aluminum oxides coatings direct power generators Golay detector cells monomolecular films photoelectric cells photothermal conversion selective surfaces semiconducting films thermochromic coatings energy bands energy bands . Bloch band conduction bands forbidden bands RT ∞ bands electronic structure excitons laser windows quantum wells

### energy budgets

Quantitative descriptions of the total energy exchange into and out of a given physical or ecological system; may include radiation heat, kinetic, and biological process.

#### energy budgets

. Earth radiation budget

. heat budget

spectral bands

windows (intervals)

. atmospheric heat budget

atmospheric energy sources

∞ budgets exergy

#### energy conservation

GS conservation

. energy conservation

RT ∞ energy energy policy

exergy

power factor controllers residential energy resource allocation

resources thermochromic coatings

# energy consumption

GS

consumption
energy consumption
coal utilization

commercial energy domestic energy

∞ energy sources fuel consumption industrial energy

### energy conversion

DEF The change of a working substance or natural power into a more useable form of energy such as electricity or mechanical motion.

# GS energy conversion

. biomass energy production

. geothermal energy conversion

. ocean thermal energy conversion

. satellite solar energy conversion

. solar energy conversion

. . photothermal conversion

. thermophotovoltaic conversion

. . photovoltaic conversion

... thermophotovoltaic conversion

. . solar total energy systems

waterwave energy conversion

cogeneration commercial energy

∞ conversion

direct power generators

domestic energy geothermal energy extraction

hydrogen production hydrothermal systems

industrial energy integrated energy systems

laser power beaming lianite

organic wastes (fuel conversion)

power beaming power conditioning satellite solar power stations solar ponds (heat storage) solar sea power plants space industrialization transportation energy waste energy utilization

#### energy conversion efficiency

. energy conversion efficiency

carrier transport (solid state)

∞ conversion

direct power generators

∞ energy

energy absorption

engines exergy fuel cells

generators

motors open circuit voltage photothermal conversion

power conditioning power factor controllers quantum efficiency

Redox cells

thermophotovoltaic conversion

tide powered generators transducers

volumetric efficiency waterwave energy conversion

energy converters
USE direct power generators

energy density USE flux density

energy dissipation

DEF The difference between energy input and output as a result of transfer of energy between two points. Used for energy loss.

UF energy loss
GS dissipation

. energy dissipation dielectric loss exergy

friction insertion loss

Lagrange similarity hypothesis

losses nonadiabatic theory

∞ power loss

traveling charge

#### energy distribution

distribution (property)

energy distribution

. spectral energy distribution

equipartition theorem flux density

force distribution

integrated energy systems quantum mechanics statistical mechanics

#### Energy Efficiency Transport program

USE ACEE program

energy equipartition

USE equipartition theorem

energy exchange USE energy transfer

### energy gaps (solid state)

A range of forbidden energies in the band theory of solids. Used for bandgap.

bandgap GS gaps

. energy gaps (solid state) band structure of solids

blue shift electronic structure MODFETS modulation doping quantum well lasers quantum wells

solid state

∞ solid state physics

#### energy levels

DEF Any one of different values of energy which a particle, atom, or molecule may adopt under conditions where the possible values are restricted by quantizing conditions. Used for electronic levels.

electronic levels GS

level (quantity)

# energy levels

- . . atomic energy levels
- . . electron states
- ground state
- . . molecular energy levels . . . intermolecular forces
- ... rotational states
- . . . vibrational states

. yrast state RT atomic excitations

atomic structure electron tunneling

electronic structure excitation

Fermi surfaces molecular excitation nuclear capture

nuclear models

nuclear quadrupole resonance nuclear spin nuclear structure population inversion quantum numbers quantum theory

energy loss

USE energy dissipation

### energy methods

GS structural analysis

Structural analysis
 energy methods
 Bernstein energy principle
 strain energy methods

RT Castigliano variational theorem matrices (mathematics)

 $\infty \, \text{methodology}$ stress analysis

# energy of formation

GS chemical energy

. energy of formation

# Explorer 44 satellite

DEF The tenth in a series of solar radiation monitoring satellites launched from Wallops Island, VA on July 8, 1971, to measure x rays and ultraviolet radiation from the sun. It was operational until June 3, 1978. Used for Solrad 10 satellite.

# Explorer 46 satellite

DEF A satellite designed to study meteoroid protective ability of spacecraft launched from Wallops Island, VA on August 13, 1972. Two scientific experiments also on board were to determine the size and the velocity of meteoroids. The velocity experiment failed to work due to excessive heat. Used for Meteoroid Technol-

ogy Satellite. UF Meteoroid Technology Satellite

#### frequency division multiple access

DEF A method of providing multiple access to communication satellites in which the transmissions from a particular Earth station occupy a particular assigned frequency band. In the satellite, the signals are simultaneously amplified and transposed to a different frequency band and retransmitted. The Earth station identifies its receiving channel according to its assigned frequency band in the satellite signal. Used for FDMA.

#### functionally gradient materials

(added September 1992)

Composite materials that consist of a gradual compositional variation from ceramic to metal from one surface to the other. These continuous changes result in property gradients which can be adjusted by controlling the composition. Used for FGM (materials).

African rift system San Andreas Fault crevasses crustal fractures earthquake damage earthquakes ∞ faults fissures (geology) folds (geology) formations inliers (landforms) landforms massifs mid-ocean ridges plates (tectonics) Rouse belts San Andreas Fault experiment synclines geological surveys GS surveys geological surveys exploration geodetic surveys geology geophysics paleontology petrology photogeology radar geology geology The study of the planet Earth--the materials of which it is made, the processes that act on these materials, the products formed, and the history of the planet and its life forms since its origin. Geology considers the physical forces that act on the Earth, the chemistry of its constituent materials, and the biology of its past inhabitants as revealed by fossils. Clues on the origin of the planet are sought in a study of the Moon and other extraterrestrial bodies. The knowledge thus obtained is placed in the service of man--to aid in the discovery of minerals and fuels of value in the Earth's crust, to identify geologically stable sites for major structures, and to provide foreknowledge of some of the dangers associated with the mobile forces in a dvnamic Earth. geology . beds (geology)

#### geometric accuracy

DEF The internal geometric fidelity of an imaging system.

accuracy

#### geometric accuracy

distortion geometric rectification (imagery) image processing image resolution

## geometric dilution of precision

DEF A navigation and positioning system performance index expressing the dilution of range measurement precision due to the geometric relationship between user and satellites. It is formulated as the square root of the sum of the variances of position estimates in the three orthogonal directions and can be employed to determine the optimal locations for network satellites and in the selection of optimal satellite signals sources. Used for GDOP.

**GDOP**

## geophysics

DEF The physics of the Earth and its environment, i.e., its solid earth, air, waters, and (by extension) space. Classically, geophysics is concerned with the nature of and physical occurrences at and below the surface of the Earth including, therefore, geology, oceanography, geodesy, seismology, and hydrology. The trend is to extend the scope of geophysics to include meteorology, geomagnetism, astrophysics, and

waveguides

gyres

Closed circulatory systems in a body of water, larger than an eddy or a whirlpool. There is a circular motion of water in each of the major ocean basins, centered on a subtropical highpressure region. These movements are generated by connective flow of warm surface water poleward, by the deflective effect of the Earth's rotation and by the effects of prevailing winds. The water within each gyre turns clockwise in the Northern Hemisphere and counterclockwise in the Southern Hemisphere. Acceleration causes sea level to fall along mainland coasts; deceleration leads to rise.

gyrocompasses

Compasses consisting of a continuously driven Foucault gyroscope whose supporting ring normally confines the spinning axis to a horizontal plane, so that the Earth's rotation causes the spinning axis to assume a position in a plane passing through the Earth's axis, and thus to point to true north.

#### heterophoria

UF exophoria RT vision

#### heterosphere

The upper portion of a two part division of the atmosphere according to the general homogeneity of atmospheric composition; the layer above the homosphere. The heterosphere is characterized by variation in composition and mean molecular weight of constituent gases. This region starts at 80 to 100 kilometers above the Earth, and therefore closely coincides with the ionosphere and the thermosphere.

### high electron mobility transistors

(added November 1992)

DEF A recently developed field effect transistor based on the technique of modulation doping of GaAs/Al(x)Ga(1-x) as heterojunctions. This technique achieves high mobility in part by introducing carriers into high purity GaAs from donor ions in an adjacent A1GaAs layer, the electrons and ions being separated by the built-in heterojunction potential. Used for HEMT (electronics)

- ∞ generators

# homosphere

The lower portion of a two part division of the atmosphere according to the general homogeneity of atmospheric composition; opposed to the heterosphere. The region in which there is no gross change in atmospheric composition, that is, all the atmosphere from the Earth's surface to about 90 kilometers. The homosphere is about equivalent to the neutrosphere, and includes the troposphere, stratosphere, and mesosphere; it also includes the ozonosphere and at least part of the chemosphere.

Huygens principle

DEF A very general principle applying to all forms of wave motion which states that every point on the instantaneous position of an advancing phase front (wave front) may be revarieting phase from (wave from his year garded as a source of secondary spherical wavelets. The position of the phase front a moment later is then determined as the envelope of all the secondary wavelets (ad infinitum). RT diffraction

#### ill-posed problems (mathematics)

(added March 1994)

Problems corresponding to physical system models whose solutions do not satisfy Hadamard's criteria for 'well posedness,' i.e., existence, uniqueness, and continuous dependence on initial data. Most commonly, such problems stem fundamental physical limitations on the accessibility of information about the object or process being studied. (See also ILL-CONDITIONED PROBLEMS)

improperly-posed problems (mathematics) boundary value problems differential equations Fredholm equations ill-conditioned problems (mathematics) integral equations iterative solution numerical analysis numerical stability problem solving

#### illuminance

uniqueness

(LIMITED TO DETECTION RATE PER UNIT AREA OF VISIBLE RADIATION-EQUALS LIGHT PRESSURE TIMES SPEED OF LIGHT)

DEF The total luminous flux received on a unit area of a given real or imaginary surface, expressed in such units as the footcandle, lux, or phot. Illuminance is analogous to irradiance, but is to be distinguished from the latter in that illuminance refers only to light and contains the luminous efficiency weighting factor necessitated by the nonlinear wavelength response of the human eye. Used for light pressure.

(added November 2000)

DEF A medium class Explorer (MIDEX) mission to study the global response of the Earth's magnetosphere to changes in the solar wind. IMAGE (Imager for Magnetopause-to-Aurora Global Exploration) will use neutral atom, ultraviolet, and radio imaging techniques to: (a) identify the dominant mechanisms for injecting plasma into the magnetosphere on substorm and magnetic storm time scales; (b) determine and magnetic storm time scales; (b) determine the directly driven response of the magneto-sphere to solar wind changes; and, (c) discover how and where magnetospheric plasmas are energized, transported, and subsequently lost during substorms and magnetic storms.

comparison

intercalibration

(added January 1999)

DEF Calibration between two or more data sources, including (1) the comparison of data sets acquired by different types of measurement systems for the purpose of deducing the calibration values for one of the measurement systems; (2) the mutual calibration of data from different measurement systems through the comparison of the data with model calculations; and (3) the calibration of multiple detectors on a single instrument through the comparison of data from each detector.

#### interfaces

A common boundary between two parts of a system, whether material or non material. Specifically, in a rocket vehicle or other mechanical assembly, a common boundary between two components. Specifically, in fluid dynamics, a surface separating two fluids across which there is a discontinuity of some fluid property such as density or velocity or of some derivative of these properties in a direction normal to the interface. The equations of motion do not apply at the interface but are replaced by the boundary conditions.

#### interferometers

Apparatus used to produce and measure interference from two or more coherent wave trains from the same source. Interferometers are used to measure wavelengths, to measure angular width of sources, to determine the angular position of sources (as in satellite tracking), and for many other purposes.

Charged atoms or molecularly bound groups of atoms; sometimes also free electrons or other charged subatomic particles. In atmospheric electricity, any of several types of electrically charged submicroscopic particles normally found in the atmosphere. Atmospheric ions are of two principal types, small ions and large ions, although a class of intermediate ions has occasionally been reported. In chemistry, atoms or specific groupings of atoms which have gained or lost one or more electrons, as the chloride ion or ammonium ion. Such ions exist in aqueous solutions and in certain crystal structures.
