

Table 954. Public Drinking Water Systems by Size of Community Served and Source of Water: 2009

[As of September. Covers systems that provide water for human consumption through pipes and other constructed conveyances to at least 15 service connections or serve an average of at least 25 persons for at least 60 days a year. Based on reported data in the Safe Drinking Water Information System maintained by the Environmental Protection Agency]

— Represents zero. ¹ Includes a small number of systems for which the water source (ground vs. surface) is unknown.

² A public water system that supplies water to the same population year-round. ³ A public water system that regularly supplies water to at least 25 of the same people at least 6 months per year, but not year-round. Some examples are schools, factories, and office buildings which have their own water systems. ⁴ A public water system that provides water in a place such as a gas station or campground where people do not remain for long periods of time and is open at least 60 day per year.
