

STEM (science, technology, engineering, and mathematics) occupations were most often found in research and technical services industries and in government.

FIGURE 19

- Many of the industries that employed large numbers of STEM workers were found in the professional, scientific, and technical services sector. The Federal Government employed the third largest number of these workers.
- Overall, there were 3.2 million workers in computer and mathematical science occupations, 2.5 in architecture and engineering occupations, and 1.3 million in life, physical, and social science occupations.

Industries with the highest employment of science, technology, engineering, and mathematics (STEM) occupations, May 2007
