# Standards for USGS and USDA Forest Service Single Edition Quadrangle Maps

## PREFACE

The feature templates contained in this standard define feature types and provide the criteria that should be used to determine if and how a feature should be depicted on USGS and USDA Forest Service single edition quadrangle maps.

This standard is intended to complement the revision guidelines in the Standards for Revised Primary Series Quadrangle Maps and the symbol specifications in the Standards for 1:24,000- and 1:25,000-Scale Quadrangle Maps, Part 5: Publication Symbols.

It has been issued as a "Draft for Implementation" because it has not undergone editorial review. Any further development of the standard will depend upon the inclusive nature of *The National Map* standards (in preparation).
