Subject: E-mail Authentication to lower spam

I like the idea. However, it needs to be either free or ultra-low cost (< \$1 US). It should also be usable with web-based E-mail accounts, such as this one I am E-mailing you from (Google's Gmail). We also need a better law other than the CAN-SPAM act, which is a mockery of our congressional system. Spammers have to be dealt with like the thieves and con-artists they are.
