

# Citrus: World Markets and Trade

February 2009

## SUMMARY

Global orange trade is forecast to decline 8 percent due to weakening economic conditions and less demand from the European Union (EU) and Russia. Orange juice trade also is expected to ease while tangerine/mandarin trade remains steady. U.S. citrus opportunities are forecast down because of the smaller orange crop, higher prices, and less demand from Japan, Canada, and Korea.

## Orange Export Decline Driven by the United States

## ORANGE TRADE FORECAST TO DROP

Global orange production in selected countries is forecast at 51 million tons, virtually unchanged from the previous year as reductions in Egypt and the United States are largely offset by larger crops in Argentina and China. Orange trade is expected to slide due to lower demand resulting from the economic crisis.

- U.S. orange production is forecast to drop 10 percent due to high temperatures that caused young fruit to drop from the trees resulting in reduced exports.

- Egyptian exports are expected to decline due to competition and uneven quality of the oranges affecting markets such as the EU.
- EU and Russian imports are expected to decline due to weaker demand resulting from the economic crisis.

### **ORANGE JUICE OUTPUT EXCEEDS DEMAND**

Global orange juice production is forecast to decline 2 percent to 2.3 million tons. Trade is expected to be down slightly due to reduced EU and US demand.

- EU imports are expected to slump as consumption of exotic fruit juices is becoming more popular.
- Despite a smaller U.S. orange crop, unusually large carry-in stocks of juice, will mean less imports and more exports.
- Brazilian production is forecast to be up 6 percent due to higher availability of fruit for processing which will sustain their dominate position in world trade.

### **TANGERINE/MANDARIN PRODUCTION IS ON THE RISE WITH STEADY TRADE**

Global tangerine/mandarin production is forecast at 19.7 million tons, up 1.5 million tons, virtually all accounted for by China. However, trade is expected to remain steady as lower Chinese exports are offset by Morocco and Turkey.

- Chinese exports are expected to drop 40 percent due to a fruit fly outbreak in Sichuan Province and reduced demand.
- Russian and EU imports, which account for over 50 percent of global demand, are expected to decline slightly because of the economic crisis.
- U.S. production is forecast to be the highest on record as more nonbearing acres continue to come into production in California. Rising domestic demand is expected to constrain exportable supplies.

*For more information, please contact Reed A. Blauer at (202)720-0898 or [reed.blauer@fas.usda.gov](mailto:reed.blauer@fas.usda.gov). For additional production, supply, and demand information, you may visit our website at <http://www.fas.usda.gov/psdonline/psdHome.aspx>.*

**NOTE:** New countries have been added to the Production, Supply and Distribution (PSD) database to account for a better representation of global trade. These additional countries have data from 2006/07 forward. Any comparison between this and previous reports should take this modification into account.

2/6/2009 3:58:53 PM

Split years refer to the harvest and marketing period, which corresponds roughly to October-September in the Northern Hemisphere and April-March in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

Import and export totals will not equal due to statistical discrepancies.

One metric ton of 65 degrees brix equals 344.8 gallons at 42 degrees brix and 1,405.88 gallons at single strength equivalent for 2006/2007 and earlier. For 2007/08 and after, one metric ton of 65 degrees brix equals 344.8 gallons at 42 degrees brix and 1,392.6 gallons at single strength equivalent.

Split years refer to the harvest and marketing period, which corresponds roughly to October-September in the Northern Hemisphere and April-March in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

Import and export totals will not equal due to statistical discrepancies.

2/6/2009 3:59:25 PM

Split years refer to the harvest and marketing period, which corresponds roughly to October-September in the Northern Hemisphere and April-March in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

Import and export totals will not equal due to statistical discrepancies.
