CONSUMER PRICE MOVEMENTS APRIL 2010

On a seasonally adjusted basis, the Consumer Price Index for All Urban Consumers (CPI-U) declined 0.1 percent in April, the U.S. Bureau of Labor Statistics reported today. Over the last 12 months, the index increased 2.2 percent before seasonal adjustment.

The index for energy decreased 1.4 percent in April and accounted for the seasonally adjusted decline in the all items index. The indexes for gasoline and natural gas both decreased significantly, outweighing increases in the indexes for fuel oil and electricity.

The food index increased 0.2 percent in April, while the index for all items less food and energy was unchanged. The index for meats, poultry, fish, and eggs rose sharply in April and accounted for the food increase; other grocery store food groups were mixed and the index for food away from home rose slightly. Within all items less food and energy, the indexes for recreation, airline fares, and medical care all rose in April. Offsetting these increases were declines in the indexes for apparel and for household furnishings and operations. The continuing stability of the index for all items less food and energy has resulted in an increase over the last 12 months of 0.9 percent, the smallest 12-month increase since January 1966.

Consumer Price Index Data for April 2010

Food

The food index rose 0.2 percent in April, the same increase as in March. The April increase was due to an increase in the index for meats, poultry, fish and eggs, which rose 1.4 percent in April and has now increased four months in a row. Other grocery store food group indexes were mixed. The index for nonalcoholic beverages increased 0.4 percent in April, while the index for other food at home was unchanged. The fruits and vegetables index, which rose 3.4 percent in March, declined 0.2 percent in April. The index for dairy and related products fell 0.8 percent and the cereals and bakery products index declined 0.3 percent. The index for food away from home, which was unchanged in March, rose 0.1 percent in April. For the past 12 months the food index has risen 0.5 percent, with the index for food at home unchanged and the index for food away from home up 1.1 percent.

Energy

The energy index declined 1.4 percent in April after being unchanged in March. The gasoline index, which fell 0.8 percent in March, declined 2.4 percent. (Before seasonal adjustment, gasoline prices rose 2.9 percent in April.) Over the past 12 months, the gasoline index has increased 38.3 percent. The index for household energy declined in April, falling 0.4 percent after rising 1.3 percent in March. A 4.4 percent decline in the index for natural gas more than offset a 2.3 percent increase in the index for fuel oil and a 0.7 percent rise in the electricity index. Despite the April decline, over the last 12 months the energy index has risen 18.5 percent.

All items less food and energy

The index for all items less food and energy was unchanged in April, as it was in March. The shelter index and its major components of rent and owners' equivalent rent were all unchanged in April. The index for new vehicles was also unchanged. The index for airline fares increased sharply in April, rising 2.2 percent. The index for recreation rose 0.3 percent in April, the medical care index increased 0.2 percent, and the index for used cars and trucks rose 0.2 percent. In contrast, the apparel index fell 0.7 percent and the index for household furnishings and operations declined 0.5 percent. Over the last 12 months, the index for all items less food and energy has risen 0.9 percent. The shelter, apparel, and recreation indexes have all declined over that period.

Not seasonally adjusted CPI measures

The Consumer Price Index for All Urban Consumers (CPI-U) increased 2.2 percent over the last 12 months to an index level of 218.009 (1982-84=100). For the month, the index rose 0.2 percent prior to seasonal adjustment.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 2.9 percent over the last 12 months to an index level of 213.958 (1982-84=100). For the month, the index rose 0.2 percent prior to seasonal adjustment.

The Chained Consumer Price Index for All Urban Consumers (C-CPI-U) increased 2.3 percent over the last 12 months. For the month, the index increased 0.2 percent on a not seasonally adjusted basis. Please note that the indexes for the post-2008 period are subject to revision.

The Consumer Price Index for May 2010 is scheduled to be released on Thursday, June 17, 2010, at 8:30 a.m. (EDT).

CPI-U 12-Month Changes, 2000 to Present

Consumer Price Index Research Series Using Current Methods, 1978-2009

Introduction

The Consumer Price Index (CPI) is the most widely used measure of inflation in the United States, and affects nearly all Americans. Annual cost-of-living adjustments (COLAs) for Social Security recipients and federal and military retirees are tied to changes in the CPI. The CPI also is used in the annual escalation of federal income tax brackets as well as personal exemption and standard deduction amounts. In addition, the CPI is used in the creation and analysis of many key economic indicators where real or constant-dollar measures are needed, including estimates of income, earnings, productivity, output, and poverty.

The Bureau of Labor Statistics (BLS) has made numerous improvements to the CPI over the past thirty-plus years. While these improvements make the present and future CPI more accurate, *historical* price index series are not adjusted for such improvements.¹ That said, the accuracy of the historical CPI is of great importance and interest to a variety of researchers. This paper presents an estimate of the CPI-U from 1978 to 2009 that incorporates most of the improvements made over that time span into the entire series. This measure, called the CPI research series using current methods (CPI-U-RS), attempts to answer the question, “What would have been the measured rate of inflation from 1978 forward had the methods currently used in calculating the CPI-U been in use since 1978?”

The CPI-U-RS is used by other statistical agencies that prefer a historically consistent CPI to deflate economic measures. The Bureau of Economic Analysis used the CPI-U-RS in its 1999 comprehensive revision of the National Income and Product Accounts.² The Bureau of Labor Statistics uses the CPI-U-RS in its measure of real hourly compensation for its quarterly measure of labor productivity and costs.³ In addition, the Census Bureau uses the CPI-U-RS in estimates of historical real income.⁴

The CPI-U-RS was constructed by adjusting U.S.-level CPI-U index series for methodological improvements, usually at the level of the item stratum such as new vehicles or residential rent.⁵ That is, the adjustments were not made to the aggregate all-items CPI-U directly, but rather to its component indexes. These adjusted series were then aggregated to form the all-items CPI-U-RS and other high-level aggregates. It is important to note in this regard that the component indexes were adjusted directly; individual prices were not used to recompute those indexes.

The CPI-U-RS provides an annual inflation series that adjusts only for specified changes in BLS methodology. No attempt has been made to incorporate research results, such as on the value of safer, but perhaps less comfortable, air travel, for which there is no corresponding methodological change in the CPI-U. Nevertheless, the CPI-U-RS is expected to be of use to forecasters and other researchers in analyzing the trends and other movements in consumer inflation over the last two decades. It should help to answer the question of the degree to which the measured rate of inflation has been affected by improvements BLS has made.

Over the 32-year period of the study (December 1977 – December 2009), the CPI-U-RS increased 217.1 percent, compared to 247.7 percent for the CPI-U over the same time period. This represents an average annual increase of 3.67 percent for the CPI-U-RS, compared to 3.97 percent for the CPI-U, for an average annualized difference between the two measures of 0.30 percent.

Methodological Improvements to the CPI, 1978-2009

There have been a number of significant methodological improvements made to the CPI since 1978. The CPI-U-RS differs from the CPI-U in that the CPI-U-RS is adjusted to incorporate estimates of what the measured rate of inflation would have been had those improvements to the CPI-U been made earlier. Table 1 lists all the improvements made to the CPI since 1978 for which estimates of historical effects were made and included in the CPI-U-RS.⁶

Unlike the CPI-U, the historical CPI-U-RS is revised annually to incorporate the estimated historical effect of new methods, and to improve adjustments previously made. In addition, there were several improvements made to the CPI since 1978 for which no adjustments to the CPI-U-RS were made.⁷ Adjustments to the CPI-U-RS were not made if the impact of the improvement on the rate of growth of the index could not be estimated or was believed to be negligible.

Table 1. Improvements to the Consumer Price Index for all urban consumers (CPI-U) since 1978, and its effect on the CPI research series using current methods (CPI-U-RS).

Change	Description	Year implemented in CPI-U	CPI-U-RS incorporates estimate of change from:
Use of rental equivalence to measure changes in homeowner costs	Changed homeowners' component from cost of purchase to value of rental services	1983	1978-1982
Rental vacancy imputation	Employed new method for imputing price change for rental vacancies	1985	1978-1984
Quality adjustment of used car prices	Prices of used cars adjusted for differences in quality after model changeovers	1987	1978-1986
Quality adjustment of sampled housing units to reflect aging	Rental values in CPI sample were adjusted for aging	1988	1978-1987
Quality adjustment of apparel prices	Regression models used to adjust apparel prices for changes in quality when new clothing lines are introduced	1991	1978-1990
Treating shifts between brand name and generic drugs as price changes	Introduced new procedures that allow generic drugs to be priced when a brand drug loses its patent	1995	1978-1994
Change in shelter formula: elimination of composite estimator	Replaced composite estimator with a 6-month chain estimator. Under-reporting of 1-month rent changes had resulted in missing price change in residential rent and homeowners' equivalent rent	1995	1978-1994
Change in shelter formula: rental equivalence improved estimator	Modified imputation of homeowners' implicit rent to eliminate upward drift property of previous estimator	1995	1987-1994
Elimination of functional form bias for CPI food-at-home categories	Introduced "seasoning" procedures to eliminate upward bias derived from the setting of base period prices of newly initiated items	1995	1978-1994
Elimination of functional form bias for other CPI commodity and service categories	Extended food-at-home seasoning procedures to remainder of commodities and services. Base period prices left unchanged in most noncomparable substitutions	1996	1978-1996
Quality adjustment of personal computer prices	Regression models used to adjust personal computer prices for changes in quality	1998	1987-1997
Elimination of automobile finance charges	Deemed out of scope	1998	1978-1997
Quality adjustment of television prices	Regression models used to adjust television prices for changes in quality	1999	1978-1998
Accounting for consumer substitution within CPI item categories	The geometric formula now used assumes a modest degree of consumer substitution within most CPI item categories	1999	1978-1998
Treating mandated pollution control measures as price increases	Changes in pollution control regulations now viewed as price changes and not quality changes	1999	1978-1998
Quality adjustment of audio equipment prices	Regression models used to adjust audio equipment prices for changes in quality	2000	1978-1999
Quality adjustment of other video	Regression models used to adjust other video	2000	

equipment prices	equipment prices for changes in quality: - video cameras - video cassette recorders		1987-1999 1987-03/2000
Quality adjustment of refrigerators/freezers	Regression models used to adjust refrigerators/freezers for changes in quality	2000	1978-06/2000
Quality adjustment of clothes washers	Regression models used to adjust prices of clothes washers for changes in quality	2000	1978-09/2000
Quality adjustment of clothes dryers	Regression models used to adjust prices of clothes dryers for changes in quality	2000	1978-09/2000
Quality adjustment of microwave ovens	Regression models used to adjust prices of microwave ovens for changes in quality	2000	1978-06/2000
Quality adjustment of college textbooks	Regression models used to adjust prices of college textbooks for changes in quality	2000	1978-06/2000
Revision of shelter indexes for 1999	To adjust for an error in the calculation of the rent and owners' equivalent rent indexes for 1999.	2000	1999
More frequent weight updates	Weights are now updated in the CPI every two years instead of approximately every ten years.	2002	1990-95

Limitations of the CPI-U-RS

There are two primary limitations of the CPI-U-RS. The first reflects uncertainty surrounding the magnitude of each adjustment made to the CPI-U-RS. The second reflects the fact that some improvements to the CPI-U, for which no adjustments were made to the CPI-U-RS, may nevertheless have affected the rate of inflation as measured by the CPI-U.

Most adjustments to the CPI-U-RS were based on BLS research that estimated the impact of methodological changes to the CPI over a relatively short period of time, and the effect of a given methodological change (outside the period of study) is assumed to be constant over time. For example, while the price changes for the experimental CPI using geometric means (CPI-U-XG) were used to adjust most CPI item categories from 1991-98, the CPI-U-RS was adjusted downward from 1978-90 by the *average* differences between the CPI-U and CPI-U-XG from 1991 to the mid-1990s. Similarly, apparel indexes for the CPI-U-RS from 1978-90 are adjusted based on study of the effect of the improvement during the last six months of 1991. While there is typically a great degree of confidence about the direction of the adjustment made to the CPI-U-RS, there must be less confidence about the precise size of adjustments made based on such extrapolation.

Similarly, as noted above, there have been a number of methodological improvements made to the CPI for which *no* estimate was made for the CPI-U-RS. Other organizations, such as the Congressional Budget Office and the Council of Economic Advisers, have estimated the impact of some of these CPI improvements on the projected rate of inflation for budget forecasts.

Results

Over the 32-year period of the study (December 1977 – December 2009), the CPI-U-RS increased 217.1 percent, compared to 247.7 percent for the CPI-U over the same time period; the annualized difference between the two measures is approximately 0.30 percent. Table 2 gives the December-to-December percent changes for 1978 through 2009 for the CPI-U and CPI-U-RS for the All Items index and for CPI major groups.

Table 2. CPI for all urban consumers (CPI-U) and CPI research series using current methods (CPI-U-RS), all items and major groups, December to December percent changes, 1978-2009.

Note: From 1978-1997, there were seven major groups in the CPI. In 1998, entertainment was dropped as a major group, and two major groups were added: recreation, and education and communication.

*These represent changes from December 1997-December 2009

**Entertainment was dropped as a major group in December 1997; these numbers represent percent changes from December 1977 through December 1997.

Conclusion and Future Research

Since the CPI-U does not incorporate methodological changes retroactively, the BLS developed the CPI-U-RS for researchers interested in a measure of inflation that attempts to use current and consistent methods of estimating consumer inflation over the 1978-2009 time period.

The CPI-U-RS provides a somewhat different picture of inflation from 1978-2009 by including an estimate of most improvements made over time in the CPI back to 1978. This can provide users of CPI data a new perspective on inflation, and on the performance of the American economy, over the 1978-2009 time period.

Researchers should be aware of the limitations of the CPI-U-RS, including the fact that adjustments made to the CPI-U-RS from 1978 forward typically reflect extrapolations of estimates made over later, and much shorter, periods. In addition, the CPI-U-RS is not adjusted for many improvements made to the CPI over the past 32 years. Nonetheless, for some purposes, the CPI-U-RS can serve as a valuable proxy for what the CPI-U would have been had current methods been in place from 1978 forward.

The CPI-U-RS is subject to revision. When an improvement is made to the CPI, and an estimate of the effect of that change can be made, the CPI-U-RS will be revised to reflect that improvement. In addition, if a superior method of adjusting the CPI-U-RS for past improvements is made available, the adjustments reported here will be refined.

To assist users, the All items CPI-U-RS indexes are available on request by calling 202-691-7000.

¹ Historical CPI indexes are occasionally revised when data collection or processing errors are discovered. Methodological improvements, however, do not result in data revisions.

² See the U.S. Bureau of Economic Analysis, *Survey of Current Business*, October 1999.

³ See the U.S. Bureau of Labor Statistics, "Productivity and costs, second-quarter measures, 1999", August 1999.

⁴ See the U.S. Bureau of the Census, *Money Income in the U.S.*, 1998, September 1999.

⁵ Because of limitations of available data, adjustments for periods prior to the 1987 CPI Revision often had to be made at a slightly higher level of aggregation, roughly corresponding to the level of a CPI expenditure class.

⁶ A more detailed description of most of these methodological changes is available in Kenneth J. Stewart and Stephen B. Reed, "Consumer Price Index research series using current methods, 1978-98," *Monthly Labor Review*, June 1999, pp. 29-38.

⁷ These are more fully described in Stewart and Reed.

Current Price Topics: The Use of CPI in Poverty Measurement

The Consumer Price Index (CPI) plays a critical role in adjusting the Nation's measurement of poverty every year. Poverty thresholds are used by the Census Bureau to determine which families are poor. Poverty guidelines are used by the Department of Health and Human Services to determine eligibility for Federal assistance. The poverty figures are adjusted by the changes in the CPI to keep the real income levels associated with these thresholds and guidelines constant.¹ Specifically, these annual poverty measures are tied to changes in the annual average all items Consumer Price Index for All Urban Consumers (CPI-U).

To illustrate an annual adjustment, the poverty guideline for a family of four in the 48 contiguous States in 2008 was \$21,200. Since the annual average CPI-U rose 3.8 percent in 2008, the poverty guideline for a family of four in 2009 was then adjusted upward to \$22,050. Similar adjustments were made to the poverty thresholds.²

Although the annual average CPI-U typically increases from year to year, as in the previous example, this measure of inflation actually *fell* 0.4 percent in 2009. This represented the first decline in the annual average CPI-U since 1955, and the first decline since these poverty measures were tied to the all items CPI-U. This meant that, unless there was a change in the law underlying the adjustment rules, the poverty guidelines would have been adjusted downward. Said another way, without Congressional action, if the poverty guidelines would be adjusted downward for 2010, some families making the same amount of income would no longer be eligible for financial assistance, and others would have had their level of aid reduced. As a result, Congress took action to keep the 2010 poverty guidelines at 2009 levels until at least May 31, 2010.³

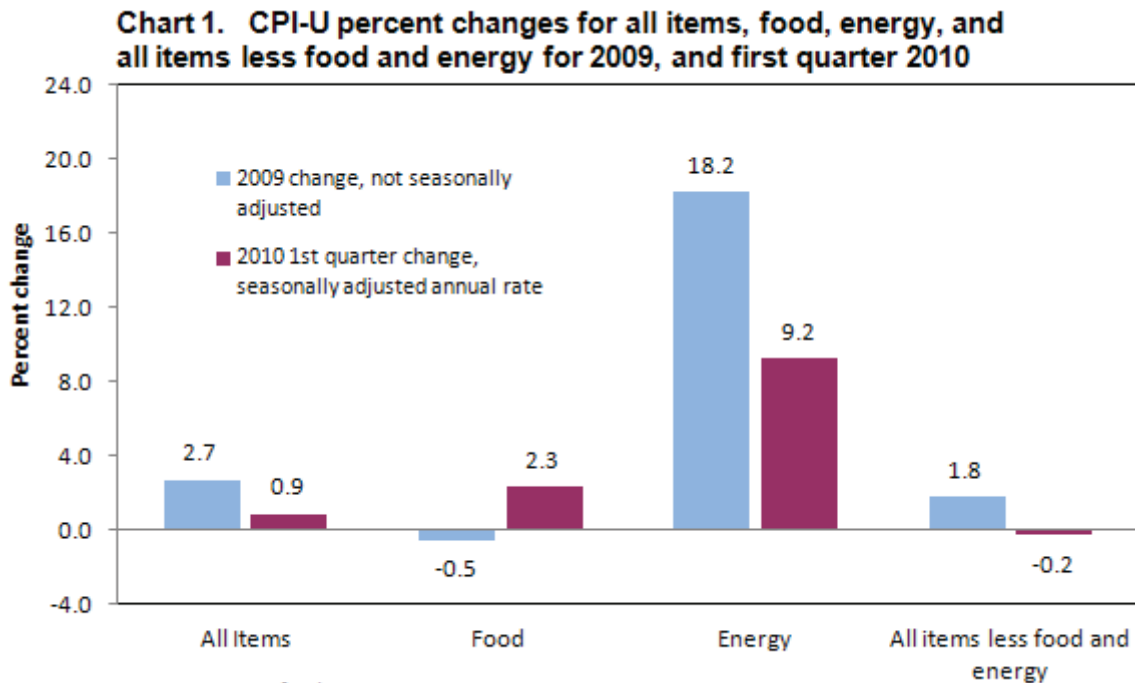

The poverty thresholds, on the other hand, were adjusted lower in 2010, in line with the small decrease in the annual average CPI-U. For example, the weighted average poverty threshold for a family of four in 2008 was \$22,025. In 2009, reflecting the slight drop in the CPI-U, the preliminary average poverty threshold was adjusted downward to \$21,947.⁴

The use of the CPI in adjusting poverty values is mandated by law. This is only one example of myriad programmatic and contractual uses for this prominent statistic. Its influence extends far beyond simply being a measure of price changes paid by consumers. Future editions of this *Focus* series for the CPI will examine some of these other applications.

Current Price Trends: Recent Modest Inflation Caused Primarily by Higher Gasoline Prices

All items

The all items Consumer Price Index for All Urban Consumers (CPI-U) rose at a 0.9-percent seasonally adjusted annual rate during the first quarter of 2010. (See chart 1.)⁵ In 2009, this index had increased 2.7 percent, not seasonally adjusted.

Energy

The modest increase in the all items index for the first quarter of 2010 was due primarily to a 9.2-percent annual rate of growth in the index for energy. Within energy, gasoline prices continued to increase in the first quarter of 2010, up at an 8.6-percent annual rate after increasing 53.5 percent in 2009. Natural gas prices were up at a 29.8-percent annual rate in the first quarter of 2010 after falling 18.1 percent in 2009, and fuel oil prices rose at an annual rate of 18.2 percent.

Over the past few years, crude oil prices—and subsequently retail gasoline prices—have been quite volatile. From July 2007 to July 2008, gasoline prices rose sharply, increasing 37.9 percent (not seasonally adjusted); crude oil prices peaked in July 2008 at more than \$134 a barrel. During the last 5 months of 2008, as crude oil prices collapsed to under \$32 a barrel, retail gasoline prices fell by more than 50 percent. In 2009, pump prices turned sharply higher again, increasing more than 50 percent, with crude oil prices increasing to around \$70 a barrel by the end of 2009.⁶

Food

Food prices rose at a 2.3-percent annual rate in the first quarter of 2010, with grocery store prices increasing 3.7 percent. Significant increases were seen in 3 of the 6 major grocery store food groups. The index for fruits and vegetables was up at a 19.7-percent rate, with fresh vegetable prices up at a 32.5-percent rate. Unusually cold weather early in the year in Florida significantly affected tomato prices, which rose at a 40.5-percent annual rate in the first quarter of 2010. Dairy products rose at an 8.5-percent rate in the first quarter, with milk at 9.9 percent. Meats, poultry, fish, and eggs increased at an annual rate of 4.1 percent in the first quarter of 2010 after falling 3.8 percent in 2009. Within this group, egg prices have risen at a 12.7-percent annual rate so far in 2010.

Small or modest price declines were noted for the other three grocery store food groups. The index for cereal and bakery products fell 2.8 percent. Nonalcoholic beverages fell 0.7 percent, and other food at home declined 1.0 percent.

Grocery store price changes in the first quarter of 2010 were more modest than in recent years. Grocery store inflation was relatively high during most of 2008; for example, these prices rose 7.0 percent from November 2007 to November 2008. In the next 12 months, however, grocery store food prices turned down, falling 2.9 percent, its sharpest annual drop since June 1959.

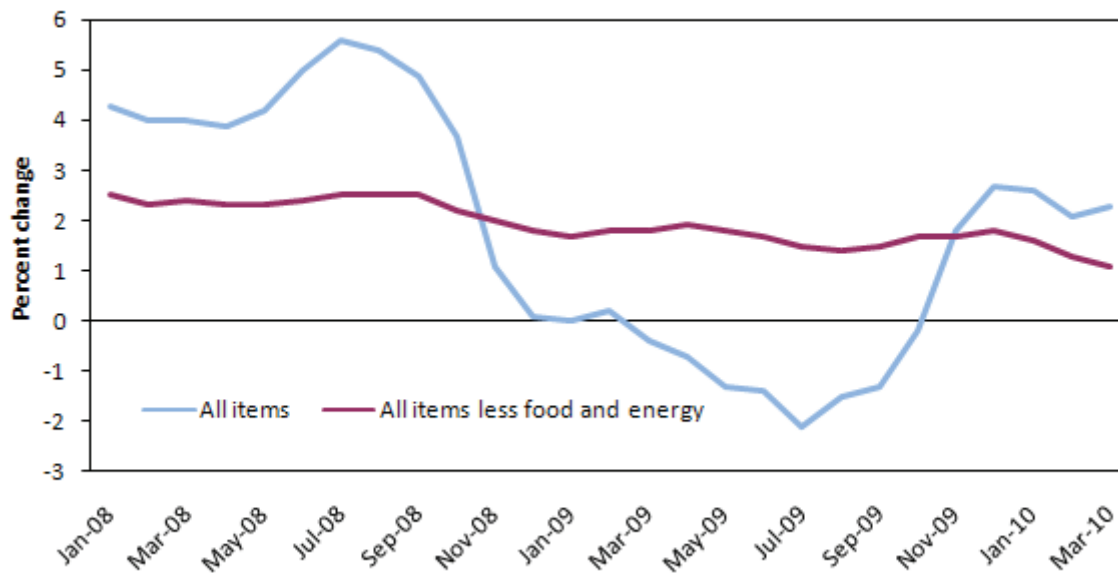

All items less food and energy

The index for all items less food and energy fell at a 0.2-percent annual rate in the first quarter of 2010, the first quarterly decrease since September 1960. The decrease in the first quarter of 2010 was due primarily to a 2.2-percent annual rate of decline in shelter costs. Within shelter, owners' equivalent rent fell at a 0.8-percent rate, and lodging away from home declined at a rate of 6.7 percent. In addition, some transportation components fell in the first quarter of 2010 after increasing in 2009. Airline fares fell at a 10.9 percent rate in the first quarter of 2010 after rising 4.3 percent in 2009. The index for new vehicles also fell in the first quarter of 2010, dropping at a 1.2-percent annual rate after increasing 4.9 percent in 2009.

The first quarter 2010 decreases within all items less food and energy were partially offset by increases in other items. Medical care prices were up at a rate of 5.7 percent in the first quarter, with medical care commodities increasing at a 7.7-percent pace. Prices for used cars and trucks continued to increase in the first quarter of 2010, up at an 11.4-percent rate after increasing 9.2 percent in 2009. Tobacco prices, which had increased 30.1 percent in 2009 due in part to Federal and State tax increases, were up at an annual rate of 1.8 percent in the first quarter of 2010.

The rate of inflation for all items less food and energy has slowed somewhat in recent years, and has increased only 1.1 percent over the past 12 months. (See chart 2.) This is the lowest 12-month change in this broad expenditure category since an equivalent increase in January 2004, and the annual rate of inflation for this index has not been lower since a 0.9 percent increase in January 1966. The recent deceleration in this so-called "core" rate of inflation can largely be attributed to a similar deceleration in shelter inflation. Shelter prices, which had increased at a 3.1-percent average annual rate from 1992 to 2007, rose only 1.9 percent in 2008, and increased only 0.3 percent in 2009. This deceleration for shelter continued into 2010, with shelter prices down 2.2 percent in the first quarter.

Chart 2. 12-month percent change, all items and all items less food and energy, January 2008 - March 2010

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

- M - Every month.
- 1 - January, March, May, July, September, and November.
- 2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ;

Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

² This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

³ Indexes on a December 1982=100 base.

⁴ Indexes on a December 1997=100 base.

⁵ Special index based on a substantially smaller sample.

⁶ Indexes on a December 1993=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

² Indexes on a December 1982=100 base.

³ Special index based on a substantially smaller sample.

⁴ Indexes on a December 1993=100 base.

⁵ Indexes on a December 1997=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

- M - Every month.
- 1 - January, March, May, July, September, and November.
- 2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ;

Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

All items less food and energy	224.125	1.3	.5	218.426	-.7	-.4

¹ Areas on pricing schedule 1 (see Table 10) will appear next month.

² Index on a November 1977=100 base in Miami.

³ This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

⁴ Indexes on a December 1984=100 base

⁵ Special index based on a substantially smaller sample.

⁶ Indexes on a December 1993=100 base.

⁷ Indexes on a December 1997=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The U.S. Bureau of Labor Statistics (BLS) publishes CPIs for two population groups: (1) The CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include, in addition to wage earner and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained through personal visits or telephone calls by BLS trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W, separate indexes also are published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period. For the C-CPI-U, data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and is subject to two annual revisions.

The index measures price change from a designated reference date. For the CPI-U and the CPI-W, the reference base is 1982–84 = 100.0. The reference base for the C-CPI-U is December 1999=100.0. An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change also can be expressed in dollars as follows: the price of a base-period market basket of goods and services in the CPI has risen from \$10 in 1982–84 to \$11.65.

For further details, visit the CPI homepage on the Internet at <http://www.bls.gov/cpi> or contact our CPI Information and Analysis Section at (202) 691-7000.

Calculating index changes

Movements of the indexes from one month to another usually are expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example shown in the box on this page illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index point change

CPI	202.416
Less previous index	201.800
Equals index point change	.616

Percent change

Index point difference	.616
Divided by the previous index	201.800
Equals	0.003
Results multiplied by one hundred	0.003 x 100
Equals percent change	0.3

Regions defined

The states in the four regions are listed below.

The Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

The Midwest--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The South--Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia, and the District of Columbia.

The West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Energy prices

Prices usually are available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI not only are for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.* The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. (See table P1.) Prices are collected, in most cases, for quantities greater than 1 gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

Gasoline and automotive diesel fuel. Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, miniservice, and self-service gas stations. Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTUs (U.S. Department of Energy)

1 kwh = 3,412 BTUs (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTUs (U.S. Department of Energy)

Food and beverage prices

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help to satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary

disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. For cases in which the proportion of estimated prices used to calculate the average is considered too high, the average price is not published, and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. Detailed specifications are available from BLS information offices or from the Washington office, upon request.

Seasonally adjusted and unadjusted data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index before adjustment for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. Seasonally adjusted indexes and seasonal factors are computed annually. Each year, the last 5 years of seasonally adjusted data are revised. Data from January 2005 through December 2009 were replaced in January 2010. Exceptions to the usual revision schedule were: the updated seasonal data at the end of 1977 replaced data from 1967 through 1977; and, in January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the [CPI Detailed Report](#).

The seasonal movement of all items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used in the aggregation of the dependent series for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 46 of the 73 components are seasonally adjusted for 2010.

Seasonally adjusted data, including the all items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the seasonal factors introduced in January 2010, BLS adjusted 30 series using Intervention Analysis Seasonal Adjustment, including selected food and beverage items, motor fuels, electricity and vehicles. For example, this procedure was used for the Motor fuel series to offset the effects of events such as damage to oil refineries from Hurricane Katrina.

For a complete list of Intervention Analysis Seasonal Adjustment series and explanations, please refer to the article "Intervention Analysis Seasonal Adjustment", located on our website at <http://www.bls.gov/cpi/cpisapage.htm>.

For additional information on seasonal adjustment in the CPI, please write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or contact David Levin at (202) 691-6968, or by e-mail at Levin.David@bls.gov. If you have general questions about the CPI, please call our information staff at (202) 691-7000.

Metropolitan areas

BLS publishes price indexes for three major metropolitan areas monthly:

Chicago-Gary-Kenosha, IL-IN-WI
Los Angeles-Riverside-Orange County, CA
New York-Northern New Jersey-Long Island,
NY-NJ-CT-PA

Data for an additional 11 metropolitan areas are published every other month [on an odd- (January, March, etc.) or even- (February, April, and so forth) month schedule] for the following areas:

Atlanta, GA	-even
Boston-Brockton-Nashua, MA- NH -ME-CT	-odd
Cleveland-Akron, OH	-odd
Dallas-Fort Worth, TX	-odd
Detroit-Ann Arbor-Flint, MI	-even
Houston-Galveston-Brazoria, TX	-even
Miami-Fort Lauderdale, FL	-even
Philadelphia-Wilmington -Atlantic City, PA-NJ-DE-MD	-even
San Francisco-Oakland -San Jose, CA	-even
Seattle-Tacoma-Bremerton, WA	-even
Washington-Baltimore, DC-MD-VA-WV	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks into the following month.)

Data are published for another group of 13 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for

Anchorage, AK
Cincinnati-Hamilton, OH-KY-IN
Denver-Boulder-Greeley, CO
Honolulu, HI
Kansas City, MO-KS
Milwaukee-Racine, WI
Minneapolis-St. Paul, MN-WI
Phoenix-Mesa, AZ
Pittsburgh, PA
Portland-Salem, OR-WA
San Diego, CA
St. Louis, MO-IL
Tampa-St. Petersburg-Clearwater, FL

How to Obtain Consumer Price Index Information

CPI information is available from BLS electronically, through publication subscriptions, and via telephone and fax through automated recordings. Information specialists also are available in the national and information offices to provide help and to respond to questions.

Electronic access to CPI data

BLS on the Internet. Through the Internet, BLS provides free, continuous access to published CPI data and press releases. The most recent month's CPI is made available immediately at the time of release. Additionally, a database called LABSTAT, containing current and historical data for the CPI, is accessible.

World Wide Web. BLS maintains a Web site at <http://www.bls.gov> on the Internet. This BLS homepage provides access to LABSTAT, as well as links to program-specific homepages. The CPI homepage <http://www.bls.gov/cpi/> provides other CPI information, as well as indexes. This includes a brief explanation of methodology, frequently asked questions and answers, contacts for further information, and explanations of how the CPI program handles special items, such as medical care and housing. In addition, CPI press releases and historical data for metropolitan areas can be accessed by linking to the regional office home pages from the main BLS Web site listed above.

Recorded CPI data

Summary CPI data are provided on 24-hour recorded messages. Detailed CPI information may be obtained by calling (202) 691-5200. A touch-tone telephone is recommended, as this system allows the user to select specific indexes from lists of available data.

Recorded summaries of CPI data also may be obtained by calling any one of the metropolitan area CPI hotlines listed next. These hotline summaries typically include data for the U.S. city average, as well as for the specified area. The recordings are approximately 3 minutes in length, do not require a touch-tone telephone, and are available 24 hours a day, 7 days a week.

<i>Area</i>	<i>Hotline number</i>
Anchorage	(907) 271-2770
Atlanta	(404) 893-4222
Baltimore	(410) 962-4898
Boston	(617) 565-2327
Chicago	(312) 353-1880
Cincinnati	(513) 684-2349
Cleveland	(216) 522-3852
Dallas	(214) 767-6970
Denver	(816) 285-7000
Detroit	(313) 226-7558
Honolulu	(808) 541-2808
Houston	(214) 767-6970
Indianapolis	(317) 226-7885
Kansas City	(816) 285-7000
Los Angeles	(310) 235-6884
Milwaukee	(414) 276-2579

New York	(646) 264-3600
Philadelphia	(215) 656-3948
Phoenix-Mesa	(480) 503-9075
Pittsburgh	(412) 644-2900
Portland	(503) 326-5818
San Diego	(619) 557-6538
San Francisco	(415) 625-2270
Seattle	(206) 553-0645
St. Louis	(816) 285-7000
Washington, DC	(202) 691-6994

Other sources of CPI data

Fax-on-Demand. This fax service has been discontinued as of April 27, 2007.

Technical information may be obtained during normal working hours, Monday through Friday, by calling the Washington, DC national office at (202) 691-7000 or any of the information offices listed below.

<i>Office</i>	<i>Telephone</i>
Atlanta	(404) 331-3415
Boston	(617) 565-2327
Chicago	(312) 353-1880
Dallas	(214) 767-6970
Kansas City	(816) 285-7000
New York	(212) 337-2400
Philadelphia	(215) 597-3282
San Francisco	(415) 625-2270
Washington, DC	(202) 691-7000

Historical tables. These include all published indexes for each of the detailed CPI components. These tables may be obtained via the Internet, by calling (202) 691-7000 in the national office, or by contacting any of the information offices just listed.

Descriptive publications. These publications describe the CPI and ways in which to use it. They include simple factsheets discussing specific topics about the CPI, a broader, non-technical overview of the CPI in a question-and-answer format, and a technical and thorough description of the CPI and its methodology. These publications may be obtained by calling (202) 691-7000, and many are included on the CPI homepage on the Internet.

Special publications. Also available are various special publications, such as *Relative Importance of Components in the Consumer Price Index* and materials describing the annual revisions of seasonally adjusted CPI data. For more information, call (202) 691-7000.

Further information can be obtained by writing the Office of Prices and Living Conditions, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 3615, Washington, DC 20212-0001, or by calling any of the information offices listed earlier.
