Project Abstract: These funds will provide additional operating expenses for existing AmeriCorps grants. The Prevention Resource Center (PRC), sponsors AmeriCorps*VISTA members throughout Montana. Currently, PRC has AmeriCorps VISTA members serving across the state, from recent college graduates to natives of Montana who were looking to make a difference in their communities. Each VISTA member works with communities through non-profit agencies that provide prevention programs in five areas: drug and alcohol abuse, teen pregnancy, school dropout, youth crime and violence, and child abuse and neglect.

Project ID: 69010000000008			Project Name: Weatherization			Project Category: Energy and Weatherization			Sub Class: 855WW						
Project Abstract: These funds will provide grants for local HRDC's. The Weatherization Program's mission is to increase the energy efficiency of homes occupied by low-income individuals, thereby reducing their energy costs. The program has reduced the annual heating costs of recipient households by an average of approximately 32%. It serves approx 2,000 high energy burden households each year. ARRA funding will allow the Weatherization Program to serve at least 2,500 more families & to double the average labor & materials expenditure per dwelling for cost-effective energy conservation measures.

Project Abstract: This request for applications (RFA) is intended to develop a list of potential candidates (private schools and public school districts) interested in replacing their existing diesel-powered school buses with new ones under the MT-SBR Project. MT-DEQ will review and rank the applications in order to select those most appropriate for funding under the DERA guidelines. Project ID: 5706000026 **Project Name:** Martinsdale Res. Drain **Project Category:** Water and Environment **Sub Class:** 540W6

Project Abstract: Martinsdale Reservoir is 2.5 miles southeast of Martinsdale. The Martinsdale North Dam has experienced seepage in the abutments since it was constructed. This project will reconstruct the toe drains, add manholes, and redirect the horizontal drain system outfall to allow accurate and safe measurements of flow and sedimentation rates. This will improve seepage collection and facilitate the measurement of drainage flow rates and sedimentation transport volumes from within the dam.

Project Abstract: Because of recent increases in wastewater flows and high levels of sewer infiltration and inflow, Virginia City's wastewater system storage cell is at capacity and can no longer store treated effluent through an entire winter. An engineering study determined that about 14,400 gallons per day of sewer infiltration can be removed by replacing certain aging sewer mains, thus removing significant burden on the storage cells. This project will replace 3,600 linear feet of eight-inch sewer main and implement spot repairs where needed.

Project Abstract: Children who are available for adoption through the Child and Family Services Division of the Montana Department of Public Health and Human Services have been removed from their own families because of abuse and neglect, or abandonment, and cannot safely remain at home. The rights of their parents have been terminated making the children available for adoption. Subsidies may be negotiated to help maintain the permanency of the adoption. ARRA funding will result in a higher federal contribution for these services.

Project ID: 5706000025		Project Name: Deadman's Basin Outlet			Project Category: Water and Environment			Sub Class: 540W6					
Project Abstract: Deadman's Basin Dam is a high-hazard, state-owned dam in Wheatland County nine miles west of Ryegate. Constructed in 1941, the dam has aged and is experiencing seepage at its downstream toe. Erosion around the outlet conduit exists as the result of this seepage, thus presenting the potential for piping and a possible breach. This project will include removal of existing outlet structure; extension of the existing outlet conduit with a new drain system; construction of a new energy-dissipating outlet structure; construction of a stabilizing toe berm; and regrading of the embankment

Project Abstract: These funds will provide grants for local HRDC's. The Weatherization Program's mission is to increase the energy efficiency of homes occupied by low-income individuals, thereby reducing their energy costs. The program has reduced the annual heating costs of recipient households by an average of approximately 32%. It serves approx 2,000 high energy burden households each year. ARRA funding will allow the Weatherization Program to serve at least 2,500 more families & to double the average labor & materials expenditure per dwelling for cost-effective energy conservation measures.

Project Abstract: Buffalo Rapids Irrigation District II is in eastern Montana, beginning at Fallon and terminating in Glendive. District 1 serves 16,170.91 irrigated acres. This project replaces two laterals, 2.9 and 7.6 and their conversion to pipeline. Lateral 2.9 delivers water to 887 acres while 7.6 supplies 423 acres. Five pipelines will replace lateral 2.9, while 3 pipelines will replace lateral 7.6. This grant will supplement funding by NRCS. This project will conserve 199 acre-feet/year of water and will replace the constant head orifice meters with McCrometer water meters on all new pipelines.

Project ID: 5301FYLA00001 **Project Name:** Como Lake Fly Ash Boat Ramps **Project Category:** Water and Environment **Sub Class:** 420DF

Project Abstract: The Bitterroot National Forest desires to expand the boat ramp facility at Lake Como High Impact Recreation Area (HIRA) located approximately 5 miles north of Darby, Montana. In an effort to pursue environmentally friendly product use, the Bitterroot National Forest approved ARRA grant funding to MT DEQ (\$165,328) to research, design, and place the new boat ramp using concrete utilizing 100% flyash rather than traditional cement concrete. This project will provide the opportunity to demonstrate that a 100% fly ash concrete can be used in a wet, freeze/thaw environment.

Project Abstract: The Daly Ditches Irrigation District (DDID) is near Hamilton in Ravalli County. The Hedge Diversion Dam and canal were constructed about 1908. The canal has a capacity of about 140 cfs, is about 23 miles long, and serves about 5,993 acres with 700 farms, ranches, or households. The Hedge Canal Diversion Dam is significantly past its design life of 60 to 75 years. This project (Phase 1) will reconstruct the diversion dam and abutments. Loss of the diversion dam would result in the loss of water for about 40% of the DDID water users.

Project Abstract: Ravalli County has experienced a 10.7% population growth from 2000 to 2005. Increased growth highlights a need to protect the county's water resources. To support the fair administration of county planning and permitting, accurate elevation and floodplain data are needed. Ravalli County will use Light Detection and Ranging (LiDAR) technology to obtain digitally formatted two-foot elevation contour interval data. The acquisition of LiDAR data is less expensive than traditional ground surveying and requires less investment and better accuracy than radar mapping.

Project Abstract: These funds will increase SNAP benefits 13.6 percent and provides funding for administrative costs. SNAP benefits provide eligible households an opportunity to obtain a more nutritious diet by supplementing their food budget. Additional benefits start at \$24 and increase depending upon the number of individuals in the household. There is also a rule change for individuals in the Able-bodied Adults Without Children category that removes the time limited benefit policy. The additional administrative funding is considered one-time-only.

Project Abstract: Richland County Conservation District will establish a well-monitoring network in the study area from which periodic water levels will be collected. Information will be used to develop groundwater flow maps. Additional areas will be tested using existing and newly constructed wells to map buried channel aquifers. A final report will provide estimates of total volume of water available and water quality for development associated with potential management areas. This effort is a continuation of an existing study.

Project Abstract: These funds will increase SNAP benefits 13.6 percent and provides funding for administrative costs. SNAP benefits provide eligible households an opportunity to obtain a more nutritious diet by supplementing their food budget. Additional benefits start at \$24 and increase depending upon the number of individuals in the household. There is also a rule change for individuals in the Able-bodied Adults Without Children category that removes the time limited benefit policy. The additional administrative funding is considered one-time-only.

Project Abstract: Children who are available for adoption through the Child and Family Services Division of the Montana Department of Public Health and Human Services have been removed from their own families because of abuse and neglect, or abandonment, and cannot safely remain at home. The rights of their parents have been terminated making the children available for adoption. Subsidies may be negotiated to help maintain the permanency of the adoption. Project Abstract: In 2007, the town of Dutton completed a wastewater engineering evaluation that recommended capital improvements. The project is to construct a new pump station, new facultative lagoons for wastewater treatment with spray irrigation disposal, and storage of wastewater during the nonirrigation season. The treated wastewater will be beneficially reused for spray irrigation of adjacent cropland. The existing primary lagoon will be rehabilitated to meet current standards.

Project Abstract: This project will cleanup petroleum-contaminated soil at the abandoned Shelby Refinery in Toole County, in the corporate city limits of Shelby. The Petroleum Refining Company was built in 1940 to refine crude oil from the nearby Kevin-Sunburst oil field northwest of Shelby. Environmental samples from the site reveal elevated concentrations of petroleum hydrocarbons in soil at an average thickness of 7.5 feet. The affected area covers approximately 30,000 square feet. Total estimated volume of contaminated soils is 8,333 cubic yards.

Project Abstract: Shelby's wastewater collection system is aged. About 47% of the system consists of vitrified clay pipe installed between 50 and 90 years ago. Flow monitoring in March 2008 indicated that 240,000 gallons per day of the current wastewater flow can be attributed to groundwater inflow to the trunk main sewer. Shelby will replace 7,565 feet VCP pipe with pvc and rehabilitate existing VCP pipe with Cured in Place Pipe

Project Abstract: The American Recovery and Reinvestment Act (ARRA) included \$3 B nationally for Title I School Improvement grants to states in Fall 2009. MT selected 4 school districts, giving priority to districts with the lowest-achieving schools that showed the greatest need for funds and the strongest commitment to enabling their schools to meet the goals under school and district improvement, corrective action and restructuring plans. The Office of Public Instruction is administering project activities directly on behalf of the subrecipients, rather than providing subgrants.

Project Abstract: These funds will provide grants for local HRDC's. The Weatherization Program's mission is to increase the energy efficiency of homes occupied by low-income individuals, thereby reducing their energy costs. The program has reduced the annual heating costs of recipient households by an average of approximately 32%. It serves approx 2,000 high energy burden households each year. ARRA funding will allow the Weatherization Program to serve at least 2,500 more families & to double the average labor & materials expenditure per dwelling for cost-effective energy conservation measures.

Project Abstract: Ruby Dam is on the Ruby River about six miles south of Alder, in Madison County. The dam and system of conveyance canals associated with it are owned by the DNRC and operated and maintained by the Ruby River Water Users. Increased storage is required to offset the effects of sedimentation that have taken place since the dam was constructed. This project will replace the concrete spillway, raising the spillway crest seven feet. This project would increase the storage capacity of Ruby Reservoir from 41,450 acre-feet to 45,155 acre-feet, an increase of 8.9%.
