WORKPLACE FATALITIES IN IDAHO - 2009

Fatal work injuries in Idaho totaled 26 in 2009, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Richard J. Holden noted that while these results are preliminary, the number of fatalities in Idaho was down from the 36 recorded in 2008. (See chart 1.) Final 2009 national and State results will be released in April 2011.

Note: Totals for 2009 are preliminary

The most frequent event lending to workplace fatalities in Idaho in 2009 was highway incidents (10). Being struck by an object or equipment, nonhighway incidents, and being caught in or compressed by equipment or objects each had three on-the-job fatalities. (See table A.) Combined, these four events accounted for 73 percent of all work-related fatalities in the State.

_

¹ Fatal events are categorized into several major groupings including transportation incidents, assaults and violent acts, and falls, among others. These major groups are further broken down into more detailed groups. See the Occupational Injury and Illness Classification System (OIICS) Manual at www.bls.gov/iif/oshoiics.htm for detailed information on the categories of fatalities used in the census.

Highway incidents remained the most frequent fatal workplace event for both the State and the nation in 2009. The number of fatal injuries from this event in Idaho was down from the 16 in the previous year. The series high of 18 worker fatalities from highway incidents was recorded in 2003. Highway incidents accounted for 38 percent of the State's workplace fatalities in 2009; nationally, this event accounted for 20 percent of work-related deaths. (See tables A and B.)

As noted, three events had three fatalities each in 2009—being struck by an object or equipment, nonhighway incidents, and being caught in or compressed by equipment or objects. For nonhighway incidents, this was the lowest number of fatalities occurring since 2003. Each of these three events represented 12 percent of the workplace fatalities in the State in 2009. Nationally, these incidents accounted for a smaller proportion of workplace fatalities—10, 6, and 5 percent, respectively.

Table A. Fatal occupational injuries in Idaho by selected event, 1992-2009

| 2009 ¹ | 26 | 10 | 38 | 3 | 12 | 3 | 12 | 3 | 12 | |

¹ Totals for 2009 are preliminary.

Key characteristics of fatal work injuries in Idaho

- Men accounted for 92 percent (24) of the work-related fatalities in Idaho in 2009. Transportation incidents, which include highway, nonhighway, pedestrian, air, water, rail fatalities, and fatalities resulting from being struck by a vehicle, accounted for half of the deaths among male workers. Contact with objects and equipment made up 29 percent of male work-related fatalities. (See table 2.)
- Eighty-one percent of those who died from a workplace injury in Idaho were white, non-Hispanic (21) and fifteen percent were Hispanic or Latino (4). (Some worker fatalities were not identified by race or ethnic origin.) Transportation incidents were the most frequent type of fatality for white, non-Hispanic workers. (See table 2.)
- Workers 25-54 years old—the prime working age group—made up 27 percent or 7 of the State's work-related fatalities in 2009, whiles workers over the age of 55 made up 58 percent or 15 of work-related deaths. (See table 2.)
- Sixty-five percent of workers killed on the job worked for wages and salaries and the remaining 35 percent were self-employed. (See table 2.)
- One industry sector accounted for 46 percent of the workplace fatalities in the State agriculture, forestry, fishing and hunting (12). (See table 3.)
- From an occupational perspective, management had the highest number of workplace fatalities (8), followed by farming, fishing, and forestry (6). Combined, these two occupational groups accounted for almost 54 percent of the fatal work injuries in Idaho. (See table 4.)

U.S. Workplace Fatalities

Nationwide, a preliminary total of 4,340 fatal work injuries were reported in 2009, a decrease of 17 percent from the revised total of 5,214 recorded in 2008. This preliminary figure represents the smallest annual total since the Census of Fatal Occupational Injuries (CFOI) program was first conducted in 1992. (See table B.) Economic factors played a major role in the national fatal work injury decrease as total hours worked declined during the year. Similarly, some industries that historically have accounted for a significant share of fatal work injuries, such as construction, experienced even larger declines in employment or hours worked.

Highway incidents in 2009 continued to lead all other events in the frequency of on-the-job fatalities, a position held since the program's inception in 1992. Still, the 2009 count of 882 fatal injuries from highway incidents was down 27 percent from the 2008 count of 1,215 fatal injuries. Workplace homicides (521) declined 1 percent in 2009. Falls to a lower level decreased 13 percent (from 593 in 2008 to 518 in 2009). Around half of all fatal falls to a lower level occur in construction, so the decline in construction employment may account for the lower number of fatal work injuries due to falls to a lower level.

Workplace suicides (237) were down 10 percent nationwide in 2009 from the series high of 263 in 2008. However, the 2009 preliminary count of workplace suicides is the second highest annual total reported by the fatality census.

Thirty-seven states reported lower numbers of fatal work injuries in 2009 than in 2008, while 13 states and the District of Columbia reported higher numbers.

Table B. Fatal occupational injuries in the United States by selected event, 1992-2009

| Year | Total | Total Highway incidents atalities | | | cides | Falls to a | lower level | Struck by object or equipment | | |

| 2005 | 5,734 | 1,437 | 25 | 567 | 10 | 664 | 12 | 607 | 11 | |
| 2006 | 5,840 | 1,356 | 23 | 540 | 9 | 738 | 13 | 589 | 10 | |
| 2007 | 5,657 | 1,414 | 25 | 628 | 11 | 746 | 13 | 504 | 9 | |
| 2008 ² | 5,214 | 1,215 | 23 | 526 | 10 | 593 | 11 | 520 | 10 | |
| 2009 ³ | 4,340 | 882 | 20 | 521 | 12 | 518 | 12 | 414 | 10 | |

¹ Totals for 2001 exclude fatalities due to September 11, 2001 terrorist attacks.

Additional Census of Fatal Occupational Injuries data are available on the BLS Website at www.bls.gov/opub/hom/pdf/homch9.pdf. Selected current and historical information is available in PDF format Detailed data may be accessed from the query system at data.bls.gov/PDQ/outside.jsp?survey=fi or via an extensive collection of flat text files. For further information on the Census of Fatal Occupational Injuries, contact the West Information Office at 415-625-2270 from 9:00 a.m. to 11:30 a.m. and 1:30 p.m. to 4:00 p.m. (PT).

² Totals for 2008 are revised and final. The BLS national news release issued August 20, 2009, reported a total of 5,071 fatal work injuries for calendar year 2008. Since then, an additional 143 job-related fatalities were identified bringing the total job-related fatality count for 2008 to 5,214.

³ Data for 2009 are preliminary. Revised and final 2009 data are scheduled to be released April 2011.

Technical Note

Background of the program

The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the U.S. in each calendar year. The program uses diverse State, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/pdf/homch9.pdf. The technical information and definitions for the CFOI Program are in Chapter 9, Part III of the BLS Handbook of Methods.

Federal/State agency coverage

The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or State agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Several federal and State agencies have jurisdiction over workplace safety and health. OSHA and affiliated agencies in States with approved safety programs cover the largest portion of the nation's workers. However, injuries and illnesses occurring in certain industries or activities, such as coal, metal, and nonmetal mining and highway, water, rail, and air transportation, are excluded from OSHA coverage because they are covered by other federal agencies, such as the Mine Safety and Health Administration and various agencies within the Department of Transportation.

Acknowledgments

BLS thanks the Idaho Industrial Commission for their efforts in collecting accurate, comprehensive, and useful data on fatal work injuries. BLS also appreciates the efforts of all federal, State, local, and private sector entities that submitted source documents used to identify fatal work injuries. Among these agencies are the Occupational Safety and Health Administration; the National Transportation Safety Board; the U.S. Coast Guard; the Mine Safety and Health Administration; the Employment Standards Administration (Federal Employees' Compensation and Longshore and Harbor Workers' divisions); the Federal Railroad Administration; the Department of Energy; State vital statistics registrars, coroners, and medical examiners; State departments of health, labor and industries, and workers' compensation agencies; State and local police departments; and State farm bureaus.

Detailed statistics on fatal occupational injuries in Idaho can be obtained from tables at http://www.bls.gov/iif/oshwc/cfoi/tgs/2009/iiffi16.htm.
