Project Name

OHIO ENVIRONMENTAL INFRASTRUCTURE, OH

Project Description

CG - Section 594: Ohio Infrastructure

Village of Polk for the Polk Wastewater Collection and Treatment System -

The Village is under Ohio EPA Findings and Orders to address a large number of failing household septic systems in the Village. The project will consist of the design, construction, and operation of a centralized collection and treatment system. The collection will consist of a combination gravity/pressure sewer system, potentially two (2) lift stations, 50,000 gallons per day (gpd) average daily design flow (ADF) package extended aeration wastewater treatment plant suitable for direct discharge to Katotawa Creek. The existing on-lot systems will be demolished when the replacement system is available. The Village has 357 residents, with 129 homes and businesses. A recent income survey conducted by the Ohio Rural Community Assistance Program confirmed that the Village's Median Household Income has dropped significantly since the last census. An earlier survey conducted in 2007 also showed that the Village qualifies for CDBG funding with a Low-to-Moderate-Income (LMI) percentage over 60%. USDA Rural Development has advised the Village it needs to obtain additional grants in order to be funded by their program. Design engineering is underway.
