

NTSB National Transportation Safety Board

Enhancing Motorcoach Safety: Issues and Opportunities

Mark R. Rosekind, Ph.D.
Board Member

United Motorcoach Association
Safety Management Seminar
December 2, 2010

1967

In 1967, the Congress created an independent NTSB within the newly formed Department of Transportation (DOT); expanded the NTSB's authority to include all modes of transportation.

In 1974, Congress made the NTSB completely independent of the DOT.

1974

UNITED STATES CODE, TITLE 49
CHAPTER 11—NATIONAL TRANSPORTATION SAFETY BOARD

SUBCHAPTER 1—GENERAL

Sec.
1101. Definitions.

SUBCHAPTER 2—ORGANIZATION AND ADMINISTRATIVE

1111. General organization.
1112. Special boards of inquiry on air transportation safety.
1113. Administrative.
1114. Disclosure, availability, and use of information.
1115. Training.
1116. Reports and studies.
1117. Annual report.
1118. Authorization of appropriations.

SUBCHAPTER 3—AUTHORITY

1121. General authority.
1122. Civil aircraft accident investigations.
1123. Review of other agency action.
1124. Inspections and audits.
1125. Secretary of Transportation's responses to safety recommendations.

SUBCHAPTER 4—ENFORCEMENT AND FINALITIES

1131. Aviation enforcement.
1132. Injurer and intervention in aviation proceedings.
1133. Judicial review.
1134. Discovery and use of cockpit voice and other material.
1135. Aviation penalties.

SUBCHAPTER 5—GENERAL

§1181. Definitions

Section 40102(a) of this title applies to this chapter.

SUBCHAPTER 6—ORGANIZATION AND ADMINISTRATIVE

§1183. General organization

(a) ORGANIZATION.—The National Transportation Safety Board is an independent constitutional body of the Government.

(b) APPOINTMENT OF MEMBERS.—The Board is composed of 5 members appointed by the President, by and with the advice and consent of the Senate. Not more than 3 members may be appointed from the same political party. Members shall be appointed on the basis of technical qualification, professional standing, and demonstrated knowledge of accident reconstruction, safety engineering, human factors, transportation safety, or transportation regulation.

(c) TERMS OF OFFICE AND REMOVAL.—The term of office of each member is 7 years. At the end of the term, the President may appoint a member to fill a vacancy occurring before the expiration of the term for which the predecessor of that member was appointed for the remainder of that term. When the term of office of a member ends, the successor may not be a successor in office.

(d) CHAIRMAN AND VICE CHAIRMAN.—The President shall designate, by and with the advice and consent of the Senate, a Chairman of the Board. The President also shall designate a Vice Chairman of the Board. The terms of both the Chairman and Vice Chairman are 2 years. When the Chairman is absent or unable to perform the duties of the office, the Vice Chairman shall perform the duties of the office.

Mission

The NTSB is charged with:

- 1) determining the probable cause of transportation accidents
- 2) making recommendations to prevent their recurrence

The NTSB is Responsible for Investigating:

- Aviation, highway, rail, marine, pipeline, and hazardous material accidents

Major product:
safety recommendations

Moral compass and
industry conscience

- 130,000+ accident investigations
- 13,000+ safety recommendations
 - 82% acceptance rate

Enhancing Motorcoach Safety: Issues and Opportunities

- Driver fatigue
- Crashworthiness/Occupant protection
- Crash avoidance technologies

Miami, Oklahoma (June 26, 2009)

- Initial minor accident (~1:13 pm)
 - blocked eastbound I-44
- 2008 Volvo truck-tractor (~1:19 pm)
 - refrigerated semitrailer
 - traveling eastbound on I-44
 - 69 mph with cruise control engaged
 - without slowing or braking collided into queue of slowing & stopped vehicles

Chevrolet Tahoe (6)

16-foot-long stock trailer (5a)

Hyundai Sonata (2)

Ford F350 pickup (5b)

Ford Windstar (4)

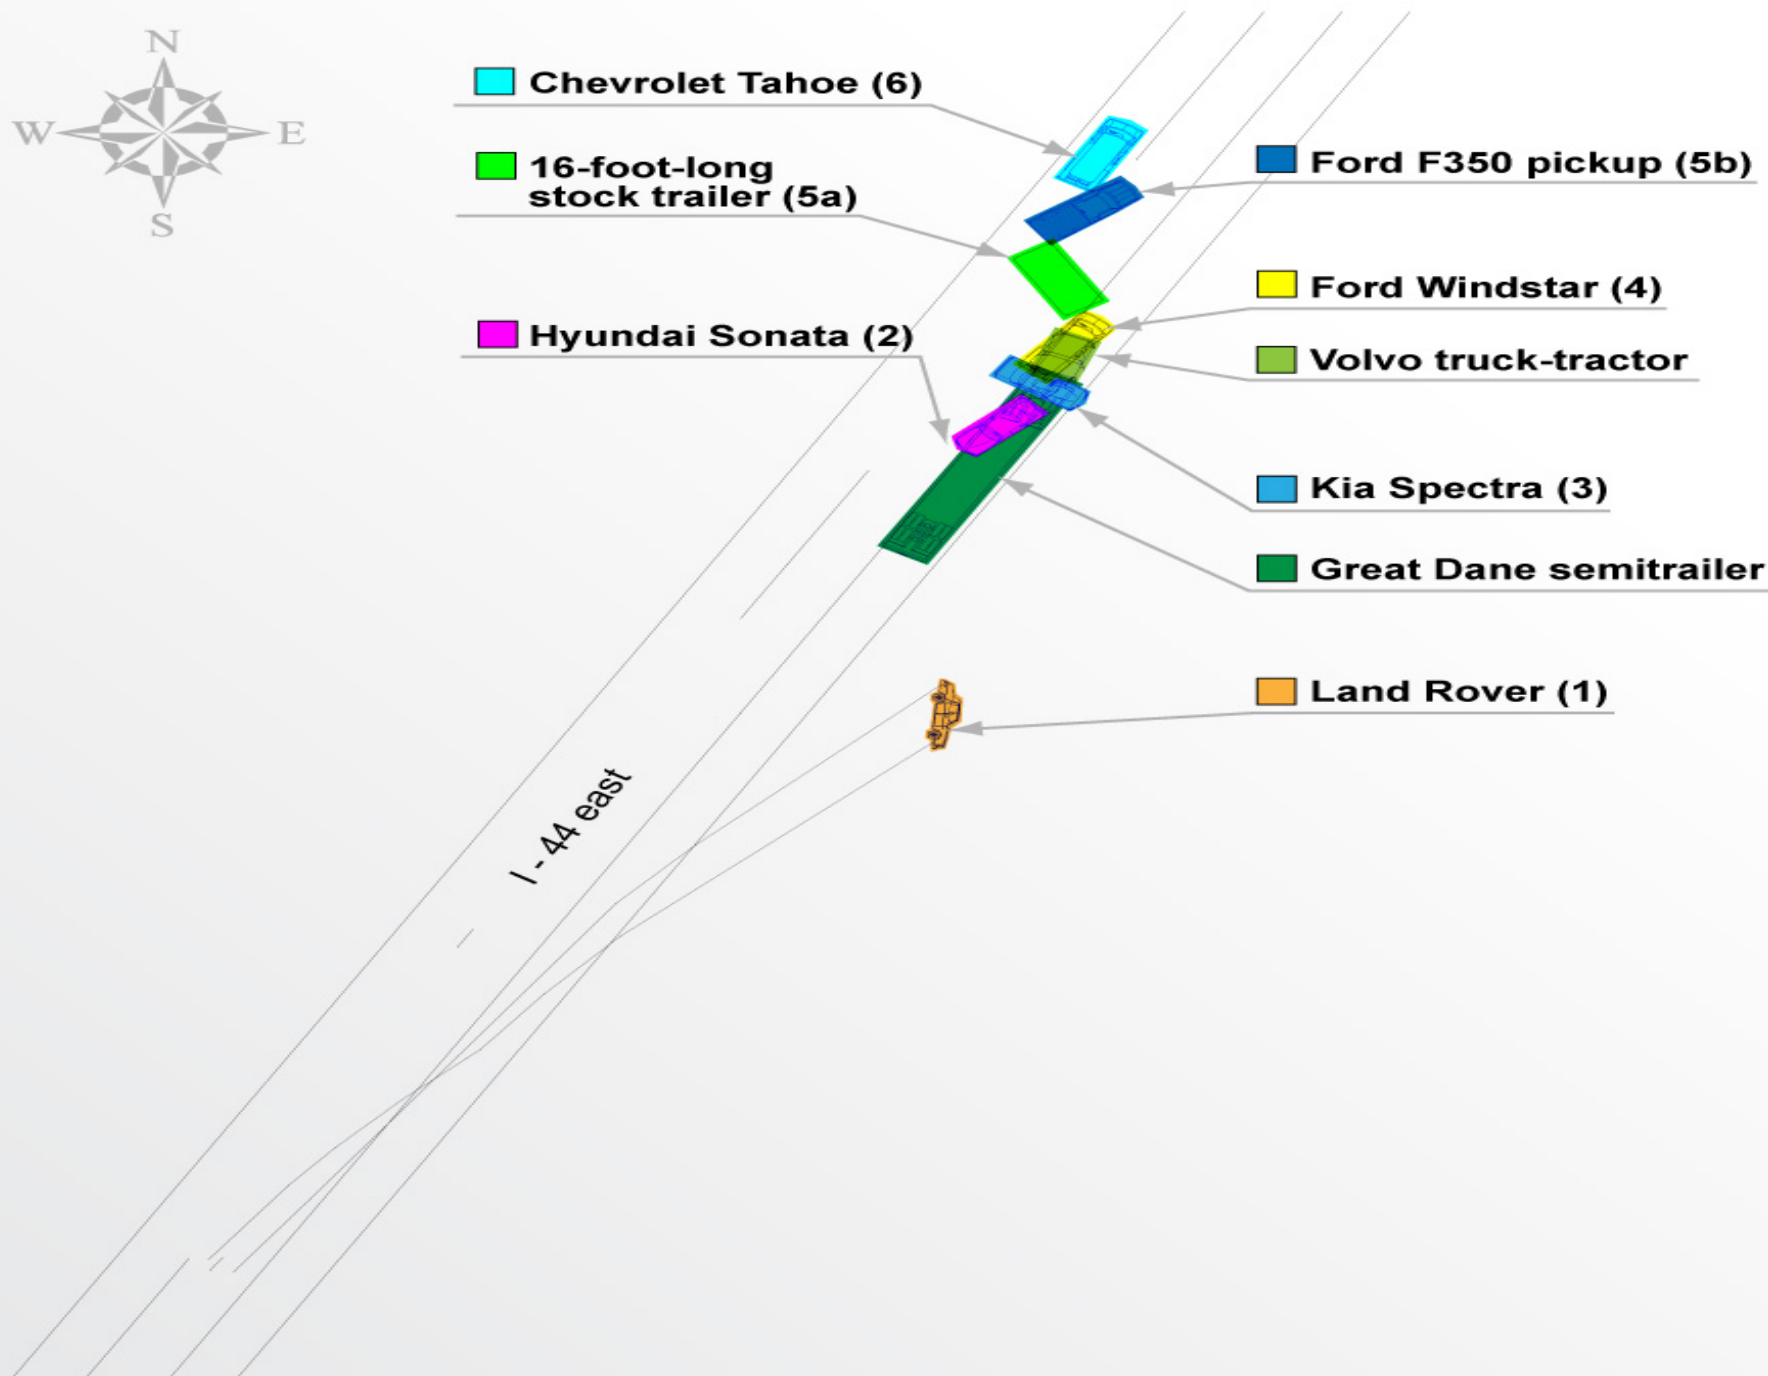

Volvo truck-tractor

Kia Spectra (3)

Great Dane semitrailer

Land Rover (1)

I-44 east

**Location of
minor accident**

**Kia
Spectra**

Fatalities/Injuries

- Passenger Vehicle Occupants
 - 10 fatalities
 - 3 serious injuries
 - 2 minor injuries
 - 5 no injuries
- Truck Driver
 - Seriously injured

Fatigue Factors

- Off work for 3 weeks
- Kept day active/night sleep schedule when off
- Had one work day prior to accident
- 3am to 3pm shift work/drive schedule (since 1997)
- Obtained min 3 hrs/max 5 hrs sleep prior to accident
- Early bedtime (2 hr phase advance in sleep time)
- Subsequently diagnosed with mild sleep apnea

Probable Cause (fatigue)

“ . . . driver’s fatigue, caused by the combined effects of acute sleep loss, circadian disruption associated with his shift work schedule, and mild sleep apnea, which resulted in the driver’s failure to react to slowing and stopped traffic ahead by applying the brakes or performing any evasive maneuver to avoid colliding with the traffic queue. . . . ”

NTSB Fatigue Investigations/Studies

- 30 highway accident investigations
- 2 Safety Studies
 - Fatigue, Alcohol, Other Drugs and Medical Factors in Fatal-To-The Driver Heavy Truck Crashes (31% fatigue; > drugs and alcohol)
 - Factors that Affect Fatigue in Heavy Truck Accidents (last sleep duration, total sleep in 24 hrs, split sleep)

NTSB Recommendations

- MOST WANTED since 1990
- 150+ fatigue recommendations
- 60+ in highway

Highway Fatigue Recommendations

Scheduling Policies and Practices

Victoria, Texas, January 2, 2008

Victoria, Texas Fire Department

- Day sleep, night drive, ~ 4 am WOCL

Scheduling Policies and Practices

- Establish scientifically based hours of service regulations
- When possible, address:
 - schedule inversion
 - day sleep/night work
 - rotating schedules
 - extended duty days
 - opportunity for 8 hrs uninterrupted sleep

Education

- Education vs. awareness
- Foundation for any fatigue efforts
- Address broad/applied content:
 - how fatigue affects performance
 - how to minimize fatigue risks
 - countermeasures to combat fatigue
 - policies to support tired drivers

Organizational Strategies

- Improve drivers' rest facilities
- Review logbook violations
(driver safety assessments)
- Non-punitive fatigue call-in policy
- Provide a backup driver when needed

Healthy Sleep

Mexican Hat, UT, January 6, 2008

24

• 360 rollover, 50/53 ejected, 9 fatalities, OSA (-CPAP)

NTSB

Healthy Sleep

- Disseminate guidance for identifying and treating obstructive sleep apnea
- Ensure drivers with apnea are effectively treated before granting unrestricted medical certification
- Have a written contingency plan to accommodate drivers impaired by fatigue or illness

Vehicle and Environmental Factors

- Rumble strips
- In-vehicle technologies to reduce fatigue related accidents
 - EOBRs
 - Lane detection systems
 - Collision avoidance systems

Fatigue Management Programs

- Comprehensive approach
- Multiple components
- Science based
- Continuously evaluated and updated
- Complements HOS regulations

Fatigue Management Program

- North American Fatigue Management Program (NAFMP)
 - (FMCSA, Transport Canada, carriers, many others)
- Three initial projects:
 - improved sleep/wake behavior
 - less absenteeism
 - fewer critical events
 - high prevalence of sleep apnea
- Phase IV (2 year target for completion)
 - industry-wide availability
 - scalable (small to large carriers)
 - web-based
- Industries moving to required FMP's

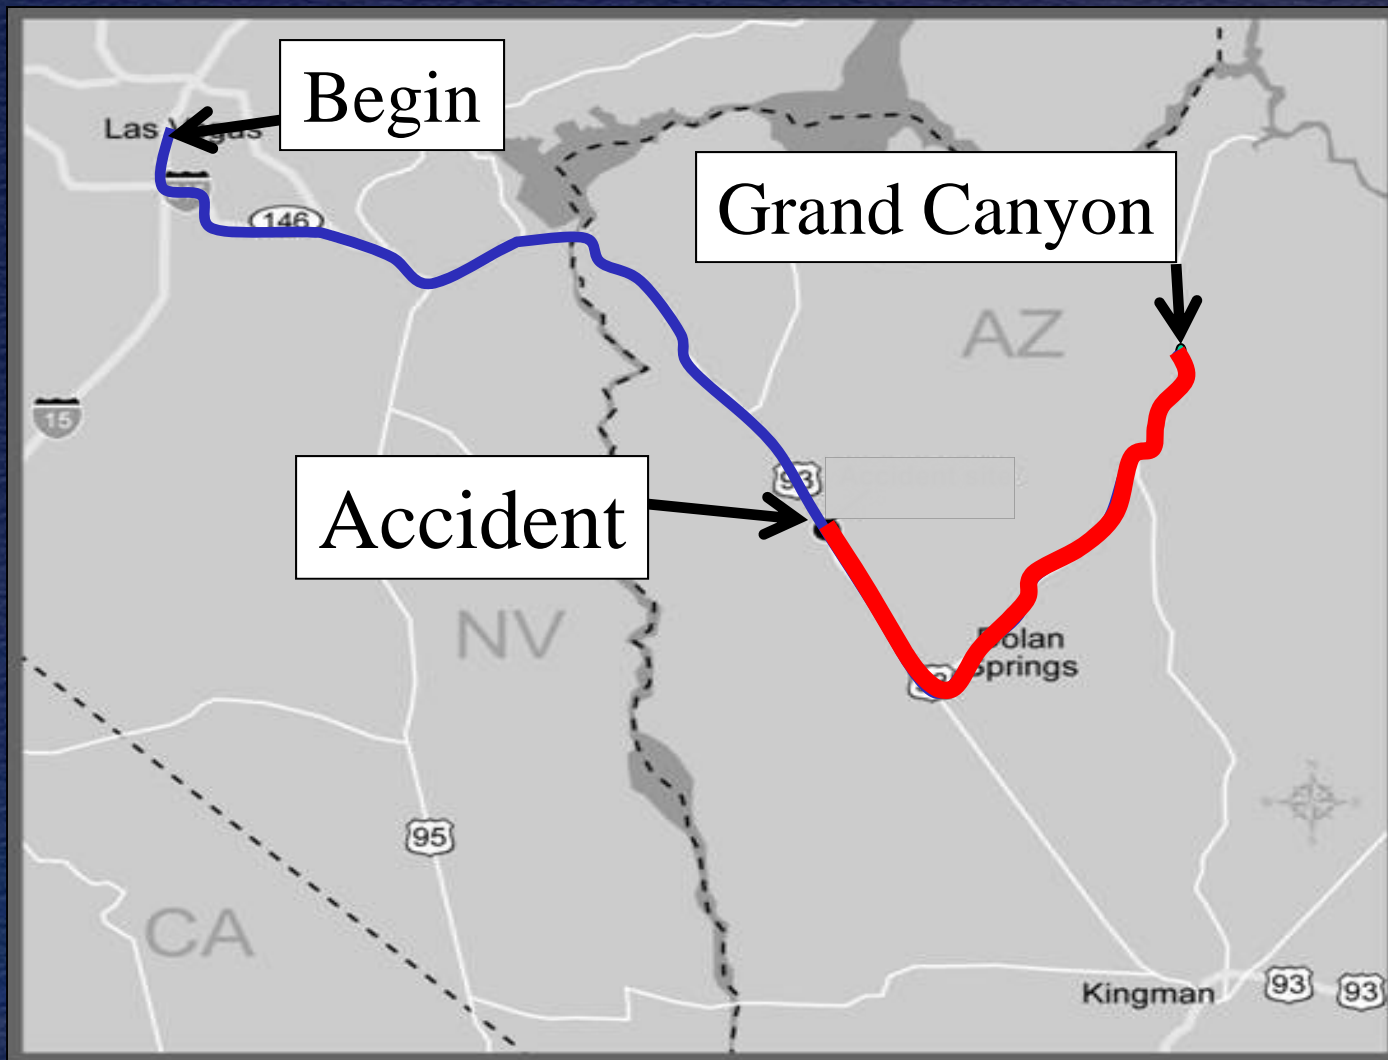

NTSB National Transportation Safety Board

Crashworthiness/ Occupant Protection

Dolan Springs, AZ (Jan. 30, 2009)

Accident Trip

Right Shoulder

An aerial photograph of a two-lane road in a desert environment. The road has a yellow double line on the left and a white dashed line on the right. A white car is visible in the left lane. Three red arrows point to specific areas: 'Final Rest Area' points to a spot in the left lane; 'Overturn Area' points to a sandy area between the lanes; 'Path of Travel' points to a dark, curved mark on the right shoulder. A blue survey marker is visible on the right shoulder.

Final Rest Area

Overturn Area

Path of Travel

- 17 passengers; 7 fatalities; others minor – serious injuries
- 35

NTSB

Bus Crashworthiness Issues

- Roof strength
- Passenger retention

Exterior Deformation

- Front fenders, hood, skirts, front roof, loading door
- 9/10 windows broken
- Minimal roof damage

Crashworthiness

- roof crush minimal; 15 passengers ejected

Crashworthiness

- Lake Placid, Florida (Feb., 2010)

- 180 degree roll; 8 passengers ejected; 3 fatalities

NTSB Most Wanted List (2000)

- *H-99-47 (NHTSA): Issued November 2, 1999*

Status: Open—Unacceptable Response

In 2 years, develop performance standards for motorcoach occupant protection systems that account for frontal impact collisions, side impact collisions, rear impact collisions, and rollovers.

- *H-99-50 (NHTSA): Issued November 2, 1999*

Status: Open—Unacceptable Response

In 2 years, develop performance standards for motorcoach roof strength that provide maximum survival space for all seating positions and that take into account current typical motorcoach window dimensions

Motorcoach Safety Action Plan

U.S. Department of Transportation Motorcoach Safety Action Plan

Motorcoaches vs. smaller buses

- Cutaway buses: 10,200 – 13,600 (2009)
- Motorcoaches: 1,600 (2009)
- Growing trend: high revenues, lower retail cost (vs. motorcoach), passenger capacity
- Economic downturn: smaller groups, traveling shorter distances

NTSB Recommendation: Enhanced Occupant Protection

To NHTSA:

In your rulemaking to improve motorcoach roof strength, occupant protection, and window glazing standards, include all buses with a gross vehicle weight rating above 10,000 pounds, other than school buses. (H-10-3)

NTSB National Transportation Safety Board

Crash Avoidance Technologies

Forward Collision Warning

Forward Collision Warning

- Adaptive cruise control/active braking
- \$1,000 - \$2,000 OEM/aftermarket option
- FCWA + ACC = greater benefits
- No federal regulations for collision warning systems
- Government/Industry Research (FCWS)
 - 21% rear-end crash reduction
 - would prevent: 4,700 crashes/yr
2,500 injuries/yr
96 fatalities/year

NTSB and FCWS

- First collision warning recommendation in 1995
- 2001 special investigation, 9 accidents (1999-2000), 20 fatalities and 181 injuries; recommendations made
- Since 2001, investigated 11 more accidents, 45 fatalities and 190 injuries (rear end/head on)
- FCWS on NTSB Most Wanted List (2007)

Stability Control Systems

- Required on all passenger vehicles by the 2012 model year
- Two types: roll and yaw stability control
- Implementation in passenger vehicles estimated to save 5,300-9,600 lives/yr
- Implementation estimated to prevent 156,000 – 238,000 injuries/yr

Stability Control vs No Stability Control

Continued Needs and Efforts

- DOT currently researching benefits of stability control for heavy trucks and motorcoaches
- Research does not currently include all bus types (cutaway buses; 26,000 GVWR)
- Will benefits extend to large commercial vehicles?
- Development of systems and performance standards for cutaway buses lagging

NTSB
