NOTICE OF INDEPENDENT REVIEW DETERMINATION

TWCC Case Number:	
MDR Tracking Number:	M5-03-2751-01
Name of Patient:	
Name of URA/Payer:	Downtown Plaza Imaging
Name of Provider: (ER, Hospital, or Other Facility)	Downtown Plaza Imaging
Name of Physician: (Treating or Requesting)	Rafael Loya, DC

August 20, 2003

An independent review of the above-referenced case has been completed by a medical physician [board certified] in physical medicine and rehabilitation. The appropriateness of setting and medical necessity of proposed or rendered services is determined by the application of medical screening criteria published by Texas Medical Foundation, or by the application of medical screening criteria and protocols formally established by practicing physicians. All available clinical information, the medical necessity guidelines and the special circumstances of said case was considered in making the determination.

The independent review determination and reasons for the determination, including the clinical basis for the determination, is as follows:

See Attached Physician Determination

Medical Review of Texas (MRT) hereby certifies that the reviewing physician is on Texas Workers' Compensation Commission Approved Doctor List (ADL). Additionally, said physician has certified that no known conflicts of interest exist between him and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for determination prior to referral to MRT.

Sincerely,

Michael S. Lifshen, MD
Medical Director

cc: Texas Workers Compensation Commission

CLINICAL HISTORY

32 year old female sustained a lifting injury on 8/___/01 while at work as a cafeteria worker for Spring Branch ISD. The patient's symptomology is lumbar-sacral discogenic pain but her diagnosis is bilateral S1 radiculopathy.

REQUESTED SERVICE(S)

Medical necessity of lumbar epidural steroid injection on 7/25/02.

DECISION

Uphold previous denial.

RATIONALE/BASIS FOR DECISION

The patient has no radicular pain. According to numerous uncontrolled trials, epidural steroid injections are an accepted treatment for radicular pain. The rationale for their use is supported by a 33-7% radicular pain relief rate. Please see the work by H.T. Benzon, 1982 and S.E. Abram, 1991.
