Public Statement for “America’s Great Outdoors Initiative” Good morning, my name is Rosalyn LaPier. I am an enrolled member of the Blackfeet tribe. I came here today to offer my voice to the discussion regarding public land use in the United States. I come with a unique perspective and background. I grew up in a family that gathered plants on a seasonal basis for medicinal and edible purposes. Until this past year when my grandmother passed away at the age of 95, she oversaw our family’s efforts to gather and process plants. My grandmother was taught by her grandmother, Mary Spotted Bear, about the use of native plants. For the Blackfeet, plant knowledge was taught through the generations from woman to woman, usually from grandmother to granddaughter. Not only was the knowledge of gathering plants taught, but also how to process, preserve and prepare plants for future use. Archaeological evidence suggests that humans have lived on the northern Great Plains for at least 10,000 years. And that throughout that time humans have used the numerous rich natural resources found on the landscape. The Blackfeet used at least 200 different plants from a variety of habitats. The Blackfeet collected these plants all over what is now the State of Montana and the Province of Alberta. The Blackfeet went to specific places each season to gather and collect specific plants. Despite the stereotype that the Blackfeet “followed” the bison, the Blackfeet strategically traveled to certain places at certain times of the year specifically to gather plants or other natural resources and to also hunt animals. My family has gathered plants on the northern Great Plains and on what is now Montana for generations. I have spent my entire life helping my grandmother gather plants. It is something I continue to do (even after her passing) and that my family continues to do. However, I have found that we are an invisible presence on the land. Even though we continue to go to certain places to collect plants during certain times of the year, just as our ancestors did before us, no one recognizes that we have been there. This is in part because we do not harm the land or over-harvest it. Because of this we are often overlooked as a stakeholder in the discussion of public land use. And we are rarely, if ever, asked our opinion of issues related to public land use. Today, I would like to make you aware of a few of the challenges we face and the obligations that we believe the federal government has toward traditional cultural resource use. Challenges to traditional gatherers: 1) Each year it seems that there is more public land that is being leased for natural resource development, logging or for livestock use. Because of this there seem to be more roads, more ATV’s and more erosion on public lands. 2) Each year it seems that there are more pesticides and herbicides being used on public lands and that I have to ask where and when they are being used. We try to avoid places that are being sprayed but sometimes it is difficult, especially for older or elderly gatherers who cannot walk far from roads or far away from the car to gather plants. 3) Each year it seems that there are more noxious weeds on public lands. These seem to be near roads or development and they greatly impact the growth of native plant species. Sometimes it seems that we have to travel farther and into more remote places to avoid noxious weeds. 4) Each year it seems that there are more commercial harvesters on public lands. I have seen areas where commercial harvesters have over-harvested and have literally stripped a site of all natural resources, leaving nothing for either animals or other humans to share. 5) Finally, it seems that whenever there is a discussion of conserving land in Montana that it is said that the land needs to be restored to the way it was when Lewis and Clark arrived. People forget that when Lewis and Clark arrived there were numerous tribal groups in the region who had lived here for thousands of years and who

(cont.)

utilized the land. There seems to be a perception that “no one was using the land”, when in fact, people did use the land and continue to use the land every season and rely on that land for their health. America’s Great Outdoors Initiative should work toward: 1) Increasing and protecting access to traditional cultural resources on public lands for traditional gatherers. 2) Limiting development, the creation of roads, leasing for livestock use, and controlling erosion on public lands. 3) Limiting the use of pesticides and herbicides on public lands. 4) Restoring natural areas impacted by noxious weeds or erosion. 5) Protecting traditional cultural resources from over-harvesting by commercial harvesters. 6) Ending using the language of “restoring the land to they way it was when Lewis and Clark arrived” as if no one was here and no one was utilizing its natural resources. 7) Asking if traditional gatherers use public lands before allowing projects or leasing to occur. 8) Promoting the perpetual use of traditional cultural resources on public lands by traditional gatherers. For years my grandmother helped people on the reservation by providing medicinal plants for their illnesses and for their health. On Memorial Day I was on the Blackfeet reservation decorating graves. While there an elder (who is a veteran) came up to me and asked that now that my grandmother was gone, if I could make some medicine for him. Gathering and using plants has been a vital part of my life and the life of my family for many generations. We collect plants in a wide range of habitats – both on the reservation and off the reservation and both on private and public lands. I hope that I can continue this practice and so can the rest of my family. However, unlike commercial harvesters, we do not gather plants to sell them, we use them for our own family use and also for members of the community. I hope that my public statement will provide some awareness of how these issues impact individuals, like that tribal elder. Although this man does not gather the plants himself, he relies on others so that he can continue to live a healthy life. Ultimately though, he relies on the federal government to provide protection of public lands so that he can continue to benefit from that land. Just as his ancestors did for thousands of years. Even though our presence on the landscape is invisible I hope that my voice is heard today. Thank you for your time.

We have MORE than enough laws and regulations protecting our forests. We love this beautiful land we live in and care about it more than you who propose this monument can imagine. I'm willing to bet the vast majority of people who are for this proposed monument don't live here. We need solid answers that have not been forthcoming regarding this issue. As a taxpayer, registered voter, landowner, and business owner within the proposed Pacific Crest Monument, I say NO to your monument!

I have been involved with the stateside of the LWCF program for more than 20 years. I have seen the difference this program has made to a wide range of communities. For many, local parks are their only link to the outdoors. Many small communities only have a single park -- that is their pride and joy. The permanent dedication continues to ensure that these parks are available, but the continuation of the program is vital to insuring this heritage.

Rebecca - My bike pollutes less than your subaru does. Why would I spend thousands of dollars on a bike and equipment only to use it to destroy the wilderness I love. You liberals have it all wrong. I pay dues and fees to make and maintain trails that you like to hike on. It's our forest as well as yours, who died and told you you have more control over the forest than I do. I don't try to force you to ride a dirt bike stop trying to force us to not be able to ride ours. Hey ____, if your trying to get in shape try maneuvering a 300 lb motorcycle through a single track trail for a while.

What a ridiculous bunch of tripe! We have plenty of oil right here in this country but our enviros and government wont let us pump it. We wouldn't even be in the gulf if we could pump on land without all the laws. Do you really believe oil companies would rather drill 50 miles out to sea and two miles deep when they can do it at 800 ft. in Texas. When the well leaks in Texas you walk over to it and slap a cap on it. 10 minutes, done not 80 days. Come on people wake up. I don't know about you but I have never met anybody that has been employed by a poor person. I want the owner of the company I work for to be the richest son of a gun on the planet so he keeps passing more and more of it down to me. "socialism is great until you run out of other peoples money" Margrett Thatcher.

With a name like, it's got to be wrong Smarten up use this to your advantage Google then follow him around the web and vote on everything he has issues with, he speeds up the process of finding public voting, its just as efficient as joining the Serra Club to have a inside view on current trends.

People who just take your distorted vision of the world as reality are going to be very disappointed when they try to find these huge open spaces you claim to know about. I have driven this country from coast to coast border to border, you can drive at 70 mph for hours and hours and find nothing but wide open spaces. No disappointments here, I get out Google earth and scroll around all the areas of Alaska I cant see when I drove on the roads in that great state. Saving lands so our kids cant use them either is just plain dumb.

I hate to say it but look at France and its nuclear programs including reusing spent fuel that we DONT reuse or recycle into more energy because of current laws. They can make the spent fuel problem pretty much go away or become a non issue... France and many other countries already has.

If you think about it off roading on a OHV teaches our youth everything that exploring the great outdoors does on foot, survival, navigation etc. it also teaches them responsibility of owning a OHV, making money to buy one, making money to maintain and repair one, maintenance, they learn how to respect and care for their OHV by cleaning, polishing, their minds are always deep into the OHV one way or another.

The good lord gave us these lands to use so lets use them and get the most out of them, their is no such thing as permanent damage to this earth, given enough time any damage will be fixed, look at the earths 5 billion year history every time something bad has happen to the earth its always repaired itself to be better..

Discussion Question 1

(cont.)

There are 1.9 billion acres in the lower 48 states. Less than 1 percent of that has wilderness potential. Go tell your problem to Lewis and Clark. You're fighting for the right to cut the last tree. Then what? Then what? Exactly then what? Come back in 1000 years and take a look if you study earths more than 5 billion year history the earth has always healed ALL wounds, fixed everything BAD that has happen to it and its always ended up being better than before. Your end of the world and "last tree" idea is plain silly.

You need to lobby in your area to properly maintain and manage your local forest lands, many are reversing their policy's on putting out fires and are letting them burn themselves out, their is a good reason for this, in areas where the fire is a problem the forest needs to be harvested and replanted (maintained and managed) sounds like someone is not doing their job as well as it could be done.

As a division of the City of Chattanooga's Parks and Recreation Department, Outdoor Chattanooga has served to promote and protect a "signature outdoor lifestyle" in and around Chattanooga, Tennessee since 2003. We act as a central information resource for connecting people to the outdoors by hosting activities, events and programs that actively engage the public and we work with outdoor businesses and non-profit conservation organizations to advocate for our natural and built outdoor resources. Our program has been hugely successful for the region both economically and socially, and we would encourage other municipalities to follow suit. Our Website is, www.outdoorchattanooga.com.

Our children and future generations need the opportunity to experience our nation's history in ways other than computers or books, this being by actually visiting the battlefields. Seeing where these battles were fought help us to understand the struggles of those who fought to preserve this nation. The Civil War was an unparalleled episode for these United States, and must be fully understood by future generations. It has only been through visiting many of these battlefields that I have come to more fully appreciate the struggles of my ancestors and others who fought and gave their lives for this country. It is my hope that my descendants will also have these opportunities.

Thank you ELK for providing outdoor education and field experiences for young people, especially in communities of color. When young people are exposed to the rich beauty of our national parks it helps instill a wonderful caretaker attitude. One where our children will take ownership in protecting our natural resources.

All I can say is "amen." People go to the parks to visit nature. Leave what is man-made at home (other than your transportation in/out of the park).

(cont.)

Designating wilderness areas and protecting those we already have are critical to helping future generations appreciate our public lands. Wilderness does not exclude anyone but rather prevents certain forms of recreation that does not fit with the definition of wilderness as defined in the Wilderness Act. Historically, settlers dominated the landscape in order to survive and progress but today with all of this nation developed we have become humble enough to accept that there should be places set aside to protect ecological biodiversity. Wilderness areas serve as repositories for wildlife, water quality, and ecological processes that can provide educational and scientific opportunities. Wilderness areas will never restrict human use because today it is generally accepted that we are a part of the ecosystem. The Wilderness Act allows managing agencies to use mechanized and motorized use for specific uses such as medical emergencies, fire, insects, and disease. Therefore, the concept of an "absolutist" wilderness will never happen. BUT just because a trail become impassable does not mean we use chainsaws to clear them. Wilderness should provide opportunities for challenge as well as simple recreation and solitude.

How about adding wilderness corridors open to OHV in order to access the millions of acres of wilderness.

I will be working in Utah over the next several years to develop an Environmental Literacy Plan and a Green School Awards Program. Many states are developing these place that bridge the gap between formal and non-formal education stakeholders. I will be using my learning in MD over the last couple years and encourage you to do the same in your states. If you want to or are willing to dialogue about this please contact me. Here are two videos that express my recent work - Green Schools in MD and Environmental Justice in Salt Lake City: { Link } - MD { Link } - SLC UT

The National Fish Habitat Conservation Act - S.1214, H.R. 2565 is a critical piece of legislation that will conserve fish habitats which will produce positive results for fisheries for years to come. The National Fish Habitat Conservation Act also has significant bi-partisan support in both the House and Senate.

I grew up in Chicago, a big city, so it was hard to get out into the great outdoors. I get outside a lot now that I live in New England, but it would have been so helpful to have field trips from school go to state parks or other areas besides museums - or have after-school programs about nature. The only way I got to get outside was in day camp.

Today life is filled with noise, distractions and stress; all leading to reoccurring health problems. People have forgotten how to "detoxify" their life by living within their means, conserving and most importantly reconnecting to nature and outdoor recreation. As life gets more complicated, it becomes absolutely important to protect our remaining wilderness through the Omnibus Land package (H.R. 146) for generations today and in the future. If "lasting effects" is what President Obama is seeking, then passage of the Omnibus bill is the way to go first; this is what would work!!! It's the concrete foundation needed to administer the President's declaration of creating strategies and programs to reconnect people to our earth! As a representative and future educator (currently an education student at New Mexico State University) of the newly organizing "Friends of the Organ Mountains-Desert Peaks Wilderness," I am in support of proposed bill S.1689 which would protect our sacred Organ Mountains and surrounding desert wilderness areas. Our groups goals and mission are to reach our community about the importance of protecting our wilderness through education, awareness, advocacy and youth wilderness or nature programs. Our biggest challenges are creating knowledge, understanding, and support in the community. But it's the Understanding that's important to get across; that the effect of protection is great!!! Continued Life!!! As you can tell, My love is Nature, the Great Outdoors; the master works of God. I enjoy taking my family hiking and exploring into the Organ Mountains and surrounding areas every Spring and Fall and times in between for tranquility and harmony with the lands of my ancestors. My Apache (and Special Forces) father gave me a love of the wild-lands and what the lands can teach us by studying it. Exploring the lands of the Organ Mountains-Desert Peaks Wilderness and seeing its beauty gives me a longing to deepen the roots of my Apache heritage and needing to share it with my children and future students. I'm a new grandmother and I want the opportunity to be able to share with my grandson the legacy of beauty, wildlife and history of our lands & wilderness; the same that my father shared with me. Many people come to our southwestern lands (Las Cruces & Dona Ana) because of the beauty and tranquil air it brings. If our remaining wilderness is left open for developments, etc.; Where shall our future generation go? Will they walk the sands of a beauty forgotten as the Sahara? Our natural beauty will no longer be, and we will no longer have the attraction and breath-taking valley of green. When the air is no more, our Mountains and indigenous wildlife will die. We need to protect as much of the wild as possible for future generations. If our remaining Wilderness is left unprotected, what is affected is our ecological systems that sustain us and give us life. Our wilderness carries many values. There is a high diversity of plant and animal life as well as a diversity of geographical lands and rock formations. It carries historic values of prehistoric markings and cave dwellings; footprints of our past. So Not only does our wilderness preserve our very Life, Protection of our remaining wilderness aides in physical, emotional and mental well-being as well as aiding in our children's educational studies; giving us our future generation geologists, doctors, environmentalist or physicists and allows them to dream of possibilities for a better future. It is imperative that we protect our remaining wilderness, such as our Organ Mountains and surrounding desert areas (Bill S.1689) through the passage of the Omnibus Land package (H.R. 146) so that our future generations may have continued life and continue to enjoy the Great Outdoors!!! Thank you very Much

(cont.)

Information signs are a common feature of local, state and national parks. I propose that a new series of signs should be installed, where appropriate, containing the following three pieces of information about a given natural feature: 1) Information about the role of the feature in its natural setting (this information is already provided on many signs); 2) Information about the human uses for this natural feature; and 3) Information on sustainable alternatives that fulfill the same human use. Following is a rough, non-scientific example of what I am describing: Red Pine: Red pines are valuable components of ecosystems in the northern Midwest and Northeastern United States. These trees provide carbon sequestration, control erosion and provide shade for their distinctive understory ecosystems. Human uses for red pine include timber and paper pulp. Conservation of red pine stands can be aided by use of alternate timber and paper products: bamboo is a fast-regenerating strong plant that is increasingly being used as timber, and 100% recycled paper products are available in most places. By strategically placing signs throughout our parks, we can effectively illustrate what is lost through over-consumption of natural resources. Additionally, we can educate the public to preserve those features illustrated by the signs and, more broadly, to think critically about the impact of resource consumption in general.

The idea is a simple one: plant fruit trees in urban public places. I worked with urban youth through an urban conservation corps and found that most of them had little personal connection to the outdoors. This was in part because they were not exposed to many natural areas. More important, however, was the fact that they did not feel any reason to care about the natural features they did encounter. The time I saw the most appreciation for the natural world was when we had the opportunity to visit a community garden that contained apple trees and raspberry bushes. The kids were able to eat both the apples and raspberries and saw lettuce and cucumbers growing in the soil. This visit created a vastly increased personal connection with nature as they suddenly could see familiar food in its natural state. It put these few natural features into a value system with which they were already familiar. This experience became a lesson about the value of many other parts of the great outdoors and, subsequently, a lesson about the importance of environmental stewardship. Planting fruit trees and other familiar edible plants in cities and towns will increase awareness of the value of nature and subsequently increase a general ethic of stewardship.

We should create a national program that could give college and/or high school credit for a semester of service in our national/state/municipal outdoor areas. This new program could be a logical extension to the Americorps program. Americorps is a pure service program that directly and indirectly, through partnership with conservation corps, sends young people into our parks and forests to work with local rangers, NPS personnel, etc. In exchange, these workers receive a stipend and federal education grants. Why not provide these federal grants to people actively in school and include a strong education component to the programs? This would effectively be a blend of the existing Americorps program and a program modeled after the programs such as those provided by NOLS, which gives college credit for a learning-based outdoor adventure. An Americorps-education program could give credit for management degrees and could include a variety of programs focused on different natural science areas (geology, ecology, forestry. . .). Additionally, not only would we be acquiring affordable and eager help protecting our Great Outdoor areas, we would be educating younger generations in stewardship and science.

ELK is one of the few programs that truly works. Their success rate with high school and college graduation as well as kids getting science degrees is a role model for others. The kids in the program not only learn valuable environmental skills, they also learn team building skills, leadership and practice diversity and inclusion --- all of which are invaluable in their adult lives. I sure wish I could have had this type of experience when I was young!! We need to find a way to share ELK as a role model across the US to impact even more kids.

The Galveston Bay Area Chapter of Texas Master Naturalists offers me endless opportunities to give back to my local ecosystems with prairie and wetland restoration and teaching others about our natural resources - all flavored with fun, food, and friendship.

Here in Hawaii we have a very successful program called the Hawaii Association of Watershed Partnerships (www.hawp.org). Local, state and federal landowners sign a memorandum of understanding to protect the forested lands that are the source of our water. This means providing habitat for rare and listed species, managing invasive plants and animals and providing educational stewardship opportunities for local residents in the watershed lands. The best part is that conservation happens across ownership boundaries, and the newest partnerships are forming with the idea of the Hawaiian ahupuaa in mind - meaning that conservation happens in the ENTIRE watershed, not just parts of it - from the mountains to the sea - because what happens upland will affect the lowlands. Look to watershed partnerships as a successful cooperative agreement between all types of landowners, private and public, and that are supported by all levels of government and private granting organizations and as a way to include local residents in the everyday tasks that are necessary for successful conservation.

An accredited Outdoor Adventures Education course for physical education is available with an approved curriculum. The P.E. students at the high school and middle school level are taught wildlife conservation and introduced to outdoor skills. 8000 students in 80 schools will be taught archery, orienteering, survival skills, angler education, backpacking, camping, hunter and boat safety courses and cpr/first aid. Many schools report a waiting list for students wanting the Outdoor Adventure class. It is obvious; students want to learn more about the great outdoors. A required course like P.E. is a great way to start the connection with the outdoors. The P.E. Outdoor Adventures course is aligned with the National Physical Education Standards: NPE K-12.1-7. Any secondary school in the U.S. can teach this course. All teacher training for the course is available through individual state agencies. The course will be taught in Texas and Wyoming for the 2010-11 school year. More information is available at www.dallasecologicalfoundation.org.

(cont.)

Any plan that does not give as much control as possible to the real people, "on the ground", who are living there (within an area reasonably described as local)--is just another special interest agenda getting played out; some of which are good--some are not. The real priorities for rural or urban communities is to recognize that their best interests are served by becoming sustainable. (Sustainable living is visibly discernible from non-sustainable attempts to get ahead in life, damn the consequences.) Moving 350 million acre feet into the desert does not sound sustainable. Lets just be sure all pertinent information about every proposal is wholly and accurately depicted and thoroughly disseminated to everyone whose lifestyle or livelihood may be affected. (Thank goodness we live in the information age. This would not have been so possible 5 or ten years ago, but it is now, even in rural areas) Let it suffice to say that every federally produced improvement program should be implemented by and for, (and be somewhat self-regulated by), the people who have the most "priority" vested in the outcome, because it affects them locally.

As much as we need continued access to oil and gas to power 99% of our modern conveniences, it is only a matter of time before tragic accidents (don't forget 11 workers and their families paid the ultimate price for this explosion and spill) like the BP spill in the gulf devastate a large percentage of our coastlines and wetlands. Like nuclear power, no matter how safe and regulated offshore drilling may be, the effects of accidents--no matter the cause--can be catastrophic. Renewable energy may still be in the idealistic phase and is yet to be economically viable, but it is our best bet. The true cost of oil, including air pollution and health problems for those living near refineries, is far more un-economic in the long run. I can say this for I have worked in the oil industry and know that despite the many honest people who make their livings providing oil and gas to the world, we would all be better off without it.

Free is nice, but the probability of overuse/misuse of public lands goes up if no one pays to use the area. There are a number of trails and areas nearby where I live, but I don't use them because I don't want to pay either. Luckily I can just go further out; no every one else can. To the point, nothing is free; open spaces require money for cleaning, patrolling, and upgrades to roads, restrooms, signage, etc. If you can't pay \$3-\$5 to spend a few hours outdoors, then your not really serious about it. What if the NPS had a lottery system where every 100th user got in without charge?

Discussion Question 1

(cont.)

Gentlemen, thank you for maintaining your integrity when responding to my comments. If multi-use recreation means expanding existing OHV areas and trail systems then I'm all for it. (It's no use hiking around these areas anyway :0) The area of Deckers, CO is a good example of regulated OHV use, it is maintained and has abundant signage. Good signage informs users of the bigger environmental picture, which hopefully they are there to learn from while recreating, and is only possible with government funding. Funded areas should have the highest standards for use. Local businesses could benefit from increased traffic. Private land owners who want to invite recreational traffic should regulate themselves SIMILARLY, with respect to the principles of conservation. Remember, the land you own will belong to someone else after you pass on, so treat it well. Wilderness area recreation should continue to be prohibited periodically and during "sensitive" times like mating season for various keystone species, and in spring when roads are muddy. If recreational areas were open year round they would fail to operate as a corridor for wildlife, and lead to ecological imbalances. (Which should be treated at the root of the cause: too much human activity causes nature to cease functioning properly; and not be an excuse to condone other unwise practices like clear cutting, bio-cide applications, or dumping.) ... This is NOT a vote to say: all OHV, all the time, everywhere and anywhere. No way no how.

Good information is key--even if it is debatable. Sustainability is becoming more and more prescient all over the world--but it is hotly contested--for anyone who gets in the way of big money is automatically labeled a radical fanatic and an enemy of capitalism; even if they are only pointing out obvious flaws with how things are done and suggesting alternatives. A national conservation effort would need good consistent signage, with science that stands on its own and advocates with enough capital to stand up to all the special interest money that will flood in to dispute, defame or obscure that good science. It would be nice if the USDA or other Govt. organizations who serve the interests of average Americans could be funded as well as the charlatans on Wall street. Imagine a \$500 billion project to disperse and defend accurate information!

Greater care for the aesthetics and, more importantly, the effects of building and habitation should be considered. We don't need more beige, stucco 2 car garages with living space attached--or more lawns in drought afflicted areas. We do need conscientious, sustainable, community oriented living spaces that blend in harmoniously with their surroundings and do not use up too many resources. This may never be resolved though, for aesthetics and personal preferences may make it difficult to standardize what constitutes "green" building, planning and landscaping sufficiently enough for the government to get behind it.

I agree wholeheartedly. Anglers are often the first to speak up when protecting water quality and fish habitats. The Administration should actively support the National Fish Habitat Conservation Act as part of the America's Great Outdoors Initiative.

Discussion Question 1

I don't think we are talking about another study here - I believe what is proposed at top was an annual national report that identifies national priorities that can be shared in state SCORP plans, in addition to state issues. SCORPS are a useful tool, as they can reflect broad consensus on statewide recommendations related to outdoor recreation. The above recommendation would merely emphasize that each state integrate "common threads" w/in each SCORP that are of national interest/concern (i.e. childhood obesity, etc).

I've just gone through the Texas Master Naturalist training and it is an excellent experience. The exposure you are given to so many areas of the natural world around us practically guarantees that you will find something (or many things) that will grab your interest. Geology, soil, plants, birds, flowers, meadow ecology, trees, insects, water, weather, land management, amphibians, mammals, etc, etc, etc. You're sure to find an area and projects that meet your interests. The other members of your chapter will probably be the nicest folks you've met in a long time and will share their enthusiasm fo the great outdoors with you. The volunteer projects become a social outing to meet your friends and do things that will educate and benefit the natural environment. It's a great program.

Keep in mind this debate is about conservation of nature, sustainable practices and making healthy changes in regards to how we treat wilderness and open spaces; running over them with gas powered vehicles may be fun, (and admittedly it does have its place in this debate), but it is not a practice with the best interest of nature and most people in mind. One hiker and one ATV rider do not use space the same way; ATVs take up much more space(by covering more ground), and just one can destroy the serene atmosphere other recreationalists go to enjoy, not to mention resident wildlife. I do have friends who ride and I wish you all the best, but don't call recreational vehicles a sustainable conservation activity that has benefits apart from being a thrill ride.

Lets: Give communities the tools they need to reclaim power over the surrounding landscape, particularly where water or mineral rights are concerned. Support Organic Farm science and promote rural regeneration by aiding new and transitioning farmers to supply healthy food and jobs to communities. Give incentive to young, (-45) skilled and educated applicants to relocate and function as entrepreneurs and consumers of diverse service and goods in rural communities. Re-test aquifers and publish an official US water report. Call out Polluters; be clear about the spirit and letter of the law, and let good science and public conscience serve as judge. Be sure culpable entities pay for clean-up and submit to regulation. Protect peoples' right to choice and increase their access to fair and accurate information. Eliminate the power of misinformation campaigns regarding harmful products, by-products, and practices. Allow consumers the right to examine and compare true and full costs to decide what stays, what changes, and what goes.

Discussion Question 1

(cont.)

Preservation of cultural history is important, and should be considered a sensitive issue when deciding what to preserve and what to raze. It may, however, be beyond the scope of environmental conservation in this context. Lets be sure living things are protected so they can flourish into the future, and not spend too much time and money worrying about human artifacts that are not of obvious historic importance. This would be a great project for private or non-profit organizations and volunteer preservationists.

Ranching yes. Meat is important, Pastured meat is best. Over-grazing-No. As much as govt should respect private landowners rights it has an equal obligation to protect the public and preserve the heritage of the landscape. Since their are viable economic alternatives to overgrazing and CAFOs there should be incentive to move away from un-sustainable methods of food production.

Remember Public Service Announcements on TV and radio? What if 20-30second spots were created to inform about key components of ecology and conservation, like: the role of microorganisms in soil fertility, and what happens to them when chemical fertilizers or pesticides are applied. working definitions of "local" (+/- 100 mile radius), "Organic", and "natural" (which doesn't mean anything) how soil, water and air patterns shift and affect various populations, i.e. what you put on your lawn eventually travels to many other places, and responsibility for clean water, soil, and air starts at home. also, statistics on recycling, landfills, and the options around what to do with consumer waste. If the public were armed with a better understanding of these key topics, they could ask better questions, make better decisions, and get involved in the process of conservation.

So long as their are nationally recognized standards for and oversight--not necessarily regulation--for private conservation efforts, then this is a good idea. Local groups should control and maintain the quality of local lands, the way only caring, locally involved people can. it would be a good use of "limited conservation bucks" to assist and protect the rights of local conservation efforts.

There have been numerous cartoon-ish spokes-animals used to convey pro-environmental messages through the decades; some effective, some not. Make sure the message is on target before spending any federal aid on a new smokey.

There is so much more to communities: Shelter, safety, and good nutrition (which can and should be abundant) Education for children, work for grown-ups Goods and services that are easily available and equitably distributed with minimal violence Health care and information providers Areas to recreate in and out of doors and enough time to enjoy it These are the priorities for communities; any other initiatives labeled as "sustainable, community ..." have to be able to reflect the attitudes and preferences of actual communities of real people. Any plan that does not give as much control as possible to the real people, "on the ground", who are living there (within an area reasonably described as local)--is just another special interest agenda getting played out; some of which are good--some are not. I am not inferring anything about this or any other idea submitted here I am just clarifying what the real priorities are for rural or urban communities, whose best interests are served by becoming sustainable. (Sustainable living is visibly discernible from non-sustainable attempts to get ahead in life, damn the consequences.) The only way to do this is be sure all pertinent information is wholly and accurately depicted and thoroughly disseminated to everyone whose lifestyle or livelihood may be affected. (Thank goodness we live in the information age. This would not have been possible 5 or ten years ago, but it is now, even in rural areas) Let it suffice to say that every federally produced improvement program should be implemented by and for, (and be somewhat self-regulated by), the people who have the most "priority" vested in the outcome, because it affects them locally.

This is a good idea so long as it does not open loopholes for estate tax evaders to invest in farm properties solely to protect their wealth. On the surface estate taxes seem crude and unnecessary, especially for the average American; but when you consider the vast difference between the rich and poor nowadays, and you recall why the founders of this country despised landed, multi-generational wealth and the entitlement and undue influence in politics and business it affords you can see why all the implications of any changes in estate taxes laws should be well spelled out and transparent for all to understand. Yes farmers and holders of open space should be allowed to keep these things in the family, so long as it is not just a tax-evasion strategy for those unconcerned with conservation or sustainable agriculture.

This kind of synergistic thinking, where wholesome food is grown by a variety of small scale local growers who supply rural and urban populations is key to both rural economic recovery and food security issues. At this time, thousands of young "rock star farmers" who have degrees in everything from soil science to business management are preparing to make this happen; just like the thousands of market farmers and other sustainability minded agriculturalists who already are making it happen. This would be a great way for the DOI, USDA and other NGOs like ATTRA to organize and support local conservation advocates to do what they love, and help more people understand the simple, beautiful, and necessary link between the land and themselves--by eating it. Local food movements are gaining momentum around the world; better to be apart of it than opposed to it.

(cont.)

This the kind of thinking that will be the downfall of our entire way of life. I don't like THOSE people so I will work to get them banned. Why so narcissistic? Share the trails folks! Where possible, multiple use is a much better solution for everyone. OHV, mountain bikers, horseback riders and hikers can all use the same trails, provided we all don't get jammed onto the few trail systems that remain open. When you are on the trails...be courteous out there people. We need to get together on this and not fragment trail systems into single use or completely deny access to user groups that we don't like, then no one will be happy. I ride a dirt bike. I sometimes ride a mountain bike. I would ride a horse, if I had room for one. I also like to go hiking.

I take exception to being accused, as a full sized OHV enthusiast, of not being environmentally conscious. There are the typical "one percenters" in all forms of outdoor recreationists that do not care about thier impact to the environment. I have seen just as many on motorcycles as on ATVs. In fact, I tend to clean up the messes they leave behind. This kind of attitude, that one group is inherently better than another, is detrimental to our shared cause.

Since 2006, an enhanced tax deduction for donations of development rights has helped farmers, ranchers and other modest-income landowners work with land trusts to increase the pace of conservation by about 250,000 acres a year. Despite support from 265 Representatives, 41 Senators and President Obama's campaign pledge to sportsmen, that incentive was allowed to expire on December 31st of last year. Now is the time to make it permanent! Tax incentives for conservation easement donations have helped America's land trusts conserve millions of acres of important wildlife habitat, productive working lands and scenic open space. By leveraging the generosity of America's farmers, ranchers and forest owners, such donations and bargain sales can preserve working landscapes for a fraction of the cost of federal acquisition. By allowing modest income landowners to deduct more of their income over more years, the enhanced easement incentive simply provides them the same benefits they would have been entitled to had their incomes been larger. For more information, please visit www.lta.org/easementincentive.

Since 2006, an enhanced tax deduction for donations of development rights has helped farmers, ranchers and other modest-income landowners work with land trusts to increase the pace of conservation by about 250,000 acres a year. Despite support from 267 Representatives, 41 Senators and President Obama's campaign pledge to sportsmen, that incentive was allowed to expire on December 31st of last year. Now is the time to make it permanent! Tax incentives for conservation easement donations have helped America's land trusts conserve millions of acres of important wildlife habitat, productive working lands and scenic open space. By leveraging the generosity of America's farmers, ranchers and forest owners, such donations and bargain sales can preserve working landscapes for a fraction of the cost of federal acquisition. By allowing modest income landowners to deduct more of their income over more years, the enhanced easement incentive simply provides them the same benefits they would have been entitled to had their incomes been larger. For more information, please visit www.lta.org/easementincentive. This idea was originally posted in the Private Lands Conservation category where it had a total of 142 votes. The following comments were posted before that idea was "archived" in late June: 1) I second this idea. Not only does the enhanced tax deduction make it easier for landowners to work with land trusts, it also enables conservation organizations to keep on doing good work to protect outdoor spaces. Local land trusts provide services to communities by preserving and enhancing water quality, water quantity, wildlife habitat, recreational lands, agricultural lands, open space and scenic vistas. In rural areas, these amenities attract visitors and tourists and bring money to local businesses. It's all connected. 2) Three Rivers Land Conservancy is steward for natural areas in the Portland Metro urban area. Urban land is too expensive for a land trust to acquire. We hold easements and provide stewardship for land that we do not own. Owners of ecologically significant land are more likely to grant a conservation easement if there is a tax incentive to do so. (22 Apr 2010) I strongly support making the tax incentives on conservation easements permanent. Easements are particularly effective in communities that are concerned about having too much tax-exempt land owned by the government or land trusts. Local officials and residents who are concerned about lost revenues are more willing to support this approach when they understand that the private landowner will still pay some taxes, even if the amount of tax on land under easement may decrease. The Trustees of Reservations 4) This is a relatively inexpensive way to spur conservation of private lands. 5) This program is a great way to work with landowners to protect open land and increase private land conservation. 6) Many private landowners would like to take advantage of this means of ensuring open space for wildlife, streams, the future. 7) If there is one thing that our government deserves credit for in the past, it is creating (in 2006) the enhanced tax incentives package for conservation easement donations. These incentives have greatly accelerated the win-win movement to place family farms and natural lands under the protection of a conservation easement. These incentives have provided landowners with moderate or low incomes an opportunity to reap some financial benefit from giving up their development rights in order to save the conservation values. But the real winners are the public and the federal government because the cost to protect natural lands is negligible and there is no on-going cost to keep it protected -- the privately funded land trusts perform this stewardship in perpetuity. I fervently implore Congress to extend, and make permanent, the enhanced tax incentives package. 8) I understand what everyone has said up to comment 7. It is all true but there is

Discussion Question 1

Written & Online Comments

(cont.)

another side to this coin. Other tax payers must make up the difference for every tax exemption including a conservation easement. The President may be hearing from many tax payers that do not want to foot the higher bill put on them due to these type easements. He is probably trying to be sensitive to all sides or possibly just believes the government needs every dime it can get because of our wrecked economy. Many amenities available in good economic times are impossible during times such as the these. 9) This incentive is important to many landowners who are giving up substantial value by donating conservation easements. It's a much less expensive way (to the overall taxpayers of the nation) to conserve essential natural resources than would be the purchase of easements or land at fair market value using public dollars. 10) The enhanced tax incentive can make all the difference in the world. It represents significant tax savings, thus significant incentive for a landowner to donate a conservation easement. As a land trust we could be buying easements but donated easements make our budgets and thus our impact go farther. In general we try to appeal to landowners interested in conservation as their first priority. With the additional incentive offered by the enhanced tax incentive I can also pull in landowners who are somewhat committed to conservation to whom the tax savings appeals. I think this is a good move for us collectively to make as a conservation community as, I believe, a large part of the future for all of us involves doing conservation work on private lands in lieu of public land management. (13 May 2010) All sportsmen should know our outdoor pursuits depend on maintaining viable fish and wildlife habitat. Unless tools like conservation easements that help groups like Ducks Unlimited and the landowners we work with are in place our lifestyle will continue to be at risk. More than 70 percent of wildlife gets food and shelter from our working farm, ranch and forest lands, but we're losing these habitats to development at the alarming rate of 5,000 acres each day. This legislation encourages voluntary, incentive-based donations of future development rights to ensure that farm and ranch families can continue to work their land, sell hunting leases and provide wildlife habitat for future generations. Ducks Unlimited has had great success using this incentive to accelerate the pace of waterfowl habitat conservation. This incentive helps Ducks Unlimited leverage Farm Bill and North American Wetlands Conservation Act funding. Landowners considering a perpetual commitment to conservation should not be pressured by an artificial deadline, and many will never begin the lengthy process without the reassurance of a permanent incentive. 12) I am opposed to Federal subsidies for nonprofit Land Trusts to purchase land. If Land Trusts want to purchase land, they should use their own money -- not mine. 13) Comment #12 is not pertinent to what is being discussed. The suggestion is to make the tax incentives permanent. 14) This is such a critical incentive for all farmers and ranchers across the country that are interested in conserving their properties for future generations. It maintains bipartisan support, a rare achievement in modern politics. Making these incentives permanent is critical for the future of private lands conservation. For the original list of votes see the archived idea here: { Link }

(cont.)

Today's 143 conservation corps (www.corpsnetwork.org) operating in 44 states build upon the proud tradition of the Civilian Conservation Corps of the 1930's while being flexible, fluid partners with many public and private conservation organizations throughout the country. These conservation corps employ thousands of youth and young adults, giving them vital career skills, on-the-job training, and education. Today's corpsmembers will be instrumental in filling public land management positions that are being vacated as baby boomers retire. Conservation corps also have the flexibility to incorporate diverse populations in their crew-based model. Many corps have programs that harness the energy of senior citizens, persons with disabilities, veterans, and minority youth. Conservation corps are capable of tremendous conservation outcomes throughout the country because they are nimble enough to leverage multiple funding sources from federal, state, local, and private entities. What are the challenges for conservation corps in protecting places that Americans love? At a time when more people are being called to serve, conservation corps need to have access to cooperative agreements, not cumbersome contracts, while working with federal agencies. Conservation corps benefit from legislation that seeks to involve more youth in the outdoors such as the Public Lands Service Corps Act and Youth Corps Act of 2010. Increased and sustained funding for programs like the AmeriCorps, Lands and Water Conservation Fund, and Rivers, Trails, and Conservation Assistance Program, will continue to connect people with the outdoors through service opportunities. Most of all, conservation corps need public support to keep alive a strong tradition dating back to the depression of combining service with protection of America's natural wonders.

We need more access to public lands for all types of recreational activity, to include full sized motorized vehicle access. There are many areas in this great nation that can only be fully accessed by 4 wheel drive vehicles, particularly for those who are disabled. It is important to keep in mind that all who enjoy our great outdoors need to work together to support this access. Cooperative effort is needed.

The Civil War was one of the most defining periods of time in this country's history and without a doubt has molded us in countless ways into the nation we are today. Battlefields possess an aura that cannot be experienced in any other way than to walk where our ancestors' blood once soaked the ground, where men fought and died for what they believed in. No teacher or text book can convey the sacredness one feels when surrounded by the now peaceful open spaces that once were the backdrop to the most horrific carnage as well as some of the bravest moments in American history. Preserving these battlefields now is more important than ever as we Americans are losing a little bit of our heritage with each passing day, and once these great links to our past are paved over, they are gone forever. We must never forget the events that transpired on these lands, and their preservation should never be compromised.

Expand the Wild Rogue Wilderness to include the 58,000 acre Zane Grey roadless area, and add the tributary streams in the area to the National Wild and Scenic Rogue River designation.

Discussion Question 1

(cont.)

The Civil War has to be one of the most important and significant times of our countries history. We MUST protect and honor these battlefields and the blood of those fallen americans who fought so bravely at these sites. To visit these Battlefields makes the novice history individual feel the presence of what ocured there and to be at awe .

This is a major part of this country's history. The Battlefields MUST be preserved and honored. If not for us let it be for the hundred of thousands of americans who fought and died for what they believed to be right. To me this is a question that should never be debated.

We were told that the local rural community could turn to tourism and recreation for alternate economic base when the current forest plan eliminated logging. Wilderness does NOT bring in recreation \$\$\$. Wilderness is "not untrammeled" by man. The native americans used every part of our mtns. They burned areas on a regular basis to maintain berry fields and wildlife areas. Wilderness was NOT a 400 yr old forest of "old growth" but a mosaic of forest types and openings across the landscape. We have so much blow down trees in out forests today it is very difficult to walk cross country. We have observed the wildlife prefer an open corridor or trail. In Enumclaw, WA the FS is now trying to clear a 400 acre area for the elk. Young successional forest whether by logging or fire is necessary part of the landscape. The forests and mtns have been my backyard where I have lived for 60 yrs. I have observed a lot. I also have an oldtimers wildlife diaries from 1949 to 1990 sharing where wildlife flourished after a burn or clearcut with abundant feed.

Goshen Farm Preservation Society is a group of dedicated people who have been trying to preseve 22 acres of land and a historic home in a heavily developed area near Annapolis MD. The property is owned by the Anne Arundel County Public Schools. It was purchased through eminent domaine in the 1970's in order to build an elementary school and middle school. The elementary school was built and the middle school was deemed not needed. The house was built in the 1780's and there are 22 acres of forest and meadows left in the original homestead. Our group was formed when a few residents found out the the Board of Ed was about to demolish the house(which was on the MD Historic Register). These residents testified at the next BOE hearing and the demolition was stopped. Goshen Farm Preservation Society has spent the last 5 years trying to gain a lease from the BOE to rennovate the House, create communtiy gardens and a historic community preserve. Each time this organization feels close to achieving a lease, new roadblocks are created by the BOE. As a member of this group, my philosophy is that environmental protection is achieved in large (lobbying by the League of Conservation Voters) and small (saving 22 acres near the Chesapeake Bay) efforts. Both are critical. Our group is to speak at a hearing on August 18th of the Anne Arundel County Board of Education concerning the feasiblity of our lease request. Our group has been busy over the last 5 years - getting non-profit status, a \$150,000 matching grant from the state of Maryland, fundraising, and much more. This lease hearing is our greatest hurdle. If you want more information, please go to our website www.goshenfarm.org .

I have visited many civil war battlefields in Virginia, Pennsylvania, Maryland, Kentucky, Tennessee, Georgia and Mississippi. It is important to protect and preserve these battlegrounds and cemeteries where our forefathers fought and died for a cause in which they believed so our children can understand and appreciate one of the most traumatic episodes in American History. Never have so many owed so much to so few.

The national trail system is a national resource. One must only look at the level of esteem and publicity the one complete trail (the Appalachian trail) receives. Completing the national trail system would create a wilderness legacy that would be a valuable learning and teaching tool for years to come.

You are absolutely right about brownfields within the built environment, but please consider using rooftops and parking lots also within the built environment instead of healthy, fragile desert ecosystems, which deserve protection as much as rainforests, coral reefs, mangroves, redwoods, and other healthy intentional ecosystems... There are a number of advantages (including democratic ownership, lower costs, less eminent domain, fewer GHGs, etc.) to local efficiency and solar, and a huge number of disadvantages to remote Big Solar (water waste, high prices, monopoly power, instability of centralized power/long transmission, etc.).

When the original CCC operated the laws pertaining to employee safety and health standards were minimal. You ate what they gave you, (no gluten free vegetarians), you slept on the ground where you worked, and you may or may not have had safety equipment. The cost of this program was minimal, no civil rights training or sexual harassment training, or blah, blah, blah training was required. To implement a program like the CCC today would cost the government a large fortune, because so many laws apply to both the private and federal workforce. About the first time someone stubbed their toe and sued the program for not providing proper footwear....the judge would put it out of business. 50 people died while fighting fire and several others were killed in work related duties. The Student Conservation Association and several other youth organizations are loosely based on the model of the early CCC program. Support for these organizations would be a more efficient use of money and workforce.

Expand the Wild Rogue Wilderness to include the 58,000 acre Zane Grey roadless area, and add the tributary streams in the area to the National Wild and Scenic Rogue River designation. The Rogue River is an iconic natural treasure providing vibrant wild salmon and steelhead fisheries, recreation, clean water, solitude and a high quality of life to the citizens of Southwestern Oregon, and indeed the nation. The Rogue River and its abundant renewable natural resources provide a sustainable economic base for many Josephine County businesses. The Wild and Scenic and Hellgate Recreation sections of the Rogue have provided \$30 million in economic benefits to the state of Oregon annually, including 445 jobs. The Wild and Scenic and Hellgate Recreation sections of the Rogue River provides Josephine County with \$14 million in benefits annually. A proposal to expand the Wild Rogue Wilderness by approximately 58,350 acres, and adding approximately 93 miles of tributary streams to the existing National Wild and Scenic Rogue River is in the best long term social, economic and ecological interests of Josephine County.

(cont.)

Throughout Britain and Europe people hike and walk on public pathways situated on private lands. These are ancient in origin, to be sure, but the impact is that communities have the infrastructure to encourage people to walk through field and forest to recreate or to go about their daily business. These public pathways encourage being outside. In Mill Valley, CA, a community built on a mountainside, a series of public steps lead down in terrace-like fashion between private properties, to the town itself in "the valley", making it possible for citizens to shop, recreate, and stay out of their cars for daily errands - while getting some great exercise!

Outstanding program! ELK has enriched the lives of many families in the community through educational nature and science programs. Some of these families would never be able to experience and appreciate the beauty of the great outdoors if it were not for the programs offered through ELK. Through the years, many of the ELK kids and their families have become stewards in the fight to preserve nature and our natural resources. I commend the ELK Board of Directors and staff on the excellent work that have done over the years.

thanks for your quote "You also cannot argue the fact that while driving a motor bike or OHV across a trail it is hard to enjoy the surrounding area" By riding a dirtbike it is proof that I love nature more. On my bike I get to see more of it in a days ride that you do. Mabey it is my better developed mind that can take in more of the beauty as I am "racing down the trail oblivious to surroundings". In all actuality I and all who I know who ride vary the speed of the ride greatly depending on the terrain in order to take in what is around. I have been able to take my children to numerous spectacular vistas and panoramas that most eyes never see. I rarely ride more than a couple miles without stopping in a opportune site to take off my helmet and look around and who knows I may even put the kickstand down and take a walk around to look at the beauty I am around. We take a snack and sit back miles from everyone else and enjoy the world. This stereotypical propaganda you spread about what of off-roaders are is absolutely wrong. 99% of off roaders use the trails as a means to spend time with family, friends, and most of all a vehicle to see nature and wildlife.

"nature lovers" must conform to your idea of what that is? As a responsible OHV sigletrack off road motorcyclist my love of the outdoors and enjoyment of nature is every bit as intense or valueble as yours. Groups like the Blue ribbon coalition and other local off road groups provide countless hours of service and improvements to public lands. The arrogance of the statement OHV supporters are any less outdoors people is ignorant.

Environmental Learning for Kids (ELK) - Put a Little Wildlife in a Child's Life! We as a nation, must make sure that ALL people have the education and experiences to connect with nature and science. ELK focuses on making sure everyone, especially communities of color all exercise their right to experience the great outdoors, graduate from high school and are college-ready, with a strong knowledge of science and natural resource career options. ELK alumni will be part of the next generation of Department of Interior employees and will help diversify the natural resource workforce. ELK's mission is to cultivate a passion in science, leadership, and service in a diverse community of learners. Through year-long and multiple-year educational experiences, ELK kids (ages 6-24) and their families develop a strong knowledge of science, natural resources, and various careers that are available in the field. Research has proven that to have success in connecting kids to nature, you must start working with them when they are young (ages 6-12) and include their families in the activities. ELK teaches kids and their families that careers in science are a viable option for youth to pursue and provides them with the resources and support network needed to achieve the same. Empowering youth to succeed also means educating their families that college is a viable option. ELK's Proven History of Success • 98% high school graduation rate for ELK students; • Secured more than \$160,000 in college scholarships for ELK youth; • Forty-five ELK alumni are either in college or gainfully employed, 72% are either studying or have graduated from college in a science major; • Families and youth are introduced to fishing, hunting, and outdoor experiences, thereby ensuring new generations become part of the American Legacy and stewards of the environment. • Successfully completed government grant projects through the U.S. Environmental Protection Agency (both environmental education and environmental justice), U.S. Forest Service (More Kids in the Woods), U.S. Fish & Wildlife; National Park Service, National Park Foundation, and Great Outdoors Colorado Our students and families have the knowledge to make informed decisions regarding important issues that will have to be voted on in the future, i.e., conservation, protection, and recreation. ELK is a replicable model that has the potential to expand nationally.

(cont.)

The positive side of our economy is that people return to places where memories were once created, places that are familiar, places that are affordable, and places that offer true intrinsic benefits that are not tied to anything that is man-made, material-oriented, and/or technologically 'advanced'. I believe that all federal agencies that manage public land need to review their mission and values, develop clear goals and objectives for future management and then be given the resources to be able to implement management strategies that will protect our lands while allowing access to the land. We need more professional federal (non contracted) staff to enforce laws, implement interpretive programs, oversee use, limit use (many of our parks allow WAY too many visitors in a given time frame) and manage land systems. Further (random), commercial concessionaire agreements need to be terminated; professional federal staff should be managing gift shops (with original, local and US made gifts), lodges, and everything commercial in parks, forests, and other federally 'owned' lands. I'd like to see partnerships for land conservation and preservation however would appreciate close monitoring for there affectiveness. I feel too much money is given to non-profits and it is then poorly managed. Several NP's do amazing things but there are some bad apples out there. More money for parks, recreation and open space, period - however that money needs to be managed from within by creating more jobs to protect and educate the public.

Volunteers in the San Bernardino National Forest Adopt A Trail program volunteered over 13,000 hours in 2009 maintaining the OHV route network. I believe we have "paid" enough.

The preservation of the sites which are inextricably linked to the seminal event of 19th century American history is a priority that cannot be deferred. In ten to 15 years the most important remaining unspoiled tracts will either be preserved or will have fallen to the developers' bulldozers. These are the places where the nation fought for and won a "new birth of freedom" in Lincoln's words. The core values that underlie our form of government and our way of life were established and re-established on these fields of honor. And on this hallowed ground as nowhere else can each succeeding generation learn to appreciate what those values mean and what price our forebearers paid to preserve them.

Many grassroots and smaller organizations have ideas and projects to share, that could benefit from the synergy of other projects in their areas, or of similar size and scope in other areas. The technology exists to create mapping tools and portals that will allow such sharing, however it can be out of the reach of the budgets or in-house technical capacity for some organizations. Create and support tools such as one I learned about today -- www.conservationregistry.org-- that will facilitate synergy and win-win collaboration and learning opportunities.

Without the on the ground information about where the critical wildlife and plant connectivity and habitat areas are, conservation planning efforts are hindered. This type of information can be used across jurisdictions in collaborative efforts to plan at regional scales that will be effective in protecting America's Great Outdoors, while helping planners and developers make smart choices about where and how to build and grow.

Discussion Question 1

Written & Online Comments

(cont.)

Preservation of Civil War battlefields -- and of the open spaces surrounding them -- is the most thoughtful, most powerful, most tangible way to honor those who fought on those battlefields. That should go without saying. Just as important, preservation is critical to imparting to young people the causes and costs of the war that gave shape to the country they live in today. The existence of the places upon which this awful conflict was carried out can serve as a springboard for educational programs to ensure that the reasons for the war, and the way in which the war was waged, are thoroughly understood and never forgotten. Schools should be urged, if not required outright, to make study of the Civil War a major part, if not the focal point, of their U.S. history curricula. Students, along with their parents, should be encouraged to visit battlefields. Surveys have shown that young people are woefully ignorant of American history. Preservation and promotion of Civil War battlefields can be used to rectify this national embarrassment.

Charge small federal and/or state fees for high impact users of public lands. Fees could be charged often through the licensing process for hunting, fishing, orv, etc. These fees would be optional in license purchasing by state -- i.e. huntings accessing state game lands would pay a small fee, maybe \$10 a year for that priviledge. Fees could be higher for extra high impact uses such as off-road vehicle access. The funds would go toward additional land purchases and for conservation projects, including trail building and maintenance, road maintenance, wildlife management, proscribed burns, etc.

As an added note ... all the Federal Government needs to do on this is follow and support the excellent lead of the Civil War Preservation Trust (CWPT) in the area of battlefield preservation.

As I stated in another comment, Native American people managed their lands for 10,000 years before Europeans arrived. They were the first multiple use advocates. They knew every plant, tree or rock and what it was useful for. Allowing land to be placed in multiple use does not mean that it will be developed. Wilderness is lack of management which does the land no good.

There is no downside to supporting battlefield preservation in the United States. Preserving history, nature, wildlife ... there is nothing not to like. Imagine the northern Virginia triangle between Richmond, Virginia, Warrenton, Virginia and Washington, D.C. WITHOUT the battlefields that are preserved there. Wall-to-wall development ... with Walmarts and Malls and highways the only monotony breakers. And yet, that is what we would have there now if not for the efforts of preservationists over the last twenty years. The alternative is too awful to contemplate. The only losers when such sites are preserved (and expanded) are greedy developers and unscrupulous retailers. The future applauds those who preserve what remains NOW.

We need full and dedicated and permanent funding for land and water conservation easements. Also, permanent protection for the tax deductibility of easements and protection from estate taxes on easements. Finally, effective support of organizations who's job it is to monitor and enforce easements.

Discussion Question 1

(cont.)

While I support efforts to expand employment opportunities, only state parks should be considered for work programs. The National Parks were intended to be more wilderness in character than amusement park. The Wilderness Act has been misused for years to include lands that do not fit the definition of wilderness. These areas should be untrammelled by man.

Outdoor Chattanooga is doing great work. It is a model for other Cities!

Civil War battlefields should be preserved not only for their historical, educational and cultural benefits, but for their economic contributions to the local areas.

From CEFC's website, it appears that it and the closely-related Biophilia Foundation are doing good work. I can't pretend to know if a nutrient reduction credit market is practical, even within a single region; but I'm giving you a "promote" vote for your good intentions.

I agree with about duplications. We even have one idea that appears twice ("Watershed..."). It's time for the administrator to step in and do some housekeeping. As for you Texas Master Naturalist folks, you've done a great job of rallying your member to stuff the ballot box, but please consider voting to support other good ideas as well, for instance Tallgrass Prairie Conservation. Thanks!

I agree with the last seven of your suggestions. Regarding suggestions #1 and #2, conservation would not succeed without support from hunters and fishers. Thanks for bringing up Wildlife Services, an organization with a terrible history.

I don't disagree with hunting and fishing; but we don't need to be hunting and fishing everywhere. I'd prefer to see isolated parcels remain isolated.

I have no problem with paying modest, user fees that help support maintenance.

I would gladly pay my share of the expense involved in creating highway overpasses and underpasses for wildlife the way Canada did in Alberta.

If you search for an estimate of the number of cities, towns and villages in the United States, you'll find various figures, typically in the ballpark of 20,000 to 30,000. While I support the creation and maintenance of urban parks and trails for the reasons you've mentioned, I don't believe it is practical for the federal government to participate. These projects are best coordinated and funded by state and local agencies and non-profit organizations.

I'm in favor of designating additional wilderness areas, and I promoted this idea. However, it is the same as the one submitted by ____ on May 7. This website has an abundance of duplications.

My family started using reusable bags for grocery shopping. They work very well. A closely related issue concerns the mess that has been made from plastic trash in the oceans.

(cont.)

Not every place needs to be accessible for recreation.

Protecting working lands and ranches from development doesn't always provide strong public benefits. The protection should serve important conservation purposes, for instance to save high-quality natural characteristics or to buffer existing conservation lands. I don't think it matters whether some or all of the debts are federally held; and I don't think the agencies that hold the debts may always be qualified to say what lands are worth protecting or to actually monitor the conservation easements in perpetuity. For me, the bottom line is that while things like cash payments, tax deductions and debt reductions help to motivate landowners, we already have in this country an effective network of federal, state and non-profit organizations leveraging these and other methods while making good conservation decisions.

The BLM should be run by people who are motivated to protect, restore and connect their land's diverse ecosystems.

The places where most of us live are troubled either by noise pollution or by light pollution at night. Having wild places where we can truly get away from these disturbances is very important for us and for many of our fellow creatures. This is what wilderness is all about. Thanks for your idea.

These parks could use wolf packs.

To all: It would be great to have a Buffalo Commons National Park in western Kansas. Those of you who are residents of that region should contact your local politicians regarding it. Please also be sure to "promote" this idea and the other ideas in this website that are closely related to it, like the "Great Plains National Park" and "Tallgrass Prairie Conservation". With your determined efforts, we can make this happen.

Well said. Having a full suite of large carnivores is essential to healthy ecosystems for the reasons you have mentioned. Reintroductions would be helped by restorations of larger natural areas and, of course, by the public's willingness to again share our landscapes with these creatures. (PS: Leopold died in 1948, though works like A Sand County Almanac were published after that.)

School yards are in every community and should serve students and the broader community as centers for conservation and environmental education and recreation. School yards are an excellent - yet underutilized - resource especially in urban areas such as Los Angeles where they are currently paved. Students and community can be engaged through service to restore habitat and redress park inequities by greening their local school campus. Greening school yards will also improve air quality, recharge ground water and reduce temperatures. In Los Angeles where the school district is the largest landowner (more than 5,000 acres and 700,000 students) - there is an enormous opportunity to grow the next generation of environmental stewards in their own communities, and to educate them about the history of conservation and the role they must play in protecting wilderness and conserving agricultural land.

Not completing the national trail would do a disservice to the Lewis and Clark expedition. They need to be appreciated for all that was discovered, and completing the trail will bring the history of the Lewis and Clark expedition alive! If the trail is completed, many more people will be educated about the westward expedition.

The completion of the national trail system incorporates the protection of the environment, United States history and diversity within the nation. Connecting the national trail from the east coast to the west encourages, invigorates and brings to life a deeper understanding of OUR national history and heritage. The trail signifies the ingenuity of the peoples of this great land. The National Trail System must be completed.

What better place to beginning to appreciate the great outdoors than in your own back yard! They say that "charity begins at home". Well, so can a respect and understanding of nature and all of it's beauty. It's a great place to teach and learn and is right out the door!

I like your idea. The problem is that the National Forest Service has shown it's propensity to close the areas in which you refer. Just last year (or was it two years ago now?) the Eldorado National Forest closed over 1,000 miles of roads and trails that were built to service the loggers and were still used by OHV'ers and others. Why? Many of the other National Forests are closing whole tracts of roads and trails that are still in use under their new "travel management plan." The real name should be the "travel prevention plan", since as far as I can tell, that is what they're planning and implementing. I went to a couple of the "travel management plan" town hall meetings. 99% of the people present were from the OHV crowd. That either means the other "interest groups" weren't interested or they didn't care as far as I'm concerned. Many good ideas were proposed, including volunteer trail maintenance programs run by the OHV clubs, FREE grading services by persons who owned and operated graders in the area and a whole slew of other useful suggestions. Pretty much it was a room full of people who were willing to do what it takes to keep the existing roads and trails open. Everything said in those rooms was completely ignored by the Forest Service Administration when the final plan came out. 1 for 1 will work. It will force those who want to close recreational sites forever to choose wisely as they will also be forced to give up like tracts of land elsewhere forever.

Preserving Civil War Battlefields is very important!! We must never forget our history or we are destined to repeat it.

The nation's outdoor interests are growing increasingly competitive. On one side there are those who would like to protect and preserve things as if no human had ever set foot there. On the other, there are those who would like to travel some of the vast open spaces on an ATV. Somewhere in the middle is the correct solution. I propose the federal government recognize that our public lands have many uses and interests. In an effort to reduce the "I win, you lose" mentality of modern politics, the government should not consider setting aside any new wilderness without setting aside an equal amount of dedicated OHV area within a reasonable proximity.

This is an example of the kind of great and innovative approach the MOU seeks to identify as stated in Section 2(c)(i) "It should recommend efficient and effective use of existing resources, as well as opportunities to leverage nonfederal public and private resources and nontraditional conservation programs."

Great idea, Mr. Evans. I believe off highway family recreation is a wonderful thing that brings families together without harming the environment.

It'd be nice to also include domesticated animals used for commercial purposes in that program (cows, chickens, etc.). Agree that animal welfare and conservation often go hand-in-hand.

In Nebraska we have a large number of minimum maintenance roads that are all ready developed. They network with a vast number of small villages, rural communities and state parks. If utilized with the approach of tourism as OHV trails for ATV riders this use could help revive these small communities with new revenue. With exposure to small farm town rural living and friendly hospitality it could inspire people to move here to raise their families. With this kind of tourism it would help promote jobs, new businesses and opportunities locally for our youth who are currently finding it difficult to find work without commuting a great distance. With OHV recreation interest on the rise I would like to see our small local communities, our county dept. of road and the state of Nebraska utilize this gem of a jewel that is all ready of existence but needs a strong foundation developed to build and map out these deserted roads to bring about this exuberant idea. As people have expressed, it is a recreational sport that brings family together to explore the great outdoors to experience a lifetime of precious memories with family and friends. Need I say more. Who do I go to next with this plan? What is the next step that needs to be taken? Where do I go for funding this plan? Where do I find these tools?

(cont.)

Civil War battlefields are tangible links to our country's past. • The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. • Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. • Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. • Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. • Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. • Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can benefit quality of life for residents.

Great concept for the plains economy, conservation, climate, wildlife, and history. What is the downside? The costs would quickly be recouped with tourism dollars, not to mention the simple fact that this is the right and best thing to do when it comes to our devastated prairie history. A win-win for everyone and everything.

The preservation of Civil War and other historical sites should absolutely be of the highest priority. They are the places that shaped this nation...men and women served and died on these battlefields. We owe it to those whose spirits still walk these lands, to our children so they may learn what events happened to bring them to where they are today, and to ourselves...as our duty to both.

I am all for education, but it depends on the source and it needs to be all encompassing. So many of these educational programs are politically driven, it is agenda driven. It sounds good on the surface, the devil is in the details. I think a good environmental program should start and look at what these kids are doing now and how they are affecting their environment. Every time they turn on their computer, video game, tv, and buying all these things, they are supporting the destruction of land. These companies use tremendous amounts of energy and these factories and stores are built on land that was once occupied by wildlife. These education agendas fail to mention all of this. They just talk about saving land far far away from where they live. The wilderness was once right under their feet. Each new house, each new shopping mall, each new car dealership destroys the land. Not only that but it reduces the nations capabilities to provide the food and fibre they need to live on.

(cont.)

I just retired after teaching 42 years. Some of my greatest satisfaction comes from the awareness that my students exhibited after studying about the Civil War and then going to the Gettysburg Battlefield. They would write essays on their return explaining what it was like to be on "a great field" (Col. Joshua Chamberlain). If our ancestors hadn't the foresight to save that field, we would not have been able to walk Pickett's Charge or take in the strategic views from Little Round Top. Thank goodness for those who saved Monocacy, Antietam, Ft. Stevens, etc.! Just last month, one of my eighthh graders took 2nd place in the Civil War Preservation Trust's essay contest entitled "Take Action: Save Civil War Battlefields". Did that make me feel proud? Certainly! But not as proud as I am of the fact that she is donating her \$100 prize BACK to the CWPT! So when we Americans look at our priorities, we must remember that our youth are our future and we must serve our future by preserving the opportunity to walk those fields. P.S. In the fall, I will accompany the Class of 2011 on their Gettysburg trip as a retiree in Union uniform.

I think this is a much better idea than wasting funds trying to save lands that don't need saved hundreds of miles from the populations and development. People need to have land preserved close to where they live so they can enjoy them on a daily basis if they wish. This would also help control urban sprawl. Good idea

Instead of subsidies, encourage free-market practices through tax breaks for the formation of a cooperative as mentioned above. If there is a need, and there is an incentive thru a tax break, an entrepreneurially minded effort will get started. This is the core of American job creation.

It is a good idea. It should also include a trip to a farm, to show how agriculture and nature can and does co-exist.

Much of the public, their jobs and their investments are the one destroying the land with constant development. Yet they fail to do anything about it. They are only focused on saving public land. Much of which is already saved and since its public it can't be destroyed. Look at what you have and what you continue to support with your purchases and investments. You are your own worst enemy. You state 6,000 acres are lost per day. Do something about it. If you are serious about this loss, you would ask for an wilderness area perimeter around every city in the United States. But don't stop there, check you investments and see what you are destroying overseas by investing in those companies.

OHV use is already restricted to designated OHV trails and roads. Thousands of miles of designated trails and roads have been closed to OHV use. Millions of square miles of public land has been restricted to foot traffic only. I like this idea.

Smoking has been detemined to be unhealthy, so why even mess with the filter on cigarettes. Maybe it should be illegal to make cigarettes with filters. What ever is left when your lips start to burn should be biodegradeable. Butts are a problem

(cont.)

Some of the "monsanto" thing has been blown out of proportion. A person needs to go back and do more research to find out what put us in this situation. Much leads us right back to much pressure by environmental groups forcing new government regulations on agriculture, such as tillage as bad and led to more erosion. This forced the use of more chemicals. At the same time governmental spending cuts for agriculture research such as that of Montana State University, a land grant university. When the funding is cut to these land grant universities, who does agriculture turn to? Private companies such as Monsanto. Funding to Montana State Agriculture is always subjected to large budget cuts while other departments see an increase. Agriculture people care about the land and are much better at it than the government will ever be.

SOME of this is a fantastic idea! After an area has been logged, nobody (else) wants to go there to recreate. I'd stop short of locking out other users though. Some of the other users aren't very good at sharing, but we'll never get anywhere as a people by acting just like the selfish users. If OHV riders want to go to LOGGED out forests, and be active, get exercise, and even create trails for the future, ENCOURAGE THEM! Providing a place for OHV recreationists to go, will reduce the user load in other areas. And user conflict is lessened too, in a very natural way, for many years. No signs, no meetings, no protests.

The San Bernardino National Forest OHV Volunteer and OHV Club Adopt-a-Trail programs are an outstanding example for the rest of the nation. Over 30 OHV clubs volunteer their time to help the Forest Service with F.S. road maintenance and reforestation.

This is an idea that needs to go national in scope and expand to cover buildings and structures owned by state, local and non-profit agencies as well. An ideal opportunity to engage our youth in history and historic preservation and provide hands-on experience in the skilled construction trades. Also want to second ___'s idea about the stabilization and scientific investigation of archeological sites.

You can't off-road in wilderness. I drive a street legal Jeep on designated Forest Service and BLM roads. I am not interfering with anyone's "wilderness experience". There are massive amounts of public land set aside as wilderness. Use it and leave OHV people alone.

I have raised two Children and now have two Grand Children and I have taken all of them to visit Battlefield's and to try and teach them the importance of the Civil War. I have traced my Great,Great Grandfather's on both my mother and father's side of our family. I live just outside of Nashville, Tennessee and it makes me sick that we have to follow a guide book that takes you from Marker to Marker to read and try to understand when and how this battle was fought. We have visited other Battlefield's like Shiloh and it is beautiful. The Stones River Battlefield just had a shopping center built there on Hallowed Ground and this is wrong. This was and is a very important time in all of everyone's lifes because President Linclon kept this Great Country of our's held together and freed mem, women and children from one of the great's sin ever committed by man and that is to think that you can own another person. There is enough land that people doesn't have to build there building's on top of peoples grave's (Hallowed Ground). My wife and I are both on a fixed income from being disabled but we still give every dollar that we can to the CIVIL WAT PRESERVATION TRUST to save this land where your family died also. Please think about this and just think it hasn't been that long ago. Think of your loved ones from then and now. Thank you for you time.

Thanks for your work. I wish the FS and BLM would recognize all the hard volunteer work the off-road communities do to keep the trails maintained for everyone's use. Multi-use trails are the only way everyone can enjoy the outdoors in their own way and an overhauled wilderness designation needs to include this.

I agree. We have effectively closed 60+% of our publicly owned land in "Wilderness Areas". A small percentage of the public can benefit from these vast acres by hiking and backpacking. Currently, the public is loosing access to thousands of acres of public land that used to be called, "The Land of Many Uses". Disabled Americans are being excluded from going to many beautiful areas because access trails are being closed. I believe the country should be looking a "multiple use" model. We have enormous challenges when it comes to saving our "environment" (overpopulation, pollution, water resource management, clean and efficient food production, etc), but locking up all of our public lands is not the answer. The government is placating a few minority political groups by doing what is cheap and easy to manage, establishing "Wilderness" areas. Trying to stop multinational corporations from polluting our Country is hard and sometimes political suicide. American families enjoy the freedom of hunting, fishing, getting firewood, driving off of the highway to get to their favorite camping spot, mountain biking, and riding ATVs to get to their favorite vistas. We want sustainable multiple-use trail systems, sustainable logging and mining that keeps our families employed, sustainable camping, hunting and fishing areas, etc. The knowledge to successfully run all those systems already exists, and in some cases, have been working for many years. But, these systems are being bled to death through budget cuts, closures, and poor management.

Reach people where they are - on the couch! Raise public awareness with a Get Out! campaign that would encourage people to get outdoors to explore and enjoy nature.

Work with existing organizations that already have volunteers and staff to teach environmental education. National Audubon Society has a network of nature centers across America; Teach for America add environmental curriculum, AmeriCorps, Keep America Beautiful and many more. Check out Great Outdoors Colorado grant program. { Link }

The Lopez Canyon Restoration Project site, located on the former landfill at 11950 Lopez Canyon Rd., Lake View Terrace, CA 91342, is within the northeast San Fernando Valley section of the San Gabriel Mountain range nearest the Pacoima Wash Greenway and the Tujunga Wash Watershed. The Lopez Canyon Restoration Project site is zoned Open Space, thus its inclusion as a Rim of the Valley entry/access point would be apropos. Moreover, because this area is zoned Open Space, its inclusion in a San Gabriel Mountains National Recreation Area would be ideal.

Set up location that have self serve credit card operated bike racks like the ones in the city of Denver but with mountain bikes to rent. You rent based on time and if not returned your charged for the cost of the bike. This gets more people out becuase tourist can't fly in their bikes and it's difficult to haul bikes for some. This also brings in revenue to preserve the wildlife areas.

my family has been off roading for over 30 years. we are responsible off roaders. Last week I took my 70 year old mother in law out in my 4X4 and she had the time of her life. If it weren't for the 4X4 (OHV) she would not have been able to enjoy the forrest with us that day. My hope is that when I am no longer able to hike or get around very well my kids will be able to take me out in their OHV to enjoy the outdoors with them.

Thank God for ELK

This is one of those trick questions touching on strongly felt political differences. We need to stay out of the political quagmire. What I think people agree on is more open space everywhere. Who owns, manages and maintains depends on more than your political perspective and the parks visitors. Many parks are truly international gems typically visited by more outsiders than locals, e.g. Grand Canyon or Yellowstone. All levels of government have problems supporting the purchase and management. We need to work on stable funding at all levels.

I agree. My many trips to wild places always leaves me refreshed and invigorated. I just choose to get there on a dirt bike.

The "sense of wonder" you speak of may be found in over 120 MILLION acres of public land. These are our designated wilderness areas, both federally mandated and by de facto agency rule. You could spend a lifetime and not come close to exploring all that these wilderness areas have to offer. Your chance of finding places "untrammled by humans" is greatest within the boundaries of these areas. The vast majority of these areas are in the West. There are maps available.

Discussion Question 1

(cont.)

The only practical and timely way to preserve our Nation's Civil War Battlefields (and Revolutionary War) before land development makes them unavailable is to establish a process by which small and large volunteer private groups attempting to purchase actual land parcels and/or the scenic non-development rights to adjoining land. We must foster Federal, State and local cooperative grants to enable private citizen groups to marshal individual contributions from those citizens who wish to preserve our national heritage. Preserving battlefields from physical and visual encroachment is an ever increasing costly endeavor. Only by consolidating individual contributions and gaining governmental participation can we hope to be successful. The Civil War Preservation Trust, one of the largest of the preservation groups, has participated in the preservation of some 30,000 acres of hallowed ground by working with and providing support to smaller local groups engaged in this effort. Government (Federal and State) entities have established grants for the same purpose, but these must be embedded deeply into the legislative process to provide momentum and stability. Our generations to come must have the opportunity to see what our predecessors have given their lives and loyalties to preserve. We must keep our ideals and principles of a free and prosperous democratic republic alive. We must do this in a practical moderate way - compromising where we are able - to ensure future national growth along with meaningful preservation of the past. This effort must involve all of our individuals and our national economic growth. We can preserve the future by preserving the past sacrifices of our citizens.

I feel that trails should be single use only, thereby doing away with the accidents and such caused by having horses spooked on bike trails, hikers getting scared on ATV trails, etc.. That way, were a trail to be destroyed or an ecosystem damaged, one would know which group of users to blame for the damages and the extents to go to to prevent an occurrence in the future. Also, trail building should be done by groups of that recreation usage. For example, mountain biking trails should be built by active cycling groups such as SORBA or avid bikers only, and for different levels of experience, or at least not by someone that has no desire to bike or knows what kinds of things bikers like. The governing agency, be it NPS or just a state park would then only have to fund these groups and provide the technical and environmental impact support when planning out where these trails would go.

More and more, children's learning comes from more of what school and media teaches them than from what they are taught by their parents. Many parents work multiple jobs trying to provide for families and plan for their kids' education and their own retirement. Therefore, our concentration needs to be on providing enough education about the environment and what makes our outdoors so "great" all around the country. A lot of kids nowadays have been conditioned to be afraid of the outdoors because parents and educators have never really taken the time to connect them to it, effectively barricading them from it by means of video games, TV, etc. If organizations, colleges of agriculture, forestry, the media, etc., would take the time to reach out to kids, and in return the school systems would work closely together with these groups, kids could take what they learn back to their households and encourage their parents to do things to help out such as donating to outdoor organizations their time and money in helping maintain the world around us.

Discussion Question 1

Written & Online Comments

(cont.)

Partnerships are critical for trail maintenance. In an area of diminishing federal agency budgets and dwindling staff, the federal government has reached out to non-profit organizations like Washington Trails Association (www.wta.org) to fill the financial gap. It's those partnerships that have sustained trail maintenance in our region for the past several years.

Volunteer work connects people with their public lands. When a hiker, equestrian or mountain biker picks up a shovel or Pulaski and works for a day maintaining a trail, they make an investment. They can see what they've accomplished at the end of the day. They can also see the scope of what remains to be done. Most importantly, they discover that they can make an individual difference by getting their hands dirty. Empowering people to care for the places they love inspires long-lasting stewardship, and that's the most important quality we can pass down to the next generation of hikers.

i raised my 2 girls off roading. now there adults and still love it and the desert.we have a strong family and good old friends made in the wild.at 52 ive seen alot of my land taken from us.we also hike,fish,shoot,mountain bike.public lands are for all of us.not just a few purests. theres room for all americans.the future of u.s.a.are in the kids,we know what the inner city does to them.keep the waters, land open for my grandson and all. please thanks for your time.

I am a Texas Master Naturalist and I think the program is outstanding. If it will work in Texas, it will work anywhere!

As a 30 year Park Ranger I have found the Texas Master Naturalist's Program to provide a tremendous boost within our communities in working to reconnect our kids and adults to the outdoors. Plus, this growing trained volunteer base has helped increase the number of outdoor programs that can be offered in our park settings, and helped keep programs going as our budgets have shrunk. I feel it would be a great program to replicate across the US to get our citizens actively involved in the outdoors again, a return to our "Roots".

I hope they call it the Land of Oz National Park. And I hope at least two parks are created for the tall grass prairie and the short grass prairie. Naturalist Marty Stouffer has been suggesting these parks be created for many years,now. Also the Poppers have provided so much to this inspiration that I hope they will be included, too. "Home on the Range" is as american as you can get.

(cont.)

I worked as a biologist conserving wildlife habitat around development in Maryland. The Chesapeake Bat Critical Area Law had advanced land use planning ideas contained therein. The Federal government should use incentives to have governments at all levels do proper land use planning. An example would be to direct development away from ideal conservation lands which could be identified by conservation agencies, non-governmental organizations, and others. A simple example is directing roads away from these areas since roads attract secondary development. The processes to accomplish this are well known and will conserve important natural areas, provide sites for public use, promote health of our citizens, and provide many other benefits. We need to use federal incentives, such as providing some money or restricting monies to localities, to make this type of land use conservation possible at a significant landscape scale instead of piecemeal attempts by those few separate municipalities that are interested in doing this on their own.

Let's not spend any more tax payer dollars to set aside any further land; more than originally planned or envisioned has been named monuments, wilderness or corridors or the like. Let's protect the rural land owner and farmer from government take over by eminent domain. Let's protect and allow rural communities to thrive by allowing multiple usages of existing BLM and National Forest Lands. Let's not create future mandated allocations of tax payer dollars for automatic purchase of land to be set aside as Wilderness or the like. Let's make every tax payer dollar which is targeted towards protecting the environment be decided in a lawful manner through congress, no more hidden allocations.

Regrettably, no other stakeholders you mention are actively, formally involved in the Cibola National Forest, as far as I know. The CNF is primarily a low-impact recreation region and, as I understand, has few leases with timber, minerals, and sportsmen interests. There is an off-road vehicle plan, primarily for Cedro Peak, following an extensive two-year hearing process with local residents. As for Indian tribes, the Navajo and Zuni have formal contacts near the Continental Divide, Mt. Taylor and Chaco Canyon southern outlier areas for archeological and cultural resources. In the other major National Forests of New Mexico, especially Gila, Santa Fe, and Carson National Forests, there are significant leases and other activities with all stakeholders.

Our country is fortunate that we still have some lands of wilderness quality that are not now protected. We should protect these lands while they are still undeveloped.

The Savory Method also known as integrated resource management has been incorporated with great success with the Colorado Division of Wildlife. This system, developed by Alan Savory based in Santa Fe, NM is an economic model to better utilize natural resources. On my farm, I planted a variety of grasses as recommended by the then Soil Conservation Service, now Natural Resource Conservation Service of the USDA and allowed the cattle to harvest thier own feed rather than mechanically harvesting crops to feed them. This is a complex concept based upon leaving mono-cultures (row crops) and utilizing diverse mixes of local grasses to capture seasons and differing feed stocks. A basic premise is diversity builds density. The Sierra Club and the Nature Conservancy has utilized this in the Malpais region of Arizona with great success, partnering with private landowners. My system was on irrigated land in Colorado and was considered to be non-brittle vs the AZ experience of a brittle environment. My proposal is to get USDA/NRCS to work with dairy farmers in the Susquehanna drainage basin (MD, PA, Ny, etc.) to incpororate this method to reduce non-point source pollution. Recent article in the paper describes how the Amish are contributing to the demise of the Chesapeake Bay and this system would greater reduce, if not eliminate this problem. The financial discipline imposed by this system would assist the private landowner to be successful while reducing non-point source pollution, a major impact to the Chesapeake Bay.

(cont.)

The public enjoys motorized access and OHV recreational opportunities on our public lands. It is a very healthy form of recreation and provides a great connection to the out-of-doors. There are many opportunities to enhance motorized access and OHV recreation on our public lands that could be undertaken by the Great Outdoors Initiative including: 1. Long-distance OHV trails systems comparable to non-motorized trail systems including the Continental Divide National Scenic Trail and Pacific Crest Trail Systems and motorized programs comparable to the National Recreation Trails. 2. Enhanced motorized trailheads with loading ramps, toilet, information kiosks, and maps. 3. Designation of an adequate number of OHV trail systems. 4. Enhancement of OHV trail systems similar to the Danskin Mountain in the Boise National Forest, South Fork Boise River in the Boise and Sawtooth National Forests, Winom-Frazier in the Umatilla/Whitman National Forest, Prospect OHV area in the Rogue River National Forest, Paiute OHV System in the Fishlake National Forest, East Fork Rock system in the Deschutes National Forest, Stonyford system Mendocino National Forest, and High Lakes and Blue Lake Trail System in the Gifford Pinchot National Forest. 5. Enhanced motorized recreational opportunities with a variety of trails for different skill levels and types of vehicles. 6. Motorized routes with minimal challenge and traffic as practice routes for beginning riders. 7. Single-track challenge trails are needed for expert motorcycle riders and trials type motorcycles. 8. National Forests in Idaho have a long and successful history of sharing single-track trails with motorcycles and we request that this strategy be incorporated in the plan. 9. Opportunities similar to the Route of the Olympian Recreation Project undertaken by the Lolo National Forest. 10. Partnership with motorized groups and clubs to implement enhancement program. 11. Enhanced use of OHV gas tax revenue to fund projects and programs. 12. Enhanced maintenance programs for OHV routes using OHV gas tax revenue. 13. To enhance youth involvement, provide more motorized access and recreational opportunities in close proximity to communities. 14. Set up a program similar to the Trails Unlimited program in each national forest. {{ Link } } . AmeriCorps forces could also be used as part of this program.

Release the captive Mexican wolf family of eight into Arizona as soon as possible. New releases of Mexican wolves will increase wolf numbers and strengthen the wild population's genetic viability. A healthy, captive Mexican wolf family is ready to be released into the wild. This release has been held up by foot-dragging among higher-ups in the Arizona Game and Fish Department. It's time that the Fish and Wildlife Service re-asserts its authority and stops allowing itself to be held hostage to the whims of Arizona officials.

If this has been addressed already, forgive me! A National "highway" of preserved habitat. This was mentioned in the Nature Conservancy magazine "Nature" last year. Incorporate rare/endangered habitat and species, wildlife migratory paths. Use overpasses, consider this "highway" a priority before building the ever increasing network of High Voltage Transmission Lines and wind farms, community planning and urban sprawl, commercial/residential development, etc, etc, etc....

Please see my idea "protect animals on our highways" This is the same concept only I would advocate extending the concept beyond only designated highways to all new highways with retrofitting where possible.

(cont.)

Resources should be defined in an expansive manner. Example: land should be valued not only for its spacial content, but also as watershed for both direct use and recharging of aquifers, as a repository for vegetation and wildlife indigenous to it, and as a source of passive, i.e. non-destructive, enjoyment and study, among many other amenities. If extraction is to be allowed, it must be demonstrated to be at least as valuable as those goods and services destroyed during the extraction. Note that off-road vehicular recreation, as currently practiced, is certainly extractive, since it tends, in some appreciable measure, to destroy all the above-mentioned amenities.

More areas should be preserved that don't allow extraction.

Your proposal confuses and conflates too many issues. Yes the grazing program gives away too much for too little, and damages the environment. And while wild horses and burros may not cause exactly the same problems as domestic livestock, they are nevertheless having a negative impact on public lands. The BLM wild horse policy IS a disaster, because it spends a lot of money for a very debatable purpose: treating horses and burros as wildlife deserving of protection when in fact: 1) many of these animals (burros especially) are feral, not wild. 2) if we do classify them as wild, they have overpopulated their habitat, just like deer, in many areas, and need to have their numbers managed HUMANELY. I agree that the federal land agencies must stop causing these animals to suffer, starve, die of thirst. We need to change the policy to allow the BLM & other managers to control equine populations humanely, rather than adhering to a sentimental idea about horses which ties the land managers' hands, and leads to the use of cruel techniques like stampedes and roundups. Sorry I have to demote your idea, even though I COMPLETELY AGREE that livestock grazing and timber production policies and mining law are all badly in need of reform.

With the help of a toolkit (Leader's Handbook, Activity Backpacks, DVD Training Video, and Equipment Trunks), Project GO programs are currently offered in 10 communities in Se Minnesota and will be expanding to 50 communities across the southern portion of the state over the coming two years. Programs are offered for free or very low cost and are held once per week all year round. Children in grades K-8 are invited to participate. Program activities include outdoor exploration and nature activities utilizing public lands (parks, trails, refuges, and other green spaces within 30 miles of each community). Early evaluation data is showing these programs are motivating children to play outdoors during the out-of-school hours; helping kids understand what opportunities are available to them at our public lands; and helping children to feel safe outside so that they may relax and observe the natural world around them.
www.mnprojectgetoutdoors.org

In the near future people in general will lose touch with the earth, the world of nature, the understanding of its importance if we fail to entrust this to the children. This type of program would be a great help in doing this. On another level this type of program would help the health and stature of our children.

(cont.)

I love this on so many levels! Our culture has changed so much since I was a kid. Things are moving so fast and even one income families have gotten too busy to share nature with their kids. This will help kids learn conservation, appreciation for nature and wildlife, empathy, how important it is to be a part of their community, and so much more. Time spent outside getting exercise is the icing on the cake!

I think that any group that does not support maintaining our environment should be questioned about their motives. The environment is all we have in a quickly changing world. If we destroy it, we are eventually destroying ourselves. This has been played out through the history of mankind. Much of this history is not being taught in schools today, so people are not aware of it. We need to set aside places to preserve what we had and have regardless of the people who are elected to office. Unfortunately, too many of these elected officials seem to be "bought off" by big business or corporations for that corporation's agendas. They get into office and change the laws we have had for their own political purposes.

1) Restore lobo the federal protection that Interior Secretary Salazar removed as one of his first implementations. 2) Use volunteers to remove & prevent invasive species from getting a toe hold. A stitch in time saves 9. 3) Eliminate ORV/ATV from the majority of wild spaces. Noisy, polluting, degrading of the eco system. There is NO place for them in wild places. They must be confined to restricted areas of private operations or designated areas. They also introduce invasives on their tires. 4) Encourage folks to pick up one piece of litter. After all these lands are the face of our nation. Cigarette butts do not belong here. Or anywhere actually. 5) Enforce quiet in the campgrounds. No music or radios etc. without headphones. The wilderness experience should not include the media without headphones. 6) Keep it dark. That we may see the Milky Way once in a while. 7) The National Parks are in disrepair. I saw sewage running from the bathrooms, thru the parking lot, into the earth, in Sequoia National Park. Fund our national jewels appropriately. 8) Pursue poaching avidly. 9) Promote catch & release programs in fishing. 10) Promote quiet sports such as bird watching & identification. 11) Protect the bio crust by insisting people remain on the trail. I saw German tourists running all over off of the trails in Arches National Park. 12) Encourage loud mouths to tone it down & listen. We are not in the city any longer. 13) Prominent recycle bins which can be removed upon bear sitings. 14) No food or cosmetic products such as toothpaste in camping tents. Bears have enough trouble keeping away from humans without scent enticements. 15) No feeding of the wildlife. Keep 'em WILD! 16) QUIET!

The ideas was to establish wild areas to save or preserve the natural vegetation and animal life. If you allow these areas to be altered, the vegetation and wildlife will be altered. Perhaps setting aside marginal areas for recreational uses would be an option and keep wild areas as wild. We should put aside more lands for wild and recreational use. With our increase in population, we are putting more stress on our lands. Who knows, but if the population keeps growing these areas may be the only wild places left on the earth.

Keep the new areas as wilderness and there are minimal costs.

Add the long-term cost of land management with every proposed acquisition .

I agree that Federal Land Management Agencies routinely exceed their Congressional authorities. However, I doubt that requiring managers to read the legislation will fix the problem. Here are a couple of suggestions: Just as the MMS is "too cozy" with Big Oil, the FS and BLM are far too cozy with wealthy, influential conservation organizations. Effectively, this relationship has resulted in top-down, "one size fits all" policies that reflect the agendas of a few wealthy special interests. The AGO initiative is a prime example. All Federal Agencies need to have an "arm's length" relationship with wealthy Beltway special interest groups, and should be required to do so. Revise the Equal Access to Justice Act (EAJE). The original intent of this Act was to provide a means for individuals who cannot afford lawsuits to redress their legitimate grievances against Federal Agencies. Exceedingly wealthy conservation organizations should not qualify. Organizations like the Wilderness Society and Sierra Club have more money than God and their frequent lawsuits should not be supported by public funds. Doing so simply invites more lawsuits. Revise the Appeals process for USDA and DOI. Currently, the Appeals process for these Agencies is dysfunctional. Appeals are virtually never granted or upheld, and individuals and organizations only appeal in order to preserve their opportunities for litigation. Establish an independent, non-partisan Appeals Board composed of real experts in environmental law.

For regular volunteers, the NPS should test chainsaw skills, and then allow volunteers who pass the test to use chainsaws for removing down wood from trails.

Update and strengthen the technical guidance for preserving cultural heritage. Create market research that identifies the top ten issues that property owners and contractors have regarding work on historic properties and create best practices documents. Think outside the Sec. 106 box to actual tools needed to implement the Secretary's standards. Get more specific.

Multi-use trails! While most everyone would like to see trail designations for just their user groups, we need to be more open minded where ever possible to multi user type trails. I have to admit that when I am in the back country I would MUCH prefer to NOT SEE ANYONE AT ALL! But I realize that this county and access to the back country is a privilege for EVERYONE that are responsible and wish to be there. I am not suggesting opening all trails up to multi-use, but many trails can be adapted or new ones made for multi-use and enjoyed in an environmentally safe way by so many more people rather than single use users. With a greater number of properly made and maintained Multi-use trails it will help to limit trail degradation from overuse of single type trails. Hiking is still popular, but I believe it reached its peak back in the 60's- 70's. Equestrian usage is somewhat limited, but the need is there. Mountain Bike usage is on the rise. Single track motorcycle use is a very high usage. ATV (50 inch and greater for side by side UTV's) is a high and gaining usage. Snowmobile use is on the rise. Cross country skiing small group but the need is there. Full size 4x4 vehicles are steady and gaining usage as well. All of these groups can and do use some of the same trails. Would it be better to have eight separate different single use trails, one for each user group, all going from one trailhead to a destination point! In a world of unlimited space, money and resources it would – but that's not what we have or is available these days! Or when possible does it make more since to have one environmentally sensitive Multi-use trail serving the same purpose of the eight trails? The trail care and maintenance through the various user groups, (club's - trail associations) along with the "Adopt –a-Trail Program" would be easier to accomplish with more groups accessing the area on the same Multi-use trail. Monitoring of trails for misuse or the possible environmental damage could be more effectively accomplished and fixed. In these days with limited funding and land availability, more trails would be available to more people for the resources used. Share the trail! It takes educating the user public to make it and keep it effective. Yes there are always going the small few that are irresponsible and don't care about the other users. And the "finger pointers" that plain just don't care about anything except what they want. But it is the responsibility for every user to respect ALL others and the environment. Sharing Trails - Many people with different interests may be enjoying an area at the same time. Trail and camping courtesy are essential for everyone to have an enjoyable experience. Be a good neighbor and extend the same courtesy and consideration to those around you as you expect from them. • Motorized vehicles (Motorcycles, ATV's, 4X4) Yield to All • Bicycles Yield to Equestrians and Hikers • Hikers Yield to Equestrians Stay On The Trail & Tread Lightly to help keep your trails open Daniel Boone National Forest has a great "Safety: Share The Trail" page { Link }

Well said. Let's put the days of discrimination behind us and try to get along so that everyone can enjoy our Public lands. Share the trail and tread lightly while you are at it.

Another way to look at this is that some trails can be managed by the day, or by time of day.. think of a hockey rink. Many hockey rinks have time for free skating, while other times are reserved for hockey games and practice or for classes and competitive skaters. Chugach State Park has been doing that -- managing winter use by type of use -- for thirty years successfully.

(cont.)

So often in life I see people who create problems as that is what they are best at. There is no perfect answer and no perfect world. But there are those that make an effort to try creating a better place for all and those that create animosity and anger where ever they can. You may actually frequent areas that the things you describe may happen to you. The multi-use trails I enjoy I stop and talk with hikers on their way to access the PCT, horseback riders on their way into The Golden Trout Wilderness area, mountain bikers and fishermen in 4X4's going to the South Fork of the Kern River to fly fish, cowboys moving grazing range cattle from one meadow to another. Yea, the motorcycle trail riders do buzz by at a faster rate than most sometimes, but I guess the people (riders) are more courteous out this way. A couple of years ago I noticed the signs marking this same trail for snowmobile use in the winter. I am not sure how I have offended you so much as to state "You OHV people like to blame everyone else and call everyone else greedy ..." as I don't think that is what I posted at all. I was not intending to "Finger Point", "blame everyone else", or be "greedy". It was merely a concept that I see - that works! I did not even suggest that OHV users be "...rewarded by destroying what hikers and equestrians like to do ...", far from it. But you did help to press my point by stating "OHV use is up ...", for whatever the true reason is, it is a fact that it is up – way up! And because this usage is up the recreational need should be addressed in an environmentally acceptable way. I'll give you an example of adapting a current single use type trail to a Multi-use trail in the area I greatly enjoy. There are (I think) well over 150 miles of single track motorcycle trails and maybe 20 miles of Multi-use trails. I really don't want to take trails away from any group of users, but sometimes the needs are there for more different interest. Rather than being VERY RESTRICTIVE and just motorcycles allowed to use these trails, some could be safely redesigned, cross country skiing and snowmobile use in the winter, ATV's, mountain bikes and maybe even full size 4X4 the other months. Yes even hiking and equestrian can use the trails if they choose, with the current trail design they cannot. Would I change all of the single track trails to multi-use – absolutely not. These trails make this area a great recreational area that it is for that purpose. Would I change any of hundreds of miles of existing hiking/equestrian trails - absolutely not! They have a purpose that they serve. If there was funding and it is environmental sound are to create a new trail for an area – it would be prudent to explore the possibility of a Multi-use trail to serve the needs of not just a select few but the need of many. I do try to learn from various view points. I did learn from your view to not frequent the area that you chose to do your hiking, as it appears there maybe some uncaring people. But then again you are very quick to judge me by stating "...quit lying about your true motives" – maybe you embellished what happens to you out there on the trail as fast as you make judgments!

All trails should be designed, constructed, and used for their intended purpose, otherwise we encounter distractions that diminish the enjoyment of our outdoor interests. Bike trails for bikers, horse trails for horses, hiking trails for hikers. Different use, different construction, different upkeep, for total enjoyment of our favorite leisure activities.

(cont.)

Well when and if this ever happens to you, " who is going to help me out the first time some drunken moron in a 4wd nearly runs me over or I have mud splashed all over me when he goes by?" I suggest you help yourself my being a respectful and polite human being, even if the offender is not. Wave at the offender and offer a conversation with the individual to impart your knowledge of conserving the environment so that all users can continue to use this beautiful land for generations to come. Be friendly and tolerant and you may get the same in return. You might even discover that the OHVer is a nice guy and you may have some common interests. If the alcohol in the individuals system prevents him or her from seeing your point of view, then find the nearest law enforcement officer to enforce the law. I have only had to use the latter strategy once in all my time in the forest. But it was quite effective as the ranger handed the offenders rakes and shovels from his truck and made them repair all the damage they were doing by disrespecting our public lands. I believe a hefty fine was awarded as well. If we work together, we can teach the 1 who needs some guidance while allowing the 99 stewards of our lands to enjoy them. Earlier in the month I was down in stopping grounds in the Sequoia NF and had a nice conversation with a group of Hikers using the OHV trails while I was sitting on my motorcycle. They were quite pleasant and it was a joy to talk with other users of the forest. The following day I was fortunate enough not to collide with a group of mountain bikers. As the lead cyclist was waiting for his friends, we exchanged pleasantries and remarked on what a great day each of us was having. Only an hour later I came to a historic Forest Service building where a lone volunteer was spending his time maintaining the facility. We conversed for 30 to 45 minutes as he relayed the history of the facility and showed me around. 30 minutes later I came across a horse camp. As I slowly rode through the camp, just to see the beautiful meadow that it bordered, I exchanged friendly waves to its occupants. Courtesy and respect goes a long ways. Please give it a try.

Expand programs like Teacher-Ranger-Teacher and leverage the educational power of National Parks. TRT connects teachers from Title 1 school districts, where at least 30% of students are on free or reduced cost lunch, to national parks. Teacher Rangers spend a summer working as uniformed park rangers, often living in the park. During the school year, these Teacher Rangers bring the park resources "into the classroom" by developing and presenting curriculum-based lesson plans that draw on their summer's experience.

Instead of limiting the Teacher-Ranger to Title I schools, school districts could designate one or more science teachers to become Teacher-Rangers, and they could present programs in all the junior/senior high schools in the district. Or small districts could band together to have one designee. All children could benefit from this kind of instruction.

I support setting aside wilderness and making soime adjustment to the states if there is an economic cost to the state. We need some protection or it will be over-utilized and destroyed.

Good idea, well said. It might really put some bite in the enforcement if the penalty were 'on the spot' so that an illegal ATVer might have to walk back to town to call his lawyer...and the walk might do him some good.

Make the fines high enough to cover enforcement costs.

Because Acadia National Park and many other parks were able to add staff when park operations funding was increased, they have been able to add interpretive programs with an emphasis on reaching young people, increase maintenance of visitor facilities, and add resource protection rangers who conduct search and rescue operations and provide emergency medical services. If we want to connect kids to these inspirational places, we need rangers to be there to tell the stories. If we want to provide for a positive visitor experience and ensure the safety of the visitor we need rangers in the parks.

American Journal of Public Health Explores New Role for Rangers In the future, park rangers may educate visitors about not only canyons and Civil War battles, but also infectious diseases, long-term wellness, and other health-related topics. In "Park Rangers as Public Health Educators," an article in the August issue of the American Journal of Public Health, David Wong and Charles L. Higgins of the National Park Service report on a project that tested the viability of national parks as settings for health education. The Public Health in the Parks grants initiative funded outreach programs in parks throughout the country. In one program, Native American children engaged in actual exercise, which they translated into a "virtual walk" of the 74-mile length of Badlands National Park. In another program, visitors to Lowell National Historical Park in Massachusetts learned about a typhoid epidemic, the transformation of a local river into an agent of death, and the ensuing epidemiologic investigation. "Further exploration of national parks as nontraditional and underutilized venues for health education is warranted," Wong and Higgins conclude.

I'll fund it if I'm allowed to use it with my OHV.

Some harvesting of trees would be acceptable if: 1. It does not involve corporate welfare and subsidies 2. Roads are kept to a minimum, financed by the timber companies and constructed in an ecologically responsible way 3. No clearcutting !!!! 4. Cutting of trees would be confined largely to dead or diseased trees, or to reduce fire danger

Picking a mushroom does not harm the living organism that produced it, mushrooms are not plants, by the time that they are big enough to be picked, they have already spread their spores (seeds) and fulfilled their ecological function. Most mushroom hunters and mycologists are nature lover and are very respectful of the environment in which they pick their mushroom (it's the best way to guaranty that the same mushroom will be found there the following years). There are very few places were mushroom hunters and amateur mycologists can enjoy their favorite past time. Mushroom hunting is a healthy and educational activity that can be enjoyed by the whole family, it stimulates transmission of knowledge from the elders to the youngsters. Allowing a reasonable quantity of mushrooms to be picked, say 1 gallon or 5lbs + 1 per person per day, as is done in some parks would have no ill impact on the fungi population nor on the environment in which they grow.

Although restricting offroad traffic to designated areas is important, there are also other ways of making offroading less environmentally destructive. The new E-Range is the world's first fully electric 4x4. For more information go to THE GREEN MARKET { Link }

There is certainly a need for some land to be designated for OHV use. The people who participate in this activity pay their taxes and deserve to have some access to Federal lands. However, allowing only electric vehicles has some very attractive positives. First, they would obviously be much quieter than I/C OHV's. Second, there would be practically no fuel and oil spillage.

Yes, this worked during the Dust Bowl and Great Depression. The CCC accomplished amazing things. It could work now.

And part of the goal of the CCC during the Depression was employment -- certainly a concern for many citizens today.

I completely agree with the idea of something like the CCC. If the Federal government is either unwilling or cannot afford what it takes to keep our National Parks and other federally managed land in good order, we must find an alternative. Something like the CCC could fill this need. I would certainly be interested in volunteering if such an organization was put in place.

For those unemployed and unable to find work, this could be an answer and would squelch the GOP's harangues about 'lazy' 'hobos' who prefer to be on the dole.

I completely agree with the idea of something like the CCC. If the Federal government is either unwilling or cannot afford what it takes to keep our National Parks and other federally managed land in good order, we must find an alternative. I agree !! An alternative would be to use folks that have been on unemployment for over 26 weeks , dope addicts , and other non violent criminals .

wonderful idea! It would be nice if we could fund something similar in other countries as well to help fix up their infrastructure as a great way to help people stay in their homelands and make a living.

In KS students are required to take physical science, biology and two other sciences. At our high school Ecology is a regents approved class to take for one of the two sciences in order to graduate and attend a 4-yr state university/college. This provides an option for students to select from Physics, Chemistry, Anatomy and Ecology to complete the two additional years of science. For those students not wishing to attend a 4-year college Life Science and Applied Biology and Chemistry are offered to graduate with the number of science credits required.

Environmental Education is a truly powerful way to enhance the connection between people and place. With this enhanced connection, the citizens of our country will be able to make informed choices regarding the effect they have on the environment. Supporting quality environmental education is supporting a quality future for the USA.

NOTE: The following are taken from four volumes of research developed by the Children & Nature Network (C&NN) and available at www.childrenandnature.org. These C&NN Annotated Bibliographies of Research and Studies were written by Cheryl Charles, Ph.D., President, Children & Nature Network and Alicia Senauer, Yale University. Greenspace supports children's quality of life Bell and colleagues critically review the last 10 years of research that has examined relationships between greenspace and quality of life. Major areas reviewed in this report are: health and well-being, social and community value, economic value/impacts, environmental value, and planning and design. Research related to children is one of the main topics highlighted in the various sections of this report. In their review, Bell and colleagues also discuss their criteria for article inclusion, highlight methodological limitations of studies conducted to date, and identify key research gaps. Author Affiliation: The authors are with the OPENSspace research center in the UK. Bell, S., Hamilton, V., Montarzano, A., Rothnie, H., Travlou, P., & Alves, S. (2008). Greenspace and quality of life: a critical literature review. Greenspace Scotland. This report is available online at: { Link } Time spent outdoors supports many aspects of children's health In this report, Muñoz reviews literature concerning the linkage between spending time outdoors and health, with a primary emphasis on research related to children. She reviews research and policy related to outdoor use and health more generally and then takes an in-depth look at topics related to children's use of the outdoors and relationships to their health. Specific topics Muñoz examines include research linking children's time spent outdoors to increased physical activity, healthy development, and overall well-being. She also examines research related to the design of children's play spaces, access to natural spaces, the use of outdoors in children's education, and research related to people and factors that constrain and enable children's outdoor play. Finally, in concluding her literature review, Muñoz identifies methodological considerations, research gaps, and provides suggestions for advancing knowledge in this area. Author Affiliation: Muñoz is with the Sustainable Development Research Centre in Scotland. Muñoz, S. A. (2009). Children in the outdoors: a literature review. Sustainable Development Research Centre. This report is available online at: { Link } Readers may also be interested in the following related report: Scottish Natural Heritage. (2009). Health and the natural heritage-the evidence base. Retrieved September 7, 2009, from { Link } Contact with nature provides a variety of health benefits In this report, C. Maller and colleagues reviewed published literature demonstrating health and wellbeing benefits from contact with nature, with an emphasis on park settings. Particularly in urban areas, parks play an important role in providing people with access to nature. The authors encourage a reframing of our traditional view of parks as places for leisure and sport towards one that emphasizes a full range of physical, mental, and social health benefits. Maller and colleagues provide valuable background material on the concept of health and the connection between nature and health. The authors then review evidence of the health benefits of various forms of contact with nature, including viewing nature, being in nature, contact with plants, and contact with animals. Maller and colleagues provide a number of recommendations, including the need for additional research, the repositioning of parks, and the

This fact sheet is available online at: { Link } An article by Howard Frumkin and Richard Louv about the important role natural landscapes play in protecting public health. This article is available online at: { Link } Children's play in natural settings provides a suite of benefits In this report, Stuart Lester and Martin Maudsley provide an extensive review of the literature related to children's natural play. The authors begin by examining the human relationship with the natural world and the importance of play and direct interaction with the physical environment to children. Lester and Maudsley then review the important opportunities that natural play provides, such as the creation of special places, and the numerous documented and potential benefits of children's play in natural settings, including the development of a sense of self and independence. The authors discuss evidence demonstrating a decline in children's access and opportunities to play in natural spaces and provide a range of suggestions to support children's opportunities to play in natural settings, such as through the design of effective playgrounds, school grounds, and environmental play projects, as well as ensuring adequate access to parks and nature reserves. Lester, S., & Maudsley, M. (2006). "Play, naturally: A review of children's natural play." Children's Play Council. This report is available online at: { Link } The importance of designing spaces that support children's contact with nature In this book chapter, Robin Moore and Clare Cooper Marcus review health threats that face many of today's children, including sedentary behavior and attention deficit disorder; the benefits that contact with nature provides to children's mental, social, and physical health; and current barriers limiting children's access to nature. The authors provide examples of designed environments, specifically in urban areas, that support children's contact with nature, including examples of innovative childcare centers and preschools, school grounds, neighborhood parks, and community institutions. Moore and Marcus emphasize the importance of the residential environment and the need to understand and incorporate children's ideas and preferences into the planning and design of spaces. The authors discuss four models of child-friendly residential neighborhood layouts with specific national and international case studies, including clustered housing and shared outdoor space, cul-de-sacs and greenways, alleys, and home zones. Moore and Marcus conclude by providing a number of key recommendations to help ensure children's access to nature in residential environments. Moore, R. C., & Cooper Marcus, C. (2008).

“Healthy planet, healthy children: Designing nature into the daily spaces of childhood.” In S. Kellert, J. Heerwagen & M. Mador (Eds.), *Biophilic design: Theory, science and practice*. Hoboken, NJ: John Wiley & Sons, Inc. This book chapter is available online at: { Link } Direct experience in nature is critical and diminishing. Nature is important to children’s development in every major way — intellectually, emotionally, socially, spiritually, and physically. In one of his newest books, *Building for Life: Designing and Understanding the Human-Nature Connection* (Island Press, 2005), Dr. Stephen R. Kellert of Yale University devotes a chapter to the subject of “Nature and Childhood Development.” Combining his original research with well-documented references to the research of others, this chapter is a powerful synthesis of what we know, and what we do not know, about the importance of nature to children’s healthy development. Kellert states, “Play in nature, particularly during the critical period of middle childhood, appears to be an especially important time for developing the capacities for creativity, problem-solving, and emotional and intellectual development.” He includes research to indicate optimal learning opportunities at age-appropriate times and differentiates between indirect, vicarious, and direct experiences with nature — with the latter less and less available to children. He urges designers, developers, educators, political leaders and citizens throughout society to make changes in our modern built environments to provide children with positive contact with nature — where children live, play, and learn. (Original Research and Synthesis) Kellert, Stephen R. “Nature and Childhood Development.” In *Building for Life: Designing and Understanding the Human-Nature Connection*. Washington, D.C.: Island Press, 2005. Full book available via Amazon.com and other commercial sources. { Link } Unstructured free play brings cognitive, social and health benefits to children. Unstructured free play in the out-of-doors brings a host of benefits to children — from being smarter to more cooperative to healthier overall. This well-documented article by two physicians builds a strong case for the importance of unstructured free play in the out-of-doors for all age groups, and especially young children. While concerned about the “obesity epidemic” in young children, the authors say that the health benefits from outdoor play are only one aspect of the overall benefits. They suggest that the concept of “play” is more compelling and inviting to most adult caregivers, parents and guardians than “exercise.” The authors cite cognitive benefits from play in nature, including creativity, problem-solving, focus and self-discipline. Social benefits include cooperation, flexibility, and self-awareness. Emotional benefits include stress reduction, reduced aggression and increased happiness. Children will be smarter, better able to get along with others, healthier and happier when they have regular opportunities for free and unstructured play in the out-of-doors. Burdette, Hillary L., M.D., M.S.; and Robert C. about the effects of contact with nature on children's lives. While the evidence is growing, this article is an important call to action for further research. Taylor, Andrea Faber; and Frances E. Kuo. "Is Contact with Nature Important for Healthy Child Development? State of the Evidence." In Spencer, C. & Blades, M. (Eds.), *Children and Their Environments: Learning, Using and Designing Spaces*. Cambridge, UK: Cambridge University Press, 2006. { Link } City parks bring social, community health and economic benefits

The Trust for Public Land (TPL) is a premier conservation organization, responsible for protection of special public lands throughout several generations. Today TPL is concerned not just about setting lands aside for future generations, but making sure that young people and families enjoy them today. TPL recognizes that to connect with nature is to appreciate nature, now and for the long term. This comprehensive report, "The Benefits of Parks: Why America Needs More City Parks and Open Space," offers a clear look at socioeconomic factors affecting the availability of parks, the history of city parks, and the hopes for a revival of commitment to city parks. The report outlines benefits in a number of areas: physical, including remedies for inactivity and obesity; economic, with increased property values; environmental, with pollution abatement; and social, from crime reduction to strengthening communities. Add this report to your collection of those that serve to document how safe places for children to play contribute to everyone's health and well being. { Link }

Children with ADHD concentrate better after walking in a park

Building off of their recent work related to children with Attention-deficit hyperactivity disorder (ADHD) and different types of activity settings, in this study, Andrea Faber Taylor and Frances Kuo investigate the impacts of three different outdoor environments on the attention of seventeen 7- to 12-year-old children diagnosed with ADHD. After completing a series of puzzles that required focused attention, each child, over the course of three different weeks, participated in a 20 minute guided walk in three different outdoor settings (an urban park, a downtown area, and a residential area). After each guided walk, children completed a concentration test and answered several questions about their walking experience. Importantly, the authors controlled for a number of potential confounding factors, including the order of environments experienced, the time of day and day of week, terrain, and season. In analyzing the data, Faber Taylor and Kuo found that children concentrated better after walking in a park setting as compared to either a downtown or residential setting and that the effect of walking in a park on concentration helped close the gap between children with ADHD and those without ADHD with regard to the concentration measure used and that the effect was similar to that of two common types of ADHD medication. In addition, the authors found that children rated their experiences more positively in the park setting than in the other two settings. Faber Taylor and Kuo discuss these findings in light of Attention Restoration Theory and their previous studies related to different environments and children with ADHD and suggest additional avenues for research and the potential of using nature in the treatment of ADHD. Faber Taylor, A., & Kuo, F. E. (2008). Children with attention deficits concentrate better after walk in the park. *Journal of Attention Disorders OnlineFirst*. rel="nofollow" target="_blank">Link } Natural settings provide psychological benefits “Coping with ADD: The Surprising Connection to Green Play Settings,” by Andrea Faber Taylor; Frances E. Kuo; and William C. Sullivan (2001) is one of the earliest studies to explore the potential for contact with nature to have a positive effect in reducing the impact of attention deficit disorder in children. The study was designed to test two hypotheses: 1) Attention deficit symptoms will be more manageable after activities in green settings than after activities in other settings; and 2) The greener a child’s everyday environment, the more manageable their attention deficit symptoms will be in general. The results were positive. Taylor, Andrea Faber; Frances E. Kuo; and William C. Sullivan. In *Environment and Behavior*, Vol. 33, No. 1, January 2001. © 2001 Sage Publications, Inc. Available on the web site of the University of Illinois Urbana-Champaign. { Link } Nature activities soothe ADD symptoms Contact with the natural world can significantly reduce symptoms of attention deficit disorder in children as young as five. Here is another important study that supports this finding. In addition to access to reports of the primary research, the scholars provide a Power Point presentation that may be used in communities to disseminate this positive information based on sound research. Kuo, Frances E.; and Andrea Faber Taylor. “A Potential Natural Treatment for Attention-Deficit/Hyperactivity Disorder: Evidence from a National Study.” In *American Journal of Public Health*, Vol 94, No. 9, September 2004. © American Public Health Association. The study and the educational Power Point are available on the web site of the University of Illinois Urbana-Champaign. { Link } Nearby nature reduces stress in children This study, reported in 2003, by Cornell assistant professor Nancy Wells, focuses on rural children and finds that even a view of nature — green plants and vistas — helps reduce stress among highly stressed children. Further, the more plants, green views and access to natural play areas, the more positive the results. Wells, N.M., and Evans, G.W. “Nearby Nature: A Buffer of Life Stress Among Rural Children.” *Environment and Behavior*. Vol. 35:3, 311-330. This study is not available online without purchase; { Link } Nearby nature boosts children’s cognitive functioning A precursor to Nancy Wells’ study reported above, this research, reported in 2000, shows that proximity to, views of, and daily exposure to natural settings increases children’s ability to focus and therefore enhances cognitive abilities. Wells, N.M. “At Home with Nature: Effects of ‘Greenness’ on Children’s Cognitive Functioning.” *Environment and Behavior*. Vol. 32, No. 6, 775-795. This study is not available online without purchase; { Link } Older children who spend more time outside tend to be more physically active and are less likely to be overweight Cleland and colleagues investigated whether the amount of time children spend outdoors is related to their physical activity levels and being overweight. About 200 five- to six-year-old and 350 ten- to twelve-year-old children from 19 randomly selected elementary schools in Melbourne, Australia participated in this study. In 2001 and 2004, parents reported the amount of time their children spent outdoors and researchers recorded children’s physical activity levels using an accelerometer and measured children’s weight and height. In their paper, Cleland and colleagues report many findings, some of which

Discussion Question 1

Written & Online Comments

(cont.)

are discussed below. The researchers found, for example, that children spent significantly more time outdoors during warmer months as compared to cooler months; boys had significantly higher levels of moderate and vigorous physical activity (MVPA) on weekdays than girls; the prevalence of overweight increased significantly between 2001 and 2004 for both younger and older children, as well as boys and girls; and among the older children, boys generally spent significantly more time outside than girls. Cleland and colleagues also found that older children who spent more time outside were generally more physically active and had a lower prevalence of overweight than children who spent less time outside. For example, the researchers found that each additional hour older girls spent outside during the cooler months was associated with an extra 26.5 minutes per week of MVPA and that each additional hour older boys spent outside during the cooler months was associated with an extra 21 minutes of MVPA. When examining changes over the three-year period, Cleland and colleagues found that the more time older girls and boys spent outside on weekends at baseline (2001), the higher their MVPA on weekends at follow-up (2004). In addition, the researchers found that in 2004, the prevalence of overweight among older children was 27-41% lower for those children who spent more time outside in 2001. With regard to younger children, Cleland and colleagues found few associations between time spent outdoors, physical activity, and overweight. While this study may be limited due to its reliance on parental self-report of children's time spent outside, the cross-sectional and longitudinal nature of this study and objective measurement of physical activity provide an important contribution to the literature. The results of this study suggest that encouraging 10- to 12-year-old children to spend more time outdoors may help increase physical activity levels and reduce the prevalence of overweight. Author Affiliation: Cleland, Crawford, Hume, Timperio, and Salmon are with Deakin University in Australia. Baur is with the University of Sydney in Australia. Cleland, V., Crawford, D., Baur, L. A., Hume, C., Timperio, A., & Salmon, J. (2008). A prospective examination of children's time spent outdoors, objectively measured physical activity and overweight. *International Journal of Obesity*, 32(11), 1685-1693. This study may be available in a library near you or can be purchased online through the publisher at: { Link } Green school grounds improve quantity and quality of elementary school children's physical activity In recent years, there has been increasing interest in greening school grounds to diversify children's play experiences, such as through the planting of trees, building of ponds, and development of vegetable gardens. Dymont and Bell investigated how green school grounds affect the physical activity of elementary school children by sending questionnaires to a diversity of Canadian schools that had greened their school grounds. Questionnaires were completed by 105 individuals from 59 schools who had been involved in their school's greening project. In analyzing the study data, Dymont and Bell found that green areas were an important place for physical activity: respondents reported that 66% of students use green areas for active play. Interestingly, the researchers found that green areas tended to support more moderate and light activity as opposed to the more vigorous activity that generally takes place in traditional turf and asphalt areas. Dymont and Bell found that nearly 50% of the respondents reported that their school ground promotes more vigorous activity after greening, while about 70% reported more moderate and/or light physical activity taking place after greening. In addition, the researchers found that 90% of respondents reported that their school ground appeals to a wider variety of

Discussion Question 1

Written & Online Comments

(cont.)

student interests after greening; 85% reported that their school ground now supports a wider variety of play activities; and 84% reported that since greening, their school ground encourages more exploration of the natural world. While this study may be limited due to its reliance on retrospective self-report, it provides important insight into the benefits of green school grounds and their potentially significant role in complementing more traditional school ground areas and improving the quality and quantity of elementary school children's physical activity. Author Affiliation: Dymont is with the University of Tasmania in Australia. Bell is with Evergreen in Canada. Dymont, J. E., & Bell, A. C. (2008). Grounds for movement: green school grounds as sites for promoting physical activity. *Health Education Research*, 23(6), 952-962. This study may be available in a library near you or can be purchased online through the publisher at: { Link } Schoolyard size and landscape quality influence children's satisfaction and weight Outdoor school grounds are an important environment to consider when striving to promote children's physical activity and reduce childhood obesity. In this study, Ozdemir and Yilmaz investigate linkages between the physical characteristics of children's schoolyard environments and their attitudes, physical activity, and body mass index (BMI). The researchers interviewed nearly 300 3rd and 4th grade students, as well as teachers, and administrators in five public schools in Ankara, Turkey. Ozdemir and Yilmaz also measured students' weight and height, and had professionals assess the schoolyard environment based on factors such as size, material, vegetation cover, and maintenance. Although schoolyards differed, the researchers found that students generally had no direct contact with vegetation and that the amount of outdoor space was limited given the number of students using the space. While most students were satisfied with their schoolyard, which the researchers speculate may be due to acclimation, unsatisfied students highlighted the lack of trees and greenery as the primary reason for their dissatisfaction. Among their many findings, Ozdemir and Yilmaz report that the size of the schoolyard was significantly related to students' BMI, with students in larger yards having lower BMI values than students in smaller yards. The researchers also found that yard landscape characteristics were significantly associated with children's BMI values, but in the opposite direction than expected: students from schools with "advanced" landscape features had higher BMI values than students from schools with "low" landscape features, although BMI values were still in the normal range. While this study may be limited due to its relatively small sample size and reliance on self-report measures, it highlights the importance of participatory and well-thought-out school landscape design, as well as the need for adequate financing and maintenance of schoolyards. Author Affiliation: The authors are with Ankara University in Turkey. Ozdemir, A., & Yilmaz, O. (2008). Assessment of outdoor school environments and physical activity in Ankara's primary schools. *Journal of Environmental Psychology*, 28(3), 287-300. This study may be available in a library near you or can be purchased online through the publisher at: { Link } Children in greener neighborhoods have lower body weight changes Bell and colleagues examined the medical records of 4,000 three- to sixteen-year-old children that lived in Marion County, Indiana, received care from a particular clinic network between 1996 and 2002, had height and weight measurements for two consecutive years, and lived at the same residential address for at least two years. The majority

Discussion Question 1

Written & Online Comments

(cont.)

of participants in this study were non-Hispanic black and enrolled in Medicaid (an indicator of socioeconomic status). Bell and colleagues geocoded each participant's address using a Geographic Information System and measured greenness at these locations using satellite images and a vegetation index. The researchers speculated that neighborhood greenness might serve as an indicator of children's access to spaces that promote physical activity or increased time outside. In analyzing the study data, Bell and colleagues found that the amount of vegetation in a child's neighborhood was inversely correlated with their Body Mass Index (BMI) score at the year two measurement. That is, in general, the more vegetation a child had in their neighborhood, the lower their body weight changes. The researchers also found that children in more vegetated settings were less likely to have a higher BMI over 2 years as compared to children in less vegetated settings. Importantly, Bell and colleagues controlled for a number of other factors in their analyses, such as residential density. While the study is observational and thus cannot causally link neighborhood greenness and body weight changes, this research highlights the role that neighborhood vegetation could play in policies and programs aimed at preventing childhood obesity. Author Affiliation: Bell is with the University of Washington. Wilson is with Indiana University-Purdue University. Liu is with Indiana University. Bell, J. F., Wilson, J. S., & Liu, G. C. (2008). Neighborhood greenness and 2-year changes in Body Mass Index of children and youth. *American Journal of Preventive Medicine*, 35(6), 547-553. This study may be available in a library near you or can be purchased online through the publisher at: { Link } Community design can promote and support children's physical activity This article is a policy statement by the American Academy of Pediatrics' Committee on Environmental Health regarding the influence that community design has on children's opportunities to be physically active. The Committee highlights the role of neighborhood design in promoting recreational and incidental or "utilitarian" physical activity, such as the availability of parks and recreational facilities, as well as children's ability to walk to school. The Committee also highlights important factors influencing children's physical activity, including traffic danger, the presence of sidewalks, and perception and fear of crime. Finally, the Committee provides a number of specific recommendations for pediatricians and government to promote children's physical activity in the built environment and support more active lifestyles. Binns, H. J., Forman, J. A., Karr, C. J., Osterhoudt, K., Paulson, J. A., Roberts, J. R., et al. (2009). The built environment: designing communities to promote physical activity in children. *Pediatrics*, 123(6), 1591-1598. This study may be available in a library near you or can be purchased online through the publisher at: { Link } Children with a park playground near their home are more likely to be of a healthy weight Physical activity is thought to play an important role in childhood obesity. While research results to date are somewhat mixed, parks can provide important opportunities for children to be physically active. In this study, Potwarka and colleagues examine whether children's weight is related to park space and the availability of specific park facilities within 1km of children's homes. Researchers collected information on 108 two- to seventeen-year-old children from four neighborhoods in a mid-sized city in Ontario, Canada. Parents reported their child's height and weight, while researchers used a Geographic Information System to assess park space for each child and a database and trained observers to assess park facilities. In analyzing the study data, Potwarka and colleagues found

Discussion Question 1

that proximity to park space was not significantly related to children's weight status. The researchers did find, however, that when examini

To protect wildlife across the landscape the Administration should adopt a comprehensive framework for a coordinated national response to address the impacts of global warming on wildlife, such as set forth in The Global Warming Wildlife Survival Act of 2009 (H.R.2338) and The Natural Resources Climate Adaptation Act of 2009 (S. 1933). Millions of people each year travel to our national parks to see the wildlife and other natural wonders. Canyonlands, Arches, and Capitol Reef National Parks provide critical habitat for desert bighorn sheep, a species once feared to be nearing extinction. But their recovery is threatened anew by drought that is increasing across their range. Because the sheep, like many species, depend on a patchwork of lands managed by multiple federal, state, and private entities, collaboration is essential to ensure their survival. Additionally the Administration should engage private land owners in collaborative wildlife management, and explore the use of financial incentives, voluntary conservation assistance, and other means of helping private land owners protect America's wildlife.

Regarding your comment: "Former meadows are now so choked with brush that it is impossible to walk or ride through. Instead of fodder for wildlife, these "pristine areas" have become fuel for devastating fires," is it not true that such areas need to go through a succession of plant life to get back to where they once were before the grazing? And what is the natural role of fire by lightning strikes in the area? Is fire a natural part of the ecosystem there? It seems extra time and attention might be needed. Such was the case with some National Parks, which were set up by the Government, but then left without support, which had to come from foundations and interested individuals. Are there any such entities forthcoming?

On the other hand, all my family and friends in southern Oregon think the monument is an excellent idea and is badly needed to protect an beautiful mountain area with outstanding ecological values.

I'm glad that concealed carry was legalized in our national parks. I travel and camp alone and this will allow me to adequately defend myself if the need arises.

Thank you for proposing this idea! I've been browsing the Dark Sky site and could not agree with you more.

(cont.)

Fifty-six percent of all forestland in the United States is in private ownership, and in the Northeast and Midwest that percentage is an even higher 77%. Private forest owners are critical partners in addressing climate change, managing development pressure, and keeping water clean. Currently, federal programs aimed at assisting private forest owners are falling short in terms of acres affected, landowners assisted, and general awareness of the role that private forests play in providing public benefits. As a way to increase the impact that federal programs have on assisting private forest owners, a landscape-scale approach should be adopted for forest stewardship planning and assistance. Landscape planning means: 1. Investing in priority areas at a watershed or regional scale rather than the traditional model of serving individual forest owners on a first-come first serve basis. 2. Building a collaborative network of local clubs, municipal & state government, and NGOs to encourage better forest stewardship. 3. Seamless government interaction, particularly between Forest Service and NRCS Farm Bill programs 4. Finding new funding sources to increase the financial viability for owning and maintaining private forest land. This might include ecosystem service markets, corporate partnerships, and other new conservation finance tools. Ultimately, this will help to slow the rate of conversion of private forestland and increase sustainable management of private forestland.

Wow! You made me go back and re-read comment. I thought that I had missed something that she may have written that made her "racism shines right through"! I guess I still am just missing it, as what I see in is a person expressing thoughts in her own way. I do not agree with everything she wrote, but I welcome her opinions and respect the right that she has to say them. And in reading your comments directed at her I see a very SLANDEROUS outrageous statement directed in a personal attack at someone that has a different point of view from your own. I think it would be best if you reviewed the "Standards of Conduct" section for this website. As far as "big brother is watching" - if you get the time please read my second comment for that included "My apology for my miss interpretation of your idea." that I gave to him. Because of my comment to him was then able to express how he best thought his original idea could best be implemented and it made the whole idea have a completely different concept to me. I think others may have taken it the wrong way as much as I did by the statement of the government REQUIRING physical exercise. That requiring part just sent me off in a different direction than he intended. Parts of his idea I now feel have merit (parking lot location, transportation) while I still do not agree with other parts, it did open my eyes and got me thinking about it. In this case, the idea of this forum, to open up a dialogue to share and learn with others in a respectful manner - worked! Thank you for your statement of "Everyone has the right to access to public lands and they should continue to have it as long as it does not destroy habitat or cause harm to wildlife..." I really like the part of "EVERYONE"

What animals are being destroyed? I live in the forest and I have deer everywhere. They do not care about noise and ATVs neither do the other animals I have seen in the forest. Where are your studies on this. I see the forest dep studying the animals all the time that's all they do is do studies and I have yet to see them release any report that says anything but we have to many deer. I see no harm coming to animals from people being in the forest.

The feds should have to start paying both state and local property taxes on all wilderness and other lands that they are refusing to allow ATV/UTV access to. If we can not have access then the exemption of property taxes should be ended. We grant this exemption because this is property that we share in common and can use. If we are no longer going to be able to use it then this is a violation of the agreement and they should start paying taxes. I would also include all land they do not allow OIL and GAS drilling on. If they are going to lock it up then they get no exemption. I think this would be a good policy that would allow some land to be locked up but prevent too much of it from being locked up because it would cost too much.

I'm not sure. There are places in Alaska, for example, that you probably should have some sort of protection in bear country.

Wow. I see had nothing to add after that. You really know your scientific studies, even references. I'm impressed.

It sounds like a good idea. Keep them as wilderness and there is no upkeep.

With the large amount of population growth and the pressures for development of our last wild lands increasing, I say more protected land is a good thing.

I have snowmobiled for years and I agree with (comment 1). In Michigan, snowmobilers pay for a trail sticker. The DNR use some of this money to pay private landowners to have snowmobile trails on private property. This sounds like a good solution to me because OHVs can be ridden anywhere (farmland, non wilderness, etc.). Do we need access to every bit of land for development (roads, drilling, mining)? More land should be set aside as wilderness, not only for people to use but to protect plants and animals. It seems selfish to me to hear people want to use up all the land. We should learn to respect the Earth. Most of these activities involving OHVs and development can be done in almost every area, not only the last remaining wilderness areas. It is also baffling to me that still, after all this time, some people would want to destroy the last of our wild areas for the quick buck.

"Conserve" means to preserve, to save in this case to prevent destruction of the land through over grazing, farming, clear cut logging, development of commercial buildings, paved roads, billboards, or housing developments. The government should not subsidize farmers except in exceptional cases of loss due to drought, floods, theft and pests. The land should remain in its natural state or restored to its natural state when it has been degraded due to over grazing, logging, fire and poor farming practices that resulted in soil loss, erosion and degrading/pollution of the water table, ponds, lakes, streams and rivers. We must conserve/protect and restore what's left of our wild lands and restore its native plants and animals, at least those that are not already extinct.

Okay, as long as the snow mobiles are kept out of Yellowstone, where their impacts are unacceptable.

Discussion Question 1

Written & Online Comments

(cont.)

"The rest of us deserve compensation." Compensation for what? For allowing people to mine on PUBLIC LAND. You could mine on public land too.

So you're saying my grandmother and grandfather should ride their mountain bikes to their camp and sleep in a tent? Remember "Recreation means different things to different people." By the way OHV riding, particularly off-road motorcycling, burns more calories and gets the athlete's heart rate up higher than any other sport except soccer and it's a tie.

Great idea, just NOT using BSA. I like the Junior Sierra Club idea.

Would it be possible to post the title page of the study so we can see who produced it. I am thinking EPA but not sure. Just curious - not a big deal. Enforcing OHV trail routes is a large seemingly impossible challenge. Cultures CAN change over time as is happening where I am from. It is extremely painful and difficult for those making the transition but it can and is happening in So Fla. Others must be patient enough to allow this to happen and get to a point where the OHV community itself will apply the peer pressure necessary for the transition from going where you want to staying on designated routes. A lot of ORV use in So Fla is related to hunting and getting from point A to point B to hunt. We mainly require designated route systems that get people within reasonable walking distance to places trails don't lead to. Even though I can be antagonistic at times myself and others in (ORV/ hunting/consvt'n.) groups are working some pretty extreme enviro group members to get things right in our area and have come to agreement on some issues we never thought we could agree on without selling either side out. That is not easy but we have done it and will continue to do so. Others can do this also but not without all parties opening their minds to at least HEAR and honestly evaluate what the OTHER side says. Could promote idea except that it relegates ATV's to race style tracks. Fortunately we still are authorized to visit public land on them in my opinion because we are engaged in a meaningful manner to develop a viable system here.

Your statement about restricting public access is completely untrue! Wyoming Stock Growers Land Trust and WY Game and Fish Department just completed a project with two different landowners who chose to convey permanent public access to four contiguous miles of the Green River in Sublette County, WY -- along with the permanent conservation of 19,000 acres of extremely productive rangeland. Providing public access is always the right of a private landowner, whether or not there is a conservation easement restricting development on their land. It is important to realize that public access can also be incompatible with certain wildlife needs -- parturition areas, migration corridors and fragile habitats which can be damaged by the well-meaning as well as those unconcerned with the footprint they leave. Here in Wyoming, our most critical wildlife habitat is on private land; keeping these lands unfragmented is key to the provision of winter range, migration corridors and breeding grounds. Conserving these lands also conserves our defining viewsheds, historic and cultural artifacts, and a way of life.

Discussion Question 1

(cont.)

The 2012 Farm Bill will be challenged to continue funding at current levels, especially for private lands conservation programs like FRPP and GRP. These programs provide excellent return on federal investment through private and state match.

- Private lands are the most productive throughout the US - agriculturally as well as from a broader biological perspective as they typically encompass riparian areas, migration corridors and provide winter range and breeding grounds for many species. For these same reasons, they are also highly sought after for development.

- Ranchers and farmers are hit hard with regulatory programs – voluntary, incentive programs like FRPP and GRP have the potential to do far more good in the long run, at less cost.

- These programs ensure unfragmented landscapes into the future, at a one-time cost to the tax-payer.

- Purchased conservation easements provide landowners with capital without liquidating acreage and keep ranches and farms intact, and at ag values, for future generations of producers. These dollars get turned into local economies, too, as willing landowners use funding to pay down bank notes, purchase additional acreage, improve breeding stock, develop water supplies, or improve infrastructure.

- FRPP and GRP funds help private land trusts ensure that community needs and values are also conserved. The cost of conserving private lands costs taxpayers just a fraction of the cost of federal land purchase and administration.

How we can make these funds go even further:

1. Allow for an increased percentage of landowners' contribution of value. Many landowners are willing to increase their in-kind contribution of 25% of the value of an easement or more. Cash match is much harder to come by.

2. Consider funding the transaction costs for donated easements. Many landowners would be in the position of donating a conservation easement to a qualified organization if the cost of the appraisal, minerals report, attorney fees and stewardship contribution could be covered. Local land trusts would be able to make dollars go even further if this opportunity could be realized.

Every minute, two acres of farm and ranch land are lost to development. The average age of American farmers and ranchers continues to increase, leaving many working lands open to fragmentation and uncertainty.

FRPP and GRP help conserve our working farms and ranches and the food, fiber and natural resources for the stewardship of future ranchers and farmers -- and the benefit of us all.

My father was employed in the CCCs. He learned many skills that did him well during his life. Except for the surveying, he passed them on to me and my brothers. Doing the same thing for the unemployed now would be a wonderful opportunity for those that would be employed and our nation. Most of the roads, trails and parks need to be brought back to the condition when they were created.

Remove the subsidies we give oil and coal production and give it to home owners, office building owners and apartment complex owners to install solar power and water harvesting installations. Greater energy efficiency, cleaner air, money saved.

(cont.)

O.K. I'm going to talk to my tax preparer and have him withhold money for any public land not within driving distance. If I can't use it, why should I pay? So maybe my taxes would have been used to add armor to a Hummer in Afghanistan. Tough. If I can't use ALL the benefits of my government, I shouldn't pay the taxes. I don't get Food Stamps; no taxes. I don't break the law; no taxes for police. I think ____ drank too much at the Tea Party.....

My idea is to invest money into the Boy Scout after school programs that teach both young elementary age boys and girls life skills that they might not receive in school or at home. This is an opportunity for them to understand what the outdoors are like as we bring in opportunities for them to learn about fishing, wildlife, archery, camping, etc. The Boy Scouts of America works hard to raise money in order to do these after school programs, but if there would be a grant in place for these types of programs we might be able to improve our programs. I would love for kids to be able to come out to camp for the weekend and experience the great outdoors, but for some of these kids, they come from at-risk families that can't provide the support to give these kids this opportunity. So my proposal would be for grant money to be given to improve our afterschool programs in order to provide the experience at a deeper level than our once a week opportunity we have at the school.

In addition to the other good uses of a fully funded Land and Water Conservation Fund, expanding the program to allow 3rd party entities, like land trusts, as defined by the IRC section 170h, to access LWCF funds to complete, hold and administer conservation easements on private lands is vitally important. Private land conservation is essential to protecting America's natural heritage, rural cultures and agrarian livelihoods. Hundreds of thousands of acres of privately-owned lands, especially in the Western United States, abut national parks. Allowing LWCF funds to be used by local land trusts in concert with generous and willing landowners to preserve their privately owned lands through conservation easements makes a world of common sense. The lands, if agriculturally productive, remain so; the lands remain privately owned, often with families who have owned these lands for decades if not generations; and stewardship of these lands is vested with the landowner and the land trust, not the federal government. Allowing America's 1700 and growing local land trusts to utilize LWCF funds for private land conservation would enhance the program goals for the LWCF in a highly cost-effective, locally-supported and efficient manner. This is an idea whose time has come!

Please visit the Land Trust Alliance (www.lta.org) to learn more about private land conservation and the use of the conservation easement. A conservation easement is a legal agreement that permanently transfers the development rights on privately-owned lands with conservation values to a 3rd party (e.g., non-profit land trust). The IRS allows this through IRC section 170(h). So far, more than 37 million acres have been conserved using the conservation easement tool. This is "additive" to government owned, public-lands conserved for national parks, wildlife refuges and other uses. If the lands being conserved are ranchlands and grasslands - such as millions of acres of privately owned lands throughout the American west, the easement would allow the lands to continue to be used as ranchlands. However, the lands could never be developed for a shopping mall, residential development, etc. This rea

After school education for all!! I did not realize so many people are of the opinion that the boy scouts are discriminatory. I have had two daughters and both were members of the girl scouts till they were graduating High School, and my younger daughter went on to be a counselor after High School. The programs provided were wonderful, and they had funding available for low income families also. We desperately need more education about the environment and wildlife and it should start in the elementary schools. Children need to be taught respect for life, all life! The food served in our schools needs to be more healthy foods. Children need more classes on healthy living....eating healthy engenders self respect.

I think this is the best idea that has been submitted. We need to create jobs. This program could be used to both employ and educate people about the Great Outdoors. This program would be a direct addition to jobs as opposed to many Stimulus proposals that create wealth for a small few and jobs for an even smaller few.

When I'm OHV traveling legally , because I can no longer hike, snowshoe, or cross country ski I hope you will tolerate me. Neither of us has exclusive use of an area.

Similarly, the need for qualified building tradespeople could fit with this model to provide jobs in the protection of our cultural landscape, which helps to revitalize our city and boost economic development. The Michigan Preservation Network ran an extraordinary series of workshops on restoring wooden windows, which has in turn put people back to work and spun out several new small and successful businesses in an economically devastated state. In considering the great outdoors, we need to remember that the outdoors begins when we open our front doors and step outside. The Great Outdoors includes our neighborhoods, downtowns, waterfronts, urban parks. By encouraging and promoting historic preservation and sustainable, livable, walkable communities, we encourage people to get outdoors and build community relationships. More people walking around in our neighborhoods and communities means "eyes on the street" which leads to safer streets. Teach our citizens - of all ages - how to be stewards of their own communities and they will carry that forward to the stewardship of their natural environment beyond their home.

Discussion Question 1

(cont.)

In addition to working on public lands, parks and forests, a modern day CCC or WPA could provide job training in the building arts which would help to rebuild our cities and communities, protecting our cultural landscape as well as our natural landscape. The Great Outdoors begins when we open our doors. Federal incentives could help statewide and local governments and nonprofits provide job training that would protect our historic communities and promote sustainable, livable, walkable communities. The question of how to pay for such a program is important, however there is an answer. Every year for thirty years, \$150,000,000 has been deposited into the Historic Preservation Fund out of the Off Shore Oil and Gas Lease revenues, on the principle that the profits come from destroying one non-renewable resources should go to protect another non-renewable resource: our country's cultural heritage and historic buildings. Funds are distributed through State and Tribal Historic Preservation Offices, which fulfill the mandate set by the National Historic Preservation Act, but they have never received full funding. If the Historic Preservation Fund were fully funded, \$65 million would go directly to Certified Local Governments, and \$35 million would go to competitive grants for States who could provide funding for projects such as this.

1) We want wilderness designations for all qualified lands on National Forests in Utah, specifically in areas currently under consideration like the La Sal Mountains, Elk Ridge, and Abajo Mountains in San Juan County and the Marysville Peak and Tibadore Canyon proposed Wilderness areas on Monroe Mountain on the Fishlake National Forest.

Absolutely, the Parks should be left in the same state without any changes other than the basic creature comforts...no timber cutting even around them, no exploration for oil, shale, etc as was proposed in Colorado, no off-road vehicles, etc...leave these few precious jewels in as pure a natural state as possible...quite a feat considering the consumptive and egotistical nature of humans!!

Well said. I always wondered when I see one of those huge rvs go by me or parked in a national park with the satellite dish on the top and all the trimmings what kind of enjoyment do they get from what they call camping? I get it at a nascar event or a football game but if your idea of enjoying nature is to drive a huge rv to a national park, consuming mega gallons of gas further promoting our dependence on fossil fuels, and then going inside to watch tv (fox news no doubt) when the sun goes down you are missing the best part of nature because anyone who has spent time in a forest at night knows that that is when the forest really comes alive. Another thing I find pretty comical is the ohv crowd saying it promotes physical fitness. I never realized that sitting in or on a vehicle was such good exercise. And to think of all the time I have been wasting in the gym lifting weights and doing cardio when all I had to do was buy a 4wd or atv and destroy a forest or 2 by driving over it. Heck I could have been Mr. Olympia by now if I had only known. That does explain on thing though, after all that "exercise" they must be severely carb depleted so no wonder why they drink mass quantities of beer and consume junk food then discard the cans, bottles and wrappers all over the forest. Not exactly sure why they feel the need to smash the bottles on rocks and trees but maybe that is a manly thing to do?

Were you opposed to the hiring of Arnold Schwarzenegger by the president to promote exercise back in the 80's? Was that "big brother is watching" as well? Where were your objections to GW allowing wire taps and screening of our emails? Was that not "big brother is watching"? The reason I took offense to remarks is because President Obama, or "O" as liked to call him, has not tried to pass any legislation on what people watch on tv like she tried to say. Republicans, and especially teabaggers, love to make Obama the 2nd coming of Hitler and I think it is ridiculous. The guy is not even a far left liberal to tell you the truth. Obviously she hates our President for reasons she has made up in her own mind and the fear seems racially motivated. Everyone has the right to access to public lands and they should continue to have it as long as it does not destroy habitat or cause harm to wildlife but lies should be pointed out.

There are a buch of wack job running around out there with guns disregarding the law. I am not prey, I am a patriot and I am packing.

I visited Mesa Verde this summer. No national park has a more loving or thoughtful visitor center than what the CCC did eighty year ago

This program while not ideal is essential to protect critical lands like those inside established wilderness areas. I would generally oppose any lands going back to development interests, but since Congress and the Admin won't step up to the plate to do the job that needs doing, this is a workable alternative.

the vast majority of bikes are on city streets which are not paid for by gas taxes but by local sales and property taxes. In fact, since bicycles cause much less wear and tear on the roads than cars, and need much less space than cars, it is bicyclists who subsidize car drivers, not the other way around.

This is not only a great idea, but it is also totally feasible. The National Park System has almost 400 units. Full "National Parks" -- like Yellowstone and Grand Canyon -- are only a small portion of the total system, which includes national preserves, seashores, recreation areas, historical parks, etc. But this system is far from complete. There are vast regions of the country with few or no national parks. This includes most of the country east of the Rocky Mountains. People who live in the East deserve national parks as much as people in the West. And having more parks in the East will save energy and resources, allowing people to visit parks without traveling so far. There are hundreds of potential new national park areas that are waiting to be designated. Most of them are threatened by resource extraction and development. We need to do it now, before it is too late. Concerns about the cost are misguided. We can afford the parks we have. All federal land agencies have had budget cuts, but the National Park Service is in better shape than the others. Plus, because 98 percent of national park lands are undeveloped wildlands, those lands are very cheap to manage -- they are basically left alone. In fact, the American taxpayer would save money by creating new parks. Most potential parks are already public lands -- mostly national forests or BLM lands. We are spending millions and millions of dollars each year to subsidize logging, livestock grazing, roadbuilding, and other destructive activities on these lands. These programs are costing us money and trashing our public lands. Shifting these lands -- which we already own -- to the National Park Service would not only stop these destructive activities, but it would also save us money. It is also incorrect that we cannot afford to create new national parks that require land acquisition. This is nothing new. Almost all of the eastern national parks were acquired from private owners. Lands to create some of our most important national parks were acquired in even tougher economic times -- during the Great Depression. This includes Great Smoky Mountain and Shenandoah national parks. Moreover, it is well documented that national parks bring major economic benefits to local communities. Teton County, Wyoming is the most prosperous in the state -- because it includes part of Grand Teton National Park and is next to Yellowstone National Park. Regarding the protection of entire ecosystems, this is a critical issue. National parks have the capability to not only preserve pristine wilderness areas, but also to connect them by restoring lands that have been degraded by past industrial activities. It is no coincidence that the most intact ecosystem in the lower 48 states is centered on Yellowstone National Park. There is growing public support for a new generation of national parks across the country. Now is the time. We can do this. We owe it, not only to future generations, but also to ourselves.

Look all you ATV/OHV dittoheads, McCulloch v. Maryland was decided in 1819. The Constitution doesn't allow states to tax federal property. Go back to school and study civics 101 and then come back and makes some suggestions.

(cont.)

a few bad apple "off roaders" do not represent the masses. I am a responsible, stay on the trails "thread lightly" off roader, and a "leave no trace" Hiker. Many of my friends are to, and I assure we police our own, and shun those who would destroy the land, or in any way jeopardize our access to it. used properly, there is little difference between a single track and a double track trail. Severe punishment/fines for off trail land damaging travel by vehicle, as well as severe fines/punishment for littering, campsite destruction, creating your own camp site fire rings, as well as other offenses committed by hikers and horse travelers, seems much more fair to all. I am sure you would not agree with me that all hikers leave trash and destroy flora, even though many of you do. remember, generalizing all people in to a category is about as fair as racism and sexism.

Please clarify your position. Either you are for funding the parks (which means exactly what?) or you are for leaving the parks alone. If you "fund" a park, that means you are expending cash for its cleanup, its preservation, its fire suppression, its wildlife management, etc etc. Therefore, "funding" implies the government is not "leaving the parks alone." What do you seek? Funded parks, or unfunded parks? Please clarify.

Hey, you hit something right on the head "Recreation means different things to different people" Please allow those people to recreate in our PUBLIC lands also. Why should everyone conform to your definition of recreation? And if you had ever ridden any OHV before you would know that nothing gets your heart rate up and your muscles a work out like riding an OHV. And I for one think that people who drive large vehicles into campsites should be rewarded, because my 15 passenger van full of boy scouts gets better gas mileage per forest visitor than your 2 passenger hybrid everytime.

Just a reminder that a good portion of the trails that are in our "wild" areas were made by miners, Ohvers and other users of the forest. Funny how you all now claim them as your own and now they aren't "trashed wasteland" or "us(ed) up". Interesting how that works

I agree with others--it's a great idea if done through an organization that doesn't discriminate. We do need outdoor education in our schools. School trips to the Adirondack Mountains when I was in junior high changed my life.

Work to remove barriers to relocalized, distributed, decentralized renewable power generation (DG) and energy efficiency/conservation in urban load centers. The more DG is in place, the less need there will be to finance and build large, industrial-scale, centralized, transmission-intensive, slow-to-completion, over-costly renewable power installations in wild lands and remote places. Put the generation near where consumption is; protect the desert and parks. DG can go up faster, has countless community benefits (jobs, business where people are) and is becoming increasingly economically competitive with utility-scale renewables and fossil-fuel alternatives. We can save wildlands and the climate all at once.

(cont.)

Better would be a graduated fee for use for areas open for multiple use. Hiking is pretty environment-friendly, so it would have a lower fee, and motorized all terrain vehicles would have to pay the highest fee since their use degrades the environment and precludes use by anyone else. Also, use of all-terrain vehicles should be limited to specific areas, since they do so much damage to the paths and the wildlife.

I LOVE this Idea and am hopeful that we all can improve our view of the night sky. It sounds simple enough and what a great contribution it could be to the future generations .

I am truly sorry that you are disabled. My idea is to keep as many people as possible healthy so they don't have special needs. I think your special need can and will be accommodated, but in some places the government can design trails, roads and facilities so that people get more exercise, not less.

Create 100 new national parks for the 100th anniversary of the National Park Service. Create new parks encompassing landscapes not represented by the current park system, including the Great Plains, Ancient Forest and the restoration of Maine North Woods, landscapes that connect wilderness areas into biologically complete ecosystems, and that connect present national parks with their surroundings.

People who say this idea will cost too much: there will be almost no difference in funding between the cost to BLM and USFS and to the NPS when the land is transfered to that agency. If you think there will be increased funding needs, well, you expect a lot of visitor centers and bells and whistles that I don't need from the park service. Besides, the NPS can charge an entry fee for various services. The USFS presently does not charge entry fees except to campgrounds and sometimes a parking pass. Please read comment above. People who think small only get small things. Think BIG. This is what the New National Parks Project is doing. Get on board!

This is a no brainer but seems to be getting almost no attention from the government. That's because BP is in charge. Big oil is trying to make solar look like an environmental nightmare so we will all reject it and keep buying oil.

The Yurok Tribe is a great asset to the Klamath River. An Ancient Forest National Park (www.ancientforestnationalpark.org) that would protect most of the Klamath River watershed and still allow Native American traditional uses would seriously help the tribe's above stated goals.

Chis's comment reminded me of a comment I saw on New West in response to the idea of creating a National Monument in North Central Montana. "The comment that we want this area "just for me" is mistaken. You are, like anyone else, perfectly welcome to come out and hunt, hike, or camp. If you need to go to the bathroom, we maintain an outhouse and keep it supplied with paper. If, like a few, you have trouble figuring out how it works, we can get our shovels and bury your streamers of TP hanging off the sagebrush. If you need a telephone, you'll have to come into our house, because there is no cell phone service. If you want to get off the main roads, we maintain the prairie trails that you will use. If you get lost or stuck, we'll rescue you. If you have trash, you can drop it in the garbage can we've set out for visitors, and we'll haul it out for you. If you want to camp, we've never turned anyone down for as long as they wish to stay (unlike the land that we only own grazing rights on, where the feds limit camping stays). We keep favorite camping spots mowed to reduce fire danger, and when that isn't enough, we put out the fires. If you bring in noxious weeds on your vehicle or clothing, we'll pull them so that if you decide to visit the area more than once in your lifetime, there will still be native prairie when you get back. If you want to help pull weeds, when the work is done, I'll make you a buttermilk cake. With this grass, the cow gives so much cream that we have to churn a lot of butter. We can swap stories about getting our Ph.D.'s. Mine is in botany. (Speaking of return visits, these comments certainly give the impression that the pro-monument crowd has never been here, whereas the non-Eastern Montanans objecting to rural ethnic cleansing have visited long enough or often enough to learn something about the land and people. Words cannot convey our gratitude for your kind support.) We volunteer many hours every year to keep this area clean and accessible to visitors and pour a yearly fee into the US General Fund for the privilege of assisting you. It is amusing to hear someone that wants to drive my children off their great great great grandmother's range accuse us of wanting this area "just for me"!"

"we need legislation that puts into action long range plans that put the health of the environment first." We need to start cutting down and removing all the pine beetle killed trees then. Extreme fire hazard.

If you want people to get out and visit the parks, talk about how CHEAP camping can be!! you don't have to spend a million dollars at Disney to have a great family vacation!! It is amazing what the kids learn being away from the TV and their toys. They have such great imaginations and will be totally stimulated by nature once they arrive at the campsite!! They will find a million things to do they never even knew they loved!! In today's economy, people need some help finding ways to escape the stress of life and camping is almost as cheap as staying home!!! Pack your food, go somewhere close by and pay less than \$20 per night for the whole family!!

Snowmobiling, for example I believe can be enjoyed without too much impact on the environment if limited to certain areas, away from known wildlife wintering areas. ATV should be limited to ATV tracks that cost money to use, on public lands. Random use of these machines should be limited.

This initiative seeks to promote everyone's involvement with and access to the natural world. One of our most important, most threatened, and often most overlooked natural and cultural treasures is the night sky. As urban centers grow and our cities sprawl, the proliferation of inefficient lighting has made it increasingly difficult for Americans to walk outside and get a good view of the stars. In Utah, we are fortunate to have a few of our National and State parks actively supporting astronomy and other dark sky programs, but the wonders of the heavens should and can be made more readily available to all regardless of location. Three years ago I was driving home from work in Sandy and passed a Harmon's Grocery where a huge array of telescopes had been set up. Out of pure curiosity I pulled in "Is there an eclipse or something?" I wondered. One of the telescope operators invited me over to take a peek at Jupiter. "Really, you can see Jupiter?" I asked, and sure enough, there it was, plus four of its moons! I was stunned...and instantly hooked! During the two years since I officially joined the Salt Lake Astronomical Society I've volunteered at many public and school star parties. It's thrilling to give people young and old their first telescopic glimpses of the planets, star clusters, galaxies, and even "just" the moon. Reactions range from "Wow! It looks so real!" to simple exclamations of wordless awe. Everyone is amazed that these cosmic sights can be viewed from a grocery store parking lot in the middle of the city...and they all want to know more. Away from the city's glare, one does not need a telescope to be enthralled by the sight of the brilliant Milky Way galaxy stretching across the sky. It is a great blessing to have many of the world's most pristine refuges of darkness within easy driving distance of Salt Lake. During my time spent as an astronomy volunteer at Bryce Canyon, I've talked with people from across the globe who have come specifically to view the night sky. Even at Bryce, however, a distant city glow can be seen on the horizon and the park's dark rangers work tirelessly to spread the word about the numerous costs of bad lighting. The effects of light pollution can persist over 120 miles from its source and hugely affect the behavior and life cycles of wildlife and the health and safety of humans. Possible fixes are not difficult or costly. When I was a kid and would leave a door open in the summertime, my parents would yell, "We don't need to be air conditioning the whole neighborhood!" It's the same with lights. A fixture that is poorly designed and allows light to glare upwards is wasting half its luminosity...and we certainly don't need to be lighting up the whole galactic neighborhood! Fixtures that are shielded and direct light down to the ground (where we need it in the first place), use much less energy and illuminate an area better. When timers and motion sensors are installed around businesses and residences, safety is actually improved and owners save on their power bills. The International Dark Sky Association estimates that 2.2 billion dollars are wasted annually in the U.S. on inefficient lighting. Calgary Alberta recently switched to shielded lighting and has reported a yearly savings of 1.7 million dollars. On top of the financial savings we'd gain from smarter lighting, we'd also be opening up the wonders of the universe to everyone in the nation. One of the initiative's main objectives is to get people, especially children, interested in recreating outside. Additionally, there is a continuing need to inspire more of our youth to maintain their natural interest in science and mathematics in hopes that they may one day pursue that interest as a career. Improving our view of the night sky addresses both these desires. Star gazing is the perfect "gateway drug" to further interest in the "hard sciences", mathematics, and engineering. Astronomy is an accessible science. It does not discriminate based on race, gender, income, or even technical ability (to which I can personally attest)...all are

equal under a dark sky. It is one of the rare disciplines that still benefits significantly from the contributions of amateurs. The stars have fascinated humanity for millennia, and going outside to hunt for planets, nebulae, and distant galaxies is just plain fun! Carl Sagan famously, and truthfully, said that we are all "Star Stuff" and that it is humanity's "birthright" to be able to look up with wonder into the cosmos. From the beginning of recorded history, and undoubtedly before, humans have worshiped, marveled at, and explored the mysteries that beckon from the heavens. It would be a shame if all this were permanently hidden behind the glare of a street light. The country is speckled with excellent astronomy clubs and star gazing groups whose members already donate countless hours sharing their love of the night sky with the community--the infrastructure is ready and eagerly waiting! Members of the Salt Lake Astronomical society have access to a variety of free telescopes available on loan with zero liability. I am a poor musician and haven't spent a dime on equipment, but have still been able to explore the hidden treats in the night sky and share my newfound love of the stars with others. Club members also have access (after a few special training courses) to use some of Utah's largest telescopes at the Stansbury Park Observatory Complex. For a tiny annual fee, one can operate any of the 3 giant telescopes on their own time. What an incredible benefit! Talk about "what works"! We would all love to see the skies darken so the experience we're able to give to curious newcomers would be even more astounding than it already is. Though the star parties we host in the city are always enjoyable, it is disappointing when many of the best sights are consistently veiled in a wash of orange glow. It would be heartbreaking if a whole generation grew up without ever seeing a sky shimmering with thousands (not just dozens) of stars. Alongside the Grand Canyon, Zion, Yosemite, Bryce, and other areas set aside for public use and enjoyment, we should protect and celebrate the splendor of our own Milky Way and the vast universe beyond that spans the cosmic ceiling from horizon to horizon, With smart planning we could conceivably bring this natural wonder to our very backyards.

I'm afraid you are mistaken. Some easements do allow public access, and in fact, public recreation is one of four conservation purposes in the tax code for which an easement can be considered tax deductible. There are organizations whose entire mission is the acquisition of conservation easements for equestrian trails, hunting access, etc... That said, public access is incompatible with many kinds of agricultural operations and creates an enormous liability for landowners. If access were a requirement, far fewer landowners would consider easements and the wildlife habitat and other conservation values provided by their land would be vulnerable to development. The appraised value of an easement takes many factors, including public access, into account when considering the genuine diminution in property value due to the easement restrictions. The recent reforms of easement appraisals ensure that nobody gets to "sell their land twice."

Good. Private citizens are holding a great responsibility to steward the forests. Most often, on their own, and with their own \$\$\$\$\$. It is difficult when the monetary return is greater to sell the land to developers.

one more time, gee obesity versus walking, obesity versus walking maybe not that many people want to get off- or out of - their misery making vehicles

I agree with pretty much everyone here - good idea without BSA. Maybe school outdoors clubs could be founded?

I strongly urge those who cannot handle a science-based world to read up on the pre-renaissance era. You can enjoy persecuting Galileo and Copernicus and fight off the plague. I support science-based environmental policy.

Use the vast number of unemployed youth and adults in programs like the Civilian Conservation Corps or Americorp to carry out environmental projects. Much of the infrastructure is already in place to set these programs up as well as some of the funding. (ARRA, Unemployment Benefits, Workforce Investment Act) The Department of Labor operates youth programs that could easily be tailored to projects that focus on the outdoors. In cities, have participants create community gardens and other green space. Just one benefit of community gardens in cities is that the gardens will provide food in the event of an emergency and reduce our carbon footprint as we look to wean ourselves off fossil fuel. Open programs up to all interested youth rather than basing entry on income qualifications. Including a broad economic background of participants creates a program for all Americans not just "the poor" thereby engaging many more youth in the great outdoors. Require long term unemployed (12 months plus) to volunteer in some capacity. (Might also include TANF recipients) This will enhance self esteem and future employability while at the same time utilizing the extraordinary talent pool of our fellow citizens. Finally, if the troops come home they will be looking for jobs. Retain troops in the military and have them use their leadership training in coordinating the effort at home. Imagine what we could achieve in terms of improving our world and ourselves.

I'm against all off road vehicles on public lands (this includes snowmobiles). These destructive devices should be available only to park rangers for emergency use only.

I've been wondering why we haven't started doing this already. It is the one thing that really makes sense. I believe that both unemployment and other benefits might be used for such a program. If they could manage it in the midst of the earlier depression, surely we can work it out now. People could go to work, learn skills, and earn their money in an honorable way.

A National Monument will hinder nothing except continued abuse. In fact, it will ENHANCE recreational opps, diminish wildfire risks, enhance local economies, and help wildlife.

(cont.)

Many Native American Tribes are committed to restoration and protection of natural resources that have always supported their people. These efforts complement Department of the Interior and other federal agency goals articulated in “America’s Great Outdoors.” The Department of the Interior and other federal agencies should use existing programs to leverage the contribution of Tribes toward the protection of wilderness, endangered and threatened species, at-risk ecosystems, and other priorities. Recent agreements to remove the Klamath River dams provide one of many examples where Federal agencies have worked with Tribes to achieve mutual objectives. One of the key contributors to dam removal negotiations, the Yurok Tribe of Northwest California, is engaged in a related land acquisition effort on the lower Klamath River. The acquisition provides another example where principles articulated in “America’s Great Outdoors” coincide with Native American priorities. The Yurok Tribe subsisted on fish runs and other forest wildlife on the lower Klamath for centuries prior to the arrival of European settlers in the late 19th Century. In the decades that ensued, however, intensive timber harvest drastically altered the landscape. Like much of the California Coast, harvesting practices threatened endemic species, old growth forest and water quality. Consequently, many of the natural resources that the Department of the Interior now seeks to restore (resources once, and still, essential to the Yurok People’s healthy and prosperous way of life) disappeared. When the Federal Government recognized the Yurok Tribe in the early 90’s, the Yurok Tribe established a constitution that requires tribal government to establish policies intended to “restore, enhance, and manage the tribal fishery, tribal water rights, tribal forests, and all other natural resources” and “provide for the health, education, economy, and social wellbeing of our members and future members.” To help achieve these ends, the Yurok Tribe and Western Rivers Conservancy are in contract with Green Diamond Resource Company to purchase ~47,000 acres within the Yurok Tribe’s Ancestral Boundary. The acquisition would increase protections on approximately 29.3 miles on the eastern watershed of the lower Klamath River, and four important tributaries: Blue Creek (24,861 acres), Pecwan Creek (16,719 acres), Ke’pel Creek (1,015 acres) and Weitchpec Creek (4,503 acres). The Yurok Tribe has published a Yurok Tribal Park Plan which lays out the general objectives for management of these properties. More specific management will focus on cultural resources, and the recovery of endangered, threatened and at-risk fish and wildlife species. The Tribe is in, or seeking, partnerships with: the United States Department of the Interior, the State of California Water Resources Control Board, the North Coast Regional Water Quality Control Board, the US EPA, the California Department of Fish and Game, the State of California Department of Forestry, NOAA Fisheries, the Climate Action Reserve, Western Rivers Conservancy, Green Diamond Resource Company and others. Of most importance to the Yurok Tribe and its many of its partner federal and state natural resource agencies, the acquisition boundary includes the remaining unprotected portions of the Blue Creek watershed. As the westernmost cold- water tributary to the Klamath River, the perennial Blue Creek is one of the best salmon streams remaining in the Klamath Basin. It is also likely to remain cool in the face of climate change, as upstream tributaries become increasingly too warm for salmon and steelhead. The Tribe will manage Blue Creek primarily as a preserve for the benefit of endangered fish species that have traditionally provided a staple for the Yurok People (including the Southern Oregon / Northern California Coho, and California Coastal Chinook). Through this management -- which will complement US Forest Service Management in the adjacent Siskyou

(cont.)

Wilderness -- the Tribe hopes to restore historic salmon runs to Blue Creek and maintain the watershed as the most reliable cold-water source for anadromous fish species in the Klamath Basin. The Lower Klamath Restoration Plan – a document itself resulting from broad local input -- addresses means of restoring riparian and instream habitat for fish protection. The vision for properties outside of the Blue Creek watershed includes sustainable harvest. Specifically, the Tribe will manage Phase 1 lands according to longer rotations that reflect Yurok cultural and Constitutional priorities. Among other actions, the Tribe will initiate an uneven-aged management regime that increases species diversity, extends riparian zone restrictions, sets aside late seral carbon reserves (enhancing marbled murrelet, spotted owl, and other endangered, threatened and at risk species habitat), and restores grasslands. The Regional and State Waterboards are key partners in this effort, as is the U.S. EPA. Throughout the property, the Tribe will also restore historical meadows to invigorate populations of elk and deer for hunting purposes and to restore natural forest complexity. The restoration of grasslands will revitalize possibilities for traditional practices like gathering and basket weaving. The Tribe also seeks to reclaim and protect important culturally important sites, allow for public trail access, and improve regional management with adjacent publicly managed lands. Western Rivers Conservancy, a 501(c) (3) dedicated to protection of outstanding river ecosystems in the western United States, is working with the Yurok Tribe to acquire the property. In the course of our dealings with them, we have discovered several useful tools, but have two recommendations: • Expansion of the USEPA's State Revolving Fund to include more loans and grants dedicated to the reduction of non-point source pollution. Currently, the State of California dedicates 5% of its State Revolving Funds to Non-Point Source projects, and a few other states have similar efforts in place. The initiative taken by these states is commendable, and effective. More can be done with a small increase in resources, and duplication in other states. • Use of Land and Water Conservation Fund, and other conservation land acquisition programs, for acquisitions within and adjacent to protected Tribal lands, and management agreements that help ensure protections in cooperation with Tribes.

Why on earth would someone want to go to a place where they are not trusted to look after their own security? Maybe I've missed it, but I haven't seen any mass murders since the NPS recognized peoples' right to be armed.

I'm promoting this, even though it's really a local issue. There are easily 3 or 4 times as many street lights in most major cities than are really needed. Last I checked, vehicles are required to have headlights and tail lights. Think about the cost savings and other benefits if even half of the lights currently in use were not used. In the area I live there are no street lights and anyone leaving their outside lights on when they aren't using them is considered the neighborhood ingrate. And no, we don't have crime issues due to the dark.

(cont.)

This is an excellent suggestion. Although nearly 80 years have passed since the CCC forces went out into the countryside to create parks, trails and protected areas for outdoor enjoyment of Americans, their achievements still stand, still are used, still contribute to the betterment of our lives. We have millions of long-term unemployed. Let them earn a decent living by building a new infrastructure of wilderness, parks, preserves and the like -- new places where children can experience nature, raw, undisturbed and beautiful.

Although I think this idea has a good deal of merit, I'm also hesitant to ask the government to create another bureaucracy. If one has to be created or enhanced, I would agree, let's give more money to an existing organization already serving the purpose (and perhaps expand them to the mass scale mentioned), and also dramatically increase protections for existing forests and habitats.

this is a great idea, and it would create jobs. if they had dithered about the EPA, we'd have a much worse scenario to face today...

I like it. This concept is already in use at Cape Hatteras National Seashore to support ORV closures for bird and sea turtle nesting sites, under a court-ordered consent decree. A closed area expands 50 meters for the first violation, 100 meters for the second, and 500 meters or more for the third. Violations are subject to as much as a \$5,000 fine and/or imprisonment up to 6 months.

Some states have adopted standards for environmental education curricula, including outdoor activities. Maryland is considering one right now, with the support of Governor Martin O'Malley. If it's adopted, all school systems in Maryland will teach environmental ed, including outdoor projects. They will be able to draw on the expertise of watershed districts and other environmental agencies.

I am in favor of this idea generally, but will not vote to promote it because I am also in favor of creating more wilderness designations. I feel that multiple land use areas should also be increased.

So often people only think of hikers when they think of public lands, but ALL people should be considered. Not everyone is able to hike. Not everyone wants to hike. People should have the ability to take their camper, their bicycle, their OHV, their horses, whatever they choose to visit and enjoy their lands. People need to spend more time outside and by closing it off to all but a small minority less and less people will get to enjoy what this country's public lands have to offer. Keep the trails/roads open to be shared by all.

Discussion Question 1

(cont.)

As an education coordinator for a watershed district in MN, I provide many education activities for K12 students. However, it has been increasingly difficult to get teachers to participate in these programs. These programs are often completely free and do not require anything of the teacher but to show up. However, I've noticed teachers do not have the flexibility in their curriculum or the time to participate in valuable outdoors education programs. It's a shame because so many important experiences cannot be shared in a classroom setting. I would love to see the federal gov. back a program that at least encourages, if not requires, teachers to take classes on env. field trips, to nature centers, water festivals, conservation days, and many of the other programs that are available. to them. Make it easy for teachers to participate, not more difficult. I don't know much about the educational policies regarding testing kids so I won't bother going in to that, but I think that is part of the problem.

Indeed, multi-use trails that include mountain biking work very well. This posted idea does not include anything about restricting the trails to only mountain bikes. What we do want to avoid is trails that are accessible by motorized vehicles. Single-track trails are not usable by ATVs, and thus help to protect natural areas from the misuse and noise of motorized vehicles. Trails must of course be properly constructed to avoid erosion. Studies show that mountain biking has similar or less erosion impact compared to hiking, and far less impact than horseback riding. The IMBA (Int'l Mountain Biking Assoc.) publishes a detailed document describing good trail building technique (the same principles apply to all types of trails). Trail grade and trail grade reversals are the most important factors in allowing water to flow off the trails instead of along the trails, thus preventing erosion.

In Hawaii, homeowners install solar cells on their roofs and sell electricity to the power company. In the US, Big Oil managers are the biggest spender on influencing the legislature and the administration. Three out of four of the energy lobbyists are former government employees. The Big Oil managers are among the 1/100th of one percent of Americans who take more than five percent of the national income. That is, the people who are paid an average \$25,000,000 per year. They are not the founders of the companies. They are not inventors. They are the survivors of office politics -- bureaucrats, if you will. They have effectively sold doubt about global warming for 35 years.

Also, use the open spaces in our communities to grow trees as alternative energy source burned in engineered furnaces.

(cont.)

Let's celebrate our diversity and history by expanding some national parks and designating new ones! America is home to so many cultures and a rich history. In the last ten years, not enough has been done to protect places that more fully represent our cultural diversity and better tell America's evolving story. We should expand existing parks like the San Antonio Missions National Historic Site in Texas and Petersburg National Battlefield in Virginia so that the system can better protect irreplaceable artifacts of catholic settlement and battlefields connected to the longest siege in American military history. We should also add units such as Heart Mountain Internment Camp in Wyoming that tells the story of Japanese-American internment during World War II, sites dedicated to Harriet Tubman's early life in Maryland and her later years in Auburn, New York, and Fort Monroe in Virginia, dubbed "Freedom's Fortress" for its role in liberating enslaved African Americans during the Civil War. There are more stories to tell and places to preserve, including those that celebrate the contributions of women. We want to ensure that we don't forget our important past and celebrate our diversity as a growing country. The National Park Service is the right agency to manage these areas.

Good idea as long as the working conservation easement and management plan are required to qualify.

It would be great to see a high school volunteer requirement based on outdoor projects. For example, require 20 volunteer hours per school year. Many of the Missouri schools require these volunteer hours already, however they are not "outdoor specific". Great idea!

I personally enjoy the public lands for hiking, camping, viewing wildlife and tranquility...However there are many responsible families that also enjoy outdoor recreation with there children that involves recreational vehicles....These families can have this oppourtunities also on designated public lands set aside for that purpose...

Create a dedicated national funding source for private land conservation that is patterned after Colorado's Great Outdoors Colorado, a program authored by Secretary Salazar during his time as Colorado's Attorney General. GOCO has successfully protected farm and ranchland, wildlife habitat/corridors, natural areas, open space and riparian areas; all of which foster recreational opportunities, scenic vistas and other economic opportunities that directly infuse cash into rural economies. Agricultural landowners successfully steward these important natural resources. Partnering with them in the protection of these important working landscapes would provide an significant financial tool helping them to pass their properties onto the next generation. This type of federal program would also provide critical match for local and state conservation funding sources and leverage millions of dollars of matching funds across the country. As an example, my organization, the Rio Grande Headwaters Land Trust (RiGHT) has been working on a special initiative to protect private land along the headwaters of the iconic Rio Grande river. Since 2007, we have worked collaboratively with other organizations to protect 7,500 acres that is beautiful, outstanding wildlife habitat and is agriculturally productive. Out of nearly \$23 million dollars worth of conservation value, less than \$2 million came from federal sources: that's leveraging those funds more than 11 to 1!

(cont.)

Existing public school system community and adult education programs are proliferating across the country. Take advantage of the resource by offering federal grants for these programs to take people outdoors. In the Community Ed program in the Hilton Central School District outside Rochester, NY, 'active adult fitness' includes "Outdoor Fitness Walking," "Nature Writing/Journaling," "Fly-Casting," "Tai Chi," "Active Yoga," "Aquafit," and "Active Adult Getaways" to NY's Finger Lakes region. All classes are discounted for adults age 55+. Many classes are only \$25 and are close to home. The real world nearby is the environment you care about.

I agree with setting aside 1 for 1. Keep in mind there is little wilderness left and once it is gone it is gone. ATVs can be ridden anywhere, including farmland or any area. Maybe ATV groups should pay private landowners to have access to rideable land, like snowmobile groups do, which connects useable trails.

Also, 1 for 1 is an excellent idea as long as it doesn't lessen the amount of land that would be set aside as wilderness.

I voted to promote this, but I am more in favor of preserving areas that are still wilderness (such as in Alaska, etc.), because there would be less land disputes and most of the land is still in it's natural state. I think creating a recreational public land system in a state with such a large population would be costly and quite an undertaking. The area would probably get alot of use, more like an amusement park (for lack of a better description). I don't think there could be much wilderness, either. That said, if it can be done, I'm in favor.

I might not get to visit wilderness areas because of the cost for me to travel to them. There are not any anywhere near my home. Just knowing that they exist gives me piece of mind. I think more wilderness should be saved. There should also be more multiple use federal land set aside.

A Framework for Conserving and Enhancing the Benefits from Private Working Forests in the Western US - This Western Forestry Leadership Coalition report represents months of stakeholder workshops investigating the suite of issues hindering private forest landowners' ability to keep and sustainably manage their land and presents the following recommendations: • Reward landowners for their stewardship of ecosystem services • Promote diverse forest products markets and the utilization of woody biomass • Facilitate action through cross-ownership management and partnerships While only a fraction of the western forested landscape, private working forests provide critical ecosystem services to their owners and to the public. They also create important linkages that facilitate the production of ecosystem services on public lands. However, we are in danger of losing the benefits provided by private working forests owing to such forces as changing climate, economic conditions, demographics, and competing social values. To explore these issues, the Western Forestry Leadership Coalition brought together family and large-scale forest landowners, county commissioners, local and regional planning agencies, state forestry and wildlife agencies, federal land managers, tribes, universities, conservation districts, and nonprofit organizations. From this, a drafting committee synthesized workshop input and developed the report. The goal is to facilitate the creation of a new policy framework and new business model that, together, address the needs of private forest landowners; local, state and federal agencies; conservation organizations; and other stakeholders in the western U.S. The report's recommendations are meant to foster solutions at a meaningful scale. Policy, program, and on-the-ground actions by a multitude of partners can contribute to a future where sustainable forest management is an economic reality, a recognized social benefit, and a significant contributor to forest health and long-term climate change mitigation and adaptation goals. { Link }

I like the idea, but I feel attention and expenditures should be focused first on the ancient forests of the Alaska panhandle. Maurine, yes -- where necessary and possible, private landholders should be brought into management decisions and plans.

Federal land agencies should implement a system where designated routes are monitored for ORV user violations. They should then close routes where there are violations beyond a set standard (say for example, two violations a month). This system is already in place on USFS land in the cottonwood canyons above SLC for dog use. This would give users an incentive to police their own, and compensate for the agency's lack of enforcement capability.

Drill baby Drill,when ever ,where ever,we need the oil,and have more than anybody else in the world, on our own land,but environmental wacko's stop us from using our own,get over it,get a life,enjoy it,and quit telling every one else how to live.

Make sure to have them hike a minimum of 5 miles with a 25 pound back pack on a 90 degree day in a Wolderness so they can appreciate Wilderness rules.

See "Ptotect Wilderness b4 it's too late.." comment 1

(cont.)

To all the regular working folks of which I am also one I will share what I have learned after 12 years of fighting for access of all sorts. The government works like everyone else Mon thru Friday for the most part. If we really value what might be lost WE better be ready to take days off and plan vacation days to attend meetings and produce informed comments (not whining how it was in grandpa's days) or suffer the consequences. It is that simple. Those who attend the meetings and do informed written comments stand a chance of getting what they want. Those who don't - DO NOT stand a chance.

The federal government should financially support and encourage the development of quiet off-road vehicles (SUV's, trucks, 3 and 4 wheelers, snowmobiles, jet skis, etc). These could be dual powered, gasoline/diesel and electric. They would be certified for off-road use in specifically designated sensitive areas. Since the majority of people objecting to OHV's is due to the noise that they create, this would satisfy both groups for the most part.

For the past 50 years most timber sales on public lands have been based on large volumes and large acreage. This has benefited large timber companies and loggers. Over the past ten years fuel reduction projects have likewise been based on having enough commercial timber to make it worthwhile for the contractor. The result has been continuous litigation and a stalemate in the woods that costs the government money and takes away from healthy forest management. Prior to the growth of the large timber and logging companies, there were "gyppo" operators in the woods. These were small, two- to four-man operations. Their cut-and-run approach, however, soon made "gyppo" synonymous with bad. The better small operators, however, continue to exist as contractors to small woodland owners, the largest segment of forestry owners in the country. I suggest we take a smaller look at our public lands, particularly in the West. The emerging growth of small diameter utilization presents an opportunity for public forestry agencies (primarily BLM and USFS) to present more focused, smaller operations. (@ 200 acres) Contracting with an independent, two- to four-man crew that utilizes smaller equipment (e.g., UTVs) would produce less controversy, more jobs, and better management practices across the landscape. One of the big problems with public land management is the proliferation of roads. Smaller equipment and smaller operating areas would require fewer roads and have less impact on the operation area. Large sales will continue to be controversial, particularly in the West, for the next few decades at least. By implementing a program of smaller scale, local workers would gain employment, overstocked lands could be thinned with less impact, and a more progressive and sustainable management of public forest lands could occur.

Require public land units to set aside a parcel of accessible land for public gardening or farming activity. Demonstrate- urban gardening; organic, sustainable gardening and farming practices; healthy eating and cooking; soil, water and clean air conservation; etc.

Yes, enlightened private stewards need to be encouraged and helped.

Thanks so much for the input, this is what I was hoping people would do - comment about balloons after having had an experience in one. I too do not want commercialization of the parks, but if we could come up with some ideas like these - a quiet way to see the animals and terrain, - I'd love to have this as an option.

Establishment of the BWCA is one of the most important environmental achievements of the 20th century; we need to protect it and ensure strong wilderness management.

Lovely idea - don't think it should be mandatory, but aggressively promoted with incentives, etc. - CCC is good model...

I learned how to be an environmental leader in Yosemite National Park at age 13. I was a participant in an educational backpacking program and my hiking group took a wrong turn down a trail. As darkness fell we realized that we weren't going to make it back to our adult leaders before the night's end. We were cold and fearful. We set up camp, fished for food, told stories for entertainment, and built a fire for warmth. When we finally reconnected with our group and adult leaders we had grown in our confidence and self-sufficiency. We felt connected to the earth and to each other. I went on to teach science education and I remain passionate about connecting youth to powerful outdoor experiences like the one I had in Yosemite as an early teen. I agree that government and nonprofit organizations should work together to create synergistic partnerships that promote outdoor education, especially in America's National Parks. We have the most tremendous classrooms at our fingertips and we owe it to future generations to utilize these magical places to create the next generation of environmental stewards.

It worked for cans. How about five bucks a tire? Save our rivers and forests the mess.

Let's protect Old Growth Forests in their Entirety, not just specific old trees within them. Old growth forests are unfortunately rare ecosystems that depend on all elements within them remaining in relative balance. Recent forest management proposals ignore this, supposedly in an attempt to move beyond forest management controversies of the past. The new argument is that by focusing on saving old trees, instead of designating entire forests as old growth, then both environmental priorities and monetary desires would be solved. The proposed logging of young trees in Old Growth Forests, however, would impact the ancient balance that nature has so well maintained. Nesting habitat for Spotted Owls and other threatened and endangered species would clearly be disturbed. Any young trees removed would remove vital nutrients from the forest life cycle. Activity of machinery would subject fragile forest topsoils to erosion. Let's protect what little we have left of these Old Growth Forest Ecosystems. Let's protect entire Old Growth Forests, not just old trees within them.

With more protection of our wild lands we increase our native flora and fauna. The benefit is to all who inhabit this great nation and all who visit. The importance of maintaining our wild places is paramount to keeping our lands healthy and our people healthy! Biodiversity is what sustains us! Let's keep our wild lands wild!

Discussion Question 1

Written & Online Comments

(cont.)

Always good to point out the economic BENEFITS of preserving forests to the anti environmental crowd that roams this site. They still think nature is only good for being logged, drilled, mined or driven over.

Good idea but I do know that President Obama has taken his family to Yellowstone, it was last summer I believe, so he has already done a bit of what you propose.

Good idea. I see this so much. Housing developmetns absolutely empty but right in the same town another forest is being clear cut for another housing development. Meanwhile an industrial park sits empty and decaying but another forest is clear cut for development of yet another industrial park. It is so needless. Use the existing homes, industrial parks and buildings first before destroying what little forest is left.

I am promoting your idea since Devons is incomplete. I agree though that everything should be done to preserve wild horses and wild horse habitat and I proposed an idea a few weeks back to do just that. To vote on it just click my name on the top then "ideas" and it is about 2/3rds down the list.

In African parks balloons are used to view wildlife. They do not disturb the wildlife as much as vehicles and it gives the rider an unique chance to see wildlife that otherwise would not be seen. I would not like to see balloons used in national parks as I think those should be left as pristine as possible with as little commercialization as possible and of course wilderness areas should be off limits to all but otherwise with the proper regulations I think balloons would be a wonderful way for people to experience our public lands, national forests and wildlife.

I grew up visiting the majestic Grand Canyon National Park with my family as a vacation destination. Hiking the Grand Canyon with my family was one of the most impressionable experiences of my childhood which taught me about conservation, history, self-esteem, environmental stewardship, and the awe of nature. Outdoor environmental education is more important now than ever. As urban density threatens our experience and connection to nature, particularly for our youth, strategic government and nonprofit partners can greatly further the National Park Service's mission. These partnerships will ensure that more urban youth experience life-changing connections to nature that will inspire them to protect and conserve our national parks for generations to come.

An excellent idea, long needed. I would only add that the West is not the only area in need of such discussion and planning. There are areas of the upper Midwest that would benefit (northern Minnesota, UP of Michigan, northern Wisconsin) as well.

Discussion Question 1

Written & Online Comments

(cont.)

Educational initiatives that promote the concept of low-impact park use are necessary to inform the public about the need to maintain a balance between the two mutually inconsistent objectives of park resource management: preservation and access. Posters at access points and trail signs can be used effectively to emphasize the balancing objective of low-impact access and to promote such low-impact activities as hiking, cross-country skiing, Nature study, and photography while discouraging or prohibiting such high-impact activities as trail biking, ATV use, and snowmobiling. Educational outreach efforts to high schools and civic organizations can also be very effective in promoting the objective of low-impact access to parks.

National Parks are the perfect place to learn about our natural environment. All children deserve an opportunity to learn in nature's classroom, see up close what they are being asked to preserve and protect, and understand the connections these wild places have to their communities back home. We cannot create a sustainable future without education. People don't care about what they don't know. The government can help make this possible by collaborating with strategic partners that have proven success, streamlining processes to encourage these partners to grow and serve more youth in more national parks, and actively working with states, counties, and local school boards and communities to find ways to fund participation in these experiences for all students. What do you think?

In reviewing my posts with my wife, she made a good point. Instead of the different forest user groups fighting with each other, why don't those that consider themselves stewards of the land work together to educate the bad apples that exist in every user group to be respectful of our public lands? That way we could teach conservation while still allowing everyone to enjoy the beauty of our natural lands. I thought it was a productive comment so I told her I would post it on the forum.

To me, one of the best things we can do regarding transportation is to get people out of their vehicles. Places like Zion National Park have successfully converted to a system where people ride public transportation into the park and leave their cars behind. This kind of system reduces motorized impact, enhances the visitor's experience, and even enables people to meet other travelers. This can and does work!

With today's seemingly growing environmental calamities, it is ever more apparent that our youth today will be the guiding force for the preservation of our environment. To help facilitate their actions, it is imperative for them to experience nature first-hand through an educational lens. National Parks is a prime location for learning and observing pristine nature sites. It behooves the government to partner with educational providers and be a part of the movement for a sustainable future.

Establish a "no-strings attached" rewards program to highlight the delivered results of local communities' plans to achieve a favorable balance between private land developers and public outdoors advocates.

Discussion Question 1

Written & Online Comments

(cont.)

Soil and Water Conservation Districts (SWCDs) should be more fully utilized in the effort to connect the American Public with the outdoors. SWCDs have existed for over 70 years and have well established partnerships between private entities (businesses, community organizations, clubs, etc.), the Federal Government, state governments, and local governments. They provide local leadership to address many natural resource concerns and have staff that are trained and ready to implement the ideas that the local citizenry place the highest priority on. One of the main advantages of utilizing SWCDs is that they can provide the grassroots connections and leadership that are essential to the success of a program to connect the people of the United States with the natural world that surrounds them. SWCDs have proven to be a successful and efficient way to deliver many different programs to the people. In a country that has diverse natural resources and a diverse population, having a locally led program is the best way to achieve success.

I was wondering when you were going to bring this up. Of course, Mount St. Helens is already protected as a National Monument, and it has strong local support to be expanded to include five nearby lakes. However, to maintain local support, recreational access, and funding and management efficiency, it should remain under Forest Service management, but with direct line-item funding.

The President and Mrs. Obama should go camping in National Forests and National Parks. Look what Teddy Roosevelt did by camping with John Muir, even Jimmy Carter floated the Snake River. Give up the Ritzy hotels get those kids in the woods. What a boost that would bring to the "get outdoors" initiatives and "child in the woods" type initiatives in the great outdoors of the USA.

Establish an Ancient Forest National Park that connects over 100 wilderness and roadless areas into one manageable whole forest for the protection of wildlife migrations, and mitigation of climate change. The park would provide a solid block of ancient forest habitat stretching from the Yolla Bolly Wilderness in California to the Rogue and Elk Rivers in Oregon. It would also include all of the proposed Siskiyou Crest National Monument and Cascade Siskiyou National Monument, the Smith River NRA and the Oregon Redwoods. This is the forest where the myth of Bigfoot began. It's wild, wooley and outstanding, renowned for its biodiversity.

www.ancientforestnationalpark.org

www.ancientforestnationalpark.org Ancient Forest National Park is the only way this is going to happen.

The New National Parks Project is working on a list of 100 additions to the National Park system including those mentioned here. I strongly support their effort. www.newnationalparks.org

I keep hearing that the fed has no right to own land, bla bla bla. The legal system in this country relies on precedence. Over the years, the lay of the land and rights of ownership have changed. Get over it. When the constitution was written, there we're almost no people in the US and not nearly as much land. It's a different country now and to try to reduce everything to the original definition is absurd. The fed obviously has a right to own land because..WE DO!

Discussion Question 1

Written & Online Comments

(cont.)

Many communities have national parks in their backyards; we must expand opportunities for all Americans, especially young people, to learn from and be inspired by these places that hold our natural and cultural heritage. For example, at Santa Monica Mountains, the National Park Service has partnered with the Los Angeles Unified School District to bring 10,000 students to participate in one or more of the park's five curriculum-based programs. The students learn about water quality testing and restoring sites with native vegetation through firsthand experience; for the majority of students it is their first experience in nature. These types of educational programs should be scaled at existing sites and replicated and funded at other national park sites across the country.

"p.s. I'm not a mountain biker. But when a helping hand is needed on trail work, I find they are far more likely to pitch in than my fellow hikers are!" Glad I'm not the only one to notice that.

And let's also protect them from light pollution.

This is similar to the Americorps program - students trade time for a small (very small) stipend and tuition reimbursement - what about an expansion of the Americorps program? I believe the 'Teacher-Ranger-Teacher' program could also fit with this idea.

I agree and believe that environmental education, and getting kids outdoors is the key to lasting change for both our environment and the human spirit. My exposure to the National Parks and access to open lands as a child had a profound effect on how I view my planet and how I view my fellow man. Currently as a mom I can see the difference it makes in my kids when they are outdoors in nature. My son learns & enjoys his science studies more and is eager to see first hand what he has only read in books or been lectured on in class. We need more organizations that provide environmental education to ensure more youth from all walks of life make life-changing connections to nature that will inspire them to protect and conserve our natural spaces.

Creating and preserving more wilderness is the best thing we can do for our present and future citizens. A chance to experience nature in its pristine glory will not be possible if resource exploitation and road building continue at their present pace. Wilderness experienced on foot is the best antidote to the stresses of modern life.

There will always be disagreements over whose ideas are right and whose are wrong. At the end of the day the best idea is the one that people are out doing. We can talk things to death and generally do. Maybe we should run our mouths less and simply do more. It is easy to sit around a table or on the couch and pick other people's ideas and efforts apart. Each and every person has the ability to do something to help. We are very good at making excuses for ourselves. Expect less, Do more. Turn off the noise, go outside and look around. Can you find one simple thing you can do right now? Do it! Don't wait for someone else to do it. Everybody is someone else to someone.

Educate the offenders a simple article in the local news paper and a 5 min segment on the news will go a long way. Its usually a local problem and should be dealt with that way.

Discussion Question 1

Written & Online Comments

(cont.)

Our National Parks have a long history of providing education and naturalist programs for visitors and organized group outings from schools to hiking clubs to senior groups. Building on this history, I urge this Administration to expand programs that reach today's youth so that we are building the next generation of supporters for our great American outdoors. Environment education for our youth is more important than ever as we grapple with pressing environmental issues like global climate change and understanding the impacts of events like the recent Gulf oil disaster.

There are several places-- especially out West that deserve to be a national park and others that should be expanded. Here are some great examples: we should expand existing parks like Canyonlands National Park in Utah, San Gabriel Mountains National Recreation Area in California, and Oregon Caves National Monument in Oregon so that the system encompasses more of the Southwest's last unspoiled wildlife migration routes; intact ecosystems near a major metropolitan area; and matchless limestone caverns. We should also add new units like Mount St. Helens in Washington and Valles Caldera in New Mexico to represent ecosystem types such as the upper montane grassland and recovering cascade mixed forests. These sites are simply examples of the possibilities that can and should be added to the system. Not all public lands should be national parks, but there are certainly some places that deserve the highest level of protection and are nationally significant to all Americans.

Tie preservation trades to redevelopment of run down neighborhoods. Use structures to teach about wood window rehabilitation, masonry repointing, carpentry, plastering, decorative finishes. Teach young craftsmen about sustainability issues. Demonstrate the value of conserving historic fabric rather than replacing. Instruct on true energy efficiency upgrades that don't compromise the historic integrity of a structure. Teach sound maintenance skills, showing that "an ounce of prevention is worth a pound of cure." Team with cities and states to revitalize regions.

This has implications for more than feel good community gardens. Community gardens could serve as the insurance we will need if there is a national emergency--particularly one related to fuel shortages which could result in our not being able to ship food where it needs to go. This is also a powerful tool to teach children about life, where their food comes from and good habits for a lifetime. I believe this is the future and one that can support many new jobs--especially for women.

Discussion Question 1

Written & Online Comments

(cont.)

Decisions Based on Sound Science – Mohonk Preserve is one of the nation’s premier sites for the long-term collection of scientific data on weather, landscape change, and species. Preserve staff and research associates have continued to add to what is now a continuum of over 80 years of natural and cultural history records and 113 years of daily weather data—all collected uninterrupted and with methodological consistency over time. These records make up the oldest and most extensive natural history record in the Hudson Valley region. Because of the Preserve’s standardized field methodologies and breadth of information, researchers can compare current and historical data and use it in comparative studies with researchers both on the Preserve and from research sites around the country. Climate scientists, such as our partners at the Lamont Doherty Earth Observatory and the Goddard Institute for Space Studies, are examining phenological trends and long-term weather data to identify impacts of climate change on the flowering of plants and the range and arrival dates of neo-tropical migratory birds.

Complete Streets – Communities across the country are asking their planners and engineers to build road networks that are safer, more livable, and welcoming to everyone. Instituting a complete streets policy ensures that transportation planners and engineers consistently design and operate roadways with all users in mind –including bicyclists and pedestrians of all ages and abilities. As Transportation Secretary Ray LaHood has said, “Our goals are to provide cleaner, safer, and more efficient ways to get around. This investment by the Obama Administration in our nation’s communities will create jobs, boost economic development and recovery, and further reduce our dependence on oil.” Connectivity between parks, preserves, and communities must be high priority. DOI should be working closely with DOT.

FHWA Recreational Trails Program – The Recreational Trails Program (RTP) provides funds to the States to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. The RTP is an assistance program of the Department of Transportation's Federal Highway Administration (FHWA). Federal transportation funds benefit recreation including hiking, bicycling, in-line skating, equestrian use, cross-country skiing, snowmobiling, off-road motorcycling, all-terrain vehicle riding, four-wheel driving, or using other off-road motorized vehicles. Between 1870 and 1929 Albert, Alfred, and Daniel Smiley built the Mohonk/Minnewaska Carriage Road network to provide guests easy access to the majestic scenery that surrounded Lake Mohonk and Lake Minnewaska. The road network served as a model for John D. Rockefeller, Jr. in the development of carriage roads at both Acadia National Park and his Kykuit estate. At Mohonk Preserve his funding will be instrumental in replacing a bridge on Cedar Drive Carriage Road over County Route 6 thus restoring the continuity of the network along the Shawangunk Ridge.

Transportation Enhancements – Federal support for transportation initiatives that link destinations with each other and major transportation hubs are needed while ensuring access for all ages and abilities including:

- physical trail connections that link urban areas with nearby open spaces and waterfronts;
- transportation programs to support pedestrians and bicycles;
- funding to inventory and convert abandoned rail beds into trails, and improve existing trails for pedestrians and bicycles;
- increase flexibility in highway design to better accommodate bicyclists and pedestrians.

(cont.)

Can you all imagine how pleasant life would be if electric vehicles were on the roads instead of the noisy gas guzzling machines we now have? We could solve the noise pollution pretty swiftly if we all - Off Road Vehicles users, boat users, car drivers - bought into the electric engine idea. And hey, it would be good for the air, for the wildlife and for our security too.

Some of the arguments in favor of "managing" forests seem to be conveniently forgetting that natural ecosystems do a fine job of managing -- without human intervention. These arguments may be instead promoting logging. Fire has been proven to be a natural benefit to western forests. Go to Yellowstone NP & see for yourself how the fire of '88 has improved the ecosystem. Some plant species need fire to open their seed pods, such as the Lodgepole Pine.

Nobody except willing sellers. No eminent domain. Check out a non-profit that does this. www.wildernesslandtrust.org If you like them, join up, send a few bucks to protect what we love and what our kids will NEED!

Hey here I am. I live about as close to fed lands and the Crest as peopel in Siskiyou County. I WANT A MONUMENT.

"recognize all the hard volunteer work the off-road communities do to keep the trails maintained for everyone's use" Nothing that one does in furtherance of ones benefit is "volunteer" -- to volunteer is to work selflessly for the benefit of others. And nothing else can use the areas that allow motorized vehicles -- certainly not plants and animals. The noise pollution, the vibrations, the oil and gas pollution destroy wild areas, and ensure they will have no future.

There is no such thing as a "wealthy conservation group" -- most of the funds collected by the Sierra Club come in the form of a \$25/year membership donation. I've been to some of these meetings representing a conservation group -- on my own dollar, as are most such representatives. And I live in Los Angeles off \$20,000 a year. So stop with the uninformed and ridiculous characterization of those committed to the future of the planet as wealthy. Our true wealth is in our love of the natural beauty God gave us. Not like the wealth of stakeholders like ranchers and mining companies and fisheries and logging companies, etc.

I agree with the compromise in general; however, 1:1 is not really a "fair" exchange when you consider the impact of OHV use on the environment. I am not sure what the best exchange rate would be, but how about 10:1 - e.g. for every 10 acres designated as protected wilderness area, there would be 1 acre of "vehicle use" area.

Fantastic idea! What if every student in America, from every walk of life, every cultural and economic background, and every part of the country, got to spend a week on a National Park learning about its history, finding out how what happens in nature impacts what happens in their communities back home, and falling in love with our National Parks. A generation from now we'd have an unstoppable army of environmental stewards working to safeguard the future of our parks and our planet.

A worthwhile idea. Pro-health and pro-environment.

We subsidize driving, but pedestrians and bicyclists are underserved. This idea promotes healthy lifestyles and is environmentally-friendly.

It certainly does and would work, especially if there are sufficient stops with access to trailheads

Horse trails would allow families with young children explore the wonders of our parks. These trails could coexist with hiking trails and have a relativ minor impact on the land

I would rather see OHVs limited to maintained forest service roads. Let's not be quite so extreme!

I say let them on national parks when they make as little noise as a hiker or a horse rider. Until them, keep them out.

Glacier NP does it, too, but with a cool twist- all the busses are 1930's era, converted to CNG fuel. As for a fee for drivers, I would support that, too- if there is anywhere one should let go of one's attachment to a personal vehicle, perhaps it would be in a National park.

Irv, you are joking right? When I get off my dirt bike, I can feel every muscle in my body. You don't just sit, but use your whole body when riding. Of course you would know this if you ever tried it. Don't spout off on what you know nothing about. If foreigners invade, I will gladly stand next to our troops to defend this country-what about you?

Riding my dirtbike is quite a work out believe me, so yes it is heathy! My bike is quiet and I have see lots of wildlife!!

Lets make all Federal land preserves and keep everyone out. No one goes in no research no management. we can just look in through the fence.

Some of this may work in some areas. We have many areas in this country that people uses are everywhere. I think more should be set aside in a natural state, especially in areas that are not used presently by people and are still wild. Wilderness is not only set aside for people, but for survival of plants and animals, some that are already endangered. Most human activities can take place anywhere; farmland, parks, private property, etc.

Enjoying OHVs is great. There should be enouph space for this activity. But try taking your helmat off in an isolated area and listen to the sounds of the forest. Enjoy the solitude and regenerate. Maybe there is more to life than rip roaring around, which can be done anywhere, not only in wild places. Some areas should be left wild.

(cont.)

Off road vehicles have their place but their proponents seem unwilling to really see the damage they do. It is true that in relatively lush areas damage is quickly grown over--unless it's in a place where water concentrates and erodes it into a gully. But in the desert it not only can take centuries for a trail created by an ORV to disappear, but because it's often pretty flat with sparse vegetation, riders very often go off on their own, leaving tracks that'll be there for a very long time. I have yet to hear of a quad or ATV that has differentials for its driven wheels. This means that every time the vehicle turns, one or both of its driven wheels must skid--and if you'll take the time to look closely at the tracks left by one, you'll see that every turn will have some degree of damage because of that skidding. In the desert where my wife and I spend the winter there are ATV trails everywhere. You can still see the tracks made by army vehicles training during World War II--and the new trails will last at least as long. In addition, the dust kicked up by these machines literally clouds the air--it often looks hazy even when the air is very dry, and you can see the dust rising in the distance every time one goes by, and the noise at the peak of the winter season is almost continuous and is audible for miles. So. While I can empathize with ORV lovers, and when I was younger did my share of dirt bike riding, It seems to me that proponents of these machines need to set their emotions aside and take a serious interest in seeing just what the real affects on the earth their machines have--and with that knowledge in mind make proposals that genuinely take these affects into account. You might encourage manufacturers to create machines with differentials, for example, as that would significantly reduce the impact those machines make. And seek to design trails that minimize impacts. And acknowledge that there are impacts on wildlife that may be very hard to see, on nature in general, and on people that need to be taken into account.

And I hope that when your children are of age, you can still walk to see these lands. I too believe that setting aside lands as Wilderness are needed. But when do you think we will have enough that actually meet the criteria set in the 1964 Act? I believe we are there now.

At the Grand Canyon, I was delighted to find that the western arm of the rim road had been closed to private cars. This allowed visitors to escape the crowds around the South Rim commercial establishments. Can something similar be done in other parks? Decades ago, Yosemite proposed closing out all cars except for overnight visitors. Instead, why not block cars from the roads that reach into the valley beyond the lodges?

I was a tour guide for an atv company on the island of Kauai. We had trails that we would use that were placed to show the tourists the area, the native plants, the local historical spots, the swimming pool. All of this was on well thought out trails that would have a minimal impact on the local environment. There was NO going off the trails. This was both to protect the area and the tourists.

What was the deer doing? Was it a buck, a doe, a fawn? Was it a blacktail, whitetail or mule? How about the other animals? What were they doing? How long did you watch them? Did you learn anything from them? See how easy it is to "love the outdoors" at 40mph?

Discussion Question 1

(cont.)

I don't like to hear my neighbors come home via their radios blaring. I have never done anything at home or camping to bother my neighbors. I go to sit and be a part of the forest, watching the trees, clouds, sky, birds, deer, elk, plants--the eco system. I listen to Indian flute music quietly. When I leave, no one can tell I've been there. I grew up camping and fishing. My daughter grew up in camping in Washington. She is in the motorcycle business. Neither of us expects to hear the roar of engines while camping. No one ever had to teach me not to litter. I have always respected the environment. Camping has exposed me to other people's ideas of camping. TV's, music, pot, litter, and the roar of engines. Quiet, please. Listen to the forest, the water, the birds, the fog, even the heat. Do not bring the city with you and thrust it on your camping neighbors and creatures of the forest. Leave it like you found it OR better.

Since OHV's damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forrest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

Public lands should be open for ALL users! Not just those who claim to have a better appreciation of nature and the outdoors because they're anti-OHV. My 4x4 vehicle gets me to remote and beautiful areas that are rarely, if ever seen and enjoyed by many of these so called nature lovers.

Yes, thank you Mathew. Let's hear it for my wilderness designation. Open spaces are necessary for life to grow as it was intended. So much natural habitat for animals, native plants, and birds is destroyed by what--malls, and more houses? We need to be stewards of life.

I've always wondered about a country who bases its economy on building buildings. That's why basing the economy on conservation and clean energy is a much better idea. Yes, some areas will have to be destroyed for that as well, hopefully with much study by scientists concerning the impact of alternative energy sites, but why is "development" even necessary. We have put under concrete some of our very best farmland, which a lot of times exists right outside of cities. Support local food production and organic farming. Get rid of the 50 little townships in a county, each one's hands being greased by the local contractor, and have real county and state planning about what to do with existing farm and wilderness areas. Start teaching our children about our connection to nature.

Keep America free. By limiting ORV use, we will also limit imported oil use, thereby stopping the terrorists who threaten our freedom. We are the only society who use massive amounts of fossil fuel to "recreate". Stop ORV use --- stop terrorism --- keep America strong and not dependent on terrorist regimes.

Discussion Question 1

Written & Online Comments

(cont.)

The wilderness belongs to the plants and animals who take refuge from our lifestyles in protected areas. We have an obligation to keep them protected. Compared to what we have destroyed these are precious acres of natural habitat. ORV's or careless campers and hikers damage wilderness areas. To respect the land we must keep our footprints small and our responsibilities to the wilderness always in mind. I have always believed that we are obligated to encourage that small footprint and keep out motor vehicles of any sort. Let us also ask campers sign on to pack out what they bring in. I camp. I'd be glad to sign on to that. This is our only planet. The interdependence of species is remarkable. Alas too few of us search to understand it. Our species cannot exist if we keep destroying the natural areas we have left.

In a world of roads, our national parks are about the only place I can go to get away from the noise of our times. I used to walk in the Ocala National Forest and nearly be run over by motor bikes that were so fast they seemed to appear through the brush before I could even hear them. I would dive to the side as they whizzed by. Naturally I could never ride my horse in these areas as the scare of a rapidly approaching bike would scare my horse and have me killed. I think the woods is all about the quiet use of the land. Leave the motors out. This is a opportunity for motor bike enthusiasts to buy their own land and whiz around all they want on it. It is no place for conservation and national pride in wild lands. This is about preserving for our grandchildren, as our grandparents preserved for us. This isn't about racing or bringing motorized vehicles in to the woods. I am so grateful my Great Smoky Mountains National Park does not even allow the rangers to use chain saws except for one week a year to preserve the silence and the peace for the animals.

Giving humans more access has never been a good thing for animals or forests. Leave Wilderness lands wild and free of humans. We have so much area yet animals have so little.

G G OHV already pays to ride on the land. We pay with our offroad registration. We also dont go out of our way to kill all the wildlife we see. It would not be fair to have unlimited access to the land in an OHV but we still have the right to some of the land and right now the ratio is of balance. G G you are wrong

Logging crews are kind and gentle lets invite them all in. After the current administration is through I guess we can sell our natural resources to pay our outstanding debts.

I'm sorry I was wrong. I think I'll buy an ATV so I can see much more of the great outdoors.

Please research Interlake Offroad Park in Lynnville, Indiana It is a multiuse park where motorized and equestrian are all in the same park and share alot of the same trails. My wife and daughter have horses and I ride them alot myself. telling people thaty horses and motorized vehicles cannot coexist has already been disproven.

(cont.)

Wilderness areas provide recreational opportunities that other public lands do not. Perhaps this is not apparent in all areas of the United States, where public lands are plentiful, but in Minnesota, the Boundary Waters provides a unique opportunity to enjoy recreation in a different way. I can't get the same experience anywhere else in the state. I recognize that this is not a true wilderness, being managed by man, but it is the closest we can get, and for that reason it is valuable. Motorized boats and vehicles have opportunities to recreate in other parts of the state, but to canoe in total isolation without the hum of a motor is something difficult to obtain elsewhere than in the wilderness. In addition, the Boundary Waters Wilderness is currently threatened by a mining project as well as cell phone towers within its sightline. I respect ATVers having areas for their recreation, but they are plentiful in the state of Minnesota. I hope they can respect my desire for an area for those who enjoy as close of a wilderness experience in the Midwest as possible.

Glen, actually national forests can be open for logging, building roads, etc. Wilderness areas get special protection. Put poetically in the Wilderness Act of 1964: "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and community of life are untrammelled by man, where man himself is a visitor who does not remain." It recognizes the limits of man's ability to manage things and that some areas should be left to be as God and nature will have them.

OHV use is absolutely sustainable. Here in Colorado we have many OHV groups which self police. We maintain and actually care about our trails. I myself have spent countless weekends on service projects working with the Forest Service to repair damage and prevent erosion. There is room for us all.

The park buses were great in Yosemite. I would like to see that system in Yellowstone.

Edward Abbey wrote along these lines in one of his books. He took it even further and suggested that we allow paved roadways in national parks to deteriorate without being repaired or replaced. Only shuttles for those unable to hike to landmarks would be allowed inside. There is no place inside our most precious places for asphalt and exhaust!

Public lands are there for the public to have access to, but not to abuse or destroy. If you want a place to tear up with your ATV, then "pool your cash, find a piece of land that's for sale and buy it" and then you can do whatever you want. No one is shutting you out, we are just asking you to respect the land and the people who are enjoying it. These lands aren't worth designating as public if we aren't protecting them from destruction. Lets just sell them to Disney and let them put in an off-road theme park.

I think the Denali bus system is a very good model. There seem to be plenty of busses and the drivers expertise and commentary make the experience more rewarding. I also like the ability to get off to take a picture or a stroll and get back on the next bus. I think if you try this system you will find it is much better than driving yourself around.

Discussion Question 1

(cont.)

The places you describe already exist. It is called the national forest. No further designation is needed. Man and wildlife coexist all through our national forests.

I agree "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and community of life are untrammelled by man, where man himself is a visitor who does not remain." So lets please stop designating lands that don't meet the stated criteria as "wilderness"

Yes wouldn't it be nice if we all had access to the our national lands and we didn't try to exclude each other.

The President used to have the role of providing to Congress the findings of agency experts and field personnel, so that wilderness recommendations didn't just sit on agency shelves in the land management plans, but actually were delivered to those who make the decisions on what public lands to include in the National Wilderness Preservation System: members of Congress. Wilderness is the gold standard for land protection and recommendations by the various agencies ought not to simply gather dust, requiring land managers to protect the land in the interim. Presidential leadership is necessary.

OHV/Multiple use in our forests helps reduce illegal drug operations and therefore is safer for my family to visit. We don't want more land. Just give us back what was taken away and let us build more trails on what we have! We will even do the work! Oh and Irv G. You have no clue the physical and mental ability it takes to learn how to ride an OHV well. Walking a kid through a forest where he/she can be attacked by a bear or mountain lion or fall from a cliff or lost may be child abuse as well. Yet it is worth the risk isn't it?

Wilderness is essential for the future; I hope that my grandchildren can see the beauty of our natural environment as I have been privileged to see it.

OHV is not unlike any other recreational adjunct and can find their own land to play on. We don't allow mountain bikes nor monster trucks on National Parks lands; There is no good reason; reason means : consecutive logical thought; to allow OHV on or in our National Parks.

I give nothing but the most respect to our public lands and I'm pretty sure I'd be safe by betting the next ten years of paychecks that the OHV crowd have picked up more trash left behind behind all users than any tree hugger group.

We have enough Wilderness. Creating more just confines all of the other outdoor recreation not allowed in Wilderness into smaller sections of land, and becomes over crowded, and overused.

Wilderness is a "one size" fits all approach to conserving land. It needs to come in many "sizes". What works well in one part of the country does not work well everywhere. Some areas would be perfectly suited to OHV use, while others might not. To me, the key to conserving land, means having as many people with a vested interest as possible, and the best way to do that is to have all user groups come together and compromise.

Discussion Question 1

Written & Online Comments

(cont.)

I have a jeep that I like to ride trails with. I stay on designated trails and drive respectfully to nature and other users of trails. Tread lightly as they say. But being partially disabled, I would not otherwise be able to enjoy these beautiful lands we have. There is a middle ground here. Both sides can enjoy with some rule enforcements. Hikers too cause damage, just look at all the wildfires that are caused by irresponsible people. We ALL have to act responsibly.

5 My feet get MUCH better gas mileage than your motorcycle. Motorcycles and Prusus are not elements that occur naturally in nature, feet are...

Not all Public Lands are appropriate for all the used you listed. For example, Acadia National Park has facilities for tents and campers, carriage roads for walking, running and biking, horse trails, and an auto/motorcycle/bicycle road. Many of the Nat. Parks in the south west have four wheel drive vehicle roads and hiking/walking trails in addition to the regular auto roads. But, there are some places where the terrain and/or the wildlife are intolerant of anything more than the auto road and the hiking trails and walking paths. It seems that each public land entity should be studied separately to determine what is the "wisest long term use" of the land.

Zion and Acadia do it - why not more? The buses I've taken have all been clean and the drivers friendly. And the greatest part of this idea is you don't have to find a parking spot - or maybe not stop where you want because there isn't a space left.

This has already been implemented in Zion National Park and works perfectly.

Limit, yes. Completely restrict, no. Good points.

I have mobility issues, but I still don't want any more OHV/ORV access in our park lands and wild lands than is already there and would actually prefer that most of the existing access be revoked. The erosion, noise, pollution and disruption of wildlife are not worth it! Wow I think that its great you have a choice to make all on your own and nobody is making the choice for you,your living proof this is what America is all about, does everybody remember the song this land is your land this land is my land....

Noise is stress: for animals, hikers and campers. Seek peace, leave your internal combustion transportation home and walk or bicycle.

Discussion Question 1

(cont.)

Your statement: "My daughters and now my grand kids explored and appreciate the great outdoors while riding a motorcycle on U.S. and WA state public property. The enthusiasm and enjoyment experienced by our kids could never be matched by a more sedate and conservative adult activity like just walking around. Kids need to be excited about getting out and doing something and orv use gets them out there and away from Madison Avenue things like Wii and game boys."shows you are still promoting manmade concepts over nature. Do you honestly think your children and grandchildren can not be excited by nature? If that IS the case then you are at fault, at least for the perpetration of the concept to your daughters that excitement can only be accomplished by speed and or machines. Getting kids away from machines (wiis, computers, motorcycles, ATVs, dirt bikes, and even SPORTS) is a way to enjoy things as a family. How can you even remotely suggest that using motorcycles is a 'cheap' way to entertain your family? Obviously you have no concept of environmental pollution. Pollution involves more than just the emissions of gasses or garbage. Pollution also pertains to noise! Getting away to a forest for a weekend of camping (free of MP3 players, music, TVs, etc.) provides MANY INEXPENSIVE ways to entertain a family. You are showing a very narrow mind set and you are cheating your family of many things of the so called 'slow life' you mention in writing about walking/hiking/camping, etc. My daughter went camping/hiking with me from the time she was a preteen. Today we still go, but not as often as before because she now has a family, I'm involved in caring for aging/ill parents so it's just that time isn't as available for the two of us as it once was. BUT I am thrilled to say, even in my absence, my daughter is taking her daughters camping/hiking and teaching them to enjoy things away from TV/MP3/wii/computer, etc. They are just as excited when they see birds or other creatures they don't get to see in their suburban neighborhood as they are when they get a new game or see a new movie. Probably more so because they realize this isn't something that comes to your door and knocks. You have and are short changing your children and grandchildren if you are teaching them that excitement/relaxation/family fun can only be obtained by speed or motorized vehicles of any type. The very fact that you haven't even considered taking them camping while on those motorcycles shows your narrow minded concept/idea of recreation/relaxation/enjoyment. I know people who have motorcycles and they pack them (they can travel further on a tank of gas than even I can with a small vehicle which gets 32 mpg), travel along scenic routes enjoying the sites and then settle in an area for camping/hiking where they enjoy nature for several days. They go as a family and have a wonderful time. No, they don't use them on the trails. They hike and walk. Great exercise, great learning, and enough new experiences to keep all of them excited by nature. I know they enjoy their motorcycles, but they also enjoy nature and show respect for the land as those who do travel at a leisurely pace because they know the BENEFITS/ENJOYMENT/EXCITEMENT of NATURE as well. With your views, I feel greatly sorry and sad for your daughters and grandchildren. It's obvious they will miss so much this world has to offer. MY DEEPEST SYMPATHY AND CONDOLENCES TO YOUR FAMILY FOR THEIR LOSS.

Discussion Question 1

Written & Online Comments

(cont.)

For those riders who say they like to hike, I want to laugh. I've seen NO ATV or DIRT BIKER hiking anywhere and I do know some who use these vehicles as 'entertainment and competition. THEY DON'T HIKE AND FOR THE MOST PART DON'T CAMP. It's become a personal joke between us. So it's laughable when I read responses that say they like to hike. While we're on the subject of impact on the forest trails from hikers, I'm one of those who pick up after those who have gone before. I'm one of those who DOES NOT LEAVE THE TRAIL! I'm one of those who believe that every trail should, for the benefit of Mother Nature to healshould be shutdown for at least one year. It would not hurt any of us to have the areas rotated and specific trails, hiking area and camping areas closed for one year in order to allow nature to 'heal' from what impact we do have on her. So far, my feelings on that subject have not been listened to. The only time a campground is closed is because it was damaged by severe weather over the winter and they are clearing it, but this doesn't allow sufficient time for nature to heal itself. The same goes for camp grounds. The only time I've seen one closed was because that specific campground decided it was time for an upgrade of features, resetting tent pad sites, doing some repairs where rain water run offs was causing erosion, etc. It wasn't just closed to give 'Mother Nature' a year off to heal. As for fees and costs. I've have maintained that fees should be raised. Not only would it help the parks and trail systems, but the increased fees might make those who are not dedicated to nature out of the environment. Easier to find a free or cheap man made 'water park' or other 'entertainment' area to have a little fun. Those of us who travel (and I have to travel a pretty good distance to get to a 'nature area free of motorized vehicles' (other than one government military facility which excludes all motorized vehicles from trails other than parking two small parking areas. The road (much larger than a trail in some areas) is full of runners/joggers/walkers and ALL are on their own two feet. They allow horses which are kept on the grounds, but in all my years of visiting this area on a military base, the only place I've seen the horses was on the grounds where they are kept which. There are riding rings etc. They are allowed on the trails, but I've never seen anything to indicate they have been there. Maybe that is because they are not there in great numbers. But I certainly don't see any 'impact' from them. If I have to travel for more than an hour to find a nature trail where I can spend time walking, hiking and just enjoying what 'Mother Nature' put there, I certainly don't want to hear the buzz of a motorized vehicle. **MOTORIZED BIKES, ALL TERRAIN VEHICLES, AND THE LIKE ALREADY HAVE PLACES WHERE THEY CAN CREATE MAYHEM ON THE EARTH. KEEP THEM IN THOSE AREAS AND OUT OF OUR PARKS, OFF OUR HIKING TRAILS AND OUT OF OUR PUBLIC OWNED FORESTS!** I do my part to keep any place I visit cleaner than it was when I arrived. I hike out more than I ever carry in and I consider myself very environmentally aware of what I do to the forest. I still remember a friend who went hiking with me years ago telling me "When you have to step on a root of a tree while hiking, ask the tree for forgiveness." That particular friend is almost a 'woodsmen'. That friend could survive in a forest with nothing more than the bare essentials. They taught me a lot. I'm aware that every time I use a trail, I do make an impact. I travel light, light footed and I stay on the trails. Perhaps the answer it to alter the trails in some areas at times. That would decrease the 'foot fall damage' of our feet, but again, that is the same as my original suggestion of closing down areas for a year to give 'Mother Nature' time to heal from the impact we do place upon her in designated areas.

(cont.)

i am off road and love the outdoor,nat forest are pubic land

ohv uses is not change climates ,off road for environment more wilderness group

we ride on trail not off trail, also call pubic land

ohv Great for Family get out in to outdoor

OMG - don't you guys have anything else to do? Post your idea, vote on someones, and then go out and do something positive for the environment, before we lose it to pollution and plastic bags.

my motorcycle gets better gas mileage then you prius. I ride right past deer and other animals all the time they don't seem to be bothered by my motorized vehicle. I ride my motorcycle on trails that have been planned out, careful consideration is payed to issues like erosion and sediment pollution because of water crossings and all sorts of other things... MY motorcycle is safe for our trails, we have spark arresters, and decibel level requirements, i'm way safer then your coleman grill.

Someone suggested user fees for equestrians. That's something that many horse owners do thru local riding club memberships. Trail maintenance and improvements come from that funding mechanism, supplemented by club fundraising efforts. Many have spoken well here on behalf of keeping motorized vehicles off of federal hiking paths and I support that. This is an either/or thing: pedestrians and horses can not coexist safely with motorized vehicles, no matter how responsibly the machines are handled. By having a motorized vehicle there, that does not give someone the right to infringe on another's enjoyment of that area, but that's what occurs. Noise, fumes, and risk of bodily harm are accepted by the OHV user. Non-OHV users do not accept those negatives, but have those forced upon them. These two user groups must remain separate.

I think this is such a great idea. I would have LOVED to not have to drive everywhere when I was in Yellowstone. You could get to know other campers and save so much trouble! Not all the parks have enough people to justify this - but many of the bigger ones really do.

I think there is plenty of land available that some areas can be used for ORV recreation. Just because it is not a recreation that appeals to me does not mean it should not be available. ORV enthusiasts deserve a place to enjoy their recreation, too.

I am not an ORV enthusiast but I know several who are. These folks are very respectful of the environment. The statement that "People who drive off road vehicles have no respect for nature or the rights of others" is a gross generalization. I think there is plenty of land available where some areas can be open for ORV traffic.

The Trust for Public Land and The Nature Conservancy are outstanding examples of cooperation -- public and private -- as well as with landowners, State Departments of Conservation, etc. who work together to manage/preserve/conservate critical habitat and other areas in conjunction with existing state and federal agencies. The Internet has only served to increase awareness and participation in the effort as well as offer more hiking, kayaking, etc. in obscure, remote places. The President can visit one of these areas and encourage Federal agencies to increase cooperative efforts.

"Leave No Trace" website: { Link } Plus restoration of land, water, and air for the intended purpose of sustaining life. Develop specific areas where the intended use is proven to have zero impact on the biological life cycle.

"Our future generations need the opportunity to enjoy this place in the same way we do today." Exactly. Leave it just the way it is. No wilderness designation.

A proven model with a solid track record of success - absolutely, more can and should be done on the federal level to strengthen and extend this method of achieving several positive outcomes.

I am a HUGH supporter of having as many opportunities as possible for everyone to enjoy their passion. A HUGH supporter of Multi-use trails. I understand and share your frustration and animosity that comes from that frustration. But I have a problem with part of your idea – “All recreational trails should be opened...”! That word “All” is so inclusive that I take it as meaning to open designated wilderness area trails, The Pacific Crest hiking Trail, and every hiking trail that there is. Not sure that is the best for all aspects. Do we need more single track and/or Multi-use trails – ABSOLUTELY. Do we need to prevent any further closures of what is now open and available – YES! But to flat out make every trail there is in this country in to a motorcycle trail is not a viable solution. I have a tendency to read into some people’s ideas and take them out of context – am I wrong with what you are trying to achieve here?

An amazing and expansive area worthy of permanent protection. A great place to remember how big and beautiful this country is.

Both TPL and TNC are getting public funding. They are endowed with millions and work with land transfer/stewardship/easements, etc. for critical habitat.

Can anyone tell me specifically where they are closing all these OHV trails? I was just out in Moab and it doesn't seem that there is a loss for OHV trails. There are numerous Federal, State, Local, and private trails in that area. Why doesn't the OHV crowd come up with some real tangible ideas rather than just say there needs to be more trails and less wilderness.

(cont.)

Here's an idea that is actually working in northern Minnesota and the Border Lakes Region. The Heart of the Continent region: Spanning the international border between northeastern Minnesota and northwestern Ontario lies an natural treasure: the largest expanse of public greenspace in the heart of North America. This 5.5 million acre (2.2 million hectares) landscape comprises a blend of working forest, rugged scenery, pristine watersheds, abundant wildlife and outstanding biodiversity. Several separately managed natural areas are encompassed by this ecosystem at the "heart of the continent," including Quetico Provincial Park, Superior National Forest (including the Boundary Waters Canoe Area Wilderness), Voyageurs National Park, Grand Portage National Monument and numerous Minnesota state forest lands and parks and Ontario provincial parks. (See map.) The Heart of the Continent Partnership: The Heart of the Continent Partnership is a Canadian/American coalition of land managers and local stakeholders working together on cross-border projects that promote the economic, cultural and natural health of the lakes, forests and communities on the Ontario/Minnesota border. From out of a broad collection of separate entities, the Partnership is seeking to develop a common identity and sense of belonging to the larger cross-border area. HOCP Mission: The Heart of the Continent Partnership seeks to sustain and celebrate the health, beauty, diversity and productivity of the natural and cultural resources of the border lakes region through collaboration to meet the needs of present and future generations. Benefits of collaboration: The most important benefit of this four year effort is that groups that traditionally have not worked together, many of whom have been actively antagonistic, are getting to know each other, build trust, and find ways to work together for everyone's benefit. As the stakeholders in this Heart of the Continent region collaborate, there are many benefits for land management, conservation, science research and the local communities. Within the HOCP collaborative, groups are meeting to talk about a shared vision for the larger landscape. Through this dialogue, groups are finding ways to reach across the organizational and international boundaries and work together on common goals and cross-border projects. In addition, public land managers at the federal, state, provincial, and county levels are starting to coordinate their efforts in ways that improve the land and connect with local communities.

Humans NEED a healthy natural ecosystem to purify the mess we make. Nature recycles our water and air, and even sets the tone for our climate. Without nature humans DIE. Therefore the needs of nature ARE human needs.

I agree!!! In addition to comments about the benefits, I think they would also gain a very positive feeling from working in the outdoors which could have such a great effect on all areas of their lives - from prisoners to the short-term unemployed. A good dose of nature can yield wonderful things!

I also hunt in southeast Oregon, regularly, and fully support protecting the wonderful hunting opportunities in southeast Oregon by permanently protecting this magnificent landscape.

I also hunt, and I also support setting aside protected areas for the animals and ecosystems I hunt near to be preserved. Everyone wins when we preserve wilderness. And when I'm not hunting, I can go to these places and get away from 4-wheelers and .306's. That's more choice, not less.

(cont.)

I am in favor of more federally preserved land.

I figured that. I think most people who care about the environment would be pleased to have more protected wild land.

I have been seeing many responses that decry "wilderness" designations as detrimental to people using the land, but as finally noted, we need to allow space for all the flora and fauna to live without disturbance. We don't truly "own" this land anyway--it was here long before we were, and hopefully will recover once we are gone.

I love this land. Among other things, it brings back memories of fabulous keg parties in my younger days. :-) The landscape is incredible, especially along the Idaho/Oregon border. That 100 miles south of Burns Junction .. not so much. I also remember thousands of jackrabbits out there. Used to be impossible not hitting them on Hwy 95. Now I don't see any.

I strongly agree. Wolves are an integral part of the animal and plant habitat. Studies have shown how elk and deer herds have devastated watersheds when their populations are not controlled through natural predation. Hunters don't fill the same role as wolves.

If the river corridor and adjoining sage lands are protected, then hunters can be assured that the game remain connected to the ecosystem and will likely remain in healthy populations. The whole notion of protection there can be understood as game management.

If we can wean ourselves of motorized entertainment the world will be a much better place for everyone .

In my city the parks and recreation department is well diversified and includes managing outdoor spaces for public use, regular outdoor performances of our municipal band in the many parks around town, and just for fun courses like figure skating, dance, sewing, cake decorating, composting, organic gardening, golf, tennis, creative writing, painting, photography and so much more. Not all are free but most are more accessible with low cost for introductory level courses through parks and rec. Most of the courses are privately administered but connected to parks and rec because it gets them a way of finding new students. I found many of my lifelong passions in some of those classes. And yes they do make this a much better place to live so they are worth having. The public skate parks for skate boarders saves us money on damage to our infrastructure because the skaters have a real place just for them. Rather than damaging every low wall or stair rail skateboarding all over town. So it is worth having. The bike trails reduce the need for EMT's to take care of cyclist who got hit by cars so they are worth it. Nice well maintained recreation areas are easy for police to keep free of thieves. When the local law abiding citizens are using recreation areas as intended the drug dealers have a harder time setting up shop. But who wants to use them when they are not well maintained? Answer: drug addicts and dealers.

In New York, the Conservation Partnership Program is a pioneering initiative that really works. This program helps landowners leverage public funds for land protection while supporting local, community-based land trusts. Through the Partnership Program, New York is building strong local land trust organizations that can implement best practices and effectively conserve farmland, working forests, community gardens, recreational areas, important wildlife habitat, and watershed lands that provide drinking water to millions. The genius of this program is that it invests in local land trusts, which helps these organizations better serve their community. To date the Partnership Program has invested \$4.5 million in 67 local New York land trusts, leveraging more than \$10 million in additional funding for community-based conservation from Long Island and New York City to the Hudson Valley, Finger Lakes, and Adirondacks. This program is both effective and politically popular because its impacts are local and tangible - it creates jobs and supports the economy by supporting farmers, tourism, outdoor recreation, and smart growth. The Partnership Program should be considered a national model. It is a successful way to invest in community-supported land trusts and local efforts to conserve special places and the natural resources that are vital to our public health, and our economy. The New York State Conservation Partnership Program is administered by the Land Trust Alliance in coordination with the NYS Department of Environmental Conservation. For information, go to: { Link }

It is often assumed that the Great Outdoors refers to the exceptional nature preserves of our nation. Yet more than 80% of US citizens live in urbanized areas. Comprehensive planning and management of urban greening is also needed. Nearby nature - including parks, urban farms, street trees, the urban forest, green belts, and gardens - generate many human health and well-being benefits. 40 years of studies provide evidence about why nature in cities is also "great." A web site at the University of Washington shares this knowledge: { Link }

I've seen the Imperial Valley before the ATV craze began and since. It is not in a better state since. Nature there was fragile before and wherever ATV's have been is mostly gone now.

Please stay on topic and try to limit the political crap. I think this is a great idea with multiple benefits. 1. restored national lands free of litter. 2. pride of usefulness and accomplishment of participants 3. Cost effectiveness. 4. exposure to the forest for those that don't have the means to get there "reconnecting people to the outdoors" 5. educational aspects of service from our communities Thank you for a great out of the box idea.

The Forest Service is doing a better job of multiple-use management now than anytime in the past, because they are giving more emphasis to ecosystems and sustainable public uses such as recreation. Let's not return to the "multiple use" of the 1950s, when logging was the only priority.

The national park experience is a reflection of the original idea for the creation of the national park system. These places signify tranquility, beauty. If one is not capable physically or mentally to enjoy these places in a tranquil manner, then zipping through on a four-stroke will not provide enhanced enlightenment. Muscle power all the way! Allowing off-road vehicles will recruit alternative personalities and mentalities to the park system. Over population is a bane on the Earth's natural resource which the NPS represents a last bastion. The park system should also reflect the nations resolve to evolve beyond fossil fuels. Lets keep our foot-prints small within and outside the National Park System.

The Owyhee is an extraordinary gem. Wilderness protection would be a superb legacy we could leave for future generations.

The Owyhee region of southeastern Oregon IS one of those places well worth preserving. As wilderness, hunting rights are protected. As the land is preserved (i.e. no new roads are built, soil erosion is virtually eliminated), hunting improves. Just because some will not be able to access hunting grounds via their truck or quad, does not mean that there will be no access; just no mechanized access. As such, the area will be improved for all who use it.

The Owyhee sounds like a place well worth preserving. I hope to visit there some day, but if not, at least it will be around for future generations to enjoy if it is made a National Monument.

There are too few places left in the US that are truly wild and remote... this is one of them. Oregon's percent of wilderness is woefully small. This area deserves more and better protection.

This area is already being conserved. It is national forest. It does not need any further designation. It works exceptionally well just the way it is. Please conserve the way it is and let us enjoy the benefits of this great area by allowing us to go there and be part of it.

Turn off your television, shut down your computer, leave your cell phone and iPod at home. Take a trip to some remote landscape and spend some time listening to the nothingness until you start to hear everything; you will find more you're more alive than you ever thought.

We have a similar Watershed stewardship program where I live. It's funded mainly by donations and grants and staffed predominantly by volunteers who work with dedicated paid professionals. It's fun, educational and effective.

What wilderness is left does take precedence over human uses. There are plenty of areas outside of our little remaining wilderness for human uses. I totally agree with Aron.

Work together, work local. Sounds like a good idea to me. There is no one size fits all in our diverse national lands.

Yes please complete the trail and allow it to be open for multiple uses. Share the Trails and tread lightly.

(cont.)

Mother Teresa said, "It is necessary that we find God, and God cannot be found in noise and unpeace.... See how Nature--trees, flowers and grass--grow in stillness; how stars, moon and sun run their course in silence. The more we receive through quiet prayer, the more we can give in the activity of our daily lives.

"ATVs...are here to stay?" We pray not. 150 years ago people said "slavery is here to stay." OHVing is unalterably destructive to the planet. Eventually, saner and ethical heads will prevail. Managing OHV trail system is best done by eliminating them.

Absolutely, anyone who shows a lack of respect and a lack of love for nature has no business being there. Nice try but this still does not mean ohv users should be given access to national parks and wilderness areas.

Agreed! And how about helping decrease our dependence on foreign oil!

America's public lands are meant for the American people--not special interests like mining, drilling and logging companies. Therefore, the government should promote recreational uses of public lands, and should give priority to the American people whenever there is a conflict.

Are you honestly comparing Slavery to ATVs...?

As much as I enjoy going out and visiting nature and wildlife, I agree with you. Some of our wild lands need to be completely protected from human use, with the exception of research and stewardship to maintain and protect said wild lands.

Comment 5 is a really awesome idea. If there was a trail such as that one could spend a lifetime seeing the wonders that are out there coast to coast. It should be put up as an idea if it hasn't been already.

Control use of our national parks and wilderness areas to provide a true wilderness experience. Some areas should be set aside for mass use via vehicle access. The vast majority of the land should be set aside to provide a true wilderness experience minus any motorized vehicles or equipment. Studies should be done to evaluate what level of use is acceptable and then control access via a permit/ day use system. this way the level of experience can be controlled to provide the most natural experience possible.

Count me in as supporting muscle-power only in our parks and recreation areas. If we really must have motor-driven vehicles, please keep them in designated areas.

Designate certain days of the week as non OHV days. That way hikers and backpackers seeking the sounds of the wilderness and encounters with wildlife won't be frustrated by listening to motorized vehicles and raised voices. You're not gonna see many animals with that racket. Hopefully this would reduce the antagonism between the two groups

(cont.)

Do us hikers not drive to trailheads? Do we not live longer if we are healthier? I think instead of alienating the OHVers, who will never completely go away, we can increase public OHV education regarding personal safety and local environmental safety. We can remove OHV trails that cross back and forth over stream bed and riparian habitat, as they recently did in Georgia. We minimize greed by recognizing the number of existing miles of ATV trails and the number of existing areas of Wilderness, Wilderness Study Area, and wilderness-character lands and try to keep them balanced. There are many more ways we can deal with climate change because the ATV-guzzlers are not the ONLY ones to blame, even though they do use a lot of gasoline. How about a hybrid ATV? Solar panels and local noise factor! That would be a great way to improve the industry.

Does anyone know what wilderness designated lands are out there. I have to admit, before this I didn't know how many there were myself. I think we have adequately set aside important lands. So why do so many what to keep everyone else out of the forest. We should all be allowed to visit the forest and enjoy its beauty and natural wonders in a variety of venues. Everyone finds renewal through the forest in different ways. One of the biggest obstacles to "reconnecting people to the outdoors" is restricting access to those outdoors. It is really hard to reconnect people to the outdoors when access to those outdoors is so restricted.

I agree with the original intent of the post, about sharing the parks. It's definitely not a good backpacking/hiking experience to be nearly run over by an OHV, and those driving OHV would probably rather not worry about backpackers on the same trails. The two groups could have different areas (sufficiently far apart) or different days designated so that they can share the parks more peaceably.

I agree with this poster with the proviso that shared trails be wide enough to safely allow hikers, bikers, horse back riders, and motorcyclists to share the trail, and that the trails not go to locations where people might be camping to avoid noise pollution.

I am asking for OHV use at the National Park level.

I can appreciate the want and need for OHV use. However, we need to take into consideration the damage to the land they cause. There should also be limits on the decibels that any particular machine can put out and limit where they are allowed by determining places where there is the least impact on the environment. Allowing them in back country where they can create washout causing erosion and water and noise pollution should be a first consideration

I don't think anyone who is concerned about the environment would argue with you. I would say people would have to be able to visit the area (possibly hunting, fishing, low impact camping). I like the wilderness designation that is currently in use. More land should be designated as wilderness.

Discussion Question 1

(cont.)

I know this area -it's an ecotone where the humid maritime coastal, semi-desert upper Sonoran, and Cascade ecosystems mesh. It was the deciding factor in my locating close by to do my graduate work, and though I lived there for 13 years, I haven't been back for almost two decades. It's truly unique and worthy of designation. BTW, Glen, I get your sense of irony (poor) and I suggest you get OFF your motorcycle before you venture into the wild areas. Some of the locals are noted for their intolerance of those who would disrespect the Siskiyou, and you really don't want to get on the wrong side of some of these folks.

I need to better understand what OHV trails are available and where, but bottom line, I'd like to see balance. I hike and snowshoe, but also snowmobile. We only ride on designated trails which are often bike trails unusable to them in winter, logging roads, frozen waterways, and edges of farm properties. Snowmobile clubs that maintain the trails constantly post reminders to stay on the trail or go home. It is possible to have responsible use of OHVs. My sled takes me to beautiful places I can't get to on foot, just like my car can in the summer, but even more so. What I don't understand in the OHV world are the people who go out on rip new trails through forests and meadows. The trucks with the giant tires completely baffle me. A dirt bike or small ATV can be confined to a pretty narrow existing trail. The bigger ATVs and trucks are hard to see as anything other than pure destruction and wasted fuel.

I think that people that don't like OHV riders are concerned for the environment. My personal opinion is land should be set aside to preserve nature, we are not the only creature dependent on nature. There should be areas that allow OHVs that is away from wilderness and national parks, etc. I agree that hunting groups have done a great deal for the environment. In Michigan, for example, a lot of land was preserved using proceeds from hunting and fishing licenses. I think most sportman are usually advocates of wild places.

I think that there should be dedicated ATV trails and areas; I don't believe ATVs should be given free reign over our public lands. And I do believe in wildlife preservation, but my point is that when recreation and industrial uses are incompatible, recreational uses should have priority over industrial uses.

I think they should be banned from most parks at all times. We must have some parks that can be used for the ohv's though.

Is this suggestion serious or was it made by an ORV enthusiast? It's difficult to imagine that such a trivial and inane suggestion could be posted on a forum created for discussing REAL problems and suggestions regarding outdoor use. Many of us who have actually been out there hiking for DECADES would not be able to safely do so without our poles. Even if this thoughtless suggestion were made a policy it wouldn't hold up to an ADA court battle anyway. Get a clue: it's not the poles making impact in the wilderness - it's us.

It would be far better to require recycling of the old tires when new tires are purchased and placed on a vehicle and not allow the old tires to be removed from the premises. If someone wants to use those tires on another vehicle, they can bring said vehicle in and have the old tires mounted. A deposit is not the way to go.

Discussion Question 1

(cont.)

It's important to realize that it's not sensible to make all areas of our nation wilderness access to various vehicles. Motorize vehicles compact soils, destroy plant life and pollute natural resources far faster than humans on 2 feet. The rules and decisions on land use should try to protect as much areas, while balancing the public's use as much as possible. With the right vehicle I been able to car camp at the Jackass Dike camp ground in the Sierra National Forest, taking the Con Ed jeep access roads, when the Kaiser pass was open, in our Datsun 240. One just had to plan for the weather and make sure to bring medical supplies in case of an emergency, since it was a 3 hour drive to the nearest ranger station. I also suggest book for Wilderness medicine for anyone who may be visiting an area away from phone lines.

Lots of comments but I think what a lot of people are missing is that these lands are called WILDERNESS. It's called the Wilderness Protection Act, NOT Acres for Human Sport/Recreational Use Act. The laws are in effect to protect the NATURAL WILDLIFE from humans. So here's an idea that would cease the bickering. Why not ban all human interaction on the land and then no one will fight over who USES it better-hikers/otv users. Quarantine it from humanity. Does that solve your problem children? Geez!

there is a focus group working this site now with 60 + people involved. Don't look for much support while they are spending time here. Your idea is a very valid one though. Have faith it is being done elsewhere and working.

Maybe ATV's will be outlawed at some time in the future, but they are here today, so I believe we would be better served by working together to manage them as best we can. Provide limited designated spaces for them, pass legislation requiring emission controls and noise controls. Lets try and fight winnable battles to protect the environment, not battles doomed to failure.

Motorized recreation has a place in our society and certainly does provide more economic flow into our small communities than most other users. I support motorized wise use and do not support those selfish ideas that exclude any user group from enjoying our public lands.

you echo my exact feelings and I being a responsible off road enthusiast do not wish to see the lands destroyed. The fact of the matter is, most, I repeat, most OHV's are not looking for the opportunity to go rip up the forests, in spite of what ignorant people say! All were asking for is that the areas that have been designated as OHV for the past 30 years, remain OHV and the money that is supposed to go to maintaining those areas, does in fact go towards the maintenance of those trails. This includes enforcement and erosion control. The OHV community is not stupid. We understand that if we are not responsible, the land and nature that we too love will be come a thing of the past. As you said, responsible OHV's have just as much right to enjoy our lands as do the eco Nazis like Skinner, who drive their polluting cars to take in nature but want to exclude everyone else who has a different point of view. Thank you for your reasonable approach to this topic.

Discussion Question 1

Written & Online Comments

(cont.)

My family owns, and uses (camping, hiking, hunting, fishing, etc) nearly 300 acres in on the Wisconsin shores of Lake Superior. Our land was once open to OHV/ATV and Snowmobile access, but is now closed to the former. This closure was prompted by the abuse and misuse by a majority of the OHV/ATV operators "borrowing" our land. We would often see new "trails" tearing through the woods, vandalism to our established camp sites, litter, and excessive erosion on and around the established trails. About five years ago we closed the land to the OHV/ATV traffic and have seen most of this go away. Despite our efforts to maintain OUR space, we have found evidence where OHV/ATV operators have "broke brush" to circumvent our gate and posted "No ATV" signs, along with vandalism to said gates and signs. I fully understand that it is not the entirety of OHV/ATV operators that disrespect private property and land-owner wishes, but there are always those bad apples that ruin it for everyone else. Yes, it is a slippery slope, but if the OHV/ATV community can not police their own actions, and respect private property, how on earth are we supposed to trust them on public lands? There are numerous public OHV/ATV trail networks throughout Minnesota and Wisconsin open for their use, yet are closed to those of us who ride slower, and lower impact, trail motorcycles. The lobby is strong, but time and again local communities come together to prevent or further limit OHV/ATV trails in their areas. The local populace are the ones that have to clean up the messes left behind by the trail abusers, and are frankly becoming tired of it. I say, maintain the amount of public lands these users have already, and leave the pristine wilderness devoid from this misuse and abuse.

My idea of Cap and trade is to tax heavily all offroad vehicles as well as speedboats , motorhomes , giant pickups and suv's , Also houses over 200 Sq ft but that is another subject .

My suggestion is to reinstate the Roadless Rule to protect National Forests (and Parks) from new road construction. This rule should also limit the deforestation and poisoning of our waterways that result from unnecessary road construction in our parks and forests.

Discussion Question 1

Written & Online Comments

(cont.)

Name-calling doesn't cut it, gang. There are just as many "extreme" off-roaders as there are environmentalists. I notice the off-roaders continually refer to their "rights" to use public land. Too often they forget that the right to swing your arm ends when it connects with someone's face. Public lands mean just that.....they belong to ALL the public and should be managed in balance for ALL the public. So if any one form of activity takes a disproportionate amount of the public space, it is out of balance. That is what has happened with off-road vehicles. Because they can cover 90 miles in one day, their impact is far larger than almost any other form of recreation. And let's not forget this is recreation we are talking about. Optional activity. Swimming, bowling, skateboarding and other forms of recreation all have appropriate places for their activity, yet off-roaders want full access to all public lands. It is out of balance. I live in the backcountry. 40 years experience with off-roaders tell me they are selfish, disrespectful and terribly ignorant about nature. Their noise reaches me from as far away as two miles. Their stench lingers on the mountain long after they are gone. Their trails have resulted in high sedimentation in local creeks. And, in my area, their local enthusiasts' group is constantly trying to expand their riding areas. Relying on history to support more riding is ridiculous. The few dirt-bike trespassers I had to contend with 40 years ago are nowhere near the numbers causing trouble today. That they have been allowed to expand their unrestricted riding across public lands is the fault of a government that has not followed the law. (Executive Orders 11644 and 11989) Just because you have "taken" something does not give you a "right" to it, particularly when that supposed "right" takes away from society at large. Two more points. Calling the Blue Ribbon Coalition a "multiple use" advocate is like calling Osama Bin Laden a great religious leader. And, for those of you who brag on riding 90 miles in one day, I would ask how many wildflowers you identified across that terrain, how many game trails did you see, how many different types of vegetation did you encounter, how many mice or snakes or bugs did you watch, how much windsong did you hear, how many bears did you hear grubbing, and how many hawks did you watch ride a thermal? You do not see these things are 30-, 40- or 50mph. What else will the children do? Why, explore the outdoors on their feet and actually learn about nature.

No, I'm sorry but we Americans as a group have rights too. What do you mean by full usage? We don't have "full usage" on most all public property. No ORVs in grave yards, no boom boxes in concert halls. No camera's in area's of national security. No mining for copper at the Statue of Liberty. Use must be compatible with the mission for the public ownership of the property. Government acts as our representative to do the jobs that no one else will or can do. One of those jobs is preserving some of our land as God created it.

Not everyone is seeking God in nature all the time. However those who use atvs etc. are often campers, hunters, hikers and fishermen as well. In all of these roles they too appreciate the quiet and peace. The trick assuring there is a time and a PLACE for everyone and everything. Consider for instance the high deserts of Idaho. Long expanses of flat land used for open range cattle and atvs. This land is pretty useless for all else. When you think of those times you were disturbed by an off-road vehicle where you even on federal land? Most of the time it is state or county parks and forests where you run into this trouble. Swaths of federal land are usually big enough and have enough variety of trails for everyone.

Discussion Question 1

Written & Online Comments

(cont.)

OHV trails are an excellent use for abandoned strip mines, clear-cut areas, and other sites of environmental disasters. If they're willing to use those places, and we designate those places as public parks, I'm fine with that. Just keep the machines (but not necessarily their owners) out of the as yet undamaged areas, or those areas on their way to some kind of recovery.

OHV use is a legitimate use of public lands, but due to its impact on soils, water, wildlife and other users OHV use does need management. Trails are great for OHVs, but some riders choose to ride off trail. The default management of BLM lands in the west is that land is open to cross country travel unless designated otherwise. While this designation made sense when user numbers were small, with growing popularity of recreational OHV use, management needs to keep pace with usage. A portion of BLM lands should be designated for cross country travel. If land is not designated for cross country travel, it is not open for cross country travel. Designating lands as open to cross country travel should remove much of the confusion that results in riders leaving the trail when they are supposed to stay on the trail.

OHVs cause noise pollution. OHVing is an expensive sport - like golfing. Why don't OHVers do what golfers do and create their own "parks"? They can charge admission to pay for maintenance and they won't have to deal with people who don't want the noise or OHVers interfering with the peace and QUIET of the few remaining quiet spaces in America.

OHVs have no place in our outdoors. They are noisy, polluting and belong in cities, but not destroying our wild places.

One of the worst problems any generation will ever face is the one we face now - global climate change. All forestry policy and wilderness policy should be shaped to protect the planet from further global climate change and the destruction that will come from it. We need to get OUT of our vehicles and we certainly do NOT need to be driving all sorts of little personal gas guzzlers all over what wilderness and wildlife habitat we have left. We need to guard against more pollution and more greenhouse gases - and most especially this is so in sensitive lands.

Our Parks are there to preserve the land AND its wildlife. To do that, some parts of that land must remain free of human interference. Wildlife needs places of quiet and safety to reproduce and protect their young. Even us humans need a place that is not overrun with other humans, we too need places that are quiet, unpolluted and intact so we can view from a distance wildlife undisturbed by our presence. The best views I have had of wildlife was through a spotting scope, the animals or birds went about with their normal activities without them fleeing at the sight or smell of a dreaded human! Wild land MUST REMAIN WILD! No roads, no ORV/ATV's, no "development", no resource extraction and only limited hunting and fishing. We also need to restore native predators to cull diseased, old and weak young herbivores. Hunters select the best of the herd, not the old, diseased, weak and injured. Save our wild lands, leave it free from the human herds, limit human access, wildlife first.

Discussion Question 1

Written & Online Comments

(cont.)

Protect animals on our highways. I am sickened every time I see another healthy but dead animal on the side of the road. Motorists usually can not prevent killing animals with their cars, but the number of deaths could be significantly reduced with animal bridges and tunnels built into our highway systems. This is actually already being done in Europe and to some extent in the USA. However, we need to increase these projects to protect animals from one of their major predators—our cars. What does it tell our children when the roads are littered with dead animals? It suggests animals are expendable and irrelevant compared to our own needs to get where we are going. Animals need to move across highways in search of food, to procreate and in some cases migrate. The problem is particularly distressing in developing suburban areas where animals are being pushed out of their habitat. We can not contain animal movements, so lets give them a little help. Here's another project for the CCC.

Protect Wildlands for the Benefit of Wildlife. Many of the comments on this forum talk about how we manage our public lands for different public values, whether it be for OHV use or experiencing the solitude that wilderness avails. Even things like watershed and habitat protection are often mentioned as a value for PEOPLE to have clean water and see wildlife... One of the challenges we face in land management decisions is to adjust our collective outlook to also value watersheds and habitat simply for other living things besides us. It is a valid "use" of some small amount of our landscape to simply protect it from human use, not just abuse or over-use, but any use.

hikers who misuse public lands should be banned from our national and state parks. Why should the taxpayers continue to pay for damage deliberately caused by those who break the rules? Responsible hikers should not pay for the crimes of bad hikers, either. Licenses of all hikers vehicles should be checked at the gate, so we can keep the bad guys out of our parks.

OHV users who misuse public lands should be banned from our national and state parks. Why should the taxpayers continue to pay for damage deliberately caused by those who break the rules? Responsible offroaders should not pay for the crimes of bad riders, either. Licenses of all offroad vehicles should be checked at the gate, so we can keep the bad guys out of our parks.

(cont.)

Since this is a comment from a New York State resident, I assume the comment was directed at the New York State Forest Preserve (Adirondack Park and Catskill Park). These areas were set aside as a wilderness preserve whose usage requires the vote of the full voting population of NY State to alter. For instance, when the NY State Northway (I-87) was proposed, it had to go through the entire length of the Adirondack Park's eastern region. Since the Adirondack Park is NYS Forest Preserve, the only way to allow this non-wilderness use was to have the entire state of New York vote on an amendment to the state constitution that would allow it. The idea was extremely controversial (conservationists did not approve), but the citizenry spoke, and the amendment was passed by the vote of the people. Every time you drive the Thruway from Lake George to Plattsburgh on the way from Albany to Montreal, you're getting full use of the land as defined by the will of the people of NY State. However, those large areas that are classified as Wilderness or Wild Forest are preserved and protected by law, as outlined in the constitution of NY State. No trees may be cut, no roads may be built, no trails may be cut or blazed unless they are approved by the APA and DEC, which is as it should be (in my opinion). No development may occur, no electrical lines strung, no pipelines dug, no structures built, unless an exemption is voted upon and approved by the people of the state as an amendment to the NYS constitution. People complain about it, but the results speak for themselves -- the Adirondack Park is a world class wilderness preserve in the most densely populated part of our nation. Individuals own about half of the Park, while the other half is owned by the state and is kept as Forest Preserve. The state also helps purchase conservation easements where the original owner can use the land for forestry or mining, but agrees to prevent development (sprawl, subdivision) of the land. I see that as a model the federal government would do well to imitate. If by "full usage" you mean the right to take your SUV out into the woods and dig ruts in old woods roads, then I do not agree. If you mean the right to take off-road vehicles of any kind into a wilderness area, then I do not agree. If by full usage you mean that you should be able to go cut down a tree to build your garage or remove some rocks for your back yard (as in our National Forests, the "land of many uses") then I do not agree. Wilderness in the vicinity of NY City, Boston, Montreal and Toronto needs to be protected, both for the people and for the natural resources.

Sounds like a great place. I'd love to go see some of that country. As a matter of fact I'll be up there in the area next weekend. I may have to swing by on my motorcycle and go see the area myself. Thank you for the information.

State and nation parks are refuges for the wildlife and make available for people to enjoy nature in its natural state. ATVs, snow mobile, and mountain bikes are an invasion of these areas and an attack on nature. These vehicles despoil the peace and tranquility to both the nature lovers and the wildlife that lives there. The least offensive are mountain bikers, most of which I meet are more respectful of nature. These parks must be kept as a sanctuary for nature and all wildlife. ATVs and snow mobiles are environmental nightmares and they must be banned from every local, state and national park and recreational area. Mankind does not own this planet, we share it with many other species and mankind must respect these species and safeguard them from those who do not.

The ATV off-road people can have Utah! Let's protect the other areas for all of those Americans who do not want to pollute and ruin the environment.

The federal government could encourage states to place a five dollar deposit on tires. This would ensure tires are brought to recyclers and lead to less people dumping their tires in the woods. When you buy new tires your old tires would cover the deposit so there would be little or no added expense for the average citizen, but people who have been saving tires, unable to afford to recycle so many at once, would be able to receive a little financial boost which they would put back into the economy instead of the forests, streams, and trails.

The reason that government gets involved because people tend to do what is most economically beneficial to them, not what is most beneficial to the environment. Look at the damage that mining and logging have done to the environment over the years when there was little or no regulation. That being said, I am more in favor of the government purchasing easements and giving tax breaks rather than purchasing land outright. That way, the money can go a lot further. My parents sold the development rights to our 400 acre farm for a lot less than what it would have cost someone to buy it. I would rather have 1000 acres with conservation easements than 100 acres that is owned and controlled by the government.

There are plenty of trails open to atv's and motos and jeeps and smellmobiles. definitely no more are necessary, I agree with that. I do see people on OHV's using them responsibly, passing courteously, staying on trail etc. and that goes a long way toward peace out there. I think the out of control high speed use and aggression has created much of the anger towards them.

There is in central Utah a motorized trail system (Paiute ATV Trail) that provides a great example of positive resource management. ATV's, motorcycles, UTV's, jeeps, etc. are here to stay. The manufacture and sale of these units is a multi-billion dollar business. People who purchase these units are looking to their public lands for a place to ride. They are looking for a place to fulfill their need for "fun". If these owners are provided a place to ride that meets their quantity and quality needs, they will ride on them. Otherwise, they will ride anyway and maybe not in right places. Bottom line is they are not going to go away, and making them illegal on public lands won't stop them from coming. so, best management tool is to provide a quantity and quality place to ride on a managed and maintained system. Managers can stop the riding in delicate environments by providing riding opportunities where the terrain and resources can sustain the use. Such a system also bring significant economic benefits to strained rural economies that surround these riding systems. Again, the Paiute is a perfect example of where and how this approach can and does work. It's been in place for 20 years and so the approach is proven. This approach can and should be mirrored in other regions where it can be supported and where it makes sense.

There should be very steep fines to support the parks, and suspensions from parks, and required park and conservation classes and community services.

These are public lands, and as such, need to be available to all RESPONSIBLE usage. My biggest fear of off road usage is, probably, the same as most people's - We don't want to see the destructive side that can be brought out. After fighting for decades to keep loggers, miners, etc out of these areas, to see another group come in and "dog out" the areas that were meant to be protected, that is just as horrifying. All this being said, these are public lands and, as such, need to be available to those who will be responsible to the "nature"(pun intended) of the land and keep it for those others wanting to come in and enjoy it, study it, etc. Find a way to provide the balance so that everyone can enjoy them, e.g. unendangered areas that won't be affected by the bikes, atvs, etc.

They need to fine them heavily or have them do service work on the trails.

Uhhhhh, this idea seems like satirical backlash. A response to an equally "excessive" idea to outlaw ATVs/OHVs? Trekking pole vs. ATV tire? Please. If this is indeed trolling, I would like to agree with you. ATVs and OHVs should not be outlawed, but their use on public lands should be restricted, at a minimum. As an OHVer, you may not be capable of caring that the noise and tracks detract from how other people enjoy the outdoors - in near silence. Said silence has no effect on OHVer recreation, but if it did, maybe OHVers would get it. OHV should not have the ability to detract from non OHV enjoyment on PUBLIC lands. On private land, tear up trail, scream and yell, down a twelver and shoot your pistol in the sky with at least my blessing.

Are you aware that it is ILLEGAL to in anyway harass a hunter in ALL 50 STATES. This includes your attempts to "scare off" game animals. While I don't agree with shooting at you, I have zero sympathy for you due to your participation in illegal activity. I have just as much a right to ride my motorcycle in the woods as you do to walk in them. As it turns out, I am an accomplished offroad motorcycle racer who also happens to have hiked a substantial portion of the Appalachian Trail and am currently planning to thru hike the pacific crest trail. Lose your narrow minded nature.

your suggestion is too emotional and not specific enough. As offensive as it seems that humans urinate in water, so do the critters. Your offense (and well taken) about the dirty diapers (does anyone ever leave the clean ones) would be better suited under the campaign of "leave no trace." I've been hiking and backpacking for over 40 years in remote and not-so-remote areas, and although I've seen many folks swimming (and some folks really SHOULD wear trunks), I've never seen streams dammed up as a result. Where are you hiking? You're suggesting that people are "drying up our natural resources" by swimming in them? Not sure I concur.

What works where you live, might not work where I live. Here ATV's are good stewards to the land. I don't use them, but without them, here, many trails would go unmaintained.

Yes, I reviewed the voting window on a recent idea - not this one. It was clear that 68 or so promote votes were cast over a 2 hour period for the idea. I could not consider that a mere coincidence especially since other ideas have similar voting pattern today. It is amazing that so many folks are that active today. It is not exactly the norm here to see 60+ votes whether promote or demote cast in such a systematic manner.

Yes, the roadless rule should be enacted for the remaining roadless areas that are left in our national foests, which are really few and far between. This rule should also apply to The Tongass National Forest in Alaska, which was the only national forest left out of the original rule. The Tongass is one of the last wild places left. There has already been a large amount of roads constructed in the Tongass and there is alot of pressure for more development. The roadless rule would keep mining and logging in areas that are already developed and have road access. This would also preserve habitat not only for wilderness recreation for humans, but also habitat for the rest of the creatures that depend on wild places for survival.

PLEASE provide photos of your own, not from a website of these 300-400 pound motorcycle riders??? I am 47 years young and when I ride my quad/atv for an hour, I will get more excersise than you would get in a week... And I don't ride fast... LOL I don't bounce like I used to so I aint going fast like the younger crowd!!! Surely the people who are collecting data can see all your foolish bias post as jibberish... Show us what you do in the wilderness... Once a year hike at the local state park? once a month???

We have valid concerns about hundreds of thousand of acres of public land being completely closed to any form of transportation and that includes mountain bikes. Mountain bikes! Too many great places have been closed. So now huge numbers of people are forced into smaller and smaller areas, where a few bad apples get all the focus. If people would get out of the parking lot and ride the single track out in the hills, they would see that it's pretty much pristine out there. Single track, animals, trees, flowers. I saw a bobcat, wild turkeys, deer, grouse, wild pigs last week during a 3 hour ride at a local OHV park (not to mention all the vegetation). Animals THRIVE out there! They're not being hunted and they know it as they wait until the last moment to walk away from my dirt bike!

Doesn't all this really come down to "different strokes for different folks"? Have we forgotten to celebrate our differences? Its not right or wrong, us against them - its about choices and preferences. There is enough land and space in this country for all of us. Let's share!

(cont.)

I too ride a licensed motorcycle on the Forest Service trails and road in East Tennessee. Tennessee, which has millions of acres of National Forests, is a leader in designated trail systems and our local off-road club works with the local Forest Service official in keeping all the trails in good shape and clear of obstruction like fallen trees that force everyone off the trail, horses and hikers included. By taking their 'Chain Saw Safety Course' we are even covered by their liability insurance. The trails are long and narrow and because of the hills and trees, nearly impossible to stray from. They are used seldom enough that we almost never encounter other people on the hundreds of miles of cross country routes. Every state should follow Tennessee's philosophy that there are many ways to enjoy wilderness areas. All it takes is a little cooperation between all groups involved.

If a hikers need to know they are the only people on the trails to have a safe adventure, perhaps they should consider purchasing a beautiful piece of private land. There should be regulations for those who choose to run faster than the allowed 3.5 mph and shoes should be limited to registered shoes to ensure regulation and minimize erosion, bad foot smells and athletes foot. Perhaps you see the utter ridiculousness of my rant? Furthermore, if you have neglected to look into organizations that promote sustainable use of all public trail such Blue Ribbon Coalition, Rubicon trail Foundation, Friends of The Rubicon, Friends of Fordyce, etc etc. You have probably neglected to realize that there is a better means to successful, shared use trails than simply banning all ohv users from public lands. Believe it or not, (I'm betting not) we as OHV users, care as much for public lands as you and do not feel the need to ban you from the land to prove it. If you were to witness some of the success we have had, educating and leading by example, you may choose a different, fair access standpoint.

I have enjoyed OHVing as a family for the past 10 years and hope to continue for many decades. If you are an avid hiker good for you. If you hike and have a problem hiking where ATV are legal to operate get a map and go on a different route or trail designated closed to ATV's. Not every person is the same so we do not all share the same opinion of a proper family activity. We need to all learn to get along and use reasonable management strategies on OUR PUBLIC LANDS.

public lands are just that public lands, remember this land is your land this land is our land.... Your talking about them like its your land. There is already millions of non OHV lands for you to enjoy PLEASE don't go to the lands where OHV's are then complain about their existence there is NON OHV areas setup just for this reason I doubt you have been to all of them there is no shortage and they are not over crowded. You remind me of the person that goes to the mall shopping on black Friday then complains about the traffic and how crowded the mall is. I do appreciate your betterment for mankind thanks.

Federal control; is exactly the opposite of what is needed. The federal government should relinquish control to state governments. Rather than restricting use, the public should be facilitated. All Federally owned and managed land should be open to public access except where there is a compelling national interest, Exceptions should be made to limit access to military installations or nuclear power sites. Access should include balanced opportunities for use on foot, equestrian and motorized off road vehicles. Hunting should be permitted in accordance with state and federal hunting seasons and regulations. The carry and use of firearms should be permitted in accordance with state regulation.

Are you nuts? Have you ever seen a kid ride an ATV??? Pull their helmet off and you see nothing but SMILES! The physical conditioning developed while riding a ATV is what keeps me in shape at 47 years old!!!

It is rather entertaining watching which direction the mud is flying and how irrational and discourteous the self-proclaimed nature lovers, icons of grace and intellectual forward thinking, really are. It's the oldest story in the book: the mudslingers (self-proclaimed nature lovers) don't understand multi-use. They want to lock up everything for their use only. Great post Rachel. These goody-two-shoes are the same whether on the dirt or on the asphalt.

A problem I have experienced in my few times of riding dirt bikes is how tempting people are for challenges that lead them off trail...up steep hillsides, etc. This really tears up the land. And this was with friends who I know are otherwise nature lovers and always very respectful of wildlife land. Once one person goes off trail, others see their path and take it also. I think there should be some designated places where OHV's are allowed, but mostly should not be allowed on public lands. Even if 90 % stay on the trail, the few who go off still cause too much destruction.

I feel dirtbikers and ATV's should ride on private land with the owners permission only. Protected areas should be left in their natural state, except for a trail. Noise and other pollution should be kept out of these areas. It only takes a few, ATV, Bud lite beer can litters to ruin a otherwise beautiful location. My comment is " Hike and you can drink a real beer, once your home!"

Allowing any motorized vehicle would be subjecting all visitors to more noise and pollution. Might as well hike along a highway. Lets allow more air traffic so we can all experience the joy of jogging beside an airport

Thank you for telling of your experience with ATV and motorcyclist on the trail. I always do what I can to share the trail with everybody and give the right of way to someone with animals. I also acknowledge the fact that there are a lot of jerks out there on these vehicles, which is why it's so frustrating to see our OHV dollars taken away from things like enforcement! You are absolutely correct in your assesment of the high emotion and there's always a middle ground. Some just don't appear to want to have a decent civilized dialouge though.

(cont.)

I am 100% against ANY OHV activity in the National Parks. This is not what the parks are for!! They are for walking the trails and observing the natural beauty of the lands, fauna and small plants that you can't possibly see from OHV's. These motorized vehicles not only disturb the wildlife but they disturb the people that are trying to be one with the land as the early settlers and Indians were. These OHV 's destroy the small little plants that you can hardly see that are naturally part of the floor of the parks but people on OHV's don't even know this.

you post as if the OHV crowd would run free and wild through the whole park. The OHV groups have designated trails we stay on. We not only try to be stewards of the land but we bring money to the parks and local business. Having designated OHV use is good for everyone including the local wildlife. Think of what the park could do with increased funds.

So I guess what you're saying is that you feel that only your wants & desires should be respected and you somehow float just above the ground so you don't effect anything from a insect to a wildflower to a micro organism! If your really honest with yourself, something I doubt, you will admit that the national parks are not actually for you, but are for everyone. Boy, and I'm not saying this to be mean, but I'd hate to be your husband or partner or whatever because it's clear, again, that only your wants & desires are important. I also wonder how you and all the other people who don't wish to share "your lands" with anyone, who enjoys it in a different way than you, expect your kids to learn to share. Something, we as a society, are constantly preaching but rarely practice!

Obviously has never looked at a photo album of a dirt biker! I know it's hard to imagine a bunch of rough and tough dirt bikers taking pics of flowers, fauna, and wildlife, but that's what I see all the time. Your ignorance is laughable. Despite what is being said on here, there are quite a few of us who love to hike, rock climb etc. Personally, my group of friends always leave after a week or weekend of camping/ohv use with way more trash than we brought in. We shut down our bikes and wait for equestrians to pass. We slow to a crawl around hikers so as not to dust 'em out. So basically, we share the forest and respect other users as we would have them do to us. The forest is not exclusive to anyone, it is there for ALL Americans, and visitors to our country too. As a Marine, I find this selfish mentality really disturbing. This is the land of the free. We have to work TOGETHER or we risk losing all our forefathers have worked and died for. The answer is simple really, education on both sides is what is needed. We need to crush the stereotypes and work together for the benefit of all.

(cont.)

"Wildlife running from the sound" of an OHV? Or from a hiker, or from another animal, or... The human race affects the environment by being IN it. Just like all the animals do. Do you think only hikers and bikers make trails? Cows make trails. Goats do. All animals do. OMG, they're affecting the plant life, we need to close down access to deer! Why do supposed naturalists and environmentalists fail to understand the environment at a basic level? We should not allow free access to ALL land. Wildlife needs it's place to thrive. But there's plenty of land. 95 out of 100 places have signs denying access to motorized vehicles, but allowing hiking, so I really don't see any validity to the claim that hikers need more land. Seems to me the OHV is constantly getting access closed down, rather than provided fair access. There's billions of acres of land. We can share. Sure, there are irresponsible OHV riders. I'm proud NOT to be one of those. And I work towards educating riders about being responsible and respectful of others and the environment as all those that go out and explore and enjoy nature should. Schroedinger's Cat tells us that we cannot examine something without changing it. So we have to accept that. By just existing we change our environment, even without technology. But we can be responsible. Riders can stay on established trails. Hikers can pack out their trash. Mountain Bikers can be respectful of equestrians. And so on. And remember, that ranger that arrives to help a lost, injured or fallen person often arrives on an OHV.

Please consider the low response of OHV/ATV users as not a lack of interest, but a fact that we are in the great outdoors enjoying our lives and unable to spend all day on the internet complaining about other people enjoying life!!! Being from Texas, I have seen the same type of "trails" everyone is worried about being created by cattle & deer! The trails that OHV use are already in existance, and quite honestly someone walking causes just a big of a footprint as an OHV if they are off the trail! In Texas we have little to no public land available to enjoy! 99% of the land is privately owned, and unavailable, unless for a large fee! Unless you have actually ridden an OHV You are unqualified to determine how much excersize you get! I am 47 years young and Walk daily! When I ride my ATV/Quad my upper body and my legs get such a workout that I am pleasantly sore for days afterwards! The terrain/miles we can cover in a days ride is all the proof I need to prove I am a nature lover! I have seen things you will never have the pleasure to see because of the remoteness of the site! The Family attomsphere is so much greater than you could imagine! Several days of camping with NO TV's, cell phones or computers! I bet your day trips you are so proud of are spent driving, with the children in the back seat watching a DVD! You then spend a few hours walking a trail, until your fast food addicted children start to get tired, or better yet BORED and start to whine about going home so they can get back on there cell phone and start Texting there friends! As a nation we should all enjoy the freedom to do what we chose to enjoy our national parks, (that we Stole from the Native Americans) Please consider the low response of OHV/ATV users as not a lack of interest, but a fact that we are in the great outdoors enjoying our lives and unable to spend all day on the internet complaining about other people enjoying life!!!

(cont.)

Your personal vehicle you drove to your hiking area polutes just as much if not more than My ATV! Noise wise and exhaust wise... How many gallons did you burn to get to your "quite place" Did your car scare a rabbit eating grass along the paved highway you drove up on? The hum of your rubber tires at 70 mph is as load as my exhaust... We could go on like this but this is not the point... The point is as Americans we should be equally able to access the great outdoors!!!

Everyone has the right to enjoy the outdoors in their own way, all of you keep claiming its wilderness and should not be used by offrarders, guess what, where your home sits was once wilderness also, does this mean you should be removed from it, by your logic' you had better pack up and leave

You're welcome Well I have read about the top 80 comments... I see a lot of hate and anger from the ANTI-ATV/OHV crowd? This in itself makes me very nervous... Just look at the comments in CAPLOCKS (shouting) Why is that? I see some hypocrisy also... They complain about "wasting gas" but yet they will drive there luxury cars out to the "wilderness" and only spend a day to de-stress? I read the "horsemen" and "horsewomen" claim the atv's ohv spook there horses... Take your horses back to your trainer, or to your own round pen... Your horse isn't finished if he spooks... (I am a retired Saddle Maker, so I know horses) I have never seen a OHV blaze by another ohv'er much less a hiker or equestrian... Yes I am sure there are some who come up on some fast, but maybe if you wore bright colors we would see you sooner? Hunters had to shoot other hunters before they realized the orange vest was a good idea!!! Maybe you could take a clue too! Let me touch on hypocrisy, from my own rural neighborhood! Cyclist from the San Antonio area come and ride there street bikes on my small county roads. They Mark there race course with spray paint on every corner, just like graffitti! They leave their signs out in my neighborhood, they leave their water/gatorade red bull bottles all over the place... Are these are the same ANGRY people posting above?

I just spent a week at Island Park, on the Henry's Fork in Idaho. Fortunately, there were a number of trails which did not allow off road vehicles, and I was able to enjoy the peace of the woods, meadows, and the river. However, in many places, the noise, smell and dust from the off-rovers made the experience less than enjoyable. I am happy that there are places where those who prefer to ride can do so, but do not think there needs to be any more wilderness set off for them.

As far as your comments go. Asking if a machine qualifies as a person is the most illogical argument I've heard in at least 20 posts. Heck, Do your shoes, or clothing or walking poles qualify as a "American Citizen"? How about your horse? Even though I have an intimate relationship with my motorcycles, and I do refer to each one as her, It's not like I'm asking for the right for them to vote or something along those lines. I and most other rational OHVs are only asking for the right to access the public lands that have already been designated as OHV lands. "I was raised in a culture where consideration of others - of not imposing yourself on others - was a highly regarded personal duty." This is still a value to me and one I try to instill every day in my daughter. That said, I do not see that in most of the anti OHVs responses on this and other sites. As far as your comment "I am always thrilled to find myself in a place where there are no sounds of engines or machinery. It's pretty rare these days.", where do you seek these places? New York City. I can guarantee you that I could easily show you at least a thousand times as many places to go enjoy the solitude & tranquility of the forest, where the only engine noise you will hear is an occasional jet passing overhead, and hell, according to people like ____, I must not have to look very hard, because after all, I never practice such activities! Sorry, I have no control over the jet thing.

when these hate mongers (sorry couldn't resist lol) are done complaining about us OHV'ers then they will soon set there sites on the Airplanes... Really people, you who have never been on or near an OHV should hold your hate and discontent until you are able to better educate yourself! Your reply is what I was referring to when I mentioned hateful... I can sit on my front porch and listen to the great outdoors, but every day I hear more and more cars driving down my country road! People want to live in the country out here. I deal with people who don't have the first clue how do live in the country, but they have every issue of Country Living! My point is I believe many of the Anti-ATV/OHV crowd here are simply repeating what they are reading elsewhere and are being re-directed here to spew these hateful in rants... Lets Hope our gov't officials can see the difference in the tone of the responses

I'm one of the envirofreaks. If you look at peoples valid point of view, the one not supporting your point of view, as hateful, that is the problem between us. You use that as an excuse to tune us out, so you don't try to understand any of the points we try to make to you. I have said that ohv use is small potatoes in the realm of environmental destruction. It is the fact that you tune us out that frustrates us and we respond with more vigor. This is a downward spiral. We should all lighten up. Speaking of airplanes, they are a much more important environmental modifier. Contrails are changing the worlds weather, clouding skies that would be clear, all over the world. That is a much, much bigger issue than ohvs.

I was referring to ONLY the ones who were unprofessional and claiming false or exaggerated facts, or the ones who sounded almost militant! Our world has been adapting and changing for milliniums... Conetails and OHV's will not be or cause the End of Times! Have more faith in Gods Plan! Do we complain about Horses or Hikers on our trails/roads? No, we adapt! God Gave us this beautiful landscape to enjoy in our own special way, and gave us the choices to enjoy it as we please! We are just asking you to SHARE What he has blessed us with!

Discussion Question 1

(cont.)

I am an off-road motorcycle enthusiast and enjoy riding OHVs in the great state of Utah. I'm offended when people claim I am damaging the environment. This is nonsense. Not only do I stay on marked and legal OHV trails, but I routinely see deer, moose, elk, and black bears ... which aren't in the least bit afraid of me or my bike. As far as noise goes, the great outdoors in Utah is so big that there are hundreds of miles of solitary quiet trails far away from OHV trails that I just don't see the issue. I'm calling BS on all this yacking. I think most Americans who live in the west would say the same.

I can see some of you are grasping at straws...The 5 gallons of gas used in a few weeks of OHV motorcycle use is now contributing directly to terrorism? The 25 gallons of gas you use a week in your commute to and from work is fine though, right? How about all of the petroleum based products you use on a daily basis? Have you started eliminating plastics from your household? Have you started walking/biking/carpooling to work? Please, tell me you don't drive to the locations you so like to hike? With your SUV packed up with stuff? Burning at 15mpg... You guys need to grow up and realize that your efforts are selfish, you simply view us as a threat because we are one of the biggest groups that you can find to point a finger at. I try to get out on the trails as often as possible, I take the family with me as they enjoy it as well. I pick up trash along trails, I stay on marked paths. I'm not driving a loud obnoxious 2-stroke vehicle either. If I was driving along a trail within a half-mile, you wouldn't even know I was there. I try to leave my surroundings better than I found them. TREAD Lightly.

Areas commonly used by hikers, climbers, mountaineers, should stay that way. Areas commonly used by OHV riders should also stay that way. For most people I know, simply driving a vehicle down a smooth dirt road is not their idea of wheeling. Sure a large group certainly do that, but others like to go further, and push the limits of our vehicles. It's not the destination, but rather the adventure there. And yes, if you look hard enough, you will find areas excessively damaged by people that don't respect the land. Hikers, rock climbers, and mountain bikers can also use this same example. I mountain bike and rock climb. Have been for years. I could hike down a flat path or climb up a steep trail, but I look for the harder, more challenging areas. Again, it's not the destination, but the effort and adventure to get there that we love. And again, if you look around, you will see evidence of damage from this group too. Neither group can say they don't have an impact, and for one to say the other is worse is ridiculous. Both groups have people that don't respect land, leave trash, pollute, etc. We both need to become more responsible in our use of land.

If you don't believe OHVs cause impact, just Google "Upper Tellico OHV Area" and take a look at the photos. The trails were so badly eroded, the Forest Service shut down the trails and has undertaken a restoration of the damaged area. Of course, OHV groups have sued to keep it open. That doesn't say much for their understanding of environmental impacts.

get your facts straight about Tellico. They shut it down and now they are logging the property and building houses up there. I am sure logging and construction have way less of an impact on the land.

(cont.)

This is a perfect example of doom and gloom at its greatest absolutely NO facts from the leftest anti OHV group just a lot of talk trying to play on the emotions of people who are concerned for the environment, the picture these people paint does not match any of the off road environment I have have seen in the past 40+ years of using it. I suspect the majority that has demoted here is also the same group that follows Al Gore and his global warming farce hide the decline ----> { Link } <---- funny but also very factual.

I just spent the last 12 days camping and riding OHV 4 Wheelers and off hwy motorcycles in central Utah. I rode 488 miles on the 4 Wheeler and 180 miles on the motorcycles (all on legal trails). I seen 55 elk, a dozen deer and a fox. The forest was awesome. I didnt see one hiker until I drove my SUV to a popular rock climbing canyon. Every Climber and Hiker I met had also driven to the canyon trail head parking area. The hike was rewarding and enjoyable. But not all areas need to be locked up to only foot traffic as well as not all areas are suitable for OHV use. We need to all get along and use resonable management principals to utalize OUR PUBLIC LANDS.

Public lands need to remain open to the public as long as responsibility and preservation are paramount. OHV users are responsible and have and will continue to have trail clean up days.

Certainly no MORE OHV use should be permitted. However much OHV users may love the outdoors, their vehicles pollute it and scare wildlife. Perhaps a small bit of OHV use is possible without creating problems. But it should remain very small.

I didn't have time to read all these comments so I hope this doesn't duplicate someone else's comments. My property abuts a forest made up of private parcels that has an OHV trail running through it. I have no objection to the use of these vehicles per se, but some users of them have come onto my property despite my putting up barriers, and their engines have killed some tree saplings I planted, and throughout the forest their sheer noise sends wildlife fleeing. Even if expansion of OHV use is seriously considered, the noise pollution is at least as big an issue as the two-stroke engine issue. Why do all these machines have to sound like Harleys? Why are there not thousands of electric OHVs out there? I doubt many would object to them.

(cont.)

My 2 stroke OHV does no more polutting than your 2 stroke weedeater... Or your zero turn riding mower for that matter... I can tell the folks who worry about the noise scaring the critters have never spent anytime in the great outdoors and are simply regurgitating what someone else is asking them to say!!! How many deer have you seen on the side of the Interstate system that continue to graze after an 18 wheeler passes by at 70 mph??? I can say from experience thousands!!! I drive an 18 wheeler and have seen thousands of deer grazing on the roadside and never even look up... Now, riddle me this... How many deer have you walked up on, that didn't jump and run the other way??? Not including the Bambi movie you watched as a child... Now I would like to ask our moderators to require a National Parks and Wildlife membership from those of you who constantly come to this Blog to bash OHV or "stand up" for the critters... In other words show us some credentials to back up your ideas or concerns... From the amount of post made by some of the "top innovators" Look to (the columns on the right) I would say it is a safe bet that you NEVER have time to visit the great outdoors, because of the shear amount of Post here.... You must be tied to the internet at work, or maybe unemployed with nothing better to do??? You have proven your ignorance on this matter... Not calling you ignorant, but a Harley Davidson sounds nothing like A 2 stroke motorcycle or ATV... Heck they don't even sound like a 4 stroke atv... So go back and edit the online site you are getting your propaganda from!!!

{ Link } Comment number 5 says it all... The OHV crowd is not the only group Polluting our parks... So one must realize that there are going to be bad apples in every bunch, and we must educate and yes even sometimes clean up after these bad seeds... but that we are not all bad people! After all this is America, and we ALL Should share in it EQUALLY!!!

(cont.)

This idea is actually workable. Unlike the other OHV idea, in which the original poster made a ridiculous, self-righteous, and polarizing suggestion about how taxpayers should buy his special interest group a bunch of land so he can ride anywhere he wants, this idea is looking for a sustainable solution that meets the needs of varied interests including other outdoor recreation and conservation. As an outdoor sports enthusiast myself (albeit non-motorized), I have been through a lot of BLM land out West and I could see how it would be entirely possible to create a sustainable multi-use trail system out there. Sustainable trails, be they for hiking, biking, or off-roading, require engineering, and engineering requires funding, as does the ongoing maintenance of the trail system, even if staffed by volunteers. BLM land presents a number of challenges (flash flooding, sand, rocks, delicate flora, rattlesnakes) but I appreciate that some people are still willing to address a problem with the ingenuity and inventiveness that made this country great -- instead of just wanting to haphazardly run right over it. Sustainability also relies on the rider to behave responsibly. If mountain bikers or hikers start cutting trails and destroying vegetation, they close the trail. If your kid makes a mess in the pool, they close the pool to everyone. If you cheat in a sport, they kick you off the team. While every sport has its bad apples, nearly everyone accepts that these are the consequences for breaking the rules. Would OHV riders be willing to accept that? Unfortunately -- and I hope my experience is not representative of the entire OHV community -- the evidence I've seen demonstrates that they would not stick to the rules and would not accept responsibility for their actions. That makes education a necessary part of sustainability as well. The riders need to be educated on their responsibility as well as the laws governing OHVs and land use wherever they are riding. As for the noise and pollution, fixing that problem with the machines would probably go a very long way towards coexistence with people and wildlife.

I don't think you may be misinformed. While there are a very few exceptions, motorized vehicles are NOT allowed within Wilderness Areas at all - already. I wish they would do your suggestion at a faster rate! There are many re-routes, bridges and armoring (use of granite rocks on the trail) in most of the areas I travel.

(cont.)

This is a very nice well written emotional rant. Please before you try to take away my freedom and my access to public lands I need to to back up what you have said here with verifiable facts showing the damage, giving directions so what your saying can be verified interdependently, have some scientific data to back up your position, maybe you have some tadpole carcass to show us and scientific data backing up a decline in frogs, salamander nymphs, and other aquatic life in this area, I am sure its as easily documented as your emotions that have been documented here. I am sure you also can show us the media glorifying I dont know about others but I would love to see this, their is no doubt a recording of this some place. I am sorry if I sound skeptical but I have been lied to by the best of them, Al Gore for example with his cast of players trying to sell the global warming thing. I agree that EVERYBODY needs to be educated about ORV's but lets educate them with hard undeniable pure facts and NO emotions like you have tried to educate the world with here. I am glad we have people passionate about the environment like you but I am sad when they try to control the majority with their emotions, repercussions from doing something like this is not going to be pretty, it might seem like a good idea today or a quick fix, short cut but it will be very regrettable in the end just ask Al Gore and his global warming gang, do a search for "hide the decline" . Thanks

And you have written a very measured and reasonable SOUNDING rant. It is typical of many who when presented with fact and documentation dismiss it with "yes buts" or total denial. Case in point is your reference to the "lies" you've been told about the overwhelming and irrefutable evidence of global climate change. Is it too much to ask that we believe we can always find ways to treat the earth better, and that in respecting the land we also respect our fellow human beings? There are too many of us on this earth to refuse to compromise; it can't be an "it's all about me" stance. And for the record, limiting how you use public lands is NOT limiting your freedom or access to these lands. You still have feet right? Try taking a stroll, hear the birds sing and the leaves of trees rustle; work off some of that anger. The heart you save may be your own.

Many of you have just pointed out the fact that we are seeing problems due to over crowding at the few OHV areas left. Thank You for that. I get the impression many of you are young and naive, highly impressionable. But try to keep an open mind and don't fall into the hyperbole and propaganda onslaught being forced upon the public by special interest groups. If you want to preserve nature, be a part of the solution. Let's get more places Re-Opened and take good care of them. If there's a little erosion and dust, well... so what! It's dirt after all.

I find it ironic that the idea author finds it appropriate to rant about the impact to watersheds by a relatively small group of people - OHV enthusiasts. Yet he chooses to ignore those groups who have the most significant impact to watershed quality. How about all those power boat users whose engines pump exhaust into the water they use? How about all those farmers who generate all that soil and chemical runoff? How about all those cattlemen whose cattle are polluting watersheds? How about the timbermen floating logs down rivers and generating runoff from cut areas? How about all those home builders building new homes in increasingly remote locations? How about all those people buying those new homes? Oh, wait - he doesn't have an axe to grind with them.

(cont.)

Where is this "Roadless Rule to protect National Forests" I am surprised nobody has asked to see it I want to read this, I am not like our current country's administration that will sign anything without reading it, we have these fools that will vote on things without reading them because we have fools that dont know who they are voting for voting for them, its like a endless cycle of stupid, an exercise in confusion at its absolute best. How about some honesty here how many of the 575 people that has currently voted on this has read the "Roadless Rule to protect National Forests" are you like congress and want to vote it in then read it? I am honest I have not read it, I am voting against this until I do read it, I cant blindly vote into law something I have not read, the emotional feelings expressed here simply dont tell me what this new law is and they certainty do not convince me to for it at this time. Thanks

It stops new road construction in national forests in areas that don't already have roads. There are already way too many roads in national forsests. More than can be maintained.

I just got bake from hiking Rock City @ Mt. Diablo park in California, and yes I'm a dirt biker. The amount of trash we picked up off the trails completely filled the small packs we were carrying! The erosion of the sandstone let alone the dirt trails was enormous from all the foot traffic. The amount of graffiti carved into the rocks was simply saddening. My 8yr. old daughter, a dirt bike racer herself, was really taken aback by all the vandalism and garbage we saw on the hiking trails. How do I answer her question, "Why do people think we (dirt bikers) are the bad guys dad?" I chose the high road and explained that all different types of people enjoy all different kinds of recreation and that we can't blame "hikers" for this mess. If we do that we're no better than the people trying to stop us from enjoying public lands. Granted we do sometimes find a small amount of trash at the campsites at the head of our OHV trails, which we pick up as a pre ride ritual. But NEVER do we find trash on the trails. Ok, maybe a fender here and there, we ride some really tough trails. ;o) My point is, please don't generalize us by a bad experience you may of had or "heard" from others. The OHV'rs I know are the best stewards of the land I have ever met and I am very proud to be raising my daughter with the same values.

So a broad generalization, poorly reasoned and without a hint of rational thought gets a 600 vote edge within days? Who are the environmental elitists that are responsible for rigging these votes?

Did you even try? I know there are a lot of shallow closed minded individuals on this site but at least try and hide your discrimination? As if the BS isnt thick enough. You only hurt your cause and give it worse name. The Sierra Club Has been noted by the majority as an environazi organization with too much money. The intention behind it has always been clear, but jeebus, are you guys even trying anymore? lol

You don't even know me, yet have all ready decided that because I have a vehicle that doesn't suite your personal taste, that I am disrespectful and want to ban or restrict my access to "public places". Seriously?!? Is this what our country has become? Whats next people.... Restricting access to those who wear off trend clothes?

Discussion Question 1

Written & Online Comments

(cont.)

People are people. Rude, uncaring, self-centered, and arrogant people populate just about any and all demographic groups that can be envisioned or defined. This idea author proves that themselves. We don't see Off-Road enthusiasts encouraging elimination or restriction of access to public lands for hikers, farmers, cattlemen, timber, or other interests. Yet this idea author is so certain of the superiority of their imperatives that they promote restriction of public lands access for many based upon the behaviors of the few. Such attitudes and behavior, in extreme form, is known as tyranny. More commonly, it is known simply as hypocrisy.

A small correction is in order. The Global Warming Wildlife Survival Act (110th Congress - H.R. 2338) is from the last congress (2007-2008) so would be more aptly put as The Global Warming Wildlife Survival Act of 2007. I say this because in the current congress (111th), H.R. 2338 is the No Welfare for Terrorist Act of 2009. S1993 is correctly identified in the current congress (111th) as the Natural Resource Climate Adaptation Act. My added comment would be that there are already many states working with the federal government on wildlife migration in the face of global warming. This include the Western Governors Association. They are doing this in a cooperative forum that includes citizen and resident stakeholders who are critical to the success of any broad landscape goal. I fear these bills which create hefty federal oversight may get more into federal-states rights squabbles and will undoubtedly end in push back from residents. While it may be appealing to try to force federal policies on states, even if viewed as benevolent causes, it is probably a doomed strategy.

Global warming, habitat protection, and preservation of species are related concerns that need to be at the center of planning decisions. Humans are but one species, we need to share and protect our environment--lest we end up in a world that resembles The Matrix.

Public lands should be quiet harmonious places, where people can experience nature at its best and see sites they have never seen before, take pictures and bring those pictures to all who have never been to the public lands. The recent PBS special by Ken Burns on the public lands did us a great service, by showing all that watched what there is to see in our great and beautiful country. The spiritual feeling I felt when at Muir Woods several years ago, would be destroyed by the roar of recreational engines. Muir Woods just as an example by being a quiet and reflective place should be preserved to allow nature to give us the connection to the spirit. It is told that when a President, I think it was Theodore Roosevelt or it could have been Woodrow Wilson, wanted to bring to life the League of Nations, which then became the United Nations, he brought the delegation that was influential in deciding the fate of the League of Nations to Muir Woods and the deed was done. Muir Woods influenced all that gathered to bring all the nations together in a League of Nations. These quiet reflective places that stir the soul, should be preserved for all generations to experience.

(cont.)

I couldn't agree more! These wildlife habitat areas need to be protected from being sold off for housing developments, strip malls, mining, excessive drilling, factories, etc.. What is left needs protection. I also fully support areas that people can still enjoy wildlife without creating disturbances- Rails to Trails is one project I love- converting old railroad track areas into trails for the public to bike and hike-- this teaches our children to connect with the wilderness and learn to value wildland areas. I see a need for this, and I also feel that wildlife Estuaries and protected roadless areas also need to be protected as well for the sake of the wild animals, marine animals and migratory birds we share this planet with. There are ways we can compromise and still provide public access without disturbing wildlife too- ATV's are fun, but a little commonsense and sensitivity goes a long way in where you choose to ride one of them. There are areas you can ride these vehicles where you are not bothering wildlife and still having a good time. A lot of former coal mining areas have good trails for this. I would choose those open areas over quiet woodland areas.

there is more than enough wilderness area around the entire country. Mankind first needs to meet the mantra here. When are you goofballs going to wake up. If you want to keep all mankind off of the land, I suggest you buy it yourself and stop making all of us pay for it.

And some people want to preserve land, but not with the restrictive nature of Wilderness. I'm lucky enough to live where you can drive for hours and see hardly any development, with both Wilderness and non-Wilderness public lands, a mix that lets everyone enjoy the outdoors while doing a variety of recreational activities.

Multiple use does work.

Use of public land should not include destroying it with OHV play. Play on OHVs can be fun but destructive. This activity belongs on land that is dedicated to this sort of degradation. Public land needs to be preserved for all that want to use it. If it is destroyed that can't happen. Put OHV play in private parks. Yamaha, Honda, etc. are making lots of money on the vehicles, as well as distributors, accessory providers, etc. They should be making places for their vehicles to be used. The only vehicles that belong on public land are those that give us access and touring opportunities on designated roads. Street legal vehicles give us that kind of opportunity and can be regulated to keep us all safe and keep the land intact.

I have to argue with post number 5. I must admit for a nature lover I can't believe how wrong you are... Do you have any idea what a reclaimed coal mine is? Or abandoned rock quarry? If you leave the trees to grow and water to flow through anyplace long enough it creates a habitat for wildlife. At the private OHV park I visit quite often which was formerly a 400 acre strip mine we now have a dense forest with steep hills to enjoy with OHVs and water holes for wildlife and it is quite common to see deer in the distance or fox or unfortunately a few rattlesnakes from time to time. Yet on this small piece of ground the OHV club maintains we hold large events with up to 200 trucks and it doesn't bother the wildlife and with regular maintenance the footprint is at a standstill with 250 acres of trails to admire the wildlife.

Discussion Question 1

Written & Online Comments

(cont.)

I propose that OHV area is measured by length of designated trails, not by acreage. Maintained and cared for OHV trails are a lot more compactable and open to compromise than areas in which OHVs cover every square foot. I concede that there should be SOME areas like that, but for most non-wilderness areas, I think it is more important to designate and maintain trails than to use acreage as a measurement.

are you saying just because we like to go offroad that we are uneducated? Wow are we resorting to 5th grade name calling? Why do we have to be jerks? Do you know all of us or is this just a general stereotype?

you're overeager to start an argument. "Jeeps and OHVs are the rule." I explore our local deserts in a Jeep myself. Sorry, Jeepers and OHVers who damage the environment are jerks. Even jerks have rights in a free society. The solution to the problem is education, not closing roads and limiting access to responsible Jeepers and OHVers.

Over a decade ago, we bought a small chunk of land close to a state forest. Several years ago, I moved out here on what would at best be called a mud road. It is illegal in our county to drive ATVs on public roads, however they come roaring down the road, leaving a trail of fumes too often. They also rip through our woods, and they do cause damage. Ruts remain where they drove on soft ground or made trips up slopes. I hate the things. They are worse than the hunters that trespass to shoot game or dig ginseng. That said, I am in favor of designated places on public land for people to ride them. Like horse trails, they would provide recreational opportunities for a specific population. Anytime we humans invade the wilderness, on foot, on horse, by canoe, or on some motorized vehicle, we change the balance of nature. The noise, the fumes, the trash, our scent, the changes to the soil, all have an impact on the ecosystem. What we must insure is that some land remains pristine, closed to invaders.

I agree. The job of National Parks is to preserve the natural beauty of these places, not destroy it. The gasoline engine is not a part of this natural world and its use should be severely limited on lands that have been set apart as parkland.

There's quite a bit of cherry picking of information and a slanted perspective in many of the "anti-access" responses. Absolutely, we need more enforcement of rules and rangers need to work with us, NOT against us. Again, a few dumb people doing a few dumb things. Why do you insist on pointing out the few isolated cases of irresponsibility? I see many people picking up trash and enjoying nature out on the trails. So many smiling faces and happy people. I've NEVER seen many of the abuses claimed by the Anti-Access folks, during my in 30 years of riding. Unfortunately, for many of the Zealots, the end justifies the means.

Discussion Question 1

Written & Online Comments

(cont.)

"Bad enough already that we get shot at by hunters if you happen to get in the way or scare off what they were trying to shoot just for sport" Total bull, hunters do not shoot at people. You are just an anti-hunter trying to use scare tactics, and fear in your attempts to discredit the over 14 million hunters who hunt responsibly, and who have paid money for licenses, tags, federal stamps for some species, land use permits, and on top of that we pay an extra 11% tax on firearms and ammunition. Hunters, fishermen/women, and the many groups started by them have paid billions upon billions of dollars for land and wildlife conservation, far more than any of the so-called environmental groups, who use all the funds they get donated to them for salaries, attorneys, and a never ending stream of absurd lawsuits to try and stop hunting, and in some cases, fishing.

how many times have you went into the woods on a OHV trip with your family? With the sheer numbers of families that enjoy the same recreation as I do there must be something to it. btw I bet you kids(if you have any) spend all day playing a video game. My daughter has horses, fourwheelers and she goes in my wife's jeep often on the trails. No video games for her she doesnt have time she is busy OUTSIDE.

I have every right to drive my Jeep on public land. Suck a duck if you don't agree.

ok heres the thing first of all my "gas hogging ohv" gets 26 mpg and its a jeep wrangler so thats off the list of negatives. second of all my jeep can take me places your boots need 3 days to get to. now i dont know about you but i dont have 3 days and i want to see as much of this country as i can. oh and by the way i pay taxes just like you, therefore its my land too, hate to tell you but welcome to America its called a free country for a reason.

I am prepping my Jeep right now for a weekend trip with my family. I cant wait to get out in the woods and enjoy nature! I am so thankfull to have the opprotunity to enjoy my hobby.

How is getting on a smelly ORV family time. Family time is doing something where you actually spend time talking to your kids and having some quality time with them. Sitting on an ORV which could cripple or put your kid in the hospital does not seem to fit that parameter what does you Minivan smell like? My Jeep smells like the airfreshner I display on the mirror. Also, my Jeep is not all that loud either and only produces the same carbon footprint it would if I was driving it down I-80. My family's chances of being crippled while riding on land open to OHV use is very unlikely. We enjoy the scenery that some parks around the nation provide us. I have seen hikers permanently injured in accidents...what makes you any different?

Discussion Question 1

Written & Online Comments

(cont.)

Sorry, my Jeep has all the emissions equipment it left the factory with. I tread lightly and enjoy the outdoors, as is my right. It's the obligation of the Forest Service to provide for diversity among outdoors users. Your comments smack of elitism and seems to encourage exclusionary practices based on some nebulous "pollution" metric. By your logic do you endorse yourself driving to the public lands? How do you get to work? MaryRose: You'll need to keep every human being out of the forest to meet your artificial standard of "wilderness". Does that include firefighters during massive wildfires? You do know that the OHV trails are highly useful as fire breaks and for getting emergency crews in and out safely.

To everyone who says quit being lazy. I have a question. What am I supposed to do. I have a bad back, and premature arthritis in my ankle. I got these problems while I was in the army. I served my country, and fought to keep America free TO ALL. Not just the elitists who want everyone to be like them. I can't hike anymore, but I still deserve the right to public lands! To the people complaining about the trash. I have been on many trails in CO, and UT from easy to hard. The most trash I have ever picked up is a wal-mart bags worth. Please back up your claims with links to pictures of this trash. To the people who claim OHVs have no right to be in "your" area. I live at the foot of a very popular mountain for climbers. Every year there are dozens of hikers rescued by our local S&R. The S&R team has a group of very well built "Jeeps", and use them to rescue lost, stranded, or injures hikers. Without our local trails these VOULENTEERS would not build their rigs, and there would only be S&R on foot possibly costing people their lives. How would you rescue these people? It seems to me that the people complaining about the noise are either being hyper-critical, or frequent areas that are overcrowded(probably because there are not enough OHV trails).

Also I can't stand people stating things without proof. Without proof you have no case. Just opinions. These FACTS are taken Directly from the Forrest Service. Off-Highway Vehicle Recreation in the United States, Regions and States: A National Report from the National Survey on Recreation and the Environment (NSRE) US Population aged 16 and older that participated OHV recreation from 1999-2004 214,022,200 people According to a table in that document, it works out to 18.6% of the total population of the US. We are not a small segment of society. 26.4 percent people above the age of 16 have participated in off highway recreation in Colorado (one in four people are considered overweight, and that is called an epidemic) 31.1 percent for Utah 20.7 percent in North Carolina Wyoming has the lead with 33.8 percent. I collected these FACTS during the closure of Tellico For the local economy in the long-term • USFS statistics indicate that OHV enthusiasts spend 4 times more money on lodging, food, and gas than other outdoor sportsmen. • Within the 3 county area encompassing the OHV trail system: • \$4.8 million in tourism revenues is generated annually by OHV users. This was for ONE trail system. • A repair solution would generate between \$1.5 and \$2.6 million in OHV revenue annually. • A closure solution would generate ZERO dollars in tourism revenue.

Discussion Question 1

Written & Online Comments

(cont.)

Very good facts. But facts dont matter just opinions and the hiking land closure community does not care what it cost a community if they can "win" and close trail systems. Hope you noted the sarcasim. As i was the first to post on this topic. The 60% to 80% of the population who do not participate in OHV use still do not recognize the family building experiences such as a sunset ride and seeing the large herd of elk grazing the medow at sundown. I still stand by my statement that my family is closer because of ATV adventures. I know people like "have no sympathy for me and my family memories" can continue to devalue my choices in life but no matter what they are still my family memories and you cant take them away from me no matter how hard you try they are in my familys minds not yours.

as the owner of a small chunk of land used for ohv/ 4x4 rec. I've never in my 7 years of running this land found trash on my trails. we are only open to motorized rec and primitive camping so I'd say it's representative of average ohv and 4x4 use. Another point I'd like to address is the noise complaints, in the state of Wisconsin, state 4x4 trails are designated as "unmaintained roads" and as such are subject to all the same laws as paved roads. Speed limits, vehicle noise, and blood alcohol laws still apply. designate forest trails as such and ticket or tow any vehicle or user that breaks the law. as an outdoors enthusiast I have a passion for camping and paddling. however, back injuries (broken vertebrae and nerve damage) have made it imposable for me to carry enough gear to even spend a night more than a mile from my vehicle and has kept me away from all but the most over crowded waterways. To help me get back to nature in responsible way, I've built a vehicle with low impact travel in mind. There is no way to convince me that my 2500 pound 60hp Suzuki Samurai on 29" all purpose tires could do irreparable damage to the forest land I would love to explore. As a 4 wheel enthusiast, I live in fear of the fact that my every move is watched by someone hell bent on kicking me off public land. every piece of trash must be picked up, every mark erased, every consideration given regardless of who's mess it was. If theres trash in the woods , a wheeler left it, if there is washout, A wheeler caused it, if a tree dies, a wheeler killed it, this kind of persecution is senseless. Because of this negative light we live under most 4 wheel drive clubs promote voluntary clean-up days and most individuals practice a "Pack out MORE than you packed in" policy. I believe that todays off-road enthusiast is unfairly lumped together with every idiot with a 4x4. It's like saying that every desert raver and drunk in a tent is a camper or a hiker and every beer can, wrapper, glow stick and water bottle they leave behind reflects on you. when someone drives a mile into a county forest and dumps a pick-up truck full of drywall scraps, he wasn't on a drive with his family to their favorite place to camp in the woods and thought, "this looks like a good place to clean out my truck." These people are knowingly committing a crime and would do so whether the land was open or closed to trucks.

Working on reforestation in the US and helping other nations to reforest is a great start. Working on clean energy sources. Working on protecting and saving wildlife in case of natural disasters. Just look what is happening in Russia - animals are loosing their homes and their lives along with ot. It's a tragedy and animals should be helped because they suffer too.

Discussion Question 1

Written & Online Comments

(cont.)

Here in the SE Utah, there are similar trail restriction due to the delicate nature of the cryptobiotic soil crust that is critical to ensuring ongoing health of the desert ecology. Unfortunately, in neighboring BLM land there are no such specific restrictions; only conservation guidelines to avoid further depletion of precious resources. I know that we want "kids to be kids", but why not take the opportunity to actually give our kids the education that our parks also want to give about protection? I'm sorry your nearby park limits your child's enjoyment, but clearly there are balances that must be achieved. There are plenty of other ways in which parents can let their kids go hog wild without throwing the rules out the door and the future of our environment...which is supposed to be there for your kids as well.

Totally agree with #11. Implement the ideas of the National Parks 2nd century commission.

Implement most of the ideas for the National Parks 2nd Century commission including more funding for upkeep, maintenance, new purchases, conservation corps funding as a green jobs and economic stimulus, paying more attention to migration corridors and staffing. The only worry I have are off road motor vehicle use by visitors, including but not limited to snowmobiles and ATV's. These should not be used in pristine wilderness areas. Part of the pristine nature of these places is the lack of noise as well as undevelopment of the land.

As an outdoor person, I see the value and quality of life when shared with others, everyone is a different person when involved with nature, we must implement the best recommendations provided by the National Parks 2nd Century commission.

the commission has reviewed and made the recommendations. it's time to implement them to maintain and enjoy our unique natural resources/sites.

We have to be mindful of the future, not just today, what is destroyed today and made into concrete jungles will not sustain us tomorrow. Please expand the green spaces.

Simply stated, we must protect our beautiful, yet fragile ecosystems, parks, wild lands, etc.

Quite honestly, I would rather my taxes be increased if it meant better environmental protection.

Thanks! Informative and helpful. With what you posted I went on line and answered my own underlying question. For some reason I was incorrectly under the opinion that the National Park Service was the agency responsible for all National Monuments. There are six different agencies that manage or co-manage the various National Monuments. I now see where the co-management might have implications for the Mount St. Helens area you make reference to.

The San Gabriel mountains are a fantastic resource for hikers. Making it part of the National Parks would provide the resources it needs to accomodate the millions of people who visit each year.

Discussion Question 1

Written & Online Comments

(cont.)

This is an area to logically put more funding. With the economy down many more people are spending their vacations in their own areas and national parks instead of flying somewhere. Spending for national parks benefits the parks, many of which are in dire need, as well as the economy with local jobs and local materials etc.

totally agree w/ full funding as well as promotion of parks to our population. so many people have never visited and enjoyed them. once you see them and learn the history, feel the nature, you will forever remember them as a high point of our country.

Ban plastic bottled water in national and state parks.

I grew up in Florida. Year after year I watched motor boats speed down the Intracoastal Waterway. Year after year I read newspaper accounts of the manatees and turtles that had been chopped up by boat propellers. I remember when Florida had Dusky Seaside Sparrows; it was declared extinct in 1990. This is an outrage. We need to stop the housing encroachment. Boats that dump their sewage into the water further damage the ecological balance; they should not be permitted to dump in our waterways. When we put the environment and animals first, we are actually putting ourselves first. When we put housing, factories, yachts, boats, and motorized land vehicles above the needs of our environment and the animals it sustains, then we are choosing our own eventual destruction along with the destruction of this planet, its flora, fauna, and marine life. Sooner or later we need to say, "enough". I am shocked by the number of adults in their 20s and 30s who do not believe the land is worth saving. We have generations who have never known pristine land and who have never learned its value. We need to educate the younger members of our society before our nation's heritage is permanently lost.

Wildlife includes a variety of fish that also need access to spawning grounds and obstruction free corridors for their migration. Promote catch and release and a return to restoring wild populations. Barbless hooks save fish from mortality. Lower the daily catch limit to one or two fish. Fish as well as bison need to be able to roam free and reproduce.

It is easy to say "let's stop the housing development and residential growth near our national parks". People will go somewhere else and destroy more habitats that are not protected by the national park status. Animals and their habitats exist everywhere, and it should be recognized. I think that this mentality should change. A lot of people don't see the problem with having a huge house in the suburbs and driving miles to work. Maybe they sense that such environment affords them freedom and privacy. People should learn how to live close to each other in apartments and in densely populated urban areas. We cannot grow our communities forever, one day we need to stop, look around us, realize that with our houses we are ruining animals' houses and create cities, not never-ending suburbs. New York City is a great example of this lifestyle. 10 million people can't be wrong when they choose to live close to each other and enjoy conveniences that only the life in a big city can provide. The size of Manhattan is finite and buildings grow up, not out.

(cont.)

In Wisconsin, we depend on large areas of bird friendly habitat for the annual migrations. Our state and its values protect that habitat against intrusion when it can but we need a coordinated effort of the States and the National Parks to see the larger picture and have a national policy of habitat protection.

No guns, no ATV's. Hiking and exploration on designated trails only. Penalties for failure to use trash receptacles and the removal of Park property. No alcoholic beverages, zero tolerance on these.

Enhance activities for children in National Parks. Have videos about National Parks been made available for schools?

Our National Parks allow all of us to escape from our modern urban environments and offer a haven for wildlife from development. Wildlife corridors help maintain biodiversity and are needed to link parks, Federal and State.

Protect our National Parks and their surrounding environment and don't allow any more homes to be built in our parks. I enjoy our National and State Parks. If you have more homes than you are just putting yourself in harm's way of any wildlife you may encounter and so we don't need to build homes on their land, because they were there first.

Sustainable forest management is a good plan to have, but it should not ban other activities, hiking, fishing, hunting, boating where there are waterways all should be open for all to use. Some ATV areas should also be made available. Clearcutting should be used very rarely, but there are cases where it is the best plan, it allows new growth, and as long as the area is replanted with the type of trees that were cut, it works out to benefit wildlife. It also provides a fire break, since forest fires used to do that, but now we put out the fires. I have seen in person the vast improvement in wildlife populations after a clearcutting operation. This was in two areas in WV, in the George Washington, and the Monongahela National forests. The numbers of deer, rabbits, grouse, songbirds, foxes, hawks, Black bears, and what I think were bobcat tracks. We also saw tracks that we think were from a cougar, but they were not verified, though some sightings were noted in the state. This site was replanted with pines, and after the clearcut in the mid 70's the pines are ready for logging again.

The only incentive is to keep routes open to roads and trails and not perverting the wilderness designation. When this happens and the public is not allowed in you start pushing more people into other smaller areas with decreasing safety and over-use. OHV is here to stay in one form or another. Learn to coexist on public lands

(cont.)

The Owyhee Canyonlands are indeed a special place. I have been fortunate to travel much of their length in Oregon either by car along the rim, hiking, or rafting the lower canyon. I just returned from spending two nights in Hole in the Ground and hiking the canyon bottom. The canyon is a rare combination of geologic majesty, diverse and fragile flora and fauna, recreational opportunity (including but hardly limited to hunting), Native American archeological sites, and stockman history. Properly protecting and preserving all of these treasures will require an integrated approach involving a range of stakeholders and concerned parties. I'm not certain that a national monument is the best way to achieve this, but I would prefer it to doing nothing.

Such a natural treasure needs permanent protection.

It is a genuine wilderness, and it deserves protection.

The Owyhee Canyonlands area is a secret national treasure. I enthusiastically agree that it deserves permanent protection as a National Monument so that future generations may enjoy the combination of beauty, solitude and wilderness activities that it has to offer. I spent a week rafting, camping and hiking through the canyon -- it truly is the "Grand Canyon" of Oregon.

I agree! Connecting the next generation to America's Great Outdoors is critically important and urgent. As global climate change becomes the defining environmental issue of our time, we must engage youth directly to begin solving this issue and stem this tide. Walt Whitman pointed out that "a child becomes all that he experiences." I am privileged to have had experiences America's Great Outdoors as a child. It was through spending meaningful time in nature that I learned the importance of creating and maintaining sustainable relationships with people and the land. I call on this Administration to invest in public / private partnerships that deliver environmental education programs to the youth of today in America's best classroom, our National Parks!

There is a very simple solution for both of you. Get out of the areas where OHV's are allowed and get into a Wilderness Area where they are not allowed! Its really not that hard!

I believe roads and sustainability go hand in hand. We need to be environmental stewards while allowing social and economic activity. We need them all in a fair balance.

Discussion Question 1

Written & Online Comments

(cont.)

If the Open Trails program were approved and funding as proposed, it would provide funds to the states and tribes to develop and maintain recreational trails and trail-related facilities across private land to isolated parcels of federal public land. When the federal government provides this type of access across private land, by law it must secure permanent easements. These type of easements are not always attractive to private landowners, and therefore, these easements are not accepted by landowners. Besides that fact, many landowners do not want to enter into any leases, easements or agreements with the federal government concerning their lands. State and tribal governments, on the other hand, frequently secure access on or across private land through short-term agreements, contracts, leases or easements, and are not required in all cases to secure only perpetual or permanent access arrangements with private landowners. This situation often is more agreeable to the private landowner.

Mandatory deposits would help. I spent my childhood collecting and working for 10 cent bottle deposits. We have low income adults collecting plastic bottles here in CA. This would help them too.

Please check out the idea I've posted. It's inspired by ecologist Dennis Martinez. I think you might like it. { Link }

Search "public native plant gardens" on this site for a complementary idea...and thank you for yours.

Thanks for the website resource, and "green infrastructure" sounds like a helpful term for weighing in with developers and city planners. I love it, keep up the good work.

This type of idea has popped up a lot over the last few pages I've looked at. I've done a lot of volunteering for various things and know the satisfaction of a job well done even if there's no monetary gain, but I also think we need to be careful not to abuse the generosity of the seniors and others who are already volunteering or may in the future. It would be nice if they could actually get paid for their time, at least to cover gas and other possible expenses. Perhaps this could be done through grants? Much of my own volunteering over the years has partly been because I didn't have money to donate, so I donated my time. Organizations have plenty of work but no funds to pay someone to do it, so volunteers are vital. The satisfaction of volunteering is often payment enough, but after decades of dedicated volunteering, I'm starting to feel a little overused. I'm guessing I'm not the only one.

This is a good idea as long as the historic roots are truly recognized. Most of this country was discovered on horseback, and the historic and cultural role of the horse should be recognized and included on Scenic & Historic Trails.

Discussion Question 1

(cont.)

And in return for this fantastic volunteer help, off-road recreationists are first at the table when decisions about where to ride are made. When I hear the off-road vehicle groups have given a million dollars to the Susan G. Komen Foundation (breast cancer), then I'll have my first example that they act in anybody's interests but their own.

For anyone with experience working with many govt agencies and doing grant writing, bringing these resources together makes a lot of sense. A clear well-defined mission and stable funding are critical to long term success.

We shape the land, and, in turn, the land shapes us. Telling the story of how this happens is extremely important.

Well all I know is we are having fund raisers, car washes, bake sales, contests, etc in order to pay for maintenance of our local parks.

Well said. I work as a Garden Instructor at an elementary school and all that you have said reiterates what our program does for the students, school community and the community as a whole. Not only does it connect them to the outdoors, it enables them to grow from seed the food that they eat throughout the year and involves them in every step of the process. For many of them, they find the connection they have been missing. If we want kids who are involved in all aspects of life, then school gardens are a great place to start.

I visit the Smokey Mountains every year. I am all for a limited (controlled) amount of traffic in the park area. I am also in favor of a fee (\$5) per vehicle to help support the park maintenance. Whenever I visit the park, I always place a donation in the collection box at the end of the Cades Cove road, but unfortunately the vast majority of the vehicles going through the park simply drive on by without a second thought of helping to preserve this wonderful area. If we were to incorporate these two ideas, I believe it would benefit the park in several ways. One, the amount of air pollution could be greatly reduced. Two, the direct impact on the natural wildlife would be reduced, thus allowing nature to recover from the damage we have already done. Three, the overall cost incurred by the Forrest service in maintaining the park would be reduced by having this fee used for just this park. I am sure there are many other ideas that others can come up with to help in this area.

Interesting, when I was thinking about outdoor spaces, I was thinking parks, forests, trails, etc., not water and oceans. Does America have areas of the ocean that are considered parks or protected spaces? If so, I agree with this comment. If not, although I am in agreement with the concept, I'm not sure that this is the appropriate place to post it. But I am going to "Promote" this idea with the understanding that if we don't have designated ocean parks, that will be something to implement in the future...including banning shark finning in said ocean parks.

To encourage camping, provide classes/workshops in "how to camp" - camping etiquette, how to set up a tent, how to start a fire, what to be scared of and not scared of, how to deal with toilet matters if not near a bathroom/outhouse, etc. Perhaps find ways to pool people who are interested but unable to afford or set up facilities alone.

Discussion Question 1

(cont.)

i LOVE this idea. zion this year was super easy to see and get around in w/ the shuttle service. glacier and yellowstone would also benefit. an 11 mile line of cars in great smokeys was horrid and really turned that whole park off to me. haven't been to yosemite to comment, but believe that environmentally the shuttles /other transportation will help w/ visits to many of our parks as they won't be crowded w/ cars; parking and air quality won't be as huge an issue. plus visitors will actually meet and talk to others - something we cannot do crammed into our own cars.

Grand Canyon has a nice public transport system there too that we used quite a bit. I think \$25 bucks to access the Grand Canyon by car was already a pretty hefty fee, though. Let's make it a no-brainer to use it, though, not a punishment if it doesn't happen to work out for the individual. Catch more flies with honey perhaps?

One of the best ideas I've seen here. The legacy of the CCC is still with us today making it easy and pleasant to enjoy our parks. This program should be open to all the unemployed, not just disadvantaged or at-risk youth as I've seen remarked in another idea. Having people of varying ages, experiences, and socio-economic status would greatly benefit all of these groups through working together and sharing their experiences.

Put community gardens in your search engine. There are many resources available telling you how to go about organizing this as well as support. Good luck. "A small group of thoughtful people could change the world. Indeed, it's the only thing that ever has."

Way to go, These are some of the best ideas I have heard in awhile. I have thought about this time and time again. The CCC was one of the best things that happened to this country. I'm in my 50s and have been in the infrastructure building business for 35 years. Due to this economy and the US not investing in infrastructure projects I have been out of work for over one year. I would be MORE then happy to sign up and be a part of a movement such as the CCC. It actually looks like employment is not a priority to the feds.

Fully staffing our national parks protects them, and ensures a better experience for all visitors.

Our National Parks must be fully funded. They are a precious and irreplaceable part of our legacy as Americans.

Funding Americas parks is best for America

Our National Parks are a precious and irreplaceable part of our legacy as Americans. They must be fully funded.

These National treasures need to be properly cared for, preserved and staffed.

Discussion Question 1

Written & Online Comments

(cont.)

I think entry fees should be reasonable to allow all people access to our lands. I think infrastructure money should be appropriated to repair the damage done for years when the parks were left to deteriorate under the "You have seen one, you have seen them all" philosophy. This would make access to the public lands more available. I think handicapped access should be part of the public lands improvement for those of us that love to visit the public lands, but are handicapped. I think that the government should have a plan to encourage visitation to the public lands. Yellowstone's roads are being refurbished as we speak. This is good. I wonder what else needs to be done to Yellowstone and the other public lands to make projects long ignored come to fruition. I do not agree that foreigners should be financially punished for wanting to come here. Their tourist dollars all make up for any real or imagined money lost by their visits. They should be welcomed as we are a nation of immigrants and how better to show foreigners our country that allowing them access to our beautiful public lands without any penalty. Imagine the pictures they take home to show to others about what a great and beautiful country we have,

My family supports increased funding for our national parks.. Funding is needed to build and maintain the boardwalks and paths that protect the environment and take visitors to great places like up Logan Pass in Glacier National Park and through the geyser basins in Yellowstone National Park. Funding supports our Rangers who tell us about the carriage roads and bridges in Acadia and explain to our kids how the Condors flying over the Grand Canyon almost died out. Funding is used for new visitor centers that orient us to the scenic wonders, wildlife, and history we are about to experience. For as many times as my family's experience in the national parks was enriched because funding provided Rangers and facilities, it's sad to say we can list just as many where trails were poorly maintained and where there were no Rangers to tell these stories.

I recently briefly met a ranger who had been coming to Yellowstone in the summer for 40 years and as his children grew up they worked at Yellowstone. His father preceded him to Yellowstone, although I do not know in what capacity he came. His visit profoundly influenced his son and then the son influenced his family, The knowledge that this ranger gave to us tourists was gleaned from all those years at Yellowstone. He mentioned geological and other disciplines doing research in the park. This research can only benefit us and should continue.

America holds the greatest natural treasures on earth. It is vital to fully fund our national parks, which are trustees of many of these treasures! Protect, conserve, educate.....these are the noble purposes of America's national parks.

This strikes me as a no-brainer. Our National Parks are an integral part of our national identity. I meet people from all over the world in my local National Parks. That's good for our local economies as well as our international image. Supporting our National Parks is a must.

Our National Parks serve a two-fold purpose in giving us a place to enjoy nature and a place to learn about our history as a nation. It is very important to preserve both the natural parks and the historical parks for the future.

Discussion Question 1

Written & Online Comments

(cont.)

Making sure our national parks are fully funded should come before the funding of foreign interests. Our national parks ARE jewels for the citizens of this country to enjoy and share with others. Without these parks the quality of life for everyone in this country is diminished. We have a duty to future generations of Americans to protect our parks and see that they flourish.

Please Increase Funding to Fully Staff National Parks!

Our national parks are truly our national treasures. Some of my dearest memories of childhood come from visiting the parks of the West with my family. Now, when the parks partner with organizations such as NatureBridge, student groups can come to our parks for educational experiences that inspire personal connections to the natural world. These field science programs in outdoor classrooms can be life-changing and affect myriad diverse student groups. Our national parks exist for educational as well as aesthetic experiences. They need our support. Full funding is critical.

Some of our best family vacations have been in our National Parks--Acadia, Bryce Canyon, Yosemite and Zion are our favorites, and we would like to see them all fully staffed and funded!

Funding must be increased by significant amounts

All National parks are important, they are part of our history and the parks need to be staffed properly, so everyone who visits gets the importance of saving this vital resource. We can't thank our presidents who have had this vision, such as President Theodore Roosevelt, to save this for our future generations. Iris

Our National Parks should be fully funded. National Park Service rangers offer dedication to a wonderful outdoor resource that gives us the best bang for the buck in this country. In tough economic times a fully funded NPS represents wisdom. We need more and more wisdom ! Disappear the privatization.

Our National Parks should be fully funded. This is a sound investment for the future. The returns for tourism alone would make it so.

Discussion Question 1

Written & Online Comments

(cont.)

Definitely fun National Parks! One of the good things about Public Parks is that they serve a dual benefit.-- not only do they benefit the public recreation wise- and serve as a means for environmental appreciation and education for our young, but these parks also serve as a protection for many wildlife species and habitat as well as being accessible to the public. In a National Park, wildlife habitat can be protected while still providing access to public camping, hiking, and recreation. National and State Parks are the tools needed in our ever growing populations to encourage the public to actually appreciate our Environment and wildlife- and to provide sanity in the place of urban chaos. Without public parks, a disconnect from Creation results. Public parks also provide enough foliage and trees to combat industrial air pollution that the rest of our Nation and World faces on a daily basis. We need the natural areas to counter the un-natural areas in an ever growing population.

Let's fund our parks!

yes...fund the national parks.

Since their creations, our national parks have served to show its citizens as well as the world the need to protect and revere historical areas as well as areas of wilderness and pristine beauty, and the wildlife contained within its boundaries. These parks must be fully funded in order to provide adequate staffing, equipment and updating/preservation, so that future generations of the country can experience the many wonders of the United States. Fully fund our parks!!!

Yes.... Our national parks need to be properly funded and protected from the greed of corporate America. These parks should be preserved for us and for all future generations. SAVE OUR PARKS!!!!!!!!!!!!!!!!!!!!!!

If we want future generations to be able to enjoy our national parks as we have, we must give them a high enough priority in the budget to bring them back to a fully maintained condition. For future generations to get the same value from a park visit the staff of rangers must be brought back up to a level to provide the ranger lead hikes and evening programs that we took our children to when they were young. Some fees for ranger walks might be an answer. The burden of a few dollars per person would only be a fraction of the cost of getting to the park and would greatly improve the value received for that cost of getting there.

Absolutely I am for funding!! My family has spent many enjoyable days and weeks at National Parks across out country. They have been some of our most fun vacations and children love them, to be outside and run and romp and be a part of nature. The traditions have continued with grandchildren from a very young age and their parents now take them. What an awesome country we have and it would be so sad not to see the Parks continue forever.

Saving the natural places and wildlife of our country should absolutely be a top priority. Without these places, humans will not survive.

Discussion Question 1

Written & Online Comments

(cont.)

National Parks and wilderness areas are a "must" for all Americans and mankind. Future generations must be able to enjoy these areas just as we have been able to enjoy them. Funding needs to be adequate to maintain facilities and trails due to use, as well as, to acquire new areas. Once gone to development or misuse, these parks and areas will be lost forever.

Save our parks before Monsanto turns them all into hog farm CAFO's, with Clarence Thomas' blessings.

I fully support better funding for our National Parks. These are treasured resources that ALL can enjoy. They need to be maintained and their rules for use need to be enforced so that they can thrive for years to come.

Full funding for the National Parks and all our wilderness areas along with continued funding for green technology.

Do not privatize park services, as we need trained park servicers with genuine care for the parks.....the love enhances the park experience. FULLY fund the parks including educational programs. Keep the noise and light pollution out. Keep OHV out....I hate what they stand for, a mentality that predates our awareness of our being as PART of the envoinment, and not stuck in a role as a permanent-adolescent dominator of a percieved other.

It's STILL America's Best Idea and deserves full funding. It could be some of the best monetary investment in all government. The payback is huge.

Protect, defend, sustain our lands, our wildlife, our waters

Our National Parks need to be fully funded with permanent staff and services as well as keeping them in the public domain.

Parks are a nice refuge for both people and wildlife. We'll be missing an important, original part of America without them. We need to preserve land that has been there since the colonists arrived in America.

I frequent Shenandoah National Park and think it would be a travesty if the park service were forced to close areas of the park due to inadequate staff. Please fully staff the NPS!

Our National Parks are treasures and should be treated as such. They are irreplaceable. If we fully funded them, we would create thousands of jobs.

Fully funded national parks are easily one of the best investments we can support as taxpayers and citizens. If only the rest of our money was as well managed and well spent. Increase the NPS budget!

Discussion Question 1

Written & Online Comments

(cont.)

Yes, please fully fund our National Parks and Monuments, etc., both for staffing and for maintenance. It's way overdue.

Our national parks are truly a national treasure worth preserving and enhancing. Adequate staffing with trained and knowledgeable rangers is very important both for increased public enjoyment of the parks as well as for the protection of park lands. Neglect will only lead to more money needed later--it's always better to maintain than to have to repair--and if eco systems are not preserved they may never be able to be restored. Please increase the funding for our national parks so that they will be available and beautiful for us as well as for future generations!

I think that it is important that the national parks be fully funded and staffed. For some this is the only place they have to go and experience wilderness and animals and mountains etc. The beauty of our parks needs to be preserved for the mental well being of the citizens of this country, who need to have these places to retreat to for relaxation and restoration of calm that can't be found in our cities.

Some of my best times have been in visits to National Parks, from the Smokey Mountains to Acadia to the Badlands to Yosemite to possibly the best, Denali. Please fully fund them.

I am so grateful that the National Parks exist for so many reasons... for the wildlife, for us to reconnect with the glories of this world, for us to be reminded of what we have to lose. Please please continue to fully fund the parks.

I just returned from Glacier National Park. I took advantage of the ranger-led activities and they were all very well done. My enjoyment of this great park was enhanced, and I appreciate the teaching and leadership they provided. In addition, the shuttle services help reduce traffic in the parks and should be expanded further.

Discussion Question 1

Written & Online Comments

(cont.)

Our family just spent three weeks this summer in Yellowstone and we were very aware of how much the full time park staff needs bolstered. They need to add full time rangers, naturalists, interpreters, fly-fishing guides, and signage. They also need to boost their educational programs for the public, as we observed some incredibly naive human behavior, such as getting much too close to wild and dangerous bears and bison for that "special photo," especially since they all had calves and cubs at their sides. Since our tax dollars cannot be designated, the federal government has a deep and ecological obligation to ensure that Yellowstone and ALL national parks be well funded. Don't cut funding--add funding for our national park systems! The new gold Leeds Educational Center at Old Faithful is gorgeous and energy efficient (It was not open yet though). We should support and nationally PUBLICIZE not only more of these types of energy efficient developments in our parks (and all over our nation--in cities and residences), but also consider putting more staff on full-time employment in those parks. We also must step up and speed up our recycling efforts tenfold in our parks and our country overall. Passenger trains should be reintroduced to Bozeman or to Livingston for those people who wish to visit Yellowstone. We took the train from Toledo through Chicago to Havre, Montana and absolutely loved it as part of our travel experience, but speaking to folks on the train and all around the areas we traveled out west, they bemoan the sad fact that passenger trains do not run into southern Montana where they are needed, and reintroducing passenger rail trains to this southern Montana area would greatly reduce our energy reliance on petrol and increase the joy of traveling long distances across our nation. We need to invest in more, not less, train travel--within states and across them.

I agree that funding should be increased to fully staff the national parks. Upon my visits to national parks, I found that many park rangers are seasonal and not full time employees of the Park Service. Many seasonal rangers are not as knowledgeable about the parks as the full time rangers. Many national parks are understaffed and hours of operation reduced. The national parks are very educational in their culture, geology and history. National Parks have to be preserved for future generations.

I very, very much agree. Our parks have such a wide draw from our overseas visitors, that these folks should also share in the cost of our efforts to keep our national parks and vistas clean, clear and available to all. We have millions and millions of visitors from outside our borders, let's engage their financial resources with a small departure tax. Great idea! I sure wish the powers that be would pick up on this idea.

I do believe we should charge foreign visitors a fee to enter our parks...that could be millions of dollars for parks and preservation. Let's be smart about our country and finances.

I support funding our National Parks by user fees and through our governmental bodies.

Discussion Question 1

Written & Online Comments

(cont.)

Becoming negative and calling our President names does nothing to solve the problems we as a nation are facing. To think positively when the situation appears negative takes vision and an enduring optimism. We need to focus on solutions more than the problems, on what will benefit the future generations of our children and their children...to the seventh generation as the Native Americans say. Once wilderness area is stripped of its trees for the lumber companies, it is of no value to us, or the flora and fauna that lived there. Once the mining roads have been cut into total wilderness areas, they are no longer wilderness. These are treasures for us to care for and keep in their pristine state...such as that is in these days. So much has already been lost, so many new building developments are threatening even the Civil War battlefield areas. There is plenty in this land for jobs to keep these as they are. If the parks were maintained, if they were fully staffed think of all the jobs that would be right there.

Sell the land. The government is out of money. We can only survive if individuals own property not the government.

Funding our National Parks should be a top priority. As troops are brought home from the Middle East, some funds could be allocated to saving our parks.

FUND OUR PARKS!!! Keep trails open and supervised!

How about we privatize the maintenance of the parks much like Obama has privatized Nasa? The government already charges enough fees as it is, and this should provide plenty of the funding needed. Any ways Obama has stolen funding for the constellation project that would have finally eliminated our dependence of foreign oil by finally being able to get power from a functionally fusion reactor. Clean, safe, and abundant power that would have been fueled by He3 mined from the moon. Just one shuttle load would have had the energy equivalent of billions of barrels of oil. This would have made electric/hybrid cars actually green instead of the toxic battery "garbage-mobiles" that they are now because they are charged by oil fueled generators. This was Bush's idea too, and the liberal "green" Obama cancelled it along with thousands of important jobs with it. Open your eyes people! Stop voting for the lying, cheating, greedy, corporate/union pawns and instead vote for the conservatives that are working for you! Get the facts, and quit listening to the sleazy lies the Libs have fed you with. Just look at the economy for an example, it started to falter when the Libs took over congress and started making bad laws. Not when Bush took office like they would like you to believe.

I'm sure funding is probably a problem (even though it's only minimum wage). But using volunteers instead of employees would make this is a great idea. Perhaps there could be discounts or a number of free entrances per month/year as an incentive/show of gratitude.

Discussion Question 1

Written & Online Comments

(cont.)

I think reviving the Civilian Conservation Corps is a great idea, but agree that paying for it is another issue. We certainly can't force people who are on unemployment to do this work, but with proper incentives, maybe we could motivate them to do it. Also, a program like this, which could provide our young people with another opportunity to serve our country, rather than joining the armed services and going off to war, would be very valuable. The work skills they would develop, not just learning how to build trails, maintain buildings, etc, but learning how to work with other people and function as a member of a team, would be valuable in whatever career they choose. This would also give people a chance to see parts of the country they might never get to visit, and could generate enthusiasm in preserving our great natural places, which is certainly not a bad thing. We might even be able to convince some of our youth to put aside their cell phones and video games and go out and enjoy some fresh air in a National Park.

Why is it that a certain segment of our society has a feeling of entitlement is due them from the government? Where they feel the government should supply them with everything! To my knowledge you have equal access to everything if you make the decision to use that, it is up to you! There are multi-use trails I use that are available and used by hikers/backpackers, equestrians, mountain bikes, motorcycles, ATV, 4X4's, snowmobiles and X-country skiers in the winter all on the same trail – everyone has equal access. Its not limiting the enjoyment of those that choose to access the area.

I support the idea and use of public land for all of our public interests. We " Off Roaders" have a strong commitment to protecting our environment for ourselves and future generations. Joe, a Southern California off roader, hiker, boater and camper.

I agree that a breadth of recreational activities should be supported. But all uses must be sustainable and compatible with the other uses in a particular area. For example, if a park wants to offer nature as a primary attraction, it should be quiet and low-impact so there will be some nature left to enjoy. If a park's primary purpose is recreation, it might be a little noisier and there might not be so much wildlife. Start with a funding basis that covers the park's most basic and popular activities that the most people can and will participate in. Usually that's walking/hiking, camping, a tram system like they have at Bryce and Zion, a lodge, concessions, ranger tours, swimming if appropriate, etc. Anything whose useage incurs significantly greater cost to the park and impact to the other visitors, environment, trails, and facilities (OHV, horses) should charge an additional usage fee proportionate to the impact, and that activity and all its maintenance and engineering should be supported by the usage fees. Lots of people coming and paying a usage fee for that activity? The usage fees left over from maintenance can go to plan, engineer, build, and maintain more trails, parking, noise and pollution mitigation, and facilities. Usage fees not covering the extra cost of that activity? Sounds like visitors to that park aren't interested enough in that activity to continue offering it and incurring the unnecessary expense. logically all activities will not be appropriate in all parks. No off-roading on the National Mall, no snowskiing in Dry Tortugas N.P., etc.

(cont.)

I heartily agree with the concept of multi-use of ALL public lands. In another post I recommended a trip to Avery Island, Louisiana. Home of Tabasco products, a beautiful park, a wild bird sanctuary and OIL WELLS. There is enough oil in the USA to eliminate imports, if desired. However, most of it is "off-limits" because of Federal Land restrictions. Second, hunting is banned on these Federal lands. What is more basic to the concept of a "Wilderness Area" than hunting. That was one of the primary uses for ALL of these lands before they became Federal property. Now the hunter and trapper is excluded. Does that sound like rational thinking? My ancestors did not travel the Cumberland trail and then west to the Mississippi and beyond, on foot, horseback, in wagons by choice. I am sure they would have loved to use an ATV and a 4-wheel drive truck. So do not permit one group of citizens to exclude another group just because they are predigest toward the other's chosen form of recreation.

Increasing access to OHV only benefits a small subset of the population with the economic resources to purchase OHVs. If an OHV owner is willing to pay a much larger share of the cost to support the parks, perhaps there is rational to increasing the use. An argument to state that greater OHV access equates to greater park visitation and therefore revenues is very difficult to substantiate.

To say "...OHV .. (is) ...a small subset of the population" is incorrect. Studies have shown that far more people take advantage of OHV use than those that hike. For some OHV's they pay fuel taxes that go to funding many projects, we are talking millions of dollars already. California alone, it gave out grants of over 27 million dollars - that did not include operating cost of CA OHV parks. If it were that hikers/backpackers were the dominate users would you expect the same from them? –“ ... to pay a much larger share of the cost to support the parks”?

Wow...no way to put OHV and hiking on equal footing no matter how you slice it. But, if it could be remotely shown that hikers/backpackers create a greater than their share of impact on the environment, than hell yes...let them pay commensurately. I'm glad we agree.

With 50 % of national forests available for logging (plus private and state land) and enough roads in national forests to go around the Earth 17 times, I doubt opening every bit of the remaining national forest land to logging would make a bit of difference. Some areas could be left without roads and logging. It would not be responsible to log every area. The logging industry now depends on market conditions more than anything. Sustainable logging should be able to be accomplished on the existing areas open to logging.

In order to preserve fund integrity, allow the landowners donating part of the value of their easement to be included (sign on) the Cooperative Agreement.

The LWCF is also key in funding the acquisition of wilderness inholdings from willing private sellers. This avoids needless and harmful development inside our prized wilderness areas. It makes possible the work of the Wilderness Land Trust (www.wildernesslandtrust.org) that actively works to carry out such transactions that benefit future Americans. Please see and vote to promote related idea: LET'S FILL IN THE EXISTING WILDERNESS HOLES! { Link }

I know home owners who: 1. Garden with native plants; 2. Heat water with a solar heater; 3. Generate more electricity with rooftop solar cells than they use and sell electricity to the power company; 4. Have ordered an electric car that will be charged from their roof; 5. In the garage, have bicycles and kayaks, not motorcycles; 6. Bike to work; 7. Compost their garbage.

I have been an ATV rider for over the last 30 years and have been a responsible person. When ever I see damage to public lands I try to do what I can to keep it clean such as picking up crap people leave behind. As far as intruding on or disturbing wildlife, the ATV trails are a very small fraction of the overall landscape. The wildlife in these already established areas tends to stay away from these areas. The way some people talk about this, they act like every acre of wilderness has an ATV trail on it and that every available off roading waco is out there tearing it up.....not true! Closing ATV trails that have existed for the last 30 years is going to do nothing. These trails even if not used will exist for decades to come. It's all about everyone being responsible. Not just ATV riders! I have witnessed so called environmentally aware hikers that leave a mark on the land by throwing trash wherever they damn well please. None of us are perfect....we all need to be responsible!

All national parks need our help, everywhere.

We have a narrow window of opportunity to restore the Everglades. Working with Federal, State and private land owners, let's finally restore the River of Grass

With the caveat that such legislation needs to include a complete analysis of the situation at the landscape level. If the legislation strictly prohibits siting utilities, this could cause more damage as the siting would be relocated to a more sensitive area and damage more resources. For example, a federally held conservation easement in Colorado did not allow expansion of an already existing utility right of way. This eliminated the most ecologically feasible option and resiting tore open untouched lands and damaged habitat. Suggest that when utilities are being sited on conservation lands that the legislation require full disclosure of the environmental impact at the cost of the utility company and be publicly reviewed.

I've made this comment on other topics. OHVs should have access on roads and designate trails. That would seem reasonable.

Discussion Question 1

(cont.)

I think this is a good idea. But to be fair, it should include allowing the use of electric wheelchairs and scooters where possible. Better, make rental of scooters available for those who aren't strong enough to walk very far. They're entitled to see the views they help pay for, too.

I too have traveled many parks and as a spouse of a disabled veteran must use a vehicle. I believe wilderness may be found around buses and vehicles. Do not land lock us out !!!

Urban Parks to allow the public on various Federal/State/Local funds to be used to allow visitors to learn, touch and see water and history is needed.

Electric and hybrid vehicles SEEM environmentally friendly because we're a step removed from the damage, but a great deal of our electricity still comes from COAL - one of the most environmentally hurtful fuels there is. Nevertheless, public transportation could be more fuel-&-emissions-efficient than individual vehicles, and it could cut down on damage done by careless drivers.

This is an excellent idea, how would it be funded is the problem. Then tie it to welfare is not practical, as most on public assistance are from urban areas, most of the parks are in rural areas. The idea is great, just need some more input, and more ideas about how to make this practical, so it can work, and not cost much money from the parks budget.

Wonderful idea. I will also post a sister-idea about noise pollution as well to potentially control flight paths over selected parks. As a current SE Utah resident, you really appreciate the dark skies around Monticello, UT (for example).

When the criminals stop roaming around at night, I will stop leaving outside lights on. The idea of dark skies is a good idea, but it just is not something that will happen. There are some areas with minimal light pollution, and these areas could possibly be used to make a few select areas, that no more lights can be added. The biggest light polluters that I see, and I have travelled the country extensively, are the neon signs that are advertising for businesses. Maybe attempt to enact laws that limit the time these can be on, turn them all off, by 10pm on weeknights, midnight on weekends? I can remember seeing large areas of the Rockies with little to no lights visible at night, and huge areas on the coasts, the best was the Outer banks of NC, years ago, about 80 miles of beach, no city lights visible at all, now you can see maybe half of the stars that you could see back in the late 60's early 70's. While I do somewhat agree with your idea, it just is not very practical.

Our national parks truly are America's great idea. They need to be more than an after thought when it comes to funding. Please work to seek a permanent and sufficient source of funding so that these great treasures will not become 'poor cousins' or an embarrassment. The fact that the American people are loving them to death is a solid sign that they are worth the effort to preserve them and expand them before it's too late. My family and I visit some units every summer. No matter where they are located, coast to coast, they show signs of need for better financial support. Our gallant rangers are doing a great job, but they need more personnel and better funding.

(cont.)

I think they have done better than the previous administration regarding the environment. The first thing the previous Administration did was try to dismantle the Roadless Rule. There is no doubt more protection is better than less. Allowing big business access to every natural resource is a huge money maker for the select few. It does nothing to benefit average people. I agree, be VERY careful with what you wish for.

The federal tax deduction for conservation easements has helped protect thousands of acres of private land from development and it certainly needs to be made permanent.

Absolutely protect the corridors!

I agree with the most natural experience possible. If an area is wilderness and you want to see it, you go in naked without food or water or gear. That would protect the wilderness.

Having worked as a naturalist at an outdoor school for several seasons, I can't say enough how needed these programs are across the country. Getting youth out of their "comfort zone" of school lets them experience nature - and science - in a whole new way. I've seen strong connections with wilderness form for some students in just a few days - my favorite moments are when a child comes in thinking he "knows it all" and leaves excited and wanting to learn more about geology or animal adaptations. Students become more interested in what they learn or have learned already in the classroom, are willing to share their what they've learned about conservation with others, and realize that anyone can enjoy the outdoors, even if they live in a city. Almost all of my students are surprised by something, and many are changed by the experience. We always end our 2-3 day sessions with a discussion on the importance of preserving these open spaces, and little things that each student can do to start the process. Not only is this an amazing experience, but our school - and almost all that I've heard of - use lesson plans that adhere to California and Nevada state standards for 6th and 7th grade science and language arts. We use Project Learning Tree, Project Wet and Project Wild to build our programming.

"We simply need that wild country available to us, even if we never do more than drive to its edge and look in. For it can be a means of reassuring ourselves of our sanity as creatures, a part of the geography of hope." Wallace Stegner

It makes me happy to read comments like the previous few defending wildlife. It's good to know there are so many like minded people out there.

Discussion Question 1

(cont.)

"I am anti hunting of struggling, threatened, and endangered animals." Much like said, there is no state that allows any endangered species that legally open to be killed. Trophy hunting is huge money in this country. As long as the rules and regulations are followed there is nothing wrong with this practice. I myself have killed multiple trophy bucks, but at the same time I have harvested those animals for food. The public and our government should be supportive of all fishing and hunting as it a money maker for our economy across the United States every year. Even through the economic lows of our country in the last few years the amount spent on hunting and fishing is still on the increase. With increase in funding to our state agencies there would be a greater chance to help protect these beautiful landscapes and animals that are in our great country.

Didn't read all the other comments, but even better would be laws requiring trash companies and/or landfills to go through trash and recycle what can be recycled. It would make sure **everything** gets recycled, would make separation unnecessary, and would provide jobs.

There should be plenty of space for OHVers and everyone else. We're not running out of land, we're just all congregating in the same areas, so they are crowded. We need to make better (more) use of the land we have. Then there will be enough natural areas for no one to feel crowded.

Sure people should be responsible about how many kids they have, but that is a personal issue not exactly the same as the world issue you are bringing up. The fact is the world is not overpopulated; people just all live in cities these days so resources can not be distributed evenly. There is way more space than we'd need to give everyone land on which to live. Have you never driven through Kansas or Nebraska before? I'm not saying urban sprawl is the answer, though responsible development has its place. We need more rural communities now that farming has been left to the mega-farmers.

Let's protect the land, but keep the existing roads open. Closing roads, especially in the desert, makes many areas impossible to visit by anyone. Let us give ourselves the opportunity to visit and appreciate our natural wonders, by keeping them accessible.

Think Globally Act Locally!

support non-profit volunteer groups that engage citizens to restore and enhance their communities. Check out www.solv.org, which is an unique Oregon non-profit that has been successfully working with volunteers for over 40 years, to clean up and restore watersheds across Oregon. People are personally engaged and passionate about their communities, plus kids are learning early on what it means to volunteer and to take care of the environment.

(cont.)

Yes, kids sit around in after-school programs, bored and not doing much, when they could spend an hour or more a day cleaning or clearing a nearby trail, hiking to a pretty lake, taking a class with a Project Learning Tree, Project Wet and Project Wild course teacher (or other volunteer or paid person), and discovering their local parks and green spaces. If kids only knew what was in these green spaces, they would love them and preserve them. Kids grow up in apartments or subdivisions so often, with very uninteresting yards, and after reading *The Last Child in the Woods*, I know they (and I) need to be in nature and they need to see it with "all its parts", not just a corner garden with flowers planted.

the animals are first

While preservation in general is good, this seems to be like another subsidy for private land owners to do what they should be doing already. I would rather see federal funds going to better manage federally-owned lands.

I totally support having our National Parks fully funded.

I favor more trails for multiple use: mountain bikes, horses, motorcycles, hikers can all coexist. Horses cause as much trail damage as motorcycles, more than MTBs. We should allow mountain bike, equestrian and motorcycle clubs to participate in building the new trail network. There is lots of room for MORE TRAILS. If you limit the # of trails it just increases the erosion on existing trails.

Can you say "c-o-n-s-e-r-v-a-t-i-o-n"?

TRT is an amazing opportunity to bring the National Parks to life for students who might not otherwise get the opportunity to learn about their powerful messages. This is also an incredible reward for teachers who are willing to make the sacrifices to remain in the poorer school districts for their careers. This allows them to enrich their teaching and their own life experiences as well. And what could be more renewing to the spirit than a summer in a National Park environment. This teacher will return to the classroom refreshed and ready to tackle challenges in a new way! As a former teacher, I'm quite envious!

This is an excellent use of funds, to educate young people in our most beautiful classrooms. All across the country schools are building outdoor classrooms. For some fortunate students, they are only a bus ride away from incredible vistas and learning experiences.

Public lands are for all the public. Management (balance) is the key.

Discussion Question 1

(cont.)

Absolutely a win-win. We need to create jobs, and making that investment one that maintains and upgrades our state and national parks and preserves is a no-brainer. I have also admired the work done by CCC in the '30's. Bring it back!

AS A MEMBER OF THE DOMICAN SISTERS OF PEACE, WE HAVE SEVERAL PLACES THAT WE CONSERVE, LIKE CROWN POINT ECOLOGY CENTER, BATH, OHIO;HEARTLAND CENTER FOR WHOLELISTIC HEALTH, GREAT BEND, KS; HEARTLAND FARM, PAWNEE ROCK, KS;CRYSTAL SPRING CENTER FOR ECOLOGY, SPIRITUALITY, AND EARTH EDUCATION. PARKS ARE AN ESSENTIAL PART OF THE CITIES IN OUR COUNTRY.

I also totally support funding our State and National parks, and am very willing to pay higher taxes for that--if need be. State and National parks are the only places left in our Country where one can connect with Nature, and where trees, lakes, creeks, woodlands ,e tc, still remain intact for wild animals. There are some things worth paying higher taxes for- and that is definitely on the top of the list--- even over education as far as I'm concerned, because going to a National or State Park is an education in itself- as well as a tool to educate citizens in respecting the Environment and wildlife.

I agree. There is so much to be gained from time spent outside exploring. National Parks provide exceptional classrooms for learning and developing lifelong appreciation for our environment. Every young person should have the opportunity to spend time in our parks discovering the natural world and their role within it.

I'm for All ATVs for the reason that it is good clean family fun. I have 3 ATVs myself and I have seen alot of wildlife, we came upon a mother bear and her cubs, a coyote, deer, frog, butterflies, beetles and birds and none of them ran from the sound of a ATV. It's nice to ride in the middle of no where and see the beauty that you can't see from your car. I don't understand why some people want to take all family fun and enjoyment away. What, do you expect everybody to stay home and not have a life? I don't impose on what you like to do, so stop imposing on other's that like to have good clean family fun.I guess you want ppl to have candles in their house for electric, and out house and horse and buggy to get around too huh?

This program has created some incredible results -- from supporting community gardens in NYC, to supporting a partnership between a local municipality, county and three land trusts in upstate NY to maintain the farming economy of Red Hook, Dutchess County. It fosters the kind of innovation and efficiencies that seem to be core values of the AGO initiative.

(cont.)

This is a very good idea that could directly impact millions of Americans in the course of their daily lives. In New York State, we are seeing the direct affect of projects like this in our newly-created Walkway Over the Hudson state park. This adaptive reuse of an 1888 railroad bridge and an associated loop trail connects people with spectacular Hudson River views, a forested state park and attractions in downtown Poughkeepsie. Commuter rail service on Metro-North's Hudson Line and Amtrak connect millions of residents from New York City with the valley's nine urban centers that serve as departure points for myriad outdoor destinations, cultural and historic sites— many a short walk away. 600,000 people have traversed the bridge -- including many commuters, families with young children, and seniors -- in its first 10 months of being open. The bridge has also become a destination for school groups wishing to learn about the region's heritage.

The CCC made some great contributions. Today we have similar efforts in the federally-sponsored AmeriCorps program, and the private Student Conservationist Association. I have worked with young people engaged with both of these programs on projects that create outdoor experiences for the public and steward our natural resources through litter cleanups and trail building. The results were really great and had a big impact not just on the young people involved, but on the communities in which they served.

Having managed an award-winning environmental education program for four years of my career, I can say that making teacher's access to partnerships with program providers is of the utmost importance. One way that not-for-profit program providers can provide this is by linking their programs with state learning standards and having a dialouge with teachers about their needs. Likewise, teachers need to know the resources that are available to them. In the Hudson Valley region of New York State, we have a fabulous federally-sponsored effort that provides guidance and resources to teachers and program providers looking to connect to outdoor resources, historic sites and lession plans to educate their students. It is called Teaching The Hudson Valley (THV) and it is funded through the National Heritage Area Program and administered by a public corporation -- the Hudson River Valley Greenway, whose board consists of state employees and representatives from our communities. THV is a model that should be considered for replication elsewhere. visit www.teachingthehudsonvalley.org for more information.

I've spent the summer exploring Glacier National Park - before all the glaciers are dead! There can be no better place than a park for children to learn about so many different things in one location - the impact we have on our environment, conservation, forestry, geology, history. love of the outdoors.

Discussion Question 1

(cont.)

This is a great idea! There currently is a network of 140+ Conservation Corps across the Country currently engaging over 30,000 young people per year. Combined with the great work of the Student Conservation Association, these organizations are operating in all 50 states. The Administration should expand these efforts to a much greater scale. In many cases the funding comes from maintenance funds already allocated, but using young people to complete the projects (e.g. trail maintenance & construction, habitat improvement, fuels mitigation, campground improvements, etc.). Also, the Public Lands Service Corps Act should be passed and allocated resources.

Urban parks would be an ideal opportunity to provide school students with an opportunity to experience nature first hand. Programs can teach them about conservation, restoration projects, wildlife, and recycling. This may be the only avenue for innercity kids to explore, enjoy and participate in nature. This experience can only grow and develop with the years. The federal government's role is to provide for experienced park rangers, equipping them with the necessary tools to run the parks and to provide educational programs. Urban parks must be protected from builders or those who want to encroach upon this land by official designation from the Park Service (e.g., National Wilderness Area). For those like me with physical disabilities, urban parks would help us to get outdoors and walk or ride wheelchairs if pathways can be developed that would be wheel-friendly.

Education is the answer for the world's ills. Hands-on education is the best way to learn about the environment, the importance of saving it for future generations, care of plants and wildlife, and the list goes on. National Park rangers do a wonderful job, just ask anyone who has experienced one of their classes. The Park Service needs to be fully staffed and fully funded so that they can continue their outreach programs. Schools, non-profits geared to children and youth should be partnered with the NPS so that all children have the experience of visiting one of our great national parks.

On comment #3, I meant to say, these organizations are NOT directly publically-funded. That's the beauty of their mission.

I'm not against OHV use at all. I still snowmobile and grew up riding dirt bikes and three wheelers. There should be areas for OHV use. The vast majority of public lands in my area are open to OHVs. The concern I have is there are enough roads in our national forests to go around the Earth 17 times and 50% of the national forests are currently open to development. How is only 1% of national forests open to OHVs? There seems to be plenty of areas open to OHVs. Some areas should not be open to OHVs. Most reasonable people would agree OHV use should be preserved for families. The only reason I demoted this idea is because it seems alot of OHV users are against wilderness designation and keep posting ideas implying they are being locked out. I say there is room for wilderness and non wilderness. Alot of people on this site probably have alot more in common than they think. To _____, if you advocate less wilderness, then you should have to visit every existing city prior to asserting we need less wilderness. What's good for the goose is good for the gander.

Discussion Question 1

Written & Online Comments

(cont.)

The forest roads in national forests are a lot of times old or current logging roads. These are very good places to ride OHVs. I'm not talking about the wide logging truck roads where large vehicles speed by kicking up dust. I was referring to small two track roads, a lot of which are not even accessible unless you have four wheel drive or an OHV. There is access to at least 50 % of national forests via roads. I'm not for building more and more roads. Some areas should stay roadless. If you're talking about trails built exclusively for OHVs, I would imagine that would add more area for OHV access to the 50% that already has roads. I'm not against OHV trails, I just think there should be areas without OHVs, also. One national forest we have visited in the past had large roads for logging and many, many trails for OHVs, etc. The area felt more like an urban park or tree farm than a wild area. This is fine in some areas, some areas should remain wild.

So many close to home open spaces are simply invisible. Lots of ways to change this. Better emphasize linkages through trails -- the charms on the bracelet concept. Even better -- use Google maps and other ways to highlight local parks -- parallel to the way Google maps helps you walk to a destination like a store, let it have the dataset to allow us to walk to parks within a mile of your location.

Great idea -- but we also have to make sure park management is responsive to our needs of the 21st Century. highlighting links to education, health and more!

Thank you. Remember, everyone, that this was reporting on a medical journal article regarding actual efforts in national parks with real live rangers who happily incorporated health info into their presentations. Maybe the same adverse reaction would be evoked by the idea that rangers talk about climate change, or endangered species, or economic stability of gateway communities -- but it surprises me that there is this level of resistance to being connected to a high-salience public policy issue!

Discussion Question 1

Written & Online Comments

(cont.)

Getting kids out into urban parks is a great idea. For those kids lucky enough to live close to an existing park, class field trips work well. And it would be great if those field trips could occur often, perhaps monthly. For those kids who don't live near urban parks, let's create some. One way to create urban parks is to purchase private property either with federal and/or private funds and turn it into an urban park. The private property could be a few city blocks in need of improvement, perhaps an abandoned factory, a lifeless downtown with empty storefronts, or an area in a redevelopment district. Buying quasi-distressed property would presumably both keep purchase costs down and improve the neighborhood. And while we're creating parks, why not set aside some of that property for an urban garden? This way kids can work in the environment while studying it. Perhaps a few schools could share the responsibilities of one park/garden, which would also teach the value of personal responsibility. Caveat: I've seen urban parks turn into hangouts for gang members and other people whose presence is incompatible with classroom parks/gardens. A barrier should be considered. I hate to recommend a fence with a locked gate since this keeps kids and their families out during non-school hours. Anyone with ideas on how to handle this issue? Another method of creating urban parks/gardens is to locate it on the school grounds, either on existing school property or acquiring adjoining property to build a park. Then funds could be gotten through a local bond measure, which would presumably give schools more control over the park/garden. This solves the 'hangout problem' since schools would be allowed to fence their own property. BTW, thanks to NPCA for creating this website and making it so user-friendly!

I second with two changes. First, I recommend expanding the program to include all K-12 students (not just junior/high school) since younger students are often more enthusiastic about new experiences than their older counterparts. Also, teen-age students may find the information alien and uninteresting if this is their first introduction to the parks. I also recommend encouraging all interested teachers to participate, not just the science teachers. While park information includes science, it is so much more than that and I suspect history and math teachers, among others, can present the information from unique angles. I don't know the current compensation paid to teacher-rangers, but they should be paid for their time. If public funding isn't available, perhaps private or non-profit funding could be used.

Nature exists in urban areas. It only makes sense that we connect children intentionally to it.

National parks are more than a historical legacy. How is that we debate educational responsibilities and needs? In an ever threatening environmental world, we must educate all our citizens of our impact, commitments and needs.

Community support is vital for lasting productive and meaningful citizenship.

Nature needs to move beyond the limited definitions of a commodity. Education is imperative

Discussion Question 1

(cont.)

I am all for better funding, and fully staffed NPS.

It is difficult to get people to preserve and protect what they do not know. Encouraging people in urban areas to explore and appreciate the public lands, will lead to greater protection for these public resources.

For a terrific example of this idea see SERC (Schoodic Education and Research Center) at Acadia National Park in Maine. For years they have been holding a 2-1/2 day educational session for grade 5 school kids called SEA (Schoodic Education Adventure) in which the children do actual research (for real) and learn doing it, of course. It's a roaring success and constantly expanding. There's much more and it's replicable in other parks with volunteer help.

My chosen "home" National Park is Glacier NP, even though there are a few that are closer (Crater Lake, Rainier, Olympic and North Cascades) to our home in Oregon. Over several years, beginning with my first stay in Glacier in 2002, I've watched the transformation of many new visitors, myself included, from wide-eyed tourists, often focused on the potential danger from the 500 or so grizzly bears (and about 1,000 black bears) that live within the Park boundaries into firm supporters of education on Park issues, including co-existing with the bears and increased Park funding. Another factor with Glacier is the excellent quality of services provided by Glacier Park, Inc. This organization is an example of a fully-functioning public/private partnership at its best. 'Customers' are happy with the services provided, and GPI employees all love working for the organization. Getting folks out to the Parks in the first place is important, but education and well run facilities are the "closer."

Once again, as long as these programs promote empathy for wildlife and nature as well as critical thinking skills by examining how our daily choices impact wildlife and nature, I am all for it!

As long as the program promotes empathy for wildlife and nature as well as critical thinking skills by examining the impact of our daily choices on wildlife and nature, I am all for it!

Learning about the outdoors, and the environment is a good thing, as long as the things that are taught to children in these programs are not the ideas of environmental extremists.

This could be a good idea, as long as there is nothing negative taught about hunting, fishing, and OHV use.

I also think shouldn't be limited to just Title 1 schools & agree that would be good to offer to all grades & not just having science teachers involved. Perhaps think of class field trips.

Thinning diseased trees to provide local jobs should be a good idea, as long as the logging is restricted to dead and diseased trees.

(cont.)

As someone who has been blessed with opportunities to explore the relationships between place and culture across this country, expanding the opportunities for American students and young people to both experience and understand their National Parks is an absolute must. We need to put aside our financial perspectives and remember that the possibilities of our future depend on those now in schools across this land. May it be so.

I agree and I am completely for full, if not additional, funding for NPS. If you look at NPS funding over the last 10 years, it hasn't even kept up with inflation, while the agency finds itself facing a growing \$8 BILLION in maintenance backlogs. However, I would point out that in addition to NPS, even more importantly is funding and support for state and local parks. Accessibility to outdoor recreation areas is a top factor in addressing issues such as obesity, stress, depression, ADHD, and living active lives. Simply put, people get out in the outdoors more often and experience related incredible health benefits - when and if access is nearby. Unfortunately, national parks are not a 10-20 minute drive for most people. Local, county and state parks need more funding, as quite honestly, they serve more people, more often, and likely have greater impacts than NPS (although I would never want to lessen the impacts of national parks - they need our support too).

I agree, especially after just returning from Rocky Mountain National Park in CO. However, I would also add and argue that local and state parks and nature centers are even more so the perfect place to learn about the environment, local ecosystems, issues, and experience the joy and numerous benefits of outdoor recreation and education. This is simply a matter of accessibility, which is proven to be a major factor in how much people get outdoors (and exercise, experience nature, etc.). Access is critical, and local/county/state parks are simply closer. There just aren't that many people that live within 10-20 minutes of a national park. So while they are one of the best places to learn about the natural environment, I would add that local parks/nature preserves/open spaces are even better.

This idea of providing people places to visit "in their backyards" is a good one. Young people who have transformative experiences visiting parks, will be more likely to visit parks throughout their lives and advocate for their responsible management.

Some of the most promising work being done right now is at the regional level, recognizing that parks are part of complex interconnected social, economic, and environmental systems. So local action, yes, but with an understanding of the context within which that action is being taken.

Protection of ecosystems is indeed an important goal.

Battlefields provide the added benefit of protecting open spaces and natural resources, while also preserving places that embody our heritage in a way that preserving historic buildings alone does not.

This strategy of using cultural resources to help promote natural resources is very smart. More initiatives like this would be welcome.

Discussion Question 1

(cont.)

A twist on this idea is if businesses voluntarily offered to give a certain amount to preservation and maintenance of natural areas. Corporate giving programs are becoming more and more common. These programs are an excellent way to build public awareness support for the businesses which sponsor them while also creating benefit for the public.

I had not heard of this program before, but this sounds like a nice balance of protection AND public use.

Creating a "toolbox" to assist with preserving cultural heritage would indeed be very helpful. Oftentimes people at the local level in the field are well intending, though do not necessarily have the resources, time, or patience to be fully effective. The Preservation Briefs and NPS Bulletins are helpful to a certain extent, though what you are suggesting would be far more specific and provide assistance at the level of needs. One community might not have undertaken a cultural resource survey, for instance, so guidance on how this might be started would be helpful. Likewise, when working on a specific type of property like a bungalow, it would be really helpful to know more about this building type, its structure, and qualities of craftsmanship, so maintenance and preservation work may be done in the most responsible manner.

The Partnership for Sustainable Communities, an intra-agency federal initiative with officials from HUD, DOT, and the EPA working together also holds great potential for creating "complete streets."

This local action in the place where people live and work, will help to build an appreciation for protection of cultural and natural resources in other places throughout the US, even if many of these places are never visited in person.

thank you, its refreshing to hear someone in your position willing to work with people wanting to use trails for other uses thank you too! atvs, 4x4s, chainsaws etc are the equipement used to build and maintain many of the trails hikers like to use and that never gets recognized, and many hikers never want to recognize trail development, maintenance, cleaning etc done by the people that enjoy uses to the trails alternative to their own when I drive my 4x4 on the trails I often end up bringing bags of other peoples trash out with me and we often patch destroyed sections of trail. _____, we aren't asking for exclusive use. we tend to be the ones happy to share the trail with people and not the people being rude and scowling at other users. we deserve the same rights to be there as you regardless of method of transportation. Yes, there are irresponsible users in our field of recreation but it isn't all of us and I've seen plenty of hikers drop thier trash on the ground and leave it there and vandalize scenic areas. And for the record your 'personal gas guzzlers' are pretty efficient now and motors create very little pollution when running correctly so you should really do some research before bashing other groups of people.

As a teaching artist (writing/theatre/storytelling), I know nothing is better for education and enrichment than hands-on learning. Once you engage a child, you have him/her forever.

(cont.)

I was looking into what I could do to help with CWPT, an organization which I have belonged for almost 20 years. I have participated in every possible way because I believe in my Legacy to the future of this country. I have served in the military for over 25 years, i have been a re-enactor and living historian for over 17. I have been in a combat zone, I have walked the fields of Malvern Hill, Gettysburg, and Antietam. When people like _____ can desecrate the Hallowed Ground that may well still contain the bones of our Honored Dead, without even TRYING to see what he is about to defile, it makes my blood boil. The greatest LEGACY we can pass on is the very fabric of our land, our history, our national past. Through efforts such as those of the CWPT, Historic Trust, and our National Parks System, we can provide this legacy to our children' children, and their progeny. What makes us the greatest country in the history of the modern world is remembering our true heroes and heroines. The greatest respect we can bestow upon their memories is to do EVERYTHING in our collective power to sustain and protect, preserve and renew the hollowed ground which is the very fabric of our history. No company can impact the country for the span on history that the Civil War has. Jobs come and go in a generation or two, the land exists forever. By supporting the Civil War Preservation Trust, National Parks System, and providing for their continued success; you and I can save the priceless legacy of our children's understanding, education, discovery of what has made, and still makes our country what it is, and can be. If you forget the past, you are doomed to repeat the errors of the past. Here is the perspective I use to explain this to the children I see in the classrooms here: The population of the US can be represented by the entire population of Texas. The number of people involved in the war is about equal to the size of the city of Houston. The number of casualties (including a sizable chunk of the civilians) equals the entire city of Fort Worth. Think about it. We can either let developers, casino owners, and greedy businesses devour this hallowed, sacred ground by an acre per hour, or we can unite to preserve and protect it forever with support to the CWPT, Historic Trust, and National Parks. MY great idea, Mr. President, Distinguished people in my Government, is to save our battlefields, our history, and our children's Legacy. Or, should we point across the black-topped parking lots of the near future to the Mega-Mall, or Discount store and say, "That is where your great-great grandfather helped stop a charge of two thousand men, and that's why the USA is great? What say you?"

Our national parks - and other parks - as classrooms is one of the best ideas educators and the park service have ever come up with. Our parks are great places to reconnect with nature, with history, and with plain old downtime. Learning from our experiences in the parks is a natural progression of things. It just makes sense. I'd like to see more schools and districts collaborate with area national and state parks on education programs that get youngsters at all grade levels out into the parks as part of the curriculum. It's healthy. It's fun. And - it's an educational experience that can't - CAN'T - be replicated in the classroom, no matter how much technology one has.

Discussion Question 1

Written & Online Comments

(cont.)

The opening of a new education center at Yellowstone National Park sends a strong message that our national parks are more than just getaway spots. They are classrooms! We need to be doing more to utilize them for their educational content: their scenery, their science, their history, and their culture. While a good number of our parks have either established or begun the process of establishing an education center within their boundaries, it would be the right thing if more would do so. In this technological age where many youngsters believe they don't need to go any further than their iphone (?) to access information, a national park education center can serve as a springboard to the real world that kids can learn about and enjoy in real time. And, in turn, that enjoyable learning experience becomes a catalyst for ensuring the next generations appreciate the national parks and their purpose as much as we do today.

While I agree with the notion that TRT ought to be available to all districts, regardless of demographics, I work in a rural district that happens to have a national park unit in within its boundaries (and eight more within an hour's drive) - and that can more easily afford to get kids out and about - and does! So, I don't begrudge the urban districts getting more of a break than the rest of us. Sure, there are disadvantaged kids in every district; my experience has been that districts like mine tend to do more to take care of those kids because they can. Urban districts - and their teachers - tend to be more overwhelmed. That said if the opportunity to expand is there, by all means, let's work to expand the program to more districts, regardless of demographics.

Unlike some who rail against big government, it is only with government funded employment that people will get put back to work. Big corporations have been totally let off the hook regarding labor which leaves people in the street. The CCC and WPA projects did some phenomenal work and got people working. We need to see decent salaries provided, though, along with standard benefits. Maintaining the natural environment will/ can provide ongoing work for many thousands of people. Also, jobs can be created in the arena of education in the parks as well as the physical maintenance required.

The wonderful thing about revitalizing the CCC is that America already has a robust network of 140 conservation and service corps serving every state in the nation. These 21st century Conservation Corps are primed for an investment of public and private dollars to engage young Americans of all backgrounds and communities to provide hands-on service on public lands. Let's not reinvent the wheel or duplicate services, but instead invest in the existing infrastructure of these modern day CCC programs. Nonprofit organizations, and state and local governments have picked up the baton from the CCC - and of the YCC and YACC - to create effective and efficient organizations that are engaging youth and young adults in service to our public lands. Many have been around doing fabulous work for youth and Americas great outdoors for decades. These 21st century conservation corps are funded through a mix of federal, state, local, and private dollars. Undoubtedly, an increase in the federal investment in todays conservation corps will reap great benefits for our parks and national forests while preparing a new generation of young people with job and life skills, and a commitment to caring for America's Great Outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

Conservation Corps are a terrific pipeline to prepare a new generation of public lands servants. Corpsmembers (30,000/year) serving with any of the 140 conservation and service corps that are in existence across the country, are learning job skills and work values, gaining leadership and technical job skills, and working toward a college education to support their careers. Today's Corps have picked up the baton of the CCC. By increasing federal and local investments in conservation corps, we are priming the pump for a 21st century workforce for our public lands. Federal investments for increased staffing in our national parks and forests creates a place for these young corpsmembers to move into professional careers as assets to our economies and lands.

How wonderful it would be to visit one of the national treasures that are our parks, and to see the beauty of that place as people did from the dawn of human existence until just few decades ago... lit at night only by the glow of a half a universe of stars, clusters, galaxies, and nebulae. We may never be able to adequately protect the night sky in more densely populated areas, but we need to protect it somewhere. Let's protect the night sky at our national and local parks just as we protect the parks themselves.

I have worked in urban schools (Houston, TX) for over 10 years. Many of the underprivileged students I have served have never experienced the great outdoors. Please, make urban parks more accessible for all!

I don't think that scientists who study primate social systems in the Congo and compare the highly organized knowledge sharing of those primates in undisturbed areas with the less organized and less well versed in survival strategies of those in highly human impacted areas are trying to bring down the economy of the people in the Congo. Seriously, scientists are simply looking to understand what they are studying and how it is impacted by all kinds of external variables. If I am just an avid reader of wildlife books and I don't even belong to any organization (which I don't), then why do I agree that we should share our planet and designate areas for wildlife protection in every country in the world. The United States should care about its own ecosystems as much as about those in other countries, and I can't say i blame scientists in other countries for looking at our environmental practices as many of us look at theirs. It hurts to think that more oil has been spilled in wilderness areas of Uganda than anywhere else. It hurts to think that happens anywhere on Earth. i may not be in favor of expansion of many government programs and I may agree with the conservative fiscal responsibility viewpoint, but not where environmental matters are at stake. I agree when it comes to people taking responsibility for their own personal needs, but we all breathe the same oxygen, and can you find one politician anywhere who can explain how oxygen is generated? Probably not on the Right or on the Left. Politicians, from Socialists to Republicans tend to understand very little about any aspect of science, and if it costs them money, they are going to understand it even less.

I live a half mile from a park. I love to walk to it and through it. I monitor Western Bluebird boxes in this park so Bluebirds have a place to nest. They will only nest in a cavity space. Fortunately the city I live in (Pasadena, Ca) has many parks. However I know this is not true in many cities.

Discussion Question 1

Written & Online Comments

(cont.)

We need to reach Americans when they are young so they can appreciate the environment and be motivated to take action and act in a way to protect it.

While volunteering with an inner city school group outing at a state park, I learned that one of the 5th graders had never seen an aspen tree and another didn't know that the yellow dandelion flower comes before the fluffy seed head. But they enjoyed learning about them. Connecting kids to nature is absolutely critical to creating future stewards for the parks. But, equally important, I think it helps kids blossom. Urban parks that are easily accessible would be an invaluable resource for urban families.

People should be introduced to more sustainable forms of recreation at an early age. When one grows up riding an ATV that is what they will tend to want to do. when one grows up riding a bike, that is what they will tend to want to do. It all begins with education. The two experiences are similar except one is far less impactfull on the environment and a much more healthy choice for the rider. where is the debate?

It would be great if all the lights in all state parks pointed downwards. And all the lights within 10 miles. Why not the whole country? Many states already have laws for public lighting (streetlights). These states have found it saves money, reduces oil dependency. But most importantly it reduces accidents caused by glare. People with cataracts (mostly seniors) have this problem. It's like having a dirty windshield. During the day - no big deal. At night every glaring light lights up the dirt on the windshield/cataracts and makes it hard to see.

There is an organization called the North American Association for Environmental Education (www.naaee.org). Perhaps we can push it to be more activist toward using national parks for educational purposes.

In a consistent, principled effort for more than 50 years – long before climate change was a key policy issue – Koch companies and Koch foundations have worked to advance economic freedom and market-based policy solutions to challenges faced by society. These efforts are about creating more opportunity and prosperity for all, as it's a historical fact that economic freedom best fosters innovation, environmental protection and improved quality of life in a society. The Greenpeace report mischaracterizes these efforts and distorts the environmental record of our companies. Koch companies have long supported science-based inquiry and dialogue about climate change and proposed responses to it. Koch companies have put tremendous effort into discovering and adopting innovative practices that reduce energy use and emissions in the manufacture and distribution of our products. We believe the political response to climate issues should be based on sound science. Both a free society and the scientific method require an open and honest airing of all sides, not demonizing and silencing those with whom you disagree. We've strived to encourage an intellectually honest debate on the scientific basis for claims of harm from greenhouse gases. We have tried to help bring out the facts of the potential effectiveness and costs of policies proposed to deal with climate, as it's crucial to understand whether proposed initiatives to reduce greenhouse gases will achieve desired environmental goals and what effects they would likely have on the global economy.

Discussion Question 1

Written & Online Comments

(cont.)

Urban parks are important, all the more so in large cities where they provide what I think of as breathing room. They also keep us in touch with change of seasons. They should be supplemented by plantings of trees and sometimes shrubs on some streets where possible.

Just as with exercise, the earlier children are exposed to and encouraged to participate in an activity, the greater is the likelihood they'll stay with it and that they'll encourage their parents to participate as well. Make opportunities inexpensive and you've got a program with staying power.

I strongly support and applaud this idea. The Arctic National Wildlife Refuge should be designated wilderness, including its coastal plain.

This program is critical, strengthening land trusts in the Upper Hudson Valley and throughout NYS - it supports transaction costs, building capacity for land trusts and vastly increasing the ability of government to assist and support property owners.

Somehow the previous Commentators missed the gist of your Idea that discussion of health issues specifically related to individual Parks can be another useful way for Park Rangers to engage with visitors to those individual Parks. The Park Ranger who lead our tour at Historic Jamestown earlier this year discussed several health issues faced by the English Settlers and Native Americans in the early 1600's (among many other topics), which brought home a number of historical lessons that we've continued to discuss long after our visit.

Although this suggestion focuses on a specific project, the bigger theme is that successful cooperative and collaborative efforts reap extremely valuable benefits, even if they are very hard to accomplish, and take a lot of time. My experience has been that proactive outreach by organizational and agency leaders to each other to propose interagency connections is what it takes to get started, and then there will be plenty of support from organizational/agency members and volunteers. Since "all politics is local," the focus should be on the community project/s, with federal folks aiding and supporting, for mutual benefit.

I believe I ran into one of these Teacher Rangers at Great Sand Dunes National Park this summer, and she was absolutely fabulous as an interpretive ranger. There are clearly great benefits for the Parks and for the teachers and their subsequent students. Funding for expansion beyond Title 1 schools would be even better.

Great idea! I wholly support full funding for staff and services at our National Parks.

Community support is critical. Without it, it is illogical to move forward on the issue of park service preservation.

Fully agree. Fund the LWCF

Discussion Question 1

(cont.)

This is a great idea! I saw a documentary on the CCC and was amazed we haven't repeated this wonderful program at a time when our young people need natural surroundings more than ever and need jobs too. Young people will learn how to protect this beautiful land and its waters and take ownership and really be a hands-on part of their own country. Maybe tax cuts and alcohol and soft drinks and junk food and yachts a little more--that'd probably more than bring in the money that's needed.

New York State has long worked cooperatively with the State and Private Cooperative Forestry Program of the United States Forest Service on the conservation and sustainable management of New York's 14.4 million acres of private forest land, held by approximately 687,000 private landowners.

In the past 15 years, every large forest product company operating in our Northern Forest region of the Tug Hill and Adirondacks has sold off large tracts of their land-holdings to private timber investment companies. Fortunately, our State was prepared to work with the companies and spent more than \$100 million in State funding to acquire more than 600,000 acres of new working forest easements. Assistance from the Forest Legacy program of the USFS also provided critical funding that leveraged the State's investment.

Private forestry is essential to the future of our State. It is a practice that remains one of our State's long running, traditional, natural resource based industries, and is now beginning to play an increasingly important ecosystem role in the face of global climate change.

Three elements that have become important to every working forest easement are: Sustainable forestry, which can be achieved through a requirement for forest certification through one of several approved certification programs

[Three elements that have become important to every working forest easement are:] Public recreation rights including hiking, camping, hunting, canoeing and snowmobiling, in balance with private recreation activities where they exist prior to the easement

[Three elements that have become important to every working forest easement are:] Extinguishment of residential or non-forestry commercial development rights to ensure the lands will be protected in perpetuity from residential and commercial development.

The objective of the working conservation easement program is to allow the purchase of easements over productive forest land so that landowners are paid to limit their right to develop their land, while retaining it as private property dedicated to resource use. To be most effective, expenditures for protection of these landscapes should take place on blocks of land so that the resource uses, such as forestry and recreation can continue over the long run without interference from other land uses.

Protecting working forests and other important habitats through conservation easements can also be a viable solution to the problems of rising property taxes, suburban and recreational development, high inheritance taxes, shortsighted forest management and a lack of management information.

Discussion Question 1

Written & Online Comments

(cont.)

The Legacy program works well with the States to leverage state and private resources for sustainable private forestry conservation easement programs, but is underfunded.

Forestry incentive programs have been used in New York to promote and facilitate preparation of Forest Stewardship Plans for private forest owners, and implement various forest and environmental improvement practices including timber stand thinning, invasive species removal, reforestation, riparian buffer establishment, wildlife habitat improvement, forest road stabilization and water quality protection. Demand for these practices from NY forest owners and managers has always well exceeded available funding, indicating a far greater potential for applying conservation practices on the ground.

Implementation assistance for forest landowners is also available through the Environmental Quality Improvement Program (EQIP) administered by the Natural Resource Conservation Service of the United States Department of Agriculture.

For States like New York with very little National Forests, the support of the USFS's State and Private Forestry program is critical to our overall ability to assist our private forest landowners and to maintain and expand diverse markets for forest products. Both traditional and emerging markets for forest products are a critical requirement for most forest management activities.

Also, the 2008 Farm Bill authorized the creation of a Community Forestry program to assist local governments and Indian Nations across the country to acquire community forests for the myriad of benefits such forest provide. Based on the successful model of community forests that began in the Northern Forest areas of New England more than 200 years ago, this program could greatly enhance the creation of community forests throughout the country.

The listening session in Concord took place against a backdrop of global climate change and the urgent need to wean our country off of imported sources of fossil fuels. Forests and sustainable forestry are keys to helping us reduce our carbon footprint and improving our domestic energy capabilities.

Funding and technical assistance from both the Animal Plant Health Inspection Service (APHIS) and the US FS, both agencies of the United States Department of Agriculture, has been absolutely critical to the states' efforts to deal with the increasing frequency of such infestations, fueled by global trade, of which New York State is at the epicenter.

Supporting the Northern Forest's forest-based economic development activities offers additional opportunities for promoting sustainable forest management and long-term retention of forested open space, particularly in large tracts that have significant ecological benefits.

Additionally, working forests have long been used for hunting, trapping, fishing and other forms of recreation while protecting water and air quality.

Markets for wood products provide direct economic returns and incentives to landowners and encourage the practice of sustainable forestry.

Discussion Question 1

Written & Online Comments

(cont.)

Viable and diverse markets for a broad range of forest products allows managers and landowners to do a better job of silviculture - managing the establishment, composition, growth and regeneration of forest stands - by providing returns from a variety of timber products, not just the biggest and best trees of a few species.

The region's forests, both public and private, are the back bone of the economy of the Northern Forest. They represent a tremendous asset, when wisely managed that can sustain the economy and the culture of this beautiful area far into the future.

The States have developed many innovative conservation tools with our many partners. Perhaps chief among our partners has been the steady and reliable support of the USFS's State and Private Cooperative Forestry program. The continued and expanded support for the USFS State and Private Cooperative Forestry program is critical to the ability of New York and other Northern Forest states to extend our conservation activities on the region's forest lands. A modest federal investment in the program will leverage considerable state and private conservation investments, and help secure the future of the Northern Forest. At the same time, it will build constituencies and connections to our great outdoors and create the next generation of advocates for our forests.

Good afternoon and thank you for the opportunity to participate in this Listening Session and to offer a few comments relative to the President's Great American Outdoor initiative. My name is _____ and I am here representing Ducks Unlimited. DU is recognized as the world's leading non-profit wetlands and waterfowl conservation organization dedicated to the protection, enhancement and management of wetlands and associated upland habitats necessary to sustain a healthy continental population of waterfowl.

What we do for waterfowl also benefits many other fish, wildlife and plant species and people. Wetlands provide numerous ecological services including the purification and recharge of our drinking water, protection of property from storm and flood damage and places for people to go to recreate and enjoy these wonderfully rich and diverse environments.

I'm pleased to say that an overwhelming number of DU supporters are outdoor enthusiasts and participate on a regular basis in activities that bring them close to nature. Whether it be hunting waterfowl over an early morning marsh, hiking a mountain trail or simply enjoying a peaceful moment in a natural setting, they understand and support with their time and money DU's important habitat work and the relationship between conservation and the added value it brings to their lives. It is that kind of connectivity and passion for all things wild that needs to be generated in greater numbers of people, young and old alike, if we hope to kindle the political and financial support it will take to conserve enough of our natural heritage for the use and enjoyment of generations to come. Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

In addition, sport hunting and fishing generate billions of dollars of revenue across the nation and support hundreds of thousands of jobs in related industries.

Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife (PFW), Forest Legacy Program (FLP) the Land and Water Conservation Fund (LWCF) and conservation programs of the farm bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential to dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations.

These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

Farm Bill programs such as Conservation Reserve Program (CRP) and Sodbuster have thus far played a critical role in preserving millions of acres of prairie grassland that benefit many species of wildlife. We strongly urge that they continue and expand.

Given the topic of discussion today, it is appropriate that this Listening Session be held in NH where approximately 84% of the state landscape is covered in forest. Historically, the vast majority of forestland has been owned by timber companies and thus managed for forest products. At the same time there has been a long-standing tradition to keep these lands open to the public for hunting, fishing, hiking and other forms of compatible public use recreation.

A Governors Task Force on Northern Forest Lands some time ago warned that changes in land ownership from the timber industry to property development for second homes and the like, would likely have an adverse impact on open space, forestry, farming and recreational uses on private lands. As downturns in the economy of the forests industry occurs, millions of acres of timber company lands are often offered for sale. When this occurs at time of a strong regional economy, working forest land is at risk to developers and prospectors interested in recreational developments.

In the face of growing development pressures, we believe the need to preserve the landscapes that shape New Hampshire's quality of life has never been greater and programs such as the Land and Water Conservation Fund (LWCF), NAWCA and Forest Legacy Program (FLP) grants mentioned above, provide federal dollars to assist state and local conservation organizations in protecting the economical, social, cultural and environmental values these lands for all Americans.

Discussion Question 1

Written & Online Comments

(cont.)

Although New Hampshire does not lie within a Priority one region for DU, it is non-the-less important in achieving our overall vision and mission for waterfowl, especially for the American black duck, a species of special concern under the Atlantic Coast Joint Venture(JV) of the NAWMP. The JV is a partnership of federal, regional and state agencies and organizations, including DU, focused on the habitat for native bird species in the Atlantic Flyway of the US from Maine to Puerto Rico. NAWCA was enacted by Congress to provide federal match dollars to accomplish habitat goals established under the NAWMP and implemented through the JV.

The current JV approach for black ducks is to protect large blocks of relatively undisturbed breeding habitat in the Northeastern U.S. forests. Breeding black ducks are linked to forests in general and beavers in particular and growth in beaver populations throughout northeastern forests has provided an increase in the quantity and quality of breeding habitat for black ducks. Habitat conservation for black ducks and numerous other species of fish and wildlife in NH is experiencing tremendous success through the assistance of JV partners and NAWCA grant funding.

Since 1990, sixteen NAWCA grants totaling \$7.9 million have been approved to protect over 125,700 acres of critical wetlands and associated uplands in NH. These grants have been matched by nearly \$27 million in non-federal funds. Many of these properties are now under the management of state and federal agencies and conservation organizations like the Society for the Protection of NH Forests, The Nature Conservancy and others. In all cases, every effort is made to make these properties available to the public for a variety of recreational and educational uses. The NAWMP, and the JV model for implementation, is recognized as one of the most successful conservation initiatives ever undertaken. The American Great Outdoors Initiative should explore ways to replicate this model when and wherever it is appropriate.

The Great Bay Resource Protection Partnership: over 8,000 acres protected; rich and diverse habitats; key waterfowl wintering area and migratory bird stopover; state, federal and private partners leveraging a combined total of private public money in exce

Connecticut River Watershed Project: Largest ever public/private land conservation project in NH—resulted in the creation of a 25,000 acre Natural Area surrounded by 146,400 acres of working forest protected through conservation easement.

Quabbin-to-Cardigan Conservation Initiative: Encompassing nearly 2 million acres, this region is one of the largest remaining areas of intact, interconnected ecologically significant forest in central New England. Nearly 7,000 acres were recently protected using LWCF and Forest Legacy Program and partner funds.

Although much has been accomplished, more work remains and more collaboration is needed. In order to build upon this success it will take increased funding to meet the backlog of interest.

America's Great Outdoors Initiative will bring much needed attention, funding and cooperation to help protect and restore the important natural resources in New Hampshire, and most importantly, yield critical benefits to its citizens

Discussion Question 1

Written & Online Comments

(cont.)

The America's Great Outdoors Initiative may be the last and best opportunity to preserve the world class resources of the Northeast's vast working forest, the mid-west Prairie Pothole Region and the southeastern Gulf Coast estuarine and freshwater wetlands recently threatened by the Deep Horizon oil spill disaster, among others .

As we have done for the past 73 years, Ducks Unlimited stands willing and anxious to work with our many partners -- and private landowners -- so that the resources and wildlife that call these areas home will continue to flourish and nurture American's love of the outdoors.

We appreciate the Administration's effort to reach out to all stakeholders to bring new ideas, perspectives and concerns to the table as we look for ways to collectively formulate policies and legislation that will have positive impacts how we manage, protect and restore and enjoy our Nations rich natural diversity and beauty by this generation and all generations that follow.

Thank you on behalf of the Land Trust Alliance, the 1,600 land trusts in America, and their 2.5 million supporters, for your leadership in launching the 21st Century Strategy for Conservation in America Initiative. I was thrilled and proud to hear the President feature land trusts and their work in his remarks - thank you for your help in calling attention to the unsung heroes working to protect lands in their local communities. Land trusts have been working with private landowners to conserve important lands for over one hundred years, and we appreciate your support for this non-controversial approach to protecting America's Great Outdoors.

It was heartening to see you and the Secretary of Agriculture, the Administrator of the Environmental Protection Agency, and the Chair of the Council on Environmental Quality working together to lead this initiative. We look forward to working with you in a spirit of collaboration on a 21st Century approach to conservation that includes the public and private sectors, businesses and nonprofits, academia and citizens.

Land trusts have a proven record of working with diverse stakeholders to protect lands that are important to their communities, whether they are farm and ranch lands, natural habitat, scenic views or places to recreate. Operating in every state and at every scale, land trusts are conserving landscapes that provide clean water; fresh air; safe, local food; and places to connect with nature for urban and rural residents alike. Land trusts have the tools, the knowledge, the connections, and most of all the passion to help make this initiative a resounding success.

Houston Wilderness is a metropolitan conservation alliance serving Houston, Galveston, and the 24-county southeast Texas region. It is comprised of more than 60 member organizations including private non-profit, corporate, and government sectors. We are similar to Chicago Wilderness but unique in that here we achieve our conservation goals largely through the partnership and support of the private sector. Our board members illustrate our balance of diverse interest groups and include the directors of Texas Parks and Wildlife Department and the City of Houston's Parks and Recreation Department, representatives of major corporations such as KBR and Conoco Phillips, educational institutions such as Texas A&M and the Houston Museum of Natural Science, and local and national conservation organizations such as The Conservation Fund and the Galveston Bay Foundation.

Discussion Question 1

Written & Online Comments

(cont.)

While our partners work to conserve and restore land, preserve wildlife populations, protect water, and provide access to the great outdoors for children and adults, Houston Wilderness works to facilitate and support their efforts. For instance, Houston Wilderness's Wilderness Passport Program links 200,000 children to 40 partner-operated outdoor learning destinations and delivers a science-based curriculum in English and Spanish to all 4th-graders at Houston Independent School District. Houston Wilderness also facilitates the assembly of the Same Houston Trail and Wilderness Preserve, a 650-mile, continuous green corridor to encircle the greater Houston metropolitan region and link our most important national, state, and local parks and preserves. Houston Wilderness also produced the Atlas of Biodiversity, an important corporate recruitment and retention tool, printed by Conoco Phillips and distributed by Texas A&M Press. Information about these projects is enclosed in this letter.

Due to the importance of our habitat, hundreds of local and national organizations are actively engaged in innovative conservation projects here - more than in any other part of Texas. Together over 1 million acres have been protected.

Our heritage of ranching and farming, hunting and fishing, and timber harvesting bring a practical perspective to conservation of open space.

It is well established that metropolitan economies, collectively, are the primary provider of jobs and the driver of the national economy. Thus, it is vitally important to preserve and support healthy cities. One way to help this effort is with parks – from New York’s Central Park down to thousands of small, beloved neighborhood greens – which can play a huge role in urban livability and desirability. On a local level the value provided by parks can include cleaner air, cleaner water, more tourism, the benefits from direct use, improved public health, increased property values, and enhanced community cohesion. On a national level, parks can help cities spur economic development, reduce climate change, foster a healthier population, and support disadvantaged communities of color.

While city parks have traditionally been considered purely local amenities, it is now recognized that this attitude has been wrong and has severely harmed the nation’s interests for many reasons – health, water quality, connectivity, economic development and social equality. What follows are five major categories of city parks and what they do for the nation as a whole. For each, we provide a specific example of success and an example of potential:

Success: The Tennessee Riverwalk, Chattanooga, Tenn Chattanooga, the “Cinderella of the South,” has risen from the most polluted city in the nation in 1969 to one of the most attractive today, thanks in part to revitalization based on its riverfront park system. Beginning in the early 1980s the city began developing a 12-mile linear Riverwalk along the Tennessee River, focusing on leveraging the city’s core asset and reconnecting it to the community. The creations included the Tennessee Riverpark, a revamped Coolidge Park, a series of trails, and the preserved the Walnut Street Bridge (an abandoned railroad viaduct) as a pedestrian-only link between downtown and North Chattanooga. The \$50-million public-private effort (funded largely through a hotel tax) has generated more than \$350 million in private investment, and the Tennessee Riverwalk has indisputably become the city’s “living room.”

Discussion Question 1

(cont.)

Success: South Platte River Greenway and Commons Park, Denver, Colo. From Chatfield State Park on the south to the confluence with Clear Creek 30 miles downstream, the South Platte River runs through Greater Denver and represents one of the nation's greatest urban park success stories. Converting the former industrial backwater into a trail-based, facility-studded showpiece took nearly 30 years to implement, but its 15 interconnected parks and 100 miles of adjoining greenways attract hundreds of thousands of users (and uncounted birds and other wildlife). Public and private funding, totaling about \$70 million (including Great Outdoors Colorado lottery money), has fueled as much as \$2.5 billion in residential, commercial, retail, sports and entertainment projects along the corridor. The centerpiece is 22-acre Commons Park, constructed as part of a new, walkable neighborhood on a former railyard on the edge of downtown. The \$21-million park has helped to stimulate the construction of 1,500 new housing units – whose residents now call Commons Park their back yard.

Success: Railyard Park in Santa Fe, N.M. A new 12-acre park in Santa Fe is revitalizing a bypassed part of the city's core, igniting economic development, invigorating a major transportation hub and providing a natural amenity to improve the quality of life. Part of a long-neglected 50-acre site that now holds retail and residences and the Rail Runner Express commuter train, \$13.5-million Railyard Park features outdoor performance space, a children's play area, a farmer's market, community cultural center, a walk-bike trail, a labyrinth and an innovate water harvesting system for irrigation. Railyard Park received funding from private, local and state sources, as well as federal transportation funds.

Success: Hunts Point Riverside Park, Bronx, N.Y. Surrounded by water but with almost no access to it, and little parkland, Hunts Point is one of the most environmentally degraded parts of New York City. It has some of city's highest rates of asthma and diabetes, and the larger South Bronx area contains 40 percent of New York City's waste facilities, four electric power plants and multiple sewage treatment centers. Because of these conditions, a local organization, Sustainable South Bronx, identified as a park site a trash-strewn, abandoned 1.5-acre plot of land on the Bronx River. Beginning with a \$10,000 seed grant, Hunts Point Riverside Park was eventually created through \$3 million in city funds. The popular park today has a fishing and recreation pier with a floating dock, a water-themed playground, a central oval lawn and a riverside amphitheater with stone seating and lawn panels. As part of a larger Bronx River effort, the initiative has led to new green jobs, restored natural areas, youth environmental education, and improved water and air quality.

Success: The Bruce Vento Nature Sanctuary, St. Paul, Minn. Preserving nature in the heart of a 3.3-million-person metropolitan area, the Bruce Vento Nature Sanctuary contains historic caves, natural springs and remnants of the area's industrial past. Protection of the 27-acre marsh has helped increase habitat in a critical urban stretch of the Mississippi River flyway, a corridor used by 40 percent of the continent's migrating birds. The nature sanctuary also links two regional trails, and an interpretive center educates city dwellers about the nature around them. Owned by St. Paul, the site is within the Mississippi National River Recreation Area. Funds came from city, regional, state, national and private sources.

Discussion Question 1

Written & Online Comments

(cont.)

North Carolina has four conservation trust funds (Clean Water Management Trust Fund, Natural Heritage Trust Fund, Parks and Recreation Trust Fund, Agricultural Development and Farmland Preservation Trust Fund) that over the years have spent hundreds of millions of dollars to purchase land and easements for conservation purposes. They have been used as match for a variety of DOI, USDA, DOT and NOAA programs. Two of them are funded from general appropriations provided by the legislature, but the real innovation is that NHTF and PRTF receive their funding from a dedicated funding source - a percentage of the deed stamp tax - so we don't have to fight for their budgets each year at the legislature. To encourage other states to create and expand such trust funds, the Administration could place a higher priority on funding projects with greater non-federal match.

North Carolina was the first state to create a conservation tax credit for donated conservation easements. Two years ago, the state passed a law and is implementing a "Wildlife Use Value" property tax category so that farmers or forest owners who want to preserve their land as wildlife habitat rather than as a working farm or forest can continue to have the same low property tax rate as before.

North Carolina is a leader in targeting high priority lands for conservation purposes. Through a state contract for preservation mitigation six years ago (more details below), many of the state's land trusts were provided with GIS mapping software. Concurrently, the NC Department of Environment and Natural Resources was putting together its "One North Carolina Naturally" plan, which targets areas of the state that DENR agencies are interested in. Today, between 15 and 20 land trusts have the staff and technology to create their own digitized conservation plans, by parcel, based on their organization's conservation priorities.

Six years ago, the state was way behind in producing wetlands and stream mitigation credits for roads and other projects to move forward. The state DOT, DENR and the Army Corps, with EPA's blessing, created the Ecosystem Enhancement Program to accelerate the process of securing mitigation credits. The creative stroke was developing a contract with the Conservation Trust for North Carolina to provide preservation properties as mitigation, on a 10:1 ratio as compared to restoration. CTNC then subcontracted with land trusts in the parts of the state that needed mitigation. The land trusts in turn worked with landowners to place conservation easements on nearly 100 properties, which had both important water quality attributes and imminent threat of development. The state was able to catch up on its credit needs quickly. The money came from DOT, which paid for acquisition and transaction costs, and for staffing and other administrative costs at the land trusts. This contract proved hugely important to land trusts' ability to increase their capacity. EPA's wetlands guidelines still allow preservation as mitigation, so the Administration could encourage other states to use preservation as a mitigation strategy.

(cont.)

North Carolina land trusts are pursuing a number of avenues to diversify who we are and who we work with, so that we better represent and serve all North Carolinians. Initiatives include: land trusts working with community development corporations to create site plans for conservation-based affordable housing (clustering housing units and preserving open space and stream banks); a summer internship program at land trusts for students from Historically Black Colleges and Universities (stipends provided by foundation grant funds we raised); increased outreach to minority farmers regarding their conservation options; passage of a law on heirs property issues that makes it easier for families to hold on to their land; and creation of a community garden in the middle of a Hope 6 housing development.

Second, in terms of what Interior is thinking of as components of America's Great Outdoors in the NY Harbor area and, beyond that, the NY metropolitan area, I could name five that have been part of my EDF work over the last 35 plus years: The NY Harbor/Lower Hudson Raritan Estuary waterfront and natural resource region; The NJ Pinelands; The four-state (PA, NJ, NY and northwestern Conn) Mid-Atlantic Highlands; The Long Island Pine Barrens; Fire Island National Seashore.

Because of my involvement through EDF and various coalitions with all of these landscapes, I could tell you about their special attributes in detail. It would be great to show you around these landscapes. These landscape not only have magnificent land, water and cultural resources, but they are in or along the periphery of a vast metropolitan area that stretches from Philadelphia, through northern NJ, NYC and the Lower Hudson Valley and northwestern Connecticut to Hartford. Some 25 million people live within 40 miles of the four-state Highlands Region, for example. My hope is that, as you develop your overall vision and plans for the America's Great Outdoors initiative, these vital landscape, integral to the health and well-being of the largest metropolitan area in the country, will be included

The Chesapeake Conservancy shares your view and has, as a principal mission, "ensuring the conservation, stewardship, access and enjoyment of the Chesapeake's iconic landscapes and waterways and its cultural and historic assets highlighted by the Captain John Smith Chesapeake National Historic Trail and the Chesapeake Gateways and Water trails Network."

Participants would also gain jobs skills training in key construction trades such as carpentry, plumbing, electric, masonry and painting, with an emphasis on developing skills in weatherization and energy efficiency. The training would include both classroom-based and on-the-job skills development.

Discussion Question 1

(cont.)

The benefits of urban trees are well-known—energy savings, clean water and clean air, wildlife habitat and reduction of the urban heat island effect. In addition, urban trees and tree plantings create a strong sense of community. New York State's U&CF program is a partnership of public, private and volunteer organizations and individuals that fosters comprehensive planning, management and education throughout New York State to increase healthy community tree cover that will enhance quality of life for urban residents. Special attention is paid to support urban forestry efforts in communities that are under-canopied, underserved, have limited access to open space, or bear disproportionate environmental burdens. In short, this important U&CF program supports the on-going effort to make communities better places for people to live. More than 200,000 volunteer hours were logged in 2009 to help plant and care for our urban forests for the residents of New York to enjoy.

The Forest Legacy Program (USFS), while currently underfunded, has proven to be an effective tool when resources are available. The Department of Environmental Conservation has used Legacy funding to acquire key working forest conservation easements that have worked extremely well to keep forest land in private ownership with sustainable management requirements and strategic public recreation rights. While New York has developed highly effective conservation easement programs for forest and farm land protection, the current fiscal crisis has diminished the ability of New York's Environmental Protection Fund, to sustain these efforts. Absent scarce state resources there is a great need for federal funding to support these critical state programs.

Community Forest program grants were authorized in the 2008 Farm Bill. If fully funded, the program would directly support local governments' acquisition of community forests, following the extremely successful New England model. The Forest Service is currently developing guidelines for implementation of the program and we have been told expect to release these guidelines for public comment by August 30, 2010. After public comments are considered and any needed revisions, it is expected the program will be ready for consideration of grant applications in the fall of 2010. New York and DEC are looking forward to supporting local governments' participation in this program.

There are approximately 14.4 million acres of privately owned forestland in New York State, which represents 76% of the state's forest resource. The USFS' Forest Stewardship Program offers technical assistance, through state forestry agency partners like NYSDEC, to nonindustrial private forest (NIPF) owners to encourage and enable active long-term forest management. A primary focus of the program is the development of comprehensive, multi-resource management plans that provide landowners with the information they need to manage their forests for a variety of products and services. Stewardship plans motivate landowners to become more active in planning and managing their forests, greatly increasing the likelihood that their forests will remain intact, productive and healthy, and that the social, economic and environmental benefits of these lands will be sustained for future generations. New York supports the continuation of the Forest Stewardship Program, which has yielded many benefits to New York's forest landowners as well as all of its citizens.

Discussion Question 1

Written & Online Comments

(cont.)

New York has benefited from many of the Farm Bill conservation programs including the Environmental Quality Incentives Program, which provides incentives to farm and forest landowners to implement conservation practices; the Grassland Reserve Program; and the Wetlands Reserve Program. The state supports the full funding of these beneficial programs and looks forward to their reauthorization in the next Farm Bill.

The Wildlife Habitat Incentive Program (WHIP) is a voluntary program for conservation-minded landowners who want to develop and improve wildlife habitat on agricultural land, nonindustrial private forest land and Indian land. WHIP in new York has to focus areas: enhancing early succession wildlife habitat with scrubland and establishing and enhancing grassland habitat for declining bird species, pollinators, and other grassland wildlife species. DEC practices and strongly supports WHIP at its Rogers, Five Rivers and Stony Kill Farm Environmental Education Centers. DEC promotes increasing collaborations across that state that will positively benefit a broad range of New York wildlife species.

New York is proud of its work with and investment in the state's land trust community. The Conservation Partnership Program (www.dec.ny.gov/lands/48901.html), a partnership between the state and the Land Trust Alliance, is a model not-for-profit capacity building grant program for the country. Development of a nationwide grant program to provide capacity building assistance to local, regional and statewide land trusts and other conservation non-for-profit organizations could leverage substantial private conservation funding and build even more effective networks in communities across the nation. Pairing this concept with the ability of land trusts to access LOCF, NAWCA and CELCP land acquisition funds, similar to the Great Outdoors Colorado model, would yield even greater results and leverage of private conservation dollars.

In 2006, New York passed and implemented a state Conservation Easement Tax Credit (CETC), which offers landowners a refundable tax credit up to \$5,000 per year to offset the property tax burden on lands for which a conservation easement was donated to a qualified conservation organization. the CETC has proved to be a benefit to both the public and landowners. Similarly, the federal conservation easement tax incentive enhancements, first enacted in 2006, have increased the rate of land conservation benefiting landowners and the public. The enhancements raise the deduction a donor can take for donating a conservation easement from 30% of their adjusted gross income in any year to 50%; allows qualifying farmers and ranchers to deduct up to 100% of their income; and extends the carry-forward period for a donor to take tax deductions for voluntary conservation agreements from 5 to 15 years. While initially enacted for the period of one year and extended each year, the enhancements expired at the end of the 2009 calendar year. New York enthusiastically supports the renewal of these enhancements and making them permanent.

Discussion Question 1

Written & Online Comments

(cont.)

The Highlands Conservation Act, passed in 2004, provides funding to protect the Highlands region, which extends from Pennsylvania through Southeast New York and Northern New Jersey to Northwest Connecticut. In the four states, the Highlands region serves as a critical public drinking water supply. It contains exceptional natural resources including contiguous forests, scenic vistas, wetlands, pristine watersheds and important plant and wildlife species habitats. The region contains many sites of historic significance and provides abundant recreational opportunities for residents and visitors. This area is also one of high population density and development pressure, and is highly susceptible to forest and landscape fragmentation. New York supports full funding under the Highlands Conservation Act.

The National Park Service contributes to conservation, recreation, and education through programs like Teaching the Hudson River Valley and Saratoga Battlefield. These valuable programs work with NGOs (Saratoga PLAN, Agriculture Stewardship Association) and municipalities along the northern stretches of the Hudson River that are working in partnership with overlapping National Heritage Areas (Erie Canalway, Champlain Partnership). In this way, the Park Service is supporting work to protect the Battlefields's scenic viewshed, revitalize the river communities and generally advance stewardship and outdoor recreation in this upper Hudson River area. New York State is honored to have four designated national heritage areas that complement and collaborate with more than twenty state heritage areas. A new plan in the report of the National Parks Second Century Commission recommended that a clearly defined system of national heritage areas have base funding and work closely with national parks.

It is or should be axiomatic that the best way to learn about the environment is to experience it directly. A unique program in New York, Operation Explore, offers New York City public school students in grades four through six the opportunity to link classroom science activities with the outdoors. Three distinct but interrelated environments - aquatic, farm, and forest - are explored through hands-on day and overnight experiences. At Stony Kill Farm, a 1,000 acre environmental education center operated by NYSDEC in Dutchess County, students learn how their food is produced and discover the interdependence of urban and agricultural communities. Everyone gets to see and do things they may have never experienced before: a chance to grind corn, feed cows and chickens, and use their senses to explore plants in the greenhouse, and run or walk around the perimeter of an acre to get a sense of its dimensions. Funding from NPS and partners to continue and expand Operation Explore would enhance our opportunities to inform urban youth about the importance of agriculture and natural resource protection.

New York is proud of the outdoor legacy created through innovative community partnerships like our Hudson River Estuary Program (HREP) related to the New York-New Jersey Harbor Estuary Program. We believe that HREP can serve as a national model for protecting watersheds using ecosystem based management and connecting people of all ages to world class outdoor recreation opportunities. HREP protects and improves the natural and scenic Hudson River watershed for all its residents. The program was created in 1987 and extends from the Troy dam to upper New York Harbor. Its core mission is to ensure clean water; protect and restore fish, wildlife and their habitats; provide water recreation and river access; adapt to climate change; and conserve world-famous scenery.

Discussion Question 1

Written & Online Comments

(cont.)

The program is guided by the HREP Action Agenda - a forward-looking plan developed with significant community participation up and down the river. Built on sound science and principles of ecosystem-based management, it achieves progress through a collaborative approach that includes: grants and restoration projects; education, research and training; natural resource conservation and protection; and community planning assistance. Implementation of the HREP Action Agenda relies on partnerships with federal and state agencies, as well as local municipalities, non-profits, academic and scientific institutions, businesses, trade organizations, landowners and dedicated volunteers. The Hudson River Estuary Management Advisory Committee provides guidance to the program, helps the state define goals and evaluate progress, and provides a communication bridge to a wider group of partners and stakeholders.

On the first point, DEC and the state's water financing Environmental Facilities Corporation have been working to ensure that projects funded through the SRF do not promote sprawling, unsustainable growth, setting priorities instead on repairs and enhancements of existing infrastructure and support for downtowns and historic town centers. The SRF can be an effective tool for promoting wise local land use planning, and to the extent feasible, finance projects that are consistent with existing land use plans. It also can and should promote wastewater treatment facilities that maximize energy efficiency.

New York State has encouraged the wider use of the Clean Water State Revolving Loan Fund provide financial support to local governments to implement comprehensive green infrastructure programs. NYSDEC's vision of an enhanced green infrastructure program includes assistance to local governments and NGO's to identify and incorporate green approaches into plans to address water infrastructure needs and to develop local programs to protect resources through landowner incentive programs, sensible land use regulations, conservation easements and best management practices. The requirement in ARRA and Federal Fiscal year 2010 appropriation that 20% of the Clean Water State Revolving Loan Fund appropriations be used for the green project should become the norm in future SRF funding determinations.

The Environmental Education Grants Program provides seed money to support environmental education projects that increase the public's awareness about environmental issues and provides them with the skills to pursue responsible courses of actions. Smaller grants to local schools and communities have supported hands-on education programs on ecological topics and provided teacher trainings to enhance environmental literacy within schools and neighborhoods. Larger grants have fostered the development of programs with wider focus such as online teacher trainings in environmental education. With additional funding, standards-based national environmental education curriculums such as Project WILD, Project WET (Water Education for Teachers) and Project Learning Tree could be offered to a wider range of audiences, providing educators with both skills and knowledge to infuse environmental education into the broad spectrum of their topics. Continued and enhanced support for these grants would allow states to expand existing partnerships, establish environmental literacy plans and a database of resources for educators and community members.

Discussion Question 1

Written & Online Comments

(cont.)

It is both the home of the Industrial Revolution in America, home to some of the most productive shell fishing waters in the north east, and home to a thriving recreational fishery. Protecting and restoring the health of Narragansett Bay and other estuaries in Southern New England directly benefits millions of Americans.

I'm writing to suggest that work authorized by the San Joaquin River Restoration Program provides an ideal opportunity to advance the Initiative's goals. As I read the Initiative, the river's restoration effort jumps out as a poster child example that can come from inter-agency and community cooperation. It is possible to reconnect Americans to the San Joaquin River just as directly as we reconnect the river to the bay.

The San Joaquin River Partnership stands ready to assist the Department of Interior and other agencies on this. We will welcome the opportunity to sit down with your staff and discuss what we can achieve together for the river, the economy, and our way of life. Please pass this on to the appropriate individuals as we make this request to arrange a meeting; we stand ready to help.

Consider my experience; as a long-time rock-hound who has forty years of experience exploring the California desert areas, I: was there in the 1970's when the first Desert Protection Act was passed. My club members spent hours working on workbooks for the BLM to decide what area of concern to "protect" and what areas should be available to the public as multiple-use.

New York is blessed with more than 80 private non-profit land trusts that work cooperatively with the state and local communities to conserve our outdoor heritage. The world's largest conservation organization, The Nature Conservancy, was founded in Westchester County more than fifty years ago. The Hudson River Valley proudly hosts several trusts that have made significant contributions to the conservation of the valley's historic landscape, including Scenic Hudson and the Open Space Institute.

In 1957, Elizabeth Titus Putnam's vision became a reality with the creation of the Student Conservation Association (SCA), through which generations of young adults have made lasting and significant differences in the stewardship of public land. Now operating in all fifty states, SCA was the forerunner of national, state and local youth conservation corps programs, including today's AmeriCorps program.

In 1977, the mayors and town supervisors of six neighboring communities at the confluence of the Hudson and Mohawk Rivers, where waterfalls and river flows ignited the industrial revolution in the 19th century, designated their communities to be the State's first heritage area. Called River Spark, this framework became a model for a state heritage area system that now has more than twenty heritage areas complementing and collaborating with four national heritage areas including the Hudson River National Heritage Area.

One of my key priorities as commissioner has been to reconnect New Yorkers, especially children, with nature. So I was particularly pleased that President Obama identified fostering "a new generation of community and urban parks" for children and families as one of his goals in the America's Great Outdoors Initiative. We in New York look forward to an enhanced state-federal partnership to achieve this and other goals related to children and nature.

Discussion Question 1

Written & Online Comments

(cont.)

The lessons we have learned from our great conservation tradition make the Great Outdoor Initiative's listening sessions in New York particularly relevant. We know what has worked to conserve our open space and natural and cultural resources, and we know that engaging the public and nonprofit and volunteer organizations and our local government partners in the great mission is even more important today than in the past as we cope with issues of urban sprawl, the lure of passive technology-driven recreational opportunities and increasingly scarce financial resources.

Second, you ask what challenges or obstacles we face. While I wish I could provide a more expansive answer, the most common denominator is the need for consistent, adequate and predictable funding. We certainly need strong planning and coordination, but we have many excellent structures in place to meet these needs (as described in more detail below). What has been missing is a revenue stream that can be counted on in good times and bad. As the President well knows in setting out the agenda for his AGO initiative, our local, state and national natural resources are vital to the health and prosperity of our citizens; protecting them costs money. We ignore this fact at the peril of our children, our economy, and our quality of life.

New York is highly appreciative of the federal government's commitment to the restoration of the Great Lakes through the President Obama's Great Lakes Restoration Initiative. By improving the health of the Great Lakes Basin's ecosystem, the federal government is investing in the long-term vitality of the region. Continued full appropriation for the GLRI is imperative to the full recovery of the health of the Great Lakes ecosystem, watershed and economy.

For the past four decades, conservation and service corps have demonstrated that young adults engaged in stewardship projects make significant contributions to their local communities and develop crucial skills and attitudes needed to become productive citizens. As pressures on our nation's land and natural resources grows and youth unemployment soars, an enhanced AmeriCorps program provides a holistic approach to addressing challenges faced by communities, natural resource agencies and families alike. Expanded funding of the AmeriCorps program will not only ensure completion of a backlog of needed conservation projects; it will help train and support the next generation of environmental leaders.

AmeriCorps members have also been instrumental in launching the After-School Conservation Club (ASCC), a program that engages elementary school children in hands-on environmental education activities and stewardship projects. The goal is to bring environmental education to and foster a sense of stewardship among inner-city elementary-aged children involved in after-school programs. DEC environmental education staff train and support site coordinators and youth counselors and lessons are taught by DEC environmental education staff and AmeriCorps members from the Student Conservation Association Hudson Valley Conservation corps and Western New York AmeriCorps programs. ASCC project sites create or enhance wildlife habitat, such as building butterfly gardens. ASCC programs are currently offered in underserved and Environmental Justice communities in Beacon, Albany and Buffalo and throughout the five boroughs of New York City.

Discussion Question 1

Written & Online Comments

(cont.)

AmeriCorps support has also been provided for crews to complete much needed stewardship projects at DEC environmental education centers on state lands. Western New York AmeriCorps crews removed invasive species and made trail safety improvements at Reinstein Woods Nature Preserve near Buffalo. The Headwaters Environmental Education Center and state forests in central New York.

Our public lands are among our most important birthrights as Americans, whether we visit them or not

President Obama and the Administration deserve congratulations for undertaking the America's Great Outdoor Initiative (AGOI). The opportunities for ordinary Americans to make their views known at public listening sessions and through the website are invaluable. The Administration needs to continue to be proactive in involving Americans in order to give them a sense of ownership over the program and its results.

The history of land conservation issues repeatedly shows that in the long term local citizens see the benefit if conservation initiatives even if they initially opposed a park or monument designation. For example, Utah's national parks are now among the crown jewels of the National Park System, even though most of them faced vehement local opposition initially.

Americans should be able to enjoy federal public lands as the citizen-owners they are. That means that in theory, access should be free

Entrance fees to national parks are traditional , but should be kept minimal. Fees for camping and the use of other developed sites such as boat launches should also be minimal and affordable.

Picnic areas and parking for day use and hiking should be always be free and subsumed into the general budget of the jurisdiction in question.

The idea behind getting children outdoors rests on at least two propositions. The first is that exposure to Nature is beneficial for children (and adults, too, for that matter). Nature is a wonderful way to learn about science, and increasingly, exposure to Nature is linked to mental health benefits as well. The second proposition is that getting children outdoors increases their physical activity, leading to physical health benefits.

Parks built around cultural and historic sites provide opportunities for field trips for schoolchildren as well as getting adult citizens outdoors. In fact, historic sites provide a perfect "gateway" for people to get outdoors. If there is a historic trail, then there is an opportunity for exercise. Lands surrounding historic sites can and should be bought for native habitat restoration areas.

Discussion Question 1

Written & Online Comments

(cont.)

As you reminded everyone in your speech at the conference, at times of great difficulty for our nation, our leaders have taken bold action to protect the grandeur of Yosemite, put Americans to work through the Civilian Conservation Corps, and built a lasting legacy for future generations. We greatly appreciate your leadership in speaking out so articulately on behalf of conservation and our mutual obligation "to take the long view to preserve our national heritage".

Further, we strongly endorse your Administration's effort to reach out to people across the country to learn more about how we can best accomplish tangible and lasting conservation results, and connect the next generation of leaders to the outdoors. It is our clear perception that a new generation of conservation is taking shape in America characterized by government agencies, private landowners and non-profit organizations working together at the grassroots level to conserve whole, functioning ecosystems, watersheds, and recreational corridors for their many benefits. We believe that through such partnerships and with coordinated, additional support for essential funding sources like Farm Bill programs, the Land and Water Conservation Fund, agency budgets, and other innovative approaches, we can successfully live up to our responsibilities to future generations of Americans.

As part of the America's Great Outdoors Initiative you have solicited effective strategies for reconnection people, particularly youth, to the outdoors. I would like to make you aware of our community-based program, Off-Highway PAL (OHPAL) coordinated by California State Parks, Off-Highway Motor Vehicle Recreation (OHMVR) Division. This program has been successfully implemented throughout California's bioregions such as the coastal dunes, beautiful deserts, majestic oak woodlands, and the scenic Sierra Nevada. I hope that a glimpse at our program may encourage you to develop similar opportunities across America.

OHPAL is a youth-mentoring program operated in partnership with the OHMVR Division and California Police Activities League. OHPAL capitalizes on the attraction of young people to off-highway vehicle (OHV) activities to forge positive relationships between youth and law enforcement, while at the same time teaching kids to appreciate public lands. Incentive-based OHPAL is available to youth twelve to seventeen years-of-age who are willing to dedicate time to their academics and model responsible behavior in the communities where they live .

As young people are increasingly losing touch with the natural world, it is critical that public agencies promote healthy recreation and the responsible use of public lands. OHPAL is a fun, physical program encouraging safe and responsible operation of dirt bikes, snowmobiles, and all-terrain vehicles (ATVs). Partnering organizations, including the ATV Safety Institute, the Motorcycle Safety Foundation and the California-Nevada Snowmobile Association, provide rider education curricula and expertly trained OHPAL instructors and coaches. OHPAL also incorporates a variety of educational activities created by California State Parks Staff and Tread Lightly! To promote positive land stewardship ethics.

Discussion Question 1

Written & Online Comments

(cont.)

OHPAL program sites are located throughout California. The proximity of program sites to large urban centers increased program accessibility and the opportunity to reach youth who otherwise may not be able to participate in OHV recreation. The unique riding terrain specific to these regions provide rich opportunities to promote an environmental ethic relevant to each youth participant.

OHPAL is a successful State-coordinated program that could be applied nationally by partnering with the BLM and the USFS. Please contact me for more information about OHPAL and the opportunity to build on its success. OHPAL can lead America's youth to stimulating outdoor activities through the gateway of OHV recreation.

I applaud the America's Great Outdoors Initiative. It's about time your administration turned its attention to our conservation needs! In particular, I would like to see more money allocated for conservation efforts fuller funding for the national parks

Reauthorization of the Endangered Species Act (without watering it down!)

More curbs on mountain-top removal in Appalachia

More protection for migratory birds and butterflies (many migratory species are in number).

And above all, the acquisition and protection of more land (particularly where endangered species exist) and coral reefs

Today, the Freedom Center sits at the very heart of an enormous riverfront development project, called the Banks, which includes a new, 45-acre urban park that will open in 2011. The Riverfront Park is being developed with funding from the Army Corps of Engineers, the Cincinnati Park Board, and the State of Ohio. The new park is the latest manifestation of a century-long commitment by the Cincinnati community to develop and maintain one of the nation's most impressive urban park networks.

The Cincinnati Park system has been rated as one of the top urban park systems in the country, and in 2010 our parks were rated as the best kept entertainment secret in the region. The management and overall beauty of our parks has allowed us to leverage over 90,000 volunteer hours, which equates to 2.4 million dollars in return to the greater Cincinnati area. So from enhancing the city's property value, and from the economic impact our park system is making, it would be well worth your time to see how our parks are so thoroughly integrated within the overall community,

Discussion Question 1

(cont.)

I, along with the Amigos de los Rios, Los Angeles County Supervisor Gloria Molina, and San Gabriel Rivers and Mountains Conservancy would like to introduce you the "Emerald Necklace" and to the area currently being considered as the San Gabriel Watershed National recreation Area under the National Park Service's San Gabriel Watershed and Mountain Resource Study.

The Emerald Necklace is a 68 mile green infrastructure connecting the San Gabriel Mountains to the Pacific Ocean, serving 4 million people. The project is a direct response to public health challenges, and opportunities to restore acres of blighted urban land. With these spaces, we will be able to restore and create habitat opportunities for outdoor education, an active transportation corridor, protect water and air resources, increase access to recreation for residents suffering from chronic health issues, and curtain urban heat island phenomenon.

We have developed a regional scale model for an Urban Park Trail and Green Infrastructure Network, and would appreciate the opportunity to share this with you. The work we are doing is a representative of the challenges and opportunities people face in metropolitan areas across the country. We would like to share our best practices and aspirations with you to create a world class urban park network, despite challenges of pollution, high costs and lack of available land, and fiscal realities we face today.

Thank you for taking the time to meet with the Outdoor Alliance last week to discuss the America's Great Outdoors (AGO) initiative. As you know, Outdoor Alliance is a coalition of six national, member-based human powered outdoor recreation organizations and includes, Access Fund, American Canoe Association, American Hiking Society American Whitewater, International Mountain Bicycling Association, and Winter Wildlands Alliance. We are, in other words, the nation's climbers, paddlers, hikers, mountain bikers and backcountry skiers.

Outdoor Alliance was honored to attend the White House's AGO conference on April 16th and as discussed, we have great enthusiasm to assist the Obama Administration in its effort to conduct a series of listening sessions this summer that will inform a new conservation and stewardship paradigm for the nation.

We are delighted that there is an express role for outdoor recreation in the AGO initiative, and stand ready to contribute to this historic endeavor. With respect to the listening sessions, consider our community a resource not only in terms of promoting the sessions, but also in terms of contributing to the sessions by identifying local individuals that can personally attest to how conservation and stewardship goals can be pursued through sustainable recreation.

Over the last century, society has transformed in many ways. Our ever-changing culture has even affected the environmental opportunities made available for children. As evident in the article "Going Truant: The Initiation of Young Naturalists " and "The New Relationship Between Children and Nature", the authors Gary Paul Nabhan, Stephan Trimble (1994) and Richard Louv (2005) discuss environmental opportunities and how they have shifted over the last century. The authors emphasize the positive influence of environmental opportunities and how they impact society.

Discussion Question 1

Written & Online Comments

(cont.)

In the article titled "The New Relationship Between Children and Nature" Richard Louv (2005) describes "nature deficit disorder" as a problem that involves children who have little to no desire to play in nature. Louv (2005) believes that this can be detrimental to the development of a youth's childhood. The author states that being outdoors can stimulate children's curiosity and imagination; essentially nature can calm, focus and excite their emotions (Louv,2005). Within both of the articles Nabhan, Trimble (1994) and Louv (2005) agree that being outdoors is beneficial. In many ways, solitude in nature "enhances children's creative play and encourages the presence of adult supervision" (Louv, 2005).

In agreement with Louv, the authors Nabhan and Trimble (1994) are convinced that children who are involved with nature eventually make it a part of their lifestyles. For example, Nabhan and Trimble (1994) discussed a coming of age ritual rite of a tribe near Abidjan, where young adolescents are required to live in nature under the supervision of an elder for several months before they may return to their village. It is proposed that children who are involved with nature can "instill instincial confidence" (Louv, 2005). It is therefore beneficial for children to be outdoors.

In response, K-12 students who are associated with the Bosque Ecosystem Monitoring Program (BEMP) develop a meaningful relationship with the Bosque. The incorporation of BEMP inspires children to play with nature while learning about the landscape that nurtures them. Environmental opportunities like these help students learn from being in the field instead of learning from the comfort of a classroom. The children are encouraged to "explore the Bosque and make personal discoveries" (Madden,2003). Daniel Shaw (2003) the author of "Flying Doughnuts and Hoped-for Eagles" has partnered with BEMP to give his students the opportunity to not only monitor the sites, but also build "visceral connections with the place that sustains them".

Recognizing that with privilege comes responsibility, the mission of The Sportfishing Conservancy is to inspire and empower sportsmen to fulfill and celebrate their commitment to their sport and real world conservation. As recreational fishermen we recognize the need to conserve and take care of the outdoors because we are active in it and want to pass this opportunity on to future generations.

One easy answer to the question how the federal government can help conservation, recreation or reconnecting people to the outdoors is to go back to your own agencies and make public recreational access a part of their mission.

Access is not the answer to every question. Access must be balanced with other needs. Some places should remain wild. Resource managers have found that allowing public access gives them "eyes" on the ground to better protect what needs protecting.

On behalf of the oldest sportsmen's and conservation organization in the country, I write to express the Boone and Crockett Club's support for your effort to establish an eco-system method of approaching conservation in America's Great Outdoors. In particular, we would like for this program to focus on the Prairie Pothole Region of the Great Plans (PPR).

Discussion Question 1

Written & Online Comments

(cont.)

Established in 1887 by Theodore Roosevelt, the Boone and Crockett Club's commitment to conservation has always been thoughtful and measured. It is a commitment that balances human needs with wildlife needs; a commitment that sees deep value in preserving the hunting tradition, as well as in conserving wildlands and wildlife, but that is also shaped by a common-sense, business-like approach to managing natural resources. The National Forests, the National Parks, and the National Wildlife Refuge Systems exist today in large part because of the extensive efforts of the Club and its dedicated membership.

The prairie pothole region is the most important waterfowl producing region on the continent, generating more than half of North America's ducks. Of the 800 migratory bird species in North America, more than 300 rely on this region - 177 species for breeding and nesting habitat and another 130 for feeding and resting during spring and fall migrations.

In addition, this region is extremely important for ranching, and Theodore Roosevelt ranched in the area in the late 1800's. The PPR is one of the areas that Theodore Roosevelt wished to conserve back at the turn of the century, eventually leading to the creation of the Theodore Roosevelt National Park in 1978 in western North Dakota. Historically, bison once roamed the grasslands of North America in massive herds, and while their numbers have decreased, the tradition of raising these animals continues to this day. These traditions have been conserved over the years, and we strongly support your effort to conserve this land for future generations.

Given the Boone and Crockett Club's long history of land conservation, we believe the future for wildlife and natural resource conservation rests with private citizens who own and work the land. The threats to wildlife habitats we see today: increased human population, diversion of large ranches into "ranchettes" with no conservation considerations, intense demands on resources, the growing recreational demands of a society craving the "outdoor experience", and government policies that at times appear to be in conflict, will cause our conservation system to break down unless action is taken.

The Boone and Crockett Club strongly supports the Obama Administration and the Department of the Interior in the effort to promote conservation on a landscape scale through America's Great Outdoors. Setting aside lands for conservation, a cutting edge practice in the 1800's, served a critical role in securing a future for wildlife in this country. Continuing this practice in the Prairie Pothole region of the Great Plains will create a legacy of conservation for this Administration that cannot be ignored.

I suggest you proclaim a "Free Family Day at America's National Parks and monuments to encourage families to connect with the outdoors

Encourage with money, tax credits, etc land trust conservation easement for private landowners. Consider partnering with state and local entities.

Pass Legislation, such as the Utah Red Rocks Wilderness Act, to preserve valuable open space on public lands

Discussion Question 1

Written & Online Comments

(cont.)

The goal to reconnect Americans -- especially youth -- with the outdoors can best be done by providing more places for them to enjoy their favorite form of recreation followed by Mountain Biking, yet the Initiative seeks to create Wilderness and Monument areas closing another 13,000,000 acres to people who enjoy those most popular forms of recreation

Wilderness and Monument designations are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple-Use in order to promote access for urban youth and all Americans. The President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors: Off Highway Vehicle recreation and Mountain Biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors. The Back Country Designation championed by the Blue Ribbon Coalition is vastly superior to Wilderness Designation because it provides the same environmental protection without locking up the land from public access. please take the time to learn more about this alternative a land protection plan:

<http://www.sharetrails.org/backcountry>

The coalition sponsors of the San Gabriel Mountains and Watershed Community Forum on America's Great Outdoors (AGO) wish to extend their deep appreciation for your visit to our region on July 7, 2010 at Whittier Narrows. As the first "home grown" event of this type regarding the President's AGO Initiative we take great pride in the fact that 400+ attendees from our local communities were able to voice their ideas about how federal agencies can assist with improving access to the San Gabriel Mountains, parks, rivers, natural areas and recreational resources in our region and providing better stewardship of our natural resources.

Further, we would like to acknowledge The America's Great Outdoors Campaign staff and the critical financial support provided for this effort through The Partnership Project. This financial assistance facilitated the participation of local community members in addition to providing essential logistical support. Many of the participating community members were Spanish speaking only and these funds will allow us to continue the dialogue and civic engagement on the AGO Initiative with this underrepresented constituency.

Over the coming weeks the coalition team will provide a detailed report incorporating the comments made by the attendees along with recommendations that will address the critical questions raised by our President as to what can be done by federal agencies along with local partners to protect our water, wild lands, trails, green spaces, wildlife, working farms, ranches and forest lands. This coalition group is excited to continue working on these issues with you, our federal partners and the Obama administration. Our overall goal is to insure that a holistic, forward looking, 21st Century conservation and recreation agenda will include elements which we believe are critical to the citizens of this region such as parity in access to National Parks, local stewardship programs, wilderness, and wild and scenic rivers protections.

Discussion Question 1

Written & Online Comments

(cont.)

We are delighted to hear of your America's Great Outdoors/Treasured Landscapes Initiative and that you are holding a number of listening sessions around the country after your formal launch in Washington, D.C. on April 16th. This will be a great opportunity for the Department of Interior and the other engaged agencies to hear from the public about the on-the-ground needs and opportunities to protect and manage our natural resources across a broader landscape for all Americans. And the importance of these lands provide for recreation and the need to connect, and reconnect, our citizens, and communities with our outdoor heritage

There are a number of local initiatives working to keep these private forestlands intact, and continue as working forests providing important ecosystem services rather than be lost permanently to development. And, Washington State and local county and city governments are making major commitments to protect and restore Puget Sound - creating a working plan and strategy under the direction of the Puget Sound Partnership. However, all these efforts from further protection of the upper watersheds, to the better coordination and funding of management plans in the lower watersheds, forests, and Puget Sound would benefit from a higher level of integration and attention. We believe the mountains, watersheds, forests, and Puget Sound provide an ideal place for realizing the full potential of the America's Great Outdoors Initiative.

Developing partnerships to preserve and protect Tennessee's incredible natural beauty and ecological resources for current and future generation has been an important priority of my Administration. Department of Environment and Conservation Commissioner in Fyke and I served as part of the Outdoor resources Review Group, and I applaud the America's Great Outdoors Initiative as a mechanism to seek public and stakeholder input with which to form a national strategic conservation agenda. Tennessee would be a proud session host.

The Freedom Center's importance to our country's history and heritage cannot be understated. Its exhibitions and programs define, in dramatic fashion, America's struggle to achieve freedom, and how that struggle continues today around the world. This theme is brought to life in the dramatic story of the escape of untold numbers of slaves in ante-bellum America on a secret network of safe houses and routes that came to be called the Underground Railroad. With the Ohio River just outside the Freedom Center's main entrance, visitors to the museum -well over 1,000,000 since its opening -are able to see this history where it happened. Many escaping slaves passed through Cincinnati on their way to freedom; many were secretly hidden in cellars and attics of sympathetic citizens. Harriet Beecher Stowe spent some of her childhood in Cincinnati. Her history-changing book, Uncle Tom's Cabin, takes place in an around this region.

Today, the Freedom Center sits at the very heart of an enormous riverfront development project, called the Banks, which includes a new, 45-acre urban park that will open in 2011. The Riverfront Park is being developed with funding from the Army Corps of Engineers, the Cincinnati Park Board, and the State of Ohio. The new park is the latest manifestation of a century-long commitment by the Cincinnati to develop and maintain one of the nation's most impressive urban park networks. It would well be worth your time to see how our parks are so thoroughly integrated with the overall community.

Discussion Question 1

(cont.)

I would like to thank you for your support of Mrs. Obama's campaign to lure America's children away from their computers and to get them outside ... and moving

I also want to thank you for your excellent presentation in Annapolis on America's Great Outdoors. Clearly, when headed outdoors, we all appreciate an awesome destination. Best are our local, natural, less manicured parklands -- trails for walking, rivers for kayaking, bays for sailing. Please help us preserve them as our legacy for future generations. Don't let fast-talking developers bulldoze these prime locations as they are attempting to do in my district.

Recipe for Preserving Children: 1 large green field, 1/2 dozen children, 2 or 3 small dogs, 1 pinch of brook and some pebbles. Mix the children and dogs well together. Put them in the field, stirring constantly. Pour brook over the pebbles and sprinkle the field with flowers. Bake in hot sunshine and when browned remove to hot bathtub.

Please accept this letter as a symbol of our support for the challenge put forth at the recent America's Great Outdoors Initiative Great Rivers Listening Session conducted on August 20, 2010 in Alton, Illinois. While we fully support the efforts of the National Park Service and it's the City The Arch + The River 2010 International Design Competition, the challenge to undertake an additional, parallel effort focused on the Confluence reach of the Mississippi River is one that has the support of communities and leaders throughout the region.

USACE Master Plans and USFWS Comprehensive Conservation Plans are practical operational example of Adaptive Management, and they can be integrated with efforts on private lands that the U.S. Department of Agriculture (through the U.S. Forest Service and Natural Resource Conservation Service) administers in order to provide the seamless integrated landscape outcomes.

Water Quality is key. All agencies should be more aggressive when dealing with Water Quality. USACE personnel monitor water quality of Corps' [rejects and works. Those same personnel need to collaborate with operational staff to look for creative ways to steward and address water quality needs. there exists a need to move past compliance and look for ways to add value. conservation easements on adjoining off project land pursued to protect project water quality could serve an incentives for local landowners to be proactive on water quality. Thoughtful consideration should be given to re-authorization of the Corps' single purpose Nine Foot Navigation Project to add Water Quality as a congressionally authorized project purpose.

All land management agencies should search for ways to assist waterside communities in their destination marketing efforts. The Mississippi River is an international travel destination, but gateway communities along the river need assistance and support in promoting the Mississippi River Band and presenting that experience to international and domestic leisure travelers.

Discussion Question 1

Written & Online Comments

(cont.)

The Department of Interior through the National Park Service needs to lead an effort to launch a regional "Take Pride in America" campaign focused on "America's River: The Mississippi." This effort could galvanize and reflect a U.S. assertion that we are dedicated to celebrating and protecting our most iconic natural resources and that the Mississippi is prepared to receive international visitors. International visits to the Midwest are not only good for the regional economy but it also exposes U.S. values to the rest of the world. In this regard, tourism serves as a great form of diplomacy.

River themed attractions, like museums, visitor centers, refuges, and preserves, which are federally managed can become outreach hubs where watershed and water awareness can be addressed through public education. Federal visitor centers and public access points along the river can function as learning responsibility for protecting our nation's water resources and our common water future. Interpretive messaging and presentations should promote water resource awareness. Currently, water availability and quality is a compelling regional issue; therefore bringing more informed Americans into the water conservation is timely. Public lands can create an important context for learning experiences. we have 500,000 K-12 students in the greater St. Louis area, and much of this student population is located within 30 minutes of the river. Our public lands along the river can provide an important classroom and public venue for improving water resource literacy.

Water-based recreation service levels should be sustained, and in many places improved, but with a smaller more sustainable footprint. A heavy investment in intensive infrastructure is not sustainable. Innovations like the Corps led Mississippi River Water Trail, the Great Rivers Greenway Trails, and trails developed by the Metro East park and Recreation District are models of low impact, small footprint infrastructure that leverage federal and regional investment and capable of driving a significant return and high levels of customer satisfaction. Innovative practices like this that stretch tax dollars while building service levels should be incentivized.

Recreational uses that are sought out by leisure travelers need to be supportable with minimal footprint of flood-proof infrastructure and complimented with improved access. Trails, overlooks, and interpretive kiosks can make an important contribution to reconnection Americans with our natural heritage, while promoting an active, well-informed America. When properly marked and marketed, these areas provide the perfect natural venues for heart-healthy experiential activities such as hiking, biking, paddling, and bird watching.

Too much emphasis in restoration is being placed on individual project design and delivery, while too little overarching consideration is given to creating a platform for long-term system stewardship. Too much rehabilitation and restoration is driven by compliance and is therefore reactive. We need to move toward best management practices in flood protection and navigation that reduce compliance costs and allow us to drive-up investment in proactive stewardships that is informed by science, performance measurement, and based on principles of adaptive management (National Research Council, "Adaptive Management for Water Resource Planning: 2004. 1

Discussion Question 1

(cont.)

Throughout consideration should be given to building on past experiences with resource leveraging and capacity building via partnering and collaboration. Partnering mechanisms employed by Federal resource management agencies should be streamlined and incentivized.

Scope: Upper Mississippi River Headwaters Reach, Upper Mississippi Confluence Reach, Lower Mississippi River Reach, Mississippi Delta coastal Reach

Public Lands Stewardship

Water quality-civic leadership initiative

Public Access, wayfinding, interpretation, and public safety

Experiential and Outreach Program Development

Public-Private lands conservation integration

Nature-based tourism community assistance

Destination marketing community assistance

Youth Service Opportunities

Livable communities/community college support

Green obs

Civic Engagement Platform for Raising Resource Awareness

The great Rivers Stewardship Community of Practice is built upon a proactive integrate approach that aligns institutions and communities around sustaining the natural capital of the river and its floodplain in order to enrich rural and urban landscapes, achieve more livable communities, and emphasize the river as a destination for natural and cultural tourism

Discussion Question 1

Written & Online Comments

(cont.)

Informed by science and civic engagement, and practical knowledge of seasoned practitioners, the Stewardship community of practice will endeavor to put forth a leveraged and integrated adaptive management approach to celebrating and sustaining our connection to and appreciation of America's River, the Mississippi.

This effort will build a greater awareness of the significance of the Mississippi River, and its incredible natural resources, encourage civic responsibility toward system resilience and optimize the use and enjoyment of this internationally iconic

Many riverside communities are making a significant investment of local resources to reconnect to the river. At the same time, more people are recognizing the importance of sustaining the river's natural capital for present and future generations. Thoughtful leadership by Federal sector land management agencies is seen as crucial to ensure that local, NGO, state, and federal investments in the restoration of the river are protected through long-term interjurisdictional.

The U.S. Army Corps of Engineers and the U.S. Fish and Wildlife Service actively manage a core footprint in the river's floodplain exceeding 300,000 acres. This already integrated land management effort involving both Agencies could provide the administrative starting point for incorporating private lands programs administered by the River Forest Partnership and the NRCS Healthy Watershed Initiative. In fact, there is already a coordinate systemic forest management plan being worked out.

Similarly, the Department of Interior's Landscape Conservation Cooperatives hold great potential for complimenting existing local and regional collaborative efforts towards establishing a regionally networked resource stewardship system. Other Federal programs and tools like the farm bill program, the Corps' Navigation and Environmental Sustainability Program (NESP), as well as the Great Rivers cooperative Ecosystem studies Unit (CESU) are tools that could build capacity to better inform, monitor, and measure outputs to ensure their predicted contributions toward achieving desired outcomes.

The initial effort will focus on the Confluence Reach of the Mississippi River. An informal, community-based scoping team, consisting of experienced practitioners from the following organizations, will convene on a recurring basis for the purpose of providing ongoing assistance and support to the efforts of interior secretary Ken Salazar, assistant secretary of the army for civil works O-Allen Darcy, Secretary of Agriculture Tom Vilsack, Secretary of Transportation Ray LaHood, Secretary of Commerce Gary Locke, and White House Council on Environmental Quality Chair Nancy Sutley.

Scenic Hudson is very excited about the initiative and grateful that the administration and the Department of the Interior are moving forward with this. We appreciate how much you and your staff at the Department of the Interior and the other agencies still have to do to plan, the listening tours and then design and implement new strategies that result.

Discussion Question 1

Written & Online Comments

(cont.)

Within a few decades, 85% of America will be living in urban areas. To engage America's next generation, and through education and empowerment build a lifelong connection to our great landscape and recreational opportunities, there is no more cost effective place to start than in the nation's cities. In turn, by building such bonds between communities and their parks and places, we will build support for the agencies and initiatives that protect them. This session would focus on place-based education programs, engaging new audiences, and the collaborative partnerships necessary to accomplish these goals, all through the lens of urban parks and natural areas.

Gateway National Recreation Area, the nation's first urban national park, offers an opportunity for the National Park Service to deliver a National Park experience to millions of New York and New Jersey residents who might not otherwise be afforded an opportunity. As part of the new General Management Plan now being prepared, Senator Schumer and Congressman Weiner have convened a Task Force of a number of City, State, and Federal agencies that have a stake in the future of the Park. This effort builds on work by NPCA, Van Alen Institute, Columbia University, and the Regional Plan Association in defining a new role for what should be an iconic urban national park. Senator Schumer has said "National Parks are America's most precious treasures and Gateway National Recreation Area is New York City's crown jewel," and "Gateway holds attractions that promise to spark adventure and stir the imagination."

A great partnership between federal, state and local authorities presents a new model of collaboration. The U.S. Army Corps of Engineers, National Park Service, EPA's Harbor Estuary Program, NY/NJ Port Authority, and hundreds of local groups and agencies are dramatically expanding their efforts to restore hundreds of sites in the NY/NJ Harbor under the guidance of a Comprehensive Restoration Plan (the CRP) to restore tidal wetlands, oyster reefs, eelgrass beds, colonial bird breeding sites, maritime forests, and other ecotypes to the area, as well as increase public access. At the same time, New York City is investing tens of millions of dollars in a series of investments to improve public access, improve water quality and address flooding issues throughout the Harbor as part of the Mayor's Plan NYC 2030 sustainability efforts. The National Parks of New York Harbor is knitting together its offerings, from Federal Hall to the Statue of Liberty and Governors Island, into new visitor experiences. It offers a terrific lesson on how government can work together to address a common agenda, restoring environmental quality and creating jobs and lasting economic value in our cities.

June 2010 will be the most exciting and important Great Outdoors Months yet, in large measure because of the President's America's Great Outdoors Initiative and his commitment to both protection of our outdoors legacy and strengthened connections between all Americans and the Great Outdoors. Last year, you played a key role in Great Outdoors Month and we invite you to play a still more important role in the month's many activities.

Discussion Question 1

Written & Online Comments

(cont.)

On Monday, June 7, the U.S. Fish and Wildlife Service and many partners, including ARC, will join in a celebration of National Fishing and Boating Week in Washington: the NFBW Youth Fishing Event at Constitution Gardens, just one block from the U.S. Department of the Interior. Hundreds of DC area youth, including a substantial number of physically challenged youth, will have instruction on casting and fishing and then have a chance to fish for free. You participated in this event last year, and then used the event to launch the Youth in Natural Resources effort. This year, we invite you to use this event to showcase for the media the impressive array of proclamations from across the nation celebrating the importance of the Great Outdoors in America - including the anticipated 2010 proclamation by President Obama. Last year, 46 governors took action on the month, and we believe the total this year will be still higher. This event can be used to link the Great Outdoors to health, to conservation and to personal actions to protect our environment and more.

Later that same day, several hundred recreation and conservation community leaders will depart Washington for the National Wildlife Visitor Center at Patuxent Research Refuge - an area set aside by President Franklin D. Roosevelt in 1936 - for the opening reception of Great Outdoors Week and for the presentation of the Beacon Awards: awards presented to federal agencies and employees for initiatives that utilize new technologies to enhance visitor experiences on public lands and/or to better manage recreational use of public lands. We invite you to help us recognize these exceptional achievements while also showcasing this wonderful facility - and, of course, kicking off our celebration of Great Outdoors Week.

On Tuesday, we invite you to meet with a remarkable group of physicians and allies who are working on use of the Great Outdoors to improve the health of Americans. More than two dozen leading physicians have joined together to form Physicians for Healthier Americans Through Fun Outdoors (PHATFOs) - and they hope to enlist your personal support in a multi-faceted campaign to prescribe parks for illnesses ranging from stress to obesity, hypertension to diabetes. Important pilots are underway, with support from major healthcare organizations and the federal Office of Personnel Management. The new healthcare reform legislation enacted earlier this year places more emphasis on prevention and promotion of healthy lifestyles, and a remarkable group led by Dr. Michael Suk, Dr. Daphne Miller, Dr. Stephen Lockhart and others will explain their ideas for incentives ranging from "frequent walker miles" to availability of the America the Beautiful Pass as a health benefit - and a source of new financial support for park and public lands operational programs. The doctors also plan to meet with Secretaries Sebelius and Vilsack and OPM Director John Berry. Among the ideas the group would share with you is an America's Great Outdoors Initiative Town Hall, organized by PHATFOs and allied groups ranging from ARC to the National Wildlife Federation to the Boy Scouts of America.

Discussion Question 1

Written & Online Comments

(cont.)

On Thursday, we invite you to join Secretary Vilsack at the Department of Agriculture beginning at 1:00 PM to present Legends awards to remarkable individuals within several of your bureaus (National Park Service, Fish and Wildlife Service and Bureau of Land Management) for lifetime contributions to connecting Americans to the Great Outdoors, and then to lead a Healthy Measures/Let's Move Walk on the Mall from 2:15 PM to 3:00 PM. The walk will feature briefings on ARRA investments on the Mall and planned further investments to ready the area for the 2016 100th anniversary of the National Park Service as well as a stop at the Office of Personnel Management and a briefing on its new OPM/GSA/Interior Campus Wellness Initiative, designed to assist employees of these agencies to choose healthier lifestyles, and especially lifestyles with more physical activity. We plan to arrange participation in this walk by 25-50 urban youth, a group very likely to demonstrate the importance of the efforts of the White House Task Force on Childhood Obesity and the report it issued yesterday. And the walk will end with an event you helped highlight last year: the Great Outdoors Week Ice Cream Social with a focus on National Get Outdoors Day, June 12. Co hosted by ARC and Unilever, the event will feature both traditional ice cream favorites like Good Humor bars, Ben and Jerry treats and more, as well as delicious and healthier treats now replacing ice cream in the nation's schools. Again this year, novelties will be handed out from two coolers by VIPs, including agency leaders and recreation industry executives. You will recall that the 2009 event on the rooftop of Interior drew some 500 people, and you were the chief VIP "scooper."

We applaud your leadership together with that of CEQ Chair Sutley, Agriculture Secretary Vilsack, and EPA Administrator Jackson in bringing about the White House Conference. It was one option we recommend in our report to build momentum for land and water conservation, and we were pleased to attend and imprint on the initiative and his Administration squarely behind landscape-scale conservation. Our report, too, put a priority on landscape level conservation to keep viable ecosystems intact, productive and functioning, to protect and manage resource lands and waters for these ends, and to expand opportunities for outdoor recreation and its many associated benefits in obs, health, education and more.

Pursue greater funding and more effective spending of available dollars.

Create a new structure within Interior to revitalize the Land and Water conservation fund and to take the lead role in the Department in implementing America's Great Outdoors and propose and advocate an inter-departmental council for America's Great Outdoors;

Greater funding and more effective spending of available dollars are both needed to advance landscape-scale conservation

There is no escaping the hard fact that more money is needed. ORRG recommended full funding for the Land and Water conservation Fund (LWCF) at its authorized level of \$900 million annually, rising to \$3.2 billion a year to reflect inflation and population growth since the original authorization. Essential to any funding allocation is an equitable share for the states. We appreciate that the Administration's budget request has made a good start.

Discussion Question 1

Written & Online Comments

(cont.)

Yet as the President said in his remarks at the White House conference, invoking the vision and leadership of Teddy Roosevelt and other Presidents, even in difficult times, we cannot neglect conservation. In a time of great difficulty, when we are recovering from the worst recession in generations, and waging two wars abroad, some may ask whether now is the time to reaffirm our commitment to our national heritage.... Even in times of crisis, we're called to take the long view to preserve our national heritage -- because in doing so we fulfill one of the responsibilities that falls to all of us as Americans...

Improve administration and coordination of land and water conservation programs

Earlier, we provided you a memorandum outlining your authority as Secretary to coordinate outdoor recreation and resource conservation programs within the Department. You could create now within Interior a new structure or organization that both pulls together functions and programs once under the auspices of the Old Bureau of Outdoor Recreation and also looks ahead to take the lead for Interior in planning for and implementing America's Great Outdoors

The consolidation of authorities and budgets for greater coordination and effectiveness was a valid vision 40 years ago that led to creation of BOR> The need now is even more compelling to promote the cause of land and water conservation and outdoor recreation. Of particular importance, is the LWCF, federal and stateside, including the State comprehensive Outdoor Recreation plans (SCORPs). ORRG concluded that stateside LWCF is not a priority for the National Park Service (NPS) and is unlikely to become one. We offered a strong recommendation that it needed attention and new resources. Other programs could be added later.

Task the new organization with looking across the Department to answer the President's call for nonfederal conservation models. We can think of no better network of people, organizations, and efforts nationwide than what you can tap through the NPS, the Bureau of Land Management, The Fish and Wildlife Service, and others and through their partner organizations, state liaisons, and like. This network can be scoured to identify examples to showcase during the listening session.

The new office can be tasked, too, with identifying and analyzing the programs of Interior's various bureaus for their suitability and potential for furthering America's Great Outdoors, especially ones that already operate with landscape-scale and corridor conservation as objectives, such as the National Heritage and National Trails programs.

Exploring what authority interior may have to mandate that a portion of stateside funds be passed through to communities pursuant to state comprehensive outdoor recreation plans that recognize urban needs. Your policy and legal teams could help ensure that full advantage is taken of any flexibility in Lwoff's enabling statute.

Considering larger incentives and tax credits for qualified gifts to secure significant in-holdings for national parks and other public land resource systems.

Discussion Question 1

(cont.)

Creating a new entity would be no easy take. It would require dedicated funding, amalgamating existing authorities, realigning jurisdictional issues, surrendering appropriations levers, and more -- all likely to be a heavy lift at this point. As a first step, you could commission a study to develop a proposal through consultations with affected interest, especially Members of Congress, so when the time is right, it could receive serious consideration.

By creating a new structure within interior, you not only could revitalize the LWCF, but also integrate the Department capabilities to further landscape-scale conservation, providing leadership, input, and even staff to America's Great Outdoors.

To assure coordination and collaboration in implementing America's Great Outdoors, we urge you to propose an inter-departmental council or board. Our report, Great Outdoors America, recommends considering an interagency coordinating mechanism, a federal council to coordinating existing land and water conservation programs. the White House Conference underscored this key them: given the substantial role of several agencies in America's Great outdoors -- especially CEQ, EPA, USDA, DOT, DOD, NOAA, and others -- such a function is Presidential support, able leadership, a collaborative mission and working style and adequate staff and funding. The opportunity exists during the planning and consultation phase for America's Great outdoor to explore the functions of a new-inter departmental mechanism, which could be created by executive order or statute. Such a council functioned well in the Kennedy/Johnson Administrations.

Accelerate the application of geo-spatial technology as a requisite for improved planning and more effective spending. For landscape scale conservation to succeed, a much improved resource inventory and planning process is needed. New sophisticated tools offer new capabilities, namely state of the art geo-spatial technologies that can create integrate and update inventories, and maps of protected lands and waters, vulnerable resources, and related information. This tool should be craft their resource, open space, and recreation plans and make investments consistent with national and state priorities.

One incentive for states and communities to compete for designing special landscapes under America's Great Outdoors might be the promise of planning funds from the stateside share of LWCF. States have a substantial responsibility for land use and development decisions, transportation planning, economic development strategies, infrastructure financing, all of which can have a great impact on resource lands and waters. ORRG viewed greater stateside funding variation is seen among the states, with some taking the responsibility seriously while others see little value in updating plans since minimal funding has been available. It is our understanding that the state side provisions of the LWCF allow for state planning grants after allocating some portion of available funding to the states by formula. planning grants would drive state and regional planning efforts for designated landscapes with some portion of the funding shared with participating communities.

Maryland's GreenPrint initiative, under governor O'Malley's leadership, and national Geographic's FieldScope provide instructive examples of how states might integrate all the pieces relevant to conservation planning, education, and civic engagement through coordinated geo-spatial

The success and enduring power of America's Great Outdoors depends in large measure on building a constituency across the country and in Congress. The size and geographic diversity of the audience for the April 16th even suggests there is receptivity. The nation's governors, country executives, mayors, and tribal leaders -- alongside conservation groups, land trusts, at the outdoor recreation industry, and others -- would seem to offer the makings of a strong nationwide constituency if they can come together around the initiative's goals and strategies. The listening sessions called for by the President should test the thesis, help build support, and identify prospective landscapes to recognize in the initiative.

America's Great Outdoors holds potential to change the way stakeholders interact to build cooperation, collaboration, and trust. We believe it will lead to a more effective stateside collaborative program under LWCF. We believe it can change the way we think about conservation. No longer would it be about setting aside land or putting a fence around resources part and parcel to integrated, functioning eco-systems that interweave public and private holdings. This would constitute a lasting contribution to conservation and a legacy in which the President and his administrations could take great pride

Thank you for the opportunity to comment on the America's Great Outdoor Initiative (AGO) if vegald of Resources First Foundation (RFF). Upon launching this important initiative, President Barack Obama made clear his Administration's commitment to developing strategies to better protect our nation's natural and historic treasures for generations to come. RFF is stepping forward to answer the President's call to action by assisting the Admnistration to identifying the "best ideas on conservation how we can pursue innovative ideas that local communitites embrace; and how we can be more responsible stewards of tax dollars to promote conservation."

REF welcomes this opportunity to submit comments to help achieve your objectives and believes the AGO is ideal forum for exploring innovative new approaches to enhaving wildlife habitat, outdoor recreation and the enviornmental health of our nation through expanded access to conservation information, contacts, and programs for private landowners. RFF has built the largest, online conservation database specifically addressing the needs of the private landowners and the symbolic businesses dependent on this market. Private lands represent the next generation of conservation with over 70% of the continental U.S. in private ownership. RFF's websites represent the ideal platform for promoting ecosysem service to privat landowners as well as new market oppourtunities for carbon sequestrian and greenhouse gas reduction.

We have had some trouble here in Utah seeing the value of protection. In the past, there was fierce local opposition to establishing Canyonlands, Capitol Reef, Dinosaur and even the reservation of National Forests here in Utah, but few would still argue that protecting these national treasures was a bad idea. We still have landscapes here worthy of that kind of protection - The San Rafael Swell, Cedar Mesa and its irreplaceable cultural resources – one of the seven wonders of the ancient world – national treasures like these need national guidance to make sure they are preserved for generations to come. We at the Trust advocate for more and better cooperation on public lands issues on the Colorado Plateau, better incentives for locals to participate to find constructive solutions together. It is important to bring all stakeholders to the table, tribal leaders, hunters, anglers, conservationists, hikers, landowners, land managers, wildlife managers, environmentalists, land users, faith leaders and local and national officials all need to be present to make meaningful change happen, and to make it stick on-the-ground on a day-to-day basis. We need the power of your Administration to help collaboration along.

We have a once in a lifetime opportunity in San Juan County in the southeast part of the state, and we have a chance to do it right. We need to expand Canyonlands National Park and Hovenweep National Monument so that their conservation vision can be realized. We need to protect BLM and Forest Service Wilderness on Cedar Mesa, on Elk Ridge, near Natural Bridges and in the Glen Canyon region; we need to protect the wild and scenic Colorado and San Juan rivers. Cultural resources deserve protection too. Southeastern Utah is unique in that a longer slice of human history is better preserved there than anywhere else in the world. We need to make sure that these internationally significant cultural resources are not lost forever due to either malice or neglect.

We have made great progress and have had success here too; we have been part of a landscape approach to conservation that Secretaries Salazar and Vilsack envision.

Things here are coming together on multiple fronts that work as a part of a landscape approach. The Trust has been part of getting the tailings pile in Moab moved from the banks of the Colorado; part of the Utah Recreational Land Exchange Act of 2009, consolidating SITLA (state land) holdings while preserving recreational lands along the Colorado River. The Trust was involved in the expansion of Arches and few years ago, and we continue to work for new BLM and Forest Service wilderness on the Colorado Plateau. We support the work of our conservation partner, the Southern Utah Wilderness Alliance, in brokering a deal with the Bill Barret Corporation on the West Tavaputs and in Nine Mile Canyon in Carbon County. We'd like to see more of that kind of effort. announced last Friday to resolve RS2477 roads issues, and we look forward to being more involved.

(cont.)

One of the most important goals of this Initiative is to reconnect Americans with their public lands. In order to best get communities engaged in public lands issues, we need more places protected. If folks are to reconnect to their lands, they will do so in places that are pristine, places where they can get away from the rigors of modern life and rejuvenate their spirits. We are blessed to have many such places left here in Utah, but they are threatened by non-renewable resource development, by short term greed, and by unmanaged and irresponsible off roading. We have the opportunity to do great things – and when local efforts are driven with national goals and the national interest in mind, we all benefit. We ask today for your leadership, and I thank you for your time.

Given the SCOPE of your outreach, I'm going to limit this to the National Parks even though the GREAT OUTDOORS covers BLM land, farms, ranches, the Gulf, and much much more. I was a conservation chair, and I was always brought back to the same cause and effect. People. Too many people. You can't protect the land when there are too many stresses on the resources. Over use, development, pollution. You NEED to include the Department of Education in this endeavor. Kids are our future. You can reach them through the schools.

I don't see a lot of young people in the parks. I do however, see lots of Europeans. They LOVE our parks which I'm sure you are aware.

1. The monthly potlucks which we move around each month (LA, Orange County, Long Beach) – strong involvement

Outreach to other sections – 100 Peaks, WTC (Wilderness Training course)

1. Outreach with schools

1. Outreach with REI and other outfitters

1. Banquet with a rock climber / Mountaineering presentation (K2, Aconcagua, Eiger)

1. Ability for members to speak with an expert – Q & A

1. Web links to other groups

Discussion Question 1

(cont.)

1. Hold an event at all of the National Parks JUST LIKE THIS ONE YOU JUST HAD at this Occidental College event. Which by the way, I think you need a follow up event to give us feedback from our feedback – just my two cents. I’m curious what you have come up with and what you intend to do going forward.

1. Hold an outreach program for a week of fixing up the Lodges at the various parks. I was just at Bryce and that lodge looked like it could use some “barn raising”. You’d be surprised how many people would show up. Many would even be willing to b

1. Have University summits and invite all the various college kids to come and make the event like a TED event. <http://www.ted.com/> In my opinion, the reason many kids and young people are not getting involved with the Great Outdoors is because you need more “techy” and tech savvy involvement at the lodges. Kids love the National Geographic stuff, and you could easily do the same.

a. Kids need more exercise which lowers obesity

a. For kids, the Ranger Programs are old and out of date. They want something new. They want what they get at Disneyland and Sea World. Although they want to touch the animals I strongly am opposed to this, you end up caging the animals in zoos, and that is not a good thing. Instead, offer video showing where the animals live and why we should protect them. Many will never (and this is a good thing) hike the wilderness and experience firsthand, to see or touch these animal’s habitats. Too many people in the wilderness is not a good thing for the plants or the animals. But with the video, it would be a way to help get the kids connected.

· Offer balloon rides over the areas. They are quiet and unobtrusive AND eco friendly.

The National Wild Turkey Federation has since our inception been dedicated to the conservation of not only North America’s valuable natural resources but also our hunting traditions. The motto of the NWTF, conserve, hunt, and share reflects our commitment to the conservation of the wildlife populations of North America, preserving our hunting traditions and sharing our enthusiasm of the outdoors with those willing to listen.

Since 1973, the NWTF has helped to restore wild turkey populations throughout the species’ historic range in the United States, Canada, and Mexico. Wild turkey numbers have increased from 1.3 million to 7 million, and the estimated number of wild turkey

The NWTF has been a leader in procuring and allocating resources for the completion of projects on important landscapes. To support its mission, NWTF generates revenue through approximately 3600 banquet auctions and special events conducted annually by 2

Discussion Question 1

Written & Online Comments

(cont.)

· The North American Wild Turkey Management Plan (NAWTMP) is designed to identify wild turkey habitat and potential habitat projects throughout North America, by State and on a regional basis. It incorporates information such as; statewide comprehensive wildlife plans, statewide forestry assessments, and the ability to import other information from cooperating agencies to use in identifying focus areas. The NAWTMP may be sorted by state or by bird conservation region to help integrate actions with other organizations. Once state strategies are in place it gives our members who serve on their respective state board of directors goals and tasks that they may put the state Hunting Heritage Super Fund monies toward fulfilling.

The NWTF is a recognized leader and valued partner in efforts to retain working lands and protect open space/green fields. The NWTF is not just about wild turkey habitat, but conserving and maintaining the ecosystems throughout the United States. Sustainable ecosystems lead to stable communities with good jobs and stable outdoor recreation opportunities for current and future residents.

Managing thirteen separate and distinct conservation programs and initiatives providing seed, seedlings, technology transfer and technical assistance to NWTF members and corporate and private landowners involved in habitat enhancement/land management projects;

Engaging in habitat projects on 35 National Forests; Partnership results—over 2,000 restoration projects exceeding \$26 million;

Promoting landscape level conservation projects such as riparian restoration throughout the Great Plains and longleaf pine restoration in the Southeast (over 10,000 acres planted).

The NWTF also works to increase outdoors interest, bringing new hunters into the fold through its education events and outreach programs. Approximately one-half of the membership of NWTF is comprised of women, children and disabled sportsmen. We have unfortunately watched as fewer Americans participate in their hunting heritage. The dwindling ranks of American hunters will have a profound impact on the operating budgets of state wildlife conservation agencies around the country, many of whom are fee funded through license sales and also receive project funding through the Pittman-Robertson Fund. The NWTF has long been an advocate of enhanced opportunity for wildlife dependent recreation and improved access to both public and private lands. Overall hunters contribute 30 billion dollars into the American economy annually. The hunting industry also supports over a million American jobs. Economic projections show that if hunter numbers continue to fall at their current rate by 2025 license dollars for state wildlife agencies may drop by as much as 25 percent. The decline in the number of hunters is also projected to cause a 24 percent decrease in revenues for the hunting industry.

- Inadequate access to land is often cited as a primary reason hunters and anglers stop participating in these traditional sports. Since 1987, the More Places to Hunt Initiative of the NWTF has worked to reverse this trend. To date, the NWTF has spent nearly \$10 million helping to obtain and retain more than 428,000 acres available for hunting and fishing.

Discussion Question 1

Written & Online Comments

(cont.)

A 2004 report to the House Appropriations Committee concluded that more than 35 million acres of Bureau of Land Management (BLM) and Forest Service (USFS) land have inadequate access. The Federal Lands Hunting and Shooting Sports Roundtable was created to improve partnership efforts between the BLM, USFS, and U.S. Fish and Wildlife Service and 40 national hunting, fishing and shooting sports organizations to address access to federal lands for hunting and shooting sports activities. Roundtable efforts are coordinated with the Wildlife and Hunting Heritage Conservation Council and the Sport Fishing and Boating Partnership Council. Roundtable projects found that access to federal lands could be improved considerably through an average investment of less than \$10 per acre

The NWTF, in support of its State fish and wildlife agencies and other partners, works to improve access to private lands as well. Private lands are critical to walk-in access hunting programs of many western States. Through such programs, States lease private land from willing owners and open it to public hunting. Implementation of the USDA Voluntary Public Access and Habitat Improvement Program administered by the Farm Service Agency would greatly aid State and tribal government abilities to build upon this success and open additional private land to public access in the future.

Getting more youth involved in outdoor recreation remains a key component of the mission of the NWTF. Through the Families Afield Initiative, the NWTF and its partners are taking action that allows more youth the chance to carry on America's time honored hunting traditions. To date, Families Afield has helped bring legislative change to 30 States resulting in 418,000 new hunters.

§ The NWTF hosts approximately 1500 outreach events each year.

§ Juniors Acquiring Knowledge, Ethics and Sportsmanship (JAKES) - The NWTF program that introduces young people to conservation and the hunting tradition. Kids under 12

- The NWTF program designed to help women over the age of 14 to learn about conservation, hunting and the outdoors through fun activities taught by expert instructors that can be shared with their families, such as archery, outdoor cooking, camping, hunting, hiking, and gardening for wildlife.

- The NWTF program that provides people with disabilities opportunity to hunt, fish, shoot, and participate in other outdoor experiences and enrich their lives in a manner that might otherwise not happen.

Since 1999, the NWTF has distributed 30,000 Wild About Turkey environmental education boxes to classrooms and other community educational settings. In some cases, it is the first positive association young impressionable minds have with hunting and of hunters.

1. Building awareness of the importance of private lands in advancing landscape scale conservation

Discussion Question 1

Written & Online Comments

(cont.)

1. Building local constituencies with landowners and supporters

1. Local land trusts have the relationships with property owners of significant private conservation lands

1. The nexus between private land conservation and public lands

1. Leveraging foundation and local grants with state or federal funds

1. Keep programs and goals broad and flexible to meet local and regional priorities

Help your Eastern program officers, attorneys, and reviewers understand Western issues and land owning and management issues

1. Allow land trusts to hold Forest Legacy easements

Kaskaskia Watershed Association is a stakeholder group representing the entirety of the Kaskaskia River Watershed, which comprises a major portion of central and southern Illinois. We represent recreation, conservation, agriculture and business interests; all dedicated to the preservation and improvement of the Kaskaskia River System. Our area of interest contains four major recreational/conservation areas; Carlyle Lake, Lake Shelbyville, Carlyle Wildlife Management Area, and the Lower Kaskaskia Navigation Channel. KWA was cited at the 2004 White House Conservation Congress as a model of how private organizations should partner with government agencies.

KWA has been successful in getting language into WRDA for conservation activities on the Kaskaskia, but after more than three years, the first step in this process a \$400,000 planning study, has not been funded. We feel that the best and quickest way to move the goals of the AGO initiative forward in this part of Illinois is to fund the WRDA study and get the process of preserving the Kaskaskia River System started. KWA continues to offer its volunteer efforts to assist this process in any way possible (including field work, data collection, and report writing), and has obtained the documented support of the Illinois Department of Natural Resources as a cost sharing partner in the WRDA program. Because of its size, containment within a single state, and KWAs good relations with private land owners, the Kaskaskia would make an excellent model for developing solutions for such problems that could be applied nationwide.

Discussion Question 1

Written & Online Comments

(cont.)

KWA would like to thank you for your interest in our area, and request your support of our goal of preserving and improving the Kaskaskia River System and its recreational areas. Also, we wish to recognize the Army Corps of Engineers, St. Louis District, for their open communication and support of our efforts.

DU is recognized as the world's leading non-profit wetlands and waterfowl conservation organization dedicated to the protection, enhancement and management of wetlands and associated upland habitats necessary to sustain a healthy continental population of waterfowl. What we do for waterfowl also benefits many other fish, wildlife and plant species and people. Wetlands provide numerous ecological services including the purification and recharge of our drinking water, protection of property from storm and flood damage and places for people to go to recreate and enjoy these wonderfully rich and diverse environments.

DU was founded 73 years ago by a handful of conservation-minded businessmen/sportsmen concerned about the decline of duck populations and habitat on the prairies during the dust bowl days of the '30's. Today we have over 2,000 members here in New Hampshire, 15,000 in New England and 1 million supporters nationwide. We appreciate this opportunity to listen in and respond to the future of conservation in America and the need to reconnect people to the outdoors. I'm pleased to say that an overwhelming number of DU supporters are outdoor enthusiasts and participate on a regular basis in activities that bring them close to nature. Whether it be hunting waterfowl over an early morning marsh, hiking a mountain trail or simply enjoying a peaceful moment in a natural setting, they understand and support with their time and money DU's important habitat work and the relationship between conservation and the added value it brings to their lives. It is that kind of connectivity and passion for all things wild that needs to be generated in greater numbers of people, young and old alike, if we hope to kindle the political and financial support it will take to conserve enough of our natural heritage for the use and enjoyment of generations to come. Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors. In addition, sport hunting and fishing generate billions of dollars of revenue across the nation and support hundreds of thousands of jobs in related industries. State, federal and private conservation organizations need to do all they can to promote and support hunting and fishing and other outdoor recreation opportunities on lands that they control and manage.

Discussion Question 1

Written & Online Comments

(cont.)

Over our history, DU has raised in excess of \$1 billion dollars and conserved over 12 million acres of wetland and associated habitat in North America. However, this could have never been accomplished without the assistance of numerous state, federal and private partners. Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife (PFW), Forest Legacy Program (FLP) the Land and Water Conservation Fund (LWCF) and conservation programs of the farm bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential to dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations. These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

DU's conservation programs are science-based meaning we use the latest scientific information learned from research, coupled with cutting edge technology, such as geographic information systems to map, plan, develop and deliver our habitat work where it will be most effective for the resource. Although our work is accomplished one project at a time, it is done in the broader context of vast landscapes necessary to sustain waterfowl through their annual life cycle of breeding, migration and wintering. For example, the prairie pothole region of the United States and Canada remain our number one priority for conservation in North America. It is where 80% of all waterfowl are produced. Tragically, native grasslands and wetlands – the natural resources that make the Prairie Pothole Region a national treasure – are disappearing at an alarming rate. It is imperative that we conserve enough of this unique grass-wetland landscape to secure a viable future for waterfowl. If we fail here, it is unlikely that we be able to meet the population goals established by the North American Waterfowl Management Plan-an international effort set forth in 1985 between the US, Canada and Mexico, that provides a blueprint for the recovery and long-term sustainability of the continent's waterfowl. Farm Bill programs such as Conservation Reserve Program (CRP) and Sodbuster have thus far played a critical role in preserving millions of acres of prairie grassland that benefit many species of wildlife. We strongly urge that they continue and expand.

Discussion Question 1

Written & Online Comments

(cont.)

Although New Hampshire does not lie within a Priority one region for DU, it is non-the-less important in achieving our overall vision and mission for waterfowl, especially for the American black duck, a species of special concern under the Atlantic Coast Joint Venture(JV) of the NAWMP. The JV is a partnership of federal, regional and state agencies and organizations, including DU, focused on the habitat for native bird species in the Atlantic Flyway of the US from Maine to Puerto Rico. NAWCA was enacted by Congress to provide federal match dollars to accomplish habitat goals established under the NAWMP and implemented through the JV. The current JV approach for black ducks is to protect large blocks of relatively undisturbed breeding habitat in the Northeastern U.S. forests. Breeding black ducks are linked to forests in general and beavers in particular and growth in beaver populations throughout northeastern forests has provided an increase in the quantity and quality of breeding habitat for black ducks. Habitat conservation for black ducks and numerous other species of fish and wildlife in NH is experiencing tremendous success through the assistance of JV partners and NAWCA grant funding. Since 1990, sixteen NAWCA grants totaling \$7.9 million have been approved to protect over 125,700 acres of critical wetlands and associated uplands in NH. These grants have been matched by nearly \$27 million in non-federal funds. Many of these properties are now under the management of state and federal agencies and conservation organizations like the Society for the Protection of NH Forests, The Nature Conservancy and others. In all cases, every effort is made to make these properties available to the public for a variety of recreational and educational uses. The NAWMP, and the JV model for implementation, is recognized as one of the most successful conservation initiatives ever undertaken. The American Great Outdoors Initiative should explore ways to replicate this model when and wherever it is appropriate.

- The Great Bay Resource Protection Partnership: over 8,000 acres protected; rich and diverse habitats; key waterfowl wintering area and migratory bird stopover; state, federal and private partners leveraging a combined total of private public money in excess of \$60 million.
- Connecticut River Watershed Project: Largest ever public/private land conservation project in NH—resulted in the creation of a 25,000 acre Natural Area surrounded by 146,400 acres of working forest protected through conservation easement.
- Quabbin-to-Cardigan Conservation Initiative: Encompassing nearly 2 million acres, this region is one of the largest remaining areas of intact, interconnected ecologically significant forest in central New England. Nearly 7,000 acres were recently protected using LWCF and Forest Legacy Program and partner funds.

Millinocket has a paper mill that is currently on indefinite shutdown and the community has been working hard to develop new economic development opportunities and jobs in the area. Our current growth industry is outdoor tourism, although we also are maintaining a solid forest products industry in our geographic area.

Discussion Question 1

Written & Online Comments

(cont.)

People come from great distances to snowmobile, white water raft, sky dive, hunt, fish, camp, and hike. They also come to see wildlife and the beautiful scenery. We are currently trying to develop an all-terrain vehicle component through the construction of multi-use trails that will bring a huge increase in outdoor tourism and boost our economy. The success we are having in these areas is due primarily to one major factor: our major private landowners. What works for Maine? Its working forests.

Given these major challenges that face us, taxpayers would be much better served by a program that enhances the various uses of the Maine forests. Recreational activities continue to be a major part of our economic base. Federal monies used to enhance these opportunities through grants for things such as publicly funded multi-use trail development can help Maine, especially when done in working partnership with Maine's private sector. Conservation easements that impose a status quo and stop any consideration of growth take us in exactly the opposite direction of where Maine needs to be. While there may be specific, limited land parcels that are worthy of purchase, landscape scale conservation easements are simply not necessary and are, in fact, a direct threat to our economic well-being and future.

Most importantly, TPL urges the Administration to immediately complete the rulemaking process for the Community Forest and Open Space Conservation Program (CFOSCP) which was authorized in the 2008 Farm Bill but has been mired in administrative delays. This program offers local communities and tribes the opportunity to purchase important forestlands for public use and enjoyment. This program will be particularly meaningful to urban areas and connecting underserved populations to forests and natural systems. The CFOSCP is well-designed to help implement the goals of the America's Great Outdoors Initiative if the rulemaking were completed, and if funding of \$10 million or more were allocated in FY12 for a first round of grants from the Community Forest and Open Space Conservation Program.

Transportation. Since 1991, DOT's trail, transportation enhancements and non-motorized programs have exemplified how federal agencies can work cooperatively with state and local governments. We support the continuation and expansion of these programs that have created and improved many urban trail and park systems for purposeful and recreational transportation.

There are a host of federal matching grant programs that leverage state and local investment in outdoor recreation lands and are critical to a successful conservation outcome and require active partnerships among federal, state, and local governments. These programs complement existing federal investments such as the Great Lakes Restoration Initiative and/or meet federally-required state resource plans, such as the State Wildlife Action Plans and State Forest Resource Assessments. These programs also help address the AGO Initiative's focus on private land conservation by providing permanent conservation easement protection of private working farms, ranches and forests. TPL strongly recommends that the Administration recognize this suite of programs as essential to the successful outcome of the AGO Initiative, and provide full support to them in budget proposals and future legislative re-authorizations such as the Farm Bill.

Discussion Question 1

Written & Online Comments

(cont.)

This suite of programs includes:

USDA/US Forest Service: Forest Legacy Program, Community Forest and Open Space Conservation Program

USDA/NRCS: Farm and Ranchland Protection Program, Grasslands Reserve Program, Wetlands Reserve Program

DOI/USFWS: Cooperative Endangered Species Fund, National Coastal Wetlands Grant Program, North American Wetlands Conservation Act

NOAA: Coastal Estuarine Land Conservation Program

DOD: Readiness and Environment Initiative

TPL believes that multi-partner initiatives to advance conservation across all ownership types within large priority landscapes are a highly effective strategy for conservation delivery. This type of landscape conservation will be particularly important to achieve higher level conservation outcomes, such as watershed protection, climate mitigation and climate adaptation, where isolated conservation actions will not be sufficient to achieve these larger goals.

Landscape conservation also creates a framework for collaboration, and reliably increases the leverage and integration of conservation actions. It supports integrated conservation planning, so that multiple actors can work from coordinated strategies, often based on GIS mapping and other tools.

Landscape conservation can also be particularly useful to break down silos in conservation approaches, linking public land managers and private landowners, and getting experts in conservation, restoration, and stewardship to deploy their skills and resources in an integrated approach.

Finally, landscape conservation can create leverage for implementation synergistic use of public funding source--federal, state, and local--and private match funding.

TPL has already been working with multiple federal agencies, states and private supporters to protect lands within some of our nation's most important and threatened landscapes. Over the past year, we have provided greater scrutiny and focus to these efforts, identifying those areas whose protection will bring enormous benefits to wildlife habitat protection, natural resource adaptation and mitigation efforts in the face of climate change stressors, and provide opportunities for restoration of critical lands. TPL's seven landscape focus areas are the Northern Forests of Maine, New Hampshire and Vermont, the Great Lakes Forests of Minnesota, Wisconsin and Michigan, the Connecticut River watershed of Vermont, New Hampshire, Massachusetts and Connecticut, the Crown of the Continent/Northern Rockies of Montana and Idaho, the Northern and Eastern Cascades of Washington, the Northern Sierras of California and the Chattahoochee River watershed of Georgia, Alabama and Florida.

TPL applauds the Administration for its efforts to implement multi-agency, cross-boundary, public/private leveraged landscape focus areas, as evidenced by DOI's Landscape Conservation Cooperatives and the USDA's All Lands efforts.

Discussion Question 1

Written & Online Comments

(cont.)

The Trust for Public Land launched a Climate Conservation Program in 2009 to focus organizational resources on project work that can support climate mitigation (carbon sequestration and storage in forests, farms, and other natural systems) and climate adaptation. TPL greatly appreciates the many strong efforts already underway through the Departments of Interior, Agriculture, HUD, US EPA, and many others to help achieve these same objectives.

U.S. farms and forests now sequester almost 15 percent of annual U.S. carbon emissions. This is a critical piece of climate mitigation that can be expanded with conservation of these carbon absorbing lands and enhanced management of these systems, including restoration, to increase their rate of sequestration.

TPL has been an active participant in development of carbon-focused project work for regional, state and voluntary carbon markets. This includes project work under Memorandum of Understanding with the U.S. Fish and Wildlife Service. TPL's a forestation project work with Tensas National Wildlife Refuge in Louisiana will generate cumulative carbon dioxide equivalent reductions of three million tons over the next 100 years. This will be the equivalent of removing 60,000 cars from the road for one year.

Description: Scientific research strongly suggests that the Northern Forest will be uniquely situated as a climate refuge for water, coldwater fisheries like the eastern brook trout, and temperature-sensitive forest types that will be heavily impacted by pests and invasive species farther to the south. TPL has been an original partner with the State of Maine, the Sierra Club, The Nature Conservancy, and other partners working to gain federal support for a USDA "All Lands" conservation push across this large forested landscape along the Canadian border. Within this broad collaboration, TPL is providing particular leadership for integrated conservation of the Western Mountains portion of the Maine Woods (including the High Peaks region and the Mahoosuc Range that actually spills into New Hampshire). Over the past five years, TPL has collaborated with local business interests and citizen groups through the Mahoosuc Initiative, an effort designed to conserve the key working lands and recreation assets in the region.

Recent conservation successes include multiple additions to the Umbagog NWR, Appalachian National Scenic Trail, White Mountain National Forest, and three Forest Legacy projects.

Now TPL and our partners are focusing new attention on conservation, restoration, and stewardship of the region's unique refugia for climate-threatened forests, fish, and wildlife. TPL currently has two complementary projects around Lake Umbagog NWRa LWCF project to add lands to the refuge, and the adjacent Androscoggin River Headwaters Forest Legacy Program project that contains the highest quality eastern brook trout habitat in the State of New Hampshire. Trout Unlimited research suggests that this habitat will withstand even a three-degree rise in average summer temperatures, making it an essential refuge for New England's only native trout. Given the continued turnover of large-scale forest blocks in the region, there are long-term opportunities to conserve this critical climate adaptation stronghold.

Discussion Question 1

(cont.)

Non-Federal Partners: TPL is a key player within a broad coalition of public and private partners that includes the State of Maine and forest industry, landowner, and conservation interests. This group is leading coordinated efforts to engage with DOI and USDA to develop a model landscape conservation effort. TPL is also facilitating the coordinated engagement of partners in New Hampshire, including New Hampshire Fish and Game, through longstanding public and private partnership efforts to conserve the cross-border Mahoosuc Range. TPL partner the American Forest Foundation will play a particularly important role working through the Small Woodland Owners of Maine and New Hampshire Timberland Owners Association to coordinate a comprehensive private landowner engagement campaign. Trout Unlimited can provide assistance in conservation planning, restoration and stewardship oriented to the region's unique coldwater fisheries. In particular, TU has developed eastern brook trout vulnerability data that can target key refugia and has developed a new set of fisheries habitat restoration and stewardship protocols specific to the Maine Woods.

Description: The Northwoods region of MN, WI, and MI contains the headwaters for the Great Lakes and the Mississippi River, and boasts America's foremost stronghold of Laurentian forest. Building from conservation of more than 125,000 acres in the region over the last decade, largely in partnership with USDA and DOI, TPL is now working with USFS Region 9 to develop new landscape conservation initiatives to address watershed adaptation and carbon mitigation in high priority watersheds across the Northwoods. This will build out at the regional scale from existing USFS climate conservation efforts through the Chequamegon-Nicolet Climate Change Response Framework.

Priority objectives identified in TPL's MOU with U.S. Forest Service are: 1) Carbon Mitigation Deployment of TPL's Carbon Conservation Mapping Facility to develop a regional carbon sequestration inventory and parcel-level priorities, leading to development of USFS-TPL carbon sequestration pilot projects as a model for this work at scale across the Northwoods;

and 2) Climate Adaptation Development of an adaptation plan for high priority watersheds within the Northwoods region, and implementation of those plans through integrated conservation, restoration, and stewardship projects to protect key resources. There is also a robust role for DOI in these efforts, including strategic additions to refuge lands in priority areas like the Upper Mississippi and DOI-led efforts on fish passage and other habitat improvements. These combined USDA and DOI efforts will help to sustain Laurentian forest ecosystem services ranging from carbon sequestration to forest products, maintain water quality in the Great Lakes and important tributaries, and provide future security for native coldwater fisheries and sensitive wildlife threatened by climate change.

Discussion Question 1

Written & Online Comments

(cont.)

Non-Federal Partners: States of Minnesota, Wisconsin, and Michigan, including the forestry agencies in each state. The Great Lakes Forest Alliance (GLFA), American Forest Foundation (AFF), and National Wildlife Federation (NWF) will be co-lead private partners with TPL in this effort. GLFA, AFF and NWF will coordinate a comprehensive private landowner engagement campaign across the Northwoods to deliver integrated conservation activities on private lands and coordination of these actions across public and private boundaries. Trout Unlimited can provide assistance for planning through its fisheries vulnerability data and implementation assistance through its expertise on habitat restoration.

Description: The Northern Rockies contain America's most intact natural systems, such as the Crown of the Continent. As evidence of this unique ecological integrity, the Crown is the only ecological system in the nation that still has its full complement of native species. Building on past successes across this important area, TPL is leading new landscape conservation efforts to support watershed adaptation across the Northern Rockies. This work is designed to achieve future security for public water supplies and coldwater fisheries in the Northern Rockies through scientifically targeted projects featuring integrated conservation, restoration, and stewardship actions. TPL is initially focused on watershed adaptation in three priority areas within the Northern Rockies the Salmon-Selway (ID), Crown of the Continent (MT), and Greater Yellowstone Ecosystem (WY). TPL is building a model initiative around the highest value watershed for adaptation within each of these three areas, thereby providing a roadmap to future watershed adaptation work at scale.

TPL has begun preliminary watershed adaptation assessment in the Salmon-Selway using aquifer data to map public water supply interests, synthesized with Trout Unlimited's Conservation Success Index data on west slope cutthroat trout. This assessment is helping TPL to identify watershed adaptation priorities down to parcel level, and guide outreach to specific landowners. Once TPL has developed landowner agreements and conservation projects are under way, TPL will seek to engage the USDA, USFWS, state agency partners, Trout Unlimited, and other partners in developing and implementing complementary restoration and stewardship strategies that can enhance the resilience of these watershed lands. TPL has completed recent watershed projects in the region that model this integrated conservation-restoration approach, such as the award-winning O'Dell Creek (MT) project this project models that work that TPL hopes to advance across the Northern Rockies.

Non-Federal Partners: TPL will partner with the States of Montana, Idaho, and Wyoming, including state forestry agencies and fish and wildlife agencies. Trout Unlimited has also provided assistance for planning through its fisheries vulnerability data, and will be a key implementation partner through its expertise on fisheries habitat restoration. Carpe Diem, a new western water collaborative of public water supply managers, is providing assistance in identifying and mapping public water supply considerations. TPL will also collaborate in these efforts with other longstanding private partners in the region, including The Nature Conservancy, The Wilderness Society, and a range of local governments and non-profits.

Discussion Question 1

Written & Online Comments

(cont.)

Description: The 7.2 million-acre Connecticut River watershed is a critical source of clean drinking water, serving cities such as Springfield, MA and Hartford, CT, and contains some of the East's most important coldwater fisheries habitat. In 1992, Congress established the Silvio O. Conte NFWR with a project boundary covering the entire watershed a new model for federally-led conservation that includes authorization for federal acquisition along with outreach and technical assistance to support coordinated conservation actions on non-federal lands. The Conte NFWR consistently ranks in the top five nationally in the federal Land Acquisition Priority System, reflecting its unique diversity of habitat types, elevations, and latitudinal diversity. The watershed and the refuge are ideally positioned to advance a climate adaptation response at scale across this important landscape.

Based on Trout Unlimited research, it is clear that this region will provide a significant percentage of the habitat refugia for species such as the eastern brook trout in a warming climate. To help advance climate adaptation in the watershed, TPL has partnered with the Conte NFWR and Trout Unlimited (TU) and the Connecticut River Watershed Council (CRWC) to achieve "watershed adaptation" for public water supplies and coldwater fisheries in this four-state watershed. The private partners are integrating complementary skills including TU fisheries vulnerability assessment, TPL GIS, TPL conservation transactions, and TU and CRWC restoration and stewardship to create truly resilient watershed resources across the Connecticut River basin. Implementation is achieved through integrated conservation and restoration projects to conserve and restore critical watershed lands developed in partnership with the Conte NFWR, the U.S. Forest Service, and state forestry and fish and wildlife agencies.

As a model for future efforts, TU has a dedicated "Home Rivers" coordinator leading efforts to restoring eastern brook trout habitat on a 171,000-acre tract in this watershed that was conserved by TPL a strategically situated parcel that contains the largest block of projected habitat refugia for eastern brook trout in the region.

Looking forward, TPL, TU, and CRWC seek to a deepened partnership with USDA, DOI, and state agency partners to achieve watershed adaptation at scale.

Private Partners: In addition to those named above, The American Forest Foundation and the National Wildlife Federation will develop efforts to engage private landowners in this effort. AFF has developed an ecosystem services project funded through a Conservation Innovation Grant that is helping private landowners to sell ecosystem services, including watershed services that can support the initiative's larger objectives. NWF is leading adaptation efforts in partnership with state government, local land trusts, and local governments, working with these partners to conserve key habitat linkages at the local level that can support a larger "Staying Connected" campaign aimed at connectivity across the entire region.

Discussion Question 1

Written & Online Comments

(cont.)

Description: Washington State's Northern and Central Cascades are critical to the well being of Washington residents and the sustainability of nationally significant natural resources, including native salmon. The Cascades form the backyard for the major population centers on Puget Sound, and provide water to residents of Seattle, Tacoma, and other major population centers. The Cascades also provide important working lands for the more rural communities on the eastern side of the range. TPL has a long history of conservation partnership in the Cascades with the USDA and DOI, having facilitated many important USFS and NPS acquisitions and private working lands easements in the last decade.

TPL and the western water collaborative Carpe Diem now seek to partner with DOI and USDA to develop a comprehensive new collaboration that can address the growing challenges of watershed adaptation and working lands conservation in this region. Climate change projections show major potential impacts, including loss of snowpack and major forest health challenges for the region's forests that would impact forest products and habitat values alike. TPL will synthesize a range of vulnerability assessment from public water supplies to coldwater fisheries to forests and then seek to work with DOI, USDA, the Washington State Department of Forestry, Washington State Department of Ecology, municipal water utilities, and a range of other partners to design integrated land conservation, restoration, and stewardship response. This will include actions such as continued consolidation of federal holdings in checkerboard lands where that ownership pattern impedes effective watershed management, and conservation of impaired watershed lands to gain site control so that restoration actions can be initiated. This will also include collaboration with private landowners to support easement conservation of important working lands that can be managed for climate resilience using DOI and USDA incentive funding.

Non-Federal Partners: TPL and Carpe Diem envision robust leadership and participation from the Washington State Department of Forestry and Washington State Department of Ecology, both of which have been leaders in assessing the impact of climate change on the Cascades. Other private partners will include municipal water utilities in Seattle and Tacoma, the University of Washington, and a wide range of local government and private partners.

Further, TPL believes that existing landowner incentive programs should be modified, or new programs created through the next Farm Bill if more practicable, to incentive landowner actions that will protect and enhance carbon stores and sequestration. A program modeled on the Carbon Conservation Program contained in S. 2724 would be an excellent approach. This would establish a set of approved carbon activities for each land type, activities that would include permanent conservation through easements, and would pay landowners on a per-acre basis for undertaking the specified practices. The program would be run through USDA with forest elements administered by the US Forest Service.

Discussion Question 1

Written & Online Comments

(cont.)

The federal government is to be commended for its natural resource adaptation response. Already the U.S. Fish and Wildlife Service is leading efforts through its new strategic plan and the Department of the Interior's Landscape Conservation Cooperatives (LCC) to create a science-driven response to adaptation that integrates land conservation, habitat restoration, and stewardship strategies. The U.S. Forest Service has produced a new "roadmap" and "scorecard" to guide its climate change response, from land managers to state and private forestry and research.

TPL is deeply engaged in these important efforts, and believes that they must be continued.

TPL is on the steering committee of most LCCs and is attempting to develop science based adaptation plans to guide TPL projects to conserve parcels that contain habitat refuge and offer connectivity benefits, both important elements of adaptation. TPL encourages that the LCCs be provided adequate resources to support adaptation research, but also to help support on the ground implementation through collaborative conservation.

TPL is also deeply engaged with the U.S. Forest Service in an "all lands" approach to climate change response, and believes that these efforts should also be given the needed resources to thrive.

Most notably, TPL is now working under an MOU with USFS Region 9, Northeastern Area, state foresters, Great Lakes Forest Alliance, American Forest Foundation, and National Wildlife Federation to develop a Northwoods Climate Change Response Framework covering the 63 million acres of forests in Ecological Province 212 that surround the Great Lakes and the headwaters of the Mississippi River. TPL's interest in this region builds from TPL-led conservation of more than 125,000 acres in the Great Lakes Forests--Northwoods over the last decade, and the potential for 250,000 acres or more of additional conservation in this region based on active conversations with large landowners. The Northwoods Climate Change Response Framework will guide this TPL project work and other landscape conservation efforts toward science-based conservation actions and management strategies that can best achieve climate adaptation and carbon mitigation in the unique forest types in this region. The Northwoods Climate Change Response Framework will build out to the three-state regional scale from the USFS-led Chequamegon-Nicolet National Forest Climate Change Response Framework and related "Shared Lands" activities on surrounding state and private lands.

Potentially relevant programs for TPL's land conservation project work include the Land and Water Conservation Fund, Forest Legacy Program, Coastal and Estuarine Lands Conservation Program, among others.

Accordingly, all federal land conservation programs with potential application to climate change adaptation should contain some clearly written criteria reflecting this priority. This will enable federal land managers, program staff, and private partners alike to have clear guidance as to how projects will be measured against adaptation objectives. Already, the U.S. Forest Service has integrated such criteria into its Strategic Land Acquisition Ranking System, providing a strong model of how this can be accomplished.

Discussion Question 1

Written & Online Comments

(cont.)

Again, TPL is grateful for the very strong movement already underway in these directions through federal agency leadership.

Description: The Northern Sierra has been identified as one of the nation's most promising sites to support climate adaptation it offers both sky islands of diverse habitat and a key site for securing water supplies in this increasingly arid region. Working through the Northern Sierra Partnership, a powerful business-environment coalition that TPL helped to create, TPL will pursue targeted conservation in support of these unique values. This will include permanent protection of key watershed lands, including acquisition of checkerboard lands for addition to the national forest units in the region integrated with restoration of impaired tracts to restore watershed function. DOI and USDA will play a critical role in acquiring and managing key tracts, implementing restoration actions that enhance the adaptation value of any impaired properties, and working with adjacent private landowners to support complementary actions.

Beyond adaptation, TPL will utilize the Northern Sierra to demonstrate two potential approaches to employing carbon finance as a conservation tool. TPL is working with USFS Region 5 Climate Director, Bruce Goines, to develop carbon demonstration projects for the Northern Sierra.

Specifically, TPL envisions two model projects with great promise for replication: 1) A USFS LWCF project whereby TPL will convey lands to the USFS subject to reserved carbon rights, and will sell the subject carbon to help cover its project costs and facilitate below market conveyance to the agency;

and 2) An easement project under the Forest Legacy Program, Healthy Forest Reserve Program, or a DOI easement program where the easement terms will be shaped around carbon goals, management, and monitoring. This easement project will be used to establish a data base and model for private lands carbon easement and associated management protocols for Northern Sierra forest. This latter project will have unique importance in developing data and methodologies for working with private forest owners under a USDA "supplemental" carbon incentives program, as envisioned by current proposals for federal climate legislation.

Non-Federal Partners: TPL has a rich baseline of existing state, local, business, and NGO allies through the Northern Sierra Partnership. Furthermore, TPL has secured interest from a range of carbon investors in prospectively participating in any projects involving sale of credits on lands that will be conveyed to the USFS or through a carbon easement on private lands.

Description: The Chattahoochee River watershed is one of America's most important water supply areas, serving millions of residents in three states, including the City of Atlanta. TPL has a long history of partnership with the USFS and NPS in the Chattahoochee River watershed. TPL was a founder of the Chattahoochee Campaign that raised \$170 million of state, local, and private funds to conserve more than 30,000 acres across the watershed, including important additions to the Chattahoochee National Forest and Chattahoochee National Recreation Area. Now this area needs focused attention to lead integrated efforts in watershed conservation and longleaf restoration that can address escalating climate change impacts on the region, including the extremes of drought and flood that have plagued the region in the last decade.

Discussion Question 1

Written & Online Comments

(cont.)

TPL, the American Forest Foundation, and the National Wildlife Federation seek to partner with USDA and DOI in integrated landscape conservation in the watershed that can deliver future security for public water supplies, economic opportunities and recreation access for local communities, forest carbon sequestration, and adaptation for fish and wildlife. This project is linking together in new and innovative ways permanent conservation strategies, such as federal acquisitions in the Chattahoochee River headwaters region, with efforts to reach unengaged private landowners and to facilitate their participation in helping to achieve landscape conservation goals. This project will focus on developing synergies between public lands and private lands initiatives, including coordinated management activities across public-private boundaries.

Non-Federal Partners: The States of Georgia, Alabama, and Florida will be important partners in this effort, particularly state forestry agencies working through the framework of each state's State Forest Resource Assessment and Strategy. The American Forest Foundation (AFF) and National Wildlife Federation (NWF) will be co-lead partners with TPL on the private side of this effort. AFF and NWF will coordinate a comprehensive private landowner engagement campaign across the watershed to deliver integrated conservation activities across public and private boundaries. The TPL-led Chattahoochee Campaign will provide additional engagement from state, local, and private entities.

It is well established that metropolitan economies, collectively, are the primary provider of jobs and the driver of the national economy. Thus, it is vitally important to preserve and support healthy cities. One way to help this effort is with parks from New York's Central Park down to thousands of small, beloved neighborhood greens which can play a huge role in urban livability and desirability. On a local level the value provided by parks can include cleaner air, cleaner water, more tourism, the benefits from direct use, improved public health, increased property values, and enhanced community cohesion. On a national level, parks can help cities spur economic development, reduce climate change, foster a healthier population, and support disadvantaged communities of color.

The Forest Legacy Program was established in 1990 to provide federal funding to states to assist in securing conservation easements on forestlands threatened with conversion to nonforest uses. Over the past 20 years, the Forest Legacy Program has prevented the loss of almost 2 million acres of forestland in 42 states and Puerto Rico and has leveraged an equal amount of state, local, and private funding for every federal dollar spent. In FY 2011, 39 states submitted proposals for 60 FLP projects and a robust President's budget of \$100 million will provide full funding for only a portion of these identified projects, leaving thousands of acres of important forests in many parts of the country at risk. TPL urges the Administration to increase its investment in this program in order to ensure the permanent protection of the myriad benefits provided by our nation's private forests.

Discussion Question 1

Written & Online Comments

(cont.)

USDA/USFS/Community Forest and Open Space Program

The new Community Forest and Open Space Conservation Program (CFOSCP) provides another means for individual communities and tribes to address threats to the forests that sustain them. CFOSCP is a 50-50 matching grant program established in the 2008 Farm Bill to give communities, tribes and non-profits funding to take a leading role in local forest protection by purchasing economically, ecologically and culturally important forestlands for community and tribal owned forests. The program also funds technical assistance through state forestry agencies to help interested grantees to plan for and implement outstanding forest management. Despite the urgent need on the ground and broad support for the program, it has not yet gotten off the ground due to administrative delays.

USDA/NRCS/Farm and Ranchland Protection Program

Congress originally authorized the USDA Farmland Protection Program in 1996 as a means of protecting the nation's prime agricultural land from being lost to development. The 2008 Farm Bill authorized the program for another five years and doubled the authorized funding level for the program, to over \$1 billion over the FY 08-FY 12 timeframe. Working in cooperation with landowners, state, tribal and local governments, and private organizations, FRPP has helped to preserve more than 475,000 acres of farm and ranch land across the country, leveraging more than \$1 for every \$1 of federal funds provided.

FRPP is a vital tool in helping landowners and communities protect agricultural land that is being lost to development and fragmented at an alarming rate. FRPP helps ensure the food security of the nation, stabilizes rural communities, promotes regional food production, saves critical wildlife habitat, protects our water quality and assists family farmers and ranchers in passing their land on to future generations of producers. Since its inception in 1996, FRPP has been enormously successful and remarkably beneficial to the agricultural community. For example, 97% of land under FRPP is still in agricultural production and 22% of FRPP farmers market locally in comparison to the national average of 5%.

This program so critical to keeping farmers and ranchers on the land in a productive way was proposed to be capped in FY 2011 at \$160 m -- \$10 m more than last year but a \$15 m cut from the level provided in the Farm Bill. TPL urges the Administration to maintain the Farm Bill authorized funding level for this program in FY 12.

The Trust for Public Land (TPL) is very pleased to support President Obama's America's Great Outdoors Initiative. We applaud this administration's leadership in convening a diverse constituency to develop a sound approach to 21st-century land conservation that will protect our natural resources and keep Americans connected to the land.

Community-driven conservation is most successful when it engages a wide range of interests, but it needs federal leadership to bring together stakeholders and federal resources to leverage state, local, and private dollars.

Discussion Question 1

Written & Online Comments

(cont.)

As a land conservation organization working in landscapes as different as playgrounds and parks in Los Angeles and the Greater Yellowstone Ecosystem in Wyoming and Montana, TPL knows well the importance of public recreation opportunities and greenspace protection that serves a diverse constituency of Americans. We stand very ready to assist President Obama implement the goals of the America's Great Outdoors Initiative and believe through our nearly 40 years of on-the-ground experience we can offer substantive help as the initiative moves forward. Thank you for that opportunity.

As the Administration evaluates the input of millions of Americans who support the AGO Initiative, TPL is pleased to have the opportunity to provide specific suggestions and supporting material that we hope are useful to you.

The Land and Water Conservation Fund (LWCF) balances the extraction and sale of federal natural resources - offshore oil and gas - with the permanent protection of important lands and waters and access to recreation for all Americans. Authorized in 1965, LWCF is an enduring conservation legacy that makes even greater sense today in the face of what could be the greatest environmental disaster of our time.

LWCF is authorized to receive a very small percentage of OCS revenue - up to \$900 million a year from revenues that have averaged \$6 billion a year over the past 5 years. Today, the LWCF has an authorized balance of more than \$17 billion. Over the years, however, Congress and various Administrations have diverted these funds from their intended purpose. TPL is very grateful for the Obama Administration's leadership in working towards full funding of LWCF as reflected in its budget proposals to date. This action has reversed years of funding declines that slowed the protection of critical lands throughout the nation and undermined state and local efforts to ensure recreation opportunities at the local level.

As you well know, LWCF investments ensure continued protection of America's public lands and enhance public recreation opportunities through grants to states, counties, and cities. The impact of LWCF on the American landscape throughout its history can be felt widely across this nation -- LWCF funds have gone to support land protection in over 750 federal units located in all 50 states as well as the District of Columbia, Guam, Puerto Rico and the Virgin Islands. LWCF funds have also gone to almost every county in the nation to support over 41,000 state and local recreation projects.

LWCF projects also relate directly to President Obama's stated objectives for the AGO initiative. National parks, forests, wildlife refuges and other federal public lands are located in every state in the nation providing public access to recreation in urban areas such as Atlanta, Tucson and Los Angeles as well as in rural areas as diverse as New Mexico and New Hampshire.

The stateside program of LWCF has distributed funds for projects including parks, sports fields, swimming pools, playgrounds, and trails. Local parks and playgrounds can connect children to nature and foster a lifetime of active and healthful outdoor activity.

Discussion Question 1

Written & Online Comments

(cont.)

Over the past three decades, childhood obesity rates in America have tripled, and today, nearly one in three children in America are overweight or obese. One third of all children born in 2000 or later will suffer from diabetes at some point in their lives; many others will face chronic obesity-related health problems like heart disease, high blood pressure, cancer, and asthma. In order for children to live a healthy lifestyle and become connected to the outdoors for its myriad benefits, they must have access to places to play, hike, bike and run. LWCF provides a direct means to that end perhaps more than any other single federal program.

The conservation outcomes made possible through LWCF funding are also closely linked to a sound economy. The Outdoor Industry Association (OIA) reports that recreation contributes \$730 billion annually to the U.S. economy, supports nearly 6.5 million jobs across the U.S, touches over 8 percent of America's personal consumption expenditures more than 1 in every 12 dollars circulating in the economy, and generates \$88 billion in annual state and national tax revenue. The 2009 National Parks Second Century Commission estimated that every \$1 in taxpayer money spent on National Parks returned a \$4 economic benefit through tourism and private sector spending. In the West, OIA reported that more than 43 million people participate in hunting, fishing, and wildlife viewing each year, spending over \$33 billion annually. Maintaining healthy wildlife populations and providing access for recreation on public lands is a key component to maintaining these economic benefits.

Over the past five years, voters approved 428 state, county, and city conservation finance ballot measures generating more than \$18 billion for the protection of forests, farms and ranches, city parks, trails, wildlife habitat, beaches and waterfronts along rivers, lakes, and streams. Seven out of ten measures placed before the voters were approved. This state and local funding provides significant leveraging opportunities for an LWCF state grants program.

A competitive matching grants program within stateside LWCF has the potential to dramatically increase the conservation impact of federal spending by providing matching grants that promote the continued creation of new state and local funding. Such a grant program with criteria that encourage and reward state and local conservation funding and support effective conservation programs and partnerships could leverage federal funds with state and local funds to achieve important federal conservation objectives.

TPL applauds the Administration's focus on sustainable communities, emphasis on connecting children to parks and open space and recognition that we need to reinvest in places where people live, work and play.

Discussion Question 1

Written & Online Comments

(cont.)

Traditionally, urban parks have been considered purely facilities of local interest --in contrast to urban roads, for instance, or urban wastewater facilities. Today, however, it is recognized that there is a considerable federal interest in high quality city parks. For one thing, city parks are the principal place where urban residents can exercise, and exercise is key to reducing the nationwide obesity crisis and related health problems and expenses. For another, city parks allow denser urban growth and infill surrounding them, reducing edge sprawl and ever more exurban automobile use, congestion and pollution and when connected create systems of parks linked to each other and to their communities allowing greater access and mobility which encourages increased use. There is therefore a great need for federal leadership and resources to expand and better shape our rebounding urban parks movement.

Including city parks and open space in a major new outdoors initiative could encourage cities to engage in long term planning and analysis.

TPL's Center for City Park Excellence has identified five major categories of city parks that relate most closely to federal interests and meaningful outcomes: waterfronts, connectors, anchor parks, environmental justice parks and threatened ecosystems.

The Department's many urban units provide millions of Americans with outstanding recreational opportunities in their own backyard and should remain a departmental focus.

USDA/US Forest Service: We recommend investment in US Forest Service programs and activities that help connect Americans in urban areas to forests. These programs include the Urban and Community Forestry program and the Kids in the Woods program.

The work of The Trust for Public Land-- from the urban core to wilderness, on public and private lands alike - allows us to witness every day the transformative impact of nature and green space for a child of the city, the deep-rooted conservation values of farmers, ranchers and forest owners, and the important American values reflected in the diversity of our publicly protected places like Yellowstone National Park and the Brown vs. Board of Education National Historic Site.

In particular we appreciate the Administration's recognition and leadership when it comes to nature and recreation in our cities. President Obama's vision is clear: America's great outdoors begins when we open our doors. Connecting with nature and safe places to recreate is just as important in our inner cities as it is in our wilderness, We at TPL agree and we believe that no child in America should be more than a to-minute walk from a park, garden or safe place to play. Without that close-to-home access we have "endangered children's habitat".

We stand ready to work with you to ensure that every American can connect in a meaningful way to our lands and waters. We are thrilled with the call for a national conversation that engages a more diverse public in the work of land conservation and we look forward to the listening sessions. In many cities, towns and rural landscapes across the country, TPL is working with numerous organizations, private landowners and local citizens to think about their local green space needs as well as those that address a greater good. We believe they are ready to meet President Obama's call to action and help implement the America's Great Outdoors initiative.

Discussion Question 1

Written & Online Comments

(cont.)

Most young children find real joy in nature when introduced in a fun way and when they see role models, especially high school and college students, enjoying the outdoors.

Children connect with and learn more from nature when they are engaged in hands-on activities to protect the land rather than simply being in the outdoors. This can always be done in age appropriate and fun ways.

Teens and young adults are a valuable asset to land managers by getting actual work done while serving as examples for younger children.

Non-profit organizations that focus on youth and conservation provide essential complementary capabilities for federal agencies when they are embraced as full partners.

When young people are actively engaged in giving back to the land they leave the environment healthier, realize more of their personal potential and develop the ethics and commitment to become engaged citizens, proponents for protecting our public lands and conservation voters.

Getting actual work done through conservation service gets young people moving outdoors in a way that forms healthy, lifelong connections to the land.

Once engaged through conservation service, many young people actively seek careers working for public land management agencies and in environmental fields.

SCA's community programs reach over 1100 at risk young people age 15-24, placing them in paid summer jobs on federal and community public lands each year. Typically, many of these young people have never experienced a connection to the outdoors before their summer jobs. Yet, SCA is able to get them outdoors, keep them through the summer, and engage many of them throughout the year and subsequent summers. SCA's retention rate in these programs is over 95 percent. Our high-touch continuum of service approach is a powerful model that can change a young person's life, while also instilling an ethic of stewardship and connection to the outdoors. We recommend scaling these types of proven community conservation summer jobs program across the country.

SCA has had success engaging diverse young people at the college level as well as high school-aged youth. Currently, most of the federal public land management agencies lack a diverse workforce. For example, 5.5 percent of the current National Park Service staffing is Hispanic, 9 percent is black, and 1.8 percent is Asian. Through our programs and targeted diversity initiatives, SCA recruits diverse young people from over 300 majority-serving and minority colleges, including HBCU, HACU, AAPI, and AIHEC colleges, to serve as interns with federal land management agencies. For example, SCA has been able to reach over 90 percent diversity intern placement levels for several federal partners in such targeted initiatives. More importantly, many of our diverse young people end up in environmental careers, including in the federal government. As discussed more fully below, we recommend that the government create a direct pipeline to careers with noncompetitive hiring status for young people who participate in SCA and Corps programs.

Discussion Question 1

Written & Online Comments

(cont.)

Conservation service can be a strategy to address youth unemployment. Young people (age 16-24) face the highest youth unemployment rate -- 19.6 percent -- since the Labor Department began compiling the data in 1948. For low-income and minority youth, the job prospects are worse. By providing paid and stipended service positions, young people are able to receive hands-on training and life skills to help prepare them for careers in conservation. Again, we recommend scaling community conservation summer jobs program across the country.

Youth conservation service also can connect the outdoors, businesses, and community development. For example, in an economic development initiative along the Great Allegheny Passage, SCA interns are working collaboratively with community stakeholders to help (i) retain existing businesses; (ii) expand and increase revenues of existing businesses; (iii) recruit sustainable new businesses; and (iv) renew trailside communities through trail-based tourism and recreation as part of a regional economic development initiative. The potential for programs like this is enormous, particularly in rural, economically depressed areas with underused trail and recreation resources. We recommend piloting similar youth conservation components of public private partnerships with conservation-based economic development initiatives across the country.

Public land management agencies need to build and invest in a future workforce that reflects America. Currently, thirty-eight percent of the workforce in the Department of Interior and 35 percent in the Department of Agriculture will be eligible for retirement in 2012. SCA and Corps programs already provide a diverse pipeline that federal land managers can tap to create their next generation of employees. Yet, land management agencies have not taken advantage of these pipelines. We recommend creating intentional links from SCA and Corps programs directly to professional, technical, and vocational jobs in the agencies through noncompetitive permanent job conversion status.

Childhood and adolescence obesity have reached epidemic proportions in the U.S. More than one-third of children and adolescents are estimated to be overweight or obese. Obesity is a key predictor for many future health problems, including diabetes. Youth conservation service can help tackle this epidemic. Indeed, many existing conservation programs by SCA and the Corps already get young people moving outdoors by, among other things, building trails, restoring habitats, and building boardwalks. In addition, many of SCA's programs, particularly residential programs, help young people make informed choices about nutrition and how healthy food connects to the land. We recommend piloting initiatives as part of SCA and Corps programs that incorporate nutrition education for participants, provide healthy meals for economically disadvantaged youth, and allow nonprofits to develop or use tools to measure and evaluate the exercise, nutrition, and recreation components of such initiatives.

Discussion Question 1

Written & Online Comments

(cont.)

Youth nonprofit partnerships are indispensable to public land management agencies. For more than 50 years, these agencies and nonprofits have created mutually beneficial partnerships to implement youth public policy objectives that neither party alone could achieve. Youth-serving nonprofits are able to help public land management agencies reach these goals by: supplementing government resources with nonfederal cash and in-kind resources; ; reaching and engaging more diverse young people in different and innovative ways; providing holistic services, including wrap-around support services; dedicating trained staff (e.g., youth development, recruitment, and administration); providing existing program infrastructure and capacity in each of the 50 states; and engaging young people in a continuum of outdoor experiences and connections that instill a lifelong connection to the land.

We, therefore, strongly recommend strengthening public land management partnerships with nonprofits by: (i) investing in youth conservation service; (ii) focusing on the collaborative nature of the partnerships through the use of cooperative agreements; and (iii) implementing youth programs through youth-serving nonprofits rather than through the agencies or individual land management units.

Thank you for opening the dialogue on this important topic. We appreciate President Obama and his administration's sincere interest and initiative in hosting these listening sessions on America's most valuable asset – our treasured outdoors.

Initiated through a directive by Governor Schweitzer, our tourism industry underwent a brand discovery process to determine the essence of the Montana brand. This process identified Montana's key attribute, our core strength, as having the most spectacular unspoiled nature than anywhere else in the lower 48.

This process confirmed that Montana's unspoiled nature, spectacular landscapes, vast open spaces and abundant outdoor recreation are all paramount to our \$3 billion tourism industry but equally paramount to our exceptional quality of life as Montana residents.

Montana's outdoor attributes consistently rate as the top reasons visitors select Montana as a vacation destination. Mountains and forests rank as our number one attraction for those visiting Montana. With uncrowded open space, rivers, and Yellowstone and Glacier National Parks rounding out the top five.

Preserving and responsibly managing these assets will help ensure that tourism remains one of Montana's leading industries. An industry that supports over 42,000 Montana jobs and brings in over \$228 million in tax revenue. <http://www.travelmontana.mt.gov/branding/>

In an effort to advocate and promote sustainable and responsible tourism practices, the Governor's appointed Tourism Advisory Council created and adopted the Montana Tourism and Recreation Charter. This Charter provides a set of guiding principles for our tourism industry to follow to ensure that we protect the unique and authentic resources, businesses and places that are essential to Montana's experiences and sense-of-place. <http://www.travelmontana.org/charter/>

Discussion Question 1

Written & Online Comments

(cont.)

The Montana Office of Tourism has identified the geotraveler as a target market. Geotourism is defined as tourism that sustains or enhances the geographical character of a place – its environment, culture, aesthetics, heritage, and the well-being of its residents. Geotourism strategies provide products, services and visitor experiences that maintain a destination’s sense of place and complement rather than compete with the needs of the local residents. This type of visitor helps to sustain and enhance our regional assets and deeply enriches their travel experience by directing them to that which is unique and distinctive to our areas. It connects the traveler to the community and vice versa.

The Montana Office of Tourism is in strong support of initiatives that protect our open space and natural landscapes such as the innovative Travelers for Open Land. TFOL is a state-wide program that seeks voluntary contributions from travelers for private land conservation when they stay at participating lodging properties throughout Montana. The funds are then awarded as grants to non-profit land trusts to protect valuable open lands throughout the state and to maintain a vibrant hospitality industry. We've supported Travelers from the start and we salute the individuals and organizations that have taken a unique idea and developed it into a national model of land protection and tourism promotion. We encourage other states to follow this lead and develop programs like this that help protect, preserve and sustain their destinations for future generations. <http://travelersforopenland.org/index.php>

The Montana Office of Tourism is very interested in reconnecting children and young families to the outdoors. While Montana’s national parks have been doing well, overall our U.S. national parks have in fact been losing visitation over the years and our youth are becoming more and more disengaged with the natural world. If we don’t engage our young families and children now, thus creating a future of passionate, dedicated advocates, who will be the voice of our parks into the future – whether it’s promoting the benefits of outdoor recreation or maintaining and enhancing funding for operations and sustainability? We would welcome more opportunities to work with our public and private partners in ensuring our youth experience the sheer magnitude of outdoor activities and learning available to them.

The Montana Office of Tourism is very interested in supporting and assisting with the America’s Great Outdoors Initiative.

Founded in 1924, the AMA is the premier advocate of the motorcycling community, and it represents the interests of millions of on- and off-highway motorcyclists. Our mission is to promote the motorcycle lifestyle and protect the future of motorcycling.

As we discussed when I was in Washington in March, the Greenway Foundation is offering to host and help organize one of the listening sessions you will hold in the West (hopefully in Denver) as you launch this program. We believe the venue should be close to the South Platte River. The Greenway Foundation has been building more and more public participation in parks, recreation and open space planning efforts in the Denver area over the past several years. We have continued to build our strong relationship with Great Outdoors Colorado. We have also been instrumental in coalition building for a major water supply project in the area as well as in launching a new, aggressive water quality effort.

Discussion Question 1

(cont.)

We know that Secretary Salazar's leadership will go a long way toward building support for GO America, but we believe a true outpouring of enthusiasm from Colorado citizens will help him get congressional approval of funding in a shorter time frame.

In his announcement, the President talked about reconnecting Americans - especially children - with the outdoors. To meet his deadline of November 15, 2010, for a report on successful efforts around the country, new ideas for innovative approaches to funding and an action plan for the next year, there is a great deal to be done in a short time. We would be honored to help you get started here at home.

I think hiking off trail should be addressed too..... That clearly has a impact on sensitive ecosystems. Additionally, breathing while in natural areas increases green house gases, not to mention all the energy consumed to build holier than thou hiking products. The sooner people realize the world is not going to crumble to a a end if they enjoy it, the better off we will all be. The planet has made it this far folks, come on!

For 25 years I have been riding in our National Forests through out California (where I live), Idaho, Oregon, Washington, Nevada, Arizona, Montana, Utah, New Mexico and Texas. I enjoy riding with my children in places off the beaten path...single track in our forests...designated and open trails. I rarely and I mean rarely, see another biker, hiker, equestrian or other dirt biker. There are no homes to bother and no pollution to speak of relative to all other forms of pollution. There is more dust and noise around my home from freeways, garbage trucks, leaf blowers, weed whackers, lawn mowers and boom boxes. There are billions of homes in the world displacing sewer, garbage causing carbon dioxide affecting the planet in such a far greater way than OHV use that it is almost laughable anyone would think OHV use contributes anything at all...comparatively. I had to be crude but humans and animals who breath, fart and excrete bodily "stuff" create more carbon dioxide and pollution in such extreme amounts that point a finger at OHV use defies rationale thinking. Look...billions of homes on the earth have dug foundations...displacing insects, rodents and other animals, not to mention the erosion issues! OHV users use such a minute portion of public land in usually remote places, it is hard to understand the opposition other than the environment is a religion in and of itself!

You are spewing complete and utter BS. A lot of unquantifiable opinion based purely on your assumptions, zero fact and all rhetoric. But thanks for playing. Most OHV'ers would simply be happy to protect and maintain what they have - nothing more. Nobody actually wants to harm the environment and is demanding to have new areas to ride in sensitive wilderness areas.

Common sense must prevail. Protecting habitat can be balanced with protecting access to public lands for all! Hikers, Bikers, OHV,s, Horses all can and should be managed to maximize public access. How better to foster appreciation of our public lands

Discussion Question 1

(cont.)

"Strenuous, perhaps, but very dangerous for children under age 16. Nothing so dangerous (killing or injuring over 40,000 children every year) deserves the "family friendly" label." - S PIn 1992, 722 bicyclists were killed in the United States in collisions with motor vehicles¹, and an estimated 650,000 people were treated in emergency rooms for bicycle-relatedWe now need to ban bicycles... And cars...

Data for #80 can be found atU.S. Consumer Product Safety Commission, National Injury Information Clearinghouse. National Electronic Injury Surveillance System Product Summary Report, Estimates for Calendar Year 1992. Washington, D.C.: U.S. Consumer Product Safety Commission, July 1993: 9.

You got to be kidding me! Look...I'm a chaplain...a pastor of large church...I preach God's creation to be taken care of. We love the earth. I represent many OHV users who totally respect the environment we use. I mean come on. You live in a house that uses sewer...you fill the land with your garbage...you have wood in your framing...you dig into the earth to have a foundation for your home...your home displaced a certain number of animals or insects...there has to be some erosion issues with your home. Why do you and many like you have no problem being one of billions who impact the earth with a home and just plain old living....giving off carbon dioxide with your breathing, farting and excrement (sorry for the crass but brutal reality here) but then have a problem with managed OHV use? Are you kidding me? Look, I've been riding with friends and family for 25 years in our National Forest throughout California and 99% of the time I never see a home, hiker, biker or other OHV user. Get rid of humans and their homes if you want to make a real difference!

There is space for all on our public lands. Education and enforcement of rules to stay on established roads and trails is the answer not banning. Cows and clearcutting do more damage to water resources than any ORV could think of! If you have a problem with irresponsible users of any resource, educate and if they won't respect the land fine and ban them and not all those that do.

Some of my favorite memories visiting parks in my childhood were the "nature walks" and "fireside chats" we attended with the park rangers. Park rangers are the stewards and teachers of our invaluable national parks - we need to fully fund and staff the parks to ensure we get the most out of them!

The national parks have been a wonderful instrument of environmental education. Exhibits, campfire talks and nature walks have introduced many adults and children to the ecosystem concept. Growing environmental literacy in our country has contributed to better environmental legislation at the state and federal levels.

How about National Parks being staffed by volunteers and those who have a passion for introducing our young people to our national treasures. This would not impact the budget and would give college students and high school graduates a fun way to spend their summers.

(cont.)

in that case then, the government should not support democrates because they are the most intolerant descriminatory group out there. The Boyscouts, on the otherhand, have made positive impacts on thousands of lives while teaching conservation and environmental responsibility. They have connected more kids to the great outdoors than any other organization I know of.

Again, if you do not like OHV/ATV then partake in the millions of designated wilderness acres. You won't find us there. Who has made the biggest footprint on our beautiful national forests? What about all that fossil fueled asphalt or concrete to build all those roads, you travel on. Wind and time will take thousands of years to cover (not restore) that. But look at the wagon trail ruts left on the Oregon trail, you can hardly find them. The only ones I have seen where on protected farm ground, that the farmer has diligently protected and preserved and that was only a couple hundred years ago. I am all for government policing of OHV recreation. Please donate your tax dollars to any anti-anti-access organization. Or just write a check to the US Treasury and in the memo, write to help police our national OHV areas and to help keep those dirt roads open.

The more trails that remain open for use, the less impact each of us will have upon the forest. We should be opening more routes, not closing them, to promote more dispersed use. Public Lands are for Public Use.

I always pick up trash on the trails or in the woods; I stop my atv, get off, pick it up and carry it out; it is just the way I was brought up; thanks mom and dad. I don't need any national clean up day organized or any special funding to buy protective gloves. Been doing it for 50 years, because it's the right thing to do. 50% of it is clear plastic water bottles.

I am not anti-hunting, but the facts are that most state fish and wildlife agencies depend on consumptive user (hunting, fishing, trapping) fees to provide a large majority of their budgets. As in politics, follow the money. These agencies obviously give most of their attention to managing for optimal hunting, fishing, and trapping because that is where their monetary bread is buttered. The only way to change this is to broaden and diversity how these state agencies are funded. For example, voluntary nongame tax checkoffs, and proposed excise taxes on bird seed or outdoor gear, are ways to broaden the public constituency that these agencies would want to represent. Hunters and other consumptive users have paid for many positive conservation programs and projects over many decades. It is time for the non-consumptive users to pay more of their fair share. After all, strong and effective conservation programs and projects are in everyone's interest, and generally provide benefits to both consumptive and non-consumptive users.

Thank you for your first-hand testimonial about the many benefits and successes of the California Conservation Corps -- may similar programs be extended across the nation!

Even local parks provide positive economic benefits. A study conducted by Parks and Trails NY shows that for each dollar invested in parks, five dollars in economic benefits are recieved by the community.

Discussion Question 1

Written & Online Comments

(cont.)

Another application of science is in setting land preservation priorities. Each region of the country is unique and has different natural assets that define its character, create opportunities for reconnecting with the outdoors for residents, and define its ecological health. Priorities for protection can be set by defining these values and mapping resource areas where funding should be targeted.

Anyone who has spent any time in the wilderness will recognize that any traffic wild or domestic has an impact. What is a game trail? I have run cattle in the mountains and they follow game trails that were already established from wildlife. The key is to desegregate trails and keep the impact to those specific areas and then you can maintain them and control the impact. There is no way to exist and not have an impact in some way, we just need to be realistic and responsible. I am not sure why you don't hear about the environmental impact the hurricanes, volcanos, earthquakes have. The impact of these things make our impact as humans look insignificant.

Great idea! Public Access to Public Land... who would have thought that a concept so simple would be so difficult to keep. I advocate Training for local recreation program managers as well. SP: The concerned families for ATV safety has a platform that is partly based upon figures from{ Link }a report titled ATV Injuries and Deaths Among Children Decrease. This report states the following in part: "According to data released by the U.S. Consumer Product Safety Commission, child deaths and serious injuries caused by all-terrain vehicles appear to have decreased in 2008. Tragically, however, at least 74 children lost their lives and more than 37,000 were injured seriously enough to require treatment in a hospital emergency department." The deaths as one poster already tallied in this forum reflects less than .04% of OHV users in the same group in 2008. I take issue with the 37,000 kids under the age of 16 who were injured seriously enough to require hospital treatment. In 2008, while on a Off Roding / Camping trip, I took my son to a near-by Emergency Room for stitches. At the end of the visit, the nurse confirmed that his visit would be counted as an OHV related treatment, as we were coming from Glamis, Ca. I took issue with this, as he was in the ER for splitting his chin open while playing in camp after dark with his cousins. It had nothing to do with an Off Road Vehicle!!! Knowing that my son is one of those 37,000, I seriously question the validity of the other 36,999 visits for Hospital Treatment in 2008.

this is a great idea. I have been a geocacher on and off for a few years. It's a great way to get outside and have a reason to explore some new areas. It gave me a reason to explore some public areas near me that I didn't know existed.

I agree, thank you for putting that so well. Most Jeeps are not OHV (off hwy vehicle) they are ATV (all terrain vehicle); I thought I should explain that. And no, my 05 Grand Cherokee is not keeping me fit, but my Polaris RZR side by side is and I ride it all over Oregon, Washington, Idaho, and Montana (not all over; because of all the anti-access opinions) Oh, and we are four generations of OHV users. :)

Discussion Question 1

Written & Online Comments

(cont.)

Establishing an Ancient Forest National Park is simply a matter of re-designating the land. The vast majority of the proposed park is already established wilderness. What would be needed? Some infrastructure in the front country? Environmentalists need to have a higher consciousness of the rural poverty that is endemic in many of these areas. A national park designation immediately raises the stature of the land, it brings significantly more tourists, and allows for some benign economic development in these rural enclaves. The National Park System needs to be significantly expanded. The excuse that other units in the system are underfunded therefore we should not add more is fallacious. Many of these potential national parks are under constant development pressures, national monument status still allows many of them to be exploited by timber, oil and gas, grazing, mining and agricultural interests. If you want more money for conservation, parks, and environmental initiatives then it will be imperative to re-task money already in the budget, 52% of which goes to "national security" in the form of the budgets for DoD, DHS, and various intelligence agencies. That's an abomination, we spend more on "national defense" than the next 30 countries combined! As for the notion that ranchers are responsible stewards of the land, that is a dubious statement at best. Most ranchers are a subsidiary of Big Agra, they exploit federal lands, exhaust the resources, socialize all external costs, then internalize the profits. I dare anyone survey a grassland after it's been invaded by tens of thousands of cattle. The evidence just doesn't support the notion that ranchers are responsible stewards of the public commons, they may be better at caring for their own parcels of land where they cannot pass off the external costs to taxpayers, but I've seen what's happened to grasslands in Oregon after grazing interests ripped the hell out of the place, and it wasn't responsible stewardship. Ranchers masquerade as free marketeers, but in reality they're just free loaders.

My OHV group just did a "clean up day" on BLM land. We filled 5 giant dumpsters full of trash. Including garbage from a Sierra Club camp-out. Whens the last time you saw a Sierra Club "clean up day". I've looked in my area and found none. I'd love to participate!

your approach to this issue is all wrong. As I have already proven in this forum, I do have the ability to see both sides of the road despite being seated squarely on the seat of my quad in the middle of it. However, your efforts to ram your ideologies down my throat will result in no concessions from me. Good luck in your efforts!

It was, indeed, my privilege to attend this conference and I found it extremely beneficial. The wide-ranging experiences and backgrounds of the participants provided an excellent opportunity to learn others' perspectives and desires. Conversation and information flowed freely in the comfortable atmosphere of the conference.

The introduction and passage of an Omnibus Public Lands Bill like the one passed in the Spring of 2009.

Make permanent protection of Oteco Mesa as a National Monument.

Protect the wilderness in the Organ monuments thru a National Conservation area

Cut out the Red tape for getting matching Fed + State Funds. It slows everything down.

President Obama's America's Great Outdoors initiative to craft a 21st century strategy for our landscapes, our parks, and our wild areas is a bold step toward bringing families together in pursuit of active exploration of this country's wonderful public lands. And what better place to gather input to accomplish the goals of this initiative than in one of America's great urban national parks?

I am pleased to hear that a listening session is scheduled in the Minneapolis-St. Paul area in August and hope that the National Park Service plays a prominent role alongside the Environmental Protection Agency. Here in the Twin Cities - at the Mississippi National River and Recreation Area (MNRA) - we have shining examples of programs that actively engage young people in their first "national park experience."

The park is home to dozens of partnerships with state and local governments, non-profits, corporations, schools, churches and individuals. For example, the Urban Wilderness Canoe Adventure program provides 10,000 urban youth with an outdoor experience by getting them on the River. This partnership program builds confidence, strengthens outdoor skills, and encourages a healthy, outdoor lifestyle. MNRA is also one of the first 20 national parks in Michelle Obama's Let's Move Outside program because of the park's program impact on urban youth.

The park's many strong partnerships are also put to work protecting the River's resources and the rich cultural history of the Mississippi. The park and its local partners restore wildlife habitat, construct walking and bike trails, and remove invasive plants to restore and protect bluff lands.

General Mills care about the national parks. Our parks are testaments to our past and our common values. With its corporate roots along the Mississippi, General Mills has enjoyed a long relationship with the River and with this national park. The Mississippi National River and Recreation Area is one of our nation's special places that brings families together for a unique national park experience in the heart of an urban area. Please consider "listening" to the people who have helped make strong partnerships at this national park by holding a session with the National Park Service and the EPA at this great park.

Our San Francisco Bay Area hosts unique public lands of incredible beauty and wildness close to large population centers. Our public lands belong to Americans of all ages and provide us with clean supplies of drinking water, healthy air, and an opportunity to experience wildlife and nature.

Discussion Question 1

Written & Online Comments

(cont.)

Enhancing sustainable economic development opportunities through tourism and recreation will benefit local communities. Communities can diversify their economies by expanding tourism-related industries and boost ecotourism in their region and thereby increasing demand for food and lodging services.

Stewardship and conservation of our outdoor recreation lands, important watersheds and valued private lands works when we come together around our shared common values. Everyday across our state concerned citizens, tribal leaders, conservation groups, recreation businesses, and local elected officials join together to enhance and preserve their treasured special places.

Protecting these public lands will provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today. This will give us the opportunity to actively reconnect our children to their incredible natural heritage.

Just recently, there was a huge success for wildlands protection in the magnificent Vermillion Basin, which the Bureau of Land Management (BLM) announced it will close to future oil and gas leasing. We need more bold actions like this to protect large, unfragmented and treasured landscapes.

Large natural areas, such as Cedar Mesa, the San Rafael Swell, Wasatch Mountains, Beaver Dam Wash and Red Cliffs -- provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while preserving the wildlife, recreation and lands we enjoy today. Protecting these lands will give us the opportunity to actively reconnect our children to their incredible natural heritage.

The Washington County Growth and Conservation Act created the 62,000-acre Red Cliffs National Conservation Area and 78,000-acre Beaver Dam Wash National Conservation Area and newly-designated Wilderness areas around the growing community of St. George. Management for all of the public lands in Washington County is currently being developed. This is a real chance to showcase all of the benefits highlighted in the public lands bill that came from the combined vision of county commissioners, conservation organizations, and local citizens.

Private Property owners are usually better Stewards than the government due to fewer regulations and private interest, so it would be counter productive to have the government involved in Landscape Wide Planning. This would degrade private property, reduce Landscape Health and infringe on private property rights.

Local Stewardship projects are the key to improving forest health. This has been proven time and time again on both private and agency lands where active stewardship has produced better forest health and increased biodiversity over non managed preserves.

Address Conservation at a Large Scale

Discussion Question 1

Written & Online Comments

(cont.)

Protect our wilderness

Improve Watersheds and Wildlife Habitat

Connect people with Nature

Provide Increased Access and Recreational Opportunities

Fully Fund the Land and Water Conservation Fund

The Prairie Pothole Region supports outdoor recreational activities for millions of Americans, providing opportunities for both adults and youth to connect to our natural heritage. Migratory birds produced in the region support or enhance the outdoor experiences of waterfowl hunters, bird watchers, boaters and many other outdoor enthusiasts in nearly every state. Waterfowl hunters alone generate \$2.3 billion in local economic value annually and support more than 21,000 jobs throughout the country-revenue and jobs that are vital to local economies.

I am writing as a member of Trout Unlimited (TU) to offer suggestions from our experiences regarding strategies and activities that can help make America's Great Outdoors (AGO) Initiative a success. TU's mission is to conserve, protect and restore North America's trout and salmon fisheries and their watersheds. Since 1959, our approach to our mission has been rooted in community-based partnerships and using fishing as a way to connect with the outdoors and conservation efforts. We were glad to see these themes echoed in the President's memo on the AGO Initiative.

Our organization's mission is focused on trout and salmon, but achieving this mission requires healthy watersheds and a landscape-scale approach to conservation. Our strategy is to protect intact habitats, reconnect them to surrounding areas, and restore degraded habitats so that they again support healthy populations of fish and wildlife. It is also essential that we sustain today's conservation gains by engaging the next generation of environmental stewards through educational programs and outdoor activities.

For example, protecting valuable habitats like Bristol Bay, Alaska, which is currently threatened by the proposed Pebble mine, and roadless lands on national forests, we can ensure that these special places continue to serve as strongholds for trout, salmon, and other species. The Land and Water Conservation Fund has been one particularly effective tool for habitat protection.

It is not enough to protect individual blocks of habitat; we must reconnect them to surrounding areas. For example, dam removal on the Penobscot River in Maine will reconnect hundreds of miles of habitat.

Discussion Question 1

Written & Online Comments

(cont.)

Where habitat is impaired, we must restore it. For example, TU works with programs like Cooperative Watershed Restoration, National Fish Habitat Action Plan and the Farm Bill to improve in-stream and riparian habitats.

To engage the next generation of environmental stewards and sustain our conservation legacy, TU operates youth programs like Trout in the Classroom and service learning. For example, TU has worked with the EPA to educate students about water quality and freshwater ecology by raising trout in classroom tanks and taking field trips to release them into the wild.

By employing a landscape-scale approach to protect, reconnect and restore habitats and sustaining our conservation legacy through youth engagement, we can develop a strategy that achieves the goals of the AGO Initiative. Building on the projects and programs mentioned above will help implement the activities to make the initiative a success.

Earlier this month, Tennessee's U.S. Senators Corker and Alexander introduced the Tennessee Wilderness Act of 2010, which could protect nearly 20,000 acres of wilderness in the Cherokee National Forest. It would specifically designate six areas of wilderness, adding acreage to the beloved Big and Little Frog, Sampson Mountain, Big Laurel Branch and Joyce Kilmer-Slickrock wilderness areas, while creating more than 9,000 acres of Upper Bald River Wilderness. The Tennessee Wilderness Act represents the opportunities that exist within America's Great Outdoors to change conservation for the 21st century. This historic bipartisan push to expand Tennessee's wilderness is long overdue. However, the true victory will be seeing Congressional approval of the bill, providing everlasting protection for eastern Tennessee's land and wildlife.

Protect our Wilderness and the Cherokee National Forest in Tennessee. We are working with Government leaders to protect wilderness and wild and scenic rivers in the Cherokee National Forest. Your support of these proposals can preserve our wildest lands for future generations.

Please support conservation of large landscapes that include pristine wildlands, working forest and ranch lands, private parcels and connections across large areas. This provides us with the best hope for addressing loss of species and open space, preserving water quality and climate change adaptation while preserving the wildlife and lands we enjoy today.

Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. The Obama administration should prioritize collaborative restoration projects on public lands, making restoration a national priority.

When I think of America's Great Outdoors, I think of our national parks. National parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year.

Discussion Question 1

Written & Online Comments

(cont.)

Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country.

A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times.

The Los Angeles region, specifically the Santa Monica Mountains National Recreation Area (SMMNRA), is an exceptional area for showcasing best practices and innovative partnerships towards reaching these goals. We urge you to consider holding a listening session and field trip to the SMMNRA.

The programs implemented by the National Park Service at the SMMNRA reach thousands of inner-city youth from underserved communities and in many cases, provide their first encounter with nature.

The partnership established between the schools and the park provide transportation, supplies, and staff that engage youth in hands-on science education, service and recreation, fostering deep connections to nature and service.

Additionally, in partnership with school districts, colleges and universities, the National Park Service has created innovative employment programs that hire a diverse group of young people from underserved communities and provide a "stepping-stone" towards a full-time career with public land management agencies.

Discussion Question 1

Written & Online Comments

(cont.)

Starting with internships and ending with full-time positions, numerous youth now hold employment positions across California. We believe that learning about these success stories would add great value to the America's Great Outdoors initiative.

The National Park Service is currently conducting a special resources study of the Rim of the Valley Corridor that may lead to enhanced recreation and educational opportunities for communities challenged with the lack of open space. The administration can glean best practices from the SMMNRA's programs that will shape how our land management agencies better connect to urban communities.

As you continue to plan and develop America's Great Outdoors program, we hope you will consider visiting the Hudson Valley region to conduct a listening session and learn about innovative strategies at work to conserve our lands and waters for public benefit.

The Hudson River Valley is one of the most significant river corridors in the country. The historical, natural, cultural, commercial, scenic, and recreational resources spread throughout the region are unparalleled. Our region is home to a wealth of history and beautiful landscapes that inspire a school of art and fostered innovation that drove our nation's early economy. Today the region is a model for the green job movement, with an emerging solar energy industry and a \$4.7 billion tourism economy that is closely linked with conservation and outdoor recreation industries.

Currently, the Hudson River Valley is designated as a National Heritage Area, National Estuarine Research Reserve and a New York State Greenway. In addition, the House of Representatives recently passed legislation authorizing a National Park Service special resource study of the Hudson River Valley.

We applaud your effort to promote and support innovative community-level efforts to conserve outdoor spaces and to reconnect Americans to the outdoors. Stakeholders from across our region have been involved in exactly these types of efforts for many years. Whether it is connecting residents of the New York City metropolitan area to one of our country's greatest landscapes or working on regional-level through the Greenway to conserve our historic, cultural and natural resources in the face of persistent population growth, the Hudson River Valley has been at the forefront of promoting innovative and cooperative solutions to our challenges.

There are a number of local initiatives working to keep these private forestlands intact before they are lost permanently to development. Washington State and local county and city governments are making major commitments to protect and restore the Puget Sound – creating a working plan and strategy under the direction of the Puget Sound Partnership.

Discussion Question 1

(cont.)

We are writing to encourage you to schedule an America's Great Outdoors listening session in our home state of New Jersey, also known as the Garden State. We believe that the America's Great Outdoors Initiative will provide an opportunity for the Environmental Protection Agency, the Council on Environmental Quality, the Department of Interior and the other agencies to hear from the diverse audiences who often live in densely populated cities and face significant obstacles when searching for healthy recreation opportunities.

New Jersey is home to a myriad of unique natural landscapes, from the Pine Barrens and Barnegat Bay in the south to the Harbor Estuary and the New Jersey Highlands in the north. New Jersey also hosts many state parks and forests, five national wildlife refuges, Morristown National Historical Park and portions of the Gateway National Recreation Area. Even with these natural and recreation areas, however, it is important to note that New Jersey is the nation's most densely populated state, where more than 40 acres of open spaces are lost each day to development.

In our country, only one in five homes have a park within a half-mile and this number is even higher for New Jersey's cities, which are some of the country's most densely populated. All Americans are adversely affected by limited green spaces, deteriorating community facilities, health problems, and juvenile delinquency. Research shows that healthy and vibrant urban areas play key roles in improving the economy, health, and quality of life in our communities. Urban parks are instrumental in helping our nation achieve important national goals of increasing exercise, providing safe, healthy alternatives for at-risk youth, and spurring local economic development. Providing cities with outdoor resources is a necessity and will reconnect people to the great outdoors.

The Hackensack Meadowlands is a beautiful, natural wetlands area. In this 8,400 acre area just minutes outside Manhattan, there are more than 50 species of fish and shellfish. Two-hundred fifty species of birds can be seen in the Meadowlands, and more than 65 species of birds nest there. Migratory birds come to the Meadowlands during their migration cycle in growing numbers, which has made the area an important part of the North American ecosystem. This area will provide this and future generations with unparalleled opportunities for eco-canoe trips, nature walks, bird watching, other appropriate recreational activities, and an environmental educational center for students. All of these activities will be in the midst of what was once deemed to be a poisoned marshland that was considered forever irreclaimable.

The Highlands comprise 800,000 acres of mostly forested land in New Jersey's seven northern counties. The region's forested watersheds supply clean drinking water to more than half of New Jersey's residents, and also provide carbon sequestration for the densely populated Mid-Atlantic States, wildlife corridors and abundant natural areas within close proximity to millions of Americans in the Ramapo Mountains, the Fanny Highlands, Wallkill River National Refuge and Sterling Forest.

Discussion Question 1

(cont.)

Currently, there are America's Great Outdoors listening sessions that have taken place in Los Angeles and other areas. Currently, there are America's Great Outdoors listening sessions that have taken place in Los Angeles and other areas in the South and West. We believe that the challenges that New Jersey faces in regards to the need for urban parks and access to quality recreation opportunities in densely populated cities and suburbs is unique and should be part of our national public lands agenda and the discussion should take place in New Jersey.

We appreciate your efforts in this regard and agree that new conservation initiatives should be based on the input from local citizens and landowners who will be most directly affected by them. In that spirit, we are writing to ask you to consider holding a listening session in Pierre, South Dakota, this summer to allow the citizens of our state to express their views on potential future AGO initiatives to conserve South Dakota's natural resources.

From the Black Hills to the Missouri River to the Prairie Pothole Region, South Dakotans take seriously their roles as stewards of natural resources. Moreover, numerous South Dakotans take full advantage of conserved lands through such pursuits as hunting, fishing, hiking, biking, camping, and snowmobiling. In fact, South Dakota's land and water resources draw thousands of visitors to the state each year, who make substantial contributions to our economy. Pheasant hunting alone provides an estimated \$200 million per year to South Dakota's income base.

South Dakota's economy also depends on a thriving agricultural sector, and conservation initiatives need to be designed with our working lands in mind. Historically, some of the most successful and well-accepted conservation efforts have been voluntary programs like the Department of Agriculture's Conservation Reserve Program (CRP), Wetlands Reserve Program (WRP) and Grasslands Preserve Program, and the Department of the Interior's wetlands and grasslands easement programs. These programs have allowed farmers and ranchers to decide if, when, and to what extent they want to participate, and to schedule their enrolment in ways that complement their ongoing grazing and crop production operations.

In addition to the basic Federal Programs mentioned above to improve habitat stewardship, our State wildlife agency has hunting access "Walk-In" programs in which the landowners can earn extra annual payments if his/her private land improvement programs have proved to be very popular with sportsmen and landowners and it adds directly to the economic benefits of having healthy bird and big game populations.

One potential initiative that we would like to explore through this listening session is how we can more effectively meet the existing unmet demand for grassland and wetland easements, which are particularly popular with our agriculture producers in the Prairie Pothole Region. This area includes significant expanses of native prairie upland grasslands and abundant wetlands, and provides habitat for hundreds of species of upland birds, waterfowl, and other wildlife. There are currently over 800 interested landowners representing roughly 360,000 acres of habitat waiting to be considered for a grassland or wetland easement on their property. Since its inception, landowners have enrolled 1.8 million acres in the easement program, and it is anticipated that demand for easements is sufficient to enable conservation of many additional acres of this unique habitat in the future.

Discussion Question 1

Written & Online Comments

(cont.)

Well-regarded national conservation organizations, led by Ducks Unlimited, and including Pheasants Forever and the Boone and Crockett Club, as well as the U. S. Fish & Wildlife Service, have expressed support for additional efforts to conserve the Prairie Pothole Region.

Generally speaking, federal ownership of large swaths of land in Maine is not politically viable, due to our long standing tradition of private land ownership, established before there even was a federal government to own land. Maine has developed a system of private land trusts that work with landowners to protect their land for public benefit. The State of Maine, with a small population and one of the most important forest areas in the country, does the best it possibly can to protect the forest resource with very limited funds.

Congratulations on a successful launch of the America's Great Outdoor Initiative! The United States is blessed with so many wonderful outdoor spaces that enrich the human experience, support our economy, and sustain critical ecosystems. I commend you for jump-starting a welcome conversation regarding how to get Americans - and particularly our young people - out the door and experiencing the natural world. I am convinced that spending time in our great outdoors will improve our health and happiness and will instill a commitment to conserve these wonderful, restorative places. Thank you, too, for including Washingtonians at the launch to include Billy Frank, Jr., Chairman, Northwest Indian Fisheries Commission, and Sally Jewell, President and CEO, REI.

The Washington State ethos is one that values our environment in its tremendous diversity. The rivers and streams, lakes, mountains, gorges, farmlands, forests, the Palouse, Puget Sound, the Pacific Ocean - and the many species that inhabit these places - have left, and continue to leave, an indelible mark on our collective psyche. The respect for the environment is not new. The earliest people of the northwest region lived in harmony with the land and water and bestowed this depth of connection to their descendents who, today, make up twenty-nine federally recognized tribes.

Also, in 1913, not long after statehood, Washington State legislatively institutionalized a state park system - three years before President Wilson signed a bill to create the National Park Service as a separate bureau within the U.S. Department of the Interior. We continue to take our stewardship responsibilities seriously and, working across jurisdictions and among numerous interests, we are ensuring a balance of conservation and preservation with recreational, educational, and economic opportunities.

Again, I congratulate you on the America's Great Outdoors Initiative. My administration stands ready to serve as a resource to you and your team. Know, too, that the people of Washington State welcome the opportunity to share their collective efforts to preserve and protect - and delight in - the majesty of the natural world around them.

(cont.)

In addition to the natural benefits, our local economy has come to depend on the many natural benefits of the Adirondack Region. Tourists who come to ski, fish, hike and enjoy other outdoor activities are critical to the many small businesses in our region. In a 2008 report, the New York State Department of Labor estimated tourism is the number one industry in New York's North County region. With this in mind, it is important we do all we can to help draw attention to the great value of resources like the Adirondacks.

We applaud your effort to promote and support innovative community-level efforts to conserve outdoor spaces and to reconnect Americans to the outdoors. Stakeholders from across our region have been involved in exactly these types of efforts for many years. Whether it is protecting waters like the St. Lawrence River and Lake Champlain or promoting the many historic landmarks throughout the state, the Adirondack Region has been at the forefront of promoting innovative and cooperative solutions to our challenges.

We are confident that you will find many projects and partnerships that exemplify the America's Great Outdoors agenda in the Adirondack Region and we hope that you, or another senior representative from one of the other federal agencies involved in this endeavor, will be able to include our region in your upcoming tour of the country.

This was a wonderful event! It brought so many people who care about the same things we do together to help us solve some of our most vexing problems related to protecting and preserving our country's rich outdoor heritage.

I would like to offer hosting a follow-up event in my district in Napa, CA so many of the people that work in the West, who for one reason or another couldn't to travel to Washington this week, will have the opportunity to meet the leaders in the Administration who are doing such important work and build upon this week's momentum. If this is of interest, please let me know so I can help set up the venue and also tours of some of the great on-the-ground work currently being done. Again, thank you for all you do and if I can be of any assistance, please contact me.

Thank you for the opportunity to provide our comments on the America's Great Outdoors Initiative (Initiative) and to provide information on the efforts Vail Resorts has undertaken related to the important goals of the Initiative. In our comments below we describe the highlights of our work to get kids recreating outdoors, engage the public in conservation and restoration projects, and contribute to our local communities as a sustainable economic resource. Much of this work is the result of vibrant public-private partnerships and we encourage the Initiative to explore this model for future partnerships. Please do not hesitate to contact us if you would like additional information on any of our efforts.

Discussion Question 1

Written & Online Comments

(cont.)

Vail Resorts is the world's premier mountain resort company operating five of the most popular ski resorts in the United States: • Vail, Beaver Creek, Breckenridge, and Keystone located entirely or partially on the White River National Forest in Colorado; and • Heavenly Mountain Resort in the Lake Tahoe Basin Management Unit in California & Nevada. Vail Resorts operates its resorts on National Forest System lands under special use permits from the United States Forest Service (USFS). Our resorts work in partnership with the USFS to deliver an outdoor recreation experience unmatched in the world.

The longstanding public-private partnership greatly benefits the American public by: providing recreation opportunities; boosting rural economies; improving the health and fitness of millions of Americans; providing kids great outdoor experiences; and promoting support for public lands and programs that protect our natural environment.

Over the past five years, U.S. ski areas have averaged 57.8 million skier/snowboarder visits annually, and about 60% of those visits occurred on public land. During the recent 2009/2010 season Vail Resorts' five resorts drew over 6 million skier visits (approximately 10% of skier visits in the United States.) In addition to the ski season, thousands of people visit the communities in which we operate to enjoy the beautiful summer weather and multitude of activities including recreating in the woods. This year-round visitation at ski areas makes up 20% of all recreation visits to the National Forest, yet ski areas occupy less than one-tenth of one percent of USFS lands.

This activity yields tremendous conservation benefits - providing recreation opportunities to millions of visitors in a mitigated environment and helping alleviate undesirable recreation impacts elsewhere on the forest.

These tourism/recreation based activities also represent a significant sustainable economic resource that employs tens of thousands of people and represents an important economic base for many mountain communities and states. In Colorado, tourism is the state's 2nd largest industry with over 143,000 employees and \$15 billion in annual travel spending.

Vail Resorts was excited to learn of the America's Great Outdoors Initiative (Initiative) as many of its goals relate to activities that Vail Resorts is involved with through our corporate stewardship program, Vail Resorts Echo (VR Echo).

Hayman Fire Restoration: In 2002 the Hayman Fire raged through the Pike National Forest, as well as state, county and private lands, burning a total of 137,760 acres. The fire destroyed 600 structures, including 133 homes, jeopardized habitat for numerous threatened or endangered species, and severely impacted the water source for more than 75% of Colorado's 4.3 million residents as well as downstream states. VR Echo has joined with the National Forest Foundation and the United States Forest Service on the Hayman Restoration Project to help bring back the areas destroyed by the Hayman fire. The effort will include riparian restoration to help reduce sediment loads, enhancement and relocation of trails, reforestation, noxious weed eradication, native plant and wildlife habitat restoration, and climate change mitigation and adaptation strategies.

Discussion Question 1

Written & Online Comments

(cont.)

As the private funding catalyst for the restoration project, VR Echo pledged \$750,000 and 1,500 employee volunteer hours over the next three years. The total area covered by the restoration project exceeds 115,000 acres with the majority taking place on 45,000 acres most affected by the fire. The goal is to complete the project by 2012, the 10th anniversary of the Hayman fire, with the objective of planting more than 200,000 Ponderosa pine, Douglas fir and other native trees on over 1,700 acres and additional native vegetation on 115 acres and across 13 miles. Through the project, jobs have been created for Colorado youth, and communities have been engaged through volunteer opportunities.

As mentioned earlier, tourism and recreation represent a significant sustainable economic resource that, in many regions and states, represents a core economic activity. Vail Resorts employs up to 15,000 employees during the height of the snow sports season, but also employs a significant number of people during the non-winter months. We are currently working with the National Ski Areas Association and Congress to create a national approach to growing seasonal and year-round recreation opportunities at public land ski areas via the Ski Area Recreational Opportunity Enhancement Act (S. 607/H.R. 2476). Enhanced year-round recreation opportunities and visitation as it relates to mountain communities increases year round employment opportunities stabilizing local economies and workforces.

The preservation of unique and beautiful tracts of land as National Parks is often called "America's Best Idea." Present generations are profoundly grateful for the foresight and effort that went into setting aside the parks that we enjoy today. Now it is our turn to do what we can for those who will come after us. I propose that our gift to the future to be a network of old-growth (or future old-growth) forests across the U.S. - one in every county. In these forests visitors will be able to experience our native forests in their mature diversity and complexity; children will be able to connect with the land that sustains them. Below I explain the benefits of this network, and a possible scenario for its structure.

Forests grow in most of the U.S., but they do not grow everywhere. Figure 1 shows how forests, and forest types, are distributed in the continental states. For the old-growth network to be truly effective, and to be within reach of all school children, there should be one forest identified which will be left forever wild within each county where forest naturally grows. Figure 2 shows the distribution of the 3,140 counties. It is estimated that forests will not grow naturally in 770 counties of these counties; therefore the remaining 2,370 counties could be part of the network.

Although this figure may seem daunting at first, many of the counties already contain public forests and a single one merely needs to be chosen and officially recognized as part of the network. In many counties it will be existing protected Federal land which becomes recognized in the network, such as National Forest, or Fish and Wildlife land. In other places, such as in the northern counties of New York, it will likely be a State Forest that is recognized.

Discussion Question 1

Written & Online Comments

(cont.)

Building the old-growth network in this way will take very little financial investment. The result will be a gift for all generations to come. A gift that will get more beautiful, and more filled with life, as time passes. A place which will never be sold or placed off-limits, and can therefore be the cornerstone of curriculum lessons. Over two thousand unlogged, accessible forests which will have a positive effect on both the humans and the wildlife in our nation.

Although forest benefits have not been specifically tied to the age of the forests, we do know that forests provide health benefits and psychological benefits. Perhaps the most recognized, but least studied, attribute of older forests is their beauty. This element of beauty brings a mixture of joy and respect to almost everyone who experiences and old-growth forest.

The National Parks began as places for human recreation and spiritual refreshment, and the ecological benefits were recognized later. In our establishment of an old-growth network we acknowledge both the cultural and the ecological benefits as equally desirable.

All forest stages have an important ecological role to play. The old-growth stage is especially important because of its unique structure. Various canopy layers and berry-producing plants are beneficial for many animal species, especially birds. In a forest that has not been disturbed for hundreds of years some trees develop hollow cavities, and these cavities become important nesting places for animals. In an undisturbed forest some large trees die and fall, creating yet more habitat: numerous insects, fungi, reptiles and amphibians benefit from the fallen trees.

The moisture retained within an old-growth forest benefits lichen and mosses, and the species that live among the mosses and lichen. Old-growth forests are one of the few land uses where topsoil is created instead of destroyed. More carbon and nitrogen is retained in an old-growth forest than in forests of other age classes. For improving water quality an air quality there is nothing better than an old-growth forest.

Old-growth forests are also recognized as important reservoirs of genetic diversity. Moreover, the old stands can serve as controls for comparing the effects of various ongoing forestry management practices.

If an old-growth forest already exists in a county it would be the ideal forest to add to the network. If there is currently no old-growth forest remaining (the more usual situation) then the ideal forest for the network would be an older, intact forest. If no older forest exist then any piece of land can be considered "future old-growth" and added to the network. Forests in the later category will be especially interesting subjects for studying old-growth characteristics as they develop.

Forests of any size will be considered, but in situations where a number of possible forests exist the largest one will be preferred. A small old forest is better than no old forest, but as the acreage of a forest increases the ecological functioning becomes more complex and more species are capable of existing there. Some species do not breed well in forests that are less than 250 acres.

Discussion Question 1

Written & Online Comments

(cont.)

Forests in the network will remain forever wild with no logging, no spraying of insecticides or herbicides, and no removal of plants or animals. Forest will remain open to hikers during all daylight hours free of charge. Properties may change ownership, but the deed restrictions will remain.

The old-growth network is a place where nature rules and humans only visit, therefore very little infrastructure is necessary, or desired. A parking and turnaround area for school buses and a marked trail are all that is necessary. Some counties may choose to install trash facilities and/or restrooms. These decisions will be made on a case by case basis.

In every state and county of the nation there are laws relating to acceptable behavior. Those laws will apply in the forest the same as they would on a public street.

Just because a forest is part of the old-growth network does not mean that it will stay one hundred percent healthy. Disasters and invasive species and storms are all part of nature's cycles. There is something to be learned from how a forest, left alone, responds to these challenges. Of course there are many forest types, and every situation is different, but generally non-management will be the rule.

The Old-Growth Network is being organized by _____. Please contact her to be placed on the interest list.

As you tour the nation this summer, allow me to invite you to hold one of your listening sessions in my congressional district in Cincinnati at the National Underground Railroad Freedom Center. Ideally, you could fit a trip here sometime between Aug. 20th and the 31st. The Freedom Center, which is located downtown steps from the Ohio River, would be an ideal venue for your meeting. Its 300-seat Harriet Tubman Theater is both spacious and intimate - a perfect setting for a dialogue with local citizens. I also understand that Valerie Jarrett has requested that you to speak with the Freedom Center's leadership about a proposal they would like for you to consider.

The Freedom Center's importance to our country's history and heritage cannot be understated. Its exhibitions and the programs define, in dramatic fashion, America's struggle to achieve freedom, and how that struggle continues today around the world. This theme is brought to life in the dramatic story of the escape of untold numbers of slaves in ante-bellum America on a secret network of safe houses and routes that came to be called the Underground Railroad. With the Ohio River just outside the Freedom Center's main entrance, visitors to the museum (well over 1,000,000 since its opening) are able to see this history where it happened. Many escaping slaves passed through Cincinnati on their way to freedom; many were secretly hidden in cellars and attics of sympathetic citizens. Harriet Beecher Stowe spent some of her childhood in Cincinnati. Her history-changing book, *Uncle Tom's Cabin*, takes place in an area around this region.

Discussion Question 1

Written & Online Comments

(cont.)

Today, the Freedom Center sits at the very heart of an enormous riverfront development project, called the Banks, which includes a new 45-acre urban park that will open in 2011. The Riverfront Park is being developed with funding from the Army Corps of engineers, the Cincinnati Park Board, and the State of Ohio. The new park is the latest manifestation of a century-long commitment by the City of Cincinnati to develop and maintain one of the nation's most-impressive urban park networks. It would well be worth your time to see how our parks are so thoroughly integrated with the overall community. My staff is ready and prepared to work with your office to coordinate a visit and a listening session, and I look forward to having you in Cincinnati.

We created VR Echo to nurture and enliven social responsibility in our company and to connect stakeholders in a new way to the diverse and growing elements that make up our stewardship efforts. VR Echo consists of three main efforts: environmental stewardship, charitable giving and community engagement which each intersect with the goals of the Initiative. For more information about VR Echo, including some of our success stories, please visit www.VailResortsEcho.com

In addition to the public lands visitation ski areas facilitate, much of our work through VR Echo intersects the goal of reconnecting Americans, especially children, to the outdoors in some of the country's most iconic locations.

Charitable Giving: VR Echo contributes significant resources to help provide access to outdoor recreation for kids who would otherwise not have the opportunity. VR Echo partners with community non-profits to sponsor education and recreation activities through direct financial contributions and a variety of in-kind donations of Vail Resorts company resources.

Some of our key non-profit partnerships work to connect Colorado's kids to the great outdoors by providing access, as well as the skills and tools, to enjoy the state's vast forests. These organizations, including SOS Outreach, Walking Mountains (formerly Gore Range Natural Science School), Keystone Science School and the Breckenridge Outdoor Education Center not only provide children the opportunity to experience the great outdoors, but also teach critical leadership skills and environmental education to encourage support for public lands among future generations.

School of Shred - 5th & 6th Grade Ski Pass Program: Vail Resorts offers every Colorado 5th and 6th grade child the opportunity to register to receive a "School of Shred" pass that provides 4 days of free skiing/riding at each of our Colorado resorts as well as a free ski lesson and equipment rental for new skiers/riders.

Volunteerism: VR Echo strives to provide our employees and their families with opportunities to volunteer in their communities with a focus on environmental stewardship. In the last year, Vail Resorts employees donated more than 2000 hours of company sponsored volunteer time to projects such as the Hayman Restoration Project and forest restoration projects in each of the communities in which our resorts operate. Across the company, our employees are making a tangible difference in their local communities.

Discussion Question 1

Written & Online Comments

(cont.)

National Get Outdoors Day: VR Echo is a committed partner to National Get Outdoors Day (NGOD), a collaborative effort led by the United States Forest Service and the American Recreation Coalition to get kids outside. In the planning stages for its fourth year, NGOD brings together more than 100 non-profits that are working to provide kids of all ages more access and better education about Colorado's natural playground. NGOD provides an opportunity for kids and their families to learn more about the outdoors and the non-profits that promote and encourage outdoor activities.

EpicMix: Vail Resorts recently announced EpicMix, an online application that will allow guests to automatically track their skiing days and accomplishments on the mountain. These experiences can then be shared with guests' social networks via Facebook and Twitter. Kids will also be able to access this feature via a kids-only application under the supervision of their parents or guardians. EpicMix will effortlessly utilize technology to digitally capture ski and ride experiences and, with the permission of the guest, share it with their friends and family enhancing the connection to the outdoors and recreation. Please see www.epicmix.com for more information on this exciting innovation.

In addition to the public-private partnership that is the basis for public lands ski areas, VR Echo partners with many community non-profits to support conservation and restoration efforts:

National Forest Foundation Ski Area Conservation Fund: VR Echo partners with the National Forest Foundation (NFF) on an ongoing program of forest conservation and restoration. The program raises funds through a voluntary guest donation program. Everytime a guest purchases a ski season pass, an on-line lift ticket, a round of golf or a hotel room at our lodging properties, they are asked to contribute \$1 to the NFF program which is matched with \$.50 by NFF.

Since its inception in 2006, the program has raised nearly \$1.7 million for on-the-ground conservation efforts such as trail restoration and reforestation. Funds raised have gone towards work in forests in Colorado, California and Nevada. Nearly 40 individual projects have received funding through this program, including the Colorado Fourteeners Initiative, the Eagle County Youth Conservation Corps and Friends of the Eagles Nest Wilderness.

The Association of Fish and Wildlife Agencies was established in 1902 to support state fish and wildlife agency conservation authority and to advance sound and sustainable management of fish and wildlife and their habitats in the public interest. State fish and wildlife agencies play a unique and critical role in conserving our nation's fish and wildlife and will be vital to the success of an initiative to conserve outdoor spaces on this people and fish and wildlife depend. We appreciate the opportunity to be a part of this much-needed dialogue about America's Great Outdoors and look forward to seeing the report to President Obama. On behalf of the Association's member agencies, we encourage you to consider including the following priorities in the final report.

Discussion Question 1

Written & Online Comments

(cont.)

Support Implementation of State Wildlife Action Plans The development of wildlife Action Plans in every U.S. state and territory over the past five years is a significant conservation milestone. These congressionally mandated plans were developed collaboratively by fish and wildlife managers, scientists, conservation organizations and private citizens with the goal of preventing future endangered species listings and to keep common species common. The plans identify more than 12,000 species that are at-risk; their threats; and the habitats and landscapes needed to safeguard rare an abundant fish and wildlife. Full implementation of these plans would meet priorities shared by federal and state agencies and private conservation organizations and is supported by more than 6,300 organizations and businesses that are part of the Teaming With Wildlife coalition.

The Appalachian National Scenic Trail (A.T.) in Maine traverses a rich and diverse landscape and is widely recognized as one of the wildest and most spectacular sections of the Appalachian Trail. The trail travels 281 miles across the state from the summit of Katahdin southwesterly to the Maine-New Hampshire border. The trail lands encompass varied ecosystems from sub-alpine forests and alpine plant communities to large tracts of northern hardwood and spruce-fir forests to extensive wetlands and important aquatic environments. Much of the A.T. in Maine travels through private land, protected by only a narrow corridor. Private and state efforts have protected land surrounding some important sections of the A.T. in Maine. But much more needs to be done. Additional efforts involving a variety of landowners, conservation and recreation interests are currently in progress or being worked on. But there is a limit to what we can do on our own, without additional federal funding, especially when many tens of thousands of acres are in need of varying levels of conservation.

In the United States, there are wildlife corridor efforts in all 50 states and every congressional district. These corridors are important for the sustainability of every major wildlife group from the monarch butterfly to the pronghorn antelope to the California grey whale -- and are found in urban, rural and wild natural areas. Indeed, because corridors connect core natural areas they epitomize the need for landscape-scale conservation approaches that make our lands and waters permeable for wildlife movement and climate change resiliency. Wildlife corridors are one of a handful of conservation issues that connect all Americans.

The Freedom to Roam Coalition of business, non-profit and governmental leaders believe that the concept of wildlife corridors is an idea that captures people's imaginations and are vital elements in developing a conservation agenda for the 21st Century. We see America's Great Outdoors as a special moment in our nation's conservation history with the opportunity to affirm wildlife corridor protection and as such offer these recommendations:

The Obama Administration has graciously put forth the American Great Outdoors program and has solicited comments from the general public and those concerned about our natural resources, wildlife and their respective futures. The following are a few of my comments, mirrored by many, based on a lifetime of experience and more importantly on the last 11 years of mountain lion advocacy here in South Dakota.

Discussion Question 1

Written & Online Comments

(cont.)

Historically, following the ruling in *Martin v. Waddell*, the wildlife and our natural resources 'belong not to anyone in particular', but rather are a public entity, for all of us citizens to experience and enjoy. As you know, the hunting community was, and many still proclaim to be, the first conservationists. Hunters were instrumental in leading the way to landmark decisions that resulted in the end of 'market hunting' and a more stable view of and programs for wildlife and natural resources. In time, such thinking led to the adoption of the North American Model of Wildlife Conservation.

Finally, if you truly want to make 'Change WE can believe in' and not just give lip service to the issues, please consider the following. These are earth shaking ideas, yet they would result in a much better overall wildlife and natural resources state of affairs for our country. I know most entrenched politicians and agencies will consider my thoughts laughable and unthinkable, but if you just allow your minds to open, you might like what you hear.

Such restrictions would be of untold value to the conservation efforts for 'Change'. I realize it would take real intestinal fortitude to put this in place, running counter to decades of abuse, but you asked for ideas and this would revolutionize a pro environmental approach to our shared wild lands.

As you can see, I have little to gain but if you in positions of authority would just heed some of these thoughts, much good could come. I close with my Agenda for my Mountain Cats Trust [Google me to see who I really am]..."To assure that the Future for Your Grandchildren is full of the Wonders and the Mysteries that You and I have had the Privilege to experience".

The private ownership of nearly all of the forestland in this state has afforded us the very unique, longtime tradition of open access to these lands since the first settlers in Maine. Our forest industries, the commercial users such as sporting camps, guides, and rafting companies, and local residents and tourists all benefit from a system that drives a major part of our state's economy. This is what works. It's what maintains our rural economy along with the taxes paid on this privately owned land.

People in Maine are connected to the outdoors - the people who live here and those who come to visit. It's a connection that has existed for hundreds of years. People who come here to recreate in the Maine woods, camping, hiking, fishing, hunting, and appreciate the natural beauty, use the system of private woods roads maintained by the landowners in northern Maine. Without this access a large part of our tourism industry would be lost which would have a huge impact on our state's economy. There is no need to change this. This system works.

(cont.)

This fact is no better exemplified than in an email sent by the former executive director of the Natural Resources Council of Maine, Brownie Carson, to a deputy assistant in the Dept. of the Interior on August 25, 2009, one year ago. It reads in part - "We (NRCM) are working on a fabulous project in Maine, the object of which is to protect 4.5 million acres of Maine's northern forest in the Moosehead Lake- Baxter Park-Allagash Wilderness Waterway region..... When Secretary. Salazar was here in July for a tour of Acadia, a small group of colleagues (including our board chair) met briefly with him to discuss this northern forest initiative. My understanding is that he was very enthusiastic about it, and suggested that it may be a good fit for the Treasured Landscapes program. I'd like to talk with you about how best to follow up, find out who is staffing the program (with focus on our area), and get your thoughts about timing, process, etc.This is landscape that the people should own!"

The Wildlife Society appreciates this opportunity to submit comments on President Obama's America's Great Outdoors initiative to encourage conservation and connect people to natural places. The Wildlife Society was founded in 1937 and is a non-profit scientific and educational association of over 9,100 professional wildlife biologists and managers, dedicated to excellence in wildlife stewardship through science and education. Our mission is to represent and serve wildlife professionals - the scientists, technicians, and practitioners actively working to study, manage, and conserve native and desired non-native wildlife and their habitats worldwide.

We appreciate the efforts of Interior staff to hold a listening session at the recent American Wildlife Conservation Partners meeting in Fall River, Kansas. Below, please find TWS's comments on what works in conservation, the challenges that we face, the role of the federal government, and the tools we need to make our efforts more successful, as requested during that listening session.

Hunting is a key component of the North American Model of Wildlife Conservation, which was developed in the U.S. and Canada. Through license fees, excise taxes on equipment, and other related spending, hunters, trappers, and anglers provide the primary source of funding for wildlife and habitat conservation. The regulated and ethical hunting heritage of this country should be sustained through access programs that provide places for the public to hunt, trap, and fish; educational programs to attract and retain hunters, trappers, and anglers; and continued legal access to sporting arms and ammunition.

Conservation programs in the Farm Bill connect farmers and ranchers to the land while allowing them to continue to work and live on it. At the same time, they protect habitat for a myriad of wildlife species and safeguard clean air and water; as such, DOI should work with USDA to promote and support Farm Bill programs.

Five years ago, each state and territorial fish and wildlife agency in collaboration with their partners and the public developed a State Wildlife Action Plan that identified thousands of conservation actions that are needed to keep common species common and prevent future endangered species listings. These plans provide blueprint for conservation success across the country. However, as noted below, state still lack the funded needed to implement these plans.

Discussion Question 1

Written & Online Comments

(cont.)

American Trails would first like to acknowledge all the great leaders of our past who had the foresight to set aside some of our Country's greatest natural resources. Today, it is estimated there are over 600 million acres of federal land alone, not to mention state and local public lands, which represents over one-third of our country's land mass. Vital to the access and enjoyment of this vast acreage of natural resources is the enormous trail system that enables all Americans the opportunity to experience America's Great Outdoors. Our thanks to the many who strive to conserve and protect our natural resources.

Leaders across the country are beginning to acknowledge the critical role(s) trails can play in the health of their communities. First and foremost, we have seen firsthand the power of trail projects that transform communities and people through investments in vital infrastructure to promote healthy communities and more importantly, healthy people.

Probably the next most effective strategy comes from the vast array of scientific studies that have positively linked trails with healthy individuals and healthy communities. These empirical findings are the result of purposive planning where by communities have been strategically placing trails as a major component of their redevelopment concept both in terms of recreational use and transportation needs.

Additional studies have shown that trails helping youth discover nature, and that young people across America are building a better future by learning skills for trails and natural resource work. Trails teach creativity and problem solving, and help bring our classrooms outdoors. By providing places for environmental education, trails help everyone learn to value our natural world and become better land stewards.

The American Horse Council is pleased that President Obama has launched the America's Great Outdoors Initiative. We applaud President Obama's effort to highlight conservation and outdoor recreation. The American Horse Council (AHC) is a Washington-based association that represents the equestrian community. The AHC includes individual members and over 160 equine organizations that represent virtually every facet of the equestrian community, including horse owners, recreational riders, competitive associations, breeders, veterinarians, race tracks, horse shows, trainers, rodeos, farriers, breed registries, horsemen's associations, state horse councils and commercial suppliers.

The conservation, management and use of America's public and private lands are extremely important to the equestrian community. The entire equestrian community is dependent on America's public and private lands. America's horses are bred, boarded and trained on private horse farms all over the country. Every horse relies on grain and hay produced on America's farmland. Recreational riders need access to public lands and well maintained trails, trailheads for horses, and facilities to make use of our nation's public lands.

Discussion Question 1

Written & Online Comments

(cont.)

The equestrian community and horse industry is extremely diverse. It includes the family that goes trail riding on public and private trails near their home, as well as the family or hunter who takes a two week pack trip in the west. It includes young Americans who participate in pony club, high school rodeo, or vaulting and individuals who compete in Three Day Eventing, Dressage, and Jumping events on weekends as recreation as well as the Olympic and professional athletes who compete in these events. The breeders, trainers, owners, and even spectators of America's horse racing industry are all part of the equestrian community.

The equestrian community is demographically diverse. Ownership of horses and participation is spread across the range of American household incomes. Contrary to popular perception, most horse owners are middle class. 23% of horse owners' have household incomes between \$25,000 and \$50,000 while another 22% of horse owners have household incomes between \$50,000 and \$75,000. The equestrian community is geographically diverse. It has participants in every state. Almost 40 states have horse populations over 100,000 some many times that. It also includes individuals who live in our nation's largest metropolitan areas in addition to rural communities. It is worth noting that the horse industry involves 9 million horses, has an economic impact of \$102 billion on the U.S. Economy and supports 1.4 million full-time jobs.

The common trait of all parts of the equestrian community share is the horse, and American's horses are linked to its land. It is not a stretch to state that every segment of the equestrian community is inexorably tied to America's private and public lands. The relationship between the equestrian community and the preservation of America's working lands is a direct one. According to the Equine Land Conservation Resource "a minimum of 36 million acres (4 acres per horse, conservatively) is needed to support the 9 million horses in the US." This figure is the farmland required just to feed our horses, it does not include the pasture and open space needed to raise, breed, and board horses.

The AHC also hopes the Administration will recognize the contribution horse farms and facilities make to preserving open green space, stream buffers, wild life habitat, forests and pasture. We believe horse farms are and should be considered working lands and need to be protected from urban development like any other working lands.

America's public lands are very important to the equestrian community. Hundreds of thousands of Americans of all ages use horses and pack stock to enjoy America's great outdoors each year. Riding provides Americans with a link to the past and a chance to see and experience America's great public lands from horseback just as early explorers and settlers did.

The equestrian community recognizes its responsibility to treat our nation's public lands with respect. This community has a deep commitment to outdoor recreation and believes that recreation is a fundamental and legitimate use of our country's public lands. Whether they are trail riders, competitive riders, packers, outfitters or saddle-stock users, they recognize the overriding need for the responsible use and wise management of our natural resources.

Discussion Question 1

Written & Online Comments

(cont.)

Furthermore, thousands of equestrians and members of various equestrian organizations, state horse councils, and trail riding clubs are involved in volunteer projects each year building and maintaining trails for all users of public lands. For example, the Backcountry Horsemen of American (BCHA) estimate that in 2009 alone their members contributed 345,690 volunteer hours, for a value of \$7,490,864 on federal land. In fact, many trail projects in wilderness would not be possible if it were not for horsemen packing in supplies, tools, and building materials.

The AHC believes the volunteer contribution and potential of equestrians should be recognized. We hope the Administration will work with the equestrian community to expand its volunteer efforts.

Our land managers have a very difficult job to do, often with limited resources and competing interests. The equestrian community is thankful for the hard work of so many of these individuals in the National Forest Service, National Park Service, Bureau of Land Management, Corp. of Engineers, and U.S. Fish and Wildlife service as well as state and local land managers.

The AHC also believes equestrian activities can play an important role in reconnecting our young people with the outdoors. Today a great many individuals who are involved in equestrian activities are young people. Riding can play an important part in getting our nations children off the couch and away from the computer. Riding can be a great outlet for young people to develop physical strength and coordination. Additionally, by its very nature riding, even though some events take place indoors, is an outdoor pursuit and most equestrians trail ride at some point.

In fact, there are many equestrian organizations specifically geared toward youth such as the United States Pony Club, the American Youth Horse Council, and the National High School Rodeo Association. Additionally, most equestrian organizations have youth programs like the United States Equestrian Federation's "High School Equestrian Athlete" program or the American Quarter Horse Youth Association.

A Pennsylvania State University 2006 study, *Impact of Equine Activities on Youth Development*, found that over 450,000 youth participated in the American Quarter Horse Youth Association, the 4-H house program, United States Pony Club, and the National High School Rodeo Association alone.

That same Pennsylvania State study found that once children became involved in a youth horse program that 90.8% stayed involved for more than four years and 58% stayed involved for more than 8 years. It should be noted that individuals do not have to have their own horse to participate in many equestrian youth programs.

Discussion Question 1

Written & Online Comments

(cont.)

Currently, childhood obesity is cause for great concern around the country. Besides getting our children outdoors, riding can be a great physical activity for young Americans. Competing on horseback is a complex and demanding physical sport and riding for pleasure on a regular basis has many of the same benefits. Riders must develop muscular strength, endurance, flexibility, coordination, balance, and fine motor skills. Riding can also improve posture and cardiovascular health. Though there is often the perception that the horse is doing all the work, riding requires athletic skills and activity from the rider that develops muscle and burns calories. Dr. Robert Leavitt, who has a PhD in sports medicine, has confirmed that horse related activities can burn as many calories as many other physical activities. For example, riding a horse at various gaits can burn as many calories as walking, riding a bicycle, or playing a game of basketball. Additionally, the daily care of a horse such as mucking out stalls, stacking hay, grooming, etc. promotes physical fitness also. According to Dr. Leavitt, grooming a horse can be equivalent to playing doubles tennis in the number of calories burned.

The AHC hopes the Administration will make equestrian activities, an integral part of its effort to reconnect our nation's youth with the outdoors. The AHC believes that any national policy should recognize the role equestrian activities can play in getting kids outside and improve their physical health.

Many American's with these various physical impairments regularly visit trails and the backcountry on horseback. Indeed, more and more such trail users with these conditions are using horses as a means of access. The horse is a common and environmentally friendly means to not only access wilderness but also many other outdoor areas for physically challenged individuals. We believe it is essential to include the role horses, mules, and burros can play in allowing access to the outdoors for physically-challenged Americans in any discussion of America's outdoors.

The horse has played a distinctive role in the history and culture of America. The horse has been transport, tool, athlete, and companion for every generation of Americans. It played an important role in the exploration and settlement of the continent. The image of the cowboy on his horse is iconically American. Horse racing is one of America's oldest sports and the Kentucky Derby is known as uniquely American around the world. The horse was and is an integral part of the culture and everyday lives of Native American tribes in the west.

The abundance of open space and vast natural resources of our country has played a central role in shaping our history and national character. The horse has always been part of that special American connection to the land. We hope the historical and cultural relationship American's have with the horse will not be forgotten as the Administration contemplates our great outdoors.

The AHC and the equestrian community looks forward to working with President Obama, Congress, the federal land management agencies and all stakeholders to preserve our great outdoors and ensure their enjoyment by future generations of Americans.

Discussion Question 1

Written & Online Comments

(cont.)

In meetings during November of last year, you challenged those of us in Maine to develop a broadly supported pilot project for your consideration on how to keep forests as forests and strengthen the rural economies that depend on forests. Enclosed, please find proposals in both of these regards. These have both been developed by broadly representative coalitions of the interests who care about the Maine woods - land and mill owners to ENGO's.

The proposals present a vision for the future of the Maine woods and Maine's forest-based economies that will be tested with the Maine public at large and piloted to refine our thinking. Central to achieving these visions is a more robust, creative and flexible federal / state / tribal / private partnership to both keeping forests as forests and strengthening rural economies, both consumptive and non-consumptive.

A number of specific suggestions are contained in the proposals. For example, why not financially reward forest landowners as we do farmers for promoting public values on their lands, and why not make strengthening forest-based economies and agency-wide priority and a joint effort among, not only the US Forest Service, but USDA Rural Development, Natural Resources Conservation Service and the Farm Service Agency?

These are extraordinary proposals in a number of regards: • First, they form an integrated whole, recognizing that forests are valuable both for their functions as ecosystems and the base for rural economies.

- Secondly, they represent an unprecedented level of agreement among a very diverse set of constituents, ranging from land and mill owners to forest conservation interests.

- Third, they present a number of creative ideas, both for keeping forests as forests and strengthening rural economies that we believe are innovative and expect will prove effective.

- Fourth, they provide a model for forest conservation, not only in Maine, but around the country.

We are anxious to meet with you in person to explain the power of these ideas and the coalition that is supporting them. In this regard, we would respectfully request that you come to Maine so that we can present our thoughts to you, and perhaps more importantly show you the great Maine Woods and the vibrant economy that depends upon it - one day would suffice and we specifically suggest a date either in September or October. Please let us know a date that would work for you.

Studies show outdoor time helps children stay healthier, enhances their imaginations and attention spans, decreases aggression, boosts classroom performance, and fosters a lifelong appreciation of the environment.

Written & Online Comments

(cont.)

Thank you for your leadership in bringing the recent America's Great Outdoors listening session to New Hampshire. As you know, the Northern Forest Region - 26 million forested acres across Maine, New Hampshire, Vermont and New York - is dominated by private forest ownership and yet has a long history of public-private partnerships to achieve significant conservation objectives. This session focused on private working forests could not have been in a better spot.

Secretary Tom Vilsack, Senator Jeanne Shaheen, Governor John Lynch and others at the forum spoke accurately to the critical role that private working forests play in the economic and ecological fabric of our nation, and also the pressing need to keep these forests as forests. While funding for easements and other conservation tools contributes greatly to this objective, we also heard that for many private landowners it is markets that drive their land management and use decisions.

As we look forward to this generation's legacy of conservation, the Northern Forest region can and should be a national model for innovative, market-based approaches for the conservation of private working forests. Many of the approaches suggested at the listening session are already being tested in this region by the Northern Forest Center and a broad, four-state network of private, public, and business partners.

Together we are developing 21st century opportunities for landowners, forest-based businesses and forest-reliant communities that create jobs and grow economic returns from sustainably managed forests:

Job retention and creation in the wood products manufacturing sector;

Community-scale wood energy systems for residents and businesses;

Payments to forest landowners from forest carbon and watershed services markets;

Aggregation and coordination of tourism providers to provide world-class experiences;

New financing options for forest-based entrepreneurs; and

Enhanced sustainable development capacity for forest-reliant communities

Discussion Question 1

Written & Online Comments

(cont.)

With the support and partnership of USDA Rural Development and the U.S. Forest Service the Northern Forest region has the ability to provide a market-driven, all-lands conservation model led by private landowners and strong community involvement and engagement. Building on the strong legacy of conservation in the region, this "third generation" of conservation tools is poised to provide great returns.

Thank you again for your commitment to building a vibrant and sustainable future for the Northern Forest and all of America's great working and wild landscapes. I hope you have a wonderful rest of your summer.

Undeniably, what sets Maine apart from the rest of the country - and the major reasons that Maine's forests remain largely intact and healthy - are the diversity of markets that Maine's forestland owners have and the ability of forest-based industries to adapt, strengthen and diversify those markets.

For today's forest-based economy the challenges are immense, but so are the opportunities. Some of the ways we use the forest are new, like Old Town Fuel and Fiber's innovative process to turn woody biomass into both jet fuel and pulp for paper. Others are modern variations centuries-old commodity products, like high-tech niche paper products or composite building materials.

Forest-based experiential tourism, which began with visitors arriving by train and horse in the mid to late 19th century, is growing and changing too. Today there are 30+ million people that live within a day's drive of Maine's exceptional recreational opportunities.

To keep forests - in Maine and elsewhere - and the economic and social benefits they have provided for centuries, particularly in rural communities, requires bold and creative action. It requires not just forest conservation efforts as proposed in the companion Keeping Maine's Forests Proposal, but also a diverse, robust forest-based economy with markets for a wide variety of forest-based products, including tourism. These products and markets provide a revenue stream for forest landowners and therefore a strong economic reason for keeping forests as forests.

This proposal offers seven recommendations to connect forest conservation with economic opportunity that, taken together, will serve as a national demonstration project for realizing the greater public benefits of privately-owned and managed forestlands.

A New Model of Collaboration to Fortify the Forest-based Economy At the request of the secretaries of the U.S. Departments of Agriculture (USDA) and the Interior (USDI), with the encouragement of Governor Baldacci, the Keeping Maine's Forest-based Economy (KMFE) Steering Committee set out to identify how USDA and USDI programs could help keep Maine's forests as forests, strengthen the forest-based economy, and provide jobs and income for rural communities. This effort complements the work of the Keeping Maine's Forests (KMF) Steering Committee, which stated as its first objective for keeping forests as forests: "Maintaining the most diverse, robust and economically beneficial forest products industry possible and the jobs that this industry provides..."

Discussion Question 1

Written & Online Comments

(cont.)

The KMFE Steering Committee, which shares several members with the KMF Steering Committee, is diverse. It includes representatives of the forest products and forest-based tourism industries, large and small forest landowners, economic development agencies, academia, and government. One of the strengths of this proposal lies in the consensus formed by a collaborative partnership of many different stakeholders on the Committee and our thorough consultation with subject matter experts across the state.

In broad terms, the KMFE Steering Committee is asking the USDA and USDI to consider using Maine as a national demonstration project for a new type of federal, state, and private partnership that prizes collaborative delivery of services and creative ways to realize economic value from forestland. Our proposal builds seven specific recommendations on three broad, thematic ideas;

Also important, they will demonstrate the ability of the federal government to adapt its programs to solve problems, meet changing local needs and capitalize on unique local abilities. The ongoing success of this national demonstration project will be evaluated regularly by tracking economic conditions (like jobs and income) over time and comparing the expected results of these recommendations with actual outcomes.

Remaining competitive in an ever-changing global marketplace is a constant challenge for the US forest products industry - a challenge that can only be met through strong public/private partnerships. To this end, a pilot program in Maine, created in 2007 with an ad hoc patchwork of funding from several different state sources, created a Senior Forest Products Advisor to the Governor.

Maintaining an affordable, accessible wood supply is critical to Maine's forest products industry. Family forest owners - often in rural communities in the southern half of the state and in relatively close proximity to mills - must be encouraged and supported to manage their land actively for sustainable timber production and other values. Research has consistently shown that the best way to do this is through a combination of technical assistance, cost sharing, and one-on-one access to a forester to walk the land with them and discuss management alternatives.

The WoodsWISE program has a strong record of success connecting family forest owners with a state forester who visits their land, explains their management options, and provides the opportunity for the owner to develop a working relationship with a private consulting forester. Unfortunately, the USFS has sharply reduced WoodsWISE funding in recent years.

Maine NRCS has made admirable progress in increasing funding devoted to forestry over the last few years. NRCS could further its conservation goals by capitalizing on the relationship that MFS has built with family forest owners, who own their land for purposes of privacy on their own recreational pursuits, rather than actively managing it for revenue. Engaging these landowners presents a special challenge. MFS has decades of experience engaging family forest owners to promote improved stewardship of their forest resources, so it makes sense to build on this expertise and design a collaborative effort between Maine NRCS and MFS.

Discussion Question 1

Written & Online Comments

(cont.)

This proposal is an opportunity to demonstrate how public and private interests can collaborate on issues of massive public and private importance. The specific, actionable steps offered here are in some cases small, but collectively they provide a replicable model that, if adopted, could transform our Nation's natural resources and rural economies.

At a time when our nation is facing new environmental threats and budget constraints, it is crucial that we establish a conservation policy that is better suited to our current needs and helps maintain our environmental legacy. Fortunately, communities across the nation are developing new and innovative approaches to conservation.

We are pleased that North Carolina has established four conservation trust funds in recent years to fund conservation activities in the areas of clean water management, natural heritage, parks and recreation, and farmland preservation. North Carolina was also the first state to create a Conservation Tax Credit program, which has been used to protect over 180,000 acres, and legislation to protect conservation easements has been approved by the General Assembly. In addition, twenty-four local land trusts, along with state chapters of The Nature Conservancy, Trust for Public Land, and The Conservation Fund, have a history of close partnership with the state's trust funds as well as federal agencies.

It is our understanding that you will be conducting a number of "listening sessions" around the country as you develop ideas for the America's Great Outdoors initiative, and we encourage you to consider making North Carolina one of the stops on your tour. Our state offers both impressive geographic and ecological diversity - from the Blue Ridge Mountains to the Outer Banks - and a microcosm of the challenges posed by rapid urbanization and development. Moreover, the conservation efforts already underway in North Carolina reflect many of the attributes that the Initiative is looking to advance: innovation, creativity, diversity and leverage put to work to conserve natural areas, preserve family farms, reconnect families and children with the outdoors, and create urban parks.

(cont.)

Since its launch in 2006, ORI has opened 2.630 stream miles for fish passage, and has received 200 requests from communities across the country to support the removal of small, obsolete dams and fish passage barriers. However, NOAA has only had the resources to address 81 projects so far. Even with the current limited funding, TU has worked with NOAA using ORI grants to open up 232 miles of new river habitats. Thanks to a combination of good project development and ideal environmental conditions, we have seen immediate recolonization of Coho salmon, steelhead, and river herring to nine watershed areas where they had been extirpated.

USDA Forest Service Legacy Roads and Trails Initiative. The vast networks of old forest roads and trails throughout our nation's forests have become an unmanageable maintenance burden and ecological barrier for the health, recover and, in many cases, survival of hundreds of individual populations of trout and salmon. Some 380,000 miles of these roads run through National Forest lands, leaving a maintenance backlog estimated between \$5 billion to \$10 billion. This backlog grows steadily with each heavy rain, spring thaw, runoff and slide, all of which, collectively, continuously deposit tons of fine sediments and surface pollution into nearby trout and salmon streams.

The National Forests received \$40 million in 2008, \$50 million in 2009, and a record \$90 million in fiscal year 2010 for Legacy Roads work. The Forest Service FY2011 budget request for Legacy Roads and Trails was \$50 million. TU recommends funding Legacy Roads and Trails at \$120 million, with an additional \$30 million dedicated to the national, regional and forest-level planning required determine minimum road systems.

Only with a manageable network of roads can we seriously regain control of its maintenance burden, and in turn effectively manage their ecological effects on coldwater fish and hundreds of other species.

USFWS Partners for Fish and Wildlife. Trout Unlimited strongly supports the Partners for Fish and Wildlife program. We work in partnership with private landowners and the FWS throughout the country to complete collaborative restoration projects, such as streamback fencing and riparian revegetation in the headwaters of the Potomac River in West Virginia. Together with the Partners for Fish and Wildlife program and others, Trout Unlimited has been able to install between 100,000 and 120,000 feet of livestock exclusion fencing annually over the past several years. This has helped create habitat for native brook trout, along with other species such as endangered bats. The role of the Partners for Fish and Wildlife program is critical to leveraging resources from Farm Bill programs and other sources to accomplish this work and restore important habitats.

Discussion Question 1

Written & Online Comments

(cont.)

NOAA Community-Based Restoration. Trout Unlimited has worked with NOAA through its Community-Based Restoration program to open up miles of spawning and rearing habitat for salmon the coast of California and Alaska. Trout Unlimited and NOAA are currently working together to expand this partnership to restore habitat for herring and sea-run brook trout in the Northeast and salmon and steelhead on the West Coast. This program has provided critical funding for the Penobscho River Restoration project in Maine, one of the Nation's best fisheries restoration projects. By the time the latest TU-NOAA partnership is completed in 2010, TU and the Community-Based Restoration program will have completed at least 67 habitat projects in 11 coastal states.

Beyond the small habitat improvement projects that are traditionally conducted by local TU chapters and community-based partners, the TU_NOAA partnership has put an extra emphasis on mid-scale watershed based restoration involving non-traditional partners such as dam owners and timber companies. This combination of watershed and small habitat improvement activities involving fish passage, channels restoration, road retirement/obliteration, bank stabilization and planting of riparian forest buffers has led to the development of permanent conservation programs in over 3,100 square miles of drainage basins.

USDA Farm Bill Programs. Trout Unlimited works closely with the Natural Resources Conservation Service (NRCS) on a number of its watershed restoration programs around the nation, including the Potomac Headwaters (WV) and Driftless Area (WI/IA/MN/IL) restoration initiatives. Farm Bill conservation programs, including the Environmental Quality Incentives Program (EQIP), Wildlife Habitat Incentives Program (WHIP), Conservation Stewardship Program (CSP), Agricultural Water Enhancement Program (AWEP) and Chesapeake Bay Watershed programs, are very effective tools for restoring habitat.

The trout and salmon habitat needs are as urgent as they have ever been. New state/federal/NGO partnerships, such as the Driftless Area Restoration Effort, Eastern Brook Trout Joint Venture, and others yielded by the national Fish habitat Action Plan, provide outstanding restoration opportunities financed by increasingly leveraged private sector funds.

Environmental Quality Incentives Program. The EQIP program has enabled Trout Unlimited to complete mutually beneficial projects with agricultural landowners, such as modifications to irrigation diversions that improve water supply reliability and fish habitat. In Montana, Trout Unlimited has worked with producers to install more efficient irrigation systems and designate the "saved" water to instream flows to improve fish habitat.

Agricultural Water Enhancement Program. Trout Unlimited strongly supports the Agricultural Water Enhancement Program (AWEP), and believes that it has the potential to result in substantial water savings and environmental improvement if properly implemented.

The National Fish Habitat Action Plan (NFHAP) is a partnership-driven initiative that addresses important fishery issues facing the United States. In short, the goal of the NFHAP is to conserve, restore, protect, and enhance aquatic habitats. This work will be based on the best science available and is non-regulatory in nature.

Discussion Question 1

Written & Online Comments

(cont.)

There are currently seventeen officially recognized Fish Habitat Partnerships. Three of the 17 partnerships (the Eastern Brook Trout Joint Venture, the Driftless Area Restoration Effort, and the Western Native Trout Initiative) have been particular focuses of the work of Trout Unlimited in recent years. A good example of all of the partnerships, the Western Native Trout Initiative is a collaborative effort working to stop the declines and improve the status of fifteen trout species across the West. Its cost-effective, on-the-ground projects address habitat and distribution issues and span across federal, state and tribal boundaries.

The eastern brook trout provides a good illustration of the importance of looking at the bigger picture. Several years ago, the Eastern Brook Trout Joint Venture (EBTJV) was formed to conduct an assessment of trout population and habitat condition across 17 eastern states stretching from Maine to Georgia. The assessment was able to identify the most significant problems for brook trout and suggest strategies that the EBTJV has employed to the fish's advantage. In addition, the EBTJV provides a forum to understand emerging issues and concerns, such as climate change.

The EBTJV is an unprecedented effort to focus and leverage the resources of state/federal agencies and conservation groups on protecting and restoring the habitat of a species that is not threatened or endangered. It has served as a model for other partnerships that have arisen through the National Fish Habitat Action Plan and has helped guide the development of the National Fish Habitat Conservation Act.

We have made good progress in partnering with EPA to develop new policy guidance on CERCLA liability that will help us move more quickly, and hopefully the pace of our progress will continue. For example, in our American Fork project, we reached an agreement with EPA on CERCLA liability that can serve as a model for other cleanups across the country.

Trout Unlimited has worked to address this need by partnering with colleges and universities to run service learning projects that enable students to participate in established stream restoration projects and learn from professionals in the environmental field. Studies have found that grounding environmental education within a community will help enhance the educational experience and incline the learner toward stewardship.

Bay Watershed Education and Training Program. Trout Unlimited has long worked to engage students in educational programs through its Trout in the Classroom program and hands-on field activities. In 2008, Trout Unlimited entered into a partnership with the NOAA Bay Watershed Education and Training Program to expand its outdoor education efforts in the Potomac River headwaters of West Virginia. The Potomac Headwaters youth education program has brought hundreds of students into the field to conduct stream health assessments and plant trees along brook trout streams as part of habitat restoration projects. These outdoor learning experiences complement in-class math and science lessons and help students develop an understanding of natural processes. Partnership with the NOAA Bay Watershed Education and Training Program enables us to increase the number of students that benefit from hands-on learning experiences.

Discussion Question 1

Written & Online Comments

(cont.)

Partnering with College Mentoring and Service Learning Programs. Through its 5 Rivers College Outreach program, Trout Unlimited has worked with colleges to organize "alternative spring breaks" so that groups of students can gain hands-on experience in hydrology, aquatic ecology, and habitat restoration. TU has also partnered with college mentoring programs to create opportunities for mentors to bring children on fishing trips to local waters. Linking passionate anglers and conservationists through TU's grassroots network with existing college mentoring programs results in multi-generational connections with the outdoors. TU is also in the process of creating college and university sub-chapters across the country. These groups would familiarize young adults in TU's mission and enable the next generation of conservationists to get involved and volunteer at watershed restoration projects in their local communities.

Trout in the Classroom. Trout in the Classroom is an environmental educational program in which participating classes raise trout in a classroom tank throughout the school year and then release them into a stream in the spring. The presence of trout in the classroom enhances students' learning environment and provides unique opportunities for engaging inquiry-based and interdisciplinary projects, including work in science, math, language arts, fine arts, and social studies.

Due to crowded schools and overloaded schedules, teachers lack the time and resources necessary to run classroom programs that go beyond required curricula. Truly engaging science and nature study have particularly fallen by the wayside. Meanwhile, most kids have become disconnected from nature, with little or no free time experiences in natural settings. In his book, *Last Child in the Woods: Saving Our Children From Nature Deficit Disorder*, Richard Louv cites numerous scientific studies which document the academic, social psychological, and physical benefits of increased access to nature (Louv also devotes two pages to Trout in the Classroom). Even something as simple as a fish tank can have profound benefits for those who observe it. Students in an urban area such as New York City are particularly susceptible to a nature deficit, many of them lacking the financial means to access public lands, especially those which are remote from the metropolis. Through Trout in the Classroom, TU works with teachers and partners to bring nature to the students in an inexpensive and widely beneficial manner.

Trout Unlimited's mission is to conserve, protect and restore North America's trout and salmon fisheries and their watersheds. Since 1959, our approach to our mission has been rooted in community-based partnerships and the use of fishing as a way to connect with the outdoors and conservation efforts. We were glad to see these themes echoed in the President's memo on the America's Great Outdoors Initiative.

America's wild, unroaded backcountry is perhaps our greatest natural asset. These lands were recognized by past generations of conservationists, notably President Theodore Roosevelt, as representing a lasting American frontier where fish and wildlife can thrive and hunters, anglers and other adventurous souls can experience the outdoors in a wild, natural state.

Discussion Question 1

Written & Online Comments

(cont.)

Today we have come to realize not only the social and recreational importance of the backcountry, but also the tremendous contributions these lands make to biodiversity and watershed health. Roadless areas serve as the last refuge for imperiled species like native cutthroat trout, and offer hope for recovery. The protection of backcountry lands, such as inventoried roadless areas, should be a central component of the America's Great Outdoors Initiative for the role they play in providing unparalleled outdoor recreation, healthy watersheds, and robust populations of fish and wildlife.

While the protection of unroaded backcountry habitat is essential to the success of the AGO Initiative, alone it is not sufficient to provide recreational access and healthy habitats. Voluntary habitat protection and public access on private lands through Farm Bill conservation programs are also essential. The Land and Water Conservation Fund is another effective tool for protecting habitat and securing public access.

It is also important to protect fish and wildlife and their habitats by enforcing environmental laws and preventing the spread of invasive species. The Clean Water Act has resulted in significant gains in water quality, but numerous challenges remain. Addressing growing problems like stormwater runoff will help achieve the next generation of water quality improvements. Fixing the fundamental problem created by two recent harmful Supreme court decisions which vastly undercut Clean Water Act jurisdictional coverage for "isolated" wetlands and headwater streams is essential.

Extraction of natural resources must be conducted responsibly in order to avoid harm to fish, wildlife and water resources. This will require reforms in the management of oil and gas development on public lands and careful consideration of potential impacts from proposed mines such as the Pebble Mine in Alaska. Finally, the threats from invasive and aquatic nuisance species like "didymo" or Asian carp call for a strong commitment to preventing their movement to new habitats.

The NOAA Open Rivers Initiative (ORI) and Fish and Wildlife Service's Fish Passage Program are very effective in promoting habitat connectivity. Two prominent examples are found in Maine, where the completed Kennebec River dam removal project and the ongoing work to reopen the Penobscot River illustrate the effectiveness of these programs and the benefits of reconnection. The removal of the Edwards Dam on the Kennebec River resulted in (1) Alewife run of over 1 million fish restored, including a town-managed commercial fishery; (2) Recreational shad fishery, non-existent before removal, is restored; (3) Spawning shortnose (endangered) and Atlantic sturgeon spawning restored; and (4) Small run of Atlantic salmon restored, in large part through a streamside incubation program that was a Kennebec Valley TU/Maine Dept. of Marine Resources partnership. Benefits on a larger scale will be realized with the completion of dam removal projects on the Penobscot River.

(cont.)

One hundred years ago, the United States initiated a marvelous cultural achievement and what may be one of our greatest gifts to the world – stewardship of public lands through a system of National Parks. Again in 1965, the idea of combining conservation of cultural sites with natural sites on public lands came from a White House Conference and was presented to the United Nations to encourage international cooperation to protect “the world’s superb natural and scenic areas with historic sites for the present and future of the world citizenry.” The 23 World Heritage Sites in the United States, most of which are National Parks, provide nationally and internationally recognized examples of natural and cultural sites. They also provide a basis for cultural diplomacy as worldwide many national parks are inscribed as world heritage sites and recognized for their outstanding universal value. Because the US World Heritage Sites (list at end) are of international importance and value, they can serve as the crown jewels of America’s Great Outdoors program and stimulate Americans to experience, learn from, and care for the nation’s natural and cultural properties and landscapes.

Use the US World Heritage sites to display that heritage is cultural, natural and mixed as people and place are intertwined and coexist. As cultural and natural resources are place-based, this is an opportunity to explain the imperative of respecting cultural and natural resources and balancing societal influence, uses and impacts based on respect and values.

a. Develop a multi-national program at World Heritage Sites with emerging and experienced professionals to encourage an international cadre of managers and stewards sharing knowledge and best practices across the world.

a. Convene World Heritage site managers to discuss best practices, international relations, and assistance to tentative site managers.

a. Develop national recognition and awareness programs to highlight the experience of US World Heritage sites, beginning with public lands in the America’s Great Outdoors program bearing the world heritage title visibly and proudly.

a. Promote public education about US World Heritage sites and the role of the US in the global community

a. Encourage school curricula and teaching tools that use World Heritage sites to teach about nature and culture and the connection to the global environment and culture

a. Build partnerships for media exposure at all levels for broad public access. This could be a marvelous means of expressing the diversity of our public lands as different national and international personalities can speak about the importance of these places at each of the sites.

· Partner with NPS to develop a stronger presence for world heritage site with an attractive, attention grabbing logo on opening page of federal/NPS websites

· Partner with media sources to broadcast to the widest public, not focused on heritage conservation community as its audience

Discussion Question 1

Written & Online Comments

(cont.)

- Partner with Dept of Commerce to integrate into US tourism publicity overseas
- Partner with NPS to develop program-focused articles on each site into airline magazines
- Partner with NPS to develop appropriate literature (brochures, posters) for distribution to the travel industry, school systems, etc
- Partner with National Geographic, American Express, VISA, ASTA, and others to assist in creating visibility
- Partner with media - Expedia, History Channel, PBS, etc. to make the program known

Partner with media to develop short public service announcements for commercial media

- a. America's Great Outdoors showcase for Americans and all the world our US treasured landscapes and the intersection between culture and nature
- b. Promote better use, enjoyment and stewardship of public lands
- c. Make the US contribution to the world's heritage known
- d. Develop multi-disciplinary interpretation programs and visitation options on the many facets of the sites' significance to promote public understanding and appreciation for natural and cultural values.
- e. Publicize sustained excellence in the conservation and protection of the World Heritage sites
- f. Through historic public appreciation and long-time use, connect the concept of that natural landscapes are also cultural landscapes. Use it to publicize the concept
 - a. Emphasize the international importance of World Heritage sites, a shared global heritage, connected to the importance of our diverse national heritage.

Promote cultural diplomacy and long-term awareness and appreciation for these places nationally and internationally

Discussion Question 1

Written & Online Comments

(cont.)

Institute a Patron's Program for the public to participate in specific ways and that give patrons a presence at sites and foster public stewardship and wise use of the place by the general population, private corporations, schools, non-governmental organizations, local governments

Work with local communities to develop sister WH sites, akin to the sister cities concept: • Develop awareness; • Foster local civic pride; • Promote public engagement and use

The founders of the national park system showed great foresight and great wisdom in recognizing the importance of preserving of open spaces for future generations. We urge the federal government to now do the same by greatly increasing the federal government's attention to and funding of open space protection. Demographic forecasts predict a continual increase in population growth. The consequence of will be a continual increase in sprawl and a continual erosion of open space.

Recreation is important to the health and well being of all humans and outdoor recreation has been proved to be the most beneficial of all. As the population constantly increases so will the demand for outdoor recreation. Land must be set aside now so that future generations have sufficient space for outdoor recreation

Open space is required to support the local farmers who supply us with fresh, healthy food. The role of governments in preserving open space has always been important, but there has never been a time when it is more important.

The Westchester Land Trust has helped protect more than 6,600 acres and the lion's share was done through partnerships with the state, the county, and the towns and with New York City. Right now those partnerships are impossible to replicate because there's virtually no government money anywhere for land acquisition. Therefore there is a great need for more land acquisition money not just from the federal government, but also from the state, the county, the towns, and New York City.

Provide funding to state and local governments and to land trusts to preserve the land that they know is the most important land in their area.

Increase its direct role in acquiring land for open space protection;

Provide the funding required to make viable the programs established by Congress for land preservation

Insure open space protection is a consideration required in all federal policies, rules and regulations affecting land use.

Shift national farm policies from their heavy bias towards factory farms and increase support for individual farmers.

Discussion Question 1

Written & Online Comments

(cont.)

Promote the health and environmental benefits of locally grown food.

you have a clear misunderstanding about what most OHV operators do, apparently. Both of my mac being street legal are required to undergo an emissions test every year and are subject to the same emissions and sound requirements as any other vehicle operated on a public road. In my state an operator of a vehicle can be arrested for criminal damage for driving on a wet road and can face similar criminal and civil sanctions for any activity that damages roads, water cings, as well as speeding, etc. (yes, traffic laws apply on many FRs) , Wilderness Areas, by their very definitions are not supposed to contain roads, nor are motor vehicles permitted within them. You have created a straw-man. I also defy you to do 200+ miles off-road on a motorcycle or ATV or even in a buggy for that er, and claim laziness. I typically find myself more physically and mentally tired after a 150-200 mile ride than I do after a 2 day, 30 mile hike. Again, you guys seem to be missing the point. We're merely asking that areas that have historical use of a certain type be ald to continue to be used in the same manner. That's all. Nowhere is anyone advocating opening up wilderness and previously roadless areas to new roads and trails. The fix is in and everyone knows it is, but only some are willing to admit it. The time has come for honesty, openness and reasonableness in the TMP process.

I think you should spend some time exploring us ORV's point of view. I am the wife of a Above knee double amputee... the only way he has seen much of Washington's forest if by a 4x4 ATV. I understand that there are lots of Yahoo's out there that do ruin the trails but the MAJORITY of us want to preserve and protect these lands. Those guys with the race bikes and loud pipes belong on the track. and most do. Our NMA clubs work year round to restore trails and build bridges so that we don't ruin our lands. ORVing is a great family event. It get's kids outdoors and away from the TV. It gives them something to keep them out of trouble. I Know many kids who If it wern't for the threat of losing their bikes/quad would have been into some trouble. Dirtbike events bring familys together. Most of us dirtbikers want to get along and share the area's with the horseman, MT.bikers ect.

This idea is not about motorized travel in wilderness, it is promoting all forms of recreation – in and out of wilderness areas. Wilderness Areas by definition do not allow motorized travel. Your statement “Go enjoy some back roads somewhere, but not on public wilderness land” is off. If you are in a Wilderness Area they would not be there with you for any type of back road use. And they could not “... ruin the experience for the rest of us.” By not being there!

Scenic and Historic Trails provide a wonderful outdoor experience by allowing people to experience and learn about our land, our history and cultures, and our enviment. We should support completion, preservation and protection of the designated national trails throughout the country, and improve access to the trails.

Discussion Question 1

Written & Online Comments

(cont.)

So many folks are out of work and are not being hired. Why not train and hire these folks to repair and enhance our parks much like was done by the CCC. Schools are not providing these skills as it seems trade skills are not so important as academic ones. Not all people do well academically but can earn a decent living in the trades. Somehow the government needs to help in this department and help the parks as well.

So, OHV clubs maintain the trails. Sierra Clubs are eco-maniacs, terrorists. Hmmm! You are right? Everyone else is wg. Do you really think that OHV clubs do more than the Sierra Clubs? I think there is a place for OHV, but not on designated Wilderness areas. How about private property? A farm. A ranch.

Stimulus \$\$ should go to parks, creating jobs for rangers, maintenance and vendors. FREE use to our military veterans, fire fighters and their families. Our national parks and forests are this country's greatest natural resource. Continue to preserve the peace, quiet and natural state by restricting ORV use and automotive access.

Stgly support the modification of the Tamiami Trail to restore the water flow to its original ways of the River of Grass.

Thank you for such educated comments. While I knew Alaska had alot of wilderness I had no idea that most of our designated wilderness was there. I live in Tree outside the Tree National Park and I love the ability to hike there whenever I can. The speed limit on the roads is usually 35mph which is great and so far no off road vehicles!! The air quality is not good though....we did manage to keep the Eagle Mountain Dump site from opening which would have further degraded not only the air quality but provided for more ravens which decimate the young tortoise, an endangered species. I am thankful that although we are very near a military base I only see their helicopters on a regular basis. The military are also helpful in fighting for envimental preservation in this area. Military reps speak up at community meetings for preservation rather than desecration of our natural desert area.

Thanks for the info , good stuff. Yes you are correct , the only way we can see where we need to improve is go out and see for ourselves. Nothing enlightens one more than exploring the great outdoors and seeing things that you wouldn't otherwise see.

Thanks for the website resource, , and "green infrastructure" sounds like a helpful term for weighing in with developers and city planners. I love it, keep up the good work.

That is a better idea than just closing them off. Around here OHV's do the lions share of trail maintenance. If they were shut out, it probably wouldn't get done.

That is fantastic being 72 and in exct shape. Hopefully you are staying in locally owned campgrounds if you camp so as to support the local community.

Discussion Question 1

Written & Online Comments

(cont.)

The "sense of wonder" you speak of may be found in over 120 MILLION acres of public land. These are our designated wilderness areas, both federally mandated and by de facto agency rule. You could spend a lifetime and not come close to exploring all that these wilderness areas have to offer. Your chance of finding places "untrammelled by humans" is greatest within the boundaries of these areas. The vast majority of these areas are in the West. There are maps available. Reports show that people only use 5 % of these designated wilderness areas. Therefore 120 million acres is more than enough.

The CCC idea has merit and can help us on many different levels...

The definition of an ATV should include a width limit and low pressure tire requirements -- not how the operator sits on the machine.

The first WPA created some wonderful infrastructure on our public lands that has beautifully weathered the test of time. What's more it taught skills and put food on the table to people who really needed it and those same dollars enriched the merchants and shopkeepers who provided goods and services to the workers. In Depression-era America, it was money well spent. We can do this again and address the maintenance backlog troubling America's land use agencies.

The greater the visitor draw, the greater the need for protection, but since those states where the sites are located are the biggest recipient of the travellers dollars, there is an appearance of 'double dipping' if those state getting most tourist money are also getting the greatest Federal assistance. Perhaps the U. S. government should match the state contribution to these areas. The visitor should have to support the site in some small way, also.

The Historic Preservation Fund should be fully funded at \$150 million. In addition, the President's proposal to eliminate funding for Save America's Treasures and Preserve America should be tossed out. These are the only two federal bs and mortar preservation programs in existance. They are very effective in leveraging federal money to create jobs, preserve historic resources, and support local economies over the long-term through cultural tourism and the revitalization of traditional communities and business districts.

The idea of 'hiking in nature" and 'driving' anything are mutally exclusive. Yes, there should be areas where driving is a set-aside. these areas should not have wildlife or be fragile. and they won't have people walking, hunting or fishing. they will be driving areas only. Now, you can't have hiking, picnicing or any other activity safely where there is driving. I have tried to see a solution and a way to share. Noise and danger of being injured prevents sharing the same area or trail. There is a need for areas, not close to wildlife areas, for driving and all the drivers should help keep those areas fit for their use But you can't drive anything in a hiking area and keep it fit for quiet, safe, peaceful 'getting away from it all' use. I've read all the attempts to work it out, the haters on both sides ideas. It requires seation. Don't hike on OHV areas and keep the noise and danger out of the hiking areas. In the meantime, try to be considerate and not run me over or shout into your cell phone or throw anything on the ground. See you out there.

Discussion Question 1

Written & Online Comments

(cont.)

The idea that creating a national monument "makes things worse" is just absurd, also, there has never been impact on current property owners land when a monument is established. Take the Cascade Siskiyou Wilderness as an example. Some people volunteered to sell their lands and were given market value for these purchases. The protection of remaining wild places is vital to continued viability of diverse species, which is vital to the human species survival. Why are humans so afraid of setting aside areas for their future offspring and grandchildren to enjoy? They too deserve the chance to experience nature in all it's bliss.

The national parks are an incredible gift that this country offers to its citizens that must be preserved and improved for future generations. The Centennial is the best opportunity to bring awareness to all Americans. The parks also serve as a model to states in their development of their own state-owned spaces, and that cannot be underestimated.

The National Parks are the birthright of the American people. We must protect these last outposts of nature. To open areas up for snowmobiles, offroad vehicles and dirt bikes is to invite destruction of the environment and a more loss of habitat to an already overstressed wildlife community. I live in a rural area (surrounded by fir and pine trees) service by gravel roads, and I know first hand how off road vehicles, dirt bike and quad runners treat nature. We should leave the trails open to hikers and horse trails, I mean can you imagine dirt bikes on the Muir Trail in Yosemite? We need funding to protect our national treasures

The National Parks are truly one of America's "best ideas". We should be proud of the parks and celebrate 100 years in grandeur.

The number one best thing we can do to protect endangered species and wildlife in general is to preserve more land from development.

The Oak Openings Region in NW Ohio is protected through a series of public/private partnerships and landowners who want to preserve natural areas in an area with more rare species than anywhere else in Ohio. The Green Ribbon Campaign is the latest iteration of partnerships to maintain, educate and restore the Oak Openings. This concept dates back to the 1990's and involves local land trusts, park systems, The Nature Conservancy, volunteers and even local governments.

The only problem with multi-use trails is that they do not work. In reality the user with the biggest, fastest machine winds up with the trail and everyone else is either driven off or reduced to a secondary status. To be fair you have to have separate trails for conflicting user groups: single-track trails for the mountain bikers who want to get their adrenaline rush and hiking and equestrian trails for those who want a peaceful interaction with nature without the fear of being ran down.

Discussion Question 1

(cont.)

The slow and quiet part I agree with but if the wilderness area is home to a species that is threatened or endangered nobody, no er how quiet their vehicle or soft their shoe, should be ald in those areas. Wilderness areas are safe havens for animal species that have already been terribly impacted by man and should remain off limits. As someone else said you cannot regulate stupid and man has proven to have a detrimental impact wherever he goes.By all means though make ohvs quieter, lighter and sr and some of the problems they now face will go away.

The sound of the internal combustion engines of OHVs is a sound that is distinct to humans, our technology, and our civilization. If the goal of conservation of wilderness and outdoor places is to preserve portions of the planet in a more pristine and natural state, allowing greater OHV use is counter productive. A hiker's footprint is as big as his or her foot and radiates a sound that travels a few feet. A motorized vehicle's footprint is much deeper and more severe than the mark of a human foot and radiates loud and unnatural noise which can travel for miles and disturb nearby humans as well as the other animal species living in the enviment. If the purpose of open space is for entertaining a few people who enjoy the power of their engines, OHV use may be suitable. But if the purpose of open space is to give many more people and animals a place to be away from the noise and impact of civilization, then open spaces without motorized vehicle access are much more conducive to this goal.

The time has come to repeal the multiple-use mandate for National Forests and establish a new management policy that favors preservation over exploitation. Since the passing of the Multiple-Use Sustained Yield Act of 1960, the guiding principle behind National Forest policy has been “to achieve quality land management under the sustainable multiple-use management concept to meet the diverse needs of people.” This includes grazing, timber production, hydroelectric dams, landfills, utility corridors, and other invasive activities. While the multiple-use doctrine may be a workable management strategy in some National Forests far from major cities, it is becoming an increasingly unsuccessful and contentious model for National Forests near population centers. The four National Forests in Southern California (Cleveland, San Bernardino, Angeles, Los Padres) are a prime example. These "forests" are different from all the others in the National Forest System because they are almost exclusively used for recreation by a growing population. In addition, these lands are not typically covered by forests at all but by unique shrubland ecosystems, especially chaparral. These shrubland dominated landscapes need to be viewed and managed for what they are: urban parks that provide citizens opportunities to renew their enthusiasm for life as well as land preserves that protect the valuable wildlands found within. By continuing the current forest management model of multiple-use there is a significant danger these lands will be lost by multiple-degradation as they are exploited for a wide range of consumptive uses. We offer an alternative approach in our California Chaparral Preservation Plan. A copy of the Plan can be downloaded here: { Link }

The wheels of progress are often slow, but they do roll along. I think the Hatfield – McCoy trail system within the last year opened up to UVT’s. Others will as well. Support Multi-use trails so everyone has more access.

(cont.)

There is already a senior one time fare that gives seniors unlimited access

There is nothing about owning a gun that makes a person crazy. People own firearms for a variety of reasons. The main reason to carry a firearm in a park is for protection from wild animals. I think too many of you greenies have watch a lot of Disney movies and think bears and cougars are cute talkative creatures that really just want to be friends.

There will be different needs - so I believe the best use of the land by those who own the land = legacy homesteads, private lands and legal rights for plants, animals and government to develop if they choose to - in the public good energy, water and clean air can be combined.

this area is already protected as a national forest - for it to be designated as a national monument would mean the thousands of people who live here would lose their property and lifestyles which would be devastating, especially in this economy, despite that KSWild says this will not happen - it has always happened! I am 69 years old and have worked very hard for many years for my home and 1 acre. I have spent many wonderful years making it as self-sufficient as possible with fruit trees, berries, vegetable garden, chickens, rabbits etc that gives me a great quality of life in my retirement years. There are many retired people here enjoying the same quality of life which would be destroyed, the people who live here love and care for the land - WHICH IS ALREADY PROTECTED! please do not support this proposal. visitors can freely come and go now as it is with camp grounds and motels which is much better to visit than highly regulated places. Please don't let this go through, please, please, please.

This idea is not unreasonable and may enlighten some trail users about the problems of over population, urban sprawl, heavily logged land, polluted water from grazing, global smog, and the high price of keeping the trail passable.

This is just another effort to stuff the ballot box in favor of OHVs. There are already plenty of places where bikes, OHVs, horses, and campers can go, and there are programs to make especially beautiful and significant areas accessible to disabled persons. Until the Supreme Court rules that OHVs are speech, let's keep things the way they are.

This is similar to the Great Western Trail which uses a combination of existing routes for both motorized and non-motorized users. Once fully designated the route will run from the Arizona-Mexico border to the Montana-Canada border. { Link } Both great ideas that should be fully implemented as originally intended.

This is THE BEST form of Education ! In Monterey, CA we have a Historic Path which everyone going on it enjoys !

This is the problem with environmental extremist, there can never be a middle ground with this group. There is plenty of open space that can be preserved as well as respectfully recreated on by multiple user groups, including OHV's. EVERYBODY deserves access to our PUBLIC LANDS (public, as in shared taxes and access). OHV recreation engages a large contingent of the US population. Without this access to enjoy our nations open spaces, peoples appreciation of it will diminish and along with the desire to protect and preserve our open space. OHV's provide recreational access for handicapped people who may never have access otherwise to some of our open space beauty. It also provides quality time for families together. The key is quiet and respectful riding through education and preserving enough open space for multi-user groups including OHV's to prevent over-use issues.

This sounds excellent, . I am a snowmobiler and I agree that snowmobiles and OHVs should only be used in areas or trails designated for them. Preserving the last of our wild areas is the most important priority. I believe this would benefit everyone.

to 4) I'll keep to the roads when you keep to the sidewalk. the tread on my tires is rubber, just like the tread of your shoes.

Us hunters already contribute an 11% tax on firearms and ammunition, you want us to pay even more? We pay our share, besides the tax, we pay for licenses, tags, land use fees, etc. Hunters, fishermen/women and all the hunting and fishing groups like Ducks Unlimited, Whittails Unlimited, Pheasants Forever, Rocky Mountain Elk Foundation, National Wild Turkey Federation, Trout Unlimited, and on and on. These groups, and hunters/fishermen have done more for wildlife conservation than any other group has. Tax the rest of the people who use the land.

Visits to the National Parks and participating in ranger lead activities such as the Junior Ranger program have been a wonderful experience for our family. Also, as a teacher, I have benefited from such valuable initiatives by the parks, as allowing visitors to participate in fossil digs at Fossil Butte National Monument and using their paleontology education kits in my classroom. As a teacher, I also have taken my students on regular camping trips in the National Parks, and made plans to use all available educational resources offered by the rangers.

We have tens of thousands of road miles in public lands already - the last thing we need is more motorized access. If motorized vehicles want a route from Washington to California, they can choose from Highway 1, 101, 395, I-5, etc...

We, as a Nation, have so many unemployed people. They would be proud to serve their Country! DO give them a job.

Well maintained parks with organized educational programs are an uplifting, educational vacation experience which makes us proud of our country.

Discussion Question 1

Well said . I work as a Garden Instructor at an elementary school and all that you have said reiterates what our program does for the students, school community and the community as a whole. Not only does it connect them to the outdoors, it enables them to grow from seed the food that they eat throughout the year and involves them in every step of the process. For many of them, they find the connection they have been missing. If we want kids who are involved in all aspects of life, then school gardens are a great place to start.

Well ther is alot of people out of work now. Lets bring back the ccc Camps. It worked back during the great depression. Which we are in now.

Well, first I had to look up UTV on Google. I guess using these vehicles on already established trails for other motorized vehicles would be OK. I obviously haven't seen the ads noted by A Ralston, but roll cages could just be a safety feature. Just don't expand access for motorized vehicles to additional lands.

Well-designed multi-use trails can work well for everyone. There are two keys--trails should be well-designed to reduce erosion and people should be respectful of one another (and of the trails). I love running into people using trails in different ways. I love using trails in different ways.

Are you aware that it is ILLEGAL to in anyway harass a hunter in ALL 50 STATES. This includes your attempts to "scare off" game animals. While I don't agree with shooting at you, I have zero sympathy for you due to your participation in illegal activity.I have just as much a right to ride my motorcycle in the woods as you do to walk in them. As it turns out, I am an accomplished offroad motorcycle racer who also happens to have hiked a substantial portion of the Appalachian Trail and am currently planning to thru hike the pacific crest trail. Lose your narrow minded nature.

What better investment can we make in the physical and mental health of our citizens that will provide jobs and economic stimulus than our national parks? None

When adults take their kids outdoors, and enjoy the outdoors with them, there is a greater chance the kids will learn to love the outdoors. When you take a kid to a park and say "Go Play" while the adults sit on the sidelines, the kids are less likely to develop a lifelong love of the outdoors.

When I was visited Death Valley National Park, I visited a remote campground. There were recycle bins. I talked to the host. He would pick up the recyclables and store them in a shed. Every week, a volunteer would drive something like 80 miles from the park headquarters, then drive them to the nearest recycle center over a hundred miles away each way. I have to say they were trying hard, but I also wonder about how much gas they were using to get the stuff recycled, when visitors were going home anyway. I am all for very tough litter laws. I sometimes think Mylar balloon manufacturers should contribute to a clean-up fund- I'm always finding them out in the woods.

Where in this country are there too many places funded by the state that OHVs can use? Could you tell me where they are?

Discussion Question 1

Written & Online Comments

(cont.)

Where is the family togetherness as you race along on the OHV. You can't talk with one another. Since OHV's damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forrest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

Whether a majority, or 50/50 (which is highly doubtful), the people who enjoy the outdoors for the scenery and stillness will lose that if more intrusive activities are ald in a wilderness. In protected, or wild, natural areas, only natural activities should be ald, walking, running (although, not competitive), camping and fishing (in a regulated manner), hunting (where it is deemed necessary for game control and not preclusive for other recreaters), photography, and, maybe, some limited bicycling routes. All of the more intrusive events, e.g.; bicycling, camping, fishing, hunting; that don't already, should bear a fee because of the overhead required to support them and the damage that they, inevitably, cause. Nature is usually quiet and beautiful, anything besides natural acts will destroy this, if you want to do noisy things that tear up the planet, there are too many places to do it where Mother Nature's sounds and sights have already been exiled.

While I am a "Dirt" tent camper by choice my parents need to be in an RV due to age and physical limitations. I know for a fact that where I often drive and set their RV up for them they pay a MUCH higher (sometimes 3-4 or even more) higher price for their camping spot than anyone who does not use the services that they require. Maybe its not the same all over and some RVer's do use more services than others and don't pay for it, but I have never seen it. A lot of RVer's are on fixed income and struggling with the cost of life already. The dump facility they use is supplied by the place where they purchase fuel as an enticement for their business. Not sure what electric pumps you are referring that they would need charge extra for, if it's a water pump, they are the same pumps that supply the campers (non-RV users) with their water. If they are paying (in some cases) four times more now to camp and you double it, that would be eight times as much as I would pay with my tent in the next camp site over!

Why do we need a new agency to plant trees for us? Nearly every home built blankets land that once supported oxygen producing trees. Every American should be encouraged by the government (possibly by tax breaks)to plant clusters of trees to reverse the damage where it was done. Lets put 350 million Americans to work on this and not create a new expensive government agency.

Why not take a walk?

Wilderness and ORVs do mix. Its the two user groups that cant seem to get along. If a trail is going to devastate an animals habitat then how can they survive in developed communities? The subdivision that I lived in had deer and other animals coexisting just fine. It is your agenda that gets in the way.

Wow that is great . Thank you for the link. That is exactly what I am proposing only in the west coast states. Yesterday I was up in the Tahoe Donner area with my Dad and we took the backroads in my truck through the Tahoe NF. It was a beautiful day and the views of the Royal Gorge on the North fork of the American River was amazing. We encountered a large brown black bear and watched him for a few minutes until he turned and walked away. It was great. Just getting out there in the forest is a blessing in itself, no er how you get there.

Yea who drives 30 MPH on a ATV trail? We have had our horses ride with us and we go the same speed as the horses. And our UTV is so quite most people do not hear us until we get up on them. We drive right by the horses with no problems.

YES ! it seems OBVIOUS ! Do Not remove any of the Old Groves

Yes, for that part of the country, it sounds reasonable. There should be land set aside for all uses.

You know, that would be a time-honoured help for our national forests and it will spell considerable relief from this recession that we are in. Yes we will fully approve this dual purpose approach, which will give a growing number of unemployed people a chance to do something for themselves and our country. So, let us bring back The Civilian Conservation Corps, and many Americans will be happy and pleased as punch to welcome it back, and it will bring well-deserve relief from this recession. Now let us all get The Civilian Conservation Corps ready for it's comeback so we can be well-prepared for it's arrival.

do you know how they come up with the number of tags they issue the hunters? Overhunting is not a problem. Are you pulling these comments out of a hat or what?

Your opinion is just that an opinion. Calling hunters cowards is childish, and shows that you have no knowledge of the sport of hunting whatsoever. There are over 14 million hunters in the US who add Billions of dollars to state and local economies every year. We pay an extra 11% tax on firearms and ammunition which goes to state fish and game agencies. the money from all the licenses, tags, and use permits we have to purchase also go to wildlife conservation, hunters have done far more for wildlife conservation than any other group.

- how did I blame them? When my grandfather was out of work during the depression, the government helped him out by giving him a job. the job was shoveling dirt by hand. Eventually he started his own construction firm, but lost it because he volunteered to join the seebees during world war II. No one in our family blamed him for either situation. When I was out of a job as a youngster, my family helped me out, but I also did things for them like cook dinner, mow lawn etc. How is this different? You jump to lots of conclusions. Maybe you need to calm down and listen. giving people work is NOT a bad thing. Most people WANT to help. Why not let them?

(cont.)

Not all National Parks are geographically large and support camping. There are many smaller parks with important stories to tell. Two of my favorites are the Marsh-Billings-Rockefeller site in Vermont and the Henry Longfellow House site in Cambridge, MA. These parks have important lessons to teach about stewardship of the land and the development of our cultural history as a country. All of the National Parks need an increase in staffing and funding in order to continue their important role in providing education and recreation to the people who visit them.

Not all recreation is appropriate for a National Park, just like not all recreation is appropriate for a gymnasium, a swimming pool, a race track, etc. Our parks are unique ecosystems and must be managed as such to remain for what they were intended, to be passed on to future generations intact.

Not sure where these facts that OHV vehicles destroy trails is coming from? Please show me statistics or facts rather than just your opinion. The fact we must all understand is this is public land and it is to be shared by all of us. You will find bad seeds in all groups regardless of the recreation at hand. A hiker is just as capable of destroying a growing plant, removing signs, etc. as is a OHV rider. Registration fees on OHV vehicles and wilderness passes help maintain these trails. In addition we have many OHV groups/clubs that give back to the community by volunteering time and/or donating to help clean/maintain.

O.K. This thread is all over the Map, so I'll go off on my tangent.... Bottom Line is: Too Many Humans. If birth control requirements to limit over-population, globally, is not established, we are doomed to "destroy the earth" whether from over use, depletion of resources, war over natural resources (Can you spell "Afghanistan" ?) etc. There will NEVER be enough cheap energy. Boy, this is off on a tangent, I know ----- and has 'nothing to do with the subject' Riiiiight.

OHV recreational use of public lands should be preserved for the benefit of current and future American families. OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Motorized recreation is a healthy family activity and provides a great opportunity for families to "get away from it all," and to experience the great outdoors. OHVs, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHVs are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors. OHVs, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHVs are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. OHVs are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

OHV use is good clean family fun. They have a place as viable recreation. Set aside property designated for motorized recreation.

On a cost basis alone, it makes much more sense to fully protect & manage these precious resources than dealing with the exponentially greater cost of repairs to infrastructure & the actual ecosystems from years of neglect & damage. These parks are all undeniably unique gems of this country. No question, we have the most beautifully eclectic collection of parks in the world - let's keep it that way!

Once again, motorized vehicles DO NOT destroy trails, cause erosion or noise pollution. Get your facts straight.

Only activities that do not degrade the environment should be permitted. We have to think out to the Seventh Generation. Period.

Our daughter and son-in-law LOVE snow-mobiling and do a lot in Canada. Let's look at what laws Canada has! They are satisfying everyone: land owners, state Parks as well as snow-mobilers who are very respectful of these laws! Marie-France

Our national parks are a critical part of our nation's heritage and must be supported and preserved for future generations. We should reallocate 10% of the military budget for preserving and protecting our national parks.

Our national parks are a living part of both nature and the past, as nature used to be. They deserve protection and nurturance so that they can continue to be the examples of what our ecosystems can be if given a chance to be under the management of Nature.

Our National Parks are a visible and hands on way for our children, and their children, to experience many of our national resources. We need to preserve our parks, and continue to protect them from encroachment. Enjoy and appreciate our parks. Increase full funding to the National Park System.

Discussion Question 1

Written & Online Comments

(cont.)

Our national parks are an amazing treasure and deserve FULL funding. I was lucky enough to visit Arches National Park, Mount Rushmore, and Badlands National Park in May and I can't wait to visit more parks.

Our national parks are an important part of our lives and our country. It shows a civilized culture resides here.

Our National Parks are an incredible legacy that deserve to ALWAYS be fully funded. We have created a unique and admirable system in the National Park Service where we show that we value our natural and historic areas so much that we have an entire government agency mandated to protect them. But, our system goes beyond protection, we teach thousands of kids and adults annually about these amazing places and encourage future generations to be responsible stewards. Very few countries in the world compare to the education and outreach programs we have in our National Parks. This is something to be proud of, that we actually have pristine areas that we haven't destroyed yet..yet. We need to keep this responsible stewardship message stg and fully fund our national parks!!! It is important to remember that we can love these places to death, the more we love them, the more support they need. Full funding to national parks, please!

Our National Parks are our greatest legacy. Pleaae fund them to show we truly believe in what has been started.

Our national parks are our national treasure and should be available to visitors. It is true that we need to have a job corps to maintain them which is perfect for this time with so many unemployed.

Our national parks are places of refuge, beauty, education, and of healing for the soul for those who have lost a connection with our wild spaces due to spending all their time in an urban/sub-urban enviment. By fully funding our national parks, we can then take steps to restore them to their previous greatness through the return of educational programs, maintenance and other public-facing resources. With so much of our beautiful landscape lost to development, it is imperative we preserve and maintain our national parks as part of the heritage we leave to those who come after us. Thank you.

Our National Parks are utterly precious, invaluable pieces of the American heritage and irreplaceable sources of true re-creation for the human spirit. There is nothing whatsoever that replaces what they have to offer and our treatment of them is a direct reflection on the respect and appreciation we place in ourselves as people and a country. They are gifts to all of the highest magnitude and we owe it to ourselves and the future to protect them with all we've got.

Discussion Question 1

Written & Online Comments

(cont.)

Our National Parks could be the perfect showcase for green energy. Local clean energy sources could solve many of the problems our park service is facing - pollution, congestion and maintenance - while supplying local and green jobs. Many parks, notably Yellowstone and Yosemite, suffer from automobile pollution and congestion. The Park Service already offers bus tours. All gas powered busses should be phased out. Tour programs should be expanded as well as bicycle rentals. Some time in the not too distant future, perhaps a fleet of small electric vehicles to rent might be practical. A simple change in park use regulations could go a long way toward conservation without costing a dime. What if some routes are closed on certain days/hours to fossil fueled vehicles? Days reserved for bicyclists? Reduced park fees for hybrid cars? Another challenge remotely located parks have faced from their beginnings is accessible electricity. Miles of power lines distract from the views and are inefficient and expensive to maintain. Parks that utilize the most practical local clean energy (wind, solar, geothermal, hydro) are great examples for their communities and our nation. Those that already use green energy should tout themselves, publicize! Money used to maintain on-grid energy use might be better used to upgrade to a more sustainable system. And there is no reason why new facilities, particularly in remote areas, should not use self-sufficient energy sources. For the last two decades the model of Park income has been the use of private concessions. Concessions to sell gifts, food, lodging and recreation. How about private GREEN concessions? So many small, mid-size businesses and larger companies are struggling to make sustainable energy viable. A contract with the Park Service would help these businesses gain exposure. Investment in park infrastructure of this kind helps local economies by providing jobs and training workers in the fledgling green industry. In some states these initiatives are in action in state parks. But more funding is needed for both national and state parks to make them a reality.

Our National Parks provide a crucial opportunity for citizens and visitors to experience the brilliance of the natural environment. Full funding for the National parks!

Our national parks serve to educate and to provide opportunity for healthy exercise. Both of those commodities are worthy and needed goals. Full funding is a good investment in the future and in the present.

Our rangers have a huge impact on children as they expertly teach about the importance of preserving our open spaces and National Parks.

Owyhee is real wilderness. It truly merits protection.

- green stickers are a fee that is to pay for access on public land - trail maintenance, parking etc. if ATVs are run only on private land they do not need to get green stickers. If ATV owners get nothing for their money they will not pay for stickers. I am not an ATV rider, but I can see their point. I just don't want to hear them.

Discussion Question 1

(cont.)

Peer pressure does work as has been demonstrated in So Fla swamps w/ORV's. It is much easier for folks to listen to their own rather than those they perceive to be outsiders telling them how to act. Spread of invasives however is another story unless all the critters quit going #2. Very large bear scat, bird and other animal droppings combined with slow moving water (sheet flow) cause many more of those problems in So Fla than ORV's. Until the animal scat ceases the problem is impossible to totally cure. Enviro groups are actually lightening up on that issue in Fla. I don't know if the problem is identical in Utah but suspect it might be. The Clinton move in Utah, I do believe though would have irritated the Pope.

Perhaps raising the rates, but letting people do volunteer work to build up state park 'credits' or earn a reduced rate, if they feel that they can't afford the higher rates. Both of these, in conjunction, will ease the flow from state coffers, bringing in higher rates from those who can, and helping ease labor costs. I know in my state, Oregon, we do a lot of volunteer work just to help keep the state beautiful, through our employers and other groups, if this were extended to include state parks then these credits could be given to volunteers to use later at state parks of their choice, and perhaps make them feel more responsible for those parks that they are enjoying.

Perhaps RV fees should be tied to the use requirements of the RVer. My rig uses 30 amp hookups, the big rigs generally use 50 amp service. Set fees on a scale related to power and facilities consumption. When I RV camp, I frequently hook up to electric & water only, sometimes only electric, and try scout a place to dump down the road. I appreciate being able to use a camp ground dump station since fewer truck stops are offering that service now. I could dry camp, but would rather not disturb a campground by running a generator, since I have not outfitted my rig with solar panels (yet).

Please fully fund the National Parks and get the invasive off road vehicles and guns out of the parks. There is no place for either. Furthermore, no more selling of federal lands for pennies on the dollar to mining and oil interests.

Please preserve our National Parks and the dark night skies within them and around them. I want the childrens children to be able to see the milky way when they look up at night. I don't want the great grand kids telling their children stories of what used to be great by starting out saying... Once upon a time..... Natures gifts should not be squandered. scdva.org

Please stay on topic and try to limit the political crap. I think this is a great idea with multiple efits. 1. resored national lands free of litter. 2. pride of usefullness and accomplishment of participants 3. Cost effectiveness. 4. exposure to the forest for those that don't have the means to get there "reconnecting people to the outdoors" 5. educational aspects of service from our communities Thank you for a great out of the box idea

Promote all forms of recreation.... Let's add hatchet throwing at random trees as a fun sport. Since OHV's damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forrest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

Discussion Question 1

Written & Online Comments

(cont.)

the government will spend several million dollars to build roads so lumber companies can log in an area that will produce \$100,000.00 worth of lumber. Your point is it would be too expensive to pay someone for their property if the land was turned into a national park? I say it would be a worthwhile expense. What I was talking about was not every area needs facilities (park store, full time employees, new roads, etc.). What I've seen in my state is when the federal government creates a national park or forest, the people who have property there stay until they want to sell, then the federal government is given the first shot at buying the property.

Really. Having grown up when they did have grazing. It was banned here in the 70s. I can now see the damage that was done to the forest by banning grazing. The forest are now so thick that you can not walk through them. Grazing did no damage to the forest it cleared out the underbrush making it so you could walk through it and made it less of a fire hazard. I dont know where this culvert deal comes from I have never seen any stream with fish in it that had a culvert culverts are only used is small drainage ares that have no fish because they do not have standing water. Logging must be done to get rid of the bettles and to control files. Also the looking rev was shared with local govns for schools in exchange for the feds not paying taxes on the land. If the feds are no longer going to pay the rev sharing then they should pay the state taxes on the land.

Reauthorize FLTFA, a "land for land" conservation program that generates revenue through the sale of BLM lands identified for disposal to help federal agencies purchase critically important tracts of land from private willing sellers for fish and wildlife conservation, cultural and historic preservation and outdoor recreation in the 11 western states and Alaska, including BLM designated areas, National Forests, National Parks, Wildlife Refuges, Wild and Scenic Rivers, the National Trails System and other priority areas. Since enactment in 2000, FLTFA has generated over \$113 million and the FLTFA account has provided funding for over 18,000 acres of strategic conservation projects, often complementing Land and Water Conservation Fund (LWCF) support. See www.fltfa.org for a brochure, maps, and more details.

Retired Americans have the time, ability, knowledge, experience and the desire to assist the USFS in many areas of our National Parks. Be it manning entry booths, book stores, answering questions, Just about anything that pulls some of the load off of Park Rangers. I am 72, in exct health and still have a functioning brain. Give us a little training, some sort of uniform and get us out there. I just got back from the Eastern Sierra, love those mountains.

Right on GOD gave us these great lands lets use them.

"The NPS proposed wilderness areas have already been administratively protected for many years" If it is working fine the way it is, lets stop wasting money studing something that is already protected and spend our money on maintaining what we already have.

: "why should that "management" include logging and grazing? How does that serve us or the land?"It creates jobs for the people who live closest to the federal land, whose families lived there before it even became federal land.

(cont.)

Promote tent camping the only true camping experience. RV's are not camping!

The Problem: Federal agency officials continue to resist the idea that easements and other alternatives are effective cost-saving alternatives to fee acquisition of lands. They talk about using alternatives but rarely try to implement them. The Solution: Incentives need to be established for officials to use easements and other cost-saving alternatives. Penalties need to be created for buying more than the interest necessary to achieve project objectives. Federal officials have often, and inaccurately, misrepresented the cost of easements. A popular notion is that easements cost 80% or more of fee title. The key is to buy easements early when development is far away. Easements increase in cost as development gets closer. However, officials have made little or no attempt to use easements or other alternatives, and instead go to great lengths to avoid them. Inholders have actually been scared out of using easements because of very restrictive terms and negative statements from federal officials. For example, the State of Minnesota successfully used easements on a cost effective basis on the Kettle River. The Park Service was unable or unwilling to use easements on the nearby St. Croix to the degree suggested by Congress. The result was costs much higher than necessary on the St. Croix and poor landowner relations. The Fish and Wildlife Service has also successfully used easements to protect wildlife habitat at costs approximately 40% or less of what the fee title would have cost. The inability of the federal agencies to use alternatives to fee title has actually led to the protection of some areas and wasted funds. The result is that there is now a huge backlog of unprotected lands. Some landowners want to sell but can't because of the shortage of money. In addition, relocation and human costs associated with fee acquisition are not considered by agency officials. Nor do they consider the project effects when inholder communities are left intact. There may, in fact, be a long term management and maintenance cost, especially when landowners remain in areas where significant cultural and historical values exist. An example is the Buffalo River. Local landowners were so mad at the Park Service that they would not even show the agency how to run a historic grist mill. How much better it would have been to have kept the grist mill in the hands of the original owners so visitors could have seen living history. There needs to be better training of land managers and acquisition officers and more information for landowners, so that all parties can understand the benefits of using reasonable alternatives and avoiding unnecessary conflict. The bottom line from the federal agency viewpoint must be to acquire only the interest in land necessary to meet the intent of Congress. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

• Preserved Civil War battlefields are tangible links to our country's past. • The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. • Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. • Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patizing local businesses. • Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. • Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. • Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can efit quality of life for residents.

I am in favor of funding our National and State Parks so that they will be preserved and maintained for all to enjoy. We are the stewarts of this earth and need to take responsibility for safe keeping.

Active management of recreational use works. With management (maps, kiosks, partnership agreements, adopt a trail, on the ground signing, etc) land managers increase capacity while decreasing impacts to natural resources. Involvement of federal land managers with local communities works. Community based FACA committees formed from a broad base of stakeholders can well serve as advisory councils to assist the land manager in critical planning and decision-making efforts. Asking for assistance and volunteer hours from local user groups and clubs can do wonders for the management of OUR lands for ALL users. Trail clean ups, trail maintenance and blocking off improper routes and bypasses are but a few of the things that volunteer time can be put to good use.

Adventure Cycling has already created maps that provide a route for the Pacific Coast trail. This is similar to their maps for the Continental Divide trail. They by pass Wilderness Areas and use mostly Forest Service roads. The maps are very good. See AdventureCycling.org

may I commend to your attention the "Sustainable Funding" section of the executive summary of the NPS Second Century Commission report? At this link { Link } (3 MB pdf) scroll down to PDF page 40 (text page 38) for an overview. To me, one sentence best summarizes it "Our financial commitment to the parks matches neither their importance to society nor the enormous franchise they have with the American people." I volunteer in a Park which loses, on average, one structure listed on the National Register of Historic Places every year. The current NPS annual operating deficit is ~\$750 million/year. This shows up directly as a growing deferred maintenance backlog and loss of staff. The distinction between expanding vs diluting the NPS mission is to first secure adequate funding for its current mission, before expanding its mission. That's why I feel you have put the cart before the horse, .

America is a very special place in that we actually have some undeveloped land to support our native wildlife, provide solace, quiet and exercise for the people that work in cities. We must do all we can to make more wilderness and protect the wild lands that we have. Thank you.

An example of using sound science would be to conduct unbiased/objective recreational carrying capacity studies for all federally managed land.

An outstanding idea! The CCC would allow improvements as well as basic maintenance of park facilities. The concept could also be used in our National Forests. Young folks would be able to learn a variety of skills that could be useful in finding construction jobs in the private sector.

Any kind of motorized access does not belong in a wilderness. If it has motors, quiet or not (and who is judging? and on what standards?), it obviates the meaning of the term. On the other hand, I would support the idea of access for those with physical challenges. That means access, it does not mean that the wilderness should be changed to accommodate motors.

As a citizen of one of the most diverse nations in the world, I see the value and the strength of that diversity. There is no reason we cannot expand that strength and depth of character.

As a diverse culture, we all have the opportunity to learn about different cultures and historic events which already took place and the ones being made today. Let us recognize the contributions made by individuals who led the way, pioneers if you will, and those who are still making a difference. The legacy of oral history is rich. You have only to ask the elders who lived through changing times to find progress is not a static thing. By going back in time, you can go forward with a rich foundation of roots bound in tradition.

As above comments have already stated, our public lands are already federally owned. Wanting to turn them over to despoilers for private monetary gain is the very reason the government needs to keep tight control, and add to the wilderness system, create more National Monuments and pull the National Forests out of the timber sales business.

As long as wilderness land is also set aside and protected!

As new land becomes available, it should be grasped at that chance opportunity, so the overdeveloped places don't take over all the earth. As humans, we all need the place to relax, reflect and redirect our thoughts and that doesn't happen so often when there's no "green" space. Setting aside space is how our parks came into being; let's spread the preserve.

As our world changes with global warming, our children need to know how the physical world has existed, exists now, and is changing.

As with all public lands, wilderness is the cheapest way to manage a park, and because the NPS doesn't ever have enough money, wilderness designation is the most prudent thing to do with park land.

At present (August 2010) corporations have a great deal of capital but are hesitating to invest in new ventures, which may well not have buyers due to an unstable world economy. The result is excess money is available, unspent, and no improved employment outlook. Why not encourage the Boards of large corporations to invest a new Civilian Conservation Corp, thus increasing employment opportunities and improvement our public lands? How to do this? How about a plaque on each project such as "This Bridge/lodge/trail/canal/renewal built by ABC corp 2010" This is not a new idea. Throughout the world we can see public schools with "Supported by CocaCola" (phrasing may not be exact)

-So what if they turn them in or someone else turns them in? Either way they do not end up in our waterways or our oceans. Much like a bottle tax charging and extra 3 cents per cigarette and then refunding it when returned would work. This is a great idea and I am shocked it is not getting a better response.

-If that is true about The Nature Conservancy then I am glad I give them so much money through my worker donation program and will make sure to up that amount next year.

Check into what happened in CO along the ft range and specifically in Boulder county over this issue. In the 1990s USFS/BLM took exception and told the folks either quit or pay because building a house on an old mining claim is not the intent of the law. Those that chose to pay had to pay current market value for the land they had essentially "squatted" on. Those that quit had to tear down the residence and put it back to original condition.

Conducting and taking surveys on any controversial topic is very difficult. Desired results can be obtained by phrasing the questions in a biased manner. When the surveys are filled out voluntarily they will not provide a true picture of how the people filling out the surveys feel about the topics. Random sampling and random interviews may be a way to obtain meaningful surveys. However, doing this will involve more personnel and expense than having people fill out a form; but it would be more meaningful.

Contrary to what some people claim, there is no discrimination going on. No one wants to restrict anyone from Wilderness areas, everyone is free to go there. You are however not free to do whatever you want, because that's the whole point of Wilderness areas. Read the Wilderness act: "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammelled by man, where man himself is a visitor who does not remain." People have to have some perspective. The main point of the Wilderness areas is to leave areas "untrammelled by man". It's not a conspiracy by hikers to exclude everyone else. There are plenty of non-wilderness areas that are meant to support "multiple use".

Currently OG forest loss is mostly due to wildfire because we have suppressed fire for so long--native Americans used fire to clear out fuels and produce useful plants. I would suggest you read up on actual ancient forests. Start with Agee, Pyne or Bonnicksen, who all have written excellent books. Simply standing back and "protecting" will not produce large OG trees. Native Americans actively managed the land. However, there are many counties that Native American management techniques would no longer be appropriate for due to danger to existing homes from fire. A sample of the original forest or vegetation in each county would be a good thing, but not easy to do, since wildfire and managed fire created most of the vegetation types in North America.

:Exotic invasive plant species are able to displace native plants only because those factors that control their spread in their original locales were not transported here with them. The serious problems caused by exotic invasive plants -- well noted in several other previous comments -- need practical, sustainable solutions...not bizarre hypothetical distractions such as your Comment #5.

Definitely, full funding.

Denali in Alaska does not allow most private vehicles into the gorgeous park. They have only a 90 mile highway that accommodates buses run by the park service. You can get off the bus and hike and camp or just walk, then get another bus back, or simply stay on the bus the whole time. The wildlife to be seen as a result is beyond fabulous. On a recent trip we saw wolves, lynx, caribou, moose, grizzlies & their cubs, coyotes, eagles, horseshoe hares, ptarmigan, dall sheep, and marmots--all on one 8-hour bus trip. The animals are more visible because there aren't cars and ATVs and people racing around scaring them.

Don't forget to write to your representatives in Congress and your Senators and let them know your feelings on this issue!

Due to the lack of land that actually meets the original honest Wilderness criteria, advocates had the law changed to allow substantially sub-standard lands to qualify. A classic example can be viewed under Challenges - "Protect Wilderness b4 it is too late...." at comment 1.

Discussion Question 1

Education is KEY to Preservation !

Education is the key to the preservation of our National Parks. Instilling an appreciation of our natural heritage is vital. Preserving our National Parks for the enjoyment of future generations is a real challenge.

In African parks balloons are used to view wildlife. They do not disturb the wildlife as much as vehicles and it gives the rider an unique chance to see wildlife that otherwise would not be seen. I would not like to see balloons used in national parks as I think those should be left as pristine as possible with as little commercialization as possible and of course wilderness areas should be off limits to all but otherwise with the proper regulations I think balloons would be a wonderful way for people to experience our public lands, national forests and wildlife.

Even though I haven't seen them all (yet), I love our national parks. We need to increase funding to preserve these places for us forever. Increased funding is very much needed to continue ranger activities, facility, trail and road maintenance, and enforcement. National parks are our sanctuary from all that's wg in the world; we need to keep our connection with nature and wildlife. The National Park System is the best idea America ever had and we need increased funding to keep it so.

Everyone who visits this site is painfully aware of the historical and cultural importance of our National Park System. However, "Starve the beast" conservatives must continually be reminded of this notion even if it has to be put into the context that we humans are "God's stewards of nature." Conservatives are hell-t on letting our national infrastructure and the economy rot. They would love to use this as an excuse to privatize every one of our National Parks so that their corporate masters can profit from it, just as they are content to let corporations exploit every other inch of land in America to the detriment of society in general and for nobody's efit but their own. At the very least, additional funding for National Parks would create jobs, something that today's conservatives have proven over and over that they are loathe to do. I recoment that everybody get and out vote this November and remember that conservative politicians are not interested the public welfare and care nothing about our National Parks other than their usefulness as corporate giveaways.

Exct proposition !DO involve the local population for planting and transplanting !

Federal land agencies should implement a system where designated routes are monitored for ORV user violations. They should then close routes where there are violations beyond a set standard (say for example, two violations a month). This system is already in place on USFS land in the cottonwood canyons above SLC for dog use. This would give users an incentive to police their own, and compensate for the agency's lack of enforcement capability.

Discussion Question 1

Written & Online Comments

(cont.)

Financial focus needs to be place on restoring and improving the National Park system. These parks are one of the unique aspects of America. They represent our heritage and are the only large spaces left for wildlife to live freely.

Full funding for the National Parks is the only way to protect these great treasures for current - and future - generations of Americans to enjoy.

Full funding of our National Parks should be a top priority in the next Congress.

Full Funding!

FULL funding, no question.

Full funding.

Fully fund, fully staff. Expand and fully train volunteers, too.

Fully funds the parks and properly staff them as well!

Fund them.

Funding for our National Parks should never be a question. Our parks are beautiful because of what our government do (funding) - why would anyone want funding to stop? I support our National Parks by going on vacation to one of them each year. In the near future I will also want to be a volunteer.

Funding for the National Parks needs to be increased so we can have them in the future.

Given the incredible pressure exerted by the OHV lobby and the mining and drilling proponents, giving these areas permanent protection as wilderness might help insure that the generations that come after us will actually have a few pristine places left that can connect them to the vast natural heritage we once had in this country. I certainly want that for my children and grandchildren.

Good idea. In Michigan, the DNR uses money it receives from snowmobile trail permits to pay private land owners for access to private land.

Discussion Question 1

Written & Online Comments

(cont.)

Great idea but lets use private funds pay for this idea I would think a GREEN mfg would want to be involved so they can promote their products, their is enough burden on the tax payers.

I agree . But there should be areas set aside for OHVs. It doesn't even have to be federal land. For example, in Michigan, snowmobiles pay for a trail permit. The DNR use some of this money to pay private landowners to have snowmobile trails access private property. This sounds like a good alternative to me. OHVs can be ridden anywhere. More land should be set as that is free of human development (roads, mining, drilling, etc).

I agree that people who clearly love the wilderness and treat it with the utmost respect and intelligence, and who know this land like the back of their hands, should be taking the LEAD role in the area's management. In these cases, the local people are far more expert than the "experts" -- and neglecting to solicit and heed their input and advice would be a huge misstep on the government's part. The local experts have their whole lives invested in maintaining the beauty and overall health of the Siskiyou Crest area. Their voices should be heard.

Our National Parks which are a treasure should be fully funded. And, I see no reason for anyone to have a loaded gun in the park. But, I guess when the first child is killed accidentally, that subject will be dealt with. Off road vehicles and snow mobiles do tend to tear up wild space. Maybe they should be restricted to roads only. Just saying...

I agree. National Parks provide a prime backdrop for quality education and partner organizations can be entrepreneurial and ensure that parks are accessible to youth from ac the demographic spectrum.

Discussion Question 1

(cont.)

I am the executive director of Western Wildlife Conservancy in Salt Lake City, Utah. WWC is a non-profit wildlife conservation organization with approximately 300 members, most of whom live in Utah and recreate in the American West. I am also a member of the Western Governors Association Wildlife Council Stakeholder Advisory Group. Our specific charge is to aid the WGA Wildlife Council in implementing the WGA Wildlife Corridor and Crucial Habitat Initiative. Additionally, I am a member of the "Spine of the Continent" Wildway steering committee under the aegis of Wildlands Network (formerly The Wildlands Project). We seek to create a "mega-corridor" of functionally connected wildlife linkages up and down the Rockies, from the Brooks Range in Alaska to the Sierra Madre Mountains in Mexico. I have read the full draft BLM discussion paper on Treasured Landscapes. I find the vision embodied in that document bold and exciting and believe that it is urgently needed. Moreover, as a member of the WGA WC SAG, I know that it is exactly what is needed in order for the WGA Wildlife Corridor and Crucial Habitat Initiative to be successfully implemented in concert with another WGA initiative, the Renewable Energy Zone Initiative. I believe that the most important thing the Obama administration can do for public lands in the United States, is to protect their ecological integrity and resiliency. Therein lies our future. We must protect, and where necessary restore, our beautiful iconic landscapes, our watersheds, and the resiliency of our ecosystems. This will provide us with clean air, clean water, abundant wildlife, and a variety of types of outdoor recreation into the foreseeable future. It will preserve and enhance the possibilities for horsepacking and backpacking adventures. Combined with swift but prudent implementation of the WGA Renewable Energy Zone Initiative it will also enable us to move toward a clean energy future, which in turn will provide new jobs for our citizens and help preserve the quality of our environment. For all these reasons, I urge the Administration to set its sights on protecting connected landscapes and ecosystems. Protection of our ecosystems, watersheds and iconic landscapes will not only require that the protected landscapes be functionally connected to serve the needs of wildlife, it will require that we limit access to much of it. So be it. OHVs, ATVs, snowmobiles, and the like must be restricted to areas where they will do the least harm. In addition, livestock grazing must be curtailed in many areas where it is inflicting severe damage on watersheds and wildlife. Energy development, including renewable energy zones and transmission corridors, as well as other types of development, must be located outside the most ecologically sensitive areas. Finally, but not least in importance, it requires wolf recovery and healthy populations of all native large carnivores.

I believe it is incredibly important to our future to support and fund our national parks.

I believe that exposure to the national park system is the key to meeting the challenges and the way to expose the parks is to institute a partnership with the youth of America beyond the conventional; boy scouts, cub scouts, etc.. utilizing programs such as educational, penal, religious as sources of recruitment for the youth and subsequently the recruitment of the parents in a volunteer partnership that can expose many people to the wonders of the system and encourage good stewardship to a portion of the population that otherwise would not have this opportunity

Discussion Question 1

Written & Online Comments

(cont.)

I believe what makes America a stg and vibrant place to live is our diversity. To the extent that our National Park System represents who we are through our heritage and history I think it should be representative of the broad spectrum of that diversity. As we make our story more broad we will enhance the ability of citizens to connect to that story and possibly enhance support of the system through visitation and funding.

I fully agree that the naional Parks should be more inclusive.

We view the America's Great Outdoors initiative an ideal opportunity to safeguard wildlife and wild places in the face of a changing climate. Thank you for considering our input during this critical process.

The New Hampshire Division of Historical Resources is pleased to be part of the historic preservation and heritage community participating in today's listening session. I am Deputy State Historic Preservation Officer.

Each state has a preservation program based on the National Historic Preservation Act of 1966, amended (16 U.C.C. 470f), but tailored to its own needs and organizational structure. The New Hampshire Division of Historical Resources/State Historic Preservation Office (DHR) manages the state and federal historic preservation programs in our state. The DHR is supported by the State of New Hampshire, by the federal Historic Preservation Fund, through a matching grant administered by the National Park Service, and by donated fudns and services. In addition to its state functions, the DHR is also responsible for administering the federal preservation program in New Hampshire. The DHR is part of many public/private partnerships focused on historic preservation and maintaining New Hampshire's heritage. We have an especially strong and productive working relationship with the New Hampshire Preservation Alliance, the nonprofit statewide organization which is dedicated to the preservation of the state's historic buildings, landscapes and communities through leadership, advocacy and education.

Together, we want to highlight our deep, shared concern for full, permanent funding of the federal Historic Preservation Find as an integral part of the "America's Great Outdoors" initiative.

The National Nistoric Preservation Act directs State Historic Preservation Officers (SHPOs) to provide financial and technical assistance to preserve the places that are important to telling America's story.

The Historic Preservation Fund (HPF) was created to supply the financial resources to SHPOs and Tribal Historic Preservation Officers (THPOs) to implement the National Historic Preservation Act.

The Historic Preservation Fund is NOT supported by federal income taxes. Instead, Congress designed the HPF to receive its funding from offshore oil and gas revenues - using the consumption of one non-renewable natural resource (oil and gas) to preserve another non-renewable cultural resource - our Nation's history.

Discussion Question 1

Written & Online Comments

(cont.)

Every year, \$150 million is deposited into the HPF, but Congress has never come close to appropriating the full amount, leaving SHPOs without the ability to provide grants and other financial and technical resources to preserve the special places that embody and convey our history.

The good news is that there is an unprecedented opportunity to provide full and guaranteed funding for the HPF so that sites like Tuttle Farm can be preserved for future generations.

H.R.3534, the Consolidated Land, Energy and Aquatic Resources Act (CLEAR Act) would provide full and guaranteed funding for the HPF and for the Land and Water Conservation Fund (LWCF).

The National Conference of State Historic Preservation Officers and all SHPOs around the country, the National Trust for Historic Preservation, Preservation Action, the National Association of Tribal Historic Preservation Officers, the National Alliance of Preservation Commissions and the Coalition for Fully Funding the HPF all stand ready to assist efforts in the Senate to fully fund the HPF.

The Nebraska Game Parks Commission feels the America's Great Outdoors initiative is a timely and ground breaking effort

Our agency and our community partners have long been seeking ways to connect children with the outdoors. We are currently implementing innovative programs reconnecting Nebraska citizens with outdoor recreation, conservation and stewardship.

Our 20-year plan to increase participation in outdoor pursuits, our science-based conservation programs, and our elaborate State Parks system are just a few ways we have been successful in these efforts. Attached you will find some ideas on how we can work together to accomplish this important initiative.

We are excited about the opportunity for a greater collaborative effort between state, federal and community partners in implementing efforts that will support America's Great Outdoor Initiative and we are poised and ready to move forward.

Below you will find ideas on how Nebraska Game and Parks Commission can work together with the Federal Government on furthering the America's Great Outdoors Initiative:

Connect our Nebraska Environmental Literacy Plan to the federal "No Child Left Inside" initiative with funding and support through federal agencies.

Resurrect the Landowner Incentive Program as a way to restore and protect our private lands in Nebraska. This program was key in providing on-the-ground funding for our State Wildlife Action Plan through community based conservation with out private landowners across the state.

Resurrect the EPA Section 314 program or increase Section 319 funding for in-lake enhancements and restoration efforts

Discussion Question 1

Written & Online Comments

(cont.)

Along with the more traditional reasons to hunt and fish, there is a worldwide movement that is emphasizes the mental and physical benefits of being in the outdoors (Louv 2005). There has been a link to stress reduction after being in a natural environment (Wells and Evans 2003). Dr. Paul Quinette preaches that the act of fishing is something that helps to instill and maintain hope and relieve stress, which leads to a lower incident of suicide by participants (Quinnett 1994). Still other studies promote unstructured "play" in the outdoors for children as a way to battle obesity, Attention Deficit Disorder, and depression (Taylor et al 2001). Studies also show that outdoor "play" adds to cognitive and intellectual abilities (Wells 2000). While outdoor activities such as soccer and golf are positive, activities such as hunting, fishing, and camping, promote stronger relationships to adult environment attitudes (Wells, N.M. and K.S. Lekies, 2006). These studies all point to the greater benefits of hunting and fishing.

This plan lends emphasis to those actions that will or can impact a broad range of outdoor enthusiasts and is designed to develop new user as well as maintain existing. This plan also suggests actions that allow for added value impacts of utilizing agency venues, personnel and resources where appropriate.

This plan lends represents a base of 38 ideas, that have been further development with partners and appropriate personnel for implementation.

There are five main goals that best reflect the recruitment, development and retention direction of this agency:

Goal 1 Recruitment and Development of YOUTH Hunters/Anglers

Goal 2 Recruitment of New Adult Hunters/Anglers

Goal 3 Recruitment of Lapsed Anglers/Hunters

Goal 4 Development and Retention of Existing Hunters/Anglers

Goal 5 Maintain and Support of Hunting and Fishing in Nebraska by all stakeholders

(cont.)

The Chicago Wilderness (CW) Coalition is a regional alliance of 254 members. CW is seeking to protect and preserve the rich biodiversity of the southern Lake Michigan region, spanning from southeast Wisconsin, through northeast Illinois into northwest Indiana and southwest Michigan, through promotion of the Green Infrastructure Vision (GIV), which can be implemented on a regional, neighborhood, or site scale. Implementation funding for all scales is vital. The GIV identifies 1.8 million acres of prospective protection and restoration areas, of which 370,000 acres are already protected. The GIV serves as a guide to creating a region where healthy ecosystems contribute to economic vitality and a high quality of life for all residents.

US EPA Clean Water funding through State EPAs (319 funds) is providing \$7,348,000 to 20 projects across the state of Illinois in 2010 and will continue to be a critical funding source in implementing GIV on the site scale. Additional directives to State EPAs from US EPA are promoting green infrastructure funding. This, and other US EPA programs – such as the Water Quality Scorecard and Municipal Handbooks – provide much needed guidance for local jurisdictions and the State of Illinois, Wisconsin, Indiana and Michigan.

Creation of a National Wildlife Refuge, Hackmatack, now under study by FWS, would establish the first NWR in this urban metropolitan area. No NWR currently exists within 140 miles of the Chicago Metro region. Establishment of Hackmatack NWR would help fulfill the Fish and Wildlife Service's directive to establish "Urban Refuges" near population centers, helping to connect city and suburban residents with nature.

In Illinois and Indiana the Land and Water Conservation Fund helped to acquire and develop new parks of statewide or national significance by funding Illinois Beach State Park (Chicago) and expanding Indiana Dunes National Lakeshore, Indiana (Lake Michigan) - places of unique natural landscape and astounding biodiversity that provide close-to-home recreation opportunities readily accessible to the public.

Realizing the impacts of rapidly unmanaged growth, local residents in the Chicago metropolitan region have passed \$1.3 Billion in Open Space referenda since 1995. Fully funded LWCF would provide an additional source for land preservation in urbanizing areas of significant biodiversity. In addition, Wisconsin and Indiana lack the statutory authority to conduct locally driven referenda, and would benefit from this federal source.

The Urban Park and Recreation Recovery has provided over \$18 million in direct assistance to economically distressed urban communities in the Chicago Wilderness region, providing Federal assistance to urban localities for rehabilitation of critically needed recreation facilities and encouraging systematic local planning and commitment to continuing operation and maintenance of recreation programs, sites, and facilities in Chicago, Oak Park, Evanston, Kankakee, Milwaukee, Milwaukee County, Gary, East Chicago, and Hammond.

(cont.)

The Fishin' Buddies! Program exposes children to the outdoors through fishing and conservation programs. Its mission is "to instill an immutable concern for the air, land and waters of our planet, and a desire to nurture the soul through communion with the outdoors. Fishin' Buddies! believes in the emotional and psychological restorative powers of the outdoors and that it is important to expose this philosophy to children who's ideal of the "Great Outdoors" as being the grassless, glass strewn, debris filled, concrete and steel playgrounds of urban America." Fishin' Buddies Youth Conservation Corps partners have included US Fish & Wildlife Service, Chicago Wilderness, Illinois Dept of Natural Resources, US Forest Service, Chicago State University, Field Museum, and the Chicago Park District, and the Forest Preserve District of Cook County. The Fishin' Buddies Youth Conservation Corps is funded by a grant from the Gaylord and Dorothy Donnelley Foundation as part of the Chicago Wilderness Leave No Child Inside initiative.

Youth Conservation Corps Waukegan, a 501 (c)(3), is devoted to the development of youth and young adults in Lake County, IL, and sponsors two main programs: the YCC Summer Program, in partnership with the Lake County Forest Preserves, engages high school students in outdoor restoration projects designed to teach about the environment and conservation of natural resources; and the YCC Youth Build Program, a ten month community development program that engages at-risk, low-income, out-of-school youth ages 16-24 by helping them obtain their GED and providing on-the-job training in construction and carpentry skills, and natural area restoration activities. YCC employs a full-time staff of dedicated professionals, some of who are serving as AmeriCorps VISTA's.

Chicago Wilderness is the best model for regional coalitions focused on biodiversity and is being replicated across the country. It is a model alliance of 254 organizations working collaboratively across organizational and geopolitical boundaries, setting regional priorities for scientific research, restoration, and public outreach and engagement. Federal support through partnerships with regional conservation alliances is incredibly effective because the federal investment is leveraged by multiple organizations working at the local level. Federal support through programs such as the Great Lakes Restoration Initiative is effective at landscape scale across a complex, multi-jurisdictional metropolitan area where there are vital natural resources and 10 million residents. It is critical that the federal government continue to support large-scale land conservation, especially in metropolitan areas where networks of natural areas are fragmented and natural systems threatened.

o The best way to save entire forests, mountain ranges or rivers is through regional planning for conservation that connects large natural areas and through partnerships across all levels of government, and with land, farm and historic trusts and other nonprofit groups and private landowners.

Discussion Question 1

(cont.)

Chicago Metropolitan Planning Agency (CMAP) has just completed the GoTo 2040 Plan. Based upon three years of research, deliberation, and public input, the plan recommends action in four themes: Livable Communities, Regional Mobility, Human Capital, and Efficient Governance. By implementing GO TO 2040, our region will: emphasize support for existing communities; encourage more compact, sustainable development patterns; increase the efficiency and transparency of government through better decision making; reduce congestion by emphasizing modernization (rather than expansion) of the current transportation system; give residents more options for getting around, including transit, walking, and bicycling; improve parks and preserve open space; and reduce consumption of energy and water. Federal support and funding for Metropolitan Planning Organizations and for implementation of regional planning efforts is vital to sustainable land use planning, especially in resource rich areas. GoTo 2040 Plan implementation through HUD funding is particularly important now.

On June 25, 2010, the Chicago Wilderness alliance released its Climate Action Plan for Nature, the first to address issues of biodiversity conservation and climate change in the greater Chicago region. The plan was developed with the leadership of The Nature Conservancy in Illinois and a number of partners within the alliance. It identifies actions related to mitigation, adaptation and increased public awareness as key strategies in fighting climate change, and addresses the significant role of, and threats to, natural area conservation in the face of this phenomenon. This supports and complements the US FWS Five Year Action Plan for Climate Change. Federal collaboration with CW, through the initiatives of Landscape Conservation Cooperatives (LCC) and Strategic Habitat Conservation (SHC), will be extremely important in the coming years.

Protection of public lands, and the scenic and recreational amenities they provide, supports our local economies. In total, active outdoor recreation generates over \$4 billion in revenues annually to Illinois' economy and supports 30,000 jobs. The National Survey of Fishing, Hunting and Wildlife-associated Recreation data from 2006 showed 3.7 million people in Illinois and 4.1 million people in Wisconsin participated in fishing, hunting and wildlife watching contributing \$2.3 billion in expenditures in Illinois and \$3.7 billion in Wisconsin. In the Chicago region alone the birding community generates more than \$356 million for local economies.

Landscape scale conservation offers communities an alternative vision for development which incorporates the value of natural areas and open space as an economic driver. Conservation initiatives which capitalize on a mix of public and private landowners create a market identity that attracts visitors and helps communities maintain their unique environment, heritage, culture and identity.

National Parks are our nation's most beloved places. The parks are anchors that protect the nation's treasured landscapes, and are integral to landscape-scale efforts merging protection, public access, and sustainable economies. There is an opportunity to leverage existing public enthusiasm for parks to do much more to connect youth, families, schools and communities to the great outdoors. The tremendous experience of the National Park Service can help Americans access healthy outdoor activities and the natural world, both close to home and across the country, and help nurture lifelong relationships with our Great Outdoors.

(cont.)

Through the America's Great Outdoors listening sessions, the recent Ken Burns documentary, the National Parks Second Century Commission report and in your own personal lives, you have seen the important role that national parks have played in forming our nation's outdoor legacy. In fact, polling conducted by Hart Research Associations shows that national parks are inherently linked to America's Great Outdoors in the minds of the voting public. Most voters, when they hear the phrase America's Great Outdoors, think first of national parks, and eighty percent of voters say national parks should be a centerpiece (forty-three percent) or important focus (thirty-seven percent) of the administration's initiative.

We represent a broad range of interests, from tourism to education, philanthropy to recreation. We learned from the last Administration's Centennial Challenge (an experiment in public-private partnerships for parks), and we want to translate those lessons to a new grassroots campaign for our national parks. Our organizations contributed some of the \$32 million from the private sector that was matched with \$25 million from the public sector in 2008 and 2009 to complete projects and fund programs in the national parks. We know what worked, what didn't and how to improve public-private partnerships that will be the centerpiece of our nation's new conservation strategy.

In the words of retired Associate Justice of the Supreme Court and National Parks Second Century Commissioner Sandra Day O'Connor, There's no better route to civic understanding than visiting our national parks. They're who we are and where we've been. Public lands in this country are owned by its citizens; national parks are a reservoir of opportunity to help Americans experience this sense of ownership, to enhance quality of life and to help communities foster healthier recreational access to the outdoors. Your administration has the opportunity to frame and solidify the National Park System's legacy for the next hundred years.

A truly historic America's Great Outdoors initiative must have a prominent place for our national parks. We look forward to helping the Obama administration develop and implement an initiative that provides a lasting legacy for our children and grandchildren.

It is appropriate since this "America's Great Outdoors Listening Session" is being held in the longleaf pine ecosystem of South Carolina that a longleaf restoration story be shared. Saloom Properties, LLC is a 1762 acre Tree Farm in the coastal plains of south Alabama - an area naturally in the longleaf range. Historically the longleaf pine was the dominant species of tree on an estimated 60 million acres. This has been reduced to its existing 3 million acres. We have seen a resurgence of restoration of the longleaf back to its natural ecosystem. Each year more acres are being planted and managed by private family forest owners.

In 2004 Hurricane Ivan wreaked havoc with its destruction to South Alabama. The day after the storm the stumpage price for our wood products were more than laved. After 5 months of logging clean-up and recouping only pennies on the dollar for salvaged timber, we decided to turn adversity into opportunity. Over the next 4 years we planted 450 acres of longleaf, and now we manage this ecosystem with prescribe burning, herbicide site prep and release and spraying for control and eradication of invasive species.

Discussion Question 1

Written & Online Comments

(cont.)

It was through incentive cost-share programs for replanting, control of invasive species, education for certified burn manager, wildlife habitat improvement programs, land recovery program that we were able to reinvest, replant and manage for sustainable forestry.

The results --- and ecosystem that is thriving with wildlife including turkey and quail and the threatened gopher tortoise.

It has become our responsibility as family forest owners to manage our forest for improvement and sustainability.

We share and promote good forest management for future generations. We are actively involved in education through personal contacts, seminars, field days and programs such as Classroom in the Forest/Forest in the Classroom with school children on an annual basis. In May we had 500 people visiting our farm on two separate field days. One of these field days was titled "Longleaf Restoration and Wildlife Management."

The management guidelines published in 2006 by the National Off-Highway Vehicle Conservation Council contain this guidance on page 35: "Water Control and Stream Crossings. Water control structures should be incorporated into the trail grade. Stream crossings should be located where the stream bottom is solid, stable or modified to support the expected uses. Stream banks should be hardened or stabilized, if necessary, to prevent unacceptable erosion or sediment delivery into the stream. When local regulations require and when crossings cannot be stabilized, streams should be bridged."

The National Trails are treasures which provide recreational and educational opportunities to millions of people. Many times the trails are located surprisingly close to urban areas. Completion of the trails would enable many more people, particularly young people, grow closer to the land and learn more about the natural world.

So then why even make it wilderness if it is already untouched? Just for the sake of wilderness. So I say make it NF and not lock everyone out.

Actually Wilderness is not decreasing it is increasing, and we need less wilderness and More NF, it's a much better solution and everyone gets to play on public lands.

we need more off road ways and less wilderness. Everyone wins with NF

Fires are a positive thing and completely natural. Deer and Elk tell you this just simply by the next year after a big fire guess what moves in???? Deer and Elk to eat off of the fresh grass that comes up the next year. Fire suppression hurts our critters way to much and we should let more forest burn, sure it looks like crap for some years but there is new growth on the way and it is 100% healthy. I know your going to say the deer and elk were already there which is true but the numbers of animals that move in on these burns tell you that they are a positive thing, we need more fires to clean up the old and get with the new.

Discussion Question 1

(cont.)

I first saw this magnificent canyonlands 55 years ago as a boy of 13 on a family trip. I can still vividly recall the experience of camping and hiking in the canyonlands. This is one of the remaining national treasures that we absolutely should protect for the enjoyment of future generations. If we don't it will soon be gone forever!

Use of Chainsaws in the forest ARE permitted with the approval of the Ranger in charge. Certified Chainsaw Operators go through a 8 hour class and a 6 hour field time before being certified. This gives the operator the use of the USFS Insurance if the need prevails for them. Plus, the Person is well aware of what to cut, look out for widow makers, and stay with in a 2 foot range of the trails they are working on. Not every one MUST be certified through USFS, but their Insurance is better than ours for sure. I know.....I am certified.....and I am a Trail Advocate and member of Blue Ribbon Coalition.

Well . . . just discovered that six years ago: "In May 2004 President Bush issued an Executive Order, which recognized the Great Lakes as a "national treasure" and created a federal Great Lakes Interagency Task Force to improve federal coordination on the Great Lakes. The Order also directed the U.S. EPA Administrator to convene a "regional collaboration of national significance for the Great Lakes." This collaboration process was needed to develop, by consensus, the national restoration and protection action plan for the Great Lakes." ---- { Link }

Discussion Question 1

(cont.)

Here was the official statement: Great Lakes Declaration Protecting and Restoring the Great Lakes through a Regional Collaboration of National Significance We, the Conveners of the Great Lakes Regional Collaboration, established on December 3, 2004, in Chicago, Illinois, in acknowledgement of Executive Order 13340 signed by President George W. Bush on May 18, 2004: 1. Recognize that the Great Lakes are an international treasure which contain about 20 percent of the earth's fresh surface water, support the culture and life ways of native communities, provide drinking water to millions of people, and form the backbone for billions of dollars in shipping, trade, fishing and recreation; 2. Recognize that the Great Lakes Water Quality Agreement of 1978, as amended by protocol signed November 18, 1987, the Convention on Great Lakes Fisheries of 1954, and other regional multi-jurisdictional agreements with Canada, commit the United States and Canada to restore and maintain the chemical, physical and biological integrity of the Great Lakes ecosystem, including the adoption of common objectives and cooperative programs; 3. Recognize that while there has been progress in restoring and improving the health of the Great Lakes ecosystem, there are still tremendous threats to the physical, biological and chemical integrity of the ecosystem; 4. Note that citizens, as well as many federal, state, and local agencies, Tribes, elected officials, and stakeholder groups, including the environmental nongovernmental organizations, industry groups, and the agricultural community, serve a vital role in protecting the Great Lakes ecosystem; 5. Acknowledge that numerous multi-governmental and non-governmental stakeholder networks have demonstrated a long history of effectively collaborating on a variety of complex regional and local ecosystem protection and restoration efforts; and 6. Affirm the need for leaders in the region, including Great Lakes Governors, federal agency heads, Members of the Great Lakes Congressional Delegation, Great Lakes mayors and Tribal leaders, building upon the extensive regional efforts to date, to collaboratively work together and with the Great Lakes community toward a common goal of protecting and restoring the Great Lakes ecosystem in order to address the new and continuing challenges and ensure a healthy ecosystem for future generations. Hereby, consistent with the laws applicable to our respective jurisdictions, pledge our support for the development of a widely understood and broadly supported strategy including actions to further protect and restore the Great Lakes ecosystem through the Great Lakes Regional Collaboration process.

Responsible motorized recreation is key. Promote awareness of the lowest impact possible by motorized vehicles and let them have access.

Discussion Question 1

Written & Online Comments

(cont.)

Every young person should have the opportunity to spend time in a beautiful natural setting. Many kids will never have the opportunity to experience extended time in a natural setting without support from parents, teachers, schools, government, or community organizations. Every person needs to find something that sparks their imagination and spirit, and nature does this for many people. Kids need the opportunity to discover this. The opportunity for a young person to spend multiple days in an educational program in a National Park combines this experience in nature, with a beautiful lesson in civics. Being in a National Park helps them realize that enjoying this protected, beautiful land is a gift given to him/her from previous generations. With luck and effective teachers, they will also learn that active participation in our democratic system is the only way to protect the parks for future generations.

Open use of motorized vehicles on public lands must be observed. It can be a responsible form of recreation and one that connects so many people to so many places.

How do we insure our national parks are relevant to future generations? How do we promote a connection between the natural world and our youth? It seems one of the best ways to address both of these issues is to increase opportunities for students across the country to access their parks. Increasing the opportunities for schools to engage educationally with our parks and for students to connect with the natural world seems essential for the future health of our parks and our children. Developing and maintaining partnerships with schools and existing park partners seems a critical piece in hopefully ensuring connections to our natural world and helping to create a sustainable future for all.

Our public lands need to stay open so all can enjoy their beauty. Me and my family currently enjoy our public lands through camping, backpacking, horseback riding, snowmobiling and quad riding. If everyone would be polite no matter what they are doing, to others using the same public lands than we can all enjoy it.

Until a few years ago, USFS and BLM lands are "open unless marked closed" for OHV. The Forest Service is just now working on transportation plans that take a more deliberate approach to where trails should be located. BLM only closes lands where there is resource damage. If the OHV crowd were truly interested in having appropriate places to ride, they'd get behind this kind of planning and quit whining about "losing" trails that were created without restriction.

Discussion Question 1

Written & Online Comments

(cont.)

In the ATV clubs I am involved with, I see operators ranging in age from about 10 to the late 70s, perhaps into the 80s. The young riders are always (within club activities where I have seen them) closely supervised by adults, wearing protective equipment and riding machines sized appropriately to their age levels. ATV use allows people of all age levels to get out and enjoy the backcountry and experience views that a large portion of the public never sees. As to hiking instead of riding...most places OHV users are looking to get to are 10-50 miles from a paved area where most would choose to leave a vehicle. I don't know any hikers that can do double that (round trip) in a day, but based on all the posts on here, it sure sounds like some posters are just supermen and could easily do so. This sport has allowed me to meet and enjoy the company of a great number of people of all age groups. These people have all been great and a joy to be around, making me realize that the stereotype of rebellious teens and grouchy old guys seems to go away once you get a few miles into the mountains. Or perhaps this sport just attracts some special people. I don't see nearly the amount of bitter people involved that seem to be common in the hiking community. Though I'll admit, as someone who has done so, humping a pack 15-20 miles a day through the mountains doesn't do the best things for my attitude either. We OHV riders do have to do some work to get other people exposed to our sport. I didn't own a quad until relatively late in life and spent most of my time exploring just a few miles a day hiking, usually on the crowded trails nearest town. I felt some animosity towards ATV and dirt bike riders that would pass me. Not because of noise or fumes, but simply because they were doing something different, and honestly, they seemed to be having a lot more fun than I was. I was fortunate enough to meet some friendly riders that allowed me to borrow a machine for a day and was quickly hooked. The quads have allowed my wife and myself to see country that only a tiny portion of the population of even this area get to enjoy. And I have yet to meet a hiker on an OHV trail around here.

OHV usage has been a great family event for us, we get to spend quality time with our children away from the distractions of modern life (T.V.'s -video games - etc.) please don't take anymore of it away from us. We have already lost enough. We have to drive for 3 hours to go somewhere legal to ride.

Riding OHVs, riding mountain bikes, and hiking are not mutually exclusive. My wife, boys, and I have enjoyed all of these activities as a family. Over the years we've spent roughly as much time hiking as we have riding. Having some areas where OHVs and bikes are not allowed makes sense, and we already have millions of acres all across this country set aside for non-mechanized recreation; wilderness areas and national parks fit this bill. Having areas allowing OHV use and mountain bike use also makes sense, but unfortunately these areas keep getting made smaller and smaller, or are closed outright. This results in the remaining areas being more heavily used and makes accidents more likely. There's room enough for all of us to enjoy our family recreational activities in this great country if we'll just use some common sense in our land management decisions.

Anything that the Government is involved in, is a MESS. We need more Public involvement with user groups of all types involved. Get the Government out of our business. Also, make the sue happy enviro's pay for all the lawsuits that they file.

Discussion Question 1

(cont.)

I love the great outdoors and have all my life. My dad taught me to respect the land and the cub scouts and than the boy scouts solidifide my respect. I now have two bad knees due to football injuries. Off-roading is the only way I can get back and enjoy the wonders of the lands. If we keep restricting where we can go by putting us into a small box, we will have more injuries due to congestion. That only hurts us all. Please lets keep the back country for us all so we can use them.

I also agree if you add National Wildlife Refuges!

The question is, how far can anyone walk? OHV and ORV areas are of littlr use to would be back packers due to a lack of ineresting features and more importantly a complete lack of surface water. There IS plenty of land for all if we just consider what exists on said land. Way back at the age of 34 I ran my last 5K foot race in 17:34 Even at 24 I would not have attempted to carry three days worth of water to enjoy lands without historic or geological attributes. I've never seen a soul on foot or bicycle in some of my former favorite off road motorcycle riding areas that are now wilderness. Those areas are too far to walk or peddle, even if there was a reason.

all uses are appropriate if done with respect for the land.

My family uses our public lands for mulitple uses. We hike, we bike, we ride off hwy motorcycles, and we maintain all trails in our forest, working together with our local forest service on all trails. Our local OHV club maintains equestrian trails, the mountain bike trails, and the motorcycle trails. We all work together to keep all trails open. Most of these are not multiple use trails, but we have trails in our forest that we all want to keep. When a mountain bike trail, or an equestrian trail needs repair from winter erosion, or even a weekend equestrian or mountain bike event, the Forest Service calls our OHV club to get a work party together to fix the trails. At a work party last year to relocate, and build a new mountain bike trail, 60 motorcyclist showed up and only 4 mountain bikers. This was a trail that was not to be used for motorized recreation, and still it was the motorized users that came to build the trail. We can do amazing things when we all work together. If you want to know how it is done, contact the Tahoe National Forest in Nevada City. All Forest Departments can learn to use ALL lands publicly. I hope my kids and my grandkids all have the right to use their public lands to enjoy, just the way we have (until recently).

I was fortunate as a child to spend time in nature: camping, hiking, identifying species along the trailside. My mother was a biologist and working environmental educator, so I had experiences many youth in my community never had access to, and these experiences shaped my life and my choices decades later. It is essential for all youth to experience nature in all its glory, to look up and see stars at night, to breathe fresh air and learn about the flora and fauna that surround them, and then learn how our choices impact this environment. Please support environmental education programs in our national parks. Support the growth of nonprofit partners so one day every child in America can have a life-changing experience in a national park.

Discussion Question 1

(cont.)

We the people are in charge of our lands not some wacked out group that gives animals more rights than humans, listen to the off-road community and you will find they love nature and many go far beyond the "groups" to preserve it and to also promote its use for future generations. Keep America free and the great outdoors open to be enjoyed.

I fully agree. Restoring the Klamath river would be a good thing to do and could also bring back means for subsistence to the Klamath people. Dams are the cause of blocking salmon migration, not the native people (or did anyone ever think salmon can climb dams?).

Don't you think the wilderness attributes will be destroyed if the wilderness is not protected? You will not be locked out, you'll just have to treat the place with the respect it deserves.

I hope this will serve as a way for OHV enthusiasts to be heard. We need a place to to get away from the cities & enjoy camping/riding. If we shut ourselves in on the cities it just means that there is no way out. I believe that there is a responsible way to enjoy an area w/o a negative impact IF that area is not so small that it is being over used.

I'd be glad to share with you a video tape I made while atving in northern Minnesota where a cow moose entered the trail only a couple yards ahead of me, moved to the other side of the trail, and began browsing on the fauna. I taped the cow for nearly twenty minutes, only 30 feet or so away while (for the most part) my atv sat idling on the trail. Only after this period of time of enjoying her non-reaction to me and my machine did I slowly move forward past her. I realize this is not the norm, but I have had similar experiences with a bull moose in rut and most recently two eagles. One mature bald eagle and one huge golden eagle who circled above me before landing less than 20 yards away on the ground! It was only after moving forward towards their general direction did they take flight. Beautiful sight. I had not seen them actually land among the maples and brush ahead of me while I was stopped or I would have had my camera ready. I'm not saying that we don't startle wildlife while on a motorized machine, but then again, I'm not saying we don't startle them while walking, either.

Climate change ... has been happening long before the likes of Gaylords have been crawling the Earth.

Not everything can or should be a national park. If you truly want to preserve national parks then do not allow any human access.

Discussion Question 1

Written & Online Comments

(cont.)

Just fyi to the OP. Your prius has more carbon emissions than my dirt bike. Also, what are you using to get to your hiking spot? A carbon free piece of equipment? Perhaps we should look at limiting urban sprawl and continued construction. How much emissions are created by the multitude of construction vehicles? How much intrusion into native habitats have been done in the name of convenience, so you can have your walmart closer to home? That clearly exceeds any impact that OHV use has on the environment. There can be responsible and irresponsible use of any piece of equipment or activity, so should we ban everything? No, obviously not. Most of my fellow riders and my family are actually conservationists, because we want to retain wilderness areas for our chosen manner of enjoyment. Don't profile based a certain vehicle. Judge the driver if there actions warrant it.

"This is the best idea I have seen!" I agree! And I'm pleasantly surprized to see the vote currently promoted by 465! Why? Because it's a compromise on both parts. I'll even add responsibility to it, wherein I mean following rules, laws and etchics... "Promote ALL forms of responsible recreation"

who wrote: "We can do amazing things when we all work together." THAT'S what I'm Talkin' about!!! Nevada City eh? I grew up in Grass Valley and I still have family up there.

wrote in the OP: "Please ban or restrict their access to public places. " In "Public Places" OHV access is already restricted and limited. What is your idea here?

This is a great idea! It reflects a balance of acces levels for a diverse Public. I believe that this is kind of what we have (in my area) at the present.

wrote in the OP: "These noisy vehicles ...<SNIP!>... should only be allowed in limited areas that do not have ecological significance. Even I, an avid OHV user and Tread Lightly advocate can tell you that all places on our wonderful planet have 'ecological significance'. So, as a result, you are calling for an outright OHV BAN on Public Land. DEMOTE. This idea does not include any provisions for OHV access over waterways. However, since it does not, it would substantially reduce OHV access in current OHV use areas. DEMOTE.

(cont.)

Lets not forget about Quality Family OHV Time in the Desert! ;) As I kind of posted elsewhere... The only time of the year that my wife and I (residents of Calif) get to see our family from Nv & Az, is when we meet in the Calif Desert for our OHV trips. Our camp is conveniently located half way between our far away homes. We will circle our RVs together and dry camp. Some times as many as 25 family members! In addition, OHV has become the glue that keep my kids involved and interested in their family as many things (friends, video games, hanging out, etc) have become cooler than 'parents'. My kids will proudly BRAG to their friends about their OHV trips. Via radio communications my family converses while riding, as if we were all sitting on the couch together. I will frequently point out a Hawk or a cool Slip-Face to my kids, or vice-versa. Regardless of who's on the ride, we will stop atop a big dune for a ride-break and take in the views that can only be seen from either the seat of an OHV, or a very low flying airplane. Back at our OHV Camp, we have camp-wide community dinners with family and friends, horseshoes tournaments, camp fires, smores and competitions for the kids (glow-stick prizes). After the kids go to bed, the adults party it up a bit (with the OHV's locked up for the night) around the camp fire. We are doing this an average of 50 nights a year, in the Desert, on BLM Land. So, yes, I would certainly say our OHV trips are all about Quality Family Time in the Desert for my camp. And that, is a fact!

As an avid OHV user and 'tread lightly' advocate, I strongly agree that OHV groups and riders need to do more to cultivate a responsible environmental ethic among all OHV users. I would think that this is what every OHV user would want. Now, this said, your OP attempts to walk the fence between two parties, but it really comes close to (or maybe does) offend an OHV community causing them to demote the idea on this forum, I only hope that they haven't done so in their heads!!! In general OHV groups do preach the 'Tread Lightly' concepts. One of the largest in your area is the American Sand Association. Check it out. Beyond that, where the rubber hits the dirt, 'my camp' passes along this ethic at every opportunity. In your OP, you wrote: "I've watched as these illegal OHV routes greatly facilitated the colonization and spread of several invasive and noxious weed species, especially cheatgrass and Sahara mustard." Can you provide any science to support this statement? Because I question how you think an OHV in the dry desert is facilitating this process? After riding my quad literally thousands of miles in the California Desert, I can state as a matter of fact that I've never brought it home with invasive and noxious weed species seeds on it. It's not like OHV's in the Calif Desert carry seed born mud and drop it off in other areas. 99% of the year, there is no mud, as it's a desert. If so, I would have invasive and noxious weed species growing in my lawn, where I wash my quad off after every trip. It's nothing less than unfortunate that the Mojave desert tortoise population is declining (and I thank you for not blaming that on OHV as there is science to the contrary), but I will not let you place blame of a fire killing more tortoise on OHV if your link is to an OHV transporting a seed. The whole concept is kind of a stretch to begin with. Other 'elements' transport seed much more efficiently than a machine that is not designed to do so. Wind. Birds Animals Flowing water I am receptive to your idea that OHV groups and riders need to do more to cultivate a responsible environmental ethic among all OHV users. But you lost my vote in your OP. If you would like to revise it to something that is not blaming OHV for "greatly facilitating the colonization and spread of several invasive and noxious weed species", I will change my vote.

Discussion Question 1

(cont.)

"Common sense must prevail. Protecting habitat can be balanced with protecting access to public lands for all! Hikers, Bikers, OHV,s, Horses all can and should be managed to maximize public access. How better to foster appreciation of our public lands." As a avid OHV user and 'tread lightly' advocate, I 100% agree with you! "It is ridiculous to think of restricting motorcycles from public lands." What you are talking about is a complete ban of OHV use on public lands and this, to me, is nothing short of unacceptable. The OHV community has suffered restrictions and closures for decades. We stood by and watched our old riding areas become congress designated Wilderness Areas and we've seen the result of the Endangered Species Act closing swath of land after swath of land. In the same breath that I tell you that I do not advocate OHV use on ALL Federally Managed Lands, I will tell you that an outright ban of OHV use on Public Land is not acceptable. There is a balance!

Every trail user leaves behind some form of pollution and creates some form of erosion, it is the uneducated user that are the worst of us all. Those trails that every one wants to ban motorized users from need to realize that we OHV users are the ones that fund said trail maintenance and other state and national wilderness areas and education through a program called the recreational trails program or RTP. The rtp is funded by a gas tax on fuel used in OHV's. The state of Rhode Island (to the best of my knowledge) has an excess of 4 million dollars in unused rtp funds. We also have no public place for ohv's to recreate (with the exception of trials bikes and minimal "dirt" roads for enduro's and 4x4's. Now even mtn bikes are loosing there places to ride.

I love to be out in the woods with my kids, & friends, at 33 my joints are starting to go the way of the dodo so biking and hiking are pretty much out of the question. but i can drop my jeep in to 4low and enjoy my low speed thrill ride at a top speed of 5mph. plus it is difficult to lug a 1/2 ton of tools and trail maintenance supply's via hikeing

OHV ers in California alone contribute 40 million dollars a year to land stewardship through the OHV Green Sticker program. This money goes to trail maintenance, restoration, and many non-OHV programs. What have you done?

There's room for all kinds of recreation for families. Hikers have their's and off-roaders need theirs too. People evolve in different ways and all people deserve the opportunity to see nature. Quadraplegics need a way to see wilderness in 4X4 vehicles (driven by family of course) as well as my 84yr old dad who can't hike anymore. Anyone that thinks it's good to shut down off-roading opportunities is simply self centered, thinking only of themselves. There is plenty of land today that is reserved for hikers only, and the land for off-roaders today is adequate for those recreational methods. There's no reason to convert one to the other. Everyone needs to chill out and let all walks of life enjoy nature. Why is it that Sierra Club hikers are always trying to steal and convert it to their type of land? Is that fair to the majority that are off-road enthusiasts? Is it fair to the unfortunate that cannot hike because of age or disability? What makes them so deserving? Leave the land open for access by all, it would descriminate against the majority and disabled if you don't.

(cont.)

An old route to the west has a unique designation a State park with one tree and one of the largest living American Elm planted by a pioneer. The landscape also changed after the near extinction of the Bison by the railroads and the new access for easy hunting. Human beings naturally change the landscape by travel. The best way to keep a natural ecosystem is without human occupation in wilderness. Birds and other animals are more limited by range or habitual patterns of travel.

There can be a balance between usage and preservation. I find it troublesome that we have lands that are being managed by people who are not open to any of the recreation that is allowed. Then when a problem arises and the reaction is to shut everything down. We need responsible management as well as responsible usage of the land. Is it possible? Yed, but it takes work, and there is plenty of it to be done. Lets keep OHV recreation available for the families and for future generations.

This is an emotional topic, but we can't let emotions create the laws. The facts have to drive this argument or nothing good will come. When it comes to damage to the land, traffic causes the damage; foot, hoof, wheel it doesn't matter. The more a trail is used the more damage it has done to it. That damage can be mitigated with a little education, and rectified with some volunteer labor. (Increase the number of trails, build volunteer groups, educate) When it comes to noise complain about noise, but do not eliminate the users. Noise can be controlled take a Harley and a BMW motorcycle for example. (Educate, pass noise laws) When it comes to smell and or air pollution the argument does not stand up either. I'm not saying that air pollution does not occur but it does occur with all user groups and modern OHVs are extremely clean. I love to hear how XC skiing is so clean, do you realize that the money you paid for a pass goes to buy diesel for the groomer. (Educate) OHV use is a very family oriented activity. I feel that any activity that brings the family together should be encouraged. Not enough family time is one of the things wrong with this country. (Encourage family activities) The people that claim OHV use is not physically demanding are simply showing how ignorant they are. I challenge the most fit of your kind to ride a motorcycle or snowmobile for say 2 hours it should be easy right. I live in Idaho, I will make sure you are well equipped and we will ride. I hike, hunt, backcountry ski, mountain bike, off road motorcycle, snowmobile, skate ski, alpine ski, and do trail maintenance on a regular basis. So when I am doing a 100 mile ride in the backcountry and you are sitting at your computer or having dinner at the restaurant, how could I not agree with you logic of close everything for the time you might come and visit, and it should be as you wanted it, waiting for you.

"You are right and right now most areas are available to everyone but sadly ORV users are not happy with that. They want access to protected wilderness areas, land set aside for endangered species, national parks, trails set aside for hikers and everywhere else for that matter. Wow, that's just a bald-faced false statement.

(cont.)

i would much rather actively participate in an outdoor activity than sit and watch tv and NOT communicate with my family and friends. i would much rather meet new friends than stay locked indoors. i would much rather lend someone a helping hand than watch them struggle thru a closed window i would much rather show and teach my kids and grand kids how to enjoy and respect the environment than to just show them a picture of what it looks like. i would much rather spend my time with those who appreciate their freedoms than with those that try to steal them from me by locking me out from my own country. keep America open and free for all to enjoy!

as a doctor who has a son as a doctor.. we ride with our families. we teach them safety and how to respect the environment. we clean up after ourselves and enjoy natures beauties as well as each others company keep our public lands open and let us ride, hike, camp and recreate

it is man with nature and the great outdoors for me and my family. dont lock me in the house with a tv. outside with my family and friends outside with the wonders of the earth keep the trails and public lands open to and for all

The forest doesn't need "wilderness" designation to be conserved. The National Forests are managed for sustainability and recreation both and therefore benefit the most people while preserving them for future generations.

The best experiences of my life have been camping and dirt biking with my family in Mendocino National Forest. The place is beautiful, quiet and wildlife is abundant. I hope that those that follow us will be able to have experiences like I have had. Management of trails and vehicles has greatly diminished some of the reported negatives.

I don't think that Wilderness designation is necessary to protect the forests. I think that the BLM and National Forest system do a good job of protecting the forests while making them available and pleasant for all who wish to visit them.

Anyone who has explored the western states knows that there is room for all out there. Trail mangement, noise restrictions and education have greatly reduced the negatives of OHV. The dirt bike is the horse of the middle class and sightseeing on these modern horses is a wonderful experience.

Finally, we would like to acknowledge how important NRCS and Farm Bill programs like GRP, FRPP, WHIP, and others have been for land conservation and stewardship in the Crown, and we would encourage the Administration to support and enhance the delivery of those programs to rural landowners.

Discussion Question 1

Written & Online Comments

(cont.)

We are landowners and residents of major landscapes within the Crown of the Continent (the Seeley-Swan, the Blackfoot Valley, and the Rocky Mountain Front). While our communities are quite different from one another, what we share is extraordinary. We make our living from the land – from ranching and forestry to outfitting and outdoor education. We share a common love for the land and a strong desire to make a difference by tending to our families, community, and the wonderful landscapes we call home. We live in working landscapes that drive the economy of our communities. Maintaining the livelihoods of the people who live here and steward these lands is the key to protecting the conservation values that are so important to our community and the American people. To do this, we have come to realize we must build bridges with our neighbors, public land agencies, conservation groups, and others through proactive, local partnerships that can achieve real and lasting results.

Over the last 30 years, our collaborative efforts have made a major difference for maintaining the rural and natural values of our lands because we worked on real solutions that we could all agree on. Known as the 80/20 rule, we have worked on the 80 percent we have in common and left the 20 percent of differences at the door. Moreover, we have all come to the table with a long-term view and a commitment to work together as a way of business, not as a one-time event. While our initial results were small in scale, over time we realized we really could make a big difference if we took a landscape view. Our landscapes are made up of extensive public and private lands that are interwoven in very important ways, so we have focused on true watershed and landscape-level solutions that integrate “all lands”. Most of all, we have come to realize we share this great place known as the Crown of the Continent in common and that to be ultimately successful we must connect with each other across this larger region to realize our collective potential and responsibility to steward what has been given to us.

We believe that the primary challenge for conservation in the 21st Century -- and therefore the focus of America’s Great Outdoors -- is how to sustain working landscapes, working communities, and working people. And while no single approach is appropriate in all situations to achieve this mix of objectives, we believe that one of the most important building blocks in any region is strong, inclusive, and locally-driven partnerships -- such as the Blackfoot Challenge, Rocky Mountain Front Advisory Committee, Coalition to Protect the Rocky Mountain Front, Swan Lands Coordinating Committee, and the Southwest Crown of the Continent Project.

While these community-based partnerships have been the stronghold of conservation success in the Crown, we also recognize that we need to organize on a more regional scale across the whole Crown of the Continent to address larger scale challenges such as climate change, ecological integrity, wildlife corridors, land-use and energy development, and forest and rangeland management. To this end, we are fortunate to have several “ecosystem-wide” initiatives underway here in the Crown, including the Crown Manager’s Partnership, Crown of the Continent Ecosystem Education Consortium, and the Crown of the Continent Geotourism Project – to name just a few. These regional efforts complement the work of community-based partnerships.

Discussion Question 1

Written & Online Comments

(cont.)

During the past couple years, we have started experimenting with the idea of a Roundtable on the Crown of the Continent – an ongoing forum to bring together currently independent initiatives, share information, and explore opportunities to work together. This process of connecting community-based partnerships across a larger landscape is very much a work in progress, but is essential to meet the conservation challenges we face in the 21st century.

Collaboration alone will not result in sustaining large landscapes. What we have found absolutely critical to our efforts has been accessing voluntary incentives and capital resources to protect open, working lands and public lands from fragmentation. Tax incentives for donating conservation easements over private lands and funding for agencies and land trusts to purchase easements have made a huge difference in the Crown. Private landowners in the Crown have placed more than 260,000 acres of working ranchlands into conservation easements through this effective tool.

The Land and Water Conservation Fund has been especially useful for this purpose as well as helping us secure large-scale industrial timberlands that could have been subdivided and sold for development.

Maintaining and restoring a healthy landscape over the long term also requires transforming the old economies of extraction into new economies of stewardship. In the Crown, rural communities want to reap tangible benefits from conservation including family wage jobs, new business opportunities and an increased ability to retain private forests and ranchlands for sustainable production. Over the past 30 years, we have had some success in the Crown creating new economic opportunities related to land stewardship. We have restored more than 60 streams, opened 250 miles of fish passage, restored over 3,000 acres of wetlands, restored 3,000 acres of private forests, and treated noxious weeds through watershed-wide programs. In order to assure that our conservation successes endure, we are looking for new strategic investments in restoration and stewardship.

I have been involved in local park commissions in my local community, which happens to be in Eastern Pennsylvania. I can attest that ATV's and snowmobiles are, in balance, a plague on natural areas. While the idea of "responsible use" has its appeal, and I'm sure many ATV owners and enthusiasts enjoy their sport in a responsible manner, there are too many who don't, and the wanton destruction of trails, slopes and woodlands is an ongoing headache in our area. The problem is that it's almost impossible to enforce restrictions on where and how these vehicles can be used. Advertising in the mass media reinforce the "go anywhere, anytime" attitude that is too prevalent in the ATV subculture. ATV's and the like should be banned in our National Parks, except where their use can be tightly controlled.

I have been privileged to tour three Civil War battlefields, lin in Tennessee, Vicksburg in Mississippi and Perryville in Kentucky. All three contributed greatly to my understanding of the Civil War. Without these sites being preserved, future generations will not be able to understand physically what happened in those four momentous years. I am stgly in favor of battlefield preservation so that they can trully have something more than books to understand the past history of the United States.

(cont.)

I have lots of fond memories of family experiences in nature with my father and none of them include being on a ohv. Quit being lazy and take your kid to enjoy nature as it is instead of letting him see it as a blur and the whine of very loud motor.

I have no idea what I could have said that could be skewed into what the other " " refers to me as. I very much enjoy being outdoors. I hunt, fish, hike, rock climb, camp and go offroading. I can appreciate the need to preserve our nations wilderness and I dont want it harmed. What I am after is the preservation of the land already designated to OHV use. Why are we losing ground every year? What I said in reference to wildlife viewing while jeeping needs to be clarified. When I am in my jeep I am not looking for wildlife. I am concentrating on the trails and very little else. Compare that to your daily commute. Do you look at wildlife while you are driving your car? If you do I dont want to be on the road with you!

I have no problem with a motorized trails, but please don't sell it as "multiple-use" when it would in reality be only for the motorized community.

I have some experience leading a nature club, and it can be difficult to compete with sports and electics. After school programs that are too academic or involve too much quiet, sustained activity (such as drawing, writing, nature photography) tend to be unpopular. Those involving more physical activity, such as hiking or animal tracking draw a slightly larger following, but those that attract the greatest number of kids are the consumptive activities. Kids love foraging for wild edibles, for example, and then preparing and sharing a treat or meal with them. Younger kids also like gathering bark, acorns, seed pods, etc. to use for sculptures or "fairy houses", and treasure hunts and geocaching appeal to some. I think the more academic and quieter nature activities should be offered during school hours. They can be worked into other subjects like writing, art, and science, but in my experience cannot compete with organized sports and electric games. It's the rare kid who chooses to spend his free time birding or photographing frs.

I have visited Yosemite NP, Grand Canyon NP, Muir Woods National Monument and other Redwood parks in California, and the Indiana Dunes, Sleeping Bear Dunes and Pictured Rocks National Lakeshores. I was thrilled with the natural beauty of these, and I hope to be able to visit other national parks and sites in the future. We need to preserve and protect these sites.

I just don't know why there is such a rush to promote off road motorized access to the great outdoors. I realize that it promotes the economy with it's specialized industry, but it is impossible to see all there is to see at 30+ mph. We need to have areas for there use the noise is offensive to those of us who walk, snowshoe, c country ski and row or paddle. To me you need to go slowly and quietly through the great outdoors.

(cont.)

I just got back from hiking Rock City Mt. Diablo park in California, and yes I'm a dirt biker. The amount of trash we picked up off the trails completely filled the small packs we were carrying! The erosion of the sandstone let alone the dirt trails was enormous from all the foot traffic. The amount of graffiti carved into the rocks was simply saddening. My 8yr. old daughter, a dirt bike racer herself, was really taken aback by all the vandalism and garbage we saw on the hiking trails. How do I answer her question, "Why do people think we (dirt bikers) are the bad guys dad?" I chose the high road and explained that all different types of people enjoy all different kinds of recreation and that we can't blame "hikers" for this mess. If we do that we're no better than the people trying to stop us from enjoying public lands. Granted we do sometimes find a small amount of trash at the campsites at the head of our OHV trails, which we pick up as a pre ride ritual. But NEVER do we find trash on the trails. Ok, maybe a fender here and there, we ride some really tough trails. ;o)My point is, please don't generalize us by a bad experience you may of had or "heard" from others. The OHV'rs I know are the best stewards of the land I have ever met and I am very proud to be raising my daughter with the same values.

I just recently planted several butterfly bushes and other frs that attract butterfly's and hummingbirds. I cannot wait for them to fr and for the birds and butterfly's to arrive!

I like horses, but their hooves and weight tear up trails. Their feces also has seeds in it that spread non-native plants and weeds. Sorry. Not ecologically friendly.

I like the dual purpose approach - give unemployed people a chance to do something for themselves and our country, and help the national parks!

I live near Glacier National Park. I would like to see it fully staffed & funded, adding more interpretive programs and events for children, so they can develop an early appreciation for our protected lands. I would also like to see Waterton-Glacier International Park expanded on the Canadian side of the border into the North Fork of the Flathead, to protect this vital watershed for future generations.

I propose the creation of a new National Scenic multi use single-track trail. The trail would go through Washington, Oregon and California. This trail would be similar in nature to the Pacific Crest Trail, but would be entirely separate. The trail would avoid all wilderness-designated areas and be open to multiple uses including motorcycles, mountain bikes, hikers, horses, etc. Existing trails would be connected together with existing forest roads, two track trails and new trails studied and developed as necessary. This would provide a seamless trail from Canada to Mexico through the Cascade and Sierra Nevada Mountains. Local trail club organizations could be solicited to adopt portions of the trail in their areas to provide maintenance and stewardship.

(cont.)

I say the land that is targeted for new parks should be left as wilderness. What upkeep is there for that? There is plenty of land left for development. Most of the country is in private hands. What would be wrong with these large companies that want to develop land doing so on private property. Is the reason they want to do it on federal land because it's a lot cheaper for them or because the land that was protected long ago now has the only resources left. Either way, it's a good argument for preserving the last of our wild lands for the environment, people, and the other creatures that depend on non-developed land to survive.

I see the extremist voters think of this as a pro-OHV idea. It's not. It's a diverse recreation idea. If you don't think there is enough room for diverse recreation activities on public lands, then well, you're an extremist. A few highlights from my weekend enjoying the great outdoors. A downhill mountain bike race, where many hikers were sharing the other trails (open to bikes) without complaint. A trip to a public park with a skatepark and dirt jumps. A scenic drive through a National Park, which despite the road, and traffic is one of the most beautiful places I've been. The bottom line is there are many kinds of "public land". It's not all Wilderness worthy. There is more than enough to spread the wealth among all the recreation activities be it hiking, biking, skateboarding, driving, OHVing, bird watching. Of course we could needlessly restrict everything and make it so boring to get outdoors, that no one would want to, but isn't the point of this to reconnect people to the outdoors?

I spent over a week at Gettysburg and did not see it all. I felt like I was on hallowed ground and had to see every inch. Battlefields are our last tangible link with the past that we can actually touch and walk on. There is nothing like exploring these battlefields. I can actually see the battles raging out on the fields, I can feel the pain, the horror - this helps us to understand the past. We must preserve these battlefields so future generations can also FEEL the past. When the battlefields go, so do the links to future generations. Seivert

I think a Siskiyou Crest National Monument is a great idea for an area that is an important biological stronghold and migration corridor. For the people that want local control I would let you know I am a native Oregonian and tax paying citizen who recognizes that "federal" land belongs to the citizens of the United States, not the folks that happen to live directly adjacent to such land. The majority of forested lands in Oregon are in fact open to logging and/or have been logged. The proportion of our lands "protected" by some kind of federal designation such as National Monuments and Parks or wilderness areas do not come anywhere close to approaching the amount imagined by some respondents, and in fact such protections constitute some low single digit percentage if you do minimal research. I do not need places like the Siskiyou protected for me. I want them protected for the health and diversity of other living creatures. Not all land has to be harvested or managed for us to use, whether it be recreation or extraction.

I think that this would help with jobs, both short term and long term.

Discussion Question 1

Written & Online Comments

(cont.)

I think the idea is reasonable, if you assume that federal wilderness and parks are the areas where this gear gets used. Is this true though? Outdoor recreational gear also gets used on private land as well as state and county land, perhaps even more than on federal lands. How about a modification of the idea: implement a small federal excise/luxury tax on outdoor gear, with the proceeds on a per-item-category basis shared **only** between government lands allowing the use of those items in them? So: taxes on OHVs could only go to areas allowing them, taxes on tents could only be shared among lands allowing overnight camping, and so forth. Would you still support a tax if it were implemented this way?

I think viewsheds should be protected from smog, as much as from new buildings.

I thought the CCC was what President O'Bama meant when he talked about funding jobs programs. The money goes to the people doing the work; helping them, their families, and our park system. Absolutely bring this back!

I was born in a farm surrounded by all the beauty the mother earth can offer to us; those were amazing times for me and taught me the love and respect I have for our nature. It is really a shame how the children today love more their computers and game systems than been enjoying the outdoor activities, so I support 100% this initiative that will help back to the nature our future generations

I wasn't alive during the depression of 1930's but as a Baby Boomer I've had ample opportunity to marvel at the fine craftsmanship and trailbuilding skills of the wonderful men and women who were part of the Civilian Conservation Corps during the 30's. I've camped at many a structure built by them, stayed in the lodges they built, and hiked the many spectacular mountain and woodland trails they created. With so many people out of work today, it seems to me that there could be no nobler effort than to bring back this amazingly successful institution. It would be a WIN-WIN scenario for all of us!

I would love to see an idea like the WPA be rehashed. Put some folks to work on meaningful conservation projects around the country.

I would say we actively manage most of the land in this country. I think what people are saying is to try to preserve what little is left, before everything is developed. Looking ahead, most people would realize that with population growth and the pressure for development (drilling, mining, logging, urban sprawl, etc.), that even the large amount of wild areas that you may be lucky enough to live near may be impacted. By the way, Native Americans had a great respect for the land.

If the Land and Water Conservation Fund was restored to full funding and distributed at the local level more parkland could be purchased, habitats restored and facilities improved....making the federal impact felt at the local level.

Discussion Question 1

Written & Online Comments

(cont.)

If the Open Trails program were approved and funding as proposed, it would provide funds to the states and tribes to develop and maintain recreational trails and trail-related facilities on private land to isolated parcels of federal public land. When the federal government provides this type of access on private land, by law it must secure permanent easements. These type of easements are not always attractive to private landowners, and therefore, these easements are not accepted by landowners. Besides that fact, many landowners do not want to enter into any leases, easements or agreements with the federal government concerning their lands. State and tribal governments, on the other hand, frequently secure access on or on private land through short-term agreements, contracts, leases or easements, and are not required in all cases to secure only perpetual or permanent access arrangements with private landowners. This situation often is more agreeable to the private landowner.

If there's "more than enough," then why is it that people in many states are asking Congress to protect more lands as wilderness? At the grassroots, people know their favorite places are at risk from logging, offroad vehicles, oil drilling, and other forms of development. I'm in favor of weighing the pros and cons of each area, and different alternatives for management. Every wilderness proposal gets that consideration before Congress takes action.

If wilderness goes, so goes any real idea of what freedom means. Go climb a mountain in the wilderness and tell me you don't understand the true grit of freedom. Freedom requires hard work. Freedom is self reliance. How can you see that if all that you know is done for you, made by other people and sold to you. How can you know what you really need compared to what you think you need. Freedom is not a sales pitch. Go to the wilderness and find out what it means.

I'm a year older than [redacted] and a long time runner, and I agree with him. You can run anywhere. We have no need to use wilderness areas for racing events.

I'm pleased to know that 4x4ers and ORVers are helping to clean up public lands. I do have trouble when I see pieces on the news showing a 4x4er during a clean up activity taking their vehicle up a slickrock with dirt and rocks flying so they can get where they feel they "just have to go". That sort of negates the good they're doing with their clean up activity and is the type of behavior what many can't understand or tolerate - tearing up the land for entertainment. That's not enjoying our public lands; that's destroying them.

Instead of killing animals that "attack" campers in our national parks, I believe that campsites should be protected from these animals in the same way we protect the animals in our zoos. We have the technology to fence the campsites in, it would be basically a one time expense and potentially save the lives of both campers and the animals that need our protection.

Discussion Question 1

Written & Online Comments

(cont.)

It doesn't go against our rights as Americans. If we take your point to the extreme, I want to go to the top of that mountain in some national park but 'm afraid of heights. Mountain climbers have access to it. I demand access and an elevator should be installed so I can go to the top of the mountain. I think land should be preserved as both wilderness and multi use areas. The threat is unrestricted development, with the extreme amount of development we have already had in this country. More should be saved. In the long run, it's the right thing to do. To sell the last of our wild lands to make the quick buck is a mistake. Large corporations are the only winners when that happens. Average citizens don't see the large profits, only the degraded land.

It is important for our youth, and adults as well, to learn about and appreciate the natural beauty found in our National Parks and sites.

It is important that all generations are exposed to the natural world both via education and experience. All public school systems should provide "field trips" to national parks located near them. Any and all adults who are associated with these students should be able to attend as chaperones, in order to learn what the students are learning, to be exposed to the outdoors, as well, and possibly lead to more outdoor activities and exposure to friends and families in an ever expanding circle of respect and love of national parks.

It is my family's goal to visit every National Park site, first in the continental United States and then beyond. This venture has been a blessing to our family, and we want all families to have the same opportunity. The American people, and all people, need these places of nature and history to know who we are and to be all we can be. We must fund these 400 sites completely.

It is really important for our youth, our future, to be given the opportunity of education about our National Parks.

It should not be about making people feel good. It should be about protecting the land and water so that other critters and plants have a chance and so the future has options - not like us where all the decisions were made by earlier generations to cut down the big trees, plow up all the prairies, drain all the wetlands, shoot all the buffalo, and kill the Native Americans.

I've been a OHV user for many years. I used to basically ignore the enviros until one trip into the central Sierras. We had a group of six vehicles, going through the Swamp Lake trail. We passed a group of hikers/backpackers about a mile from the lake. We were polite, waved, etc. We pretty much ignored them as they camped on the other side of the lake from us. Next day: we filled 3 bags with the trash they left, and put out the fire they left burning (there was a fire restriction in effect). They violated back country rules by setting up camp within 5 feet of the water's edge. They left several piles of human waste (not even bothering to bury it). I guess they wanted to feel closer to the animals. A couple hours later we passed them again on the way out. We offered to let them carry their waste out, and were treated to a significant amount of profanity (although there were several children in our group). This was when I started being an activist for mixed use of public lands.

Discussion Question 1

(cont.)

I've seen elk in the wild less than a quarter of a mile away from atvs not even flinch from the loud noises the atvs created, in the mountains of Montana. We have been riding atvs in the mountains and on the plains for 30 years and hope to always do so. The public land is just that PUBLIC. This summer we have ridin almost 700 miles in two months on roads ON ROADS AND TRAILS. Don't close in riding areas and they won't become high-impact areas.

I've visited the Siskiyou over a period of 50 years, as my sister lives in the area. I also worked for BLM and have seen how the pressure from industries leads field managers to allow development such as logging, mining, and new roads. I'm in favor of the national monument because it will strengthen BLM's hand in resisting those pressures. The area will be more and more important to the growing tourist economy.

altho the routes may exist on the ground, that is the roads are there, designation of the route and "inviting the public" to use it as a designated route will require NEPA. A motorized route from the south to north borders of Oregon was once identified and promoted by the State of Oregon using existing backroads and traversing several eastern Oregon Forests. The Forest Service was sued and had to pull all the signs out and make the designated route go away because NEPA wasn't done on some of the Forests. I believe the theory was that, yes the roads are there, and yes motorized use is occurring on them, but nobody has analyzed the effect of inviting more use and what that increased use will impact in terms of wildlife, etc.... Just goes to show, nothing is easy anymore.

, Thanks for visiting the Tx Master Naturalist site! We all agree that education is the key. It is very important to make sure our children understand their role in the enviment. The TMNP gives us a great way to educate both children and adults and I encourage you to get a program started in your state. Just last week I took 120 3rd graders on a nature trail and taught ecology. We make our school programs very hands on learning. We do the same with adults. We participated in an Earth Festival for Earth Day and are planning another for next year. We had 900 students from 2nd to 5th grade attend. Education, education, education!

-What long term damage? I have been riding the same trail for over 30 years and it looks the same-no change, same animals, etc. So you are saying that conservationists are god? We would not have any nature if it wasn't for them? Wow, that's encredible. The earth has been around for millions of years and will continue long after humans are gone. With what time I have here on earth, I am going to enjoy.

Discussion Question 1

Written & Online Comments

(cont.)

-I have said time and time again but I guess for you I will have to say it one more time. If an area of forest is put off limits to me as a hiker and backpacker because it is deemed to be an area that houses a threatened or endangered species I AM FINE WITH IT!! Is that clear enough for you? Above all else I am a lover of nature and wildlife and I would like to see it survive as long as possible and I personally feel that is much more important than my own self centered desires. As has clearly stated there are literally hundreds if not thousands of animal and plant species that are now endangered. Do you not feel like their survival is just a little more important than your desire to ride your ohv everywhere? Your protests as far as elderly and kids is a very weak one as well. I do not know any elderly person that want to ride a motorbike or 4wd nor do I know any that could handle the rough ride but I do know a few that like to hike and do as often as me. As far as kids go they have more energy and more spirit of adventure than I do so I see no problem with them hiking either. Yes it is a problem for disabled people but there are more than enough places now for them to go so I see no need to add more.

First you say the vandals are a minority! communicate effectively with the vandal minority Then you say many are respectful and do not return to private property once informed. Many of the atv riding adults have been respectful. After hearing once that they are on private property, they don't return. Then you say - However, based on my experience, most of the atv riders are vandals. Do you see the conflict with what you are trying to say? You're dealing with that very small percentage of ALL ATV riders, those that either don't care (minority) or are misinformed (and once informed don't come back). You go from minority and respectful and then you still can say most of the atv riders are vandals? Credibility disappears with statements that are conflicting.

(cont.)

-Thank for the links and I will be sure to access them from home as my computer here at work is unable to access many outside web sites. I am glad you provided some and no I did not realize the Sierra Club had an ohv chapter but again thank you for pointing that out. As I said I have only seen destruction and then seeing peoples votes on this site for oil drilling, etc. and less protections for endangered species just showed me more and more that my feelings, because of the damage I have seen, is correct. Maybe some of these links will make me reconsider, we will see. Mind you none of this will make me want to hike a multi use trail or go out and buy a ohv. Your activities impair mine and hinder my enjoyment of the outdoors plus no er how you try to candy coat it your recreation causes damage to trails,wildlife habitat, wildlife themselves and forests and that is something I cannot endorse just like I cannot endorse hunting no er how much good hunting groups do. IF I am incorrect then yes I would apologize but her statements towards the President were just as abusive as any I have said and I am really growing tired of people trying to make Mr. Obama out to be the next coming of Hitler. No I did not read the code of conduct. Once again though you danced around my question of damage caused by ohvs but at least you admit to causing some damage. As far as my lifestyle damaging the enviment of course I think about that EVERY DAY! I have taken great steps to minimize my damage by driving a fuel efficient car, car pooling to work when possible, I took advantage of Obamas tax rebates and redid my home with energy efficient windows, doors and siding. I have been replacing my old appliance for years with energy star appliances, I am vegetarian and I regulate my electricity use strictly. I have and will continue to do my best to minimize my carbon footprint, can you say the same?My comment to stands. This was an obvious organized group that came here with a planned attack to demote ideas on conservation and promote ideas for greater ohv access and less protections for species and forests. The only reason you do not have a problem with it is because the group efits what you want.

Just because the demographics change it doesn't mean that the parks should. It would be better to encourage the people to enjoy what is there than change things and allow uses that very likely to change the enviment of the park. Work to make the kids feel comfortable in the woods, don't change the woods to make it less "scary".

Just use the Land and Water Conservation fund money to help with the Parks.

, Help me out here as I am not familiar with the areas that you are referring to. I get the grasp of what your idea is about and think protection for this type of areas are needed. But not sure why The National Park Service is the right agency to manage these areas. First, are these areas not currently protected at all? Such as State Park or regional park status? If they are protected what's not currently work? Would the protection as a National Monument status work as well rather than National Park? I live within two miles in either direction of two state run parks that are well managed, that is at least as long as the funding holds out in these difficult times! When Death Valley was a National Monument in many ways I feel it was better run then under the National Park status it is now. Thanks -

I think the author is advocating just what you want. This idea is not about motorized travel in wilderness, it is promoting all forms of recreation in and out of wilderness areas. Wilderness Areas by definition do not allow motorized travel. Promote all forms of recreation that the standards of Wilderness allow, as well as promote all forms of recreation (as you put it) in already developed areas.

To say ...OHV .. (is) ...a small subset of the population is incorrect. Studies have shown that far more people take advantage of OHV use than those that hike. For some OHV's they pay fuel taxes that go to funding many projects, we are talking millions of dollars already. California alone, it gave out grants of over 27 million dollars - that did not include operating cost of CA OHV parks. If it were that hikers/backpackers were the dominate users would you expect the same from them? ... to pay a much larger share of the cost to support the parks?

it is okay that you dont understand why we like to go offroad. We are not asking you to join us. What we want is to keep the ground we already have. Not one time have I ever said I want access to all of the park ground. The OHV community is growing and at the same time we are losing trails and ground at an alarming rate. In the state of Indiana the OHV communtiy has about one acre of ground to ride on to every ten thousand acres of public ground. We need to find a place for people to ride their OHVs. The state of Indiana has stated OHV use is a viable form of recreation.

-I have been riding since I was 8 Years old and have never been crippled or hospitalized, neither have my kids. You would stand just as much or more of a chance falling from a hiking trail. Every year there are many hikers that have fallen to their death. Some of my families fondest memories are when we were out on trails riding, having a picnic and enjoying the great outdoors! My OHV is not smelly, but I have run into some very rank hikers.

Let's all do a little homework and see how our government representatives voted in the past regarding funding for National Parks. If we're not pleased, let's let them know, first by contacting them and second by putting them on notice that they may not count on our support/vote in the next election. Let's start acting again like the UNITED States of America. That is how we became a great nation and that is the only way we can get back there.

Many of my BEST National Park memories include a guided tour and/or conversation with a ranger. The parks need to be fully staffed to inform, educate, motivate, and inspire future generations!

maybe you have said it too many times already. No er how many times you say it, it still is not true. I have seen many a hiker destroy trails that also leads to erosion. Maybe you can widen your narrow mind. Do you walk everywhere? Maybe your car desturbes our peace. D H-Right On!

Most, if not all of the land involved in this proposal would involve redesignation and management of lands already within federal, and in some cases, state, ownership. It would not incorporate a significant amount of private land, and where it did, the government would likely enter into a management agreement with the owners, affording them assistance or tax advantages for participating.

Maybe solar or wind power. Most people don't consider drilling for oil to be a green job, just because it's done outside. If that was the case, turning forests into parking lots wul be a green job.

Missouri has one of the best state park systems in the nation including a funding system that is supported primarily by a voter-approved sales tax. Even so, they recently had to reduce staffing and thus services that get people outdoors. I imagine other state parks that don't have state sales tax funding are in even worse shape.

Most parks do not have the funding to conduct studies to find out what their visitors want. Some come to picnic, some to exercise, some for programs, some to hike, birdwatch, etc. Some attendance surveys show that different ethnic/civic groups often have different associations with parks (groups that are highly social like to barbecue but may never get on a trail), groups that are well-educated may prefer displays and educational programs, groups that prefer lots of technology may not feel comfortable where there is no electricity, inner city kids may have fears about the outdoors that country kids do not have, there may be language or cultural barriers that prevent some groups from enjoying our local, state and national parks, etc. As demographics change, so must parks.

Mr , while you may be correct, there are plenty of places (like the Hunter Creek Valley near Aspen, where thousand-year-old peat bogs have been heavily degraded by OHVers) where irresponsible users have damaged sensitive wetlands and riparian habitats. Most of it happens illegally. So not only are they being extremely poor stewards of the public lands, but they're also criminals. More restrictions, more enforcement, and less "access" is required to reclaim these places for their sensitive inhabitants. And most of the places that is talking about in Utah are on BLM land, which apparently doesn't have the same restrictions. Or else they don't enforce them.

My best childhood memories are of traveling the country visiting many national (and state) parks. With the reasonably low entrance fees and the cheap camping fees, it was the only vacation my family could afford. But it instilled in me a sense of wonder at the beauties that can be found in our own backyards and a love of travel and adventure.

My family's farm -- west of the Mississippi -- is certainly "open space" but it isn't anybody's idea of a Wilderness Area or Wildlife Corridor, so the 80% open space statistic doesn't mean much. Wolves and buffalo outside national parks are subject to shooting (often from helicopters) and poisoning, so saying wildlife has plenty of places to live doesn't hold water, either. What negative impacts do wildlife corridors have on rural communities? No examples are given, or even hinted at. The Nature Conservancy is a non-profit 501(c)(3) corporation; they make their financial reports and IRS Form 990 public at: { Link } If Ms Anderson has evidence the Nature Conservancy is making "huge illicit profits" then it's her patriotic duty to present that evidence to the IRS. Government does properly have some role in some things. Preserving and protecting God's Creation are among the things government should do.

My mother has taken part in being a leader of school-age youth for years along the towpath at the Cuyahoga National Park. Funding consistently for staff helps secure being able to utilize the parks for all, because planning ahead makes a functional schedule rather than a haphazard one. Please do your part in ensuring access for the key to our spaces set aside for nature and humans to mix.

My wife and I are in our 60s, and as day-hikers we get into wilderness areas far enough to enjoy their wilderness character. In my younger days I did some overnight trips, and they are nice to remember. No motorized or mechanical vehicles should be allowed, except wheelchairs, which have long been permissible in wilderness areas.

Please check out the idea I've posted. It's inspired by ecologist Dennis Martinez. I think you might like it. { Link }

National Park access fees should be tiered. Residents (U.S. Citizens) should not pay the same fees as non-residents. Resident Seniors and families should get access at reduced rates.

National Parks like the Cuyahoga National Park and Recreation Area can be incorporated as a field trip for all school kids somewhere in the 13 years of education. I believe that starting at the elementary school level in programs that reinforce natural science while kids are most curious is key. Also it teaches them how to be stewards for preserving the land for themselves and generations to come. The principles of environmentally friendly and "green" are ones that start at home, continue through school and are a lifelong investment in what each person can do to help out.

National Parks need more funding to more completely fill their role in creating generational memory, wildlife conservation, and retention of quiet spaces.

National Parks should be fully funded & staffed. As should the educational programs. I plan trips & vacations around what National Parks, monuments, etc. are in the particular state I'm visiting.

No new roads some like a very good idea!

No OHV's or other motorized vehicles, (other than your vehicle to get you there), should be authorized in National, or State Parks unless they are emergency vehicles looking for missing people. They prefer, and start with people on foot and on horses, and using dogs to try to track someone before the mechanized!

I am very glad to hear about America's Great Outdoors Initiative. We are in desperate need of some serious change and future planning.

This is an extremely important act, and our landscapes need protection now, before there is even more irreversible destruction caused.

Utilize the existing nationwide network of utility easements, particularly those linking all the highrise electric towers as a cross-country pedestrian pathway/network for walkers, hikers and cyclists (or at least mountain bikers since the existing trails underneath them are dirt). Then promote the trails. This would encourage Americans to walk more, as in Europe, because it would be a safe and fairly scenic, extensive network.

These easements could also be used for community gardens and to plant orchards for public consumption, to feed our homeless citizens. Local garden clubs could even have contests to beautify these corridors (designing so they do not interfere with vehicle access to service the towers).

It is necessary to protect our environment.

I was very excited to hear that you have launched America's Great Outdoors Initiative. Thank you so much! Your active leadership will help make real inroads here at home with a ripple effect abroad. There are so many environmental and wildlife issues that need to be dealt with today if we are to leave anything for future generations to inherit.

I know this is just a start. But I hope it is the beginning of big change based on the recognition of the problems we face and actionable strategies we can implement. I would imagine you could get grassroots efforts going on this initiative. There are many, many Americans who, I'm sure, will be willing to coordinate actions to make America's Great Outdoors Initiative become reality.

I am a Mechanical Design Engineer in product development. I escape to the wild each year for an uplifting rest from my fast paced daily work. I learned to do this from my father who taught our family backpacking and low impact camping in the Cascade Rockies of Washington State when I was growing up during the 1960s. He was a vice president of Archer Daniels Midland Company (ADM) and understood the great value of the wilderness experience. After his teachings I began leading my friends in wilderness experiences ranging from The BWCAW and Montana's Bob Marshall Wilderness to Alaska.

Take kids camping. I have taken my daughters wilderness camping since they were age 4 and they love it.

Please save (more wilderness and) Utah's Red Rock Wilderness while we still can. Please protect these national treasures before they are privatized, built over and used up. Many red rock gems are unprotected outside Zion National Park and outside the wonderful newly designated Escalante National Monument, my personal favorite.

Southern Utah's Red Rock Wilderness is important to me for enjoying its spectacular landscape photography. Every year I travel there for Canyoneering hiking adventure, the secluded serenity and the natural splendor that it offers away from my usual busy life at home. The other people that I meet there from around the country and from around the world are always equally thrilled with the terrific scenery. The picturesque expanses of artfully shaped multi colored sandstone formations, narrow slot canyons, soaring cliffs and arches are rejuvenating to the spirit and breathtaking to experience and will continue to do so for all others if they are left unchanged.

After travelling to various highpoints of interest around the world I discovered the most amazing gem of southern Utah's The Red Rock Wilderness. It is a major national treasure that generates continuing tourism and should be protected for anyone to enjoy without us changing it. It should not be given away to those few who would damage it, mine it, build over it and use it up. These belong to all Americans.

Future generations will thank you for your forward vision if you can save these special areas now. You and this Administration are the forward visionaries today.

If interested in spectacular photography of Utah's red rock wilderness, see the well written guide book *Photographing the Southwest - Volume 1 - A Guide to the Natural Landmarks of Southern Utah* by Laurent Martres. If interested in Utah's canyon hikes see the guide book *Non-Technical Canyon Hiking Guide to the Colorado Plateau* by Michael Kelsey. These fine works are two of the best books that I own. (This adventuring is the real thing. These canyons are several hundred to over 1000 feet deep and widths from several hundred feet to sometimes only a few inches wide. They meander through a rainbow of hard sandstone combining unusual color and texture to surprise the camera.)

Please save more wilderness and Utah's Red Rock Wilderness.

A few areas to consider saving: Robbers Roost - area located east of Utah's amazing Goblin Valley State Park, (including Moonshine Wash, Blue John Canyon, Robbers Roost Canyon, Happy Canyon and many others in the immediate area too numerous to mention). ? East of Zion National Park: Englestead Hollow, Birch Hollow, Upper Orderville Canyon, Parunuweap Canyon, Mineral Gulch, Misery Canyon. ? North Wash Side Canyons - along the east side of Utah highway 95 between Hite and highway 276. (Including Leprechaun Canyons) ? Lower White Canyon and the Black Hole, Long Canyon, Gravel Canyon, Cheesebox Canyon and Fry Canyon located south of Hite Utah along the east side of Highway 95. ? Maidenwater Canyon - located along the east of Utah Highway 276 and south of its intersection with Utah Highway 95. (Including Swett Creek Canyon and Woodruff Canyon) ? San Rafael Swell – located north of Goblin Valley State Park.

Thank you for launching the America's Great Outdoors Initiative. As a retired physicist from Los Alamos who has spent the past fifteen years working to preserve what remains of our prairie grasslands ecosystem, I am so very grateful for this initiative.

The focus of my efforts has been on preserving what little remains of the once vast population of Gunnison's and blacktail prairie dogs that populated the front range of the Rocky Mountains. These animals, as you are well aware, are a keystone species in their ecosystem. To this end, I helped initiate one of the first ordinances in the country that offers protection for the prairie dog colonies in the City of Santa Fe. More recently, I have joined forces with The New Mexico Wilderness Alliance and other organizations to begin the process of establishing a wildlife corridor that will eventually extend from Mexico to Alaska along the spine of the continent.

It is for these reasons, along with the recognition that we have no choice but to preserve and protect our environmental quality that I applaud this initiative. It gives me hope that my wife, my daughter, granddaughter and great granddaughter (as well as my son) will have a chance to enjoy what so many of us have taken for granted.

We need to promote walking and bicycling and canoeing in ALL of our urban places as a first step to generating more interest among urban residents in visiting our great national parks and monuments. Leaving the car or the bus and walking or riding your bike is only possible where facilities are in place to accommodate those choices. The more the choice to walk/hike/bike is available the more likely people become to choose health and get active.

Enhance emphasis on establishing land value to facilitate prioritization

Educate the public about the value of public and private forests

Develop a method(s) to aggregate small landowners to facilitate participation in ecosystem services markets.

(cont.)

National Parks and Recreation areas should be effectively managed to give as many citizens as possible reasonable access to desirable recreational opportunities. There should be well-marked roads and trails to direct people, and portable toilet and garbage facilities at remote places, to protect plants and wildlife from pollution. For example, I was at Yosemite this summer. There were several spots to enjoy the river from, but only one was clearly marked. However, there was no way for the general public to access it because there was no parking available nearby for the general public. I can understand that the Forest Service wants to keep the river pristine, hence the hidden day sites, but it is not fair that the one improved beach was available only to a handful of campers willing to camp without water, right next to a major highway. Surely that spot could be better used for the general public, and water could be available easily, right next door is a stable that must supply water for it's horses. Of course, to park at the stable you have to be able to drop several hundred dollars on horseback rides--after paying to get into the park. I'm a teacher and I just don't get paid enough to afford the first-class tour, but I still deserve that chance to enjoy the beach and have a barbeque with my family for one afternoon.

Finally, I think a great idea for general stimulus would be to encourage the BLM and Forest Service to partner up with cities and counties to protect and preserve historical and archeological sites and items, by creating roadside mini-museums (think out of the box--they don't have to be buildings) that can serve as centers for tourism in small towns and communities across America. School children can get involved in research and discovery, along with local community groups and businesses, to bring pride and commerce to our main streets all over America.

I want to encourage you to preserve and expand for the health of our nation and planet and so generations forever will be in awe of these special places..

Leave a legacy that will outlive you and establish your place among the giants of conservation.

Regarding America's Great Outdoors... "what works" is Conservation Districts. They are an arm of local government and are located in every county and state across America. Partnered with NRCS, but with a grassroots mentality. No need to create a new bureaucracy at tax payer expense to start from scratch. Conservation Districts exist for this very purpose, and are well established and extremely effective.

As a donor of a conservation easement in NH, I wanted to thank you for taking the time to organize a conference on the value of protecting outdoor lands. Donating a conservation easement is a big step for a landowner and I think many more long time landowners will participate if we can continue to explain the benefits to future generations and to ourselves. I can't thank you enough for helping us out with this work. We are thrilled that our property, First Mountain in Shelburne, NH will be permanently protected through the diligent work of the Mahoosuc Land Trust.

I attended the Listening Session at the Grapony Center in Concord, NH. I think it was a good idea and I thank Secretary Vilsack for an excellent presentation. Unfortunately, that's where the good information ended. Of the 300 or so participants the vast majority were directly associated with some agency trying to obtain the developments rights from private landowners. The session and the breakout sessions quickly degenerated into a begging period for more federal dollars for these organizations. Jane Difley, president of SPNHF said her Organization (the biggest in the State) didn't have enough money to properly administer the easements they currently own and asked for more Government dollars.

· Experiential opportunities in the outdoors and numerous green places to go there's no replacement for the real thing.

I want to thank President Obama for the Americas Great Outdoors initiative, and for addressing land conservation as an important activity. With all the topics that the President and his team have to cover, it is great that they made time for this one, since land conservation is important to our future quality of life.

Perhaps attorneys can be encouraged in bar associations or network referral systems to acquaint their Will and Estate-Planning clients with Nature Conservancy trusts for those clients who might be interested in inserting such trusts in their wills.

I live in Idaho and can understand why it is the fifth worse state to live in if you are an animal. I am originally from Michigan and I think Michigianians have more of an understanding that we are suppose to be stewards to protect and care for all we are given.

Everyone should visit the Field Museum in Chicago. There is a ticker in the entrance way that reads how many species are dying each day. It is quite an eye opener. Tom Brokaw on a documentary called "Baby Boomers" was asked how our generation would be remembered. That is when the stark realization hit that I think our's will be remembered as the generation of greed. We care more of what happens to us today than what will happen to the world tomorrow.

Please reevaluate how the BLM functions. I'm speaking specifically about the lands out west where the wild horses used to have their own lands. They shared this with other wildlife.

Please protect the land, and save the animals who call it home. Please don't be overly influenced by the cattle ranchers, oil and development concerns.

Discussion Question 1

Written & Online Comments

(cont.)

I am so pleased that Pres. Obama is hosting this conference on the Great Outdoors. As a 60 year old woman (and tomboy forever) I have enjoyed the pleasures of being in the great outdoors for my entire life and in less than 2 weeks, my husband and I will embark on our greatest outdoor adventure. We are going to be walking around Lake Superior for 4 1/2 months. We are doing this to bring attention to freshwater issues and to set an example for people of all ages to follow your dream and GET OUTSIDE!!! We take our grandchildren out in nature whenever possible, but we know there are too many children today who are growing up without enough time Outdoors. Our adventure is called Full Circle Superior and we invite people to follow us through our website our FB fan page.

First, President Obama and the public need to know some facts about who is behind this campaign. Sportsmen are very excited about this project as it will open doors to promote more youth hunting, buy more hunting lands, and get more of the Pittman-Robertson gun tax \$ for their state.

Increasing their funds enables them to buy more lands, which if you are not of the 4% that hunt, you will only enjoy in off seasons, but many animals can be hunted all year long now so maybe not.

OUR NATIONAL PARKS, NATIONAL FORESTS, HISTORIC SITES ARE HOME TO MUCH THAT AMERICANS TREASURE. ONCE GONE THEY WILL NOT RETURN. WE, THE AMERICAN PEOPLE, HAVE THE OPPORTUNITY TO THINK OF THE FUTURE AND NOT JUST THE IMMEDIATE NEEDS. I FIRMLY BELIEVE, GIVEN THE CHOICE, WE THE PEOPLE WOULD VOTE TO INCREASE FUNDING FOR NATIONAL PARKS AND PARK RANGERS, THE FORMER HAVE BEEN UNDERFUNDED FAR TOO LONG, THE LATTER CAN NOT SURVIVE ON THEIR SALARIES. IT IS TRULY A DISGRACE!

And I must make a special plea for my home region of Southwest Oregon called Klamath-Siskiyou Bioregion. It is in the northernmost part of the California Floristic Province, one of the Earth's 25 Biodiversity Hotspots. These hotspots are biogeographic regions with a significant reservoir of biological diversity that are under intense threat from humans. Together they contain about 60% of the Earth's known species.

A second priority encompasses what we here call the Siskiyou Wild Rivers National Salmon and Botanical Area. This would establish robust, cohesive protections for the forests and watersheds of five Wild & Scenic Rivers on public lands. To conserve them, commercial logging, mining and off-road vehicle use will be restricted. Roadless areas will be protected as Wilderness, and nine candidate rivers will be given Wild & Scenic River status. A key piece of this would be protection of southwest Oregon's Rogue River and the neighboring forests. You must nudge Congress in the right direction here for the benefit of America.

National, state and many local parks support life-long activities like biking, hiking and paddling. These activities are so important for a healthy, fit America.

Discussion Question 1

Written & Online Comments

(cont.)

Parks also preserve our natural and cultural heritage and remind us what makes our nation great. Unfortunately, some state governments have looked to their parks as a way to cut "non-essential" programs from budgets in meager times. Parks have been closed, staff cut, land even sold! Yikes!

The Panel Discussion presenters were obviously very well qualified to speak and it was evident that they all took the subject matter very seriously. Specifically as to the NH presenters and as to our past and present trusted NH leaders in general, someone said at the session that we NH folks are fortunate in that they "get it" as to the value of our forest resource for all of its multiple uses - including working forests. I concur that they "get it" and that we are fortunate to have their support. This appears to be in contrast to some of our neighbors. How do we keep it this way in NH? You make a good point in your statements about re-connecting Americans with the Great Outdoors. This needs to be done - with the parents, the teachers and the students.

Please remember to include an education component. As a Girl Scout leader I am very passionate about getting children connected with the natural world. It would be great to bring this project into the schools via geography, science, math and history.

There is space for all on our public lands. Education and enforcement of rules to stay on established roads and trails is the answer not banning. Cows and clearcutting do more damage to water resources than any ORV could think of! If you have a problem with irresponsible users of any resource, educate and if they won't respect the land fine and ban them and not all those that do.

It's not about trying to see the outdoors at 30+ mph as you claim. These roads provide access to camping areas that give people the opportunity to slow down, relax, and enjoy scenery that would otherwise be unreachable for them. Should nature be preserved only for the ultra fit that can hike all their camping gear 20 miles up a trail? If all you want to experience is the tiny sliver of the great outdoors that can be seen along hiking trails departing from a paved parking lot, you're truly missing out on what nature has to offer.

There are plenty of designed "Wilderness" areas for you to enjoy peacefully. I am glad you enjoy it. But don't try to take away my right to life, liberty, and the pursuit of happiness. I along with millions of others enjoy riding ATV and enjoying the great outdoors. I also can ride all day and not see another human except my group. BUT, I do see deer, elk, and bear. I have seen more wildlife from the back of my ATV for the last 10 years, than I have in 40 years prior as an outdoorswoman, walking in the forest. If you don't like ATV go to Yellowstone or any other national park, or any designated wilderness area, there are millions of acres. Good luck getting into the center of that wilderness area. That alone tells me we have too many acres designated already.

Discussion Question 1

Written & Online Comments

(cont.)

As a struggling ATV enthusiast, hunter and outdoorswoman, I see the benefits of protecting our environment and natural resources. I find it very interesting that today's national forests, BLM and private land is even here today for us to enjoy due to today's environmentalists. Conservation is the answer to improving and sustaining our environment, managing our national forests by continued support from the public from fees charged to access and enjoy the forests not closing the roads and keeping our public lands from the public. I for one am against anymore tax dollars going to our national parks, most of the visitors are from across our borders that have not contributed a dime to sustain. Whereas keeping all our national forests open to the public, foreign and domestic, sustains the state and local economies, not just our government, to be spent in other mismanaged divisions. I have enjoyed the natural wonders and woods of the Pacific NW for over 50 years, I have not seen Yellowstone.

Good idea. Let's quit bombing other countries, then using our taxpayer dollars to fund rebuilding of those countries and hiring companies owned by high ranking professional politicians in Washington to do it. Sorry, I got off track. Just think what all those dollars could do for OUR country?

National, state and many local parks support life-long activities like biking, hiking and paddling. These activities are so important for a healthy, fit America. Parks also preserve our natural and cultural heritage and remind us what makes our nation great. Unfortunately, some state governments have looked to their parks as a way to cut "non-essential" programs from budgets in meager times. Parks have been closed, staff cut, land even sold! Yikes! In the 1940's, recovery brought us hundreds of thousands of acres of accessible parks and left a legacy that helps make our country great. Let's work so that recovery in the 2010's does not leave out our state parks. Having a strong system of local and state parks in every state is essential for maintaining our great America!

I have spent 2/3rds of my life protecting natural resources, as well as you as humans, by fighting fires in the wildlands and forests. My body has paid a little for that endeavor as I have gone through 4 knee surgeries and will have to have at least 1 knee replaced as I approach my retirement. I live in a forest. I love it. I hike as much as I can. I raft and kayak and I ride my quad more as a recreational thing now than as a racer as I was. In the future, it will allow me to go to places I went when I was healthier without having to deal with extra pain and suffering. I believe there are 100s of thousands of folks in my shoes who would love the chance to see things their bodies just can't accommodate on foot any longer. I suppose there are plenty here who simply would say "Too bad for them, they should not have abused their bodies so much..." Well, if I wasn't hiking into fires with 50-60 pounds of gear on my back to fight fires in the wilderness caused by "green" hikers setting their toilet paper on fire so they would 'leave no trace', then maybe I would be in a different place. I guess you could call it environmental bigotry. I saw it growing up in Santa Cruz when they started banning mountain bikes from the trails as incompatible and I see it now with them wanting to ban anything with wheels.

Discussion Question 1

Written & Online Comments

(cont.)

There are many, many ways to enjoy America's public lands while preserving them at the same time. In fact, each promotes the other. Using the land for recreational activities OF ALL KINDS can generate revenue, promote land resource education, and of course provide Americans a wonderful way to relax and enjoy this country. The easy way out to protect our lands is to limit anyone from using it. It's cheap and it doesn't require any thought or foresight. But the reality is that it's not complicated or expensive to find a way to manage public land that allows everyone to use it and preserve it at the same time. There are no lack of enthusiasts who will devote their FREE time and knowledge to this cause. Just give them a chance. This country is at its best when the citizens are involved and managing it at a ground level. Not when bureaucracy and limited interest radical groups are making the decisions.

I learned my respect for our country's land by USING IT. Not by being excluded from it. As a hunter I face stereotypes and accusations all the time. I'm referred to as "killer", "animal hater", "redneck" (even though I live in the heart of Chicago), etc. But it is my time spent in the forests hunting that has given me my respect and devotion to our land and its wildlife. I've spent many days in the woods without having seen a deer, turkey, or whatever seasons game I was hunting. But I enjoyed those days as much as any. Just by being in the woods and enjoying the hike, hunt, and scenery. Being an avid off-road motorcyclist has done the same thing for me. It makes me want to preserve our land because I use it. Not by being excluded from it. When I'm not allowed to use land the respectful way I like to use it, I will slowly and surely lose my commitment to taking care of it. There are many ways to allow everyone to use the land and enjoy it. Roping it off is not one of them.

, in that case then, the government should not support democrats because they are the most intolerant discriminatory group out there. The Boy Scouts, on the other hand, have made positive impacts on thousands of lives while teaching conservation and environmental responsibility. They have connected more kids to the great outdoors than any other organization I know of.

My OHV group just did a "clean up day" on BLM land. We filled 5 giant dumpsters full of trash. Including garbage from a Sierra Club camp-out. When's the last time you saw a Sierra Club "clean up day". I've looked in my area and found none. I'd love to participate!

I strongly support and applaud this idea. I've worked with young people on conservation projects who were provided from the Student Conservation Association and Chicago Botanic Garden intern program. They are always bright, enthusiastic, and diligent workers. The only downside is if they are not engaged in productive work, or given trivial or bureaucratic work. This can discourage them from future conservation involvement. So bring on the youth for many beneficial reasons, but make sure that their supervisors give them productive work and a rewarding experience so that they will maintain a life-long conservation interest.

While recreation, economics, and personal connections are *very* important considerations when encouraging people to get involved with the great outdoors, we must ensure that there is sufficient natural habitat for those people to enjoy when they get there *and* for wildlife to enjoy when and where humans give them some space of their own.

Discussion Question 1

Written & Online Comments

(cont.)

For 25 years I have been riding in our National Forests through out California (where I live), Idaho, Oregon, Washington, Nevada, Arizona, Montana, Utah, New Mexico and Texas. I enjoy riding with my children in places off the beaten path...single track in our forests...designated and open trails. I rarely and I mean rarely, see another biker, hiker, equestrian or other dirt biker. There are no homes to bother and no pollution to speak of relative to all other forms of pollution. There is more dust and noise around my home from freeways, garbage trucks, leaf blowers, weed whackers, lawn mowers and boom boxes. There are billions of homes in the world displacing sewer, garbage causing carbon dioxide affecting the planet in such a far greater way than OHV use that it is almost laughable anyone would think OHV use contributes anything at all...comparatively. I had to be crude but humans and animals who breath, fart and excrete bodily "stuff" create more carbon dioxide and pollution in such extreme amounts that point a finger at OHV use defies rationale thinking. Look...billions of homes on the earth have dug foundations...displacing insects, rodents and other animals, not to mention the erosion issues! OHV users use such a minute portion of public land in usually remote places, it is hard to understand the opposition other than the environment is a religion in and of itself!

The disconnection between some of these folks and reality is truly alarming. The preservation of and responsible access to our nations natural lands can and does coexist. From my experience, the vast majority of people who frequent our national forests and other such lands are kind-hearted OHVers and, or sportsmen who truly appreciate the outdoors and our wild places, not individuals who are destroying it. Sure, there are a few "bad apples" who abuse our lands, but punish those individuals and not the vast majority of outdoor enthusiasts. Expand our National Forests and Open Spaces, but allow responsible access including managed OHV use. We mtn bikers, rock climbers, dirt bikers, 4-wheelers, fishermen, equestrians, and other outdoor enthusiasts must unite against these anti-access extremists. Through responsible access, appreciation for wild places is gained and protection is guaranteed.

The DOI recently told BLM to be setting aside areas for other sources of energy like geothermal and solar. This is much to my dismay, as its in the middle of 'my area' on a new map, potentially adding more closures in my area. That said, the BLM is doing a pretty good job with 'my area'. They do what they are allowed to do by the USFWS, and even then a lawsuit from the Private sector can change what the BLM is doing. Evidence my 49,000 acres of sand dunes closed over an Administrative lawsuit. Now, I belong to an ORG that watches BLM and makes sure they are doing everything that they need to. Filing reports on time, studies, etc to avoid that they get sued by our opposition on a stupid admin lawsuit to close more land. My ORG works very close to the BLM and things are good. If what you say about your area BLM is happening, I would agree with you. But, my area BLM is ok with me.

I recently saw an electric motor scooter on the street, and it was very quiet indeed. Quiet electric OHVs would be an advantage in front-country areas where OHV noise now conflicts with picnicking, camping and fishing. It's especially a problem in confined valleys and around lakes, where the noise of conventional OHVs bounces off rock or water surfaces, spreading widely. The erosion impacts would have to be analyzed case by case, as they are now.

This is a great idea. In many cases, land trusts can move nimbly and efficiently to safeguard land for future generations. Many land trusts also have strong ties with local communities that help residents understand the importance of land preservation as well create opportunities for public access.

Great idea! It is also important to ensure that the Farm Bill's easement programs benefit farms in all states. Each region of the country can be defined differently, and food security is important everywhere. In New York's Hudson Valley, the region's diverse agricultural base provides eighty percent of the fresh foods to New York City's greenmarkets. Farms in our regions have a different character than other regions of the country, yet they provide critical public benefits that support public health and the regional economy, and provide a first hand experience for many Americans to connect with the outdoors.

In many regions of the country like New York's Hudson River Valley, scenery and vistas are critical for regional economic development. Here, the region's majestic views are a critical draw for visitors that contribute to the region's \$4.7 billion tourism economy. Viewsheds, that also overlap with recreational opportunities for boating, fishing, swimming and critical habitat, are appreciated by the region's residents for the quality of life that they provide and contribute to the region's reputation deemed by Congress to be "the landscape that defined America."

Trail Riding is a great way to spend time with the family. My two sons love getting out into nature and enjoying the national forests.

they used some of the same tactics to keep the wild nature of an area in my state on state land. I'm all for it. I think most reasonable people would agree that overall, as a country, we have far too little wilderness and too much land open to development and land that has been developed. 50% of our national forests are currently open to development. I would say that is more than enough. Don't forget, there is still state land and private land open to development. I think most people are leaning toward preserving more of what is left.

Idea for the National Parks! For a couple years the Mariposa CA Symphony Orchestra has presented a concert at Yosemite National Park and it was very well attended. I believe that it brings new visitors to the park etc.

Dear Mr. President My wife and I are retired teachers enthusiastic about nature and avid gardeners. Three years ago we had to leave our home in Seattle and move to Houston to care for her mother who has Alzheimer's Disease. After three years another sister stepped up and volunteered to take our place. We planned a leisurely trip back to Seattle taking 18 days and visiting four National Parks: Big Bend Mesa Verde Grand Canyon and Sequoia. We saw what the CCC did to make trails and make it possible for visitors to enjoy these beautiful works of nature. Very few countries in the world have national treasures like these and we saw peoples from all over the world visiting them. We have 9 grandchildren and three great grandchildren. We hope that these wonderful places will be preserved in all their natural splendor for them and many generations to come.

The short message I would like to pass along Keep as much of our land wild and undeveloped for people to enjoy and wildlife to thrive. Once property is developed we can never get it back.

When I think of America's Great Outdoors I think of our national parks like Joshua Tree. Please help us protect these places.

I and my family have visited 56 National Parks and Monuments. They are an invaluable to all people in the US.

I support all your effort to repair the damage we've done to ourselves and build a better future. I think you're a man of great integrity and intelligence and we're lucky to have you as our President. When I think of America's Great Outdoors I think of our national parks and hope that your efforts will include preserving these precious resources particularly providing .

As I wrote you during your splendid trip to Acadia National Park as an American I am most grateful for and proud of the National Park system. I have had the great good fortune of having visited many of them and enjoyed hiking and water sports. I cherish the simple pleasure of just being outside and listening to the sounds of the wilderness. Know that your children will always appreciate those opportunities and that the attention your trips bring to the Parks brings a more secure future as well. Thank you for that.

Growing up in New York City I understand the importance of natural spaces. I now attend Sterling College in Craftsbury Common VT and am majoring in Sustainable Agriculture. I am so grateful to my parents for exposing me to the outdoors from a young age. If not from that regular exposure to areas of nonconcrete I'm not sure I would have found my passion for the natural world.

We have just returned from visiting Crater Lake National Park Colorado National Monument and Cedar Breaks National Monuments. Whenever we make vacation plans our plans include units of our National Park system. Our National Parks are among our most treasured inheritances. Please protect preserve and enhance our National Parks so that they will continue to be the Great Outdoors for America and the world. Thank you. We are counting on you.

My love of nature was the inspiration for my scientific career in biology and chemistry research.

As an avid hiker experienced wildlife watcher and amateur photographer I have visited these "units" of our national park system: Rocky Mountain national park in Colorado Big Cypress national Preserve in South Florida (where I hiked a section of the "Florida National Scenic Trail") Zion and Bryce Canyon NPs in South Utah Padre Island National Seashore in Texas and Katmai NP (and Preserve) in Southwest Alaska.

When I think of America's Great Outdoors I think of our national parks especially Sequoia which is nearby.

Discussion Question 1

Written & Online Comments

(cont.)

I grew up going to Glacier and Yellowstone National Parks because I lived in Montana and my parents loved the Parks. I love the National Parks and so do my children they are America's Great Outdoors! This also speaks to issues of science education and the importance of all Americans to understand the world they live in.

I am writing to express how important our national parks are to me and my family. When my two sons were growing up we often visited national parks on vacations. We were astounded by their beauty and wildness and also by how many people felt the same way we did. Parks in all different parts of the country thrilled us Acadia Cumberland Island Yosemite the Grand Canyon we always came away changed and enriched by the experience. Our boys grew up to love the outdoors and to be concerned about the environment. Strongly connected to the Great Outdoors they hike camp and fish often choosing back country and remote settings where they feel amazingly comfortable and comforted. They have volunteered to clean up rivers and remove invasive species. They have studied botany geology and environmental science. One volunteered with the Student Conservation Association to work in the Grand Canyon over a spring break while in college. He then worked for 4 months with on a Geocorps job a project that brings geoscientists into national parks. He was stationed in Guadalupe Mountains National Park in Texas a remote but fiercely beautiful treasure of national land. We need our parks to keep that connection with the natural world to remind us that we share this beautiful planet with other species that deserve a fitting habitat and our respect. Our parks need us in terms of full funding a robust volunteer program for young people protection from development (roads oil or gas drilling excessive snowmobiling hazing of wild animals). Our park system should be expanded and maintained both national and state parks. A friend's son recently took a bike trip from Oregon to California and remarked on the drastic difference in parks in those states the Oregon parks were beautifully maintained and welcoming to visitors/campers etc. while the California parks were understaffed closed and unwelcoming. I also believe it is important to provide wildlife corridors so the animals in our parks can survive. When we visited the Tetons one summer we were fascinated by the geology but saw crowds of people of all ages completely mesmerized by the bison and moose there. Federal state and local governments must work together on this.

I use our national parks. They require more funding and allowing each park to retain a portion of its fees for park improvements is a great idea and long overdue.

I grew up spending summers camping in Stanislaus National Forest in California. What a beautiful place! The Rangers taught us "all we needed to know" about the land plants trees and history all around us. Girl Scout Camp backed up what we learned from the Rangers. I have passed along that respect for the land to my children and grandchildren. America's Great Outdoors encompasses land history awareness of our surroundings and respect for nature.

Discussion Question 1

(cont.)

Every summer i invite grandchildren to join me one by one on a trip to one or more National Parks. I just took the last of the three able to come this year back home. All our lives were enriched by the beauty of our nature our history lessons and the people we met. I am so grateful for the latest one (Port Chicago) in my area and plan to take my grandkids there next summer

Teddy Roosevelt will forever be remembered for establishing out national park system and when I think of adventure in America I think of our national parks. I urge you and your administration to take the following actions: 1. Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. 2. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. 3. Preserve for all Americans present and future large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage. 4. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives.

And our national parks are not complete without their wildlife. And they are a tremendous destination for foreign visitors as well.

My family and I enjoy the Great Outdoors. We love visiting our national parks and want to see them protected and maintained in a manner that will allow our future generations to enjoy them. Additional Funds are needed to do this.

Thank you for your leadership in health care global peace climate energy and environmental issues. Please consider the importance of America's national parks in your Administration's agenda. America's national parks ARE America's national treasures and something that all Americans can get behind. Please know that America needs more parks for people to enjoy. In the Las Vegas Valley we're working on creating a new national monument that preserves and protects a significant Ice Age Fossil site an area that will surely provide insight into global warming and cooling periods. Please consider using The Antiquities Act to create this new national monument and bringing new sites into the system that better represent our changing country and protect remaining natural areas before we use them all up. The proposed new national monument in the Las Vegas Valley Tule Springs Fossil Beds will provide a significant wildlife corridor that will link four federal agencies.

Every visit that I have made to a national park is now a treasured memory.

I hope you and the family had a great time in Acadia National Park this weekend (despite the heat.) It's one of my favorite National Parks (though I'd have a hard time choosing favorites when I think of Olympic and Yosemite and Yellowstone....) I'm sure you noted the beauty of Sand Beach and the fun of being atop Cadillac Mountain. As you seem to appreciate our National Park System I am hoping you will take the following steps to ensure our parks' sustainability and health: I thank you for your past conservation efforts and hope that despite a still hostile economic climate and many pressing issues you will lead the fight for our National Parks.

Americans and Foreigners care about the future of these incredible places so they will be there for our children and grandchildren to enjoy.

My husband and I are great fans of our National Park system. We have gone to live at both Bryce Canyon and Zion Canyon National Parks for extended periods of time to take in their incredible beauty and to see first hand the role they play in the lives of our own citizens and the lives of the millions of visitors from beyond our borders that come each year to revel in their natural splendor. We were moved and permanently changed by our experiences in both parks as we have also been by visits to parks like Joshua Tree Mesa Verde Yosemite and the parks of the giant California Redwoods. Each year we make it our goal to see yet another of these magnificent parks and discover even more of their value. In our view it is imperative to preserve and improve these national treasures so they will prosper not only for our generation but for many generations into the future.

I care about the future of these incredible places. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

Our national parks provide respite recreation and inspiration for our citizens and habitat for all kinds of precious wildlife. Moreover our national parks have been a conservation inspiration to the rest of the world.

My husband and I have a goal of trying to visit all our national parks. We have seen beautiful and stunning scenery and learned about the history of our country in national parks. They are a treasure. I am an American who cares about the future of these incredible places so they will be there for all children and grandchildren to enjoy.

I would like you to know that I am a retired teacher who finally made got to go on a trip out West nearly 4 years ago. I visited the Grand Canyon Bryce and Zion. I was overwhelmed by their beauty. I want to go back and see the other natural wonders of the West. Please make sure they are not destroyed. Thank you very much for reading my comments.

I hope you and your family enjoyed Acadia National Park on your recent visit there. Our national parks and state parks are great to visit or stay as their prices are low enough for people who are on limited income to enjoy.

Including the above let's get back to supporting the Boy Scouts of America and the Girl Scouts of America ALL OVER America by allowing and encouraging Scout Groups free access to National Parks.

Nature provides a sanctuary not only for the animals but it provides a calm place of renewal for every human being on the planet. Protecting our National Park Service is a social responsibility to all Americans. Your assistance is needed NOW.

Thank you for supporting change in America and protecting our environment for future generations.

The natural beauty preserved in these parks is an irreplaceable part of our cultural heritage and our national identity.

Hiking and camping in our national parks has always been a wonderful summer vacation joy for me and my family through many years as I am now 82.

I care about the future of these incredible places. As I write this I am planning my next visit to a national park. I hope you found Acadia as wonderful as I did when I was there 15 years ago. I can't wait to go back next year. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

Americans care about the future of these incredible places. My children love to camp and hike and soon my grandchildren will be doing the same. I want them to have the opportunity to visit and enjoy our national parks.

Particularly I have a brother who is a senior citizen and visiting the parks is one of his most treasured pastimes. One of the few his can afford.

There should be no hunting mining or oil/gas extraction from our Nat. Parks. Motor vehicle use should be tried to be kept to a minimum by using shuttles and banning snowmobiles and offroad vehicles.

. My vacations are nearly always to a national park.

Discussion Question 1

Growing up in California which has some totally awesome National Parks like Yosemite and Kings Canyon National Park I learned to appreciate the beauty and majesty of nature going to those places. I in turn brought my children to those places as they grew. Now we live in SC and it doesn't have the national parks we grew up with and we miss them. Some states are really missing out. I know you just spent a weekend in Maine and while the East Coast is great you should go to Yosemite after tourist season. It is the most spectacular place ever. October would be a good time to take a break and take in Yosemite and Kings Canyon National park. They're close together so you can see both in one trip. You will love the Sequoias.

This is one of my most passionate pleas so that animal life can survive the vicious atmosphere we've forced upon it.

President Obama It is so important (as you know) to get our young people involved in the great Outdoors. Get them involved in our Parks Rivers Wildlife & Plants in and beyond our Great National Parks. An Old Chinese Proverb: TELL me & I will Forget SHOW me & I may Remember But INVOLVE me & I will Understand It would be great educational opportunities for school graders & park visitors. It would be good for your administration to take the following steps: We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. Revenues primarily from oil and gas leasing have accumulated during the past several decades in the Land and Water Conservation Fund unspent for its intended purpose.

Get loaded guns out of national parks. We must protect visitors wildlife and employees from the dangers of loaded firearms.

Urge the National Park Service to develop plans to get people to our parks on transit not by private automobile. This will help in the goal of reducing greenhouse gas emissions.

Bring back the CCC in an environmentally responsible fashion! This was a GREAT program that connected youth to the great outdoors and gave them a sense of pride. This was a win/win program.

This is an excellent time to build up our parks and put a few people to work in a WPA type program to do it. Our parks should be a symbol of national pride as well as an engine of economic growth.

I have been fortunate to have spent my entire life having access to National Parks visiting them has been among my fondest memories. For the sake of future generations we MUST insure that they are permanently protected.

Preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage.

Discussion Question 1

(cont.)

In "Rewilding of America" (I believe that's the book title) the author speaks of large tracts of land for wildlife corridors. I apologize for not knowing the exact information but I believe the US should initiate and maintain large long wildlife areas for "undivided" migration to keep animals safe.

Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives.

Dear Mr. President Thank you for all that your administration has been working for on behalf of the environment including your Executive Decision of July 19 for stewardship of our waters. . . . Too many of our nation's children are deprived of life enriching experiences outside of their urban neighborhoods. Please evaluate and consider new sites to bring into the system that better represent our changing country and >protect remaining natural areas before we use them all up. If we are to stay healthy in body and mind our lives cannot be limited to office parks shopping malls video games and making and spending money.

We have such a gift in our National Parks. What a great asset to our country!

Our national parks are such an incredible treasure!! You must do all possible to protect them for us & future generations.

Our family began exploring Glacier Park since before it was a National Park. Mt Vaught at the head of Lake Macdonald is named for a great Uncle. The family spent every summer they could on and in that lake. My husband first went at the age of 6 weeks and now our very large family goes every summer they can to the cabin they built on land they purchased up the North Fork. This land is now in a trust so it can never be sold.

National Parks are our national treasures. They inspire us and for those of us who are lucky enough to visit them change our lives forever.

this is one of the most important parts of preserving the Great Outdoors and one of the most misunderstood. My husband and I have seen the impact a new national monument can have on a region's economy: along route 89 in southern Utah instead of a dirty and dangerous coal mine there are now dozens of new trading posts motels and restaurants catering to the tourist trade brought to the state by the Escalante/Grand Staircase National Monument. Even in the great outdoors people have to eat and sleep!

We drove from Florida to Arizona and Utah this spring and national parks played a tremendous role in our enjoyment of the great outdoors. We met many people from foreign countries who were measuring America by what they saw in our national parks.

Discussion Question 1

Written & Online Comments

(cont.)

National parks were part of my childhood and should be part of future generations childhoods.

Parks are the best memories I have in growing up with my family and raising my family.

My daughters and I spent the last month visiting national park sites throughout the south. We learned about American history at the Cumberland Gap Little Rock Central High School San Antonio Missions Palo Alto Battlefield Fort Pickens Chalmette Battlefield and Andrew Johnson's home. We observed Kemp's Ridley sea turtles and other flora and fauna of the Gulf of Mexico at Padre Island and Gulf Islands National Seashores. We experienced the preservation of wildlands at Big Thicket and Little River Canyon National Preserves. We enjoyed American culture at New Orleans Jazz and Jean Lafitte National Historical Parks.

I am 62 years old. Have been to several National Parks. They are one of our National Treasures. We need to keep them going. I want my grandkids to enjoy them as much as I have.

Our parks are counted on by so many to renew the spirit and inspire us to be more than we have been. Please do what is in your power to help guarantee these spaces for future generations. If you have ever seen a grizzly bear with her cubs or watched pronghorn antelope run then you know you are in the presence of grace.

Dear Mr President I am so much an advocate for our National Parks. Living in BoulderCO and having access to Rocky Mountain National Park is a joy of my life. I hope that future generations have the opportunity to enjoy what I have.

I love the National Parks. They are one of the great things about our country. The learning about nature the fun on family trips and my own national pride are all wrapped up in my memories of these places.

Education is the only way to train people to respect and appreciate nature. People are too dependent on motor vehicles for their outdoor experience. We need to get them on the ground to understand the valuable resources our nation has.

I hope you enjoyed your recent visit to Acadia. I have been there many times in the past. I live near Redwood National Park and am a frequent visitor there too. Our parks and open spaces are precious and irreplaceable resources.

Over the past 30 years we have been to over 20 National Parks around the USA and well know the value of these unique resources not only for their geographic content but for the preservation of natural factors and wildlife as well.

Not only do I donate regularly to the National Parks but I also use them on a regular basis. Are you actually looking at legislature that actually has a positive impact for me? Do me a favor...Ask_____ to use public transportation for the next few weekends...and donate the proceeds to our National Parks.

Discussion Question 1

(cont.)

National parks are everywhere! I don't think a lot of people realize how many exist and how wonderful they are. We need to get the word out and educate the population so that communities can be involved in protecting what is rightfully theirs. The points described below are ways to help make that happen. Thank you for listening!

I visited Alaska in May on a small boat from Seattle to Juneau and then onto Denali National Park. I saw whales dolphins seals otters puffins and even a mama bear and her cubs from the boat. Getting up close to the glaciers there were many seal pups sitting on the ice floes. What an exciting experience that I hope my grandchildren will be able to enjoy seeing animals in their natural habitat.

I am an active National Park and Seashore user and feel strongly that there is a strong link between a strong and well funded National Park System and the America's Great Outdoors Initiative ("AGO"). I applaud the administration for their efforts to promote AGO and when I think of America's Great Outdoors I think of our national parks and seashores. They further engender personal reflection in an increasingly fastpaced and digital culture.

National parks are our National Treasure. .

I have visited and explored all 58 of our National Parks including the one in American Samoa! When I was little my folks would take me to a different park for their vacation and I grew up passionate about our beautiful parks. Please give our National Parks the top priority in your Great Outdoor Initiative!

. I was lucky enough to grow up near the Great Smoky Mountains National Park where I delighted in seeing black bears as a child and learned to love the wildlife and beautiful vistas during many hikes through my teenage years. As an adult there is no other place where I feel a stronger sense of peace belonging and awe...the daily grind simply disappears when I enter the Park. They inspire long walks that keep our bodies tuned and our minds clear.

Our parks are treasures of the earth that we must preserve and protect so that our children's children's children can enjoy them like we have. We depend upon the balance of the entire earth ecosystem for our survival. Keep our National Parks. User fees are fine to help but the country must support the basics of the land.

I have just finished reviewing some old photographs from vacations past. It brought back a flood of wonderful memories camping hiking with the kids and friends. I would hate to think of our grandchildren and their growing up without just such an experience.

My family spends much of our leisure time each year enjoying at least one National Park. Every park we have visited amazes us with the majestic beauty of the natural world and the vision of the people responsible for setting these areas aside for future generations to enjoy. We would like to urge you to work hard to protect and improve our National Parks.

Discussion Question 1

Written & Online Comments

(cont.)

My wife and I are 80 and 81 years old and about to take off on our long-awaited "bucket list" trip. We plan to spend 78 weeks driving through the American West. We'll stop and see a few people (family and friends) but mostly we will be on a nonscheduled roaming to appreciate the National Parks and other beautiful sites. We have already enjoyed many other national and state parks and want future generations to be able to enjoy them at least as much as we have. So we strongly endorse your American Great Outdoors initiative.

Every citizen should take time to enjoy our nation's treasures and experience the beauty of this country.

I have had the very good fortune to visit Yellowstone and Grand Teton National Parks 3 of the past 4 years. Each visit we wish we had more time. The natural beauty of the mountains canyons geysers "paint pots" the river Jackson Lake...all these are amazing but it is the sightings of the animals that make the visits truly memorable. A full moon setting over Jackson Lake at sunrise...with a moose and her calf in the foreground on Moose Flats. A grizzly among tiny yellow flowers on a field below a road in Yellowstone. A black bear down by a creek...or one time wandering past the cabin! A lone black wolf loping down a path toward a den greeted by pups on arrival...all witnessed through a spotting scope but still...WOW. I wish I hope every American could have these experiences of quiet wonder and awesome solitude. \.

The National Parks are very important for this country and to me personally. I have a goal of visiting and hiking in all of our 50+ National Parks before I die. I am 41 and have visited more than 20 of them hiking hundreds of miles. To me these parks represent all of the beautiful biological and geological diversity this country has to offer and are therefore worth protecting.

. National Parks were a significant source of education for my husband and I as we were growing up. Our parents took our families and traveled almost every year to one or more National Parks to camp. So many Americans have worked hard to maintain the National Parks in their pristine original state it would be devastating to allow them to deteriorate. Strengthen the capacity for federal regional state and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife plants and rivers beyond park borders.

My grandson is six. He loves to go outside and play and he loves to pick up trash since he wants the trees and animals to be healthy. National Parks can provide a more natural outdoor experience. For a little while we can let go and enjoy nature without constant reminders of the pollution and stress that seems to grow daily around us. .

. Last year we took our four daughters and their children to the Tetons and Yellowstone. Our It is a lesson many of us pass down to our children and grandchildren.

My wife & I just returned from visiting four of our National Parks. It is always an uplifting and renewing experience to do so. Each park had its own personal message for us.

Discussion Question 1

Written & Online Comments

(cont.)

Dear Mr. President: please follow in the footsteps of your predecessors and beef up the National Park efforts. Also look at how you can help the state parks which are being shortchanged all over the country especially in California. This doesn't have to be financial help but rather putting emphasis on what the people can do themselves. This could be one of your elements asking citizens to help preserve their environment.

Our green space is shrinking and needs more protection as we become more populated. Green space gives us a place to center ourselves and find a balance in our lives.

National parks are good investments in our future. Please stop the TC2 Coal fired power plant in Trimble County KY. Many trees are being destroyed because of the transmission lines for the property being taken by EON.

National parks are good investments in our future. These places that still show us what our country once was must not be allowed to be corrupted by development or cease to exist altogether. We would all be the losers.

National parks are good investments in our future. They are the one chance we have to experience nature get away from electronics and revitalize our minds and souls. We need them more than ever in these troubled times.

I have spent time at a few National Parks and I wish everybody who wants to could visit them too. they are beautiful and spiritual places. A great place to unwind from daily life

Our ancestors have given and sacrificed much to create and maintain these parks so I feel it is the least we can do to maintain and improve them for our future generations!

We live near Yellowstone National Park and see the influence it has on everyone who visits there. It is only one of many gems in the park system and they all need care and nurturing.

National parks are good investments in our future. With the economy in dire straights many activities have been cancelled for youth pools closed zoo cost up as well as days shut neighborhood parks not maintained due to budget cuts

National parks are good investments in our future. But we have to remember these are also the last places for our wildlife to live I think without them the park would not be such a learning and living environment for generations to come...thank you

We took our 7 children to Utah's National forests and to the Grand Canyon for many years. They are all adults with families of their own and have continued this tradition that we started with them.

I can testify that I plan my vacations every year around visiting national parks in all parts of the nation. Most of the journey I take by Amtrak another way to see the magificence of the North American landscape.

Discussion Question 1

(cont.)

We spent our honeymoon at Yellowstone NP and have returned many times with our children now in retirement and hopefully some day with our grandchildren. There is nothing like the experience. It must be preserved.

Both when I was a child and when we took our own children to visit the National Parks we were enriched by the Ranger programs. Adequate funding should be restored so this kind of experience can continue through the generations.

I am a concerned American who cares about the environment and I volunteer to help wildlife and the environment.

I also feel that our Parks are grand cathedrals of priceless treasures great opportunities and soul nurturings that enrich and expand our minds and spirits. Without them we are diminished as a people and as individuals.

Finally the parks provide a living classroom for many branches of science. The knowledgeable staff need to promote ALL science and its importance in our lives. Only America's parks provide such a unique and encompassing opportunity.

We can start to make a difference in small ways and by involving our young people. Issue a challenge to the Nation's young to take the challenge and come up with as many ways to save our parks and get involved! We all love a challenge!

My husband and I recently returned from an exhilarating tour of National parks and monuments in South Dakota North Dakota and Nebraska. Our trips around the US continue to reinforce the importance of our wonderful park system.

My son is 5 months old and I want to take him to the parks to share the joy I have known in them. I am sure you want the same for your children. Keep up the good work I know it's hard sometimes but I feel good knowing you are trying.

The National Parks and Forest Preserves have had such a profound impact on my daughter's life while she was growing up learning about the land and animals I am proud to tell you she graduated from Veterinarian School of Medicine June 12 2010.

As a frequent visitor of the national parks I am strong supporter of preserving and adding to these land legacies.

National parks are good investments in our future. I think National Parks are vital for the education and nurturing of our youth and I support them monthly with financial donations. Of course it goes without saying that National Parks are essential for the spiritual upliftment of all peoples.

Mr. Obama this is a great way to distance you from the oppressive negative administration that preceded yours. Fresh air and fresh water aren't new ideas and the parks work directly with that end result. Please show that there is a heart in Washington DC.

(cont.)

My deceased husband helped develop Yosemite Park working with the CCC's a great program we could use again! And my present husband volunteered 13 years with Gulf Islands National Park in Mississippi. We heartily endorse "America's Great Outdoors" initiative.

Nothing beats the beauty of nature to keep our balance and give us solace in these hard times. National parks are good investments in our future. I so admire the NP rangers they are a devoted group of men and women and so informed!

I have personally had the good fortune to visit most of America's national parks and have found them to be aweinspiring. They are so unique indeed in the world. The park rangers were without exception excellent informative and helpful. These parks are our real national treasures.

WE MUST SAVE THESE PARKS NOW.

My family members all enjoy our parks and revel in the freedom to explore the wonders of nature. We look forward to our vacations when we can once again have the joy to relax in the beautiful splendor of all the parks have to offer. Please help us keep our plans for years to come!

How many great moments have been spent in National Parks how can we rate these or put a value on them? Great places are of great value and they are for everyone in our society from all "walks of life." What is mutually ours needs to be greatly protected. These parks are nearly sacred.

I am a retired NPS interpretive ranger and over the years I have given programs to hundreds of school groups. When I was in the 8th grade we went on a field trip to Mammoth Cave and I was so captivated by the park ranger who guided us through that I decided I would like to do that some day.

National parks are good investments in our future. Your children and grand children and mine deserve to see the unspoiled beauty of these majestic places. If you don't protect them they could be sold off to the highest bidder as Bush did for much of our publicly owned resources. You do not want to go down in history as another auctioneer of public lands.

I want you to know how important the National parks are to me and this Country. I visited 10 national parks in a 2 week vacation from CA to CO and back. I'm a park pass holder every year. I love the passport program and plan to collect all the parks stamps. I give the passport books to friends as gifts and promote the amazing resources and parks afforded to us. However if you don't maintain and continue to care for the parks they won't be here for my nephews to enjoy with their children.

Having been to some of our National Parks I can attest personally to the importnt role they play in connecting people to the natural environment on a scale that cannot be duplicated by the private sector. Their importance to the preservation of species and cultural history is impossible to quantify.

(cont.)

Since the time that President Teddy Roosevelt recognized the importance of preserving significant areas of our country for public use and appreciation there is no doubt that Americans and others are appreciative of these parks and sites so there should be maximum effort by the administration to insist on the continuation of the program.

Our parks are our greatest heritage! . . .

National parks are an incredibly important part of our country. In these we can take our children to get a personal and intimate view of nature. We can provide for our kids a place for them to go find themselves through explorations on foot of their surroundings. I recently spent two weeks in several parks; Grand Canyon Mesa Verde and Zion. We need to protect these and all the other national parks. My kids loved the hikes the tours the history lessons both geological and anthropological.

Our recent visit to the Chincoteague National Seashore was wonderfully refreshing and recreational in the best sense: recreating our spirits in the presence of the great Atlantic ocean on a beach that is just beach no condominiums boat docks etc. etc. Our national parks are incredible resources for us all and an inspiration to visitors from other countries.

I attended a listening session in Davis Ca. on July 7. Support for the National Parks was demonstrated by attendance. Many more people in favor of maintaining peace and quiet [wilderness values] than opening areas to ORVs and dirt bikes. Please support less invasive use of National Parks. If a person wants to hear noise and breathe exhaust we've got plenty of that in town.

I know that for me spending time on the Blue Ridge Parkway nourishes my love for the beauty and wonder of the natural world and I believe that encouraging and strengthening that love by preserving and building upon the legacy of our National Parks will have a profound effect on more people realizing that we must take better care of these treasures before they are lost forever.

I have been making a point of visiting as many of the Western Parks as I can and I have found each one to be extraordinary. The well developed parks like Denali and the Grand Canyon are fine but my favorite is Lassen Volcanic National Park because you can truly feel like you are away from the crowds. For the sake of man and animal we need to be sure we don't love our parks to death.

Our parks are a huge part of our heritage. They belong to all Americans and should be kept in good condition to preserve our history and environment. There is so much in our parks to learn and enjoy. My family and I have traveled to many parks and enjoyed them immensely. It is a crime that not enough money is given to the parks to keep them up. Please do all you can to protect our parks!

Help preserve our environmental treasures! . . .

We recently visited Bryce and Zion National Parks. I was startled and disgusted to see a sign on the Lodge entrance to Zion that portrayed a gun with the words "No weapons" across it. I hope you will have some influence to get that legislation allowing guns in our Parks repealed! One more request: I'd like to see more minority families in our Parks. It is very obvious that they are missing.

I support all of the ideas put forward here and have one of my own. Exposure to the beauty of these places would help but there sometimes needs to be a reason to get people engaged. Considering the condition of the economy jobs are needed especially for young people. Consider the prospect of setting up something similar to the CCC in our parks. They need maintenance that has been deferred. Put unspent TARP and stimulus funds toward opening up jobs in our National Parks. The workers get exposed to their wonders and we the people get to reap the benefit of their labor.

. . . Use the projects below to create much needed jobs. . .

We have enjoyed visiting many of our nations' National parks and hope to visit many more. National parks inspire us to be the best we can. . .

We have our national treasure the National Parks because of farsighted "average" Americans brilliant visionaries and planners others in high political office. I hope we as a people with the help of our elected officials will always protect and cherish the National Parks not to mention maintain them by every possible means. We all have to do our share to keep our National Treasure available always for all Americans.

My first National park visit was in 1952. I have since then held a great respect for our National Parks. This past Winter I did 3 National and 11 State parks. (I also sail as crew on 19 TH. century Tall Ships). These are added to the national treasures that are our's. We need to do everything possible to preserve all of the above.

My parents took us to national parks on vacation. Thus I learned to love nature. Therefore we took our children to national parks on vacation as well. These are parks are our treasures and must be treated as such.

With all the buildup furor over peak oil and energy independence which is real and created in part by our lack of appreciation for and understanding of our natural world we must prioritize our Natural Treasures and teach our People respect for and an understanding of why we need this Natural World as much if not more than what can be extracted out from under it. What we have left of it is damn little to leave our future generations.

Discussion Question 1

(cont.)

It is very important to me and my family as we visit national parks as often as we can. We are actually leaving out of town today on a long roadtrip across several states visiting national parks recreation areas and forests. These lands are invaluable to us and as I take my 21month old son for his first camping trip I can only hope that he will carry on this tradition with his children. Please protect our parks for future generations.

The legacy we leave behind will be a reminder to value their gift and preserve it for future generations....we live in the most beautiful diversified (geographically geophysically geologically and ethnically) country rich in culture and tradition. You can't reproduce natural beauty and you can't restablish native flora and fauna....what we have is what we cherish and provisions for protection should be a mandatory promise to all who value life.

On a personal note having read books about Theodore Roosevelt's personal crusade to protect and defend these places of beauty and majesty and having seen Ken Burns' America's National Parks series on PBS seeing and hearing the personal comments from so many Americans about what these lands mean to them if all we do in our lifetimes is preserve what has been lent to us by God and our future generations we will have done much of what God asks of us.

We must incorporate new educational programs in elementary/middle/high schools... and of course should extend into college courses each level becoming more and more advanced in the knowledge of nature and the outdoors. Organic agriculture sustainable living and renewable energy should be the main focus of our educational programs. We have more than enough resources to provide everyone with the knowledge and knowhow incorporate educational programs at a young age to produce healthy healing foods. And could very easily be taught how to grow and make their own medicines. We must stop competing and start collaborating:)

Growing up some of my fondest memories were of visiting national parks with my family and now retired with our children grown and with children of their own my husband and I are finding new wonder in exploring them. In a few weeks we leave for Olympic National Park and can't wait to see it for the very first time. We always make a special effort to see wildlife in every one of the parks we go to and are sure that most people feel the same way as we do.

Since 1951 when my husband and I married and began our family we have visited our National Parks. Every year during summer vacation we would head to the parks to restore and renew our love of this land and seize the opportunities offered to instill that love in our children. As the children grew and were old enough to drive we ventured farther and farther to explore parks distant from our eastern seaboard home. Both of our children grew up appreciating and thoroughly enjoying this national heritage. I cannot conceive of a United States that would carelessly set aside what has been so carefully developed since Teddy Roosevelt's time. Europe saves castles: the US saves lands and creatures. Both represent what has been; however the first a;ways looks backward and will never continue to grow: the second looks forward and continues to grow whuile connecting to the past. Don't settle for castles!

(cont.)

I know that from my own childhood experiences that the love of parks and wildlife develops from being exposed to these elements in an atmosphere of appreciation enjoyment and education. The more children and young adults connect emotionally with the natural world through the experiences in parks and protected areas the more they will learn to value the natural wonders therein. The word "progress" can and should be used synonymously with protection and preservation.

. My 2 cents: I would spend hours in the woods near my house when I was a troubled kid/teenager there I would think and find peace. my parents were abusive and insensitive I knew I didn't count with them and because I felt inferior because I didn't count I was shy and had no friends. Because of the time I spent in the woods and reading I grew up to become a strong adult who counts. I have a special relationship with the earth and I want it to be there for others to find peace.

Our National Parks are one of our greatest treasures!

I grew up visiting the fantastic breath taking National Parks in our country. They were magical as a child and stayed with me as soothing memories during my life. They were places I wanted to return to and hoped would be preserved and protected forever. When there is no other place to go there are always the National Parks to visit and escape to. No other nation has a brilliant National Park system like ours. National Parks are a piece of heaven that belong to the American People.

There is something about nature that just soothes the soul. Every day we have less and less of it left to enjoy. Please protect the National Parks so generations to come can enjoy the beauty and peacefulness they have to offer. We don't want to have to explain to our children or grandchildren why there are no National Parks for them to visit. We don't want them to have to learn about nature from a book. Please protect the Parks and the programs they offer. Thank you for your consideration.

Please protect our wild places for future generations!!!

When I think back to the legacy that CCC gave us in the 1930s I often would like to go back and tell those guys what wonderful places they created. They would be shocked to see the wanton development but could be proud that what they built continues to exist. Lets have a new generation of people who leave a larger legacy of federal parks to honor the work that was done so well. As an outside person I can only say protect the undeveloped areas from wanton greed that is so much a part of the American culture.

Discussion Question 1

(cont.)

As a personal note please know that when your children get older they are going to want to learn more about America and our National Parks give that lesson. Gettysburg to show where America was split and fought for and against slavery. Mount Rushmore where the president's heads were carved. In California the great Redwood Forests where they tower for 100s of feet over other trees to reach for Heaven. There are many more National Parks where families can go to see experience and learn about history. Do not let them go please.

I feel free when I'm in a forest with trees towering overhead.

Green spaces are critical for so many reasons. We know that they help to save our air from the damage we do to it every day. Time spent in open spaces helps to heal us as well there is ample research showing the mental and physical benefits we gain just by being out in open unspoiled places.

Thank you for all that you are doing. Please remember our parks.

Our parks are one of the few wild places that remain to teach future generations about the importance of preservation of our planet. I would also like to add that they need more protection from oil gas and forestry industries as well as buffer zones around them free from development so that eco systems and migratory routes stay intact. In addition we need more protection for the endangered species that live in and around parks most especially wolves and grizzlies who are the top predators naturally. My last comment is that all ORV and ATV should be permanently banned from National parks.

I am proud to serve as a National Park Volunteer at Congaree National Park.

Having been born and raised in Florida I have used many of our Federal and State parks. We Floridians love our parks and use these often. We also have observed in our State and all other States that we visit that Parks are loved and needed by all men women and children of not only our Nation but all others that come here. Our National Parks should be one of the most ecologic sensitive issues that our Government oversees with the foresight of the future. Not to rape and pillage our assets but to add to these assets for the future generations.

Some of my most memorable experiences have taken place in one of our country's national treasures a National Park. Whether hiking in Yosemite or viewing wildlife in its natural habitat in Denali I have been awed and inspired by the beauty that surrounded me. I felt truly fortunate and moved by the opportunity. Such memories often give solace for a busy working person to remember what is real and pure and what must be protected so humans can continue to commune with nature and their inner selves. Additionally I feel these experiences left a lasting impression on our son who is currently a graduate biology student at work saving the frogs in the Sierras. Conservation has become his personal ambition and I couldn't be prouder.

(cont.)

America's Great Outdoors serve many purposes not least of which is fighting global warming.

. My wife and I visit as many parks and monuments as is possible every year. The discoveries are overwhelming.

I can't begin to tell you how important our National State and City parks are to me. I can't imagine a world without them it would be a place of desolation. I've seen beautiful places in my own state gobbled up by greedy developers who abandon the site as soon as they've squeezed every dime they can out of it or by vandals who destroy with ATVs and graffiti. The wild places give me comfort and inspiration.

. To the extent that we protect and enhance our parks we are contributing to our own health and heritage as Americans.

I love our national parks as does my whole family. In fact we are preparing to leave for a camping vacation in Grand Canyon Zion and Bryce national parks. So they are very very special to us.

Some of my most treasured moments throughout my life have been when visiting our glorious National Parks.

I treasure our national parks and have been fortunate to visit many of them. As a matter of fact last summer I packed up my "green car of the year" with my three children and some camping gear and traveled the western US visiting nine national parks. We were awestruck time and time again at the beauty and wildlife we found in our national parks. This summer our family will climb Mt. Whitney after camping in Tuolumne Meadows and I'm sure we'll be awestruck once again. I consider John Muir and Teddy Roosevelt my heroes for making these places accessible to all of us.

My husband and I love to visit Rocky Mountain National Park and many other state parks multiple times per year.

. To me the highlight of any vacation across our country is visiting our national parks. We do this often when we visit relatives in the midwest and east coast.

. The reason that the robber barons of the 20th and 21st centuries haven't completely destroyed our country is because of our national parks.

Just today I listened to a mother of 4 children talk with them about attending the Glacier Institute; all were excited about what this offers.

Our National Parks are important. Please keep them for our children.

Discussion Question 1

Written & Online Comments

(cont.)

. I HAVE JUST FINISHED A VACATION AND GREATLY ENJOYED SOME OF THE NATIONAL PARKS.

I am an Oregon resident who loves our country's national parks. Indeed my family is spending our summer vacation this year seeing as many national parks as we can. .

Those of us who grew up experiencing the outdoors through National Parks have a wealth of memories we want our young one to have as a part of their lives.

I am a true lover of our National Parks and a long time member of the NPCA. . .

They must be protected for the children of the future. .

Youth access to parks and recreation is a proven way to keep them off the streets. Having access and going to parks also teaches them to respect and protect their environment. .

First stop the space program. Then hire people to plant trees. Build reservoirs. . .

. I was just in the Grand Canyon river rafting and realized what a National Treasure we have.

I am blessed to live in the foothills of the Blue Ridge mountains here in Virginia.

. . . As your family has recently enjoyed Acadia National Park my family has as well. We also recently visited Olympic National Park in Washington state. Living in North Carolina we have the advantage of the Great Smokey Mountains and Blue Ridge in the west and the Outer Banks in the eastern part of our state. We love having these natural places as a refuge for peace and beauty.

. National parks are a public owned national treasure and must be protected for future generations. .

. Apart from the fact that the parks constitute a haven for animals and the natural things that grow. .

We need to fully fund our parks and provide needed services for families who visit them.

. I have personally enjoyed many of them over the past 50 years from the Everglades to Alaska and many in between. .

Discussion Question 1

Written & Online Comments

(cont.)

. I grew up visiting Yellowstone every 5 years with my family and I spent one of my college summers working there.

I hope your family enjoyed the Acadia visit. Our national parks should get more attention. . . .

. . . . Our family began camping when our five children were very young. We bought a ten dollar pass which entitled us to all national parks monuments forests etc. and that included free camping! Since we were on a very limited budget this allowed us to enjoy many wonderful vacations touring the country and camping along the way. As senior citizens my husband and I continue to take relatively inexpensive vacations camping with our grown children and our grandchildren in many of the same places we visited years ago. One problem does exist!!! Many of the places we visit now are quite run down and are understaffed. (there is only so much the S.C.A. can be expected to do!!!). I hope you will realize the importance of protecting all of our national parks monuments forests for all of us now and for future generations.

The work proposed below can be done with army troops returning from tours in Iraq and Afghanistan. The thing the soldiers most miss about duty back home is the comradeship of their fellow soldiers and this kind of unit work would solve some of the drinking driving dieing and suicides that I hear about. I also think civilian military formation for young adults of late teen age to give direction to many young people would help with work in the national parks and elsewhere. I have volunteered for natural area restoration and I clearly began to see a huge need for more focus on forests and even in developments especially to remove invasive species of plants. SDD

. I am an unabashed lover of our National parks system. I want to thank you for taking family vacations in two of our beautiful National parks this past year. As you know people of color do not spend the same amount of time outside of urban areas that Caucasians do. This is a shame and a problem that needs to be addressed. I believe that our National parks are ideal places to begin outreach to include all people of our nation in outdoor recreation. If a person has never experienced to wonderment of the beauty of nature they will not care if it is protected. The National Park Service has many programs already in place to reach out to people of all ages cultures and ethnicity but the Parks are so severely underfunded that the programs reach far too many people.

Discussion Question 1

Written & Online Comments

(cont.)

. A personal story My wife and I both thought we needed to "get away" from our house and go someplace cooler and more comfortable during the hot weather. We chose to go to a place where we spent our first honeymoon after getting married in the mountains of Virginia. What a refreshing time we had hiking in the mountain trails remembering our visit there over 40 years ago horseback riding etc. We then had a wonderful meal at the lodge..topped off by black berry ice cream pie a wonderful treat. In less than 1/2 a day we both felt refreshed after our time in the mountains time well spent. Our story is just one of many about how important our national parks are to the people of this country. Please do everything necessary to keep the parks well kept and available.

Remember what President F Kennedy said ask not what your country can do for you but to ask what you can do for your country so we the people need to get out there and do our part and get out there and start cleaning the parks and streets our property's and help the neighbors to haul junk away and help the elderly and be kind to your neighbor and get involved in service work and help clean up America and don't listen to gossip about the president because it doesn't mean a thing it's just cheap talk and we need to help do our part to stand united with our president and do what we can and to make our grand kids proud of what we Americans are made of and how proud we stand By Robert E Rome When I think of America's Great Outdoors I think of our national parks. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

In addition to the suggestions following please consider my personal observations. I recently completed an eighteen day camping tour of Badlands Teton Yellowstone Glacier and Teddy Roosevelt National Parks along with visits to Mount Rushmore and Devils Tower National Monuments. Some of the most enjoyable activities were with the park Rangers. Whether at evening campfire talks or guided hikes their insight made the experience complete. The young ones became involved in discussions and their questions were very well received. I don't know if there is an offseason for Rangers but getting the Rangers into the classrooms across the country may be beneficial to the health of our natural and wild places. Introducing our youth to the beauty and history of these places would lead to a more environmental attitude needed to further protect the places that make this country special. It is working with my grandchildren and I know it will work on a national level. thx. Gary. When I think of America's Great Outdoors I think of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

Discussion Question 1

Written & Online Comments

(cont.)

I make it a point to take my grandchildren to visit at least one of our national parks or recreation areas each summer. Over the years we have been able to see most of the parks in the eastern United States and four parks in Colorado. I believe it is important for our children to learn about our nation's heritage by attending programs and events at the parks. This summer we will go to the Great Smoky Mountains National Park. I have observed how budget cuts have reduced the number and frequency of ranger-led programs. In spite of these cutbacks the park personnel do their best to make the visitors' experience rich and memorable. But we must make sure that these experiences remain available for future visitors.

When I think of America's Great Outdoors I think of our parks national state and local. I also think in terms of what is nearest and most attainable to all Americans personal gardens at home or in the school surrounds. Schools should receive strong incentive to give every child opportunity to "play" in a garden that they prepare plant caretake and from which they harvest to eat. I also think of farmers' markets where children are exposed to peruse happily in company of moms who get the choice of largely organically produced goods not forced to be overpriced. Today we must bear the burden of being visionary as were those few who preserved for us what we still enjoy despite encroachment of "civilization" because those wise people could foresee mankind's propensity to abusively use and waste what is incalculably precious. National parks MUST be adequately funded so they can continue to play an important connection of people young and old to the outdoors. By preserving our parks we preserve the natural and cultural diversity of our nation and contribute to the health of our people.

The Framers of our Constitution stated the essential purposes of government in the Preamble. The establishment and faithful maintenance of our national parks as a fitting legacy bequeathed to future generations is inherent in the Preamble's stricture to "promote the general welfare". I have striven to visit a different national park every year. Last year I spent a glorious week in Glacier National Park a park whose namesake glaciers are threatened with extinction from global warming. This year I'll visit Lewis & Clark National Park a site celebrating visionary leadership and a story of indomitable courage combined with intellectual curiosity and a mission espousing goodwill toward the continent's original inhabitants.

Discussion Question 1

Written & Online Comments

(cont.)

The National Parks have played a huge role in my and my family's life for many years. For all of our family vacations the national parks are the only locations we considered. Without them how could we know the splendor of God's protected country; how could we have seen the true beauty of wildlife along the roads in the early morning hours up close and personal for our enjoyment; where could we have taken senior citizen parents in their 70s and 80s to enjoy the mountain vistas to watch them ride down alpine slides to encourage their hiking in some of them to watch their reaction for the first time seeing the grandest canyon on earth to see Old Faithful....oh my God the list goes on! When my parents could no longer travel they sat and watched a video we made for them from all our family vacations and just enjoyed reminiscing about the good times they had the memories they made and just wished they could still travel to our spectacular national parks. As for me personally the national parks provided me with the serenity solitude and healing I needed when dealing with some serious health issues. If it wasn't for the national parks I would definitely have turned out differently. I am now an avid hiker climber and will remain in awe of these special places. Our future generations need these national parks to learn cultural diversity; we need to keep the interpretive programs to educate our younger generations to promote careers in the environmental arenas in how to save our national wonders and not forget about our wildlife which is so important to all of us. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. It is imperative that we protect these places as such as they are.

The United States is so unique with all of our national parks. National parks. Previous administrations and groups worked hard to create the park system. Ken Burns made such an exceptional movie on the parks that even people (like me) who think they know more than a little bit about the parks probably learned a tremendous amount of 'new' information about the parks system! I grew up in Washington DC (10 yrs) and Silver Spring MD (24 years) before ending up in AZ. While I still prefer the DC area Arizona is amazing!!! If you like the outdoors only about 20% of AZ is privately owned. That leaves about 80% as National State County Reservation land. Most of this land can be used by the public. How wonderful that is for Arizonans! The parks play an important role in living in AZ and also the rest of the USA should be kept going and well maintained so that Americans and (legal) visitors have the opportunity to see how beautiful our country is!!!

Dear Sir I think president Roosevelt was wise and realized that some places are symbols. Symbols of America's birth struggles strength and symbols of hope. We must have these symbols to remind us lest we forget and history fades. I love to go to the outdoors to get away from the dirty city to find peace to find closeness to God and nature. The solitude allows me time to think and time to recuperate from life. These places are treasures the belong to ALL Americans even those not yet born! I hope you realize the value of protecting our parks wildlife and wildlands. No one has the right to steal such places away for their own personal ATM machine. These places are symbols that are as important as the symbols in DC and New York. They are American symbols and treasures and they must be saved for every American.

Discussion Question 1

(cont.)

As a child and a teenager I grew up in the outdoors and I know from experience of the confidence it provides when an individual is comfortable hiking riding horses playing in the mud swimming camping. AND most important "THE OUTDOORS" is "OPEN" 24/7 and available to us all through our national parks. As our population grows and grows and grows there are fewer and fewer empty lots grandparents in the country and other opportunities to experience the outdoors which means that our national parks are essential if we are to provide our people with opportunities to know to take pleasure in to educate themselves about the natural world in a personal individual experience. Let's plan for the physical and psychological health of our population with greater attention to and more value placed upon our national parks. . . .

. My Daughter soninlaw and grandsons left just yesterday for a three week trip out west (driving all the way) to see some of our great parks Zion Bryce Canyonlands Arches Grand Canyon Lake Mead etc. I have been thrilled by so many of the parks and love to go to the one nearest my home Shenandoah National Park. I have noticed over the years that they all NEED HELP and attention and care! They are gifts for all Americans and I am disgusted that previous administrations have let them gradually deteriorate or not get the quality of care they need. You are doing so much for this country healthcare financial reform etc. that I am confident that your administration can help restore the national parks to the conditions and quality they and the people of the USA deserve. GO FOR IT! I know the rest of this letter is basically a "form letter" but it would be nice to think that someone somewhere with a sincere interest in this issue reads this!

I am a native New Yorker that's NYC. Unfortunately I don't get to national parks much. Went to the Grand Canyon once (awesome) and of course close to home Liberty & Ellis islands (not parks so much but of course important and impressive) As a New Yorker I believe you should bring some park to the city. I contribute when possible to The NY Restoration Project and the Central Park Conservancy (I was married in the Conservancy Garden). I think all urban projects should include public space that contains gardens and tax breaks given to organizations who "green" their buildings. I may never get to see Yellowstone but I really enjoy the public space on 4546 St between 5th & 6th ave the block where I work which brings natures peace and sanity to frantic midtown. So I'm all for the great outdoors especially when it's in the middle of the city. . . .

A little over 200 years ago this great nation was for the most part ALL wilderness and in that amount of time we have succeeded in ruining the majority of this precious gift. We have not always been very good stewards of the land and the diversified life forms that make up these important Ecosystems. The saying that comes to mind is "So it goes so do we" meaning that if we neglect these areas and continue to assault these areas to satisfy our own greediness for the minerals precious metals oil gas etc. we will in the end condemn ourselves and our future generations to failure. What is left of our wilderness areas must be preserved at all costs. Without America's Great Outdoors we become nothing more than just a blight upon the face of this planet and will in the end doom ourselves to obliteration for not being the care takers we are supposed to be. . . .

Discussion Question 1

(cont.)

When I think of America's Great Outdoors I think of our national parks and California State Parks. This is our legacy to leave future generations. California has reduced support of the State Parks and they are falling apart. The parks both National and State reserve key areas for safe enjoyment of the outdoors and save them from future commercial development. We camp every year and whenever we travel our family visits whatever National Park is nearby. We have just spent time at the volcanic parks on Maui and Big Island of Hawaii which was very educational to my children. Next summer we are planning to rent an RV to visit several National Parks from the West to Mt Rushmore. These are cherished landmarks that not only Americans but visiting international tourists come to see. I am proud to meet people from other countries that are here visiting and taking the time to see our remarkable sites. I've toured a lot of Europe and Asia and they continue to maintain their key areas of History and I am so glad we do too! It's part of who we are. Please don't lose focus on this long term strategic opportunity.

As a child I relied on my parents to help me reach the great outdoors. The Jersey shore the Delaware river lakes waterfalls creeks even the woods between my house and the local church and golf course. As soon as I got my driver's license and first car the National Parks became my travel companions. My parents proudly taught me volumes about the CCC. The topic was but a paragraph in my history book. TSKTSK on our educational editors!!! When I went to Acadia National Park the first time and saw the stonework of the little bridges and the buildings the carriage paths the trails I cried with gratitude. Thanks to everyone who made this preservation possible. This is and always will be MY park. When I hit any trail I bring a garbage bag and pick up any litter I find along the way. Once when I was in the park and stopped at an overlook to see to the balancing rock far above us. I looked down and the slope below me was filled with garbage tires diapers and even a bathroom sink. So instead of taking the trail up to the rock my friend John and I spent our afternoon collecting the waste of others and putting it in dozens of black bags and carting it to the nearby park dumpster. Sure we could have driven away upset by what others did but we took care of it and made a hidden little nook of our world cleaner and better than we found it. I felt empowered. I took back something that someone had taken away. What makes a garden beautiful is all the colors textures shapes angles scents what makes it priceless is getting dirt in your shoes and under your fingernails. People should feel that way about the natural world. And that's how to get the feeling connect directly to it. Mr. President in your book you described the impact it had on you to fly in a regular airplane with other citizens I assume coach seating versus first class and private planes. Same thing here. If a pair of boots is all that separates you from the majestic rock you are standing on top of and you had to walk climb and sweat to get to that spot it means something. It means everything!

I may be late responding to this because it is already 72610 but I am going to respond anyway and hope that I can add my thoughts: My aunt and uncle lived and worked in Yosemite National Park year round and when I was 9 years old I was fortunate enough to live with them for a year and a half in Yosemite valley. This was many years ago. This experience shaped my life fundamentally and I am deeply grateful for that and to them for providing that opportunity for me. EXPERIENCE IN A NATURAL WORLD SETTING IS INVALUABLE IN SHAPING LIFETIME RESPECT AND UNDERSTANDING OF THE PHYSICAL WORLD AND HUMAN BEINGS AS JUST ONE PART OF THE WHOLE. Every child every person should EXPERIENCE that reality and the National Parks are able to provide that opportunity. YOU HAVE to get INTO THE NATURAL world to begin to understand your small part in it and to appreciate that. When you GET IT you will work to protect it for the rest of your life teach you children to do the same and support all those who spend their lives as Park Rangers as environmentalist and all who treasure the worlds resources THAT SUSTAIN ALL LIFE. aloha from hawaii .

. With our daughters my husband and I visited over 30 national parks across the U.S. When they were young the girls participated in as many junior Ranger programs as they could and always looked forward to hiking spotting wildlife learning names of plants and animals and mountains. We have photos of them with the Rangers from Yellowstone and Yosemite to Acadia. And now after spending 2 years teaching at an environmental education center in CA our youngest daughter is in graduate school at Duke working on her degree in coastal environmental management. She is passionate about doing what she can to protect the earth and about sharing her love of the environment with her students. Her masters project is on the effects of sedimentation caused by development on coral reefs. If you ask ___ where this passion and love of the environment came from she will tell you it is from her days at Assateague Ntl Seashore at Acadia the Everglades and all those other parks where she spent lazy summer days exploring and learning to appreciate nature and the wonderful gift our varied and wondrous environment is for our country. We must capitalize on the treasure that our national parks are for our country and our people. It is unbearably sad to think that so much of what my daughters experienced as young children 20 years ago is currently unavailable to them due to lack of funds and other problems due to neglect and lack of foresight in previous administrations. But we can turn this around now. .

Below is the standard letter NPCA while it is a good letter it does not reflect all that I think about of our National Parks. Our Parks are a reflection of our society if we take care of them and respect them then our society can be proud of them. I have been vacationing in National Parks for over 30 years both before and after having kids. It is hard to explain the feeling when you drive into a National Park when you see the brown signs there is no other feeling like it. My kids which are both now in their 20's still enjoy going to the parks. As a matter of fact we were all in the National Parks of Utah just last July all 5 of them. We even brought my future soninlaw who as never been in Utah with us. He was wowed but what he saw and experienced. I will always be visiting a National Park throughout my life and I want to enjoy and be proud of the parks. The parks reflect on me personally and as a nation. We need to reverse the damage done to them by the previous administration. The parks are a place where people from any background can go into and enjoy they are not just for the rich but you can feel like a rich person when you are in one of our great National Parks. Thank you for your time

We love our National Parks. When I was more mobile we hiked camped and took our children to a National Park at every opportunity. As I have become less mobile we have taken my parents in their 80s and city raised to National Parks in a rented motor home. Now we travel to National Parks in a camper van and even if we just drive through it is a refreshing and awesome experience. We love Yellowstone and the Grand Canyon and go as often as possible now that we live in the west. When we lived in Virginia Shenandoah and The Smokey Mountains were our favorite hang outs. WE loved Chincoteague and the wild horses Jamestown and its history and DC itself with its wonderful historic hiking trails and museums.. I would love to see more accessible areas and events for mobility challenged people. This is an area that our country is sadly lacking in. Many of the accessible areas available have been planned and tested by able bodied people and are not really accessible to those in wheelchairs or using canes. Rest room doors open outwards so no one can get in without help even though there is usually one handicapped stall inside the restroom. Soap and towel dispensers cannot be reached by those in chairs. The National Parks should be for ALL Americans not just children or inner city teachers being park rangers. Those are good ideas too but what would be better would be to get the inner city KIDS out to National Parks.. The National Parks should be for ALL Americans not just children or inner city teachers being park rangers. Those are good ideas too but what would be better would be to get the inner city KIDS out to National Parks.. I would love to see a National Park in Idaho. The River of No Return Wilderness area would be a wonderful inclusion. It is unspoiled and is what America used to be. Some mail is still delivered by air. Radios are still used for communication. Jet Boats are the only way to get up river to historical ranches along the river. It is a beautiful area and should be protected.

I just visited 2 National Parks with my grandson (Crater Lake and Mt. Rainier) which just reaffirmed the great need to protect our national lands.

This year I have had the pleasure of visiting some of our country's national parks. I have waited a long time to retire and do this. . . .

(cont.)

Maryland does not have any national park within its boundaries; but where I live the closest wildlife sanctuary is the Patuxent Wildlife Refuge located off MD212 (Powder Mill Road) in Lanham. I have visited this refuge a few times; it has wonderful trails to either walk on or ride the tram(s) provided; and it also has a wonderful indoor exhibit of the diverse wildlife and their habitats as well as some interactive displays for adults and children to enjoy. If you and the family have not yet visited this sanctuary I recommend that you do so at your leisure (perhaps in the early to mid autumn).

Over the years since 1963 when we were married my husband and I have taken trips to many of our national parks. We hope to visit those we have not yet been to in the years to come.

I love the national parks; I believe they are our most valuable national asset because they provide us with mental and spiritual blessings.

As an avid hiker and nature photographer I visit a number of our national parks every year and consider them one of our greatest treasures.

There's enough proof from studies done to show that knowledge is learned quicker and stays much longer when it is learned experientially. Also this will open a field to children which they are more likely to go into as adults if they've had some experience.

My late parent were always supporters of our National parks and held annual passes for many years. In addition to the joyous times our parks offered them and me I agree that National parks play a tremendous role in connecting people young and old to the outdoors preserving the natural and cultural diversity of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

This issue is very important to me as I just returned from a trip where I brought my wife and four sons to Rocky Mountain National Park this July.

When I think of America's Great Outdoors I think of my dad. He spent time teaching us the names and calls of the birds the names of the trees weeds flowers and little animals. We were so proud of ourselves when we went to school because we knew and loved nature. Today National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and respect for all of nature.

I have been thinking a lot about the National Parks recently. National parks play a tremendous role in connecting people young and old to the outdoors preserving the natural and cultural diversity of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

If you are in any doubt about how important and special our National Parks are please watch Ken Burns' wonderful documentary "America's Best Idea." It is inspiring but it also illustrates how easy it would be to lose these amazing places either through neglect or giving in to special interests who would use these resources for their profit. The National Parks make me proud of America. Endless war makes me ashamed and angry.

Our State and National Parks are very important to every generation. National parks connect people to nature and remind them of the importance of protecting our natural resources thereby contributing to our health and the planets health. National Parks preserve the natural and cultural diversity of our nation. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

. National parks play a tremendous role in connecting people in my family to the outdoors. They preserve the natural and cultural diversity of our nation and contribute to the health of our people.

America's national parks are one of its greatest treasures and in a world where development takes precedence over preservation of natural beauty so much of the time it is imperative that our national parks always be there to provide people with the opportunity to escape and reconnect with nature. I feel that more opportunities should be given inner city children to experience nature as well as this can be a lifealtering experience for them.

our parks are all we have thats still nice

P.S. Increase littering fines

I have spent many vacation days both as a child and as an adult in our National Parks. A few years ago I backpacked 90 miles of the Appalachian Trail in the Great Smokies National Park. All the parks are truly amazing and need to be protected for future generations to enjoy.

I know your wife wants us to get moving and this is a way to do it.

. Please go and stand on the north rim of the Grand Canyon and be still; just look and listen. Our children must experience this. Go to Happy Isles in Yosemite National Park and listen to the roar of the waterfall. Visit Yellowstone in winter and walk in the snow. God is good.

. P.S. I Love Wildlife . Thank you for helping to save these executives why saving the Western Gray Whale important. I look forward to your swift action to ensure a complete ban on whaling in Iceland.

(cont.)

I'M 25 YEARS OLD AND WHEN I WAS A LITTLE KID I WAS ALWAYS OUTSIDE PLAYING. THAT'S WHAT I REMEMBER FROM MY CHILDHOOD! A GREAT CHILDHOOD! IF CHILDREN DO NOT PLAY OUTSIDE AND PEOPLE DON'T ENJOY THE OUTDOORS ANYMORE THEY WILL NOT CARE ABOUT IT! THIS EARTH IS OUR HOME AND WE MUST CARE! IT SHOULD BE PRIORITY NUMBER 1. WITHOUT IT WE ARE NOTHING.

My grandfather helped build some of our state parks when he was a young man. He took great pride in it. Our family vacations were always to a state park or a state campground. I raised my daughters to respect nature and took them mountain climbing and hiking all the time. I'm a volunteer in my town for the Greenway Volunteers. We take care of the hiking/biking trails that run through our town. Getting back to nature is great exercise its an inexpensive get away there are parks and trails in every state. We need to protect them NOW so that they'll still be there for future generations to enjoy. We have just one home once we pave over and drill it and sprawl all over it its gone we don't get second chances to get it back. We are losing so many different wild life species and plant species to carelessness. Lets stop and think about protecting something so precious before its too late.

I agree with all of the above. I feel strongly that poor inner city youth need to be given the opportunity to experience the outdoors.

We truly need to keep our parks up. These national treasures are a must see.

In addition to what we already have to do in National parks we need to add more activities with stick limits to how and what we do in the arks. WE should add very stiff fines to people that trash our parks and do not put out the their fires completely and correctly. This even includes water divining scuba diving and fishing.

In the past CCC forces performed much go develop and improve national partks. Something similar could put young people to work.

I thought you would like to know that my husband and I will be making the National Parks our destination next summer!! I can't wait! I haven't seen any of the midwestern parks.

P.S. A very positive step in these difficult times and in particular for young people is to give them meaningful jobs. A program akin to the CCC of the 30's would be a very good model to follow. It would provide jobs needed maintenance to our parks and forests and at the same time expose those same individuals to the natural world in all its ramifications. This type of program is long past due.

I visit National Parks whenever we travel. Yellowstoe Glacier Yosemite just to name a few. Of course weas a nation could always use more. Thank you for anything you do to help our parks.

In addition Mr. President I would like to provide a few personal remarks. I believe we need to provide corridors for wildlife without these wildlife paths for free moving wildlife life in the US will suffer greatly. Our children must get back to nature if they are to grow into protectors of our earth and its bounties. We need larger and larger wild areas with little or no sounds of civilization and we need places that are farther and farther from roads. Our earth our wildlife and our children need your committment and the power of you and your office now.

We need more parks. Please evaluate and consider new sites to bring into the system and protect remaining natural areas before we use them all up.

I support the "America's Great Outdoors" project. Please take the following steps: Our national parks and park resources are second to none in the world: protect preserve enhance enlarge.

My husband and I are members of the outdoor organization The Tacoma Mountaineers of Tacoma Washington. We live near Mt. Rainier and love to introduce our visitors to the wonders of the Park. We want our children and grandchildren to take their friends to the parks too. It is sad to witness the deterioration of the parks due to tighter budgets. Our citizens need to become more involved in the great Outdoors and our parks need to be ready to welcome them. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

President Obama Please make the preservation of our national parks a priority in your Great Outdoors initiative. For the last 15 years I have backpacked numerous times in the Grand Canyon and on the Appalachian Trail. I hiked in the Grand Canyon by myself the first time and was so moved by the experience I recruited family and friends to make the next trip. As a result ten other adults have backpacked with me over the years. Most have returned for multiple trips. Every single one of them can speak to the lifechanging experience the trip was. Some talk about what they've learned about other cultures some about a greater spiritual connection with God some have grown closer to family some began recycling programs. You see time spent in these incredible places makes a huge impact for good one person at a time. Americans care about the future of these incredible places.

Unfortunately this has been a TERRIBLE summer for me and the future does not look bright. The outdoor beckons but I believe I have only been outside a handful of times. I did go to my local park on 2 occasions. On the first the songstress apparently didn't know the lyrics to "Sweet Home Chicago" as she sang (loudly almost as if in my direction) ... GO HOME ... BABY DON'T YOU WANNA GO GO HOME etc. and upon my quick departure immediately segued into "SOMEWHERE OVER THE RAINBOW ..." which I always liked except for when it is sung so spitefully. My last visit was better as I met a local antique vendor who had lots of fabulous items and was so kind to me; we chatted for over 10 minutes I would say. Another guest at the fair stopped by her booth while I was there ~ we were talking about our age (typical women thing!!) and she commented "Black women don't look as old as we are because we stay out of the sun no wrinkles!" See I am white and they both were black but we all were talking about age. Whatever. I tell you that because strangely enough as I went to visit other booths at the fair nobody (or very few!) people would even make eye contact with me! IMAGINE! Another nice day turned bad. So parks are great a great place to gather. But honestly it really depends on who gathers there. Sincerely

This is our outdoor legacy to the next generation. It is our obligation to protect it.

National parks are good investments in our future. But once gone we have nothing.

National parks are good investments in our future. We cannot wait any longer to protect our parks.

We need to provide good Park jobs for all that need them!

Our national parks represent our living legacy to future generations.

Growing up I spend many summers traveling across the United States camping in and near the National Parks. This helped me appreciate the vastness of our country and the diversity of the people who founded it and lived here originally. This also helped me appreciate the history lessons I received each year in school. It is important that we support the parks for generations to come.

And importantly adequately STAFF the chronically under staffed parks!!!

National parks are good investments in our future. They are also a legacy for our children and grandchildren and need to be protected.

Discussion Question 1

I have enjoyed many parks over the years with my children and now my grandchildren.

National parks are good investments in our future. There are 42 wolves left we have to stop the killings of these beautiful animals.

National parks are good investments in our future. Actually the parks are the only place we can visit where the environment and nature is protected.

National parks are good investments in our future. They must be respected and we must prove that we care by taking care of them for the future generations....

I have been to Yellowstone Teton Yosemite. They are great places and we need more places like them.

Our national lodges built during the depression are works of beauty and art. They are a national treasure.

I have visited many of our national parks and am always amazed at the uniqueness and beauty of each.

Our National Parks are treasures that can never be replaced if we lose them so they must be cared for and nurtured!!!!

National parks are good investments in our future. These are our natural treasures and it is our prime responsibility to preserve and protect them against any and all threats.

I love parks; they are a peaceful place to be. I hear trees and streams when they talk and feel all things are possible.

Keeping our national parks in good condition will not only help us today but make lives better for many future generations!! Let's do it!!!

Parks have become Sacred Places

I have been going to Acadia for more than 30 years. Finally retired I hope to see many on the National Parks in the West and South. I hold a Golden Age Pass.

I am a big user of National Parks. Living in Michigan and having a place out summer place out side of the Sleeping Bear Dunes they are a big part of my life.

Discussion Question 1

(cont.)

I worked in Yellowstone N.P. nearly 50 years ago. The experience will live in my memory as long as I live. Our national parks are the diamonds of the Earth. When I think of America's Great Outdoors I think of our national parks. National parks

I have become a more spiritual person as time has gone on in my life. I believe and respect that all of the world's great religions come from the same God but I choose to follow the Hindu path of India. This path in particular is aware that everything in this world is connected and that even the earth is a spiritual being in a sense of great importance to us and must be respected and protected. In addition we need to stay connected to nature and the earth in a way that is becoming more absent for too many people in our country. For the people of our country to continue to develop fully and correctly in these very difficult and challenging times it is important to try to reconnect with the earth the planets the seasons plants and animals that are a part of us. One very important outlet for this is our national parks. We need more and more national parks and we need to get more of our countrymen to visit and spend time in them reconnecting to our planet and to God. Please therefore take heed of the issues mentioned above and support them all to the best of your abilities. It is vitally important if we are to go on that we love this planet and care for it doing everything we can to safeguard it and to preserve it. Of course the criminal acts in the Gulf of Mexico serve to strongly emphasize this point. This can be seen as a warning signal from God that we need to take notice and act in the appropriate manner.

Thank you for offering to protect our National Parks! They were almost abandoned during the last Administration and we are fortunate to have your leadership!

Not only that but everywhere in the world I travel people are in awe of our public lands and knowledgeable about our national parks. They have visited them or hope to visit them. .

My goal has been to visit everyone of our National Parks. So far I have visited 12 of them including St. John in the VI Acadia Olympic Yellowstone and more.

My wife and I really enjoy these great treasures and have now visited more than 30 and will soon add several more. Please we need to protect and cherish them all.

Our family didn't have much money when I was a child but we could afford to camp in National Parks. Yosemite was within halfaday's drive so it was the place we camped in most often.

Our national wilderness wild places wildlife open spaces vistas and farmland are a priceless legacy that must be preserved intact for future generations at any cost. .

Discussion Question 1

I have stated that our great National Parks are a living cathedral of the highest order! President Theodore Roosevelt I recently found agreed. He stated "It was like lying in a great solemn cathedral far vaster and more beautiful than any built by man". It is our obligation to respect preserve and promote the beauty (admired for centuries by those who came before us) for those that come after. I know after having had the pleasure of not only personally visiting many of our national treasures but by watching in the news as you and your lovely family visited them also that this should not have to be a hard sell. I do realize however that there are some among us who have no sense of the history splendor and promise of excitement that our National Parks render along with our huge responsibility to preserve them for posterity! Let's not even think of Paving Over Paradise: They paved paradise they put up a parking lot A big hotel a boutique And a swinging hot spot. Don't it always go to show You'll never know what you got till it's gone? They paved paradise they put up a parking lot. They took all the trees they put 'em in a tree museum. They charged the people A dollar and a half just to see 'em. Don't it always go to show You'll never know what you got till it's gone They paved paradise they put up a parking lot. "Paving Over Paradise to Out in a Parking Lot" Our National Parks and those who run them are to use the vernacular AWESOME!

Because my mother's family was in Oregon and my father's lived near Chicago and we lived in Annandale Virginia every 45 years we took a road trip during summer vacation swinging through National Park campgrounds on varying routes west north and toward home. I remember the howl of wolves at Craters of the Moon when I was five the raccoons at night that cleaned out our cooler in the Everglades bear tracks in Yosemite getting the next to the last campsite in the Grand Tetons Old Faithful spewing high deer and the scent of spruce at Devil's Tower. I've taken my own family to Glacier National Park to the ashes across from Mt. St. Helen to Zion canyons the Rockies and Mammoth Cave. The National Parks are treasures to be preserved for generations to come.

As someone who has been visiting national parks for more than 50 years I can't think of anything that has had as profound an effect on my life or the lives of my family. . .

. This year in fact my daughter and I will both be visiting Yosemite for the first time and we could not be more excited about finally being able to breathe in all this national jewel has to offer. .

.I have spent my whole long life visiting many of our parks and national forestshikingcamping and fishing with my family as a childand now as an adult. National parks It's where I got my most valuable education. . They are valuable watersheds as well.

The American Indians said it best: "We do not inherit the earth from our ancestors we borrow it from our children." Help us protect and save the earth for future generations. .

. Our parks are integral to our past shaping who we are and what we value. As a teacher it was natural to tie the lessons of environmental and political succession with the health of our society and National Parks. .

Discussion Question 1

(cont.)

. . Our natural treasures play a huge part in the world's balance. Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016.

. . Collect fees from the people who use the parks to fund the parks. Discourage littering by outlawing disposable containers or collecting a deposit refundable upon return of disposables. Hire the out of work to do maintenance and cleanup. Pay for it with use fees.

National Parks have and still are very important to our family. Last weekend we went swimming at a national park. Our children grew up going to national parks and have learned a lot from the park Rangers. Please keep funding the parks. the parks are needed to help our youth grow up. The National parks play a tremendous role in connecting people young and old to the outdoors preserving the natural and cultural diversity of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. Heed the advice of the National Parks Second Century Commission a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans two them in the next century.

Thank you for your 'America's Great Outdoors" initiative. Our American wilderness is one of our greatest gifts to the world as well a precious legacies we can leave future generations. . .

. Our national parks should have a prominent role (over pooppy carcinogenic and maltreated cattle and subsequent desertification of Western U.S.) in any SUCCESSful initiative focused on "America's Great Outdoors." .

. Last year I visited Yellowstone National Park Glacier National Park Mount Rainier National Park and several wildlife refuges.I intend to visit others this year. These national treasures should never be abandoned. .

I visit National Parks on a regular basis and most times base my vacation plans on visiting a National Park. National Parks are truly an American treasure that I try to take full advantage of.

. Having personally visited many of our national parks (some more than once) I know they also provide inspiration and awe for many adults and children who have little opportunity to experience such natural magnificence. .

Discussion Question 1

(cont.)

There simply is no form of any kind of media that can even start to match the sights that can be seen in every national state and county park in the nation. Of course the national ones are the ones that come to mind first. When I was a kid my entire family used to get together and go camping we had the best 'family time' that anyone could ask for. I should mention that by family I mean parents siblings aunts uncles and cousins. What can I say my Dad had three brothers and a sister. Between them they gave me twenty one first cousins and five siblings. How were we supposed to know that this was the cheapest and easiest way to go on vacation and have a seriously good time of it. One time my Mom's parents even came with us and they were amazed at the party that never ended. My cousins siblings and I are as close now as we were forty four five years ago and the memories are still the best of my family. There is something to be said about being one step ahead of broke when it comes time to raise a family. Mrs. Clinton wrote the book 'It takes a village'. We were the village and I will savor that feeling until the end of my days. Please do not do any thing that will cause others to be unable to enjoy the Parks and life in general. I told ___'s sisters about all the great times we had together and it must have sounded pretty good to them. These days four times every summer we pack everybody up from Grandma to little ones and their bottles and head to a central State Park for fourday weekends. And the cycle continues. It will teach anyone a whole new meaning to save the planet and remind them that the Human Race ain't the only game around. Thank you for taking the time to read this and please keep our parks the way that God made them.

Thank you requesting citizen feedback in "America's Great Outdoors" Initiative. America is blessed with wondrous natural resources that all of our citizens can access and enjoy and our National Parks are what comes to mind first. These parks are the perfect place to connect young and old to the outdoors and to foster appreciation of our natural heritage and resources. The diversity of the Parks offers something for everyone and helps us all appreciate the variety and bounty that our 50 states offer. In addition they serve as outdoor classrooms to teach about conservation history and culture. It is essential that we as a nation preserve our National Parks. I encourage your administration to act in the following ways:

Everyone I know has taken a vacation in one of our national parks. Everyone had a favorite and we love to fight about the virtues of them. We must do everything we can to maintain these treasures.

. One keeps on forgetting that they are also source of revenue because they generate tourism and much needed tourism dollars. I know I am a travel facilitator/Interpreter who brings in hundreds of tourists in the travel season.

. My own time spent in the National Parks during the summers as a young adult is among some of the best times of my life. The parks' beauty and originality are unparalleled! Please help preserve the parks for future generations!

Bring back the camp fire circles at night led by a park ranger to sing songs tell stories learn about wilderness. No computers no hand held games just people with other people in a precious National Park.

Discussion Question 1

(cont.)

One of the great things that America has is its National Parks and Monuments. Sadly over the last 30 or so years these treasures have been allowed to deteriorate and most are now in deplorable condition.

. In fact this September I will be spending a great amount of time in several national parks. I could not do this if it were not for the forward thinking people who came before me that saw the value of saving our American landscape and culture.

I was thrilled when I heard that you and your family would be making a visit to Mount Desert Island and Acadia National Park. To my husband and I it is one of the most wonderful places we've ever been to and we've traveled a bit. I am fairly sure you were AWED as well. One of the best things about Acadia is the incredible system of hiking trails and carriage roads. The history of the trails and the roads is amazing. Bird and wildlife watching are also terrific there. It is a very special place that deserves special care and attention so that for generations to come folks can leave a bit of their heart there each time they leave only to come back and enjoy it more every time.

We need cooperative efforts between federal state and local agencies and private landowners because wildlife doesn't understand boundaries on a map

My parents introduced me to our national parks when I was young; my grandfather built the roads in some of the national parks in California. My life would have been very different if I had not had the national parks experience. It saddens me to think of all the children in our country that are missing out on that experience.

. My family and children now adults have been fortunate during our lifetimes to enjoy the U.S. national parks. As educators we applaud the dedicated staffs of those parks which need protection and preservation for the present and future generations.

I am a CPA today from working my first summer of college in the accounting department at Glacier National Park. After doing the numbers there was plenty of time for hiking and camping with my new fellow student friends.

OUR NATIONAL PARKS HAVE BEEN ALLOWED TO BECOME SHABBY AND THEREFORE UNDERUSED. IT WOULD NOT BE A BIG STEP FROM THIS TO ALLOWING THEM TO BE AUCTIONED OFF TO COMMERCIAL INTERESTS. THESE LANDS WERE PRESERVED FOR A REASON!

THANK YOU FOR WHAT YOU HAVE ALREADY DONE TO TRY TO REVERSE THE SUICIDAL DESTRUCTION OF OUR ENVIRONMENT. WE ARE BEHIND YOU AND WANT TO POINT OUT THE GREAT NATURAL RESOURCES OF OUR WONDERFUL COUNTRY WHICH ARE IN GRAVE DANGER.

As I came to the national parks later than many as a young father I experience a double shot of "oh!" That first view of Yosemite's valley; the long soaring road to the South Rim; the pushing force of Old Faithful and the interior immensity of Old Yellowstone Inn I remain overwhelmed with America's natural grandeur and power.

. Having lived for many years alongside the most highly visited national park the Great Smoky Mountains and visited 12 others in the U.S. I wish to state that they are our crown jewels and should be preserved in the best condition possible for all time. .

When I think of America's Great Outdoors I think of stillness and simplicity; I think about how I quit smoking cold turkey because the patch didn't work (gave me whelps) and the gum gave me heartburn! Instead I took off each morning to our nearest national park: Sequoia National Park and there I hiked ten plus miles for three days straight and then something clicked. I realized I was a nonsmoker! Sure parks connect us to each other but most importantly they reconnect us to ourselves in the larger scheme of things.

America's national state and local parks are still the best ideas this country has ever had. They are a national treasure for each and every person and must be treasured as such. preserved protected and secure for our guture. . .

Wherever possible our forests and national resources should be protected and preserved. They are vital to our country as resources where future generations can enjoy and celebrate the beauty of nature and the vital connection between human civilization and the natural world. My son loves to hike and walk savoring the beauty of the world around him and sharing that with his friends. It has added a dimension of thought and respect that would be unimaginable were his world centered solely on TV video games and other 'artificial' pursuits. America's state parks are invaluable in many many ways. Whatever can be done should be done in order to maintain and preserve these parks for the present and the future. .

Thank you for the initiative America's Great Outdoors. We are lucky to have amazing natural resources in the United States. As this initiative unfolds please keep in mind the national parks and Student Conservation Association which does great work all over our country.

. When I was just six my parents took me on an eightweek crosscountry camping trip to most of the west's great national parks and I still remember how impressed I was with the knowledge of the park rangers about the beautiful surroundings. I congratulate you and your administration for all that you have achieved thus far...please know you have the support of the citizens of our great country!

I live in the beautiful state of Utah and one major concern I have about our parks is the law our state passed allowing people to carry guns into the parks. This seems to create a danger to the wildlife and families who vacation there. . .

our state parks the expanse of countryside and all our green areas in and around cities. I have enjoyed (during my work across the country) to have an opportunity to visit parks such as Yellowstone and Yosemite (and places such as Mt. St. Helens the Atlantic and Pacific coastlines the lakes and forest land in Idaho the Adirondacks in New York and Presidents' sculpture in South Dakota) and consider them national treasures. I recently enjoyed seeing the series on National Parks on PBS and hope you have an opportunity to see at least some of the highlights with your family. It visually and historically was a gem as are any of the Jacques Cousteau specials including the one on reefs in the Pacific Ocean. s. And even with the oil disaster keep focusing on the goal of environments for future generations as best as you can.

Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives. Our parks are irreplaceable and so beautiful. Visiting some of the parks was an awesome site and made one feel so close to our creator

We need to think of our future. We need to think of our children's future and our grandchildren's future. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives. . . .

. Throughout my life I have visited and stayed in many of our national parks with my extended family and my life is enriched by having an appreciation for the outdoors conservation and wildlife. We need to do what we can to keep the national parks available for generations to come. . . .

My wife and I have visited National Parks like Isle Royale in Lake Superior and have been struck by the awesome beauty of these wild places. We have also been struck by the need for more resources to fund upkeep and enhancement of these wonderful treasures. . . .

For me there is nothing more important than to link the children of this nation with the great outdoors. It provides a wonderful opportunity for families to recreate together. . . .

We have often been in National parks across the country. Little is more important than preserving these for all reasons not the least of which is a legacy we pass on to future American generations. . . .

Having spent a considerable amount of time in a large number of our National Parks both with my husband and before we were married with other friends I have very strong feelings about the wonderful heritage we have. When we are in the parks we always attend Natural History Lectures put on by the rangers and also go on conducted hikes.

I was lucky to begin visiting National Parks at a very young age and developed a life long love of the outdoors. I am over 60 extremely active and retain a love of nature. I believe our care for scenic wild spaces is a core value that sets America apart from many other nations. The spirit of our magnificent National Parks strengthens and inspires our hearts minds and spirits.

I know you viewed the 'National Parks' documentaries on PBS and this says it all. Please don't forget it as our protected areas are going to end up being our only National treasure after the TransNational Corporations pillage what's not protected (ie the Gulf).

. Having visited a number of our national parks I'm well aware of their beauty and the need to preserve them for future generations as well as we the current citizens of the US. I'm even more convinced of the need to take care of the national parks after viewing the excellent PBS series on the national parks.

Looking back at some of my fondest memories growing up I think of family trips to some of our national parks. Visiting Yellowstone for instance inspired within me a love of seeing animals in their native habitat doing exactly what wild creatures should do. I also found it fascinating to see what the land looked like before Manifest Destiny inspired a nation to conquer the West. In other words national parks connect people young and old to the outdoors preserving the natural and cultural diversity of our nation and exposes an increasingly urban population land outside a cityscape.

. Last year at the age of 74 my wife and I enjoyed 4 National Parks in the State of Utah camping and hiking and seeing fantastic places that we had not seen before. The Park Pass for seniors is a great incentive for getting people of all ages to enjoy and learn about our natural areas and national treasures.

Dear Mr. President; thank you for doing the right thing on so many issues: health care, wall, reform, etc. I like to think that these parts of my life let me enjoy the other parts of my life like trees, lakes, fresh air. Please help me to enjoy what really matters in life.

. I have visited several in my home region: Acadia National Park being one of them. This National Park is an example of the careful conservation efforts of our predecessors. These people had a sense of the importance of preserving the natural beauty of our country for eternity. We need to continue this legacy.

I have many fond memories of childhood trips to Bryce, Zion, Grand Canyon, Yosemite, Yellowstone, Acadia, Lassen, Crater Lake, Olympic, Redwood, Petrified Forest, Grand Teton, and several others. Fortunately, my parents loved to travel, and every trip made me long to return. Every natural wonder excited my curiosity. I continued throughout my life to visit other parks wherever I traveled.

. My family and I have spent a week in Acadia National Park during the last 15 summers. As I am sure you noticed last week, Acadia has many varied ways for people to enjoy the outdoors. In order for future generations of Americans to continue to enjoy and have access to the natural beauty of America's National Parks.

I've lived in the US for the last 28 years and I know that our National Parks are one of our greatest and most precious natural resources. I have been to almost all National Parks in the lower 48 states and Alaska and have found great joy in visiting them.

(cont.)

. At a more personal level my family has enjoyed many vacations in which visits to our National Parks were the main part of our itinerary and my children have many fond memories of our experiences together. Our country's great outdoors are a tremendous gift and the national parks are an especially wonderful treasure. .

During the past years we have taken many vacations which always include some of the national parks. They are beautiful and must be preserved for future generations as well. It is also necessary to preserve these lands and more as they become available for wildlife and flora to survive. . .

Our national parks are also our national heritage. Our forefathers found this country wild and subdued it for our benefit. Holding on to the wilderness that Native Americans and White settlers gave birth to this country from is not just ecologically conservative but historically significant. . .

My family has appreciated and used our national parks for generations. They have allowed us to reconnect with nature relax and enjoy their many benefits. I can't imagine what it would be like had not these areas been set aside for both animals and humans. Let's keep always keep it that way. . .

. OUR NATIONAL PARKS HAVE BEEN SHAMEFULLY NEGLECTED. "AMERICA'S GREAT OUTDOORS" INITIATIVE WILL HELP CUSHION THE MOST RECENT LOSS OF FUNDING. GIVE CITIZENS A CHANCE TO DEMONSTRATE HOW THEY FEEL ABOUT THIS HERITAGE. ADD A SQUARE ON OUR INCOME TAX RETURNS THAT GIVES US A CHANCE TO INCLUDE A DONATION FOR THE PARKS! SEE WHAT HAPPENS.

I love the great outdoors. I have written but not published six stories based on the five senses trying to get parents or teachers to get young children outside and learn to see smell touch feel and hear the things that are outside. This can be in a park or in your back yard or on a trail. . .

. Think about what Ken Burns' documentary showed and how the promise of national parks needs to be preserved for our children and our grandchildren. National parks were a gift from farsighted Americans in the past and we need to be the stewards of this legacy for the future generations. . . It's not just about minting a new series of quarters!

I think it is great that people can use our national parks but to me they are more of a living national treasure that must be preserved not only for their beauty but also for the ecosystems that they support. They are rugged and wild like our American heritage and are part of the American spirit. .

. I just finished my vacation which was traveling around the Olympic Peninsula in the State of Washington where I hiked in several parks. It was so beautiful and wonderful to be outside. I got to hike at Lake Quineault Ruby Beach Hoh Rain Forst Lake Crescent and several place in between. Please keep these in their natural beautiful state.

(cont.)

Mr President One of my first jobs during collegewas working in Yosemite National Parks. I had lived in San Francisco and had not really enjoyed our wonderful park system. They need all the support that our country can give. They are part of our great heritage. .

What is more American than our own National parks? They are symbols of our greatness and our uniqueness. They are beautiful places for tourists to have a true American experience when traveling here from abroad as well as treasured National landmarks for Americans to enjoy with their children and grandchildren. . .

. My husband and I are taking a vacation to the National Parks in the western United States this fall. I am so excited to finally be able to see Yellowstone and Mount Rushmore among many others. This is a trip I have been planning for months and I am so grateful for opportunity afforded us through the efforts of John Muir Horace Albright and Teddy Roosevelt.

An important part of getting Americans outdoors is the promotion and of our National park system. To do so we must ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. . .

I've just returned from a week camping in the Mt. Hood National Forest (Timothy Lake North Arm Campsite). I live in Rhode Island so this was a distant site for me but an amazing experience. Every morning I took a long run part of it along the Pacific Crest Trail. I cherish this wonderful heritage preserved from development (though there is both logging and energygeneration) and I hope it will be available to my grandchildren. National forests and parks play a tremendous role in connecting people young and old to the outdoors preserving the natural and cultural diversity of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. .

. The parks do so much for our country from sheltering endangered species to educating our citizens about the environment. My visits to our parks have been an education and a pleasure. A recent visit ti Zion gave me a different perspective on democracy. Everyone there has to ride the park bus to access the park. rich and poor alike are exposed to the same wonders.

. My wife Cindy a school administrator and I were able to spend a couple days in Glacier national Park this summer. As with Yosemite Yellowstone or Death Valley the memories and photos from our visits to these national treasures will serve to reinforce and reenergize our efforts to preserve and protect this nation's legacy for our grandchildren and future generations.

Our national parks should be protected at all cost. 470 Appalacian mountaintops have been blown up and destroyed forever the oldest mountain range on the planet. The shame of it makes me want to leave the country. If that isn't enough we're destroyed the water with gas drilling. Parks will be our only place to breathe and dream. . .

I recently spent 18 days visiting various National Parks on a road trip/vacation. I was mostly in the Grand Teton National Park. This was the third time I have been there and it is a life changing experience even for a 64 year old (my age). Our National Parks are a legacy that all Americans must protect and preserve. I encourage you and your administration to take the following steps:

I have had some of my most memorable aweinspiring uplifting and rewarding experiences visiting National parks. I feel so proud of those Americans who had the foresight and courage to recognize and preserve the great natural and important cultural areas we have in our country. I love how you see people of all ages and people from many other countries enjoying the wonders of the parks. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

When I think of America's Great Outdoors I think of our national parks I have Mt Rainier and the Olympic National park near me here in Washington State. In fact my church Normandy Park Congregational Church UCC will be taking our annual hiking trip to Longmire and Paradise at Mt Rainier to enjoy God's glory of wildflowers. If your haven't been to our state I strongly encourage you to come and visit us specifically... see our church website at npucc.org. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

When I was 15 years old in 1955 I traveled from home in Pennsylvania to Great Smokys National Park. There I met the late Arthur Stupka. He was a wonderful mentor and inspiration to me. I went on to degrees and a doctorate in biology founded The Conservation Agency and have always worked on and treasured our National Parks and Seashores. When I think of America's Great Outdoors I think of our national parks. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

National Parks are a great resource in recognizing nature's treasury. There is a great poster made in the 70's by Crum that demonstrates what unwise use of nature's treasures becomes. Why not use the national parks and that poster to challenge the populace to recognize what unwise management and use resources with the resolve to do better.

The first national park I saw was Yellowstone and that is when I really knew what was great about America! I knew I wanted to see more of this "real America" and visit other national parks. I realized that there were these places without development or highway noise and I was hooked; I could feel my soul soar into this great open space! National parks play a tremendous role in connecting people young and old to the outdoors preserving the natural and cultural diversity of our nation and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

(cont.)

I have always loved nature and being outdoors from the time I was a toddler riding on my Grandfather's shoulders when he went for walks in the woods. Very many of my family vacations were spent in our national parks and I am lucky enough to live within 50 miles of the Olympic National Park one of our greatest treasures. . . . One of the top reasons I voted for you in the last presidential election was because you stated that you support efforts to protect our natural environment. Please don't let me down!

I've always been so proud that ours was the first country to preserve natural lands for ALL people to be inspired by and enjoy. They more than anything else personify the vast diversity and beauty of this country. The richness of our natural heritage is one of the greatest assets we have in America. It is my belief that staying connected with nature contributes to our emotional well being and our magnificent national parks afford this opportunity to people from all walks of life. .

I am an artist and live in Moab Utah next to several outstanding National Parks and would like to see children do art in the parks especially since many art programs are being cut in the schools. They could sketch draw paint photograph different aspects of our incredible natural heritage as a tribute to our country have a local showing. It is a wonderful way to really look at nature and appreciate all the beauty around us!

I grew up in New York City. While I enjoyed all that the city offered I always wanted to see more of the country that I saw on National Geographic and other TV programs. As an adult I travelled overland across country twice meeting people making friends and learning the true meaning of awestruck. There is nothing to match a sunrise in Yellowstone a night in the desert SW or a thunder storm over the Grand Canyon. We are blessed as no other nation with a rich and diverse landscape. .

This summer my kids received their Jr. Ranger Badges when we were visiting Sequoia National Park. They learned a lot and enjoyed nature. My son said upon our return that he didn't feel right about playing his DS anymore. Since then he has continued his addiction to electronics but he also is a great fan of the outdoors. Our National Parks are so vital to these kids. . . .

When I think of nature and national parks I envision animals living in peace in a clean safe and protected manner to where we and our children and future family can see learn and appreciate the beauty of nature and God's other creatures who deserve a lot more respect and protection than what they currently get. Please help us to achieve this Sir...

(cont.)

My husband and I were in Southwest Harbor Maine a few weeks ago when you and your family visited Mt. Desert Island This is one of my favorite places a place to which I return each year to renew and refresh both my body and soul surrounded by the beauty that is Acadia National Park. I have also visited many other National Parks across the country and was overwhelmed by the wonder and majesty of all of these places. I am sure that your family has experienced that feeling as well. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year.

I would be bereft if our National Parks were allowed to deteriorate and be lost to all of us to my children and grandchildren and all future generations.

I grew up in Brooklyn N.Y. worlds away from the mountains the forests and the rivers of our nation. I thought the roadrunner in HannaBarbera's cartoons on Saturday mornings was a mythical creature. When as a young woman I saw a roadrunner with my own eyes and got to tour many of the great parks of the West including Yosemite the Grand Canyon Bryce Zion and Yellowstone it literally opened a whole new world to me and I have been an avid conservationist ever since. Consequently I think our national parks

My family has had the pleasure of visiting many of the country's national parks over the years. Now that our children are grown my husband and I continue to enjoy visiting the parks. Just last month we spent 10 days in Yellowstone and the Grand Tetons. Such visits are a source of great enjoyment and relaxation. My son and his wife are looking forward to taking our young grandson on visits to some of the national parks.

Every September my dad and I go to the Mt. Cheaha Park (I can't remember if it's a state or national park) he is a member of Narcotics Anonymous and they have an event up there each year.. Anyway it's so much fun. I've been going up there since I was a baby and I couldn't imagine what my life would be like without that park.. Thank you for paying such attention to them it means a lot to so many people including me.

My family just returned from an exhilarating trip to King's Canyon/ Sequoia and Yosemite National Parks. Although I had read about and seen pictures of these extraordinary places they can't begin to demonstrate their grandeur. This was a wonderful opportunity for us to reconnect with our teenage boys with some quality time and to get some great exercise experiencing nature.

I live less than 10 minutes from one of our national treasures the Delaware Water Gap National Recreation Area. I see evidence of the previous statements on a weekly basis when I meet people on the trails on the creeks and on the river when fishing. Enjoying our national parks together instills a strong sense of national pride and brotherhood. It is us the people and most importantly the Park Rangers that know our parks the best.

(cont.)

I worked as a teaching assistant for a sixth grade teacher. We took the students on a week long trip to Yosemite National Park as a culmination of their year. They spent the entire year learning about the flora and fauna the geology the people who lived in the valley. The actual camping experience taught them selfreliance and teamwork. And for many the hike to Nevada Falls via the John Muir Trail and The Mist Trail was a life changing challenge that boosted their selfesteem and ability to set lofty goals. I believe the exposure to this grand national park has enhanced their lives and made them more aware and caring adults who will always value the beauty of natural places.

. I am sure you and your family experienced the unique freshness sparkle and magic of Maine on Cadillac Mountain in Acadia National Park. I have made pilgrimage to this site every year for over 60 years; and moved to Maine because of it and the Belgrade Lakes District. Did you notice that looking to the sea from the top of Cadillac you see 15 degrees of the curvature of the earth in a way you can never forget once you notice.

I am a retiree who lives near AND ENJOYS Joshua Tree National Park and the Mojave Preserve both in California. I would appreciate your giving attention to the steps listed below and keeping our National Parks as a high priority in your administration. You and your administration are doing a wonderful job especially considering all the things that need addressing in our country.

. State parks and National parks were highlights of our vacations when we were growing up. My parents were teachers and we would never have been able to afford Disney World or any of the other hot tourist places. I'm sure there are thousands of Americans now who use the parks for a much needed break as well as those who love the parks just because they are beautiful. Please keep the parks safe available and as natural as possible.

. I also am reminded of the thousands of animals who live in those national parks. These animals are among the most beautiful creatures in our country and deserve as much effort to make their environment liveable as we do. They deserve a chance. Animals have always been my passion and it is my belief that Americans need to be continuously educated about them and have the chance to see them first hand. But we can't do it by ourselves. Thank you for taking the time to read this.

. I grew up withing less than an hour from the Great Smoky Mountains National Park and it played such a huge part in my life growing up in East Tennessee and the lives of my children one of which lives and works in the Pigeon Forge and Gatlinburg area. It has been an historical gem for hundreds of years and has educated the nation about the early settlers and the good and bad things done in the name of our government...such as the Trail of Tears.

Death Valley National Park is my favorite unit in the Park system. I love many other Parks but it is DVNP that brings me back time and again. The intersection of human history with some of the most spectacular physical geography in the world never ceases to amaze and inspire. I support the NPCA and I support your work to fully fund and expand the NPS.

Discussion Question 1

(cont.)

Our national parks are our legacy and it is priceless. Knowing we have these enormously valuable assets and knowing they belong to the people of this nation is truly mindboggling! The richness the beauty words cannot convey what the parks especially those closest to me mean to me. They are ours our awesome treasures that must be protected and sustained for ALL of us and for those who will follow.

Some of my happiest hours have been at National Parks. They hold some of the most amazing sights in America. They are national treasures that should be cherished and protected. I can imagine an innercity kid going from dirty hot noisy streets to the Grand Canyon or Zion or Yosemite and being enthralled with the beauty the sounds of waterfalls and birds the silence of a redwood grove and the wonderful aroma of pine and redwood. Remember that national parks were a great boon to the economy during the Great Depression.

One of my earliest memories is of camping in a national park. Since then National Parks have played a major role in my life with experiences of Yosemite Glacier National Park Yellowstone and the Smoky Mountains which have left poignant memories which are part of who I am now at the age of 82. I'm everlastingly grateful for the insight of our former presidents who realized the value of setting aside and protecting areas of our magnificent country for future generations. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. And they help to connect us to the best within us. I urge you to continue this heritage and take the following steps:

I am a senior citizen with a Golden Pass which I use whenever possible. My best vacations and happiest memories are the ones where I visited our beautiful National Parks. Beautiful scenery nature study and pride in our wonderful country are memories I will never forget. The Park Rangers are helpful interesting and very competentthey are the key to a meaningful trip. Please give strong support to our parks and the people who make our visit enjoyable!

My family and I have spent our most memorable vacations camping hiking biking and just enjoying the beauty of the great outdoors in our national parks. We have spent weeks in Grand Teton Yellowstone Acadia Smoky Mountains Point Reyes Cape Hatteras the Grand Canyon and Zion. Spending time in those places allows us to breathe to slow down and to remember that we are not the only creatures on this earth.

In addition to the comments below I strongly encourage the administration to fulfill its promise to base its policy decisions on sound science. On controversial issues like Snake River salmon recovery the administration has come up woefully short of fulfilling its obligation to make informed and scientifically educated decisions. It would be a shame if petty regional politics also intruded in the debate on America's Great Outdoors.

(cont.)

Everyone loves to go to the park. When I was young our family lived across the street from a small city park and we played there most days. Now being much more mobile we have taken our current family to many national and state parks. Being outdoors appreciating nature and just being away from the crowded artificial environment of the city refreshes a person and gives one a better understanding of what life really means.

The first 47 years of our marriage we visited and camped in many of our national parks or just visited many of those with our own kids as we traveled across the country to visit friends and relatives. Our last trip included Mt St Helens after that tragedy [at least to the folk living and camping there]. The spectacular regrowth 30 so years later was a joy to see and to wonder. We must save these wonders for as many travelers as will go.... Beauty and wonder and love for the outdoors.

When I was a young girl our family camped from Florida to California and back mostly staying in State & National Parks. It was an experience I'll never forget and shared with my children and hopefully will share with my grandchildren. The Parks are a national treasure (and economic reserve as well) and must be protected and maintained. With all the other issues your admin. has to deal with please don't let them slip through the cracks of time & energy. I thank you for everything you are doing to help us out here in America and keep you and your family in my prayers. I invite you to visit NC's 5th Dist. and ride the Blue Ridge Parkway & share through reporters to all America the beauty of our mountains we love. It will inspire you and them to save America's great outdoors. Maybe bring Elaine Marshall & Billy Kennedy (running against Virginia Foxx) with you for a photo op & support? Fund raiser in WinstonSalem/Greensboro?

Many people underestimate the role that a connection to the outdoors can have on a person. This connection ideally starts at an early age and builds throughout one's life. A person connected to the outdoors has a greater respect and understanding of their surroundings. School field trips in which children come to appreciate and learn about the outdoors and their National parks are invaluable resources that we must further take advantage of.

Stop allowing ATV's in our national parks. They have plenty of other places to go and there is no possibility that the people who enjoy riding around on loud gasguzzling machines are people who really care about the national parks or anything else but their own boneheaded pleasures. I have been going to the parks my whole life and there is no place for these polluting idiots without severe damage being done both to the flora/fauna and other visitors. TIME TO SAY NO TO THE MOTOR VEHICLE INDUSTRY FOR A CHANGE.

Your administration needs to take the following steps; Get rid of Salazar. He's as bad as Palin. The damage he has done to our beautiful wild horses and to the magnificent wolves is criminal. He is not what I expected from the Democrats and if he continues he will ruin our national parks. You should be listening to what the people want and stop buying in to the pockets of big oil and ranchers. Our parks need to be kept safe protected in every way. Stop allowing drilling and causing more and more endangered species. So something right for the good of this country.

Discussion Question 1

(cont.)

We have an obligation to future generations to protect and preserve our environmental resources. Any other course of action leaves them with a broken future. "National parks and reserves are an integral aspect of intelligent use of natural resources. It is the course of wisdom to set aside an ample portion of our natural resources as national parks and reserves thus ensuring that future generations may know the majesty of the earth as we know it today." John F. Kennedy .

I was thrilled to learn that MY PRESIDENT and his beautiful family took a vacation not too far away from me in ME at the Acadia National Park! You are setting a great example by vacationing in this National Treasure. Acadia is one of my favorite places on Earth and I am sure you all had a wonderful time. Perhaps more Americans will learn to explore our amazing natural heritage through publicizing your own experience in Acadia. Could that happen? . . .

growing up in Alaska I was surrounded by its wonderfull forrests streams & ocean.We played in the woods as soon as we could walk & hiked and camped out as teens so its very important to me to preserve our wild placesespically in Alaska where we have had Republicans in power so long who seem only to want to destroy & develop them.To their ruin. The more kids & families who play picnic & hike in nature the betteras they will want to protect them as spiritual places when they are older. .

. As a child my family took vacations to National Parks every summer especially Yellowstone. We also visited the Grand Canyon Petrified Forest and many others. Those experiences will always remain with me ... seeing the beauty of the world that God created that is mostly untouched by humans. In today's era fewer and fewer people are takin advantage of these national parks. It is sad to talk to kids who have never been to any of them. There must be a way to make them more aware of their presence and the enrichment they can bring to their lives. .

. We started the concept of National Parks and in doing so started the environmental movement to save our open space our plant and animal wildlife our historical buildings battlegrounds and forts in essence to preserve what makes America. I recently went to Zion & Bryce Canyon National Parks and enjoyed the natural settings the camping & hiking the Ranger led programs and the trams which help reduce traffic and pollution. These types of programs NEED to receive funding to continue to preserve and expand the benefits we can receive from the National Parks.

In our family our vacations are centered around the National Parks. The parks teach history and geography as well as an appreciation of the beauty of the landscape as well as the varied ecosystems. As a teacher I see that many students are disconnected from the outdoors by being plugged into video games movies and other indoor activities. If they don't learn how to appreciate this beautiful world they live in they will not learn how to take care of it as the next generation's stewards of the earth. . . .

When I go on vacation I always go to National Parks and monuments. After I got my PhD I took my kids for 72 days to 23 national parks just in UTAZ & NMexico! Since then we have had fun on many Sierra Club Service projects. To strengthen the Park system I recommend a National Park Service program such as Sierra Club runs. This way people can have fun while working on trail and vegetation improvements AND seeing spectacular natural sites as well as making friends for life who have similar values. . . .

One of the most important things when I was growing up was the time I spent outdoors hiking in national and state parks and enjoy our national forests. I learned to love nature and respect it. I raised my children the same way. National Parks play an essential role in helping families enable their children to reconnect with nature. Nature is not only good for our souls but for our bodies and brains as well. I hope that we will continue to support our national treasures found in our parks and national forests. . . .

Our national parks are gems in the crown of the United States and serve our land and our people in many beautiful ways. National parks are an extremely important resource in providing not only the preservation of a variety of lands and animals but in introducing and teaching children and adults alike to appreciate what our homeland has to offer what nature has to offer and to provide recreation and renewal of body mind and spirit. It is so important to maintain and expand this basic resource for all Americans. . . .

. . . I live in an area that is blessed with two large National Parks around us Moab Utah. It has been ideal for the elementary schools here to be able to take field trips to Arches. Also as one of the founders of the Moab Valley Multicultural Center we have found the local Parks authorities very willing to collaborate on summer programs for the children we serve from various ethnic and class background who don't usually have the opportunities that more affluent local children have. This has enabled them to experience the outdoors in such beautiful surroundings and learn about the local fauna and flora. . . .

___ and I have dedicated our time in the our golden years of retirement to volunteer our time efforts and sweat equity to support the maintenance upgrades and spirit to individual National Parks Forests and Monuments throughout our great country till the 2016 Centennial of the National Park Service and chronicle our experiences on our blog parkwithjackandkiefer.blogspot.com (through google) to echo the call of President Obama's "America's Outdoors Initiative" and hopefully inspire others to join in the Great American Odyssey...Thank you for your lifetime commitment to our Country... . . .

PERSONAL NOTE: AS A CHILD GROWING UP IN THE MIDWEST MY STRONGEST AND FONDEST MEMORIES COME FROM THE TIME MY FAMILY SPENT OUTDOORS IN NATIONAL STATE AND COUNTY PARKS. MY LOVE AND RESPECT FOR NATURE AND THE ENVIRONMENT STEM FROM THOSE EXPERIENCES AND I BELIEVE IT IS IMPERATIVE THAT WE PASS THESE PLACES ON FROM GENERATION TO GENERATION. WHEN WE LOSE THESE TRADITIONS WE LOSE OUR FUTURE. NOTHING COULD REPLACE THE JOY OF LIFE AND THE SENSE OF WONDER AND DISCOVERY I EXPERIENCED WHILE EXPLORING OUR NATURAL WORLD AND IT WOULD BE CRIMINAL NOT TO GIVE THOSE OPPORTUNITIES TO OUR CHILDREN AND SO ON. . . .

President Obama and Administration As a single mother the California State Parks have become an essential part of my life. They offer an affordable haven within which I am raising a moral environmentally conscious member of our community. I hope that in the very near future I may incorporate more experiences with our National Parks and I hope to travel across many state boundaries to do so. Please do everything in your power to ensure that these landmarks these necessary areas are available in their untarnished beauty to our children and our children's children. Thank you so much!

Our closest parks are Kings Canyon National Park and Sequoia National Park I hope you can come visit them one day because they are beautiful! Along with considering many of the important points outlined below I would like to request a serious consideration be paid closed attention when considering helping fund our park services and that is to lower the entrance fees to these parks. Our community here in the Central Valley of CA is very poor and for many making the trek to park means having to do without because you're having to put money away for gas food and the entrance fee to the park which may not seem like a lot but to many in our community it unfortunately is a lot.

My father who passed away suddenly in January of this year visited most of our National Parks during his lifetime. It is those times spent with him camping in Yellowstone with snowcovered buffalo sleeping just outside our tent; hearing the elk bugeling throughout the night; taking my adult son with us on our last adventure to Yellowstone so that he could both enjoy the incredible wildlife as well as the amazing natural phenomena and sights to behold in conjunction with spending a most incredible camping experience with his grandfather that I think of most when remembering my father...a man that I always thought of as "just" my Dad...but later came to understand that he was an incredible human being. I look forward to taking my granddaughters on the most incredible adventures that my Dad exposed me to. Please take the necessary steps to ensure that our National Parks will be there for them to experience as I did with my Dad.

My paths during the 65 years of my life have afforded me to see some of the wonders of all 50 states Puerto Rico and Gaum. Visited 5 continents and many place on each. The is from Beriut Lebonan (Marine Barracks 1983) to seeing and hearing the bombs of Viet Nam. Alaska to Santiago Chili and north or the Artic Circle in Norway to Ascension Island in the South Atlantic. The world comes to see and enjoy our national treasures and parks as we go to see theres. I traveled coast to coast and northern states to Florida after my Grandfather after he was in his 80's. Seeing our treasures are unedited compared to writers slanted and biased view of our great nation.

(cont.)

For the past 4 years my husband and I have rented a series of smaller RVs and toured a large percentage of America's National Parks. It is impossible to describe the wide range of beautiful topography and the large number of wild animals we were privileged to see on these trips. My all time favourite park is Yellowstone. We were able to be close to so many animals and to experience so many incredible places within the park; it moved me beyond words. We arrived in October in a snowstorm; spent a couple of days in temperatures in the 40's to 60's; and left the park in short sleeves and short pants! We saw moose including a mother with her young one; buffalo whose daily fun was to stop the cars on the park roads while tourists took photos; we saw a coyote a wolf hares many types of birds and a myriad of other animals. We saw Old Faithful erupt. We saw mineral springs mountains etc. We felt blessed to have the opportunity to explore the Park. I am disabled and have to walk with a walker. Every Park we visited had ensured that those with disabilities could experience almost all that it had to offer. One last personal thought. Last fall before we left for southern California and a trip that included 3 deserts giant redwoods and sequoias enormous sand dunes Joshua trees and of course Muir Woods we saw the National Park television show about how Muir Woods came to be. Standing there ourselves we felt a sense of history that we could be a part of a place that became a national park because of one man's life long efforts. It was thrilling.

Below is the standard message from the NPCA however I have a few different objectives for our national parks... I was fortunate enough to grow up in Malibu California riding my horses down to Broad Beach and Zuma with the dogs hiking up Bonsall and Solstice Canyons as well as having Deer Creek as my playground. I was a decorated Junior Lifeguard at Zuma for five years and cherish our canyons and especially our waters. What plagues me however is not only the city's neglect in community planning that allowed our wetlands to be overrun septic tanks from \$1020 million dollar homes to infect the water and worst of all the allowance of new home owners to not only build on state land obstructing trails but also to stimulate laws that prevent our precious natural playgrounds from being enjoyed as they always have been. I am a dog owner and horse lover and the land that was once all cattle is becoming evermore manicured and devoid of any of its original spirit. I cannot even take my dogs to the beach I grew up on because some people are not responsible pet owners. Segregating animals from nature because of fearful or irresponsible humans is as ridiculous as if I were to propose that people should not have children because some kids become criminals. Instead of barring pet owners from the trails and the beaches institute some sort of permit process that would not only bring much needed revenue to our park employees but more importantly encourage animal owners to be more responsible! I can only pray that this is actually the President reading this because no one seems to take the exclusion of pets from public life seriously but for many people our animals are most precious and they deserve to enjoy some semblance of the habitat and lifestyle that we as humans have so far removed them from. Preserve protect and cherish our parks and beaches the wealth of our nation is truly in our land but do not forget that people are not the only part of this country... Thank you so much for your time. . . .

Thank you for declaring National Wilderness Month. As a lifelong Westerner who grew up on the National Forests of Utah and California, I agree that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Unfortunately the greatest unprotected wilderness in the lower 48 -- Utah's wild canyon country -- remains in jeopardy from policies leftover from the Bush administration. I'm a SUWA member and I agree with their analysis:

Thanks for declaring September as National Wilderness Month. Supposedly, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. However, I have taken numerous trips throughout these lands across south and central Utah and, well, literally ten million acres of land there deserve to be designated "wilderness." You would do a wonderful service to this and future generations if you started designating some of these acres as wilderness. Of course, it also would help address the potential devastation of climate change, as well.

Wilderness is essential to man's wellbeing

I am a native Utahn and have been active as a member and volunteer of the Southern Utah Wilderness Alliance. I have spent a great amount of time exploring Utah's magnificent canyon and desert areas with my children and now with my granddaughters. I mourn the likelihood that these lands and wildlife will be lost for future generations if action isn't taken very soon. Please make protection happen now!

I grew up in Colorado and developed a deep appreciation for the beauty of American wilderness. When declaring September as National Wilderness Month, you stated "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

I've traveled these areas extensively and hope they will remain pristine in perpetuity. Peace!

These lands are a vitality important to keep wild and free and safe for future generations of Americans to enjoy and soak in their grandeur, beauty and uniqueness. Land once lost can never be reclaimed from either the drilling or the ORV routes and all the damage they cause. To despoil such landscapes for a few more thousand barrels of oil or the machines that are a part of Americas crazy love affair with burning all the oil seems such a poor tradeoff. Furture generations won't much remember the oil, they will cry in sorrow over the loss of such beauty.

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Zion National Park recognized its own 90% Congressionally (newly) designated Wilderness Zone, by conducting public input on a Soundscape Management Plan and draft EA-- proposing new audibility-based, and loudness, Standards for the Wilderness Zone. These draft Standards don't go far enough, but they are a sufficient start to get some improvements in place from tour aircraft (hopefully a ban), and some beginning effort from the FAA on other aircraft noise sources. Thank you for your Administration's support on that. However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. Two of these WSA's are right next to Zion National Park.

I am very pleased with your administration, if I was ever asked by a poll I would tell that. Please keep up the good work on all fronts and please help protect the environment. Utah has some incredible wilderness that needs to be protected.

Tonight we are camped at Millsite State Park in Ferron, Utah. We spent the day touring the northern section of the San Rafael Swell. These lands need permanent protection from coal mining and oil and gas blight. From the huge coal fired plant spewing haze causing pollutants into the air, to the bullet holes in the canyon walls and road signs, to all of the OHV "trails" scarring the landscape it is clear that these lands need protection from all of those who do not care in the least for pristing wildlands that can support wildlife. We only saw cows today, not a single antelope or bighorn sheep. How sad. Thousands of people come from all over the globe to see the redrock country of Utah every year. I hope in years to come there will still be something to see.

I'm a frequent visitor to Utah.

Maintaining as much pristine environment as possible is essential for the human spirit and is a critical element in the future of Utah's economy. The states that protect the most land will, in the long term, have robust tourist industries as people flood from around the world to see the marvel of wilderness. Setting aside wilderness is the bast savings account our nation gave have.

I have visited some of these fragile places and been awed by them. Please stop this destruction and save these gorgeous places for future generations.

We have visited So. UT's federal public lands many times over 30 years for quiet recreation in some of the most unique and spectacular landscapes in the world on the Colorado Plateau. These include national parks, monuments, forests and BLM lands. These lands are America's treasures, our legacy to the future. Please do the right thing for the precious public lands of UT.

(cont.)

Here in Utah the red dust from the red rock country is in our blood. Not only do we cherish the pristine wilderness, but this natural asset bring tourists from all over the world. It can't remain healthy with roads and trails invading the fragile desert and riparian areas. Please help us protect this irreplaceable treasure so you can bring your children and grandchildren to enjoy it as we do.

As a Minnesotan who enjoys visiting wildlands in Utah, I very much appreciate the President's recent proclamation of National Wilderness Month.

My family and I have personally had the privilege of enjoying the public lands of the redrock country in Utah. We greatly value the experiences we have had there and want those experiences to be protected for future generations.

I am a Oregon resident with a great fondness for the wild places of Utah.

President Obama-- Thanks for declaring September as National Wilderness Month. It was very timely for me as I have just returned from vacation at Yellowstone National Park, our nation's first designated national park. As much as I love visiting our national parks and monuments, it is also essential that we protect "the tranquility and grandeur of America's natural places", especially those still remaining wilderness areas. However, policies from the Bush administration remain in place which threaten our ability to do this throughout the West, especially in Utah's redrock country. Please push to enact the America Red Rock Wilderness Act while rescinding the Bush administration's ill-conceived "No More Wilderness" policy that will decimate wilderness quality areas with drilling and ORV use. And, while your at it, in your spare time:), please revisit the 2008 Resources Management Plan, another short-sighted, wilderness unfriendly fiasco. Thanks and keep up the great work.

We are traveling to Utah later this month and wish to continue to do so because the lands are intact, not because they have become a moonscape of drilling rigs and trucks and roads. For crying out loud, DO SOMETHING!!!

I personally know the wild beauty of Utah's redrock country, as I have been a frequent visitor since 1989. I live in the Chicago area and happily drive 1400 miles to visit places like the San Rafael Swell to hike in the quiet backcountry with camera gear in my pack. Talk to Sen. Durbin, a fellow Illinoisan and sponsor of America's Red Rock Wilderness Act (S. 799) since 1997, and he will tell you why Utah's wild places must be protected and preserved. Illinois' other senator, Sen. Burris, is a cosponsor of the Act. Thirteen congressmen from Illinois cosponsor the Act (H.R. 1925), including three Republicans.

Thank you for declaring September as National Wilderness Month. However, I have hiked and camped in Utah's redrock country which continues to be threatened by the Bush-era policy of no more wilderness. Land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. It is past time to protect these precious lands.

Discussion Question 1

Written & Online Comments

(cont.)

I appreciate your enlightened view of the value of wilderness to our country's long-term health.

I have vacationed in Utah seven times. The red rock areas of Utah are really awe inspiring. Mr. President, and Mr. Salazar, please protect Utah's red rock areas by declaring them Wilderness. Thank you.

I volunteer in a visitors' center at the Gulf Islands National Seashore. We hear from visitors every day how grateful they are that there are national parks. And they mention particularly the Gulf of Mexico coast where so much natural area has been irresponsibly built upon, destroying both the function and the beauty of the shore.

I am an 18 year old college student who has been an avid nature lover my entire life. My family has spent the summers exploring state and national parks as well as our own land which is in forest preserve. From the stunning vistas of Yosemite and Yellowstone to the peace of Brown County, Indiana and the quietness of rural Iowa, nature has fostered serenity and hope in me.

I hope that my grandchildren and their grandchildren are able to enjoy America's great outdoors as much as I do. I have hiked the Appalachian Trail, several trails in Alabama, Georgia, Florida and plan to hike out west next year (summer is the time for me since I teach). I recently met a group of guys in their 30's who have been hiking together for the past 20 years along with their scout master who is now 76. WOW! I have not met very many people can say they still love doing an activity after 20 years. Outdoor activities keep families and friends together.

I'm an avid outdoors junkie, anything that I can do outdoors is a blast. Specially when it's mountain biking. Mt. Biking is growing rapidly here and I have heard of stories where fighting over land ends up getting our beloved trails closed by people who love nature. When in all reality the two are just alike, other than the fact that one group does it on a mountain bike.

Mountain Biking changed my life. It truly did! I got in shape, I got happier, I met my husband, and I moved to the great American West.

I am a mountain biker, we are environmentalists by nature. We ask for equal access, not exclusive. We build trails, repair and rebuild. We are conservative. We wish to pass on our love and respect of trails on to the next generation and beyond.

In today's stressful world, more than ever we need our quiet and natural spaces. Children and adults require open spaces to thrive.

Visiting our State and National parks is the only way many Americans can enjoy low cost family vacations. What better thing is there for our children to grow up to appreciate in life than quality time in the great outdoors and getting lots of family time, exercise, and fresh air.

This is our heritage. This is our legacy.

Discussion Question 1

Written & Online Comments

(cont.)

I've been an active outdoorsman all my life. And the older I get, and the crazier the pace of my life, I find I need the quiet of the woods and the connection to the natural world all the more. This is not some abstract political position here; it's a question of spiritual survival and nourishment for my soul.

I love the outdoors and do lots of camping / hiking every year...Without these recreational places there is no escape and relaxation available to those of like mind.

I love this country. I love its beauty and its natural treasures.

Many of the resources available to our population have been under assault by development, pollution, and infestation from invasive species. By protecting tracks of land now, we can better preserve them for future use. The uses of these lands, through dynamic management principles, can provide open space for recreation, habitat for threatened and endangered species, as well as aiding fisherman, ranchers, and farmers in protecting their livelihoods.

The benefits for preserving natural parks translates not only to recreational advantages, but serve as carbon sinks that help to offset greenhouse gas emissions.

Isn't it all about the above. Who needs more buildings and houses. KEEP AMERICA BEAUTIFUL

Do it it for your kids, my kids, and for the future of the great nation. We as a nation are nothing if we do not leave the beauty of our great land for next generation to enjoy.

I myseld used to weigh 300 lbs. I mountain biking the trails here last year, so far Im back down to 260. Please help us to help us keep in shape

There shoudl be protected spaces for recreation including for horse back riding and we should be protecting farms, too. We need open space for mental health, trees to cleanse the atmosphere and spaces for people to recreate in their chosen activity. This is so important to our health as individuals and our communities.

It's the outdoors that save us all from the stress of our lives, the lives we are forced to live working very hard to live in the homes we have. President Roosevelt knew it was so important that he preserved the Yosemite valley. Praise God for that - wouldn't you say?! MY ENTIRE FAMILY WOULD LIKE next generation to enjoy America's great outdoors too.

If we start now we can help America get back on her feet by keeping it's members physically fit and ready for the challenges ahead!

I grew up learning from and enjoying all the great wild places this wonderful country has to offer.

Discussion Question 1

Written & Online Comments

(cont.)

As a 7th generation American outdoorsman I have grown up enjoying and still love out natural riches. I also want to dedicate my life and service to protecting these resources by conservation and working to improve sustainability. I am a second year Forestry Student and am very passionate about our outdoors... Tracy Byrd said it best in the Mossy Oak Song ""Pass it on in the name of conservation, pass it on to another generation, pass it on.... Nothing like the sound when the day breaks""

We can do it. The fee's collected and jobs made plus the free education that the America's shared outdoors provide is a great way of gett'en us move'en in the right direction.

If you want to say no to drugs, say yes to mountain biking! Keep American's options to have fun and not get fatter.

I want my son to experience the same beauty, wonder, and sense of preciousness that I know. If we don't protect the beauty around us, one day, it won't be there.

America's open spaces are some of the most spectacular. Protecting these places improves quality of life and help to foster appreciation for the natural world.

These things are a necessity to our society that's needs to be revived, meaning that our youth needs to stop spending 8 hours a day in their homes playing the newest game system on the market and, rather, go outside and camp, hike, fish, or just do anything outdoors. That spirit is still in the hearts of Americans and I think we should do what we can to bring it back to the surface.

. I know economic times are rough; recovery isn't going to happen overnight. But now, more than ever, we need our wild spaces. We need places to renew our souls.

. The damage is something that we can't undo once it's happened. We need to make decisions that will decide the future of not only our passions, and hobbies, but more importantly, our Earth.

The next generation needs to see and learn the great outdoors like us. It can teach them a lot of thing that could come in handy if ever camping or just out walking in the woods.

Here is an idea. How about having people collecting welfare work in a park twice a week. Have them learn what its like to EARN a check!!!

...support conservation of our farms, ranchlands and forests without expanding wilderness zones which severely limit the activities permitted in their boundaries.

Even us hunters are committed to conserving wildlife and lands for more generations to come

Discussion Question 1

Written & Online Comments

(cont.)

I teach middle school science and having the outdoors protected will be great for our generations in the years to come. I take students out trapping during the school year on my own time, and I show them how nature works and try to interest them in activities that they can enjoy in the outdoors.

Not only will this benefit the next generation, it will benefit all of us, right now.

My father always had us kids in the mountains. I was born and raised that way. I have 2 children of my own who enjoy the same thing. I'd like them to carry that on to their kids as well!!

I'm sure President Obama would agree, but sometimes we need to be reminded of what's important...& If the American people got out of the living room more maybe we have a nation that would not be 65% overweight.

HELLO no living species can exist without nature.

I have spent much of my 56 years in America's great outdoors. As a former user of 4 wheel drive vehicles, and growing up in a family with guns for hunting I have distanced myself from both because of the lack of respect, and lack of connection to the natural world shown by those misusing the same. I can not put into words what joy and connection to what life is really about our wildlife and wild lands have been for me... In better managing the use of our wilderness, and educating people about our connection to nature I believe we will be a much more fulfilled and happy people. And that will carry on into our daily lives and the many generations to come. I am so very pleased that the issue of such a basic need as our wildlife, and great outdoors being preserved and nourished is being recognized by this administration.

My father taught me a great respect for the environment and a great love for the outdoors. I've been a conservation volunteer, hiker, backpacker, and avid mountain biker. As I've seen our country's majestic wildernesses and open spaces, I've been impressed by both their value and fragility.

I am volunteering at a national wildlife refuge near our home, putting out a newsletter and planning educational programs.

I want my daughter and her future kids to grow up knowing what a national park is firsthand, not through a history book.

Discussion Question 1

Written & Online Comments

(cont.)

I am excited to learn that you are in a position to recommend protection of wild areas such as the San Gabriel Mountains around Los Angeles. There is a gestalt principle at work here. Protected areas must be contiguous or will not thrive. Animals and plants disperse over a territory; they cannot cross highways or commercial zones. To preserve a natural environment that benefits the air and water we depend on and offers residents an outlet for recreation and education, the entire ecosystem must be allowed to function.* Management must consider the needs of predators in the region-- mountain lions, bobcats, bears, etc. -- and design recreational areas that do not interfere with the animals' migration, reproduction, or search for food.* Protection of the D.E.L.T.A. rescue sanctuary must be included. If Los Angeles County continues to harass this operation, we will lose it. Thank you for considering my comments, and good luck with this important issue.

I feel that we can reduce global warming, reduce all schools' budgets, improve children's nutrition, help to fight children's weight and diabetes and have a wonderful opportunity to inform students of the importance and complexity of plants and their contribution to the planet. Very simply. Have every school in the country grow vegetables and fruits whether hydroponically or in the ground. Every class would have their own section that they would be responsible for, naturally opening the way for science departments to work this into their part of the curriculum. This produce would be used in daily breakfasts and lunches and possibly in "bake sale" fund raising type efforts.

I used to rock climb as a youth in San Gabriel Mountains. Please protect the area. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty.

I'm sorry that I won't be able to attend as I am out of town. This marks a historic event, giving people the opportunity to have their voice heard on what matters most to them about the many wonders and beauty of the great outdoors. It shows people's appreciation and how they want to protect what they love.

In our Community, Monrovia, I am a founding member of the Monrovia Mountains Conservancy which helped educate our Community about the benefits of Conservancy of our local foothills, rather than housing development. Along with many other supporting voices, our Community voted by over 78% to tax itself to preserve the foothills of the San Gabriel Mountains, in their natural state, into perpetuity.

Discussion Question 1

Written & Online Comments

(cont.)

The simplest way to improve people's health and thereby connection to the environment and nature is to eat a diet high in raw fruits, vegetables, nuts and seeds, to the extent of 60% to 100%. This eradicates addictions, diabetes, as well as many other "modern living" diseases and this also preserves the resources of our planet. A natural life, that includes growing at least part of one's own food supply, leads to a natural connection and empathy with nature. It's as simple as that. In terms of specific regional issues, the San Gabriel Mountains soar above our homes, from Santa Clarita to San Bernardino, providing much of our public open space. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers.* Enhanced educational and interpretive programs so that kids--and everyone--can learn more about native habitat, plants and animals, as well as growing fruits, vegetables, nuts and seeds.

When we enhance our relationship to wild places, especially so close to a large city, we improve our relationship to the very soul of our community and our selves, with far-reaching consequences in terms of other issues such as crime reduction, education, health, and a sense of how we fit into the larger whole.

We must be responsible stewards of what we have inherited as well as what we create so Americans in the future will be able to understand the richness of this country.

One of the biggest and positive impacts that comes from our parks monuments trails and such is that they are available to everyone - rich and poor. This can not be said about many of the places to visit here in our country. Please do all you can to preserve our tremendous heritage for generations to come.

My father was in the military so we moved around the country a lot. My parents always took us to see the important scenic and special places in each area we lived. I did that with my children as well. Today I am retired still traveling still loving to see all that this country has to offer.....we must keep faith with all those who came before because they made us what we are. Thank you for all your efforts and especially for the Great Outdoors Initiative.

This initiative is a great way for people to around the country and in any community to be involved in something where they can see the federal funds "do" something that they can physically see enhance their community. Even though funds being spent are being used globally for some initiatives that benefit all people now seem to NEED to see something spent that they feel ownership of. This is a way to do that.

Americans continue to connect to the land and its historic and cultural resources but also for tourists this is a great attraction and will continue to bring tourists to the US.

I write as chair of our village's Historic Preservation Commission and as a family that vacations to view our nation's historical and outdoor treasures. It is important to our family that these great national assets be preserved.

Discussion Question 1

Written & Online Comments

(cont.)

I have researched my family tree as many many others do and have done before me. What a thrill it is to visit a place where my ancestor lived fought or died. If these places of historical importance disappear future generations will never be able to experience that feeling of "closeness" or "connectivity" that I have felt with my ancestors.

Visitation to state and national parks provide important economic development for neighboring communities. Jobs are created and sustained. State and local tax revenues resulting from outdoor recreation travel support important services and programs. Travel and tourism creates entrepreneurial opportunities and grow small businesses.

My home is listed on the National Register for Historic Places. I am an active volunteer for architectural preservation and Historical Districting to help insure that our visible history is preserved for future generations to learn from and enjoy.

My family has spent delightful hours visiting historic sites throughout this nation. We also visit wilder landscapes and parks. Both are important and I trust that the historic sites will also be honored in America's Great Outdoors Initiative.

As the owner of an historic home and farm and a descendant in Frederick Law Olmsted's family I am well aware of the need to continue support for Federal state and private lands that provide Americans with the open spaces to enjoy natural and cultural sites and landscapes whether in active recreation enjoyment of the outdoors or as an environmental asset. These historic and natural sites are found in a wealth of locations so that Americans can celebrate our shared earth and heritage.

Preservation is also good for the economy. Many individuals gear their business towards the preservation area and earn their living helping keep America's treasures in good repair for all to benefit from.

We just returned from Grand Canyon National Park were on Labor Day we were treated to the experience of watching 100's of foreign visitors marvel at one of the world's greatest natural wonders. Other countries recognize the amazing natural and historical gifts that we have preserved for all to experience we just have to recommit our spirit and resources to preserve our treasures for the world.

One of the few ways that remain for people to connect to the past -- their heritage -- is through experiencing a place. There is something emotionally special about standing on the same ground where a great battle was won or lost or seeing the very house where Abraham Lincoln lived. Our parks and wilderness areas are also a way of connecting with America's past. One stands in Yosemite and thinks "This is what it looked like before civilization came; before McDonald's." Heritage tourism is a growing industry because there is so little left of our past. People DO want to see historic places and unspoiled wilderness.

This is an issue that affects me and My family personally. We use state parks many times a year and is our way to "re-charge" from living and working in an otherwise crowded society.

Discussion Question 1

(cont.)

As someone who lives in an historic district within an old Connecticut manufacturing city I know first hand how important our historic structures are. They help to define who we are where we came from and how that context informs our future.

If our National Parks had not preserved in the early 1900's we would not have their beauty now. Let us continue to preserve our history.

As a longtime hiker and camper in our glorious national parks and monuments I want future generations to enjoy the advantages I have had.

I have just come from our local Historical Society meeting this Thursday evening. We are struggling to restore a Sheriff's home and attached Jail built in 1880. A few weeks ago I visited an archaeological dig with my nephew and his family at Fort Michilimackinac. We saw first hand items that have been unearthed that were here long before the territory was settled by the French and English. These historic and natural sites reflect a wealth of resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. We appreciate the funding for cultural resources trust it will be brought back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more Parks Monuments Trails and other permanent protection for the sites and lands that are important in our heritage. The Rail-Trail projects undertaken across the country are an excellent example of connecting people back to the land.

Americans ever year spend a great deal of time and money going to various countries overseas to admire their wild lands cultural recreational and landscaped areas. Millions of dollars are spent on those visits. Equally world citizens visit our sites. For us not to venerate our country's contributions to those same kinds of areas sends a very negative message about the way that we value our country. Even if no one else visited our sites than our own citizens we deserve the opportunity to enjoy all the benefits that can be derived from the admiration of them.

We just spent three days at the Great Smoky Mountains National Park with our four children and enjoyed every minute of it.

Over the course of this summer I've had the opportunity to visit several sites throughout our great country having significant historical and recreational value including San Lorenzo National Forest near Santa Cruz Wendover Air Field and Bonneville Salt Flats near Salt Lake City Mississippi River historic sites between LaCrosse WI and Clinton IA where I grew up the Tall Ships Festival in Chicago and most recently beautiful areas in Maine between Portland and Ellsworth including the Maritime Museum in Bath. Perhaps the most transformative was a week on Seguin Island at a Light commissioned by President George Washington. These visits helped to strengthen and refresh me and allowed me to appreciate and understand our rich national heritage in personal ways not possible through an iPod or a BlackBerry.

(cont.)

In our area historic homes are few and far between; however we are blessed by beautiful mountains and very historic passes. Both Cumberland Gap and Clinch Mountain Gaps helped funnel pioneers into western Tennessee and Kentucky during America's most important era of settlement. A visitor/interpretative center is desperately needed at the Clinch Mountain site in Grainger County Tennessee. We are blessed with care of the famous Cumberland Gap through the auspices of the Cumberland Gap National Historic Park; however additional funds are needed there to develop additional areas that Americans of all ages can use. The recent designation of U. S. 25 E across Tennessee provides some level of protection to this region; yet additional funding is essential. It is very important that we continue to preserve our forest lands water sheds and historic homes/areas as the future -- our future -- depends upon these connections with our past history and culture.

I have recently moved from Washington to Georgia. It is remarkable how lush and green both states are. I was not expecting that of Georgia and am happy to be surrounded by so much beauty. My husband and I enjoy hiking in the many waterfalls in north Georgia and running and bicycling. Please do what you can to preserve our open spaces to continue our quality of life in enjoying the great outdoors.

In Western NY (Buffalo and surrounding Erie County) Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes. Buffalo has many natural and cultural sites and landscapes areas whose constituent resources are closely related to one another are inextricably linked because environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Our natural beauty and landscapes are so unique in this world. We talk about what it means to be American and taking care of what we have and that which we take for granted helps insure that our country stays beautiful and breathtaking for generations to come!

Ken Burns' wonderful TV series on our National Parks epitomizes how they provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation. They are also intertwined with our most treasured historic and cultural sites and landscapes. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

It's nice to have places to vacation and enjoy nature but the most icritical part of this initiative is to provide a sanctuary for wild animals. We are nothing as humans if we do not recognize the importance of the diverse ecosystem that is our world and set aside a great amount of land for them to flourish.

I cannot tell you how much reverence I feel for these historic resources and never take a vacation without visiting one of them. Please help to keep them safe and protected.

Discussion Question 1

(cont.)

I strongly believe that my four children are the literate and appreciative nurses and teachers that they are today because we took the time when they were young to take them to the various sites of our American History.

It is at these sites that people connect with their natural and cultural heritage. People relax their minds and exercise their bodies and realize how connected we are to all life on earth. Families that play together outdoors get closer and develop a reverence for nature which is critical as we must take care of the earth if we expect it to take care of us. We must learn the lessons of our ancestors in order to create a sustainable future.

As a landscape designer and lover of the outdoors there is nothing more important than providing those spaces for our future generations to learn from the previous. I was taught about the cultural heritage of the US through interaction with outdoor spaces as a child. It was that exposure to America's treasures that gave me a sense of place and belonging to this great Nation. It is why I went into Landscape Architecture and it is why I am so involved in my community today.

Americans need their history now more than ever and more and more people are realizing the incredible value that a historic site holds. I grew up in the largest National Forest in the nation and I might value the outdoors a little more than your average American. History is too important to be left behind historic preservation saves one small piece of America at a time ensuring that it'll be there for many many future generations to come. Long live History!

Please help preserve our history for generations to come!!!!

Our children are depending on you to preserve their cultural and historical heritage. My sons can't imagine not being able to visit the historical areas they now enjoy with their children and grandchildren.

I live in a tiny town in northern Arkansas that depends on BOTH the natural resources and the rich history of our town and our area to attract tourists and to attract new people to our area. We are working as hard as we can to preserve what our town has to offer but we need more help. Please share funding for our efforts to preserve our local history with the funding to preserve our natural resources. We need all the help we can get!

As an educator I have brought students to many history parks to study history and geography in the field. As a college professor for physical geography I often refer to our national parks and their geology. It would be a shame not to preserve both physical and cultural aspects of our country by lack of adequate funding to monitor and protect them.

(cont.)

I agree with the statements given about providing for our National Heritage. We have just found what we believe is a Cherokee built cabin hidden under a hotel here in Cave Spring. By that discovery all manner of people have come forward talking to each other. A side effect is that many are claiming Cherokee blood no doubt truly spoken for this area and for Georgia. That we are all related no matter our colors is making us more connected and gives rise to more tolerance of each other than ever. This is definitely worth some thought as money is allocated. People are our resources too. Therefore the statements below should be heeded. Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation and are intertwined with our most treasured historic and cultural sites and landscapes. Natural and cultural sites and landscapes areas whose constituent resources are closely related to one another are inextricably linked because environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage because once we know where we've been then we know where we're going.

Our small rural community has been enhanced by pending stimulus funds to provide energy conservation lighting upgrades in the Village -- at the historic Belmont Mill and Sargent Park. Citizens and community organizations are hopeful that the Village and its green space and walking trail potential will be available & treasured for the next generations. Americans continue to connect to the National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

Getting outdoors is not just about hiking biking playing a sport etc. Many wonderful historic sites help get us into the 'great outdoors.' Historic cemeteries indian burial grounds trails like that of Lewis and Clark are all part of our historic landscape.

As the President of the statewide non-profit historic preservation organization Preservation Iowa I have witnessed first hand the power of community revitalization and economic stimulation that comes about because of the rehabilitation of historic resources/buildings. These commercial and residential buildings make up the very core of our Iowa and most American communities. Historic rehabilitation has also played a very important part of the disaster recovery from the devastating flooding that affected Iowa in June 2008. To date over 50 historic rehabilitation projects worth over \$200 million have gotten underway or have been completed.

In addition as an urban planner with experience in historic preservation efforts I know how important preservation and rehabilitation can be in rejuvenating urban neighborhoods and downtown commercial areas. That preservation enhances the market value of buildings provides a stronger tax base for local communities enhances job opportunities in those areas and provides jobs in the building trades during the revitalization phase.

As one of the original proponents of the Ebey's Landing National Historic Reserve on Whidbey island WA I have seen the many positive outcomes of preserving our farmlands forest historic sites and vistas. The Reserve draws people to the island who love history and the landscape - still used as it has been for more than a century. The protected environment here has drawn new people in to settle and tourist to help keep the local economy alive. Such areas if not protected are truly a loss for those who live there and those who would come to study or visit. They are resources to be protected for all of us - and our great grandchildren.

Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. Our built environment serves as a record testifying to significant themes in the development of community and industry alike. Each structure in this environment makes a contribution to this story. It is of utmost importance to capture those stories essential to the understanding of our past to preserve them for interpretation by future generations. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

I have hiked throughout the Grand Canyon National Park and frequently visit our local park at Bear Mountain in New York near West Point Military Academy. I think you can see that National parks provide some of America's finest outdoor classrooms and serve as a basis for promoting exercise, conservation of the land, history, and civics education for millions of people each year. To continue to foster the strength of our National Parks for the benefit of all Americans, Thank you for your guidance for the preservation of our National Parks and considering my comments.

When I think of family vacation time I look to the National Parks. We have visited several and there is nothing that can compare with a trip to a national park. From scenery to the educational programs provided, a trip to one of our National Parks is an educational experience of a lifetime. We are so blessed to have a wide variety of national parks in America. Your administration needs to take the following steps to ensure the parks will be viable for future generations:

I love our national parks! Great place for getting in touch with the land & creatures. Most people of course don't have acres of their own to wonder on & enjoy the beauty of it all. Have to have that refuge. Also the parks do provide alot of jobs.

Visiting national parks has provided our family with most cherished vacation memories which we plan to share with future generations.

Our National Parks are a National Treasure and one of the things that proves to the world our love of our country and our freedom.

Discussion Question 1

(cont.)

We personally have visited several of our national parks, monuments and historic sites and there is no place in this country that thrills us more. The older I get the more interested I am in seeing where I've come from and what the people of this country have done to insure that I and generations after me will continue to learn the valuable lesson that, we don't know where we're going if we don't know where we've come from. I love the outdoors and I'm thankful for the men & women that help preserve God's wonderful creation. Our son recently became employed by the Park Service at the Historic Preservation Training Center in Frederick, MD. We're so excited that he will become one of those men that will preserve our parks for future generations.

Parks are good for our health, physical and mental.

Some of our nation's greatest wealth is found in our natural resources. Our greatest natural resource are our unsullied, undeveloped National parks.

They are especially important to those of us who live here in Arizona as they attract tourists to our state and provide us with wonderful places to get outdoors.

My personal first experience at a national park was in our first national park as a fifteenyearold. Yellowstone was amazing! I saw many animals I had never seen before. While it wasn't my first time in the mountains, as an lowan at the time, I was still amazed. But the mud pots and painted rocks and waterfalls were dazzling. I would like to see the parks have a steady funding source and for user fees to be either cut or curtailed completely.

I'd like there to be National Parks for my son and his future family to enjoy like I've had and my parent's before me have had

Parks for our mental health as well as for habitats for our precious wild creatures. Most important we need our parks and wildlands for our mental balances.

When we were raising our four children, we took every opportunity to visit our state and national parks and national monument. Our children felt very commected to our beloved USA and our great outdoors.

Even though I cannot camp in the National Parks any more, I still relish the memories of my experiences in many of them. They were our best vacations for the beauty and serenity to be found there. We are so in need of this remarkable natural foundation of our country!

Along with the Constitution, our National PARks System is indeed America's best idea.

It's a great way to put people to work a la FDR.

(cont.)

We are a nation in SERIOUS need of outdoor recreation, sport and communing with nature. These spaces are essential to preservation of the American way of life! Thank you for considering my comments and in advance for your positive action.

As Ken Burns said in his wonderful documentary on our National Parks, Saving them was the greatest Act ever. Everyone loves the National Parks. I spent one summer as a Camp Councillor at a Pioneer Girls Coub Camp 6 miles South of Yosemite, It was heavenly. To see them is to believe in them and to love; them.

National parks have for years played an important role in my lifetraveling with family as a youngster; hiking in the Smokies every chance I got while I was in graduate school; taking my mother, aunt and and landlord who were all in their seventies on a trip across the United States from North Carolina to California and the Pacific North West. Now I am a senior citizen and still cherish our national parks! spent my 10th wedding anniversary riding a mule to the bottom of the Grand Canyon. The national parks preserve the natural and cultural diversity of our nation, and contribute to the health of our people. What a great opportunity to put people who need work to work doing the backlog of work that needs to be done to maintain trails and other infrastructure.

I do not think I can say it better. I lived by YOSEMITE, for awhile and hope that these special places will be able to last forever!

Mr. President, I have many fond memories of visits to the Grand Canyon and other National Parks such as Bryce, Yosemite, and Estes. Summer vacation trips west with my parents when I was a young teen played a major role in the forming of ideas I hold dear to this day concerning what is of great value in these United States of ours. I believe

Our National Parks are at the very heart of "America the Beautiful," in every way. We need to ensure the viability of longterm survival of these irreplaceable national treasures that we call our National Parks. It is critical that your administration take the following steps:

America's Great Outdoors is spectacularly represented by our beautiful national parks.

And I have just been to the Grand Canyon National Park with my granddaughter that was a great experience for us.

One year I took my class to Tree People, a conservancy off Mulholland Drive in Beverly Hills. How they came alive! One little immigrant child in particular was so filled with joy in being in nature, that the remainder of the school year was bearable for him, in the cement jungle of L.A. I wish every child could visit the parks and nature spots twice a year or more. For some, the school taking them is the only way they can get there!

My family and I live within 5 miles of the LBJ National Historical Park and I am continually impressed with the programs that are made available to families for them to learn more of our history; experience living in earlier years and the influence that has had in shaping one of our presidents.

When I think of America's Great Outdoors, I think of our national parks "America's Greatest Idea."

Our family has been visiting state and national parks forever, since my children were very small, in tents going camping. We always left our site cleaner than we found it, and our children always loved camping and experiencing the "great outdoors." We even had a couple of encounters with hungry bears raiding our trashcans late at night (in the early 1970's). We have raised bright, happy children who love and appreciate the parks and feel that they are sacred. They are also good citizens. I feel that it is so healthy for people experience great times out of doors and to develop a love of all living things, including the wildlife, trees, etc. As a family, we have seen some of our prettiest sights out of doors and will never forget the images. I'm sure they make us better and more appreciative people.

This initiative is a GREAT idea, a step in the right direction, positive, brilliant! I only wish I lived closer to one of our National Parks, or could afford to visit any of them, or could do something for them, the ones I've seen are truly magnificent, and I've seen pictures of many of the rest and know they are too, they are treasures to be preserved, saved, cared for! Thanks for doing this, I hope it works!!! Next on the agenda...JOBS, PLEASE!!! There has to be a way to change this outofcontrol, surreal nightmare of an economy!!! It's so discouraging, depressing, frustrating and sickening what is happening to the dreams of so many people no jobs, no homes, financial ruin, sick, no health care, you know all about it. But for those of us on the receiving end of this insanity, it feels hopeless. And, I certainly don't see a way out of this, I don't see it getting any better anytime soon. But, what do I know, I'm just an administrative assistant, living outside of Detroit, trying to hold onto my little home, like my family members and friends, and I know that's not what this is supposed to be about but I saw the opportunity to reach you and had to take it! I don't know what you can do, I don't know what ANYONE can do, but we need help!!! Please!!! ALL my comments!

Having just returned from an amazing trip through Yosemite, Kings Canyon and Sequoia National Parks with my granddaughter, I am acutely aware of the importance of our national parks. As a single grandparent raising my granddaughter, I am trying my best to instill in her the love of the outdoors that I have found so renewing. During our trip, she had her first experience touching snow, catching fish, seeing squirrels, deer and chipmonks. It also brought back fond memories that I have of camping trips with my parents. My granddaughter said she just loved being out in nature, and even became a Jr. Ranger through a wonderful program offered by the national parks.

Discussion Question 1

Written & Online Comments

(cont.)

For many Americans, national parks are "once in a lifetime" trips families talk about for years (the Grand Canyon, Yellowstone, Yosemite, the Everglades). For some, they are old friends, revisited and rediscovered every year. But for every person who visits them, they are a precious opportunity to see the natural world and the history of our country and to remind themselves that we are only passing through, and that we will be remembered for the quality of our stewardship while we are here.

The National parks are America's best idea. As a youth and as an adult, I have enjoyed the educational opportunities and the recreational opportunities in the National Park System. The following steps are urgent:

When I think of America's Great Outdoors, I think of our national parks, parks like the Grand Canyon, Zion.

When I think of America's Great Outdoors, I think of our national parks (and monuments).

It wasn't until I retired from the U.S. Air Force that I truly had an opportunity to visit and enjoy our nation's national parks. It has been a sublime experience, and one I hope to share, one of these days, with my grandchildren. The scenery is absolutely amazing, the closeness with nature creates an emotional connection, and the wealth of experiences offered by our National Parks is absolutely amazing. National parks are an invaluable asset to the United States, and we should treat them as such.

I care deeply about America's future. National parks represent the best America has to offer our children and grandchildren a glimpse of what the world once was, a connection with the few wild place left in this country, and an opportunity to appreciate our heritage, history, culture, and natural resources. National parks are our tangible connection to our past, present and future.

Our National Parks stand as a symbol of the USA's commitment to our future.

There is no better way of connecting family time than in the great outdoors. We spent 2 weeks in Wyoming and South Dakota National Parks last summer and everytime my 2 year old sees the pics on the computer he says he wants to go back! The 4 and 7 year olds are helping me find our next great adventure to a national park. We decided after last year that we want to take our kids to as many national parks as we can while they grow up. It means a lot to us and them. We should be proud of our nations National Parks and take good care of them so that they will be here for generations to come!

When my husband and I think of America's Great Outdoors, we naturally think of our national parks. Thank you for considering our comments and best of luck.

My first comment when contemplating our National Parks is all the jobs they create (AND GOD KNOWS THEY'RE NEEDED!!!!) As well as how many more you could create by protecting these national treasures. I also think of America's Great Outdoors, I think of our national parks.

Discussion Question 1

(cont.)

As someone who has frequented our parks as a kid and now as an adult, I cannot think of better places to roam than the parks. I have been knocked down by deer, chased by a bear, licked by a wolf, intimidated by a buffalo bull, watched badgers playing and spent hours enjoying other very wonderful activities.

Congratulations for letting your daughter go to summer camp. It's a great place for her to uproot and reroot, learn more about herself and others in a neutral setting, and more fully appreciate the natural world and her relationship to that. It's an opportunity too few children have today.

I grew up traveling "OUR" National Parks. At 62 years of age, I still desire to visit "OUR" special and sacred places unscathed and preserved as Nature intended. If one only listens, the wilderness and its inhabitants have a great deal to teach us.

I have had a life long love affair with our country's incredible national parks. I visit as many as I can each year.

Many I have personally visited all of the major parks in the western half of the United States. I hope one day I can take my children there to see just how wonderful our country truly is.

Our families most precious trips and memories are surrounded by the nature and beauty of our national parks, what better way is there to experience the great outdoors!

I live in Moab, Utah mainly for the wide open spaces around us including 3 National Parks.

Once we get conservation funding and with proper implementation, we can then focus on issues such as agroecology, local school and household garden projects that will benefit local communities, states, and the rest of the nation, educationally, emotionally, and personally. Thanks.

One of the most magnificent places on the planet is the Avenue of the Giants in Northern California, the Tallest Trees in the World, a place of prayer and peace and LIFE so magnificent we have not grown enough to comprehend yet Please set priorities to protect these magnificent representations of LIFE on this planet.

I am a resident of San Miguel County and this area is magnificent in beauty and wildlife. Please protect this area and others like it.

Please protect key landscapes on a large scale for the land, for the people, before it's too late. I ask that: 1) The Obama administration conserve large landscapes, including our healthy wildlands, connecting them with working forest and ranch lands, private lands and the connections across these large areas.

Many areas that are rich in biodiversity are also targets for resource development or human community development. While these needs are important, it is also important to consider our planet as a living organism and to intelligently relate to this organism. We have lost a great deal to human development. Human survival depends on the protection of these precious resources.

Discussion Question 1

(cont.)

Protecting agriculture land for farming is going to be essential to building resilient communities. Let's us be smart and stewards not only to lands for wildlife and ecological protection but for people too.

Roadless areas in the San Juan Mountains.

Please protect key landscapes on a large scale for the land, for the people and the animals. We are asking that: go clean, go green.

Please protect key landscapes on a large scale for the land, for the flora and fauna, and for the people.

The natural world needs help. More than ever.

All of our Wild Lands, here and across America need to be protected for us and future generations.

Areas of South Park and the Platte River basin

If we do not connect people with wild nature humans will certainly continue on their pathway to utterly destroy the Earth. More and more humans are becoming "cyber" or living in a virtual world of computer technology, television and videos. Seeing people continuing their horrid driving habits in gas-guzzling cars and trucks when the entire ecosystem of the Gulf of Mexico is being destroyed is a graphic example of how disconnected people are from the reality of their impact on nature.

Protecting and preserving crucial corridors of our shared ecosystem is an act that will be appreciated for generations for its contribution to our future as a land and as a people.

My family and I use these wild areas on a weekly basis throughout the year for rafting, backcountry skiing, mountain biking, climbing, backpacking and photography. I believe that the motorize sports are important as well, however I feel that they have enough areas and the remaining roadless areas should be set aside and protected. Some of these as Wilderness and other as special non motorized areas.

Dear President Obama, other than for campaigning, have you and your family been to my beautiful state? It's a place of phenomenal diversity and beauty! I certainly hope that the southern desert grassland Otero Mesa and scenic Rio Grande, our native wildlife and plant species, significant water resources, and imperiled desert ecosystems. are all here for your family to visit after your next 6 years in office. Thank you, President Obama for working to promote the tradition of wilderness in New Mexico. We look forward to your involvement with the America's Great Outdoors Initiative.

Discussion Question 1

(cont.)

I worked in Yellowstone Park for 3 summers in my 20's and had the best experiences of my life. I continue to enjoy the great outdoors here in New Mexico and while on vacations in the United States. I see lots of tourists both Americans and people abroad enjoying our parks , national forests and wild rivers . The more we preserve the better.

Having raised my children in New Mexico, and having served its people in emergency rooms throughout the state for over thirty years, I have many reasons to care for its wild and beautiful places.

I live in New Mexico and spend over 30 days a year outdoors in national forest or BLM lands.

We continue to be blessed with our National parks thanks to president Roosevelt's support and commitment to the Civilian Conservation Corps which improved the National Parks in the midst of a Depression.

While a huge fuss was kicked up at the time the coastal lands north of San Francisco were protected, that public land is now part of what draws tourism here, and creates jobs in our region.

I just want to say SAVE NATURE AND SAVE LIFE.

I want better safer out door parks so that when my home gets foreclosed on i ll have a safe place to stay with my family thanks

(cont.)

When a site marries environmental, historic, and cultural resources you'll find the most successful formula for bringing people outdoors to enjoy the places that tell America's stories. Take Saugatuck, Michigan for example. It's a sparsely-developed landscape of spectacular beach, rare freshwater dunes, water, woods and wetlands; habitat to several endangered species; and home to a large number of significant historic and archeological sites. Saugatuck has been a very successful draw for Chicago residents and others for more than 120 years because all of these resources work together for one of the best visitor experiences.

What works: What are the most effective strategies for conservation, recreation, or reconnecting people to the outdoors? One of the most effective strategies for reconnecting people to the outdoors is providing federal dollars for local projects. Modeled after its sister program, the Land and Water Conservation Fund (LWCF), the Historic Preservation Fund (HPF) provides dedicated funding to support the programs and activities for historic and cultural sites. Programs like Save America's Treasures and Preserve America along with National Heritage Areas play important roles in promoting heritage tourism which brings people with their dollars out to experience those sites. The programs also attract private dollars to restoration projects and work in partnership with the federal government to promote economic development and create jobs.

o According to one analysis, between 1999 and 2009 the Save America's Treasures program allocated around \$220 million dollars for the restoration of nearly 900 historic structures. This investment by the SAT program generated in excess of \$330 million from other sources and created 16,000 jobs (a job being one full time equivalent job for one year) at a cost of \$13,780 per job created. (D Rypkema)

o We are fortunate to have in our midst the I&M Heritage Corridor, which was the first explicit bringing together of preservation, conservation, recreation, and economic development in the country. There are now almost 50 national heritage areas in the U.S. that owe their existence to the pioneer I&M Canal National Heritage Corridor.

Challenges: What obstacles exist to achieve your goals? (for conservation, recreation or reconnecting people to the outdoors) The obstacles to achieving our goals of reconnecting people to historic sites outdoors are The lack of full, permanent and dedicated funding for the Historic Preservation Fund limit the matching grants for State Historic Preservation Offices; Tribal Historic Preservation Offices; and limit funded preservation activities like planning, survey, and public education for historic preservation. Eliminating funding for SAT that leaves no preservation \$\$ for "bricks and mortar" projects and ends the most successful preservation effort in the country's history.

o If the I & M Corridor, with its many natural, historic, and cultural resources were given more funding, it could continue to rehab historic resources, and develop more programming to draw even more people to the to this beautiful 96 mile-long historic site.

Federal Government Role: How can the federal government be a more effective partner? (in helping achieve conservation, recreation or reconnecting people to the outdoors) The Federal Government can be a more effective partner by:

- Reinstating FY 2012 federal funding for historic preservation for Save America's Treasures, and Preserve America at FY 2010 levels.
- Increase to at least FY2010 levels National Heritage Areas' funding.
- Provide full, permanent and dedicated funding for the Historic Preservation Fund at \$150 million and the Land and Water Conservation Fund at \$900 million.

Tools: What additional tools and resources would help your efforts be even more successful? We believe that increasing the capacity of federal, state and local agencies

to care for and interpret historic and cultural places would go a long way to helping our efforts be more successful.

In 2000 my family moved to the Appalachian Mtns. from Houston, TX where I was born and lived for 16 years. Seeing nature flourishing with beautiful mountains was a refreshingly new experience. After several months of wondering what to do, I ventured into nature. I found that our purpose as humans is not to spend our lives in shopping malls or sitting in front of the television, but to use our bodies to explore this fantastic gift that is the world around us. This is the key to a healthy lifestyle, which Americans desperately need. In the 10 years that I've spent enjoying the outdoors I have seen so much of it destroyed or just diminish from being unkept. We must take care of the world that has taken such good care of us, so that we may enjoy it for many years to come.

What Works: Involvement/participation- WE need to get people involved. WE have too many public employees who try to take over and be gate-keepers which make many stay away from public places. I was able to get 100 acres on a Scenic River for a Public Park and kept it for 10 years with a single Ranger. One day Ranger Jane showed up with 2 other ladies and told me that I had NO RIGHT to tell people they could come to the place even though I had signed waivers and had an agreement. They also made up some story about my being a "gay basher." They got rid of the hard-working Ranger and replaced him with 4 others... I do not lead hikes there anymore, I do not do "kids in creeks" there anymore and I seldom visit and pick up the site. I saw the same public employees who try to limit public participation at the AGO meeting along others who think parks belong to Park employees and not the citizens. In trying to deal with our Natchez Trace Park people, there is no concern for the public nor genuine safety issues. As a full time volunteer for public parks, spaces and Green-ways, I tend to feel less than welcome..... My suggestion is to replace most of the paid bureaucrats with motivated volunteer groups and neighborhood coalitions. Challenges? Absolute indifference of Government to dumping and filling and ruining of watersheds by a few connected developers.... When you complain or report incidents - you become the enemy. There is something wrong! It is not that we have too much government, it is that we employ too many who do not care, work as little as possible and work against and not for PUBLIC interests. I say motivate or terminate. Most Public employees work fewer hours for more money and benefits than most other workers..... We have a volunteer network in Nashville Parks and Greenways which should be a model for others. Federal Role? Funding, incentives and motivation... Get friendlier, more committed and dedicated workers who care..... Think about those who have worked to conserve great parks, forests and places- not many were Government Employees. Continue to get more public input outside of the paid to work group.... Tools? SCHOOLS! Conservation incentives- Identify the treasures and publicize more about what WE should and can do... Work with existing conservation organizations and help locals to help themselves... A 20,000 acre tract near me that was bought with Federal money is now like a War zone with insensitive shooters and 4 wheelers. There is something wrong in our society with militant groups intent on violence which tool should be training and behavior modification. We need more public education about Good and Bad practices and more public information about what is sane and rational and to do more about those who abuse the environment and to make it news.

(cont.)

Hunting and fishing are ways of life. They are our passions. We share it with family and friends and it trully makes us whole and makes us who we are. We MUST protect our land and waters. We MUST ensure that they will be around for generations to come. President Obama, this is not a choice, this is an obligation.

early on as a child I grew up fairly alone, being separated from my siblings, and having to deal with an abusive father. I turned to nature at a very young age. I have always felt a spiritual greatness, an importance that which preceeds anything I had, and still have ever known. This ancient vastness of nature that we have been blessed to live upon. I know I am only one human, one man, even so, there are many many things I wish to accomplish in the conservation of the natural world. To better preserve the world for humans as a thriving race.

America's outdoor spaces are one of the most valueable featues our country has. I have yet to visit another country that guards its natural spaces the way that America does. Protecting our outdoors for the future is one of the greatest gifts we can give to the next generation.

I strongly recommend designation of the Prairie Pothole Region of North Dakota, South Dakota and Montana as a "Treasured Landscape" in the administration's America's Great Outdoors Initiative. The Prairie Pothole Region supports outdoor recreational activities for millions of Americans, providing opportunities for both adults and youth to connect to our natural heritage. Migratory birds produced in the region support or enhance the outdoor experiences of waterfowl hunters, bird watchers, boaters and many other outdoor enthusiasts in nearly every state. My father was an employess of the Dept of Interior and used to purchase these pot holes in ND for wildlife reproduction in the 60's. We lived in Minot, ND and I have many fond memories of traveling the beautiful countryside and learning about migratory and reproductive habits of ducks and geese. He instilled in me the importance of prairie potholes. I urge the administration to recognize the Prairie Pothole Region as a Treasured Landscape.

I am very happy to hear about this program. As you take input, please consider the following: - We need not only to protect existing wilderness areas, but increase them, if possible. - It is essential to consider the effects of habitat fragmentation on plant and animal species; ten separate 1000 acre areas are not as biologically productive as one 10,000 acre area. - The agencies which oversee natural resources must be given stable and adequate funding, and the authority to enforce. - Park and recreation areas should be designed to get people out of their cars. (Let them borrow bug nets if they want!)

Dear Great Outdoors Representative: The present government is doing a great job with such things as the Everglades Comprehensive Invasive Species Management Area (ECISMA) and Army Corps of Engineers Efforts (GEER) BUT what I've noticed is the public hasn't been brought along. (Such as the NWF is doing with their Yard Habitat Program.) If we're (The U.S.) going to spend \$1,000.00 an HOUR sending helicopters to the Big Cypress to spray for invasives on two trips, shouldn't we get the public to STOP reseeding those areas with their own backyard invasives? Further, DOT gives Highway Enhancement Funds to my city of Parkland and the powers managing those funds NEVER made them remove the invasives on the properties in question. Want to have a GREAT OUTDOORS? Don't give out FEDERAL MONEY unless INVASIVE REMOVAL on the affected property is COMPLETELY REDONE. This includes National Register for Historic Places such as the Bonnet House in Fort Lauderdale, who say: If we remove the INVASIVES, we affect the history. Balderdash! The Invasives were planted by humans and they should be removed. Make it a 10 (ten) year requirement that ANY HISTORIC AREA that doesn't remove their invasives will lose their designation. Furthermore, require that FUTURE HISTORIC DESIGNATIONS MUST BE INVASIVE FREE. Give me a chance and I'll tell the president. Thank you. Sincerely yours in Wildlife Preservation,

Greetings. I love the freedom in our National Forests. The Angeles Forest provides a wonderful place for urbanites to find respite. However, litter is a HUGE problem there. We need 'No Littering' signs posted with their relative penal codes in English and Spanish, and 'No Dumping' signs in the obvious places (just follow the trash!). Enforcement people are a must, especially in crowded spots, and particularly near the water. Big Tujunga Narrows and Stonyvale Picnic Ground are wonderful, but not when filled with empty beer cans and full diapers. Please add resources to fix this problem and keep the Angeles beautiful. Thank you.

Hello, My name is (name deleted) I live in Grand Junction, CO. I'm a retired wildlife biologist, having worked for the Colorado Division of Wildlife for 33 years. I'm also a hunter, fisherman, hiker, back packer, mountain biker, down hill and back country skier, outdoor photographer and camper. I take every opportunity possible to make use of public lands in the vicinity of my home town as well as other areas throughout the west. I support the basic idea of Americas Great Outdoor Initiative. I also support the following ideas or concepts; * Protection of key landscapes on a large scale * Creation of a comprehensive quiet recreation strategy for federal lands. While motorized recreation on public lands has its place, I think it will be very difficult to substantially expand OHV trails without negatively impacting important wildlife habitats. * Science based management of natural resources on public lands * Sustaining opportunities for sportsmen to continue to enjoy hunting and fishing on federal public lands and waters. I also support the following policies or ideas: * New reforms of BLM onshore oil and gas leasing procedures * Colorado Oil and Gas Conservation Commission rules that provide additional protection for wildlife and wildlife habitat in the oil and gas drilling permit process * Protection of Colorado's non-wilderness roadless areas either by the Clinton Administration Rule or by the recommendations of the Colorado Roadless Area Taskforce Thankyou for the opportunity to comment on this important initiative. Cheers.

(cont.)

I attended yesterday's Listening Session in Chicago and wanted to briefly share my comments and ideas:

1. Thank you for attempting to further strengthen one of America's greatest assets its outdoors and to reconnect Americans with their outdoors. It's great to see our White House doing that.
2. We very much hope that ways will be found to build on the work of local organizations and local coalitions that are saving and restoring natural areas and parks all across the country. From experience, we know that local groups (especially nonprofit land trusts and similar organizations) can be creative and build alliances of municipalities and other non-profits that are really effective.
3. We urge you to be sure to do all that can be done to fund land preservation and land restoration on public and private lands. We have a good backbone of protected land but much more needs to be done. Moreover, natural lands that are not stewarded with natural processes will tend to degrade over time.
4. We would urge you to be aware of the importance of ecologically minded stewardship of lands close to home. Backyards, woodlots, school and corporate campuses are all places where nature can be treated well with natural landscaping, organic gardens, rain barrels, and other good practices. The process of doing this builds ecological literacy so that camping and excursions elsewhere are more enjoyable as nature is already understood. Create living spaces around us also awakens the hearts of adults and kids by making possible encounters with wildlife. Community gardens are also extremely useful in getting people outside and creating community across all races and backgrounds. People in cities and suburbs should have nature around them so they don't have to travel hours away to see birds and butterflies. If this is done on a larger scale, it will also lead to cleaner streams and lakes, less erosion, and richer soil. Healthier land and water contributes to community health in an important way. We'd urge the White House to implement a bird garden and some natural landscaping at the White House itself to show that we can bring nature home in ways that benefit people and wildlife.
5. We urge you to support conservation easements by extending the more extensive tax incentives for private landowners that donate them. Easements are an important and cost-effective tool for land conservation across the nation.
6. Trails and trail systems are critical and need to be substantially expanded and improved. For truly healthy living, people and children should be able to get outside and do normal tasks and errands without using a car. We have a soccer field complex that is less than 2 miles away but has absolutely no bike trail access so we must get in car to drive there. On the other hand, our city of Grayslake has a generally excellent bike trail system that allows us to go grocery shopping, visit friends, and get to the gym on bike. A precondition for really offering healthy outdoor living is when people in urban and suburban America can do most of their normal daily activities by bike or by walking. This is good for health and will also contribute to our long-term energy independence.
7. The federal government can play an important role in strengthening America's Great Outdoors and our connection with the outdoors by creating a useful set of indicators that, like GDP and the Dow Jones Industrial Average, tell us how our Outdoors are doing in terms of water quality, preserved lands, accessibility to open space, etc.

Good luck in this initiative!

(cont.)

In both looking at how much outdoors there is to enjoy and how many people are able to enjoy it, we need to look at big enough picture. With the global climate crisis, we need to look at the health of entire ecosystems and allow plenty of space for wildlife to adapt. And with kids, we need to look at adapting what is already in their environment to getting them out to find that the woods are not, as one of my urban friends fretted when I took to the woods in rural Ohio, full of bears, snakes and rapists.

20 August 2010 The Honorable Kenneth Salazar United States Secretary of the Interior
c/o America's Great Outdoors U.S. Department of the Interior Fish and Wildlife and Parks
1849 C Street NW Washington, DC 20240 Dear Sir, Thank you for your vision and
your leadership in helping to make President Obama's America's Great Outdoors initiative a
personal and national priority. As millions of Americans spend their summer days enjoying the
great outdoors, including our 392 national park sites across the country, we are reminded of the
important role they play in preserving our public lands and national heritage. From the great
southern wildlands like Great Smoky Mountains National Park to places like the Ocmulgee
National Monument, which memorializes our continent's Native American history, the national
parks provide some of the best means of connecting Americans, young and old, to America's
Great Outdoors, and preserving the natural and cultural diversity of our nation. As the AGO
initiative winds down, with the ending of the summer, and you begin to ponder the incredible
outpouring of the ideas and hopes of the American people in order to assist the President in
crafting a 21st century conservation agenda, I would like to offer several thoughts. The ideas
below emerge from the work of the National Parks Conservation Association's southeastern
regional program. They are framed within the context of the AGO's four questions. I)
Challenges: What obstacles exist to achieve your goals for conservation, recreation, or
reconnecting people to the outdoors? Major obstacles to advancing a 21st century approach
to conservation include the following. A) The Need for Full Operational Funding for the
National Park Service. Compared to the overall federal budget, the Park Service is very
small—only one tenth of 1 percent. Providing Parks the funds needed to serve visitors and
protect resources is a tiny investment in our national heritage, and provides economic benefits
and jobs in struggling communities nationwide. A recent NPCA-commissioned report, *The U.S.
National Park System: An Economic Asset at Risk*
<http://www.npca.org/park_assets/NPCA_Economic_Significance_Report.pdf> , found that the
National Parks generate over four dollars in value to the public for every tax dollar invested by
the Federal Government. The President's 2011 budget request for the National Park Service
is approximately \$2.7 billion—a decrease of \$21.6 million over the current fiscal year 2010
budget. Within the total budget, nearly \$100 million in park programs are reduced or
eliminated—including Save America's Treasures and Preserve America grants—and parks are left
without funding to pay for cost of living adjustments for staff. The operations budget proposal
does not come close to meeting the \$100 million request by the National Parks Second Century
Commission, and is insufficient to maintain current park operations and visitor services. As
recommended by the National Parks Second Century Commission in their final report to Congress
and the Administration, NPCA is advocating for a multi-year commitment that reduces the
operations shortfall by at least \$100 million per year, as well as an additional \$500 million to
meet the construction and maintenance needs of our National Parks. First and foremost, the
President and Congress must support operations funding for the National Park Service, sufficient
to meet its' needs. B) Lack of a Secure and Fully Funded, Mandatory Land and Water
Conservation Fund. The Land and Water Conservation Fund (LWCF) was established in 1965
by Congress as a bipartisan commitment to invest in our natural areas, working lands and historic
and cultural heritage, and to increase access to recreational opportunities for all Americans. The
LWCF has protected land for our national parks, national wildlife refuges, national forests,

Discussion Question 1

Written & Online Comments

(cont.)

national historic and scenic trails, and wild and scenic river corridors. In addition, the LWCF state assistance program has helped develop new state parks, trails, and recreation lands in every state in the nation. The LWCF has also helped farmers and ranchers protect working lands with conservation easements and saved some of America's richest wildlife areas for hunting and fishing. In spite of these successes, the LWCF program has been dramatically underfunded. Every year, \$900 million from federal Outer Continental Shelf (OCS) drilling lease proceeds are supposed to be dedicated to the LWCF. But the full funding of \$900 million promised by Congress has been reached only once since 1965. Congress has diverted as much as \$17 billion -- 85 percent -- of the Fund's dedicated revenue for projects unrelated to conservation or recreation. Over the last eight years LWCF funding for federal land protection has dropped over 70 percent, hitting a low of \$130 million in Fiscal Year 2008. In order to preserve America's treasured landscapes and places of national significance, it is essential that the President and Congress fully fund a mandatory LWCF program. Current events in the Gulf of Mexico make keeping this promise more important than ever.

II) What works: What are the most effective strategies for conservation, recreation and connecting people to the outdoors that you have used?

A) National Parks Work! The National Parks embody America's natural and cultural heritage. They preserve the exemplary places and tell the defining stories of the American character and experience. National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning. Consequently, National Parks are the heart of America's Great Outdoors and should have a prominent place in the President's initiative.

B) The National Park Service Works! The National Park Service has become legendary for doing amazing things with few resources. To give one example, the Rivers, Trails, and Conservation Assistance Program (RTCA), which receives less than one percent of the National Park Service budget, is making outstanding contributions to community-based conservation efforts around the southeast. The program offers NPS staff assistance to community partners for planning, organizational development, project coordination, facilitation, and public involvement in achieving locally-defined goals for natural resource conservation and outdoor recreation. To highlight one project in Georgia, much of the floodplain along a 50 mile stretch of the Ocmulgee River between the cities of Macon and Hawkinsville is already in public ownership, but is managed under a patchwork of federal, state, and local jurisdictions. Because of this fragmented management, recreational access to the river has traditionally been very limited. RTCA is helping to change that by working with the city of Hawkinsville and Bleckley, Houston, Twiggs, and Pulaski Counties to develop and improve public access points along the river, thereby creating a canoe trail, or Ocmulgee Blueway. When the Blueway project is finished, RTCA's partners will be able to promote river events such as festivals, river races, and run/bike/paddle races that can be combined with other eco-tourism promotions in each county. These developments will support local businesses, such as outfitters, restaurants, hotels, and shops, as well as create new constituencies for environmental stewardship. Ultimately, this project has the potential to link the city of Macon and the Ocmulgee National Monument downstream to the Altamaha River Canoe Trail and the city of Darien on the Georgia coast, over 200 miles away. From Darien it will connect to

Our community remains supportive of the National Park Service and the Forest Service with the realization that both are very large landowners in Washington's Western Clallam and Jefferson Counties. Both of these agencies have played, and could play into the future, a significant role with regard to "getting people into America's Great Outdoors." While the goals of this initiative are laudable, the idea that America's Great Outdoors should be an independent tourist/recreation draw is contingent upon people feeling welcome and invited to visit, explore, recreate and enjoy those lands. At the present, our "Great Outdoor" recreation centers are seriously lacking the financial commitment necessary to meet the new level of hype being used to promote them. For years, our community and others have argued for fully staffed facilities where there are no more "rare ranger sightings" associated with educational and recreational offerings by overwhelmed, multi-tasking and multi-hat-wearing front country recreation, interpretative, enforcement, and educational staff. In addition, while the recent investment by Congress into both the NPS and USFS through ARRA addressed some of the maintenance backlog for both agencies, it only took on the projects that were "shovel ready." There continues to be a significant maintenance backlog that is limiting access to and enjoyment of "America's Great Outdoors." It would be worth a note of caution to the Executive Branch that it may be problematic to highlight the need for America to rediscover itself, and its historic connection to its lands, only to have the visiting public find dilapidated buildings, unmanaged trails, outdated visitor centers (such as the one at NPS Hoh Rain Forest). Further, the expecting public may encounter facilities and parks that are understaffed or so heavily relying on volunteers that staffing seems to be a second thought. Also, there are great needs for both the USFS and NPS to engage in recreational planning if we are to see a true realization of the vision associated with this initiative. Over the past decade or longer in our region, we have continually been promised "plan revisions" or "new planning opportunities" to address the concerns and issues being raised about our public lands. Yet, in nearly all such cases, those required recreation plans, day use plans, capital investment plans, forest plans, etc., all get continued out to some tenuous, unattainable date in the future. America has a remarkable heritage that is integrally tied to the utilization of its natural resources and outdoors. This initiative has the potential of rekindling that flame of discovery in the hearts of many of our fellow citizens. The challenge that lies ahead is ensuring that those outdoor resources are prepared for the expected and/or hoped-for visitors. What Works? First and foremost, local collaborative, constructive efforts are probably the best example of what in fact works. In our community, there are conservation efforts focused on salmonid recovery that involve tribal and local governments working in partnership with citizen, state, and federal land owners on specific project enhancement efforts. However, these efforts, unless it is the application period for a specific project grant round, rarely see the continual participation and engagement of all of the federal land managers, particularly the NPS. If the meeting is to regulate, or to explain how the federal agencies could apply for state salmon recovery funding board funds, then we see tend to see the federal agency at the table. If it is to develop a coordinated planning effort, their attendance is less than certain. The USFS in our area, however, has been an active technical supporter of the local collaborative salmonid efforts and deserves recognition for its involvement in these efforts. Unfortunately, some of the agencies own policies and procedures require the agency to create its own local citizen advisory group. Recently, the USFS ONF found itself having to do just that, in spite of two

Discussion Question 1

Written & Online Comments

(cont.)

well established salmonid recovery/watershed planning groups, effort to undertake a focused watershed initiative in the Calawah Basin, when many locally felt it would have made better sense to utilize the existing salmonid recovery organizations that have been working, planning and promoting local driven conservation for the past decade. Unfortunately, the USFS administrative process did not allow for the local ranger district to utilize what was in place. Second, citizen buy-in to the idea that the Great Outdoors applies to them - all of them. People need to feel that they are a welcomed group that can partake in activities without worry about being shut out or closed down. This may require land owners like NPS and the USFS to put as much attention on the front end visitors as there seems to be on the wilderness and backcountry users. If all feel welcome and have a positive experience, that will then result in returning, engaged users. Challenges. First, there needs to be a clear realization that adding more land, wilderness or otherwise, to existing USFS and NPS holdings will not result in more people visiting and using that specific park, forest service site, etc. Second, there needs to be a realization that over the past two decades, or so, the discussion of recreation on federal lands has developed some very restrictive "socio-economic classist" views. If we are going to be asking Americans to enjoy their outdoors, we need to realize that this is going to include a large collection of various user groups, enthusiastic, and types. At the present time, there seems to be an agency bias against outdoor recreation that does not fall in the "day hike/outdoor wilderness walk" style of recreation. However, there are a larger number of outdoor enthusiasts that believe their interests in exploring the great outdoors as off road vehicle drivers, hunters, horse riders, etc., should also be incorporated in such new policy efforts. At the present there continues to be clashes between interested user groups and enthusiasts that usually leave a level animosity hanging about the recreation lands. On the opposite end of the spectrum is the hope that some forms of tourism aimed at understanding the underlying ecosystems, species and climate of the region could be developed to attract other users. However, the true investment in such new tourism markets has not been made a priority. In fact, some of the hype assigned to such objectives have been seized upon as a means of dissuading other users that may not meet the "perceived ideal visitor." A balanced, multi-use and user approach needs to be developed as part of this new initiative. Third, the process of engaging in the permits, or being involved in the planning is not an easy one. In many cases, the interested participant has to spend numerous hours attending briefings, meetings, reading through high technical documents, and then have a narrow window to submit formal comments. Such a process can be a significant negative persuader for the general public wanting to be engaged in the future of our Nation's "Great Outdoors." Fourth, the process itself seems to be a hurdle. Many times the lament from the USFS/NPS is that "the NEPA we have on recreation is outdated," "need to revise the existing plan," or, "no plan exists, so we have to wait until we can undertake that plan to address your access issue." Then when efforts are made to determine when a recreation plan, or plan amendment is to be considered, it is usually many, many years off in the future. Federal Government Role Focus. If the goal is to encourage the use of the outdoors and the properties managed by the federal government for recreation purposes, the agencies need to: 1. Make the lands and facilities usable. Limited use and/or closed doors, trails, and campgrounds due to a lack of maintenance funding, or lack of funding for operations, is a significant barrier that has to be addressed. The field staff are doing remarkable things, but they cannot be exp

As someone who grew up with nature, drifted away during my teens and early twenties, and has recently redeveloped a connection to our nation's amazing natural heritage, I fully support your effort to "leave no child inside." I have worked as a seasonal park ranger, and after being laid off from my full time job as an arts educator, I have decided to go back to school to pursue degrees in environmental management and forestry. Never has the need to protect our wildlands been so fundamental to the future of our nation, and never has there been a greater need to provide access to these lands to people of all ages and backgrounds. I offer below a few suggestions: - Continue your support of the NPS and all of the work it does. The ARRA has provided many parks with much-needed funds to repair their visitor services and facilities. There is still a backlog of needed maintenance, and many parks are in desperate need of long-range plans to adjust to increased visitation and climatic changes. - Provide incentives and opportunities for inner-city families to get into the outdoors, whether this be in the form of youth leadership retreats, natural history programs held in green spaces, community-sponsored bus trips to our national parks and forests, or something else entirely. **ACCESS TO NATURE MUST NOT BE RESERVED FOR THE ELITE.** - Work with local landowners, nonprofits, and NGOs to develop a nation-wide network of protected areas and wildlife corridors. Landscape-level ecosystem conservation will be an essential component for the future integrity of our larger protected areas. - Continue the country's tradition of providing a wide range of access to our wildlands. Different types of people will seek different outdoor experiences. It's important to make sure that Americans have the ability to camp in a developed campground using an RV or tent while also protecting vast roadless wilderness areas where visitor use is minimal and natural systems are able to function unimpaired by human development. - Continue to set an example for minority families everywhere. The U.S. will soon be primarily a non-white population. It's important that folks don't feel that National Parks and the outdoors are places reserved for retired white couples. Our protected lands should be places where people of all backgrounds can go to explore nature and push the boundaries of their own comfort zones. Seeing our mixed-heritage First Family on TV enjoying the National Parks may help break down some of the racial stereotypes associated with the National Park Service. Best wishes as your administration continues to tackle this daunting challenge.

Send more resources to the state level to fund Nature Centers and other environmental entities that conserve our wildlife and natural resources.

Hello, I attended the Initiative meeting in the Twin Cities (Minnesota) on August 4, and want to submit my comments: One of the most effective strategies is to preserve the wilderness resources we currently have, and not allow them to deteriorate. As we talk about how to connect people to the outdoors, we must make sure we make sure the "outdoors" are still there. The Boundary Waters Canoe Area Wilderness is one of the premier outdoors resources we have, and it is in imminent danger of being destroyed. Preserving the BWCAW should be among the top priorities of the Interior Department and the National Forest Service. It is a national--international--treasure that all should be concerned about. The current threat is from sulfide mining drilling and the potential sulfide mining that has never been accomplished anywhere in the world without environmental damage. The drilling has been going on for some time as I write this, and international mining companies are pouring money into the drilling and exploration, at a rate that no local counter-investment can match. The sulfide mining drilling/exploration is occurring in and under the watershed leading directly into the BWCAW. The waters in this area are interconnected marshes, wetlands, creeks, rivers, and lakes, eventually leading through the BWCAW into Quetico and ultimately to Hudson Bay. Acid mine drainage into this watershed will be unstoppable, and will alter the environment for centuries. Much has been written by experts concerned about sulfide mining near the BWCAW, which I won't repeat here. But, for a government concerned about the Great Outdoors, a major part of the plan MUST be preserving the Great Outdoors that currently exist. The federal government has a regulatory role on what mining and drilling permits are allowed. I greatly appreciate the EPA's decision on the Polymet mine Draft EIS earlier this year. However, much more vigilance is needed to protect the Great Outdoors that is the Boundary Waters Canoe Area Wilderness. Thank you,

(cont.)

Department of the Interior, I attended one of the public youth listening sessions held in Albuquerque, NM on the America's Great Outdoors initiative. I was representing Talking Talons Youth Leadership, which is an animal rehabilitation center in Tijeras, NM. We use our non-releasable exotic animals to teach youth about science, the environment, and protecting these animals and their habitats. We have a summer camp where we take the kids on hikes in the East Mountains, fieldtrips to other rehab centers and nature centers, and really spend most of our time outside. We are trying to create a community garden using garden club volunteers in the community because this will teach that a person can be sustainable on their own - we don't always have to get what we need from a grocery store. The land that our center sits on is directly connected to Cibola National Forest area, and we are working with the USFS to create a program that involves the community in Talking Talons as well as the national forest. These are just some things on the horizon... What Works - Our most effective strategies include the use of our non-releasable exotic animals. We use these animals to teach kids about science and the individual animals' stories. The kids get to learn how to hold them, and this is how they build a strong connection to the animals. Because they start to care deeply about the animals, they also start to care about preserving their habitats in the wild once they learn about them. Caring about the conservation of the species and the species' habitats is then a small step from there. Challenges - Since we are a non-profit organization, we rely on state and federal grants to help us serve our community with our programs that connect youth to animals and the outdoors. This is our greatest obstacle; money and getting available grants. Federal Government Role - Really the grand obstacle to all of our programs is available grants to apply for. Maybe if the federal government had more money set aside for this effort, organizations like us could thrive because more grants would be available to us. Thank you for your time, and I hope these comments help you on your way to submitting your report to the President.

The following comments are submitted in response to the America's Great Outdoors Listening Sessions and a copy of these comments are also attached America's Great Outdoors Listening Session Comments of _____, Knoxville, Tennessee July 15, 2010

1. Commercial timber harvest in our National Forests should be discontinued. This practice, which is heavily subsidized by the tax funds of the citizens of our country, cannot be justified under any pretense except as noted here. Our timber resources should only be commercially harvested, if needed in the event of a catastrophic event that severely damages private forest lands over a very large area of several million acres. As the US Forest Service (USFS) now practices commercial timber harvest, and growing timber for this purpose, private businesses that own and grow timber for the wood products industry are forced to subsidize their competition.
2. The primary mission of the USFS should be to manage our National Forests for water quality protection and recreation. There are several ways that users can assist in funding the recreational programs, which I will not attempt to enumerate here, that should be considered by the USFS.
3. I appreciate very much the recent introduction in the Senate, of the wilderness bill by Senators Lamar Alexander and Bob Corker that will protect some additional areas of the Cherokee National Forest under the provisions of the 1964 Wilderness Act. But there are many other roadless areas in the Cherokee, Nantahala, and Pisgah National Forests identified by both the USFS and citizens organizations that should be designated as wilderness study areas. They should be given immediate protection from timber harvest, road building, and any other development until their qualification for protection under the provisions of the 1964 Wilderness Act has been determined. A number of our National Forests throughout the nation should be officially, by legislation, designated as National Recreation Areas with qualified areas given additional protection under the provisions of the 1964 Wilderness Act. The Cherokee, Nantahala, and Pisgah National Forests are three of our National Forests in the southeast that should be designated as National Recreation Areas. The use of ATVs and ORVs for recreational purposes, should be prohibited on all federally managed public lands, except on roads maintained for use by ordinary passenger automobiles. The use of bicycles and motor vehicles (wheeled vehicles) in our National Parks and all other units managed by the National Park Service should be restricted to use only on roads maintained for use by ordinary passenger automobiles, except on roads and trails constructed and maintained specifically for use by wheeled vehicles other than ordinary passenger vehicle. The long standing controversy (67 years) concerning the construction of a road in the Great Smoky Mountains National from Bryson City, NC to Fontana Dam will be resolved once and for all, only when Swain County, NC is paid the full amount of \$52 million in lieu of building the road, as agreed to by the new agreement which replaced the earlier "1943 Agreement" that promised the road. The Department of Interior should include in it's budget, starting with FY 2011, sufficient funds to complete full payment of the \$52 million in no more than another 5 years. Current payments (2) add up to \$12.8 million, leaving \$39.4 million due.

-- Thank you for wanting to get input directly from the stakeholders of our community and work together for solutions. My name is (name deleted) and I have lived in Highland Park, CA for over 30 years. This is the neighborhood I have grown up in and the one I love. I am a Champion Mom with the Network for a Healthy California Los Angeles Region. I am a spokesperson who advocates eating more fruits and vegetables and increasing physical activity among low income California residents. I will try to make it to your Occidental College visit but if I am unable to I wanted to voice my thoughts based on my experiences. Thank you for the opportunity. **WHAT WORKS** Community Outreach in low income neighborhoods. Inner city children are often unaware of hiking trails and there is a lack of access to parks in their neighborhoods. When cities such as Los Angeles are so over populated with buildings, etc. what is needed most is usually a park. In Highland Park a huge housing development is being planned on Ave 57 and Piedmont. Would a small "pocket" park serve the area better? Creating and conserving parks is one of the best ways to promote a healthier lifestyle for residents of neighborhoods. Sycamore park is an excellent example of a park that works. As a child many of my birthdays were celebrated there. The playground equipment was falling apart back then. A big sense of community pride arose when beautiful playground equipment was installed for the children and a set of exercise machines for the parents. The location of the parentsmachines are right next to the children's so they can safely watch their children as they work out. All parks should have a set of machines strategically placed. With the obesity epidemic in our country and the economy the way they are... this is a solution. Families would have a safe place to exercise and gym memberships would not be a requirement!!! Conservation of our parks and the government helping to create new parks works. They also are community gathering and building places. Government helping to protect historical landmarks like the Southwest Museum in the Highland Park area of Los Angeles. As a child our family would visit this museum on a regular basis. We would walk to the museum. As a teenager my best friend (name deleted) and I would jog at Sycamore Park and end our jog at the top lookout area of the Southwest Museum. Walking through the outdoor gardens and sitting on that bench as we viewed the city was the best. The museum was such a positive place for our community to enjoy. It is sad that my children will not have the wonderful experiences I had at this museum because the exhibits and museum are not functioning as they were. Government should protect and conserve historical landmarks that provide enjoyment of the outdoors , educate and are a sense of community pride in neighborhoods across America. Providing safe, lighted bike pathways, swimming pools (adding splash pads & curvy slides like at Northridge's pool to our area pools), enforcing dog leash laws on hiking trails are a few other things I can think of . The Audobon at Debs park is a great example of partnerships that help bring the great outdoors to inner city children. If you really think about it most of these places are possible because of a park. When the great outdoors is perceived as a safe and fun place to be a lot will be accomplished. Lower obesity and crime rates. I also have to mention protecting & conserving the Boys & Girls Clubs of America. We went there as children and now my children go there. The club on Pasadena Ave is an amazing place which encourages children to play sports, swim etc... The club provides (when funding is available) outdoor experiences for children. The partnership of the Federal Government should be to help build up communities. Work with the stakeholders to find solutions and build a solid foundation. Thank you for your time.

Thank you for the invitation to attend your America's Great Outdoors Initiative Listening Session held in Albuquerque, NM on July 17, 2010. This event was well organized and attended by a diversity of stakeholders from throughout our state; a testament to both your successful outreach and the great interest of the conservation community in New Mexico. While I was able to participate in some of the sessions, I was unfortunately unable to provide a comment during the breakouts. Thank you for the opportunity to comment in writing.

Observations at the 7/17 Meeting During the sessions, I observed a strong conservation ethic across a wide spectrum ranging from agriculture, preservation, youth education and empowerment to multiple use. I was also impressed by the agency leadership exhibited by Department of Interior and Department of Agriculture and your interest in developing more effective federal support for local projects and programs worth investing in.

Comments I would like to provide comments focused on programs and opportunities that will cultivate and grow the conservation ethic in our communities for current and future generations of Americans . . . in their own backyard! While implementation of sustainable management strategies in our large blocks of public land is important, I believe that federal agencies have an opportunity for a stronger supporting role in cultivating community appreciation of the natural and built environment within the urban and rural areas where our citizens live. Without an understanding of conservation amongst our citizenry and youth, we will lose the opportunity to get them out of the house and to appreciate, experience and support conservation of our wonderful natural areas outside of their community.

What works The USDA Forest Service Urban and Community Forestry (UCF) Program provides funding to support a State Urban and Community Forestry Program (offered through State Forestry Organizations and the National Association of State Foresters) in each of the 50 States and 6 Pacific Islands. State UCF Programs cultivate local community forestry efforts in our cities, towns and villages through technical assistance and funding support for: development of management plans, tree inventories, arborist education, etc. In addition to providing resources and expertise, State UCF Programs are in-tune with the needs of municipalities and are successful at developing extensive partnerships and programs that support local communities. Here are just a few of the partnerships that states throughout the country have successfully developed:

- Environmental: EPA, State, regional, and local organizations (SmartGrowth, Green Infrastructure, Air and Water Quality);
- Community health (partnerships with hospitals, healthcare providers, urban greening and connection to human health and activity);
- Non-profit citizen organizations (at the local, regional, and national level);
- Community planners and housing organizations;
- Utility and energy providers;
- Outdoor education organizations

The impetus of success for State UCF Programs relies on creative program implementation and partnerships that leverage a limited level of base program funding support provided by the Federal Government.

Challenges While the USDA Forest Service and individual State UCF Programs have built an Urban Forestry Program that provides: research, services to communities, and effective partnerships; there are great challenges to building sustainable municipal programs that result in a true impact on the conservation ethic of our citizenry. States face two critical challenges in implementing our programs:

- The current Federal allocation formula for State UCF Programs is based on a state's population. This results in many states throughout the country receiving on average \$200,000 to implement a statewide program. As a result, the ability to effectively serve mid to

Discussion Question 1

Written & Online Comments

(cont.)

small size communities is greatly hampered (ironically, these are the communities that our programs have the most potential to impact when services are provided!). State UCF Programs are effective at developing non-traditional partnerships that elevate the importance of urban forestry and often result in additional funding support for individual communities. The challenge lies in sustaining sufficient funds to deliver a sustainable statewide program that can operate and grow to serve the needs of communities. Federal Government Role The Federal Government has an opportunity to recognize benefits provided by the already established Urban and Community Forestry Program and align its extensive resources and programs to support it. For example, nationally we see many separate efforts at expanding implementation of "green initiatives" through Federal Agencies, such as: HUD, DOT, EPA, Department of Commerce, Department of Energy. Locally, there is extensive synergy at aligning these resources on-the-ground, but the state and local urban forestry stakeholders consistently dedicate significant time and resources to compete for a diversity of federal funding sources that serve a common purpose in the local community building healthy forests that result in healthy people. Rather than promoting competition among federal agencies for a "piece of the green", the Federal Government has an opportunity to align a diversity of agendas and overlapping resources into one synergistic "Community Conservation Initiative". This initiative has the potential to: bolster existing programs, further partnership and leverage of resources, and result in sustained and lasting change in the conservation ethic of our communities. Tools "Aligning our resources to create a lasting impact" Across the country, we often talk about the importance of the 3-legged stool in sustaining local urban forestry programs: the state, the municipality, and the grassroots citizen organization. While many state organizations have these pieces in-place, we struggle to maintain sufficient funding to maximize our impact on the citizens of our states. We challenge Federal agencies to recognize the existing infrastructure and expertise in states throughout the country and seize this opportunity to align your diversity of agencies and resources toward a common goal. If Federal leadership accepts this challenge, the states and our partners are poised to provide input and support so we together can ensure successful implementation of an effective and sustainable "Community Conservation Initiative".

Hello, I attended the Annapolis Great Outdoors listening session on Friday, June 25, and didn't get a chance to share my comments in the breakout session with (name deleted) Deputy Assistant Secretary at USFWS. Wetlands and headwater streams are critical to sportsmen and women and to continuing our outdoor heritage. Aquatic animals of all shapes and sizes depend on wetlands at some point during their life cycle. These small streams and wetland have been left vulnerable to destruction and pollution due to two recent Supreme Court decisions that dramatically reduced the scope of Clean Water Act jurisdiction. We need the Administration to work with Congress to pass legislation to restore Clean Water Act protections to these critically important yet vulnerable waters. Thank you,

Nobody was listening at the Grand Junction session so here is what I wanted to say:

1. Eliminate the estate tax permanently so that farms and ranches can remain in the family.
 2. Reduce intraagency conflicts. There should be no reason the BLM and the NPS can't get along.
 3. Reduce interagency conflicts. There should be no reason the BLM is writing the planning document for drilling in the White River National Forest.
- Respectfully submitted,

Last Friday I attended the session at the Occidental College in Los Angeles and during our break out group, our facilitator at the Samuelson Pavilion encouraged us to follow up with our challenges and or "what's working" recommendations with an example or story. 1. Challenge Our organization has been providing outdoor education programs over 35 years to youth in the public and private sectors and when trying to reserve "group sites" at some of the National Parks, these sites go very quickly because there are not enough. Group sites are critical when working with large groups of students. An example is Yosemite National Park, we need to solicit assistance from several of our staff on the 15th of each month to arrive in the office by 6:30, set up their computers to recreation.gov (the site that reserves for the National Parks) and at 7:00 a.m. SHARP, everyone needs to select a group site, these sites are taken within five minutes. Please increase the number of group sites available for so we can continue our mission of nurturing and educating these youth groups and providing an environmental stewardship inspiration. 2. Federal Government Role How can we partner with the federal government to make outdoor education programs available to our disadvantaged and at risk youth groups? We have a part-time grant writer and would welcome the opportunity to bridge grants that make these effective programs available to low income schools and organizations. 3. What works We have hundreds of stories and letters acknowledging some of the "life changing" experiences that take place in outdoor education. Here is one of many stories pertinent to environmental stewardship. a. A group of students attended a 5-day backpacking program in Yosemite National Park and at the conclusion of their program they were so inspired by their environmental stewardship calling, they returned to their communities and began a crusade to educate their peers and local residents by providing them with alternative on saving on the cost of electricity, within a short period of time, they reported a total of 200,000 pounds of carbon as a result of a program they have launched called the "pay it forward" project. b. A Salvation Army group of youth based out of Los Angeles and grant funded for a 3-part series of outdoor education combined with leadership, service learning and environmental stewardship taught these "at risk youth" and provided them with the tools necessary from the "Leave No Trace Behind", what they can do to contribute in their communities, reconnect with the outdoors and understand the importance of conservation. This particular group's last program was in the wilderness backpacking in the San Jacinto Mountains. Upon their return, they exchanged all paper and styrofoam eating/drinking utensils and now bring in their own washable eating utensils, maybe a small contribution but monumental to this group of youth. 4. Tools I have attached a list of outdoor education programs we provide and are constantly looking for new areas, Angeles National Forest is another great location. It would be helpful to have detailed trail maps accessible by GPS or downloadable to easily navigate trail groups without getting lost. We welcome any future discussion on how we can help support The America's Great Outdoors Presidential Initiative. Warm regards,

The new America's Great Outdoors program is a great opportunity to encourage the people of America to go out to wilderness quality lands and connect with nature. This can only happen if they actually enter the great outdoors by leaving their motorized vehicles and spend time on foot enjoying these great places. An added benefit of exploring the great outdoors on foot is that others can enjoy wilderness in peace and quiet. I am from Utah where many of the areas that are administered by the Bureau of Land Management are under attack by large numbers of motorized recreational vehicle enthusiasts. Often new illegal trails are carved out into the bush often with disastrous ecological effects. Please put key provisions into the new America's Great Outdoors program that places emphasis on the non-motorized enjoyment of America's wild places. Other possible provisions could create funding sources for education and enforcement to protect America's trail system from illegal incursions by motor vehicles. Thank you for considering my ideas.

I attended the listening session in Minneapolis yesterday, and I had a few comments to share:

What works: I believe that important aspects of reconnecting people to the outdoors are to a) improve access, b) reduce fear, c) enhance connections to natural resources and connections between people in outdoor settings, and d) "make it cool." Some thoughts on these components...

Access. I live in Minneapolis, and I love living here. But, I don't think I would be happy to live in many other large US cities. In Minneapolis, there was forethought to design a park system where each residence would be within 6 blocks of a park. Easy access like this, for everyone, will make reconnecting to the outdoors possible for all. Access to the outdoors must be planned for and incorporated on the front end.

Fear. In terms of reducing fear... I believe that there we must clarify the true risks and benefits of unstructured, outdoor activities. When I was a child, my friends roamed freely in the outdoor world. We were encouraged to get outside and play. This unstructured play taught us to be creative and make our own fun. It taught us independence and how to think for ourselves. Today, parents are afraid to allow children to roam around outside unsupervised. Parental fear of stranger abduction of their children is pervasive and greatly unfounded. I think it would be beneficial to clarify the true risks of death or injury from various sources. Although the data varies from year to year... in 1999 there were 49 children killed related to stranger abduction, while this is horrible it is hardly a serious risk for most children considering there were ~50,000,000 children in US in 1999. Just for comparison, over 40,000 people are killed in car accidents in the US each year. Maybe it would be safer to let kids play outside in the neighborhood than put them in the car and take them to a "safe" supervised activity.

Connections. People are much more likely to maintain their involvement in an activity if they feel connected to the resources and connected to other people who are involved. These connections build up over time... I don't believe they are likely to occur after a single "outdoors program." This relates to the two points above... I believe the easy access... and encouragement of regular, unstructured outdoor activities will create ongoing outdoor activities, rather than "special" one-of-a-kind outdoor programs.

Making it cool. People are bombarded with commercial advertising about what clothes, cars, and electronic equipment are cool. Let's get real... it's way cooler to be active, fit, engaged, and focused in an active outdoor activity. And no, it's not just about acquiring the latest piece of outdoor equipment. Just being out there is cool. How can we get that message out??!

Challenges: I think one key challenge is to better understand people perspectives on conservation, recreation, and the outdoors. We need to better understand the barriers to, motivations for, and perceived rewards of outdoor recreation and conservation behavior. We also need better analysis of what IS working. Do people who have better access have greater participation? If we break down the barriers to conservation behavior, do more people engage in the behaviors?

Federal Government Role: There is a huge role for the government in facilitating the suggestions above. Strategic planning, leadership, funding, and coordination/encouragement of partnerships with state and local governments, corporations and nonprofit organizations.

Tools: More support for coordinated research on human interaction with natural systems. --

Discussion Question 1

(cont.)

Hello there: Thank you for the opportunity to comment. We are a land trust (a 501 c3 nature conservancy nonprofit corporation) serving Whidbey and Camano Islands in Washington State with a mission of protecting our islands most important natural habitats, working farms and forests and scenic vistas in partnership with willing landowners and our community. Like many of the other 1,600 Land Trusts in the U.S., the Whidbey Camano Land Trust has done incredible work to help advance the land protection missions of our federal, state and local agency partners. We have over 1100 active household members and have protected over 6200 acres of land on these very special northwest islands. Land Trusts are a powerful way to enhance our governments work to protect our nation's most important landscapes and provide outdoor recreation opportunities, particularly hiking, biking, horseback riding, bird-watching and, in appropriate areas, hunting. Land Trusts live and work in the areas they help to protect and we rely on establishing and keeping good relationships with our local and state government officials and with landowners and the public. We can work in places and on projects where federal agencies have no access. We can work more quickly and creatively than the federal government. We can stretch and leverage federal and other public monies to go much farther than federal agencies can with the support of landowners of all different persuasions. We work in close collaboration with our public agency partners to ensure that all of their legal and other requirements are met. We hold the highest ethical standards and have adopted and actively implement the Land Trust Alliance's policies and procedures for land trusts. Just a few examples of our work:

1. Ebey's Landing National Historical Reserve, a unit of the National Park Service: In just 5 years, our Land Trust has secured over \$16 million dollars (with another \$6.8 million of requests pending) to permanently protect hundreds of acres, including the most important prime, historical working farmlands and nationally significant natural areas. The \$16 million came from a variety of federal, state and local grants as well as private donations of money and land no funding was from LWCF. Our key partners include the NPS, USFWS, NRCS and Navy, as well as State Parks, WA Natural Resources, Island County, Whidbey Conservation District, Town of Coupeville, Ebey's Reserve Trust Board and many private organizations and individuals. We are working with our partners to protect hundreds of additional acres of prime working farmland at risk from residential development.
2. Nationally Significant Fish and Wildlife Habitat: Using a variety of USFWS grants matched with state, local and private dollars, we have protected one of just 12 remaining populations of golden paintbrush, a federally threatened species. We are actively recovering golden paintbrush at this site as well as restoring the prairie landscape to benefit other species. We are working to permanently protect another golden paintbrush population at risk of elimination as well as a remarkable and rare old-growth forest along a marine feeder bluff benefitting threatened salmon stocks. We have protected critical wetland and upland habitat at Crockett Lake, a critical stopover for tens of thousands of migratory birds. We have protected thousands of acres of salmon habitat, including protecting and restoring important former estuaries, located just one ebb tide from the huge Chinook and other salmon runs in the Skagit Delta, so that juvenile salmon can find refuge. The above is just a few examples of the work we have accomplished in just a few short years because of our dedication to collaboration and healthy partnerships with federal, state and local agencies. Please enhance the excellent, low-cost work of our nation's 1,600 land trusts by:

1. Making the enhanced tax incentive for conservation easement donations permanent. This tax incentive

Discussion Question 1

Written & Online Comments

(cont.)

greatly benefits our nation's small farmers and keeps prime farmland available for our nation's own food production. Our nation's small farmers deserve full credit for their invaluable donations of conservation easements that eliminate development and ensure the best soils are kept permanently available for food production. 2. Increasing funding for the Farm Bill conservation programs, including the Farm and Ranchland Protection Program and Wetlands Reserve Program and increase the leverage of these funds by allowing land trusts to acquire conservation easements. This will greatly reduce government spending at the same time that it increases private/public partnerships. And it protects farmlands and water our nation's most valuable resource. 3. Fully funding the Land and Water Conservation Fund, Forest Legacy Program and the new Community Forest and Open Space Program and change these programs to allow direct acquisition of land and easements by land trusts. Thank you for taking the time to read our comments. We are committed to working in close partnership with our federal government to achieve the best land protection and, as a bonus, reduce the workload burden on our federal resource agency partners.

Thanks for conducting a listening session in New Hampshire to receive input about how to best protect America's Great Outdoors. (<http://www.doi.gov/americasgreatoutdoors/Join-the-Conversation.cfm>). I will not be able to attend your event so I am submitting my comments via email. Bigger threats than insects, disease, and fire to my family's forests are state and federal Government Regulations. The state of Massachusetts' Department of Conservation and Recreation has all but eliminated forestry on 60% of public land and they now threaten to limit private landowners' opportunities to sustain their family forests. Job losses as a result of the state's preservationist policies are enormous. I urge the Obama administration to support family forest land owners, jobs, and open space conservation by enabling private landowners to make a living on their sustainably managed land. As the president and 9th generation of my family's Tree Farm business, I oversee the sustainable forest management of thousands of acres in Massachusetts. W. D. Cows, Inc., is the largest private landowner in the state. As the past president of the MA Forest Landowners Associate and the MA State Director for the national Forest Landowners Association, I presume my views are shared by many. Last year I closed my family's long held sawmill because manufacturing lumber in Amherst just doesn't make economic sense anymore. Moving forward we are focusing our efforts on sustainable forest management and log sales. We also are seeking other forest-based economic opportunities to sustain our family business into future generations. To ensure the future of private forests, we could use your help improving our forest-based economic opportunities in areas including solar and wind power, carbon credits, spring water production, conservation restrictions, and markets for logs. Biomass power has become virtually a criminal thought in my state. How is this environmentally preferable and renewable fuel source not being given full encouragement of the Patrick and Obama administrations? We need your help to turn MA and this country around. If you want to protect open space, please do not take rights and opportunities away from private forest landowners. Please encourage our sustainable and economic opportunities and encourage the state of MA to do the same. Thank you.

Discussion Question 1

Written & Online Comments

(cont.)

As a financial donor to your primary AND presidential campaign, and in light of this country's growing support for the Republican party, I want you to act now on wilderness conservation. We have a limited amount of time to create, expand, and better protect our wilderness, monuments, wildlife refuges, parks, forests, trails, and rivers. To ensure that future generations will always benefit from our public lands, consider these priorities for America's Great Outdoors: - Address conservation on a large scale - Protect our wilderness - Improve watersheds and wildlife habitat - Connect people with nature - Fully fund the land and water conservation fund Thank you for your leadership. You have this one chance to shape a bold conservation strategy for the 21st century. Please act now.

Dear President Obama et al., It has come to my attention that the Civil War Preservation Trust (CWPT), which I am a member and whose great-grandfather served in the Union Army's 27th Ohio Infantry, Company "H", has proposed that battlefield preservation be made a key element of this outstanding conservation initiative. For more than a year, CWPT has encouraged senior administration officials to use this opportunity to commit resources for preservation of the nation's remaining unprotected battlefield land as a lasting legacy of the Civil War Sesquicentennial (2011-2015). We ask that you please take a few moments to express your interest in battlefield preservation, and let the Administration know many Americans believe in the importance of protecting our nation's endangered Civil War battlegrounds. When you visit the website <<http://members.civilwar.org/site/R?i=otRGnRo8FlxudHXqexJiCw..>> , be sure to vote "promote" for battlefield preservation and offer your own personal thoughts on why this should be an Administration priority. Here are a few points I wish to have included: Preserved Civil War battlefields are tangible links to our country's past. The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can benefit quality of life for residents. I hope, sir, that you will definitely consider these salient points in your decision.

I support battlefield preservation, especially of Civil War sites. This is very important ground to protect, and provides open space as well.

Save our national heritage!! Fund Civil War Battlefield preservation!! Thank you.

Discussion Question 1

Written & Online Comments

(cont.)

The Obama's, more than any other couple to ever occupy the White House, should understand the sacrifices made by Civil War soldiers on their behalf. It is obvious that they do. The preservation of those historic battlefields leaves a legacy that they can share with their children and the nation's children. Here is an area that they, as much as Theodore Roosevelt did for conservation of Natural Resources, can own in their own spectacular way. Roosevelt once asked what it would take to save millions of acres. He was told his signature on an Executive Order. I urge the President to sign an Executive Order and using his signature to save millions of acres of battlefields in the United States.

When I was a child, the Civil War was still being taught as a major event in school. These days, it's a minor blip. In 1961-65, the Civil War centennial was a remembrance of a bloody, sad chapter in our collective history. The folks in New England, who seem to "edit" our history texts, see a need to trivialize that era (except for slavery!). This is why we need to preserve our battlefields; so this history is not lost to future generations. Thank you for reading this,

Dear Department of the Interior, As a member of the Civil War Preservation Trust, ancestor of two Civil War Veterans, and a civil war reenactor, I would like to urge you to make "Battlefield Preservation" a key element in the "America's Great Outdoors Initiative." As a civil war reenactor, myself and thousands of others have had the opportunity to enjoy the outdoors on civil war battlefields across this country, while at the same time teaching literally millions of Americans about our civil war heritage. As we approach the sesquicentennial of the Civil War in 2011 - 2015, I feel there is no better way to honor those who served and died in that great war than to set aside land for future generations to enjoy while at the same time re-living history. Battlefield Preservation is the most honorable way I can think of to conserve America's Great Outdoors. Thank you so much for your attention to this initiative.

DEAR SIRs WE SURELY HOPE YOU CAN DO EVERYTHING YOU CAN TO PRESERVE ANY WILDLIFE HABITAT. PLEASE SEE MY ATTACHMENT. THANKS

Our history is short. We cannot lose any of it by destroying or ignoring places where people fought and died for our country. Citizens cannot do this alone. We need the government to support these historic places. Visit them. Stand on the ground. Then decide that nothing is important about that land.

please keep up with the support of civil war battlefield preservation, thank you

As the single greatest catastrophe in this country's history, yet it's seminal event, we have a duty to preserve the blooded fields on which our ancestors fought and died to preserve the Union and free a people from slavery. Please do not let our heritage be paved over.

Discussion Question 1

(cont.)

As Americans it is incumbent on us to protect the hallowed places where so many of our forefathers gave their lives. The protection of Civil War battlefields provides this opportunity to our current generation. Battlefields are rapidly disappearing because of unwise development that disregards our historic resources. We do not have much time to act. Those of us who share this common interest and sense of responsibility must act now. Our numbers are many, and our will is strong. Our battlefield organizations, National Park Service, and government officials must be strongly encouraged to protect these legacies of our national fabric.

President Obama: It is important to preserve our Civil War battlefields. We don't need Walmarts or Casinos built next to them, destroying their historicity. The Civil War has impacted our country like no other and our battlefields, if preserved, will keep reminding us of that now and for generations to come. If we lose sight of this and allow our history to fall prey to developers who only want to build malls, office parks and housing developments. They can all be built on non-historic property and it is important to uphold that on the federal, state, and local levels of government.

Federal Government...Please continue your support of the CWPT that works so hard to preserve our heritage...

I am a professional geologist with over 30 years working in private industry and state government (Oklahoma Geological Survey). In the past, I have worked for the National Park Service (Crater Lake) and the U.S. Geological Survey (Yosemite National Park and Arizona). I have also worked with the Nature Conservancy, the Oklahoma Water Resources Board, and the Norman (Oklahoma) Environmental Control Advisory Board (to city government). I am also a petroleum geologist and work with local education and rockhound groups. The United States (and the world) is facing some critical decisions regarding the wise use of its natural resources, including water, petroleum, and minerals. As such, we are going to need trained professionals in these fields to give us direction and provide solutions to some of the important questions we face. The geosciences community is in the forefront of these issues, and it is critical that we continue to attract young people into our profession. One way to do this is at an early age grammar school. And there is little that young people like to do more than collect things. As a child, one of my earliest and fondest memories was breaking open a rock in a local streambed to discover it was loaded with small shells ancient brachiopods that lived millions of years ago. The Girl Scouts and Boy Scouts have programs and merit badges in geology, and one of the requirements is building a rock, mineral, and fossil collection with identifications. In addition to Scout leaders, local rockhounds often sponsor kids programs in which adults take children into the field to collect specimens. A column in a recent rockhound magazine that I subscribe to discussing the AGO initiative is titled "Conservation and Recreation." To this title I would add "Education." I would encourage you, in your deliberations about allowing collecting specimens on federally managed lands, to allow the small-scale (e.g., no digging, even with only a shovel) collecting of common rocks, minerals, and fossils. Rockhounding is not only a popular outdoor pastime for (usually) older people, but is critical for engaging children at an early age. Obviously, some federal lands should be entirely off-limits to collecting anything e.g., national parks and monuments. But collecting on other lands in which the collector does not disrupt the surface and does not sell his/her specimen for private gain should be allowed. This is a complex issue and there are many points of view. However, my 30+ years experience as a professional geologist and part-time educator tells me there are many avenues of compromise. I would be willing to discuss this issue at greater length at your leisure.

Thanks for a great time at Occidental college last week. It is great to have an administration that cares about the (our) environment. My comment: Even though off-road recreationists talk of large numbers of enthusiasts, the data is not accurate. There are many people that use their 4-wheel street-legal vehicles as access and touring of public lands. Our interest is in low impact use and protection of the lands. There is a sector of off-roaders that are mainly interested in their vehicles, the speed and the destruction of lands (carving hills, climbing boulders, racing in sand dunes and washes, riparian areas and the like). Off-roading on public lands should be limited to street-legal vehicles where law enforcement can easily check for id, see the license plates and enforce the law more easily. Speeding and destroying land should be reserved to contained parks, preferably funded by the recipients of the off-road related sales of RVs, vehicles, clothing, parts, etc. This type of activity should not occur on public lands since it destroys the land and excludes everyone else from the use. The nuisance, the pollution, habitat destruction, noise and chaos created is not something the public should accept on public land. This destruction has saddened us as local hikers in north San Diego county. We have hiked into the proposed Wilderness area of BLM and found beautiful riparian areas destroyed. BLM does not have enough rangers to control the problem. We fear for our safety as hikers and equestrians with our lands being open to this type of rampage, Thanks,

My name is (name deleted) I attended the "Listening session" Friday August 27, 2010 in Nashville, Tennessee. I was in room 201 but during my comments the Moderator and the Note Taker were whispering to each other and my comments did not get attention or recorded (nor did my name). I am retired, but active in the Friends of the Cumberland Trail State Park and the Every Child Outdoors Tennessee Coalition (previously the No Child Left Inside" coalition). I am also a past Director of Tennessee State Parks. What works: Taking kids outside. I have taken kids on hikes both for pleasure, exercise, and education. The Friends' has sponsored some K-12 teachers to attend workshops to teach them how to prepare and implement outdoor classes and other activities. School, church, scouts, and park led activities to take kids outside works. It works for social ability, educational, health to combat obesity, and for future conservation/environment efforts. We should incorporate these efforts into our K-12 education standards and requirements. We should require outdoor activities to address childhood obesity and education of almost all classes. Teachers' degrees should have this training and education in their curriculum. Teachers should know how to create and implement outdoor activities and education when they get an education degree. The Challenges: To get (require) educators to place importance on outdoor activities and classes. Many teachers are themselves over weight and uncomfortable outside. Many educators I have talked with do not hold outdoor activities and classes as an option. In fairness to teachers they have a lot on their plate already, like teaching-to-the-tests. To address our liability laws and tort reform to encourage schools and other organizations to take kids outside, so that teachers, parents, and scout leaders are not afraid to take kids outside. The flip side of that effort is to train adult leaders in how to conduct an outside activity. We need to allow kids unstructured, unrestricted outside play at all levels, as well as supervised outdoor activity. Federal Government Role: Much of what I have mentioned does not involve more money or greater spending. If we change our focus and priorities at schools, church youth, and other adult-led activities it can be done. Get teachers and parents to lose weight and lead by example. Discourage and help parents to avoid "helicopter" parenting. Provide training to teachers, parents, and adults on leading outdoor activities. Increase levels in park staffs' in this regard will be necessary. The main people who will help teachers, and other adult leaders will be park/staff rangers, and health professionals. Friends- of-parks organizations can (as we have done) play a major role in bringing together environmentalist, educators, health professionals, etc. to provide a comprehensive approach. Tools: Educators have their hands full addressing the many requirements place on them without additional burdens that they will not be paid for. The number one thing we can do is make outdoor education and exercise for kids a priority, and reward effort and success. The second thing we can do is beef up the staffs' and resources of parks, park staff, health professionals scout and church leaders who can work with educators in this mission. Thirdly, we can encourage parents to lead by example in getting outdoors, losing weight, helping kids study about the outdoors and what happens out there. Thank you for this opportunity. Please acknowledge receipt of this message so I'll know it went through.

These are my comments for your report to the President on the America's Great Outdoors Initiative. 1. Explain why. I attended the Annapolis meeting and heard many good presentations, including your video. What was missing was explaining to the "unwashed" WHY it is important to conserve natural resources, the importance of ecological health. I don't think that just emoting over beauty or saying we have to save resources for future generations is enough or convincing. 2. Focus on restoration. In many areas, there are no land or waters to buy or save. It's all been developed or destroyed. I believe we need a major effort by all conservation agencies to restore degraded areas. Also, we need to help people understand how small parcels can make a difference. The Audubon at Home program at the National Audubon Society is a good model. Thank you for this important effort.

It is very important to preserve the remaining special places and landscapes in this country. There are 9 million acres in Utah that have been waiting for 20 years to be approved for wilderness protection. The Southern Utah Wilderness Alliance www.suwa.org has identified the most spectacular and important land in Utah for protection. The Utah land bill has been tabled for about 2 decades. Now is the time to protect this valuable land. We rush to drill gas wells on the public land because of the gas companies political clout, but what about the needs of the average citizen who pays taxes. The land is a valuable resource for tourism. When I have toured the national parks in Utah during the summer, the majority of the visitors to the parks are from outside the U.S. Please protect the land in Utah, and the rest of the valuable scenic and recreational resources that we have in this country. The needs of the citizens and tax payers should not be disregarded for the benefit and profits of gas and oil companies.

(cont.)

Friendly Greetings! I attended the August 4 meeting in Minneapolis which focused on the Mississippi River, and would like to elaborate on comments I made there. The Mississippi River and its corridor through the Twin Cities form the Mississippi River National Recreation Area. About half of this waterway is classified as "impaired" by excess turbidity, mainly caused by sediment contributed by a major tributary, the Minnesota River. A major study is about to culminate in a Total Maximum Daily Load (TMDL) for this portion of the river, which we call the South Metro Mississippi. It will provide numerical goals for sediment reduction as well as targets for restoration of the ecosystem. As water clarity improves, healthy aquatic vegetation will return, which will provide food and habitat for waterfowl, fish, and other forms of aquatic life. I would like to suggest that America's Great Outdoors Presidential Initiative takes explicit actions to support the achievement of the water quality targets that will soon be established through the South Metro Mississippi TMDL for Total Suspended Solids. By engaging the National Park Service, Environmental Protection Agency and US Department of Agriculture in a concerted effort, the federal government can help us launch a major ecosystem restoration initiative that will greatly enhance the quality of outdoor experiences in the Twin Cities Metropolitan Area. Exhaustive research has gone into establishing a water quality standard for the Mississippi that will restore the aquatic ecosystem, and to identify where the major sources of sediment are located. Citizens working with state and federal experts have developed a suite of Environmental Indicators and metrics analogous to those for the Chesapeake Bay. I believe that with federal support and cooperation, we can launch a quality, science-based Mississippi River restoration project that will greatly enhance the outdoor experiences of residents of and visitors to the Twin Cities Metropolitan Area.

<<Large Landscape Conservation final.pdf>> September 2, 2010 Honorable Nancy Sutley, Chair Council on Environmental Quality c/o America's Great Outdoors 1849 C St NW Washington, DC 20240 Mailstop 3156 Dear Ms. Sutley: Thank you for your work in collecting and synthesizing an abundance of important ideas, recommendations, and policy tools as you prepare the America's Great Outdoors report for the President. We hope you will find the enclosed Policy Focus Report, Large Landscape Conservation: A Strategic Framework for Policy and Action, a valuable resource as you continue your work. Over the past two years, we have explored the topic of large landscape conservation with key policy leaders, practitioners, academic researchers, NGO leaders, and funders. Our conversations started with the recognition that the most important land and water issues facing North America—including land use patterns, water management, biodiversity protection, and climate adaptation—require new approaches, many of which transcend the reach of existing jurisdictions and institutions. This exploration has resulted in the enclosed report, which describes regionally based initiatives currently underway in forest lands, ecosystems, watersheds, and wildlife corridors that involve multiple jurisdictions and ownership. The report recommends ways to encourage such efforts and foster innovation going forward, including:

- * Gather and share information. Establish a common, coherent scientific database and develop an annotated atlas of governance efforts.
- * Encourage a network of practitioners to build capacity. Catalyze collaboration through a network similar to the Land Trust Alliance to identify best practices and ideas for policy reform.
- * Establish a national competitive grants program to enable and sustain promising efforts. Facilitate homegrown partnerships, improve coordination among ongoing efforts, and recognize the most promising approaches to large landscape conservation.
- * Improve the policy toolkit. Strengthen incentive-based tools for landowner conservation and improve coordination and participation by federal and other governmental agencies.
- * Facilitate innovative funding opportunities. Maximize and focus the use of existing federal and state programs and authorities that can be implemented quickly and without significant new funding.

The report provides greater detail on each of these recommendations. Thank you again for undertaking this important effort. Please contact me if I can be of any further assistance.

What Works In my community of Western North Carolina, partnerships between land trusts, the state clean water management trust fund, the natural resources trust funds and the National Forests are effective in acquiring conservation easements. Coops of farmers and some state and federally funded local facilities help small local farmers process their products and get them to local and regional markets. The school system in Madison County uses local food in the school lunch program. Challenges Conservation easement transaction costs are very high and not possible for many people who would otherwise be willing to put land in easements. NC Farmland Trust fund has never been adequately funded and \$2M a year does not go very far. Local participation in providing funds for land preservation projects is not possible for poorer mountain county governments. Federal Gov't impediments The system of using volunteers is hopelessly tangled in bureaucracy originally meant to provide some kind of liability protection to agencies. In my own community, an effort to keep a NFS recreation area open more months of the year by having volunteers clean bathrooms, cut grass, and empty garbage complete fell apart because of onerous and unrealistic requirements placed on those who wanted to volunteer. Innovation and grass roots work is key but when all is said and done, all groups are desperate for funding, especially in these hard economic times. Agricultural policy does not take into account impact on small farmers but rather serves corporate farms. Farm subsidies need to be eliminated or completely restructured to provide benefits to small farms and farmers. Food Health and Safety Act as originally written would have put most small farms out of business. Tools Good data and research needs to be done and disseminated to the public and decision makers quickly -- and not so couched in cautious bureaucratic language as to be useless. Example, fish and wildlife initiative to study impact of large wind turbine installations on bird and bat life is disappointingly "cya" in tone. There needs to be some compensation to local governments when a large percentage of the counties land base is publically owned and therefore, tax exempt. Selling off existing public assets is NOT the answer to this problem

On behalf of the Los Angeles County Department of Regional Planning, I would like to submit the following comments:

- **What Works** · School field trips to the outdoors for elementary, middle and high school students, and participation in projects that restore the environment or recreation areas serve well to reconnect people to the outdoors.
- **Preserving outdoor areas and providing the means for the public to utilize them through trails, trailheads, parking areas, information kiosks and websites, definitely increase the use of the outdoors for recreation purposes.**
- **Challenges** · **Funding for procurement and maintenance of outdoors spaces are two of the most pressing challenges to increasing conservation, recreation and reconnecting people to the outdoors.**
- **Safety is also a major additional challenge in many urban areas.**
- **Staffing to work on procurement efforts is another challenge; many local governments and land preservation agencies are short on personnel and other resources, and are burdened with innumerable priority projects, lessening the time these groups have to work on procurement.**
- **A lack of monetary resources has forced many school districts and other groups to cut field trips, physical education classes, and other non-academic efforts, reducing the time young people spend outdoors.**
- **Federal Government Role** The federal government can be a more effective partner in helping to achieve conservation, recreation and connecting people to the outdoors by:
 - **Fully funding the Land and Water Conservation Fund every year**
 - **Remembering that even though Americans may not put environmental issues at the top of their "concerns" list every year, preservation of the environment and outdoor recreation opportunities will always be important to the American public.**
 - **Allowing more control to federal units such as individual national parks and wildlife refuges for determining priorities, allocating resources, and working with local jurisdictions to conserve environmental resources and develop joint recreation resources.**
- **Tools** Additional tools and resources that would help our efforts be more successful are:
 - **A database of best practices regarding strategies that local and regional jurisdictions have employed to encourage conservation, promote recreation and facilitate reconnecting people with the outdoors.**
 - **A database of grant and other funding opportunities to assist local and regional jurisdictions in the acquisition and maintenance of parklands and recreational facilities, and to hire and train personnel to manage conservation efforts and educate the public about outdoor resources and use opportunities.**

Thank you for the opportunity to participate in this discussion.

As a motorcycle rider, I have been involved with the Santa Fe National Forest Travel Management Rule (TMR) for four years. We formed the Blackfeathers Trail Preservation Alliance so that we may have standing and input on the TMR. The Draft Environmental Impact Statement (DEIS) for the TMR on the Santa Fe National Forest (SFNF) was just released. Much of our input for the 525 miles of single track trails appears to have been ignored! We have been granted about 140 miles of single track trail. Dozens of established trails have been eliminated. As you probably know, Off Highway Vehicle (OHV) use has more than doubled in the past 20 years. Yet, the Forest Service plan is to cut the trails by more than half! Does this make sense? Increasing use of these remaining trails will only lead to the degradation of trails rather than their preservation. It appears the fix is in for decreasing OHV access to the forest. At this time, similar actions are happening on all National Forests and BLM land across the country. The SFNF claims not to have the money to maintain the present trail system. Most of the money goes to road and hiking trail maintenance. Little or no money has been allocated for OHV recreation that has doubled within the past 20 years. What little money is raised from fees and taxes goes to enforcement. In fact five years ago, a \$35,000 OHV Grant to develop trails was unused by the SFNF. Presently the SFNF has only five miles of declared OHV trail! Now it appears in the DEIS that the FS wants to reduce access and limit riding areas to accommodate hikers, mountain bikers, and horseback riders that are disturbed by the sound and sight of an OHV. What ever happened to a multi-use forest? As an OHV user, how are my fees and taxes benefiting me? Dont you think its time to recognize who the real users are and accommodate increasing trends rather than limiting access to OHV users? According to the Out of the Wilderness article in Newsweek 2/9/08 the Pergams and Zaradic study showed outdoor activities (hiking fishing camping) have been significantly decreasing, about 10% per decade, since the 1980s. That is a significant decrease! Ive certainly noticed the decline of hikers and mountain bikers in the SFNF over the past thirty years. Yet, the FS as well as the Department of Interior (DOI) are more responsive to the dwindling number of hikers, mountain bikers, and campers than the ever increasing numbers of OHV riders that actually use the forest. I attended the DOI public listening meeting in Albuquerque NM in July. I counted three OHV users, a dozen ranchers, a few educators, and several that already work with youth in the forest. All the other attendees, in large numbers, were the NO ACCESS environmental groups Ive seen for the past four years at the SFNF public meetings. These groups allow very little compromise in sharing trails; their goal is to eliminate OHV use as much as possible and to create a wilderness-like atmosphere within the multi-use forest. . I watched Americas Great Outdoor Initiative (AGOI) video and read the material and did not see a single word on OHV use. AGOIs purpose is to promote and support innovative community-level efforts to conserve outdoor spaces and reconnect Americans to the outdoors. It sounds like a great plan to involve youth in building trails and take ownership of their forests. Where is the AGOI connecting OHV use to outdoors? Where are the OHV advocates within the DOI? I believe the DOI is creating a platform for environmental groups to reinforce the limited access decisions of the DOI on public lands. Its also apparent the AGOI is headed off in the same direction by not including OHV users. The DOI and the Department of Agriculture claim to recognize OHV use as viable form of recreation and say that they are limiting access at reasonable pace. I would not call this first round of limiting access (over 50%) a reasonable pace. I would call it an agenda meant to severely limit OHV use on public lands.

Discussion Question 1

Written & Online Comments

(cont.)

What happened to the multi-use concept? The CEQ, EPA, and the Departments of Agriculture and the Interior are allowing major input into how public lands are to be managed from the same environmental groups (as indicated from the AGOI listening meetings) who are pushing for yet another wilderness omnibus bill that would declare millions of square miles as wilderness areas without public input. The OHV community is growing and is a viable means of creating jobs in America today. In Colorado alone, OHV use is a Three Billion Dollar Industry! We will all be watching very closely as millions of miles of roads and trails are closed to the public for OHV use. These decisions will affect millions of people everywhere. Many people are not as well-connected as the environmental groups and their input will not be heard. Their jobs will just disappear and they will be added to the rolls of the unemployed.

Thank you for the opportunity to comment on this important subject. First, there is a "real" discussion regarding fully funding LWCF at the appropriated \$900M+. This is very important to the success of any federal conservation initiative. Second would be increasing duck stamp prices and therefore the impact of those funds in the associated acquisition projects (offshore O&G tax's, etc...). With that said there are several issues that have accumulated in the last administration and out the USA at this point in time way behind in the ability to respond to this discussion: 1. There needs to be an immediate hiring of new real estate staff and planning staff in the Interior and Agriculture Agencies. The training of these new staffers needs to be fast tracked. 2. The appraisal services needs to be completely re-engineered. This has started but also needs to be fast tracked. 3. There needs to be an acceptance of third party appraisals and a very quick review of all appraisals. 4. Boundary expansions need to be put into a much more efficient process so that there is not a full year or more of time lags and discussions. This is not rocket science, we know these resources. For a successful program to be put into motion quickly and efficiently, say in 6 months or less than a year, the above items will have to be addressed ahead of funding. I have only touched on the tip of the funding iceberg so as to keep these comments concise (think MMS, NOAA, FEMA, etc...). This is short term as President Obama does not really have that much time left when you look at the reality of how DC works. Last but not least, we can "dialogue" all day long while our problems (or opportunities) are just growing bigger and bigger. We know enough about our resources that it is time to act. Another key element is that there is no such thing as consensus. Take comments and move forward. Thanks again for the opportunity.

To whom it may concern: I reported verbally regarding three pressing issues that are impacting the Thorn Creek Watershed located in South Cook County, IL and Will County. 1. the first matter involves the abundance of Koyotes that have facilitated the demise of the Beaver Population in the 1000 acre Thorn Creek Nature Preserve at the Headwaters of Thorn Creek. I have also been told that the Public Works of Matteson has been killing beavers in the headwaters of Butterfield Creek which impacts the recharge of groundwater resources. I understand how Beavers can impact a stormwater drainage system as they blocked the stormwater in a 1996 storm event from getting into the Mary Woodland Reservoir located in Lynwood, Il in the Lincoln-Lansing Drainage District. At that time, the MWRD-GC determined to hire Beaver Trappers which kill 90% or more of the Beavers because of their out-of-date trapping practices. Also, at that time. the Beaver's Engineering Skills were 'out foxed' by the Engineers at Clemson University. They developed the widely used Beaver Pond Levelers. I received the most advanced version this past winter while visiting Clemson University and plan on installing these devices this coming fall in the Cook - Will County area. But. first we must have the Beavers restored to the Thorn Creek Nature Center which contains the 'flashiest' stream in N. E. Illinois. Thorn Creek's gradient is 18 to 20 feet per mile and this combined with the inadequately controlled release of StormWater creates a major silt flow into the Little Calumet River because the sediment collecting Sauk (Trail) Lake and dam has been filled with silt for about the past 50 years. 2. Sauk (Trail) Lake and Dam at 26th Street is an on line multiple purpose stormwater detention, recreational project built in 1930 by the Cook County Forest Preserve with one third of the cost provided by Bloom Township. It has been cleaned twice, but not since Govenors State University was constructed in 1972 where there are several ornamental Retention Ponds that need to be upgraded for Detention and discharge through Wetland Treatment Trains in accordance with the down stream Cook County Forest Preserve's Stormwater Management Policy. (<http://www.fpdcc.com/downloads/SMP.pdf>. which is lacking implementation by the Cook County Board of Commissioners. 3. Thornton Transitional, Composite Reservoir has just been awarded a 70 million Dollar Grouting Contract by the MWRD-GC. The following is my statement given to Region 5 on Aug. 31. after hearing the response from the Distinguished Panel at America's Great Outdoors' work shop at Northwester University: Comments and Related Environmental Concerns from a Stakeholder of the Thorn Creek Watershed, regarding the Thornton Transitional Reservoir and the lack of maintenance of Sauk (Trail) Lake and dam at 26th Street in Chicago Heights. Rev. 8/31/10 After a few FOIA's to MWRD-GC and ACE, and follow-up questions, I have may have uncovered a potential boondoggel regarding the MWRD's building potentially the 'World's Largest Toilet Bowl' in the Thornton Quarry, in Thornton, Illinois. The rest of the story - - The World's Largest Sanitary District is in the process of constructing a Reservoir in the Thornton Quarry to contain raw diluted sanitary waste from the Deep Tunnel (TARP). Unfortunately it appears that there has not been an 'Environmental Impact Study' although I recall reviewing an Environmental Assessment by Townsend Engineering via the ACE many years ago. This may have been the predecessor or a first attempt to comply with the 1970 Federal Law. (<http://www.hks.harvard.edu/saguaro/pdfs/sandereisandsklessons.pdf>) As I recall there were many unresolved issues regarding groundwater contamination and that some perimeter test wells were required by the USEPA to monitor the potential impact that this future structure will

have on 'Well Water Resources' in the Thorn Creek Watershed. Its operation depends upon continued pumping of water into Thorn Creek. Today August 30th, the Legal Researcher indicated the documents I requested appear to be missing and were not archived in any 'Depository Libraries'. That was the first place I searched, as GSU is a Depository Library in the Thorn Creek Watershed. Before considering that a recent expenditure to grout the North Portion of the Reservoir (the Transitional Lobe, North of I-80) at 70 million dollars may be a needless waste of tax resources it is necessary to consider how the use of this reservoir may have changed in the past forty years. I believe the original concept and evaluation involved the diluted sewage from the Deep Tunnel (TARP) and suggested further study, but based upon flooding issues in the Thorn Creek Watershed because of unregulated development a new aspect of putting the Thorn Creek stormwater into this reservoir was added to the project. Also Groundwater useage in the 107 square mile Thorn Creek Watershed has changed, but there remain numerous communities that use Groundwater and private wells which may be impacted by the activity that is presently planned for the Thornton Quarry. Continued reliance on this Groundwater at least on a temporary basis has been demonstrated by the interruption of Lake Water from Hammond. During a recent severe winter, this surface water resource was blocked by Mother Nature (Ice) for up to a couple of weeks when the intakes in Hammond which is about 1 mile from the outfall of the Grand Calumet River froze over. Other vulnerabilities such as a recent oil pipe line failure which was prevented from getting into Lake Michigan could have also caused water intake problems at Hammond where I have advocated the intake be extended ten miles out into the lake in recent years. As I recall, there was a report that the Hammond Intake is the lowest quality in all the Great Lakes and this necessitates added chemicals which impact the health of the quarter million or more bi-state users. I also have discussed with the Hammond Trustees the need to use Ozone instead of Chlorine as used by the Lake Bluff - Lake County Water Commission for the past 25 years. Ozone is used exclusively in the State of Florida. Finally, storms on the Great Lakes have an impact on potential ship disasters. Also, Earth Quakes could impact the Thornton Quarry structurally because of its proximity to the Kankakee Arch on which the South Suburban Airport may be built, in the near future. These are some of the numerous issues that need to be designed into an equitable environmental solution for the future use of the Thornton Quarry. Forty years latter we have a better scientific understanding of the Groundwater Resources in Illinois which was assisted by the IEPA's Resource Management Tool. (rmms.illinois.edu, using I.E. only) I believe the Groundwater Guardian the Thorn Creek Watershed Stakeholders should be involved in an Environmental Impact Study, before committing more tax payer money on this potentially fool hardy venture. 'Dilution of Pollution is not a solution, not even in the Oceans. and Adding Thorn Creek's Storm Water to the mix will make a bigger mess for processing in the Calumet Plant where I formerly worked. Hopefully a Environmental Impact Study which involves the Stake Holders of the Great Lakes will produce a prudent solution as the Thorn Creek Watershed is a component of the Great Lakes Watershed with its waters during normal flows diverted via the Sanitary & Ship Canal to the Mississippi Watershed. This Watershed also provides Sauk (Trail) Lake that and Dam which if restored will be a potential source for deterring the Asian Carp migration into the Great Lakes. Please reserve a seat for ___ (Environmental Science Graduate of GSU) and my self, Ed.D., NIU, at the North Western University, morning "listening session". Thank you,

I am a land planner and landscape architect who has planned a very unique (for this area of North Texas) 1200 ac Nature Preserve oriented residential development that is within 30 minutes of the eastern edge of the Dallas Metro Area and 10 minutes from the fast growing cities of Rockwall, Terrell, Fate and Royse City. It is planned to have 70% of each lot in a contiguous conservation easement dedicated to the Texas Land Conservancy, one of Texas' approved land trust. Currently, 625 acres have already been dedicated and it known as the HIGH POINT PRAIRIE. The development is named Los Establos and was envisioned to restore a Tall Grass Prairie ecosystem that is very scarce, particular in this part of Texas, where developers typically do high density suburban lots with little thought to preservation and open space. This residential development was a leap-frog to the typical development around here and the nation to make this financially feasible but is still having a difficult time selling lots in the current market. I recommend a special federal, state and county program to encourage other developers and adjacent land owners in semi-rural areas to set aside lands for the future that can save significant portions of ecosystems for future generations. I will be willing to serve as an advisor to a group that is interested in pursuing this. This is an opportune time due to the slow down in sprawling residential development to avoid the same mono-environment type of planning that steadily creeps along gobbling up and destroying native habitats and using high amounts of energy and natural resources.

Land should not have to PAY for itself. It is a God-given gift to man to enjoy. No man created it and man can pay to enjoy it by paying fees to walk or run or hike. Our country seems to think everything has to be commercialized and make money. Not true. Humans seem to lose their best attributes when they no longer have access to land and wild life. Examples are our cities. There should be more land saved for future generations so they can smell the rain on clean earth and see the plants and animals created for viewing. Too many people think Man rules the earth. More land and access to nature is humbling and soul-enhancing. Please set aside more huge tracts of land for people - not contractors. Our San Francisco Bay Area hosts unique public lands of incredible beauty and wildness close to large population centers. Our public lands belong to Americans of all ages and provide us with clean supplies of drinking water, healthy air, and an opportunity to experience wildlife and nature. I urge you to implement the following priorities: --The Obama administration should create new national programs that help connect people - especially our youth - with nature. Outdoor play and a connection to the natural world benefit children in many ways. The federal government should develop new administrative incentives and funding to expand state and local opportunities for students to reconnect and learn about nature. --Enhancing sustainable economic development opportunities through tourism and recreation will benefit local communities. Communities can diversify their economies by expanding tourism-related industries and boost ecotourism in their region and thereby increasing demand for food and lodging services. --Stewardship and conservation of our outdoor recreation lands, important watersheds and valued private lands works when we come together around our shared common values. Everyday across our state concerned citizens, tribal leaders, conservation groups, recreation businesses, and local elected officials join together to enhance and preserve their treasured special places. --Increase funding for recreation, improved access and trail system revitalization through the Public Lands Service Corps Act of 2010: The bill (H.R. 1612) "increases service opportunities for youth and young adults on public lands (ages 18-24), providing green jobs, improving infrastructure, restoring public lands, encouraging cultural and historical research, improving the health of coastal, marine and estuarine ecosystems, addressing climate change and assisting with scientific data collection." --Fully Fund the Land and Water Conservation Fund: The administration should support full funding of the Land and Water Conservation Fund and other programs that foster conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas, protect lands around lakes, rivers and streams. The fund can also be used to establish new local parks and trails, or provide key wildlife linkage areas. Thank you for considering my comments.

(cont.)

I am concerned about the future we are leaving for all of our grandchildren, yours and mine, particularly the environment, the depletion of natural resources and the loss of beautiful natural places still left in the country. If we continue taking and using what every we want or feel we need now to satisfy our every whim, there will be very little left for future generations. We need strong leadership in the country to change our ways and convince us to pay a price now so future generations will not have to pay a much bigger one in the future. Our San Francisco Bay Area hosts unique public lands of incredible beauty and wildness close to large population centers. Our public lands belong to Americans of all ages and provide us with clean supplies of drinking water, healthy air, and an opportunity to experience wildlife and nature. I urge you to implement the following priorities: --The Obama administration should create new national programs that help connect people - especially our youth - with nature. Outdoor play and a connection to the natural world benefit children in many ways. The federal government should develop new administrative incentives and funding to expand state and local opportunities for students to reconnect and learn about nature. --Enhancing sustainable economic development opportunities through tourism and recreation will benefit local communities. Communities can diversify their economies by expanding tourism-related industries and boost ecotourism in their region and thereby increasing demand for food and lodging services. --Stewardship and conservation of our outdoor recreation lands, important watersheds and valued private lands works when we come together around our shared common values. The San Francisco Bay Area is a critical habitat not only for humans, but for wildlife and aquatic life as well. The public lands in our area must be protected for the benefit of future generations and to ensure species survival. Accordingly, please: (1) Enhance sustainable economic development opportunities through tourism and recreation that will benefit local communities. (2) Increase funding for recreation, improved access and trail system revitalization through the Public Lands Service Corps Act of 2010. (3) Fully fund the Land and Water Conservation Fund, which fosters conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas, protect lands around lakes, rivers and streams. Thank you.

I've received notification from The Wilderness Society that you're looking for public input on actions for public lands. I'm sick of industries operating without any concern for human or environmental impacts. Regulations and penalties need to be sufficient to ensure that human safety is guaranteed and that ecosystems are preserved for future generations. If companies can't make those promises, they shouldn't be allowed to operate. Clean water and air, beautiful landscapes, and diverse species that are older than our own species are not worth losing for a few transient dollars. Companies that violate regulations need to have severe penalties. If companies can consider penalties a standard operating expense, then they're not severe enough. Our country is creative and industrious enough to come up with alternatives to destructive practices. Stop holding back progress and destroying our planet for economic reasons. Thank you for considering my comments.

I would very much like your input on the issue of walking dogs free of leash in conservation land. I live in eastern Massachusetts where land is crowded. There is a movement afloat here to ban off-leash dog walking in our conservation lands, lands that have been purchased using our municipal and federal tax dollars. The Great Meadows Wildlife Refuge is a huge part of several eastern MA towns and the federal government banned dogs (both on-leash and off-leash) completely from all of this land. Many communities in eastern MA have banned off-leash dogs from conservation lands. Yet dogs need off-leash exercise and off-leash socialization with other dogs to be emotionally and physically healthy. PhD animal behaviorists have done studies that prove that dogs need off-leash exercise and off-leash socialization with other dogs in order to have good quality of life. If we can't provide for this need for our companion dogs on conservation land, our society is turning its back on "man's best friend". If you look at the writings by animal scientists, small fenced in parks do not enable the amount of exercise needed for most dogs or satisfy a dog's "seeking system" (see Dr. Temple Grandin's research). Conservation lands with trails and a variety of terrains, water and shade are needed for healthy dog exercise and socialization opportunities. I hope that the need to provide off-leash dog walking on conservation land will rise to a high level of importance in the President's Initiative. I would like to know how I can participate under the Initiative to bring this issue the attention it deserves.

Our country is blessed with many beautiful and diverse natural ecosystems. Most Americans quickly recognize that the everglades, the Rocky Mountains, our coastlines, and other sites as national treasures. Less well known is the Prairie Pothole Region of the Northern Great Plains. This magnificent expanse of native prairie and wetlands supports a host of important wildlife species and is absolutely critical to the future of continental waterfowl populations. Despite its significance, bits of the Prairie Pothole Region are lost every year to agricultural conversion and wetland drainage. It is my hope that the America's Great Outdoors initiative will recognize and protect the Prairie Pothole Region and a national landmark or similar status to help preserve its future for wildlife and people.

Dear Sir/Madam: On July 1 I attended the Listening Session on Americas Great Outdoors and have included an expanded version of the ideas and issues I presented that evening. I hope you find them helpful.

Eastside Audubon The mission of Eastside Audubon is to protect, preserve and enhance natural ecosystems and our communities for the benefit of birds, other wildlife and people. Thank you for holding the Listening Session in Seattle. I welcome the opportunity to tell you about our program and contribute to the discussion of conservation of our natural areas and the promotion of greater involvement in the outdoors by American families. I represent Eastside Audubon, a chapter of the National Audubon Society with a service area that includes East King County from Lake Washington to the Cascade Crest and from the Snohomish County line to just south of I-90. Established in 1980 as a Chapter of the National Audubon Society, Eastside Audubon has grown to about 450 members and conducts all its activities using volunteers. Eastside Audubon has three primary means of serving the community: Conservation of birds and preservation and restoration of bird habitats, education of children and adults about birds and conservation issues, and recreational bird watching. The chapter sponsors a variety of bird watching trips and native plant walks, provides classes for adults, works with youth in a variety of settings, monitors land use and development that impact our communities, and conducts bird surveys of sensitive areas. I will respond to each of the four questions discussed in the breakout sessions.

1. Challenges: What obstacles exist to achieve your goals for conservation, recreation, or reconnecting people to the outdoors? A major obstacle is the lack of a national priority to support the consolidation of natural areas at the local level in multi-use urban and suburban parks and neighborhoods. Other priorities such as continual construction of soccer and baseball fields, hardening the environment by paving trails, and brighter lighting of parks seem to take precedence over preserving the natural environment. The introductory film reinforced the belief that nature is far away and the need for people to have to travel to amazing vistas to appreciate the outdoors. There was only token mention of local parks. In addition to protecting our national parks and forests we need to help people appreciate the outdoors where they are.

2. What works? What are the most effective strategies for conservation, recreation, and reconnecting people to the outdoors that you have used. Eastside Audubon has a number of programs that have been effective. For example, over the past five years the chapter has made a major commitment to conservation and bird watching recreation at Marymoor Park in Redmond, WA. We hold a monthly work party of 15-30 people and have been successful in restoring and preserving habitat for birds and other wildlife, and establishing a network of birding trails with high quality interpretive signage. This was done with the volunteer labor of our members, community people including high school and college students who were contributing their community service time, and employees of companies such as Microsoft and the Puget Sound Bird Observatory. We are committed to establishing a legacy of stewardship to pass on to children. Our chapter works closely with teachers in 14 schools in East King County and provides classroom-based educational programs on birds and the environment which include topics such as bird migration, species identification and typical foods birds eat. Each year we provide nature camp scholarships to six children from low-income families, a \$150 grant to a teacher to support environmental education, and a \$500 college scholarship to a high school senior who plans to study science or the environment. Chapter volunteers lead over 75 bird watching field trips per year for people of all skill levels and are committed to getting people out

of their homes and into nature. 3. Federal Government Role: How can the Federal Government be a more effective partner in helping to achieve conservation, recreation, and connecting people to the outdoors? We welcome this new initiative and hope it will get the federal government involved in many kinds of grassroots conservation and recreation activities. Promoting this White House Initiative as a national priority in a manner similar to President Kennedys Presidents Council on Physical Fitness would be a great beginning. We recommend that the federal government provide ongoing and consistent support for citizen science projects such as the Audubon Christmas Bird Count and the Cornell Lab of Ornithologys urban bird count and their joint Project Feederwatch. Also needed is financial support for analysis of the collected data and promulgation of the results. We also recommend that the government establish a massive effort to remove invasive species from natural areas, to plant native species of plants, to clean and repair trails and waterways, and to preserve open land in urban and suburban areas where most of the people live. These programs will also provide jobs to millions of Americans. In addition, we need government leadership to help the country stop burning fossil fuels and to review all legislation for its effect on the carbon load in the atmosphere. 4. Tools: What additional tools and resources would help your efforts be even more successful? Federal, state and county coordination will greatly help local organizations expand the kinds of activities conducted by Eastside Audubon which rfect the overall goals of the White House Initiative. These programs can be expanded to new communities and strengthened in the communities where they are already in place. Support for public-private partnerships is also important. Eastside Audubon has partnered with King County in its work at Marymoor Park, and with local businesses such as REI and Puget Consumers Coop to support education and conservation programs. Other communities have asked us to participate with them, but we are limited by size and budget. America is blessed with natural beauty and it has taken the active participation of citizens in Audubon and many other organizations to advocate for cooperation among the various levels of government to protect what we have. To expand the range of opportunities for families and improve the natural areas we cherish will take not only government but also average citizens who feel a sense of belonging and ownership for their country. Conservation and recreation can co-exist and enhance one another. Local community groups are one important aspect of a program to reconnect people to the outdoors. We hope the federal government will support this kind of community involvement. Thank you,

Along with many thousand others, I insist that our HUGE, Centralized Government continue funding our nations hallowed ground: Civil War Battlefields. Aside from the many wrong-doings being committed by Congress, etc., these hallowed grounds must be cherished and understood by all! Thank You,

I would like to take this opportunity, as an American citizen of the greatest nation on Earth, to remind you to remember all National treasures that have been created and desperately need to be preserved. Both land and sea, from the actual salt water to the highest redwood trees, these are Americas greatest symbols. They cannot lobby or vote, but must rely on a President with foresight and a love of preserving what is truly great about our Nation. Please put conservation and preservation on your list of priorities so you can leave a permanent and pristine home for our treasured national symbols. Thank you in advance for your time and attention to my request.

Dear Sir, I understand that there is a new draft of the Imperial Sand Dune Recreation Management Plan. I with my family have been going to ythe dune for over 40 year. Frist with my kids and now with my grandkids. My family keeps growing the same as the number of duners keeps growing. Yet the recreational area and camping area keeps getting smaller. As with any active sport there is some risk. That risk increases the more congested the area gets. I hope the new managment plan will increase the area to ride and area to camp. Thank you

We are writing to express our support for continued equestrian use of federal land. This country has a long and proud history of horses on our trails and continuing this tradition is an important link to the past, an opportunity for our citizens to connect with the outdoors in a unique way. In addition, it is crucial that we continue to allow access to vehicles with horse trailers. Without it, how are we to actually reach those trails? Horse owners are, for the most part, good stewards of our wild places. We know the importance of maintaining the land, protecting trees and wildlife, packing out what we pack in. Thank you.

Dear Department of the Interior and President Obama;. As a Committee Member of the St. Louis Bay Chapter Ducks Unlimited, outdoors enthusiast and supporter of waterfowl habitat conservation, I strongly recommend designation of the St. Louis Bay Estuary and River watershed as a "Treasured Landscape" in the administration's America's Great Outdoors Initiative. The St. Louis River provides the headwaters for the Great Lakes which sustain many millions of people. Its heartbreaking to see the lack of waterfowl over the river compared to my childhood growing up in the Bayview Neighborhood of Duluth when great flocks of ducks could be seen traversing the flyway over the St. Louis Bay. Now Duck sightings have become relatively rare. One of the causes that I can see is the pollution from Iron Mining. Sulfides, Heavy Metals, suspended solids, and other pollutants continue to be discharged into the river. I have looked at reports from the Dunka Pit where the above pollutants are discharged into Birch Lake which then flows into the Boundary Waters Canoe area Wilderness. The Minnesota Pollution Control Agency records on close scrutiny show the science that is generally overlooked. In wet times the tested biology seems to fair well due to the generally followed dilution solution to pollution followed by these state agencies but in times of droubt the impact of the pollution kills everything which results in stream sterility unable to sustain wildlife further up the food chain including waterfowl. Recognizing the influence the outdoors has on our youth and the need for conserving america's natural landscapes, the president and his administration have proposed the America's Great Outdoors Initiative(AGOI). This initiative is designed to promote the outdoors to youth, advance private-land conservation strategies, and use SCIENCE-BASED management practices to resore and protect our lands. Our Great Lakes Headwaters are not only being polluted, they continue to be further threatened by newer sulfide mining proposals to extract base metals. These newer sulfide mining proposals are intended to provide jobs. However these jobs are being proposed by an industry with a horrible legacy of envfironmental destruction. Sulfide mining is a net job killer in tourism, logging, agriculture, and public employment. The pollution diminishes recreational oppurtunities, kills wildlife, increases health care costs, increases electricity cost through PUC agency subsidy, causes widespread property devaluation reducing government revenue and concentrates these costs on surviving businesses, for a thousand years. The federal governement needs to join the State of Wisconsin in banning these sulfide mining activities in wet areas which are at risk including the BWCA Wilderness and the Great Lakes. We need laws that prevent State and Federal Agencies from protecting polluters by being allowed to issue permits to pollute and pre-empting lawsuits by environmental organizations intending to enforce the law. Once polluted by sulfide mining, the Great Lakes would take many thousands of years to recover. These Lakes of which the St. Louis River forms the headwaters contain 25 percent of the world's fresh waters. Let's make a good first start by cleaning and keeping clean the Lakes St. Louis River headwaters and it's estuary. Let's bring the Ducks back to the St. Louis Bay. Let's stop sulfide mining and force iron mining to at least make attempts to mitigate their pollution.

Dear Policymaker, Here are policy priorities we think the Obama administration are to consider in designing a policy for America's Great Outdoors. 1) Conserve large landscapes, including our healthy wildlands and rivers, connecting them with working forest and ranch lands, private lands and the connections across these large areas. Protect large natural areas such as: Mid-elevation lands currently proposed for Wilderness designation by citizens of Colorado - especially the Hidden Gems Wilderness Proposal. The Hidden Gems specifically seeks protection for ecologically rich landscapes at lower elevations that are under-represented in existing wildernesses and protected areas. 2) Critical migration corridors, landscape linkages, headwater areas, and areas of varying elevations must be protected in the face of increasing development, destructive recreation, and climate change. Areas like the Thompson Divide (NE of Paonia and SW of Carbondale) should be protected from the fragmenting impacts of energy development and road building to ensure that we don't isolate the last great pods of habitat in western Colorado. Protecting these public lands and rivers will provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today. This will give us the opportunity to actively reconnect our children to their incredible natural heritage. Just recently, there was a huge success for wildlands protection in the magnificent Vermillion Basin, which the Bureau of Land Management (BLM) announced it will close to future oil and gas leasing. Following this lead, we need bold actions like this to protect large, unfragmented treasured landscapes. 3) Reaffirm and implement BLMs authority to establish Wilderness Study Areas. This effort should include giving the Bureau of land management the authority to establish new Wilderness Study areas and to protect the wilderness characteristics of those areas. Hundreds of thousands of acres of land across the West that were identified by citizens and BLM as worthy of wilderness designation have been leased, and they deserve both a commitment and an approach to real protection before they are lost forever. 4) Create a comprehensive Quiet Recreation Strategy for federal lands in Colorado. This strategy should variously provide for non-motorized activities such as hiking, mountain biking, fishing, family camping, wildlife photography, and more. A formalized acknowledgement should create more sustainable use of our lands while encouraging things like stewardship, trail maintenance, volunteerism, and getting youth outdoors. Using Colorado as a pilot project for a Quiet Recreation Strategy will also provide a sustainable use model for the rest of the country to follow. 5) Support and implement more science-based management of our resources in Colorado. This science-based management needs to provide a better understanding of the impacts of conflicting land uses on other resources across the landscape. Colorado is fortunate enough to have many important native species, such as the sage grouse, which would benefit from the incorporation of a more science-based management plan for their protection. 6) Support opportunities for sportsmen to continue enjoying healthy and challenging hunting and fishing on federal public lands and rivers. Preserve the values and access that make backcountry hunting a wholly unique endeavor. This can be done through a variety of measures, including through the designation of backcountry hunting Special Recreation Management Areas as has been proposed by the Jarbidge, Idaho and Little Snake, Colorado BLM Field Offices in their respective Resource Management Plan revisions. Please consider these conservation policies in your decision making.

I would love to see a return to the Conservation Corps Idea now that our country needs job creation. State and local governments are cash poor right now. I vote for hiring local people to staff state and local parks that have been forced to close (i.e. in Oregon and California among others). Pay local residents \$15/hour to keep these parks open and keep vandals and thieves out! It would be a cheap solution, create jobs, protect the resources we the people own, and allow stressed out Americans to recharge in the Great Outdoors. No more motorized off-road vehicles, jetskis, or snowmobies in our parks, please. It is way too noisy and dangerous when they are allowed to ride roughshod over pedestrians. Thanks,

Dear Secretary Salazar, I am attending the listening session in Albuquerque today. While I have the opportunity, I would like to make my views known. I am in favor of non-motorized recreation on our federal lands. Please limit oil and gas exploration and development, cease road building in sensitive public lands. I would like you to make more opportunities for Wilderness recreation, and I support the tread lightly approach to mountain biking on public lands. I appreciate your help with these efforts. Best,

There is no such thing as "good" habitat destruction (e.g. mountain biking and mountain bike trail building) vs. "bad" habitat destruction (e.g. sprawl). ALL habitat destruction is bad. Selfishness and ignorance of basic biology is driving the push for vehicular (ab)use of wild lands. And, yes, mountain bikers ARE lobbying to allow bikes in Wilderness and Wilderness Study areas, proving that they are out of touch with reality. We DEPEND on the existence and health of other species! -- I am working on creating wildlife habitat that is off-limits to humans ("pure habitat"). Want to help? (I spent the previous 8 years fighting auto dependence and road construction.) Please don't put a cell phone next to any part of your body that you are fond of!

Everyone should be able to enjoy the sky at night as part of our national heritage. In the northeast there are many cultural sites which are unidentified or unstudied. These sites were meant to be viewed at sunrise, sunset and during certain night events, such as the Perseid Meteor shower. These ceremonial landscapes played a 'lost' role in our nation's history. The federal government could now play an important role in supporting the identification and protection of these sites. The federal government could also play a role in reforming our night-time lighting - inefficient fixtures, wasteful timing and overuse of lighting. 'Dark sky' street fixtures are no more expensive than traditional fixtures. Residential lighting can also be manufactured to be 'dark sky' friendly - I own several. The federal government could provide incentives to states and towns to become more lighting efficient. Public education could go a long way. A one night national 'dark sky' event could bring partners together to raise awareness of the beauty of the night sky as part of our great outdoors and to generate support for more year round changes. In the recent National Geographic issue, a nonprofit in New York working with community farms asked children who had participated in their programs if they had seen the stars - sadly only two children who had recently immigrated from Africa could answer 'yes'. Viewing the stars should part of the outdoor experience for every child. Consider sponsoring a 'Big Star Night' on August 11th each summer to coincide with the Perseid Meteor shower and bring a greater awareness of this light pollution and energy conservation issue. I think corporate sponsors could also be found who are interested energy conservation. Nonprofit and community partners around the country would offer local family oriented events (a sort of 'Trails Night' similar to Trails Day). When everyone realizes what we've been missing, it will generate excitement for restoring our great national night sky! Thank you for considering this idea, please feel free to contact me for additional details. Respectfully submitted,

I am very concerned at seeing all of the current indicated support for OHV activity. I feel this is totally opposed to the growing environmental disasters of CO2 and need to reduce use of fossil fuels for unnecessary electricity and petroleum use. Only perhaps special use for persons whose mobility is imparied should be accomodated to some extent. Purely recreational use which involves blasting around public lands with ATV's, ORV's, etc. etc. needs to be eliminated. I am 76. If that rule means I never get to go some places, that is part of the burden which our developing society has placed on some of us. The land, water, air - resources - are primary and should not be compromised for personal whim/wants etc. Thank you for your reply re my two questions.

Hello, I was unable to attend the recent Great Outdoors public meeting in LA (July 8). First of all I just want to say what a great idea it is to go out and get feedback directly from the public - thanks for taking the time to listen. My background is as a former faculty in an Earth Science department (GPS at Caltech) - but not in a capacity that gives me any credentials in environmental conservation. Mainly, I have just always had a passion for the US southwest - even from my days looking at Arizona Highways magazines in a school library in the north of England. Since being in the US over the last two decades - very recently as a citizen - I have grown much more attached to this wonderful region. I thus feel internally the tension between conservation and access that so plagues policy on land usage. One of the very best ways to access and be immersed in the vast landscapes of the desert west - where hiking and foot access is largely impractical - is via offroad vehicles, be it along the breathtaking Mojave road in California, the stunning White Rim trail in Canyonlands National Park in Utah, or the numerous trails over the Panamint Mountains near Death Valley, California. Such offroad access is often viewed as destructive to landscapes, and in a very limited number of extremely sensitive areas, this may be true. But on the other hand, most of the people I have come across who use offroad vehicles are connected to the land in much more real and impassioned way than the many city-bound of my friends: they access the land because of their love of it, not to destroy it. Indeed, access to the land and the opportunity to experience it personally is, I think, key to the nurturing of a true appreciation of America's great geographical inheritance in current and future generations. Responsible access, employing a reasonably large number of designated trails and allowing the opportunity for wilderness camping is essential to allow the land to be appreciated. The current policy in many areas of closing trails and limiting camping opportunities, by excessively concentrating activity, only serves to artificially fuel negative images of insensitive intrusion of civilization on the land. Those of us who value the land and want vehicular access want this intrusion less than anyone - the last thing we want in the solitude offered by the vast West is to be packed into tight confines with others. The west has survived and thrived through much busier and more destructive times than these, of logging and mines and the early booms of the 1800's and early 1900's. It is largely emptier now than in those times. Partially, I think, we often suffer from the fallacy of "the fragile Earth" - the idea that with the slightest touch we may break it. As a climate scientist, I have rather grown to appreciate the profound robustness of the Earth and its climate system. Make no mistake - the climate challenges we face are challenges to our own wealth and comfort, not to the planet. We also suffer from a romanticism of the primordial - the myth that much of the west is untouched wilderness that remains in a pre-Columbian state. Yet invasive species, extensive nineteenth century logging, mining, excessive fire prevention, and other activities have touched almost every corner of it. Despite these various ravages, the West has survived and adapted, a new equilibrium reached. A relatively small network of offroad (more properly unpaved road) trails across this land threaten it much less than prior challenges. Yet when larger threats to the global environment are at hand, the connection to the environment offered by direct contact with the land is threatened if we close people off from it. Once closed, and out of sight, the environment seems much more distant and less meaningful. We need to make it more meaningful and tangible. That can best be done by encouraging people to get off the freeway and see it - if only up close once in a lifetime on a offroad trip with a friend. Please consider the

importance of the human connection with the land and the critical role of widespread offroad access for this connection in the vast expanses of the west. Sealing it from the people may ultimately be the least effective way of protecting it.

When the guns are out of the parks, we'll start to participate again. Until then, we say away.

America's parks are not only an important part of her history, but also of our future. If expansion of parks is impossible (which is a silly thought because nothing is impossible; some things are just a greater challenge than others), then the preservation and beautification of the present parks is a necessity for present generations as well as those to come.

America's parks are truly something that we must protect and preserve for generations to come. I myself travel to several of these across the U.S. and fell lucky to have them available. I fear the movement that has become ever more apparent that many parks are becoming less and less accessible to the general public for interests such as Fishing, Hunting, trailriding of ATV's, camping and hiking. If some had their way, large portions of the Everglades and Rocky Mountain parks would be unaccessible except by non-motorized means. Some of these particular areas are places so remote and can hardly be accessed except during narrow windows each year due to weather alone. As a tax paying citizen I feel that these parks should continue to be available for me, my children and grand grandchildren. Thankyou.

Dear Mr. President, Theodore Roosevelt once spoke about preserving our natural resources for our future generations by protecting them from the short sightedness of industry. I hope that you will work to expand the funding and support for the stewards of our land and game resources, like the National Park Service and Bureau of Land Management. Without these protections, national treasures like Yellowstone National Park and the Grand Canyon would not exist as we know it. The Parks, Monuments, Forests, Grasslands and Wildlife Preserves need another champion like Theodore Roosevelt. I hope that champion is you.

Dear President Obama, I bet it's been a long two years. Did you remember some of the people who helped get you here? I know there's a fear of midterms and a prevalent sense of apathy among congress, but I know there's so much more that could be done. We stand at a crossroads, a final chance to curb the excesses of our society. Not to be cliched, but its on your shoulders Mr. President. Please, help save this land for future generations.

Every generation past has had the opportunity to enjoy one of the greatest joys of living-- nature and the beautiful outdoors. I urge you to consider the detrimental impact that would occur if you chose not to better protect this beautiful Earth.

Discussion Question 1

Written & Online Comments

(cont.)

Hike4Life believes in enjoying the outdoors, not taking from or destroying it! Many consider the murderous hunting of wild animals an enjoyable Outdoor Sport, H4L respectfully declines and refuses to accept that it is fun or pleasurable to steal the life of another living being. The massacre of the world's animals is directly linked to man and our inherent nature to spread, to dominate and to destroy. At Hike4Life, we believe in sharing the outdoors with our wild neighbors and marveling in the beauty that has been given to us by the Natural World. We do not trash our forests or woodland areas, we don't participate in malicious behavior or mistreatment of wildlife that we may come across, the only thing we leave with are photographs and memories. Please do your part and protect what we have cause once it's gone; it's gone! ?

I am the next generation, the ones who will be living the consequences of our parents decisions for the next fifty years. I am young, and I want to have many an opporunity to enjoy the great outdoors as you have had. I speak for the trees since they cannot speak for themselves, and I insist you extend the amount of space put aside for parks, nature trails, and hiking trails. Because it IS important.

I believe each person has a right to wilderness whether they choose to indulge is their own choice yet I feel they should have the option open to them. Why not protect the land, from rivers to forests to deserts, no matter how forsaken someone somewhere needs them so why not keep them open for all the generations still living? Thank you if you actually read this, but I understand you've got things do. Have a nice day.

I spend a TON of time outdoors and we absolutely NEED more conserved and preserved and restored land. Without it we have nothing. You should read up on Teddy Roosevelt a bit. Regardless, I am devoting my life to conservation and spreading the joys of the great outdoors. Every president has a duty to expand our protected lands and improve what is already protected. Thank you!

I would not be the person I am today without America's protected outdoor spaces. I have never felt better than when I'm standing in the glory of nature's magnificent beauty. Protected outdoor spaces allow people to come together for quality time with each other and they provide a vacation from Blackberries, iPhones, laptops, email and the industrialized world. Please help protect these outdoor sanctuaries for America's future. Thank you!

Let's get America's children off the couch and into our forests, on our beaches, on our waterways. Your consideration of all aspects of outdoor recreation during this planning process is critical to the health and well-being of the United States. From proper management of our natural resources, to the maintenance and protection of access rights for EVERY American citizen. This includes a robust and all inclusive motorized access policy. Do not lock up America's most treasured natural resources and spaces with the most discriminating and exclusive land use management designation available - Wilderness. Leave America's wide open spaces available to it's citizens. Not for development, but for access and recreation.

MOUNTAIN BIKES DESTROY NATURAL AREAS - PLEASE KEEP THEM OUT. THANK YOU.

Discussion Question 1

Written & Online Comments

(cont.)

Mountain Biking promotes healthy lifestyle, appreciation for nature, and more. Please help promote this activity by allowing access to more trails. Allowing bikes into wilderness areas already used by horses etc would be a great start. Thanks for all that you do, especially given all the conservatives out to destroy you.

One of my favorite parts of driving up to college two weeks ago was driving through Pennsylvania. My mom was napping in the passenger seat while i drove through the Pennsylvania Wilds and the Northeast Pennsylvania Mountains, and for those few hours, I could not have been happier. Sitting there, making my way through the ever-present road work on highway 80, i found myself imagining what it might have been like to live in the wooded hills surrounding me. That is a moment that everyone should have the privilege of having-finding a connection with the land's original inhabitants. If that, more sentimental, view doesn't move you, maybe a more scientific and pragmatic look would help. In my first grade class we learned a song about the habitat. I don't remember it all now, but i do remember that there were two main habitats we discussed: the forests and the oceans. The points we covered (as first graders) were that the forests and oceans help their respective inhabitants to "breathe." As a middle schooler, I learned how the forests and oceans help organisms "breathe"-they recycle carbon dioxide that we produce and give off oxygen, which we breathe. As a junior, driving around with my mother, visiting colleges, we were listening to a book on tape, specifically Bill Bryson's A Short History of Nearly Everything. While listening, I heard him mention something about trees and how they produce oxygen and take in carbon dioxide. Naturally i was intrigued. As i listened, however, I became slightly horrified: the amount of carbon dioxide in the atmosphere was at a dangerously close point to overwhelming the naturally "fix-it" threshold of the trees, who have been helping counteract our trials and errors of the past millennia. Needless to say, that's not good. I have now presented two views to you on this issue and all that is left for me to do is give you my support. So, i urge you to take every opportunity that you find to help protect our wildlands, where lingering memories of days long past might flash through some young persons mind, and where the flora is doing its best to keep us, as a species, alive and well.

Stop Factory farming, whaling, killing of innocent animals and the destruction of their habitats. The survival of humans, the animals and our planet earth depend on changes now.

The more people that hike and enjoy the outdoors will result in more people who care about the land. Those people will in turn want to invest in it. Preserving our national parks and monuments is vital for our continued high quality of life. There is something deeply spiritual about walking a trail and being with Nature. I want my children to enjoy it someday too.

The park system in America is the best this about America in my opinion.

There needs to be an intelligent approach to outdoor conservation- Namely that the access be based on the vehicle's environmental impact: 1. RESTRICTED ACCESS: motorized vehicles 2. SEMI-RESTRICTED ACCESS: horses 3. UN-RESTRICTED ACCESS: mountain biking & hiking

We are very fortunate to have some wonderful places in Minnesota - Boundary Waters Canoe Area Wilderness, Itasca State Park and the Headwaters of the Mississippi River, just to name a few. We have experienced first hand the beauty and importance of preserving these precious places for wildlife to flourish and people to visit and have had the pleasure of sharing these places with our children and hope to have the opportunity to do the same with our grandchildren. Please help support preserving these very important places. They are part of what makes our country GREAT!!!

With the damage caused by the Station Fire where I live, it is more critical than ever that we protect what is left of our outdoor spaces. In addition, when I went hiking in Eaton Canyon yesterday, there was gang tagging on the signs! This is unacceptable and more forest rangers and park rangers should be hired.

Excellent listening forum in Denver. Unfortunately we had to leave before the breakout. A few thoughts: Waterways should be central to AGO themes. Not only waterways in urban areas but also from their source. The upper watersheds are in danger in many areas. Focus on multi jurisdictional projects that protect the watershed and provide for recreation from the source down. Waterways would also appear as a "new" emphasis and give a refreshed image in the Park and Forest system which has appeared to focus on National Parks and Wilderness Areas. (without losing focus on Parks and Wilderness). Continue to increase roadless areas. In general, motorized transport does not reconnect anyone to the earth. Recognize conflicts in directives to the USFS. Example, if forests are to be open to alternative energy development does that include a string of windmills on the Continental Divide? How are energy, recreational and wildlife concerns to be balanced? Right now it appears that the USFS is encouraged to support all alternative energy development. Urban green space is vital, even on the top of buildings. Another Colorado idea, Historicorps, directed through Colorado Preservation Inc, is an excellent model for the means in which to couple experience in the natural environment with a recognition of the importance of our shared history. Do we need a national lottery? Thank you for the effort.

(cont.)

In the small town of Cuba, NM we have organized a partnership to operate a program of trails, walkways, and physical activity to address health concerns in our community. You may find out more about our program at <http://www.stepintocuba.org>. Here are some challenges and potential solutions that arise from our experience of the last several years.

MAJOR HIGHWAYS Our community is bisected by US Highway 550. Our NM Dept. of Transportation seems far more concerned about moving traffic through Cuba quickly, than encouraging pedestrians to do personal business or enjoy recreation on foot. We need speed controls and other traffic calming approaches such as bump-outs, crosswalks, flashing lights, trees, islands, etc. We need a process that allows for adequate public input on this issue. We think that periodic community input sessions and highway design that reflects community desire for more walkable communities should be a priority for state highway departments utilizing Federal funds.

US FOREST SERVICE AND US BUREAU OF LAND MANAGEMENT TRAILS We have a working local partnership for developing local trails that interconnect with scenic Federal lands and the Continental Divide National Scenic Trail that surround our community. Our local plans have been difficult to implement because of scarcity of resources for construction and maintenance of trails. We are dismayed that so much of our Federal budget is directed at maintaining outdoor recreational opportunities remote from where people live, and so little is directed to connect population centers - such as Cuba, NM - to nearby opportunities. Again, a meaningful local public input process, and a re-prioritization of resources seems like the answer. The health and quality-of-life "pay-off" from local trails seems huge in comparison to their cost to construct and maintain.

SMALL CITY PARKS Our city park is not a green refuge from the "concrete city jungle," but rather a center of outdoor activity. We are developing a year-round fitness trail that will serve as a hub for a network of walkways that will connect to our schools, businesses, services, surrounding Federal lands, and the Continental Divide National Scenic Trail. We are pursuing resources available for developing the park, but they are few and far between. Development of a "national blueprint" for small town parks, including potential resources for development, would be an important tool. A program of municipal park development might be very constructive "economic stimulus" for current times.

SOCIAL SUPPORT FOR PHYSICAL ACTIVITY We have a program of social support led by a walking champion. It includes fielding walking referrals from our local clinic, individualized counseling on physical activity plans, organization of walking groups, and worksite healthy activity promotion. These are evidence-based approaches that address our community and Nation's excess weight and diabetes epidemic. They should be among the highest priority of New Mexico's and other state health departments. Unfortunately, they are not, and resources for social support activities such as these are scarce. Health insurance entities rarely cover them as a health benefit, and municipal recreation budgets - such as Cuba's - are inadequate. Rearranging funding priorities to provide for a "pedestrian coordinator/walking champion/physical activity leader" in small communities and neighborhoods, perhaps employed by health departments, seems a potential answer.

YOUTH OUTDOOR EDUCATION The No Child Left Inside movement seems an important key to a healthier future for our country. Programs that encourage environmental and outdoor education, self-reliance in wilderness situations, summer youth corps outdoor jobs, and mentoring seem like an important direction. We are advocating for a safe routes to school program that allows for

Discussion Question 1

(cont.)

school bus drop-off and pick-up at our city park, with students walking the remaining 1/3 mile to and from the school campus. With the addition of a pedestrian walkway from the park to the schools, we would have a natural venue for school-based outdoor activities. I hope these ideas are useful and can be incorporated into the Americas Great Outdoor Initiative. Once again, please read more about our ideas at <http://www.stepintocuba.org>.

Ideas for America's Great Outdoors Initiative This initiative is partly motivated by a need to enhance recreational opportunities on public lands. But increased recreation opportunities will not flow from a whisk of a pen in Washington D.C. Any successful recreation management policy must be accompanied by adequate budget, staffing, and above all, management's priority to achieve critical on-the-ground goals. Federal agencies' allocation of budget, staff, and management effort should reflect the developing reality that outdoor recreation provides a greater good for more Americans than any other aspect of its multiple-use mandate. The time has come to make managed recreation the BLM and Forest Service's top priority. Prioritize all efforts on clearing the repair/maintenance/improvement backlog in the National Park Service before designating any new National Parks or other similar protective area designations. (The National Park Service alone estimates that it would need an extra \$9.5 billion to clear a backlog of repairs and improvements.) All too often "conservation" means reducing public access and recreational uses. The AGO Initiative should explore ways to enhance a diverse range of recreational uses, including motorized and non-motorized recreational uses, across federal, state and private lands. Federal land managers too often limit or restrict public recreation activities. Federal land managers should focus on recreation friendly management plans that are not restrictive and embrace a wide range of diverse recreational uses, including motorized and non-motorized recreation. Thank you,

First, we need to fund permanent land conservation in a meaningful way. With all the billions spent on completely useless stuff at the federal level (like F-22 fighters for \$250 million each, that have never, ever been flown in combat), surely we could find a few billion each year to buy and protect wilderness areas for future generations. Second, in regard to western states in particular, we have to stop this ridiculous dance with the anti-predator wackos in Idaho, Wyoming, etc. who hate wolves and bears pathologically, blaming them for every dead sheep, or for killing elk and leaving fewer of them for human trophy hunters to shoot. The United States' past anti-predator campaigns were cruel, short-sighted, and stupid, and there's no reason to repeat them. More wolves does mean fewer elk, but that means healthier herds and more trees and other vegetation, leading to less erosion and a healthier ecosystem all-around. Third, we need to ban destructive activities like off-road vehicle and snowmobile use on federal land. The small minority who is only able to enjoy the outdoors by tearing it up with machines, should not be able to ruin these lands for the wildlife and people who respect them.

(cont.)

Please continue to leave the dunes open to the public for ATVing. This is a big money maker for the economy. Do you know the amount of money spent on Trailers, Off road vehicles. Quite a bit as we own a Trailer, Sand Rail and 3 ATV's. We work hard to be able to enjoy these activities. I'm so tired of the "Greenies" taking everything away. This is a great family activity. Are the people who don't ATV going to go out in the 100 degree weather and have a picnic in the dunes? I don't think so. This is just another one of our rights being taken away. Washington DC needs to worry about bringing the jobs back to the US and leave our parks alone!!

We who enjoy the Imperial Sand Dunes, as hundreds of thousands do each year, ask that the dunes stay open and available to all for recreation. For 50 years this has been a recreation destination for generations of families. We have experienced numerous closures over those years and continue to fight the forces that would have the entire area closed to the many thousands who enjoy their experience there. Please help to keep the dunes open and available!

Please consider the needs of responsible Off Highway Vehicle Users, we are stewards of the land & contribute untold thousands of hours of volunteer trail maintenance where our families & children recreate, please keep these areas open to the public & DO NOT DESIGNATE them Wilderness,

I support the OUIBUS proposal and I for sure want to raise Otero Mesa to a national monument and the Organ Mountains to wilderness status. Thank you,

I do not know if it is still timely to provide input to the America's Great Outdoors discussion. If so, I would like to add this: There is a great impediment for the majority of Americans to enjoy the outdoors: they have to get to the outdoors by road. Most roads provide either no access for pedestrians or poor access. Federal highway standards now call for new highways to have sidewalks and marked bike lanes. Sidewalks that are built are generally truncated with hydrants, signs, and utility poles, and traffic signals at intersections (if present) do not allow for safe highway crossings. Bike lanes at the sides of the roads are on pitched shoulders, often gather road debris, have no physical separation from adjacent vehicular traffic, and disappear at intersections. These lanes are very dangerous to use, hence are rarely used. I strongly recommend that all highways built or modified with Federal money be required to have bicycle/hiker trails built as part of the highway project, in the place of both bike lanes and sidewalks. It is imperative that these trails be physically separated from the highways for safety either by distance or physical barriers. In addition such construction must allow for safe crossings at major intersections, employing bridge overpasses if necessary. Trail construction should be cheaper per mile than the combination of sidewalk and marked bike lane since the trail does not need to be built to such high traffic load designs as the 6 feet of bike lanes now allocated for highways. While designs that employ bike lanes and sidewalks often see limited use, designated bike lanes are likely to see heavy use both as access to outdoor activities and as transit options to vehicle use on highways. Their development would allow for greatly increased use of the outdoors by large numbers of people with no increase in spending. VR,

Sirs, America's Great Outdoors is an unprecedented conservation effort spearheaded by President Obama and several government agencies to reconnect people with nature. You're off to a good start with America's National Parks, National Forests, National Monuments, National Wilderness Areas and National Wildlife Refuges and other protected places set aside for the American public. A few suggestions for how to proceed from here: Expand farm programs that help farmers return their farms to being places where biodiversity reigns and the farm is fertile, productive, sustainable, profitable and serves as excellent wildlife habitat. The CSP Tier III effort is a good example of how all these elements can work together. Expand wilderness areas and put a stop to logging therein. Period. Improve Watersheds and Wildlife Habitat Fully Fund the Land and Water Conservation Fund, and America's National Parks, National Forests, National Monuments, National Wilderness Areas and National Wildlife Refuges. They have all been underfunded for years and this needs to be stopped and turned around. Thank you for adopting a bold conservation strategy for the 21st century.

To Whom It May Concern: I would like to express my concern that you please consider battlefield preservation in the 'Americas Great Outdoors' Initiative. Positive things about such preservation include: Preserved Civil War battlefields are tangible links to our country's past. The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can benefit quality of life for residents. Thank you for your consideration in this.

The White House Initiative on America's Great Outdoors. A specific proposal to increase youthful physical activity on public wildlands. What Works Orienteering is a "map reading sport" and has become a popular outdoor activity for high school groups, scout groups and others, of all ages, across the country. The sport challenges the orienteer to solve a series of physical and mental problems by interpreting features on a map and then navigating their way to a solution. High schools, from across the country, have come together to compete on our state parks and public lands in orienteering events. Challenges In preparation for these events, school groups would like to practice in more places, more often and not just at few, local orienteering events. However, because a map fee is made necessary by the expense of the special purpose recreation map, most agencies consider an orienteering event a "Special Use" and therefore require a special use fee and other requirements that make an event expensive for the orienteer and difficult to administer. By simply recognizing that orienteering events are a non-profit activity and not applying special use requirements to the orienteering competitions, the agencies could greatly increase the opportunities for youthful participation in this sport. Federal Government Role- All federal agencies could have a "MOU on Orienteering" that recognizes orienteering: - as a legitimate backcountry activity and should not be considered a "special use." - has minimal and no lasting impact on wildland habitats - has a role in training search and rescue personnel as well as preparing the outdoor recreationist for the backcountry experience - as opportunity to enhance the physical fitness of the participants - investment in maps is an investment in public land infrastructure (as if the agency itself produced the maps) and that recouping the investment by charging a map fee should not be considered a commercial activity. Tools- The best tool the federal agencies could provide is to encourage orienteering on appropriate spaces within their jurisdiction. This would not require funding on their part, just a well understood "Memorandum of Understanding".

(cont.)

I am disturbed to see the "fuelish" Americans desire to promote more OHV use on our public lands. Come on people, wake up, end motorized recreation, and get back on your feet. The benefits include : a cleaner environment, less oil consumption, and improved human health. If observant you may notice most motorized recreationalists have poor physical fitness and need exercise. Take a hike ; ride a bicycle ; paddle a canoe or kayak ; replace your snowmobile with X-C skis ; sell your powerboat for a sailboat. Wake up humans ! Human caused climate change is real so we must change. We cannot "stay the course". As a supposed world leader, America must set a "pro-environmental" example for the developing world. A convincing part of this would be to denounce our previous non-environmental practices as having a negative impact on the earth and admit to leading developing nations astray. In other words the U.S. must admit our mistakes, commit to pro-environmental change, and promote the changes for all humans. Only then will The U.S.A. truly be a world leader with the foresight needed to create a sustainable future for all life on earth. Currently, we are so preoccupied with the delusion that improving the economy and resuming our accelerated growth and consumption based on fossil fuels is in our best interest. This short sighted ignorance will be our demise. We have kept our oil based economy so long that we may have setbacks as we develop and implement cleaner technologies, but they will result in a stronger, more sustainable economy. If we don't commit to a "green" change for human development then we truly are "Earth Cancer". With a growing population of 7.2 billion cells we will end our hosts (earth's) ability to support life. How ironic that, Homo Sapiens, the most intelligent (?) of Earth's life forms could be so ignorant as to cause environmental damage to our host and therefore compromise our future.

I attended the listening session yesterday, and would like to reiterate a few points missing from the breakout sessions. First, let's get an omnibus wilderness bill onto the floor of the Congress like last year. Being from southern New Mexico I would like to see the Organ mountains-desert peaks wilderness bill included. This bill, co-authored by senators Bingaman and Udall, has been carefully crafted with all constituents and stakeholders included in the process. I would also like to see Otero Mesa designated as a National Monument. This very unique and fragile ecosystem is also a cultural monument. It is the last contiguous stretch of Chihuahuan desert grassland left in north america, home to many rare/endangered species of plants and animals, and native american petroglyphs in the surrounding mountains. I hope to see it as a protected area, and not spoiled and polluted by HEYCO's oil drilling for what BLM describes as an "insignificant" oil reserve. Much more important to this arid region is the enormous water table under this small oil deposit. Get these two southern New Mexico treasures on an omnibus bill for wilderness this year! Thank you,

Discussion Question 1

(cont.)

The America's Great Outdoors (AGO) initiative has two problems: 1) AGO must ban GMO crops and trees. GMO "foods" cause cancer, diabetes, aborted fetuses, permanently altered DNA, etc. ArborGen's GMO eucalyptus destroys native plants, water, and wildlife (proved in Brazil, Thailand, etc.). It also hosts *Cryptococcus gattii*, which causes fungal meningitis. GMO pine and poplar are also threats. 2) AGO's administrators (Jackson, Salazar, Vilsack) are untrustworthy. They did not, e.g., clean up toxic supersites, reform the Minerals Management Service (key in the BP ecocide), or curb Monsanto's filthy GMO "crops." Monsanto is committing domestic terrorism by knowingly selling disease-causing GMO products. Industry skills must not administer an environmental program.

Our next generation will be able to enjoy our state and federal parks, monuments and forest preserves because we already have huge control over wilderness areas throughout the U.S. The founders of our Constitution intended for a smaller federal government and wanted the states to have more control. Mr President, please reduce the size of the EPA and remove carbon dioxide gas as a listed pollutant. We all want to protect the environment that we live in, even us republicans. Unfortunately a scam is being perpetrated on the American people. Global climate cycles are due to solar activity, mass volcanic eruptions, asteroid strikes, etc. At this point in history, humans do not have any significant effect on the Earth's climate.

I would ask that you NOT set aside any more land for designation as a National Monument or Wilderness areas. I live and work in Siskiyou County California which is a very rural county that has more than 65% of the county managed by the US Forest Service and Bureau of Land Management. The attempt to establish a Monument here would take more of what little private land we have and eventually take it off the tax rolls and hand it over to the federal government, not for management, but for set-aside land that can not be managed. This should not be allowed to happen. In these economic times, we do not need more land that is unproductive, but we need to start wisely using the resources that we have in this country. We should not be importing all of our needs (fiber, energy, steel, wood products, etc.) when we can and should be providing them for ourselves while at the same time producing thousands of jobs with this production. We have some of the most productive land in the world in the Pacific Northwests Forests; and the worlds best land managers, we can managing these lands wisely for the benefit of both forests and our societal growth if given the chance. Creating Monuments and Wilderness areas only locks up this land making us more dependent on other countries to supply our basic needs. Please do not create more Monuments and Wilderness areas. We can encourage Americans to enjoy the outdoors, while educating them on the needs of using our resources responsibly instead of using other countries resources where the management is not done as responsibly.

(cont.)

I am a voted for you, volunteered for you, and donated to your campaign. Make me want to do that all at least one more time. Please don't mess our country up. We only have one Earth. We need to share it with those alive today and ALL those who come after us. This is our duty, responsibility, and reason to live. You have power - do something with it. Here are some things you can do: Address Conservation at a Large Scale Protect our wilderness Improve Watersheds and Wildlife Habitat Connect people with Nature Provide Increased Access and Recreational Opportunities Fully Fund the Land and Water Conservation Fun

I am so excited that you are our president. Please keep up the good work and save our environment for our grandchildren. Keep wolves protected Put the money into the Land and Water Conservaton Fund Protect our wilderness from logging and ATVs- keep at least some part of our country as close to what God made it as possible- RAMP UP THE EPA!!!

I ask that the Government and all agencies achieve Conservation at a Large or International Scale; protect Wilderness; improve Watersheds and Wildlife Habitats; connect people with Nature via Education and Direct Exposure; provide increased Access and Recreational Opportunities; revive the Land and Water Conservation Fund; and abandon, now and as long as America exists, all Dependence on the Business Sector.

I have reached the age where my health will not allow me to get out and hike the trails of my younger days. But my memories of those trails and sites are still with me and I want my grandchildren to understand why I loved the wilderness so much.

I've spent many years canoeing and camping in the Boundary Waters Canoe Area Wilderness in northern Minnesota. This unique and beautiful wilderness is one of our national treasures, and must be preserved and protected together with our other wilderness areas.

i was just reading about FDR and the CCC program he initiated and the creative people, on the whole, that were charged with its implementation--and the USA is certainly better off. i applaud the obama administration with also caring about the wilderness and wetland areas and i support whatever it can do to leave such a legacy. it will have to hang tough since the gop seems intent on scuttling any of his ideas, independent of their merit or the benefits for our country.

(cont.)

It is myopic to think of nature solely in terms of human recreation (although that is somewhat preferable to thinking of the earth as a limitless resource that we cannot use up). I'm stunned to see that even the Democratic Party does not have climate change as one of its top agenda items -- yes, we need to protect "America's Great Outdoors" but we need to look beyond this to our constant stream of toxic waste, the pollution that already fills the ocean -- such as the Great Pacific Gyre, a mass likely larger than the state of Texas consisting entirely of human rubbish.... When will the White House face the reality of what is happening to our planet as a whole? How many more catastrophes will it take --more fires to destroy Russia? More floods to cover 50% of Pakistan instead of only 20%? A further increase in the occurrence of severe storms that wreak havoc on our cities, cause our rivers to overflow and wash away precious soil, destroy the trees in our parks? We are sorely mistaken if we think we can protect one parcel of land (or destroy one parcel of land) without considering the global situation. We've decimated the diversity of species on both land and water -- some 80% of ocean species have disappeared. We're hurting human health, causing cancer, premature puberty, all sorts of chronic diseases through environmental pollution. (No wonder the cost of healthcare is so high. You can't fund both sides of a war and expect to win it.) Toxins in, toxins out. What waste we create remains waste, if not forever, then for a very, very, very long time. Please: show us you understand the connectedness of these issues. Take the need for clean energy seriously; reduce the production of plastics; do whatever it takes.

More wilderness, more open spaces...less drilling and environmental degradation and destruction. I am asking you to save NOT give away my (our) country to the greedy industrialists who would defile any and all in their wanton disregard for all that is great and beautiful about this country and planet.

My hope is that the majority of people will more and more see humans as part of the Earth and honor the complete cycle of its contents. I want decisions that reflect the responsibility we have to each other and the future, and respect the essence of every being, both alive and not-alive. Respect to me means not wasting, using materials for their intended purpose in no greater amounts than necessary,

One of my greatest pleasures in life is hiking and birding in the GREAT OUTDOORS! Americans are so fortunate to be able to camp, hike, and backpack in our many great national parks and wildernesses! I know that money is tight and the economy is way down, but with our burgeoning population, now is NOT THE TIME to cut back on protecting and preserving our special wild places. It is important that we fully fund the Land and Water Conservation Fund as it was intended to be, and not keep taking money from it for other services! If we don't continue to save and protect our special wilderness lands and fully fund our national parks, then we will have done a great disservice to our children and those that come after us! There is only ONE EARTH and once its inhabitants, species, plants, and ecosystems are gone, there will be no more! We cannot create more! Please continue your strong leadership in protecting and creating a better tomorrow for all Americans!

One of the fastest and most effective way to reduce global warming is to restore wild forests and wetlands. That's why I am asking you to seize this opportunity to create, expand and better protect America's remaining natural outdoor spaces, including wilderness, monuments, wildlife refuges, parks, forests, trails, wild and scenic rivers and even some historic sites. To ensure that future generations will be able to live at all and and enjoy our public lands, please consider these priorities for America's Great Outdoors: - Stop the paving over and wholesale destruction of any existing wild land and water. - Restore and protect our existing wilderness - Improve Watersheds and Wildlife Habitat - Connect people with Nature by providing Increased Access and Recreational Opportunities One way to do this immediately is by fully funding the Land and Water Conservation Fund Thank you for your leadership in shaping a bold conservation strategy for the survival of humanity.

One of the things I love about America are its open spaces. We have such wonderful pristine habitats, let's keep them that way for when I'm old.

our great outdoors are a national treasure, and part of the heritage that we should protect for future generations. I am an American citizen living abroad in Costa Rica, teaching ecology and conservation courses at the undergraduate level. One of the wonderful aspects of Costa Rican culture is the value that the average citizen places on the country's natural heritage. Everyone, from taxi drivers to school teachers, is proud of the many national parks here. I would love to see Americans as involved with the great outdoors as my neighbors here are. America, too, has a great diversity of beautiful protected lands that we can all be proud of. In order to make sure that future generations enjoy our natural heritage as well, it's important to make conservation and environmental education a priority. In planning the America's Great Outdoors initiative, I think these priorities must be addressed. Specifically, we need to: 1) address conservation at a large scale. To preserve species that require large home ranges, and to give species a better chance to survive warming-associated range shifts, we need to look at conservation beyond the local-scale park approach. We need to conserve landscapes and create corridors. 2) we need more community-centered conservation, education, and recreation programs that connect people with nature. If we can get people out enjoying our amazing natural landscapes, we'll have more people invested in preserving them. Also, we need to consider conservation programs outside of reserves-- encouraging tree planting, involving local schools in constructing bat houses or restoring riparian ecosystems, etc., etc. 3) fully fund the Land and Water Conservation Fund. In order to protect America's natural areas, we will need resources. As an educator and as a scientist, I ask you to consider these three priorities for the future of America's wild lands. Thank you for your leadership in this vital endeavor.

Please consider these priorities for America's Great Outdoors: - Address Conservation at a Large Scale - Protect our wilderness - Improve Watersheds and Wildlife Habitat - Improve and restore offshore barrier islands - Fully Fund the Land and Water Conservation Fund We need your leadership to shape a bold conservation strategy.

Please do not sell or privatize any national parks or BLM lands. Provide funding for maintenance and prevent money from park fees from going to the general fund

Discussion Question 1

Written & Online Comments

(cont.)

Please protect our wild areas before it is too late and they are swallowed up by development. Please, please preserve space for the wild animals and plants. It's the LEAST we can do to preserve at least a part of nature.

Please protect our WILDERNESS AREAS and our SMALL FARMS, especially our DAIRY FARMS. THANK YOU AND HAPPY BELATED BIRTHDAY,

Thank you for your leadership of our country during such trying times. My prayers, hopes and actions are with yours to help our nation grow healthy, smart, and clean.

Please....No more wilderness. Locking up our public land does nothing but to serve those with self serving interests. These people want us off of foreign oil, but won't let us drill...they want us to drive electric cars, but with no infrastructure to charge such vehicles, they promote wind generation, but don't tell of the inconsistencies, they want clean renewable power such as hydroelectric, but they make us pull out our dams, they won't support nuclear or anything related to. We need to ask ourselves today...are we better off than we were 50 yrs ago...is the direction that these individuals are pointing us to really going to make us better than we are today....I think not. Lets take the steps to put this country back on it's own two feet!

Protecorate! Save them dang trees! Please. Thank you, savior of the forest.

Protecting natural areas and species is one of the most important roles of government. Once they are gone, they cannot be returned to their original state. In addition to enjoying the outdoors, my research focuses on freshwater snails and mussels. The U.S. has globally exceptional diversity, with hundreds of species, but these are among the most critically imperiled organisms in the nation, with about 70% at risk if not already extinct. Only by preserving natural, free-flowing rivers, can the loss of species be halted. Similar concerns apply to other organisms. And a better environment promotes human health. Large-scale conservation efforts, expansion of protected areas, enforcement of environmental regulations, controlling greenhouse gases, developing sustainable energy-all of these are key parts to a sustainable future. While we develop other energy sources, well-regulated expansion of nuclear energy, including cutting the red tape that prevents establishment of a suitable waste disposal facility at Yucca Mountain, is probably a necessary intermediate.

These lands need to be available for the next generations of Americans to enjoy.

To give the future the benefit of our public lands, I hope you will - optimize conservation - protect wilderness - improve watersheds and wildlife habitat - provide more access and recreation, and - fully fund the Land and Water Conservation Fund. Thank you for your leadership in the 21st century.

Discussion Question 1

(cont.)

Unadultered wilderness inspires my imagination, creativity, and sense of wonder. I bring that sense of wonder and joy to school children in my community through after-school outdoor nature and birding activities. It's important to know that extensive wild places will be enjoyed by them in the future. In our overcrowded world, wilderness needs to continuously be created, expanded and increasingly protected. Please consider FULLY funding the Land and Water Conservation Fund.

As Conservation Chair of the Salem Audubon Society, I am writing to urge you to help expand and protect America's great natural places, including parks, wildlife refuges, wilderness, forests, and rivers. To prepare for a future in which the only remaining natural places will be those that have been purposefully set aside, it is imperative that we take action now. Specifically, please addressing conservation at a landscape level, which is needed to ensure the survival of larger species of mammals and birds. Protect wilderness wherever possible, as it is an ever diminishing resource valuable for recreation and wildlife habitat. And fully fund the Land and Water Conservation Fund to make this possible. Please take advantage of this opportunity to leave a great natural legacy for future generations.

Each year coal plants pour millions of tons of harmful pollution into our air. This pollution doesn't stop at state lines, and as a result people throughout the country are forced to breathe unhealthy air. I am pleased that the EPA is acting to help states be good neighbors by reducing air pollution escaping across state lines. The proposed rule will produce at least \$100 billion, and possibly up to \$290 billion, in public health savings, and it will prevent at least 23,000 heart attacks, 26,000 hospital visits and 240,000 asthma attacks, according to EPA estimates. In contrast, delaying action could result in up to 36,000 deaths related to dirty air. Like the highly successful acid rain program, the rule sets final clean air requirements but gives coal plants flexible options to achieve those requirements. The areas with the most cleanup to do will also realize significant benefits so that no state will bear an unfair burden. This is a national problem that needs a national solution, and I urge the EPA to quickly finalize this common sense approach to protect public health and help states efficiently and cost-effectively clean up their air.

Mr. President and Staff and Members of the Administration, I write this in the name of the future. For our land, wildlife, and water and for the generations of Americans who will either praise or damn us for what we do here. America's great outdoors need our protection and this can be best achieved through continued vigilance over what we have, the need to expand beyond what we have and the determination to create new ways of preservation and conservation for today, tomorrow, and onward in this dream called America. This would include our shared outdoor spaces such as wilderness, monuments, wildlife refuges, parks, forests, trails, wild and scenic rivers and historic sites. Please consider such important priorities as large scale conservation including wilderness protection which is at the heart of any logical meaningful attempt to improve and protect watersheds and wildlife habitat as well as allowing Americans to continue to share in and be shaped by our natural world which is the heart of America herself. Please fully fund the Land and Water Conservation Fund and continue to provide access for these critical recreational opportunities. We need you to lead. America's wildlife, lands, and waters need you. We need you. Please act for our children and our children's children. This land is our land. It is the land of the free. Please don't forget.

(cont.)

Thank you for calling for a renewed effort to connect people with nature in America's Great Outdoors initiative. As a scientist, educator, and naturalist, I can personally testify to the need to connect people with their natural world and the many benefits of doing so. This is true even in a rural state like Vermont, where I have had to teach people how to do things as simple as observe the migration of geese in fall, see wildlife signs all around them that they had never noticed, and recognize common wildflowers. Along the way, people of all ages and backgrounds have come to appreciate the restorative power of nature something that E. O. Wilson calls "biophilia". The keys to making nature a greater part of our life are few and simple:

1. Restore our damaged forests and grasslands. People cannot be expected to cherish clear-cuts or cornfields. They need places that are truly natural and inspirational. These places can vary in size from a few acres in a city park to millions of acres such as the Greater Yellowstone Ecosystem. Natural areas of all sizes are needed, but to make them most valuable, we need to develop greater sensitivity in how we treat all of our lands, including agricultural lands, developed lands, transportation networks (it doesn't help to have a preserved area if no one can reach it), and residential areas. Whatever the intensity of use of land, we should instill a belief that every place in America can be beautiful if we want to make the effort to do that.
2. Conserve landscape-size natural areas in every state so that every American can actually visit one within a day's drive. These areas should be at least 10,000 acres in size and should have as their primary purpose the restoration of natural ecosystems, such as old-growth forests, prairie grasslands, or other outstanding features that made America such a land of wonder and opportunity for the first Europeans who reached this country 400 years ago. Restoration should include both the natural vegetation and wildlife to each area.
3. Protect wildlife. A landscape without wildlife is just open land. A forest with wildlife is paradise. We need to conserve critical habitats, establish protected wildlife corridors, and provide information to private landowners on how they can take simple and inexpensive steps to improve habitat for wildlife, such as protecting streamside vegetation and leaving a few dead trees to provide cavities for wildlife.
4. Provide more opportunities for people to learn about nature. The 21st Century equivalent of the Civilian Conservation Corps would be to staff every public land from city parks to national parks with naturalists who can teach people to observe nature and understand what they are seeing. We need thousands of naturalists to share their knowledge in biology, geology, astronomy, and meteorology with the general public.
5. Ensure that all Americans have access to natural areas. We need to provide public transportation to more natural areas and create more opportunities for people to recreate in the outdoors. Until we get the people to the natural areas, they are not achieving their potential value to Americans.
6. Bring more land into protected natural areas. As America's population grows, so too should our conserved lands. We must protect and restore more land and the best way to do that is to fully fund the Land And Water Conservation Fund. Thank you for bringing this issue to the attention of Americans.

I want everyone to cherish and protect the world in which we all live. Appreciate the beauty of each tree, each body of water and each animal that lives there. Please put more emphasis on our wild places and encourage people to get out and explore the world around them.

Discussion Question 1

Written & Online Comments

(cont.)

Please do all you can to protect America's wilderness, parks, forests, wildlife refuges, etc. These beautiful and wild areas, once lost or destroyed, can never be replaced. If kept as they are, they offer so much to this great country and her people and animals. Thank you in advance for protecting these areas.

Please put a moratorium for the wild horses' protection !! Do it now !! Their existence is at stake and the BLM's propaganda must be stopped. It is deplorable what legacy this administration is leaving for our wild horses and burros - please do this now - end the corruption of BLM. Place a moratorium on all round ups !!!

Wild and open spaces must be preserved for future generations. No financial gain, business benefit or gain in employment can match the value of nature that is unspoiled. Allowing commercial interests to utilize our national parks, forests and other natural areas for capital gain amounts to selling off a treasure that cannot be replaced in return for a short-term gain that can be accomplished through other means. The national wild areas are themselves attractions that generate capital, jobs and opportunities on an ongoing basis. It does not make sense to allow any exploitation of these lands for the gain of a few, when the loss is felt by so many. I appreciate your attention to maintaining the wild and natural areas of our nation for current and future generations.

I see two major areas for increased natural resource protection that are currently much neglected: 1) There are many relatively small areas of unique ecosystems and rare species that should be protected as scientific natural areas. In my part of the country, there are many small bogs, fens, and native prairie remnants that are extremely important scientifically for the rare ecosystems and species they contain. Most of these ecological relicts are areas of only 10- 1000 acres, but they should be protected from all human alteration. 2) While our national parks and monuments were wisely created to protect our most spectacular natural treasures, there need to be more federal parks and natural areas closer to human population centers. As the petroleum age declines and transportation becomes ever more expensive, I think that it is essential to have suitable natural parks near cities, where urban dwellers can travel quickly and with relatively small use of fossil fuel to hike, camp, and otherwise enjoy natural environments.

I just learned that aquatic life is gasping for air in the shallows of the Gulf of Mexico. My grandchildren deserve better. Please fully fund the Land and Water Conservation fund. The outdoors is our legacy and we need to pass it on better than we find it. I look forward to cycling the trails of our forests, swimming in our lakes, enjoying clean air and sounds of wildlife, not machines, in wilderness. There is so much to undo when cattle overrun public lands, eroding and polluting to make their owners richer. We mustn't use it all up in one generation! Please do all you can to secure, protect, support and improve our wild heritage. Thank you for all your efforts bringing this country into the 21st century.

Discussion Question 1

(cont.)

I want the next generation to enjoy America's great outdoors too, so please seize every opportunity to create, expand and better protect America's shared outdoor spaces. AMERICA'S BEST IDEA deserves our best protective efforts. I hope this will be a hallmark of your presidency -- leaving our natural heritage in better condition than it was when your administration began.

You have already taken steps to protect earth, sea shores, rivers, and air of this country. Thank you, heartily. I write this letter with gratitude and to urge you to address conservation on a large scale, to continue to strengthen protection for our wilderness lands, as well as for the practical cleanliness of soil, water, and atmosphere. Wilderness is spiritual "money in the bank" for future generations' discovery and enjoyment -- and perhaps holds solutions among its life forms to inspire us in future. Protecting soil from toxic wastes, protecting water sources, air and sea shores are matters of immediate safety. This has been a most difficult Congress. However, I hope you know how many of us will back you in defending our wildernesses, lands, waters, and air. Thank you.

Mr. President, Besides the economy the greatest single threat to this country as identified by the U.S. Military is climate change. Working to stop further damage that, once done cannot be repaired, would create jobs, build a new world economy, and provide new infrastructure tax bases to rebuild our world. Of course as part of that renewal we must deal with the individual parts of the puzzle. This must include protecting those wild places we have now. They are some of our greatest assets and why would we not more assets as we rebuild our country economically and environmentally. Don't let the obstructionist block what we know will heal this country. Don't let their hollow promises of compromise make us compromise our values. Stand tall and lead this nation. Those of us who will follow only need a leader with true vision who will do what it takes. President Obama, ... be that leader!!! Thank you

The wilderness areas are the jewels of America. Please do whatever you can to preserve and maintain them. We must spend more money on our national and state parks.

America's Wilderness Areas are a national heritage and are under constant threat from human activities.

I hope to continue using America's great natural resources, the mountains, forests, rivers, shores and all of these incredible spaces set aside for nature and the citizens of America. My children now enjoy these places on their own and I hope the next generation will be as fortunate. Stop all thoughts of drilling, mining and wholesale lumbering of forests. We need more natural spaces set aside for us, the citizens of America. Keep the privateers from damaging these treasures...please fund more land and water conservation initiatives. Protect our natural resources from pillage by private greedy corporations and anyone else who would put these places up for auction. America's great natural spaces cannot be replaced. Thank you for addressing this most important issue of conservation.

Discussion Question 1

Written & Online Comments

(cont.)

I love my wild places, and I don't want to see them destroyed by our terrible energy plan. We should develop more clean energy, and make it more available to people so that we can avoid using fossil fuels.

I want to tell you about the trip we took to Canada in August. The Canadian Rockies are beautiful, they are cared for, and the government protects the wildlife and wild flowers before people and making money. It was a joy to find large areas where people are not allowed so the wildlife can be protected. They even build viaducts over the highway so wildlife can move from one safe area to another without the terrible results of fast moving cars. I was very impressed with the cleanliness without sacrificing the wildness. I was impressed with the well designed signs to inform travelers of the animals, the forests, and the history of the area. Please look to Canada for their solution to protecting the great outdoors. We all need clean air, clean water, clean beaches, and clean roadsides. It benefits us all when our government works as hard for the wildlife as they do for big corporations. In the long run, we will be a better country.

Please protect our current Parks and wilderness from short sited overdevelopment. May I suggest using all media to raise awareness on conservation. TV News broadcasts are a great and often only source of information to the general public. Of course, the newspaper (hard copy and on-line) would be a far reaching source as well. It's important to keep this at the forefront of the American consciousness just as much as "Going Green". I also strongly encourage you to develop more educational programs and opportunities to keep our upcoming generations involved with nature. Right now, many could care less. I think it would be beneficial to, if possible, work it into the school system. This will ensure they keep up the stewardship of our great wildernesses. Currently, we are well beyond the carrying capacity of this earth. I know this is very controversial but ultimately, we as Americans must control our population, which in turn should resolve overdevelopment issues. I have a great love of nature and I have witnessed this time and again as a fundamental need of repair and replenishment for the human race. Please use this opportunity to create, expand and better protect America's shared outdoor spaces, which of course includes wilderness, wildlife, wildlife refuges, parks, forests, trails, wild and scenic rivers and historic sites. Please consider these priorities for America's Great Outdoors: - Address Conservation at a Large Scale - Protect our wilderness - Improve Watersheds and Wildlife Habitat - Connect people with Nature/this must be a constant. Too many young people are completely out of touch. We are raising generations more interested in video games, Blackberries, shopping malls. - Provide Increased Access and Recreational Opportunities - Fully Fund the Land and Water Conservation Fund There is nothing much more important than this. Thank you for your involvement in the stewardship of this great Country.

(cont.)

Please stop "gifting" American oil, water, mineral, and timber resources to industries demonstrably willing to rape the land for riches that belong to all Americans! Their actions prove the dishonesty of themselves and the promises they make. We've lost too much already. Without strict, unyielding conservation my children and grandchildren will never see the beauty of America. So much of the natural beauty, the clean lakes and rivers, magnificent mountain scenery, and places to camp and fish away from the filth and noise of the cities has disappeared in my lifetime. Without strong leadership from you my great-grandchildren will have to wait in line for a peek at what my generation has experienced and loved. They deserve so much more but will not find it without your help. For the sake of all Americans please demand of Congress the laws to protect what belongs to all our people and the financial commitment to make it happen. Don't let congress give away America! Please be the Roosevelt of the 21st Century. Attach your name to the legacy of Teddy. Thank you for the leadership to save our natural wealth that you and only you can provide in this effort.

This group wants me to write you to protect the wilderness so future generations can enjoy it. While that would be good, I think our wilderness areas will be essential for the survival of future generations. I grew up in WV and I can guarantee that the coal industry puts their bottom line over all else. My Father was a State legislator and what I saw and heard of these people was a horror. My proof that they have not changed is in the actions of the mining companies in WV compared with the actions to save miners in Chile. From what I have read, the oil companies are quite willing to take shortcuts to save a buck. They seem very much alike to me. We can't let these greedy folks get ahead of real people. They don't care about anything but their bottom line.

My granddaughter deserves to enjoy America's great outdoors, as do your grandchildren yet to come. Therefore please seize this opportunity to create, expand and better protect America's shared outdoor spaces, especially the estuaries and their land edges where rare creatures like the Diamondback Terrapin live between ocean & inland waters. I live near & have kayaked the Kiawah River estuary where these turtles as well as nesting eagles have found a fragile home. Yet housing developments threaten this region. This is an area deserving of protection. In advance I thank you for your leadership as I understand you plan to shape a bold conservation strategy for the 21st century.

Please protect America's outdoor spaces. We owe ourselves and our descendants access to unspoiled lands and natural resources. Please promote and sign the necessary legislation. Your leadership is critical if we are to save our environment from current destructive practices.

(cont.)

In the last three hundred years humans have become dominant among the creatures on Earth, but only aware of it in the last thirty years or so. We are about as qualified as the Pauper in the palace of the Prince to lead the nation, or in this case the living world. Appreciation and love of anything must be a combination of knowledge and exposure. Now that the vast majority of our citizens inhabit cities, it is especially important that they have an appreciation of nature. Without such an appreciation, it is doubtful that our species will survive the climate change that we, in or ignorance have precipitated. I therefore suggest that we need some kind of natural experience and education appropriate to the age of students at every grade level. The education must take place in the schools and be complemented by experience in the fields, woods and streams of America. The education must emphasize the many ways in which we humans are dependent on the natural world: for breathable air, filtered water, vegetables and medications, psychological development. For the exposure, it is important that wherever possible our national parks, reclamations and wetlands be as accessible to our big cities as possible. Cleaning our wetlands, streams, rivers and oceans should probably be our first priority. Most

America's Great Outdoors Listening Session Comments Obstacles to getting outdoors and recreating: · Perceptions of Risk · Costs (money & time) · Equipment · Skill

I think that the biggest hurdles to getting people outside are the perception of risk and the lack of free time and transportation/access to public lands. There seems to be a perception that parks are filled with perverts and drugs/crimes. Parents are reluctant to let children play outside unsupervised, due to the perceived risks and the stigma associated with "letting" your kid get hurt. Perhaps an educational campaign (advertising) could help to break down this perception of the outdoors/parks being scary places. Pools have lifeguards to supervise and provide rescue skills if needed to visitors to the pools; Can parks/public open space provide (volunteer, paid, combination) "parkguards"? Would a system of parkguards that patrol parks and supervise and assist visitors help to get more folks out enjoying the outdoors? Other big hurdles are the cost of equipment needed for many outdoor activities. Trails can be enjoyed via human powered (hiking, bird watching, running, cycling) for low to no costs. These activities are similarly impacting on the environment. Motorized and equestrian uses require additional expensive equipment and skills, and are heavily impacting on the landscape. Most of the nation's population can partake in human powered recreation on trails in the outdoor setting, utilizing a wide variety of types of trails (greenways, rail-to-trail conversions, ADA accessible boardwalks and nature trails, as well as challenging natural surface trails). Trails provide access as well as experience while conserving public lands by concentrating foot (and other) traffic on the trail's surface. Trails that don't provide the access and experience that users' desire will be used less frequently and users will establish their own trails to get the access and experiences they desire. Trails need to be properly designed and maintained to minimize their impacts to natural resources; Trails need to be inventoried and treated as facilities with appropriate budgets for maintenance and construction. Other than breaking down the perception of risk and keeping the monetary costs associated with outdoor recreation low, we need to make accessing public lands easier for all Americans. National Parks and Forests are wonderful places, but are inaccessible to the majority of the nation. Regional, state and local public lands are where the work needs to be done: Trails and facilities need to be built and maintained. Access needs to be improved, by providing safe pedestrian/cycling routes and public transportation alternatives that access the parks/open spaces and fit the typical and atypical American's busy daily schedules. We need to encourage citizens to "make time" for the outdoors: put down the remote and take a hike, picnic dinner with your neighbors or family in the park, skip the gym go for a run in the woods. A nationwide advertising campaign that makes outdoor recreation seem cool, coupled with paper and electronic resources to help Americans locate and access their public lands is needed to get folks motivated and active. Construction of new public lands and greenways can further enhance the natural and man-made landscape by providing connectivity b/w parks and people and other parks. Greenways and rail to trail conversions provide transportation corridors. These can be co-located along natural features (rivers, waterways, ecological communities) and planned/constructed in a manner that symbiotically provides benefits to man and nature. Corridors can provide safe and efficient commuting routes for students and working Americans as well as recreation for weekend/evening users. It is important to balance access and recreation with conservation. Science and research can help inform and enlighten the public as well as land managers about many management concerns. Science provides an objective lens

to investigate problems and formulate solutions that will help provide an optimum balance of high-quality recreation experiences with conservation/environmental goals. Finally, I would like to point out that there are a range of types of parks from National Park Service Units to the local urban open space or playground. America's Great Outdoors come in a variety of flavors and are managed by a plethora of agencies and departments. This initiative is being put forth by DOI, but needs interagency cooperation and public support to be successful. Thanks for hosting the listening sessions; America has great people and great lands that need to be united. I am a researcher at Virginia Tech (cooperating with _____ of the USGS); our primary research efforts have been on recreational impacts to public lands. My passion is for science, trails and outdoor recreation. I am very excited to see the Obama administration and Secretary Salazar put effort into reuniting American's with the outdoors. I believe that this is needed and can/will help address several pressing societal issues (health, energy, economy).

As the comments on a recent blog post clearly illustrates, over 90% of the people believe the problem starts with the parents. Until we get the parents of our nation's youth setting a good example, we will be fighting a never-ending battle unfortunately:

<http://dean.runnersworld.com/2010/07/the-great-outdoors.html#comments> Hope that helps with the feedback.

What kind of country, what kind of world will this generation leave behind? Our grandchildren will ask "What were you people thinking?" Is their entire grasp of nature to be found in books & National Geographic? National Geographic can put out a new series - "Remember When?" Remember when there were actual live animals here? Oh, that's right - we destroyed their habitat & food sources. When is enough enough? Suburban Sprawl - cut down all the trees, destroy animals & then name subdivisions after them. Maple Grove? Yeah, it once was. Whispering Pines? They don't even whisper anymore as they are all dead.& gone. Mallard Cove? This goes on ad infinitum. Please vote to help save what little we do have left.

Hello, I would like to see access to public land ownership made easier to poor people. That includes the impossible- Land Trust and the BLM. They hold auctions that you have to pay a registration fee and a current market price to start the bidding. This makes it impossible for the poor, because we are cut off before we can even start. The rich get richer, only they can get access. Also the burning of forests by the BLM, should be stopped. Isn't there enough forest fires every year, losing billions of acres and yet they burn more. It is not a scientific fact that it is a sound practice. Millions of animals lose their homes and winter supplies of food. Thanks

I am a firm believer in vigorous, well-informed local initiatives aimed at grappling with conservation and preservation problems. Attached is an article I wrote about three years ago (published in the Star Tribune) recommending as a state-wide model the strategies and measures taken by the Ten Mile Lake Association to preserve the water quality and surrounding environment of that water body. I am submitting it as my contribution to the forthcoming listening sessions project.

I received the following email comments from someone unable to attend the Listening Session in Fort Pierre, SD scheduled for tomorrow. Please see their comments below. Dear Sir/Madam I am sorry that the Pioneer Grazing District will be unable to attend the Public Listening Session on the Presidents America's Great Outdoors Initiative. The enclosed letter is our comments. I hope they are helpful. The Pioneer Grazing Association is an association of independent livestock producers who utilize and care for a portion of the Buffalo Gap National Grasslands in southwestern South Dakota. We appreciate the opportunity to comment on the President's America's Great Outdoors Initiative. The Buffalo Gap National Grasslands are for the most part, well maintained and being exceptionally cared for and preserved for the next generation. Allotments are managed as an economic unit with private area ranches in order to fulfill the goals of Title III of the Bankhead-Jones Farm Tenant Act of stabilizing and perpetuating the rural, agricultural economics of the arid plains of the western United State. Unfortunately, unfounded concerns and political ideologies have prohibited range management and control of the population of prairie dogs inhabiting the grasslands. This has not only adversely affected the health of the range, but also allowed for the spread of disease in the prairie dog population of other species. Reconnecting people to the outdoors must include proper management of our collective resources and wildlife so people will be able to view aesthetically pleasing vistas without soil erosion and fear of disease. Further, closing existing roads and trails creates obstacles to people enjoying the grasslands. The Interior Department should be facilitating, not discouraging, the public's enjoyment and making it easier, not harder to access public lands. The Buffalo Gap National Grasslands has traditionally been managed for and achieved: conservation of the land and sustainable use of the resources, provided vehicle use for access to private lands and recreation; and equal opportunities the disabled, aged and/or infirm. Recently, these conservation and recreation achievements have been threatened by ideological management of the National Grasslands. If the goal of America's Great Outdoors is to reconnect people to the outdoors and activities please encourage scientifically based, as opposed to ideologically based management of the population of all species of animals inhabiting the National Grasslands. Further, encourage use of the grasslands by maintaining access for all people no matter what their limitations are. Restrictive designations, reservations and/or areas will not achieve the goal of reconnecting all people with the outdoors. Thank you for your thoughtful consideration of these comments. Pioneer Grazing Association sincerely desires continued and improved sustainable development of the grasslands in order to encourage people to reconnect with our great outdoors.

To whom it may concern, I recently had the privilege of attending the Listening and Learning Session for the America's Great Outdoors initiative held on June 25, 2010 in Annapolis. I was not able to attend the breakout sessions in the afternoon so I would like to provide comments now. I am a Professor of Biology and a book author (Teaching the Trees: Lessons from the Forest, 2005, University of Georgia Press). While studying the nation's old-growth forests for my next book (Getting to Old Growth, in production, Ruka Press) I learned how few of this nation's forests are left uncut and allowed to develop their full ecological richness and beauty. I would like the Federal Government to form a network of old-growth forests throughout the nation. What a wonderful project this would be for AGO! I would be willing to oversee its creation. Please see the attached document "Old-Growth Forest Network" for more details. In answer to your specific questions: What works: The best strategy of all is 1) protecting natural land, and 2) helping average citizens get out and experience the natural land (through maps, signs, tours, etc.). Challenges: I would like to work full time at forming this network of old-growth forests, but I still need to eat. My challenge is finding income to support me while I do the conservation work I believe in. Federal Government Role: In the same way that chain stores and chain restaurants benefit because all over the nation they have name recognition and people know what to expect there, the Federal Government could help in this conservation effort by centralizing and giving "name recognition" to the Old-Growth Forest Network project. Being part of a Federal Network would make the project more likely to be successful. While the Federal Government support initiatives via the National Forests, please keep in mind that not all states have National Forests and therefore not all states benefit from the initiatives. Tools: I need a way to reach someone in the Federal Government with my idea. If it is supported I would need a small budget.

Wildlife and Land are important to us as Americans. We have a treasure trove of species and land that is incredible. We must find methods and techniques that replace warfare such as animal poisoning, hunts, and aerial shooting of our wildlife. Alternatives: Preservation of National Parks as Wildlife Sanctuaries that prohibits any type of wildlife hunts, wolves as example. Population control through sterilization methods such as tubal ligation that has been tested in Albany, New York and birth control in the form of chemical sterilants. Population control of wild horses and burros/donkeys where the animals can run free and not be kept in holding corrals filled with displaced mustangs and burros. Alternatives: Mustangs and burros are part of our culture, our heritage. Instead of being scapegoats, as has been the case for years, there needs to be Equal Representation of mustangs and burros when litigating with cattle rancher interests. Federal sanctuary lands need to be established such as sanctuaries already established by private individuals. Working animals such as special bred dogs and donkeys to protect livestock. Population control through birth control in the form of chemical sterilants and methods such as tubal ligation that has been tested in Albany, New York.

I'm my total honest opinion OHV's should not be allowed to destroy mother nature in any form and if not stopped or controlled there will be no wilderness nor any thing else left for people to enjoy except bare dirt and desert with no trees or greenery.

Discussion Question 1

Written & Online Comments

(cont.)

Keep OHV out of national parks and wilderness areas. Turn decommissioned military bases into OHV parks. Leave the others for those of us who have the gumption to use our own two feet.

Please invoke added protections for wilderness areas from all kinds of despoiling. Please work on Conservation efforts for our wilderness areas. Please put in place laws which protect watersheds from pollution, runoff, and destruction by impervious cover thereby protecting our drinking water. Please instigate laws which protect the habitats of our indigenous wildlife. By fully funding the Land and Water Conservation Fund you will be doing much toward these goals. Thank you,

I have been exploring the wilderness since I was a Cub Scout in 1963. My family took us to wilderness lakes in Minnesota, Wisconsin and Canada. We were taught to respect and nurture nature as a prime responsibility. I think our government has a prime directive from our nations finest leaders including Theodore Roosevelt and many others. It is a critical need even and especially in hard times, to protect our natural world from exploitation and irreversible destruction including wilderness, monuments, wildlife refuges, parks, forests, trails, wild and scenic rivers and historic sites. Having been a teacher, officer of the Fraternal Order of Eagles, a journalist and parent, I am insisting these priorities be met for our national heritage to be kept intact and the health of our people, living creatures and awe inspiring heritage. - Address Conservation at a Large Scale - Protect our wilderness, especially in Alaska, the Arctic, shoreline health and reefs. - Improve Watersheds and Wildlife Habitat with adequate protections from development. - Connect people with Nature with excellent school and community programs. - Provide Increased Access and Recreational Opportunities through youth corps and other ways for young people to save us. - Fully Fund the Land and Water Conservation Fund WE desperately need your leadership in shaping a powerful conservation strategy for the good of our planet and likely for our actual survival.

Discussion Question 1

(cont.)

I am discouraged with the postings that appear on the website. Many are only requests for personal projects and have little to do with national leadership that seeks conservation and connection with the outdoors. The most important leadership the outdoor initiative can provide does not fit within the categories you provide. It is the articulation of a land ethic. (Although I said this at a Listening Session it does not appear in the notes from those sessions) If nothing else appears in the final document, the national need to articulate a land ethic needs to be there. We need to be stewards that care for the perpetual functioning of the natural world for our clean water, food, and materials for shelter. The dominant American culture makes us forget this connection to the landscape at all levels including our personal health and physical fitness. If we had clear guiding principals about the land and water upon which the nation stands we would not make inconsistent and costly decisions about natural resource management, transportation, food production, residential development and even public health. In terms of your categories I will offer limited discussion: What works Spending time outside works. Getting people to spend time outside is not always easy. Some of the places that inspire people require effort in terms of time and physical capability. I think the physical requirements improves the quality of the outdoor experience and develops an understanding that is lacking when a person drives to a place. Not everyone can spend time in wilderness, but for me it is a place of rejuvenation and solace. There is nothing else like it. When I take someone new into wilderness they start with a level of anxiety that can only be dispelled through the accomplishment of the journey, particularly a hiking journey. Without exception they want to go again. It might take a while but the experience is not forgotten and there is a request to go again. Anything that expands the opportunity for young adults to work outside is helpful. Not all families have a chance to hike together because of time and ranges in physical capability. This was true in my family. For me it was the formative period of my early 20's when I was lucky to have jobs in the woods with natural resource agencies. The many months I spent living in tents and doing hard physical work gave me a level of confidence that has served me well and allowed me to take others outside to see the wonders there. It also laid the foundation for my determination to live near wild places and arrange my work and family life to accommodate time backpacking, hiking and nordic skiing. That time working in the woods in my 20's laid a foundation for lifestyle choices for which I am very grateful. Until recently I did not appreciate how much women in particular were hesitant to go outdoors. I moved to my current home to be closer to hiking opportunities. As it is always safer to have a hiking companion, than to go alone, I looked for others that wanted to go hiking. I found that if I started with shorter hikes, and gradually took people on longer and longer hikes they became quite confident and compelled to do more. The first year there were five of us. The next year over 30 women wanted to be on what they called "the hiking email list", then next year there were over 50 women, and some of the men in the community knew where we were going and asked to go along. You can imagine this number of people gets unworkable. It works better now that we started categorizing hikers as preferring long haul and short haul hikes; people started using subsets of the list to hike with people with similar skill levels. Barriers to getting people outside Proximity: In our busy world, it is the proximity to wild places that can make a difference. The closer you are the more you might visit those places regularly enough to venture further and further into the wild places. Lack of access to mentors: While none of the outdoor skills are particularly difficult, it is easier to love

Discussion Question 1

(cont.)

the out of doors if a person's first experiences are with a mentor. The mentor can quietly demonstrate basic outdoor skills and backcountry travel ethics. Simple things like trash, pack it out. Personal responsibility for your raingear, your foot care and the ability to ensure your water is safe to drink is all important. The hiker needs to be able to read a map; experience reinforces what the topographic lines really mean.

I have two: 1. Sponsor a photo contest for the various parks inviting all to submit pictures taken in the parks. This will have the result of participants really examining the beauty and wildlife found in the parks and will provide pictures to exhibit in public and in private. A HUGE WIN WIN event The prize could be a calendar made from the pictures. 2. Make use of the marvelous lectures and demonstrations given in the parks offering talks in schools and auditoriums around the country. It will generate an interest in travelers who do not usually think of the National parks as centers of learning and the opportunities that can be found there. . Thank you

I am a long-time Utah resident, and someone who greatly enjoys hiking and watching wildlife on federal lands in Utah. I've seen increasing problems and resource impacts in recent years. These include the dangerous expansion of cheatgrass and other invasive/noxious weeds, destructive fires due to excessive fuels from past and current mismanagement, overgrazing of riparian and Mojave desert tortoise habitats, and illegal OHV route proliferation. The status quo is not working; we are "losing ground" on several resource management fronts. I also do not agree with most elected Utah politicians who are simply shills for fossil fuel, ranching, mining, and/or OHV industry interests, have financial conflicts of interest, and/or are ideological wingnuts. They do not speak for me or many other Utahns who realize that we are on the wrong course and need to change direction. Of course, it would help if more Utah voters stopped selecting anyone with a pulse and "R" next to their name on the ballot as their representatives. In short, Utah needs your help to preserve its precious wild lands that give us clean air, drinking water, open space, beautiful recreation areas and wildlife habitat. From Cedar Mesa to Red Cliffs, Utah offers an extraordinary home to wildlife and outstanding recreation opportunities. However, development, increased recreation, overgrazing, cheatgrass fires, and climate change have put some of our most precious outdoors destinations at risk. Large natural areas, such as Cedar Mesa, the San Rafael Swell, Wasatch Mountains, Beaver Dam Wash and Red Cliffs -- provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while preserving the wildlife, recreation and lands we enjoy today. Protecting these lands will give us the opportunity to actively reconnect our children to their incredible natural heritage. In addition, it is imperative that the backroom Norton/Leavitt "no more wilderness" deal be revoked, and BLM's authority to inventory and protect (on an interim basis) wilderness quality lands be restored. Thank you very much for your consideration.

(cont.)

I am a landscape architect who designs parks and believes completely in the power of outdoor experiences. Children who grow up with quality outdoor experiences are at a distinct advantage in life. The outdoors is good for the mind and the body and I believe all people should have easy access to the types of outdoor spaces that set this country apart from many others. As an adult, I know I have benefitted from my outdoor experiences and to this day find a calming power in the mountains, by the water or on a bicycle cruising down a safe trail. This power is real and lasting and the more people who are able to benefit from it, the better off we'll all be. The value of urban parks, wilderness and everything in between is difficult to measure; but far more important than most of what we strive for in our daily lives. I continue to firmly support this administration and look forward to watching you find new and creative ways to protect and restore the places the citizens of this country need now, as much as ever. I will professionally and personally throw whatever support I can towards this effort. Thank you for your efforts to date and please do all you can. It matters more than so many things, yet sometimes is easy to overlook. Sincerely;

Please plan for America's future by creating, expanding and better protecting America's shared outdoor spaces, including wilderness, monuments, wildlife refuges, parks, forests, trails, wild and scenic rivers and historic sites. Furthermore, please make these priorities: large-scale conservation; protect our wilderness, improve watersheds and wildlife habitats, provide increased access and recreational opportunities, and finally, fully fund the Land and Water Conservation Fund. Thank you for taking care of our natural heritage.

As you decide on what to do with our national parks, forests, wilderness areas, and other national outdoor treasures, I ask you to consider the following: 1. Please work to protect vast areas of unfragmented land throughout the country, particularly in areas with significant biodiversity or unique ecological systems. 2. Set as a goal to protect at least a third of all land in the US 3. Work hard to preserve existing biodiversity on protected lands and restore biodiversity as much as possible where it has been lost (such as restoring large carnivores to areas where they have been extirpated). 4. Expand access, camping sites, and recreational opportunities in national parks, while retaining and expanding wilderness areas. Regards,

Please make it a priority of this administration to preserve and protect our remaining wilderness, conserve habitat for wildlife and native plants, improve our watersheds and fully fund the Land and Water Conservation Fund. For me, personally, I feel closest to God when I am in the natural world. It is rapidly being lost to the interests of big business. Please take BOLD STEPS, and make conservation and connection to the natural world a priority. It's very important.

I've always thought that America's parks, forests, and other wild places are among the best things about this country. Protecting and expanding this aspect of America should be one of our highest priorities. I urge you to protect existing wilderness and implement conservation at a large scale. Without parks, trails, and wild places, we'll lose our connection to the land--please don't let that happen.

I backpack into the wilderness ocean beaches of Olympic National Park, Washington, each summer for the last 16 years. The peace, serenity, clear air and quiet are worth any amount of money. And like other coastlines, like California's, once a forest or prairie is developed, cut-up and/or paved over...it is gone. Most of America is developed and used such that watershed values, wildlife habitat and peacefulness is seriously compromised, degraded. My wife, Kirsten wants as much of our remaining undeveloped public lands to be forever kept that way for generations of Americans just growing. Please take every opportunity to be a "protection President." Even as he despoiled our country, President Bush set aside that great big area in the Pacific Ocean. Please do better than him and, like Teddy Roosevelt, set aside just as much park, wildlife refuge and federal forest land as you can. The Antiquities Act lets you do...So please do it!! I endorse the following guidelines: - Address Conservation at a Large Scale - ecosystem scale - Protect our wilderness - Set-aside, Improve Watersheds and Wildlife Habitat - Connect people with Nature - Provide Increased Access and Recreational Opportunities - Fully Fund the Land and Water Conservation Fund Fully funding the LWCF funding is a real biggie. Money is there from offshore oil drilling; please see that it gets used as it is supposed to be and not left in the Treasury. Thanks!

An extremely important educational tool and deserved preservation for all the souls who fought and died to solve the greatest internal conflict this country has ever encountered. All citizens of this country need to know of all the sacrifices that were made for this country to have evolved as it has. There is DNA in that ground that is common to all Americans and that soil should be preserved to honor them all. Thanks,

I am writing to urge you to create meaningful science-based public policy that will protect America's shared outdoor spaces, including wilderness, monuments, wildlife refuges, parks, forests, trails, wild and scenic rivers and historic sites. Especially important to me are protecting forests and watersheds, including wetlands. Adequate wetlands public policy could have greatly mitigated the flood damage caused by Katrina, as you well know. Thank you for this opportunity to comment and to advocate for a meaningful, science-based public policy for protecting our country's wilderness areas.

Please work to protect our right to hunt and continue creating national forest!

I've been grateful for what remains of Maine's wilderness for the past thirty years I've lived here. Only six percent of Maine is public land, so the threats to what remains continue to rise. Here are some proposals.

- The Western Mountain and Lakes landscape totals over one million acres, encompasses both the Mahoosuc and Rangeley Lakes/High Peaks Regions, links the Northern Appalachians as they pass from New Hampshire to Maine, and serves as a bridge between the White Mountain National Forest to the south and the Maine Woods. This region comprises the southwestern boundary of the Maine Woods closest to population and tourism centers making it the demonstration landscape that is most vulnerable to development pressures that could fragment the forest. Loss of lands from the timber base and severing recreation corridors, such as snowmobile trails, would undermine the area's local economy which relies primarily upon forest products and tourism. This provides us with an unprecedented opportunity for addressing loss of species and open space, preserving water quality and climate change adaptation while preserving the wildlife and lands we enjoy today.
- Protect our Wilderness: In Maine, we are working with Congressional leaders to protect wilderness and wildlands from the islands off our rocky coast to the mountains on our western boarder Your support of these proposals can preserve our wildest lands for future generations.
- Improve Watersheds and Wildlife Habitat: Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. The Obama administration should prioritize collaborative restoration projects on public lands, making restoration a national priority.
- Support Proposals to Connect the Outdoors to People especially Youth: Support nature education programs, a revived civilian conservation corps, and programs that inspire people to go outdoors.

Thank you, President Obama, for working to keep Maine the most forested state in the country. We look forward to your involvement with the America's Great Outdoors Initiative.

Hello, I attended the July 1st Seattle listening session and wanted to contribute my comments. In terms of federal government role, we need an overarching vision for the future that acknowledges our current living patterns and economic system are not viable, even in the short term. It is this system that, at the micro level, has limited funding for outdoor preservation and sustenance of facilities and programs. At the larger level, it is responsible for the pattern of wasteful suburban and exurban land use, wanton resource extraction, and the religion of the car that are driving the losses others described at this meeting. I realize these problems are beyond the scope of the DOI. However, a significant change in the relationship between government and the economic powers shaping the landscape and constraining our future must occur for the DOI to meet the Great Outdoors Initiative's goals in any meaningful way. Primary among these is a reform of land use to forbid further exurban development, to make roadbuilding the last priority of the Department of Transportation, and to tax pollution and financial ponzi schemes to fund clean energy and infrastructure development. No serious attempt to acknowledge these problems has been made since my childhood memories of President Carter. The near-trillion dollars used to prop up a financial system based on junk mortgages and Monopoly money would have been much better spent on restoring our existing rail system, building the high-speed rail system Obama announced, developing smart grids, fixing disintegrating water and sewer systems, and reinstating the CCC as an employment and environmental restoration program. Hands-on doing and building of systems and infrastructure to carry us into the indefinite future will connect people with nature as they perform restoration work, and make them aware of how the systems we depend on constantly teeter on the edge of failure. The NGO and other professional environmental speakers at the meeting miss the larger point, and are probably incapable of getting it. Incremental adjustment of federal law and massaging the bureaucracy for funding or rule changes will not address the economic and political forces causing the problems they are working to solve.

(cont.)

President Obama: The public lands in this country that we all share are a critical part of our heritage, our present, and our future. Whether in cities or in rural areas, they are precious pieces of land remain in a natural state for all Americans to learn from and to enjoy. Additional lands must be added in the coming years to any and all US government public land agencies to preserve and conserve natural areas for the expanding US population to use and enjoy. These lands provide wildlife habitat, watershed preservation, recreational opportunities, educational settings, historical lessons, scientific laboratories, spiritual experiences and much more. Public lands are the one and only locations where all Americans can enjoy these opportunities in diverse areas and on a large scale - private America does not afford this. Many Americans have special places and have special stories of those places that they treasure - I do. Let me tell you about mine. My favorite place is the Blue Ridge Parkway in North Carolina and Virginia. I have been going to all parts of it as often as I can for 50 years. My parents took me to Peaks of Otter as a small boy and I was hooked on the Parkway. Mount Pisgah is a special place for me these days also. I enjoy hiking, nature study, and camping while on the Parkway. The non-commercial setting and rustic appearance is also a plus for me, as the NPS does a great job maintaining the area in pristine condition. I truly enjoy the fact that I can always depend on the Parkway appearing the same now as it did 50 years ago. The campgrounds there provide an affordable, clean, and scenic spot for my family to spend the night actually right on the Parkway and I always stay in them when open. My times hiking on the Parkway have been some of the best in my life and I look forward each year to returning to experience it all over again. Public lands conservation in this country must become a national personal, social, and political priority if it is to succeed. This land ethic must be learned and adopted by all Americans. Large natural areas set aside provide the best hope for meaningful conservation to take place. All public land agencies must be involved in the process and include expansion of these agency units. Partnerships with private citizens and American business will be needed in coming years to be inclusive of all segments of America and provide out of the box thinking. Citizen connection with public lands through educational and recreational opportunities is essential for any meaningful conservation to take place - Americans will only protect what they know and care about. More resources must be used for this goal. Education of Americans, especially children, about the wonders of US lands is needed. Full funding of the Land and Water Conservation fund is needed to help assure these conservation goals are met. Previous generations of thoughtful Americans made my enjoyment of the Blue Ridge Parkway possible. I am thankful for their hard work, sacrifice, and vision. We must continue that legacy now for future generations. Thank you very much for listening.

Self Serve Rental Mountain Bikes: This provides revenues for Forest Conservation while providing a service to the public that will encourage outdoor activities. Visitors can't always bring their bikes and locals do not always have the means to get their bikes there or have mountain bikes versus street bikes. The City of Denver has self serve bike rentals where you can use a credit card to rent by the hour and if you don't return the bike your card gets charged for the cost of the bike.

What will be done to step-up (make it easier to participate) with la's green garbage program. A stepped-up program would help green spaces, public and private. San Francisco's program is much more enabled for resident participation. Will enforcement be a part of a plan? (my landlord won't allow green garbage other than yard trimmings [my councilman's office -(name deleted)- was of no assistance])

Thank You for Your Time in Southern California: Though I wasn't chosen to speak up at the general summit or break out session, I will share these thoughts regarding education in our great outdoors. Educational experiences and research projects can also be considered forms of recreation on our public lands. Real world field settings are better, more exciting and more efficient learning environments than any classroom or laboratory we could ever build. Two big obstacles continue to be the cost of getting students into the field and liability issues. Many administrators, principals and other leaders in education hesitate to support these real world learning experiences for these and other reasons. How can we work together to tear down these barriers and encourage leaders and teachers to use these rich educational settings that wait for them? Then, could we assemble groups of mentors or field learning leaders that can help educators from K-12 to the university levels better appreciate our natural resources as their classrooms and laboratories? There are plenty of professionals (even some that may be retiring) capable of sharing their expertise in the field with educators that may hesitate to use these resources. For instance, I have more than 25 years experience teaching geography and earth science here at Santa Monica College. I have led my students on field trips throughout the southwest states and have worked with the NPS on restoration and research projects from Death Valley to Channel Islands and from the SMMNRA to Joshua Tree National Parks. Considering the natural and human diversity of our region, it would be difficult to find a better place to encourage such field learning on our public lands. How can I help?

Dear American's Great Outdoors, I was one of the Green Teens who attended on of your Listening session, at the listening session people voiced alot of there opinions. At the same time I felt that the group was to big and that some of the topics that were brought up were not for the environment. Alot of people mentioned schooling and how testing took up so much time and money, this is true. I felt that everyone was just saying what the didn't like instead of giving a possible solution. I have been a Green Teen for two seasons, what is a Green Teen? We are a group of teenagers who work on our own garden and other farms, including dairy farms and other vegeatable farms. We also feel that everone has the right to locally grown food, so along with a farm nereby called Common Ground we sell our produce for cheap price. Expanding on the idea of cheap local produce. This summer I learned about a place called Belo Horizonte here the believe that food is a right not a privilege. An I trully believ in this. In our nation we look down on people who don't have the money to go to starbucks for a five dollar coffee. Instead showing them they better, more enviornmental safe and cheaper way. Yes our naion has food stamps and has soup kitchens, but to get food stamps you have to go through loads of paperwork and at the end you dont qualify because of one little thing that doesn't fit the criticrea of food stamps. Soup kitchens the feed as many as people as they can but that not even half the starving people in our nation, and alot of it beacuse lack of secreaty and the shame we put on people for eating at soup kitchens. In Brazil, in this town it doesn't matter if you are the richest or the poorest or someon where in the middle. All that matters is that ypu get the right to fresh locally grown food. Now i don't know if this will ever be possibe because of the world we live in, but if we can just start it in small communitys we can make a difference slowly but important changes. Thank very much and I will continue to spend in comments inn hope to seeing a change in one of them. Thank you,

Like many states, Illinois is facing severe cutbacks in State funding for conservation. Land trust organizations, like the Natural Land Institute, have stepped up to fill the gap in funding for land protection programs, using private funds and volunteer labor. The Federal government can assist these private land protection efforts by:

1. Maintain and expand income tax incentives for gifts of land or conservation easements. These incentives need to be reauthorized and made permanent.
2. Do more cooperative agreements and partnerships between the NRCS and private conservation groups to do planning, outreach and technical assistance needed to implement federal conservation assistance to landowners.
3. Invest in green infrastructure through use of the USEPA state revolving loan funds for clean water and safe drinking water projects by promoting the use of these funds to finance land protection projects and best management practices.
4. Energy legislation should help fund carbon sequestration using existing permanent land protection programs.
5. Develop more permanent land protection alternatives for the Conservation Reserve Program, including paying for conservation easements on land that lacks a cropping history and that should never be farmed.
6. Remove barriers to the use of the Wetland Reserve Program and Conservation Reserve Program by conservation agencies and private organizations for permanent land protection initiatives, such as payment limits, ownership requirements, nontransferable applications and prohibited reimbursement of restoration expenses.
7. Recognize the Upper Mississippi River bluffs between the Quad Cities and Twin Cities as a Treasured Landscape.
8. Put additional resources into implementing the Mississippi River Basin Initiative.

Private land trusts in Illinois have been effective partners to implement the goals of the State Wildlife Action Plan and federal, state and local conservation priorities. Developing partnerships with land trusts is a cost effective way to deliver federal conservation programs. Respectfully submitted,

Dear group, Thank you in advance for letting me write in... Although Kansas has the Tallgrass Prairie Reserve, the government owns only 1.2 percent of Kansas land for natural habitats / national parks vs. 84 percent of Nevada, by comparison... The buffalo need a "home on the range" and I hope you'll please consider Kansas when making any key decisions...

For fire burned areas, like my area near the Station Fire and Sayre Fire, we need workers to cut/weed out truly dead wood. In the wooded areas off of the 210 freeway between Slymar and La Canada cities--this area needs thinning, before some car or human yahoo sets the area ablaze. My suggestion is to have young teens (12-16 yrs) taught how to use the tools, given proper clothing, and how to thin certain areas WITHOUT disrupting the animals, birds, and insects homes drastically. To pay for this would be via donations, selling bumper stickers (or other small goodies) and the businesses that can donate food, games, points on to food point totals--a variety of ideas not mentioned would work--JUST GOOD VOLUNTEERISM would be best. Part of their resume. ===== The area concerning Kagel Canyon, Shadow Hills, and the truck driving school" (1) drop the school (2) plant more oak trees than elm (3) ticket more polluting cars/truck to help finance the area Thank you--got to go

Your policies are locking the old and infirm into the cities. Youth who could become outdoor enthusiasts are similarly excluded because of the costs associated with access to wilderness areas, and the specialized equipment required for hiking and backpacking. Hunters and other sportsmen must hike into desolate areas in California's Mojave desert, a region which requires one to carry a gallon of water for each day. It is clear that the intent of the preservationists is to exclude man, as though he were a threat to the very lands that he is part of. Our "land of the free" is rapidly becoming a land of slaves, subject to the whims of special interest groups and their Quislings in the federal government. Stop restricting public lands, they are not the exclusive property of the progressive misanthropes who jealously restrict the open spaces. Keep the neo-animists political ambitions restricted to San Francisco and Berkeley. There they can pass laws in support of America's enemies, consume a steady diet of Nat Geo and Animal planet on TV, and leave the rest of us in freedom.

Set up a program where students - high school and college - earn credits -not money - to up their grade point average for participation/time spent at Nat'l Parks. A paper could be verified By park official at presentation of program. Sent from my iPhone

HI, I HAVE NEVER UNDERSTOOD THE REASON IS BEHIND HUMANS GROWING AND MAINTAINING GRASS (LAWNS). FROM MY PERSPECTIVE, I SEE THE WASTE OF WATER, SEED, CHEMICALS, TOOLS, MACHINERY AND MANY HUMAN HOURS. AN ALTERNATIVE: 1. ONLY ZERO SCAPING, NO MATTER WHAT THE LOCATION OF THE COUNTRY. 2. ONLY PLANTING SEASONAL AND ENDEMIC, GROWING HERBS, FRUITS AND VEGGIES. 3. THE GOVERNMENT REWARDS THOSE LAND OWNERS NOT GROWING GRASS, INSTEAD GROWING THINGS TO EAT. 4. CHEMICAL INDUSTRY MUST ONLY PRODUCE AND SELL NON-TOXIC SUBATANCES. WE ARE FOREVER CHANGING AND KILLING THE LIFE CYCLE OF HUMANS AND ANIMALS WITH THE UNEEDED USE OF UNHEALTHY CHEMICALS. THIS PROCESS IS FULLY SUPPORTED BY OUR GOVERNMENT OR THEY WOULD STOP IT COMPLETELY. THESE CHEMICALS CHANGE THE FRAGILE BALANCE OF BOTH HUMANS AND ANIMLAS.

(cont.)

There are 2 parts to my comment: 1) The best way to protect natural habitat is to leave it alone! People are the biggest threat to pristine environments. To preserve America's natural splendor, we should improve recreational facilities IN THE CITIES AND SUBURBS. If urban life is more wholesome, outdoorsy and inspiring, the populace will automatically learn stewardship and love for the land. There's no way you can protect and preserve a wilderness area by making it more accessible to humans. Make the cities and suburbs more accessible, and leave the wilderness as it is. 2) I strongly recommend all the following: - restrict the use of off-road vehicles to places designed for them - retract that absurd bill about allowing guns in state parks (who knows what people are doing or will do out there? plus it's terrifying for female hikers) - federally enforce very high fines for any kind of litter - teach stewardship in all schools - federally mandate that all beer and cigarette packaging contains DO NOT LITTER THIS warnings, and shame industry into taking more responsibility for their products destroying nature. (Most litter on trails, beaches and wilderness is beer bottles/cans, cigarette butts, bottle tops, and snack wrappers. I know because I pick it all up every single day.) - federally mandate higher refunds for recycled bottles and cans (they pay 10 cents each in Michigan, and it's made a huge difference in how clean the state is. - crack down HUGELY on any and all corporate, county and state infringement on the environment -start a White House campaign, featuring Michelle and the kids or whomever, and let the country know what is expected of them. We need leadership! - Require EVERYONE to agree to a list of rules before entering a state park, federal reserve, wilderness area, etc. "I will not litter, I will not disturb creatures that reside here, I will not remove or displace any part of the natural habitat, I will cause no harm, including by my voice, I understand I am a guest here. THANK YOU FOR READING OUR CONCERNS AND IDEAS. IT SO-O IMPORTANT!!!!

Basically, all this programs needs to do is create, expand and better protect America's shared outdoor spaces. Just keep these priorities in mind for America's Great Outdoors: > Address Conservation at a Large Scale > Protect our wilderness > Improve Watersheds and Wildlife Habitat > Connect people with Nature > Provide Increased Access and Recreational Opportunities > Fully Fund the Land and Water Conservation Fund Thank you.

The Hingham Land Conservation Trust is a small non profit charitable organization in the town of Hingham, Massachusetts. The work that we do in conserving land, holding conservation restrictions that protect the land and environment and advocating for local land conservation is mirrored by many land trusts, large and small, across the country. At a time when even in these difficult economic times land values are very high, economic incentives for land conservation are critical. We have great hopes that the America's Great Outdoors program will provide such help and support to local efforts all over the United States.

Discussion Question 1

(cont.)

I'm writing to applaud President Obama and his administration for publicly supporting the work of non-profit land trusts. I am a founding board member of the Black Canyon Land Trust in Montrose, Colorado. This small non-profit has taken more than 300 conservation easements on private farm and ranch lands, working with these willing landowners to protect about 30,000 acres for working agriculture, wildlife, and scenic open space. We could not have done this work without the important programs of the federal government that provide tax deductions and other incentives to encourage private landowners to conserve their properties for the benefit of the public and future generations. There is no other land conservation work in the U.S. that is having such an important and far-reaching effect on the permanent conservation of private lands. Please do all that you can to provide permanent funding and programs for conservation easements through the Land and Water Conservation Fund, Farm Bill programs, and to make the enhanced easement incentive permanent. Thank you for your support of conservation for working private lands,

I was fortunate many years ago to do a three week trip through the National Parks and Forests of the Western US. Since then I've spent many vacations traveling through some of the most beautiful and environmentally important lands in America. Recently my 21 year old daughter completed her own three week whirlwind trip of our nation's national parks and other public lands. I am writing to ask that you ensure the lands are available for future generations and that even more lands are protected. Thank you for having your administration take the time necessary to talk with the American public about what is important to them. These are lands owned by all Americans and it is important that our voices are heard above those of businesses that look at our nation's natural resources as just a way to make a lot of money. These lands are much more important than that. Primarily I encourage you to preserve lands that have already been protected and to provide funds needed to manage these lands property. The National Park Service, Fish & Wildlife Service, Forest Service, Bureau of Land Management are all under funded and need more money for staff and to improve infrastructure. Lands that are protected are threatened by in-holdings and by development along the boundaries. Money needs to be appropriated, especially Land and Water Conservation Funds, to let agencies buy in-holdings and adjoining lands in order to protect lands already set aside. LWCF needs to be fully funded, as you have already requested, to allow this to happen quickly before these lands are destroyed and lost forever. Wildlife corridors are needed to allow wildlife to move between protected areas. As more and more land is developed and roads are built it is becoming increasingly difficult for animals to not become isolated in small pockets of habitat. While developed recreational lands are important it is also important to establish and secure wilderness areas where people can get away from the hustle and bustle of their everyday lives. The wilderness values of these potential areas can be lost very easily and swift action is needed to identify and protect wilderness areas that need to be protected quickly. Thank you for your attention to this matter.

Please give serious consideration to the private sector as the source of funding for open space and farmland protection. Create a program not unlike The New Market Tax Credit program which has been very successful in creating capital for inner cities throughout the nation. Rethinking the way we protect land on a national basis could be an initiative of the Dept. of Agriculture and Department of Treasury that models itself on the New Markets Tax Credit Program in permitting taxpayers to receive a credit against Federal income taxes for making qualified equity investments in to be created or perhaps even existing organizations akin to Community Development Entities (CDEs). Substantially all qualified equity investment would be by design invested in the purchase of development rights (farms) or fee properties (open space). The syndication of these credits would allow for socially responsible investments in farmland protection and food security. In addition I would urge the administration to look to flexibility in federal agricultural programs that can accommodate our smaller farmers. Trends in our county indicate that fruit and vegetable producers have a bright future if food safety programs can be administered in a way so as not to bury producers in fees and additional paper work. When future programs are instituted I would suggest that the control of the actual transactions be decentralized and done in a manner which can be directed by those who know the import of strategic properties.

As a Board member of the Whidbey Camano Land Trust on Whidbey Island in the State of Washington, I want to say thank you for launching America's Great Outdoors Initiative. Our Land Trust protects natural habitat and working farms and forests. We do amazing work and significantly leverage donor dollars. We know the local area and its needs and priorities. We enjoy widespread community support. Partnering with local Land Trusts is a great way for federal agencies to accomplish things they can't do on their own. Give us the tools and we will accomplish the job for you: make the enhanced tax incentive for conservation easement donations permanent provide for community forest conservation bonds fully fund LWCF and the Forest Legacy Program and change these funds to allow direct acquisition of land and easements by land trusts. Respectfully submitted,

In a small town on Washington's Olympic Peninsula, our local Jefferson Land Trust (which is among the 6% of land trusts in the US that have earned national accreditation) is working collaboratively with private citizens, local business, and other non-profit organizations, as well as city, county, and state governments and federal agencies to preserve open space, habitat, and working lands for future generations. Over the last 20 years we have collaborated with many partners to accomplish far more than any one group could on its own. Broad community financial support and volunteers make this possible. Federal support could be even more effective with enhanced tax incentives and full funding of the Land and Water Conservation Fund, Farm Bill conservation programs, the Forest Legacy Program, and other conservation funds. In addition to protecting working farms and forests from conversion, our work also helps mitigate the effects of climate change and provides habitat corridors to aid species in their adaptation to those changes. We have also convened a broad coalition to envision the Olympic Peninsula 100 years in the future and plan ways that we all can work now to provide a diverse and healthy environment that also is economically viable and sustainable for future generations. Thank you for your help and interest.

(cont.)

Dear Mr. President: On behalf of Jefferson Land Trust, I want to thank you for launching the America's Great Outdoors Initiative: a 21st Century strategy for conservation in America. As a homegrown network of hundreds of concerned citizens throughout the Olympic Peninsula, Jefferson Land Trust is at the front lines of the effort to conserve the places that make America special. Through innovative partnerships with private landowners and our partners in government, we're beginning to turn the tide against the unplanned development that has put a growing strain on our wildlife, our waters and our treasured landscapes. We truly appreciate your decision to mention America's 1,600 local land trusts in your remarks launching this initiative. It is our belief that the federal government can achieve far more with its limited resources by working through local partners like Jefferson Land Trust to engage private landowners in communities across America. Take the example of our work with a variety of government and natural resources partners to preserve Tamanowas Rock a sacred tribal place for the Jamestown S'klallam Tribe here on the peninsula. The Land Trust, along with members of the Tribe, State Parks, and the Department of Natural Resources have banded together to save this magical place from development and to preserve it for sacred use by the Tribe. Thank you, Mr. President, for making America's Great Outdoors a priority. We need and are grateful for your leadership in launching a process our nation desperately needs to better protect the places that sustain us and define us as a people. From our majestic parks to our collective backyards, America's Great Outdoors is a legacy we owe to our children and grandchildren.

(cont.)

Dear President Obama, Thank you for launching America's Great Outdoors Initiative: A 21st century strategy for conservation in America. We appreciate your support in helping us to protect and preserve America's great places. Lummi Island, WA is one of those special places. As a board member of the Lummi Island Heritage Trust, I am well aware of the importance of your action in furthering our mission of preserving the land and the rural character of our beautiful island. Preserving this rich environment directly benefits and protects the flora, fauna, and the quality of life of the 1,000 people who live in our community. In the 11 years since our organization was founded, we have successfully created 3 preserves which encompass 273 acres of protected land. In addition, we have worked with land owners to place conservation easements on 557 acres of private property, thereby limiting much potential development. For such a small community, these are substantial accomplishments which are due in large part to the L.I.H.T.'s commitment to educating our island community about the value of conservation. Their phenomenal response clearly demonstrates their dedication to this place and the principles of conservation. One of the greatest threats to our continued success is the economic challenge which our country currently faces. We need federal support for this work through grants and tax incentives for land owners who donate land or conservation easements on their property. We are working with our legislators to help make current enhanced tax incentives permanent and to insure adequate funding for this program. We truly appreciate your decision to mention America's 1,600 land trusts in your remarks in launching this initiative. It is our belief that the federal government can achieve far more with limited resources by working in partnership with land trusts, such as the Lummi Island Heritage Trust, to engage private land owners in conservation across America. We appreciate your leadership in these important issues. Thank you for making the America's Great Outdoors Initiative a priority. With your help, this initiative can preserve the gift of the natural world for our children, grandchildren and generations to come.

(cont.)

Dear President Obama, Thank you beyond words for launching this initiative about the Great Outdoors. Our natural areas are great treasures for all our people and need to be loved and cared for. The focus you have put on this truth will help open people's eyes to the importance of protecting our natural areas and precious, natural places. One of my most important concerns is that the uses made of these places includes caring for wildlife and their need for homes. All life is precious and wildlife is quite vulnerable to the intensity of human lifestyles. We need, as a caring society, to be aware of and concerned about our feathered and furred and scaled friends. Thank you for taking a stand on this important need. A second concern that I have about the uses made of America's Great Outdoors is that we continue to set aside places that can stay wild and undeveloped. We human beings need places of quiet for solitude and to restore our weary spirits. In our increasingly busy lives, we have to take time to rest the soul—for health and for life balance. Finally, the work of land trusts across the country helps protect important areas for wildlife and for the community, for public benefit. Land Trusts identify the most important areas to protect for today and for future generations. In our work of partnerships between private landowners and nonprofit organizations, we actively think about the kind of world we are leaving our children. Thank you for keeping the needs of nature and all of us depend on nature in the forefront of conversation. We are grateful for your leadership.

(cont.)

I am a member of the North Carolina Horse Council, Back Country Horseman of America, and Equine Land Conservation Resource. I also serve on the State Trails Committee that reviews applications and recommends grant awards for Federal RTP and state Adopt-a-Trail funds. Equestrian access to public trails is one of the most threatened and diminishing resources, particularly in the eastern US; only OHV users have less access to public land. Though Federal lands like National Forests seem to stay committed to all forms of outdoor recreation, this open-minded ethic has not been transferred to State and local governments in their planning for parks and recreation. Repeatedly I encounter State and local planners and land managers that are absolutely oblivious to the equine industry around them, and (one of) the erroneous assumptions they operate from is that as urbanization increases, horse ownership decreases. Part of the role of the organizations I support is to raise that awareness and educate, and we do the best that we can, case-by-case. However, an increased push from the Federal level to equally consider ALL forms of outdoor recreation in the planning process would be helpful, particularly if any part of the land purchase or facility development receives federal funding (CWMTF, RTP, Land and Water Conservation Fund, Federal Aid in Wildlife Restoration Act/Pittman-Robertson funds, etc.). ALL uses should be OBJECTIVELY evaluated before being ruled out based on sound scientific/technical reasons, not based on elitist preservationist or just plain uninformed opinions. A particular problem in NC is the Wildlife Resources Commission that manages hundreds of thousands of acres purchased with the assistance of Federal money; they will barely tolerate non-hunting recreation until it becomes a "problem" - which it almost inevitably does because WRC will not commit any resource to management or facility development. When the problem is perceived, they prohibit the use (be it mountain bikes, equestrians, etc.) in the state Administrative Code; how many other public lands codify their rules of conduct as law? When challenged on prohibitions, WRC will often produce a biologist who will claim the presence of some sensitive or threatened flora or fauna (which may only be present on a small portion of the land). This is a waste of public resource and a misuse of conservation policy. There are many models (adopted by other states) that could be followed and would foster responsible collaborative use (not to mention increased public appreciation for the importance of hunting and maintaining these conserved lands). Below is information and recommendations for consideration; * Horseback riding and carriage driving are legitimate and culturally-significant forms of outdoor recreation. * Riding and driving, along with the care and maintenance of equines and equine-property, is physical activity which gets people out of doors, encourages exercise, and causes appreciation for the natural ecosystem. * As urbanization increases, so does the equine population and the demand for recreation opportunities. This is, in part, because well paying jobs and disposable income are clustered around urban areas, and many fast growing areas still have ex-urban areas where traditional agricultural lands are being redeveloped as hobby farms or commercial equine operations. * Use of Federal funds to purchase land that will allow any form of recreation (including hunting) should mandate the inclusion of ALL forms of recreation. The exclusion or prohibition of equestrian, mountain bike, and/or OHV use should occur only through a methodical, transparent and reproducible evaluation process that includes input from all stakeholders. * State and local tax codes need to be revised to recognize equine operations as agricultural, not commercial, enterprises to be eligible for tax relief, farmland preservation, and/or voluntary agricultural districts. * As traditional agriculture is replaced by

(cont.)

hobby farms, federal state and local conservation incentives need to be developed and/or strengthened to recognize the open space preservation value of equine farms. * Similarly, incentives and strong indemnity laws should be developed for private land owners to allow trail easements on their properties. Public/private partnerships between local and state governments and large residential developers should be strengthened to allow public recreation opportunity. * Greater opportunities for "front-country" equestrian experiences in local and State Parks must be developed, so that people (and their horses) can gain the skills and appreciation to progress into the often more-challenging National Parks and Forests. * Equestrians need to become better educated about conservation ethics, impacts of trail use on the environment, the importance of volunteerism, and training to prepare themselves and their mounts for the multi-use trail future. This can be done through funding to agricultural extension, soil and water conservation districts, and state horse councils and equine industry commodity groups. -- BLOQ Resources

Federal agencies' allocation of budget, staff, and management effort should reflect the developing reality that outdoor recreation provides a greater good for more Americans than any other aspect of its multiple-use mandate. The time has come to make managed recreation the BLM and Forest Service's top priority. All too often "conservation" means reducing public access and recreational uses. The AGO Initiative should explore ways to enhance a diverse range of recreational uses, including motorized and non-motorized recreational uses, across federal, state and private lands. Federal land managers too often limit or restrict public recreation activities. Federal land managers should focus on recreation friendly management plans that are not restrictive and embrace a wide range of diverse recreational uses, including motorized and non-motorized recreation. The administration has prided itself in being open and transparent, yet Representative (name deleted) and Representative (name deleted) have not yet received a response to their requests for documents. It will benefit the outreach function of this Initiative if the Department of the Interior would respond to H. Res. 1406. The initiative and the public will benefit from a full understanding of the various public and private conservation efforts currently underway. Accurate information is critical for good decision-making. Statements that state large areas of our nation's natural landscape have been lost to population growth and development, or that a changing climate and new sources of pollution are affecting wildlife and watersheds, must be put into an accurate context. The initiative must disclose how much land is being conserved. The initiative should work with the over 1,600 privately run land trusts to find out how much land has been protected in recent years. The initiative should disclose how much land is conserved via federal conservation efforts, such as the Department of Agriculture's Conservation Reserve Program. In addition, it would help to disclose how many federal dollars are being spent on the various conservation efforts. Finally, the initiative should disclose the conservation efforts underway via the Land and Resource Management Plans of units of the National Forest System, the Bureau of Land Management and National Park Service. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide access to the Great Outdoors for Americans of all ages, shapes, and sizes.

(cont.)

Thank you for this opportunity to comment on The America's Great Outdoors Presidential Initiative. I was fortunate enough to have been able to attend the meeting at Occidental College on July 8, 2010 and was impressed by the members of the panel and their desire to reconnect Americans with the outdoors and to further the protection and formation of outdoor areas. While I do live in Los Angeles and understand the need for urban parks, my comments are geared more to the units that are under the NPS. As someone who spends almost all of their vacations in National Parks, I have much to say but will limit my comments to the following areas.

Education: There needs to be more education on protection of parks and their resources. This should not only take place in our parks but in our nation's schools. These lessons should also include educating the public on the proper behavior in parks. Too many people go to our outdoor areas without the knowledge of how to properly act. This causes negative impacts to the park, its natural resources and the enjoyment of other park visitors. This holds true for not only for NPS units, but also for lands under other federal protection and in urban parks. Since the NPS and some other federal agencies already work with the Leave No Trace organization, parks should utilize them more. While some parks, such as Rocky Mountain National Park, have embraced the LNT organization and have included LNT information in all their guides and information booklets, other parks have not. LNT information should be prominently display in visitor centers and also in the park newspapers that are given to visitors when they enter a park. Another way of using LNT is to arrange local LNT educators to come and speak at organizations, parks and schools.

Park Rangers: Visitors need more interaction with Park Rangers. I have been in parks that the only place that you see Park Rangers are in the Visitor Centers or on the few Ranger led programs. There have been times that we have been in a park we did not see any Rangers the whole visit. Get more Rangers out in the field because visitors enjoy the ability to interact with Park Rangers not only during Ranger led talks but, also while they are hiking or at a popular spot. Children who get to talk to a Park Ranger could become a future Ranger. Our Park Rangers deserve a career path that is stable, with better pay and benefits. Give seasonal rangers more opportunities to become career employees. This would allow the NPS the ability to hire and keep qualified people. Rangers and their families often live in substandard housing and some struggle financially. Many are transferred to other parks or units every few years and are never able to set roots down. These men and women protect our nation's treasures, sometime risk their own lives and should be have a decent quality of life.

Volunteers: With budget restraints, having park volunteers has allowed parks to continue to serve their visitors and protect the parks. There needs to be more opportunities for people to volunteer. We live very close to the Santa Monica Mountain National Recreation Area and there are only a limited amount of volunteer activities and most of them involve hard physical work, such as trail building. Those of us with physical limitations would like an opportunity to help in other ways. A program for "spontaneous" volunteers would be nice. Those, who at the last minute find out that they have a few hours to help out, could go to a visitor center and look at a list of things they could do for that day. For example, since trash has become a problem in parks, one could go to the visitor center and borrow some gloves, a pick up tool and trash bags and pick up trash while they are enjoying the park. Having volunteer activities for families is also important. This is a good way to get the whole family outdoors while also serving as a learning experience.

Over development: Over development inside our parks is becoming a problem.

(cont.)

This is especially true in Yosemite where the park is starting to look more like an urban park not a national park and many projects are overblown. An example of this is what was done to the Yosemite Falls area. Although a parking area has been restored to its natural condition and a small picnic area was added adjacent to the restored area, a huge restroom was built right next to them and the area now looks like a city park. Instead of one's eye being drawn to the falls, the first thing one notices is the restroom. While corporate sponsors are a very important source of money to improve parks, projects they sponsor should not become a monument to their corporation. New building inside of a park should be limited to only facilities that are vital to the safety of visitors and the park or as replacements for an already existing facility. Any new structures should be built in areas that are already developed. Again, Yosemite comes to mind for they will be building an 18 acre complex to house the Yosemite Institute in an area that is currently undeveloped. This institute is used by only a small percentage of visitors and should be built outside of the park or in an area that is already developed. Development adjacent to our parks and outdoor areas should be controlled. This especially pertains to oil drilling, mining and power plants. While they are physically outside of a park, their activities impact visitor experience and the natural resources of the park. Over crowding: The problem of overcrowding in our National Parks has to be addressed. Massive traffic jams occur daily in our most popular parks during the summer. Traffic jams and crowds lessen the quality of a "visitor experience". While some people believe that adding more units under the NPS will help with overcrowding, they fail to realize that this will not alleviate the overcrowding of popular areas because people want to go to those parks. In fact, I was shocked to hear that there has been discussion of a campaign to get more foreign visitors to come to our National Parks that stressed our most popular parks. I personally could not get reservations in multiple National Parks that we had wanted to visit this summer because their lodging was already booked. It is not right that tax payers can not get lodging in a park when a campaign to get more foreign visitors is being planned. More parks or protected areas: One way to protect our great outdoors would be to incorporate more natural areas into the NPS System. For example, the Angeles Crest area in the San Gabriel Mountains is already partially under federal or state control, its status should be raised to at least a National Recreation Area. Also, there are lands in the San Gabriels that are worthy of wilderness protection. Its location near one of the largest cities in the United States means that it is easily accessible to millions of people but lacks the facilities and staff to protect its resources. However, before too many areas be added for protection, it is imperative that the already existing areas have enough budget to be able to maintain their facilities and protect their resources. Again, thank you for giving me the opportunity to share some of my thoughts.

I know this is a little of topic, but I'm a common man that enjoys the outdoors and fear that it may be disappearing. My enjoyment is tied to OHV as I'm not in the best physical condition due to medical conditions. I would hope that are elderly are given consideration in whatever plan that is put forward.....Thanks,

Tools; I think the Federal Govt can use the tools on the local and city level to create Community gardens through parks and recreation not only as an outdoor classroom to reconnect children to the food we eat but also to provide a sustainable food supply to our starving future. This will allow individuals to enter prominent careers in agriculture and cities pay there park staff good money and benefits, it time that we start growing our own food instead of depending on Mexico and California to feed us. It's time we take the city parks to a new level and start feeding the future, this will benefit all especially the govt

Greetings (name deleted), Presently, the Community Alliance for Open Space (<http://twitter.com/CA4OpenSpace>) is focusing on winning a pending lawsuit against the City of Los Angeles to preserve the Lopez Canyon Restoration Project Site (within the Rim of the Valley Corridor - NE San Fernando Valley, San Gabriel Mountain section) as an industrial use FREE Open Space Zone. We have quite a battle before us but we are in it for the long haul. In the meantime, I thought you would be interested in knowing what is going on right next door to Lopez Canyon. Please see the attached photos. This section of the San Gabriel Mountain range, along with Lopez Canyon, is located near the Pacoima Wash Greenway and the Tujunga Wash Watershed (Lake View Terrace, CA 91342 & Pacoima, CA 91331 above the 210 freeway off Paxton St. and Foothill Blvd.). The activity taking place in the attached photos can't exist within the proposed San Gabriel Mountains National Recreation Area. Your thoughts on this matter are appreciated and any proposed collaboration to stop this desecration is welcomed. Thank you for all that you are doing to protect the San Gabriel Mountains. Best regards, "It is horrifying that we have to fight our own government to save the environment." Ansel Adams

To Our Administration: My name is (name deleted) and I am an outdoor enthusiast, wetlands supporter and fortunately, a Ducks Unlimited employee. I urge and understand the importance of designating the prairie pothole region as a "treasured landscape". For all of my childhood and into my adult life, I was effected by this region, in that I grew up in Eastern, NE. Without the PPR, I would never have had the opportunity to enjoy the beauties of what North American Migrating Waterfowl bring to communities around our great nation. Research and public opinion will show that this region is the key player in preserving these dreams and lifestyles of not only NE residents, but all supporters around the country, due to the nature of migration. By not shining light and ultimately government support of this area, we do not risk the chance, we destroy the opportunity to do perpetual good to our nations heritage. Not only do I beg, I demand that this region be designated as a treasured landscape. It is on your shoulders to bring the voice of us citizens to the forefront. Regards,

Hello, Thanks for holding the Great Outdoors Listening Session in Minneapolis, MN. An on-going conversation about our "great outdoors" is vital for our people and our land, and I appreciated hearing perspectives from administrators and from my fellow citizens here in Minnesota. In our smaller breakout sessions, the conversation in my group was centered around two of the four topics: challenges, and the federal government role. Less of the conversation was devoted to what works, and what tools could be helpful in local - or national - efforts. I wanted to share with you a project the Center for Changing Landscapes at the University of Minnesota is working on that could have national implications: Minnesota's Network of Parks and Trails Inventory and Framework (MNPAT). I've attached two pdf documents for MNPAT: a one page project description, and a pdf presentation we've made for the project. We would hope the work we are doing could inform future efforts nation-wide. As well as the attached documents, there is more project information and 87 county maps available on our project website: <http://ccl.design.umn.edu/mnpat.html>. If you have questions on our project or would like more information, we would welcome the conversation. Congratulations on a successful session, and we look forward to seeing the outcome of this national effort. Best regards,

My main comment is this: you don't encourage appreciation of our great outdoors, and you don't encourage more use and appreciation of our outdoors, by fencing us out of our wilderness. I'm a great believer in the long B.L.M. philosophy of multiple use of our public lands. Increasingly, here in California, BLM lands are confiscated by federal agencies either to be incorporated into military bases or as national parks and monuments. I'm a rockhound (and will be president of the California Federation of Mineralogical Societies next year). My family and I have long enjoyed trips to BLM lands in California and Nevada and Arizona to collect rocks and common invertebrate fossils for personal enjoyment and education. Increasingly, such activity is being limited and constricted as BLM lands are placed out-of-bounds to American citizens. Please, on behalf of the 135 nonprofit clubs and societies belonging to the California Federation of Mineralogical Societies: don't fence us out! If you wish to encourage public enjoyment of public lands, keep them public!

Hello, I am inquiring about the America's Great Outdoors Initiative to support grassroots efforts and reconnecting Americans to the outdoors and the conservation of outdoor spaces. We have for the past seven to ten years been working on something similar in Metropolitan Kansas City in getting a diverse population involved and exposed to the Outdoors. In 2003 our TV show Urban American Outdoors debut across the country and locally featuring one of the first multicultural outdoors TV shows to air. Our audience both traditional and diverse became immediate fans. We never knew what to expect but we found out that a lot of people wanted to be a part of what we were doing and ever since we have continued to move forward in our goal of connecting all people, because we believe that Outdoors is for everybody! What I am interested in is how do we go about setting up a listening session in Kansas City? We are planning for an Urban Outdoor Summit Sept. 24 & 25, 2010 could this be done at the same time? Also do you have material we can hand out to our guest at this conference. I am so happy that we have an administration that is full inclusive when it pertains to the Outdoors. We have been trying to dispel some of the myths and fear associated with being in the outdoors and I think we have been doing a good job according to a lot of the emails and phone calls we get. I Hope to hear from someone soon and I will be able to provide any material you may need from us. Thank you,

I probably won't be able to attend the meeting on August 9 in Concord NH, but wanted to send a quick email to urge that the Forest Service end the practice of clear cut logging in the White Mountains (and elsewhere) in favor of timber harvesting methods which are less disruptive to the local ecosystems. Also, I'd like to suggest that off road vehicles should be banned in conservation areas and on recreational corridors such as rail trails. Thanks and best regards,

To all the people that are helping save the wild mustangs and burros: I have heard about the cruelty of these wild mustangs by starving them in captivity and while rounding them up by helicopter, they caused the death of many horses. i know that colt and their mothers are dieing because of mishandling in Nevado and other states out West. Why the rush? Why can't you handle these horses in a more humane way by feeding them and if some are giving them medical assistance? Preserving our Heritage as American, the choice to destroy one of most loved animals that are apart of nations history. You will be hated by humanitarians everywhere if you don't find homes for the animals out West that you don't want there. What do you expect to gain by committing such a cruel act? Alot of people are finding out about what's going on and it will be the shock of America. Consider what you are doing as a cowardly act and you should be ashamed to call yourself Americans.

I believe the first thing that should happen is that Obama should tell Salazar to stop killing wolves. Humans need to realize that wild animals **DEPEND** on the outdoors to survive. Without animals, what is the outdoors ?

(cont.)

Ladies and Gentlemen, Good afternoon. I am (name deleted), President and CEO of the Illinois Association of Park Districts (IAPD). The IAPD serves 350 park districts, forest preserves, conservation, municipal park and recreation, and special recreation agencies throughout Illinois. Our members have strived for years to promote community-based recreation, the conservation of land, water, and wildlife resources, corridors and connectivity, and to reconnect Illinois citizens to the great outdoors the very goals the President has set forth in the America's Great Outdoor's Initiative. We enthusiastically embrace and support this agenda! Illinoisans understand the importance of recreation and conservation. According to a 2009 survey,[1] nearly 80% of Illinois voters support a \$350 million capital investment in land and water conservation. In the past 5 years, Illinois voters have approved 11 out of 12 referenda to support forest preserves. And yet while the general public understands the value of parks and open space, our agencies struggle to obtain consistent and reliable funding sources to maintain and enhance our efforts. As a result, Illinois is in the bottom 10% of all 50 states when it comes to publicly-owned land for natural resource protection and enjoyment.[2] Our State is in the bottom third in spending for open space.[3] So, as we embark on this exciting national initiative, consistent and reliable funding must be at the top of any agenda. And there are many reasons why we should be allocating additional resources for parks, recreation, and open space. Not only would it help reconnect Americans with our public lands as the President has suggested, but doing so would help our nation attain many of its other priorities. For instance, our nation has spent a considerable amount of time debating and discussing how to provide healthcare for our sick and elderly. But public park and recreation agencies are approaching these problems head-on by working to keep our nation healthy and reducing the need for doctor visits in the first place. As the chief providers of recreational programming, organized sports activities and other fitness programs for children and adults, we are leading the fight against obesity. Because many schools have chosen to eliminate physical education from their curriculum due to budget constraints, our demand for these activities is only increasing. So our programs are already promoting physical fitness and good health, and with consistent and reliable funding we can do more. Much attention has been focused on the development of new technologies such as electric and fuel efficient automobiles. At the same time, champions of parks and open space have been working on ways to provide alternative modes of transportation so we can reduce the need for automobiles. Connecting corridors of green space such as trails and greenways provide the capacity for people to move from place to place without a car. But achieving widespread connectivity of our trails and greenways also requires consistent and reliable funding for more land acquisition. Parks and open space also play a critical role in fighting climate change. They help improve air and water quality. They help prevent soil erosion and pollution caused by agricultural and road runoff. They serve as natural floodplains. For every 1% of increase in protected wetland along a stream corridor, peak flow decreases by 3.7%, which is crucial for storm water runoff and flood management.[4] A single tree's contribution in controlling air pollution, soil erosion, soil fertility, recycling water and humidity is worth almost \$200,000 over a 50 year period! In other words, it makes economic sense to invest in our natural resources. There are countless other examples of the ways park districts, forest preserves, conservation and recreation agencies positively impact other national objectives. Congress recently authorized funds to save the jobs of local police. The after-school youth programs our agencies provide helps

keep kids off the street and reduce crime. With additional funding, these programs could reduce the overall need to fight crime. My point today is that investment in our parks and open space pays dividends well beyond simply engaging Americans with the outdoors though that is a worthy goal in and of itself. Investment in these resources would help reduce the demand for national spending in many other areas, too. But funding must be consistent and reliable. In closing, Illinois' park districts, forest preserves, conservation, municipal park and recreation, and special recreation agencies continually strive to connect Illinois citizens to the great outdoors, and we stand ready to help the President achieve the goals set forth in the America's Great Outdoors Initiative. As we move forward, consistent and reliable support and funding are needed to enhance our efforts. [1] Fairbank, Maslin, Maullin & Associates survey taken of 600 Illinois voters from May 12-14, 2009. [2] Illinois State Land Conservation Funding, The Illinois Environmental Council Education Fund, in partnership with The Nature Conservancy and The Trust for Public Land, March 2007 [3] Ibid. [4] 1993 Illinois State Water Survey

Please protect America's Wilderness with wildlife a patronage of the mountains, the forests, the wetlands, the seas, and valleys, the cavedwellers, and the arctic, cascades, and the tundra left astray. Wildlife have some areas over-populated, and many which are just on a mere existence. Wolves, and other wildlife exuberate these harsh elements, assuredly as you've seen a Sarah Palin ad [of her own style] and the endangered species act, which also need updating to adjust to the life and death of some casualties of. Yet, a new milemarker should be here with your team helping a new arranged plan of support and wildlife eco system so desperately needed. Wildlife of all realms needs your support, even if it calls for sending some to another country to help out with our overpopulation of certain wildlife parks, trails, mountain areas and communities where families are endangered. Numerous tasks require a steady hand, a man whom can think on all these levels, and the courage to bring a wilderness society a new preserve for our future generations. Please remember Alaska was our last newest State, and it too offers a huge preserve and cause of understanding of wildlife intelligence, nature behavior, and eco systems to be in harmony for our future generations to see America's majestic creatures, and those whom choose to visit America's parks and wildlife preserves that actually have wildlife in its wake. I witnessed on June 20, 1977 the time of new life being brought while a 100% eclipse was taking place at Bimini, Bahamas. The sea turtles hatched millions of hatchlings, and they clickety-clacked up and down the entire white shoreline while I [humbly] sat on a Large Sea Turtle who ever so patiently, moved and dug herself out while letting me know I was no longer welcome to sit on her shell to see this sight. To the right, and left of me were many large sea turtles all moving after while, as the eclipse slipped behind the silverstreaked ocean and the sun came in full view of a lovely brilliance of a magical afternoon. Since I was 14 yrs old, the others on the island were all youths, with a counselor, boat captain, and island natives at this area. I am forever in their debt. - Address Conservation at a Large Scale - Protect our wilderness T - Improve Watersheds and Wildlife Habitat - Connect people with Nature - Provide Increased Access and Recreational Opportunities - Fully Fund the Land and Water Conservation Fund

We need more Wilderness on public lands. We need respect for the natural forests and wonders that we have inherited. There is plenty of private land for tree farms and cows, so keep them out of the national lands. Recreation is already a more important use of national forests, especially here in the East, than is log extraction. Machines are incompatible with protecting wildlife and natural ecosystems, to say nothing of the important spiritual connection of humans to nature. Protection of the natural habitat itself also leads to clean water supplies to adjacent communities, as well as air purification and soil creation capabilities.

BY ALL MEANS preserve the Civil War battlesites. I have been to Gettysburg (twice), Vicksburg, and Fort Sumpter. The Chicago Civil War Roundtable has been to Chickamauga. The Civil War has been called "America's Illiad". Homer would understand.

Acquire and restore damaged natural areas in exchange for public access. Acquire from private ownership damaged and abused natural areas, such as abandoned riverfronts. Engage community volunteers from all walks of life to clean up and restore the damaged areas in exchange for permanent public access. Improve water quality, enhance wildlife habitat, eradicate exotic invasive species and replant with native plant communities. Design trails and greenways with the health of the natural resource foremost in mind. One example is Great Barrington Housatonic River Walk www.gbriverwalk.org <<http://www.gbriverwalk.org/>> a National Recreation Trail.

I am in support of listing the prairie pothole regions as a Treasure which it most definitely is - there is a diminishing habitat for Ducks and if we do not be proactive and guard this treasure we will all lose

Make illegal modified car, motorcycle and off road vehicle mufflers illegal to sell and/or install across the nation. They pollute and make too much noise!!!

when we do our taxes there is a box which if checked automatically gives a dollar to the presidential reelection campaign. We spend an obscene amount of money of campaigns and this dollar should do toward National Parks and historic preservation

Department of Interior, Thank you for the opportunity to comment on the Presidents national dialog about conservation. This is an important opportunity to indentify issues that can make a difference for the future. The Federal Government, through the Army Corps of Engineers, (Missouri River Authorized Purposes Study[MRAPS]) has undertaken study of management of the Missouri River. The 65 year old law (1944 Flood Control Act) that governs management of this great river basin, which covers over 1/6 of the country is outdated, and inefficient in addressing the contemporary needs of the nation. The "Challenge" is to objectively review and study how a modernized management can better meet the contemporary needs of the basin and country, and make the necessary amendments to the existing legislation. The "Federal Role" will be to provide the leadership to implement the modernization process. Modernizing management of the Missouri River will provide numerous opportunities to enhance recreation use, environmental quality, and sustainable use of the river resources for all the Basin States. Modernizing management of the Missouri River will diversify state economies through numerous opportunities for enhanced recreation development and use. Applying adaptive management tools to future management decisions will provide for efficient, cost effective, and sustainable use of river resources, and can provide a pathway for addressing developing issues such as the effect of climate change on river flow. And finally, creative use of river functions to meet authorized purposes will save multiple millions of management, resource restoration, and resource enhancement dollars. Our Chapter urges the Department of Interior to fully engage and partner with the Corps of Engineers to modernize management of the Missouri River!

Comments regarding America's Great Outdoors Initiative: The Williamson Act that was established in California in 1965 is an incentive for ranchers & farmers to keep large tracts of land intact. It helps protect watersheds, provides space & water for wildlife among other advantages. However, this year the funding in California was essentially dropped--\$1 Million in funding out of the \$39 Million that is needed to fund the Williamson Act. Why can't these funds would be restored? If the President wants people to use the Great Outdoors more, why is the U.S. Forest Service proposing to close roads in our National Forest (Sierra National Forest)? They also propose a ban on vehicles driving more that 10 feet off a main road--how does that promote dispersed camping? That doesn't seem family friendly. I support H.R.5580 by Rep. Devin Nunes' (R-CA) that would require Congressional approval before designating future monuments. The designation of National Monuments impacts ranchers, farmers, miners, etc. by restricting their traditional activities within those areas. I am unable to attend the Davis or Los Angeles Listening Sessions due to prior commitments.

Today, many families are losing touch with America's great outdoors. Fields, forests and streams are becoming fragmented by lack of support for conserving these crucial areas. As Ducks Unlimited members, we understand the importance of habitat conservation and have led this charge for decades—and we will continue to do so. Recognizing the influence the outdoors has on our youth and the need for conserving America's natural landscapes, the president and his administration have proposed the America's Great Outdoors Initiative (AGOI). This initiative is designed to promote the outdoors to youth, advance private-land conservation strategies, and use science-based management practices to restore and protect our lands. I am asking that you take a moment to e-mail the Department of the Interior, which is currently accepting ideas from the public on how and where the AGOI can provide the greatest benefits for Americans and the natural landscapes that support their outdoor lifestyles and livelihoods. Through sound scientific research, DU knows that the future of waterfowl and waterfowl hunting depend on more aggressive conservation of the Prairie Pothole Region, also known as the "Duck Factory." Encouraging the AGOI to designate the Prairie Pothole Region as a "Treasured Landscape" will help secure the future of waterfowl populations throughout North America.

WHO WANTS OR NEEDS 'EM! OPEN YOUR EYES! WHEN YOUR DRIVING DOWN COUNTRY ROADS, U.S.A., THEY ARE THE LAST VESTIGE OF THE WILDERNESS IN THE COUNTRY. THEY PROVIDE FILTERING MECHANISMS THAT CLEAN THE WATER THAT PROVIDES WATER FOR THE MILLIONS OF HOMES SURROUNDING THEM. FURTHER MORE THEY ARE THE NEST PROVIDERS FOR ALL OF THE U.S. WATERFOWL. THE PROCEEDS OF WATERFOWL LICENSES, GUNS, AMMO, CLOTHING, MOTELS, HOTELS, TRANSPORTATION, AND OTHER PERIPHERALS REACHES INTO THE MULTI-BILLIONS. AND THEY ARE BEAUTIFUL! IT BEHOOVES THE PRESENT POPULATION TO DO THEIR UTMOST TO PROTECT AND PRESERVE THEM. THANK YOU.

Agency, The problem is not the duck factory at all as stated by the Ducks Unlimited organization. The Ducks migrate south from these areas where they have food, water, and protection against the predators. Once the young ducks are hatched and fly south with their family group they go to places like the Sacramento valley, and the deltas to pair up for the return flight to the so called duck factories. There is a large natural lake left after the ice age call "Salton Sea" that is being deliberately being drained to place a highway on the north end that has been taken over by an Indian tribe that will completely destroy the habitat. Also, there is a Wild Life Refuge on the east side of the Salton Sea that is "The Wister Unit" that could use more help that the ducks unlimited organization has neglected for some time now. The harvesting has not been very successful due to lack of interest of the low number of birds that have been showing up there since the "Sea" started being destroyed, and neglected. The global shifting for several years now has made the migration of Ducks and Geese later in the season and also should be changed by at least 6 weeks for waterfowl. I hope you honestly hear my voice as I am a hunter and not a politician with the interest of the future of these Gods creatures.

Hi I will say I have never hunted the Central Flyway and probably never have the chance, BUT, I have read many articles over the years and I do understand that the small lakes and ponds which make up the "Prairie Potholes", are of almost immeasurable value to the waterfowl populations of the central flyway. They do need protection, they must be protected for the "health" of the many species of birds and animals which depend on them.

I am 59 years old and have been lucky enough to live in South Dakota pretty much my whole life. My Dad started me hunting with him when I was just a youngster and have loved it ever since. I really enjoy the outdoors and have taken countless numbers of people and introduced them to hunting and the outdoor experience in South Dakota. I would like to make a recommendation on the management of our farm ground in the Midwest. I think we have to start thinking out of the box to get the agricultural programs to coincide with the wildlife programs so we can start having a win win for everyone especially the game that lives on the land. The last seventeen years have been extremely wet in northeastern SD and we have lived up to our nick name of being the Pot Hole Region. The cattails and slough grass is growing wild in all the low lying areas along with the CRP acres that have covered a lot of the marginal farm land and the wildlife have done very well with all the new found habitat to live in. The CRP program started going out three or four years ago as the commodity prices went up and the fixed payment on the CRP acres stayed the same and land owners started taking their land out of the program and put it back into production. Now all of a sudden there is money available to put these acres back into grass and some farmers are taking advantage of it. This is great news for the sportsman and the wildlife that lives on the land. The PP (preventive plant program) is another one that could really benefit wildlife if the rules were changed just a little. When these acres are too wet to be planted in the spring these little bodies of water turn into great nesting areas for pheasant and ducks as well as homes for the deer in the area. By late summer these areas start to dry up and here comes the disc and these areas are gone and can't be used by wildlife for food and shelter for the coming winter. We have to start working together to maximize our assets so we can get the most benefits out of the land for the farmers as well as the sportsman and the wildlife. Thanks,

I am 80 years old and since I can remember have enjoyed nature and waterfowl with or without a gun. So my Grandchildren and son can have the same opportunity, I encourage you to designate the Prairie Pothole Region as a "Treasured Landscape".

To whom it may concern: As a farmer in Minnesota, I support making the prairie pothole region of MN, SD, ND a "treasured landscape". Having farmed for many years, I know it is hard to bring off a crop in poor soil. Most of these soils are dry and of poorer quality than the top producing areas and are best left as prairie or grazing land.

To Director of Interior My wife and I think that the greatest thing we can do for our grandchildren and their grandchildren is to help the wildlife, like birds, ducks, turkey, deer, elk, bear, etc. for the future. In order to do this, we must have save the little Habitat we have left. Please have the AGOI provide Habitat and the Prairie Pothole Regions in the USA is a great area to save.

(cont.)

The Prairie Pothole Region is found in the northern Great Plains of North America. The region consists of grass-covered wetland habitats covered with few-to-many shallow depressions called either potholes or sloughs, and they were made 10,000 years ago as glaciers retreated. Prairie potholes are usually filled with water and are included in many habitat restoration projects. If we forget to protect the habitat of this region it would be like us letting Lake Superior dissolve and wither away; that also was a glacier that retreated. For the love of the animals & land . . . "Save the P.P. Region"! Appreciate all your time & efforts in the conservation today for tomorrows habitat. We only get one earth plant on her well. Thank you kindly.

Save the Missouri Coteau and the Prairie Pothole areas. The Duck Factory of America. Saving the Great Lakes would be beneficial to our future, as well as the Mountains from strip mining and mountaintop removal. Too bad we can't save our whole planet from ourselves.

Please give the North American Prairie Pothole Region a HIGH PRIORITY for preservation of a unique habitat for Migratory Wildlife.

Please don't let our country destroy any more duck habitat. We are trashing this country. Thanks

Man will destroy all land for wildlife unless they set aside needed land for wildlife Wake up America....

Ladies and Gentlemen, I'm writing you to ask you for your help in protecting and preserving what is left of our native Prairie landscape. I'm 65 yrs old and have been an active and avid outdoorsman and conservationist for well over 40 yrs, since I made my 1st excursion to the Prairies after I graduated college in 1968. I have visited the Prairies annually since then and have seen 1st hand the destruction and loss of so many thousands of acres of native grasslands and wetlands. We have so little precious left! Help me....help all of us who place such a high value on the importance of this landscape. Thank you so much!

Ladies and Gentlemen, Please add my name to that of fellow conservationists endorsing the designation of the Prairie Pothole Region as a "Treasured Landscape". As I watch my Louisiana coast disappear and degrade as a result of hurricanes and the recent oil spill, I feel the need, not only to save the "Coast" but all of the treasured landscapes which comprise our national heritage. Count me as a supporter of anything which will benefit the preservation of the prairie pothole region.

IN MY OWN WORDS, PRAIRIES AND POTHOLES, WHO WANTS OR NEEDS 'EM! OPEN YOUR EYES! WHEN YOUR DRIVING DOWN COUNTRY ROADS, U.S.A., THEY ARE THE LAST VESTIGE OF THE WILDERNESS IN THE COUNTRY. THEY PROVIDE FILTERING MECHANISMS THAT CLEAN THE WATER THAT PROVIDES WATER FOR THE MILLIONS OF HOMES SURROUNDING THEM. FURTHER MORE THEY ARE THE BEST PROVIDERS FOR ALL OF THE U.S. WATERFOWL. THE PROCEEDS OF WATERFOWL LICENSES, GUNS, AMMO, CLOTHING, MOTELS, HOTELS, TRANSPORTATION, AND OTHER PERIPHERALS REACHES INTO THE MULTI-BILLIONS. AND THEY ARE BEAUTIFUL! IT BEHOOVES THE PRESENT POPULATION TO DO THEIR UTMOST TO PROTECT AND PRESERVE THEM. THANK YOU.

I will make this short and easy. The Prairie Pothole Region is a very valuable piece of real estate that reproduces endless wildlife for our and other countries. I urge this administration to recognize the Prairie Pothole Region as a "Treasured Landscape". If lost it will never be recovered. Thank you for your kind consideration.

I feel the AGOI needs to focus on land restoration. Original habitats of land and water are critical. Public access to these lands are also crucial.

I am writing as a conservationist first and duck hunter second and am concerned greatly as to what's happening in the Prairie Pothole Region. This area needs preservation status help. When the area is destroyed it can't be brought back. The untold amounts of carbon released for a temporary gain is unacceptable. The harm to waterfowl that has called it home since the melting ice glaciers is a paramount concern. Please protect this region for all the future waterfowlers and conservationists. I thank you.....

I am asking that you do everything possible to save the remaining Pothole region in North and South Dakota. Once this area is lost, it is gone forever. Conserve what we have left before it is too late, as we are losing the battle right now. This should be a treasured landscape to preserve for our future generations. We don't need another bushel of corn or wheat; We need to protect what we have now.

I am a Ducks Unlimited member and believe that the prairie pothole region is one of our most important waterfowl breeding areas and needs to be conserved to the extent that we can.

Our wilderness lands must be protected and preserved, not emptied of the wild species and certainly NOT turned over to development in any way whether it be pipelines crossing the lands or mineral mining rights issued or taking the surface and/or ground waters, or any other kind of destruction that

PUH-LEEEZE, get ORVs under control and off public land. They are devastating national treasures.

I want to see: 1) More land protected as wilderness. 2) Reasonable restrictions on ORVs. They do tremendous damage to the environment

to President's OBAMA ADMINISTRATION During pasted years I visited the 4 corners The Rockies Florida and was impressed that the size of the wild spaces which was a great opportunity for wild life (unfortunately in florida the "lamentein" are disappearing !) Please continue that policy which is a BEST for the following generations Thank you for considering my comments. I look forward to your reply.

With the state of the economy and the nation at war it is more difficult than ever to focus on what seem to be non-essentials. Yet at this time it is more important than ever for us to focus on what makes our nation great. This year I have personally witnessed many more people visiting national parks in my area. People not only look to them for inexpensive vacation options during belt-tightening times; but they also look to nature to restore their faith. In nature we look upon the grandeur made available to us through the thoughtfulness of our nation's leaders. That is why I am so pleased to hear about the America's Great Outdoors Initiative. We need real innovation and dedicated resources to conserve and protect our land water and wildlife so that generations to come can appreciate nature come what may. We can't let industries make our decisions for us. We can't afford to sell our nation's heritage during difficult times. Please encourage maintenance and development of sanctuary for wildlife. Please take an active role in guiding conservation with the highest level of care. Thank you.

I am certain we have saved all of the great places already please stop this land grab. I enjoy off road motorcycling on public lands

Gentlemen: As a young boy I was privileged to join and participate in Cub Scouts and Boy Scouts (and was active until I joined the USAF). This put me in touch with the great outdoors in many of our 50 states and I was able to hike camp canoe boat fish hunt and otherwise enjoy this beautiful country God has blessed us with. Following my Air Force tour I married and raised three children. To "pay back" some of what I had "taken" from Mother Earth I returned to Scouting as a Scoutmaster and also served in several management positions. As a family unit we spent many weekends and vacations camping in the western states with our Jeep and tent trailer exploring the remains of many "ghost" towns and learning more about Americana than is usually available in most text books. Later we took up dirt bikes (motorcycles) and snowmobiles exploring the back country Alpine Nordic and backcountry skiing mountain climbing and the like. I think it is safe to say that I have a deep appreciation for the outdoors and would support most projects that would promote the accessibility of our public lands to current and future generations of Americans. This is not one of them. Unfortunately many of the places I have been privileged to visit have been designated Wilderness Areas and Off Road Vehicles (ORV) can no longer use the pre-existing trails. That forces the ever increasing numbers of ORV enthusiasts to use the ever decreasing number of "open" trails thus making them more dangerous more crowded and further away from home. Result.....fewer and fewer people get to enjoy the busier and more dangerous trails and more non participating people in the area complain about noise traffic and other negative aspects typical of large groups of people in smaller areas with a view toward obtaining more land closures. A vicious circle. Let's get some proponents of the use of public lands involved and come up with some ideas which when enacted will move us closer to our multitude of objectives.

Discussion Question 1

(cont.)

Hello I use many open to the public lands to enjoy the outdoors with my family as my parents did with me. I have spent time helping to clean and clear public lands at my own expense and time as well. I will believe that we are all entitled to these areas and should be good stewards of them. To just close them outright serves no purpose that I can see. I belong to various off road and outdoor groups and none of these groups were asked to come to any meeting on this closure. Are you absolutely sure that we are all represented in this? Thank you for your time

I am an avid outdoorsman who loves taking my family camping fishing hiking mountain biking four wheeling in many different settings. I love the forests the deserts the oceans the mountains and so does my family. Please do not close any public land from the use of the public. Please keep the land open to transportation such as ATVs and 4wheel drive vehicles. I am an adopt a trail coordinator at my local OHV area and volunteer many hours a year for work projects and clean up days. Using the land responsibly is sustainable and is a right of the citizens of the United States. Thank You for your time. Keep public lands open to the public.

Mr President. I object to your America Great Outdoors Initiative. In my experience areas designated National wilderness and monument designations limits the areas in which people can actually access. As an avid outdoorsmen (Hunter fisherman ATV'er Dirtbike'er Snowmobiler mountainbiker and hiker I find it most enjoyable to be able to do my sports with as few limits to where I can go as possible. The tougher it is to access an area because of nature the more fun. The tougher it is to access an area because of Government restrictions the more boring and un-enjoyable it is. Also I start paying taxes in 2 years. some of my paychecks already get cut for tax purposes. I want that money going to keep these areas open and easily accessible to the public not to close them off. Thank you for your time. IF you are an aid reading this it's for the President of the greatest nation on this planet. Not you.

My family and I live in an urban area and we do enjoy the outdoors every weekend. And I do mean "every" weekend. We enjoy riding off-road motorcycles. My sons ages 9 and 16 enjoy the nature and the outdoors vs. playing video games and riding in SUVs to the local shopping mall. Both are junior rangers. As a result we respect nature conserve recycle and use renewable energy as much as possible in our lives. Despite any preconceived notions against dirt bike riders we live green and unlike others don't simply use "green" as a buzz word. Other benefits from our sport are that my wife and I have a strong family bond with our 2 sons. We exercise regularly and stay physically fit. Any plan that restricts our off-road access to enjoy our sport does not represent our interests.

My family has enjoyed many places of scenic beauty that we would otherwise never have experienced without being able to access these places by traveling off road. Please stop these closures so that others can have the opportunity to witness these beautiful spots.

Our Family of 9 enjoys camping in the beautiful outdoors especially in the dry Desert as 1000 of us do. Mr. President Please let us enjoy our Public Land and the great outdoors and DO NOT CLOSE our Public Lands. Thank you.

(cont.)

President Obama As a life long Democrat and member of organized labor and I vote for the person best suited to insure my continued employment. With that said and as you understand better than anyone I'm sure many issues are not just D. or R. so I would like to ask your support to continue to allow me and many others the chance to enjoy the great outdoors in our favorite past time including off-road motorcycling and horse back riding. These activities are my families two favorite past times. We as a family have enjoyed countless hours together as well as spent 10's of thousands of dollars to enjoy our hobbies. The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas we need less! Thank you for your consideration.

With our world facing very real environmental problems why would we restrict opportunities for people to form relationships with our natural world in a way that if properly managed does not promote any significant environmental damage? Let's focus on real environmental problems and let's encourage people to get involved by promoting activities that allow them to develop their own personal relationship with nature. Thank you

While I believe that we do need to preserve the natural beauty of this great nation we should encourage people to enjoy that beauty not restrict them from it unnecessarily. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas we need less. If the goal is to reconnect Americans especially youth with the outdoors I believe that it can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation followed by Mountain Biking yet the Initiative seeks to create Wilderness and Monument areas closing another 13 million acres to people who enjoy those most popular forms of recreation. Please consider all forms of recreation that are impacted when Wilderness and Monument areas are designated. It truly pains me to see more and more of our Nation's lands being isolated from new generations of Americans. Please reconsider closing additional public land and make more land available for use by our children and subsequent generations.

I am writing to voice my objection to the America Great Outdoor Initiative. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation of all types. Off Road Vehicle use is by far the most popular form of recreation followed by Mountain Biking yet the Initiative seeks to create Wilderness and Monument areas closing another 13 million acres to people who enjoy those most popular forms of recreation. OHV and ATV activities are a fantastic way for families to enjoy both the great outdoors as well as quality time together please don't make it any harder to find safe and scenic locations to recreate.

I enjoy sending time in the national forests. I travel by jeep and motorcycle. Your intended legislation will limit access to the forests. Please don't legislate away the public use of public land.

(cont.)

I moved here from Kansas so I could ride on mountain trails in Colorado.

I want to express my strong opposition to the designation of more wilderness. My wife and I are ardent hikers and backpackers and enjoy frequent use of existing wilderness for that purpose. But I'm also an off-road motorcycle rider and mountain bike rider and appreciate the opportunities I have to enjoy non-wilderness areas for those purposes. Far more citizens take advantage of recreational opportunities on non-wilderness lands than on wilderness lands. Designating more wilderness will have the perverse effect of actually preventing the public from enjoying the outdoors. Not everyone wants or is able to strap on a pack and hit the trail. At a minimum the President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors: Off Highway Vehicle recreation and mountain biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors.

Please dont lock us out of our public as most people dont use them I for one use them frequently with my wife and two little girls. There is nothing more thrilling to me than exploring the forest with my family. Thanks for your time

The only outdoor recreation I have is use of two wheeled vehicles on public land.

(cont.)

To whom it may concern I am writing you concerning land and forestry use involving ORV (Off road vehicles). Are people misinformed and don't fully understand what is at stake and what may be leading to a lost right for ALL of us? Myself I LOVE the smell of fresh crisp clean outside country air and the sight of more trees and less buildings. After all this is where I grew up. But I feel some groups and individuals are going about this land protection thing all wrong. I call it LAND LOCK. Little by little our rights are being ripped from us. The areas for (adults and children) to enjoy ORV (Off-Road vehicle and snowmobile) are far and few between. Some people and groups like to complain about pollution. Let's look at the facts! There are serious doubts about people having an effect on the planet called global warming now and there is data out now actually showing the contrary to this. These small vehicles emit about the same emissions as a lawn mower due to the ORVs limited time of use and the small size of these engines. I do believe that chain saws weed trimmers and lawn mowers emit more pollution than ORVs in general due to our forty hour plus work week. Should restrictions be put on those as well? I feel the need to write about other states as well as my own. The land closure issue seems to be the same scary path that the entire country is on with all of these silly bans because of the people and groups that DON'T fully understand all issues they bring up. Let me to fill you in on some facts about the woods and animals. My brother is a hunter and I have nothing against that. The funny thing is that we see more animals when we are out in the woods enjoying ourselves on our ORVs relieving some stress and showing our young people these beautiful isolated areas of the outdoors when my brother sees fewer animals. The animals know we are not out there to hurt them when we are on our ORV. Animals are smarter than what they get credit for. They can sense when they are being hunted or when there is a hunter nearby. Some breeds actually cry out to warn others. They have strong senses that they use to survive. They don't speak or rationalize like we do. They use their senses to survive therefore their senses are very strong. I have been in situations where I have gotten very close to wild animals even with a motor running under me you can't tell me that they can't sense I was not going to hurt them. Another example this one I have seen many times. As I ride down the trail I see a bunch of birds on the ground eating some seeds that fell from a tree. As I come through some may move a short distance on the tree or a surrounding tree. I then see them go back to the fallen seeds on the ground in my rearview mirror as I pass. I doubt that I've devastated them. I have also been in similar situations with deer. One occurrence comes to mind. I was coming over the top of a hill and as I went over the top there was a deer standing in the trail eating. He didn't care at all about moving from the middle of the trail. Another time I remember was when I was with two other friends on our bikes. We were in Beartown state forest in Massachusetts. We left the parking lot going up a big hill. We stopped and shut off the bikes to talk about which way to go as the trail split off. As soon as we stopped a quail came walking out of the woods and started to walk around my friend's bike. He then started to peck at the rear tire. We just laughed and were wishing we had a video camera as these things happen to us quite often with wildlife. Don't get me wrong I support and think that land preservation is VERY important but I know the facts first hand! We need land protected for us NOT from us. We need to create more designated areas for ORV use. I spend a lot of time out in this great country's wilderness. ORV riders don't drive animals out of an area. A trail through the woods does no damage unlike removing trees and developing the land Putting in a new road for cars to run over animals or building new houses

Discussion Question 1

(cont.)

or malls! The clubs that I belong to help to keep trails free from fallen trees and other blockages for all. Animals use these trails as well. Even in small local areas (such as power lines) people seem to enjoy complaining about ORVs and the sound of a small engine. I have been on the side of the trail and have been surprised several times when an ORV came around a nearby corner and at that point was just able to start to hear it. This applies to ORVs of today's standards with factory exhaust. An ORV is one of the classic sounds of the country or wooded areas just like a chainsaw log splitter lawn mower or a weed trimmer. I say "If you don't like what you hear move to the city and see how many pleasant country sounds you hear." Another effect that people don't think about is the impact on young people. Kids that take up these sports develop respect in learning about wild life and the environment and getting out enjoying our wooded areas with family and friends. They are usually not the type to leave food wrappers and beer bottles behind. When you take land away "or don't have any areas to begin with" guess where kids go. They hang out in the cities and towns more and a good part of them may get in trouble. Of course this is not the major cause of youth trouble but everything adds up these days. Some elected officials actually enjoy these activities themselves. I would be proud to take someone along to show him or her the fun and beauty of these sports. The revenue these sports create is also beneficial as well. States should take a good look at this issue and designate more areas for its people to enjoy these activities that can be separate from hiking or skiing areas. Don't let America continue on a LAND LOCK path. Do your part and help stop this before we all lose out! Thank you for your time!

Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. My late husband loved to ride his off road motorcycle. He passed away of a heart attack while sitting on his bike in the middle of a ride in 1999 in a place called Stonyford CA. The members of his group "Valley Trail Riders of Livermore (CA) adopted the trail and have been taking care of it ever since he died. This group is very responsible and takes care to teach the children of the group about taking care of the landscape. It would be a shame to not have a place to ride as a family.

Closing Land to controlled motorcycle and ATV pleasure riding simply takes away the American way of life that has gone on for 30 years. RV trips with families for the weekend tens of millions of dollars revenue from Motorcycle Dealership business millions of healthy young people enjoying the outdoor life will all be pressured. PLEASE THINK AGAIN

Dear President Obama It appears that your administration is about to embark on a program that will deny citizens of the United States access to a large swath of their public lands.

Discussion Question 1

(cont.)

I support careful stewardship of and preservation of access to public lands for prudent use by hikers mountain bikers equestrians etc. These rules while they achieve the goal of protecting lands may create a generation of Americans that don't know about or appreciate the importance of these areas. Mountain Biking does more where I live to introduce our young people to the beauty and value of our wilderness than any other single activity except perhaps hiking. It teaches the value of volunteering for trail building and maintenance and helps to expand appreciation for our lands and encourages us to "leave no trace". It encourages health and fitness in a nation that is facing crisis levels of obesity and chronically poor fitness.

I Believe that locking the wilderness away from people is the worst thing that can be done !!! I enjoyed the wilderness as a youth with the boy scouts and all my friends. it teaches you to love you're land and use it with respect. If its locked down then no one will respect what they don't know. To spend any money to close down nature from the benefits of proper enjoyment is absurd!!! Instead you should take a look at WEST VIRGINIA it has opened maintained trails with a permit fee and largely boosted it economy with out handing out (waisting) tax dollars. If you want to know whats good for any area you have to live there for a while. You can't know whats good in ARAZONA if you live in D.C. or for NEW YORK and live in COLORODO. I live 35 minutes south of D.C. and have watched development destroy all the woods I enjoyed as a youth. I have seen allot of people that call themselves tree hugger that have never spent a week or two in the woods camping and in joying nature instead they have to have a blow drier and cell phone. There idea of camping is a motel room!

I have two children who love the outdoors. We are a family of motorcycle riders and have been forced to go further and further to ride and enjoy the land that our grandfathers were all able to enjoy. For you to close these areas to me & my family is a disgrace to all who enjoy the outdoors. Given there are a few that neglect the outdoors but to take away the rights of everyone because of those few is ridiculous!

My principle hobby is riding motorcycles on primitive trails on National Forest and BLM lands near my home in Durango Colorado. This is my chosen way to experience the wilderness. Like 99% of the off-road motorcycle riders I know and ride with I go great lengths to ride responsibly. We do not damage trails. We do not ride trails closed to motorcycles. We maintain our machines to run quietly. And we do more to clear downed timber from our trail systems in the spring than any other use group. Sadly our contributions to trail preservation and maintenance seem to go unnoticed. Motorcycles are being excluded from more and more single track trails. I have seen several occasions where a trail in closed to motorcycles it quickly falls into disuse and disrepair and within a few years is unusable. Certainly there are public lands where user conflict is a serious concern but where I live if motorcycles are not allowed on the trails they will disappear. We have abundant land for motorized recreation in Southern Colorado. We maintain the trails. We ride responsibly. For these reasons I write to oppose the administration's recent proposals for increased Wilderness lands National Monuments and other potential land use changes connected to the Great American Outdoor Initiative that would exclude motorized users from public lands. Let's find a way to enjoy and preserve these lands for all user groups.

Part of being an American is to have the freedom and responsibility to explore our wilderness areas. Be it OHV's mountain biking hiking or camping with the family. Please consider this coming from a man who has raised his children enjoying responsibly the great outdoors. Thank you very much Mr. President for taking the time to read this..

dear pres obama i am 67 yrs old and have been riding off road dirt bikes since 1969-most of my riding has been in nmex-but also in ariz cal and tx i also have two college degrees-in biology-SMU 65 and ecology WT A&M U 88 i have a unique view of use/abuse of our natural lands-i know we can achieve both objectives(use-preservation) by objective monitored controlled enjoyment of our natural lands-we are achieveing this goal right now in the s cal desert with the co operation of the BLM and the area motorcycle clubs i cannot put into words what it is like to ride in the desert-the epitome of total freedom-'high wide and handsome'- what an uplift to the soul it provides!!!-being able to ride and see no people no vehicles no cattle no signs at all of civilization-just the beautiful blue sky the desert and the mtns in the distance-you the desert and God!! i know i am not alone in pursuing this enjoyment-there are thousand of us enjoying this unique aspect of the American Dream i know i am seconded by many others when i plead with you not to close even more of the dwindling public lands that are available to the enjoyment of Americas' caring and involved citizens thank you for your time in reading my responce

I am an avid outdoor enthusiast and enjoy a variety of outdoor activities from hiking to mountain biking to motorized OHV use. There is a need and a place for all such activities in order for each of us to enjoy our public lands. I strongly reject the notion that these radical special-interest groups are somehow smarter more noble more worthy or more representative of America. Please do not let them steer us toward ever more restrictive policies - keep our public lands publicly accessible!

Most of the land in the west is open space. Wildlife have plenty of places to live. There is no need to create Wildlife Corridors or designate additional Wilderness Areas. I object to spending my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations. This will discourage the public from enjoying the outdoors.

I enjoy hiking any chance I get and I find that people who travel into the wilderness whether it be by off road vehicle mountain bike or hiking/backpacking enjoy these areas and maintain them. They do NOT destroy them! More people should get out and enjoy the beauty that America has to offer.

I ride atv with my 3 of my 4 sons.It allows me to spend quality time with them enjoying the outdoors instead of playing on the Internet or video games.

(cont.)

Regarding closure of American Public and Private Land and Wildlands for recreational use: I am a fifty one year old American born and raised here. I was a Boy Scout in my younger years and as an American growing up in a wholesome family I was taught to respect our environment for today and for the future. I ride motorcycles on and off road. I hike and mountain bike on trails. I boat on waterways. I do all this in a responsible manner. This is one of my American Freedoms I cherish. Taking away and/or limiting public private and wild lands for this type of use is something I am completely against. If revenue and preservation are necessary then I propose the Government fine force to rebuild and/or repair and/or punish with monetary consequences the ones who abuse and violate responsible use of our nations wilderness public and private lands.

I am 63 yrs of age and have enjoyed outdoor recreation in many forms I have enjoyed hiking riding offroad and and now I share the sport of trail riding with an organization that does what the government promised they would do when they applied the "Green Sticker" fee the "wilderness permit" fee the Special "Group permit" fee the "Day use" fee the "Yosemite Pass" and so many other leans. I can remember when the "Green Sticker" fee was first proposed the Government offered to maintain our trails police our public lands and recreation areas for the few bad actors that did not use them responsibly provide permanant and temporary employment (summer jobs for college students) in order to maintain a good balance of enviremental empact and "SERVING" the public for thier responsible recreational enjoyment. There is not enough room in this format to write about the broken promises to the public and how most of our funds have be misappropriated for political and special interest. Wouldn't it be nice if we could trust our government servants with our taxes a government that would listen to and recognize the responsible majority not regulating for the sake of control. I am fairly sure that this letter will never see another set of concerned eyes I trust this initiative will be passed in some midnight session by a small group of politicians that have never ventured into the forest with their friends to install water bars clear brush plant trees and trully enjoy the great outdoors. The last thing and the most important thing that I trust. There are still a greater part of this Nation that will do "the right thing". President Obama Myself and others would respectfully request that you investigate the agencies that have misappropriated funds and NOT rendered the services that we have paid for. Please protect our PRIVILEGE to enjoy and be responsible for our public land and recreation areas. Thank You

This letter is about my concern on the closing of so many of our public lands. For the past 40 years I have enjoyed our outdoor recreation areas and the past 10 years have been able to explore with my children. Which is priceless! We boat we hike and we offhighway ride. I fear that if we don't become understaning to others needs then all our riding areas will be closed. This will cause a backlash and will lead to violation protests. Being fair is the utmost importance. Please help keep our recreation and offhighway opportunities open to all Americans. Thank You

I am partially disabled and motorcycles and bicycles are the only way i can acces some of our lands. Wilderness diesgnation excludes too may Americans who have a right to access.

(cont.)

I live in busy crowded Los Angeles with my husband and two children. We visit California city desert monthly to dirtbike spend time together and enjoy the wilderness. By taking our freedom away to visit public land our family bonding time and children's memories will be lost. Limiting access to private land can only harm the American family and the youth's interest in wilderness. I do not believe the people's best interest is at heart here.

Every year more and more so called "public land" is being closed! It is getting harder and harder to find places for law "to go and spend time with their family's riding their dirt bikes and quads. With money being as tight as it is it seems that spending "2 BILLION" of my tax dollars (it is "OUR" tax dollars) to close public land is not a wise thing to do. But for some reason you people in government think that there is no end to the money you can spend! The more "Public Land" you close the more trampled the land that is open will become. I have noticed this over the years and when the land that is open does get trampled you want to close it because of over use! I have been riding in areas for over 30 years and in the past 15 to 20 years I have watched them slowly get "worse and worse" because of over use! Because of the fact that other areas get closed to orv use and no other places are being open to take the load off of them this is what happens! There are more and more people getting into riding off road every year. But our areas are getting smaller and smaller. It does not take a rocket scientist to see what is coming! Instead of giving kids a place to go and have fun you are just keeping them from doing anything contributing to nothing for them to do causing them to hang in the streets get into trouble and over populate our juvenile detention centers!! Give families back their rights to do FAMILY things!! Make the right choice by keeping our lands that "WE PAY FOR & OWN" open. Some of my best memories are when I was young riding dirt bikes up in the woods and spending time with friends & family.

Our leaders need to include the two largest forms of recreation as a priority in this plan to reconnect Americans with the Outdoors. That would be Off Highway Vehicle recreation and Mountain Biking. Both of which our family friends and neighbors are involved in. Just by taking the sample of residents in our neighborhood who participate in these activities it would seem that a large number of our population enjoys these 2 sources of family recreation. I object to the spending my tax dollars locking the public out of more of their public lands through inappropriate Wilderness and Monument designations for a select minority many of which do not even frequent the "wilderness".

I am writing to voice my opinion on these wildlands closures. Please refrain from closing more public lands. Me and my family have been using these lands for over 28 years. We spend 4 days a week riding motorcycles and driving jeeps around the Owyhee front in Idaho do not want to see our rights to these lands infringed upon. So please hear us loud and clear. Public lands need to remain public!

Discussion Question 1

(cont.)

Keep public lands open to the public! I object to my tax dollars being used to lock the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations. The president needs to include the two largest forms of outdoor recreation (Off Highway Vehicle and Mountain Biking) in his plans to reconnect Americans with the Outdoors. As a BSA Scoutmaster I am dedicated to introducing our youth to the great outdoors. Living in the State of Texas makes this a challenge due to the chronic lack of public lands - almost all land in the state is privately held. Please don't make the job of educating our youth in outdoor skills by closing more lands to public use. We must be able to get there before we can enjoy it! Can we protect our public lands without locking them away from the public? YES WE CAN! Say NO to land closures!!!!

The President proves over and over again that he says one thing and does another. He clearly wishes to stifle American freedoms under the guise of he knows what's best for us. He is schooled in the Saul Alinsky mold of destroying America from within. He is not to be trusted at all! In any case Local Stewardship projects are the key to improving forest health. This has been proven time and time again on both private and agency lands where active stewardship has produced better forest health and increased biodiversity over non managed preserves. The President is interested in local involvement in his plan yet no multiple use groups have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands. Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans.

I really value the quality time my young son and I spend off road and in wilderness areas. My son recently started motorcycle desert racing and really enjoys the challenge.

I am an OHV enthusiast who recreates in the American Southwest and do it responsibly. I am one member of a larger group of men who have ridden together in Arizona New Mexico and Colorado with our off-road motorcycles. We are responsible obeying all laws & restrictions; we all purchase ORV Tags and are happy to do so if it helps keep trails open. We are always courteous of other users on the trails and give the right-of-way to hikers mountain bikers or equestrians but to be perfectly candid we rarely see anyone else on the trails wherever we ride. I strongly object to any further closures of "public" lands. I respectfully submit that a better approach is to allow those of us who love the open lands to participate in upkeep and trail maintenance. Most of the people I know that are involved with off-road vehicles; be they motorcycles ATV's mountain bikes or jeeps are more than willing to help maintain trails & roads; they just need to be enabled to do so. We have long admired the well managed off-road use program in Colorado and have worked to try to influence the establishment of a similar trail system in Arizona and have offered repeatedly to help maintain such a trail system. It is sad to see that small self-serving special interest groups have gained so much power and influence that they have closed off the use of so much land; our land; to all but a very small group of people. Please do not allow this trend to continue; please keep our lands open for all Americans to enjoy.

Many of the most important lessons I ever learned in life were learned in the wild or in a Bog or at a Tide Pool along a stream creek or brooke. And we can't forget the Ponds Lakes Rivers Aquaducts Sloughs Wetlands Swamps Falls Irrigation Ditches Reservoirs and Geothermal Resource Areas. I learned about animal anatomy. I tried to heal the hurt animals with just the things I could find out there in the wild country. I learned animal husbandry and the birthing process of many animals. I studied the animals habitat and how the animals used the habitat mostly out of necessity. I learned about the pecking order of things in the wild. How interacting properly would mean life or death within the colony or pack or whatever group you had been accepted into. I learned how certain species must rely on others of their own type to be able to exist. Or maybe use a decoy animal of a different species to draw near an animal of which you are predator of. I learned to provide food for myself and for animals of which I felt necessary to susstain life or comfort or power. Many of these self taught Nature Studies were learned. And in the years to come I would learn that these beautiful places were ideal for studying the opposite sex of my same species. I learned very much about everyone of these subjects without even one textbook. I could go home and dig into the encyclopedia set and find my answer. Then when a nature program came on TV I would amaze my parents with my knowledge. This is one school you can't lock up. Not if you have an ounce of compassion for learning.

ORVs ATVs and off road riding are a good use of land. They are also a good family sport. Propery used parks can be balanced between people animals and habitat

(cont.)

I am one of the people who attended last night's function in Seattle- I appreciate the effort this administration is putting out to try to get input. I am just a citizen that enjoys hiking and camping in the outdoors. I have no affiliations to any groups. I was a bit intimidated to talk last night because so many of the comments and suggestions were put forth by extremely knowledgeable and articulate spokespersons from different nonprofits and environmental interest groups. I have a few comments I will put forth now. What works: I have read of groups like Conservation Northwest that work with interests that environmentalists traditional have butted heads with hunters Logging companies and developers they have sat down and been cordial to each other to find ways to satisfy everyone's needs. I think this is the approach we need to use as we reach an era of resource depletion. Challenges: As I mentioned in what works- resource depletion- This will ultimately be the sticky wicket This will be the Government's role to educate the public and industry about the brutal facts of overpopulation and resource depletion and everyone can't have all that they want. There will have to be incentives and education to try to steer this country in the direction of sustainability. Federal Gov. role: My wife and I love to camp and hike and one thing we noticed that is frustrating is the different passes and fees at different outdoors areas. Couldn't the Federal Government oversee a single pass that all the states dipped into? Sometimes you go to a trail head up miles of poorly maintained forest and once there find out you need a pass to park there but you can't buy it there- same with some camping areas- A sign says to buy at the regular place you would buy a hunting or fishing license- but the sign may not be specific in the location and I don't know the businesses in the area. A pass for all the states we would gladly purchase. Tools- I would like to see websites that could give you information on hiking and camping and other outdoor activities that would tie together the disparate agencies involved State Parks BLM Land County Parks State lands etc just have one place to go to find out about outdoor opportunities. Another tool would be a website for volunteer opportunities. One last comment is that I think some of the traditional uses of public lands need to be reexamined. I don't believe that ranchers should be able to leave their stock on public lands- Cattle foul waters and destroy fish breeding habitat and they are unpleasant to encounter when out hiking. If Ranchers don't have enough of their own land they shouldn't be raising livestock. Cattle are a big greenhouse gas producer and are not efficient for food production either. Thank you very much for your time and interest

Prior to the Station Fire in the mountains around Los Angeles we had the opportunity to go up into the mountains and get away from the city. This is so important to making life in L.A. livable. Now we have lost a lot of the wilderness that we relied on for our spiritual rejuvenation. I urge that you develop wilderness management plans that: 1) Eliminate fires of this size and 2) Help L.A. to recover from this fire more quickly. This might mean better planning and/or more resources. This is such a huge loss to us.

Our public lands belong to all Americans and provide us with clean supplies of drinking water healthy air and an opportunity to experience wildlife and nature. Our region hosts unique public lands of incredible beauty and wildness close to large population centers. Investing in our region will permanently protect a large and varied natural landscape create economic opportunities for neighboring communities conserve the region's biodiversity and recover its wild species through habitat conservation and restoration. I urge you to implement the following priorities for my region:

Protect the proposed Berryessa Snow Mountain National Conservation Area: Located less than 100 miles from the Bay area and Sacramento the region stretching from Lake Berryessa to Snow Mountain is our outdoor wonderland. It gives us clean drinking water spectacular views and places to hike kayak and more. Local people have come together to support designating the Berryessa Snow Mountain region as a National Conservation Area so future generations can enjoy this natural treasure. The administration should protect this treasured area and other unique landscapes for future generations.

Conservation at a Large Scale: Large natural areas such as the Berryessa Snow Mountain region provide our best hope for addressing loss of species and open space preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today.

Create Economic Opportunities: Protected public lands can provide economic benefits to their surrounding communities. Communities can diversify their economies by expanding tourism-related industries boosting ecotourism in their region and thereby increasing demand for food and lodging services and increase property values by protecting the area's natural amenities.

Improve Watersheds and Wildlife Habitat by investing in restoration of the Berryessa Snow Mountain region. This will create jobs that are built around proper stewardship of our natural areas. Thank you for considering my comments.

Public lands belong to all Americans providing us with supplies of clean drinking water healthy air and the experiencing of wildlife free-flowing waters and the earth. Investing in our region will permanently protect a large and varied natural landscape create economic opportunities for neighboring communities conserve the region's biodiversity and recover its wild species through habitat conservation and restoration. I urge you to implement the following for my region: Protect the proposed Berryessa Snow Mountain National Conservation Area which is less than 100 miles from the Bay area and Sacramento; it extends from Lake Berryessa to Snow Mountain and is one of our outdoor wonderlands. It gives us clean drinking water spectacular views and places to hike kayak and more. People in this area are coming together to support the designation of the Berryessa Snow Mountain region as a National Conservation Area. It is truly a natural treasure that should be protected for its water supply and for the enjoyment it brings to those who want to explore it now and by future generations. Conservation at a Large Scale: Large natural areas such as the Berryessa Snow Mountain region provide our best hope for addressing loss of species and open space preserving water quality and protection from climate change while preserving the wildlife and lands we enjoy today. Permanently protecting wildlands such as those in the Berryessa Snow Mountain region should be a priority and looked upon as an important legacy of this administration. Protected public lands can provide economic benefits to surrounding communities diversifying these economies by expanding tourism-related industries boosting ecotourism in the region and thereby increasing demand for food and lodging services. Investing in restoration of the Berryessa Snow Mountain region we will create jobs that are built around proper stewardship of our natural areas. This restoration will enhance wildlife habitat preserve critical water supplies and connect people to the land. The importance of reconnecting or staying connected with nature cannot be overstated. The Berryessa Snow Mountain region provides countless opportunities for connecting the communities of the Bay Area and the Central Valley with nature. Existing outreach programs for families and children will only be enhanced by permanent protection of this natural playground where recreation and outdoor education opportunities abound. Thank you all. May God bless you all as you consider all the comments you receive about the future of conservation and may you make the most ethical and considerate of decisions.

Thank you for launching the America's Great Outdoors Initiative. Escape into the wilderness has been a major contributor to the quality of my life. My vote is to preserve this precious resource to the greatest degree possible. Thank you.

I attended the "America's Great Outdoors Initiative" meeting in Albuquerque NM this past July and based upon the information I heard especially during the Comments session I believe that Trout Unlimited's programs could play a vital role in making the Great Outdoors Initiative a success.

Restoring and creating habitats preventing activities that will damage the habitats introducing fishing to our youth etc. all will continue to support the manufacturers suppliers of equipment necessary for our sport. Fishing guides lodging and food businesses transportation companies etc. will benefit also from our sport. In short jobs will be maintained and created.

(cont.)

we staRT with small animals as their fate affects us all.

Here in Wisconsin we have made remarkable progress in protecting fragile streams and restoring ones that were marginal.

I live in California. We are leading the nation in many environmental efforts - especially in regard to automobile and truck pollution. We are also a highly dysfunctional state in regards to our government (not unlike the national Congress). Much of our environmental efforts have come from the public support of private groups like TU. The cleanup of the Sacramento River after the disastrous train wreck and chemical dump of a few years ago was largely undertaken at the insistence of many private conservation groups pressing the state to act. Our state is under the constant threat of oil gas and mineral development - and the pressure to make our public water privately owned - on public lands. Help us protect our public waters from the assault of private corporations.

I am from Alaska and I am really worried about this Pebble Mine project.

I am a member of the Upper Green River Chapter of Trout Unlimited in Pinedale Wyoming. I moved to Wyoming to marry my wonderful husband also a TU member and Chair of the National Wildlife Federation and to enjoy the clean environment and wild experiences outside my doorstep. One of my favorite outdoor activities is to fish for wild trout. I joined TU because its mission is focused on healthy watersheds intact habitats and restoring degraded streams so that these support healthy populations of fish and wildlife. TU also works to educate and involve the next generation of Americans like my chapter does by supporting youth fishing days in Pinedale. It's hard in a little "backwater" place like Pinedale (pop: 7000) to know what is going on in the nations capital. I rely on the National TU folks to take my message of protecting wild rivers and wild places to national leaders like you. My local TU Chapter is currently working on placing an experimental fish screen at the mouth of an irrigation ditch to prevent wild trout from entering the ditch and being left to die once the irrigation flow diminishes. If this is successful we'll contact ranchers and replicate this effort throughout the county. Our landscape efforts are not on the large scale of TU but when we all work together good things will happen in our nation. I didn't inherit a polluted planet with filthy water and degraded streams but my generation will be leaving this for the next generation of Americans. UNLESS we get off our duffs and have a serious effort to protect the water and habitat for fish. We may use wild trout as the reason for these efforts but the truth be told it will benefit us and our children and grandchildren just as much. I thank you for your efforts and ask you and President Obama to keep up the work to help America's wild places and great outdoors.

(cont.)

I am an active member in the Colorado Trout Unlimited Organization and am writing this letter with the hope that I can help make America's Great Outdoors (AGO) Initiative successful. Our mission is the protection of coldwater fish species and their habitat. Through my involvement I have learned that the Organization is full of people willing to sacrifice their free time to help protect something they cherish. I pride myself in working within a close-knit community to make a difference in my streams and river ways. I quickly learned that protecting fish means a lot more than I thought. We also need to protect our rivers and watersheds and repair and restore degraded waterways for fish and other native species and plants. I found that repairing damage done by man requires constant work. We to protect the areas that have not been damaged yet and we need more projects like the Land and Water Conservation Fund to help us do that. Educating the next generation of anglers and conservationists is also a critical component in our success. My chapter is leading the way in integrating Trout In the Classroom in Colorado. We help young kids learn the value of cold water fish by raising them in their classroom then releasing them in the wild months later. The program has been hugely successful and we are expanding the program this year from one school to five. Building on the projects and programs mentioned above will help implement the activities to make the initiative a success and helping unite and expand a grass roots effort will only strengthen the initiative.

I am writing as a citizen of the United States of America and a resident of Minnesota to offer suggestions from my experience regarding strategies and activities that can help make America's Great Outdoors Initiative a success. My recommendation is to protect intact habitats reconnect them to surrounding areas and restore degraded habitats so that they again support healthy populations of fish and wildlife. It is also essential that we sustain historical conservation gains by engaging the next generation of environmental stewards through educational programs and outdoor activities. and roadless lands on national forests we can ensure that these special places continue to serve as strongholds for trout salmon and many other species.

I am writing as a member of Trout Unlimited (TU) to share what our North Bay (San Francisco Bay) Chapter has been doing to promote this cause for the past 7 years. Following a conservation speaker at one of our meetings 7 years ago several of us were in discussion when someone observed "We all have gray hair! Where's our next generation of conservationists and environmentally concerned citizens going to be coming from?" After brainstorming this question for a bit and mindful of the fact that fly fishermen are generally excellent stewards of the environment we decided we'd better start teaching young people how to fly fish and "hook" them with an interest in nature. That first year we oriented 28 youth (ages 8-18) in all the aspects of fly fishing; casting knots and rigging reading the waters and entomology knots etc. This past year we had grown to 124 participants and now include the parents or guardians who learn FF skills so that they can coach and support their young people. In short we've been doing OUR job in helping young people get outdoors but we'd certainly appreciate some support from AGO.

I am writing as a member of Trout Unlimited (TU) and an active participant in land conservation efforts here in Maine to offer suggestions from my experiences regarding strategies and activities that can help make America's Great Outdoors (AGO) Initiative a success. Local Land Conservation groups provide for the protection and preservation of critical habitat through the process of easements donations and community support for reserves parkland trails waterfront facilities and scenic and historical venues. Community-based partnerships and public access including fishing hiking and camping and other low impact activities offer a way for ordinary citizens to connect with the outdoors and with conservation efforts. Financial support through favorable taxation State Bonding (e.g. Land for Maine's Future) and public and private donors makes this possible. Both healthy watersheds and a landscape-scale approach to conservation are needed to insure continued public access to the natural places in every state. TU's Land conservation programs strategy is to protect intact habitats reconnect them to surrounding areas and restore degraded habitats so that they again support healthy populations of fish and wildlife. It is also essential that we sustain today's conservation gains by engaging training and empowering the next generation of environmental stewards through educational programs and outdoor activities. Faced with hydro power licensing issues we must provide alternatives both for power and habitat preservation as does our local Damariscotta Mills Fish Ladder restoration which involved TU the Damariscotta River Association and the State of Maine among others. I thank you for your efforts.

I am writing to offer support for community-based strategies and activities that can help make America's Great Outdoors (AGO) Initiative a success. I am a Life member of Trout Unlimited (TU). In addition I am a Life Member of the North American Fishing Club a member of the Federation of Fly Fishers Secretary of the Board of Directors of Potomac Riverkeeper and a member of two watershed organizations in West Virginia where my wife and I have a second home. For the latter two organizations I am heavily involved in stream monitoring as a WV-certified monitor and various other activities related to conserving protecting and restoring the two watersheds. My experience has shown me that a community-based approach involving working partnerships with appropriate local regional and national organizations is a viable way to connect people with the outdoors and conservation efforts. I am pleased to see this theme echoed in the President's memo on the AGO Initiative. Unhealthy streams and rivers cannot support healthy populations of fish and wildlife or provide clean water for drinking and recreation. Thus it is essential that we not only sustain today's conservation gains but also work towards further gains. I believe that this can be done by engaging the next generation of environmental stewards through educational programs and outdoor activities. Each of the organizations that I mention above are involved in such efforts in various ways. Working together we can develop a strategy that achieves the goals of the AGO Initiative. Building on the projects and programs of Trout Unlimited and the other organizations will help implement I thank you for your efforts and look forward to working with you as it develops.

(cont.)

I was born and raised in Vermont. I spent two years in Nevada and Arizona as a missionary for the Church of Jesus Christ of Latter Day Saints; other than this time out west I have lived my whole life in Vermont. I spent a lot of time staring at screens of different kinds while growing up (TV computer) and although we went camping fishing and hiking I didn't develop an appreciation for the outdoors until after high school. I see now the value of our Great Outdoors and hope that that appreciation could be fostered in many more hearts than is currently the case. Much hard work and effort will be required of all of us but I believe that the results will be worth it. **** Of special interest to me is having more self **** sustaining wild trout habitat as well as more habitat for grouse woodcock and waterfowl. Please help us to not only save what we still have left in our great places but to restore our backyards to something that we can be proud of. ***** I can only imagine the hard work and effort that you must put into this. Thank you for doing your best.

My family and I believe that Trout Unlimited is a prime exemplar of true balanced use of our natural resources.

Secretary I have been a member of TU for the last 2 years and have been impressed with their attention to conservation issues. This is a great organization that is focused on conservation from the most local level there can be - the local chapter of guys and gals taking a Sunday afternoon to haul tires and beer cans and shopping carts out of a local stream (by hand) all the way up to projects on the scale of dam removal. The attention to every level of the environments we work to maintain or restore is the only way to ensure success with something as daunting as conservation on a landscape scale. Please read their words below and let this great organization and our officials help with the AGO.

Trout and Salmon need clean and plentiful water resources.

TU's mission like my own is to conserve protect and restore North America's trout and salmon fisheries and their watersheds. As a native of Colorado north of here I know you understand this. I personally conduct on-stream demonstrations in micro-fauna and trout diet. By employing a landscape-scale approach to protect reconnect and restore riverine habitats and sustaining of the AGO Initiative. If I can be of any service in this endeavor please contact me.

Discussion Question 1

Written & Online Comments

(cont.)

You have got to be kidding!?! I am writing as a member of Trout Unlimited (TU) to protest your plan to implement the "America's Great Outdoors (AGO) Initiative". We do not need the federal government to spend any additional non-existent dollars on these proposals. The country is broke and as responsible citizens we continue to gladly rely on private donations rather than see irresponsible fiscal themes echoed in the President's memo on the AGO Initiative. It is essential that we sustain today's conservation gains by engaging the next generation of environmental stewards to voluntarily contribute to our educational programs and outdoor activities and additionally discourage them from becoming increasingly dependent on big government. We will pledge our own funds to preserve our own selfish interests thank you. As conservatives we privately engage the next generation of environmental stewards and sustain our conservation legacy. For example TU has worked to educate students about water quality and freshwater ecology. Building on the projects and programs mentioned above will help us to privately implement our activities. Please use any available federal funds should they ever become available to serve the truly poor thank you. It would be a travesty to waste money to directly support the lifestyles of the well-heeled members of Trout Unlimited.

I am and/or have been a supporting member of several conservation-purposed organizations. While a number of such organizations have had success in supporting the maintenance and revitalization of their focus species none appear to me to have had the broad based impact on multi-use initiatives as has TU. And who in their right mind can minimize the importance of clean water on quality of life and life itself? Indeed a "river runs through it" with "it" being the lives of every American citizen. Building on the projects programs and philosophies mentioned above will help implement the activities to make the AGO initiative a success.

The Middle Rogue Chapter of TU takes a hands-on approach to improving habitat through tree planting and stream improvements as suggested by the Oregon Department of Fish and Wildlife as well as working with other groups and raising funds to pay for heavy equipment when required. For example dam removal on the Rogue River here in Oregon will provide safe passage for upstream migrations of salmon and steelhead and more importantly will provide safe return of endangered silver salmon smolts as they return to the ocean. We also look forward to the removal of the Klamath River dams which are a major impediment to returning salmon and steelhead trout. For example the Middle Rogue Chapter has worked with Oregon Department of Fish and Wildlife in teaching freshwater ecology by raising trout in classroom tanks and taking field trips to release them into the wild as well as teaching "Angler Education" classes to 5th grade classrooms throughout the area.

We must act to protect intact habitats reconnect them to surrounding areas and restore degraded habitats so that they again support healthy populations of fish and wildlife. . . To engage the next generation of environmental stewards and sustain our conservation legacy youth programs like Trout in the Classroom and service learning opportunities are critical. For example Trout Unlimited has worked with the EPA to educate students about water quality and freshwater ecology. I thank you for your efforts and look forward to working with you as it develops.

(cont.)

As a long term volunteer with TU and the U.S. Forest Service I lead volunteers into the wilderness twice each year. We repair watershed damage do fish and wildlife counts and build exclusion fencing which keeps grazing cattle out of the Golden Trout spawning areas. This is only possible with a cooperative effort between the Governments (State and Federal) the cattle ranchers and T.U. volunteers. . I thank you for your efforts and look forward to working with you as it develops.

One issue that is very close to home and my heart for me is the Marcellus Shale drilling in PA. This drilling poses an immediate and unmeasurable threat to lands and wildlife of PA. Someone must set new standards and procedures to eliminate the threat to our great outdoors.

It is not enough to protect individual blocks of habitat; we must reconnect them to surrounding areas. For example, dam removal on the Penobscot River in Maine will reconnect hundreds of miles of habitat. Where habitat is impaired, such as the Driftless area of Minnesota, Iowa, Illinois and Wisconsin, we must restore it. For example, TU works with programs like Cooperative Watershed Restoration, National Fish Habitat Action Plan and the Farm Bill to improve in-stream and riparian habitats.

ONLY A HOLISTIC APPROACH WILL DO.

Our natural world must be protected and kept as pristine and viable as possible. All life on Earth is inter-connected, and the quality of our lives depend on the health of our ecosystems and wildlife, who play important roles in the natural balance of Nature.

Just as I am thinking of my children's children, I pray you are also. We have to leave a legacy of understanding that we did what was right for their future.

This is a great idea. There are many capable people who I'm sure will bring great ideas to the table.

Please support these efforts so that our children and grandchildren will have these treasures as we did.

I think putting a stop to the ongoing consumption of our undeveloped and wild areas by urban sprawl needs to be curtailed somehow. Bring communities and suburbs back from the edge of decline, that would make more sense and energy savings.

The future of our human race depends on our actions and our responsibility to our earth and all that inhabit it. We must be stewards of this precious land that we all need to survive on.

Though not a US citizen myself I nevertheless regard the the magnificent parks, refuges, national forests and public lands in the USA as part of my heritage, particularly in this shrinking and so-called "globalized" world. Comprehensive conservation of our natural habitat is important to all peoples.

(cont.)

Our national landscapes are a great part of our character as a nation. We cannot afford to let them be diminished, because it will diminish us as well. The idea to preserve special places and wildlife was one of this countries best ideas.

I suggest that you publicize the benefits of establishing CONSERVATION EASEMENTS ON PRIVATE lands. I find that most people do not know or understand the benefits of such easements. If you will highlight them, more folks will help in conservation.

We were afraid that the Obama Administration was going to follow the Bush Administration's total disregard for our precious wildlife refuges, parks, wilderness areas, and our entire environment. We hope this Initiative means that there will finally be a real change.

this is important to me. I want to leave this as a legacy for my children.

Our nation needs this initiative!

This is a thrilling start to the preservation of many species and habitats. I implore you to continue moving in the direction with a strategy that will protect and save our great outdoors, the wildlife and their habitats. I truly believe it is crucial to the well being of all Americans to keep our natural world healthy and vibrant!

As someone who has visited several of our wonderful national parks, this initiative is especially worthwhile and vital to our nation.

I would like to incorporate school people, students and teachers, probably High School and College ages, to be in programs of work-study projects.....to assist in repair and maintenance and stewardship of local parks, rivers, creeks, oceans, habitats that need attention...this could be a 'for credit' program so the monies needed could be lessened some what.....thanks for doing good things for where we all live...intribe,kathy

Our world is a gift that we shouldn't waste! No artist could rival nature's brush with landscapes or wildlife. It's too precious not to protect!

This effort will positively impact our lands, our citizens and our environment for many generations to come and will be a great example to other nations in protecting and preserving their precious natural resources. I deeply thank you for both your awareness and willingness to address this issue that is of concern to all Americans who love the natural world.

I look forward to seeing your good work in our great outdoors!

We are the caretakers of this land and its waters. We can do no less than cherish this commitment for the generations to follow.

(cont.)

It will be the single-most important initiative we undertake in order to secure the future of our natural world.

It's truly an exciting time, to be working toward a comprehensive plan that will protect and preserve our glorious wild spaces for generations to come!

The protection of the natural world has always been very important to me as it should be with everyone who cares about this planet.

We can't get it back once it is gone. The earth, land, wildlife, the great outdoors, obviously means a lot to a lot of Americans. Please protect as much of it as you can.

my family and extended family make use of our state parks and camping areas every year as a reasonable and healthy area to get together explore and make memories. Please do all that you can to keep these wild areas available and unspoiled

wild horses and burro's should be included they need to have their land returned to them also so they can thrive.

Our national parks, (wildlife) refuges, Florida's national forests, and public lands all across this beautiful country represent the best of America. Thank you so very much in advance for your valuable time spent considering my comments with an open mind and understanding of nature's needs. God bless you and America!

There is nothing better to spur the imagination for our young minds than nature and the great outdoors. Let us keep it intact for the next generation.

I take advantage of the parks and waterways around here all the time. I'm wondering how my places can sustain a large growth. We definitely need more opportunities. Valley Forge Park, for one, has gotten so crowded it is hard to enjoy the nature sometimes on the weekend.

Watersheds and wetlands, wildlife and ocean creatures are far more important than politicians!

We must protect all these beautiful places, and animals that reside there

I am a Kindergarten teacher, and I trust that you will do all in your power to leave my students and their unborn children a healthy intact natural environment. Thank you!

I thank you for your time,,,,,please try to help keep profiteers and bad management from mis using the land and harming environment and species,,,It is time for more protection for our fragile earth,,,Do all you can and thank you,,,!!

Discussion Question 1

(cont.)

After a wonderful few days in the Grand Teton National forest and Yellowstone National Park in mid-July this year with my 13 year old grandson tagging along, I cannot imagine losing any part of this beautiful country to satisfy the almighty dollar. Future grandparents should have the opportunity to show these beautiful lands to their grandchildren..

The future of our ecosystems, our wildlife, and our human communities depends on the actions toward conservation and preservation that are taken now.

PS Nothing is more important in the long run than taking care of our home, the earth.

I have lived for over 20 years in three of the great National Parks, Olympic, Mount Rainer, and Sequoia-Kings Canyon and I know how grand they are and how vital to our citizens' future they are. So. please take heed!!

I also must state the obvious. These are PUBLIC lands. These wonderful places must always be managed for the PUBLIC, with the PUBLIC's interests held in priority consideration. Our public lands must never, never be sold or leased to private enterprise. Private enterprise, especially big corporations hold one primary goal, first and foremost, and that is to exploit resources for their own profit.

Please make it possible for our future generations of children to love the same things that we have loved and to learn to live with nature and not to destroy. We have already lost so much.

Do not permit any mining, lumbering, drilling, hunting, snowmobiles, ORVs, etc., in these refuges...only hikers and backpackers, birdwatchers, and the like. Thank you.

The tradition of maintaining a strong stewardship of our precious national treasures is something we should be proud of. We cannot let down those who let us inherit these treasures by neglecting them now.

We need to preserve them not only for ourselves, but for future generations. Why should we deny them such beauty, education and pleasure?

I am thrilled with your Initiative. Nothing is more important to me than conserving and protecting our land, water, and wildlife. They are the foundation of our physical and spiritual well-being.

For years my husband and I took our three daughters backpacking in many of our National Parks and Wilderness Areas. We became a very close family, learned to truly appreciate these treasured places, and created some of our most precious memories. I want this to be available for future families in America. Therefore,

As our population grows and global warming looms, our public lands must be able to withstand and survive enormous strains.

(cont.)

Our forefathers had the vision to set aside great tracts of land for parks, refuges, national forests and public lands so that a way of life could be preserved through the ages. These parks, refuges, national forests, and public lands represent the best of America.

I have just returned from a vacation in several national parks. Something that is a constant in the national parks we visit is that people stop -- wherever they are -- for wildlife. Watching wildlife in a natural environment is a big thrill for people. The biggest thrill of my family's just completed vacation was seeing Kaibab squirrels on several occasions at the North Rim of the Grand Canyon. Wildlife needs protection, more than ever. The fact that we saw these rare squirrels (not having seen them on two previous trips there) tells me that they are getting some necessary protection. Not all creatures are so fortunate. We must act now to conserve the majestic landscapes and diverse wildlife they support.

We are the keepers of this great, wonderous country...we cannot let corporate interests destroy this precious gift!

I live in Moab, Utah and realize the need for a cohesive program as I have seen tremendous changes in this area now that it has been discovered.

I have enjoyed the great outdoors all my life. I hope my grandchildren will have the same privilege. That would seem to be in our hands together.

Our family has owned land,since 1947;now in a land trust, on the North Fork of the Flathead which is only 3 miles from Canada.It is a refuge for the entire family every summer.

Being a native Michigander, preserving our state's amazing natural resources is a high priority for me. Last summer, I visited some of the few large tracts of remaining prairie grasslands in our nation with stops in Oklahoma, Kansas, and Nebraska. Every effort must be made to save these now tiny pockets of our nation's heritage!

I believe public lands number one priority is conservation. All life deserves to exist & when the environment is safe for wildlife, its safe for us too. We should consider ourselves guardians of our lands not abusers of it.

Nothing is more important on our planet than the amazing natural world we live in . We must enhance its beauty and integrity for the health, benefit, peace and enjoyment it gives us all!!!!

Yes, this is not only ours, but theirs...the generations to come. Our american grandchildren and great grandchildren. Let's be remembered as Heroic, the generation that made the decision to save our Wilderness. This is our moment. Progress through Preservation.

As a Wildlife Scientist with 47 years of experience in research on the behavior and ecology of endangered species, I know the importance of protecting critical habitat for wildlife, while ensuring safe and peaceful wilderness recreation for future generations of Americans.

(cont.)

This is a very important issue to me personally. I am an immigrant to the US-- we came when I was 7 years old. At that time I wanted to see Yellowstone and Disneyland. Well, I have been to both many times (as well as numerous other national parks and other "wildlife" areas). I have a son now, who's 8, and he has been to several national parks (including Yellowstone), but has never been to Disneyland (I'm not sure he even knows it exists). The point is that I believe that the national park systems (and I include other "wild" areas) are crucial to what we are as a nation and what is important and significant.

My father spent his entire work life in the Upper Peninsula of Michigan, working as a state forester for the Department of Natural Resources. My brothers and I had the unthinkable good fortune to grow up in fairly pristine nature. One of my brothers became a wildlife biologist and spent the last decade working with the California Condor restorations project. To us it feels like protecting our natural lands is like protecting our true mother. Please take this opportunity while it is in your good hands to make policies that will value what is truly irreplaceable - and that is ecosystems that support so many wondrous lives.

Please protect our outdoors for us and the animals. It is a place of mental relaxation... a place for all to enjoy...God bless

As a National Park visitor for over thirty years, I am excited that you are considering a broad-reaching, inclusive plan for them.

For the most part, individual species will continue to reproduce if given the habitat elements that they need. As these elements become fragmented a landscape-scale conservation effort will be required to maintain continuous access.

I grew up in a family treasuring our outdoors and wild spaces; camping 'rough' was a regular part of my childhood, and I can never thank my parents enough for this.

As a child, my family camped in America's beautiful outdoors, and I naturally fell in love with its wonders. From Michigan -- to Bristol Bay, Alaska -- to the Gulf of Mexico,

As an active user of federal and state lands for camping, hiking, skiing and just plain enjoying, I want to thank you for launching the Initiative. One more thing I do want to add is the tragedy of the cattle grazing in our national forests. They ask camper and hikers to tread lightly, pack it and pack it out. The cattle are destroying beautiful areas all through the forests. As a resident of Montana I am appalled at the devastation they have created. Cow patty's everywhere, trampled grasses and flowers, destroyed stream beds. This issues should be a priority!

After just returning from a visit to Alaska and visiting the Tongass National Forest, and being awed by the beauty of the glacier and environs there, I feel it is essential to continue to protect our National Parks and Forests.

Discussion Question 1

Written & Online Comments

(cont.)

My family and my wife's family spent most summer vacations in the National Forests. It was a treasured part of our childhood and we should ensure future generations have the opportunity to do the same.

It makes me so happy to learn that the Obama administration values our wildlife and wild places, and intends to conserve them. What would our country be without these beautiful wild areas and creatures that bring beauty to our lives.

I teach kindergarten students. We use outdoor recreation areas to learn about the water cycle, habitats, animals, plants, and the connection between people and the natural world. My family also visits parks and public lands for our vacations. We love to camp in the outdoors.

I live in a rural area. and try to implement integrated landscaping not only in my own backyard, but in others who ask me about landscape design. We almost lost a state treasure this year, our Alamo Lake. People were horrified to hear that the state "misappropriated" monies that were left to the park for its continual operation. My grandson has already missed out on so many treasures that we used to take for granted

I have nine grandchildren. My biggest hope for them is that they will be able to enjoy our wild spaces as I have. I want them to hear bird song, to see a fox or a whale, or even a wolf someday. I hope that they will have forests to explore, clean air to breathe, and clean water to drink.

I am 73 years old and as I begin the last leg of my life on earth, I wish to At my age I can see more clearly the needs for the future. I was born in Wyoming and have seen a dramatic change in the exploitation of wild places. An example of this is the need to expand the greater Yellowstone to the whole ecosystem and not straight line boundaries. National forest land should be included in the national park and additional lands purchased to capture the essence of what is need to be preserved.

My wife and I love our National Parks and have had the good fortune to visit some of them. We value them and want to see more energy, thoughtful planning and money put into these "forever jewels" of our nation. It would be wonderful to regain the spirit of Teddy Roosevelt and the resources that were put into forming and maintaining these wonderful and awesome places.

I have had my breath taken quite literally away so many times in my life by the natural beauty of our National Parks and natural preserves. No picture, no video, no second hand account and no great numbers of them could prepare one for the grandeur and the sheer immenseness of the beauty and majesty of those places. Those moments and that pristine majesty are priceless!

Conservation is not at the bottom of my list of important issues facing not only our country but the world. Those who want to leave every decision to "the market" would be living in a very different world now, if it were not for the likes of Teddy Roosevelt, Ansel Adams, and others like them in bringing the necessity of preserving our outdoors to the public's attention.

Discussion Question 1

Written & Online Comments

(cont.)

We have no greater national treasure than the beauty of our wildlife and the land that supports them. I suppose that I am a proud environmentalist, but each meaningful time in my life I can honestly say was inspired by the beauty of nature. I want my children and grandchildren to experience that joy. Please continue with a strong and protective plan that will insure the future God's creation.

I am incredibly excited and pleased that the Obama Administration is launching the " Initiative". I think protecting America's wild spaces and natural resources is essential for Americans now and future generations. I am a strong supporter of President Obama and I hope the Obama Administration will continue to implement creative, forward thinking strategies such as this one.

I have seen the beauty in Yellowstone National Park and Rocky Mountain National Park both many times. When I was young my parents would take us to the mountains to observe the cute little chipmunks and the beautiful elk and deer and big horn sheep. They taught us to respect all of God's creatures including wolves and bears and coyotes. Why is it that so many want only to kill these majestic animals?

I have loved every visit we've been privileged to make to our national parks, as well as to local and regional conservancy places. These are sanctuaries of beauty and healing, absolutely irreplaceable treasures of our nation. It gives me joy to think of returning the wolf to balance the ecosystems of Yellowstone and other western parks. Even to be part of rescuing the bluebird by having a nesting box in our backyard is hopeful. I hope that we will learn to protect prairie dogs and other smaller animals, birds, fish, and plants that are part of the interconnected wholeness, the health of our country. Trees, intact wetlands, healthy rivers--all help us have the flexibility and resources to withstand climate change.

I am a vagabond/photographer/writer and since 1998 have been traveling the country. I have visited every state, have been to nearly 30 National Parks along with Historical Sites, National Monuments and other places of interest. This fall I will embark on another lengthy (4 to 8 months) trip around the country visiting another 85 places of interest, including 60 National Parks, Monuments and Battlegrounds, Wilderness areas and National Forests. As one who has had the privilege to have seen so much of this beautiful country, I believe it of utmost importance that these places be preserved for the enjoyment of future generations in as pristine condition as possible and more lands designated for preservation under the umbrella of the National Park Service and National Forest Service. We must preserve these lands for the Seventh Generation.

Discussion Question 1

Written & Online Comments

(cont.)

I grew up in Cleveland, Ohio, where the locals would brag about the "emerald necklace" of interconnecting parks and woodland corridors that snaked through the city and its surrounding suburbs. As it turns out, what was a nice thing for dayhikers to have is a necessary thing for the wildlife to have, and if you've ever been to Cleveland, I'm sure you've been impressed by the diversity of wildlife in the greater metropolitan area. The wildlife in the great wildernesses of the West do not have such different needs: they too need open spaces they can roam, and passable corridors across entire regions without human blockades. Just as no single suburb of Cleveland could have implemented the "emerald necklace" of parks there, no single state or local authority can implement an integrated policy across the publicly held lands: we need the Federal Government to be the neutral force in charge to keep the public land strategy coordinated and effective.

Almost 75 years ago the pioneering conservationist and ecologist Aldo Leopold called for a new "land ethic", arguing that not only land managers but also the American people needed to reconnect with nature and understand the interdependence of all living things. In spite of Leopold's efforts and the contributions of those who followed and fought to protect our soil, water, air and natural resources we find ourselves a decade into the 21st century still struggling against powerful political interests to establish a clear environmental policy with any kind of widespread public support. Our present course is unsustainable and irresponsible. That is why I want to As a wildlife biologist and park naturalist I have spent the last 12 years monitoring threatened and endangered species, restoring habitat and educating the public about conservation issues. I have personally witnessed the transformation that can occur when people make a direct connection to nature and experience the wonder and beauty of our public lands.

We are so thrilled that we have a "Green-Thinking" Government. Since President T. Roosevelt and the Naturalist Muir, our protected lands and wildlife flourished. The overpopulation and the pollution that goes with it, is threatening these wonders. Delani National Park takes the tourists sightseeing in a little train, so the cars of the visitors don't disturb wildlife and damage air quality. Maybe this process could be implemented in other National Parks also. The Great Smokey Mountains National Park is one of the most polluted outdoors in the country, There is bumper-to-bumper traffic, I think that it is the most visited place in the Nation. If this park would follow the example of Delani, the pollution would be cut down. Also, charging an entry-fee would help to hire more employees and create more guided tours, lectures and other educational efforts. The Everglades National Park was a joy to visit, but lately it has regressed, and there are not as many enjoyable programs as there used to be. The visitors especially enjoyed the tour through Shark Bite that started from the Visitors' Center in Flamingo. All that is gone now, even though it could bring in revenue and delight the public. The little train was taken out years before the hurricane struck.

(cont.)

I personally have experienced the breathtaking beauty of our nation and it's wildlife because of these protected areas. Treading lightly in remote wild lands and leaving no trace is the hallmark of backpackers and hikers. These should be the hallmark of our government to preserve not only the lands, but the wildlife that inhabit these areas as well. Now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change.

In addition, now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change, pollution, mineral extraction, population pressure and poorly planned development. This initiative must include the conservation of large, connected landscapes to help build resilience to the impacts of climate change and other threats. We must act now to conserve the majestic landscapes and diverse wildlife they support.

It is difficult to overstate the importance of this initiative at this time in our history. Our parks, refuges, national forests, and public lands are home to some of our our most treasured and historic places. Now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change. We share a responsibility to leave the next generation healthier and better connected to the natural world. Thank you again for having launched this important process, and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

I am very happy that that you have launched the Initiative. This may be one of the most important things that you do for the future of the America. To ensure the existance of the best of this country for our children Please make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality. This initiative must include the conservation of large, connected landscapes to help build resilience to the impacts of climate change and other threats.

I take a great deal of pride in our treasured landscapes and share a responsibility to leave the next generation healthier and better connected to the natural world. I thank you so very much for launching this important process and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality. We will be judged by how we treat each other AND our environment.

I am writing to thank you for launching the Initiative and think it is a great idea.. I heard about it through my support of Defenders of Wildlife. I also agree with thier comments:

We need dedicated resources to protect wildlife.

Excluding the Gulf and other shoreline areas from offshore drilling for gas and oil would go a long way toward the goals of your policy.

Discussion Question 1

(cont.)

Generations to come can enjoy the beauty of our parks and the diverse wildlife that they are comprised of.

friends of mine have just returned from 4 weeks in your wonderful National Parks, including Yellowstone, and sent me pictures and descriptions of the beautiful Blue Ridge and other spectacular places. At the same time, the tragedy with the bear attacks was reported in Australia on the main TV news services. Is there not some way you can deal with this without killing a bear which, seen from downaunder, was living naturally and caring for its young. Anyway, on the positive side, I urge the USA, as world leaders, to employ real innovation and dedicated resources to conserve and protect your land, water, and wildlife.

It may well be that I will have memories of the South Dakota Badlands, of the Black Hills, and Yellowstone and Glacier National Parks to treasure and might not again have the time or resources to make another visit there or to another park, forest, or other public land. I am, nonetheless, very pleased that you have launched this important process and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality. The benefits will belong to many.

Wild places are important to future generations and the earth's biodiversity.

It's time to save for the future. Our parks, National Wilderness areas, refuges, national forests, and public lands represent the best of America.

Our precious wildlife, forest, lakes, oceans, and land rely upon humans to keep it safe.

HAVING EXPERIENCED A WONDERFUL TRIP TO THE BAD LANDS, BLACK HILLS, YELLOWSTONE AND OTHER WESTERN SITES WHEN I WAS EIGHT,

We must protect our national treasures - INCLUDING OUR WILDLIFE.

This has been too long neglected. Our parks, refuges, national forests, and public lands represent the best of America, and in some cases, the best in the world.. We have seen too much of this in the recent past. Without a plan, these environments are likely to be grossly exploited, and in the end, will lose the character for which they were preserved in the first place. During my life I have been fortunate to visit many of our National Parks and wildlands, and I am thrilled that you have launched this important process. I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

THANK YOU! Launching the Initiative is a innovation to dedicate resources to conserve and protect our land, water, and wildlife.

Discussion Question 1

Written & Online Comments

(cont.)

They are home to our most treasured and historic places, and a too-rapidly dwindling source of wildness.

Or national parks are a precious commons that should be protected at all cost.

I love the wildlife and want my children, grandchildren and great grandchildren to have the same privilege. Without your help, all this beauty will disappear.

We need to leave something worthwhile for future generation to see and admire. There is nothing better than nature.

From childhood to adulthood, few things have provided me the comfort and solace our great outdoors has. Please please please make it a priority to ensure it is here to do so for the ones that follow...

And remember, we are only borrowing our Mother Earth from our GRANDCHILDREN and it is our responsibility to return her in better condition than we received her. May you walk in beauty

Our family really values our public lands and hopes the govt. will be a good steward for future generations.

I am very much encouraged by the recent decision to once again protect our wolves in the West. It is an important and welcome change from the way the administration seemed to be heading -- away from environmental improvement and a disregard for the welfare of all wildlife. Every living thing on our planet has its own crucial place, and we should do everything we can to avoid losing any one species before we get to the point where our own species may be endangered! Thank you for considering our concerns as citizens.

PLEASE LISTEN TO THOSE WHO LOVE THE EARTH AND WANT TO PRESERVE ITS BEAUTY AND WILDLIFE, NOT TO THOSE WHO WANT TO EXPLOIT IT FOR THEIR OWN GREED!

THE ___ FAMILY WORKS CONTINUOUSLY TO PROTECT OUR FRAGILE PRECIOUS ENVIRONMENT AND FEEL GRATEFUL TO "DEFENDERS" FOR THEIR GENEROSITY, VIGILANCE AND EFFICIENCY.

I will continue to send letters like this and sign petitions until I'm sure that my nieces, nephews, and their children will always have a beautiful world to live in. The human mind and soul needs more than the basic food, clothing and shelter to stay healthy. Without wild spaces and biodiversity, our planet will become a man-made prison - a global "ant hill" in which human life becomes nothing more than working, buying, procreating and fighting wars. To keep alive the "better angels of our nature", it is vital to respect, cherish and protect all creation.

The administration is on a positive roll. You are encouraged to continue to move forward with all due haste with a keen eye on preserving our precious earth and its inhabitants.

Many Americans like myself take enormous pride in the great and beautiful landscape of this country. When we elected President Obama we knew he was very serious about preserving our environment for future generations.

I personally support the efforts of DEF to protect and enhance our natural environment. I know you believe in the statements in this letter, too, and will do your utmost to see that they become reality. Thank you for being an ethical and idealistic president.

Dear Mr. President, The Great Outdoors, Wild Life, Great Water Ways, Lakes and Streams, Purple Mountains Majesty, these are the amazing things God gave us to visit and be awed by. I want my son to be able to enjoy these things as a youngster and be able to teach his children some day the importance of these great and amazing things ! Human greed has slowly put these great things in critical circumstances and I think that is so sad. It makes me tear now as I am typing this ! My Grandma was my girl scout leader when I was young and taught the importance of Nature and animals and to RESPECT them ! Camping, Nature, those are things that help to keep sanity in crazy times! They say City Livers get depressed being around concrete, and skyscrapers ! They say everyone needs nature in their lives or you could seriously go crazy ! We need nature and wildlife and so do future generations ! Sir, PLEASE Do everything in your heart and soul to keep these great things of Nature and Wildlife not only safe but growing and thriving and increasing in sustainability ! Please ! It is so important, without nature I know I would go crazy and be very depressed and so sad that future generations would not know what a forest or animals were ! God Bless America !

America and please forgive me for stating the obvious is enormous. Our country has an example of every biome and is home to species that can be found nowhere else. Our country biologically speaking is very very special and is unique in the world. I should probably state now that I approach the issue of conservation from the standpoint of a biologist well a biology student but it's essentially the same mindset. My ultimate goal as a biology student is to get my doctorate in astrobiology which I assure you is a real thing. I want to study life off Earth which at this point consists of finding places where it could develop in the first place (which is proving something of a challenge) and finding analogs of harsh extraterrestrial environments on Earth. From the vantage point of an aspiring astrobiologist life on Earth is so precious as to be invaluable because it's the only life we know of. Certainly it is incredibly unlikely that there is no other life in the universe but it is definitely likely that life on Earth and life off Earth did not develop in the same way. Our whole evolutionary history is special; it's ours and ours alone. If we don't protect our country's wildlife we can lose an important part of ourselves. To ensure that our country retains its biodiversity and remains beautiful and unique please consider these priorities for America's Great to help foster an ethic of conservation among Americans

(cont.)

I have seen tiny parks created out of small spaces on Long Island when I lived there. It was amazing how many people used those tiny spaces all of the time. People NEED to be connected to the outdoors and nature for their physical and emotional well being. This is a perfect time to maintain create and expand the parks systems; as President Roosevelt did creating JOBS that are much needed for many in this country.

Abolish and rewrite the old mining laws of the 1800's which allow widespread destruction and pollution with no restoration requirements. Abolish mountaintop removal and stream filling forms of strip mining.

I grew up in a family which took our vacations camping in both national or state parks in the West. When I married my husband and I took our children camping in national and state parks and later in BLM campgrounds across the country.. Those children are now grown and they take their children hiking and camping in national and state parks wilderness areas and BLM areas. It's important for us as a nation to keep these areas available for posterity so that they may know that we share this planet with other life than just human. We took them to the high mountains and to the oceans. They grew up loving and cherishing these very vital areas.

Our forests and national monuments are precious treasures that can never be replaced once they are gone.

It really hurts me to see so much of the countryside I love disappear.

Not only have I enjoyed hiking in our wonderful national parks but so have my children. I want our national parks to be better protected so that my grandchildren can enjoy what we have.

I believe america can save itself from itself but someone has to take a stand NOW...I believe this is the generation to do it and it starts with this presidency... Thats .why i voted for you because i know we can.

SINCE YOU BECAME PRESIDENT MORE WOLVES HAVE BEEN KILLED THEN IN THE ENTIRE 8 YEARS OF BUSH !Yes the states are allowing this but you can take action to put an end to this. And you can easily stop all killing of wolves on all types of federal land period. Also your Sec. of the Interior is destroying the wild horse herds of America. RESTORE PROTECTION AND STOP ROUNDING UP THE WILD HORSES NOW. These are my top priorities plus the list below. Dare to be bold and make hope a reality instead of a hollow slogan.

Time that my husband and I spent in our National Parks and national Forests are some of the best memories I have of our lives. I pray that everyone can enjoy our great outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

Some of my fondest memories of childhood have to do with the outdoors. I got the chance to go to camp several summers and sleep in cabins then tents and finally leanto's as I got older. Surrounded by the wonder of the woods and the sounds of nature lulling me to sleep at night I was instilled with a lifelong love for the outdoors so much so that I became an academic botanist that has done research on rare and endangered plants. These days I am trying to educate the public on the negative aspects of invasive foreign plants and the need to keep them out of their gardens as well as encouraging them to volunteer to help eradicate these plants from natural areas where they are altering ecosystems.

At an early age I was introduced to the wonders of our beautiful country and its National Parks. I have travelled with my children and grandchildren throughout the west. It is my hope that they will continue to enjoy life in the great outdoors of the U.S.

The most important thing we can do in our generation is make sure the planet is in the best possible condition for future generations. That should take priority over all economic concerns and everything else.

I have a personal connection to the Smoky Mountain National Park as well as Mt. Mitchell and Lake Jordan in North Carolina.

Our family has been enjoying for years the magnificence of our National Parks.

My husband and I have spent a lifetime of vacations at state parks and national parks. We consider this type of vacation the best kind of getaway. Our lives have been enriched by enjoying nature instead of crowded noisy cities. Now that we are over 65 and unable to do things like snow skiing snowmobiling water skiing backpacking and hiking we have at least those wonderful memories of vacations past and we can still relax and enjoy the state and national parks in a more laidback fashion.

I don't believe there is a better legacy we can leave our children than conscientious stewardship of our land. We are so blessed in the U.S. with natural beauty and open spaces. Let's keep that blessing intact!

For decades our family has enjoyed hiking backpacking and camping on state and federal public lands.

All these abovementioned points will lead to future generations teaching their children how to search for and watch Monarch butterfly eggs grow and turn into beautiful creatures that they can release just as I have taught my children. They will be able to know the beauty of a small stream and learning to fish with their Dad even if you don't catch anything but a good time and conversation with Dad. Walking in the woods learning about trees and animals before they become extinct the trees and the animals.... Thank you for taking the time to read this as well as for your leadership in shaping a bold conservation strategy for the 21st century.

(cont.)

I have always wanted to go to Yellowstone (after watching many nature shows about it) to personally see touch and experience its beauty. I have visited Muir Woods in Northern Calif. and was awed and inspired by the huge trees and the sounds of nature all around. I hope that every American will have a chance to visit these beautiful wild places that connect our spirits with nature now and in the future.

I've had the privilege of visiting and enjoying our National and State Parks and want future generations to have that same opportunity.

For years our family has enjoyed the the beauty and grandeur of the great outdoors both in this country and abroad. We have fond memories of the Grand Canyon national parks in the U.S. Northwest and especially of the U.S. National Park in St. John U.S.V.I. We have visited there for the past 29 consecutive years and for many years have participated in the Volunteer Program on that island.

I have greatly enjoyed America's excellent wild places in my 47 years and I want the next generation to enjoy them too. Places such as the Roan Range Wild Horse Area in western Colorado Boundary Waters Canoe Area in northern Minnesota the Frank Church River of No Return Wilderness in central Idaho. And so many others whose character leaves one with a sense of being energized and recharged.

Summer camping and rafting in Idaho what could be better? Knowing that I and future generations can do this again and again. And that each time we will find wildlife and clean air and water.

For many years I have enjoyed the parks.

By the end of 2010 I will have enjoyed donating six weeks of volunteer effort in our national parks and national forests. Preservation of our public lands is one of my highest priorities.

Our great outdoors are so important to me and my family. We just traveled through Badlands Mount Rushmore Yellowstone and Grand Teton. Almost all of our vacations center around trips to the outdoors.

I came to this country over 40 years ago and the first chance my husband and I had we crossed the country camped in National Parks and admired the beautiful landscape. Later when our children were born we continued to visit natural and historical monuments and instilled in them a love for the country and for nature and wildlife. Although I have no grandchildren I still want the next generation to enjoy what we were able to show our own children.

My time in nature is my time to connect with God and to the interconnectedness of all life. It is the lasting universal heritage that we must preserve and that future generations deserve. Your dedication to the the principle of nature conservancy will be part of your great legacy.

Discussion Question 1

(cont.)

Our great natural landscapes are an attraction for foreign visitors as well.

Anyone who has visited one of our wonderful National Parks or protected areas has experienced the magnificence of so much of this country. This beauty is also important to our future and health as a society.

The Adirondack Park adjacent to my home serves as a wonderful template for preserving wilderness and a range of buffer areas. Come visit and enjoy what every American should know as their heritage. Watch the Ken Burns series on our National Parks then visit a wilderness area within one and understand the treasure that is America. Please please protect our natural environments our watersheds our clean air our biodiversity. Once tamed our wilderness is lost forever. Protect it from the pressures of industry and housing.

As I was growing up my family took me as often as possible to enjoy the great outdoors. We hiked the Appalachian trail. Did white water river rafting in many states. Camped and swam in our wilds. Keep the water mining of Natural Oil out of our protected lands.

Although some of the negative actions and destruction enabled and abetted by the previous administration has been stopped there is much more to be done to save and restore wild scenic special places that should be a legacy to future generations as well as an enjoyment for all of us now even those who have not yet had the opportunity to experience these special places.

Like millions of others my life and values have been deeply affected by my experiences growing up in an urban environment but with many treasured visits to our National and State Park Systems. As we urbanize we need the counterbalance of these preserved locations to stay in touch with something greater than ourselves. Lose the parks and the human race becomes more selfish. We have too much of that already. Please support the parks and our natural heritage at every opportunity. Help make us a better people.

Dear President Obama & company As a young active college student America's public lands are essential for me as a place of escape beauty and wilderness. Someone (who I've since forgotten) said it best when he noted that an American looking for beauty need not look outside his own country. Let's keep that truth alive and preserve our parks and public lands.

(cont.)

I am a recently retired American who has loved nature and the outdoors since early childhood. Memories include: huckleberry picking on dusty trails Priest Lake Idaho; exploring cliff dwellings in New Mexico and Arizona; wilderness hikes in the Sierras the Pacific Northwest the Southwest (as well as in Costa Rica and Peru); hundreds of hikes in state and national parks of California where I lived for over 30 years. Newly moved to Arizona my dashboard is already piled with City State and National Park receipts; I visit these areas several times a week often with my age 6 grandchild who already loves hiking climbing and camping and knows a lot of natural history. I find peace and perhaps wisdom through my frequent visits to protected wilderness areas. It becomes clear that each of us is part of an apparently infinite variety of plant and animal life earth and that this amazing creation earth life must be treasured and protected. We human beings don't have the right to destroy it through waste pollution and wanton development.

All of the above are excellent goals and should be pursued but ABOVE ALL ELSE protect all our current and possible wilderness from development mining and drilling.

I have firsthand heard people from other countries comment how surprised and delighted they are with the openness and variety we have in the United States. They are amazed at places like Yellowstone National Park where they can see nature and an array of wildlife. Even though they may have seen pictures of the Grand Canyon seeing it in person is aweinspiring. We are so fortunate to have such a majestic country with so many diverse regions. Each needs to be protected and preserved for future generations. We cannot sit back and wait for someone else to take the initiative. Five years ten years from now may be too late. Could you have predicted the Gulf oil disaster before it happened?

Allow protected wildlife to stay protected

When I need a break from my very busy life style I head to a National Park or quiet campground and trails. I am a community organizer. Between work and volunteer activities my days are very hectic. To reenergize myself I go to back country areas protected by government agencies.

Plus it creates jobs and we desperately need those now.

As our sons were growing up we spent time camping and hiking in many beautiful places in national state and local parks and the rural countryside near historic places.

I never had an opportunity to visit our great parks til I was in my 50's; but I knew all my life that they were worth saving for all humanity. Not just to be leased to ranchers or for oil drilling.
Thank you !

(cont.)

My favorite vacations have been in National Parks. Some of my greatest enjoyment has been watching wolves and bears in the wild in Yellowstone. My children grew up loving the natural world because of their vacations in National parks.

Recently I had the good fortune of hiking in Rocky Mountain National Park in Estes Park CO. I cannot imagine a world without that lovely example of nature nor should I try to. It's part of our legacy as American citizens.

It's great that this country's prominent politicians are showing some concern with ecological issues. We have so many beautiful places in this country that are all different. We are so lucky to be able to enjoy and protect these areas so let's make sure we do so.

I have three children and someday they will have grandchildren. I've raised them all to enjoy and cherish the natural world and we have spend many happy times hiking and camping. I think that preservation of our wilderness is not just a good idea. It is also vital to ensuring that our future citizens are aware of and can engage with the natural world. Our protection today is for their sakes.

Please continue on in the tradition of Teddy Roosevelt by safeguarding the outdoor space that is still left and restoring those areas such as wetlands that are so vital to our environment health!

All my favorite family memories from childhood and continuing into my adult life involve being outdoors. Camping hiking cooking over the campfire are all memories entwined with the feeling of closeness in my family and in the community. We must protect our outdoor areas and keep them GREAT so that future generations have the opportunities to make their memories as well.

I grew up traveling with my family on summer vacations to America's National Parks State Parks and various forest river and ocean areas. I learned as much about this country on these trips as I did in school.

Take immediate action to stop global warming which is destroying many habitats for wildlife. It's important to me that my grandchildren and their children to come have the opportunity to enjoy the many wonderous and beautiful places and the wildlife that inhabit them that I was fortunate to enjoy as a child. It breaks my heart that they are so rapidly slipping away from us. Our wilderness must be protected in order that the earth can repair herself. By fully funding land and water conservation fund perhaps the generations to come will be able to enjoy those things. Thank you for your consideration in protecting our wilderness and wildlife. When I was growing up my family spent summers and took small trips throughout the year to the Great Smokey Mountains. We enjoyed the rivers and lakes and all the amazing wildlife we encountered there. Today due to many factors much of that has changed and it saddens me greatly.

(cont.)

Dear Mr. President and Officials Having traveled most of my young adult years I can tell you what it is like to have seen Yellowstone National Park. Learning from the Rangers about the wildlife there and how to Respect these areas. I have seen Alaska and I cannot tell you how i felt when i saw my first Salmon fish. I was taken in by people who were Locals and they gave me tours of their area. They Loved where they lived and also respected the open space that we are so Blessed to enjoy to date. Mr. President and Officials What are YOU going to leave the next generation for them to see? That's why I am asking you to seize this opportunity to create expand You have the power to Tax companies to help fund what is needed.

A bold conservation strategy for the 21st century is of serious importance. Many people think the purpose of conservation is for pleasure and enjoyment of the outdoors. I feel and science is backing me up on this it is critical to the survival of the human race along with all the creatures we share this earth with. I lead weekly nature walks for children and adults. The wonder a respect I see in their faces reaffirms my commitment every week. We need the outdoors for our well being as well as our survival. Educating people on the importance of a clean healthy balanced world is vital to the future of conservation. Giving people a place to connect to nature close to their home and throughout the country will benefit all of us. Please make public land protection and expansion a cornerstone of our countries policy.

I was born in the beauty of New England raised in the beauty of the desert Southwest went to college in the beautiful mountains and Ponderosa pine forests of Northern Arizona spent a decade in the Midwest (Iowa) and now live near the Pacific Ocean on the beautiful California Central Coast. Each region beautiful in its own unique way and each deserving of having its natural beauty preserved for future generations to enjoy.

If earlier generations had not taken action to preserve our wilderness areas think what our country would look like now. We have a responsibility in these times to provide for future generations to experience America's natural beauty and not destroy it. Adirondak Park created by New York State is an example of action taken by one of the original 13 states to set aside natural assets for all of us to experience the natural beauty of the mountains for all of us. Future generation not only need new technology. They need a beautiful country in which to realize a balanced life in which they can raise their children and comprehend the beauty of nature.

I still believe in the hope you bring that we all can create if we allow ourselves to give up that hard shell of cynicism. WSe can still make a difference one tract of land @ a time.

I believe that this plan will also help preserve our planet and sustain all life for geenerations to come.

I spent some of the happiest days of my childhood in Sequoia National Park and the Kern River Canyon. I want my grandchildren to have the same opportunity to create beautiful memories of America's wild places.

I applaud your efforts in many areas of your Administration after stepping into the biggest mess from GWBush... My deeply felt request to Protect America's Great Outdoors you are the one that can stymie the selfish and thoughtless land mongers in our Congress. I Love America and All that We as Americans Stand for Please show the Universe YOU CARE!

Protect our current wilderness areas but also reinstate the government's ability to declare new areas as wilderness areas without building new roads or fullservice camping which harms the wilderness areas we are trying to protect

I personally find the natural beauty of the many places in this country so relaxing inspiring and uplifting that I am writing to ask you to take the following actions to be certain that these places remain unspoiled and are not destroyed.

Our nation and the world economy faces a difficult time. But during the last depression it was public conservation spending that helped pull us out of it. And the legacy Roosevelt left by wilderness and park spending is enriching our nation today.

Our future generations deserve to have the benefits of our beautiful outdoors to enjoy the same as it used to be in the past. Please keep greed from destroying it any further.

Keep Roadless areas intact Roadless

To me it is incredible that anyone could fail to see the value the necessity of conservation of our land.

Coming from Hawaii I see everyday the benefits to our economy watershed native species health and well being that protecting wilderness creates. The natural landscape is the reason why people love the place so much and when the wilderness is destroyed it leaves a scar on the land as well as our hearts.

The National Park concept first introduced in our country is an idea that makes me proud to be an American. I have visited all fifty states with my children and national parks and monuments in most of them. It's extremely important to me not only to protect what we have but also to expand the preservation and protection of our natural and historical heritage. I hope that my grandchildren will also be able to enjoy what I treasure. Climate change is already having an impact on wildlife so protection of habitat is also vitally important.

(cont.)

I grew up in the Black Hills of South Dakota. It is a wonderful place that includes the Mount Rushmore National Park as well as one of the most beautiful State Parks in our Nation Custer State Park. The Black Hills are the oldest Mountain Range in our Nation unique in the fact that they were formed from Granite Rock. It is a place that the Lakota Indians have always cherished as well as the many other people who have settled and lived there. I have been fortunate to visit all of the National Parks in the western part of the United States and have wonderful memories of driving through Buffalo herds in a jeep floating down Snake River with my husband and our 2 children looking for Moose then climbing through Bryce Canyon and finally driving to the Grand Canyon. We have so many treasured places in America where people can enjoy the land and animal life that lives off those lands. I am hopeful that it will be taken care of and preserved for our children our grandchildren and their grandchildren. Our environment and water ways are an important part of our legacy. They need to be protected and sustained through proper management and proper funding.

I have been very blessed over my lifetime thus far in being able to be around and observe the beauty of various ecosystems and their varying forms of wildlife (from the Sierra Nevada mountains to the Grand Canyon Puget Sound and the Cascades to the Sonoran Desert where I now reside about 1/2 mile from the Saguaro National Park East). Our children and grandchildren have gotten to observe wildlife in our front yard as well as in the park or in the nearest National Forest on Mt Lemmon. When we lived in San Francisco going to school we lived a few blocks from Golden Gate Park (an Oasis Retreat in the middle of that city) While there I tutored a boy about 10 years of age who had never been out of the city. As the world and our own countries population increases I believe that it becomes more important than every to preserve open natural spaces for people to connect with and enjoy. Please preserve as much as possible in as many areas as possible; our future generations will need it and thank you for it.

As a person who likes to vacation on MARTHA'S VINEYARD.....I think you have begun to see more of the value of conserving our Natural Environment. Nature is God's Gift to Humans helping us to continue having healthy mental conditions. Nature is also a gift to all other animals.....not only for their mental conditions.....but also for food. Without enough protection of our lands as well as our oceans we lose food and habitats not to mention oxygen and a calming environment. Please help us on Cape Cod and the Islands to protect our Lands.....our Ocean and our Sounds (both Vineyard Sound and Nantucket Sound) and our Bays too.....from overdevelopment. We may all suffer for it in the future. There are more wide open ocean spaces that will be of less risk to human life. The Wind Farm in Nantucket Sound may prove to be destructive to that tiny section of water.....and perhaps to all the human life in that area. We have many small aircraft ferries full of people and small recreational boats all over the Sounds. A few years ago I remember reading that an SSA ferry from Woods Hole to MV broke down in Vineyard Sound. It floated at the whim of the winds until rescued.....as any boat that has lost power will do. Imagine that happening in Nantucket Sound.....after the building of 130 wind turbines. Will Coast Guard helicopters be able to get between all the turbines to save human lives??? Will any rescue vehicles be safe from so many huge towers.....in high winds??? (We have high winds with some regularity way out here in the North Atlantic Ocean as we are.) Imagine a nor'easter coming through with 5570 mph winds or higher.....at the same time as an engine break down. Remember the deaths that occurred in NYC about 5 or so years ago when a ferry bumped into the wharf while docking? Quite a few lives were lost. I don't know what that dock was made of.....but turbine bases are cement !!! It can't be good to bump into one of those !!!! I do not mean to be selfish or dramatic about this.....as though we are the only people with these gifts. However we have such a tiny amount of land and water I am truly trying to have people in positions to help understand that we are being squeezed out. Most other states in America have much more in resources than we do.....(except maybe Hawaii.....as you well know !!!.....but even HI does have more land and ocean than we do). I hope you will understand what the Kennedy Family truly understood.....and took steps to protect. Our little bit of the world needs help to save it from a construction and destruction the might ruin us in less than 100 years. PS: I was on MV last Saturday. I didn't "get to see you and your family" on our rounds !!!! ;) I hope Sasha and Malia have had a chance to have a ride past the Bus Stand in Edgartown. There is a great sign there.....addressed to them.....painted by the "Y" kids. I think they should be able to take it home with them. There is probably a nice place on their playground.....or in a playroom.....or somewhere.....where they could put it !!! (They might have fun showing it to their children when they are grown !!!! A Great fun memory !!!!) I was a teacher for almost 40 years.....I trained on the Big Island for Peace Corps (1969).....then I began a Head Start (type) PreSchool in the Fiji Islands. After teaching outside of MA for so many years I am happily back home on the Cape.....and I hope to see it remain the beautiful place it has always been. Please help !!!!! THANK YOU for all you have done since 2008 Election and your Inauguration in January 2009.....to straighten out so many issues and problems. I am quite aware of all the successes in just 2 years. Hope to see you and the family vacation on the Cape sometimes too !!!!!

Your commitment to Wilderness and Wildlife is the main reason you got my vote.

In my own area of Philadelphia Pa and touching on the suburb of Lafayette Hills we are in a battle to protect land that is being considered for trails and farm that would fragment an already fragile biodiversity and take away the home of the Bobolink along with other animals. We must all be stewards of this fragile planet.

Our survival depends on a healthy ecosystem....clean water clean air biodiversity.....the outdoors is so much more than a great place to play!

Thank you for your leadership in attempting to restore sound conservation and environmental policies to our country. Much remains to be done. Specifically it is absolutely vital to make preservation of wilderness establishment of new parks and monuments and restoration of wetlands and wildlife habitat the cornerstone of America's Great Outdoors. New and growing threats specifically overdevelopment pollution and a changing climate demand a focused approach to preserving and protecting the wild areas wildlife rivers and lakes and cultural and historic sites that connect us to nature to each other and to our shared history. I beg you to make these your highest conservation priorities.

I remember the heartbrake I felt when Bush's regime violated much of our public lands and placed immediate profit over longterm social enjoyment of the lands we have for the public. I would like to tell my children that all the lands that have been disregarded and ravaged in the past eight years are now brought back under government protection so that thier children and generations to come can enjoy the experience of being in the woods the desert or the mountains and connect with nature once again on the most basic immediate level. Everyone should have that oppportunity. Please protect our nations parks and fund the ability to conserve more for generations to come.

please there is no other choice. You will be remembered as the strogest and Best President in history! We must wake up to the reality that Animals and Nature deserve the Same respect we demand for ourselves. Somewhere we all got onto the wrong road And we must get back on the Right road. I'm behind you 150% .

I believe that we are not only responsible for ourselvesl but also responsible for future generations. They are dwindling so rapidly it is heartbreaking. The very things that give America is unique character among nations is being lost.

The nation must preserve it's natural environment and serve the sacred trust inherited from previous generations. protect air & water quality everywhere Improve Watersheds and protect Wildlife Habitat Build renewable power generation plants and retire fossil fuel power plants convert all existing coal plants to clean coal plants with carbon sequestration and construct energy storage systems to give the electrical power distribution system a backbone that empowers distributed power generation on a robust scale.

Discussion Question 1

(cont.)

As one who has enjoyed the national parks and wilderness areas of this great county for many years I want the next generation to enjoy the outdoors too. I live just two miles from Rocky Mountain National Park and never cease marveling at its beauty and wonderful wildlife.

As you know the more complicated our society and our lives get the more important nature is to our survival.

Living in Michigan protecting our water resources is especially important to me!

I have just returned from an eleven day wilderness canoe trip with my wife son and his fiancée in one of America's incredibly beautiful and pristine parks. I am 65 years old and I have been enjoying the great American outdoors since I was a boy. I often introduce others to nature's beauties and wonders.

I want the next generation to enjoy America's great outdoors too and you as the leader of our country have the power to make certain that happens. Here in California for example development and conservation are in constant contest against one another. With your help work toward restoring the Eastern Sierras' Mono Lake toward historical water levels and preventing development around can continue. Outdoors. The America we love cannot survive without them:

We are all only here for a very brief period of time. It is our moral responsibility to preserve the environment for those to come here after us.

Americans share at least one thing in common: place. It defines us motivates us inspires us. Whether it be the seashores of Long Island Sound where I grew up the midwest prairies where I worked as a biologist or the Connecticut River Valley where I live the land and the life it supports have been integral to my sustenance wellbeing and cultural identity.

I have long enjoyed visiting our National Parks across the country and want to preserve support and expand these opportunities for the future.

I have enjoyed many of America's outdoor treasures in the past and hope my grandchildren will be able to enjoy them as well.

In addition I want to preserve wild areas for native plants and animals. We need to protect and preserve these areas. Humans are not the only living being on this planet and it is time we started thinking about all living creatures. We need to stop building instead we should rebuild areas that are dilapidated. We need new cleaner sources of energy instead of depleting our earth of all its natural resources. I know it is expensive to make these changes but the our future the earth's future depends on it.

Now more than ever we need to keep our green lands intact!

Discussion Question 1

Written & Online Comments

(cont.)

These are our most valuable resources and must be preserved. These resources are our heritage.

I have greatly enjoyed the largely unfettered access to the great outdoor areas since my settling here in 1965. The many wilderness experiences in Colorado and elsewhere have made a lasting impression on me and my preferred means of relaxation in the outdoors. For example this weekend we are headed to the Wildcat Hills of Nebraska for horseback riding on a friend's ranch. Also my wife is US Forrest Service volunteer for the Poudre Wilderness Volunteers in Larimer and Weld counties.

I grew up visiting our national parks with my parents people of the "Greatest Generation." I want my grandchildren to have those same opportunities and more. Please take every action needed to protect and enhance the parks and monuments that preserve our heritage and culture. Also STOP the "let it burn" philosophy that became popular within the national forest service. Please don't let forest fires burn up Yellowstone or any other national treasure again in the name of misplaced trust in the "natural processes."

The Sacred is most fully realized within Nature.

I understand that in this political climate that allocating money for these things may be challenging but timing is very important and we should make this time something that will be recognized as a point at which we really did something to make these opportunities for recreation and protection a reality.

This planet and especially the beautiful areas of it this continent need to be protected conserved and kept free from development. We have and continue to destroy so much of it...

We have a Moral Responsibility & Obligation to leave the Earth in a Healthier State for Future Generations.

I think it is essential to protect the wilderness. I think God manifests himself through wilderness and we have much to learn from it. We should respect it and not deplete it. Help us to do that .

Cities need carbon credits so they can do the right thing to protect openspace.

Oil dependency pollution and urban sprawl have contributed to encroachment and resulting destruction of our wilderness areas not to mention funding cuts and the repealing of laws that once helped protect them. Once they're gone they're gone. Encourage the development of green energy sources

I grew up near the natural wonders of the Everglades. I worry now that my daughter might never experience the beauty of the Southern Florida wilderness let alone my grandchildren or greatgrandchildren.

Discussion Question 1

Written & Online Comments

(cont.)

Our family has been blessed to be able to many national parks and forests learning so much and just enjoying nature and all God's wonderful creation in the process. There is so much fragile natural beauty in our country. We have gained such a strong appreciation for these wonders and the ecosystems they are part of. My children and grandchildren and their grandchildren thank you.

One great concern of mine is the generation of electricity from solar power plants. Solar is just one of the componets that will allow this country to lessen our dependence of fossil fuels. My concern is the solar power generating facilities that use water. Water is one of our countries most precious resources. Using our water resources in the generation of solar power will put extreme pressure on our water resources. Please do not allow Federal monies for this purpose. Droughts are still a reality in many parts of the country that have great potential for solar power. Lessening the threats to our wildlands is important. Conserving them is extremely important especially our water resources.

Whenever I feel disturbed distracted and overwhelmed by my daily routine and have need to be restored I find what I lack in the great outdoors. Being in nature whether walking running biking swimming or simply sitting reminds me of the beauty around and inside me. I spent last weekend hiking and camping on the Appalachian trail in Harriman State Park. As evening approached I sat on a rock by a clear mountain lake and marveled at how lucky I am to be able to enjoy such a simple and unfortunately vanishing pleasure.

These precious places are not simply tourist attractions but help to preserve our world our environment our lives.

I am excited to say I just got from taking my three kids on a weeklong camping trip to Yosemite National Park Mono Lake and the national forests around the Eastern Sierras. I'm also eager to head outdoors next month with the kids and dozen families from our school for National Public Lands Day exploring and protecting the Black Rock Desert/High Rock Canyon National Conservation Area. We do trips and projects like this every year because we want to see and preserve America's natural beauty for my kids and future generations.

We must conserve and preserve our wilderness. There is so little left. Conservation of our publiclyowned open spaces is a winwin situation. All Americans benefit. The more we lose open spacethe more we allow industrial concerns to degrade our publiclyowned land the more we lose as a nation.

America is blessed with great beauty and we are called be be stewards.

I want the next generation to enjoy America's great outdoors and not have to clean up after our mess. Increase funding to protect federally protected wildlife from overzealous state governments

Discussion Question 1

(cont.)

If have been to many beautiful parks and wild life area around the country. It was very moving for me to get to see these places. I walked through many of them and I would be very disappointed to see there areas disappear. Just camping in local parks has been a great experience. Listening tp the wild life at night and see them at twilight. I am an early riser so I watch them throught the window of the trailer so I don't disturb them. Having people dig drill and build new homes in these places would be an injustice to future generations Please do everything in your power to stop the cruelty to our land.

I know these are tall issues to address (along with everything else that needs your attention) but our children are worth it and this beautiful spot on this beautiful planet is worth it.

The healthy natural presence of our wild places is the foundation on which the rest of life rests and thrives. We have no greater task before us than protecting it.

We should not steal from the future!

We need your help to keep our world beautiful and clean..I love the space around me in Coco. as well as Kansas when it is kept with clean water and space..Thanks Pam Darnell

Provide adequate funding for restoration and law enforcement on public lands

We need to support adequate funding for our National and State Parks Systems and the National Park Service. And we need complete streets more and better pedestrian and bike interconnecting our residential communities and linking them to shopping recreational and employment centers and multimodal transportation centers.

I want our future generations to enjoy America's great outdoors too. I raised my daughter from infancy to love and respect all that we call our great outdoors. As a result she is now working on her Masters degree in Outdoor Education so that all of the children's lives that she touches will have a greater appreciation for all that the "great outdoors" encompasses.

Without your leadership in shaping a bold conservation strategy for the 21st century our future generations will not have the opportunity to enjoy and appreciate what many currently take for granted. Thank you in advance for your decision to create a bold conservation strategy for the 21st century.

Most of the great parks are overcrowded illustrating the need for nature in our lives to repair our souls in this hectic world. These places are sanctuaries that reflect the beauty of our planet and are irreplaceable in this rapidly expanding civilization. We simply need to do a better job of protecting them and creating more for future generations before it is too late. We don't need to mine every mineral log every forest and carve every access road in this brief generation.

Discussion Question 1

Written & Online Comments

(cont.)

The great outdoors is one of the only things we have left to exercise freedom in this great land. The fresh air the exploration a place for children to learn about the world and roam. I have a 2yearold boy and he's going to be out and exercising his mind and body instead of staying inside and playing video games...

I can still remember being 10 years old (I'm now retired) and going with my parents and grandmother to Yosemite National Park. It was a wonderland for me then and it still was when I was there for my fifth visit just three years ago. I am fortunate to be living next to a great river and near many beautiful state parks. I am looking forward to a fall visit to Yellowstone. These experiences should be available to all Americans and also to those who visit our country to see its beauty.

Luther Standing Bear once said "Man's heart away from nature becomes hard; [the Lakota] knew that lack of respect for growing living things soon led to lack of respect for humans too." So I ask that you please consider the following. It's not only for nature's sake but mankind's own sake. We need to protect these natural places before future generations have nothing left.

for the 21st century even if the militaryindustrial complex is running our country at this time you can do something that will benefit your very own family particularly your two fine girls who deserve a fighting chance in our environment. I never could understand how the real rulers don't seem to care about their own families when it comes to the environment. Is the money and power that important when one jeopardizes their very own?! I realize the executive branch no longer leads the nation but the least you can do is make it as difficult as possible for those who do. Thanks very much for doing something to help the situation!!

And a resident of the Great Lakes region of the U.S. I feel the Great Lakes need special protection from oil drilling industrial pollution and sewage as the major source of fresh water for millions of citizens. and the Great Lakes

We can't afford to allow the erosion of pristine places to continue in the name of development or for profit. We must also protect these fragile habitats from the effects of global warming and our lack of stewardship. To protect other species from extinction is to protect ourselves as well.

It is imperative that we preserve America's remaining out door spaces into the future especially with an eye on preserving the natural habitat for wildlife. Our own survival and that of our fellow creatures depends on this.

If the next generations have only stories of what it "used to be" like to live in this country their emotional bodies will grow cold and die from lack of nourishment. Memories are nice but do not nourish. Maybe that is already taking effect as observed in the attitudes and opinions and careless "care less" attitudes of today's unhappy hate filled egotistical expressions of intolerance. Cement tall buildings. fast food and unethical practices will produce exactly what it consumes. i hope it is not too late we live here taking for granted that Mother Nature won't crumbleour memories are very short when it comes to disturbing something we are \$\$\$\$\$\$ to.

Discussion Question 1

(cont.)

Experiencing Nature and protecting it is so important to all of us. Especially as our climate changes we need to take action now.

End these stupid wars and spend the money repairing the mess this country is in. Don't ever bail out Wall Street again bail out the working class instead. Picture what would happen if you gave the money to the working class bills paid off no one thrown out of their houses no more you owe xxx dollars to xxx scams anymore. Best of all shred the credit cards.

It is most important that we maintain outdoors and protect the wildlife. Do it now so the upcoming generations may enjoy.

I have enjoyed taking my own children to many of the national parks.

Clean Energy (Solar Wind etc.) Clean Air Clean Water

My son is almost two and has discovered the wonder of the playground made by nature....I hope to be able to truthfully tell him that our country protects nature our most beautiful and important resource.

I want the next generation and generations beyond to have the opportunity to enjoy America's great outdoors. America is a large and unique land from lush forests to deserts to mountains to plains...the diversity of our wilderness is aweinspiring and is a huge part of what makes our country great. As our lives become more technological and urban or suburban our link to the land and the wilderness grows weaker. We need the people of America and our government to remember the land before it is too late. I was born in Utah a truly majestic state with mile after mile of wilderness. As my life has marched on away from the place of my birth I am always amazed at the strong tie and I have to the wilderness of my youth. It makes up the fabric of the person I am today. I hope that my children can feel the same connection to their place of birth California and that over the years we can all enjoy the lands that resonate so deeply within our beings.

Keep all the undeveloped natural lands the way they are and return 10% of the overdeveloped land to its original state.

Preserve pristine nature and prevent contamination through genetically engineered species. Recognize that animals and nature should be treated as the valuable resources that they are Eliminate pesticides herbicides and fungicides

ensuring that ecosystems do not become fragmented "islands." Ensure that wildlife corridors are part of the park system. that are in keeping with the peaceful experience of the landscape that the great majority of park goers are seeking.

(cont.)

On a personal note if we do not take care to ensure the healthy conditions of beautiful planet Earth now we may not get another chance. The recent disastrous oil spill will take its toll on Earth and future generations for many years to come. If we don't reach out to preserve the wild and historical magnificence we have left in America it will slip uncontrollably out of our hands forever.

I think of Teddy Roosevelt often these days. When he was a kid he used to think the Great Seal of the United States was actually a seal one that ate fish. I wonder what he would think of his wild places today the ones he loved so much. Please do everything in your power to save and protect our remaining wilderness areas. It's so disturbing to see what we've done to our wild areas in my lifetime alone I hate to reflect on it. When I was a kid the rains resulted in an amazing explosion of frogs everywhere on a biblical scale. Big ones little ones smooth ones bumpy ones frogs the size of my pinkie nail hopping all over the place like crazy super balls dropped from the sky. It was a sight to behold. Wish my kids could see it but it's gone. Vanished. Just a memory in my mind's eye. Today frogs are disappearing faster than a popsicle in Palm Springs. I used to watch baby horny toads (what silly scientists call the Texas Horned Lizard) frolic by the hundreds at my bare feet; I'd scoop them up by the handful. Now they're endangered. I used to watch pronghorn antelope bound gracefully beside our family car on the freeway at 50 miles per hour now my kids think I'm making this up. The creek and wetlands where I caught pollywogs and powderblue damsel flies is now a cement drainage ditch. There's still a lot to save. But we must act now before it's all gone. I want my children to enjoy America's great outdoors too. Obama carpe diem! Hurry. Seize this moment to create to expand to better protect America's shared outdoor spaces. Wilderness whispers words of wisdom: let it be. Monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites all these must be protected. My ____ should always be able to enjoy our public lands. Please consider these priorities for America's Great ____ Thank you Mr. President. It's a new day in this brave new world. Help us and help Congress shape a bold conservation strategy for the 21st century.

I am thankful for the foresight of past generations that set aside Wilderness State and National park lands for us to enjoy. These are one of the largest assets and treasures in our country. I spend most every weekend hiking snowshoeing and biking in my backyard paradise the Wasatch Mountains of Utah. My favorite vacation is to backpack and reconnect with nature. I feel lucky to live so close to many wild places that can make this a reality. I never tire of exploring the outdoors enjoying wildlife and the remoteness. I notice every year more and more Americans are discovering the outdoors and these paradise settings are getting crowded. Further those lands not protected are often challenged with access issues development and grazing/mining/drilling interests. It is with real concern that I write to you to ask that you help to ensure that future generations will always benefit and enjoy our public lands please consider these priorities for America's Great ____

"In wildness is preservation of the world" is a statement truer now than when first written which is why our society needs to diligently conserve and protect our natural heritage.

(cont.)

Thank you for all you have done for the environment already. I know you are cleaning up a mess left behind by Mr. Bush but I appreciate what you have been able to achieve despite all the obstacles.

It's so depressing to travel across our country and to see the wilderness disappearing under strip malls and mega churches and ubiquitous gated communities. We need to plan smarter plan better! We also need to consider our responsibility to protect the animals that live in the few remaining open spaces. !!!

I currently enjoy bicycle trails. We need more for recreation and for kids to get to school safely. Please continue to support RailtoTrails.

Once these special places have been violated we can't get them back!

Above all make sure to decrease pollution through enforcement of existing regulations which should be protecting our environment thus protecting the public's health and wellbeing. Continue to fight for an increase in renewable energy which will help as well.

My kids are 10 and soon to turn 13 I hope that they get some of the same chances I had to be inspired by the Wildernesses and wildlands of this country that have shaped our heritage. I also believe that all things on this planet are interconnected and our future is dependent on the good health of all species and environments on our planet. We need to do a better job of protecting and even enhancing the health of these environments and through protecting Wilderness monuments wildlife refuges parks forests trails and wild and scenic rivers and historic sites we are on the right track but with the threats facing our world we need to do an even better job. More protection is necessary!

This is IMPORTANT! And now is the time to act because soon it will be too late and our irreplaceable wildlands wildlife wilderness and entire natural heritage will be destroyed and gone forever. Please prove that all of us who voted for leadership and change did not make a dreadful mistake that leader and break with past pollution exploitation and destruction. Take a stand for conservation and preservation.

I was privileged to have grown up in Montana. From the time I was small Big Sky country was my "personal" backyard. It would be difficult to describe the effect this upbringing had on my world view but I do know that I want future generations to enjoy America's great outdoors as I have.

This is also a great opportunity to create new jobs! Privatizing and / or exploiting our public lands can never be undone so we believe it is extremely important to protect first!

We need to preserve our beautiful wilderness to pass on for future generations. There is nothing more beautiful than nature.

Discussion Question 1

Written & Online Comments

(cont.)

To cut to the quick just keep one thing in mind: When it's gone it's gone. Forever. Or millions of years whichever comes first.

I thought that electing a man with young children would make our country's natural wild beauty a priority for him. I hope I was right.

In my first college English class we were asked to write an essay on our home town. I thought about that for a while and realized that my true home town the one that nurtured my soul was all the many summer long camping experiences I had in the Sierra Nevada high country of California. I wrote my essay about that "home town" the place from which I gained a love of the Earth and nature and all that lives on this Earth. I now have a bumper sticker that sadly reads "Daddy what were forests like?" I urge you Mr. President to do all that is possible to preserve my "home town" so that no child in this country will ever need to ask the question that is on my bumper sticker.

Our 24 year old daughter is already enjoying Montana Wilderness. That's why I am asking you to take this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. We believe the long term vision of protecting our land will bring economic benefit to our small community in Montana. In fact saving this special place will ensure tourism dollars now and in the future. Working as an 'information center volunteer' I talk to people daily who are in our community to enjoy the small rural place surrounded by our 'wild' country. We find our own spiritual renewal in the outdoors. for the 21st century and for your leadership on all the issues we face today.

Once these treasures are gone they're gone for good. Leave what we've had the chance to enjoy to our children grandchildren etc.

As more and more people become disconnected with the land there is less understanding and less concern about the importance of healthy watersheds wetlands forests and the need to protect working lands. It makes it easy for them to dismiss or misconstrue the importance of these lands to their food sources and the rural people who manage and sustain them. Access to wild lands and recreational opportunities in nature at least provides a connection point many will otherwise not experience.

I have been to all 50 states and a good share of our national parks.

On a more personal and local note I call your attention to Sterling Forest in New York just an hour's drive from New York City. This area had been an outdoor enthusiast's paradise under private management a decade ago but since relegated to the perversely limited vision of the Palisades Park Commission of NY & NJ it has become a wilderness museum "Look but don't touch" with all former activities circumscribed or banned. Please do not let this become the norm for government administration of our wilderness lands.

Being a student at the University of Wisconsin-Platteville who is pursuing a degree in civil engineering I have learned through my courses the importance of our natural habitats. As our population grows we are continuously increasing our quantity of residential and agricultural acreage. To make room for this growth natural habitat is taken and developed. If we continue this process our wildlife will be ruined and may become extinct. Also the natural wilderness is key to helping us control our runoff by slowing it down and letting it infiltrate the soil thus recharging our water table. With water resource concerns growing out west we need to take control of our bad habitats and start preserving the natural engineering we see in the wilderness. Push sustainability into the forefront of land development. Thank you so much President Obama for taking the time to consider my email with a clear and accepting mindset. Your leadership is key to shaping a bold conservation strategy for the 21st century and future generations.

I realize that there are major economic worries to be dealt with at this time. However I feel these ideas are very important as well.

We need to stop thinking about ourselves and consider what we will leave the children.

Our government needs to stop selling off public lands and/or leasing them to oil and gas companies. These lands need to be preserved and protected from pollution so that they can be enjoyed not only by people today but for generations to come.

As a U.S. citizen I am blessed with the parks wilderness areas and other lands that have been preserved for our enjoyment and kept free from development.

We are a fast growing nation but we ought to be mindful of our responsibility to nature in order to protect the great land which will provide for our future generations.

Preserving our wilderness AND THE CREATURES THAT LIVE IN IT is essential to preserving the beauty that is this nation. You open it to ranchers and oil interests we all know they will trash it ALL...for profit. What kind of legacy is that? Stop the commercial interests NOW before it's too late.

As an Eagle scout I "grew up" in the outdoors. Countless lessons were taught to me by mother nature at her best and especially at her worst. Having access to wilderness of all sizes both physical and mental is critical for a well rounded education.

Discussion Question 1

I love the outdoors & being able to see the beauty of God's handiwork. My dad & mom took us girls out to California when I was a teen and i really enjoyed it.

Americans are willing to step up for protecting our natural resources. Your leadership will galvanize the efforts of those working so hard on these issues.

Please think long term as you make your decisions. We really need to protect our great outdoors

I was lucky enough to take many family vacations as a child to national parks. I want the next generation to have this opportunity and others like it as well.

And thank you for protecting these resources for our next generations.

I have been a long time lover of Yosemite National Park. Ever since I moved to California over 30 years ago it has been one of my favorite places to visit. Yellowstone Bryce and the Grand Canyon may not be what they are today had they not been protected. and Foster programs that educate all ages especially young children so they will grow up seeing and understanding the importance of living in harmony with nature.

We need more money to fully fund National Parks upgrades! I look forward to your reply.

"To cherish what remains of the earth and to foster its renewal is our only legitimate hope for survival." _Wendell Berry

You have the power to keep the beauty of our great outdoors intact for all generations to come. So please create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. Please ponder as priorities the following list bearing in mind that our great outdoors are not only for recreation they are for the mental and physical good health of all. Thank you for being a leader. Please lead now in one of the most important aspects of the century.

! Keep Oil drilling out of our wild areas! without allowing destruction by ATV's! Be more proactive about our endangered animals and plantlife!

As a member of the boomer generation I want to be sure that wilderness the outdoors parks etc. are preserved not only for my own use as I retire but for my children and grandchildren. Camping and hiking are a great joy for our families and our children need to be able to experience areas that are pristine and support wildlife clean water etc. The natural beauty of this country is the heritage we pass on.

Discussion Question 1

(cont.)

My father's family left the coal mines in Pa. to homestead in Wisconsin. My father taught me to love and respect Nature. I have been able to pass that view to my daughter. It is my hope that she may have the same chance if there are any unspoiled wilderness areas left. Hunting and fishing have always been a part of my life so I understand at a personal level the delicate balance of Nature. I have seen in my lifetime the effect of the destruction of wetlands and loss of habitat. I urge you to save what little wilderness is left and not put profit before posterity.

INCREASE FUNDING FOR ALL PARKS

With so many people now living in urban environments the need to protect honor and make available these important and beautiful spaces in our country is vitally important!

Our own personal "wealth" may be diminishing for ourselves and for those to whom we might want to pass on whatever we have earned; but that doesn't mean that the natural treasures of American must diminish and deteriorate as well.

When children families have parks wildernessplaces of peace it has been shown the crime is less....People need places to rest reflect appreciate our world...The bang for the \$Buck is better if we do not have violence in our streets communities & towns... The \$price for parks/wilderness is off set by what we do not have to repair by violence. All children should have a place/chance to play & appreciate beauty. If the only consideration is co\$t.....Consider the value in peace less valalism more beautiful America AND** HEALTHIER ENVIORMENT(trees etc). As you know the republicians want to cut funds for parks etc...soon after that crime rises (not seeing the connection to value).....Children have no place to run off energy so possible distruction occurs. The republicians have their own "private" parks then want tax paying citizens to have less....This is not The Good America that promotes giving less to children/citizens than what the wealthy have. Cannot put a value on healing powers of Nature to all. I trust you'll do the prudent/just thingtrue meaning of "Conserve" in this case:)cb.

From The Great Law of The Iroquois Confederacy..... "IN OUR EVERY DELIBERATION WE MUST CONSIDER THE IMPACT OF OUR DECISIONS ON THE NEXT SEVEN GENERATIONS."..

The following matters are of vital concern to me and my family. Please protect our national resources. They are treasures. They are nonexpendable and cannot be replaced. These matter are of great concern to myself and other Americans.

I wanted to add something to this letter of my own but I just can't say it any better than this. This is sooooooo important please please.

"Shared use" isn't really shared if one use destroys it's value for another. For example who wants to visit a clearcut on their vacation?

Discussion Question 1

(cont.)

These lands are our public trust and are not meant to benefit a few corporations for profit.

In the face of exponentially increasing population the pressure on open lands and undeveloped areas is ever increasing. We have surpassed the ecosystems ability to process our waste and replenish resources. Absent the wisdom to control population only the preservation of natural resources can slow the ultimate consequences.

Now you can prove to the world and the Republicans that although you have had to increase the national debt for the next generation you have also insured that you have protected the environment for the them.

Nature cures a multitude of ills. It contributes so much to our physical and mental well being it heals and challenges us we are part of it and it of us we must always treasure and protect its sacred inheritance to be passed on.

Provide Increased Access but protect against inappropriate use such as offroad vehicles and snow mobiles

We don't own this land we just borrow it from our children. What will your legacy be?

I am one of the lucky few Americans who gets to live with two of this country's most beautiful national parks right on my doorstep. We spend our winters in Bozeman within an hour's drive of majestic Yellowstone and our summers in Grand Teton National Park with our extended family. These wild and scenic spaces are of vital importance to all of us who live and work in their gateway communities.

Please know that this letter is sent with most sincerity and concern. This is so important for all Americans. We so much need places to feel safe and relax. Thank you.

IN Hawaii we have an especially beautiful outdoors.

Let's make sure we are giving our kids as great of a chance to enjoy our natural landscape as we have had!

There are still many natural and historic places I would like to visit before I die or before I become too ill.

IT IS SO VERY IMPORTANT TO PRESERVE AS MUCH OPEN SPACE FOR FUTURE GENERATIONS AS WE CAN. I CANNOT IMAGINE A WORLD WITHOUT OUR BEAUTIFUL NATIONAL PARKS OUR MAGNIFICENT WATERWAYS AND OUR RICH ANIMAL HERITAGE. WE MUST MANAGE THESE CAREFULLY TO MAINTAIN THEIR HEALTH AND SAFETY.

Discussion Question 1

(cont.)

I am a 79year old who will not live to see the fruits resulting from your positive action to improve and protect our national parks and monuments. However I desire that my children grandchildren etc. are able to enjoy the wonders of our wilderness areas and national parks just as I did. Please prevent the opportunists from stepping in and diminishing or destroying whatever we already have.

help us all to become better citizens of our beautiful country. ; those quiet places where we can soak up peace away from the clang of our daily life! before all our wildlife disappears in this century! ... Mother Nature is the ultimate healer. * Please protect our beautiful parks forests and trails from those who run roughshod with mobile/sports vehicles! ...don't whitewash your promises.

Since the early 90's our family has had a blessing in that the vacations we have taken included many of our national parks and forests. The awe inspired reactions by my family are priceless. Watching everyone stop "dead in their tracks" and stare at moose along side the road in the Grand Tetons. Later in the same day we watched new born bison in a meadow frolic with their siblings in Yellowstone. This isn't scratching the surface of almost two decades experiencing the wonders of our nation. There are some possessions of the American people that have to be protected against greed and exploitation at all costs.

no dirt bikes or snowmobiles which spoil the experience for everyone else for example.

I've recently retired as a public school teacher. For my entire career teaching grades 6-12 in many areas of the country I incorporated outdoor activities into my lessons because I consistently saw positive results with my students. Hands on lessons in nature promote academic success no matter the discipline.

We believe that our country is at a crucial fork in the road. The fork that should be taken is to protect and build on the parks monuments forests seashores etc that have already been set up.

I grew up feeling a strong connection to nature through countless visits to state and national parks. Through these experiences I gained an appreciation for the world we live in and our impact upon our world.

This is the foundation of the American spirit and is critical to the next generation. The experiences had at these sites form the spirit that is the motivating core of Great Americans. Part of being a visionary is to address OUR outdoors on a significantly large scale.

Our Earth is in ecological crisis! Now is not the time to destroy what's left.

(cont.)

Twice I have had the experience of exploring and being a part of the northern Minnesota Boundary Waters. My experience in the pristine lakes where we could drink the same water on which we were canoeing provided personal and professional growth for me. My heart is heavy with continuing news of the devastation of not only wilderness areas but other more urban lands in this country. And I am saddened to know that conservation is not apparently one of your considered priorities. Our children and grandchildren deserve to have a planet that can still be seen as the little blue dot in the universe...not a dullhued orb.

"Just think how senseless and lifeless a youngster's life will be if they are not able to enjoy the outdoors by being in it conserving it and sharing this with others. Being in the great national parks like Yosemite teaches an individual not only respect for nature but expands their love for it and inspires creative ideas harmony and peace." "Involve our youngsters in conservation by making it an academic standard to fulfill in the curriculum"

I have 2 children that already love the outdoors. It is a lifeline of relaxation that cannot be found anywhere else! Not to mention the peace and quiet that our natural places offer the ability to see wildlife in a natural habitat and recreation that cannot be digitized or otherwise simulated.

My husband and I have spent many wonderful vacations enjoying our national parks and monuments and other wild areas. We are environmental consultants in NJ who treasure the opportunity to study the wildlife and plants of very different areas throughout the US. If we don't preserve unspoiled habitats we will never know what we have lost from our biodiversity heritage as development and resource exploitation devour the land.

In the face of rising population and its everspreading development as well as its desperation for extractive energy sources the importance of conserving natural landscapes for future generations has never been greater. Failure to hold a strong commitment to this value will eventually alter the character of our nation's great outdoors irreparably and with it the character of our citizenry who will have fewer and fewer places to experience the restorative value of the natural world. Even now that experience is foreign to some especially in urban areas. Electronic technology has also begun to diminish our youth's interest in connecting with that natural world which portends a perilous loss to the American psyche. Furthermore in order to not exacerbate the existing polarity between environmentalists and their opponents I urge you to be realistic about the scope of envisioned projects. Some megalandscape multimillionacre complexes envisioned by wellmeaning groups while admirable in idealism will only panic those threatened by these prospects (e.g. ranchers) and will galvanize all sectors of opposition. It is strong enough already. Conservation projects must be viable apropos existing stakeholder interests not decreed as government fiat with winners and losers. This is challenging to say the least; but respectful and patient collaboration is essential to longterm success.

Tax advantages for wildlife conservation; Remove Coal as a major fuel source; Save all wildlife for future generations; Renewable energy Our grandchildren need your help...Thank you!

Stop the killing and roundup of Wild Mustangs and protect them in their habitat

Our parks and forest will be plundered by those who don't care or those who find a way to make a profit from them. Our children and their children deserve to have these places available to them to enjoy and love the way I and many others have during our lifetimes. Please save these wonderful places. We deserve them.

It is inexcusable the way humans have trashed this planet! I don't want to be known as from the generation that did nothing but make it worse. Please do what you can to protect it from those who are so selfish and greedy that they don't care about the trashed up planet they leave for their grandchildren.

Being with nature is one of the most important health needs of our citizens. We must protect our wild areas for the animals native to them and parts of other public lands for people to reconnect with our great outdoors.

From ancient times to the present the greatest and most valuable assets humanity relies upon are based in healthy intact natural ecosystems. Food shelter medicinal and spiritual needs are satisfied within these natural environments. The past century has seen unprecedented use and decline of natural resources to the point that future generations may only know it from photographs and stories. I have been blessed to have grown up and thrived through ready access to recreational areas. public lands please consider these priorities in protecting and preserving America's recreation and wilderness lands:

wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. I'll admit to it; I have a vested interest. I've been hiking the Appalachian Trail since age 7 and have visited many national parks wildlife refuges monuments national seashores and so forth in my 56 years. I don't have children but am always conscious of how our actions affect future generations. Thank you for considering my opinion. I wish you and yours health and peace.

In my 72 years of life a constant source of inspiration and renewal has been nature and especially as found in the relatively unspoiled portions of our great outdoors. Nothing is more important!

Perhaps it would be a good idea if the drilling logging and mining interests were to be severely limited in these regions.

A Healthy Earth and healthy ecosystem will help us lead healthy lives. We are connected. You can't have one without the other.

Let our descendants enjoy all that we have enjoyed and more!

(cont.)

A relationship with nature and time in it are extremely important for child development and wellbeing and are necessary for the next generation to be engaged citizens.

Now is the time to take action to protect our great outdoors. Our wilderness National Parks natural habitats and nature's natural beauty must be preserved in a time when development is encroaching on us all.

It is imperative that we protect national parks forests preserves monuments and add to that more wilderness areas parks monuments forests and wetlands. The very life (both animal and human) that are protected in these places is threatened unless we take action to both protect what we have and extend it. National Parks need buffer large buffer areas to stop encroaching growth and to protect what is in them animal life forests woodlands watersheds etc. We need these things to and to preserve the life sustaining things that they provide to us as humans water supply clean air sanctuary for our souls. You must fully fund the Land and Water Conservation fund increase funding for all of our national treasures and make additional funding available to state and local governments for the outdoor and open areas they protect such as state forests parks wet lands and woodlands. Thank you for your time

Protect and increase our opportunities for outdoor recreation. Natural places and open spaces need to be more available in most of America.

All my life of 70 years I have loved nature and the outdoors. Many of my most cherished memories and periods of personal growth have been within nature's awesomeness.

Protecting the outdoors is a major priority and I want the administration to do everything possible including adequate funding to protect our great outdoors.

P.S. Please don't overpromote our wild areas to those who have not yet learned how to respect them first and play by the rules of the parks. This means not bringing in a myriad of plastic containers and other forms of packaging that will likely end up as garbage or worse...litter. People need to understand why we need to respect these areas and this means behaving appropriately with respect to nature. Additionally...NO noise from any electronic devices is essential too..no booming cars ipods cell phones and obnoxious illegally modified exhaust pipes on motorcycles or cars. If such is how people want to behave in such a setting or any setting for that matter..and cannot take 5 to do a digital detox and hear what the world sounds like naturally and discover the joy in peace... Then perhaps they need to stay out of these precious treasures.

Save our wildlife particularly those at risk; Ask for the current Secretary of the Interior's (Ken Salazar (sp)) resignation. Appoint someone who really cares about saving public lands and wildlife for the public and future generations.

Keep up your efforts to make this the best country it can be.

(cont.)

Sir what a legacy for your children grandchildren you would be leaving them to see what wonders GOD has created. How sad if they would not be able to enjoy the wilderness and all its beauty because we didn't expand create and protect the sites and the animals that live in these spaces. Will you not help protect this beauty for all to enjoy now and in the future.

engage public and private corporations to assist in conservation in their regions. Consider tax advantages if necessary. for us and for our children. Really seek out alternative energy sources and develop them for use. No more drilling!! let's not have any more species face extinction because we neglected these important areas. engage children teenagers and young adults with innovative electronic campaigns. Engage adults thru electronic and print media. Make it cool to be outdoors! help the states maintain and fund their outdoor recreational areas. so America keeps the wilderness it already has and can return important overdeveloped areas back to the wild.

I have 4 Grandchildren ages 7 10 11 and 18. I want them to be able to truly experience this beautiful country. Not have to be told what used to be. Thank you for your kind attention to this problem.

Prevent further degradation of National Parks We really need to come together as Americans on this issue.

Fund More Jobs in the National Park Service

Dear Mr. Obama & Administration As someone who lives in a state of beautiful clear lakes abundant forests and magnificent mountains I would like to see everything possible done to preserve what few tracts of wild spaces are remaining in our country. Many American's have taken too many liberties with the land and mistreated it for too long. It is time that we consider what wild spaces remain and attempt to protect it for future generations. I recently visited Yosemite National Park. I was in awe of its beauty and I am thankful for those who recognized its importance to humanity and fought to protect it over a hundred years ago. I wonder what Yosemite would be like today if it had not been protected as a national park? I shudder to speculate.

As an avid outdoorsman and user of our public lands I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. The Monongahela National Forest here in WV has just designated several new wilderness areas that will benefit generation to come. However we need this type of vision across the board in all our public lands management. Many roadless areas across our great country are prime for wilderness designation but they languish due to petty political concerns.

We must protect and enhance our outdoors. We only have this chance one time. Please act very strongly and positively on our request below!

Discussion Question 1

(cont.)

In order for the next generation to enjoy America's great outdoors we need leadership that values a strong conservation agenda. Let this be another example for the CHANGE we voted for.

I am grateful for what Franklin D Roosevelt did to create the national parks that we now have.

We all need to protect our planet!!

As a nation we are quickly expanding with no end in sight please save these wilderness lands.

Mother Earth does not belong to us. We belong to her. She is in critical condition and "Yes We Can" do something about it. Hopefully before it is too late. My focus is on 'clean water for all living things'. That does not include putting an UNapproved prescription drug considered a toxicant by the FDA in our drinking water. We drink only about 1% of that. Just think where does the rest of it go?

Thank you for preserving the most beautiful and wonderful parts of our country for my children and grandchildren and their grandchildren to enjoy.

We all know it is our responsibility to care for this planet for future generations. I don't understand why I have to fight so hard for something we should all agree on.

As an outdoor enthusiast myself I am deeply grateful to those leaders who have worked to protect wilderness areas in the past. I also know well that without such leadership and supporting efforts by all of us who value America's great outdoors pristine forests and many other areas would have long ago been spoiled to make a quick buck for the privileged few. Finally as a psychologist I am aware of the growing body of research showing how important spending time in nature is to our wellbeing.

In particular... keep destructive intrusions (drilling mining offroad vehicles unnecessary killing of wildlife etc.) out of all existing federal parks and reservations.

We need wilderness and wildlife not only cities.

I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces wilderness areas natural monuments large wildlife refuges where wildlife is **TOTALLY PROTECTED FROM HUNTERS** parks forests trails WILD and scenic rivers and historic sites.

Development continues at an unsustainable pace. Protect what you can now before it is too late.

Thanks for helping our future generations to have an exciting world to live in!

You may be strongly aware of Southern California beaches but less knowledgeable about how mountainous the area is particularly east and north of Los Angeles that needs ours and your protection. Essentially there are 4 high uplifts rising steeply to where the terrain reaches 10000 feet above sea level: Going from south to north the first is Mt. San Jacinto (San Jack). This is a "Sky Island" going abruptly above the Palm Springs desert to almost 11000 feet and which has recently received National Monument status. One goes through 5 climatic zones as he/she ascends it as if one was traveling north to the Arctic. As a youngster (I am 84 years old) this was my first Big Mountain inspiring and true spiritual ascent. The next is the highest in true Southern California Mt. San Geronimo. This is also called "Greyback" because it is above timberline. Earlier on I fought successfully at Forest Service hearings to save it from ski development. It is ringed by youth camps and these precluded any development of its 11500 foot summit. The third area is Mt. San Antonio just above 10000 feet and also called "Old Baldy" because winds from the Pacific have stunted its pine forests. It is a good day ascent on skis in the winter. Hopefully it will receive wilderness protection as part of the proposed San Gabriel Wilderness Area. And finally there are the southernmost Sierra Nevada peaks that reach a climax of 14495 feet about 200 miles north of Los Angeles at Mt. Whitney. These were my playgrounds on many occasions and as a biologist I have done significant research there over several decades. I also took my 2 children into the Sierra to give them what I call "The Gift of the Hills" that I also received from my parents and grandparents when I was growing up. Anyway I am and have done whatever I could to protect these mountains for my children and now my two grandchildren. I look forward to your efforts for help in these goals. Please follow the examples of President Teddy Roosevelt and the Sierra prophet John Muir to become true political activists in saving what are truly "Nature's Gems."

My family and I spent a lot of time in our National Parks and the wilderness areas of America. I owe my dedication and love of the outdoors to those days spent in such places

Please also protect our Gulf of Mexico for many reasons but for me personally I want to enjoy eating seafood from there. I also would like to see my three great grandsons to enjoy the pleasure of the beaches food sand and culture of the shores of the Gulf. Protect from oil spills and any other poison seeping in from other sources. We must protect our planet since it is where we live.

My family and I camp hike and visit national parks many times a year. I hope they will be afforded the opportunity to do the same with their children.

keep our national parks and national wilderness areas free from development and prospecting

Discussion Question 1

(cont.)

As a grandmother who with my late husband enjoyed our great outdoors I want the next generation to enjoy America's great outdoors too. (As a former grant writer for a tristate council of governments I have been privileged to see the fruits of the LWCF in numerous small towns in our area. Present and future generations will enjoy the trails parks and recreation opportunities this fund has made possible).

Everything possible must be done to ensure the conservation of our rights to have wilderness areas and historic spaces all over the United States for our children and their children. Protection of the existing areas as well as the creation of new areas can only enhance our environment and our wellbeing as well as assist us in living our lives connectively with all beings on our great Earth.

Your administration often talks of positive change from the policies of the Bush administration. There are few better areas to make such change in and few that need it more than wilderness conservation.

I have spent the summer working in a park and financial survival is all they think about conservation and protection are not even on the table any more... no roads no motors ni some parts even no people. small peices of land can be linked to create wildlife corridors. at 20 to 40 dollars a night for a tent space only the rich can camp. all it takes is a trail a restroom and a trash can.

Protect endangered species of animals and willife and create sanctuaries where they will live and thrive.

There is nothing more important than protecting our very essence of survival as a species. It shouldn't even be a question!!! I know you know. Please take ACTION!!!!

With or without you in the White House this is a critical moment in our history. As I'm sure you're aware there is more at stake than being the first AfricanAmerican being elected to the White House. The environment globally is at a sensitive turning point some things eg endangered species have already gone beyond recovery or restoration. But as the leader of this country you can create the conditions which will protect & preserve our great & irreplaceable natural resources. In the tradition of First Ladies i.e. Lady Bird Johnson Eleanor Roosevelt this is a cause that Michelle Obama could shepherd in some way. What a great legacy this would be!

Our future generations deserve the chance to experience our National parks system as my family has had the opportunity to do for many generations. Personally I would like to see Point Lobos on central California's coast and the Pajaro River State Park also on California's central coast as well as the many State Parks at Big Sur California added to the list of National and State parks that should be preserved for the future. I'm sure it's a difficult decision on your part given our Nation's current economic condition on what parks will stay open and which ones will need to be closed due to a lack of State and Federal funding. I hope that funds will be found to keep all of our National and State Parks open.

Discussion Question 1

(cont.)

I am aware of funds for conservation projects being slashed and budgets for our National Parks being cut. This leads to a detrimental change for our great wild lands. We have to do better to conserve these valuable and unique landscapes for our next generation and for our dwindling and endangered wildlife.

We need to stop openpit coal minningNOW. And we need to cleanup coal ash mess. I think the best place to keep the coal ash is to put in the yards of big coal Officers and that of the power company. If more room is needed then use the yards of Congressmen of help the coal company.

The outdoors have always provided refuge for me and my friends and family. We look to these spaces as vacation destinations as areas to gain more knowledge about our natural surroundings and as sites to gain spiritual refreshment.

Your administration has already proven leadership in medical care and at least addressing the Wall Street mess within the limits of obstructive industry interests and Republican obstructionism. Supporting conservation efforts is part and parcel of defending the environment energy conservation and global warming action. Thank you for your continued intelligent leadership.

This natural world is what we have to pass on to future generations of Americans; please protect our natural world.

Our greatest President's left a legacy of the beautiful national parks and recreational areas we now enjoy.

America can be proud of its early conservation efforts. Let's keep the tradition going and protect what cannot be replaced.

I want my son to be able to have the same incredible experiences that I have been able to enjoy in the many parks and forests and mountain lakes I have been privileged to visit.

I worry that my grandchildren will not have a healthy environment and a clean outdoors with space to roam. Please be a leader. Forget politics. Protect the future. Thanks for all you do!

Our family spent many weekends and vacations visiting parks and lakes around the country. Camping hiking and boating provided us the opportunity to make the natural world part of our lives and fed out spirits. After many years my husband and I have gone back to camping a chance to feed our souls.

Discussion Question 1

(cont.)

I believe these efforts are not for mere enjoyment of nature but they are vital to continuing generations being able to live healthy lives. Our health is tied to our environment and without the hard work of conservation and preservation we will increasingly become overpolluted overdeveloped weaker and sicker. My children are already suffering from this trend as they suffer from environmental illness. Increasing numbers of children suffer from allergies autism and other environmentally influenced diseases. Protecting our wilderness forests parks and preserved spaces is just one step among many we need to be taking toward better health of future generations.

I spend as much time as I can out in the various natural settings available to me here in Oregon. There is no comparison to a man made park. Man will never really duplicate the beauty of a forest built by god. We need to think beyond humans. This world is not just ours to destroy in the name of profit. We must take a stand to say that plants and animals have the right to live their lives the way they want to without fear of destruction at human hands.

The wonderful world of nature cannot be replaced if it is exploited by money seeking companies and persons. Responsible and careful development practices must be followed by all so this heritage is preserved.

All of the following criteria are vitally important to your agenda. By adding one important element to the necessary actions would have a profound impact on the other necessary steps And that element would be to lower the immigrant numbers for the U.S.A. Sheer over population is a root cause of all social economic and environmental issues.

As a mother of two young adults I with their father joyfully introduced them as children to many of the great spaces our forefathers had the wisdom to preserve for all Americans not just the rich and privileged. Together we explored the Grand Canyon Arches National Park Lassen Sequoia and Kings Canyon glorious Glacier and ethereal Bryce Canyon Grand Teton the incredible Yellowstone Zion Mesa Verde Canyon de Chelly Petrified National Forest and a couple of favorite haunts Yosemite and Pt. Reyes National Seashore. Preserving these amazing lands for all is one of America's best ideas.

One of President Clinton's greatest legacies is the roadless acts.

Stop the selloff of PUBLIC LAND to private developers Permanently protect public lands from any and all development

Our natural world has been extremely important in my life both growing up and as an adult.

I have not been the parks all the years that I have been working and hope that in my "senior" years to experience all the places of America the beautiful

Discussion Question 1

Written & Online Comments

(cont.)

Just last weekend my boyfriend and I went to Wildwood Park in Oregon. There are a bounty of Douglas firs on the banks of the salmon river. The BLM has done a wonderful job restoring the land and making it a good home for the salmon that call the river home. There's even a viewing area on the river where you can see under the water to fingerlings. The air is fresh and cool. It's an opportunity to learn that wouldn't exist without conservation. We walked the nature trails visited the boardwalk through the wetlands and enjoyed a lovely picnic dinner. Outdoor places need preservation so more people can luxuriate together and learn and be awed by what nature has to offer.

however restrict access by offroad vehicles to reservations set aside for that purpose outside forest areas where they can tear up the ground all they want without destroying the forests and wildlands and terrorizing wildlife. There is no reason why 510% of the population should be able to dictate policy on managing public lands.

Encouraging people to enjoy and appreciate the great outdoors will foster a respect for others as well.

The Seventh Generation rule should apply hereit is not just about us and maybe our grandchildren.

The possibility to connect with the natural world is one of the most underrated resources we have. Ecosystems and wilderness are not luxuries; they are fundamental to being human and must be preserved for ourselves our children and future generations.

Once they are destroyed it is virtually impossible to recreate them.

Discussion Question 1

(cont.)

Despite world wars cold wars police actions race riots economic depressions S&L/Financial meltdowns wars without end and global warming... despite it all the United States has an enduring legacy of land preserved and protected in our national parks wilderness areas preserves monuments state parks and local open spaces. These lands create an enduring sense of place confidence security for every citizen of these United States. Despite all the bad news one need only step into a local state or national park and hope seems to infuse into your spirit; the hardedged world almost always seems to lose some of its spirit. John Muir and the great visionary park advocates are true heroes we can call our own. Please join the ranks of Lincoln Roosevelt Johnson Carter as a towering champion of America's natural heritage; seize the day and this moment in our country's astounding history to create expand and better protect America's wonderful parks preserves wilderness' monuments wildlife refuges indigenous/native sacred places and rivers. Be as bold as the visionaries before you and think of generations to come who will look back a hundred years to this time and place and thank President Obama for his vision. When considering a legacy of land which is the stage upon which America continues to evolve please frame your strategy with these priorities: Expand the existing system by buying out inholdings eliminating grandfathered nonconforming activities and correcting haphazard politically contrived boundaries with ecological watershed boundaries. Do this through programmatic and agency cultural direction and fully applying the Land and Water Conservation Fund which was established to do just this and not offset the federal deficit; Provide the longterm nondeclining agency budget funding necessary to manage restore administer police protect and interpret our public trust lands. Of any government employee the public trusts park and forest rangers over anyone else; it is an honorable and indispensable career profession and responsibility of our government. Depoliticize the Department of the Interior Department of Agriculture and other public land management agencies and bring back the esteem morale honor and integrity to professional career civil service.

I regularly enjoy outdoor activities and in fact that is my passion. Many experts believe that we as a society have become so disconnected from nature that it has caused a "nature deficit disorder." Our society has become so involved with technology/media that there is no time to commune with nature. This absence from nature has caused detrimental outcomes for our children. Please consider future generations and provide for the above mentioned priorities.

As someone who cares very deeply about the earth I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. The natural world is vastly important to all life on this planet as an ecologist and person who believes that all things are connected protecting and caring for the planet we live on is vastly important for the well being of all present and future generations. Restore and protect wetlands

Discussion Question 1

Written & Online Comments

(cont.)

Kayaking our lakes rivers and bays hiking camping and fishing in back country photographing majestic sciens wildlife and flora climbing and cave exploring just sitting listening to nature and coming to that peace that can only be experienced in natural settings that is what I want the next generations to enjoy in America's great outdoors too. I may be too far along to participate in every one of those activities any longer but my children grandchildren nad hopefully many future generations will be able to enjoy them.

The wilderness areas we still have left are our heritage and our future. They are the refuge of many forms of wildlife that without the human race would also suffer. It is against the law in most places to have less than adequate housing for our pets; are not these great creatures entitled to the same? We as humans also need these beautiful and pristine places to be able to go to from the cities to rejuvenate our souls. To have places of respite from the drone bright lights and hustle of city life.

We have a country rich in resources wilderness and natural wonders. Please work to keep it that way for generations. With the advent of climate change and the reckless use of resources we have polluted squandered and wasted our riches. We need to pull back take responsibility now as stewards of gods creation and protect what we still have. We must be true stewards of the land.

Every summer my family and I choose a national park to visit. This year we visited Zion National Park Grand Canyon and Antelope Canyon. In past years we've been to Yosemite Glacier National Park Yellowstone and the Grand Tetons. They have all been amazing places and our children have learned to hike and appreciate nature and wildlife. Of course it was sad to see Glacier National Parks glaciers swiftly disappearing pollution in Yosemite and Grand Canyon but that's what happens after 8 years of an administration who didn't care about preserving our national treasures. I hope Mr. Obama will be a different president who doesn't sell off our parks and reserves to the highest bidder but treasures them as much as our founding fathers who established them as national treasures for future generations like my family.

I care deeply about the outdoors and am appalled by and ashamed of the damage to the environment perpetuated by big business that has been allowed to continue even after the Bush administration left power.

With all the other pressing problems its easy to put wilderness on the back shelf. However wilderness can be a part of the solution for those problems including: global climate change economic growth clean water clean air and health care. Wilderness provides a myriad of resources free if left alone. Our enjoyment of it which improves health is only one part of it. People pay to visit areas with wilderness; wilderness sequesters carbon cleans water and air as well.

I am also concerned that these sites stay affordable to all which many are not these days and ask you to keep that in mind as well. at a reasonable cost

Discussion Question 1

(cont.)

I have two grandchildren ages 1 and 3. They are fascinated with the natural world as most young children are. This is perhaps our most important opportunity to act given the political and ideological climate of our time. Truly it may be among the MOST IMPORTANT efforts of your administration when you consider the very long impact of preservation and conservation.

Once lost they can never be replaced. This is the heritage we should leave the next generations not a desolate landscape ruined by oil spills and pollution. Please protect our natural wilderness and national parks.

I have been fortunate enough to do some wilderness hiking and have visited most of the great national parks. Those are our national treasures and as such they should be treasured protected and preserved for future generations.

Tha means we need to address global climate change

Natural unspoiled pieces of earth are one of the greatest reminders of the joy of living. I want my children and their children to continue having the opportunity to benefit from contact with the beauty of our outdoor world.

I live near the Mississippi River which carries silt effluent from waste treatment plants and lots of agricultural runoff. Iowa's rivers rank fourth from the bottom of all the states' water quality. Improvement of watersheds is very important.

Please bring all energy producers back in line with the clean air and water act as this is turning out to be a huge blunder and detrimental to our parks and environment in general.

The lands around the parks must also have some protection. In some areas for example: Washington Coastal parks and both Mt Rainer and The Olympic Rain Forest park in Washington State the trees have been clear cut right up to the parks boundaries causing huge blow downs in the parks. With only 2% of all old growth forests still standing world wide we need to protect these ecosystems. I loved Roosevelt's Conservation Core it gave people jobs self respect skills and respect for nature and changed some peoples lives forever who were employed in this movement. I think this is a positive way to make the above bullet points happen and get our youth outdoors.

ReHab our Parks and Monuments

We need to preserve natural areas for the benefit of people yet to come. Unless we take steps to do so they'll all be used up with very few left to enjoy.

Nothing was as important to me as a child as the opportunity to enjoy nature and the outdoors. I already feel like there are fewer opportunities for this for my own children.

Discussion Question 1

Written & Online Comments

(cont.)

perhaps enact the 'Buffalo Commons' park idea in the upper midwest all of it and protect more by designating more wilderness by designating preservation areas by an ecosystem approach by promoting green rails through developed areas every year!

Open spaces and wilderness areas are important not just for personal enjoyment and reflection but also to protect sources of drinking water.

Please help preserve this great land for our children and all future generations. Thank you very much for your time.

I am 87 yrs. old. I have seen the beauty of the mountains the National parks and have enjoyed nature as a whole. I want the same for my GreatGrand children. Please protect our natural beauty and resources.

If nothing else this will help provide jobs in this country jobs that only people can do onsite and not outsourced. You have the chance to correct the last irresponsible Administration's mistakes sir as well as indicate you have kept faith with the people who hired you.

My son and his future are my motivation for protecting our resources. I want him and his generation to enjoy everything nature has to offer.

Please keep in mind that the BEST way to save the environment is to limit the growth of the human population through education cheap and easy access to birth control methods (including hysterectomy on demand) and limiting immigration. Thank you.

I live in Taos NM which is a very beautiful place with many outdoor recreational opportunities please keep the outdoors as inviting as it is in NM. I am blessed to live here!

Clean Air Clean Water and healthy living depend on you.

Having grown up on a small farm in eastern Ohio I have a special love of nature and the outdoors. I value the land and its ability to "take care of" the human family through nurture of body and soul. Currently I live in the city but near the ocean and a nature conservancy area. I feel very fortunate to be able to have these close by. City living requires that its dwellers have places that are accessible and protected. Such places offer a balance and perspective to life that is so very necessary for all of us humans and is certainly necessary for for the nonhuman family that shares this fragile planet and seeks to survive and to flourish.

I think it is important to remember we are already overpopulated on this earth. All beings need a place to "get out and away from it all". And quite honestly I for one am happiest in nature!

Our natural life and open space are a gift from God and ours to protect and enjoy. It is critical for our wellbeing and the wellbeing of all future generations!!! You are the head caretaker!!! Remember?

Discussion Question 1

(cont.)

This is one of the most beautiful countries in the world with so many different wilderness areas. Our National Parks are awesome as I can testify. We need desperately to preserve them for our great grandchildren

I hope that my greatgrandkids can freely enjoy the great outdoors just as I did in my youth.

I have loved nature and forests ever since childhood growing up in southwest Virginia and I really hope that the next generation will be able to enjoy America's great outdoors too.

I personally believe it is of the utmost importance for American's to realize that we are part of the natural world not disconnected from it. If more people can come to this understanding we will have a better chance to face looming threats such as climate change.

and provide on sight education to maintain the preservation of the wilderness and encourage responsibility for those enjoying and experiencing this Nature. without harming the local wildlife and their habitat

The natural environment still left untouched by mankind should be protected and preserved for sustaining life for future generations. If wilderness areas are left as they are the unique ecosystems at play in the macro and micro climates will help our air quality and water quality as well as provide habitat for flora and fauna greatly at risk. The most important rationale for saving our wilderness areas is to improve the quality of our environment.

Once these public spaces are gone they are gone forever.

Even though there are places I will never see in person knowing that they are there and protected gives me great peace of mind.

The two words that I stress are BOLD and CONSERVATION. As our population continues to grow and that old innate exploitation gene in human nature remains with us it will not be easy for you to prioritize Conservation. That is the reason you will need to be both bold and adamant that the priorities listed above remain as one of the hallmark's of this Administration's legacy to the people of the United States.

Now my personal coment. Nature has grounded and expanded my life. From country walks with my Mom to cross country excursions on land and water (I've probably missed only 1/2 dozen states.. regretably). I've been through Yellowstone Acadia Grand Canyon Denali and more national and state reserves than I can remember. I have been blessed as have my children who have grown to share my passion. Our heritage as well as our hope lies in the Grand Creation we have been placed within. Please strive to protect this great treasure we've been asked to steward. Thank you

Longrange planning is as important as shortrange planning in responsible government. We want the next generation to enjoy America's great outdoors too. Fully fund the development of alternative responsible energy development

Please don't let corporations dictate what our next generation will be able to enjoy. We must have responsible leadership if we are going to maintain responsible conservation! Just say no to corporate greed.

Firstly it is imperative to us future generations and the planet itself that both the amount and quality of pristine roadless wild lands be protected. These "islands of life" will form the seeds around which the globally sustainable ecosphere germinates in decades and centuries to come.

It's important to preserve wild places so that people and their children can get away from video games television and the internet to experience nature first hand. In this way we can pass on the conservation ethic that is America's best idea.

But more important than enjoyment is the knowledge people need to have about the natural world and how it works. Without this they simply don't understand the importance of our legislators making wise decisions on issues that affect the physical world.

As a young girl growing up in rural Maryland my family and I feel personally connected to the unique wilderness all Americans share.

I believe that we need to look at things that are important to us and the inspiration of all who still enjoy and want to keep the appreciation of outdoors because if we don't protect them now where are we going to go take the appreciation of the outdoors at? I love to see the outdoors and love to see the sunsets or how the clouds create in the sky with colors and from the horizon of the mountains. To hear the birds chirping melody songs to see a moment of magical delight of seeing beautiful deer and others. I love the beautiful national wonders waterfalls rivers historic sites monuments and other places. I would like for good people who work in Washington to take the time to buy a ticket to go to those places and see them for yourself and I know it will change how you feel and you will want to protect the outdoors for generations to come.

Educate more people about the importance of Nature Protect our water sources Restrict new roads being built in America's most pristine outdoor spaces Thank you for your consideration!!

If we do not protect our great outdoors with its treasured wonders and wildlife then we will end up destroying humankind in the future.

My family has enjoyed the Cuyahoga Valley Towpath Trail & look forward to the day it extends right up to Lake Erie. Not only do we enjoy the beauty of nature but it provides the exercise of bicycling for the children.

We must do ALL that we can do for the generations to come!

Our country has become so disconnected from its most precious resource our connection to nature.

Please consider what your grandchildren along with mine will not be able to even see much less have at thier fingertips to enjoy if you do not step up and at least consider doing something with these above ideas. Once they are gone they cannot be brought back just like all of our other past losses and those we are presently losing. I could name them all or at least begin to name them but I'm sure you are completely aware of all of our wishes.

I am a proud natureloving American. I love my beautiful country and We need to capitalize on all of the green energy resources we have in this country keep our natural resources clean and accessible and get off oil and other polluting methods of powering our lives.

There is more much more to life than making money and destroying our earth mountains soil air and water to do it.

Our population is growing. More people means more development. Let's keep some portion of our country natural.

I have always enjoyed the beautiful outdoor sights that nature provides and respected nature's importance to continued life on this planet that of human beings as well as other life forms. We must do everything we can to protect the natural world. I voted for you because I believed that you shared many of my priorities for this nation including conservation of our great outdoors.

We only get one chance to preserve our most magnificent wild places. Once they are developed we never get them back.

and educate them Stop the coal oil and nuclear power industry from further pollution Educate people about how bad coal oil and neuclear energy is Start programs for cleaner energy uses and educate people about "going green"

The main reason that we live in Alaska is to benefit from the beautiful lands surrounding us. We visit the National Forest almost daily and frequently enjoy visits to national monuments and national parks here in Alaska. In addition the majority of our vacations outside the state include visits to the great outdoors including frequent camping trips. We were lucky enough to spend two years traveling around America in a small RV and visited our parks forests monuments and other public lands from coast to coast. In our travels we love to bring our grandchildren and great grandchildren along to learn to love nature as we do. An upcoming trip to Arizona and New Mexico this fall will include my 90 year old mother on our visits to Saguaro Organ Pipes Petrified Forest/Painted Desert Grand Canyon Carlsbad Caverns and Guadalupe Mountains National Parks. We already have a trip next spring planned to visit the many national park areas in southern Utah. The National Parks are the crown jewel of America and need to be maintained upgraded and expanded. These areas are enjoyed by millions of Americans as well as foreign visitors. The parks are suffering from neglect and we are counting on you to reverse this trend and give them the attention and funding that they need.

I grew up in a creek in Santa Monica California I knew every frog and dragonfly that was there personally! We climbed hills and slid down them in the rain every chance we had. During summer vacations our parents drove us to many of our country's national parks where we camped and learned invaluable lessons about our environment and the priceless animals who inhabited these sites.

As a citizen of Arizona I have had the opportunity to grow up in the shadow of the incredible natural beauty of the Grand Canyon and other areas of my state.

I feel blessed to have been able to enjoy all of America's great outdoors.

We need to protect and conserve all the wilderness habitats that are left in this country. It is important to and wildlife habitats. So that wildlife has a place to live and thrive. All creatures and plants play a part in OUR ecosystem. When you lose just one creature or plant it has a snowball effect on the rest of our ecosystem. We need to so that they can see it's beauty and appreciate what it truly has to do with all life. We should without disturbing the wildlife that are there. We have a town in our state called Ithaca New York. It has numerous waterfalls and parks yet maintains a town around all this without disturbing it. They appreciate the beauty nature has brought them and it also brings in tourism dollars. I've been to Acadia National Park in Maine and was in awe by all it's beauty and how we can visit this area and keep it relatively undisturbed. This park brings in a huge amount of tourism for Bar Harbor Maine where cruise ships come to port so that people can visit Bar Harbor and Acadia National Park. While there we took a cruise on the ocean to go sightseeing for whales. We saw dolphins racing along side our ship and we got to see some huge whales. It was awesome. When my daughters were young we used to take them hiking and to parks a lot. It was an inexpensive healthy and good time for all of us. They still appreciate nature and love to camp and hike. It is important that we Conserve the public federal state and local parks that we have and to create more to help stop suburban sprawl and wildlife. We must all learn to coexist with nature or we will not survive without it.

Dear President Obama I am writing to you to ask that you Please help US to protect our natural heritage legacy protecting and conserving our wilderness areas and the resources with which to do so. I cherish these beautiful areas and although I haven't visited alot of them just knowing that they're there gives me hope; a renewal of spirit and rejuvenation of soul when I am in their midst. I feel it is of the utmost importance that we realize how beloved these places are in the hearts of all Americans and how it is all of our birthright to maintain and uphold their care so the next generation can enjoy America's great outdoors too.

That's why I am MOST STRONGLY URGE you to seize this opportunity to create expand and better protect America's shared outdoor spaces including ESPECIALLY wilderness wildlife refuges (FORBID HUNTING AND TRAPPING THERE) parks forests trails wild and scenic rivers and historic sites. Protect ESPECIALLY our wilderness FROM NUMEROUS THREATS AND PROTECT WILDLIFE ESPECIALLY SPECIES SUCH AS WOLVES PRAIRIE DOGS ETC. FACILITATE connecting people with Nature WHILE PROTECTING THE ENVIRONMENT WHILE THERE IS STILL TIME.

the trashing of America is proceeding unabated!!!!

Once these places are gone they can never be replaced.

protect our country from the devastating effects of pollution and emissions that cause global warming

(cont.)

I believe as the Native Americans do we are all connected to each other as well as our surroundings. I also believe that everything starts at the top whether that be a family company or government. Mr President you get the opportunity to help change the world that we know

I have had the privilege of growing up in the beautiful parts of this land the Southwest and New England. I camped and hiked and canoed and loved every minute of spending time in nature.

I have enjoyed camping in many areas of this beautiful land both as a child and again when my children were young. These are precious memories that will always stay with me. We still enjoy the majesty of so many natural areas where ever we travel and would like to protect these areas for many generations to come. We currently are fortunate enough to reside in an area where we are lucky to see wildlife in their natural habitat. This is always amazing to whomever is lucky enough to get a glimpse of a bobcat havelina roadrunner or even a rattlesnake.

Hiking though the Southwest has truly been one of the divine pleasure in life. Thank you for your heading our nation to a sensible conservation strategy for the modern world.

You've seen several of the National Parks this summer and you've spent time on Martha's Vinyard. Perhaps if you were able to visit the National Parks as a private citizen the way most Americans and foreign visitors do you would be adamant about leaving a natural heritage legacy for future generation to enjoy America's great outdoors too. Martha's Vinyard is a great place to relax and enjoy the company of others but isn't it a bit overcrowded especially with the rich and/or famous?

When America's first National Parks and wilderness areas were established they were done with future generations in mind and with the goal of protecting forever an unparalleled treasure a collection of landscapes viewed with wonder the world over. When I first set foot in a wilderness area specifically Tuolumne Meadows in Yosemite National Park I was struck by the calming effect of the wild silence and conversely the excitement it generated within me. It changed me forever. Sadly America's collection of environmental gems has been tarnished and is under tremendous pressure from increased population and its attendant pollution. Repair and protect our existing wild lands and establish further areas of untrampled wonder. We have been to the moon. Let us come back to Earth save what we've got then we can reach for the stars.

I am thrilled that your administration has made the decision to focus on Amercia's great outdoors. Our country is rich in natural wonders but those riches must be protected form overuse and exploitation pollution and overdevelopment.

The outdoors are so important to us and our future generations please keep them safe by making more wilderness areas safe from energy exploration roads and roads in general.

(cont.)

Given that we have monumental issues in front of us I have to strongly express my need for immediate efforts for the only environment we have. When asked during polling "what is the number one issue for you?" and then I'm given the choice of Economy Education or Employment... I say strongly the ENVIRONMENT. It has fed sheltered and supported us for hundreds of thousands of years and now we are very quickly destroying our source. I grew up in Southern Arizona's beautiful Sonoran Desert. I spent every night outside growing up playing in the desert surrounding our neighborhood. I explored the ecology that I learned about in school. Still today I love to hike mountain bike kayak... you name it to appreciate the environment we live in. Any trip I go on involves outdoor exploration... and most recently Yellowstone left me breathless. But our world is suffering and right under our feet. In my own home town of Green Valley AZ we have had to consider health effects from the mountains of copper mine tailings which my mother and grandmother worked for (health wise I've already had 7 surgeries and am treated as a medical anomaly and a friend from high school has died of cancer caused by a contaminated aquifer she was 31). Many of the flora and fauna of the Sonoran desert are endangered and some extinct and yet development continues as well as a new copper mine in some of the most beautiful area of Madera Canyon I could imagine. We are losing our outdoors. Please always remember what we do to one strand of the web of life we do to the whole web...

I love my country. "Oh beautiful for spacious skies.... purple mountains majesty... from sea to shining sea" I cherish this land and I am committed to doing what I can to see that we are good stewards of this "grace." It is a gift that can be lost not most likely from outside forces but by our own neglect and misplaced priorities.

As one of millions who enjoy the great outdoors I know the most important thing we can do for future generations is to preserve as much as possible of it in its natural state. Set aside wilderness at a Large Scale

I appreciate that you and your family have created a garden at the White House. What a wonderful way to begin that introduction to other life around us! I was fortunate enough to grow up with weekends in the country. Although I didn't realize it at the time it was a critical experience that has helped me connect to other humans as well as other life around me as I have grown up. I don't think I would have nearly the appreciation for life and all it has to offer were it not for that experience. Thank you for putting a garden a significant part of our food source before us as a model of how to begin reconnecting with the land and our communities.

WE DID NOT INHERIT THE EARTH FROM OUR ANCESTORS WE BORROWED IT FROM OUR GRANDCHILDREN. PLEASE HAVE BIG OIL RECREATE TESLA'S POWER TOWER PATENT IS ONLINE. THEN THEY COULD CHARGE HOMES AND INDUSTRY A MODEST FLAT FEE TO US AND THE WHOLE WORLD.

Growing up my father would take the family to the Gila Wilderness Forest in New Mexico which was quite a long way from El Paso Texas where I grew up. This is where I became interested in the beauty of forests and the creatures who live in them.

(cont.)

We have been to several of the National Parks and cannot imagine our country without them. We need more of these sacred places where all of us can be renewed by spectacular natural wonders and we are hoping we can have another national park in the great North Woods of Maine. In this contentious society we live in nature remains replenishing of our minds and spirits.

Transportation to the parks so that poor people can visit them too

This Earth is the only one we have let's protect it!

As a psychotherapist I know the value of the outdoor for mental as well as physical health.

I am 54 my mother is 73 and a few weeks ago we spent a wonderful weekend camping with my nieces and their very young children at a National Forest in Oregon. We could not have had a better time as a family.

We need to conserve for those who come after us.

If one thinks seven generations ahead regarding this very worthy project it will help our earthly home.

Develop educational programs for youth (at all levels of school) to learn about the environment and its conservation

My favorite place is Mt Rainier National Park which I find most restorative to visit and be in wild setting. Natural areas like this are vital to our wellbeing. Particularly as population increases and people live in close proximity. Seeing nature's balance and beauty give respite.

As I am someone who lives in the wilderness areas in Rockland County outside of New York City I have easy access to use of our local national parks.

Nowhere else can you "HEAR" the silence or noise (if you will) that permeates into your spirit awakening awe and wonder of the unspoiled nature left for us and future generations!

There are many important issues in front of you and the American people right now. This is one of them maybe not as big as the economy jobs or lost homes but important nonetheless. The "great outdoors" can help the people to recreate relieve stress gain a new perspective on other issues in our lives so it will be good to protect and improve it also for human life and wildlife.

If it weren't for efforts similar to this one I wouldn't be able to enjoy camping and hiking in Glacier like I will be in a couple weeks!

Our family did not have much money but our family vacations every year involved choosing a state or National park and going camping. Memories flood over me when I reflect on those trips. My appreciation of the natural world and the interconnectedness of all life on our planet was planted and flourished in those trips.

I recently spent some time in Glacier National Park with my brother's family. It was even more beautiful than I remembered. Please save these places for our future generations. They bring out the best in our people.

My husband and I have enjoyed our forests parks historic sites and rivers so much; I can't bear the thought that my grandchildren and their grandchildren won't have the same heritage.

Protect the wild for all of us.

I've always enjoyed the great outdoors in Colorado and Arizona. Especially the fishing. When I was a kid my dad would drive the family around in the forests to see if we could spot elk and deer and we always did. What great memories!

As the president of the United States of America this is one of the greatest undertakings that you could bring to fruition.

Too many of our nation's children are already losing their connection with nature and suffer from what Richard Louv called "nature deprivation disorder." Furthermore we need programs by dynamic wellpaid naturalists at these sites to help invite more participation in nature and educate the people of this country including our children.

This letter is about National Parks and the outdoors in general. Having gone to school in Wyoming and Washington State I am well acquainted with outdoors activities and much enjoy them.

Some of our family's most treasured memories are the vacations we took in our National Parks. Let's make that possible for future families also.

This letter seems to say very well my thoughts on the environment. My family very healthy in mind and attitude all enjoyed our ventures exploring and camping and canoeing while they were growing up. As adults they view the wilderness areas as places to restore their sense peace and harmony. Protect these important treasures please.

As a teenager I hiked and camped all over what is now the Desolation Valley Wilderness Area long before it was so designated. The experiences I had are still wonderful memories that I can look back on. At the age of 93 my physical condition prevents me from repeating those experiences but I can still visualize them today with great pleasure.

Discussion Question 1

(cont.)

Here in Washington state I was fortunate to grow up camping hiking hunting and fishing and it has enriched my life in many ways. I am healthier physically mentally and spiritually because of my connection to the natural world. My love of wild places has led to an environmental ethic that goes beyond wilderness to include global regional and community concerns like climate change sustainability transportation food security and issues of inequality and social justice. I believe that protecting natural areas and resources will benefit all of us even urban dwellers who never set foot in the woods. Indeed we are all part of the web of nature and must protect it for the survival of this and succeeding generations.

Thank you for your utmost attention and concern on this matter that elevates us to the great country we continue striving for.

Every day that I can I walk into Griffith Park to enjoy some fresh air clarity and peace of mind and to stay healthy. Life in the US today is complex and often hectic; it is this gift of spending time in nature that I give myself almost everyday that really brings me happiness inner strength and revitalizes me to continue my work my life my art.

There is nothing like hiking where no one else has ever hiked before. Or seeing the vastness of wilderness and letting go of all pent up stress from work unemployment traffic pollution the economy etc. Yes connecting with Nature. AAAAHHHH!!!

Perhaps greater concern for our public spaces will also make us less reckless about destroying public (and private spaces) in other countries by military means

I work overseas in Kenya for USAID and see the consequences of the lack of conservation and the effect on watersheds and wildlife habitat. The snow is almost gone on Mt Kenya and Kilimanjaro. I love returning to the states to camp in our pristine national parks and wilderness areas. LETS KEEP IT THAT WAY!

All these things are what make America different and make this country strong; we are the land of the great outdoors as we should ever be!

Like most Americans I value our heritage and the wild outdoor places and wildlife that remains so very important to me today. We must protect our great country in every way so we can ensure that these priceless lands will be preserved for all of our citizens.

I would like my children to have the opportunities I have had to enjoy valued natural space.

No doubt the day will come hopefully many generations in the future that we will no longer have "a great outdoors".

Nature is the backbone to a full understanding of beauty and human's placement in the world. Please allow future generations the opportunity to have this most important of human reflections.

Discussion Question 1

Written & Online Comments

(cont.)

My family particularly enjoys the Cape Cod National Seashore.

Some of the most profound experiences I have ever had have happened in the wild lands of America.

Personal note: If we don't act now to conserve and preserve our natural areas the earth will be doomed! It is already revolting against humans with such natural disasters as increased and new tornado zones the Canadian earthquake that rocked the northeast United States shelves of ice breaking off Greenland melting polar ice that is threatening wildlife habitats relentless oil spilling into our oceans both in the gulf and in China Iceland's volcano spewing forth smoke that affected a continent across the ocean...the list goes on! When we can respect the earth she will provide for us but if we ignore and take advantage our resources will all be gone. I was always taught: Love your Mother (Earth). Thank you for doing everything you can to preserve our beautiful world for future generations. Otherwise what's the point of anyone having children?

I have 2 daughters and 2 granddaughters. I am a volunteer senior keeper at an accredited rescue facility for abandoned and abused big cats. I advocate for the environment I am a vegan. Having spent the most glorious vacation ever in our national parks in Utah and Colorado this is a legacy I want my descendants to enjoy also.

Creating the world's first National Park at Yellowstone is one of the truly significant contributions of America to its people and by example to the world.

This year my husband and I took one of the best vacations we've ever had. We visited Mt. Rushmore Crazy Horse Devils Tower Yellowstone and Glacier National Parks. What a wonderful way to get away from the stress of life and to explore the grandeur and beauty of this country! We kept all of our entertainment dollars within the US and supported many mom and pop shops hotels and restaurants along the way. Our vacation wouldn't have been nearly as fantastic if we hadn't been able to get out and hike a few trails to see those hidden gems of waterfalls and to see the bears elk mountain goats and prairie dogs.

Our greatest treasure is our National Parks.

Our children are becoming increasingly an indoor generation. We need to renew our commitment to the natural surroundings to give them places to visit and thrive.

I have watched interviews with inner city children describing how changed they were by the experience of spending time in wilderness areas and how much more peaceful they felt as a result. This alone is reason to preserve our wilderness.

(cont.)

As a former Montessori teacher and Director of the Forest Ecology Preserve Nature Education Center my mission has been to help people especially children become truly awed and inspired by nature. Heartfelt appreciation (love) must come before the desire to care for it can exist. The following is an article I wrote a few years ago which will hopefully illustrate my deep concern for our next generation and the future of our planet: *Where Do Children Play?* "If the youth have not been taught to love the good and beautiful to respect the rights of others and to appreciate the worth and value of the things about him his education is incomplete. Let us teach Alabama's boys and girls to love flowering fields the vernal woods and limpid streams for they are their playground and the habitat of all our wild creatures." Excerpt from: *Some Birds Fish and Game of Alabama* (1925) I.T. Quinn Commissioner These beautifully written words from I.T. Quinn in 1925 still hold significance for us today but sorry to say the children's "playground" has changed locations. What Richard Louv has written in his best selling book *"Last Child in the Woods: Saving Our Children from Nature Deficit Disorder"* sheds light on this relatively new phenomenon. Louv sees our children so plugged into television and video games that they are "the first generation to be raised without meaningful contact with the natural world." This disturbing fact is one which should help motivate us all to help create places where children and families can learn to appreciate the wonders of the natural world once again. "Children (and adults) need nature's nutrition"* for the many life lessons and benefits they can receive each and every day. Brent Evens* Social Worker and CoAuthor of *The Nature Center Book* states "Nature centers [such as the Forest Ecology Preserve] are providing places and programs that literally put youth in touch with nature. This is where our communities can encourage kids to be kids to climb trees play in the creeks skip rocks encounter the critters and dig in the dirt." He also asks the question "How can we prepare the next generation to inherit the Earth if the next generation has no personal relationship with the Earth? The great indoor migration is putting the [mental physical and spiritual] health of our children as well as the planet at risk." Nature play and programs...have never been more important. *****

The national parks hold a very special part in my life. As a city dweller they have given me an opportunity to realize the space and grandeur of field mountains glaciers streams. Above all my husband's ashes are scattered in Yosemite and I often think of the place where he is overlooking a fantastic waterfall half dome the grand expanse of sky and forest. I hope my ashes join his when I die. This may sound creepy but it is true. We need these spaces to keep us human in touch with nature. the more population we have the more we need these places.

This is also a great way to help combat global warming

I live in the foothills of the Blue Ridge Mountains in the Appalachian region of North Carolina. It is very important to me and others that I know to preserve the natural splendor and biodiversity of our region.

Discussion Question 1

Written & Online Comments

(cont.)

I live in an area with thousands of acres of public lands. The predator/prey population is complete. All Americans should be able to enjoy our public lands.

Thankyou for standing up to the DoNothing Republicans who created the mess we are in!

Exploring and enjoying the outdoors together is one of my family's favorite things to do. We've visited many National Parks Monuments and Forests where my son has learned much about the natural world and caring for it and where our entire family has found joy and renewal. These places are surely one of America's greatest assets.

We owe it to our children to protect and preserve the environment and all of its inhabitants. It is the legacy we leave with them and the future they have before them. "We simply need that wild country available to us even if we never do more than drive to its edge and look in. For it can be a means of reassuring ourselves of our sanity as creatures a part of the geography of hope." Wallace Stegner the Wilderness Letter

My favorite place to experience is Pt. Reyes National Seashore. It is a sacred place managed for habitat and wildlife rather than humans. I feel renewed after spending time there and the quality of my life is improved.

I have only one grandchild but she deserves to enjoy the beauty serenity and educational opportunities that only interaction with nature can give her. How about your children and grandchildren? Do they not deserve the same?

Thank you very much for the many achievements of your administration. Overall you have accomplished a great deal and worked hard to solve our nation's problems. Although you have already accomplished things that will stand as a legacy for the future please consider one more way to enhance that legacy in a truly meaningful way.

I just returned from hiking in the Desolation area off of Highway 50 in Calif. with my brother & son.

Research indicates that the very health and wellbeing of our country and our planet may depend on our responsible management and protection of the natural places.

Your leadership is very much appreciated.

As someone who believes that preserving our natural heritage is crucial to the life humans will live in the future I want the next generation to enjoy America's great outdoors too.

Reconnecting with natural areas and with our heritage helps to foster a greater sense of compassion for all that is an important quality for all American's.

Discussion Question 1

Written & Online Comments

(cont.)

One of the best things America ever did was to create national parks monuments refuges and wilderness area for all people. We need to always protect these actions and never take them for granted.

I was fortunate to grow up taking family vacations to many of our treasured national parks and am passing that opportunity onto my children. Most recently we visited Effigy Mounds in Iowa. It is a gorgeous place filled with history nature serenity and hope. All Americans deserve to have these opportunities available to them.

When my family get the opportunity for a vacation we often make use of America's great PUBLIC outdoor spaces and camp in them on our way to visit distant relatives and friends.

I spend a great deal of time in an area of the world that still flourishes in a natural manner....southern Mexico. The lack of industrial development in this rather remote area affords me the life experience of watching the flow and balance of people and nature in an everyday manner food is on the table fish are available to catch there are natural settings for cows to live their lives etc. People have fewer toys to play with but enjoy their families and nature as a result. It is now a lifestyle that I don't want to lose because it brings a harmony within and without I have not experienced in living 50 years in different areas of the United States. I'm not saying to go back to being without modern conveniences but not to destroy that which makes life worth living in the first place. There is more harmony when people coexist with nature and not destroy it for personal gain. There is more freedom for all creatures to enjoy life human and otherwise when we live with them and respect their needs and desires for simply living. It's a choice I still have and had to look for a place in the world outside of the U.S. to enjoy this "not doing harm to others" everyday. Give that back to us through conscious decisions that keep us close to our inheritance with Nature.

Our family has put conservation easements on our lands 52 acres in Southern Oregon so that it is protected from future development. It's our small way of husbanding the land for the future.

It's the most important legacy we will leave to future generations!!!

generations of Americans to come deserve to enjoy America's great outdoors too.

Our national parks and wilderness areas is our inheritance and our legacy to the next generation. People need nature and wildlife in this fast paced stressful society.

Every year for 30 years I have taken my family to camp in the wilderness from Key West Florida to Prudhoe Bay Alaska and many places in between. Wild places enable you to recharge to be more productive and provide an inexpensive way to have fun with the whole family yet learn at the same time.

Discussion Question 1

(cont.)

It is always easier and more economically feasible to preserve what already exists than to try to recreate it after it has been destroyed

My grandchildren and yours can only benefit by protecting the American Great Outdoors.

What a fantastic opportunity to protect and care for our natural world. National Parks National Forests Wilderness Areas and State Parks have played a formative role in my family's life.

Even if I personally do not utilize these lands (which so many I do) just knowing that they are there LIVING and in preservation provides some peace and wellbeing.

Since my husband's retirement we especially have enjoyed visiting the wonderful National Parks and Monuments of this great country.

Protection of our wild natural areas must never be seen as an expensive luxury but as an essential for good health the spiritual and physical health of humans who visit these areas and commune with the wild outdoors the health of the plants and animals that live there the health of the nation by preserving for future generation what has been a healing source of strength for present and past generations.

Now more than ever our populace needs to have access to nature national parks forests riverways etc. With all the problems with our modern day lifestyles this link to nature will become more and more important!

"We must protect the forests for our children grandchildren and children yet to be born. We must protect the forests for those who can't speak for themselves such as the birds animals fish and trees." The Nuralik Nation Says it better than I can.

It is a great idea to protect and preserve and create and expand existing sites. It is our greatest resource!

Our special wilderness lands have been a vital part of my life.

I live in a large city but love to visit our wilderness areas and feel good just knowing they're there. I want my grandchildren to know and love these areas as I do.

I live within 2 miles of one of our wilderness areas the Superstition Mountains of Arizona and I love that it is available to us all that there is no development or road system allowed to tear up the trails and that it provides thousands of people the opportunity every year to explore a varied wilderness experience within 40 minutes of Phoenix.

I am a parent of 5 adult children who love to enjoy our country's beautiful nature. Our youngest daughter is working at Yellowstone National Park this year and loves her surrounding nature.

Discussion Question 1

We are blessed to live in a country filled with many kinds of beauty. It would be shameful not to protect what we are lucky enough to have to show our gratitude & to leave to our successors.

Trees do more than . They make our oxygen too. With human population ever increasing and breathing out more CO 2 we need all the oxygen we can get. I would live out in the woods if I could but I live in a desertno one appreciates a tree more than I do.

Our amazing wilderness defines us as a nation for ourselves and for the world.

Every generation to come should be able to enjoy wilderness in America.

IT STARTS IN PARKS!

I have visited three of our national parks: Yellowstone Glacier Yosemite. Each is gorgeous in its own way and I truly enjoyed being there if only for a short time. I noticed that each had many visitors of all ages nationalities. etc. and I trust this will continue through the coming years. America is truly beautiful and all of our national parks plus other land and water spaces need to be preserved for generations to come.

My family and i are very grateful to the farsighted pioneers and officials of our nation who gave us the national parks and many other types of nature preserves. We have spent many enjoyable days in these parks and through them have come to value our earth and want to care for it.

We all share in the stewardship of all fo God's creatures!!!!!!!!!!

Many of the best times of my life have been spent in the wilderness often wilderness that wouldn't exist if it wasn't protected.

I am strongly in support of any conservation of American wilderness. As I watch urban sprawl in Tucson more and more of our beautiful unique desert begins to disappear. I grew up able to see the Milky Way in the night sky now it is not visible because of light pollution. I believe we can have growth and protect our environment. Being responsible and protecting our lands and water can only be a winwin for us and future generations.

I am a lover of wilderness and the outdoors in general. As a teacher and parent I know how important the outdoors is to our children. It helps them be more resilient in an ever more stressful world. I just returned from a 5 day backpacking trip and feel more ready to face the problems that confront me.

Discussion Question 1

(cont.)

Our natural areas are also tourist attractions. They are a part of the American image.

My grandchildren and their children deserve the opportunity to enjoy wilderness that has not been compromised by development.

We definitely need to respect the gifts God has graciously given to us. Thank you for your attention to my letter.

I'm glad you're my President. I know you care deeply about matters such as this. I know you want your daughters and their children to enjoy all the beauty of this great land of ours for many years to come. I know I can count on you to do the right thing.

My grandchildren deserve to be able to enjoy the wonders of Nature in the same manner I did when I was growing up.

I will always treasure the last trip that my husband and I made with my late motherinlaw to the Four Corners area. She had lived in Seattle her whole life. We toured the national parks in the area and enjoyed driving through the national forests. Over and over my motherinlaw said "I never knew there was anything like this in our country." I can still hear the awe and joy in her voice.

We have visited most of our nation's National Parks over the past 52 years and many of our National Monuments. We want our grandchildren to be able over their lifetimes to be able to appreciate nature as we have enjoyed it.

We can best keep enjoying the great outdoors by not decreasing what protection there is and increasing regulations designed to protect the great outdoors and its inhabitants. We can also continue to enjoy the great outdoors by cleaning up the pollution in government. There is a rotten spell that has been emanating from government for some time now from all three branches of what is supposed to be a representative democracy but the only ones getting representation are the corporations...need I say more.

Our family takes great pride in our national parks and considers them not only a place to visit and experience renewal but also a legacy to be passed on to future generations.

Every person should have the opportunity to be in a natural area at least for a time without knowing the interruptions that come in our modern society. If they can experience that silence more will be willing to conserve the little we have left.

Natural lands have the necessary capacity to clean air with forests and vegetation supply clean water with effective natural filtration and serve as evolved habitat for an entire spectrum of organisms.

Jesus sought out lonely places to reflect and pray. We need such places.

I want my grandchildren and their grandchildren to be able to have the same wilderness experiences that we were able to give to our children.

I want tomorrow's grandchildren to enjoy America's great outdoors too. Our health peace of mind and happiness will all be enhanced by advancing these goals; they are important to our wellbeing as a nation.

My favorite places to visit in our country are the parks and wilderness and national monuments.

I want my kids and my grandchildren to be able to enjoy the beauty of nature when I'm long gone. I don't want them to grow up in a world that doesn't appreciate the great outdoors and only cares about material things. I wish for them to see nature and actually enjoy it and want to be there. I know so many people who don't care about the environment and it's because they don't realize how important it is. I want all people to realize the importance of nature and to be able to enjoy it. It really matters.

I know there are a lot of things that are vying for your attention but the most important one for me personally is protecting our nations natural environments.

The earth in its natural state is precious.

I have enjoyed the great outdoors and have lived for 75 years in this beautiful country. I have always said that the great outdoors is food for the soul.

I definitely realize that YOU have many issues to contend with however keeping our ENVIRONMENT and WILDLIFE free and safe for our progeny needs to be a PRIORITY!

Parks and wilderness in California are of particular importance to me and I would like these to be a priority for future funding and protection.

These places are priceless and if we let them disappear they will be gone forever there will be NO way to get them back. To ensure that current and future generations will always benefit from and enjoy our

At 44 years old I am back in school as a senior Biology major with an emphasis on Environmental Ecological and Evolutionary Biology. I am planning on working to protect wildlife and the earth.

For the sake of all of our offspring we want future generations to enjoy America's great outdoors too.

Discussion Question 1

PLEASE HELP PROTECT OUR OUTDOOR SPACES!

I am a longtime hiker with a particular affinity for the red rock country of the Colorado Plateau. While working in aerospace for a quartercentury I spent almost every summer vacation on the Plateau. I've been to the bottom of the Grand Canyon nine times and to Arches Goblin Valley Zion Bryce Toroweep Monument Valley Capitol Reef Garden of the Gods Kolob Calf Creek you name it I've probably been there. More than once. And I've been to the Tetons Yellowstone etc. In other words I value America's parks beyond measure. They're not just a part of our country and of humanity they're a part of ME. Those are not just wise things to do they are integral to sanity.

Priorities for me are that we do not compromise existing wilderness by allowing mining logging road building which would harm the water the forests the natural beauty of these areas. That the department of interior cannot sell public lands to the highest bidder. That science and nature are used to determine how to best protect areas that are open to development for business as well as citizens to create a winwin. That we enforce clean air and water regulations. Businesses that pollute are held responsible.

I teach too many students who have never been exposed to nature and an appreciation of all life forms. The first reaction of many of them is to step on a bug shoot a deer or use a street as a trashcan. We need to not only preserve our wilderness areas but to add programs accessible to all citizens especially the young ones that will teach responsibility and an understanding of the web of life.

This is not just about the next generation being able to enjoy the great outdoors. Whenever we take away protected land it usually is a stopgap measure with no long range provable positive solution in mind. However when we destroy the land the impact is long range with an irreplaceable loss. Please do not engage in stopgap measures. As the Native Americans say one must see the effect of your actions on seven future generations. We are so untrained in this thinking and you have the power to shift that.

It is of paramount importance to protect our wild spaces. As our population continues to grow these areas are necessary to provide spiritual relief to our every day grind

First fire Ken Salazar and replace him with someone who cares about the environment instead of oil and mineral extraction.

I REALLY want this and it's the right thing to do...

I trust you to do what is best for all creatures great and small; from each sapling to the largest of mammals. Do the right thing.

Provide Increased Nonmotorized Access and Recreational Opportunities

We are so privileged to have these wonderful places and they need to be protected.

I have been lucky enough to enjoy our incredible National Park system and have visited quite a few wilderness areas.

Teddy Roosevelt and John Muir began creating these special places. I have been in many national and state parks state and national forests wilderness areas and national monuments. Each of these visits has enriched my life. Please help!

Beauty especially natural beauty is being pushed aside in our fastgrowing and sometimes outofcontrol world. The sanity and awe that come from being in nature are what have sustained me and my children through times of stress and adversity. It is a comfort that is ours by right and citizenship. It is also our right and responsibility to maintain and conserve the diversity that will surely provide life for our descendants into the future. I am doing my part by becoming a woodland steward and supporting conservation causes. I know I can do more.

I know you think LONGterm and of future generations as a parent and a responsible citizen although so many people don't have the luxury of thinking for the future. Sustainability is not just a catch word it is a necessity for all life. I want the next generation to enjoy America's great outdoors and REAP the benefits of the watersheds bigeochemical cycling pollutant filtration and nutrient sources of the future.

This is the most important issue for me. The loss of the middle class is important but without a connection to Nature we will be lost as a species.

As a mother a person who appreciates the grandeur of nature a student of nature who realizes all the critical services nature provides to us which we eradicate at our peril and a citizen who votes and assesses voting records I want the next generation to be able to enjoy and benefit from America's great outdoors too.

Improve Watersheds This great country has always protected its wildlife and their habitats with the Endangered Species Act. Now however it seems that no one in our Congress Senate or leaders of our states care about what has always been one of our greatest assets. Do we want our children grandchildren and future generations to look at these wonderful animals in history book pictures because we have slowly destroyed them by the greed of the American people. These animals have no one to protect them except us. God created them for man to take care of they are a vital part of our heritage please insure that they are a vital part of our future. Thank you for getting protections for our wildlife and their habitats.

I am fortunate enough to live with the redwoods in Northern California which were nearly wiped out by lumbermen before protective laws were passed. It is up to our elected officials to advocate for the preservation of our national treasures. We are counting on you.

Wild Horses living free on their original territory

I visit and enjoy this nation's public lands whether it be hiking in our nation's and states' park and wilderness areas or kayaking canoeing rafting on our many lakes and rivers.

If nothing is done to save this your children and grandchildren will never know the joy and beauty that was originally created by our Great Father in Heaven.

Promote appreciation of and respect for our natural and historic places Increase awareness of the benefits that accrue by preserving our heritage Increase funding for preserving and protecting our heritage

The natural environment keeps humans alive. To protect the environment is to protect human beings.

Stop the killing of wolves and buffalo

We need to protect future environment including wildlife and all elements of ecosystems for future generation. Please stress to the public that we must overcome with vigor the selfishness and selfcenteredness that seems to wish to use up resources and kill the golden goose that is our planet that provides our water and air and that sustains our life. We have obligations.

The great outdoors is too precious to not be protected. To be out in the wild is very humbling and peaceful for the soul. We must protect these wonderful places.

Fully fund our national parks they need a lot more money than they are currently getting. Increased access should not include motorized vehicles in national parks or wilderness areas

The concept that land(which includes all our natural resources) is a resource that belongs to everyone being created by the Creator for all is fundamental & goes far beyond conservation into economics.The value of land should be taxed for the whole community & labor & capital should be untaxed in order to cure our economic ills. Anyone who causes any pollution or damage to our natural resources should be taxed. Tax what you burn not what you earn. For more on this crucial matter go to www.henrygeorge.org

Our planet would be lifeless without wilderness areas. We all gain energy in every aspect of our lives from our forests grasslands and natural waterways. We need a new perspective and respect for our planet and what makes it work naturally.

We need to protect our public lands for future generations!!!!!!

I voted for you and will in the future as long as I see that you are a president that puts conservation ahead of business. Let us set the standard for the world. Thank you.

: Please conserve large landscapes that include our most pristine wildlands working forest and ranch lands private lands and the connections across these large areas. Large natural areas provide our best hope for addressing loss of species and open space preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today. : Wildlands represent some of our healthiest and most intact lands. Please use all tools available to protect our public lands including recommending new wilderness and national parks designating national monuments and expanding National Wildlife Refuges. : Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. Please prioritize collaborative restoration projects on public lands making restoration a national priority. By restoring our forests we can spur economic growth by providing needed jobs and improve recreation opportunities. : Please create new national programs that help connect people especially our youth with nature. Today youth especially people of color are underrepresented on our public lands and it is important that new policies and programs are developed to encourage more youth participation including nature education or recreation programs and a revived civilian conservation corps. No matter where they live all children deserve the opportunity to learn about and experience the wildlands that belong to all Americans. : Recreation is a great way for people to experience nature and help develop a strong conservation ethic. Please ensure access is increased for all Americans. : Please support fully funding the Land and Water Conservation Fund and other programs that foster conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas protect lands around lakes rivers and streams. The fund can also be used to establish new local parks and trails or provide key wildlife linkage areas. Strong leadership is needed to shape a bold conservation strategy for the 21st century.

Stop destroying the U.S. You don't see other countries destroying their lands (not including the ones at war). They have more respect for their country than people who live in the U.S. has.

there is just so much of the wilderness left please do whatever you can to preserve as much of what is left as you can we are not alone on this planet we share it with a vast array of amazing wildlife. it would be a poor legacy to the next generation to let any more of it disappear. want the next generation to enjoy America's great outdoors too.

scenic rivers and historic sites including the herds of Wild Mustangs and Wild Burros.that every American has a right to see if they so choose..

Discussion Question 1

(cont.)

We don't camp but have travelled around many of the country's parks and continually tout the Grand Canyon experience to friends and family.

With all the carbon dioxide in the air our country is in need of as much oxygen as we can produce. Green plants and trees give off oxygen. That is why I want you to protect and conserve America's land parks and forests. Clean water is a top priority for America. We need to protect our scenic rivers lakes and creeks. Americans take oxygen and clean water for granted. These two commodities will not last forever if we do not conserve them.

Wilderness areas are vital to the health and wellbeing of people wildlife and planet Earth. Humans need to experience natural places and the best way to guarantee that this can happen is by expanding and protecting national state and local parks.

Having space outside connects people to the land and supports care for the future of our planet. If we do not have space outside we loose the ability to care about it and our future on a livable planet.

The key points are well covered in the letter above but I would like to add my personal feelings to this. In the past few years I have spent time to go internally and discover my true core values. Many people do this maybe before they are in their 50's but they do the self examining to find these. In the truly hard uncertain times of this era I know Nature is my core. To be unable on a daily basis to enjoy the fluttering butterflies the song birds busy taking care to find their next meal a box turtle slowly crossing the flowering wildflowers the beautiful sky at night would be unnatural to me. I am one of the lucky individuals who has the opportunity to live in an area that is being protected. While not a National Park the NJ Pinelands is a National Reserve. Protecting all of our land should be our priority. The land does not belong to anyone we merely babysit it for the next generations. On my watch I'd like to believe we will continue to do just that save it for all to come. Enjoying the wonders of this great Earth is OUR right. Please continue to go to all lengths to save every possible inch of America.

Once the great outdoors is gone we can never get it back.

I am asking you to preserve the Great Outdoors in the face of indiscriminate development urban sprawl increasing population and fewer and fewer open space for people to experience for a sense of peace and to reconnect with our natural world.

All my life I have cherished America's wild lands. As a child they were my playground places where I learned to respect nature and my own connection to the earth. As an adult they provide an oasis from the fast pace of my daily life. One of my greatest sources of pride in this country is our natural heritage areas.

Discussion Question 1

(cont.)

I would like to continue to enjoy my wilderness areas as well as giving future generations the opportunity to enjoy America's great outdoors. When we lose connection with clean air and water and the peace that being outside can bring we don't fight to protect it. How selfish it would be for our current administrations to take that connection away from our children and everyone who uses this earth after us. in every possible way

As a child I was blessed to grow up in Utah a state abundant in rare natural scenery of stunning beauty.

We should revere our lands.

Dear Mr. President & Admin Officials: I am one of the countless Americans who enjoy and feel very proud about the Great Outdoors Wilderness Areas and Natural Beauty of America.

Knowing that there is some wilderness left and that there exist wildlife refuges give me spiritual solace eventhough I live in the urban environment og the city of Philadelphia. Nature has sustained me in my often difficult life on this earth as a refugeeimmigrant from World War II. I deeply worry about the protection and survival of the American flora and fauna against corporate greed.

I go into the national parks and wilderness areas every summer on my vacation. Some of my most memorable times are in the solitude and great expanse of the natural landscape. This is a landscape millions of years in the making. It is priceless beyond any money you could put on it. I want it to remain this way for all people for all time.

I want the children of tomorrow to enjoy America's great outdoors too. And my children thank you.

It is only through nature that we can fully understand ourselves and our origins. Preserving our precious wilderness and other outdoor wonders is therefore fundamentally necessary for us to become complete as human beings. Quickly address and implement solutions to slow Global Climate Change

We have an historic opportunity to transform conservation for the 21st century and leave a naturalheritage legacy that future generations can enjoy. ; wild spaces are vital to the ecosystem

We have an historic opportunity to transform conservation for the 21st century and leave a naturalheritage legacy that future generations can enjoy.; wild spaces are vital to the ecosystem

Discussion Question 1

(cont.)

I grew up spending most of my summers in the Adirondacks or St. Lawrence river and can't imagine my Grandniece and nephew not having that opportunity. PLEASE not only save and protect our wild spaces even more importantly help America be a benchmark for saving our Planet (as a habitable space for people and wildlife). To me that is one of the key things the world needs to wake up to before it is too late. Make us the leaders not the followers in this effort I beg you...

Protect our Wetlands

For the people of this country young and old the open spaces provide peace and appreciation and foster respect for the environment.

Having a healthy environment for everyone to live in is very important to me. I could write a very long letter telling you why but I'm taking care of my elderly father who has Alzheimer's so I just don't have the time now. Please read the following form letter and let it speak for me. Thank you.

As an Ohio Certified Volunteer Naturalist I spend a great deal of time protecting habitat raising butterflies and introducing people to the natural world around them.

I enjoy the great outdoors a lot myself and always clean it up so that there is something for the next generation; therefore I expect the government to help ensure that there is a great outdoors too.

I personally would like to ask you to be the president who made environmental issues important. I realize there are other issues more important but would you please leave something for your daughters and my grandson to enjoy and remember. Thank you so much for your time.

for the 21st century and beyond....the world is our playground for young and old and every ethnicity please help save it!!

When I think of all that so many people have done for this great country of ours in so many ways to protect and preserve this great country of ours: the very least we all can do is to continue what they have started.

As a child my parents took our family to many of the National Parks in almost every state and I have many fond memories of the beautiful mountains rivers canyons oceans forests etc as well as the wildlife. It disturbs me to see mining, logging drilling and otherwise destroying the integrity of the environment that belongs to all of us.

I firmly believe that the heart of humanity and our ability to keep the planet healthy for future generations is to preserve as much undeveloped and unexploited land as possible.

Discussion Question 1

(cont.)

For all of you with sons and daughters I want their future to be even brighter than ours. Environmental conservation is the most important thing we as a people can do to contribute to the healthy future for our children that we all want. With sustainability and ecofriendly business practices it is possible to actually lower the financial cost of our basic needs and instill quality morals for our future generations. You men and women know what to do so do it for the sake of the human race!

I have lived in Illinois my whole life and have always enjoyed the outdoors and the opportunities that the great lake and wonderful parks provide us. I also have been lucky to travel to Hawaii camp at the Boundary Waters and visit several other beautiful American nature sites. For the past five years I have been a Ranger in DuPage County and have seen first hand the enjoyment people receive from coming out to our wonderful outdoor areas. I implore you to follow with any and all means possible to protect enhance and continually support monetarily and politically the environment in which we live visit and enjoy everyday as Americans. Thanks for your time and continued support of our natural areas.

I've live most of my life in southern California. I'm now living in central Florida. I've enjoyed the incredible beauty of our country's southwest and now am getting to know appreciate and love the southeast. I've also had the opportunity of enjoy other areas of America's great outdoors. The very health and wellbeing of our nation and its people depends on maintaining the integrity of these areas. Our great outdoor spaces and wilderness areas must be protected.

The larger our population grows the more need there will be for wild lands to recreate in and to protect our natural heritage.

I have just come home from a vacation in southeast Alaska and Glacier Bay. I am overwhelmed at the expansive beauty of this place and the abundant wildlife on land and in the sea. I had the opportunity to speak with many who grew up in this area or have been visiting here for many years. They have seen the changes here from overfishing ignorant trophy hunters and clearcut logging and none of these changes are good. I am not naive to the needs of growth but we are just beginning to understand the urgency of conservation.

How wonderful it would be for this Administration to be known for its conservation efforts and successes. When we conserve we protect not only our remarkable natural heritage and protect wild places and wildlife we also do so much for people on so many levels. Thank you.

I have been backpacking in the western US wild areas for over 40 years and have begun to share this experience now with my children. I am concerned that there is less wild land now than even a few decades ago and feel strongly that we need to take steps to preserve what little is left.

I am an avid hiker and regularly use our wonderful state and national parks for recreation.

Discussion Question 1

Written & Online Comments

(cont.)

I have enjoyed Yellowstone Lassiter smokey mountzins sequoia National parks and Kings Canyon.

Don't let developers turn our most prescious resources into parking lots and strip malls; some things are worth more than money. To help others realize the value of our natural environment they need to be exposed to one which is not polluted or paved over.

For those of us who live in a watershed environment like we do in Michigan the water becomes vital. What we put in obviously we take out. One simple example is that of salmon. Over the 25 years of living here we have gone from being able to fish for salmon from Lake Michigan to not being able to eat it. Our efforts are beginning to pay off for Lake Erie I hope that we are wise enough to continue to clean things up.

As a grandmother and a physician I know the next generation's health depends on enjoying America's great outdoors.

I am writing to encourage the protection of public lands.

My husband and I both work in land conservation in North Carolina. While we've seen tremendous strides in public lands acquisition funding and management we are all too aware of the largescale threats of population growth and global warming. The first inevitably places more and more pressure on our natural resources through inappropriate land use. The second places more insidious stress on all of our natural lands since global warming is likely to cause more erratic weather increased catastrophic fire sea level rise including saltwater inundation of freshwater resources and increased exotic invasion in natural areas made more vulnerable by environmental stress. Setting aside MORE and LARGER natural areas is not the only solution; we obviously have to reduce the source of global warming limit population growth through education and engage in wise land use planning. However acquiring and protecting large blocks of forest will help reduce global warming acting as a carbon sink and a source of oxygen. Acquiring natural areas with high diversity clusters of rare species and relatively little evidence of disturbance will ensure that these areas act as reservoirs to minimize species and natural community losses. And acquiring extensive areas along rivers and streams (of at least 300 feet in width) will ensure that aquatic resources are protected for our drinking supply as buffer against flooding and for the rich diversity of species which rely on riparian resources.

p.s. If you need convincing come to the Rouge river and take a trip up the river in the jet boats. You will want to preserve it and all the other places that look like it.

(cont.)

As someone who has found the wonderful and much needed respite in getting into a wilderness setting to recharge and relax I cannot encourage you enough to protect what seems to be rapidly disappearing. Wealthy "owners" of lake shores here in Minnesota seem to believe they can do and build anything they want destroying the God given blessings I believe need indeed must be preserved. Why do a few always think they have all the rights that ought to be shared with all? And when those "powerful" folk buy legislators even governors with their wealth so no rules or regulations get passed we have destroyed what may never be reclaimable!

To live in a country such as ours without wilderness would be a shame and a huge injustice to future generations.

Address Conservation as a national priority areas and their bordering areas through federal educational and access programs

THIS ISSUE DOVETAILS NICELY WITH THE FIRST LADY'S DRIVE TO IMPROVE FITNESS IN KIDS A HEALTHY WILDERNESS SYSTEM IS VITAL TO TEENAGER'S EXERCISE & HEALTH.

If we don't protect our vital but fragile environmental treasures now it will be too late to undo the damage.

If it is a fact that parks are free why not start charging? I know that the parks need a lot of money for upkeep and have been suffering from neglect for some time. These treasures should be cherished for our greatgrandchildren and beyond. Thank you for anything you can do!

I also believe that protecting our outdoor spaces is a key component to fighting global warming.

Please help save the earth so we have something to leave to the future generations.

PLEASE KEEP UP THE GOOD WORK. WE NEED A FAST MOVING TEAM TO UNDO THE DAMAGE FROM THE LAST ADMINISTRATION. WE KNOW CORPORATE INTERESTS DO NOT MOTIVATE YOURS!!!!

OUR AMERICAN MUSTANGS AND OUR WILD BURROS NEED TO BE PROTECTED. THEY ARE AN INTEGRAL PART OF OUR AMERICAN HERITAGE. I WANT THEM TO BE ON OUR PUBLIC LANDS FOR OUR CHILDREN AND OUR CHILDREN'S CHILDREN.

Discussion Question 1

Written & Online Comments

(cont.)

Dear President Obama: I think you are one of the greatest Presidents we have had in the 58 years I've been alive. You've accomplished so much with such hideous opposition from the Republicans and aggressive right wing fanatics. No doubt you are aware however that these same people are fighting to downgrade public protection of our national parks and wildlands. No doubt they want to put an oil well on every square inch of whatever is left that is beautiful in America. God Bless you for all that you have accomplished thus far.

PROTECT OUR ENVIRONMENT AND PEOPLE... NOT THE OIL/COAL/GAS/NUCLEAR INDUSTRIES WHO POLLUTE!

This is such an inexpensive means to help educate children and adults as to the natural beauty of our planet ; it is also a great stress reliever for many! I want the next generation to enjoy America's great outdoors too.

When I was a child I was greatly excited about the return of summer for a number of reasons one of which was the numerous camping trips that my mother brother and I took during the warmer months of the year. I grew up loving to camp and I continue to do so today. Please make it possible for me to share the joy of camping as well as many of the other activities that can be enjoyed outdoors with my children.

Our shared outdoor spaces provide the opportunity for human interaction with the natural world and as a result of this interaction improvement in our collective physical and emotional health. Understanding the advancing threats placed upon many of these natural areas we would wisely protect what we have now. In order to do this our nation's people need to know what they have even if they do not live close to these resources and do not have first hand knowledge of these resources. The way in which they will have this knowledge is to visit natural areas and enjoy the splendor that is there. For this reason I ask your administration to take the lead in this America's Great Outdoors project!

I know how much you and your family enjoyed your recent vacation on Mount Desert Island. I have lived here all my life right on the ocean and quite near Acadia National Park (at least by boat!). You enjoyed so much of the outdoor beauty that our state has to offer and I voted for you and still support you 100%. I even have a framed picture on my wall of a poster which shows you on a hundred newspaper covers the day after your inauguration. (And that says a lot as I'm not into politics at all.) You made history then and you have continued to make history with your wisdom and courage. I commend you for your leadership in shaping a bold conservation strategy for the 21st century. Thank you.

It is my belief that conservation of wilderness both dry and wet is at the heart of planetary need.

Discussion Question 1

(cont.)

My husband and I are retired and have been lucky enough to travel across this country enjoying some of the wild and historic places as we go. The young people of this country deserve to have the same opportunity now and in the future but what will be left for them?

Dear President Obama: When my father died in November 1985 I felt numb for months. Fortunately or providentially my momma sister and I visited the South Rim of the Grand Canyon on Father's Day 1986. As I stared at the wonderful shapes and shadows of the Canyon I experienced the awesome majesty of God. Slowly from that day forward my heart and soul began to heal. For the next 20 years our little family was privileged to visit many wondrous natural sights in our great National Parks System and in other places set aside for the public's enjoyment.

Please protect Earth.

Protect our Great National Parks (a world treasure)

What a beautiful gift this North American continent is! Within our borders we are blessed with unspoiled natural resources wildlife habitat and watersheds.

THE MAJOR DIFFERENCE BETWEEN WHAT I WANT TO DO WITH AMERICA'S RESOURCES AND WHAT OTHERS LOBBY FOR IS THAT WITH MY METHOD THE LAND AND WATER REMAIN NATURAL WITH NOTHING DESTROYED OR CHANGED THAT CAN NOT BE UNDONE. WITH OTHER METHODS THE PRESENT GENERATIONS USES OUR RESOURCES AND LEAVES LITTLE OR NOTHING FOR THE FUTURE. PLUS ONCE USED UP AND PERHAPS DESTROYED IT CAN NOT BE UNDONE. WE WILL ALL DIE EVENTUALLY AND TAKE NOTHING WITH US SO HOW WE USE THIS EARTH IS WHAT WE LEAVE FOR THE NEXT GENERATION. LET'S STOP BEING SELFISH RIGHT NOW.

I want the wildlife to be able to live peacefully in their habitats and free of humane destruction and interference. It would also be great if the next generation of humans have a great respect for animal life and their habitat. They would be able to take in the beauty and educational aspects of protecting wildlife and their lands.

Our country is nothing without our land! Please work to protect the natural resources that we have so that future generations can enjoy America!

P.S. I Love Wildlife . Thank you for helping to save these executives why saving the Western Gray Whale important. Thank you for considering my comments. I look forward to your swift action to ensure a complete ban on whaling in Iceland.

(cont.)

Nothing is more "American" than the enjoyment of America's great outdoors and Public lands! I want to remind those who seem to forget that Generations of motorized OHV Users and Supporters are taxpayers who through those very taxes which have funded the procurement expansion and maintenance of these areas. Millions of private dollars and countless private hours of time are donated every year by the OHV community to expand and maintain OHV trails and riding areas. The OHV community has proven through their personal investment of time and money that they care about the land and are committed to responsible use of that land. These people have an equal RIGHT to use and enjoy these lands. I urge the managers of PUBLIC Lands recognize this invaluable commitment as well as encouraging and expanding the responsible use of Public Lands for ALL Americans. Local land managers who should already have the authority to enforce existing land usage laws can through the proper enforcement of existing regulations; protect our Great Outdoors and Public Lands. There are more than sufficient regulations and statutes in place to allow managers to protect our Public lands! We DO NOT want or need additional wilderness or land areas closed to the public. What is "public" about land that cannot be accessed by a substantial segment of the "public"? What we need is for our public lands to be more accessible to ALL citizens including responsible motorized travel as well as improved access for the handicapped. To ensure that current as well as future generations will always benefit and enjoy our public lands please consider these priorities for America's Great Outdoors: Increase Public Awareness and a Positive Image of Responsible OHV Usage Protect access for ALL Americans to ALL public lands including the existing OHV trail systems by increasing land use education and etiquette and by encouraging responsible motorized access to public lands including additional motorized access areas Fully Fund all motorized and offroad trail opportunities Fully fund our local USFS districts to enforce existing laws and regulations to protect our public lands. Fully Fund land use education programs specifically aimed at Responsible OHV access and Use. Please DO NOT lock OHV users out of Public Lands which belong to ALL Americans! We encourage and insist that those in power create a pathway to increased access to public land by all users while assuring those very lands are protected through improved and responsible land management.

I recently returned from a ten day trip visiting National Parks in Montana and Wyoming and my experience there has really caused me to reflect on the importance of our shared outdoor spaces. My time spent hiking wildlife watching and talking with the NPS Rangers created one of the most memorable vacations I have ever experienced.

Having grown up in the beautiful Willamette Valley of Oregon I have a great appreciation for our green spaces towering trees and a walk in the woods. That is why I know that preserving these special places and creating more will have a lasting positive effect on our generations to come.

As a lifelong outdoorsman I have found America's natural areas to be an immense gift that should be preserved and protected. Nature in its original unaltered state is the greatest thing we have. Wilderness renews the soul and has an intrinsic value to all Americans and all of humanity now and in the future that is far greater than that of any material resource.

I have spent my life of 56 years stewarding America's landscapes and productive farms. I teach natural history environmental science and land conservation. The connection we humans share with the one great life force of nature is essential to the wellbeing of this generation and future generations. I have spent many weeks and months experiencing our great wilderness areas forests and parks. The solutions for our future as a civilization depend on preserving intact healthy ecosystems and our planet's biodiversity. Without these resources we will lose the basis for our greatest commodities and economies. Please be bold in creating new wilderness areas expanding our national parks and forests adding watershed management protection and conserving our precious natural heritage so that my children and grandchildren and all future generations. While camping in one of the beautiful New York State campgrounds in the Adirondacks this August I was struck by how these facilities benefit the poorer families. For many the summer vacation consists of packing up the camper truck tents and moving to a campground by a lake. The respite from daily life and work is palpable in the woods and on our waterways. Spending time outdoors around a campfire fishing hiking or paddling renews our souls and restores our health. Being in nature is a necessity for us all. I was on a nearby island in Maine when you visited Mt. Desert Island with your family this July. I was so thrilled to know you were taking time for yourselves surrounded by the immense beauty of Acadia National Park. It made me extra happy.

Let us enjoy all this by implementing the Clean Air Act.

And many many thanks for thinking about the future of this country.

This is our home. It gets so depressing to go outside and be surrounded by nothing but concrete and asphalt noise and pollution. The wilderness brings one's soul back to life.

We should all be thankful for the insightful leadership of many presidents over the past century to allow us to have the fabulous natural wonders we still enjoy today. I thank you for your leadership in protecting many of our most important natural lands during the first 18 months of your presidency.

I want the next generation to ... understand how important pristine natural areas are to our health and survival.

As a resident of the State of Michigan the Great lakes are my true heart's home and particularly the Michigan Dunes area where I reside. The overwhelming beauty endless opportunities for outdoor recreation and easy access to wilderness areas that exist in Michigan make this a resource of inestimable value and one which we must protect and preserve with great care. If you have never experienced the beauty and bounty of this place I urge you to come! Bring your family and dear friends. The experience will change you and enrich your life!

Discussion Question 1

(cont.)

Beyond the obvious benefit of our children having natural parks and places to see the other species on this planet actually count for something and they need natural places to live.

All my life (I'm 75) I have enjoyed the outdoors hiking kayaking or just refreshing my soul taking in the beauty of our natural world. Years ago I worked at an environmental education school/camp which gave elementary school children a wonderful week exploring and learning about the natural world which greatly enriched their lives.

EVERY EFFORT should be made to protect and preserve our wildlife and environment! This is a no brainer.

The times I enjoy the most are spent in National Wildlife Refuges National Monuments National Parks...all of those wonderful places where beauty birds and other wildlife and hiking trails abound.

I disagree with the trend to make wilderness more accessible. By its very nature wilderness needs to be unchanged. When a road is cut into it or it is so easy to reach that people can drive an air conditioned car into it it ceases to be wilderness. With the advent of the live cam those who want to see the wilderness can watch it on line but may not destroy it in their selfish abuse of it.

There really is nothing more important than saving the environment.

I believe this is ESSENTIAL for Americas' health in ALL aspects.

I'm a retired scientist. I spend much of my time reading the literature of conservation biology. I'm deeply concerned about restoring more of our degraded native ecosystems. I also spend a lot of time in the field watching wildlife. We must do more now especially now due to global warming.

We need to reduce the price of camping and simple recreation in our parks! the economy is suffering and we should be able to retreat to the woods to spend time freely with our friends and family All Americans should be able to afford to camp in their local parks!!

It's about protection of the commons a concept being forgotten about in the unbalanced overemphasis on privatization of everything a concept that has its consequences in the weakening and destruction of every one of our global life support systems. We have to take action to protect our support systems which come from the Earth that doesn't have polluted air water and soil and that provides niche ecosystems for various other living creatures with whom we share planet earth.

Discussion Question 1

(cont.)

We should work to protect and preserve our natural spaces as they are untouched by man so that all future generations can see these treasures and be awed by their beauty. "Leave it as it is. The ages have been at work on it and man can only mar it." Theodore Roosevelt May 6 1903

Please don't buy into the arguments that too many jobs will be lost if mountain top removal mining is discontinued or coal fired power plants are moth balled the increases in recreation and other positive uses of the environment will more than offset terminating these polluting enterprises plus decrease the health related costs of foul air and water.

We have a lot of animals that are on the extinction list that could be protected very easy. If we had somebody that could help us protect those species then that might result in very good things for those different species. The wilderness is a beautiful and breath taking scene! We need to keep the wilderness that way for the future generations in the world so they can see what we see today.

Large parts of my state Oregon are national forest and need to be protected from clearcut logging mining and other extractive activities. These forests belong to all Americans not lumber companies.

Wilderness and our National Parks are amazing treasures that belong to all Americans.

I write this from Acadia National Park in appreciation of the foresight and dedication of the system's founders and advocates.

There are many smaller wild areas of beauty that are mingled close to and among the areas where people live. The advantage in setting aside these is that people can take advantage of them on a daily or more regular basis. Saving our larger spaces is very important but there is always a problem of over development of these. When people visit they need places to stay and eat and other activities. Having many smaller places close to home can help with this problem. Being close to developed areas also means they are in more danger of being developed and their beauty and recreational value lost forever.

After retiring as a US ambassador in the Third World I founded and continue to Chair a SOLAR ENERGY company. Like all SOLAR it's expensive but we do it for our GRANDKIDS!

WE CAN'T SQUANDER OUR RESOURCES AND NATURAL PLACES FOR SHORTTERM PROFIT. Thank you for your leadership in shaping a bold conservation strategy

I have wonderful memories from spending time in the great outdoors and would hope that 50 years from now other children can build great memories out there too.

Discussion Question 1

(cont.)

As has been said before we do not "own" the land. We are only caretakers of it in trust for our children's children's children. Let us do that wisely. It is our "capital". One does not wisely spend "capital" and call it "profit".

Watching the TV special on our national parks recently I was flooded with memories of how important these natural areas have been to me and my entire family. I really don't know what our country would be without such opportunities to connect with the natural world. Not only do they give so much in terms of family fun and rejuvenation from the workaday world but they help us to understand environmental issues and their importance for our very survival. How can we fail to pass on this legacy to the next generation of Americans? You now have a potential role in seizing this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites.

National Parks connect me to this country more than almost any other government policy.

The above actions will create badly needed jobs for our citizens.

Protection of outdoor space has always been important to me and my family. As outdoor enthusiasts we believe that wild spaces are important for quality of life as well as a big part of American culture and an important link in learning about the world around us.

Some of my best memories are hiking the John Muir Trail and other trails out of Yosemite Valley and then camping in the snow in the valley over the December holidays. It is my favorite park but each is valuable to us.

I am enjoying my retirement by spending as much time as possible visiting our nation's national parks national forests and national monuments.

I want the next generations of humans to enjoy America's great outdoors the way that I have and I also believe that it is our duty as dominating species on this planet to protect and preserve the homes of other species. Protect rare and endangered species and communities
We believe in you!

What follows is a canned organization message. I want to add my personal endorsement and concern that the Obama administration preserve this country's great heritage of fantastic wilderness. Red Rock country in Utah the great mountain ranges in Colorado Wyoming and California these are some of the memorable experiences of my lifetime.

Increase Science and Research to ensure protection of our wilderness limit motorized vehicles of any sort in wilderness lands so as the ecosystem is sustainable. Thank you for your leadership and please ensure protection for America's greatest resource and that is our land water flora and fauna.

Discussion Question 1

Support Scientific Research

We have a tremendous legacy in this country because of past Presidents and legislatures that understood the need to preserve the grandeur of our country. We have to stop letting mining and oil drilling interests determine where they will dig and drill next...we the people need to make that determination and it should NEVER be in these sacred places. Left to these companies we will one day have no place left of beauty as they will gladly tear up every square inch of our country in their endless search for dirty energy resources. It simply has to be stopped!

Caring for Creation is part of our responsibility as people of faith and as citizens.

All my life I have loved and continue to love the outdoors. For both enjoyment as well as mental and physical health I hope that the next generation can enjoy America's great outdoors too.

I have seen the destruction of our natural spaces over the last 60 years and want to save what's left for my great grandchildren.

Please President Obama consider that the natural world and all its raw beauty as truly America's greatest resource. So often as I hike the trails or canoe our rivers I find Europeans here enjoying the outdoors and the wilderness experience because they do not have our scenic wonders and our vast landscape protected and entrusted so that all generations here and afar will have what our ancestors had wide open spaces verdent forests living streams.. It is our duty as custodians and stewards of the land to protect plants and animals and the microorganisms that are vital to a healthy ecosystem.

As someone who grew up in a family that took every opportunity to go camping and hiking I learned the value of nature experiences. Even in these tough economic times we need to remember the future generations' needs for wild lands and healthy habitats for us and for other creatures.

I have more than a seventy year history of enjoying the mountains seashore and deserts which I shared with my family and friends. I have never tired of reliving the experiences and looking for more and new ones and I've never been disappointed. It is vitally important for us to protect the outdoors for future generations.

These are precious and belong to all Americans.

I enjoy the outdoors. I live in Seattle and probably my favorite part of the area is all the beautiful outdoor spaces.

Discussion Question 1

(cont.)

I live with a view of an open space and mountains. I want me grandchildren and generations to come to enjoy that view to hear the coyotes yipping and howling to see the bald eagles in our area to continue thriving and having a place to hunt and live.

Ouir future generations sould have the same opportunities to enjoy our outdoor landscape and associated flora and fauna as we have.

Extraordinary vision created our treasured national wilderness and recreational places and I ask that you show extraordinary vision in continuing that legacy for future generations.

My sweetest memories of my childhood circle around vacations in the State and National Parks and those experiences have influenced my entire life. I want the children of 100 years from now to enjoy and be molded by America's great outdoors too. That's why I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. Energy forms will come and go but we cannot sacrifice the precious tapestry of Life that is our legacy for the finite possibilities of a few more years of archaic energy! Our children deserve better than that.

Once we lose these precious gifts they are lost to everyone forever.

PLEASE: for our kids and their kids and all future generations

I want the next generation experience the abundance beauty and resilience of our land. Provide increased access and recreational & educational opportunities The time of believing that man can subjugate the earth is over. Please help lead to way to an era in which we act in harmony with the resilient web of life on Earth.

Outdoor activities are important to people's health.

from overuse and invasive species Connect urban citizens with natural areas Utilize existing park space rather than developing new systems Fund a plan to reseparate the Mississippi River from the Great Lakes in order to prevent the introduction of additional exotic species

We and particularly you are called to be stewards of the earth. It is timepast timeto take the long view for our future. The shortsighted actions we have taken so far and the path we are on must be changed for the sake of our children their children and all the creatures on this planet. Let's leave the oil and coal in the ground for future generations and better applications.

Discussion Question 1

(cont.)

There are a myriad of ways to provide energy without destroying the unique natural wonders of America and our earth. Wind solar and geothermal opportunities abound in this country but are grossly underused. A national mass transit plan would go a long way in reducing our addiction to fossil fuels and preserving the planet. We need someone to show that they have vision as John Kennedy did and are resolute and fearless like F.D.R. We MUST utilize our resources properly for if we don't what planet will we move to when this one is no longer inhabitable?

This is very important for all of us. I want the next generation to enjoy America's great outdoors too.

Being in nature is one of the most important parts of life. It transcends our daily struggles builds character and connects the soul beyond the limitations of family work and school.

Please please please take advantage of your position to take care of the earth. What more important job can government do? I want my children and grandchildren to have clean air and water but also to have access to unspoiled nature. We simply must create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild We simply must start thinking about your future. Please use your position to do the right thing and help us to do so.

This is not just for recreation but for our health. These wild places are critical for biodiversity and a healthy planet. We are tied to them. If they die so will we.

I can not imagine a future for our children country and the world without our protected areas our wetlands forests national parks. Wildlife is such an important part of our heritage. The Native Americans had a great respect for the land animals and life that they were given. We desperately need to keep that tradition for future generations.

Our natural world will be a key tool for our salvation when we're ready to seek solutions and reground our culture. Future generations must depend on us to the right things today just as past generations have done the right things for us.

All my life I have benefitted from the beauty and peace derived from our natural environment. Even though I am in my eighties this homage to nature is an important aspect of my daily concern.

I'm sorry I missed the America's Great Outdoors meeting in our town. I agree with what is said below and where I live public lands are quite common and make our lives more interesting. Please make decisions with our kids in mind so they can enjoy the lands the way I do. That means keep undisturbed lands undisturbed and support BLM and USFS land use plans that have a good dose of gentle use and recreation. Thank you.

Discussion Question 1

(cont.)

Especially in times like these when political wrangling and humancreated and natural catastrophes gnaw at our tolerance and good temper refuge in wild spaces always gives relief. You locked in the whirlwind of urban settings do not have the opportunity to gain this relief and benefit. Work to make it ever more available to yourselves and all we citizens.

Base decisions on science not big money interests

When we destroy the remaining wilderness areas we come closer to destroying ourselves. including global warming and pollution

I have very fond memories of family camping trips with stops at many of the National Parks across the US when I was growing up.

As a recent graduate with a BS in Environmental Science I have been working and volunteering on the Boston Harbor Islands this summer. I feel very strongly that the government needs to take action on protecting our natural and historic places.

As a resident of the State of Tennessee I appreciate and value highly the wilderness lands that have been set aside for the enjoyment of people of every age from near and far. I was born in New Mexico and grew up there and in Texas. My appreciation for God's creation began with visits to Carlsbad Caverns White Sands Lincoln Forest Bandelier Valle Grande in New Mexico and continued with visits to Big Bend and the Davis Mountains in Texas. In Tennessee a visit to the Great Smoky Mountains or one of our scenic rivers is not only aweinspiring it renews the spirit.

We do not inherit the earth from our ancestors we borrow it from our children. ~Native American Proverb

We need to act now to protect the future of our country and its environment. We can't allow big oil and big coal to continue their unabated pollution.

I've lived in many states in the Northeast and MidAtlantic and have taken the opportunity to enjoy the state/national parks wherever I have lived.

We the human race have to stop destroying the Earth like we've got someplace else to go. What we've got is all there is and when it's gone it's gone. Keep the mountain tops where they are. Keep the oceans vital as the seat of life on the planet. Keep species and ecosystems alive as the irreplaceable treasures they are. Short term economic gain in return for destroying the planet forever is no deal.

Nature should be preserved. We are smart enough to use ecofriendly sources of energy and to realize that nature contains many scientific revelations and diverse information that have the potential to yield more benefits than money can buy. It's up to us..

Discussion Question 1

Written & Online Comments

(cont.)

I have a deep abiding respect for the beauty and awe of nature and the wonder that is the lands of the United States.

. I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces by adopting a common sense sciencebased approach to conserving wild places.

Big Oil and Dirty Coal are always looking for opportunities to drill mine and desecrate America's wilderness; don't let them!

We MUST save our wild places for future generations!

For the past 30 years my husband and I have spent part of each summer camping in nearby national parks sharing this experience with our children grandchildren and now our great grandchildren. On these trips we all have created and shared precious memories that bind us together not just as a family but also as appreciators and lovers of nature and the wilderness. We hope that your decisions will enable our grandchildren and great grandchildren to continue these traditions and create more memories for many years to come. Please help us and them preserve our national parks and natural resources for the future of all Americans.

First I want to say that I've seen improvements in the protection of outdoor areas since the end of the Bush administration. In particular I am happy that the Interior Department walked away from its proposal to clear cut much of the old growth forest here in Southern Oregon where we live part of the year.

There will be an opportunity this fall to make good sound choices concerning preservation of our shared public lands. While I agree with the 'generic' points below my primary concern is that we not allow the destruction and despoiling of irreplaceable natural resources and unique natural areas. All too often in the past companies looking only to their own shortterm profit have been allowed to create whatever damage they wished and leave the messes (Superfund sites among them) for the US citizens to pay for. And of course "remediation" isn't going to recreate these places as they were originally. Putting money directly to work in our national parks and other such areas can be good for the economy as well if it's done properly.

I am an industrial scientist. My doctoral work at Oxford University concerned carbon in the environment. I strive to protect the environment oceans farmlands wilderness mountains from excessive damage from human activity through pollution global warming or whatever cause.

Hopefully an awareness of the need for developing the uses of sun wind water to resolve our energy needs will reduce the strength of the argument for more & more destruction of our natural resources by the petroleum interests.

Legalize bicycling in all Wilderness areas. Permanently stop road decommissioning.

Discussion Question 1

(cont.)

Contact with nature restores our humanity.

We need to preserve the blue planet by keeping it green.

My brotherinlaw and I have hiked the Cascade trail and climbed Mount Adams several times.. Everyone should have a chance to enjoy the great outdoors.

Cape Cod's National Seashore has been a boon to many. As our population grows so does our need for more areas to be preserved.

TO Whom it may concern Not only will this help wildlife but also the people.

My grandfather had a homestead in Montana which our family sold back to the Forest Service and it is now a part of Glacier National Park. We expect that land to be preserved for everyone to enjoy.

My family and I greatly enjoy being able to visit this country's natural wonders. For example mt. Ranier and grand canyon nps in 2008 crater np in 2009 and mt. Rushmore and devil's tower national monuments and wind cave and the badlands nps. In 2010. It was the good foresight of the leaders of prior generations that has made this possible. The current administration has to be equally vigilant and proactive in safeguarding our national treasures.

Do not underestimate the importance of contact with the outdoors to good citizenship based on understanding of the environment that sustains us.

I well remember the tremendous awe that I experienced in Bryce National Park with its riot of colors its rock formations the drama of the views as I travelled in and out of the dazzling sunlight and into the shade. The dense sense of peace and quiet that reached deep down inside of me as I gazed in wonder at the many delights of nature small and large. I want future generations of Americans and visitors to our nations to have the opportunity to experience that same awe and wonder that I experienced at Bryce and the sheer joy and delight in the many other wonders we have to discover in our national system of preserved public places. I want to be able to continue to explore new places and to make return visits to places that have held me in awe and wonder. To see with my eyes to hear with my ears and to experience with my heart and all of the senses with which humans are blessed.

My wife and I love to hike and camp. We have seen some of this country's amazing and wellpreserved national parks with Big Bend and the Everglades among our favorites; our goal is to one day see all of them.

Discussion Question 1

(cont.)

We lived in Vero Beach Florida from 1958 to 1963. At that time a 50000 acre freshwater marsh formed the headwaters of the St. Johns River. It was wild and the most beautiful marsh I have ever seen in my long career as a fishery biologist. It had cypress domes surrounding circular ponds. The ponds were shallow with white sand bottoms. Flying over the marsh it looked the craters of the moon. You could wade the ponds while fishing for bass. When you caught one because it could not dive it would tail walk across the top of the water. Meanwhile you could look at the beautiful surroundings and watch the myriad ibises herons roseate spoonbills etc. Before we moved to Louisiana. Minute Maid bought the marsh drained it bulldozed everything flat planted part of it in citrus and allowed the remainder to grow up in a trashy mess. Now all that I have left is beautiful memories of it and an abiding sorrow that it is gone.

. Our environmental treasures must be better cared for than they have been for the past ten years.

Ensure our safe clean precious earth environment to be here for our grandchildren and their grandchildren. We cannot make a more honorable decision.

Perhaps the best argument for protecting our wildlife and wilderness places is Ken Burns series on the National Parks "America's Best Idea."

As a psychologist I see the positive effect that access to nature has on the cognitive and emotional growth of children.

We need to keep the wide open spaces we have left wide open. There are too many reasons and they all revolve around money that we are willing to put the great outdoors at risk. Please back any legislation that will preserve and respect our forests wilderness undeveloped land rivers sanctuaries and all the other many beautiful places we have left but are open to destruction by the almighty dollar.

With more people we need more wilderness monuments wildlife regues parks forests etc. I have enjoyed and continue to enjoy and be refreshed by the outdoors.

Protecting and expanding the last few relatively wild places is essential. The Earth gives us all we need to survive (this is true even for those who don't consider themselves "environmentalists"; no one can live well without unpolluted natural resources). Destroying or degrading the remaining natural areas imperils our own survival and the more natural areas we preserve the greater the possibility that we will 1) discover new medicines 2) preserve ecosystems upon which we depend for our survival 3) respect the other forms of life (besides human) which God/Mother Nature has created and 4) survive as a species. (Really). Protection of the environment is one of the top 3 issues which determine how I vote.

I've spent many years of my life hiking backpacking biking and other outdoor activities. The places where these things can be done are in jeopardy from resource extraction and destruction. Any place that has been saved up until now needs to be expanded improved and saved again.

Discussion Question 1

(cont.)

As a child I grew up on Appletree Lane and ran around on Butterfly Hill. Both are now subdivisions. The things a child learns on Butterfly Hill you can't learn in school or the Discovery Channel but they are I think of elemental importance. They have been for me. I think of them as gifts. I would like to leave a world where the gifts of nature are still a part of the child.

Once you give private enterprise license to extract resources from public lands they lose their wilderness quality forever. There need to be some places that are set aside for nature and the solace it provide to us.

Our connection to nature is fundamental to our physical and mental health and our general wellbeing. I want future generations to enjoy America's amazing outdoors and have this primal connection to our land.

These places are our heritage and belong to all citizens not to the faceless corporations that would destroy them forever for the sake of a few months worth of polluting fossil fuels or industrial minerals. There are both known and unknown wonders in these places that should remain available for our children to discover.

Now is the time for a bold strategy to protect and preserve our great nation's wild places. In my home state of Wisconsin there are many worthy projects such as the Ice Age Trail and the Driftless Area Park Preserve. These are excellent examples of biologic geologic genealogic and economic diversity as well as some of the most beautiful wildlands imaginable.

These wild spaces and species are a vital part of our natural national trust. They are not ours to use up and deplete we are entrusted to care for them for our children.

Once wilderness areas are turned over for development there is no turning back. It is so important to preserve wilderness areas and to treasure all of our outdoor spaces.

Our global resources are finite and are presently supporting a burgeoning global population growth. How long can this go on? We MUST protect every bit of the natural environment with which our planet (..and so far the only planet in the observed Cosmos) enjoys; water oxygen just the right distance from the Sun to produce a surviveable temperature and so many more "happy" coincidences.

Save our nature...save us.

water air habitat our heritage our deepest connections renewal recreation regeneration for all of our children My family and I enjoyed spending our vacations in the wilderness areas across the US. They were times of growth and communion; I dearly want this experience for my grandchildren as well.

I have photographed and written about nature for years and in Texas I enjoy as many undisturbed public lands as I can visit such as Big Bend or the Big Thicket National Preserve.

Discussion Question 1

Written & Online Comments

(cont.)

And please remember: America's public lands belong to the PEOPLE and our descendents NOT to the oil companies coal companies gas companies and others who are only concerned with what resources they can steal today.

We want our children and grandchildren to appreciate nature as we have known it!

The greatest pleasures I have had were visiting and supporting the existing parks and wild areas in our beautiful country. Never think that we have done enough situations change we need to preserve and add to our outdoor assets. Population grows we need to make readily available close to heavily populated areas new places to provide our citizens the experiences we should all share.

In my life I've been able to find lots of "favorite" spots outdoors both popular and little known. I want my eight grandkids to enjoy America's great outdoors too. Now climate change and corporate greed seem bent on destroying our nations' precious resources of land and sea.

Growing up some of the most memorable experiences I had were family vacations to National Parks. My love for biology my push for conserving in both my own life and in my political advocacy and my respect for what God has given us all stemmed from these early experiences. Today I continue to enjoy a range of parks monuments forests and other federally protected outdoor regions.

I don't normally send emails like this I don't think they do much good. But right now the stakes are really high. I am an aquatic biologist by trade and I am alarmed at the scale of environmental devastation. People say they love their country but I really don't think they know what that means. Soon there will be no country left to love (other than Applebees parking lots and poisoned waters full of kids with nowhere to go). We NEED wilderness to survive (e.g. basic ecological services like clean water). We also need them to survive AS A CULTURE self reliant skillful and healthy people. So here goes I'm sending this note into the ether in case this plea will fall on your ears. Just so you know I am a volunteer firefighter and I also volunteer to teach kids science spending most of my time serving my country with no reward making it doubly painful to see wanton destruction by those who wish to socialize the negative externalities of their business in extremely irresponsible ways just to make a quick buck and head to their next tea party. Canned message follows (if anyone does read this thanks for your time)...

Fully Fund and protect and preserve the Everglades.

Once these are spoiled an important part of their legacy as Americans is lost. Why should our grandchildren and great grandchildren have to struggle to restore what we have squandered?

Discussion Question 1

Written & Online Comments

(cont.)

I would not be the person I am today if it were not for the frequent access that I had as a child to wild places. They helped to keep alive the awe for life that is so important to anyone traversing through difficult times. The beauty that we experience in wild places and the places that get stirred within one's heart as the connection to nature is recognized is truly a necessary part of personal growth. More and more one sees that this is being understood as access to wild is frequently a top consideration in any city's planning and development. At the University of Colorado at Boulder where I have resided for the past 11 years there is now talk of incorporating Wilderness Hikes into orientation of new and prospective students. It would be good to see more of this. I know you would too.

Once destroyed you can't get them back.

Please remember that our public spaces are decreasing and that the next generation will look back to us and condemn us for not protecting these natural resources.

Future generations deserve to inherit pristine wilderness.

More places like Williamsburg should be encouraged to form foundations.

"In wildness is the preservation of the world." John Muir

When it comes to sharing resources I have found that people tend to take a short term approach to getting what they want for themselves. That is why I think it is the job of government to step in and take a long term approach for managing shared areas and ecological assets. Government needs to select policies that will bring the greatest good to the most people for the longest time. To ensure that future generations will always benefit from and enjoy our Institute Reforesting Programs: plant seedlings of hardwoods pines firs and redwoods using volunteers and park employees.

Promote reforestation and beautification in all states. Continue to identify and protect endangered species of wildlife and plants.

Our health depends on these wilderness areas!!

I enjoy natural areas where I can see wildlife.

Some of my happiest times in life have been at state parks in my home state of Pennsylvania at the Grand Canyon and on the Allegheny River Wilderness Islands.

(cont.)

I grew up hiking in the wilds of the eastern US. The memory of those outings are still among my fondest.

Expand multiple use areas where bike riders horseback riders and other sport participants (skate boarders surfsail etc.) can share the outdoors.

Please remember that the country that our children and their children live in will be determined by the decisions that you/we implement now.

As someone who has visited and cherished Yellowstone Park I want the next generation to enjoy America's great outdoors too. Future generations should have the chance to marvel at all the wondrous nature out there. Earth itself is a precious resource and it is up to us to protect it.

Also leaving land wild is a great hedge against global warming. We need every advantage in that fight!

America's great outdoors are not ours to do with what we like but a precious resource loaned to us from our children. America has put our trust in you and I am confident that you will make the hard decisions.

It's been shown on numerous occasions that most industries or businesses do not self regulate very well. They are interested in profit not safety or being environmentally conscious. Please don't allow big business/corporations to ruin the beauty of our environment for short term financial gains. Our future generations deserve more.

Your administration has already made great strides in the conservation of America's parks and wilderness so please keep the momentum going!

My children and grandchildren look forward to enjoying safe drinking water fresh air and beauty in the wilderness.

My number one concern is the environment. I have seen the clear cutting the gas guzzling vehicles carrying one person to work the trash thrown out of cars etc. So many of us pretend our poor behavior has no negative repercussions. My children and I suffer from the pollution in the air. We need better controls on pollution! Who can provide that but the government?

Our shared places are vital to our country.

It's only with actions such as these that our kids and or kids' kids will have anything left.

Discussion Question 1

Written & Online Comments

(cont.)

We have so enjoyed our retirement years because of the opportunity in this great country of ours to get out and see the awesome places that have been set aside as National Parks National Forests Wildlife Refuges National Monuments and National Historic Sites. We've loved Yellowstone (and revisit it annually in all seasons); Grand Teton; Joshua Tree; Great Smoky Mountains; Glacier; Rocky Mountain National Park. We've visited a historic Ranger Station along the wild and scenic Lochsa River in Idaho. We're leaving home again in two weeks' time to enjoy elk bugling in the Rockies of Colorado.

I would like to have access and recreational opportunities in our parks and reserves; however not to the extent that the terrain is damaged as with the off road vehicles.

As a lifelong resident of the Chesapeake Bay area I have enjoyed the benefits of vigorous outdoor recreation in state and national parks. Our youth and indeed all Americans will need undeveloped natural areas to sustain the love for the incredible natural resources that have brought such prosperity to the US.

I am always impressed by the quality of our national heritage and the expertise shown by those managing these lands.

There is a growing disconnect between humanity and the wilderness in today's fastpaced technological society. I feel that by starting to work towards the above goals today we can begin to get back to nature. No matter how much we may think ourselves of a higher priority than our environment we cannot live without it. Fragile ecosystems are being destroyed this very day this very hour because we do not have the proper protections in place. The effects are and will continue to be devastating if you do not act to protect what we still have.

The great outdoors can be a salve to our spirits like no other. When the news is bad or life seems gloomy the great outdoors can help us put it into perspective. It is essential to our mental and physical health. California is filled with such places from the ocean to national parks like Yosemite. Spend some time with your family here and you will see.

America's great outdoors is still the country's greatest resource & we must preserve it for the future. I was lucky to have grown up long before nature deficit disorder but I feel strongly that we need to reverse that trend especially in these stressful times.

As a field biologist I can reassure you that conservation is critical not only for recreational purposes but also for research opportunities many of which we have yet to envision. Not long ago the scientific community would not have considered the importance of setting aside pristine areas in terms of understanding the biological impacts of climate change. Now much of our information predicting organismal response is based on phenomena observed in areas our federal government has wisely set aside for protection. Such conservation initiatives are increasingly important.

Discussion Question 1

(cont.)

I am thinking of not only the next generation in our family but at least the two generations after them. We do our best to conserve energy recycle protect wildlife and protect the waters with which we come in contact. As a society we need to praise and support the scientific community as they tell us the truth instead of religious theories.

As the population of the country grows more pressure is placed on the wild places and even greater protections need to be put in place to protect these irreplaceable parts of our country.

In order to protect our land for our children and grandchildren whether they live in the country or cities we need to protect our natural resources and respect the forces of nature instead of trying to control them.

Our country has enough strip malls which half of the stores aren't occupied to begin with. There need to be places in this country that are exempt from expansion.

Some years ago a team of economists sat down to calculate the economic value of all of the contributions to planetary and human health made by forests. I don't remember the figures but they were basically priceless. The lesson of climate change is that there is no planetary ecosystem that is expendable. If we behave as if there were it will be us who will eventually be expendable. We depend on wilderness of land and of sea for our survival on this planet whether we know it or see it or not. Our psychological emotional and spiritual health also depend on the wild places being held sacred. I want the next generation to enjoy and be humbled by America's great outdoors too. That's why I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. Address Conservation on a Large Scale from development and drilling

The preservation of natural areas is important to abate the effects of climate change.

There are literally many issues of critical global concern demanding national and personal attention. The issues outlined below are basic and should be the foundation of our national policy without further delay. We have dithered far too long. Science has told us what we need to know. Let's get on with it.

Please do the right thing for our planet and all living things.

As a child my parents took our family camping and fishing as on a regular basis. This gave me and my siblings an opportunity to learn to appreciate the wonders of America's outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

Some of my favorite trip and times have been in national parks monuments forests and historic sites. I strongly support doing more to protect more areas for recreation environmental protection and use by future generations. Parks and wild areas are more important than another oil well or another building. Let's think long term about the health and well being of people plants and wildlife that we need and enjoy so much!

I am getting too old for wilderness exploration but I want my children and my grandchild to enjoy America's great outdoors too.

Stop killing wolves

This is necessary as overdevelopment will make this country a very unsightly place to live in.

The National parks are the visions of another forward thinking President. He would be very upset and not what he envisioned of how a treasures are being whittled down by leases and permits. The Parks are being nickle and dimed to be a Disneyland atmosphere and for profit for a few.. Stronger protection for all life within parks. boundaries . Public or BLM lands need to be added to Nat'l Parks to make" Green corridors" for migrating wild life. Summer and winter ranges. Decrease the number of leases for mining and grazing. They are being given first priority by Government Agencies to the detriment of wild lands and wild life.. Have an environmental group be in charge not a government agency. No building. create a buffer zone near all rivers and no clear cutting. Ban mountaintop removal. poisoning the future.

YES PRESIDENT OBAMA WE ARE YOUR CONSTITUENTSTHE ONES WHO LOVE YOU! WE KNOW YOU ARE DOING YOUR BEST AND THANK GOD FOR YOUR INTEGRITY IN THE FACE OF AN AMERICAN DISASTER IN THE MEDIA. I KNOW YOU WILL DO ALL YOU CAN TO PROTECT OUR LAND OUR HERITAGE AND OUR WILDERNESS.

We all love and benefit from america's remaining nature and wilderness and we all suffer from it's unwaranted destruction! Site solar energy on fallowed lowgrade farmland not in unspoiled desert habitat. Do not spoil sweeping vistas with any new power transmission lines in the name of green power. areas both large and small. incl linkages.

Stop building on protected land

We cannot preserve and protect our wildlands wildlife and National Parks if we keep allowing development and/or oil and gas exploration & drilling on public lands.

. I don't believe providing more public access or adding recreational areas is a promising way to protect the wildlands. That only promotes destruction of the natural lay of the wildland.

Discussion Question 1

Written & Online Comments

(cont.)

It is time that people realized the importance of protecting the beautiful earth we have. Creatures that live on earth were put there for a purpose and not to be destroyed by thoughtless actions of man. We are only one species and can't live without a diversity of species. Get with it!

The bottom line is that we must absolutely protect America's great outdoors for future generations of Americans and for our children now.

I spent an amazing three months back in '98 traveling in a converted Chevy van around the US with my two sons (then 10 and 12). We clocked up an amazing 16780mi from Mexico to the North Slope and from California to the Dakotas. We wound from park to park on the maps staying almost exclusively in park campgrounds. It was a spectacular journey. I wish that everyone in North America could do something similar... Now and for generations to come. Ours is a beautiful and wondrous land.

Keep big business especially Oil companies out of Public Lands. We are not benefiting from their actions. If they must drill or mine anywhere they need to be accountable and have plans (and backup plans) in place beforehand to take care of any mishaps. We cannot take their word that their methods will be safe. We need to demand proof from them before we let them touch our land or water! Please do everything you can to get BP busy at once cleaning up the wetlands around the Gulf Coast! All of the wildlife that depend on these areas can be decimated within a generation or two without them. BP is now saying they are not finding oil on the water...make them look harder! Under the water under the sand...the oil is there! Force them to work harder to find and clean it up! Americans are increasingly living in cities away from nature. We need places to go to experience and teach our children to appreciate nature. If we don't protect these habitats we will lose precious species which are interconnected with other wildlife. Please depend on scientists for data instead of hunters. We need to be able to get away from the cities without having the noise and pollution of offroad vehicles and speedboats following us. We need to protect our lands and waters. They are already endangered by Global warming (or climate change if you prefer) and pollution. We need to keep them as clean and pristine as possible. We need a campaign to make littering socially unacceptable!

These initiatives if supported and undertaken wisely and free of politics will ensure that our most important resources will be preserved maintained and protected. If we cannot protect our land and natural resources then what kind of "superpower" are we? Without natural resources there will be no USpeople cannot and should not survive without them. Be bold!

There is nothing like close contact with nature in a park or wilderness to instill lifelong love and respect for nature and passion for conserving it. I hope we can pass this on to future generations.

Please provide full funding for our national parks.

Discussion Question 1

Written & Online Comments

(cont.)

Next time you need a little vacation you must go to Zion nat'l park. It is the most beautiful space on earth.

As yearly visitors to National and State Parks we value preserved protected and rehabilitated natural areas for many reasons including discovery rejuvenation from being closer to natural vistas as well as for the opportunity to share these places with many of the international visitors who travel here each year. What purer more economically beneficial way for promoting international cooperation and communication is there? When our leaders are at war when ignorance and the hate and fear ignorance begets are raging all around us it is both amazing and rewarding to share time and space in mutual admiration of a pristine area with those who disagree with us as individuals and a nation. There are few investments which have a greater return.

I grew up visiting the National Parks of our country as the only vacation our family ever took. They are like a second home to me.

(This crusty old white guy will be 80 soon. Was beginning to think I'd never see a president and administration so dedicated to their jobs.....and so far it looks like their pants are staying zipped.)

Humans have taken ENOUGH land from nature for their own gains & greed! Leave the preserved areas alone.

The history and sights of our beautiful country have to be preserved.

By creating more outdoor areas for people to enjoy the united States people will benefit by having healthier lives. Since obesity is one of America's biggest problem I feel that it is very important for people to have a wide variety of things to do outdoors and most importantly be able to access it easily. If this access means building more parks and outdoor spaces then I think that should be the next step. Outdoor recreation stimulates people to be active which in turn will benefit them throughout their lives. by building more natural parks bike paths and outdoor recreation areas.

This is why I have belonged to The Nature Conservancy for many years even though I am and have always been low income. Some things are just more important than fulfilling another personal desire. But Nature Conservancy can't do everything alone or even in conjunction with all the different agencies they partner with. I have traveled across this great land visiting state and National Parks as I traveled. Each area has different specialties brought to light for the casual traveler by the capable rangers that love and staff them. Each park is a new adventure! What will it showcase? How will it be interpreted? Education and outreach to our children and grandchildren are crucial. If our young people don't develop a love and appreciation for the wonders around them there will be no need for parks in the future. And that would be a major loss to us as humans.

Discussion Question 1

Written & Online Comments

(cont.)

Our public lands belong to all Americans and provide us with clean supplies of drinking water healthy air and an opportunity to experience wildlife and nature. It is also about better connecting people especially young people to nature. With the stresses of our rushrush society and lifestyle more than ever we will continue to need more natural wide open spaces to decompress and relax and escape from the worries and challenges of the concrete jungle. And it is about connecting people to each other following the principle that that the best conservation outcomes occur when people work together to protect connect and restore private lands working lands and our wildest lands.

Its very important to maintain established hiking trails instead of closing them.

National parks and historical sites are where our family up to 3 generations of us have had some of our best vacations and where multiple generations can have a wonderful experience together and in smaller groups then meeting in the evening to discuss a wonderful day. I want future generations to be able to take advantage of this familystrengthening bonding experience.

I fully support more places for recreation while protecting the wilderness. Which brings me to the next key point we need to ". That becomes difficult when the wilderness isn't protected and wildlife habitat becomes endangered. That is nature. Thank you for your support concerning these important matters.

This is a legacy a few visionaries in our past have left us unpopular in their time.

Once this wilderness is gone it is gone forever. Please preserve it for our future generations.

Like many American's I am a US ecotourist! I spend my vacations visiting the wilderness and my dollars are spent in the various communities near these areas. I live in Florida and I vacation from Maine to Washington State and the midwest. It will be a travesty if our children's children are unable to enjoy nature in the manner that my family does each year!

I look forward to your response on the matter.

I grew up in an inner city back East. I will never forget the first time I traveled out west and set my foot in a national park. I had never seen anything like it. I had never felt anything like it. Even the people seemed different. It changed my life. Unfortunately the parks have changed and not for the better in my lifetime. Grant endangered status to threatened species sooner rather than later

Discussion Question 1

(cont.)

I was lucky enough to grow up near the redwood forests of Central California and the experiences I had hiking through and camping in these magnificent works of nature shaped the person I grew up to be. I wish to preserve these and other wilderness areas so that others may experience the benefits I've enjoyed from the beautiful nature scenery in our country.

My children and grandchildren must experience America's great outdoors. I am a physician a psychiatrist who treats children. Medical studies show that being outside in green places helps depression and attention deficit hyperactivity disorder.

As a Marriage and Family Therapist Intern I work with at risk and underprivileged populations of children and I believe that underprivileged and at risk children who have access to the natural world have a much better chance of avoiding the pitfalls of drug abuse and crime. We need policies which will give kids in the inner cities (like in south central LA where I have worked) opportunities to see wildlife and open spaces.

i have enjoyed our national parks and wilderness areas since I was a boy and have hiked rafted and kayaked through some of Alaska's California's and several other states wild and scenic rivers and parks. in all its aspects there is truly so little of it left without a home they cannot survive especially young people but for responsible users only!

I'm concerned though that wetlands protection should be tempered by care so that such areas don't breed mosquitoes especially those with a potential to give West Nile virus or malaria to those they bite.

My wife and I regularly visit national parks and monuments in New Mexico and California.

; it is so important not only for people but for animals and the planet to have wilderness animals are losing natural habitats fast please protect them tell the truth about wild animals; teach people that wilderness can be enjoyed for itself. Don't have to be out there shooting at things or wiping out species including handicapped access water sources are becoming increasingly important.

I know the health of our rivers and waterways is integral to our health and well being. I grew up the first 20 years of my life with the Shoto River and Manitowoc River in Wisconsin. They are etched forever in my memory. They are part of my bones. They are part of my knowing that nature comes first... for the benefit of all.

The "great outdoors" is my church...it is where I go for spiritual solace and renewal. If more people went to my church there would be less violence and hatred in the world.

Reinstitute the WPA or CCC and put people to work.

Discussion Question 1

(cont.)

Preservation of America's resources is a sacred trust begun by Teddy Roosevelt. His vision helped to shape our love of the outdoors today. Your vision will shape the love of generations yet unborn. I pray that you will do all that is possible to give them a legacy of American beauty and pristine wilderness.

Remember if we don't take care of our planet it won't take care of us.

I am very grateful that some people had the foresight to preserve and protect certain areas for me.

One of my fondest memories is the first time my father and I hiked and camped in the John Muir wilderness of the Sierra Nevada. This was a grand experience followed by many more in our nature parks and wilderness areas.

We must think ahead to ensure our precious natural resources are protected and that wildlife has a place to call home.

Just remember. the GOP wants to sell everything taxpayers own to private industry to make a profit for the super rich.

I am 82 years old and I want to make certain that future generations can benefit from the preservation of our great outdoors to protect it from destructive development. Once we lose land we can't get it back.

When I was growing up the most special vacations were in our National Parks Yellowstone Mesa Verde Yosemite etc. Now I want the same for my grandchildren to enjoy the splendor of our great outdoors.

Looking for opportunities to add National Parks National Monuments and National Forest land should also be considered. Since contemporary Americans use and waste more resources than any group of people in human history it is imperative that we protect existing national land and do all we can to add to our already robust National Park System.

Establish more national parks and monuments and maintain those existing Keep our forests healthy Protect and restore wildlife habitat and wetlands Improve opportunities for outdoor recreation

To ensure that MY GRANDDAUGHTER and future generations will always benefit and enjoy our Support efforts to keep roads and vehicles out of wilderness areas including snowmobiles. The noise of vehicles are extremely disruptive to wildlife not to mention hikers and backpackers who are out for a true wilderness experience.

In addition to the below please also push the creation and enhancement of habitat corridors through urban areas and the development of parks as part of a collective urban ecosystem that connects to wilderness areas in rural areas and allows for wildlife habitat in urban areas.

Protecting the Earth and our natural resources is so important it's unbelievable as to how many people don't realize this. On the other hand many do understand. Of course we need energy to survive in this world today but our means to survival is a contradiction when it is slowly destroying the planet we live on. It is crucial for us to start working with the Earth instead of just taking from it for future generations. They deserve to have an abundance of clean water air nature to enjoy and normal climates to live in without fear.

All of these areas help us to be better people and citizens.

We are running out of lands that can be so designated so we must act as soon as possible to preserve as much as possible.

both areas now unprotected that will otherwise be lost AND protect our existing National Parks from the damage caused by overuse and inappropriate use (e.g. snowmobiles and offroad vehicles of all types).

Life itself evolved from the natural world. We must protect and preserve that world while we can.

I grew up in Yosemite National Park. I know how important the GREAT outdoors really is. We need to preserve and protect the greatness that we have.

Without clean fresh water we will have nothing to pass on to following generations. The planet will be bereft.

As an avid camper backpacker and hiker I want the next generation to enjoy America's great outdoors too. through Reforestation of Areas Leased for Logging through Education

I believe preserving places we enjoy is vital to our generations now as well as our upcoming generations as well. It is important for people to connect with nature and enjoy the outdoors. We cannot live in a world where we are so caught up in society and it's ways of constant watching of television programs; as well as endless hours on the internet. We the people of America have the opportunity and the right to provide changes in our one and only world. You can help us be the change.

Once it is gone it cannot be retrieved.

During my life I have visited quite a few national parks forests and monuments and found them very relaxing and enlightening.

I know we all can achieve great things when we work Together!

please act now!!

Two of the things important to us are our Freedom and our Great Outdoors.

My name is and I'm a strong supporter of protecting the environment and the wildlife that inhabits it.

WE NEED OUR PRECIOUS FORESTS AND WILDLIFE to Keep Balance in a world that must align itself with Loving Kindness to survive.

Concrete asphalt and cars everywhere. Let's maintain some sanctuary!

PLEASE HELP..THANK YOU.

There are children in our great country whose feet have never touched the ground they walk on concrete and pavement all their lives. It is difficult or impossible to imbue a generation so cut off from Mother Earth and Nature with respect and love for the natural world and her creatures. We must change this! Our children need to feel the splendor of being in nature and then they will want to preserve and protect it.

These lands are recreational areas for millions of people. They are sacred lands for many indigenous people. And their beauty is so important that we could never duplicate it.

As an elder nearing my eightieth year I want the next generation to enjoy America's great outdoors too. These efforts are needed NOW!

*Just a thought but my home state of Michigan is full of lucious greenery and animal inhabitants and most of our residents are moving out of state if they have not already. Good place to start.

I think if more people spent more time in the wilderness there would be less stress and conflict in society.

Not only do I want the next generation to enjoy America's great outdoors too I feel a connection with ALL life on this planet and do NOT WANT ANY of it to be destroyed or damaged due to carelessness or greed. This is not just soft hearted thinking here we do NOT know everything and so when we allow species to be destroyed we may place ourselves and/or other species' on the endangered list! I don't want that to happen and I'M SURE THAT YOU DON'T EITHER!

Discussion Question 1

(cont.)

Parks wilderness areas historic places are all part of what makes America America. They speak to our souls and need to be preserved.

We have a really gorgeous country with lots of geographic variety.

We have a duty to do as much as we can to preserve the environment for future generations.

Just went to California for the first time and saw giant trees rocks waterfalls and meadows. It was astounding!

MAYBE YOU COULD ENCOURAGE MS. WINFREY TO DONATE SOME OF HER MILLIONS TO OUR NATIONAL PARKS FOR THEIR PERPETUAL CARE! AND THEN SHE COULD TALK TO HER OTHER WEALTHY FRIENDS...AND THEY COULD DONATE SOME OF THEIR MILLIONS TO OUR PUBLIC SCHOOLS!

I want my children and grandchildren to have the opportunity to enjoy what we have please do not let greed and politics take away what should be our greatest legacy to future generations. The earth is not ours to destroy we share it with all of the diverse peoples and species on it and have a responsibility to take that fact seriously. Thank you.

Acadia National Park is one of my favorite places. When I lived in Boston and the "citiness" would get to me I would hop in my car and drive the very long drive to Mr. Desert and walk the Wonderland Trail. Such wonderful things to see: first pine forest then what seems like a large bonsai garden then huge granite rocks leading to the Atlantic. Then back into the car for the long drive home refreshed. I know since you have recently returned from Acadia that you understand the wonderment of our National Parks and other wildlife habitats.

Our family values outdoor recreation for physical and mental health more than any other thing.

Our resources won't last forever please protect them! We do need much more conservation and less usage of our resources.

The first job to undertake is the rebuilding of the Gulf coast. Our citizens that live there MUST be protected from worsening storms. Our knowledge of natural processes and ecosystems is sufficient to accomplish this. Our success in doing this difficult job will serve as a springboard for further tasks in wilder surroundings.

Discussion Question 1

Written & Online Comments

(cont.)

It is imperative that we protect not only our earth's natural ecosystems but also focus on sustaining the plant and animal biodiversity that are so interconnected with the habitats in which they live in. Just as the wildlife depends on their habitat for essential resources the trees plants and animals within the natural community helps recycle the nutrients that sustains a healthy ecosystem. As a part of protecting our wilderness we must allow easy access and mobility for the animals so that they can travel more freely and not be confined to regions surrounded by human development. A solution is to develop 'wildlife corridors' as a safe passageway for animals that can be implemented in a way that helps guide wildlife through a network of protected lands.

If we wanted to continue the Bush Administration's policies we would have elected McCain!

Some of my greatest learning moments have come to me in the outdoors

The importance of protecting wild places and wilderness areas for future generations cannot be emphasized enough. These places help to rejuvenate us reinspire us and are of utmost importance to the environmental balance of the planet.

Since I was a child I enjoyed learning about the natural world around me. After serving in Viet Nam these "green islands of hope" became more important to me. I am retired from The National Park Service now and hunting and fishing along with gardening have become a way of life for me. I am personally proud that you are my President and that you have given me hope by steering this country in the directions that you have. You have done a tremendous amount of work for us and I am grateful and proud of you.

I went with my grandchildren to a park in Long Island that is a bird sanctuary and they loved it. I hope it will still be there when they want to show it to their children and grandchildren.

I grew up in the 60's and 70's and was exposed to conservation then in Arkansas. Colorado is my home state now and we've been blessed with people with enough foresight to set aside land and preserve it for those in the future. If it wasn't for their bold acts I feel Colorado would definitely not be the great state it is with great views and vistas and land that everyone can use. I want the next generation to enjoy America's great outdoors too. It is time to take our short sighted narrow views and think of the future and what will be left for them to explore and cherish!

Many young people today don't even realize that they are part of nature! I want the next generation to enjoy America's great outdoors and the opportunity to find their place in it!.

Nothing is more important than protecting our environment so future generations will have a healthy place to exist and will be able to enjoy America's great outdoors too.

Discussion Question 1

(cont.)

As an avid hiker my family and I spend many days each year in a wide variety of parks national forests monuments wilderness areas and other places that have been set aside for the public to enjoy. This is a priceless heritage that has been created by leaders from Teddy Roosevelt onward who have a vision of the value of public spaces and conservation.

Since I was a child I have been a regular visitor to America's National Parks and Monuments. My life has been immeasurably nourished by these wilderness areas and places of great environmental splendor or historical importance.

PERSONALIZED PART: this is the first step in preventing climate change. I voted for change but not that.

Our national parks system is the one of the greatest legacies we can preserve.

Clean water is one of this country's most valuable resources.

If these lands and sites are ruined we can never recover them.

I want my children and all future generations to be able to grow up as I did in the beautiful country that is our home. It's important for the mind and health of all people to have a chance to enjoy nature and I would not want to deprive our next generations of this great pleasure that too many people take for granted.

One of the most precious things we have as Americans is an amazingly diverse natural environment and I want the next generation to enjoy America's great outdoors too.

for the 21st century. President Obama I think you are a wonderful leader and I support the changes you are trying to bring about to make life better for all mankind not just Americans. Keep plugging away for us.

P.S. They always want me to "personalize" the message. I can't put it any better than they do and the fact that I took the time to fill in the blanks with my name address and other pertinent information should be enough to show that I care and I want you to do the right thing. I trust that you will.

We are studying how your administration's policies are more proconservationist than the previous Bush presidency in my ENV. LAW class at NC State University.

Discussion Question 1

Written & Online Comments

(cont.)

I have worked within several wilderness areas on projects that provide for increased environmental protection and recreation. The original wilderness areas plan included areas that fit the intent of the designation and protected pristine and unique lands accomplishing tremendous good for those fortunate enough to have the time and physical ability to enjoy such wonderful country. I continue to work on volunteer projects within and outside of Wilderness areas of Sequoia National Forest. As additional areas were sought to add to the original wilderness areas that meant the intent of the wilderness law. Some of these were private in holding, lands that needed to transfer from other agencies others were areas that took time to survey and to process. The Wilderness system grew for good reasons. As the years went by the term Wilderness began to be misused and politicians learned they could stir up emotion by claiming to "protect at risk Wilderness areas" with new legislation. So the original definition and purpose for wilderness areas, a quite noble one, became skewed and often were based on emotion, politics and not on any science. Wilderness designations in many of these areas can do harm by restricting the abilities to conduct land management activities that are needed to protect the lands, public and adjacent communities. There have been areas closed to 4x4 over the last 20 years based on no logic just emotion. Such as areas proposed in this bill. In these areas prior to wilderness designation vehicle use had been restricted to designated routes that due to soil and rock and infrequent use no environmental damage was occurring. This was all based on scientific studies. Many of the areas that were closed under the desert wilderness act have no other ways to access them due to distance traveled to and from water and the severe environmental conditions. Without 4X Jeep type access there is no other way to recreate, protect or study these areas. The USFS and BLM have spent many years studying and improving the roads that can be maintained to allow for recreation, and environmental protection, while closing those that do not provide for all those issues. Protection of public safety and protection of the area from invasive species, disease and from the effects of catastrophic wild fire is greatly impacted by the designation of wilderness area to areas that do not meet the intent or definition of Wilderness area. Non Wilderness lands can be managed for any type of recreation opportunity that is eco friendly for that area and in a much more cost effective manner. Designating more Wildernesses will discourage the public from enjoying the outdoors because many unintended and cumbersome regulations that automatically apply. The President said he is interested in local involvement in his plan, yet none of the local user in these areas that I am involved with have been contacted. Only national interest groups who do not use the area at all have been promoting the changes in our area. The Initiative seeks to address Climate Change and should use the best science, which has been determined to be the need for fuel load reduction, (logging, chipping, masticating and control burning) to promote forest watershed health and reduce greenhouse gas emissions. These activities are restricted by wilderness areas. Reduction of hazard fuels from our forests to provide for public safety and to reduce emissions by the reduction of plumes that transmit huge quantities of material into the atmosphere daily from catastrophic wildfires requires renewable resource harvesting in America, also known as logging. In the US we have now evolved logging practices to mimic natural fire in the forests. Our logging is done under the strictest environmental regulations in the world. Wilderness designation generally eliminates logging and all other fuels management practices. There are many scientific reports how logging can reduce the wildfire threat and the emissions of green house gasses. An

Discussion Question 1

(cont.)

Increaseing wilderness acre has already increase the occurrence of large fires and the emission of green house and toxic gasses by wildfires. The Klamath County seat in Ca. the city of Yreka, 2 years ago had un healthy CO2 levels for weeks above the Federal Permissible Exposures limits due to fires burning in wilderness areas. .

I look forward to the day I can take my kids and share with them what my DAD had shared with me and made me a better person for it.

I take my nephews and niece on Jeep rides several times a year so they can see first hand and learn respect for the land and the animals living in the area. It's a wonderful experience to share with young people and it would be a shame to have them lose this privilege. As a avid 4-wheeler and snowmobiler it's important to me to be sure that I always respect the land and make sure that others do the same.

I was raised riding dirtbikes and ATV's and would like to raise my kids in the same manner. We contribute alot of revenue to the towns in which we go riding and racing in and in this economy these little towns rely on people visiting and recreating in their community.

im not sure what gives people 2000 miles away the rite to govern how our land is used without giving every one a say in it. were i live there is a great amount of people who recreate with our ohvs. people come from hundreds of miles away, probably because there is no place to ride were they live.

My 4 children go and drive in the forest to fish, bike ride and snowmobile.

My family and many other families, spend mulitple weekends every year together, bonding and building strong respect for the outdoor beauty of this nation. The majority of offroaders are not abusers but are conservationist to conserve and protect our outdoors. This builds great family relationships and better citizens.

My family has enjoyed Off Highway vehicle recreation for over 30 years. We treat the environment with respect and help keep it clean. I sure do wish the Federal Government would quit spending money they do not have.

My Family like many others spend a lot of time in the wilderness Camping, fishing, Hiking, Four Wheeling, and Ditbike Riding we enjoy the outdoors and if that is taken away the kid's would spend more time with their friend's instead of family and more time's than not they will make bad decissions from being around the wrong people instead of Family. We talk more when there is no TV, Video Game's, Computers, or Cell Phones and there is more involvement in our kid's lives without these distractions.

My family likes to camp and enjoy adventures on OHV's.

My name is and I am writing today to express my views on the management of our natural spaces. I am an active outdoorsman and support ALL who would use our natural and wilderness areas including hikers, mountain bikers, campers, horseback riders, and off-road enthusiasts. In addition . Thank you for taking the time to listen to my concerns.

My name is and I live in Southern California. I have been an avid motorcyclist and outdoor recreation enthusiast my entire life (41 years).. My family and friends regularly enjoy public lands via motorcycles, mountain bikes, hiking, off roading, camping, fishing, etc. Since

Nature can be enjoyed responsibly, it provides for stress relief. Those looking to spend activities in wildlife enjoy the wildlife not destroy it.

Public lands belong to the public and the public is everybody, not an elite few

Please work to increase public access to our outdoor areas by increasing the amount of areas designated for the use of Off Road Vehicles as well as for mountain bikes, horse riders and hikers.

I have two suggestions: 1 - If you so choose to designate more wilderness, I would like to see Washington DC and New York city reverted to its original state of wilderness because there is very little outdoor enjoyment on the east coast - these are obviously highly sought areas in which to reside - we need to save it. 2 - Fish and Game needs to revert back to "land management" by helping maintaining the land, not a law enforcement agency - oh, no money? Try selling 1/2 of the new vehicles provided and put two people in a vehicle - or for that matter - does every Fish and Game officer need a new 2010 F350? I know - astounding thoughts.

Dear Sir, I've personally enjoyed many of these areas since I was a kid and it has contributed greatly to my own understanding of myself and nature. We need more space we can freely enjoy, not less. Thank you,

finally please keep all of our off highway riding areas open we have little as it is. thank you for your time

Finally, TAKING PRIVATE PROPERTY OFF THE TAX ROLLS INCREASES THE NATIONAL DEBT! Let people who are wealthy, buy up real estate, PAY THEIR TAXES, and keep it pristine.

Hello, OHV access is disappearing and those of us that ride are forced into smaller and smaller areas with reduced recreation opportunities. These remaining areas are then too crowded. More access is a good thing. Sincerely,

Mtn biking is of my greatest passions.

How can you continue to restrict access to outdoor activities while drafting legislation mandating kids be active, these lands belong to everyone including OHV users. You should be advocating using these lands not cutting people out. If you want to get kids active in sports and other recreational activities (stupid).

I am a big wilderness supporter. I work for the National Park Service and have spent countless days and hours in the backcountry here since I was about 8. It is very important to me and I think well worth preserving. That said, I also am a firm believer that there should be different 'levels' of areas for different people and different types of use. Yes, those that can hike into remote areas, the most remote without even trails can thoroughly enjoy the true wilderness areas. If the researchers can be limited, then there is very minimal impact to wildlife and the environment in general. Currently there is way too much research, killing animals and harassing them in the name of research. But there needs to be areas that others can also enjoy and learn to appreciate this great country. Some like to ride horses, some mountain bikes, others motorized motorcycles etc. Should everywhere allow all access? No, I don't think so. BUT I also believe that there are already enough areas for wilderness use in this country and adding more will not improve anything in any way. There are also huge funding issues for the current wilderness areas. I know this very well working at a National Park. We cannot even maintain what is there now, how can we possibly maintain and properly manage even more? I say this from both a taxpayer and an employee. Let's properly do what we have now. I strongly encourage no more wilderness areas at this time. Not only are there enough areas now, but from a monetary point of view- this is like a person that can't afford the upkeep or payments on their house buying a new vacation house in the mountains because they love the mountains so much. Then asking someone else to pay for it since they don't have the money. First let us properly maintain and fund the current Wilderness areas (National Parks, Forest Service etc). I would support more areas for motorized use, and mountain bike etc. I think this is a great way for all, especially youth to get exercise, experience the outdoors and stay out of trouble! It also does a lot to stimulate economic growth, with users making various purchases to equipment. Please, let's fix what we have now first! Thanks for your time, (name deleted) Some boiler plate one points I agree with below:

I am an almost weekly user of the outdoors. I ride motorcycles on legally designated riding trails, hunt and camp and hike with my wife. This is an essential part of my lifestyle.

I am an Arizona native who regularly enjoys using our public lands via motorized means. Continued access to public lands for all forest users, including motorized users, is vital to my family's continued enjoyment of our public lands.

I am an avid outdoor enthusiast that enjoys our public lands. The proposed closure certainly looks like more of the same Government rhetoric, massive closures for specific lobbyists. Keep our public lands open to the public. This includes all forms of outdoor recreation, not just specific uses. As a responsible off road driver I respect our public lands and enjoy visiting areas I otherwise would not be able to. These trips are spent with family and friends. Please leave our public lands open to the public. Good management, education and stewardship are important, not mass closures.

I am an avid outdoor enthusiast who enjoys fishing, hunting, and riding off road vehicles. These are pastimes that have been handed down to me and I wish to continue the trend. I have observed a continued and escalating trend to "manage the impact" of these activities, which in most cases results in limited access and closures. The fact that I enjoy these activities implies stewardship on my part to preserve them for future use. Listed below are but a few of the multiple reasons that I oppose the closure of more public land.

I am offroad and mountain biking enthusiast and have a company that employs 20 people who rely on our public lands being open for use.

I feel that the general public has a right to recreate in the national lands that we ALL own and we do not need further restrictions to do so. There is already PLENTY of un accessible land now as it is!

These lands belong to the people. We love America and want to enjoy the countryside. That's why we make our homes and raise our familys in rural areas. We should be able to enjoy this great country! Thank you for your time!

This is the Public's Land, to use, and enjoy.

This letter is to respectfully voice my concerns and objections to the president's land use proposals (restrictions). As an avid outdoors man, myself and my family have enjoyed public lands for generations through camping, hunting, fishing, bicycling, and OHV use. My children are taught, as was I that as users, we have a duty not only to respect the resources, but also to act through responsible stewardship and by always picking up not only after ourselves, but after those not quite so responsible as us. Through the fees we pay for annual OHV permits and park access, we are further supporting the continued management and preservation of our rights as American citizens who are entitled to our own American forest lands. Thank you for your support in this matter.

This letter reflects the views of my whole family, we are very close, my son does well in school and is a happy well rounded kid. One of the main reasons for this is our weekend getaways to our local forests. There is no phones, computers, x-boxes etc, just us and other familys bonding and enjoying the outdoors. Our recreational activities include camping, hiking, mountain biking and yes, we ride off highway motorcycles too. Surprised? well most motorcyclists I know are multi-activity familys and individuals who truly care about the land they recreate on. My family has planted trees, done trail maintenance, picked up litter, cleaned up streams etc. we believe in land stewardship and practice it. This is why it's imperative that you allow us and the groups who represent us such as the BRC and the ARRA to actively participate in any matters involving decisions on our public forests and lands. When there is no transparency, people who stand to lose the most, such as OHV users, become very suspicious of what is really going on. Below are some comments I selected from a comment menu in the letter generator that further reflects our feelings on this issue. Thank you for considering my thoughts, concerns and comments,

We work hard and need to be able to have a cost effective release to keep in shape, and stay happy. To do these things with our Children and creat memories for us all.

As an active member in the outdoor community, I and many of my friends volunteer hundreds of hours every year to construct, repair and maintain wilderness trails. We are instrumental in educating the public regarding these resources and promote responsible OHV recreational use. We invest our time, money and talent to responsible OHV recreation and will continue to do so for the recreation we value and the environment we cherish. Responsible recreation is the answer, public education is the key.

Dear Sirs, As a father of 4 and a husband to my lovely wife, the one activity that we have left to do together away from home is to go off road and ride in the desert and sand dunes around Southern California. Please take these comments into consideration.

Dear Sirs: My family and I recreate on public (and some private) lands on almost a weekly basis. We enjoy hiking, camping, hunting, and OHV riding, and have done so for many years. The time we spend together as a family enjoying our public lands is priceless and irreplaceable. We encourage you to consider the following comments while drafting public lands planning and management agendas. The President is interested in local involvement in his plan, yet no multiple use groups have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands.

I have enjoyed these activities as well as hiking and camping in public lands One day I hope to pass these on to my children I just hope there are enough areas left to do so.

I raised my daughter riding ORV's in our National Forests. True ORV enthusiasts are respectful of our environment, helpful (we donate many hours working on trails) to others, hard working, and family oriented. My daughter feels a lot of her confidence and drive for success (she plans on being a doctor and starts college next year) came from learning to ride motorcycles on mountain trails. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. Remember these youth will be our next generation of police officers, lawyers, carpenters, computer technicians, and Presidents. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation. ORV riding is not only a recreational activity, it is an esteem building, family and friend bonding, and environment respecting activity. Please keep this form of recreation a priority in all law making decisions.

Maine's forests provide countless benefits for human and natural communities. Over 70 million people live within a day's drive of Maine and rely on them for clean water and air, as well as for their outstanding recreational opportunities. These diverse forests also contain a dizzying array of flora and fauna, including many endangered or threatened species, as well as rare tree and plant communities. Increasingly, we are confronting the reality that our forests face more urgent threats than ever envisioned. These threats include sprawling growth and development that are diminishing forests in Maine at an alarming rate, and climate change will have tremendous impacts on forests and on plant and animal species in Maine, New England, and globally. As the climate warms, species will generally shift their ranges up to higher elevations and to the north. The more our forests are fragmented by development, roads, and shopping malls, the harder it will be for species to successfully shift their locations, adapt, and survive.

Create Economic Opportunities: Protected public lands can provide economic benefits to their surrounding communities. Communities can diversify their economies by expanding tourism-related industries, boosting ecotourism in their region and thereby increasing demand for food and lodging services, and increase property values by protecting the area's natural amenities.

Federal, state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes.

The American people need to be considered as the fourth branch of our government. Our voices are vital to the direction of our country. My family lives and thrives because of the great outdoors. Our garden and chicken sustain us nutritionally, and our trails give us ways to mountain bike and hike to keep us active and healthy.

I grew up loving this, please let my children and grandchildren do the same.

I have been up and down the east coast and recently got to visit the northwest for the first time and the great majesty that is nature must be protected for the wildlife as well as generations to come. People can learn and take much pride in the land if it is kept safe and clean for all to see.

I am just an every day middle class citizen working to support her family. The outdoors, parks, rivers, beaches, etc. are one of my favorite destinations. They are beautiful, enjoyable, easy to access, and inexpensive.

Please, help protect the land, and those of us who choose to embrace nature. Your kids and their descendants will thank you!

Our favorite way to relax is to take three weeks a year to tour the state and national parks. We meet wonderful people and appreciate the beauty God has given this world.

I would like my son to be able to enjoy the outdoors the way I enjoyed them as a child..free and unwavering. This is important to the survival of our way of life....on this planet. Enough with the concrete jungles already. PEACE!

We all need to get out more

Outdoors is one of many cures to our OBESITY epidemic. - PS GO OBAMA

There are places right now in our country where no person has ever set foot. It is pristine, untampered by our industrialized ways. Let's keep them that way.

I wish to have much of the roadways in our national forests preserved. I am disabled and can no longer hike, but I can still take my pick up on back roads. There are many places I have enjoyed that I can't get to because the roads are no longer maintained. We all can't hike!

America is beautiful and has beautiful places to visit when people want to get away on a vacation; so why would you want to ruin the opportunity for Americans to see the Land of the Free to wander in the awe of it all? Our next generation deserves the opportunity to see what we see now in America instead of some built over acre - with probably some useless thing that they cannot return home with photos and state "went on vacation and all I came home with was photos of some built over item instead" of what they wanted to see. I am a photo technician and the photos that I see being printed most of the time during the summer months are photos of people enjoying their vacations - wanting to share those photos with family and friends and to be passed on - Please do not ruin and take away what Americans have the freedom to do - visit natural and historical places as well as vacation spots in parks for recreation.
