OFFICE OF SURFACE MINING RECLAMATION AND ENFORCEMENT

GENERAL STATEMENT

The Office of Surface Mining Reclamation and Enforcement (OSM) was established with the passage of the Surface Mining Control and Reclamation Act (SMCRA) of 1977, Public Law 95-87, August 3, 1977.

SMCRA was enacted to ensure that coal mines are operated in a manner that protects citizens and the environment during mining, to assure that the land is restored to beneficial use following mining, and to mitigate the effects of past mining by aggressively pursuing reclamation of abandoned coal mines. SMCRA provides the means for restoring abandoned coal mines through collection of a tonnage-based reclamation fee assessed on current coal production.

Currently, 24 States have regulatory programs in place and OSM continues to work with Indian tribes to enable them to assume primacy. Twenty-three States and three Tribes administer approved abandoned mine land reclamation programs. These primacy States are successfully implementing their approved regulatory programs. OSM's role has evolved to establishing policy direction and guidance, providing grants to primacy States and Tribes, conducting oversight activities in accordance with SMCRA, and administering and operating programs on Federal and Tribal lands and in States that have not assumed primacy.

The highlight to the FY 2001 President's Budget is the continuation of the Administration's commitment for a multi-year effort to fund the Abandoned Mine Lands (AML) program at a level commensurate to fee receipts by 2003. The FY 2000 budget provided the initial increment of \$10.55 million to achieve this commitment. The FY 2001 budget proposal seeks an additional \$14.4 million. This gradual increase in project funding will result in a concurrent increase in reclaimed acreage over the next several years and will also provide a major beneficial impact to the citizens of the coal fields and the lands and waters in their communities.

In FY 2001 OSM is proposing a significant increase in the AML reclamation program to aggressively accelerate the restoration of abandoned mine sites adversely affected by past coal mining practices. OSM is proposing a \$14.4 million increase to reclaim abandoned mine sites that pose significant threats to human safety. Of this sum, OSM will direct \$12.4 million to State and Tribal grants for projects that support the President's Clean Water Action Plan. The remaining \$2

OSM's mission goals are to : (1) Repair, reclaim and restore as much land and water as possible that was degraded by past mining to provide America with cleaner and safer land and water and to provide employment and economic opportunities in depressed coal regions; and (2) Improve OSM's regulatory program for protecting the environment, people and property during current mining operations and subsequent reclamation through cooperative results oriented oversight and evaluation of State programs, and in carrying out OSM's regulatory responsibilities in order to safeguard people and the environment.

Office of Surface Mining Reclamation and Enforcement

million increase will provide additional funding for the Appalachian Clean Streams Initiative to accelerate the cleanup of miles of polluted streams caused by past coal mining practices. This will also support the Clean Water Action Plan.

The FY 2001 President's Budget requests \$309.2 million in current authority, \$67 million in permanent authority, and 650 FTEs. Almost 80 percent of OSM's funding request will be passed to the States and Tribes in the form of regulatory, reclamation, or Small Operators Assistance Program grants or will be used for emergency and high priority projects. OSM will use the balance of the request to provide technical assistance to the States, conduct its oversight responsibilities, implement a Federal Reclamation Program, and carry out its fiscal responsibilities for collecting revenues and awarding grants. OSM implements these programs through three regional and ten field offices.

OSM is focusing on several new approaches in implementing SMCRA. These initiatives include an increased emphasis on the Appalachian Clean Streams Initiative to facilitate State and local coalitions to clean up acid mine drainage and improve the aquatic environment and quality of life for coalfield citizens. Through this initiative, over 100 State and Federal agencies, local soil and water conservation districts, national conservation organizations, private foundations, and coalfield residents have formalized their commitment to work together through a Statement of Mutual Intent.

OSM is continuing its efforts to establish partnerships to improve and increase outreach efforts that allow full participation from its stakeholders in addressing common problems. These initiatives will assist OSM in forging a bond and partnership with its stakeholders that will endure well into the 21st century.

OSM and its partners continue to work together to better implement the surface mining program. They have been working in concert to develop sound environmental policies and implement procedures which benefit not only the coal field citizens but enhance the environment for all Americans and support the coal industry as economical, progressive, and responsible. As an example, OSM and the States revised OSM's approach to oversight from a process review to measuring on-the-ground results. The OSM/State team received the Vice President's National Performance Review Hammer Award for this improvement.

During fiscal years 1998 and 1999, OSM increased its outreach efforts to work with all its stakeholders. In January 1998 OSM sponsored a Federal Coal Symposium in Washington, DC. The symposium was the largest event OSM has ever sponsored, with more than 250 individuals attending, including stakeholders from Government, industry and environmental and citizens groups. The symposium served as an information sharing opportunity to foster a mutual understanding of current Federal programs affecting the coal industry and the remediation of environmental problems stemming from past coal mining practices. Additionally, OSM sponsored regional symposia in each of its three regions to accommodate stakeholders in those parts of the country.

In January 1999 OSM conducted a policy outreach symposium on reforestation at surface coal mines. The symposium provided a forum to discuss reforestation on mine lands and obtained stakeholders input on how to encourage tree planting on active and abandoned mine lands. Attendees included representatives from Federal and State agencies, industry officials and citizens groups. OSM followed up on the symposium with a technical interactive forum in March 1999 to highlight successful reforestation efforts.

To better serve its partners and the public, OSM continues to improve its databases by working with other agencies to include all abandoned mine sites, coal and non-coal, in a unified inventory. OSM expanded its electronic permitting program to reduce paperwork and save time and money for both the States and industry. OSM's website contains comprehensive information on regulatory and reclamation matters and even accepts requests from citizens for Freedom of Information Act requests.

As mining and engineering information technology continues to grow rapidly, OSM continues to lead by providing and enhancing the most up-to-date information, technical training, technical assistance, and technology transfer. OSM believes these programs greatly help the States and Tribes operate their respective regulatory and reclamation programs in fulfilling SMCRA's requirements

Advancing AML enhancement and re-mining continue to remain OSM priorities. OSM has implemented a proposal for "Enhancing AML Reclamation" which allows more sites to be reclaimed without significant additional cost to the government. This effort results in achieving more AML reclamation by allowing contractors to offset reclamation costs by removing and selling coal found incidental to reclamation projects. Re-mining allows current operators to mine previously mined sites. Re-mining operators mine the now economical coal left by previous operations, as part of their current operations, and reclaim the entire site as part of their post-mining reclamation responsibilities. These operations may resolve many environmental problems created by past mining.

On December 17, 1999 OSM promulgated a comprehensive rule on valid existing rights for surface coal mining operations. The Surface Mining Control and Reclamation Act (SMCRA) prohibits surface coal mining operations in National Parks and other specially protected areas, but the prohibition does not apply to persons having valid existing rights. OSM issued final rules that redefined the circumstances under which a person needs and has valid existing rights to conduct surface coal mining operations in areas where mining is otherwise prohibited. The rules established requirements, procedures and responsibilities for submitting and processing requests for valid existing rights determinations.

OSM also published a related rule on December 17, 1999 that clarified the existing regulatory position that subsidence due to underground coal mining is not a surface coal mining operation, and therefore, not prohibited in areas protected under SMCRA. Consequently, neither subsurface activities that may result in subsidence, nor actual subsidence, are prohibited on lands protected by section 522(e) of the Act.

Office of Surface Mining Reclamation and Enforcement

Additionally, during FY 1998 and FY 1999 OSM addressed the controversial mining technique commonly referred to as "mountain top mining." In its annual oversight report on the State of West Virginia, OSM evaluated the practice as it is now being implemented in that State. Also, at the direction of the House Appropriations Committee, OSM reported to the House and Senate Committees on March 1, 1999 on the overall situation, and the role of OSM, the States and other Federal agencies in regulating its environmental effects.

During FY 1999 OSM devoted substantial resources throughout the agency to address this situation and the litigation in West Virginia. OSM is working with a team of Federal and State partners, including the Fish and Wildlife Service, Geological Survey, Environmental Protection Agency and the Corps of Engineers, to develop a programmatic environmental impact statement for mountain top mining in West Virginia. This has already resulted in more environmentally protective permits being issued in the State. This effort will continue into 2001.

In addition, OSM is working on several high priority issues. These include blasting, bonding, post-mining land use, and hydrology. OSM is also reviewing regulations and policies in areas like long-term temporary cessation, contemporaneous reclamation and Tribal primacy.

Administrative Initiatives:

OSM successfully addressed the Year 2000 computer problem (Y2K). OSM established an ongoing agency-wide project that examined its computerized information systems and modified those affected by the Y2K problem. For example, the Applicant Violator System (AVS) and the Abandoned Mines Land Inventory System (AMLIS) were converted to achieve Year 2000 compliance. In addition, OSM converted the accounting, grants, and collection systems to be Year 2000 compliant.

OSM continues to implement the Chief Financial Officer's Act and coordinates those activities with Government Performance and Results Act (GPRA) implementation. The linkage between the strategic planning and performance measures and the audit of OSM's financial records has improved overall program management. OSM is also participating in the automated Interior Department Acquisition System (IDEAS).

The Department converted to a new payroll/personnel system, the Federal Payroll and Personnel System (FPPS). FPPS is a state-of-the-art, fully integrated payroll and personnel system. OSM continues to implement the automated human resources system to help streamline and make more effective the recruitment process.

OSM is working with Departmental vehicle management officials to identify the type(s) of alternative fuel vehicles to use in implementing its programs. When purchasing new vehicles, OSM will replace non-alternative fuel vehicles with alternative fuel vehicles whenever practicable.

OSM continues to make a substantial effort to increase its workforce diversity by participating in

a targeted recruitment program in cooperation with the other personnel and EEO offices. To maximize resources, OSM and other Interior bureaus have each taken the lead on a portion of the program initiative. OSM is coordinating recruitment efforts. This initiative supports the Secretary's Strategic Plan for Improving Diversity in the Department of the Interior as well as OSM's Strategic Plan.

Government Performance and Results Act: Core GPRA requirements are to improve planning, eliminate duplicative processes, and involve stakeholders. Although a relatively small bureau, OSM is positioned to lead such coordinating/transfer endeavors. OSM deals with both State and Federal agencies, is responsible for both Federal and private lands, reclaiming and protecting diverse sites, and enhancing technology transfer among many constituents.

The FY 2001 President's Budget request continues to justify the government's needs through strategic goals and associated performance measures. To prepare for this, OSM first identified its major functions, or Business Lines. OSM then developed a Strategic Plan to carry out mission, vision, and goals and implemented a new budget structure in FY 1998 that allows OSM to relate resource requests to strategic goals in a more understandable way. The Business Lines are:

- Environmental Restoration;
- Environmental Protection;
- Technology Development & Transfer;
- Financial Management; and
- Executive Direction and Administration.

The individual Business Line sections in this document begin with a brief description of the program activities within the business line. They then discuss the strategic outcomes and FY 2001 annual performance goals, how OSM will measure and evaluate progress toward the goals, and the resources needed to achieve the annual performance goals. The remaining part of each section describes in detail the resources and workloads of the program activities supporting the business line goals.

Budget Highlights: OSM encourages building livable communities in the Appalachian Region through the AML program. The program restores the Nation's lands and waters adversely affected by past coal mining practices and benefits those citizens in affected coal field communities.

In addition to restoring land and waters to productive use and removing existing health, safety and general welfare hazards, this program generates economic benefits to local communities in three ways. First, since many of these sites are in areas that have not enjoyed the full benefits of the

improving economy, the program provides the immediate economic stimulus of jobs. Second, restoring the environment by eliminating health and safety hazards enhances community infrastructure so that outside investors are more likely to invest in the community. Third, the restored land and waters create a pride in community which is critical to future economic growth.

OSM requests \$309,234,000 and 650 FTE to achieve its FY 2001 annual performance goals. An additional request of \$67 million in permanent authority is requested to provide health benefits through the United Mine Workers of America to coal miners and their dependents as authorized by the Energy Policy Act of 1992, when the employing coal company is no longer in business.

The FY 2001 discretionary request represents a \$17.5 million increase over the FY 2000 enacted level. As previously noted, \$14.4 million of this increase is to substantially accelerate the reclamation of abandoned mine sites, which includes \$2 million that may be devoted to the Appalachian Clean Streams Initiative to accelerate the recovery of streams polluted from acid mine drainage from past mining practices. The FY 2001 request includes a \$541,000 increase for State regulatory grants to enable States to properly implement their programs to regulate coal mining activities within their borders.

This request also provides \$2.56 million for uncontrollable cost increases.

This budget proposes appropriation language changes to allow OSM to:

- Remove the funding and twenty-five percent limitation on the amount of emergency program funding that can be spent in any one State.
- Fund minimum program States at \$2 million per year for AML reclamation.
- Provide that the increase in AML funding is to be used only in those States and Tribes using funds to address environmental problems caused by historic abandoned coal and other mine sites and who obligate to grants all of their distributed portion of the FY 2000 AML appropriation.

Also, in FY 2001, the Administration will propose legislation to ensure continued benefits for retired coal miners and their dependents as well as ensuring continued solvency of the United Mine Workers of America, Combined Benefit Fund; and continued abandoned coal mine lands reclamation (AML). For the AML Fund, the proposal extends the abandoned mine reclamation fee, which is scheduled to expire on September 30, 2004, an additional 10 years, through FY 2014.

Office of Surface Mining Reclamation and Enforcement

The following summary compares the FY 2001 request level to the FY 2000 enacted level.

**1999 - 2001 Resource Comparison
(Dollar Amounts in Thousands)**

*Note: Includes actual and estimated civil penalty collections in addition to appropriated amounts.
FY 1999 figures include effects of the rescission.*

**Description and Summary of Program Changes
in FY 2001 Budget**

The total request for OSM's current appropriations is \$309,234,000 for FY 2001. Funding is requested from two appropriations as summarized below.

Regulation and Technology

This appropriation finances the regulatory functions of SMCRA as administered by the States and OSM. Federal activities related to the administration and monitoring of State regulatory programs and OSM's technical training, assistance, and transfer activities related to environmental protection are also financed by this appropriation. The total request is \$98,076,000 (including an estimated \$275,000 in civil penalty collections); a net increase of \$2.2 million over the FY 1999 enacted level. The budget proposes:

- An increase of \$0.541 million for State regulatory grants, and
- Uncontrollable increases of \$1.675 million.

Abandoned Mine Reclamation Fund

This appropriation supports the reclamation program functions carried out by the States and OSM. The Fund is derived from a fee levied on coal production sales, use and transfers. The bulk of the appropriation finances grants to States to implement reclamation programs. The Fund also supports Federal activities related to the administration and monitoring of State programs, as well as OSM's technical training, assistance, and transfer activities related to environmental reclamation including the Small Operator Assistance Program. The total request is \$211,158,000 an increase of \$15.3 million over the FY 2000 enacted level. The budget proposes:

- An increase of \$14.399 million for State and Tribal reclamation grants, including up to \$2 million for the Appalachian Clean Streams Initiative, to address problems caused by historical abandoned coal and other mine sites. Of the increase for the Appalachian Clean Streams Initiative, \$1 million may be used for cooperative agreements with local organizations, such as small watershed organizations.
- An increase of \$886,000 for uncontrollable cost increases.

Office of Surface Mining Reclamation and Enforcement

Proposed Appropriation Language Changes:

Regulation and Technology

For necessary expenses to carry out the provisions of the Surface Mining Control and Reclamation Act of 1977, Public Law 95-87, including the purchase of not to exceed 10 passenger motor vehicles, for replacement only; [\$95,891,000] ^ _____ \$97,801,000

Provided, That the Secretary of Interior, pursuant to regulations, may use directly or through grants to States, moneys collected in fiscal year [2000] ^ _____ 2001

for civil penalties assessed under section 518 of the Surface Mining Control and Reclamation Act of 1977 (30 U.S.C. 1268), to reclaim lands adversely affected by coal mining practices after August 3, 1977, to remain available until expended: Provided further, That appropriations for the Office of Surface Mining Reclamation and Enforcement may provide for the travel and per diem expenses of State and tribal personnel attending Office of Surface Mining reclamation and Enforcement sponsored training.[Department of the Interior and Related Agencies Appropriations Act, 2000, as enacted by section 1000(a)(3) of the Consolidated Appropriation Act, 2000 (P.L. 106-113)] ^ _____

Department of the
Interior and Related
Agencies
Appropriations Act,
2001.

Office of Surface Mining Reclamation and Enforcement

Abandoned Mine Reclamation Fund

For necessary expenses to carry out the provisions of title IV of the Surface Mining Control and Reclamation Act of 1977, Public Law 95-87, as amended, including the purchase of not more than 10 passenger motor vehicles for replacement only, [\$195,873,000]^ _____

\$211,158,000

to be derived from the receipts of the Abandoned Mine Reclamation Fund and to remain available until expended; of which up to[\$8,000,000]^ _____

\$10,000,000

to be derived from the Federal Expenses share of the Fund, shall be for supplemental grants to States for the reclamation of abandoned sites with acid mine rock drainage from coal mines, and for associated activities through the Appalachian Clean Streams Initiative; [Provided, That grants to minimum program States will be \$1,500,000 per State in fiscal year 2000: Provided further, That funds herein provided up to \$18,000,000 by Section 410 of Public Law 95-87, as amended, of which no more than 25 per centum shall be used for emergency reclamation projects in any one State and funds for federally-administered emergency reclamation projects under this proviso shall not exceed \$11,000,000]:^ _____

and of which \$13,000,000 is to be used only in those states and by those Tribes that are using AML funds to address environmental problems caused by historic abandoned coal sites and other mine sites, and who obligate to grants all of their distributed portion of the fiscal year 2000 AML appropriation:

Provided further, That prior year unobligated funds appropriated for the emergency reclamation program shall not be subject to the 25 per centum limitation per State and may be used without fiscal year limitation for emergency projects; Provided further, That pursuant to Public Law 97-365, the Department of the Interior is authorized to use up to 20 per centum from the recovery of the delinquent debt owed to the United States Government to pay for contracts to collect these debts: Provided further, That funds made available under title IV of Public Law 95-87 may be used, for any required non-Federal share of the cost of projects funded by the Federal Government for the purpose of environmental restoration related to treatment or

mine drainage from abandoned mines: Provided further, That such projects must be consistent with the purposes and priorities of the Surface Mining Control and Reclamation Act: [Provided further, That, in addition to the amount granted to the Commonwealth of Pennsylvania under sections 402(g)(1) and 402(g)(5) of the Surface Mining Control and Reclamation Act (Act) an additional \$300,000 will be specifically used for the purpose of conducting a demonstration project in accordance with section 401(c)(6) of the Act to determine the efficacy of improving water quality by removing metals from eligible waters polluted by acid mine drainage:] Provided further, That the State of Maryland may set aside the greater of \$1,000,000 or 10 percent of the total of the grants made available to the State under title IV of the Surface Mining Control and Reclamation Act of 1977, as amended (30 U.S.C. 1231 et seq.), if the amount set aside is deposited in an acid mine drainage abatement and treatment fund established under a State law, pursuant to which law the amount (together with all interest earned on the amount) is expended by the State to undertake acid mine drainage abatement and treatment projects, except that before any amounts greater than 10 percent of its title IV grants are deposited in an acid mine drainage abatement and treatment fund, the State of Maryland must first complete all Surface Mining Control and Reclamation Act priority one projects. [(Department of the Interior and Related Agencies Appropriation Act, 2000, as enacted by section 1000(a)(3) of the Consolidated Appropriations Act, 2000 (P.L. 106-113).)] ^ _____

Department of the Interior
and Related Agencies
Appropriation Act, 2001.

Justification of Language Changes

Regulation and Technology:

1. No legislative changes are proposed for this account.

Abandoned Mine Reclamation Fund:

1. Changes reflect the appropriations amount which includes the proposed increase from \$8,000,000 to \$10,000,000 for the Appalachian Clean Streams Initiative.
5. Restores minimum program State funding level to \$2 million.
6. Changes proposed appropriations amount available for emergencies and proposes removal of the twenty-five percent cap on emergency spending per State.
7. AML funding is directed to those States and Tribes using AML funds to address environmental problems caused by historic coal and other mine sites and who obligate to grants all the distributed portion of the FY 2000 appropriation.
8. Reflects the one time funding nature for the demonstration project in the Commonwealth of Pennsylvania.

	<u>Enacted/Change</u>	
2001 Pay Raises		\$0/+\$994

The January 2001 pay raise amount above was calculated before the Presidential Policy pay raise amount was available to the Department of the Interior. In total, the sum of the amounts above for pay raise costs is nearly the same as the correct amount. The amounts above offset the equivalent of a 4.025 percent for the full fiscal year rather than 3.975 percent, that is, they are 0.05 percent too high. The amounts above are based on raises of 4.4 percent and 3.9 percent respectively, rather than the actual 4.8 percent for January 2000 and the President's requested 3.7 percent for January 2001. The Office of Budget will compile the correct amounts and provide them to the Appropriations Subcommittees and post them on our website (www.doi.gov/budget) soon after the release of the President's budget request.

CSRS/FERS Retirement Costs.....	2000	2001
	<u>Enacted/Change</u>	
		\$217/+\$210

The adjustment is for changes in estimated retirement costs paid by the bureau. It results from changes in the relative proportion of FERS employees in the work force resulting including the effect of the recent CSRS-to-FERS conversion open season.

2000 2001

Enacted/Change

Workers' Compensation Payments\$75/\$100

The adjustment is for changes in the costs of compensating injured employees and dependents of employees who suffered accidental deaths while on duty. This request is for 12 months actual costs ending June 1999 and will reimburse to the Department of Labor Federal Employees Compensation Fund, pursuant to 5 U.S.C. 8147(b) as amended by Public Law 94-273.

2000 2001

Enacted/Change

Unemployment Compensation Payments.....\$342/-24

This adjustment is for changes in the costs of unemployment compensation claims to be paid to the Department of Labor, Federal Employees Compensation Account, in the Unemployment Trust Fund, pursuant to Public Law 96-499.

2000 2001

Enacted/Change
