Secure Flight Program

**Overflight Overview and the Overflight Table
for Third-Party Providers**

Version #1.0

February 8, 2012

OVERFLIGHTS REQUIREMENT OVERVIEW

The U.S. Department of Homeland Security (DHS) Transportation Security Administration (TSA) has notified covered foreign air carriers of the requirement to submit Secure Flight Passenger Data (SFPD) for all *covered overflights* for watch list matching purposes. Currently, TSA conducts passenger watch list matching for more than 200 U.S. and foreign aircraft operators for flights into, out of, and within the United States, including U.S. aircraft operator flights between two international points (e.g., Bangkok to Tokyo) to identify individuals that may pose a threat to aviation or national security. The Secure Flight Final Rule requires covered foreign air carriers to transmit SFPD – full name (as it appears on the government-issued identity document the passenger plans to use when traveling), date of birth, gender, and, if available, Redress Number and passport information – 72 hours prior to the scheduled departure of covered flights. The overflights requirement is the final phase of the Secure Flight Final Rule implementation.

Overflights are for any foreign air carrier flight departing from an airport or location outside the United States and transiting the airspace of the continental United States en route to another airport or location outside the United States. Airspace of the continental United States includes the airspace over the lower 48 contiguous states of the United States, not including Alaska or Hawaii, and the airspace overlying the territorial waters between the U.S. coast of the lower 48 states and 12 nautical miles from the continental U.S. coastline. The overflights requirement does not apply to:

1. Flights that transit the airspace of the continental United States between two airports or locations in the same country, where that country is Canada or Mexico (i.e., Canada-to-Canada or Mexico-to-Mexico).
2. Any other category of flights that the TSA Administrator designates in a notice in the *Federal Register*.

While the Secure Flight Final Rule does not directly regulate third-party providers (e.g., travel agents, online travel companies), it does require that all covered foreign air carriers collect and submit SFPD for all covered flights regardless of reservation channel (including reservations made by third-party providers). Accordingly, each covered foreign air carrier must ensure each third-party provider that books a reservation on the covered foreign air carrier's behalf complies with this requirement.

The Overflight Table included in this document is a practical working guide developed from a list of airport pairs based on historical flight paths. TSA provides this guide to assist third-party providers in supporting the TSA requirement for covered foreign air carriers to collect and transmit SFPD for all covered overflights regardless of booking channel. Since foreign air carriers may determine a flight may be a covered overflight, even if it does not appear on the list, third-party providers are advised to consult foreign air carriers for any additional airport pairs for which SFPD must be collected.

OVERFLIGHT TABLE OVERVIEW

The Overflight Table identifies airport pairs that TSA has determined are overflights. (However, since foreign air carriers may identify additional airport pairs for which they will submit SFPD, third-party providers are advised to consult foreign air carriers for any additional airport pairs for which SFPD should be collected.) Overflights are those flights operating in either direction between the airport designated by “IATA Code 1” and the airport designated by “IATA Code 2.” The country information that corresponds to each IATA Code is provided for reference. Note: Table 1 defines the various columns within the Overflight Table and Table 2 illustrates a sample airport pair route.

Table 1: Overflight Table Column Definitions

Column	Definition
IATA Code 1	The International Air Transport Association (IATA) airport code provided in this column depicts the arrival or departure airport for an overflight airport pair route
Country 1	The country listed in this column is one that is associated with “IATA Code 1”
IATA Code 2	The IATA airport code provided in this column depicts the arrival or departure airport for an overflight airport pair route
Country 2	The country listed in this column is one that is associated with “IATA Code 2”

In Table 2, the airport pair route from Charles de Gaulle Airport (CDG) (IATA Code 1) to Mexico City International Airport (MEX) (IATA Code 2) is identified as an overflight. Because overflights are those flights operating in either direction between the airport designated by “IATA Code 1” and the airport designated by “IATA Code 2,” the return or reverse direction would be included as an identified overflight as well.

Table 2: Sample Airport Pair Route

Country 1	IATA Code 1	Country 2	IATA Code 2
France	CDG	Mexico	MEX
