

Table 13. Nutrient constituents detected in ground-water samples collected in the Southern Sacramento Valley Ground-Water Ambient Monitoring and Assessment (GAMA) study unit, California, 2005.

[The five digit USGS parameter code is used in the USGS's computerized data system, the National Water Information System, to uniquely identify a specific constituent or property. An asterisk (*) in front of a number in the table indicates a concentration higher than the threshold. "DD" following a site area name in the first column indicates "depth dependent." "FP" following a site area name in the first column indicates "flowpath." E, estimated value; GAMA, Ground-Water Ambient Monitoring and Assessment; mg/L, milligram per liter; N, nitrogen; na, not available; MCL-US, U.S. Environmental Protection Agency Maximum Contaminant Level; NAM, North American; QPC, Uplands; SAM, South American; SOL, Solano; SUI, Suisun–Fairfield; USGS, U.S. Geological Survey; YOL, Yolo; V, analyte was detected in both the environmental sample and the associated blanks, and is considered not detected; —, not detected]

GAMA sample identification number	Ammonia, dissolved as nitrogen (mg/L)	Nitrate, dissolved as nitrogen (mg/L)	Orthophosphate, dissolved (mg/L)	Total nitrogen (nitrate + nitrite + ammonia + organic-N), dissolved as nitrogen (mg/L)
