GENERAL DESCRIPTION

The Well Bore tape file is set up in a hierarchical structure with the Well Bore Root (API Number) being the root of the file (see page I.2). The Well Bore Root is a segment of the data base that contains API Numbers in numerical order. An API number is a unique number assigned to every well bore in the state. The key is the first two bytes of each record that identifies the segment (see page I.3). For each specific well bore (key=01) there may be information from each segment pertaining to that well bore (e.g. Completion, key=02; Date, key=03; etc.).

To proceed to the next well bore on the tape, look for the next key=01 record.

The symbol indicating a recurring segment(^) shown on page I.2, means, for example, there can be more than one completion, plug, drilling permit, etc., for one well bore.
