

St. Marks

*National Wildlife Refuge
Reptile, Amphibian and
Mammal List*

*St. Marks
National
Wildlife
Refuge*

The St. Marks National Wildlife Refuge was established in 1931 and today encompasses 66,000 acres. Its wide diversity of habitats, including open water, salt marsh, swamps, freshwater pools, hardwoods, and upland pine areas make the refuge home for an equally wide variety of wildlife.

*Endangered and
Threatened
Wildlife*

St. Marks NWR provides nesting areas to these Federal and State endangered and threatened birds: the Southern bald eagle, least tern, and red-cockaded woodpecker. Other endangered or rare species include the: woodstork, American alligator, Eastern indigo snake, swallow-tailed kite, peregrine falcon and the Florida black bear. Occasionally, visitors glimpse loggerhead sea turtles and West Indian manatees offshore by the lighthouse. Many state-listed threatened and endangered plants are also found on the refuge.

*This blue goose,
designed by
“Ding Darling,”
has become a
symbol of the
Refuge System.*

This list contains the 52 species of mammals, 40 species of amphibians, and 66 species of reptiles compiled from observations, consultation with experts in respective fields, and literature research. Some species are more common seasonally and some are nocturnal. Look for such evidence as tracks, burrows, grass tunnels, and other signs of activity. Careful eyes and attentive ears can uncover numerous clues to the variety of wildlife present. Night spotting of animals with artificial lights is prohibited.
