

seasons have been closed before the fishery quotas have been reached to prevent the fishery from reaching the halibut PSC limit. Reducing halibut mortality and assuring that each halibut returned to the sea has the highest possible chance of survival are therefore high priorities for the IPHC's, the Council's, and NMFS's management goals for both halibut and groundfish.

Before halibut are returned to the sea, the catch of halibut as well as other groundfish must first be estimated by at-sea observers. A number of regulations assure that observer estimates of halibut and groundfish catch are credible, accurate, and without bias. For example, NMFS requires that all catch be made available for sampling by an observer; prohibits tampering with observer samples; prohibits removal of halibut from a codend, bin, or conveyance system prior to being observed and counted by an at-sea observer; and prohibits fish (including halibut) from remaining on deck unless an observer is present.

With the implementation of Amendment 80 to the FMP on September 14, 2007 (72 FR 52668), allocation of halibut PSC amounts was modified for vessels in the Amendment 80 sector, but halibut mortality continued to limit fishing in some fisheries. The Amendment 80 sector received an initial allocation of 2,525 metric tons (mt) of halibut PSC in 2008, but that allocation will decrease by 50 mt per year until it reaches 2,325 mt in 2012 and subsequent years. This amount is further allocated between the BUC and the Amendment 80 limited access fishery. In certain years, the amount of halibut PSC allocated to the Amendment 80 sector is less than the sector's historic catch; therefore, finding ways to continue to reduce halibut mortality is important for this sector.

The EFP applicant proposes to assess various fishing practices and their effect on halibut survival. It would allow researchers onboard the three catcher processor vessels to sort halibut removed from a codend on the deck of the vessel and release those fish back to the water after determining the physical condition of the halibut using standard IPHC viability methods for predicting mortality of individual fish.

Fishing under the EFP would occur in two phases during 2009. In May and June, Phase I fishing would allow sorting of halibut on deck to determine practices for reducing halibut mortality. Later in the year, Phase II would apply the halibut mortality saved in Phase I to allow additional EFP catch of groundfish and halibut within the BUC's allocation.

This proposed action would exempt the participating vessels from the following:

1. The prohibition on biasing the sampling procedure employed by an observer through sorting of catch before sampling at § 679.7(g)(2);
2. A requirement to weigh all catch by an Amendment 80 vessel on a NMFS-approved scale at § 679.27(j)(5)(ii);
3. A requirement for all catch to be made available for sampling at § 679.93(c)(1); and
4. The requirement for halibut to not be allowed on deck without an observer present at § 679.93(c)(5).

The BUC would not be allowed to exceed the 2009 Amendment 80 cooperative apportionment of halibut mortality of (1,793 mt). In the event that the amount of halibut mortality savings estimated under this EFP shows less mortality than the amount estimated using standard 2009 halibut discard mortality rates established for the Bering Sea trawl fisheries (February 17, 2009, 74 FR 7333), BUC may be allowed to continue fishing for groundfish species later in the year, with some limitations. The BUC would be required to submit a report to NMFS and the IPHC of the estimated halibut mortality saved during the Phase I. After review and approval by NMFS, the BUC may be allowed to do subsequent EFP fishing later in the year as Phase II fishing under the EFP. The BUC would be limited to no more than the BUC's Amendment 80 groundfish allocation. The additional amount of halibut caught would not exceed the amount of the halibut mortality savings under the EFP, or BUC's 2009 allocation of halibut PSC.

This EFP would apply for the period of time required to complete the experiment in Phase I and potentially in subsequent fishing in Phase II, during 2009, in areas of the BSAI open to directed fishing by the BUC. The EFP activities would be of limited scope and duration and would not be expected to change the nature or duration of the groundfish fishery, fishing practices or gear used, or the amount or species of fish caught by the BUC.

The activities that would be conducted under this EFP are not expected to have a significant impact on the human environment as detailed in the categorical exclusion issued for this action (see **ADDRESSES**).

In accordance with § 679.6, NMFS has determined that the proposal warrants further consideration and has forwarded the application to the Council to initiate consultation. The Council considered the EFP application during its April 2009 meeting.

Public Comments

Public comments are being solicited on the application through the end of the comment period stated in this notice. To be considered, comments must be received by close of business on the last day of the comment period; that does not mean postmarked or otherwise transmitted by that date. Copies of the application and categorical exclusion are available for review from NMFS (see **ADDRESSES**).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 17, 2009.

Kristen C. Koch,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-S

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

List of National System Marine Protected Areas

AGENCY: NOAA, Department of Commerce (DOC).

ACTION: Notice of availability of the List of National System Marine Protected Areas (MPAs) and response to comments on nominations of existing MPAs to the national system.

SUMMARY: NOAA and the Department of the Interior (DOI) invited federal, state, commonwealth, and territorial MPA programs with potentially eligible existing MPAs to nominate their sites to the national system of MPAs (national system). A total of 225 nominations were received. Following a 30-day public review period, 26 public comments were received by the National Marine Protected Areas Center and forwarded to the relevant managing agencies. After review of the public comments, managing agencies were asked to make a final determination of sites to nominate to the national system. All the nominations were confirmed by the managing agencies. Finding them to be eligible for the national system, the National Marine Protected Areas Center has accepted the nominations for 225 sites and placed them on the List of National System MPAs.

The national system and the nomination process are described in the *Framework for the National System of Marine Protected Areas of the United States of America* (Framework), developed in response to Executive Order 13158 on Marine Protected Areas. The final Framework was published on

November 19, 2008, and provides guidance for collaborative efforts among Federal, State, commonwealth, territorial, tribal and local governments and stakeholders to develop an effective and well coordinated national system that includes existing MPAs meeting national system criteria as well as new sites that may be established by managing agencies to fill key conservation gaps in important ocean areas.

FOR FURTHER INFORMATION CONTACT:

Lauren Wenzel, NOAA, at 301-713-3100, ext. 136 or via e-mail at mpa.comments@noaa.gov. A more detailed electronic copy of the List of National System MPAs is available for download at <http://www.mpa.gov>.

SUPPLEMENTARY INFORMATION:

Background on National System

The national system of MPAs includes member MPA sites, networks and systems established and managed by Federal, State, Territorial, Tribal and/or local governments that collectively enhance conservation of the nation's natural and cultural marine heritage and represent its diverse ecosystems and resources. Although participating sites continue to be managed independently, national system MPAs also work together at the regional and national levels to achieve common objectives for conserving the nation's important natural and cultural resources, with emphasis on achieving the priority conservation objectives of the Framework. MPAs include sites with a wide range of protection, from multiple use areas to no take reserves where all extractive uses are prohibited. The term MPA refers only to the marine portion of a site (below the mean high tide mark) that may include both terrestrial and marine components.

Benefits of joining the national system, which are expected to increase over time as the system matures, include a facilitated means to work with other MPAs in the MPA's region, and nationally on issues of common conservation concern; fostering greater public and international recognition of MPAs and the resources they protect; priority in the receipt of available technical and other support for cross-cutting needs; and the opportunity to influence Federal and regional ocean conservation and management initiatives (such as integrated ocean observing systems, systematic monitoring and evaluation, targeted outreach to key user groups, and helping to identify and address MPA research needs). In addition, the national system provides a forum for

coordinated regional planning about place-based conservation priorities that does not otherwise exist.

Joining the national system does not restrict or require changes affecting the designation process or management of member MPAs. It does not bring State, Territorial, Tribal or local sites under Federal authority. It does not establish new regulatory authority or revise existing regulatory authority. The national system is a mechanism to foster greater collaboration among participating MPA sites and programs in order to enhance stewardship in the waters of the United States.

Nomination Process

The Framework describes two major focal areas for building the national system of MPAs—a nomination process to allow existing MPAs that meet the entry criteria to become part of the system and a collaborative regional gap analysis process to identify areas of significance for natural or cultural resources that may merit additional protection through existing Federal, State, commonwealth, territorial, tribal or local MPA authorities. The initial nomination process for the national system began on November 25, 2008, when the National Marine Protected Areas Center (MPA Center) sent a letter to federal, state, commonwealth, and territorial MPA programs inviting them to submit nominations of eligible MPAs to the national system. The initial deadline for nominations was January 31, 2009; this was extended to February 13, 2009. A public comment period was held from March 6, 2009 through April 6, 2009.

There are three entry criteria for existing MPAs to join the national system, plus a fourth for cultural heritage. Sites that meet all pertinent criteria are eligible for the national system.

1. Meets the definition of an MPA as defined in the Framework.

2. Has a management plan (can be site-specific or part of a broader programmatic management plan; must have goals and objectives and call for monitoring or evaluation of those goals and objectives).

3. Contributes to at least one priority conservation objective as listed in the Framework.

4. Cultural heritage MPAs must also conform to criteria for the National Register for Historic Places.

Additional sites not currently meeting the management plan criterion can be evaluated for eligibility to be nominated to the system on a case-by-case basis based on their ability to fill gaps in the national system coverage of the priority

conservation objectives and design principles described in the Framework.

The MPA Center used existing information in the MPA Inventory to determine which MPAs meet the first and second criteria. The inventory is online at http://www.mpa.gov/helpful_resources/inventory.html, and potentially eligible sites are posted online at <http://mpa.gov/pdf/national-system/allsitesumsheet120408.pdf>. As part of the nomination process, the managing entity for each potentially eligible site is asked to provide information on the third and fourth criteria.

List of National System MPAs

The following MPAs have been nominated by their managing programs to join the national system of MPAs. A list providing more detail for each site is available at <http://www.mpa.gov>.

Response to Public Comments

On March 6, 2009, NOAA and DOI (agencies) published the Nomination of Existing Marine Protected Areas to the National System of Marine Protected Areas for public comment. By the end of the 30-day comment period, 26 individual submissions had been received from a variety of government agencies, non-governmental organizations, industry and conservation interests, advisory groups

and the public. Given the breadth and multi-faceted nature of comments and recommendations received, related comments have been grouped below into categories to simplify the development of responses. For each of the comment categories listed below, a summary of comments is provided, and a corresponding response provides an explanation and rationale about changes that were or were not made in the Official List of National System Marine Protected Areas (MPAs) for this first round of nominated sites.

- Comment Category 1: Purpose and Scope of National System
- Comment Category 2: Agency Review Process
- Comment Category 3: Public Review Process
- Comment Category 4: Support for Nomination of Specific Sites to National System
- Comment Category 5: Questioning Eligibility of Specific Sites for the National System
- Comment Category 6: Concerns about Potential Restrictions on Use
- Comment Category 7: Information Available to Assess Nominations
- Comment Category 8: Information Quality Act
- Comment Category 9: Gap Analysis

Comments and Responses

Comment Category 1: Purpose and Scope of National System

Summary

A few comments called for more clarity about the purpose and vision of the National System of Marine Protected Areas (MPAs), although there were different perspectives about what this vision should include. One respondent thought that the agencies should create more specific minimum criteria for the national system, while another contended that the nomination process should mirror the creation of new sites under the National Marine Sanctuaries Act. Some respondents had comments on entry criteria for nominations to the National System of MPAs, or on plans for implementation of the federal responsibility to avoid harm to the resources protected by a national system MPA. One respondent recommended that the name of the "National System of MPAs" be revised and called the "National Network of MPAs" stating that "a National Network is opinion-based; a National System is science-based."

Response

The purpose and scope of the national system, and plans for its implementation, were developed with extensive stakeholder engagement over a four year period from 2004 through 2008. During this period, the *Framework for the National System of Marine*

Protected Areas of the United States (Framework) was developed. Three separate public comment periods on the document were held and announced in the **Federal Register**. In addition, the National Marine Protected Areas Center (MPA Center) held numerous meetings with stakeholders to obtain input on the Framework, and worked closely with the Marine Protected Areas Federal Advisory Committee (MPA FAC) in open meetings on key concepts that were incorporated into the document. The Framework document was finalized in November 2008; no public comments were received on the **Federal Register** notice announcing its release. Issues raised by respondents focused on the content of the Framework are not considered germane to this public comment notice.

Regarding the recommendation that the nomination process should mirror the National Marine Sanctuaries Act (NMSA), the agencies contend that the NMSA should not be the model for nominations to the national system for the following reasons: (1) The national system is charged with working to coordinate diverse MPAs across all levels of governments. These sites and programs have diverse authorities, and it is inappropriate to impose the requirements of one federal MPA program (e.g. the NMSA) on other federal, state, and territorial MPA programs, which have their own legal authorities, processes and purposes; (2) The procedural elements for the NMSA are focused on the designation of new MPAs, while the nomination process for national system of MPAs is focused on the admission of existing MPAs into the national system for the purposes of enhanced coordination, recognition and stewardship and (3) The NMSA's extensive procedural requirements for sanctuary designation (including public involvement and interagency consultation) are not warranted for inclusion of a site in the national system of MPAs since that action has no regulatory impact or potential to restrict human uses of that site.

The agencies disagree with the recommendation that the National System of MPAs be renamed the "National Network of MPAs." Section 4(e) of Executive Order 13158 calls for the development of a National System of MPAs. In addition, the terms "system" and "network" as used in the Framework are clearly defined in Section VI. Glossary of Key Terms of the final Framework. These definitions were developed in consultation with the MPA Federal Advisory Committee to ensure clarity of usage and consistency with current scientific thinking.

Comment Category 2: Agency Review Process

Summary

Two respondents called for nominations to the national system to undergo special review by particular management agencies. One called for all nominations in a given region to be reviewed and approved by regional Fishery Management Councils. Another respondent called for all sites in Alaska to be reviewed and approved by the Alaska Board of Fisheries.

Response

The current process for nominations to the national system provides for nominations to be made by the MPA's managing agency and for a public review process of the MPAs proposed for nomination. The agencies believe that while it is appropriate for other agencies or bodies in a region to comment on such proposed nominations as part of the public process, it is inappropriate for these other agencies or bodies to have the authority to approve or disapprove nominations made by the agency legally responsible for the management of an MPA.

Comment Category 3: Public Review Process

Summary

Two respondents noted that the 30-day public comment period was not sufficient to review information for 225 nominated sites, and requested that the public comment period be extended. One respondent recommended that all nominated sites be reviewed by the Marine Protected Areas Federal Advisory Committee.

Response

The agencies have concluded that this extension is not necessary because the public has had ample opportunity to address many of the issues raised through the multi-year public process to develop the Framework, which included three separate **Federal Register** public comment periods. The agencies followed the Framework's process and provided an opportunity for the public to comment on issues related specifically to nominations to the national system. The agencies do not believe that an extended comment period would substantively change the comments received. Moreover, because the national system of MPAs is a non-regulatory program that will not change the management or regulations of member sites, there is no risk of harm to the public resulting from declining this extension. Regarding the

recommendation that the Marine Protected Areas Federal Advisory Committee should review the nominations, the Committee was actively involved in developing and recommending the entry criteria for the national system. However, the role of the Committee is to provide advice to the Departments of Commerce and the Interior, not to engage in governmental decision-making regarding operational details of the national system.

Comment Category 4: Support for Nomination of Specific Sites to National System

Summary

A number of comments supported the nomination of specific sites to the national system, noting the significant ecological and cultural value of the areas, and adding that the participation of these sites in the national system will lead to a strengthening of their conservation efforts, as well as enhancing the national system. One comment sought better integration among NOAA Fisheries and National Marine Sanctuaries, and further sought opportunities to leverage funds and establish partnerships.

Response

Comments that support the nominations of sites to the national system were forwarded to the appropriate managing agencies. Regarding the call for enhanced integration, the agencies believe that the national system will result in enhanced collaboration and coordination of all MPA managing agencies, including NOAA Fisheries and National Marine Sanctuaries.

Comment Category 5: Questioning Eligibility of Specific Sites for the National System

Summary

Several comments questioned the eligibility of specific sites for inclusion in the national system. Eligibility concerns included whether sites met the definitions of 'marine' and 'MPA,' as well as concerns over a specific site's management plan. In particular, several respondents noted that the Cherry Point Aquatic Reserve (WA) did not meet the national system entry criteria to have a management plan because its management plan is still in draft.

Response

According to the *Framework for the National System of Marine Protected Areas of the United States of America* (Framework), a site is eligible for inclusion in the national system if the

site: (1) Meets the definition of an MPA as defined in the Framework; (2) has a management plan (can be site-specific or part of a broader programmatic management plan); (3) contributes to at least one priority conservation objective as listed in the Framework; and (4) cultural heritage resources must also conform to criteria for the National Register of Historic Places.

It is important to note that only the 'marine' portion of a site will be eligible for inclusion in the national system. According to the Framework, to be marine, a site "must be: (a) Ocean or coastal waters (note: coastal waters may include intertidal areas, bays or estuaries); (b) an area of the Great Lakes or their connecting waters; (c) an area of submerged lands under ocean or coastal waters or the Great Lakes or their connecting waters; or (d) a combination of the above. The term "intertidal" is understood to mean the shore zone between the mean low water and mean high water marks. An MPA may be a marine component part of a larger site that includes uplands. However, the terrestrial portion is not considered an MPA. For mapping purposes, an MPA may show an associated terrestrial protected area."

Recognizing the often lengthy process in finalizing a management plan, which in some cases can take years to complete, the agencies determined that an established site may submit a draft management plan in order to meet this eligibility criterion.

Comment Category 6: Concerns About Potential Restrictions on Use

Summary

Several comments addressed the concern that the inclusion of a site in the national system will limit access to an area, and in particular will restrict recreational fishing or boating, sportfishing, commercial fishing, aquaculture operations, or coastal industry.

Response

The national system has no authority under Executive Order 13158 to either change the management or regulatory authority of existing MPAs or create new MPAs. MPAs will continue to be established, managed and revised under each site's existing federal, state, territorial, tribal or local authorities and their associated legal processes. The inclusion of an MPA into the national system in no way "federalizes" any state or local areas included within the system. The Executive Order states that the national system is "intended to support, not interfere with, agencies'

independent exercise of their own existing authorities."

Comment Category 7: Information Available to Assess Nominations

Summary

Several respondents contended that the information available on the nominated sites was not sufficient for the public to assess whether the entry criteria had been met. Respondents noted that additional information was needed to ensure the transparency of the review process. For example, one respondent wanted to view information that indicated how, not merely whether, sites met the nomination criteria.

Response

The agencies posted information on the nominated sites on the public Web site, <http://www.mpa.gov> in a downloadable PDF format. Information provided in this format included: site name, management agency, level of protection, permanence, constancy, protection focus, fishing restrictions and management plan type. In addition, information on the primary conservation objective(s) addressed by each site, and the regulatory or management tools used to address the primary conservation objective(s) was provided. One week after the **Federal Register** notice appeared, based on a request from the public, the location of all federal sites sorted by the state in which it is located was added to the downloadable file to improve ease of utility. Users were also able to download GIS data for nominated sites as part of the MPA Inventory posted on www.mpa.gov. Information regarding the MPA Center's assessment of eligibility was available to the public through the Web site. For example, the Web site provided information on the type of management plan for each site, as well as the evidence the management program for each site provided to indicate how it met the primary conservation objective(s) of the national system.

The MPA Center recognizes the need to expand the data available on <http://www.mpa.gov> and to make it more accessible and usable to the public, and is in process of developing and improving Web-based applications to address this need.

Comment Category 8: Information Quality Act

Summary

One respondent expressed concern that because of general disclaimers on the <http://www.mpa.gov> Web site (at: http://mpa.gov/helpful_resources/

disclaimers_pr.html), the data contained therein regarding the Marine Protected Areas Inventory does not comply with the Information Quality Act (IQA). The respondent states that in light of the disclaimer language, the public "has no reason to believe that any of these data are accurate, reliable, and complete or they have any utility." If true, dissemination of such information would violate NOAA's Information Quality (IQ) guidelines, published pursuant to the IQA. In support of this assertion, the respondent cites NOAA's IQA guidelines as follows: "Information quality is composed of three elements: utility, integrity and objectivity. Quality will be ensured and established at levels appropriate to the nature and timeliness of the information to be disseminated. NOAA will conduct a pre-dissemination review of information it disseminates to verify quality. Information quality is an integral part of the pre-dissemination review * * *."

Response

NOAA's MPA Inventory information is reliable and complies with the NOAA IQ guidelines standards for utility, integrity, and objectivity. The content of the initial Marine Managed Area (MMA) Inventory and its successor Marine Protected Areas Inventory (MPA Inventory) were developed and designed in cooperation with federal, state and territorial agencies and were the subject of public comment under the Paperwork Reduction Act. The definition of "MPA" was the subject of **Federal Register** comment processes as part of the inventory development process, and three additional times as part of the development and publication of the *Framework for the National System of Marine Protected Areas of the United States of America*. Data were collected directly from primary sources, and from the Federal, State, or territorial agency programs that designate and manage MPAs. Once initial data were collected, inventory information for each site was sent by the MPA Center to the pertinent MPA management agency for verification prior to posting on the www.mpa.gov Web site as part of the quality assurance/quality control process.

In addition, on November 20, 2008 the MPA Center Director sent a letter to MPA program managers providing each with a set of potential nominee sites from the pertinent program. The MPA program managers reviewed and verified the accuracy of the information provided. As a result of these review processes, the agencies believe NOAA's MPA inventory and related information disseminated through the MPA Center

Web site meet the applicable NOAA IQ standards.

Regarding the disclaimer language posted on the MPA Center Web site (at: http://mpa.gov/helpful_resources/disclaimers_pr.html), the agency has taken the respondent's comments into consideration and will replace the existing disclaimer with more appropriate language regarding limitations on the use of the data contained on the MPA Center Web site.

Comment Category 9: Gap Analysis

Summary

Two respondents noted the importance of the gap analysis described in the Framework document, and urged that the agencies move forward with the gap analysis to identify areas meeting the conservation objectives of the national system in need of additional protection.

Response

The regional gap analysis process described in the Framework will complement the nominations of existing sites to the National System of MPAs by providing information on areas in need of additional protection to MPA management agencies. NOAA and DOI are currently in the design phase of the gap analysis process; information on the process will continue to be posted on <http://www.mpa.gov>.

Dated: April 17, 2009.

John H. Dunnigan,

Assistant Administrator.

DEPARTMENT OF COMMERCE

Minority Business Development Agency

[Docket No.: 090416673-9681-01]

Solicitation of Applications for the Minority Business Enterprise Center (MBEC) Program

AGENCY: Minority Business Development Agency, Commerce.

ACTION: Notice.

SUMMARY: In accordance with 15 U.S.C. 1512 and Executive Order 11625, the Minority Business Development Agency (MBDA) is soliciting competitive applications from organizations to operate a Minority Business Enterprise Center (MBEC) in the two locations and geographical service areas specified in this notice. The MBEC operates through the use of business consultants and provides a range of business consulting

and technical assistance services directly to eligible minority-owned businesses. Responsibility for ensuring that applications in response to this competitive solicitation are complete and received by MBDA on time is the sole responsibility of the applicant. Applications submitted must be for the operation of a MBEC and to provide business consultation services to eligible clients. Applications that do not meet these requirements will be rejected. This is not a grant program to help start or to further an individual business.

A link to the full text of the Announcement of Federal Funding Opportunity (FFO) for this solicitation may be accessed at: <http://www.Grants.gov>, <http://www.mbda.gov>, or by contacting the appropriate MBDA representative identified above. The FFO contains a full and complete description of the application and programmatic requirements under the MBEC Program. In order to receive proper consideration, applicants must comply with the requirements contained in the FFO.

DATES: The closing date for receipt of applications is June 4, 2009 at 5 p.m. Eastern Daylight Time (EDT). Completed applications must be received by MBDA at the address below for paper submissions or at <http://www.Grants.gov> for electronic submissions. The due date and time is the same for electronic submissions as it is for paper submissions. The date that applications will be deemed to have been submitted electronically shall be the date and time received at Grants.gov. Applicants should save and print the proof of submission they receive from Grants.gov. Applications received after the closing date and time will not be considered. Anticipated time for processing is seventy-five (75) days from the closing date for receipt of applications. MBDA anticipates that one award under this notice will be made with a start date of September 1, 2009.

Pre-Application Conference: In connection with this solicitation, a pre-application conference is scheduled for May 7, 2009. The time and location of the pre-application conference have yet to be determined. Participants must register at least 24 hours in advance of the conference and may participate in person or by telephone. Please visit the MBDA Internet Portal at <http://www.mbda.gov> (MBDA Portal) or contact an MBDA representative listed below for the specific time and location of the pre-application conference and for registration instructions.
