## BLM Salem District Mechanical System Retrofit Project – #42

**Need:** This project will update the 29 year old building's mechanical systems by installing two new high-technology condensing boilers, adding a solar thermal preheater to the hot water system, replacing various exhaust fan motors, insulating supply/return ducting, adding occupancy sensors to specific rooms, and adding new purge fans to the air handling system. The entire system would then be retro-commissioned to ensure optimization of mechanical equipment scheduling.

### Recovery Act Funding:

The proposed work will be completed using a construction contract and would use a design consultant.

**Benefits:** These mechanical system retrofits/improvements will improve the buildings energy efficiency and will reduce natural gas consumption.
