(a) "Emission-based multiplier" means the total of all actual emissions of each regulated air pollutant emitted at a stationary source, area source, or device during the previous calendar year, up to 6,000 tons per regulated air pollutant, excluding amounts of any hazardous air pollutant or regulated toxic air pollutant that has been included as particulate matter or as a volatile organic compound in the actual emissions;

(b) The department shall assess a "dollar per ton fee" of \$60;

(c) "Consumer price index multiplier" means the percentage by which the average of the consumer price index for all-urban consumers published by the U.S. department of labor, as of the close of the 12-month period ending on August 31 of the previous year, exceeds the average of that consumer price index for calendar year 1989;

(d) "Inventory stabilization factor" means the higher number of the following:

(1) The quotient of the total statewide stationary source actual emissions of 40,910 tons per year as determined from the 2002 inventory, divided by the total statewide stationary source actual emissions from the previous calendar year, rounded to the second decimal place; or

(2) One; and

(e) The emission-based fee shall be calculated by multiplying together all of the following:

(1) The "emission-based multiplier" as calculated pursuant to (a), above;

(2) The "dollar per ton fee" as specified in (b), above;

(3) The "consumer price index multiplier" as calculated pursuant to (c), above; and

(4) The "inventory stabilization factor" as calculated pursuant to (d), above.
