# New Approaches for High-Throughput Identification and Characterization of Protein Complexes

## Center for Molecular and Cellular Systems

**Michelle V. Buchanan**

**H. Steven Wiley, Frank W. Larimer**

**Oak Ridge National Laboratory**

**Pacific Northwest National Laboratory**

### Collaborating Laboratories

**Argonne National Laboratory, Sandia National Laboratories, University of Utah,**

**University of North Carolina**

# Team Leaders

## Core:

Steven Kennel, Thomas Squire

## High Throughput Complex Processing

Mike Ramsey, Karin Rodland

## Mass Spectrometry

Greg Hurst, Richard Smith

## Molecular and Cellular Imaging

Mitch Doktycz, Steve Colson

## Bioinformatics and Computing

Ying Xu, David Dixon

Carol Giometti (ANL) gel electrophoresis
Ray Gesteland (U. Utah) mass spectrometry
Malin Young (SNL) cross-linking
Mike Giddings (U. North Carolina) mass spectrometry

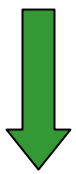
# Goal 1

## *"Identify and Characterize the Molecular Machines of Life"*

*"…instead of a cell dominated by randomly colliding individual protein molecules, we now know that nearly every major process in a cell is carried out by assemblies … of proteins...Indeed an entire cell can be viewed as a factory that contains an elaborate network of interlocking assembly lines, each of which is composed of a set of large protein machines."*

***Bruce Alberts,*** *"The Cell as a Collection of Protein Machines: Preparing the Next Generation of Molecular Biologists," Cell*, **92**, 291 (1998)

**Protein complexes are key to biological function**



Understand the network of reactions that occur in sufficient detail to predict, test, and comprehend the responses of a biological system to changes

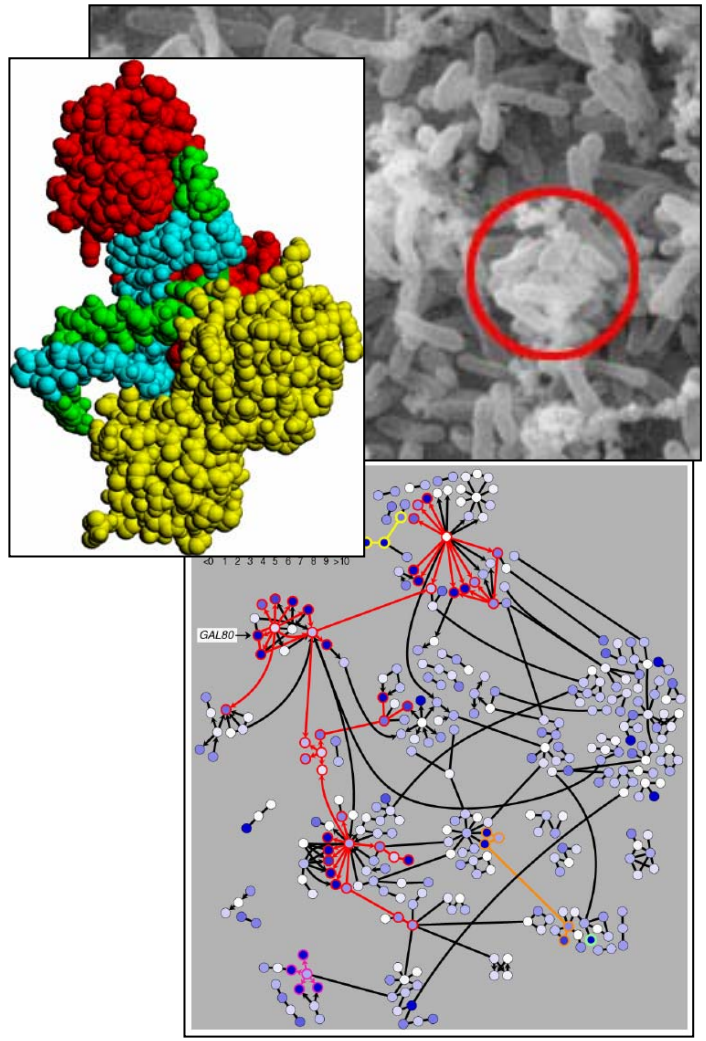
# Goal 1 includes three main steps

- Identify complement of protein complexes and their components
- Elucidate function and dynamics of complexes—intermediates, nature of interactions, cellular location, kinetics
- Establish how changes arising from environmental stress, development, etc., affect complex formation and function

## which lay the foundation for GTL

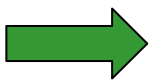
# Impact of Goal 1

- Molecular level understanding of protein complexes and, ultimately, networks
- Predict/change behavior of organism and community
- Predict function, biological pathways by homology
- Discover new functions



# Identification and Characterization of Protein Machines

- New approaches needed for large-scale studies
  - No single tool will provide all required information
  - Computational tools must be integrated from beginning
    - Analyze, compare, predict, share data
    - Quality assessment
    - Guide experimental design and data collection



Develop integrated approach to correlate identified complexes with data from gene expression, protein expression, imaging, and other methods

# Strategy to Achieve Goal 1

- Initiate protein complex identification using affinity separation combined with mass spectrometry and computational tools
  - Use multiple approaches, non-optimized techniques
  - Focus on targeted complexes
- Evaluate new approaches for high-throughput identification
  - Identify bottlenecks, opportunities for automation
  - Establish dynamic R&D program to develop new, integrated analytical and computational tools
- Incorporate additional tools, data to characterize complexes
  - Imaging tools to characterize complexes in cells
  - Tools to identify interaction interfaces

# An Approach for High Throughput Identification of Protein Complexes

**Combine complex isolation, mass spectrometry and data analysis**

- Bioinformatics
- Cloning, tagging
- Controlled cell growth
- Affinity isolation
- scFv production
- Cross-linking
- Separation
- MS analysis
- Data analysis, archival

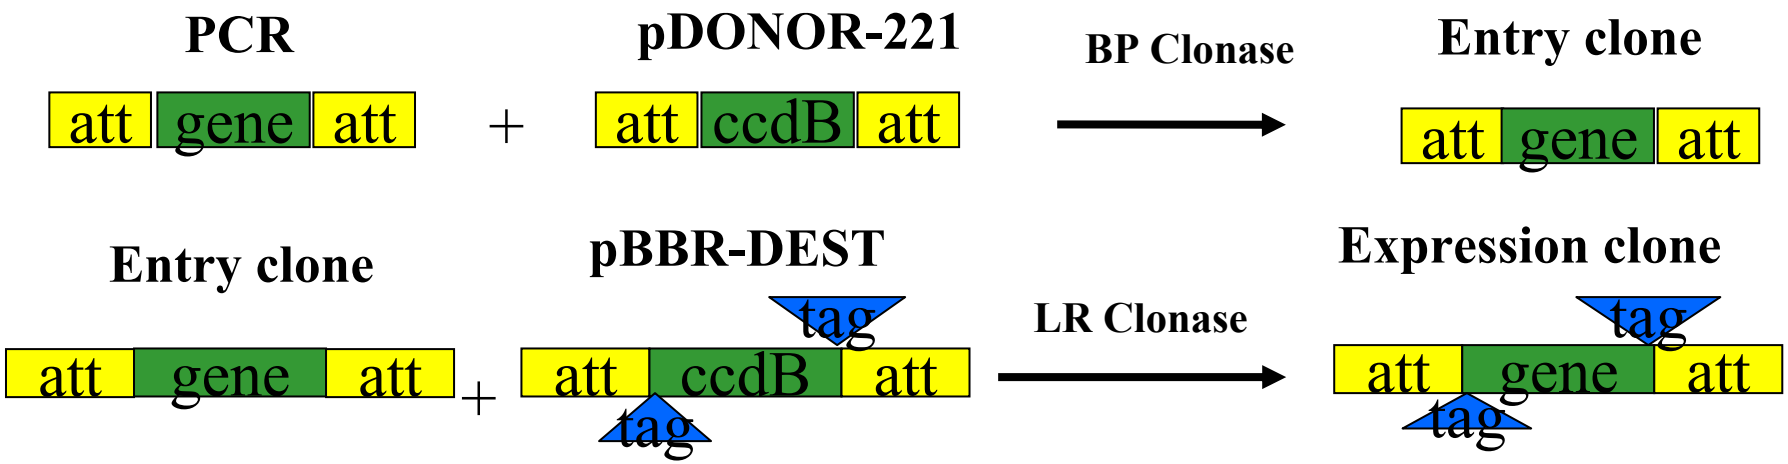
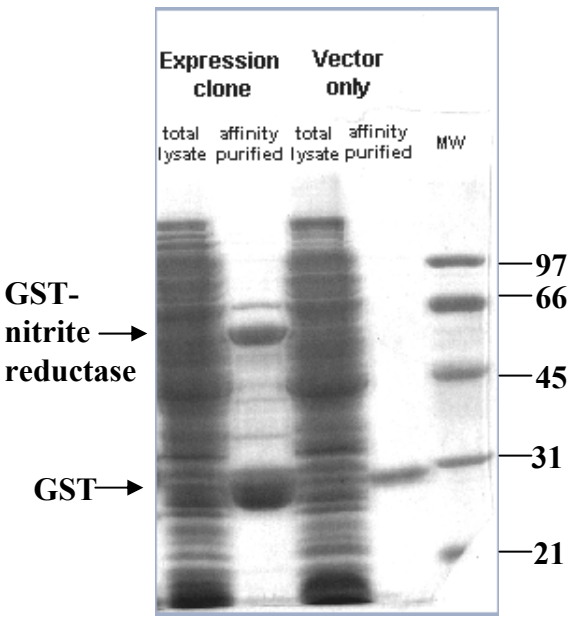
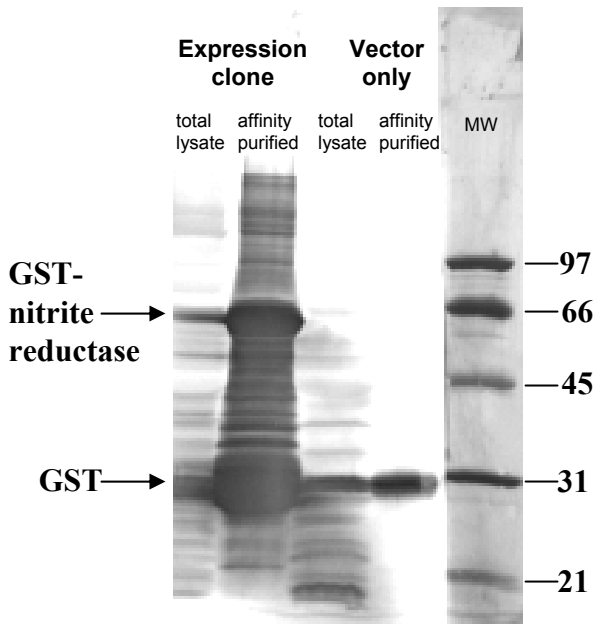
# Modified Gateway system for production of affinity tagged *R. palustris* proteins



## Protein stain



## Western blot



## Mass Spectrometry

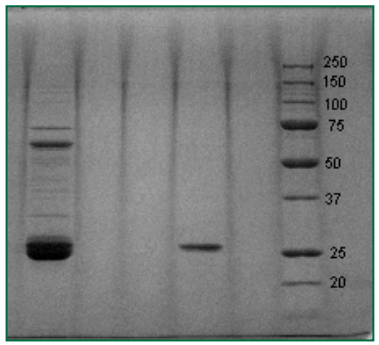
**GST-nitrite reductase band**

| | # of peptides identified | |
|---|---|---|
| | MALDI | nano LC MS/MS |
| GST peptides | 5 | 13 |
| GST/linker peptides | 2 | 1 |
| nitrite reductase peptides | 9 | 11 |
| linker/nit. red. peptides | 0 | 1 |

**GST band**

| | | |
|---|---|---|
| GST peptides | 10 | 22 |
| GST/linker peptides | 1 | 1 |
| nitrite reductase peptides | 0 | 0 |
| linker/nit. red. peptides | 0 | 0 |

# Verification of *R. palustris* Fusion Proteins Expressed in *E. coli*—Two Approaches



Affinity capture of tagged proteins from lysed cells

1D PAGE

whole eluate digestion

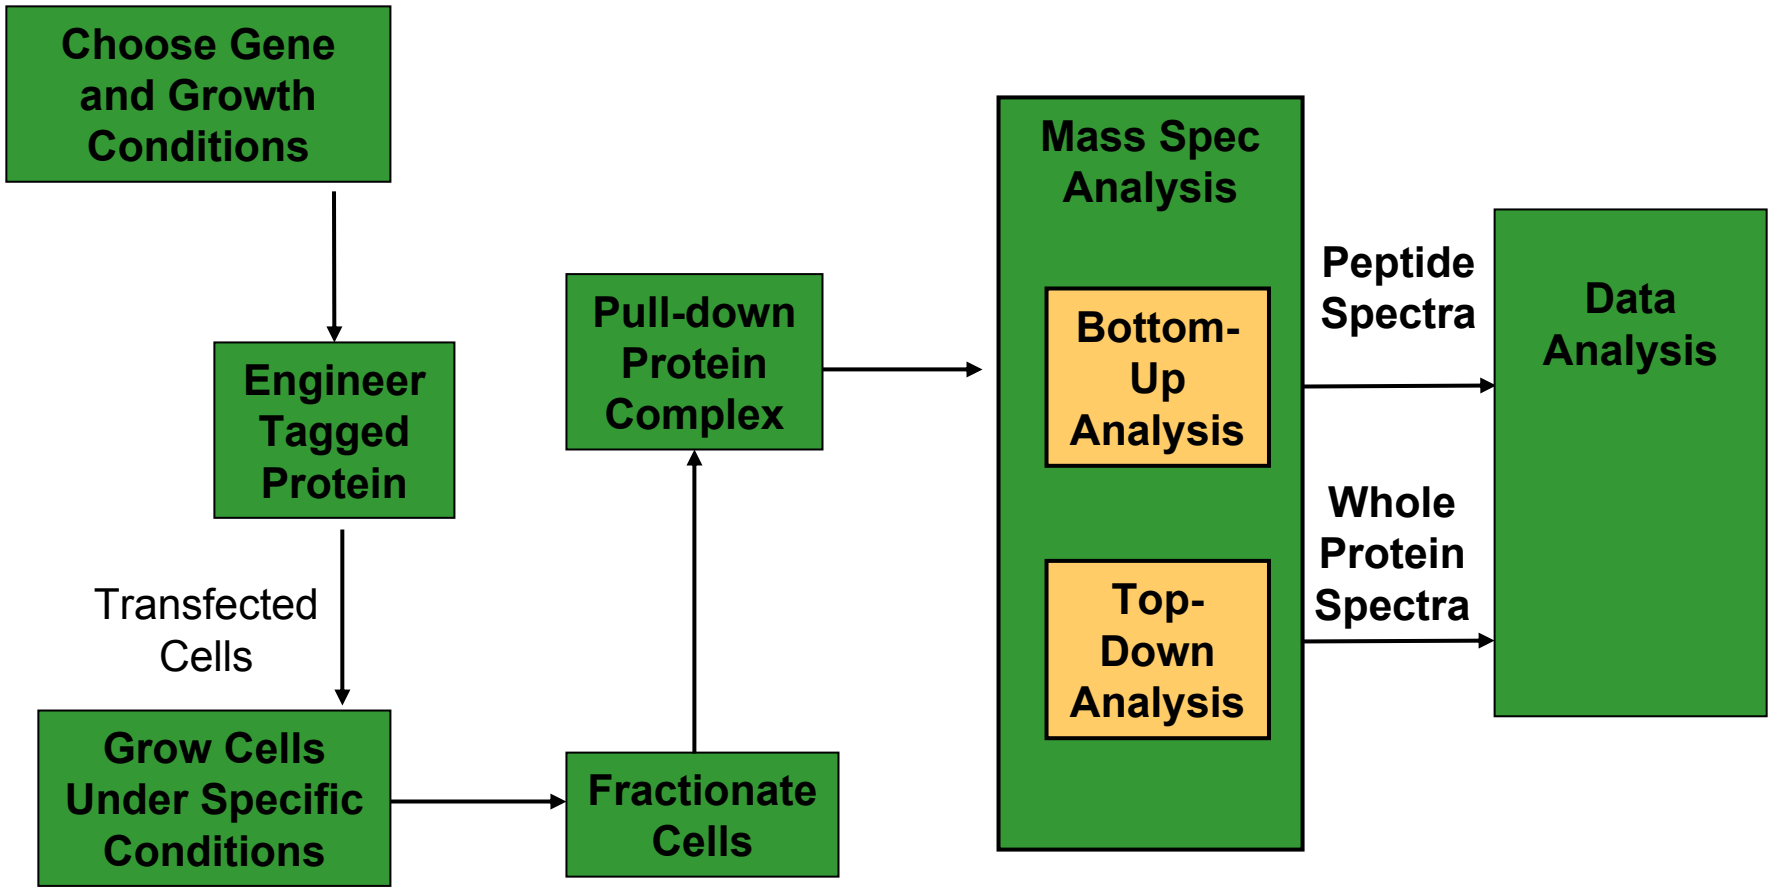
In-gel digestion and mass spectrometric identification of individual gel bands

LC-MS-MS of digest peptides; identification of proteins via SEQUEST

| | No. of peptides identified from: | | Others |
|---|---|---|---|
| **Fusion Protein** | **target protein** | **affinity tag** | ***identified*** |
| Rpal 4709 + N-terminal GST | 45 | 8 | 2 |
| Rpal 4709 + C-terminal 6-His & V5 epitope | 31 | 3 | 19 |
| Rpal 5426 + C-terminal 6-His & V5 epitope | 35 | 3 | 8 |

*These are candidate methods for analysis of **protein complexes** isolated via affinity purification*

# ORNL GTL Process Flowchart

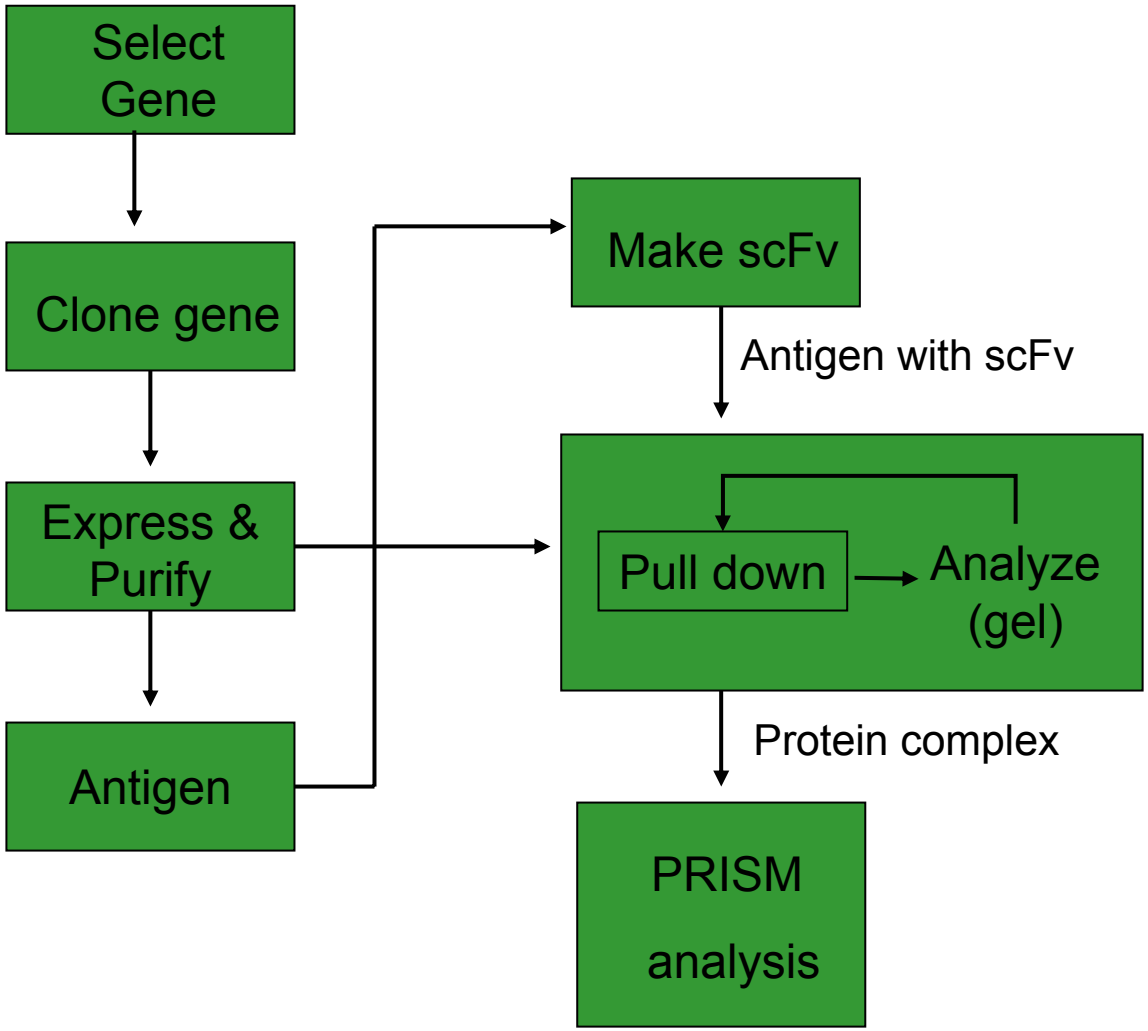


# Analysis of expression of affinity tagged *R. palustris* genes

| Gene | Function | Affinity Tag | Expression |
|---|---|---|---|
| *nirK* | Nitrite reductase | N-His | ++ |
| | | C-His | + |
| | | N-GST | ++ |
| | | C-GST | 0 |
| *groEL-2* | chaperonin | N-His | ++ |
| | | C-His | +++ |
| | | N-GST | + |
| | | C-GST | + |
| *groEL-1* | chaperonin | N-His | +++ |
| | | C-His | +++ |
| | | N-GST | ++ |
| | | C-GST | + |
| *soxB* | thiosulfate oxidation | N-His | ++ |
| | | C-His | ++ |
| | | N-GST | 0 |
| | | C-GST | 0 |
| *soxC* | thiosulfate oxidation | N-His | ++ |
| | | C-His | ++ |
| | | N-GST | + |
| | | C-GST | + |
| *hupS* | uptake hydrogenase small subunit | N-His | 0 |
| | | C-His | ++ |
| | | N-GST | 0 |
| | | C-GST | ++ |
| *hupL* | uptake hydrogenase large subunit | N-His | ++ |
| | | C-His | ++ |
| | | N-GST | 0 |
| | | C-GST | ++ |

+++ Excellent ++ Good + Poor 0 None

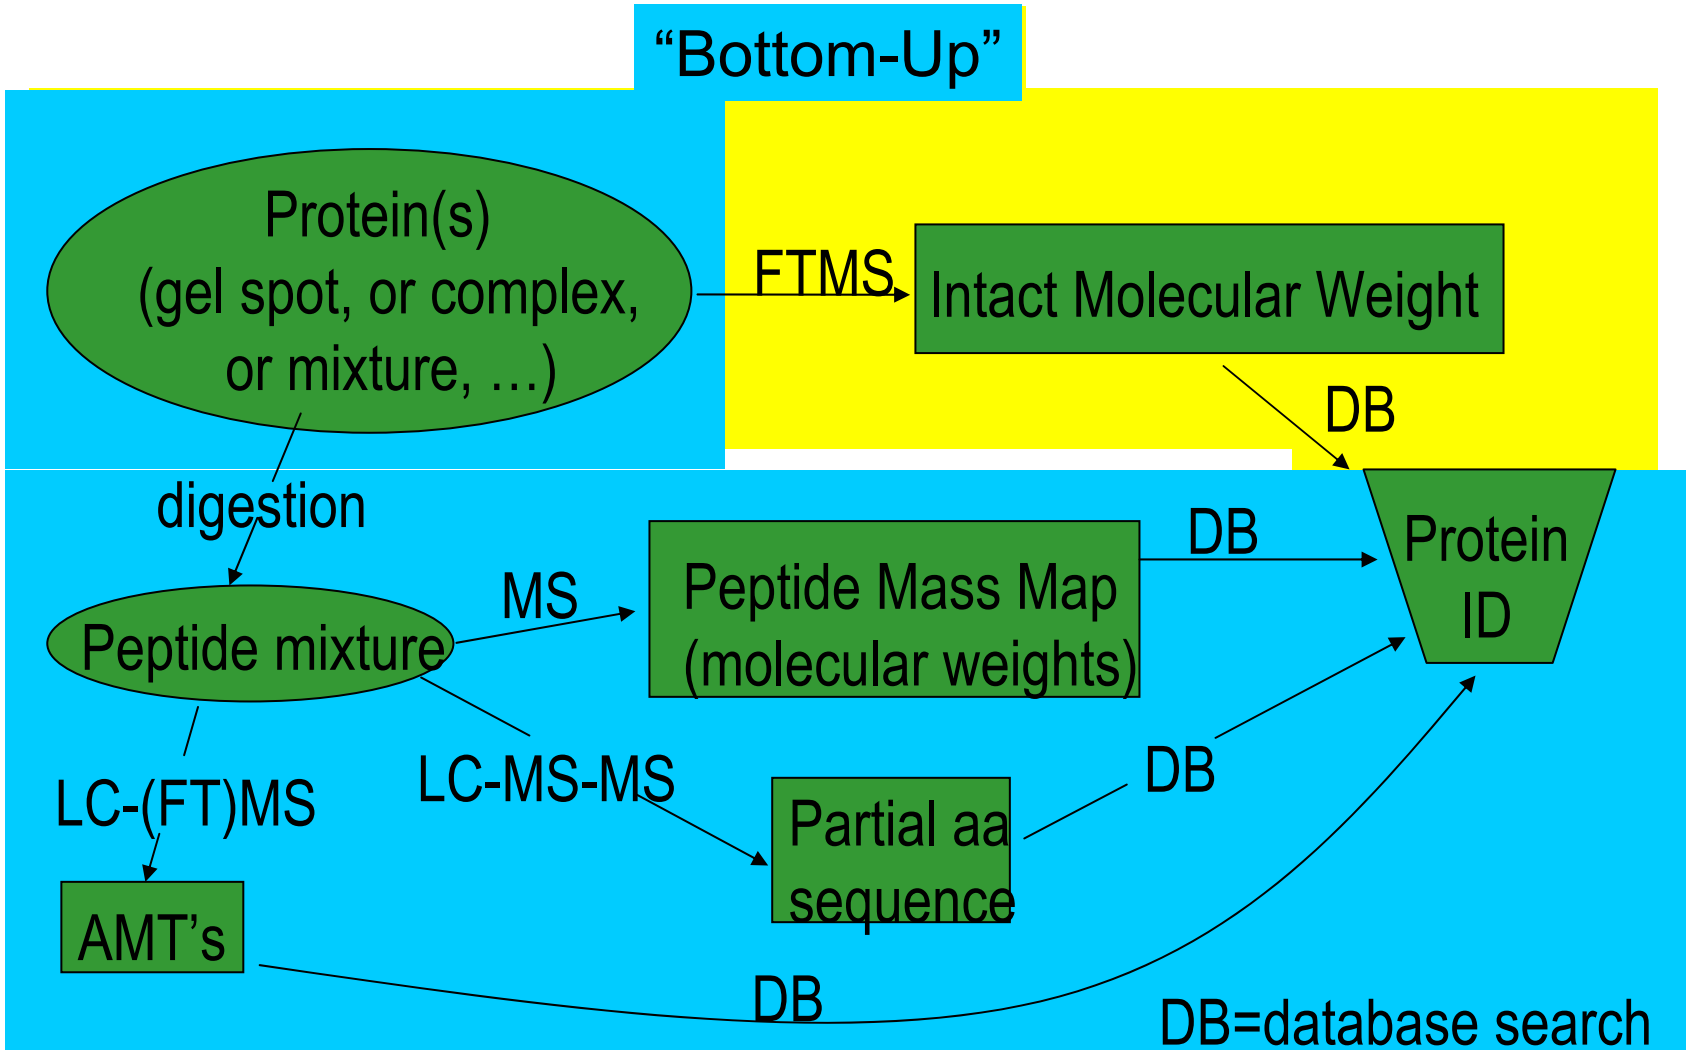
# Heterologous Expression



# Tagged proteins generated to date for pull-down studies of *S. Oneidensis*

| Gene | Description | Annotation |
|---|---|---|
| hydB | periplasmic Fe hydrogenase small subunit | SO3921 |
| hydA | periplasmic Fe hydrogenase large subunit | SO3920 |
| napA | periplasmic nitrate reductase | SO0848 |
| omcA | decaheme cytochrome C | SO1779 |
| omcB | decaheme cytochrome C | SO1778 |
| hoxK | Quinone-reactive Ni/Fe hydrogenase small subunit precursor | SO2099 |
| petA | ubiquinol-cytochrome C reductase iron-sulfur subunit | SO0608 |
| | flavocytochrome C flavin subunit | SO3301 |
| | Gfo/Idh/MocA family oxidoreductase | SO3120 |
| | oxidireductase molybdopterin-binding | SO0715 |
| nrfC | formate-dependent nitrite reductase | SO0483 |
| ptpA | phosphotyrosine protein phosphatase | SO2208 |
| ptpB | Tyrosine-specific protein phosphatase | SO3124 |
| cpxP | Spheroplast protein y precursor | SO4476 |
| msrA | methionine sulfoxide reductase (isoform A) | SO2337 |
| msrB | methionine sulfoxide reductase (isoform B) | SO2588 |
| eno | Enolase | SO3440 |
| rnlB | ATP-dependent RNA helicase | SO0407 |
| rpoD | RNA polymerase sigma-70 factor | SO1284 |
| | Cytochrome c3 | SO2727 |
| rpoA | DNA-directed RNA polymerase alpha subunit | SO0256 |
| rpoZ | DNA-directed RNA omega subunit | SO0360 |
| hepA | RNA polymerase-associated protein | SO0575 |

# MS for Protein Identification



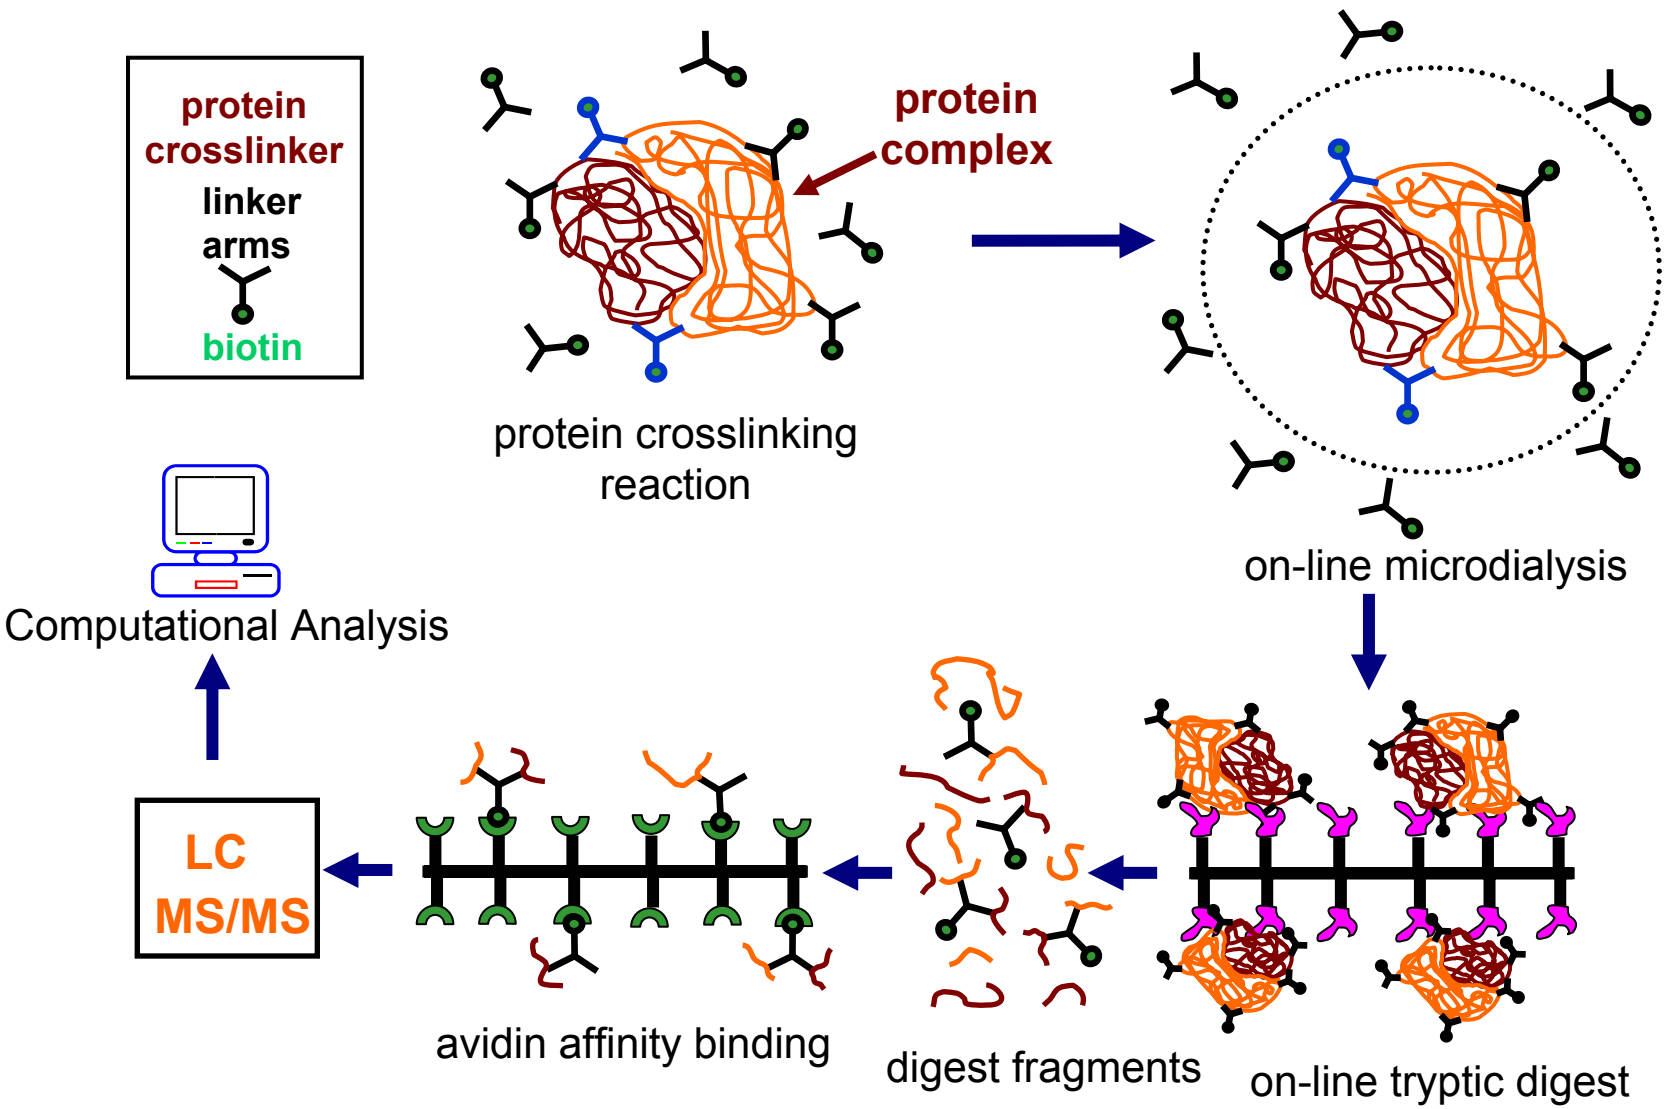
*Integrating "Top-Down" and "Bottom-Up" Mass Spectrometric Approaches for Proteomic Analysis of Shewanella oneidensis*, N.C. VerBerkmoes, J.L. Bundy, L. Hauser, K.G. Asano, J. Razumovskaya, F. Larimer, R.L. Hettich, and J.L. Stephenson, Jr., J. Proteome Research, in press for Vol 1, issue 3 (estimated June 2002).

# Crosslinking and Mass Spectrometry for Protein Complex Analysis

Oak Ridge National Laboratory,
Sandia National Laboratories

- Chemical crosslinking has potential for:
  - Stabilizing “fragile” complexes
  - Providing information on distances between particular residues in proteins or complexes
  - Improving throughput for MS analysis of complexes
- Technical issues currently being addressed:
  - Low abundance of crosslinked products
  - Interpretation of mass spectrometry data

# Protein Complex Analysis: Proposed Affinity Crosslinker Approach



# AUTOMATION OF PROTEIN PRODUCTION & ANALYSES

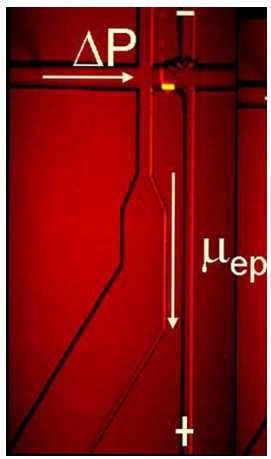
C



A. **Macroscale HT Cloning and Sample Preparation**

B. **Microscale Sample Production for Mass Spec**

C. **Lab-On-A-Chip**

# Emerging approaches for characterizing protein complexes

## *Molecular and Cellular Imaging Subproject*

- Characterize protein complexes in isolation, within cells, and on cell surfaces/interfaces
- Employ multimodality approaches to molecular imaging—optical probes, molecular recognition force microscopy, afm/optical, $(optical)^n$
- Validate the composition of protein complexes
- Determine the location of specific complexes at cellular and subcellular locations
- Characterize dynamics, binding forces

# Bioinformatics and Computing

- **Short-term goals**
  - Create infrastructure for sample tracking, data collection and analysis
  - Improve tools for predicting and validating members of protein complexes
  - Build tools for interpreting MS data from cross-linked and modified proteins
- **Long-term goals**
  - Predict protein structures involved in forming complexes
  - Predict function of protein complexes
  - Help build global architecture for integrating data necessary for successful systems biology

# Computational Tools Support All Aspects of Center

- sample tracking
- work flow monitoring
- library information management
- data processing, storage, management and transmission
- data communication and technical support
