Helping You Make Informed Decisions

DATA STEWARDSHIP/PRIVACY IMPACT ASSESSMENT INTRODUCTION

The Objective of Data Stewardship/Privacy Impact Assessments

Privacy Impact Assessments (PIAs) are required by the E-Government Act of 2002 whenever "developing or procuring information technology . . . or initiating a new collection of information . . . in an identifiable form . . . " They also are required by Office of Management and Budget (OMB) Circular No. A-11 and OMB Exhibit 300, "Capital Asset Plan and Business Case," which tie together privacy considerations, executive agency funding requests, and Enterprise Architecture (EA) requirements. Finally, PIAs link project and system risk assessments to ensure the provision of adequate security, as defined by OMB Circular A-130. Consistent with the objectives of the E-Government Act and to ensure the continued trust of our constituency, on February 3, 2004, the Census Bureau is releasing this PIA to the public.

The purpose of PIAs is to ensure no collection, storage, access, use, or dissemination of identifiable respondent information (businesses and individuals) that is not needed or permitted. According to OMB, "PIAs are structured reviews of how information is handled: (i) to ensure handling conforms to applicable legal, regulatory, and policy requirements, (ii) to determine the risks and effects of collecting, maintaining and disseminating information in identifiable form in an electronic information system, and (iii) to identify and evaluate protections and alternative processes for handling information to mitigate potential privacy risks." The review makes use of a structured tool--a series of questions that determine whether the planned system or activity is consistent with our organization's privacy principles, procedures, and controls.

Despite the use of the term "privacy," PIAs typically cover privacy, confidentiality, integrity, and availability issues, which the Census Bureau would equate with "data stewardship." Therefore, the U.S. Census Bureau refers to these evaluations as Data Stewardship/Privacy Impact Assessments (DS/PIAs). DS/PIAs can facilitate data stewardship, management, awareness, and compliance efforts.

At the Census Bureau, DS/PIAs also provide a project management tool, allowing program and project managers to integrate data stewardship considerations into the planning and design phases of work. This approach has the advantage of early detection and avoidance of certain sensitivities altogether or of identifying risk mitigation activities that may need to be incorporated into a funding request.

Data Stewardship at the Census Bureau

Fully consistent with the E-Government Act of 2002, the Census Bureau has adopted a Data Stewardship program. Data Stewardship is the process of meeting the public need for statistical information and the legal and ethical obligation to respect individual privacy and protect confidentiality. It is a management approach to decision-making that facilitates meeting our mission requirements to collect and publish high quality data about our Nation's people and economy and satisfies our ethical and legal requirements to respect the privacy and protect the confidentiality of all Census Bureau respondents, customers, contractors or bidders, and employees.

The Census Bureau has embarked upon a data stewardship program that addresses privacy and confidentiality as well as data access and use issues. At its core is the Data Stewardship Executive Policy Committee (DSEP), the Census Bureau executive staff focal point for decision making and communication on privacy, security, confidentiality and administrative records policy issues. The DSEP has adopted a set of Privacy Principles that are aligned with our mission and assist us in achieving our goals and objectives. The DSEP has developed new policies (available upon request) that strengthen our cultural commitment to data stewardship. The PIA is one tool for implementing and creating awareness of data stewardship policies.

The Census Bureau's DS/PIA Scope and Methodology

For the first application of DS/PIAs, the Census Bureau included in scope the full program covered by each OMB Exhibit 300, each with its own DS/PIA, whether or not the full amount of the program's funding was included in the OMB Exhibit 300. In the case of Economic Census and Surveys OMB Exhibit 300, the wide variety of functions covered by multiple legal authorities, required it to be parsed into multiple DS/PIAs. This DS/PIA tool, with slight modifications, is also intended for use with new data collections submitted under the Paperwork Reduction Act (PRA) to OMB.

A full DS/PIA is conducted on programs whether they contained Personally Identifiable Information (PII), Identifiable Business Information (IBI), or both. Identifiable information is defined as information that actually identifies people or businesses. Examples include direct references such as name, address, social security number, employer identification number, financial information, or other identifying number or code such as telephone number, email address, etc. It also includes any information used separately or in combination to reference other data elements that are used for identification such as gender, race, birth data, or geographic indicator. These two types of identifiers (PII and IBI) allow identification of specific individuals or businesses, as defined in the glossary. A partial DS/PIA (i.e., just the identification and systems components) is conducted in OMB Exhibit 300s that represent infrastructure system programs involving no "ownership" of data under the premise that the data and activity, or "program" components of the DS/PIA, are covered by program area DS/PIAs.

The DS/PIA is organized by the Census Bureau's four Privacy Principles, addressing:

- Mission Necessity
- Openness
- Respectful Treatment of Respondents
- Confidentiality

A complete assessment ensures alignment with Census Bureau data stewardship strategies, goals, principles and policies. The guidance from OMB directs that PIAs cover the following items:

- 1. What information is to be collected.
- 2. Why the information is being collected.
- 3. The intended use of information by the agency.
- 4. With whom the information will be shared.
- 5. What notice or opportunities for consent would be provided to individuals regarding what information is collected and how that information is shared.
- 6. How the information will be secured.
- 7. Whether a system of records is being created under Section 552a of Title 5, United State Code, (commonly referred to as the "Privacy Act").

We address these items in three groupings, consistent with our privacy principles:

- The nature and type of **data** being collected (Items 1, 2, and 5 in part, above)
- The activities surrounding the handling of, use of, and access to the data (Items 3, 4, 5 in part, and 7 above)
- · The computer systems through which the data will pass and/or in which they will reside (Item 6, above)

The first two components comprise the "project" aspects of the program, while the third focuses on supporting systems. The DS/PIA assessment uses responses to a series of questions measuring sensitivity and mitigation to achieve a net rating of low, medium, or high for the "data" and "activity" aspects of a project. Project data sensitivity may vary substantially, however stringent mitigation activities keep all project data protected. The goal is to mitigate projects from high or medium to the medium or low levels. For the third component, the net assessment score comes from the security review and certification process, with the documentation based on agency security plans.

Most of the mitigation questions ask about the applicability of and conformance to statute, regulation, or policy. The Census Bureau's data stewardship policies covers most of the data, activity, and systems sensitivity areas. In a few cases, policies are under development. Therefore, the tool asks about additional activities that a program area may voluntarily undertake to reduce or mitigate sensitivity or risk.

Staff familiar with the privacy principles, policies and the DS/PIA tool assist program managers in completing the DS/PIA through face-to-face meetings, thereby ensuring consistency and understanding.

Limitations

The Census Bureau's plan for this tool is for it to be used by program and project managers throughout the lifecycle of the project; beginning as part of the initial decision making process when initiating and designing projects involving the collection or use of identifiable data and the dissemination of protected products by disclosure avoidance techniques. However, during the first implementation, the tool was used primarily to reflect the current state of program plans, which serves as a benchmark for future PIA assessments. This limitation of our tool is offset by the fact that the current state of programs is currently influenced by data stewardship policies and controls that are at the foundation of this assessment tool. In the future, the Census Bureau intends to utilize the original strategy of asking subsets of questions from the PIA assessment throughout the project development life cycle. This approach will allow for the PIA tool to be an intrinsic part of the project management process at the Census Bureau and assure that data stewardship becomes an integral part of program decision-making.

In addition, because the scoring system used to identify the adequacy of mitigation activities to sensitivities focus on net, or mitigated results, it is possible that some variation across programs may be masked. To address that concern, the unmitigated risk score is provided on the scoring sheets. Finally, there are a few content areas where additional analysis would be beneificial. We envision progressing on each of these issues as our tool develops.

DATA STEWARDSHIP/PRIVACY IMPACT ASSESSMENT USER GUIDE AND GLOSSARY

The Census Bureau's DS/PIA exists in Microsoft Excel, and each of the following sections is provided on a separate "sheet."

Sheet 1: Cover Page

Sheet 2: Introduction

Sheet 3: User Guide/Glossary

Sheet 4: The DS/PIA Instrument

Sheet 5: The DS/PIA System Write-up

Sheet 6: The DS/PIA Data Sensitivity Worksheet

Sheet 7: The DS/PIA Activity Sensitivity Worksheet

This sheet is the User Guide/Glossary, with an explanation of the items on sheets four through seven.

The DS/PIA Instrument

The instrument poses a set of questions to program managers. Program identification questions are asked to ensure a clear link to OMB Exhibit 300 or Paperwork Reduction Act (PRA) Information Collection Request (ICR), among other items.

The next set of questions under the first Privacy Principle on Mission Necessity covers the breadth and depth of a data collection, and whether sensitive topics are addressed. Sensitive topics are defined as: abortion; alcohol, drug, or other addictive products; illegal conduct; illegal immigration status; information damaging to financial standing, employability, or reputation; information leading to social stigmatization or discrimination; politics; psychological well-being or mental health; religion; same-sex partners; sexual behavior; sexual orientation; taxes; and other information due to specific cultural or other factors. The Census Bureau considers religion a uniquely sensitive topic and has a specific policy on the collection of information about religion.

The second Privacy Principle on Openness asks about tracking of notification for mandatory data collections, and about tracking of consent for voluntary data collections. It also asks about consent related to the use of proxies or data from third parties, which are often, but not always administrative records from other federal agencies.

The third Privacy Principle on Respectful Treatment of Respondents is relevant to the actual data collection activities. It asks about targeting population groups, and about burden and frequency of the collection.

The fourth Privacy Principle on Confidentiality covers internal controls related to need-to-know access, use of off-site facilities, data transfers among systems, dissemination of products that have been protected by disclosure avoidance techniques, and archiving plans. It asks about control of any sensitive data (including sensitive topics, but broader) or information.

The DS/PIA Data Sensitivity Worksheet

This sheet categorizes all of "data" related questions asked on the instrument into either "sensitivities" or "mitigations." For example, asking about a sensitive topic introduces "sensitivities" to the project. Ensuring adherences to the Respondent Identification Policy, which addresses within household confidentiality, is a mitigation activity. A score is associated with each question to "net" a ranking by topic of low, medium, or high for each topical area. The objective is both to assess strengths for each topical area and for the overall project's "data" components.

The DS/PIA Activity Sensitivity Worksheet

This sheet is organized in the same manner as the Data Sensitivity Sheet. It covers all of the activity-related question topics, such as those related to use of Special Sworn Status or use of off-site facilities.

The DS/PIA IT Systems Risk Worksheet

This narrative describes the specific mitigations in place for the particular IT systems supporting a program. It also describes the Census Bureau's IT security review and certification process, which is undertaken for a computer system. The DS/PIA uses results from this process to inform its systems component.

Glossary

Administrative Records - Administrative records and administrative records data refer to microdata records contained in files collected and maintained by administrative (i.e., program) agencies and commercial entities. Government and commercial entities maintain these files for the purpose of administering programs and providing services. Administrative records are distinct from systems of information collected exclusively for statistical purposes, such as those the U.S. Census Bureau produces under the authority of Titles 13 or 15 of the United States Code (U.S.C.). For the most part, the Census Bureau uses, and seeks to use, administrative records developed by federal agencies, as directed by Title 13, Section 6. To a lesser degree, it may use information from state, local, and tribal governments, as well as from commercial entities.

Administrative Records Handbook - The Administrative Records Handbook, re-issued on May 16, 2001, states the restricted access policy for administrative records and describes the processes and procedures that implement the policy. It is available on-line at the Policy Office Intranet site.

Articulating the Title 13 Benefits of Census Bureau Projects Policy - This policy provides guidance and criteria for determining whether a project delivers a benefit to the Census Bureau. The policy is available from the Census Bureau's Policy Office.

Commingled Data Sets - These are files that contain Administrative Records data, such as tax data, along with Title 13-protected data. Such files remain commingled even if the Administrative Records data use was limited to the sample selection phase. They are typically subject to both Title 13 and any additional data-supplier imposed restrictions.

Confidentiality Protection in Statute - United States Code, Title 13, Sections 9 and 214 protects the confidentiality of personal information, including about businesses, collected during the decennial census and other censuses.

Controlling Non-Employee Access to Title 13 Data Policy - Issued on July 15, 2002, this policy provides guidance on (1) when it is appropriate to confer special sworn status (SSS) on an individual for purposes of working with Census Bureau confidential data; and (2) when it is appropriate for access to those data to take place at a non-U.S. Census Bureau site or facility, including security requirements. The policy is available through the Census Bureau's Policy Office.

Data Stewardship Assurance Mechanisms - Data Stewardship is a management approach to decision-making that facilitates meeting our mission requirements to collect and publish high quality data about our Nation's people and economy and satisfies our ethical and legal requirements to respect the privacy and protect the confidentiality of all U.S. Census Bureau respondents, customers, contractors or bidders, and employees.

Data Stewardship assures that the Census Bureau can effectively collect and its customers can use high quality data about the Nation's people and economy while fully meeting the Census Bureau's ethical and legal obligations to respondents to respect privacy and protect confidentiality. This includes fully meeting the legal and reporting obligations levied by the Census Act, the Privacy Act, and other applicable statutes, including the requirements of governmental and other suppliers of data to the Census Bureau. It also includes meeting the ethical standards identified by our Privacy Principles and other data stewardship best practices. It assures that high quality data are available for use through effective application of security and technology. It includes the use of alternative data sources as appropriate to reduce burden, minimize cost, and improve data quality and timeliness. Our Data Stewardship approach is supported by our culture, education, awareness, methodologies, and organizational structure.

Disclosure Review Board (DRB) Checklist on Disclosure Potential of Data - Is a tool that assists the DRB in reviewing disclosure-limited data products. The checklist are completed and submitted to the DRB.

Geospatial Information - This term covers the collection, information extraction, storage, dissemination, and exploitation of geodetic and geomagnetic imagery (both commercial and national source), gravimetric, aeronautical, topographic, hydrographic, littoral, cultural, and toponymic data accurately referenced to a precise location on the earth's surface. It is information produced by multiple sources to common interoperable data standards. It may be presented in the form of printed maps, charts, and publications; in digital simulation and modeling databases; in photographic form; or in the form of digitized maps and charts or attributed centerline data.

High Sensitivity - High sensitivity projects involve data or activities that, if not mitigated, can significantly harm public confidence in the Census Bureau's ability to protect privacy and confidentially, thereby significantly inhibiting its ability to carry out its mission.

Identifiable form - As defined by the OMB Order Providing for the Confidentiality of Statistical Information, identifiable form "means any representation of information that permits information concerning a specific respondent to be reasonably inferred by either direct or indirect means."

Identifiable Information (II) - This is information that actually identifies persons (see persons). Examples include direct reference such as name, address, social security number, employer identification number, financial information, or other identifying number or code such as telephone number, email address, etc. It also includes any information used to reference other data elements that are used for identification such as gender, race, birth date, geographic indicator, etc.

Personally Identifiable Information (PII) - Identifiable Information (II) that refers to individuals.

Identifiable Business Information (IBI) - Identifiable Information (II) that refers to organizations or businesses.

Information - As defined by the OMB Order Providing for the Confidentiality of Statistical Information, information "means information of any kind that is not generally available to the public, and includes data."

Informed Consent - This is the agreement of the respondent to provide personal data for research and/or statistical purposes based on the full exposure to the facts, including any risks involved and available alternatives to providing the data needed to make an intelligent decision to participate. It applies when respondents have a clear choice to participate or not and are not subject to any penalties for failing to provide data.

Low Sensitivity - Low sensitivity projects involve data or activities that, if not mitigated, have limited potential to harm public confidence in the Census Bureau's ability to protect privacy and confidentially, thereby having limited potential to inhibit its ability to carry out its mission.

Medium Sensitivity - Medium sensitivity projects involve data or activities that, if not mitigated, can harm public confidence in the Census Bureau's ability to protect privacy and confidentially, thereby somewhat inhibiting its ability to carry out its mission.

Microdata File - These are electronic files consisting of individual records each containing values of variables for a single person, business establishment or other unit.

Moderate Risk Level - NIST FIPS 199 defines a "Moderate risk level" as: "The event could be expected to have a serious adverse effect on agency operations (including mission, functions, image or reputation), agency assets, or individuals. The event causes significant degradation in mission capability, places the agency at a significant disadvantage, or results in major damage to assets, requiring extensive corrective actions or repairs."

Notification - Denoted for a condition in which the respondent provides personal data for a mandatory data collection. As with informed consent, the respondent provides data under a full exposure to the facts associated with the collection, but the choice or agreement to participate is not present.

OMB Exhibit 300 - The Exhibit 300 is designed to coordinate OMB's collection of agency information for its reports to Congress required by the Federal Acquisition Streamlining Act of 1994 (FASA) (Title V) and the Clinger-Cohen Act of 1996; to ensure that the business case for investments is made and tied to the mission statements, long-term goals and objectives, and annual performance plans developed pursuant to the Government Performance and Results Act of 1993 (GPRA); and for Information Technology, to ensure that security, privacy, records management, and electronic transactions policies are fully implemented.

Persons - As defined by the OMB Order Providing for the Confidentiality of Statistical Information, persons "mean individuals, organized groups of individuals, societies, associations, firms, partnerships, business trusts, legal representatives, companies, joint stock companies, and corporations, and refers to both the singular and the plural."

Privacy - This concerns how the Census Bureau respects and minimizes intrusion on the personal life or business operations of the respondent by the manner of collecting information and the nature of the information sought.

Privacy Impact Assessments (PIA) - PIAs are required by the E-Government Act of 2002 and by the Office of Management and Budget (OMB) Circular Number A-11, OMB Exhibit 300, "Capital Asset Plan and Business Case." According to OMB, "PIAs are structured reviews of how information is handled: (i) to ensure handling conforms to applicable legal, regulatory, and policy requirements, (ii) to determine the risks and effects of collecting, maintaining and disseminating information in identifiable form in an electronic information system, and (iii) to identify and evaluate protections and alternative processes for handling information to mitigate potential privacy risks." PIAs also ensure consistency with an organization's privacy principles, procedures, and controls. Despite the use of the term "privacy," PIAs typically cover privacy, confidentiality, security, and data use issues.

Public-Use Microdata Files - These are statistical products released without restriction on use or other conditions except for payment of purchase fees. These are files with records that contain information about individuals or households, or about businesses, with all personal identifiers removed. They are released only after disclosure avoidance techniques have been applied to protect the data.

Reimbursable Project Acceptance Criteria Policy - This policy establishes criteria for accepting reimbursable projects at the U.S. Census Bureau. This covers all projects for which the Census Bureau would receive funds and for which a BC-505-A form is required by the Budget Office, excluding product sales. The policy is available at the Policy Office Intranet site.

Respondent - As defined by the OMB Order Providing for the Confidentiality of Statistical Information, respondent "means a person (other than a Federal employee responding to inquiries within the scope of his employment, see CFR 1320.3(c)(4)) who is requested to provide information, or is the subject of that information, or who provides that information." (See "persons.")

Respondent Identification Policy - Issued on August 6, 1998, the policy provides guidance for the decennial census and household surveys employing dependent interviewing techniques. The policy applies when field representatives revisit a household for a follow-up interview or quality control operation, and the field representative is instructed to update/review information previously provided. The policy is available at the Policy Office Intranet site.

Sensitive Information - This is defined in the Computer Security Act of 1987 as, "... any information, the loss, misuse, or unauthorized access to or modification of which could adversely affect the national interest or the conduct of federal programs, or the privacy to which individuals are entitled under section 552a of Title 5, United States Code (the Privacy Act), but which has not been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept secret in the interest of national defense or foreign policy." This includes information about Census Bureau investigations, enforcement actions, personnel contracts, financial matters, EEO cases, and reorganizations.

Sensitive Topics - They include: abortion; alcohol, drug or other addictive products; illegal conduct; illegal immigration status; income, information damaging to financial standing, employability, or reputation; information leading to social stigmatization or discrimination; politics; psychological well-being or mental health; religion; same-sex partners; sexual behavior; sexual orientation; taxes; and other information due to specific cultural or other factors. The Census Bureau considers religion a uniquely sensitive topic and has a specific policy on the collection of information about religion.

Special Sworn Status (SSS) - Special Sworn Status is the designation given to non-employees who are given the Oath of Nondisclosure in order to access confidential, and other statutory protected data, in support of Title 13 programs. SSS is authorized by Title 13, U.S.C., Section 23(c), which permits the temporary staff to be sworn to assist the work of the Census Bureau provided they observe the limitations imposed by Title 13, U.S.C., Section 9.

System of Records - Under the Privacy Act, it is defined as "a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual."

Tabular Data - Tabular data is a means of bringing together and presenting related material or other information in columns or rows.

Title 13 Training - This refers to the Title 13 Computer-Based Training (CBT) used to teach those new to the Census Bureau and to annually remind current workers of the Census Bureau's strict confidentiality standards and how the standards apply to everyday worklife at the Census Bureau. The training provides awareness and a basic understanding of the oath of nondisclosure, the confidentiality aspects of Title 13, the basic differences between Title 13 and Title 15, and the Privacy Principles and Unauthorized Browsing policy.

Unauthorized Browsing - It is the act of searching or looking through, for other than work-related purposes, protected personal or business-related information that directly or indirectly identifies individual persons or businesses. Unauthorized browsing is prohibited.

U.S. Census Bureau IT System Security Evaluation for Privacy Impact Assessments <u>Economic Census and Surveys and Special Processing - CEN03</u> Risk Level – Moderate

The Census Bureau IT Security Office, based on the information contained in the IT security documentation provided for the Economic Census and Surveys and Special Processing system, has determined the risk level of the system to be moderate. This risk level was determined by a careful review of information relating to IT configuration and security controls that make up the Economic Census and Surveys and Special Processing system. In addition to an independent review of security controls, the program area coordinated with the Technical Security Staff of the IT Security Office to perform a technical vulnerability assessment scan on the Economic Census and Surveys and Special Processing computing system. Security risks defined by this scan were corrected by the program area and were documented as part of the package provided to the Census Bureau Chief Information Officer (CIO) for authorization to process sensitive data on the Census Bureau network. The main computing system that stores and processes the Personally Identifiable Information (PII) and Identifiable Business Information resides behind the Census Bureau firewall. Access to the system and file structure is controlled by access control lists and specific user privileges. All activity on the system is recorded in security audit logs that are reviewed on a regular basis by designated personnel. Any anomalies noted are reported to the Census Bureau IT Security Office, which conducts an investigation and documents the findings for management review.

Data collection and input activities are resident in the Census Bureau Economic Census and Surveys and Special Processing (CEN03).

The Census Bureau classifies its IT systems risk levels as high, moderate, or low as indicated by the individual risk levels to confidentiality, integrity, and availability. Confidentiality risk has the greatest bearing on privacy per the risk levels defined in the NIST Federal Information Processing Standards (FIPS) Publication 199. Confidentiality is defined as "Preserving authorized restrictions on information access and disclosure, including means for protecting privacy and proprietary information." Systems judged to be moderate risk systems are further defined as systems processing information for which "The unauthorized disclosure of information could be expected to have a serious adverse effect on agency operations (including mission, functions, image or reputation), agency assets, or individuals. A loss of confidentiality could be expected to cause significant degradation in mission capability, place the agency at a significant disadvantage, or result in major damage to assets, requiring extensive corrective actions or repairs." The Census Bureau standard for any system that processes sensitive information protected under United States Code is to have minimum-security controls in place for a system at the moderate risk level. The system may be elevated to a high-risk category if warranted: when combined with specific program information during the Privacy Impact Assessment process, or when the system functions change during the life cycle. Risk levels are reviewed regularly by the IT Security Office, program areas, and the Privacy Office to ensure that they reflect the level most appropriate for the system based on the PIA life-cycle and processing requirements.

The Census Bureau has organized its IT systems by business area into 17 major systems and all are categorized at the Sensitive, But Unclassified level. Each of these systems has a security plan completed in accordance with NIST Special Publication 800-18 and the requirements of the Federal Information Security Management Act, Title III of the E-Government Act of 2002. The security plans are prepared by the system owners and provide the basis for identification and implementation of required security controls. These controls ensure the appropriate level of security is applied, relative to the overall risk level of the system. Each system security plan provides the following information pertaining to the system:

Section:

- 3.2.1 System Name/Title
- 3.2.2 Responsible Organization
- 3.2.3 Information Contact (System Owner)
- 3.4 General Description/Purpose (Describes the type of data, as well as a general overview of functions)
- 3.5 System Environment
- 3.6 System Interconnection/Information Sharing
- 3.7 Sensitivity of Information Handled
- 3.7.1 Laws, Regulations, and Policies Affecting the System
- 3.7.2 General Level of Sensitivity (Pertaining to confidentiality, integrity, and availability).
- 4.1 Risk Assessment and Management
- 4.2 Review of Security Controls (How does the system comply with existing security policies?).
- 4.3 Rules of Behavior (Delineates the responsibilities and expected behavior of all individuals with access to the system.
- 5.1 Personnel Security (Contains information about personnel security measures)
- 6.1 Identification and Authentication
- 6.2 Logical Access Controls (Authorization/Access Controls)
- 6.3 Public Access Controls
- 6.4 Audit Trails

The Census Bureau uses a multi-step IT security planning process that begins with the identification of a new system or modification to an existing system. Once identified, the system owner contacts the IT Security Office (ITSO) to determine what level of documentation is required for their system. The system owner develops and submits his/her documentation to the IT Security Office for review. The ITSO, working with the Information System Support and Review Office, coordinates with the system owner to ensure that all required information has been provided. Concurrently, a technical security review of the security controls and system security level is conducted by the ITSO to determine if the system's controls comply with the published security policies. This review also assures that all technical vulnerabilities are either corrected or mitigated to an acceptable level of risk prior to the CIO's authorization of the system to process sensitive data.

The Census Bureau has fully integrated the IT security process into its business planning. The IT security personnel are involved in the early stages of projects to ensure that appropriate security controls are addressed and that project personnel understand, and are responsive to, IT security requirements for protecting their systems and the data they process. This involvement extends throughout the life cycle of the project, and regular reviews are conducted to ensure continued compliance with security requirements.

All systems identified in the Census Bureau inventory have been Certified and Accredited using the "Guide for the Security Certification and Accreditation of Federal Information Systems", NIST Special Publication 800-37.

Security documentation, risk assessments, and corrective action plans for each system are kept on file in the ITSO and made available as requested to authorized individuals. These documents are classified as "For Official Use Only" and access is restricted to individuals with a demonstrated need to know.

The Census Bureau has ensured that the security controls required by NIST for systems with a moderate risk level are in place using the NIST guidance, "Guide for Mapping Types of Information and Information Systems to Categories, Special Pub 800-60, and "Standards for Security Categorization of Federal Information and Information Systems," FIPS Pub 199.
