I. FUNDING OPPORTUNITY DESCRIPTION

A. Program Description: The Psychological Health and Traumatic Brain Injury Research Program (PH/TBI) Research Program was established in fiscal year 2007 (FY07) for the purpose of complementing ongoing Department of Defense (DOD) efforts towards promoting a better standard of care for PH (including post-traumatic stress disorder [PTSD]) and TBI in the areas of prevention, detection, diagnosis, treatment, and rehabilitation. This includes research to benefit service members, their family members, veterans, and other beneficiaries of the Military Health System. A total of \$586 million (M) has been appropriated to support biomedical research focused on PH/TBI research efforts from FY07 through FY10, with \$341.6M being assigned to the US Army Medical Research and Materiel Command (USAMRMC) Office of the Congressionally Directed Medical Research Programs (CDMRP) for management oversight. The FY10 appropriation that has been assigned to USAMRMC is \$120M. Approximately \$10M of this appropriation has been assigned to the USAMRMC CDMRP for this program announcement/funding opportunity. The objective of the current program is to promote research that will advance the prevention, detection, diagnosis, and treatment of military-relevant PH issues and TBI. Funding will be focused on innovative projects that have the potential to make a significant near-term impact on improving the function, wellness, and overall quality of life for warriors, veterans, families, caregivers, and communities.

Proposals involving multidisciplinary collaborations among academia, industry, the Military Services, the Department of Veterans Affairs, and other Federal Government agencies are highly encouraged. Though the program supports groundbreaking research, all projects must demonstrate solid judgment and rationale. The Government reserves the right to increase or decrease the FY10 PH/TBI Research Program funding of \$10M to execute the program.

B. Award Description

The PH/TBI Research Program's Cognitive Rehabilitation For TBI Clinical Trial Award mechanism is offered for the first time in FY10. These awards are intended to encourage rapid implementation of clinical trials to assess the efficacy of cognitive rehabilitative therapy for TBI for members or former members of the Armed Forces. Collaborations with military researchers and clinicians are encouraged. ***NOTE: Priority will be given to studies that use military or veteran populations who have been diagnosed with a TBI incurred in the line of duty in Operation Iraqi Freedom or Operation Enduring Freedom.***

Evaluation of the impact of one or more of the following Focus Areas on Cognitive Rehabilitation is encouraged, but not limited to:

- Cumulative concussions,
- Mild, moderate, or severe TBI (preference for mild TBI [mTBI]),
- Chronic symptoms after a TBI,
- Use of information technology devices (Personal Digital Assistant [PDA] devices, computers, etc.),
- The use of robotics, nutritional supplements, and timing of out/inpatient rehabilitation, or

- Strategies for polytrauma leading to TBI.

Funding from this award mechanism must support a clinical trial(s). In general, a clinical trial is defined as a prospective accrual of patients for a study where an intervention (e.g., device, drug, behavioral, surgical procedure, or other) is tested on human subjects for a measurable outcome. Refer to the General Application Instructions, Appendix 5, for additional information about studies involving human subjects. ***The proposed clinical trial is expected to begin no later than 12 months after the award date. This award mechanism may not be used to conduct preclinical research studies. Applications are expected to:***

- Demonstrate availability of, and access to, a suitable population that will support a meaningful outcome for the study.
- Include preliminary data to support the feasibility of the research hypotheses and research approaches.
- Discuss how accrual goals will be achieved and how standards of care may impact the study population.
- Describe clearly defined, focused endpoints for the proposed clinical trial that correspond to the design and sample size proposed.
- Include pharmacokinetic and pharmacodynamic outcomes, if applicable.
- Within the Clinical Protocol/Project Narrative, clearly articulate the statistical analyses plan. Include a power analysis reflecting sample size projections that will clearly answer the objectives of the study.
- Include a clinical study coordinator who will guide the clinical protocol through Institutional Review Board (IRB), Human Subjects Research Review Board (HSRRB), and other regulatory approval processes; coordinate activities from all sites participating in the trial, and coordinate participant accrual.
- Demonstrate institutional support.
- Demonstrate prior involvement and success in conducting a clinical trial.
- Discuss the potential impact of the study results on individuals with PH and/or TBI challenges.

If the study is in support of an application to the U.S. Food and Drug Administration (FDA), an Investigational New Drug (IND) or an Investigational Device Exemption (IDE) application should be submitted prior to the grant application submission. The Government reserves the right to withdraw funding if an active exemption from marketing approval for the IND or IDE has not been acquired within 6 months of the award date.

Preliminary data (may be from outside of the PH/TBI research fields) unpublished results from the laboratory of the Principal Investigator (PI), research team, or collaborators named on this application, that are relevant to the proposed research project, **is required**. Proposals should also be based on a sound scientific rationale that is established through logical reasoning and critical review and analysis of the literature.

Use of Human Subjects and Human Biological Substances: All DOD-funded research involving human subjects and human biological substances must be reviewed and approved by the USAMRMC Office of Research Protections (ORP), Human Research Protection Office (HRPO), in addition to local IRBs. ***NOTE: Local IRB approval at the time of submission is NOT required.*** The HRPO is mandated to comply with specific laws and directives governing all research involving human subjects that is conducted or supported by the DOD. These laws and directives are rigorous and detailed, and will require information in addition to that supplied to the local review board. ***Allow a minimum of 6 months for regulatory review and approval processes for studies involving human subjects.*** Refer to the General Application Instructions, Appendix 5, for regulatory requirements.

Partnering PI Option: As a method to bring a new perspective to research and facilitate progress in the PH/TBI field by combined effort, a Partnering PI option is offered for this award mechanism. Development of the research plan should involve a reciprocal flow of ideas and information with substantial intellectual input from all partners into the design of a single research project. Intellectual input extends beyond a proposed project in which a partner merely supplies support services, tissue samples, or access to patients will not meet the intent of this option.

This award option is structured to accommodate up to three PIs. One member of the team will be identified as the Initiating PI, who will be responsible for the majority of the administrative tasks associated with application submission. The other members will be identified as the Partnering PIs and will need to complete administrative tasks associated with application submission. Separate awards will be made to each PI's institution. One Initiating PI and up to two Partnering PIs may be designated. Additional collaborators may be included, but will not be designated as PIs.

Multi-institutional research: Multidisciplinary and multi-institutional projects are allowed. If the proposed research is multi-institutional, plans for communication and data transfer between the collaborating institutions, as well as how specimens and/or imaging products obtained during the study will be handled, should be included in the Project Narrative. A separate intellectual and material property plan agreed upon by all participating institutions is also required for multi-institutional research. Participating institutions must be willing to resolve potential intellectual and material property issues, and to remove any barriers that may interfere with achieving high levels of cooperation to ensure successful completion of this award.

Encouraged DOD collaboration and alignment: Military relevance is a key feature of this award. Therefore, PIs are strongly encouraged to collaborate, integrate, and/or align their research projects with military and/or VA research laboratories and programs. Use of Military and VA Populations:

If possible, access to target military or VA patient population(s) should be confirmed at the time of proposal submission. A letter of support, signed by the lowest ranking person with approval authority, should be included for studies involving active duty military, veterans, military and/or VA controlled study materials, and military and/or VA databases.

C. Eligibility

PIs must be at or above the level of Assistant Professor (or equivalent). Refer to General Application Instructions, Appendix 1, for general eligibility information.

D. Funding

- The maximum period of performance is **4** years.
- The maximum allowable direct costs for the entire period of performance is **\$2,000,000**.
- The applicant may request the entire maximum direct cost amount for a project that may be less than the maximum **4**-year period of performance.
- Regardless of the period of performance proposed, the applicant may not exceed the maximum direct cost. In addition to the direct costs, indirect costs may be proposed in accordance with the organization's negotiated rate agreement.

Within the guidelines provided in the General Application Instructions, funds can cover:

- Salary
- Research supplies
- Equipment
- Clinical costs
- Travel between collaborating institutions
- Travel costs of up to \$1,800 per year to attend scientific/technical meetings
- Travel costs of up to \$1,800 to attend one DOD-sponsored scientific meeting
- Other direct costs as described in the General Application Instructions for the Detailed Budget and Justification

The CDMRP expects to allot approximately \$10M of the FY10 PH/TBI appropriation to fund approximately 3 Cognitive Rehabilitation For TBI Clinical Trial Award applications, depending on the quality and number of applications received. Funding of applications received in response to this Program Announcement/Funding Opportunity is contingent upon the availability of Federal funds for this program.

E. Award Administration

Quarterly technical progress reports will be required.

Changes in PI are strongly discouraged and will be allowed only at the discretion of the US Army Medical Research Acquisition Activity (USAMRAA) Grants Officer.

The transfer of an award to another institution is strongly discouraged. A transfer will not be allowed for any institution that includes a study site/clinical trial at its location. Approval of a

transfer request from an institution that does not include a study site at its location will be at the discretion of the USAMRAA Grants Officer.

At the Government's discretion, the PI and Clinical Study Coordinator may be requested to participate in a pre-award meeting. Travel expenses for this meeting will be covered by the CDMRP.

Awards will be made approximately 4 to 6 months after receiving a funding notification letter, but no later than September 30, 2011. Refer to the General Application Instructions, Appendix 4, for general award administration information.

II. TIMELINE FOR SUBMISSION AND REVIEW

- **Pre-application Submission Deadline: 5:00 p.m. Eastern time (ET), June 30, 2010**
- **Invitation to Submit an Application: July 30, 2010**
- **Application Submission Deadline: 11:59 p.m. ET, September 7, 2010**
- **Scientific Peer Review: October 2010**
- **Programmatic Review: December 2010**

Application submissions will not be accepted unless the pre-application process is completed by the pre-application deadline.

III. SUBMISSION PROCESS

Submission is a two-step process requiring both (1) pre-application submission through the CDMRP eReceipt system (<https://cdmrp.org/>) and (2) application submission through Grants.gov (<http://www.grants.gov/>). *Applications will be invited based on pre-application screening.*

The Cognitive Rehabilitation For TBI Clinical Trial Award mechanism is structured to accommodate up to a maximum of three PIs. One partner will be identified as the Initiating PI and will be responsible for the majority of the administrative tasks associated with application submission. The other PI(s) will be identified as the Partnering PI(s). Initiating and Partnering PIs each have different submission requirements; however, all PIs should contribute significantly to the development of the proposed research project including the project narrative, Statement of Work, and other required statements. The Initiating PI must complete the pre-application submission process and submit the contact information for each Partnering PI. If an application is invited, the Initiating PI will receive a letter of invitation via email by the CDMRP eReceipt system. The letter will provide the information necessary to begin application submission through Grants.gov. Each Partnering PI will subsequently be notified separately by email. Please note that each Partnering PI must follow the link in this email and register with CDMRP eReceipt in order to associate his/her grant application package with that of the Initiating PI.

Submission of the same research project to different funding opportunities within the same program and fiscal year is discouraged. The Government reserves the right to reject duplicative applications.

PIs and organizations identified in the application should be the same as those identified in the pre-application. If a change in PI or organization is necessary after submission of the pre-application, the PI must contact the eReceipt help desk at help@cdmrp.org or 301-682-5507.

A. Step 1 – Pre-Application Components

All pre-application components must be submitted through the CDMRP eReceipt system by **5:00 p.m. ET on the deadline**. Because the invitation to submit an application is based on the contents of the pre-application, investigators should not change the title or research objectives after the pre-application is submitted.

The Initiating PI is responsible for submission of all pre-application components.

The pre-application consists of the following components, which are organized in the CDMRP eReceipt system by separate tabs (Refer to the General Application Instructions for additional information on pre-application submission.):

- **Proposal Information – Tab 1**
- **Proposal Contacts – Tab 2**
- **Collaborators and Conflicts of Interest (COI) – Tab 3**

The Initiating PI must enter the contact information for the Partnering PI(s) in the Partnering PI section.

- **Required Files - Tab 4**

Preproposal Narrative (three-page limit): The Preproposal Narrative is inclusive of any figures, tables, graphs, photographs, diagrams, chemical structures, pictures, pictorials, and cartoons.

The Preproposal Narrative should include the following:

- **Rationale:** Present the ideas and reasoning behind the proposed clinical trial, to include relevant literature citations. State how this project meets the intent of the Cognitive Rehabilitation For TBI Clinical Trial Award mechanism and the intent of the program.
- **Hypothesis or Objective:** State the hypothesis to be tested or the objective to be reached.
- **Intervention, Drug, or Device:** Describe the cognitive intervention, drug, or device to be tested.
- **Research Strategy:** Concisely state the project's objective and specific aims. Describe the proposed project and the population(s) that will be enrolled in the study. If applicable, detail how project addresses one or more of the focus areas
- **Military Benefit:** Describe the potential impact of this study on deployment-related cognitive rehabilitation

Pre-Application Supporting Documentation: The items to be included as supporting documentation for the pre-application are limited to:

- References Cited (one-page limit): List relevant references using a standard reference format that includes the full citation (i.e., author(s), year published, title of reference, source of reference, volume, chapter, page numbers, and publisher, as appropriate). The inclusion of Internet URLs to references is encouraged.
- Key Personnel Biographical Sketches (four-page limit per individual)
- **Submit Pre-application – Tab 5**
- **Other Documents Tab – Not applicable**

Pre-Application Screening: Pre-applications will be screened by the PH/TBI Research Program Integration Panel (IP) based on the following criteria:

- **Military Benefit:** What impact these studies will have on the outcomes of cognitive rehabilitation interventions utilized to treat individuals with a TBI incurred in the line of duty in Operation Iraqi Freedom or Operation Enduring Freedom.
- **Research Idea:** How the proposed project addresses the intent of the award mechanism and the program.
- **Research Strategy:** How the rationale and specific aims support the project's objective.
- **Personnel:** How the personnel's background and expertise are appropriate to accomplish the proposed research (i.e., statistical expertise, expertise in PH/TBI Research, Cognitive rehabilitation research experience, and clinical studies).

Following the pre-application screening, PIs will be notified of whether or not they are invited to submit an application; however, they will not receive feedback (e.g., strengths and weaknesses) on their pre-application.

B. Step 2 – Application Components

Applications will not be accepted unless the Initiating PI has received a letter of invitation.

Applications are submitted by the Authorized Organizational Representative (AOR) through Grants.gov (<http://www.grants.gov/>). Applications must be submitted **by 11:59 p.m. ET on the deadline.**

Each application submission must include the completed application package of forms and attachments identified in Grants.gov for this Program Announcement/Funding Opportunity.

The CDMRP requires separate Grants.gov application package submissions for the Initiating PI and each Partnering PI. Initiating and Partnering PIs will each be assigned unique and separate log numbers by the CDMRP eReceipt system. Each PI must submit his/her Grants.gov application package using only his/her unique log number.

Application Components for the Initiating PI:

The Grants.gov application package consists of the following components (Refer to the General Application Instructions, Section II.B., for additional information on application submission):

1. SF 424 (R&R) Application for Federal Assistance Form: Refer to the General Application Instructions, Section II.B., for detailed information.

2. Attachments Form

- **Attachment 1: Project Narrative (no page limit):** Upload as “ProjectNarrative.pdf.”

For the Cognitive Rehabilitation for TBI Clinical Trial Award application, *the Project Narrative is the clinical protocol*, which is the main body of the application. The clinical protocol must address the required components described in Section V, Clinical Protocol and Supporting Clinical Documentation.

- **Attachment 2: Supporting Documentation.** Start each document on a new page. Combine and upload as a single file named “Support.pdf.” If documents are scanned to pdf, the lowest resolution (100 to 150 dpi) should be used. *Each component has no page limit unless otherwise noted.*
 - References Cited: List all relevant references using a standard reference format that includes the full citation (i.e., author(s), year published, title of reference, source of reference, volume, chapter, page numbers, and publisher, as appropriate). The inclusion of Internet URLs to references is encouraged.
 - List of Acronyms and Symbols: Provide a list of acronyms and symbols (e.g., PCR = polymerase chain reaction).
 - Facilities, Existing Equipment, and Other Resources: Describe the facilities and equipment available for performance of the proposed project and any additional facilities or equipment proposed for acquisition at no cost to the (USAMRMC). Indicate if Government-owned facilities or equipment are proposed for use. Reference should be made to the original or present contract under which the facilities or equipment items are now accountable. There is no form for this information.
 - Publications and/or Patent Abstracts (five-document limit): Include relevant publication URLs and/or patent abstracts. If publications are not publicly available, then they must be included. Extra items will not be reviewed.
 - Letters of Organizational Support (two-page limit per letter): Provide a letter (or letters if applicable), signed by the Department Chair or appropriate organization official, reflecting the laboratory space, equipment, and other resources available for the project.
 - Letters of Collaboration (if applicable) (two-page limit per letter): Provide a signed letter from each collaborating individual or organization that will demonstrate that the PI has the support or resources necessary for the proposed

research.

- Intellectual and Material Property Plan (if applicable): Provide a plan for resolving intellectual and material property issues among participating organizations.

- **Attachment 3: Technical Abstract (one-page limit):** Upload as “TechAbs.pdf.”

The technical abstract should be written using the outline below.

- Background: Present the ideas and reasoning behind the proposed research.
- Objective/Hypothesis: State the objective/hypothesis to be tested. Provide evidence or rationale that supports the objective/hypothesis.
- Specific Aims: State the specific aims of the study.
- Study Design: Briefly describe the study design including appropriate controls.
- Military Benefit: Briefly describe how the expected results of the proposed project are relevant to and will impact the outcomes of individuals with a TBI incurred in the line of duty in Operation Iraqi Freedom or Operation Enduring Freedom.

- **Attachment 4: Public Abstract (one-page limit):** Upload as “PublicAbs.pdf.”

The public abstract is an important component of the application review process because it addresses issues of particular interest to the consumer advocate community. For guidance on how to write a scientific piece for the general public please see <http://www.plainlanguage.gov/>.

Use the following outline:

- Clearly describe, in a manner readily understood by lay persons, the rationale and objective for the proposed research.
 - Do not duplicate the technical abstract.
- Describe the ultimate applicability of the research.
 - Which individuals will it help, and how will it help them?
 - What are the potential clinical applications, benefits, and risks?
 - What is the projected time it may take to achieve a clinically-relevant outcome?
 - What are the likely contributions of this study to improving outcomes for individuals who require Cognitive Rehabilitation following deployment to Operation Iraqi Freedom or Operation Enduring Freedom?
- **Attachment 5: Statement of Work (SOW) (two-page limit):** Upload as “SOW.pdf.” Refer to the General Application Instructions, Section II.B., for detailed information.

Each PI must submit an identical copy of a jointly created SOW. The contributions of the Initiating PI and Partnering PI(s) should be noted for each task.

- **Attachment 6: Detailed Budget and Justification (no page limit):** Upload as “Budget.pdf.” Use the Detailed Budget and Justification form (available for download on the Full Announcement page in Grants.gov). Refer to the General Application Instructions, Section II.B., for detailed information.

Initiating and Partnering PIs must each submit a unique and separate detailed budget and justification.

- **Attachment 7: Subaward Detailed Budget and Justification (if applicable) (no page limit):** Use a separate Detailed Budget and Justification form for each subaward budget. Combine into a single file and upload as “SubBudgets.pdf.” Refer to the General Application Instructions, Section II.B., for detailed information.
- **Attachment 8: Military Benefit Statement (one-page limit):** Upload as “MilBen.pdf.”

State explicitly how the proposed work, if successful, will have an impact on accelerating the evaluation and movement of promising rehabilitation treatments into clinical practice. Further, describe the potential impact of the study on the lives of military troops and veterans recovering from TBI incurred in the line of duty in Operation Iraqi Freedom or Operation Enduring Freedom.

Describe how the proposed studies are responsive to the health care needs of the Armed Forces and/or the US veteran population. Describe the military or veteran population(s) that are to be utilized, and their appropriateness for the proposed studies. Show how the proposed studies complement ongoing DOD and VA areas of research interest.

- **Attachment 9: Transition Plan (one-page limit):** Upload as “Transition.pdf.” Provide information on the methods and strategies proposed to move the product to the next clinical trial phase and/or delivery to the market after the completion of the PH/TBI Cognitive Rehabilitation For TBI Clinical Trial Award. The plan should include details of potential funding sources, collaborations, and other resources that may be used to provide this continuity of development.
- **Attachment 10: Data/Research Resources Sharing Plan (one-page limit):** Upload as “DataReporting.pdf.”

The Data/Research Resources Sharing Plan will not be reviewed during the peer or programmatic review processes. It will be used for administrative purposes only.

Describe how unique and/or final research data and resources will be shared with the research community and general public, including cases where pre-existing data or research resources will be utilized and/or modified during the proposed study. Clearly explain any limitations associated with a pre-existing agreement that preclude subsequent data/research resources sharing.

The content of the data/research resource sharing plan may depend on the data being collected or the resources being developed. PIs should describe briefly the

expected schedule for sharing, format of the final dataset, documentation to be provided, analytic tools to be provided, data sharing or material transfer agreement (or other documentation) including criteria for deciding who can receive the data/research resource and whether or not any conditions will be placed on their use, and mode of data/research resource sharing (e.g., posting data on an institutional or personal website). If research involves human subjects and the data and/or research resource(s) are intended to be shared, the application should discuss how the rights and confidentiality of participants would be protected. PIs should follow their institution's technology transfer policies and provide links to model technology transfer agreement used by institution, as appropriate. Refer to the General Application Instructions, Appendix 4, for more information on Data and Research Resources Sharing.

- **Attachment 11: Letters Confirming Access to Target Military or VA Patient Population(s) (one-page limit):** Upload as "Access.pdf."

If applicable, provide a letter(s) signed by the lowest ranking person with approval authority for studies involving active duty military, veterans, military and/or VA-controlled study materials, and military and/or VA databases.

3. Research & Related Senior/Key Person Profile (Expanded) Form: Refer to the General Application Instructions, Section II.B., for detailed information.

- PI Biographical Sketch (four-page limit): Upload as "Biosketch_LastName.pdf."
- PI Current/Pending Support (no page limit): Upload as "Support_LastName.pdf."
- Key Personnel Biographical Sketches (four-page limit each): Upload as "Biosketch_LastName.pdf."
- Key Personnel Current/Pending Support (no page limit): Upload as "Support_LastName.pdf."

4. Project/Performance Site Location(s) Form: Refer to the General Application Instructions, Section II.B., for detailed information.

Application Components for the Partnering PI(s):

The Partnering PI must follow the link in the email from CDMRP eReceipt and complete the registration process prior to the application submission deadline in order to associate his/her grant application package with that of the Initiating PI.

The application submission process for the Partnering PI uses an abbreviated application package of forms and attachments from Grants.gov that includes:

1. **SF 424 (R&R) Application for Federal Assistance Form**
2. **Attachments Form**

- **Attachment 5: Statement of Work (SOW) (three-page limit):** Upload as “SOW.pdf.” Refer to the General Application Instructions for detailed information on completing the SOW. *Each PI must submit an identical copy of a jointly created SOW. The contributions of the Initiating PI and Partnering PI (s) should be noted for each task.*
- **Attachment 6: Detailed Budget and Justification:** Use the Detailed Budget and Justification form (available for download on the Full Announcement page in Grants.gov). Upload as “Budget.pdf.” *Initiating and Partnering PIs must each submit a unique and separate detailed budget and justification.*
- **Attachment 7: Subaward Detailed Budget and Justification (if applicable):** Use a separate Detailed Budget and Justification form for each subaward budget. Combine into a single file and upload as “SubBudgets.pdf.”

3. Project/Performance Site Location(s) Form

IV. INFORMATION FOR APPLICATION REVIEW

A. Application Review and Selection Overview

All applications are evaluated by scientists, clinicians, and consumer advocates using a two-tier review process. The first tier is a scientific peer review of applications against established criteria for determining scientific merit. The second tier is a programmatic review that compares applications to each other and makes recommendations for funding to the Commanding General, USAMRMC, based on scientific merit, the overall goals of the program, and specific intent of the award mechanism. The highest scoring applications from the first tier of review are not automatically recommended for funding. Additional information about the two-tier review process used by the CDMRP may be found at <http://cdmrp.army.mil/fundingprocess.htm>.

All CDMRP review processes are conducted confidentially to maintain the integrity of the merit-based selection process. Each level of review requires panelists to sign a non-disclosure statement attesting that application and evaluation information will not be disclosed outside the panel. Violations of the non-disclosure statement can result in the dissolving of a panel(s) and other corrective actions. Organizational personnel and PIs are prohibited from contacting persons involved in the review process to gain protected evaluation information or to influence the evaluation process. Violations of these prohibitions will result in the administrative withdrawal of the organization’s application. Violations by panelists or PIs that compromise the confidentiality of the review process may also result in suspension or debarment of their employing organizations from Federal awards. Furthermore, it is a crime for Federal officials to disclose confidential information of one party to another third party (Title 18 United States Code 1905).

B. Review Criteria

1. Peer Review: All applications will be evaluated according to the following criteria, which are of equal importance:

- **Military Benefit**
 - The degree to which the proposed research, if successful, will have a significant impact on the cognitive rehabilitative care of soldiers who have suffered a TBI.
 - How the proposed research will make original and important contributions towards the goal of advancing treatment and/or recovery from cognitive issues associated with combat-related TBI.
 - How the potential outcomes of the proposed clinical trial will impact long-term outcomes for those who have suffered a combat-related TBI.
 - How well the proposed study addresses the selected Focus Area.
- **Intervention, Drug, or Device**
 - Whether the intervention is clearly and adequately described.
 - Whether the treatment/intervention integrity (i.e., consistency) is clearly and adequately described.
 - Whether the intervention, drug, or device to be tested is available and appropriate for the proposed clinical trial.
 - How the proposed intervention compares to pharmacologic agents, devices, and/or clinical guidance currently available (if applicable).
 - Whether there is documentation that an IND/IDE application has been submitted or completed (if applicable).
 - Whether measures are described to ensure the consistency of dosing of active ingredients for nutritional supplements (if applicable).
- **Study Design**
 - How well the scientific rationale and preliminary data, including critical review and analysis of the literature, and laboratory and preclinical evidence support the rationale for testing the intervention.
 - How well the study aims, hypotheses or objectives, experimental design, methods, including utilization of appropriate Control arm(s), data collection procedures, and analyses are designed to clearly answer an important clinical objective.
 - How well the logistical aspects of the proposed clinical trial (e.g., communication plan, data transfer and management, and standardization of procedures) meet the needs of the proposed clinical trial.
 - How well the inclusion, exclusion, and randomization criteria meet the needs of the proposed clinical trial.
 - To what extent the proposed clinical trial affects the daily lives of study participants (e.g., Is time requirement prohibitive to trial participants/daily activities? Will participants still be able to take their regular medications while participating in the clinical trial? Are participants required to stay overnight in a hospital?).

- **Clinical Protocol Development and Human Subjects Protection**
 - To what extent the plans for addressing human subjects protection requirements as described by HRPO and coordinating IRB submissions and approvals at participating sites are appropriate.
 - How well appropriate plans for developing procedures to ensure compliance with FDA regulations for investigational agents are considered (if applicable).
- **Statistical Plan**
 - How the statistical plan, including sample size projections and power analysis, is adequate for the study and all proposed correlative studies (if applicable).
- **Volunteer Recruitment and Accrual**
 - How the recruitment, informed consent, screening, and retention processes for volunteers will be conducted to meet the needs of the proposed clinical trial.
 - Adequacy of a contingency plan to resolve potential delays (e.g., slow accrual, patient dropout) in clinical trial completion.
 - How the protocol describes access to and availability of volunteers for the clinical trial, the prospect of their participation, and the consideration of likelihood of volunteer attrition.
- **Ethics**
 - How well the risks to participants are minimized, and evidence of a monitoring plan which is appropriate for the level of risk.
 - How well the evidence supports that procedures are consistent with sound research design and, when appropriate, procedures used are already in use for diagnostic or treatment purposes.
 - To what degree the selection of participants is equitable, informed consent is sought and appropriately documented, and appropriate safeguards are in place for vulnerable populations.
- **Personnel**
 - Whether the applicant meets the eligibility requirements.
 - How the clinical study team's background and expertise are appropriate to accomplish the proposed research (i.e., statistical expertise, expertise in PH/TBI research, and clinical studies).
 - How the levels of effort of the clinical team are appropriate for successful conduct of the proposed trial.
 - Evidence that a study coordinator with appropriate expertise is or will be immediately identified at an appropriate level of effort.
- **Environment**
 - The appropriateness of the scientific environment for the proposed research.

- How well the research requirements are supported by the availability of and accessibility to facilities and resources (including collaborative arrangements).
- **Organizational Resources and Commitment**
 - The degree of organizational commitment for the use of facilities and resources.
 - Whether the organization has demonstrated access to appropriate patient populations for the clinical study.
 - How the facilities and resources are appropriate for the cognitive rehabilitative care of TBI patients.
 - How the resources and expertise at the organization are appropriate for data management and maintaining security/confidentiality.
 - If appropriate, the extent to which the intellectual and material property plan is developed and appropriate.
- **Transition Plan**
 - How well the transition plan describes deployment of the intervention, product, device, and/or emerging technology to the target clinical environment.
 - Whether there is evidence that the PI has or can secure additional funding, or whether the PI clearly described potential options to secure the additional funding needed to bring the intervention, product, device, and/or emerging technology to the appropriate next clinical trial phase and/or to the clinical setting.
 - How well the proposed resources to bring the product to delivery support the likelihood of success.
 - How appropriate intellectual property, licensing, and/or business professionals have been included or engaged.
 - How well the plans are described for further development of the intervention, product, device, and/or emerging technology, and how well the plan completes development of the product to ensure a successful transition.
 - How well the long range vision for implementation of the intervention, product, device, and/or emerging technology in the clinic or field is addressed.

The following will not be individually scored, but may impact the overall evaluation of the application:

- **Budget**
 - Whether the budget is appropriate for the proposed research and within the limitations of this Program Announcement/Funding Opportunity.
- **Application Presentation**
 - How the writing and components of the application influenced the review.

2. Programmatic Review: The following criteria are used by programmatic reviewers to make funding recommendations.

- Military benefit
- Ratings and evaluations of the peer reviewers
- Programmatic relevance
- Adherence to the intent of the award mechanism
- Program portfolio composition

V. CLINICAL PROTOCOL AND SUPPORTING CLINICAL DOCUMENTATION

A. Required Elements of the Clinical Protocol (upload as Attachment 1, “ProjectNarrative.pdf,” on the Attachments Form in Grants.gov):

Please note that the protocol should address the following elements:

- Trial design
- Intervention, drug, or device to be tested
- Feasibility of the study
- The statistical plan
- The personnel involved in the study
- Ethics and/or regulatory issues

Protocol elements:

1. Protocol Title

2. Phase: If applicable, designate the phase of the trial or the class of the device to be tested.

3. Principal Investigator (PI)/Study Staff: List the complete name, address, telephone and fax number, and email address of the PI. List the names of all key study personnel who will have significant involvement in the study; include their professional credentials (e.g., M.D. or R.N.), highest degree(s), job title, and employing institution.

4. Study Location(s): List all centers, clinics, or laboratories where the study is to be conducted. Provide the Federal-wide or DOD Assurance number for each institution engaged in study. Include the name, degree(s), title, employing institution, and complete address of the investigator(s) for each study site.

Multi-institutional Clinical Trials: If the proposed clinical trial is multi-institutional, plans for communication and data transfer between the collaborating institutions, as well as how specimens and/or imaging products obtained during the study will be handled, should be included in the appropriate sections of the Clinical Protocol. In addition, a separate intellectual and material property plan agreed upon by all participating institutions should

be provided for multi-institutional clinical trials, as described above in Section III.B.2., Attachment 2: Supporting Documentation.

5. Time Required to Complete the Study: State the month and year of the expected start and completion times.

6. Background (Suggested limit: ten pages): Include a literature review that describes in detail the rationale for conduct of the study. Include data from preliminary and preclinical studies that led to the development of the protocol. The background section should clearly support the choice of study variables and explain the basis for the study questions and/or study hypotheses. This section should establish the relevance of the study and explain the applicability of the proposed findings.

Note: If the protocol was initiated using other funding prior to obtaining the DOD funding, explain the history and evolution of the protocol and declare the source of prior funding. Specifically identify the portions of the study that will be supported with DOD funds. For ongoing protocols, HRPO approval is required prior to initiation of any human subjects research activities supported by the USAMRMC.

7. Objectives/Specific Aims/Study Questions: Provide a description of the purpose and objectives of the study with detailed specific aims and/or study questions/hypotheses.

8. Study Design: Describe the type of study to be performed (e.g., prospective, retrospective, randomized, controlled, etc.) and outline the proposed methodology in sufficient detail to show a clear course of action.

- Define the study variables, and describe how they will be measured.
- Describe the methods that will be used to obtain a sample of volunteers from the accessible population (i.e., convenience, simple random, stratified random).
- If applicable, describe the subject-to-group assignment process (e.g., randomization, block randomization, stratified randomization, age-matched controls, alternating group, or other procedures).
- Explain the specific actions to accomplish the group assignment (e.g., computer assignment, use of table of random numbers).
- Describe the reliability and validity of psychometric measures, if applicable.

9. Study Population: Describe the target population (to whom the study findings will be generalized) and the nature, approximate number, and pertinent demographic characteristics of the accessible population at the study site (population from which the sample will be recruited/drawn). Demonstrate that the research team has access to the proposed study population. Furthermore, discuss past efforts in recruiting volunteers from the target population for previous clinical trials (if applicable), any potential barriers to accrual, such as a change in the target population demographics, a change in medical practices, or competing clinical trials; and plans for addressing unanticipated delays (e.g., slow accrual). Volunteer selection should be equitable. The protocol should include justification of any age, race, ethnicity, or sex limitations provided.

10. Inclusion/Exclusion Criteria: List the inclusion and exclusion criteria in the protocol. Inclusion/exclusion criteria should take into consideration the specific risk profile of the studies to be conducted and the standard of care for that patient population. Ensure that exclusions are justified. Clearly state the exclusion criteria for volunteers with disease, taking medications, or from certain groups.

Inclusion of Women and Minorities in Study. Consistent with the Belmont Report and recent congressional legislation, special attention is given to inclusion of women and minorities in studies funded or supported by the USAMRMC. This policy is intended to promote equity both in assuming the burdens and in receiving the benefits of human subjects research. If women and/or minorities will be excluded from the protocol, an appropriate justification must be included.

11. Description of the Recruitment Process: Explain methods for identification of potential volunteers (e.g., medical record review, obtaining sampling lists, health care provider identification, etc.).

- Describe the recruitment process *in detail*. Address who will identify potential volunteers, who will recruit them, and what methods will be used to recruit them.
- If volunteers will be compensated for participation in the study, a detailed description of the compensation plan should be included in the protocol. Ensure that the compensation plan is fair and does not provide undue inducement. If the study requires multiple visits, a plan for pro-rating payments in the event of volunteer withdrawal should be considered.
- Describe the recruitment and advertisement materials. The recruitment materials should not be coercive or offer undue inducements, and should accurately reflect the study. An ombudsman should be considered for use with particularly vulnerable populations.
- Some important considerations for recruitment materials include:
 - Recruitment materials should not promise a cure or benefit beyond what is mentioned in the protocol or consent form.
 - If the volunteers will be paid, the amount of payment should not be presented in bold type, larger than other text, or otherwise overemphasized.
 - Recruitment materials should not promise “free medical treatment” when treatment is not the true intent of the study.

12. Sample Size Justification: A complete power analysis must be included in the protocol to ensure that the sample size is appropriate to meet the objectives of the study. The protocol should specify the approximate number of volunteers that will be enrolled. If the protocol involves multiple sites, the number enrolled at each site should be stated.

13. Description of the Informed Consent Process: Specifically describe the plan for obtaining informed consent from volunteers. ***Provide the Informed Consent Form.***

- Identify who is responsible for explaining the study, answering questions, and obtaining informed consent.
- Include information regarding the timing and location of the consent process.
- If applicable, address issues relevant to the mental capacity of the potential volunteer (e.g., altered capacity due to administration of any mind-altering substances such as tranquilizers, conscious sedation or anesthesia, brain injury, stress/life situations, or volunteer age).
- Address how privacy and time for decision making will be provided, and whether or not the potential volunteer will be allowed to discuss the study with anyone before making a decision.
- As consent is an ongoing process, consider the need for obtaining ongoing consent or for re-assessing capacity over the course of a long-term study, and describe any relevant procedures to assure continued consent.
- If volunteers who cannot give their own consent to participate will be included in the study, there must be a plan for the consent of the individual's Legally Authorized Representative (LAR) to be obtained prior to the volunteer's participation in the study. State law defines who may act as the LAR. The IRB of record should be consulted for guidance regarding who can serve as LAR for research at the study site.
- If illiterate volunteers are anticipated, the consent process to be followed for illiterate volunteers should be outlined in the protocol. The consent form should be verbally read/explained to the volunteer in the presence of a witness. The volunteers must sign or make a mark (such as a thumbprint) to indicate agreement to participate, and the witness must sign to attest that the content of the written consent form was accurately conveyed to the volunteer.
- If it is anticipated that volunteers who do not speak the primary language of the host country will be enrolled in a trial, all documentation provided to volunteers (consent form, information sheets, etc.) should be translated with a copy provided to the HRPO for review at a later date. A plan for ensuring that volunteers' questions will be addressed during the consent process and throughout the trial should be included.

NOTE: When consent will be obtained in a language other than English, documentation that the foreign language version of the consent form is an accurate translation of the English version of the consent form must be provided to the HRPO at a later date. Documentation from a qualified translator certifying the translation must be provided along with the English and foreign language version of the consent forms. The documentation of translation should include the following statement: "I certify that this is an accurate and true translation." The signature, name, address, phone number, and, if available, fax number of the translator should also be included.

- If a waiver of all or parts of the consent process is being sought, or a waiver of documentation of consent is desired, include justification of why the waiver should be considered. This justification should include how the protocol meets the criteria

set forth in Title 32 of the Code of Federal Register, Section 219 (32 CFR 219). If consent to use existing samples or data in a future study was provided as part of another study protocol, this should be clearly explained. If the institution is a covered entity, justification for Health Insurance Portability and Accountability Act (HIPAA) waiver requests should also be provided.

Assent. When minors are included in a study, a plan to obtain assent (agreement) from those with capacity to provide it, or a justification for a waiver of assent should be provided. Age-appropriate assent forms should be developed for use with minors when assent is obtained. Capacity to provide assent should also be considered for other populations that cannot provide informed consent, and assent should be obtained whenever possible.

14. Volunteer Screening Procedures: List and describe any evaluations (e.g., laboratory procedures, history, or physical examination) that are required to determine eligibility/suitability for study participation and the diagnostic criteria for entry. Please note that some screening procedures may require a separate consent or a two-stage consent process. Informed consent must be obtained prior to initiation of any procedures for the purpose of determining eligibility.

15. Study Procedures/Study Interventions: Describe the study intervention or activity that the volunteer will experience. Provide sufficient detail in chronological order for a person uninvolved in the study to understand what the volunteer will experience and when it will occur. Provide a schedule of study evaluations and follow-up procedures. Provide all case report forms, data collection forms, questionnaires, rating scales, and interview guides, etc. that will be used in the study.

16. Description of Protocol Drugs or Devices: If the protocol uses a drug, biologic, device, or nutritional supplement, provide the following information:

- For medical products regulated by the Food, Drug, and Cosmetic Act, designate the protocol as Phase II or III clinical trials research.
- If the study is in support of an application to the FDA or other appropriate agency, provide the IND/IDE number and name of the sponsor.
- Provide complete names and composition of all medications, devices, or placebos.
- Identify the source of medications, devices, or placebos. Describe measures to ensure the consistency of dosing of active ingredients for nutritional supplements, if applicable.
- Describe the location of storage for study medications.
- Describe the dose range, schedule, and administration route of test articles.
- Describe washout period, if used, in detail.
- Describe the duration of drug or device treatment.
- Declare concomitant medications allowed.

- Provide information on treatment safety, including anticipated side effects, and any antidotes or treatments available for them.
- Describe the plan for disposition of unused drug.
- For FDA-regulated studies, describe the procedure by which the IND/IDE sponsor will monitor the protocol in accordance with Title 21 of the Code of Federal Register, Section 312 (21 CFR 312).

17. Laboratory Evaluations:

- **Specimens to be collected, schedule, and amount.** All specimens that will be collected for study purposes must be clearly stated in the protocol. The collection schedule and amount of material collected must also be clearly described. This may be represented using a table or schematic for more involved protocols.
- **Evaluations to be made.** All evaluations that will be made for study purposes should be stated in the protocol. Copies of all data collection forms must be provided. The protocol should explain how the results of laboratory evaluations will be used to meet the objectives of the study (or to monitor safety of volunteers).
- **Storage.** Specimen storage must be described in the protocol, to include where, how long, any special conditions required, labeling, and disposition. If there is a plan to store specimens for future use (either by the investigator or through an established repository), this should be outlined in the protocol. If samples will be collected for future use in other studies (and if this is not the sole purpose of the protocol), volunteers should be given the chance to opt out. Potential future uses of samples should be addressed to the degree possible. If volunteers are given a menu of options regarding sample donation for future research, procedures should be in place to ensure that volunteers' wishes for use of the samples are honored. Procedures for withdrawal of samples at the request of the volunteer should be described if samples will remain coded or identified.
- **Laboratories performing evaluations and special precautions.** The laboratory performing each evaluation should be clearly identified in the protocol, as well as any special precautions that should be taken in handling the samples. Special precautions that should be taken by the volunteer before, during, or after the laboratory procedure should be clearly defined. If transport of samples is required, provisions for ensuring proper storage during transport should be included in the protocol.
- **Multi-institutional Clinical Trials.** If the proposed clinical trial is multi-institutional, plans should be included for how specimens and/or imaging products obtained during the study will be handled.

18. Data Analysis: Describe the data analysis plan. The data analysis plan should be consistent with the study objectives.

19. Data Management:

- **Methods used for data collection.** All methods used for data collection should be described in the protocol. Copies of data collection forms and any test instruments administered should be provided. Data collection forms should be adequate and accurate according to the data collection plan described in the protocol. Whenever possible, identifiers should be removed from data collection forms. Critical measurements used as endpoints should be identified.
- **Multi-institutional Clinical Trials.** If the proposed clinical trial is multi-institutional, plans for communication and data transfer between the collaborating institutions, should be included.
- **Volunteer identifiers.** If unique identifiers or a specific code system will be used to identify volunteers, this process should be described in the protocol.
- **Confidentiality:**
 - The protocol should explain measures taken to protect the privacy of study volunteers and maintain confidentiality of study data. Strategies to protect the privacy and confidentiality of study records, particularly those containing identifying information, should be addressed. Investigators collecting particularly sensitive information should consider obtaining a Certificate of Confidentiality.
 - The protocol should address who will have access to study records, data, and specimens. The protocol should acknowledge that representatives of USAMRMC are eligible to review study records.
 - Requirements for reporting sensitive information to state or local authorities should be addressed in the protocol. Examples of sensitive information that may require reporting include positive HIV (human immunodeficiency virus), hepatitis, or tuberculosis test results, illegal residency, child or spouse abuse, or participation in other illegal activities. These requirements will vary from state to state. Investigators should consult their local IRBs for assistance with state requirements.
- **Disposition of data.** Describe where data (both electronic and hard copy) will be stored, who will keep the data, how the data will be stored, and the length of time data will be stored. Note that records of IND studies must be kept for 2 years after a New Drug Application is approved/issued, or for 2 years after the IND is withdrawn. Records required for IDE studies should be retained for 2 years following the date that the investigation is terminated or completed, or the date that the records are no longer required for support of the pre-market approval application, whichever is sooner.
- **Sharing study results.** In cases where the volunteer could possibly benefit medically or otherwise from the information, the protocol should explain whether or not the results of screening and/or study participation will be shared with volunteers or their primary care provider, to include results from any screening or diagnostic tests performed as part of the study. The potential benefits of providing volunteers with the information should be weighed against the potential risks. It is

generally not advisable to use experimental assays or techniques to guide clinical care.

20. Risks/Benefits Assessment:

- **Foreseeable risks.** The protocol should clearly identify all study risks. Study risks include any risks that the volunteer is subjected to as a result of participation in the protocol. Consider psychological, legal, social, and economic risks as well as physical risks. If the risks are unknown, this should be stated in the protocol. If applicable, any potential risk to the study personnel should be identified.
- **Risk management and emergency response:**
 - The protocol should clearly list all measures to be taken to minimize and/or eliminate risks to volunteers and study personnel or to manage unpreventable risks. All safety measures in place to mitigate risk (e.g., core temperature monitoring, electrocardiogram monitoring, observation periods, and special procedures to avoid disclosure of potentially damaging information) should be described.
 - Planned responses, such as dose reduction or stopping criteria based on toxicity grading scales or other predetermined alert values, and other safeguards should be detailed in the protocol.
 - If there is a chance a volunteer may require emergency care or treatment for an adverse event, the protocol should discuss the overall plan for provision of care for study-related injuries, to include who will be responsible for the cost of such care. For example, if a study sponsor or institution has committed to providing care for study-related injury at no cost to volunteers, this provision should be explained in the protocol. The clinical site must have adequate personnel and equipment to respond to expected adverse events, and the nearest medical treatment facility should be identified in the emergency response plan.
 - Any special precautions to be taken by the volunteers before, during, and after the study (e.g., medication washout periods, dietary restrictions, hydration, fasting, pregnancy prevention, etc.) must be addressed. If pregnant volunteers will be excluded from participation in the study, the method used to determine pregnancy status in women of childbearing potential must be specified. Also, the time that will elapse between the pregnancy test and exposure to study procedures or medical products must be stated, as well as how long the non-pregnant volunteer should use effective contraceptive practices after participating in the study. Please note that contraceptive practices may be necessary for male volunteers participating in certain types of studies. Pregnancy testing is recommended within 48-72 hours before the start of the study. Consideration should be given to repeating testing prior to administration of test articles.
 - Any special care (e.g., wound dressing assistance, transportation due to side effects of study intervention impairing ability to drive) or equipment

(e.g., thermometers, telemedicine equipment) needed for volunteers enrolled in the study must be described in the protocol.

- **Potential benefits.** Describe real and potential benefits of the study to the volunteer, a specific community, or society. Ensure that the benefits are not overstated. *NOTE: Payment and/or other compensation for participation are not considered to be benefits and must be addressed in a separate section.*
- **Intent to benefit.** If volunteers cannot give their own consent to participate in an experimental study, and Title 10 United States Code Section 980 (10 USC 980), http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=browse_usc&docid=Cite:+10USC980, applies, a clear intent to benefit each volunteer must be described in the protocol.

21. Study Personnel:

- **Roles and responsibilities of key study personnel.** Briefly describe the duties of key study personnel. Describe their roles in the study effort. A study coordinator is required at an appropriate level of effort whose duties may include the following: Recruit and consent volunteers, maintain study records, administer study drug, take and record vital signs, and enter data into computer database. A key person must be identified who will be responsible for guiding the protocol through the IRB, HRPO, and other regulatory approval processes, coordinating activities from all sites participating in the trial, and coordinating participant accrual.
- **Conflicts of interest.** Investigators and key study staff must disclose any real or apparent conflicts of interest (financial or other). This information may be provided in the protocol or by submission of a conflict of interest declaration form. (Many institutions have a form for this purpose, as does the FDA. A Financial Disclosure Form for Investigators is also available on the HRPO website at https://mrmc.amedd.army.mil/index.cfm?pageid=Research_Protections.orpToolkit_ORPtoolkit). Measures taken to mitigate the impact of conflicts of interest must be provided. Information regarding conflicts of interest should be disclosed to volunteers in the consent form. All protocols that support development of a drug, device, biologic, or other intellectual property require completion of a conflict of interest declaration by all investigators on the protocol. Other protocols may require conflict of interest statements on a case-by-case basis.

22. Roles and Responsibilities of Medical Monitor: The DOD requires that a medical monitor be assigned to greater-than-minimal-risk protocols. The specific roles the medical monitor will fulfill should be outlined in the protocol and not represent a conflict of interest.

NOTE: The HRPO requires that the medical monitor review all unanticipated problems involving risk to volunteers or others, serious adverse events, and all volunteer deaths associated with the protocol, and provide an unbiased written report of the event within 10 calendar days. At a minimum, the medical monitor should comment on the outcomes of the adverse event and relationship of the event to the protocol or test article. The

medical monitor should also indicate whether he/she concurs with the details of the report provided by the PI. Reports for events determined by either the investigator or medical monitor to be possibly or definitely related to participation, and reports of events resulting in death should be promptly forwarded to the HRPO.

23. Study Organization and Management Plan: Provide an organizational chart and a timetable for completion for the clinical trial and publication. Provide a plan for ensuring the standardization of procedures among staff and across sites (if applicable). Provide a plan for real-time communication among collaborating institutions (if applicable).

24. Withdrawal from the Protocol: Volunteers may discontinue participation in the study at any time without penalty or loss of benefits to which the volunteer is otherwise entitled. The protocol should describe the procedure in place to support an orderly end of the volunteer's participation (e.g., exit exam or follow-up safety visits outside of the context of the research study, information regarding prorated payment for partial participation, etc.) and the consequences of a volunteer's decision to withdraw from the study. The anticipated circumstances under which the volunteer's participation may be terminated by the investigator or others should also be addressed (e.g., noncompliance, safety issues, loss of funding, etc.).

25. Modifications to the Protocol: Describe the procedures to be followed if the protocol is to be modified, amended, or terminated before completion. Note that any modification to the protocol, consent form, and/or questionnaires, including a change to the PI, must be submitted to the local IRB for review and approval. Major modifications to the study protocol and any modifications that could increase risk to volunteers must be submitted to the HRPO for approval *prior to implementation*. Some examples of major modifications include a change in PI, addition of a study site, changes in study design, and addition or widening of a study population. All other amendments will be submitted with the continuing review report to the HRPO for acceptance. Address the procedure for submitting amendments even if modifications to the protocol are not anticipated.

- **Protocol Deviations.** Describe procedures and notifications to be made in the event of deviations from the approved protocol to include both the local IRB and the HRPO. *NOTE: Any deviation to the protocol that may have an effect on the safety or rights of the volunteer or the integrity of the study must be promptly reported to the HRPO.*

26. Reporting of Serious Adverse Events and Unanticipated Problems:

- Reporting procedures will differ from institution to institution, so it is important for investigators to identify the reporting requirements for all entities involved in review of the protocol, and to clearly define this procedure within the protocol.
- Serious adverse events and unanticipated problems can occur in any and all types of studies, not just experimental interventions or clinical trials.
- Include a definition of what constitutes an adverse event in the study. For IND or IDE studies, include definitions as described in 21 CFR 312.32 and the ICH

(International Conference on Harmonization) E2A Guidelines
(<http://www.ich.org/cache/compo/475-272-1.html>).

- Describe agencies or offices to be notified, with point of contact information, in the event of an unanticipated problem or serious adverse event.

All protocols should contain the following language regarding the HRPO reporting requirements for adverse events and unanticipated problems: “Unanticipated problems involving risk to volunteers or others, serious adverse events related to participation in the study, and all volunteer deaths related to participation in the study should be promptly reported by phone (301-619-2165), by email (hsrrb@amedd.army.mil), or by facsimile (301-619-7803) to the USAMRMC ORP, HRPO. A complete written report should follow the initial notification. In addition to the methods above, the complete report can be sent to the US Army Medical Research and Materiel Command, ATTN: MCMR-ZB-P, 504 Scott Street, Fort Detrick, Maryland 21702-5012.”

For protocols that have a medical monitor assigned, the following language should also be included:

“The medical monitor is required to review all unanticipated problems involving risk to volunteers or others, serious adverse events, and all volunteer deaths associated with the protocol, and provide an unbiased written report of the event to the USAMRMC ORP, HRPO. At a minimum, the medical monitor should comment on the outcomes of the event or problem, and in the case of a serious adverse event or death comment on the relationship to participation in the study. The medical monitor should also indicate whether he/she concurs with the details of the report provided by the study investigator. Reports for events determined by either the investigator or medical monitor to be possibly or definitely related to participation, and reports of events resulting in death should be promptly forwarded to the HRPO.”

27. Continuing Review and Final Report: The protocol should acknowledge that a copy of the approved continuing review report and the local IRB approval notification will be submitted to the HRPO as soon as these documents become available. A copy of the approved final study report and local IRB approval notification will be submitted to the HRPO as soon as these documents become available.

B. Surveys, Questionnaires, and Other Data Collection Instruments: If the study involves surveys, questionnaires, case report forms, data collection forms, rating scales, interview guides, or other instruments, include a copy of the most recent version of each of these documents with the protocol submission. For each instrument that is used, the following information at a minimum should be addressed.

- Information collected with study instrument must be related to the objectives of the study.
- Procedures for use of study instruments should be clear in the protocol. Study instruments should be coded to protect confidentiality whenever possible.

- For study instruments provided to and/or completed by volunteers, the study instrument should be legible and presented at a reading level appropriate to the population. Copies of instruments submitted for review must also be legible.

C. Additional Protocol Language Requirements

The following are reporting requirements and responsibilities of the PI to the USAMRMC ORP, HRPO, and should be reflected in the protocol:

- The protocol will be conducted in accordance with the protocol submitted to and approved by the USAMRMC ORP, HRPO, and will not be initiated until written notification of approval of the research project is issued by the USAMRMC ORP, HRPO.
- Accurate and complete study records will be maintained and made available to representatives of the USAMRMC as a part of their responsibility to protect human subjects in research. Research records will be stored in a confidential manner so as to protect the confidentiality of subject information.
- The knowledge of any pending compliance inspection/visit by the FDA, Department of Health and Human Services Office for Human Research Protection, or other Government agency concerning clinical investigation or research, the issuance of Inspection Reports, FDA Form 483, warning letters, or actions taken by any Regulatory Agencies, including legal or medical actions, and any instances of serious or continuing noncompliance with the regulations or requirements will be reported immediately to USAMRMC ORP, HRPO.

VI. ADMINISTRATIVE ACTIONS

After receipt of pre-applications from CDMRP eReceipt or applications from Grants.gov, the following administrative actions may occur:

A. Rejection

The following will result in administrative rejection of the pre-application:

- Preproposal Narrative exceeds page limit.
- Preproposal Narrative is missing.
- Page size is larger than 8.5 inches x 11.0 inches (approximately 21.59 cm x 27.94 cm).

The following will result in administrative rejection of the application:

- Project Narrative is missing.
- Budget is missing.
- Page size is larger than 8.5 inches x 11.0 inches (approximately 21.59 cm x 27.94 cm).
- Submission of an application for which a letter of invitation was not received.

B. Modifications

- Pages exceeding the specified limits will be removed prior to review for all documents other than the Preproposal Narrative.
- Documents not requested will be removed.
- Following the application deadline, you may be contacted by CDMRP via email with a request to provide certain missing supporting documents (excluding those listed in Section V-A, Rejection). The missing documents must be provided by 5:00 p.m. ET on the second full business day following the date the email was sent. Otherwise, the application will be reviewed as submitted.

C. Withdrawal

The following may result in administrative withdrawal of the application:

- FY10 PH/TBI Research Program IP member(s) is found to be involved in the pre-application or application processes including, but not limited to, concept design, application development, budget preparation, and the development of any supporting document. A list of the FY10 PH/TBI IP members may be found at <http://cdmrp.army.mil/phtbi/panel10.htm>.
- Submission of the same research project to different funding opportunities within the same program and fiscal year.
- The application does not conform to this Program Announcement/Funding Opportunity description to an extent that precludes appropriate review.
- Direct costs as shown on the detailed budget form exceed maximum allowed by this Program Announcement/Funding Opportunity.
- Inclusion of URLs with the exception of links to published references.
- The proposed research is not a clinical trial.
- The PI does not meet the eligibility criteria as described in this Program Announcement/Funding Opportunity.

D. Withhold

Applications that appear to involve research misconduct will be administratively withheld from further consideration pending institutional investigation. The institution will be requested to provide the findings of the investigation to the USAMRAA Contracting/Grants Officer for a determination of the final disposition of the application.

VII. CONTACT INFORMATION

A. CDMRP Program Announcement Help Desk: Questions related to Program Announcement/Funding Opportunity content or submission requirements should be directed to the CDMRP Program Announcement help desk, which is available Monday through Friday from 7:30 a.m. to 4:00 p.m. ET. Submit questions as early as possible. Response times will vary depending upon the volume of inquiries. Every effort will be made to answer questions within 5 working days.

Phone: 301-619-7079
Email: cdmrp.pa@amedd.army.mil

B. CDMRP eReceipt System Help Desk: Questions related to the submission of the pre-application through the eReceipt system should be directed to the CDMRP eReceipt system help desk, which is available Monday through Friday from 8:00 a.m. to 5:00 p.m. ET.

Phone: 301-682-5507
Email: help@cdmrp.org

C. Grants.gov Contact Center: Questions related to application submission through the Grants.gov portal should be directed to Grants.gov help desk, which is available 24 hours a day, 7 days a week. Please note that the CDMRP Program Announcement and eReceipt system help desks are unable to provide technical assistance regarding Grants.gov submissions.

Phone: 800-518-4726
Email: support@grants.gov
