# **Terms and Conditions of Use**

Purchase or receipt of this product indicates the customer's acceptance of the following terms and conditions:

- NASA does not grant exclusive use rights with respect to this product or the data contained therein.
- This product and the data contained therein are intended for the sole use of the customer. The data may not be installed on any system with public Internet access. The customer may not reproduce the data for distribution to any third party. Additional requests should be directed to the NASA Center for AeroSpace Information (help@sti.nasa.gov).
- The sale of this product shall not be construed to constitute the grant of exclusive rights in the data contained therein or any form of license to the customer under a NASA or Government patent, patent application, or invention.
- The customer will not assert any proprietary rights to any portion of the data, or attribute the data to any source other than NASA.
- With respect to data contained in this product, neither the U.S. Government, NASA, nor any of its employees or contractors make any representations or warranties, express, implied, or statutory, as to the validity, accuracy, completeness, or fitness for a particular purpose; nor assume any liability resulting from the use of such data and shall in no way be liable for any costs, expenses, claims, or demands arising out of the use of such data.

# NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NASA Aeronautics and Space Database and its public interface, the NASA Technical Report Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM.
   Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION.
   Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION.
   English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include organizing and publishing research results, distributing specialized research announcements and feeds, providing help desk and personal search support, and enabling data exchange services.

For more information about the NASA STI program, see the following:

- Access the NASA STI program home page at http://www.sti.nasa.gov
- E-mail your question via the Internet to help@sti.nasa.gov
- Fax your question to the NASA STI Help Desk at 443-757-5803
- Phone the NASA STI Help Desk at 443-757-5802
- Write to: NASA STI Help Desk NASA Center for AeroSpace Information 7115 Standard Drive Hanover, MD 21076-1320

**Volume 2** • **Rotated Term Display** 

# Introduction

The NASA Thesaurus contains the authorized subject terms by which the documents in the NASA Aeronautics and Space Database are indexed and retrieved. The NASA Thesaurus comprises two volumes: Volume 1 – Hierarchical Listing With Definitions and Volume 2 – Rotated Term Display.

The *Hierarchical Listing With Definitions* contains all subject terms and USE cross references currently approved for use, and displays the full hierarchical structure for each term along with a definition when available. In addition, the listing has been developed to serve as an orthographic authority for upper/lowercase forms of all terms and cross references. The **term-added date**, displayed for all terms added after April 1988, is also given. The listing includes terms appearing in the *NASA Thesaurus*, *Preliminary Edition* (December 1967), the *NASA Thesaurus Alphabetical Update* (September 1971), the *NASA Thesaurus* (1982, 1985, 1988, 1994, and 1998 editions), and other terms approved for use through the end of December 2008. Over 18,300 terms, 4,300 definitions, and approximately 4,500 USE references are contained in the *Hierarchical Listing With Definitions*.

The *Rotated Term Display* is a ready-reference tool that provides thousands of additional 'access points' to the thesaurus terminology. It contains the postable terms and nonpostable terms found in the *Hierarchical Listing* arranged in a KWIC (key-word-in-context) index. It is a useful companion to the *Volume 1* listing, containing more than 52,700 entries.

New editions of the *NASA Thesaurus* CD-ROM are produced annually. Monthly updates are posted on the Thesaurus information page of the NASA scientific and technical information Web site at <a href="http://www.sti.nasa.gov/thesfrm1.htm">http://www.sti.nasa.gov/thesfrm1.htm</a>. Suggestions for term modification, deletion, and addition may be e-mailed to <a href="majernation-ma

Lexicographer NASA Center for AeroSpace Information 7115 Standard Drive Hanover, MD 21076-1320

The terminology of the earliest edition of the NASA Thesaurus was based in large part on the actual indexing vocabulary developed by NASA during the 1960s. Other thesauri, notably the DOD Thesaurus of Engineering and Scientific Terms (AD-672000), have provided additional candidate terms. The general guidelines for the initial creation of the NASA Thesaurus were based on the COSATI Guidelines for the Development of Information Retrieval Thesauri (1 September 1967). Continuing development of the NASA Thesaurus conforms to the thesaurus standard of the National Information Standards Organization (Guidelines for the Construction, Format, and Management of Monolingual Controlled Vocabularies, ANSI/NISO Z39.19-2005).

#### Nomenclature and Conventions

**Postable Terms**. Subject terms that have been approved for use in indexing, and thus can be 'posted.' In *Volume* 1, postable terms are shown in non-italic type.

**Nonpostable Terms**. Terms that are included for cross reference information and cannot be used for indexing. In *Volume* 1, nonpostable terms are set in italics.

**Term Selection**. Subject terms have been chosen on the basis of their significance and use in aerospace literature and their effectiveness in representing productive retrieval concepts. Particular consideration has been given to frequency of use in earlier NASA indexing and search vocabularies, to relationships with other terms in the vocabulary, and to precise scientific and technical usage.

Noun Usage. In general, subject terms are presented in the noun form.

**Singular vs. Plural**. The plural form has, in general, been used for subject terms. The singular form, however, is employed for non-count nouns (such as *snow*), terms that refer to unique entities such as *Mariner 10 Space Probe*, and terms related to specific processes, properties, and conditions.

**Term Length**. No more than 42 characters, including spaces, are used for any subject term. Various words in longer terms are sometimes truncated. Full expanded forms of such truncated terms are generally included in the scope notes.

**Term Ambiguity**. When subject terms have more than one meaning in aerospace usage, or where distinction between terms must be made, clarification is provided in one of two ways:

a) Parenthetical qualifying expressions or glosses are added, becoming part of the subject term. For example:

sizing (shaping)
sizing (surface treatment)

b) Scope notes are also added for explanation or definition; they do not become part of the subject term. For example:

# rotational states

SN (LIMITED TO MOLECULAR ENERGY LEVELS — EXCLUDES ROTATIONAL DYNAMICS OF VEHICLES OR OTHER BODIES)

**Word Order**. Subject terms that consist of more than one word are listed in *direct order*, i.e., in their natural word order rather than in an inverted form. (The *Rotated Term Display* can be used to access terms by embedded words.)

**Abbreviations and Acronyms**. Abbreviations and acronyms that are in common usage in the aerospace and general engineering communities are employed for some postable terms in this thesaurus. In most cases, USE cross references are made from the unabbreviated forms. For example:

Orbiting Solar Observatory USE **OSO** 

**Synonyms**. When candidate subject terms are true synonyms, one is chosen to be the valid, or postable term, and the other is provided with a USE cross reference. For example:

Columbium **niobium** 

USE **niobium** UF columbium

**Array Terms**. Subject terms with meanings either too broad or ambiguous for effective indexing or retrieval of information, have been designated array terms and carry the following scope note (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE TERMS LISTED BELOW). Relationships with other postable terms are shown by the Related Term (RT) reference only. For example:

 $\infty$  beams

SN (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE

TERMS LISTED BELOW)

RT beams (radiation) beams (supports)

An infinity symbol  $(\infty)$  precedes an array term in each of its appearances in *Volume 1*.

**Identifiers**. In the *NASA Thesaurus*, identifiers (i.e., terms that designate unique entities) are treated as regular terms and are provided complete cross references. Most identifiers are proper nouns and many include a numeric or alphabetic designation for a particular model or item. As a general rule, identifiers are added to the thesaurus only if they have an important relation to the aerospace sciences.

## Cross Reference Structure

Cross reference relationships in the *Hierarchical Listing With Definitions* are shown as follows:

<b>Cross References</b>	Notation
Broader Term	GS
Narrower Term	GS
Related Term	RT
Use	USE
Used For	UF

These cross references have the following applications:

**Broader Term**. This reference indicates that the term represents a more inclusive concept. In the Generic Structure (GS), the broader terms appear above and to the left of the term referenced. For example:

# reentry communication

GS telecommunication

- . space communication
- . . spacecraft communication
- ... reentry communication

The terms *telecommunication*, *space communication*, and *spacecraft communication* are broader terms to *reentry communication*.

**Narrower Term**. This reference indicates that the term represents a more specific concept. In the Generic Structure (GS), the narrower terms appear below and to the right (indented) of the term referenced. For example:

## **GS** scanners

- . Coastal Zone Color Scanner
- . horizon scanners
- . infrared scanners
- . ocean color scanner
- . optical scanners
- . . flying spot scanners
- . . multispectral band scanners
- ... Thematic Mappers (Landsat)
- . ultrasonic scanners

The terms Coastal Zone Color Scanner, horizon scanners, infrared scanners, ocean color scanners, optical scanners, and ultrasonic scanners are narrower terms to scanners. The terms flying spot scanners, multispectral band scanners, and Thematic Mappers (Landsat) are narrower to both optical scanners and scanners.

The number of narrower terms is not limited. For example, *artificial satellites* has nearly 500 narrower terms.

**Related Terms (RT)**. This reference indicates that the two terms are conceptually associated, but not equivalent or generically related. The RT relationship is reciprocal, as illustrated in the following example:

radar equipment

radio equipment

RT radio equipment

RT radar equipment

**Use (USE)**. This reference indicates that the listed term is not 'postable,' i.e., not a valid term, and that the term or terms adjacent to the USE indicator should be used instead. Note that all nonpostable terms are set in italics. For example:

jet airstreams

**USE** jet streams (meteorology)

**Used For (UF)**. This relation is the reciprocal of the USE cross reference and indicates that the term listed above the UF indicator is a valid or 'postable' term, and term or terms adjacent to the UF indicator are nonpostable. For example:

# jet streams (meteorology)

UF jet airstreams

# Filing Order

The ordering of subject terms into an alphabetical arrangement can be accomplished in several ways. The most commonly used methods are the letter-by-letter, word-by-word, and the computer sorting order. In the absence of any universal agreement on a standardized approach, a word-oriented modification of the computer sorting technique has been adopted in this thesaurus.

A special feature has been added to this technique to sort numeric designations in natural ascending order. Non-alphanumeric characters contained within terms are sorted prior to alphanumeric characters. In *Volume 2*, non-alphanumerics are ignored altogether for the general KWIC sort. Thus, embedded parentheses are filed before the alphabet in *Volume 1*, but are ignored for filing in *Volume 2*. Hyphens, slashes and periods follow blank spaces.

## Retrospective Indexing

Between 1984 and 1993, all terms added to the *NASA Thesaurus* were retrospectively assigned to past database records using a method that combined advanced search strategies and manual review. Most of the terms for which this procedure was carried out can be identified by checking the **term-added date** that appears directly below the term in *Volume 1*. Term-added dates are provided for all terms added to the *NASA Thesaurus* after April 1988.

# Thesaurus Term Definitions

Definitions are given for most terms added since 1976 as well as for many earlier terms. Definitions of more common or general scientific terms are given a NASA slant if one exists. Certain x terms are not defined as a matter of policy: common place names, chemical elements, specific models of computers, and non-technical terms. Other terms lack definitions because the *NASA Thesaurus* predates by a number of years the systematic effort to define terms. Nevertheless, definitions of older terms are continually being added.

Many of the definitions contained in the *Thesaurus* were constructed by lexicographers at the NASA Center for AeroSpace Information, who rely on the following sources for their information: experts in the field, literature searches from the NASA STI databases, and specialized references. Other definitions were obtained from the following sources:

AGI. Glossary of Geology, 3rd edition. Alexandria, VA, American Geological Institute, 1987.

**ASTM**. Compilation of ASTM Standard Definitions, 6th edition. Philadelphia, PA, ASTM, 1986. Copyright, the American Society for Testing and Materials (ASTM). All rights reserved. Used with the permission of ASTM. The original definitions appeared in the Annual Book of ASTM Standards.

**DOE**. Energy Data Base Subject Thesaurus (DOE/TIC-7000-R7). Oak Ridge, TN, Department of Energy, 1987.

**IEEE**. *Standard Dictionary of Electrical and Electronics Terms*, Fourth ed., New York, NY, IEEE, 1988.

**SP-7**. *Dictionary of Technical Terms for Aerospace Use*, NASA SP-7. Washington, DC, NASA, 1965.

In some cases, definitions from these sources have been subjected to minor editorial alterations; for example, to make a definition agree in number with the NASA form of the term.

## NUMERALS

2001 Mars Odyssey (added May 2001)

DEF Mars orbiter mission designed to make global observations of Mars to improve our understanding of the Martian climate and geologic history, including the search for liquid water and evidence of past life. The three primary instruments carried onboard are THEMIS (Thermal Emission Imaging System), GRS (Gamma Ray Spectrometer), and MARIE (Mars Radiation Environment Experiment). Launched April 2001.

stability acoustic instability signal fading thermoacoustic effects

#### acoustic levitation

DEF Method by which molten materials in space are suspended during processing experiments in the low gravity environment. Also, the use of very intense sound waves to keep a body suspended, thereby eliminating any container contact.

GS levitation

acoustic levitation

RT buoyancy space processing

#### acoustic measurement

(MEASUREMENT OF PROPERTIES, QUANTITIES OR CONDITIONS ASSOCIATED WITH ELASTIC WAVES) DEF Measurement of properties, quantities, or conditions of acoustical, i.e., mechanical waves. Used for sound measurement.

sound measurement

#### GS acoustic measurement

. noise measurement acoustic emission acoustic frequencies acoustic imaging

ambience

anechoic chambers

audio frequencies audiometry cepstral analysis

effective perceived noise levels

frequency measurement grazing flow

∞ measurement

mechanical measurement

noise meters

reverberation chambers

seismographs sound pressure sound waves ultrasonic tests

#### acoustic microscopes

DEF Instruments which use acoustic radiation at microwave frequencies to allow visualization of microscopic detail exhibited in elastic properties of objects. Used for scanning laser acoustic microscope (SLAM).

scanning laser acoustic microscope (SLAM) UF

GS microscopes

. acoustic microscopes

acoustic propagation imaging techniques microwave frequencies optical equipment photoacoustic microscopy wave propagation

#### acoustic nozzles

RT ∞ nozzles sonic nozzles sound generators

#### acoustic propagation

GS transmission

. wave propagation

acoustic propagation . . sound propagation

RT acoustic microscopes acoustical holography

acoustics

 ∞ propagation whispering gallery modes

#### acoustic properties

#### GS acoustic properties

elastic waves

. acoustic impedance

acoustic instability . acoustic scattering

. . reverberation

. acoustic velocity

. sound intensity . zero sound

acoustic frequencies

field strength grazing flow Lamb waves

mechanical properties

∞ physical properties

∞ properties ∞ resistance

sound waves wave dispersion

acoustic radiation USE sound waves

#### acoustic resonance

(added June 1997) resonance GS

. acoustic resonance

acoustic excitation acoustic frequencies

acoustics

resonant frequencies

resonant vibration

#### acoustic retrofitting

DEF Modification, especially of aircraft, to effect noise reduction; specifically, the introduction of absorber materials and jet noise silencers

GS retrofitting

#### acoustic retrofitting

absorbers (materials) aerodynamic noise aircraft design aircraft noise jet aircraft noise mufflers noise reduction propeller noise vibration isolators

#### acoustic scattering

GS acoustic properties

acoustic scattering

. . reverberation scattering

. wave scattering

. . acoustic scattering

. . reverberation acoustic imaging

acoustic sounding

acoustics

deep scattering layers reciprocity theorem

sodar

sound detecting and ranging surface noise interactions

underwater acoustics

### acoustic simulation

GS simulation

environment simulation

. acoustic simulation

elastic waves flight simulation reverberation chambers

#### acoustic sounding

GS sounding

acoustic sounding

acoustic scattering

acoustics Earth atmosphere meteorology rocket sounding rocket vehicles sounding rockets ultrasonic tests underground acoustics upper atmosphere

acoustic stability

USE frequency stability

#### acoustic streaming

DEF Unidirectional flow currents in a fluid that are due to the presence of sound waves.

fluid flow

fluid switching elements fragmentation sound waves

streamlining

#### acoustic velocity

The speed of propagation of sound waves. Used for sonic speed, sound barrier, and sound velocity.

UF sonic speed sound barrier sound velocity acoustic properties

acoustic velocity rates (per time) . acoustic velocity

velocity acoustic velocity

 $RT \, \infty \, barriers$ 

exhaust velocity Gutenberg zone Mach cones Mach number sonic booms sound pressure subsonic speed

supersonic speed transonic speed

acoustic vibrations USE sound waves

#### acoustical holography

sonoholography sound holography

GS imagery . photography

. . holography

. . acoustical holography

imaging techniques . acoustic imaging

. acoustical holography

acoustic propagation imaging techniques sound waves

wave front reconstruction

The study of sound, including its production, transmission, and effects. Those qualities of an enclosure that together determine its character with respect to distinct hearing. Used for sound.

sound GS

consists of two functionally independent units, AMSU-A and AMSU-B. The AMSU-A is de-

signed to measure scene radiance in 15 channels, ranging from 23. 8 to 89 GHz, to derive

atmospheric temperature profiles from the Earth surface to about 3 millibar pressure height. The AMSU-B is designed to measure scene radiance in five channels, ranging from 89 GHz to 183 GHz for the computation of atmospheric water vapor profiles.

### amplitudes

DEF The maximum value of the displacement of a wave or other periodic phenomenon from a reference position. Also, angular distance north or south of the prime vertical; the arc of the horizon, or the angle at the zenith between the prime vertical and a vertical circle, measured north or south from the prime vertical to the vertical circle.

# anisoplanatism

(added May 1999)

DEF In adaptive optics (AO) systems, a performance-degrading effect that arises whenever light from the wave-front sensor beacon and light from the target object sample different volumes of optical turbulence. This effect results in an increased value of the aperture-averaged residual phase variance after AO compensation, which causes an exponential decrease in system performance.

# apoptosis

(added October 2000)

One of the two mechanisms by which cell death occurs (the other being the pathological process of NECROSIS). Apoptosis is the mechanism responsible for the physiological deletion of cells and appears to be intrinsically programmed. It is characterized by distinctive morphologic changes in the nucleus and cytoplasm, chromatin cleavage at regularly spaced sites, and the endonucleolytic cleavage of genomic DNA at internucleosomal sites. This mode of cell death serves as a balance to mitosis in regulating the size of animal tissues and in mediating pathologic processes associated with tumor growth.

atoll reefs

USE coral reefs

## atolls

DEF Coral reefs appearing in plan view as roughly circular (though sometimes elliptical or horseshoe-shaped), and surmounted by a chain or ring of closely spaced low coral inlets that encircle a shallow lagoon in which there is no pre-existing land or islands of non-coral origin; the reefs are surrounded by deep water of the open sea, either oceanic or continental shelves. Atolls range in diameter from 1 km to more than 130 km, and are especially common today in the western and central Pacific Ocean. Atoll is derived from the native name in the Maldive Islands (Indian Ocean) which are typical examples of this structure.

backings USE backups

#### backlobes

Radiation lobes whose axes make angles of approximately 180 degrees with respect to the axes of the major lobes of the antennas. By extension radiation lobes in the half-space opposed to the direction of peak activity.

RT antenna design antenna radiation patterns directional antennas

## backpropagation (artificial intelligence)

(added December 2001)

DEF A learning algorithm which minimizes the error function of perceptron neural nets by comparing the actual and desired outputs and adjusting the weights of each neuron layer.

GS mathematical logic

. algorithms

#### ... backpropagation (artificial intelligence)

RT artificial intelligence computer techniques error analysis least squares method machine learning neural nets optimization

## backscattering

DEF Scattering of radiation in a direction having a component opposite its original direction of propagation.

scattering GS

## backscattering

differential absorption lidar forward scattering laser plasma interactions microwave signatures nuclear scattering scatter propagation

backshores

USE beaches

## backups

DEF Items kept available to replace items which fail to perform satisfactorily. Items under development intended to perform the same general functions another item also under development performs. Used for backings.

UF backings

RT redundant components reserves weldina

## backward differencing

DEF A method of solving a parabolic problem for approximating a time derivative in terms of a previous time step.

differential equations numerical stability problem solving

#### backward facing steps

A step structure which faces an oncoming flow. Used for rearward facing steps.

rearward facing steps boundary layer flow flow geometry fluid boundaries forward facing steps reattached flow recirculative fluid flow stairsteps ∞ steps

## hadlands

DEF Intricately stream-dissected topogra-phy, characterized by a very fine drainage network with high drainage densities (77 to 747 miles per square mile) and short steep slopes with narrow interflues. Badlands develop on the surface with little or no vegetative cover, overlying unconsolidated or poorly cemented clays or silts, sometimes with soluble minerals such as gypsum or halite. They may also be induced in humid areas by removal of the vegetative cover through overgrazing, or by air pollution from sulfide smelting. The term was first applied to an area in western South Dakota, which was called "mauvaises terres" by the early French fur traders.

GS land badlands barren land topography

## baffles

Plates that regulate the flow of a fluid, e.g., a heat exchanger, boiler flue, or automotive muffler.

## baroclinity

DEF The state of stratification in a fluid in which surfaces of constant pressure (isobaric) intersect surfaces of constant density (isoteric). The number, per unit area, of isobaric-isoteric solenoids intersecting a given surface is a measure of baroclinity.

## baroreceptors

DEF Receptors in the vascular system, particularly the aorta and carotid sinus, which are sensitive to stretch of the vessel walls.

pressoreceptors

anatomy

- . sense organs
- . . baroreceptors

receptors (physiology)

baroreceptors baroreflexes

pressure

baroreflexes

(added March 2001)

DEF A negative feedback system that buffers short-term changes in blood pressure. Increased pressure stretches blood vessels, which activates pressoreceptors (baroreceptors) in the vessel walls. The central nervous system's net response is a reduction of central sympathetic outflow. This reduces blood pressure by decreasing peripheral vascular resistance and by lowering cardiac output. Because the baroreceptors are tonically active, the baroreflex can compensate rapidly for both increases and decreases in blood pressure.

NASA space programs

... Bioastronautical Orbital Space System

RT ∞ systems

#### bioastronautics

The study of biological, behavioral, and medical problems pertaining to astronautics. This includes systems functioning in the environments expected to be found in space, vehicles designed to travel in space, and the conditions on terrestrial bodies other than the

aerospace environments aerospace medicine animal models ∞ astronautics bioengineering biology Biosatellite 1 Biosatellite 2 Biosatellite 3 closed ecological systems Columbus space station

Earth atmosphere exobiology head down tilt head up tilt hindlimb suspension lunar environment planetary environments ∞ science space adaptation syndrome

space exploration space flight space stations spacecraft environments tilt-table test

## bioavailability

(added August 2001)

The extent to which a drug, nutrient, toxin, or other substance enters the circulatory system or becomes available at a site of physiological activity.

biological availability physiologic availability availability ŨF GS

. bioavailability RT adsorption

exposure intravenous procedures material absorption pharmacology physiochemistry sorption toxicity toxicology

## biochemical fuel cells

GS electric generators

Bravais crystals crystal growth crystal lattices crystal structure packing density single crystals

Brayton cycle

A thermodynamic cycle consisting of two constant-pressure processes interspersed with two constant-antropy cycles. Named after George B. Brayton, American engineer.

## chemical elements

. copper	arsenic isotopes	potassium 39
copper isotopes	barium isotopes	potassium 40
. gallium	beryllium isotopes	praseodymium isotopes
. gallium isotopes	beryllium 7	promethium isotopes
. gold	beryllium 9	protactinium isotopes
=	•	
gold isotopes	beryllium 10	radioactive isotopes
gold 198	bismuth isotopes	astatine isotopes
. hafnium	boron isotopes	beryllium 7
hafnium isotopes	boron 10	beryllium 9
. hahnium	bromine isotopes	beryllium 10
. halogens	cadmium isotopes	carbon 14
astatine	calcium isotopes	cerium 137
bromine	carbon isotopes	cerium 144
bromine isotopes	carbon 12	cesium 134
chlorine	carbon 13	cesium 137
fluorine	carbon 14	cesium 144
fluorine isotopes	cerium isotopes	cobalt 58
liquid fluorine	cerium 137	cobalt 60
iodine	cerium 144	copper isotopes
iodine isotopes		11
•	cesium isotopes	gold 198
iodine 125	cesium 133	indium isotopes
iodine 131	cesium 134	iodine 125
iodine 132	cesium 137	iodine 131
. heavy elements	cesium 144	iodine 132
. hydrogen	cesium vapor	iron 59
hydrogen isotopes	chromium isotopes	krypton 85
deuterium	cobalt isotopes	niobium 95
hydrogen 4	cobalt 58	nitrogen 16
metallic hydrogen	cobalt 60	phosphorus 32
tritium	dysprosium isotopes	polonium 208
liquid hydrogen	erbium isotopes	polonium 209
. indium	europium isotopes	polonium 210
. iridium	fluorine isotopes	potassium 38
iridium isotopes	gadolinium isotopes	potassium 40
. iron	gallium isotopes	rubidium 86
. iron isotopes	germanium isotopes	sodium 22
iron 57	gold isotopes	sodium 24
iron 58	gold 198	strontium 85
iron 59	hafnium isotopes	strontium 88
. lead (metal)	helium isotopes	strontium 89
. lead isotopes	holmium isotopes	strontium 90
. light elements	hydrogen isotopes	transuranium elements
. magnesium	deuterium	americium
magnesium isotopes	hydrogen 4	americium isotopes
. manganese	metallic hydrogen	americium 241
manganese isotopes	tritium	berkelium
. mercury (metal)	iodine isotopes	californium
. mercury isotopes	iodine 125	californium isotopes
mercury vapor	iodine 131	curium
. metalloids	iodine 132	curium isotopes
antimony	iridium isotopes	curium 242
antimony isotopes	iron isotopes	curium 244
arsenic	iron 57	einsteinium
arsenic isotopes	iron 58	fermium
boron	iron 59	lawrencium
boron isotopes	krypton isotopes	mendelevium
boron 10	krypton 85	neptunium
germanium	lanthanum isotopes	neptunium isotopes
germanium isotopes	lead isotopes	nobelium
polonium	lithium isotopes	plutonium
polonium isotopes	lutetium	plutonium isotopes
polonium 208	lutetium isotopes	plutonium 238
polonium 209	magnesium isotopes	plutonium 239
polonium 210	manganese isotopes	plutonium 240
silicon	mercury isotopes	plutonium 241
amorphous silicon	molybdenum isotopes	plutonium 244
porous silicon	neodymium isotopes	sergenium
silicon isotopes	neon isotopes	tritium
tellurium	nickel isotopes	uranium 232
tellurium isotopes	niobium isotopes	uranium 233
. molybdenum	niobium 95	uranium 238
. nickel	nitrogen isotopes	xenon 133
nickel isotopes	nitrogen 15	xenon 135
. niobium	nitrogen 16	zirconium 95
niobium isotopes	nobelium isotopes	radium isotopes
niobium 95	osmium isotopes	radium 226
. nitrogen	oxygen isotopes	radon isotopes
liquid nitrogen	oxygen isotopes	rhenium isotopes
nitrogen isotopes	oxygen 17	rhodium isotopes
nitrogen isotopes	palladium isotopes	rubidium isotopes
nitrogen 16	phosphorus isotopes	rubidium 86
solid nitrogen	phosphorus 32	ruthenium isotopes
. nuclides	platinum isotopes	samarium isotopes
isotopes	polonium isotopes	scandium isotopes
aluminum isotopes	polonium 208	selenium isotopes
aluminum 26	polonium 209	silicon isotopes
aluminum 27	polonium 210	silver isotopes
	•	
antimony isotopes	potassium isotopes	sodium isotopes
antimony isotopes argon isotopes	•	

sodium 24	helium	potential energy
strontium isotopes	helium isotopes	
strontium 85	liquid helium	chemical engineering
strontium 87	liquid helium 2	RT aerothermochemistry
strontium 89	krypton	∞ chemistry
	krypton isotopes	combustion chemistry
strontium 90	krypton 85	cracking (chemical engineering)
sulfur isotopes	neon	diffusion
tantalum isotopes		
technetium isotopes	liquid neon	∞ engineering fluid flow
tellurium	neon isotopes	
tellurium isotopes	radon	furnaces
terbium isotopes	radon isotopes	heat transfer
thallium isotopes	xenon	materials handling
thorium isotopes	xenon isotopes	∞ operations
thulium isotopes	xenon 129	thermochemistry
	xenon 133	
tin isotopes	xenon 135	chemical equilibrium
titanium isotopes	. rhenium	UF Chapman-Jouget flame
tungsten isotopes	rhenium isotopes	chemical shift
uranium isotopes	rhodium	GS chemical equilibrium
uranium 232	rhodium isotopes	. acid base equilibrium
uranium 233	. ruthenium	RT association reactions
uranium 234	ruthenium isotopes	buffers (chemistry)
uranium 235	. rutherfordium	dissociation
uranium 238	. selenium	∞ equilibrium
vanadium isotopes	. silver	heat of dissociation
xenon isotopes		phase rule
xenon 129	silver isotopes	reaction kinetics
xenon 133	. strontium	thermodynamic equilibrium
xenon 135	strontium isotopes	memodynamic equilibrium
vtterbium isotopes	strontium 85	chemical evolution
yttrium isotopes	strontium 87	
zinc isotopes	strontium 89	DEF The theory of the creation or produc
	strontium 90	tion of living matter from nonliving matter.
zirconium isotopes	. sulfur	GS evolution (development)
zirconium 95	sulfur isotopes	. chemical evolution
. osmium	. tantalum	RT abiogenesis
osmium isotopes	tantalum isotopes	biological evolution
. oxygen	. technetium	∞ evolution
liquid oxygen	. thallium	exobiology
oxygen isotopes	thallium isotopes	life sciences
oxygen 17	. tin	organic compounds
oxygen 18	tin isotopes	protein synthesis
. palladium	. titanium	protobiology
. phosphorus	titanium isotopes	self assembly
phosphorus isotopes	· · · · · · · · · · · · · · · · · · ·	con accombly
phosphorus 32	. tungsten	chemical explosions
. platinum	. vanadium	GS explosions
	vanadium isotopes	
platinum isotopes	. zinc	. chemical explosions
platinum isotopes . protactinium	· · · · · · · · · · · · · · · · · · ·	. chemical explosions gas explosions
platinum isotopes . protactinium protactinium protactinium isotopes	zinc	. chemical explosions gas explosions propellant explosions

#### Clementine spacecraft

(added May 1997)

A spacecraft launched in January 1994 as part of a joint NASA/DoD-BMDO (Ballistic as part of a joint NASA/DoD-BMDO (Ballistic Missile Defense Organization) mission to space-qualify several lightweight electronic instru-ments and systems (including an ultraviolet/ visible CCD camera, a near infrared and long-wavelength infrared camera, and a combined high-resolution CCD camera and laser ranging system). The Clementine mission also provided the first complete systematic surface mapping of the moon from the ultraviolet to near infrared spectral regions. A software malfunction in May of 1994 precluded a planned flyby of the asteroid Geographos.

Columbus space station

SN (LIMITED TO THE AUTONOMOUS ESA SPACE STATION. FOR REFERENCES TO THE INTERNATIONAL SPACE STATION MODULE USE COLUMBUS MODULE.)

DEF A manned orbital platform originally planned by the European Space Agency to be a fully autonomous space station. This planned station was later superceded by the "Columbus totalion was later superceded by the "Columbus" station was later superseded by the 'Columbus module' that became the Agency's largest contribution to the International Space Station.

cosmic rays

DEF The aggregate of extremely high energy subatomic particles which travel the solar system and bombard the earth from all directions. Cosmic ray primaries seem to be mostly protons, hydrogen nuclei, but also contain heavier nuclei. On colliding with atmospheric particles thay produce many different kinds of lower energy secondary cosmic radiation. Used for cosmic radiation.

#### cyclotron frequency

DEF Frequency at which a charged particle orbits in a uniform magnetic field. It depends on the charge to mass ratio of the particle times the magnetic field. While the frequency is independent of the particle energy, Lamor orbit increases with energy.

GS frequencies

cyclotron frequency

charged particles Larmor precession

### cyclotron radiation

DEF The electromagnetic radiation emitted by charged particles as they orbit in a magnetic field. The radiation arises from the centripetal acceleration of the particle as it moves in a circular orbit.

electromagnetic radiation . nonthermal radiation GS

. . cyclotron radiation

. ion cyclotron radiation

charged particles Larmor precession Larmor radius

∞ radiation

### cyclotron resonance

DEF Energy transfer to charged particles in a magnetic field from an alternating-current electric field whose frequency is equal to the cyclotron frequency.

resonance

### . cyclotron resonance

### **Deep Impact Mission**

(added July 2005)

Flyby mission designed to observe the collision of a solid impactor with comet Tempel 1. The mission consists of a flyby spacecraft, which releases a guided impactor. The flyby spacecraft is equipped with two telescopes, the High Resolution Instrument, and the Medium Resolution Instrument, for imaging and spectroscopy of the collision and its effects.

			purification	(adde	ed October 2000)
	odulation		reverse osmosis		A class of polymeric macromolecules
GS	coding	00	separation	characte	erized by a regular highly-branched mo-

lecular architecture resembling a spherical starburst, and a synthesis process that permits nearly complete control over critical molecular design parameters, such as size, shape, surface/interior chemistry, flexibility, and topology. Because of these characteristics, dendrimers are seen as important elements in the manufacture of nanoscale materials and devices.

## diffraction propagation

Pomeranchuk theorem signal fading speckle holography speckle interferometry speckle patterns underwater optics very long base interferometry

#### diffraction propagation

Wave propagation around objects, or over the horizon, by diffraction.

GS transmission

. wave propagation

diffraction propagation

diffraction radiation

geometrical optics

∞ optics

∞ propagation spherical waves

underwater optics

#### diffraction radiation

DEF Electromagnetic radiation excited by an electron flux passing near a diffractive, periodic structure, such as a wiggler magnet in a free electron laser.

electromagnetic radiation diffraction radiation

bremsstrahlung

cyclotron resonance devices

diffraction propagation electron beams

electron diffraction

free electron lasers gratings (spectra)

laser outputs light emission

maser outputs

masers microwave emission

microwave oscillators

microwave tubes microwaves

nonuniform magnetic fields

particle motion

relativistic electron beams

stimulated emission devices transferred electron devices

tunable lasers

wave diffraction

wave excitation

wiggler magnets

## diffraction telescopes

USE spectroscopic telescopes

## diffractive optics

(added July 1995)

DEF Optical elements that add up scattered light from a multiple of disturbances in amplitude or phase to generate a transformed wavefront.

diffraction optics

RT display devices

holography

∞ optics

photopolymers

#### diffractometers

measuring instruments

. optical measuring instruments

### diffuse interstellar bands

(added February 1997)

ÙF DIB GS spectra . spectral bands

#### . diffuse interstellar bands

interstellar chemistry interstellar extinction interstellar matter molecular clouds

polycyclic aromatic hydrocarbons

#### diffuse radiation

DEF Radiant energy propagating in many different directions through a given small volume of space; to be contrasted with parallel radiation. Used for lunar scattering.

lunar scattering
heat transfer
light scattering UF RT point sources ∞ radiation

specular reflection

#### ∞ diffusers

SN (USE OF A MORE SPECIFIC TERM IS
RECOMMENDED-CONSULT THE TERMS
LISTED BELOW)
DEF Specially designed ducts, chambers,
or sections, sometimes equipped with guide vanes, that decrease the velocity of a fluid, as air, and increases its pressure, as in jet engines, wind tunnels, etc. Used for shock diffusers.

shock diffusers

air conditioning

air conditioning equipment

attenuators

baffles

boundary layer separation

ceilings (architecture)

chokes conical flow deflectors diffusion diverters engine inlets exhaust diffusers

hypersonic inlets ∞ illumination inlet flow

inlet nozzles louvers mixers

mufflers nozzles porous walls pressure recovery

separators sprayers

supersonic diffusers vaneless diffusers

# diffusion

DEF In an atmosphere, or in any gaseous system, the exchange of fluid parcels between regions, in apparently random motions of a scale too small to be treated by the equations of motion. In materials, the movement of atoms of one material into the crystal lattice of an adjoining material, e.g., penetration of the atoms in a ceramic coating into the lattice of the protected metal. In ion engines, the migration of neutral atoms through a porous structure incident to ionization at the emitting surface. Used for diffusion effect and perfusion.

UF diffusion effect perfusion

#### GS diffusion

. ambipolar diffusion

atmospheric diffusion

. gaseous diffusion

. gaseous self-diffusion magnetic diffusion

. molecular diffusion
