Discussion Question 1

What works: Please share your thoughts and ideas on effective strategies for conservation, recreation and reconnecting people to the outdoors.

Albuquerque, NM

She formed her own coalition. There are 6 members who are very committed to the community and the land. They have a relationship with Cochiti and Santo Domingo. They are not waiting for anyone and are doing what they want. She wants the Federal Government to have a vision for the 21st century that increases public lands and have an agreement with private land owners. Northern NM wants the toxic chemicals ceased and from getting into the waterways. She would also like to see a continental conservation protection plan.

Kids get attached if given money. Have a CCC for youth. There are a lot of young people that need jobs. This will give them the responsibility.

His group is trying to get together with the youth conservation groups and bring grants into the Las Cruces Communities and get kids out into the dessert in Dona Ana County. It helps to reconnect the rest of the community. The Federal Government should pass the Omnibus Bill. The Land Bill will be helpful for the West. BLM should look for more wilderness or NCA lands. He would like to see Otero Mesa become a national monument. NLSC is now helping him put together a friends group to get grants. He would like to see the Federal Government provide more funds to organizations that support what the group does.

Students to grab concepts at the lever that they are studying. Partnerships with agencies works.

His group formed a non-profit to accept monies. The BLM was designated as a lead and he doesn't feel that they would have been funded if the BLM staff wasn't involved. One of the things they do is hire youth to do watershed restoration. You have to work with your neighbors and designate an agency to get the staffing.

One of the biggest challenges they face is that there is not enough funding for trails to fix those in existence or to create new trails. Just over the 4th of July weekend 14 members from his group cleared 80 miles of backcountry trails in the Pecos Wilderness. The Forest Service is under continuous pressure and without these kinds of groups they have no choice but to close the trails.

One of the things that she has done locally is start a climate action group in her school. One of the things that you have to take into account is to set the example first and make your voice heard. Being a community leader shows other people what they are capable of by taking the initiative.

Likes to go backpacking and camping in New Mexico, Colorado and Utah with family and friends.

Discussion Question 1

Albuquerque, NM

(cont.)

They employ a lot of the Acoma youth. Kids find that it is fun being employed with them. They take it back to the Native American culture. Being stewards of the earth and that it goes back to the mother earth. They find pride and joy doing that kind of work.

Birdwatching, hiking and mushroom hunting

Likes to play soccer

Biking and Swimming. Likes to go down by the River. Alameda has a nice river.

After football practice he likes to ride his bike to the pool. He lives next to an arroyo so he likes to walk up and down the arroyo

He is currently working in the Carson National Forest building a fire break between the Pueblo and the forest to help reduce the spread of a fire. They are also building trails in public lands. When people see them out on the trails they know that they are taking care of the land and they have a greater appreciation for the land. They are trying to make it more accessible for the public. They have two different crews of about 20 doing forestry work. They also have two more crews working with the youth in the community trying to get the youth to do things outside. Over the course of the year they have over 100 people working for the Youth Corp

Recommendation would be going to the community and getting young kids involved. He is currently working with water harvesting and reconstructing sites.

She and her friends go off roading in Tijeras, hiking in the Sandias and swimming

Works with the Bosque Ecosystem Monitoring Program. They monitor the Bosque which is a riparian ecosystem along the Rio Grande. They monitor water depths and litter fall for that forest. They get the youth involved and now have 700 youth that come into the Bosque to do water samples. By getting the youth involved it forms a lasting relationship with the environment and gets the kids interested in something that they normally wouldn't do.

Likes to rollerskate around the community and the Rio Grande. She likes to hang out with friends at the skate parks in the city.

Not so much physical access as much as mental access. As long as you are not part of the environment you cannot connect with it. Just working with Earthworks has educated her and has been her chain of thought on a daily basis.

Fishing, Camping, in Eagle Nest and whitewater rafting

Discussion Question 1

Albuquerque, NM

(cont.)

Skiing and snowshoeing in the Sangre de Cristo Mtns. A lot of biking and camping and backpacking close to Santa Fe

Art connects with nature. Picking up recycled materials and trash and making art with it.

He also works with the youth and right now they are working at Santa Fe High building an outside classroom. Kids need hands-on-experience and ask how they can get involved. It is not only an outdoor classroom. It contains a perma-culture garden and solar panels. They will be monitoring the solar panels throughout the school year. He feels that more monies for outdoor education programs in public schools are needed so the students connect with the land instead of a textbook. It would be nice if the National Parks should have outdoor classrooms so that when the students do visit the Parks serve as an example

Farms on five acres, goes running in the foothills in the near his pueblo. Likes to go outdoors and watch the sunrise

Work out of the Ancestral Lands Office in Acoma Pueblo. Being Native American they have a certain connection to the land and they teach that to their groups. They uproot tamarisk removal, introduce native plants along the riverside. Their main focus this summer is erosion control and water conservation

He has a Five acre field that he goes to work on

Works in a community garden. He lives by the Sandias so just being near mountains and water is what he likes to do.

Thank you for coming to Albuquerque for a meeting to talk about "Wild Lands". I want to save our wild lands in New Mexico as well as other places in the U.S. and have worked to protect Otero Mesa and Valles Caldera and more needs to be done.

Wild horses belong in the west and are a symbol of the West! They evolved and developed hooves as a result of the western range. By relocating herds to sterile lands or zoo like conditions, the rich forage will cause many to sicken and die.

Backpacking and camping, goes to Colorado, Utah and around Albuquerque for camping. With youth groups and family. Enjoys any camping, even "car camping".

Biking, go to the park, go swimming, walk along the river. Primarily inner-city areas. Playing sports, soccer.

Bird watching, hiking to find birds with family, mushroom hunting with grandma

Discussion Question 1

Albuquerque, NM

(cont.)

Civilian Conservation Corps from FDR era worked. Need to re-implement a program like this.

Do something like a breast cancer walk but for conservation, recreation and parks.

Farming, trail running, watch the sunset/sunrise.

Fishing, camping in northern NM. White water rafting. From Indiana and appreciates the ability to get outdoors in the west.

Football practice, ride bike to the pool, lives near arroyo and walks it to see what he can find.

From Acoma Pueblo. Need to have incentives for getting outdoors - like jobs, scholarships. Need to focus on who you are trying to reach. Need to have youth leaders/role-models who encourage younger kids to do conservation work. (Many kids agreed wages and peer support/examples would encourage them to do conservation work.)

Gardening, community gardens, likes to be in the mountains.

Get young kids involved in the community. Educate people on green habits. Have community days where you take people to sites that are using green techniques – water harvesting etc. Educate people on work being done. Community based projects that bring people together.

Go long boarding, work in the field.

Has been doing trail work since he was 12 and loves it. Trail work and connections in Gila National Forest are deplorable. Access to trails is horrendous. Fire budgets are huge and trail budgets are small. Gila is one of the larger national forests and only 10-15 people are doing trail work, usually seasonal hires. Signage is a problem. Crew leaders can't even figure out where trail is or what trail they are on. How can the public figure it out?

Have a week where people are encouraged to unplug from media and technology and encourage them to go outside.

Have city/community projects that do conservation work.

Hiking, snowboarding, picnics, biking.

Discussion Question 1

Albuquerque, NM

(cont.)

Make federal buildings zero carbon. Need green-collar conservation corps to do this work. Use solar panels, water harvesting etc. Get people involved hands-on and educate them how to do it in their own lives.

Mentorship and culture is what works. Provide the opportunities and youth will do it (recycle bins, compost). Make it convenient, make it habit and kids will do it. Kids need role models/leaders who are doing it. Need to make opportunities for kids to apply what they learn – outdoor classrooms. Education works.

Monitors bosque ecosystem along the Rio Grande. Measures water depths, water samples, litter fall etc. Involve over 700 youth from elementary to high school who help with the monitoring. This helps youth get involved and form a relationship with the environment. They learn to appreciate the uniqueness of the bosque. This starts through the school but helps get kids involved and interested in conservation and they take these practices with them as they get older.

Moved to New Mexico to try to heal from 9/11 (eye witness of Twin Towers being hit). Inherited land and got inspired to share with others. He takes youth to public land management meetings. Youth ideas can inspire us. Individuals (adults) need to go out and get involved with young people and take them to special places, public lands.

Need to deal with climate change. Need to pass current legislation for carbon limit (CLEAR). We don't need a cap and trade system. There is a cap and dividend approach proposed by Rep/Dem senators. This would provide funding for youth corps. An aside - kids like animal poop and tracks. Take them out to do animal tracking.

Need to outreach to parents to teach them to encourage their kids to get outdoors. (Sec. Salazar – How do you outreach to parents in this day and age?) Need to educate parents on outdoor activities that are cheap – camping, hiking etc. Meet up groups in communities and conversations on how to get outdoors would be a good start.

Offer environmental scholarships to get youth employment that's related to the outdoors.

Off-roading, hiking, swimming in rivers/lakes, coach soccer in parks.

Over the last 6 years there has been a great organization effort to work with farmers and ranchers to conserve private lands. This is a great opportunity and many farmers/ranchers are willing to work with us if we educate them and partner with them. They make conservation choices everyday and we can help them make better choices. Average age of most ranchers is over 50, we need to move youth into this way of life or lands will be sold and subdivided.

Pick up trash when they see it, even if they didn't do the littering.

Discussion Question 1

Albuquerque, NM

(cont.)

Really likes art and thinks it's a great way to connect to nature. Used trash to create art sculptures and recycled art. Helps people realize we are trashing the environment and we need to recycle.

Roller skating, skate parks, picnics in the mountains.

Started high school climate action group. We need young people to set an example and take the lead. Wants to be a leader and have her voice heard. Doesn't buy bottled water, car pools, only shops at thrift stores. Reducing/reusing is as important as recycling. Wants others to realize what they can do to help.

State parks are wonderful local opportunities. Have good education programs. Need to protect wilderness areas.

The Youth Conservation Corps work! Keeps kids out of jail, teaches them conservation skills/job skills, employment/money, helps them find future employment.

There are young people who are doing great conservation works and know where their roots are. We need to start learning what works and maintaining cultural practices. The government ruined our (Latino) lifestyle and you want us to partner with them? Not all youth are addicted to electronics. But these can be used to reach other youth through youth already doing conservation work. Young people who know where they came from are best for reaching and reconnecting other youth.

We need to have fun. Make outdoors fun and a good time. Kids need to learn the outdoors means freedom, independence, a place in nature. Don't make it seem like formal education/structure. Let kids run and have fun. For the last few years there has been a waiting list for girls wanting to join local Girl Scouts chapter but there aren't enough adults willing to volunteer their time to work with kids and get them outdoors.

Work in ancestral lands office. Work on Acoma pueblo lands. As Native Americans have connection to the land. Introduce native plants along river, build check dams to prevent erosion, working mostly on water conservation and preventing erosion.

Working in Carson NF to reduce fire danger between Taos Pueblo and forest. Building trails on public lands across NM. Public sees them working and appreciates that there are groups working to maintain and build trails. Working to remove invasive species and reduce fire threat. Have 2 crews of 20 people doing forestry and trail work. Several other crews in communities and summer program crews that involve and educate local youth. Some bosque and wetlands environment work. Involve about 100 people throughout the year. Serve as leaders/role models to teach other people how they can help.

Volunteerism works well when it works

Discussion Question 1

Albuquerque, NM

(cont.)

Marketing campaign, partnered with local groups and businesses, radio shows

Federal funding on conservation grants, more infrastructure, more resources = more volunteers

Strong grassroots interest which involves local, State, and Fed partnership

Works best when we work together, Feds, States, Tribes, citizens. When Fed creates environment in which all can success, it works well.

We support research based multiple use wise use of federal lands. Place attachment theory – get kids out and attached to the land

Encourage Congress delegation to move protection measures forward quickly

Unplug the children. Provide alternatives. We have two urban gardens

Needs to be taken to grassroots level...involve local peoples, not just big entities and groups. Get all players at the table...if you don't there will be dissent. Respect each other.

Creation of more wilderness area – protects ecosystems which are vanishing

NM can work at landscape level on public lands protections. Otero Mesa, Organ Mountains, examples of large swathes of public land. How to connect kids? Protect it for the future.

Workgroups having fun, spend night at some place easy to deal with and affordable – NM Outdoors is a club which is having success in this area

In public schools, it really works if you can start children in enjoying the outdoors. Also, families doing activities with others outdoors. Cooperatives all across country, doing that as a way of joining together and thrive.

Father took her camping – made outdoors an integral part of her life. Initiate interest and respect through getting young people out into the natural world

Better communications into media so people know there's something out there they can connect to.

Discussion Question 1

Albuquerque, NM

(cont.)

Give people opportunities to participate, involve smaller groups

Community garden has started to feed food pantry, local foods and farmers markets work great

Youth as catalysts, instead of just recipients of services – example recycling – poor response from community and schools until they gave the job to the youth. The program went from 7 schools to 17 last year, with more signing up.

Identify ONE common goal that every member of all organizations can adhere to, start working towards one commonality, then we work together and not at cross purposes.

Partnering with Forest Service – trail maintenance, helping

It works best for me when I have a job, and I know what to do – I volunteer when I'm scheduled....better than 'come when you can'

In the All Indian Pueblo Council HS, students go to pueblos, work on community environmental projects – it works very well. At end of school year, they present their projects in school. Students have gone on to work for tribes in conservation

Most of the time, finding an overriding goal works. Unplugging kids? Can't just unplug them and send them out....you have to TAKE them out. Make yourself available for youth

"All land is local. No matter what you are going to do, I'm very proud that we have, in our jurisdiction, the City of Albuquerque Open Space Center. It is amazing. We have lots of programs that we run every week for different ages. We work with the Petroglyph National Monument. We've joined forces with them. Being as we are a rural state, we think of Santa Fe and Albuquerque as urban. The Open Space Center gives kids a chance to have open fields where they can grow stuff."

"We really have an opportunity here. Our culture (in New Mexico) is based, for the most part, on small scale organic farming. You can actually invest a lot of money in New Mexico. We can be the example for how it can work for supplying food. We've been doing this for 800 years. Community farms are unbelievable resources. It is important that children know where their food comes from. It is really how we profoundly understand the experience on our planet. Nature heals. We think we are going to solve all the natural disasters. We should pay attention to nature. Nature will tell us how to clean up these disasters. It is really important to protect nature. The other thing, so many veils have been lifted in terms of ethics, greed, etc. What I came to realize is that youth are ethical. They don't need an ethics course. They understand what's right and what's wrong. We need to work for each other."

Discussion Question 1

Albuquerque, NM

(cont.)

"We are the only program fully run by Native Americans. A while back we were used as a model for other Native American Tribes in connection to the Public Lands Act that was put together in 2009. I would like to see something like this go forward. We have a great partnership with the Pueblo of Acoma and would like other tribes to have that option and to learn more about themselves, their cultural values, and their connection with nature. Tribes are losing their connection with traditional values, due to technology. Speaking from the point of view of Native Americans, I'd like to see Conservation Corps started on all tribal lands. We started with 42 members, and are now up to 80 members. We are very excited to see our program move forward, but we need some money. We train young adults to do preservation work on some of our projects. Working with young people is one of our main goals."

"I'm a rancher in Northern New Mexico. To answer the questions that you presented today - a third of the land in the U.S. is public land. We don't need any more public land or wilderness. We need to put more money towards the lands we already own and make healthier watersheds. Also, how do we protect private lands? It is by allowing people who own those lands to use them in a sustainable manner. New Mexico being a poor state, a lot of ranchers cannot partake of federal programs that require a match. That slows progress and any impetus we have. We have a whole lot to do with the lands we already have. Work on what we do have and what we need to change."

"Member of. "Great Old Broads for Wilderness". We have a new chapter here in Albuquerque. It is a national organization. We need to support the wilderness we already have and create new areas. Wilderness areas are being overused, misused. Expand them. We are at the other end of the age spectrum from those young women. We need to take our children and grandchildren out into nature. We learned to appreciate nature as children. Permanent changes – setting aside areas for wilderness is one of the few permanent changes. It can't be changed back."

"I take kids on walks through the Nature Center. We explore bugs, the pond. They love it and are fascinated by it. Kids don't even know often that there is a river here in Albuquerque. I'm constantly surprised with how little interaction these kids have with the outdoors. A lot of families don't take their kids outside. They don't have money for buses. I think that is one very simple solution. Once a year isn't enough to form a relationship with nature. If they do, they will actually care about it and form a relationship for the future."

"I proudly work for the National Park Service. Backcountry Ranger for the season. At Bandelier, people come there to see the archaeological resources. 70 percent of it is wilderness. Youth Corps is a partner, AmeriCorps, there is a Youth Conservation Corps at Bandelier, Cornerstones Program, Day Camps. We need to make things last, get kids outside, beef up State Parks education programs. Mentoring. Bring youth to be more civically engaged - example as outdoor educators or writing letters. Being part of the political process."

"I'm just a citizen, local music teacher, and composer, and a member of the New Mexico Wilderness Alliance. This group has been involved with the Manzano Mountains. I'm urging that the study area there be designated as part of the wilderness. This would create a critical wildlife corridor. That's right here. "

Discussion Question 1

Albuquerque, NM

(cont.)

"I work with trusts and National Preserves. I was a little unsure about showing up, I wasn't sure how many people would show up. I am really excited. This is a large group. To address the two questions, re: getting kids outdoors. Let's hold another one of these in two years. This is a solution. I think this is already a good idea. Let's do this again. And just hearing from everyone already. I can't imagine that everyone would walk away today without making some kind of networking connection. We need to help ourselves by working together."

"I would love to see permanent protection for Otero Mesa by whatever method is available. What works? Wilderness works. If you look out at the Sandia wilderness or the Pecos wilderness around Santa Fe, then you realize that lays the groundwork for everything we are talking about, giving people of all ages the chance to get out and interact with nature. Lasting change. Of course I realize that some of this is due to the legislative process. We'd like to see some of the places talked about get protected by the agencies, and we'd like to see existing laws be enforced. For example, off road use. The Forest Service needs to be aware that there are a lot of illegally created roads and they need to be closed. Defragment land ownership, preferably between the State and Federal ownership. Rationally manage."

"We were both at the youth session this morning. A lot of the youth managed to sum up really strong and significant points. It was inspiring. Youth are often full of passion and have new ideas. Everybody talks about this specific designation or this specific cog in the machinery; we need to see the big picture. It will not take just all of our organizations, but all of our organizations working together. Without the dung beetle, all of those savannah ecosystems would collapse. The dung beetle rolls the dung and carries it underground, keeping the grasslands fertile. That keeps all the elephants, zebras, etc., all of those well known animals, afloat. I know a lot of people bring up problems, but we need to follow those up with a solution. This morning we talked about a significant problem in getting kids to connect with the nature – it is just not a top priority for a lot of kids. "Mental access" someone said this morning. Also, not every kid lives near open land. Friends, shopping, preparing for college, etc., take priority. Mentors are key. We should make sure that nature is part of the way we all think. We need to get networking done right as we sit here. We've got to get all partners together to come up with solutions. This morning at the youth session, some girls talked about having a walk for conservation causes. That is what all of the 7 or so organizations I have worked for have been trying to do for ages. I think it is really important that we can all work together. Lasting change – part of that is seeing the big picture. The national picture. Implementing things that will protect places on a national scale."

Discussion Question 1

Albuquerque, NM

(cont.)

"Thousands of farmers and ranchers are not here today. We work at growing products for the world. Every one of us is intimately involved in agriculture. As we look at landscape management, if we cannot maintain our food supply, we can't recreate or worry about wildlife. We have to get back to our roots that allow us the time to do these kinds of things. I agree with a lot of things that have been said. In defense of the Forest Service, we think they are doing too much for wolves. Otero Mesa is a very special place. The reason it is a special place, people that have lived and ranched there for four generations. Go to Otero county, talk to those people. No one there knew that it might become a monument. It was the fourth worst drought in 100 years. We don't want to see gas and oil drilling there, but do we just give away that energy source?"

"I'm a former member of New Mexico Mountain Club Conservation. The reason I came here today is that I would like to say "Amen" to this man about Otero Mesa. We have to keep some lands wild. We have to keep it wild in some places for future generations. I really came also to ask the question - how are the trails for these ATVs and these off-road vehicles that are tearing up the mesas, how are they related to conservation and maintaining the beauty and the wildness of this beautiful state? We owe it to the children not to let those expand any more."

"I'd like to speak for a few moments. I'd like to voice my support for Senator Bingaman's efforts..."

Discussion Question 1

Annapolis, MD

Maryland National Capital Parks and Planning Commission. We have to understand childhood development. Consider Maslow's hierarchy of needs, such as economics. Start with core principals of youth development to think about outcomes. Skill-building promotes self-esteem and community. The ability to earn even a modest wage builds self-esteem. Positive relationships with adults determines success of programs. Parks provide stress relief. We want to change behavior and we need to change institutions to do that. Need to teach and develop staff to do outreach.

likes parks in the city, takes bus to park, hang out with friends.

Responsible for 8 county National Heritage Area with two National Parks – Cedar Creek and Shenandoah NP. Is facing similar challenges; they are tasked with protecting ten battlefields. They work with willing landowners to protect land in Rockingham (and other?) counties. Have received grants thru American Battlefield Protection Program. They've found the most effective strategy is to sit down and engage with landowners to engender a sense a pride, started a dialogue with landowners on possible tools to conserve lands, and have developed land conservation strategy specific to each parcel. Key strategy is to getting recognition of battlefields incorporated into county comprehensive plan to ensure a common vision among key decision makers.

county schools build restoration project, kids develop project. Unique way to give kids first hand experience. Invest kids in the environment. Kids go home and talk to parents, kids became advocates. New way of campaigning, facebook connection w/ kids, ask for small contribution, kids invested in process. Invest young people in environment, they want to know how conservation is progressing if they are invested.

Northern VA Regional Park Authority manages the Occoquan Water Authority. The outstanding rowing facility gets people down there – about 1,000 kids on the water in the springtime. They go down there for the rowing, not the environment - but they are seeing beaver, woodlands, etc. They bring their parents on the weekends – 2,000-3,000 people on the weekends. Through this experience, they “get” the importance of the outdoors. This is one of the few reservoirs that is open to the public – that concept should be expanded.

Education: conservation preservation.

I try to conserve as many resources as possible, like paper, or water while I'm washing dishes. And you can reduce the amount of resources you use every day

I'm trying to raise student awareness about environmental issues, but it is difficult because a lot of students aren't really interested in the issues

Discussion Question 1

Annapolis, MD

(cont.)

Public parks around neighborhood; no national park near house – but Dad works for NPS so on vacation they go to national parks – grew up going to national parks with family; historical house site – tour house; but bike and hike, too

NO – have to travel 30 minutes

stopped buying plastic water bottles; “recycling nut” – goes in trashcan and pulls out recyclables

very confusing to look online and try and find jobs

service time; educate through schools

Junior ranger program, get kids out to park and teach them. Sprouts 2-5 yr olds, start young, plant acorns. Must connect on playful level. Advertise to parents on web (follow up question on how they connect to 2-5 yr olds) build something out of sheets, kids excited no matter what. Teen rangers, trail maintenance, show kids the wildlife. Civic justice corps – bring disadvantaged youth into park, amazing for kids, parents learn from kids. Kids learn trades. Bay grass planting- kids involved, can see the grass grow. Gunpowder falls state falls

trails, likes going to different parks, works at gunpowder falls park, worried about access to public areas, likes to take family to park.

he gets youth involved in recycling efforts, get support system for recycling, trail maintenance, engage youth in environmental problems of that the community must...

he works with civic justice corps - takes at risk youth in parks, teach them about trail work, kids find their work to be rewarding through this program, see what they've done -we need more programs like the one he works with.

Junior Ranger Program home and public schools – SPROUTS (2-5 years) what is a tree? An acorn? Planting, hikes – Teen Rangers high schoolers do trail maintenance – enrichment Scales and Tails with falcons, raptors, all around us – Civic Justice Corps for at-risk youth get into the parks for grass and they love it! What is this? Enjoyable, and they go home and explain what they did to their parents and learn hands on like tree planting but also carpentry – Bay Grass Planting – temperature variations see how much grass grows in Gunpowder Park or nearby -- advertise in their newsletter or online to parents – wilderness survival sessions as well.

Education, engagement and parent participation

Discussion Question 1

Annapolis, MD

(cont.)

Educate youth on what preserving the environment means.

get kids involves get dirty – need the reinforcement of parents

Establish community gardens: come together with crops. Recreational opportunities through gardens.

likes going on the water

mandate outdoors experiences in schools. Make having to go outside mandatory. Make it another subject in school, like history.

: MD has funding (real estate transfer taxes, agricultural land conversion to communities, conversion taxes). Inclusion of GIS from DNR to create priority areas.

Over last 30 years his organization have conserved 200,000 acres of lands, headwaters of 72 watersheds. Endorse LWCF funding. They have garnered \$220M from LWCF over last 20 years. He recognizes that they can't buy all important lands. They are now doing a lot of community based work as well. Also taking a top down approach (have been able to get legislation in PA passed that mandated all 58 municipalities along AT must adopt trail friendly land use controls. But are tasked with trying to support these muns. His vols are a connection to these communities. Obstacles: information, technical assistance and financial support. Many counties that the trail passes through lack land use controls and planning staff. State funds are down. They would benefit from modest seed grants to provide temporary support to counties and municipalities trying to develop local land use controls.

Landscape preservation important, Green Infrastructure, without it is a loss of natural functions. Land conservation needs to be localized at watershed level. Losing these lands will mean more costs. Papers have made the case for the values, but hasn't been a communication platform.

A threat can really rally a lot of different people to save an area. Wilderness battlefield threatened by Walmart brings together several different organizations. The programs from the federal government need to engage volunteers between providing volunteers and organization is great to get different ages involved and contributing to conservation

I like going downtown, walking around, seeing all the hustle and bustle

I just started going green. We're in this world and it is kind of hard to go green, but we're learning. Over the past few months I've been trying to recycle and find other ways to conserve

Discussion Question 1

Annapolis, MD

(cont.)

I work for a project where we go to low income homes and teach them how to save energy by changing light bulbs to CFLs. A lot of these people aren't educated about going green, but most of them know about CFLs so we start there

It's become a sort of a trend where it's popular to do this... which is good because now everybody thinks it's cool to be green.

Yeah, the hippie kids don't really know what they're doing; they are just following the trend.

need to reinforce value of conservation and place.

Organizations need to educate

We need to reach parents if we want to reach youth. Beyond school programming, we also need to emphasize family quality time. For example our family participates in outdoor activities like trail restoration. Historic places are also important places to get kids outside and engaged. One of my kids is much more likely to want to go to someplace historic. Finally, we need to empower local organizations that are already there, rather than focusing on new programs.

also likes to bike

I like to go to state and national parks and kayak on freshwater rivers

I try to do all of those things and try to buy more local foods

I try to volunteer in student groups or wildlife based groups that clean up roads.

Life style change on a large scale. Caring for open spaces is automatic. Starts in school, starts early. Positive experience at early age. Get kids outdoors and exposed to fun activities.

Engage youth through technology at a young age, such Iphone applications involving nature related functions, commercials about listening to music outdoors, etc

Community service and volunteer hours are important

Discussion Question 1

Annapolis, MD

(cont.)

Quality of life and economic revitalization, tourism, and also wanted to add preserve culture resources because they increase quality of life, restoration projects across the country have spurred econ revitalization. Save Americas ??? provides matching program, for fed investment of 150K have inspired individuals, local governments, foundations to bring in match and that has in turn been anchor in reinvestment into some abandon communities. That match component is essential. Hope program will return after 2011 budget.

Whatever you to engage children must be fun. Start early. Show job opportunities to your children so that they're environmentalists early. They have a pilot program: Woolly mascot, buddy bison. Where has buddy bison been:? Grades preK – 8 grade. Comes with toolkit. Come with local park maps. Buddy Bison website. Buddybison.org. Twenty-one pilot schools – new education centers in California, Nevada. Uses photos, stories, artwork. National grassroots movement. Connects kids through out the country. Biggest obstacle is transportation. Set up a program that's funded by scholarships for bus funds. High school organizations say if DOI would give jobs that are available, along with course work, developing skills, could increase hiring in the DOI. Little kids to older students; Simple and scalable. Teachers love it.

Community gardens: like that idea at the Department of Agriculture. It is a great way to bring a community together and learn about environment. Think about how you can work with Dept of AG, and non-profits, ...excited to work with it. Know your farm, know your food. Farms hooking up with urban areas to provide local crops, local communities visit the farms.

Jobs...there are opportunities to get involved. USDA FS and NRCS have tremendous opportunities for young people...examples. So many exciting jobs...job corps (6000 young people learning about green jobs – green related skills).

goes on walks and rides bikes on public lands

Thinks that the environment is related to all school subjects and should be incorporated. Science teachers engage kids about biology, English teachers help kids write poetry outside, etc.

What works well? We receive recreational benefits from Rock Creek Park (MD) – but it needs help from Land Water Conservation Fund. In Virginia's Mason Neck National Wildlife / State Park – you see pollution coming from DC and entering bay and this needs to be taken care of. We need more resources from Land / Water Conservation Fund. We need to take care of our places and provide resources for places to look clean and attractive to tourism.

Copy on federal level what state's do: e.g., several agencies coming together to save land. Be more flexible on how money can be used. Idea of an investment board.

Community gardens. Initiative for funding and template to create in community and staff.

Discussion Question 1

Annapolis, MD

(cont.)

Utilizing technology – social networking sites...parks that people can post events to and youth can RSVP. Adults need to try to make cool to kids. Park can friend a kid

Parents to promote involvement with environmental education. Educate parents on how they can get kids involved from a young age through high school.

I would love to get out to the mountains but it is hard to find time

I support local food by going to local markets and frequent restaurants that use food grown on local farms

It's more of an individual thing for me which I don't like because I think that organized conservation efforts are important

The trend is a good thing, but if it is uneducated, then you need to figure out why buying local food is a good thing

Visiting National Parks has been one of most inspiring impacts on my life. Feels that a new National Park in the Chesapeake Bay would be critical to increasing understanding value of the bay, and helping residents to appreciate nature.

We start with what is common & familiar, e.g. nature, history; then we work backwards to try to make the point about preservation. We think about how to engage the five senses when we are structuring programs. Children appreciate that. We find that word of mouth is the best way to market our programs.

working with teachers on SOL, hundreds of ways nature can reinforce those SOL – need to interconnect schools with parks better with video, physically – kids can bring parent to park and say look ma, this!

likes going hiking and appreciates cool geological features

Recycling. Notes the importance of DC providing people with the blue bins to promote recycling.

implement an outdoor ed program at schools.

Discussion Question 1

Annapolis, MD

(cont.)

Partnerships and LWCF funds to protect lands & paired up with the middle school next to a historic battlefield. The principal supports the project; it has become part of the curriculum (history, geography, physical education) to learn about the Appalachian trail. They made a pledge to hike a certain distance of the trail while the teachers wrote specific activities based on locations. Used John Smith's historic raid to go through the historic record and considered the actual location to create video podcasts to publish the story of John Smith.

Suggestion: Include the culture as well as the natural resource to engage people

Look at programs that work and give them priority for funding - land and water conservation, rivers and trails program - connects people in the community, existing federal holdings in their ecosystem setting and connect them to the Chesapeake bay watershed. There's room for more national parks that would provide more access, protect more natural and cultural resources

tries not to take cars; bikes everywhere, takes metro; composts and recycles; look at labels of all brands – looks for containers that are compostable

getting voice out there – “being green is the in thing” – make being outdoors the “in” thing; have adventures and fun parties to entice kids – i.e. AdventuresNYC (free outdoors activities!); one awesome experience in the outdoors can be life-changing

Job opportunities available, accessible.

outdoor activities free and open to the public – all activities

outdoor education and service through schools

local park, Druid Hill; spends a lot of time at harbor in Baltimore City – habitat environment; beach volleyball --> historical hill

go to local/school parks, but not enough

I like to go hiking in the national forests because I live nearby

“Eat the view” --promote farmers markets.

Not many parks near house; no national parks – doesn't spend too much time outdoors

Discussion Question 1

Annapolis, MD

(cont.)

not as conscious

more youth outreach programs in high school – job opportunities; government came to him – made it much easier

never heard of NPS before they came to me

mandate volunteer time

emphasized that the method to getting around funding issues by tying it to landscape change.

Relate protection of farm and forest land and connecting people. Montgomery county about 30 years ago to protect agricultural stock, so began a program to TDR over 30 years have protected 90K acres. Other thing county has done is hired an economic development coordinator focused on agriculture, help farmers to be part of agro tourism, get kids out to farms. If you want to get people connected to land – protect land and allow farms to continue to farm and people are connecting to it.

RTCA is high on my “what works” list. They play a really important role – they are experienced planners and they serve as an extra set of hands, and we (MD DNR) don’t have to pay them. Of all the NPS programs, this one is the best because it gives back to us. Regarding boating and public access facilities: a great program, managed through the FWS, is the Sport Fishing & Recreation Grant Program – they provide an enormous amount of funding to the states. Recreation Sport Fishing money is funneled through the states to create access sites. I would hate to see the program cut. The Sport Fishing & Recreation Program is well established – these people know boating better than most NPS employees do. These people and the program are incredibly important.

Has encountered many local successful projects. Each time there have been a couple of people that are catalytic, a primary reason community has connected with project. Need new army of conservationists. Could be helped along by investing in future leadership – are many programs like this now (ie. National Conservation Leadership Institute) that could be supported nationally. This is not mainstream program – it gets corporate support, is attended by federal and state agencies. Could be a national model.

camping; no national parks near house – but local parks, Gun Powder; hiking, kayaking

Greenbelt Park... but not much of anything – just a big open space, not a park

Discussion Question 1

Annapolis, MD

(cont.)

dad found job for me

Engage through brook trout, fishing, enroll CREP not for stripped bass and crabs, but for native brook trout, so they can fish with kids, we can gain a lot about focusing on local amenities of each area. We have CREP programs, temporary easements, need to migrate to permanent so have ecological function of floodplain, is there a way to increase flex in purchase easements. States don't have funding sources and want to protect land but don't fit wetland reserve, or don't fit CREP, need to think broader about funding sources.

Wildlife refuges are a good public-private model. Most have "Friends of" programs. Could be used on a larger scale.

Everything I learned about the outdoors was from the boy scouts. No other organization introduces this # of kids to the outdoors and encourages them to stay involved. They also own large areas that need preservation

From Portland Maine- helps kids from disadvantaged situations, have kids build rowboats. Does this with his own grandkids. Personal love of water environment. Takes a week to build a rowboat.

works to clean up litter and trash

Integrate the outdoors into the education system

Integrate Earth Day into school and get kids to go outside

likes to see good scenery, defines open spaces as no buildings. He likes to be places where he can go to find himself

He tries to make sure nothing dangerous goes into runoff which goes into the gutters. He is reminded by the "Save the Bay" signs around Baltimore and motivated to preserve water quality. Thinks that environmental issues could be mitigated by increased awareness

refers to "living classrooms" in which kids go on boatrides and are taught the importance of taking care of the environment. Conservation needs to become a personal issue.

Kids in the area – if they know they will go and they will grow. Make it implied mandatory that schools use the public lands. Get the kids to come out.

Activities, popping images (sesame street)..make our public lands more animated. Make public lands fun, include activities and challenges

Discussion Question 1

Annapolis, MD

(cont.)

When we emphasize hiking, kayaking and canoeing, we emphasize conservation - not just fun. We're getting people actively involved in removing invasive species at several state parks. We're encouraging them to do something useful in nature. The "Save the Mattawoman Creek" campaign has been powerful because we pulled in local groups. We're focused on it – we are conducting major events throughout the summer. We're going to provide kayaking and hiking tours to offer people a chance to get to know about the issue. www.mattawomanwatershd.org

Congratulations on the recent actions of the EPA – good marks! Look at all of these things from a reasonable viewpoint – the federal government must lead.

Need multiple dimensions to make conservation happen. Ripple effect- multiple kinds of interests and programs and groups. Clinton admin had a program that worked well, but wasn't fully funded: American Heritage Rivers Initiatives (Loretta Neuman ran this White House initiative) State initiatives have great models, but not nearly enough funding.

I like going to State parks

Just the fact that you do it says a lot more. My family always kind of makes fun of me for the things I do to conserve energy, but it has gotten to the point where they see that it really means something to me, so they don't make fun of me anymore.

And the hippie types may not realize whether they're helping or hurting the cause.

The parks in Anacostia... I am a martial artist and I like training outside to get the chi from the ground and outside

I try to commute more by the train and bus... and get a bicycle too

A lot of my friends were really living the green way... like by not using plastic bags. The individual effort is where it starts initially before it gets organized. I try to lead by example... I will show you what I do, not tell you

Government support in school systems. Educate children

Increase communication – social media, advertising, Facebook, get word out on what we have and what we stand for.

concerned about proposed casino on the Journey Thru Hallowed Ground 3000 feet from Gettysburg battlefield. Is difficult to defeat proposal; decision left up to PA Gaming Control Board, concerned about impact on battlefield. Need buffer zone to limit casinos around National Parks ie like Vicksburg,

Discussion Question 1

Annapolis, MD

(cont.)

We teach environmental stewardship. I'm vitally interested in fishing for native trout, and our streams are at risk for an invasive species—Didymo (and algae that coats the stream bottom and chokes off all other life). Invasive species is a rallying cry for recreational use of water. Collaborative effort—environmental monitoring and outreach helps make people feel like they are a part of this. Kids can map river bottom.

got job through cousin

how do you get people outside if they're just not interested? Not events... sports. Need something for everyone

Know where the parks are. People don't know where to go.

environmental science and outdoor education needs to be in schools

P.E. cut from schools...more field trips to parks.

Grow your own food - victory gardens, pull together to grow fruits and vegetables.

In order to have access to the outdoors there has to be public access.

takes public transportation.

DOI jobs in agencies all over the country in parks, refuges, lots of lands. Encourage to talk about job opportunities

Education not just schools but parents too. Encourage engagement and education of youth

What made you so passionate about outdoors? Grew up in suburbs of Atlanta and seeing sprawl and watched Chattahoochee River turned brown to red because so much of land has been taken off so now have clay enter river. Chat national recreation areas and being able to walk to that and not needing a car that allowed me to sit quietly. Also parents banned video games.

took eco footprint test and now wants to reduce carbon footprint. She recycles, got her family involved, decreases her shower time, got recycling bins at her school. Really concerned about water pollution and chemical that pollute.

Discussion Question 1

Annapolis, MD

(cont.)

chevy forest, creek, likes to stay active, lives in DC area, running, likes to spend time with family outside camping, likes to see the stars.

trails, biking

the combination of education and getting young people on board to fight for conservation, kids go back to school and the kids can say they worked for parks, bring experience to peers.

partner with corporations, her boys like Gatorade commercials, if they promote the idea kids will think cool. That's what kids listen to, have to speak their language.

Great to be here. Impressed with consistent themes. Been in DC 3 ½ years. Promote partnerships...biggest partnership with next generation. Introduced the "No Child Left Inside (NCLI)" initiative Studies show youth spend about 7 ½ hrs day on electronics and only 4 minutes on outdoor recreation. There is a need to be tech savvy but something is out whack with those numbers. Support real resources to get youth outdoors. Primarily into school. Incorporate outdoor education. 1700 orgs across country pushing to get NCLI legislation passed. Hope to get included in education authorization. Gov has to perceive when people are pushing for new framework...new energy framework. Build new framework, the next generation, most aware of the environment, take over this issue, make it your issue, using social media you can become the leading edge in Environmental Awareness in this country. Most exciting thing in decades. Every high school should have an Environmental Club. Own it! Exciting prospect what you can do with this issue on the environment. Pledge to be a partner.

fishing, gardens.

community gardens in outdoor areas, get kids involved, many empty lots, give incentives to convert the space.

society is experiencing push for universal computer literacy- we must have similar approach to outdoor education.

have to educate youth - if they don't know, how can we expect them to help effort.

Increase communications via outreach, public forums, social media

Rock Creek Park

Discussion Question 1

Annapolis, MD

(cont.)

Areas Around Goucher College

Anacostia River, arboretums

Olmstead Woods, The National Cathedral

Southern Maryland Parks, wetlands and marshes

In my neighborhood in northeast DC, people put trashbags out on their fences and property to encourage people not to litter. It started informally, but now their available all over the place

Installed rain barrels at home and school to collect water

I pick up trash along the GW parkway for work, and make sure there are plenty of places available to put trash

Although it started originally because of a plumbing problem, now I collect water from the downspouts when it rains and use it to flush the toilets

It's important to focus on the little things you can do in your everyday life-changing light bulbs, showering efficiently, and recycling.

The environment isn't limited to just the outdoors. It's what's around us all the time. You need to be conscious of indoor and outdoor environments, then. One example is to choose plants for outside your home that improve the air quality.

It's also important to share the available information with family and parents . They're the ones who are really going to encourage interest in their children.

We could focus on education aimed at kids, to take it home to their parents. If a kid says "Hey, I heard about this cool thing to do," Parents are going to check it out

Maybe some USDA and DOI outreach programs? We also need to make sure we get to kids in the places they already are, like a TV ad campaign, a brochure, something that gets them when they're not in school.

You could also do immersion education projects. For example you could read an article and do a research project on location somewhere outdoors. This encourages discover and incorporateslots of different learning styles to find how you personally relate to the environment.

Discussion Question 1

Annapolis, MD

(cont.)

One thing we do at Anacostia to get people to see the place is river tours. Maybe we could bring schools out with free transportation so people are out there, see the pollution, and want to help. You could also provide routes using public transportation.

Yeah, Like showing parks and how to get to them on the metro maps. That would be cool. And providing people with alternate transportation that's project or experience specific.

Information outreach campaign that targets kids outside of school, with a broad view to encourage different interests.

I know Baltimore does free buses on the weekends to certain parts of the city. It would be cool if public transportation went free to parks or historic sites, make them more widespread.

The more parents know, the easier it is to tell their kids about it, even if they already know. Parents are the ones who can really encourage and make an interest. I mean amusement parks give discounts, and parents take their kids there. If you made some kind of a special event at parks people would go

It would also be good to educate people about the outdoors in a way that gets a lot of people involved, like a community garden. It draws the whole family in to create participation and awareness.

You also need enough willing participants to start the process on some sort of big community event. Like paid staffers need to back it up, and be willing to give their time to prepare and clean up and help out.

We need more days like Earth Day. One day a year is good, but there needs to be more chances for lots of people to get together and mix education and outreach.

An environmental fair would be good, too

thank Save Americas Treasures Program, through them secure funding. Echo those comments.

In Baltimore, Johns Hopkins partners with heritage organization partners with heritage with walking trails. National Parks Conservation Association – suggested for natural conservation programs to look at national conserve act.

Listening to people is huge to make them feel they are being heard and they are involved – IdeaJam and Facebook page tell people how their dollars are being used and this is all about the people and for the people—this makes our government stronger and brings people outdoors

Transportation: key accessibility. Public transportation to George Washington Parkway. Implementation. Baltimore free shuttle to areas on the weekends (examples).

Discussion Question 1

Annapolis, MD

(cont.)

Outreach: to youth and parents. Parents teach kids through communication and bond. BBQ – national BBQ free to all (gov pd) bring everyone together. Everyone likes to eat-this is a common affinity across different ethnicities and cultures.

Education: schools are cutting P.E....encourage them to keep outdoor programs and outdoor classroom areas. Get more for youth.

– SPROUTS (2-5 years) what is a tree? An acorn? Planting, hikes – Teen Rangers high schoolers do trail maintenance – enrichment Scales and Tails with falcons, raptors, all around us – Civic Justice Corps for at-risk youth get into the parks for grass and they love it! What is this? Enjoyable, and they go home and explain what they did to their parents and learn hands on like tree planting but also carpentry – Bay Grass Planting – temperature variations see how much grass grows in Gunpowder Park or nearby -- advertise in their newsletter or online to parents – wilderness survival sessions as well.

A threat can really rally a lot of different people to save an area. Wilderness battlefield threatened by Walmart brings together several different organizations. The programs from the federal government need to engage volunteers between providing volunteers and organization is great to get different ages involved and contributing to conservation.

Activities for children are skewed for younger children. Engage middle school. Engage the faith based community. Kids in Montgomery county go on Earth Day to pull invasive species in Rock Creek Park. We need to work on partnership skills. Need to facilitate relationships. How do you streamline things so that there isn't double reporting

Agriculture land preservation, farm forest enterprise, need to find common interest between people and government. Forested lands – provide more funding for woodlands workshops, home owners may not know what profit can come from land. How can make more land more profitable. And government is interested in connecting land. Also, marrying agriculture and tourism – for example Mt Pilliar farms in county – excursion with family – getting children out in open.

Aligning land conservation priorities, look from state level and look at regionally, if align, call partners can come in and work on same slate. Does allow fed priorities and local priorities to merge. Open space – transfer tax. Looking at ranking based on quality forest, hubs and corridors, so have eco function nailed down. Haven't done as good of a job with agricultural lands. Need to do better job leveraging and all agree on priorities and based on sound formulas.

All participants should go to NPS website and urge completion of national trails system. 1960 Congress created National Trails system and according to website, only one (Appalachian Trail) has been completed. Participants should also vote on priority projects at AGO website.

Area should be named national treasure. Put pressure on development watershed. Corps of engineers and DOI work together

Discussion Question 1

Annapolis, MD

(cont.)

As parent, idea of community garden is good, stumbling block is school facilities folks, slow down construction. Mortar folks need to be involved

At National Aquarium in Baltimore we had outreach programs that targeted very young children. Daycares are a good place to start. It's good to start when children are little. We sometimes try to get sponsors to help pay the entrance fees for kids to visit sites. Multi-year programs are the best way to really reach kids; providing multiple encounters. They can start with activities in school or close to home when they are younger or just starting, then can do more advanced activities as they grow up. Schools don't always apply to become partners so we have to do outreach to them. Teachers aren't always comfortable with losing instruction time. Non-science teachers were not comfortable with external programs. Teachers once they are fully trained, then become more comfortable using the programs that are available. Teachers didn't want to do training during the summer. Funding was helpful to get teachers trained for environmental education. Children going off-site can be facilitated by sponsors. Getting into the school system and into their curriculum is essential. Also need to work with private schools.

At state level, they have greened their own grants program. Grants depend on conservation externalities. Keystone principles- reward the right types of developments.

Best model of land conservation is Pine Barrens in NJ-- Strong local zoning, TDR, and governing body, good plan. Lots of federal funding. This model would work well in Chesapeake. State can do good things—eg, protecting land along Appalachian corridor. PA and MD doing better than VA.

bring Arlington Echo program attention – involves kids in stormwater restoration, lessons, plant on restoration site, first-hand experience in environment and cheap labor! – go home and talk to parents about it – projects that may have had local opposition now are supported because kids have contributed to it

Budget crisis biggest roadblock to the outdoor experience. Two park staff laid off (parks and rec). Annapolis has 200 acres of parkland. They have to rely on volunteers such as girl scouts. They use "Volunteer Voice", a weekly announcement on the local AM (WNAV) radio station. Weekly interview where need for volunteers is aired. This way really connects to the public. Also use Volunteer website: <http://www.volunteeranneandundel.org/>

building and maintaining trails relates to conservation so as not to erode or trap trash in creeks – through adults, newspapers, online and at REI they get volunteers – many in suburbs less knowledgeable than folks in cities – it's sad – if people don't understand how conservation happens they don't understand value – youth engaged through Americorps, SCA, Scouts – kids are lost – glimmer of hope when they participate and do something productive

Discussion Question 1

Annapolis, MD

(cont.)

Can encourage teenagers to teach younger kids. City of Annapolis interns work on green jobs programs. We need to look at this as stewardship, taking care of something that doesn't belong to us. Think about demographics; think about the opportunity to increase diversity in the environmental community. As government officials, look at multi-family housing when it comes in for approval. Encourage connections between trails, environmentally safe areas, storage for recreational equipment, environmental design. Give people ownership through small backyards.

Chain of habitat - connection between protected lands. Arlington - a bridge was built to enable people to get from Roslyn (urban) across the highway down to the park. Find the missing link to enable people to get from urban areas to parks.

Conduct a series of listening sessions with young folks. Talk to them directly. Gear does cost money – offering the equipment for free is an important concept.

Conservation fund. A VA strategy that has worked well is the easement acquisition incentive which was done through legislation. Enhanced income tax credit. Where tax credits are transferable. Gov Kaine set a goal of 400,000 acres of conservation with few state dollars for state conservation, most accomplished through conservation easement donated tax credit program. But also great federal programs for purchase of conservation easement, fed forest legacy program and also military partners.

county schools build restoration project, kids develop project. Unique way to give kids first hand experience. Invest kids in the environment. Kids go home and talk to parents, kids became advocates

Education for climate change and ecology in middle and elementary schools. More information for kids to understand what the career options are - internships like STEP and SCEP. If they don't get introduced to the field when they're young, they're less likely to pursue a job in an environmental field.

Emphasize the state tax credits (transferability of those credits). The majority of easements have come after the tax credits were enacted, mostly after they were made transferable. Conserves about 6 acres per hour in the state of VA. This way the easements don't get lost with the investment. Many new landowners don't have the income to leave easements instead of allowing development. Many of the land owners reinvest the money in the land and community if an easement is agreed on. Preservation trust fund - uses money to offset the costs of creating easements which is often the difference to get owners onboard. This pays for transactions including lawyers etc.

Encourage citizen engagement. By monitoring water quality, they become engaged. Government must value that engagement. Give the citizen credibility. Gives them a role in conservation.

Enhanced tax benefits needed. Good example happened in MD (50% of adjusted gross income) caused a bump in protection.

Discussion Question 1

Annapolis, MD

(cont.)

Environmental markets help supplement on top of federal funding, there will be credits earned by farmers and ranchers that is paid by private rather than federal. Want to hear more information if this can work?

Environmental trust - no transferable tax credit for MD like in VA - driven by federal tax deduction sparked rapid growth. We need to get state tax credits going through congress to take the next step.

Everything I learned about the outdoors was from the boy scouts. No other organization introduces this # of kids to the outdoors and encourages them to stay involved. They also own large areas that need preservation.

Fairfax county schools, elementary schools and parks. Work w/ teacher's standards for kids in different grades, have to have environmental education standards. use parks to reinforce issue. Connect park to school. Use park to educate kids. 4th grade kid bring parents out and kid shows them something

Farms, DC environmental education consortium. Forest communities, people only concerned w/ survival. Childhood obesity is real problem. Growing own food- impress on young people how important. Low cost, low carbon imprint food Expose kids to natural world, draw kids in, meet kids where they are and teach them. Teach teamwork, teach about parks Edible gardens, people sitting around not doing work, put them to work in gardens Agricultural runoff is #1source of pollution. Wants DOI and EPA to work on this

For those with funding issues, connect with your schools and universities. Ask for help with a neighborhood design center – find a landscape architect who is starting out, partner with university to help out with local parks and trails. Good source of free design skills.

From a programmatic standpoint, one of the biggest obstacles is the fact that folks do not have the knowledge and the skills to recreate appropriately. Folks don't have the income to try recreational activities to find out if they like them or not. Through "Get Outdoors Pennsylvania" folks are introduced to recreation and it's free! People can camp, hike, kayak, etc. Single parents are one targeted audience. The equipment is available to check out. Each time they come back to the park, they can check out fishing rods, kayaks, and other equipment.

From Portland Maine- helps kids from disadvantaged situations, have kids build rowboats. Does this with his own grandkids. Personal love of water environment. Takes a week to build a rowboat

Getting people engaged in the outdoors; we have to get them out – on the water & on the trails. Here in Annapolis – the "hidden gems" are the street ends. These street ends often lead to water – they offer people water access and the opportunity to put a kayak in. Need *increased parking and increased awareness (that these places exist.) [*Some areas permit only 2 hours of parking which is very restrictive.] What works is: Making the lands open to the public so they can get out on the water.

Discussion Question 1

Annapolis, MD

(cont.)

Harper's Ferry and JTHG partnership project –the middle school students (7th and 8th) never been in the park got in groups and interpret the John Brown raid for Susquecentennial to do vodcasts on what Brown did and what it meant to them – for example, a what would you do where a debate about slavery demonstrates the comundrum of the Civil War – service learning in nature and cultural environment is a fruitful opportunity to grow a new ethic in youth

Have caucus in house of rep. work closely with others. Historic preservation fund is important. Land water conservation should be funded

Have to discover what excites people. engage imagination. Some people like stories. Landscape in norchester county, Harriet Tubman traveled through there. People enjoy hearing about her story. Story present in landscape.

he covers region from ME to TX. Has encountered many local successful projects. Each time there have been a couple of people that are catalytic, a primary reason community has connected with project. Need new army of conservationists. Could be helped along by investing in future leadership – are many programs like this now (ie. National Conservation Leadership Institute) that could be supported nationally. This is not mainstream program – it gets corporate support, is attended by federal and state agencies. Could be a national model.

Heritage areas are limited and often 'silo'ed. Good examples are Battlefields, Heritage areas. Use various resources at a grass roots level. People will try to find whatever money is under the rocks.

Higher education can inspire change. There are specific classes that can spark interest to get kids involved. Actively get involvement rather than teach the problems

His organization raises matching funds to match federal and state funding to acquire battlefield lands. Was created 20 years ago by Congress. Key tools are American Battlefield Protection Program (ABPP), Farm and Ranch Land Program, and Transportation grants, which provide funding for conservation easements to help preserve lands and keep as working lands. Want to maintain viewsheds in productive agricultural lands, don't want to pay for maintenance. What works – having matching grants in order to ensure local folks have a stake in projects and are engaged in public private efforts. Recomm: keep funding for ABPP; make permanent conservation easement tax credits. Ensure that LWCF funds can be used to acquire inholdings (the issue is the lack of funding, not policy towards acquisition of inholdings). If NPS had funding to buy out partners (like CWPT) would allow partners to reinvest their funds in other projects. Ask for a mileage buffer around battlefield parks.

inspiration by natural resources but some more inspired by stories of people such as the Harriet Tubman story and they understand the natural landscape through new eyes as a strategy for resource conservation

Discussion Question 1

Annapolis, MD

(cont.)

Kids need safe places in urban and suburban environments that are nearby and easily accessible. We need places where kids can feel comfortable being in the outdoors. So we need not just the big parks, but also the small parks nearby that kids can safely explore. We also need local mentors to teach kids and to help them to be comfortable in nature.

Kids want and need hands on encounters—the chance to see it and touch it. Groups like Sierra Club, Chesapeake Bay Foundation can help by bringing hands-on specimens to classes.

Launched a program at park, getting kids more involved, develop job skills. At a High school in Calvert County, students attended an archeology class in a 560 acre park with limited staff. This class created a cell phone tour. They researched oral history, spoke with archeologist, transcribed, wrote the script, recorded it, developed marketing and signage. They developed serious skills. HS seniors created a system where visitors call a number and learn all about the archeological site. Replaces staff. Involves students. Gives them job skills, and buy-in. Very successful.

lives in Shenandoah Valley. We need an emphasis on Shenandoah part of CB watershed, CREP program gives incentive to get farmers to get interested. Often private firms supplement land trust. Federal government could look at VA examples and think of ways to leverage and expand on programs and create others.

Marketing is the key; take the parks to the people. At a number of water parks, we bring the naturalists to the staging areas in water parks so they can reach the people (kids). Then the people (kids) start coming to the nature centers and education centers – they never would have found the centers without this contact. A larger idea: create trails that pay for themselves and make money on top of that (through easements and fees) – we have a model of that. Bring in the Secretary of Transportation and look at our utility lines across the country – see if there's some way to use them for non-motorized trails; create a national program.

MD has funding (real estate transfer taxes, agricultural land conversion to communities, conversion taxes). Inclusion of GIS from DNR to create priority areas.

National Audubon Society and Audubon Society of VA have a program called Audubon at home which sends ambassadors to people's homes to convert their yards into more natural landscaping and habitat for wildlife. They also do that with schools and local governments. There isn't that much land left to acquire they feel that it is better to work with private landowners. These kind of program help children because they bring the experiences close to home.

Discussion Question 1

Annapolis, MD

(cont.)

Need additional tools to support the No Child Left Inside Act. Amendment of Elementary Education Act could provide funds. Maryland's Children in Nature plan is developed. Seeking to embed the ideas of No Child Left Inside within the Elementary Education Act to get outdoor and environmental education integrated as part of core curriculum. Small amount of money to these educational plans could open window. Consider how to leverage funds that are already being spent to connect kids to the outdoors. Try to get environmental education into the core curriculum of public schools. Doesn't always have to be reliant on transportation; it can be on-grounds garden or changing operation of school building and grounds.

Need more staff at refuges to be environmental educators rather than relying so much on volunteers—many of whom are elderly and it's difficult for them to get out. Disability focus—accessibility for children & adults and the less-able.

Need to promote jobs that connect the youth to the outdoors. USAJOBS is not easy to navigate; and many nonprofits don't have great websites. Need better advertising of internships and job opportunities in the environmental and outdoor recreational fields.

Need to promote new technology to make farming exciting to young adults. Groups need to work together, share office space, etc. It all comes down to money. Federal gov't requires a lot of action/goals, but not the money (unfunded mandates).

Need to work on National Landscape Conservation System (NLCS), codified in 2009. What's worked: gateway communities; work a lot with youth. Obst. No one has heard of NLCS. Best tool: need a Secretarial order to mandate conservation prescription for these lands, would help with management. Better partner: would like to see conservation as a priority. Would like to see NLCS raised as a priority within BLM.

New website, Service.gov, Volunteer.gov, a great way to connect with kids, teens. Need to develop an I-phone app where people can enter "Here are my coordinates, show me what to do in this park." (Already developed) comment.

Our county is on a peninsula – surrounded by water. We have a ChesPax(?) program. All students, grades 1-7 spend a day in the county on their "environment day". 6th grade concentrates on archeology, different topics for each grade. Important that it's required by the county. Meets Maryland service learning, which means county doesn't pay for it. They plant trees, native gardens, visit the landfill. Landfill visit consists of tours. Younger grades are given donated (from local stores) brown grocery bags. Students draw pictures, write conservation messages, advocate recycling. Then grocery stores hands out bags. Calvert County.

Our organization used RTCA to help with long-range facilitation planning. That program has helped hundreds of communities around the country.

Outdoor education centers, are very successful where schools are required by state law to have students attend one day each year. Encourage grassroots efforts in outdoor education. Counties don't have money for this education. 400-800 attendees have been involved in outdoor education with support from parents. If parent demand these activities, counties will provide.

Discussion Question 1

Annapolis, MD

(cont.)

PA Agency owns core of mountain, but foothills are fruit belt and they are struggling now to make it. Create an attraction to draw tourists from Gettysburg and market with agricultural growers and bridge gap. Landscape of apple growers is so tied to landscape in general. Agency is funding a buy local movement. CSAs popping up. Integrating working landscapes.

Parks and people in dc, recently got grant. Does work in inner city area, combat 'fear of land', and fatalism-- memory of elders is powerful. In inner city, there are elders who remember lands, kids want to connect, works in inner city. Kids sell produce, replace drug market. Simple things can be done, show kids that they can lead the way. Tiniest reasons will keep kids away. Kids don't know about what is out there. They need to be enthralled with what is out there. Bring back the magic of the outdoors, government can help.

Partnerships and LWCF funds to protect lands & paired up with the middle school next to a historic battlefield. The principal supports the project; it has become part of the curriculum (history, geography, physical education) to learn about the Appalachian trail. They made a pledge to hike a certain distance of the trail while the teachers wrote specific activities based on locations. Used John Smiths historic raid to go through the historic record and considered the actual location to create video podcasts to publish the story of John Smith. Suggestion: Include the culture as well as the natural resource to engage people.

Pennsylvania Wilds has a youth outreach concept/initiative which is a marriage of outdoors & technology. An example of this is geo-caching. Kids like to do things that involve technology & outdoors. A good strategy is to lure them in with technology, such as social networking marketing and then lead them to the outdoors. An iPhone app, like one currently in existence that uses GPS to track trails, can be very helpful.

People should feel like they are involved. Many people haven't heard of DOI, online idea jam, facebook page. People should know. More advertising is needed. Likes that Sec Salazar was out here at this listening session. Make people aware so that they can enjoy. Helps get people to great outdoors

Prepare model legislation relating to the problem. Urban planners want everything to be concrete. Worried that no conservation. Model zoning code related to conservation of resources. Same way transportation built highway Model curriculum for colleges that teach urban planning. Have rural planning and suburban planning. Model program that says incorporate these things in program. Master program for landscape master--green infrastructure.

Preservation of land. Their challenge is historic structures on historic lands. They are mothballed, or run as historic houses, due to lack of funding. Could do so much more with funding, but it's not there. Would be excellent sites for social studies and history curriculum. Challenge is that social studies program isn't supported in PG county. 27,000 acres have been preserved.

Private property adjacent to public land with no public access to public land. Someone needs to cover my insurance for people coming through my land to get to the public areas. If I am not around to grant access, then I'm liable. ANSWER: You are protected by Recreational Liability Act – most states protect landowners who allow public access.

Discussion Question 1

Annapolis, MD

(cont.)

Provide public access via private lands – explore what’s going in Santa Barbara and Montecito – they are creating biking trails across private lands.

resident program children from disadvantaged schools build rowboats connects kids – he grew up in ME – building boats part of own experience – endorse boats – built rowboat in a week with his grandson

Restore habitat on school grounds. He is involved with program that introduces kids to nature. operates 2 -3 states, needs more funding, introduce kids to importance of conservation. Meeting between Sec. Salazar and Duncan, that’s something that they can consider

RTCA recommended to the YMCA that they should partner with the American Hiking Association. Eleven million members of the Hiking Association are under 17 years of age – what an ideal way to reach that group!

schoolyard habitats program involves kids in every step of process – habitat, nature restoration operates in only a few states and could use more funding to introduce kids to restoration and conservation, environment – Sec Duncan and Salazar could talk about this at their meeting

Service learning- partnership with NPS and middle school to get kids out to the park. Kids lived in area, but never visit parks. Got kids to interpret the trail, created a podcast. Kids discussed what the park meant to them in a contemporary setting. Look at issues like slavery and civil war. NPS uses podcasts for interpretation for youth.

Special places – treasured landscapes – connect people to outdoors, make a story, people relate to a place and make them expand.

State forests are looking at ways to keep forests in forests, new markets have potential to do that, other success story that we have seen is federally assisted state programs through state private forestry, connect resource professionals with land owners to provide assistance. Forest stewardship program has been helpful. Suggests that government leverages limited resources and connect resource professionals to landowners through USDA.

Supports full funding for LWCF. Likes Go Colorado program as a model. Need to bring private capital to initiative. Need to activate Chesapeake Treasured Landscape Initiative federal leadership committee

Takes teachers from Title 1 schools who go to national parks during busy season, providing volunteer staff. Take this environment back to the classroom. Stats: 84 teacher rangers resulting in contact with 230,000 people, taught 24,000 students. Intermountain region unable to hire as many as they needed.

Tap into your private sector, develop private funds. We host 2 fundraisers, one for corporate sponsors, other for regular members. Try getting together over cocktails. Conserved over 13M acres using affluent sponsors. Look for other companies to sponsor.

Discussion Question 1

Annapolis, MD

(cont.)

Target multiple state programs on a single land mass.

Thank you to those who run RTCA and Trust Funds. There is not a magic universal wrench that works for everything. We need specialized tools. \$8 million per year is provided for services via boat registration fees. RTP is a smaller program – there are opportunities for growth – the focus is on non-highway recreational activities, including snowmobiling, etc. Trail maintenance is the key to success. Funding ongoing maintenance is terribly important. I'd like to raise an opportunity. Currently in our country we spend \$8,000 on health care per person per year. This is a lifestyle-induced situation. People eat poorly, smoke, use alcohol and drugs, etc. If you took 70% of the population times \$8,000 – we could use that funding to curtail our health expenses if we alter lifestyles. The medical community is catching on to this...a physician now may prescribe 10,000 steps per day (on trails) to a patient. The physicians could offer parking passes for their patients to park and walk! It is a tremendous opportunity. A special Town Hall on health and the great outdoors is in the planning stages; national groups are asking for this Town Hall to occur.

The ability to work with land trusts around the state as agents dealing with local farmers as opposed to the agencies who don't know them as well. Those groups can be reimbursed for the costs to develop the relationships are key.

Virginia has also enacted several transfer taxes specifically in the Piedmont area. We have to meet people where they are and talk about what concerns them in the Chesapeake watershed. Connect urban and rural populations -- where do people buy local food -- send out information to locals on where you can buy local food to support your local agriculture. It helps urban citizens understand the relationship they should have with the rural agricultural region.

was copres of DC environmental consortium with schoolyard gardens – conservation and environmental concerns not relevant to those concerned with survival – in poor urban communities problem with food access – school gardens impress on people natural environment with low carbon footprint food – Will Allen in Ohio says this also creates jobs – an incredible template for teaching about the environment, watershed if you meet them where they are – nutrition piece and teamwork, hard work – edible and community gardens productive especially on public lands unused that could change the food system, help with runoff – changing the way we eat can change the way we practice and live and demand – need more emphasis from EPA in addition to USDA

We have been working on program funded by USDA called BMP challenge, but farmers need assurance if they do implement BMPs. As we go forward and look at climate change, how can we look at nutrient trading programs down the road, to give farmers incentive to trade off nutrient credits?

Discussion Question 1

Annapolis, MD

(cont.)

We have to make the connection that public access and our parks are important for education. Kids aren't getting outside because the parents aren't taking them. We need more opportunities for people - kids especially - to get out. This is all tied to environmental sustainability. We need to invest in this – public access is so important – we should tie it to education. We need to get the schools (students) out a little more. Standards of Learning in Virginia have restricted field trip numbers – this is something that could be easily changed with funding.

We hosted an Earth Day event with 650 kids in attendance. We could have used more. DC testing precluded participation. The calendar needs to be looked at, so that events can be held. Not easy to find children's activities through the National Park Service. Need to add special section on the website.

We need sidewalk access to urban parks. Complete the "streets policy." Government space is the street system itself – promote more trees and landscaping.

We need to be more aware of other resources that may help. In 2011 \$45 million budget (Land Water Conservation Fund?) but other programs that are much larger and we need to target those. For example, the Conservation reserve program- \$1.8 billion dollars, the Wetland Reserve Program - \$500 million, Farmland Protection Program, etc.

We need to consider private access incentives. One example: someone has private land they're willing to put into an easement; add an incentive to encourage them to include public access within the easement. Offer "another carrot" to gain increased water access for the public.

Works with Americorps, got him involved in many programs. Junior ranger program, get kids out to park and teach them. Sprouts 2-5 yr olds, start young, plant acorns. Must connect on playful level. Advertise to parents on web (follow up question on how they connect to 2-5 yr olds) build something out of sheets, kids excited no matter what Teen rangers, trail maintenance, show kids the wildlife. Civic justice corps – bring disadvantaged youth into park, amazing for kids, parents learn from kids. Kids learn trades
Bay grass planting- kids involved, can see the grass grow. Gunpowder falls state falls

Youth are a good resource. Think about how youth can teach adults. Youth-led organizations, such as the Statewide Youth Board on Obesity Prevention Program can be a model. Facilitators take youth who are already interested in the outdoors and they encourage other youth to get involved. It resonates better than having adults talk down to youth.

The RTCA program is critical to our water trails program in Virginia. Outreach in the communities is critical. The other program that's essential is the Land and Water Conservation Fund (LWCF) – the funding allows us to fund our parks and to fund water access. Through VA Game and Inland Fisheries we can only fund motor boat access – LWCF allows us to fund non-motorized boat access! The program is so important to all of our parks, and to our population.

Discussion Question 1

Annapolis, MD

(cont.)

The state wildlife action plans has been helpful. What it has done is state agency and all partners and develop collaborative plan that helps endangered species. Funding for program has been successful, but not sufficient to meet goals. Half are being revised to include climate change. This is helpful for states to use to meet conservation goals. Need to use these plans to look regionally but there is not capacity in states to look at regional scale.

The two things we need to focus on are: awareness and benefits. We fail at the national/state/local level to articulate why it's important to protect a place or to invest in a certain activity. We fail to articulate our message that both physical and mental health are tied to outdoor activities. The key ingredients are: awareness overall and awareness of the public benefits.

These folks (above) are doing a great job of getting the word out. Everywhere I go (including here), I hear about the "Save the Mattawoman Creek" campaign.

They have 1500 members that hike, canoe, bike, Stewardship is key. Partnering is what helps them. Partnerships supply labor. One example, they partner with federal government on National Public Lands Day. On Assateague, members spend hours per day, cleaning up trails, providing free labor. The park provides free campsites. Gives people ownership of that park since they worked on it. One weekend in National parks – free camping – work.

To reach youth, protect land that borders youth clubs, rec centers, etc. A portion of funding should go to youth programs.

Top down support in education for these environmental programs. Sponsor programs where high schools student teach middle school students. Very meaningful experience for high school students. They have a good relationship with USFWS to teach outdoor education classes. Plan and sponsor urban outdoor camping. Develop community partnerships with the local government, museums, Make it fun. Too much do as I say not as I do. Kids see through that. We must walk the talk. Kids are not dumb.

Trail maintenance, don't have runoff into creeks, Advertise in outdoor retail stores, people in suburbs sometimes more ignorant of nature than those in city Thinks sad that people don't appreciate physical labor that built this country Likes Americorps, but thinks that kids in general are lost because the kids don't know what to do, he wants kids to start working with land. Wants kids to hike the AT

VA the system of natural heritage for natural area preserves - strategy - talk about GIS like you love it. GIS is great because it is strategic for targeting areas. Funding from LWCF can create state organizations to find the valuable land and habitat. It's important to get the leaders to understand the necessity of GIS.

Discussion Question 1

Annapolis, MD

(cont.)

Virginia does a great job developing easements on private land. However, the easements do not currently include public access to the lands. A little more credit (transferable tax credit) should be provided to the landowners if there is more public benefit included in the easement. Perpetual easements are given in Maryland and Virginia to figure out where the land will go/how it will be used. We should put a clause in the easements stating that “the land may be a park in 50 years”, or something similar.

Discussion Question 1

Asheville, NC

More national parks are esp. important for protection- expand them

Work with rivers In Middle GA- many people who live there have never experienced the river- amazed by the experience- getting them there is a big challenge- need more funding for awareness of their own backyard

Great to have multiple groups working together to actively engage on a local level. Sustainable community initiative needs traction with moving forward.

Civil War/Benton Battlefields(near Raleigh success- continue to use the farmland as it was at time of battle, still preserved and yet farmed with collaborative preservation funds, in original condition, contributes to preservation/historic value and real estate agreements with multiple land owners

continue same theme, NC state historic sites, potent force in parks- maintain them continuously, protect the land use.

Hickory Nut Gap farm- wife and sister- 50 children/horses camp, made possible by Conservation Easements. Thankful that this county most fortunate to have funding and official support. (Farm and Ranchland protection program) Makes higher quality farmland, keeping it out of development

Muddy Sneaker program that works to the future. Instilling values into children. Contract with NC elementary schools, 14 instructors, to bring children into the woods to teach school lessons. Incorporate the environment into their lessons. It works.

Reaching 8th graders is too late. Need to get to kids at an earlier age.

Easements really do work. Purchasing a wetland to use it as a central feature and the subdivision will face the wetland. The wetland will be used as a teaching area for the elementary schools.

per his work - protection of entire corridor Hickory Gap—2-land scenic road designation keep it out of development and no more billboards.

NC trust fund provides \$\$ for recreation facilities- also emphasis on planning, what communities need- provide technical assistance- process is as important as the \$\$- master plans help in build strong projects- communities initiate the request for help from NCSU-

Rocky Mount NC-got the park system with Land and Water Conservation Fund \$\$-have 40 parks now- would not have them without LWCF

Interested in Lewis and Clark trail- referenced the Stephen Ambrose book about the trail- people love the trail to death- we need to make people aware of what we have- need easy mode to educate, using vehicles such as novels, public broadcasting stations, etc

Discussion Question 1

Asheville, NC

(cont.)

Agree- collaborating with USFS as well as a community revitalization group-example: Jackrabbit mt. bike trails (Tusquitee RD, Nantahala NF) – collaboration on grant writing is esp. important

Nature Conservancy-working—funding for outdoor spaces was good- but not now being funding at level LWCF- \$900 mill a year by revenues from off-shore oil drilling but did not get to them at the level authorized for.

Important to acknowledge volunteer groups. Don't lose sight of the fact that working with volunteers also requires stewardship programs to and funding to organize volunteers.

Public Service Announcements are very important

Federal lands bring a good opportunity for students to learn in a multi-curricular/multidisciplinary activity- many disciplines in one place- such environments have a strong/lasting impact

Want people at higher levels to foster more trails and greenways- needs to come from the top down- need leadership and funding to generate the interest

Focus on gateways- hiking and fishing and biking- need to get kids away from their video games- incorporate recreation and conservation into videogames and the other “environments” kids live in

National Parks and National Forests work. Public lands are an hundred year experiment. Did it work – yes it does. We are making final choices and we need to think comprehensively.

USGS is very important for managing river water gauging- many gauges are threatened due to lack of funding

Successes of land acquisition at a larger scale. Rocky Fork tract- Demonstrates what can be accomplished when you have collaborative working groups. Make connection back to communities between quality of life and large public lands access.

The National Geographic Magazine, exposure at a young age from many sources, makes the connection for your lifetime.

The partnership between ATC and volunteers works. It is a good model for volunteer activities. Provides a good interaction with federal agencies.

Land acquisition is key. Getting community partners involved that recognize the value of having ATC in the community. Mutual benefit of putting relatively obscure communities in the visibility of recreationists.

Discussion Question 1

Asheville, NC

(cont.)

Focus on access to recreation- example: Salida CO- good development of biking and hiking- esp greenways- enjoy walking in the evening

Recreation interest- Swain Co 86% Fed owned- had made county a welfare state- and can't take care of what it has(campgrds. Parks etc) so why are we expanding land ownership. Gov't has too much lands-at what pt are we free, privately owned property rights. Never be able to own property.

Accessibility is what keeps us out of doors every day. Sustainable environments

Encouraged that administration has decided to include bicycles and sidewalks in transportation planning. Encouraged that administration has focused on cross collaboration between departments. River redevelopment project – ex. River District Project.

National Parks, State park infrastructure provide great opportunities to get out. Need to keep that infrastructure and keep it well funded. Need to maintain these.

Work with families with young children (birth to 5 yrs). Advocate the concept of previous comment down to children even younger (3 years old). Work with early childcare community to get teachers trained.

Availability and accessibility of opportunities. Transportation means, the closer we can get opportunities to people, especially children, the more likely people will take advantage.

Value of USFS to recreation is very high- the NVUM results report high satisfaction with USFS recreation- has not had the status with the agency mission it should

what seems to work well and historically has worked well is to marry local efforts with federal dollars and/or federal expertise, such as RTCA; Parks in Classrooms is a Blue Ridge Parkway program that reaches 25000 students throughout region using multi faceted partnership.

Need for local recreation groups to introduce people to resources- 5000 river and watershed organizations s across the country- provide THEM with the tools they need to address local policy issues and more effectively working with federal agencies

Build it and the will come- am an old guy in a young sport- have had to learn to bring resources TO people- use current technology- email is out of date-communication to the youth has to change- facebook, text, twitter- true of communities and pvt sector as well

Devel opment of waterways is growing a lot- a lot of local interest-bringing families and children in a safe environment-esp. need to locate them in or near towns- in OK City a park was been developed for water recreation- teaching kids about rivers and river safety

Discussion Question 1

Asheville, NC

(cont.)

Volunteer equestrians that work with Forest Service and State Parks. Appreciates the opportunity to contribute to the parks and forest as a volunteer. Volunteer groups have been very effective at keeping trail

Agency has had a positive move towards ecosystem management. Bringing prescribed fire to the landscape (through Wyden amendment- providing ability to manage across public/private lands.

Transition towards getting people on the ground. Also good to see new faces in the agencies that are bringing forward new ideas.

Youth programs in sportsman area – areas of interest to youth. Clubs such as 4H and FFA are excellent, but could be moved to include city areas. However, Rangers need additional training to know the law inside and out.

We've gotten a lot better as a result of Clean Water Act. Lack of willpower to continue pollution regulations. Water is our most important recreation resource. And they need to meet the goals of the Clean Water Act

Federal Historic preservation fund works in funneling funds to a local level to preserve historic places.

Blue Ridge National Heritage area. Work with counties on specific projects to assist in continuation o attract visitors and increase quality of life. Partnerships to provide education activities. Support conservation groups to protect land and scenic views. Visitors and locals say that scenic views are instrumental – should be careful not to alter those views by over development.

Farm Bill has assistance decreasing for private though.

Get schools involved- eg high school in Maine- "Mountain Day"- also have days to pickup trash in communities- use schools for delivery of outdoor learning

Friends of National Parks organizations are very effective in engaging the community in the Parks . They are active in community outreach and education, park clean up, and engaging young people. The Gettysburg model.

Loretta C. Woods Park in honor of Lorretta Woods. One million dollar park in Greenville. One person's influence with local politicians, etc.

SC – local land trust difficulty getting \$, except if fed tax designation- Wetlands Restoration fund does come back t help benefits. Ie, 135 acres mitigation process paid for it.

Discussion Question 1

Asheville, NC

(cont.)

NC legislators have provided \$1.5 million over the last few years for land purchases. NC does not have as much protected land as western states. Concern about increase in NC population that will put additional pressure on our existing resources. What NC does well is making the most of the dollars available – Dept of Defense is an excellent partner – Ft. Bragg and Camp LeJeune are excellent examples. DOD has lots of flexibility. DOD allows federal dollars to be spent for conservation on private lands. Stretches the dollars, and also provides protection for threatened/endangered species. Ft. Bragg recognized at the White House a few years ago for conservation efforts.

NC has harnessed private philanthropic opportunities to excellent ends. State has good partnerships with private individuals for 50/50 matches for land protection.

(riverlink) Strategic plan-need a landtrust check - repairing areas under 100 acres—gotten 400 acres given to them... restoration – easement might be 6 acres, who is monitoring it, they are filling a gap

Good people working for the federal gov't. The time that gov't employees contribute to educational events. The importance of having gov't employees having permanence in a local area.

Surveys of historic properties to help the public make informed decisions on development. Historic surveys are used to work with developers, lobby elected officials, to produce what the community wants to see.

Provision of services should be local. Facilities need to be provided locally. Need to make things happen where they are accessible to the people. In this economic environment we have the opportunity to buy land

Give people the opportunity to improve their local communities. Investment of federal dollars in local communities. Stateside LWCF

Run extended trips (academic endeavors) for college and university age students. For example, river trips create chance to get out and study river conservation while receiving literature credits. Extended experiences have a large effect - Challenge is access issues. Waterways rarely have places to spend the night. Must pull the organizations, state, local and national parks together to create public access and camping locations.

Public school children – teaching children outdoors. This a program called “muddy sneakers”. Classroom work is conducted outside. Course topics such as math, social science, geography, etc. Very good feedback from the students and teachers. Program is not funded by the state generally. Funding comes from donations, foundations, etc. School system pays for the transportation.

Hearing from the population what doesn't work for them. Segmented areas need education programs to have access to safe environment, i.e. ASAP.

Discussion Question 1

Asheville, NC

(cont.)

appreciates social aspects of hiking and hiking clubs; joining a hiking club is important – provides safe environment and exposure/awareness to recreation areas

University of TN Professor. Programs really work, we just need to get them going

Our federal lands can take advantage of new technologies. We're missing a big population by not embracing new technologies to make info available. What would you suggest as a top priority in technology?

Restoration on existing public lands 1) invasive plant species removal working with partnerships (need to remove red tape) 2) Pisgah and Nantahala NF – budget focus is on timber with restoration as an after-thought – need to prioritize restoration; surveys and legal fees have been paid for by the county – fed money would help.

Law and regulations work well – agencies should not bend to industry – need to resolve "Roadless Area" rules

Kids need to learn what things are, and see that there are friends out there, not strangers – virtual fieldtrips are really good and she hopes teachers are using them

Trails to Every Classroom – managed by Appalachian Trail Office. Trains teachers to take kids out to Appalachian Trail Communities – trains teachers to use the resources they have nearby. Great program

building broader coalitions (state and local levels); planning that engages people with diverse interests broadens conservations base. Non-traditional customers (eg: low income communities of color): conservation planning effort that engages communities; helps create and develop different kinds of priorities.

U-Par program hasn't been funded since 2001 – pay attention to emerging population of urban youth; Carolina Thread Trail is a new initiative; there are few federal funding pots to provide programmatic funding

leads outdoor learning expeditions for 5th graders – get kids outside – get kids familiar with outdoor equipment (compass, etc.) – become more familiar with learning in the outdoors – 23% increase in EOG test scores, better school attendance, better physical fitness – fosters confidence in children

National Trails like Trail of Tears National Historic Trail provide opportunities for collaboration to implement interpretation; Main Street Programs that link Blue Ridge Parkway and local communities

Botanist, works with children and adults, teaches heritage of SE, uses flora, thinks we need to teach names of organisms so that children and adults can connect with nature, all ages could benefit, as young as possible

Discussion Question 1

Asheville, NC

(cont.)

Ethno-botanist. Developing lesson plans.

Summer daycamp, amazing how many kids have not been to BRP or any national forests – partnered with Kids in Parks, to expose kids to the great outdoors – gives the kids something to latch onto – identifying trees, plants, bugs, etc.

Originally from educational arena, but in corporate area. We sit all day in school, and we continue to sit all day in the corporate world. How do we train teachers? Changing the school system to an extrinsic system to an intrinsic system is important – being outdoors will put the soul back in education.

Friends groups assist in raising funds. Teacher-Ranger-Teacher – they take the knowledge back to the classrooms.

federal agencies need to build stronger relationships with private entities

Forest Stewardship and Wildlife Habitat Improvement program, Farm Bill, Federal programs are underfunding but they are such a big help to private landowners. Forest Development program for Regen/Stand Impr, replanting- Feds could Enhance that.

protect, restore habitat,-- Farm Bill, TU Admin cost share ie fencing to leverage solutions(cattle out of streams etc)- Collaboration between all is key- National Fish Cons Habitat- joint partnerships instrumental in pristine streams/cold - Conservation Easement Tax incentives- Unknown status of the tax incentives is a huge concern- right now it's on renewal basis year to year –Federal tax incentive for donation of easement.

North Carolina State Parks is developing a pilot program of “nature immersion”, helps overcome fear of the unknowns of outside; develops appreciation and conservation ethic; learning lab at focus parks; Youth internship programs and mentoring programs; engages people who are afraid of the outdoors

Connecting communities with resources; for example, the “Snot otter” festival (a species of hellbender) where people come for bbq and bluegrass and then get into the river! Make sure interpretation is included and encourages connection with community

resources from all areas for climbing routes, boulder cliffs, etc.

bring environmental education into public schools; recommendation is specific funding be available to communities that take environmental education to public school system – because programs like this are running on a shoestring. Despite environment in WNC, many locals out of touch; must plant seeds in young people; funding is needed to keep programs like Muddy Sneakers in schools; Louvs book proves how early exposure is so important; match environmental ed to state mandated curriculum

Discussion Question 1

Asheville, NC

(cont.)

Private partnerships with state entities. Private groups have different revenue streams that are effective

Develop public and private partnerships with local governments which facilitate land easements, construction of parks. Getting the children involved – environmental education and site visits to colonial sites, etc. Virginia creeper trail is an old rail trail – hiking, biking.

In many ways, technology has connected with the great outdoors –for example earth caching or geo-caching.

New state park is developing based on LWCF and other conservation groups to expand park.

Using an historic preservation fund to purchase land and sites works. Developing historic preservation easements. The State Historic Preservation Office receives funding which is used for these easements.

Natural Register of Historical Places is part of the National Park Service as well.

Church groups were a wonderful opportunity for camping, outside activities.

Americorps' Project Conserve is a great way to connect conservation entities. 22 enrollees and more than a dozen organizations involved this year. Very successful.

Great successes with cooperative management system of public/private partnerships that form Appalachian Trail Conservancy. "Trails to Every Classroom" has been transferred to other national historic and scenic trails; train the trainer for teachers; citizen science is a great tool to engage communities about what's in their back yards – also serves as a laboratory for climate change.

Connecting lands and communities: a local four- county planning process outreaches to provide green infrastructure, etc.

Lived and worked in camps for 26 years – camps are becoming more suburbanized, but close to large populations of students – provide outdoor environmental education programs in a residential center – teach kids an appreciation and love for outdoors – Good to have national parks near urban areas to get kids outside – 14,000 kids per year go through the program

Youth Conservation Corps is great. Huge impact on kids lives.

Discussion Question 1

Asheville, NC

(cont.)

Youth Learning Institute (Clemson) claim to impact 100,000 youth each year. Lots of organizations working with youth. Opportunity – get some of these groups sitting around the same table, one organization may have fundraising arm, and another has the curriculum – mega opportunity. Reduce duplication, and don't worry about who gets credit as long as common goals are met.

Increase trail crews - they work in partnership to maintain and establish trails; very helpful when park personnel is lacking. Also a chance for people to contribute to their community. Incorporating the university to accommodate students to come to integrate instructors to share with interested students with 4H. (inter-city kids). Utilize park service camp facilities. Website is www.thesca.org. Click Serve (upper left), select Conservation Corps and select the crew for more information, i.e. PISGAH Crew.

FDA comment period open for 2010 dietary guidelines. They are proposing that we reinstitute recess, physical education, home economics into curriculum. We need to get these things back into curriculum for number of reasons including childhood obesity.

Team River Runner – disabled veterans. Suffering from too much success. Very integrated – African Americans very interested. Great program – doesn't cost much – Warren Wilson College is donating pool, staff, training. VA Hospital

Conservation very important- on specified days, the store donates 20% of sales to conservation

“Trout Towns” program; don't need license to fish in trout streams in select towns in Western NC; encourages communities to make sure their trout streams are in great shape; tourism and clean water innovation within city limits

NC is a model with trust funds leveraging

Fortunate to have a land base protected by previous generations; lots of existing land trusts; historically lots of resources to spend on conservation; have a natural heritage program in NC; link the state's natural heritage areas

Opportunities lacking for children, especially “city-slickers” and younger generations - needs to go through and be supported by the Community Centers. Centers need to take a step further and go door to door and develop methods of different outreaches that are effective. Sale the idea of outdoors and the ideas of conservation and preservation. Mix technology with the ideas behind America's Great Outdoors.

emphasis needs to be on youngest children and at risk groups; need more programs that support that.

Discussion Question 1

Asheville, NC

(cont.)

Focus on how to involve youth from urban lands. Need to repeat messages to children. Youth programs work but they need to be repeated through time, from a very young age until their through high school.

Kids fishing day a great thing-need similar days for mountain biking, hiking- referred to the recent Kids Fishing Day on the Uwharrie NF-- lots of kids

programs have provided access and experience wit areas we are tying to protect- in college outdoors instructor—took a girl camping that saw milky way for first time and camping, Ever. Chances to experience help with future appreciation.

value ecosystem services in general are important

In the 1920's, several sites were at risk. Governor Byrd contacted private citizens to build the Skyline Drive and Blue Ridge Parkway.

community based science – monitoring project in Little Tennessee Watershed has created a generation of river advocates; model of citizen science; projects needs to be funded in perpetuity. Little Tennessee Watershed – Jackson, Haywood, Graham counties

Local workshops and initiatives to help people determine how they want their future to look; one community did a model charette, lots of community diversity

responsible for wildlife management and to some extent education; one thing that's working in their agency are: Environmental Education Centers – comparable to other programs bringing the classroom into the woods ; what works – consider the local perspective. Each locality has its own uniqueness and that needs to be part of the plan. Also, in regards to Sports Fish & Wildlife Restoration Act is working. Tax is collected from industry and based on number of licensed hunters/fisherman – user pay/but everyone benefits.

NC has tax credit program for conservation easements. Program has been very successful. Would be great to be a national model. Also works for Clean Water Mgmt Trust Fund – when there's support from govt; local landowners are very willing to come into conservation easement if there's some help with funding. Can't say give me the rights on your land, and give me the money. #2 – greater growth of local greenway systems; encourage more work on greenways; #3 – Watersheds – demand exceeds supply though and creates a local liability with an increased pressure to sell non producing land – in NC program to put watersheds in conservation easement for public access/recreation areas.

add to Damon's national level- I work at state/local level- Good working arrangmts with FS and NPS- Marisue Hilliard and Steve have discussion have helped them too be more effective, ie, Clean Water Act, LCWF, projects getting done across WNC

Discussion Question 1

Asheville, NC

(cont.)

Public/private groups work well; ATC is a good example of what works well; trails to every classroom and parks in every classroom are great programs; need to connect people to what is in their backyard.

LWCF funding used commonly, but thin as of late. Partnerships and collaborative efforts working well – needs to be coordinated better. Nonprofit can intervene in land sales – broker sale. Mountains-to-Sea Trail was done this way.

have ongoing dialogue with partners and local communities – dialogue has become part of nature

Volunteerism important – should be taught and learned – some school systems require seniors to have a portfolio that includes so many hours of volunteerism – should be taught in the classroom at an early age (any type of volunteerism) – people are going to have to step up to put ‘sweat equity’

have a new tax program in NC passed in 2008 that gives landowners a tax break

Farm land – NRCS could provide more support in acquisition costs; volunteer agriculture program – 3/4s of counties have these; get federal agencies cooperating – create advisory council for agricultural land conservation; community gardening /local foods

NC’s comprehensive wildlife action plan to improve wildlife species in NC; citizen groups can partner with wildlife commission to help improve these projects; a great process to develop plans included biologists from all state’s agencies; there is a great group of professionals in the state; Passing a comprehensive carbon bill that reduces carbon and fines polluters would help fund NC’s wildlife action plan; current plan is adapted to climate change: NC’s plan is a model; NC’s wildlife federations are “bringing boots to the field”; this is a habitat model – easy to interpret; habitats that species need to survive are identified

Partnerships with federal agencies and partners/volunteers/user groups- forming coalitions with other user groups- esp. hikers, equestrians and mountain bikers working together—GA Mountain Trail is a good example- open to all three user groups- partnerships are very powerful in trail maintenance, fundraising, etc

DFR- State level working well in Urban and Comm Grant program with USFS-establis urban forestry and education, site specific programs. Inc Tree City USA, Tree Line(util) and Campus Tree programs. Lots of greenways and planting initiatives. Several non-profits help- Keep America Beautiful programs. ACT also.(neighbor-woods)

Local works. Easements and trails, local governments, local land owners have a high degree of trust with the local community.

Discussion Question 1

Asheville, NC

(cont.)

Fully fund the land and water conservation fund. Funds help to establish parks and trail, provides protection, benefit on private lands such as green ways. Annexation not allowed without putting in a new park. Parks and walking trails, nature trails, within walking distance from homes and easily accessible to everyone.

Worked as Youth Conservation Corps, Student Conservation Association – those are great programs, better than public education to help kids get into

State-wide Trails projects (theme trails) – NC Equine Trail – maps statewide equine trails; also NC Daniel Boone Trails in piedmont counties and eastern counties; resources programs like Friends of Mountain History); themed exhibit projects with museums and historic sites travel across the state (like “Civil War 150”); develops local participation with Chambers of Commerce, historic sites, Departments of Natural Resources, Blue Ridge Natural Heritage Areas; distributes newsletters

Working- Clean Water Trust Fund-brings together a lot of folks, and able to leverage the federal \$, LWCF, Forest legacies0 as someone who works all over the Southeast, NC seems to be working the Best. (FL- Defunded, SC-not much, GA-no funding) Synergy between all is good.

Educational tours and activities, etc. Advertise for it. Get the locals excited about. Eco tourism!

Money follows programs; mandates create programs – i.e. incorporating environmental ed must be mandated for money to be available.

Buncombe county advisory board is focal point of conservancy groups; can work across counties; cross-section of public and agencies; Federal and states could reward local jurisdictions with money to fund land conservancy programs

NTrust Historic Preservation – when people come for eco tourism it’s really heritage tourism – they may not want an outdoor recreation but access to local/authentic experiences. Historic/Culture orgs and Natural Resource orgs need to work better together. Historic/cultural resources offer a diversity of experiences in travel

talking about rivers and poor counties... how do people come (tourism) and how do you sustain tourism while highlighting and conserving the natural outdoors while providing recreations

Discussion Question 1

Asheville, NC

(cont.)

Land trust is working with an education program started in 1980s through the National Geographic Society. This model program sent \$\$ to universities around the country for universities to teach public school teachers about geography. Professors taught 'master teachers' the content. Then the teachers returned to their schools and taught others. Model has been going on for 22 years. Funded through endowments from National Geographic. The program is closely tied to environment education and all the curriculum is tied to state standards. The program creates many partnerships. She has worked with this program in AL. Students get not only classroom education, but they go outdoors as well. National Geographic Alliance is name of the program.

Alliance for Planet Earth at his college was an effective way to reach students. Put up an info table in high traffic pedestrian areas. Way for youth to engage other youth to recruit people for the club, Alliance for Planet Earth.

It works when people stay local. Biomimicry. Keeping things grassroots and be able to share ideas locally.

Adequate funding for LWCF; end KV funding system to increase amount of stewardship projects – keep money local; carbon accounting/offsets are important

Watauga Parks and Recreation Authority has sponsored a newly formed Tourism Development Authority pushing for more outdoor recreation opportunities; very fortunate to have tourism-based community; state and federal parks cutting staff but more people are coming to local, state and national parks.

Blue Ridge National Heritage Area has been very effective in Western NC. Every community was asked what they saw as important in their community worthy of preservation, both natural and cultural. Heritage Area needs continued funding.

New developments need to include walkable space or outdoor space. HUD needs to be part of the picture. Curbside nature is the way to go. In Heywood County every 4th grader spends at least one day in an outdoor education program. Need to have a better system to get every child outdoors.

NC takes this seriously and has added large amounts of land to public ownership, even during down economic times (Chimney Rock and Grandfather Mtn State Parks). Concerned about viewscapes along the BLRI and that state and land trusts need to work together.

what is working in my group is we're taking care of trails that haven't been touch since 1970s. Will be working on these trails for several months. The question is how to sustain the work and funding. Excellent experience for college student/early graduates and eager work force – people come into SCA who haven't even pitched a tent until

SCA is making trails accessible. See more and more folks on trails and it works well.

Discussion Question 1

Asheville, NC

(cont.)

2 programs that work with child care facilities. One for 3-5 yr olds called Preventing Obesity by Design, via Natural Learning Initiative (Blue Cross Blue Shield foundation funding). Outdoor Learning Environment is the other program that works with established child care facilities. Teaches them that 'bugs' are ok, what is ok to touch. Encourages parents to take the children into nature, into parks. We have a long way to go because there are so many children who need this.

engage celebrity (athletes, actors, actresses, etc) encouragement. Use local celebrities to promote.

all privately funded –4H kids and others – teaching wildlife habitat mgmt, forestry mgmt, disabled kids outdoor programs

Tie USDI into HUD design for developments in cities. Sustainable Communities Initiative is a federal initiative that USDI needs to be a part of.

greenways are what's working; offer intergenerational experiences; closer than other public lands and trails; trails and greenways in urban environments is very beneficial

Summer college program where students work on science-based projects. Connect students with local resource specialists/managers. Provides students with the opportunity to see that career and also have that experience in the outdoors. Provide young people with the opportunity. Training outdoor educators is also an important component. Summer camps has been one successful component.

Best ways to connect to the outdoors is through school programs. Inclined families already participate. Families without, especially under resources, minorities, and not inclined families have hard time making conversion. School programs introduce the resources, which trickles to the families. Problem – environmental education is always marginalized as an add-on to the curriculum. Need prioritization of environmental education on par with other subjects. Single best thing is to put weight of Presidents Support is “No Child Left Inside” Support must come from Top Down.

I think national forest service needs to reevaluate how we market ourselves on higher technology and social media. We need to reposition ourselves so we can take advantage of technology. We need to partner with the business world; we lag by 5 years or more.

Partnerships – Friends of the Smokies, Smokey Mtn Hiking Club.

GIS-based analysis is key – Land of Sky Regional Council's Linking Lands to Rural Communities. Use natural resource priorities to create conservation value map – piece together major hubs for protection of potential corridors. Can identify what is important to protect. Can connect farm and forest lands and programs.

Discussion Question 1

Asheville, NC

(cont.)

Partnerships – local land trusts can assemble these. Open space area preserved with private donations. Started here now has developed into greenways and blueways. Creates visible message.

Need constituency in areas you want to protect – gotta get folks out there to develop a connection with the land. Take people out to show them.

AT is good example.

Partnerships are essential for land and recreation management. Need to rely on volunteers as well.

Children's bicycling programs work to get kids to enjoy outdoors and is an activity that they already have a knowledge of. Children's bicycling also working to reach children that are diverse. Have found these students have been a natural constituent. Just transitioning these children from urban setting to more natural setting for their bike rides.

Safe Routes to School is successful legislation. Maybe this could be amended to Safe Routes to Schools and Parks. Access to national parks and local parks, not just schools.

Partnerships work. They work when host agency 'isn't afraid of you' . If a partner group is empowered, better results.

Finds programs for youth is rewarding, especially the Junior Ranger Program. Also gets the parents involved. Mobilizing volunteers gives people a sense of ownership and increases public involvement. Need increased personnel for interpretive work and maintenance. Get people out in the field and participating in the work. Urge NPS attention to support groups.

Landscape scale vision for NC that contains North America's most diverse temperate forest; highlights globally, nationally, state's significant places; gives message for focus areas and demonstrates priorities; collaborate and coordinate efforts among members; working toward same goals increases effectiveness

LWCF – Land and Water Conservation Fund; AT

Enhancement Program under DOT (FHWA) – Greenway program. Transportation-oriented projects can create greenways along highways, streams, and RR tracks. Make outdoors accessible.

one thing I see working is collaborative decision making – for natural resource protection, outdoor recreation planning, etc. – if you want to vie for competitive grants you have to show collaboration; don't plan in a bubble – it's not effective.

Discussion Question 1

Asheville, NC

(cont.)

Partnerships are key. Look at unconventional partners. Military bases and their conservation strategies. Common goals of conservation and military training – RCW example. Dedicated stream of funding works well. Importance of GIS maps and plans based on those maps. Folks can rally around info on the maps.

Wetlands Reserve Program, other programs that support conservation easement – programs could be improved but work – Forest Legacy Programs

Fed tax deductions on easement and donations of land. Questions on how to deduct. Need clarification. Make it a longer write off. Extend benefit

Clay County health dept and school systems are taking kids mt. biking- fighting obesity- currently building a skills park to help build basic biking skills

Land Trust Movement - Blue Ridge Tomorrow group works with a prioritized strategy instead of each competing for donors. Collaboration is working well. Similar to Land for Tomorrow.

Palmetto Conservation Association in SC – Trail system that has used partners to complete trail system. Wetlands Reserve Program has worked and been expanded to uplands. Takes a long time though. Basically a Federal Conservation easement.

Trails – need to be able to get to trails to get folks out. Create visitor centers and programs along trails. Works well.

Programs to take kids into the forest is great experience. Great way

State office has inventoried/identified all the environmental education centers in the state. State level sees all these programs, but does not see the support for the programming and staff at all of these centers. Also wants to see this curriculum integrated into multiple disciplines, not just into a single course (eg. not just into a science course).

SC Conservation Bank – also has preserved farmland; state initiatives are critical. Need incentives

One of the programs that works is the Appalachian Trail Conservancy/AT Office Trail to every classroom project. Focused on providing workshops to teachers that are in school systems along the AT. Teach approximately 40 teachers per year at several different workshops. Also develop curriculum related to Trail and outdoors/public lands. Play-spaced education (teach students about their local area/environment) and service-learning based (engage students in project of sorts). Bringing teachers together with local “resource” people, so that teachers get to know the local resources that they can use.

Discussion Question 1

Asheville, NC

(cont.)

Go Green. Use art (recycled materials, trash) make sculptures, talk about social justice issues, using what is around them to engage them initially – we have programs but need engagement before the kids get involved in such programs – for kids, must start in their backyard – bridge from community to the ‘great outdoors’ – gardens, water quality – circle of life (home to neighborhood to regional to national park)

Treemont at GSMNP. Views programs as partnership with the schools. The Treemont staff does part of the teaching but also have teachers do part of the teaching. Helping teachers learn these skills while working with Treemont staff. Also do summer camp experiences for students. Have students do research projects while there and then present their projects. Found that this experience enhances their school work and exposes them to career opportunities.

Teacher, need to bridge gap between neighborhood to national park – but need additional volunteers for teachers (from NPS?) – teachers need a helping hand, particularly tweens and teens

Hollywood can help. Tie in media to real life to educate. Piggyback on such media to relate and connect with communities.-check out climateproject.org

Working together as groups like Land for Tomorrow (conservation related groups that lobby as part of their activity has been very successful. The combined effort has resulted in a better, stronger use of conservation trust funds in NC.

Splitting the costs among private/public entities is working well in western NC. Everyone gives something instead of only public money.

Readiness and Env Response Initiative – Development encroachment on military bases. Use these programs to buffer military bases. Corridor near Macon where NPS is working with military to share management and conserve land – military provides some funding.

State Wildlife Action Plans are very important. States identify what most ecologically important areas are on the landscape. Opportunities for partnerships. GA WL Federation has worked with NPS to manage lands to preserve hunting.

NPS, existing systems are not being fully funded, maintenance backlog, etc. Need more money to fund these programs

Groups of land trusts – Blue Ridge Forever. Private funded.

Discussion Question 1

Asheville, NC

(cont.)

Feels that public education is best vehicle for delivering outdoor education/environmental education. Muddy Sneakers program is good example of one such program. This program emphasizes trying to bring the “summer camp” experience to public school students. Took goals and objectives from mandatory NC school standards that can be taught/learned in outdoor setting. Then took children outdoors and taught these standards in this outdoor setting. That school’s testing/standards improved by 23%. Successful program led to implementation of similar programs and “believers” in other parts of the school district.

Conservation Trust for NC. Project that tries to make land conservation movement in the state reach more diverse audience, be more inclusive. Realize that the demographics are changing and that Hispanic/latino population will be the majority—working to reach this segment of our population. Doing trainings w/ land trusts across the state on diversity importance, also working with affordable housing groups, local food groups, healthcare providers, etc. Want land trusts to realize that they need more partners to assist and more diverse partners. Bring in diverse students for summer internships etc. Also doing community gardens in urban areas. Conservation-based affordable housing-land trusts protect open space and then partnering with affordable housing groups to build high quality affordable housing in that area. All these efforts are to reach a diverse audience. Feels that this project/initiative is working well.

We need people to use the outdoor facilities; resources need to be accessible, open longer, easier access.

Land Trusts are diversifying groups they are working with – foundation grants. Higher minorities for summer, work with minority farmers, minority training, new housing developments that respect landscape.

NC Conservation Tax Credit – conservation easement based. Has protected lots of land in NC. Tax benefit is often the right incentive. 20 states have this.

Juvenile restitution programs are helpful. This creates young ones working supervised, in areas to clean up. This is an opportunity, sometimes the only one, that they have to get outdoors. One example is community gardens. Scout programs. Many places exclude animals, however many people get outdoors when they walk their dogs.

NC Farmland Protection Trust Fund has worked well statewide – but need more money

All taxa biodiversity inventory. Get people in the public involved to go out with researcher.

Privately funded groups (i.e. Yes Camp) tour parks and recreational areas and enjoy it, while getting outdoors. Kids in the Creek – 8th grades get put in the creek to catch bugs and fish, taught ecology and get exposed to elements. This may be their one chance to experience the outdoors.

Discussion Question 1

Asheville, NC

(cont.)

Need more collaboration in policy development as well

Trails to Every Classroom program-taps into teacher's creativity- give the teachers the tools

Smart phone technology. Use social media, facebook, twitter, myspace etc...

This is the time to look at business partners and cooperating associations to help with the marketing aspect. We're getting so far behind the private sector. People will be more comfortable engaging through facebook, twitter.

I don't think a lot of schools know about programs to introduce youth and minority children to NFS/NPS.integrate more information into school curriculum to make children aware of resources activities available. Need to be

It's important to engage people to share memories, histories of parks. Parks should pursue these stories. There hasn't been a concerted effort to build a history of forest lands.

We do need to connect to our children, how do we pay for all of these programs? We have a lot of good ideas but there needs to be programming funds available. Partnerships work well.

collaboration, sustainability education; private enterprise funds different conservation and education programs; need to kids out of the classroom and out into the resources

NC has 4 Trust funds

Use Cartoon network, every youth in America watches regularly.

Tax incentive is important in conservation easements

Reconnecting people with outdoors- have programs working with teachers- teachers work in the park as rangers- helps them understand what is in their back yard- also get students into the park- focus on both curriculum and recreation

NPS's Second Century Commission ----implement that vision-promote geocaching to get people outside

How do we get young people to take more ownership in parks?

Discussion Question 1

Asheville, NC

(cont.)

AT license plates have paid for School Program \$ in Hot Springs schools

Partnership with public partners – acquired new piece of land with agreement that there will be more LWCF money in future; many trails are in the area; transaction costs should cover stewardship responsibility

Need regional strategies- not easy for small communities to develop by themselves- Western NC better than most in regional development- need to cover even more areas- for example, many waters in NC empty into SC- needs federal leadership for interstate coordination

Support and build on existing programs such as Boy Scouts

Jaqueline – formed collaborative county outreach groups with knowledgeable persons; funding with LWCF and tax incentives have been important to group; received funding from fed, state, and private citizens for acquisitions; Partnership for the Blue Ridge – multiple partners in four states

NPS should partner with schools and boys clubs to help disadvantaged children. Don't count on parents to know what's available. Many parents have no experience in the outdoors to teach their children.

Outdoor classrooms work well. Don't cut bus services to field trips

How do we reach out to minorities? Do we have urban city internships?

Marketing outdoor opportunities to the schools, outward bound works.

Land trust working to get access to Catawba Falls – worked to acquire land – Fed and LWCF worked together with community.

response – easement- type of trust does pay taxes still. Karen Riverlink – More Creative – Progress Energy relicensing – there were good examples of converting to Grant \$. Also License plate \$ to Natural Heritage trust fund.

Grants from programs such as Rec Trails Program have been very helpful- keep what we have

Emile Eagle, Civil war also- mechanisms –Farm and Ranchland protection program, matching grant program, federal, state, private, Transportation enhancement funding, Conservation tax easement incentives, Land and Water conservation funds

Discussion Question 1

Asheville, NC

(cont.)

Question- More of a challenge Item-

How do you get a more hands on interface with youth to exploit opportunities on the parkway?
Discount passes for families?

We're passionate about getting children outside, need money, most money goes towards conservation.

FRIPP Program has worked well – conserve farmland

Large urban area – nature preserves in urban communities. Restore streams in neighborhoods.

Science-based information (GIS, etc.) works. County inventories. But don't know what is on private.

Scenic Byways Program has funded several important projects in NC.

SC Tax Credit – can sell SC tax credits for 80 cents on the dollar.

-camping on platforms only accessible by boat/kayak etc.

-target boy scouts and bird watchers

-have access on the water for people to use for camping. 40 miles worth

-had 5 counties come together to create a “paddle trail” system where people came recreate on the water and use camping facilities

climbing paces are on private property... strategies to simply ask residents was failing

have made rock face/climbing purchases from private homeowners through fundraising efforts and grassroots efforts

collecting donations, silent auctions, etc

Discussion Question 1

Asheville, NC

(cont.)

having access near park service facilities, and collaborating with them

VERY GRASSROOT face to face small organization, community relations conservation efforts

local level public relations

gain partnerships with other related clubs, organization etc. to increase involvement (ex: rock climbing conservation group (Carolina climbers coalition)...partner with urban rock climbing clubs, training facilities etc)

Ask what the communities want (ex: school kids want disk golf)

Large volunteer maintenance crews for trails

Citizen-financed 30,000 acres of greenspace - lightening bug, birdwatching, frog monitoring – offering orienteering in schools via junior ROTC orienteering programs

5th grade env. program – a part of NC school curriculum – working for 3 years – significant increase in science scores by participants. Kinds learning all things are connected.

get all 5th grade classes out hiking on the AT – Trail to Every Classroom – AT becomes curriculum – Am Hiking Soc – website to ID trails – ID trail days, events, trail locations

Outdoor Alliance – making sure kids have a connection to the outdoors via rec. activities – brings understanding – overcomes disconnect if they don't know it – they won't protect it

– Finally realizing that conservation and recreation are not opposed but can be partners – putting people on the land doing rec activities aids in its protection

Scouts offer service, outdoor experiences, volunteering – start at a young age, family-oriented, serve 4,000 youth – orienteering, camping, 130 Eagle scout projects this year, horsemanship, day camps

co-op w/Parkway on projects – orienteering, other outdoor activities (climbing, spelunking, etc...)

Continual revenue stream tied to city/county 6% occupancy tax (1/3 of \$ for infrastr. projects) – these all go to outdoor rec infrastructure – developing mtn bike trails, and a 15-yr mgmt plan – leveraging these funds to increase impact – double it! Building capacity for local non-profits (increases value and footprint of impact)

Discussion Question 1

Asheville, NC

(cont.)

Child care programs – outdoor program emphasis (infants to 5) - increase kids' time outside

group dwells on taking on things that go against conservation (development) – example of Va Creeper as adaptive reuse and revenue generator – an opportunity for the FS – from Parkway to valley? Would allow the FS to get away from extractive uses to keep management levels

From media perspective – facing shrinking budgets, staff – potential for non-profits to share content – need to create more formalized relationships – providing info to the media – rural areas have poor broadband access – limits communication about info available – a challenge – how to use and access the forest info very disorganized – needs improvement

the first place people call for info is local parks dept – don't have resources – no clearinghouse for outdoor tourism information – need a data base for this

Young people need to have correct scientific names, those programs work, learning about environment, partnerships work – particularly science learning centers

Problem with kids – no money/time/knowledge in schools to take kids to nature area – need to teach kids what they are looking at – doesn't have to be a beautiful forest, could just have weeds in a back lot to get kids connected to nature

All inclusiveness needed – Go Green, Getting Back To The Basics are two local programs, the y need funding to bring all children to the great outdoors

YMI Cultural Center in Asheville is centrally located, good resources for African American community.

Cooperation is key. Federal government has the opportunity to encourage collaboration and cooperation with other agencies and private sector. Sustainable communities is a great idea that puts multiple objectives into one basket.

Strongest resource is us – the public, individuals. Keep projects local and manageable but big enough to get gov't recognition for funding.

Repetition of messages over time. Repetition of messages. A concerted effort akin to Smokey Bear that brings a message to the public.

Forest is better place to learn science than classroom. Get kids into nature, you don't need capital investment to do this.

Warren Wilson College is a good reference for a college that has integrated environmental edu

Discussion Question 1

Asheville, NC

(cont.)

This listening session is an example of good governance—to come and ask for public’s input and use a bottom-up approach versus a top-down approach.

Costs to maintaining parks so there is a cost to visiting areas. Free or low costs make areas accessible.

Environmental Education also is an effective strategy.

Start a group called “Friends of Nature”. Parks with natural landscape, trails in the woods, picnic shelters. Promoted with schools and teacher. The Parks and Recreation Dept does nature camps. This gives access to small children through adults.

Another use of easement is to purchase easement from a tobacco farmer.

Passport in time with the Forest Service give citizens an opportunity to work on an archeological project.

Transportation enhancement grant. T-21 funds

Working with communities to plan a trail and other development. Develop partnerships to generate funds, etc. Rivers Trails CommunityAssistance helped with these efforts.

Every county has Soil/Water conservation office that can help private landowners address conservation needs on their property. Underutilized service.

Wants to see how all the educational outdoor programs can be better integrated. They mostly are isolated efforts and could be more effective if integrated.

Hiking in the foothills

Kayaking

Rafting in Chataloochie

Fishing

Discussion Question 1

Asheville, NC

(cont.)

Play sports

interconnectedness of nature

Learn from nature, natural processes

Physical exercise

Working outside-always something different to notice

Educate people about the environment

Provide opportunities to conserve specific endangered species to people who aren't familiar with the environment

Practice and teach Leave No Trace

Enjoy teaching people to preserve the environment and improve it

Bike around town

Eating vegetarian

Eating local food

Native gardens

Composting

Harvesting wind energy

Discussion Question 1

Asheville, NC

(cont.)

Farm initiatives in Atlanta schools - outreach to kids

Safe access

Safe transportation

Marketing - jobs, funding, more local, community-based advertising

School buses, transit buses can be used

Interesting incentives

Hiking on BRP

camping

Driving around looking for places to go

exploring fields

reunning especially at the aboretum

doing sports with friends

mountain biking riding in Brevard and on BRP

skateboarding - cat in Brevard

swimming

Discussion Question 1

Asheville, NC

(cont.)

rock climbing/rappelling

bike riding

Boy Scout Code - LNT, clean up after self and others

recycle

a lot of clubs in town try to get people to do stuff outdoors

composting at restaurants

hotels have the option to not wash sheets/towels to conserve water

advertise great outdoors as being healthy

When I was younger I used to always go outdoors; do whatever I could get my hands on. Mountain biking, etc.

Where I go outdoors depends on the time I have in the day. Only an hour I may just go to a local park.

I like to do normal day-to-day activities outside, in city parks: sports, reading, etc.

Others, agreed: focus on city, local parks

urban setting, go to the local pool, city park; not necessarily a big focus on national parks, traveling to get to parks

Freedom of not having to be inside (watching TV etc); freedom to be actively, lively

pay-off is so much more rewarding than going to the gym

Discussion Question 1

Asheville, NC

(cont.)

in a lot of urban areas there's concrete, etc. Compared to more rural areas, lots of outdoor activities, woods, etc.

Nature Conservancy; the land we have right now, the sights and sounds of nature alone can attract people outdoors

The economy and culture of the Asheville area are closely tied to our outdoor spaces and the tourism and recreational opportunities they provide. As such, a deep appreciation and commitment to conservation has grown throughout this community. The Asheville area is home to half a dozen regional land conservation organizations that have worked with federal, state, and local governments as well as private landowners to preserve farms, forests, and wetlands for the benefit of the entire population. For example, Buncombe County has developed highly successful programs which use easements and tax exempt geographical zones to successfully slow the loss of farmland to housing development near Asheville.

The Asheville area is also home to several initiatives designed to encourage greater appreciation and utilization of our outstanding natural resources. The Blue Ridge National Heritage Area, designated by Congress in 2003, is anchored here at the new Blue Ridge Parkway Visitors Center and covers twenty-five counties in Western North Carolina. The "Muddy Sneakers" organization originated in Hendersonville and serves four counties including Buncombe, Henderson, Transylvania, and McDowell and is a national model for successful incorporation of the outdoors into the classroom and vice versa Asheville is also home to the American Whitewater Association, an organization that has led the charge for more "human powered outdoor recreation" around the country_

Discussion Question 1

Bangor, ME

People in Maine have trails and opportunities available and a conservation ethic

Goals are goods, come back to Maine in 2016 100 anniversary of Acadia and NPS.

Ditto! Elementary teachers don't often have the science background, so resources will be very helpful!

We're not talking much about the ocean, but it is a part of our great outdoors. Willingness to innovate, which means taking risk. You don't always succeed but it's important to innovate and take risks. We need to evolve. Maybe all of our natural areas aren't perfect (e.g., gravel pit in natural area), but it got us to "yes." It's easy to say no, but that is not innovative. Penobscot project involved not asking for a lot of permission until they had something to show for the work they'd done. Project didn't only look at fish and river restoration but allowed the hydro work.

Working forests specifically mean fiber extraction. Loggers are Master Logger certified and are very aware of land they are working on.

Working south of Augusta...we have really cool projects in the region. Many land trusts are thinking smartly already. Trails...setting up easements for trail maintenance is important. Endangered Species Act is contentious about what it can do and fear of what it will do. Habitat Conservation Plans should be better used.

Strongly in favor of north wood national park. Its one of the last largest semi wilderness areas east of the Mississippi left and it's a shame to see it being exploited by the timber industry. To my knowledge there is no national park in this country that wasn't controversial in the community in which it was proposed. That applies to ME and what I would ask is their is great misunderstanding about what activities can and cant occur within a national park, its up to the designation document that speaks to what can occur in the national park and me citizens are very ignorant about that. Having a dept of interior come and give public hearings around the state about the national park process and what can and cant occur in a national park, for ex hunting and fishing can occur, but they don't know about that. I would thank Obama for holding a session such as this.

An important passage in the Call to this Listening Session celebrated "collaborative that] exemplify ecosystem based restoration efforts that are aimed at improving communities and their natural and their natural resources, providing clearer water, improved critical habitat for sensitive species, and economic resource for the future." Inspired by that Call and this gathering, I offer a contribution to this discussion that addresses Science in our National Parks, and especially in Acadia.

Discussion Question 1

Bangor, ME

(cont.)

Acadia National Park is well positioned to contribute to this mission. The web of life woven through the woods and waters of Acadia is an extraordinarily diverse floral and faunal endowment at the boundaries of the Northern (Boreal) and Eastern Temperate Forest biomes. The research resources of the scores of world-class universities and colleges of our New England region and the immediate proximity of two distinguished biological research laboratories and the College of the Atlantic are well known. Acadia now offers, in the recently expanded Schoodic Education and Research Center (SERe), a premier venue to support regional research into climate change and conservation issues and to convey to teachers, students, and park visitors the importance of such ecological study. Investment in science and education conducted through these regional, local and park capabilities will have robust national returns. It is important that we know how our parks may evolve and how we can act as conservationist as they do. But it is essential that we anticipate the conservation, cultural, and economic consequences of biome boundary migration - a dynamic that could effect many millions of human beings and hundreds of billions of dollars of economic activity. Good science in the parks can serve this mission.

We like to conserve mountains. Bring opportunities to the people. Think about conserving iconic places, bring people to them through pathways for walking, biking, and strolling.

Local organizations like Land Trusts that can get hands around community's needs

Local resources Non-governmental Organizations (NGO). Have people take ownership of the places. Spend a buck to get 10 bucks back by having volunteers to help. Use local resources and local people. Keep the political bologna out of the science; it doesn't help the salmon. When studying salmon restoration, for too long politics has superseded science.

Our State Wildlife Action Plan and Beginning with Habitat program brought together partners, such as land trusts and agencies throughout the state. Our programs work with local decision makers in the municipalities to develop conservation priorities. This is not top down and helps build appreciation of wildlife habitat.

Engaging and empowering the local thinking works. Rise from the grass roots up. Grass roots and land trusts are important to bring in the other programs. In the long term, the community plays a key role.

We have a trust fund for Univ of Me college students and youth to get them outdoors. Get other conservation groups (flyfishers and hunters) involved in their educational outdoor projects. We have started a Family Fun Day where all these conservation groups work with children. Activities include beginners fly-casting, bow hunting. It is all volunteer, you just have to ask.

Delphi Forecast Techniques to develop who will own forests in ME in the future. It is anonymous. This technique the Federal Government ought to use. It identifies inherent polarization.

Discussion Question 1

Bangor, ME

(cont.)

The experience works, if you have it you can apply it to your life. Break away from the good old boys, traditional way it is done. Don't tell the gov't what we want. Tell them what we can do. Help each other and have gov't facilitate it. Dove-tail for results. Network with those in the room today. Information is far more important than regulation. Need good information. Gov't makes rules and needs to enforce their rules.

Get kids outside. A lot of kids get scholarships to go to camps such as Bryant Pond Conservation Camp. This experience transformed the kids. The kids came back again and spread by word of mouth. Everyone needs to get the information out there about the camp experience.

DLT is a community-led partnership in Maine, which Grand Lake Stream residents founded it in 2001. Community well-being through conservation. 370,000 acres area 350,000 are in conservation. 33,000 community forest. Managed multi-use. Public funding was matched 6 to 1. They have a forest manager and are Forest Stewardship Council certified. They have established forest trails, water trails. These connect families to the outdoors and at the same time creates an environment that allows local businesses (guides and lodges) to be successful. This land trust project was high on the Forest Legacy list and received support in the state of Maine. The town of Grand Lake Stream appropriated \$40,000 to help the land trust. Lots of interest by various groups helped with this conservation effort. Broad sweep of agencies and programs. This is a positive example of collaborative conservation effort.

Forest Legacy is a great program. Healthy Forest Reserve Program (HFRP) is a good program for managing endangered species, but could be broadened to cost-share on management plans. NRCS needs to expand the program without adding hooks and restrictions so that people run the other way.

Build buses that are affordable so we can get kids outside

Q1: Landscape conservation as it merged is the best way to achieve the greatest goals. Means looking at large parcels of land and making sure animals can roam freely. If we look at landscape in a river for example, we are looking at an entire watershed--a system as opposed to isolated parts. Landscape conservation has emerged as the best way to achieve the greatest goals - maintaining connectivity across habitats and systems. EG - Penobscot River System include all the watersheds, all the feeder streams, all the dams all the way to the ocean.

Q1: We don't really have the time to work with one project at a time we need to look at these river systems on a whole. We don't have the time to work one project at the time as we have low numbers, we need to look at landscapes.

Discussion Question 1

Bangor, ME

(cont.)

Penobscot River and some of the issues seen: For years we had been looking at dams on an individual bases. When _____ got involved here, we saw it as a real opportunity to take a basin wide approach. One thing that was different about this project was that we all wanted to spend more money on the resources and less money on the lawyers. There has to be a better way to do business. I think for the tribe, it is our homeland, and we are lucky to be able to live in our homeland. The current project is a landscape scale project. We used to examine one dam at a dam. When PPL bought the dams, that was our chance to manage with a basin-wide approach. This took 3 years of discussion to understand everyone's interest in the various projects. We wanted to spend and money on projects, not on lawyers. It is the largest river conservation project east of the Mississippi. This is important to our people - the Penobscot have a responsibility and duty to give back to the natural world and help fix that river.

I've had a lot of people ask why do private landowners allow recreation to happen on their property. I think it is because of tradition. As managers we cannot allow it to become too costly otherwise we are not helping the landowner we are working for. Recreation Liability Law is also really important in Maine. With our state land, there is a challenge in how to fund these things. The fed. gov't could help states do some trial projects on state land. It can't all come from tax money, but can be supported by other things like user fees.

Maine has been a leader in the forest legacy program funds. Many of those have been supported by both public and private money. We were able to purchase millions of acres to be used as conservation land, and those lands can be used by the public. At the same time many are required to do sustainable forestry. Asking senators to fully funding the conservation program will help the parks in this country Maine has been a leader in using Forest Legacy funds as well as private and foundation funding. If state dollars were used, than those lands are open to the public. There is a tremendous need to fully fund the Land and Water Conservation Fund. I invite you to contact your congressional representatives.

We have two large conservation easements. One in the Penobscot area. Another It is important to keep these as simple as possible because circumstances will change, but I think they do offer the best of several worlds forestry-agriculture

We appreciate you all coming. We all have a common goal to preserve the precious resources we have. Maine is unique in its strong history of philanthropy. Donations are going down so the LWCF money becomes far more important. Flexibility in federal funding is very important.

The conventional wisdom to date has always involved NGO's, gov't, but I'd strongly encourage you to engage businesses. Create a culture of "yes". The Penobscot challenge is one example. It was a collaborative effort and the two Secretaries' challenges were a key part of is coming together.

Discussion Question 1

Bangor, ME

(cont.)

Thanks for the feds coming to town to hear us. Maine is the most heavily forested state in the country in a per-acre basis. We still have some time to get it right, and there are a couple projects in the works now that can be used as examples. Maine has always been a leader in conservation. Let us do our work. It has taken a long time to create these environmental problems and they require a long term commitment to solving them.

Connecting children with the outdoors, children are small and don't drive cars, remember as a kid going in the backyard to play, don't need much and don't need a big area, open space in urban areas, get a farm close to the malls, community gardens. Connectivity needs regional planning, encourage towns and land trusts to do regional planning, Gov provide money for facilitating regional planning.

Best way to connect ME people with the land is to get them out there, ME knows how to make collaboration work. The more we can get people out to see the resources the more likely they will want to convey to the future generations.

Leadership the last few years willing to have conversations across groups, breaking down silos, leaders willing to look into the future, come to common denominators and that is working in ME

People work together well in Maine, with each other

Federal Gov NPS protects wildlife habitat, and supports the Maine North Woods Nat Park,

Implementing forestry knowledge requires large tracts of land what has worked well is the Northeast Research Coop

Private busing system on the Acadia without Fed

Maine has long tradition of LT community, ground up conservations. The towns look to the LT and the LT's look to the community leadership. Look up to NPD for River and rails programs

Diversity interns working with FWS

Leading people outside and world class adventures, Federal lands to recreate on. Fed lands easy to sell marketing. Don't create competition across programs for enviro education progs

Amazing earth fest on the Colorado plateau, something that could be recreated elsewhere, encourage and excites people about there public lands.

Partnerships and collaborations BPL owns land timber lease held by town, town gets benefit. Collaborate with PLT to get out on the land, Forest Legacy and State money was key to success.

Discussion Question 1

Bangor, ME

(cont.)

Lots of different spectacular public lands, different programs help to fit specific lands to certain programs,

LMF is a great program and should not go un mentioned

State Wildlife plans,

Lot of professionals that are retired and donate to land trust and help,

Access on Private land is what works, keep the working forests.

FLP very successful in Maine, Money raising the private side money, money to raise the stewardship for the project

Leaders of AGO need to say we are part of the web of life and the National heritage, important the humans are part of nature and work with nature.

fundamental tool, good science is needed, we need a fed gov to make serious sustain investment in science to monitor changes from climate change, preparing us as good stewards of the land. Good Science has highest return on investment.

Need to get the message out to the Public, Fed can be a PR firm to get the word out, need to let people know what Maine already has

Feds educate people about the natural resources, gov consider a feasibility study for Maine North Woods NP

Sense of scale 1.3 Million, upper right corner of transportation corridor, doing a pretty good job of managing private lands, please pay attention to Maine scale is small impact is BIG.

Maine has most tremendous opportunity, Maine has been ignored, Atlantic Salmon \$ VS Pacific Salmon \$, Maine has largest remaining forest in the east and has a great opportunity.

Utilizing the networks that currently exist, utilizing private sector for marketing, instead of creating more and utilize what exists

Innovative Collaborations, keeping Maine's Forests report, seed money to continue

Discussion Question 1

Bangor, ME

(cont.)

2 Million acres of private lands conserved, 3-1 Private to public funding, Ecosystem service that will reward the forest landowner for the public services the land provides regardless if they are participating in a CE program.

Very important to listen to different perspectives Maine does great things locally, science, land trusts, creating projects need support without interference. Cooperative conservation and allow local systems to work as long as broad goals met

Keeping Maine's forest and keeping Maine's economy, broadband access to the rural areas of Maine, limits future business success. Public and private partnerships

Marketing advice, obstacles, fear of fed govt, in Maine, better marketing by fed LWCF money and other successes with the great collaboration in Maine, marketing this land protect by this land trust to with funds from Federal Govt, also if you guarantee public access then you must advertise, also need line item to fund recreational management plans,.

Look to the Dept of Education to update criteria to get them outdoors.

I would like to develop a trail from my land to the town. I need money, legal advice, state officials, town officials.

Cooperative Agriculture Pest Survey grants work well

USFS Forest Health Programs work well.

Large scale partnership efforts work. The Penobscot Restoration effort works because the people who started it had the long term goal. The Eastern Brook Trout and the National Fish Habitat Plan is floundering. These efforts have been supported by local agencies and efforts. We need federal support for these on the ground projects in habitat restoration.

Conservation means all of us. We are all part of the reason that the oil spill happened. We can all make a difference.

Maine is a blessed place because of the huge expanse of landscape. The Great Maine woods needs to be protected as an important part of the East Coast.

As our population grows, we need to fully fund the National Parks as these are often the first places where kids get outdoors.

We need to connect kids, and diverse populations of kids, so that these people become our future stewards. Teacher Ranger Teacher, and Acadia Qwest both work well to encourage kids to get outdoors

Discussion Question 1

Bangor, ME

(cont.)

We need to encourage advocacy, not have the federal agencies discourage advocacy.

RTCA and LWCF both work well and should be continued.

Acadia is a magnet. That is working. 2.5 million visitors. Visits are up 20% this year. It is an economic engine for 3.5\$ million. It is also a magnet for 3000 volunteers.

Grants and technical programs work well but need add'l funding. For example, the LWCF, the Rivers and Trails Program. There are many state, local and private funding that works.

The National Parks connect people to the land better than any other tool. There is nothing more important than supporting national parks and funding national parks. A Maine Woods National Park should be created.

Our organization supports public access on private lands. Maine has a model to assure that private ownership supports private access.

Our Steelworkers Union also partners with the Sierra Club. It is called the Blue green Alliance. This is a good, working model.

Private Landowners Work. The reason environmentalists love Maine is because its residents have taken care of it for 400 years. Penthouse environmentalists don't really know ME. In my lifetime, ME has GAINED 77,000 area a year. The addition of three townships of forests every year is the greatest carbon sink in the land. I can ride an ATV 100 miles on forests lands to the ocean. Private landowners make that possible.

Private ownership works. We are an outdoor people and landowners need help building more trails for snowmobiles and ATV's.

We have a successful partnership of a town of 300 people and the state and Forest Legacy Fund. The State owns the land, but the Town leases. Partnerships are the key to success.

Protecting environmental values, maintain traditional uses, and strengthen the rural economy - these are the three most important goals for ME's forests.

Dealing with private lands is Gifford Pinchot's unfinished business. "Keeping Maine's Forest" is a good, working model.

Student Conservation Association - this is wonderful program that provides jobs and experience in the woods. Entry level jobs in natural resources are very difficult. Build on the SCA or AmeriCorps models for more advanced level jobs. This will keep people working in these types of jobs all across US.

Discussion Question 1

Bangor, ME

(cont.)

Pleased to see Presidential Initiative. Reagan had them. But particularly pleased with reaching broadly to all. Other documents from other initiatives can be challenging to use and should be provided to legislatures. Can lessons learned here be used to educate lawmakers as a whole to improve funding to Fed agencies that can benefit State programs?

Penobscot is shining light of what can be done. 5 years ago they could do a trip and catch lots of striped bass and make a living guiding. Now there are none. The coast of ME north of Kennebec is in trouble. In a few years things are going to be awesome. My business has declined 60% in last 5 years back of no stripers. People don't want to go north to freshwater fish when on the coast. I invested more in my business, bought bigger boat to chase tuna. Have to go 40 miles offshore - is dangerous. I want striped bass back. Ches Bay is overfished/mismanaged and the stripers there make up those that travel to Maine. Fed Govt has not managed them well. There should be no commercial harvest of striped bass on the East Coast. Fed Govt allows ?? fishery for menhaden, which is the most important fish of sea. Only fish that eats red tide algae. If menhaden came to GOM there would be no algae. Feds need to find money to remove dams. Memo only mentioned fishing and hunting briefly, flowery language. I fear this agenda is only about watching, preserving, skiing. Need to allow rec for all Americans.

Funding. We're in a key moment as Senate votes on oil spill bills. LWCF, Forest Legacy Fund have been great. ME is an excellent place to use Fed funds due to prices. Want to see sense of spirit Congress had in enacting this legislation. See continue to focus on whole ecosystems. Fragmentation is a problem. Whole communities of interest for partnerships. ME Forest Biodiversity Project worked together years ago. State's Land Fund program is a coalition that benefits the environment. It comes out of common sense - ME has always made sure forests were taken care of. We've had engineers from China come to see Penobscot project. Keeping Maine's Forests is a discussion, not a final report. Economics have also been linked to the project. We need Fed participation in KMF program. There is a ton of work ahead not done by email, or a meeting every 6 months. A lot of people are talking about what the forest industry needs. This didn't happen 10 years ago. Conservation groups understand now that everyone needs to work together.

Maine has some of the best resources anywhere. Acadia NP is paramount and beautiful. It needs support. Needs LWCF to be made whole. The non-profits are working with landowners to acquire land. Linkages in landscapes, Appalachian Trail are important. Fed Govt could look at the new models of partnerships. Feds can facilitate a process for partnership without being a landowner. DOI and USDA could work with the State to develop a "7th Generation" view.

Discussion Question 1

Bangor, ME

(cont.)

Private land works because it is treated like public land. It's better than Federal land. Can't take my son to a trout pond and catch limit. Roads everywhere. We have a mosaic of many landowners with many different objectives. There is no one solution for every acre. Nothing nicer than having a protected preserve next to your property. We might need fed land to keep our traditions due to increased access. I disagree that youth doesn't go into forest because of electronics. I have 6 kids. The Federal No Child Left Behind law is keeping kids out of nature. Just put it into the curriculum so it's required by teachers to incorporate it. Assessment drives instruction.

5th generation slate miner. It's been taken for granted the resources we have. Over the last 10 years, things have changed. The % of people that could stay and make a living is rapidly declining. Keep knowledge base that we've developed here.

There is a ME Youth Fish and game Association spends kids traditional outdoor activities. Have summer camp for 2 weeks.

I think the Maine thing I want to say is that I personally, am not sure whether or not a national park would be in the best interest in the area, but those in the business should be because we only need to look at Ellsworth or Bar Harbor to see the benefits of this. Those in business only have to look at those and see that it works. We only have to look at the work resulting to see that it will create jobs. I would rather keep the woods the woods. When you go into the real woods, which non of us see anyone, you can really see the benefit of seeing the great woods in tact, not just for ourselves but for all the creatures.

open use policy is enhanced by the liability law that was passed in Maine

1. encourage philanthropy leveraging with public dollars. 2. encourage young people through conservation education. 3. investing in science to improve science based management decisions. Will send in comments to website.

Observation: taking young children hunting, fishing, camping. Boys commented that they wanted to stay longer and didn't miss tv, etc. How lucky Mainers are to have access to natural areas for little or no cost. Important to keep that access available.

Having national parks well advertised and available enhances usage. Having media spots will get more people out.

two older sons not interested in farming. Would like to keep farm as a protected land trust to continue farming/natural area. Concerned that the production of the farm will be adequate to keep the trust going. Perhaps the federal gov't can help? His farm is in Central Maine, and most farm trusts/easement opportunities are in Southern Maine. Wants farm land to be protected for his children or grandchildren. Money needed to maintain the trust and not sure if money from farm enough to do that.

Discussion Question 1

Bangor, ME

(cont.)

Rarity of space and type of natural areas are extensive, but not well advertised. Rare and precious are the vast openness of the natural areas. Not promoted well, people think it can be cut away. But there are hundreds of miles of snow mobile trails and rivers that can be convoked for days without crossing a road.

Lake science instruction for students/young people. There should be more access to this type of instruction with provisions made to have people come. Need to do more to get kids out, but it's tough to even afford a bus to take a group of kids out. Not every kid has a dad that will take them to these places.

Land liability statute has helped land stay open for use. Other states have asked for input on how Maine does this. 2) Leveraging volunteerism is an important resource.

They are having a positive reaction from landowners who don't typically like conservation by offering up sustainability ideas.

Canoe trips are being reduced, but the state parks' first time camping program works because it's simple. Gets people out of cars. Watershed Council runs guided canoe trips at no cost for kids who have never paddled before. These are kids who were afraid of bugs, but found they weren't as bad as they had feared.

Private funders and public funders working together to leverage resources works. The more groups that get together to leverage resources = more leveraging.

Making a living on land; NRCS programs helpful (EQIP, etc.), working with conservation districts. Challenges that others have voiced. AS FWS educator know that education is important, especially the young people. Students or people with young children need to be introduced to the natural areas. Land users have access to some programs, such as hunter safety, etc. But there isn't much available for land owners. Youth camps are very pricey and often available to non-residents. These camps should be made more available and affordable for local children to take advantage of. Funding is hard to come by for these camps experiences. Higher funding would be helpful to get youth involved so that respect for the land will grow. He is a grandfather of 5 and can see the greater appreciation that kids that have access to natural areas have in comparison to kids who have not had the access.

Land conservation discussions are usually focused on a certain parcel or area. Need to identify how these parcels being protected protects a larger habitat area. We need to have a consistent language between non-profits and government so that people can understand what each other are talking about.

Leveraging volunteers works well. People are enthusiastic to help save land that they love. It is more helpful if they feel that their volunteerism is supported by federal funding, and not instead of it.

Discussion Question 1

Bangor, ME

(cont.)

Thank you for taking the time during the America's Great Outdoors listening Session in Maine to see and hear more about the remarkable and innovative partnership to restore one of America's great rivers through the Penobscot River Restoration Project.

The Maine session was extremely well-run, leaving the attendees with a clear impression that the federal team had truly listened to their input.

We appreciated the opportunity to share what we have learned in the Penobscot Project with you and with others on your team and from the public.

As you witnessed, we are enormously proud of the Penobscot Project and the continuing commitment to its successful completion. The project includes several federal agencies, the Penobscot Indian Nation, the State of Maine, hydropower owners PPL Corporation and Black Bear Hydro LLC and several conservation groups and many other partners. The project is the result of exemplary collaborative federal leadership, from the negotiation of the agreement to technical assistance to funding. For instance, the Department of the Interior (U.S. Fish and Wildlife Service, National Park Service and Bureau of Indian Affairs); Department of Commerce (National Oceanic and Atmospheric Administration) and U.S. Environmental Protection Agency all play key roles; partnership with the Department of Agriculture is also promising. This vital collaboration remains critical.

Penobscot Project partners have raised \$25 million to purchase dams, engaged in thorough permitting, and are on the brink of full implementation to restore access to nearly 1,000 miles of habitat for sea-run fish including federally endangered Atlantic salmon and Shortnose sturgeon.

Received the Federal Energy Regulatory Commission permits, with Endangered Species Act consultation for Atlantic salmon and Shortnose Sturgeon, for the decommissioning and removal of two and bypass of another dam that impede sea-run fishery recovery;

Received the State of Maine Department of Environmental Protection Permits to remove the dams and construct the bypass;

Negotiated a collaborative agreement, secured permits and began construction on an updated more fish-friendly replacement water intake system at a mill associated with one of the dams;

Received funding through the Recovery Act to remove the Great Works dam in 2011;

Received funding to complete engineering for Veazie removal to begin as soon 2012;

Began extensive, cutting-edge base-line scientific monitoring, partially funded with Recovery Act through the National Oceanic and Atmospheric Administration, and employing local university scientists, to learn, share lessons and measure the impact of the project;

Discussion Question 1

Bangor, ME

(cont.)

Prepared for fish bypass construction in Howland, including work with the town on restoration-related aspects of site redevelopment on lands adjacent to the bypass, as well as helping secure \$600,000 in Brownfields funds from U.S. Environmental Protection Agency; and

Kicked off a new \$6 million private capital campaign to leverage additional federal dollars. This will bring the private philanthropic investment in the Penobscot Project to almost \$20 million.

The Penobscot Project is demonstrating a principle crucial to conserving our nation's outdoor heritage: collaborative multi-agency, multi-stakeholder leadership can produce large-scale, lasting ecological, economic, recreational and cultural results for people and wildlife. While work remains, the Penobscot is now poised for restoration, and public-private partnerships remain crucial to every aspect of the project. Simply put, a project of this scale takes a broad partnership to be successful.

As you saw directly, "from mountains to shining sea" the Penobscot Project is truly a microcosm of America's Great Outdoors imperatives. We believe this ecosystem scale project on the Penobscot River achieves a long sought balance of environmental, economy and community needs.

We welcome your thoughts and leadership on how to ensure the Penobscot Project's success. We hope this model is the very type of project to be highlighted in the AGO report and the President's FY12 budget.

Discussion Question 1

Berkeley, CA

Employ Youth

Preserving natural lands/waters (national and local/urban)

Match youth to projects they are interested in

Youth-defined conservation

Bottom up (community) program design

Broad experiences: PR, planning, not just field work --career pathways

Outdoor industry partnerships

Co-design

Environmental education

NPS metropolitan liaisons/Youth Corps led by youth

Comprehensive collaborative (multiple partners) long-term tracking and opportunities for youth

Social media

Intensive outdoor experience in nature - inspires individuals like John Muir and David Brower; urban youth transformed by experience in backcountry; Ex. CCC backcountry; challenge, builds self-esteem; career pathway; fuels management/reduction on PG&E

Boys and Girls Club's Outdoor Camp – holistic experience that brings youth from involvement in activities rooted in their communities to the outdoor camp; peer- to-peer mentorship/communication

Discussion Question 1

Berkeley, CA

(cont.)

Have family oriented activities

Existing organizations, like corps, can set up infrastructure

Help get “kids” to parks - Ex. Yellowstone Recovery – youth corps set up spike camp, groups rotated in

National framework to take work to scale - ex. Girls on the Run, national non-profit connected to schools, funded by shoe company

Cross-sector partnerships/collaboration is really important. Outdoor industry can be a major player; Ex. REI Kids on Trails

Discussion Question 1

Bozeman, MT

To put into practice the multiple of environmental evidence on protecting our wildlife, their dispersal and migration. This needs to be a priority, especially for wildlife corridors near national parks, specifically Yellowstone in this area. An educational component is important to educate the next generation. The surface Transportation Act of 1991 adapted by Montana that allows commercial semi trucks (long haul) to go on any Mt. roads. MOOT has therefore made all roads accessible to the large semis and not all roads should carry semi trucks. Work with Montana Corridor association to agree to preserve our ecologically sensitive areas. The things that work are the Montana Dept. of Transportation and local community support.

Clean, abundant, accessible and protected water.

Organize communities to develop local strategies to protect waterways. Educate and train children on water clean and free. Employ state and federal guidelines for oversight and regulations.

Maintaining enough continuous wild land to allow ecosystems functions. Conserving soil that will allow sustainable agriculture forest and ecosystem function.

Research is required to better determine what it takes to maintain functioning ecosystems. Assume that larger continuous wild areas will maintain ecosystems functioning and facilitate purchase of lands to make continuous wild lands.

Funding for parts and balancing "mixed". Human caused destruction of our natural resources, such as global warming (climate change), uncontrolled logging, mining and its associated consequences such as the current crisis in the Gulf.

Protecting wildlife migration corridors like the Madison valley. Protecting and preserving water sources. Preserving land.

Reduce traffic speed and eliminate long-haul trucks from the Madison Valley. Implement setbacks on roads and eliminate dumping and pollution. Corridor development and get more land into conservation easements.

It is critical that outdoor activities and the facilities to provide them are available at all levels. Local governments and states have increasing use, aging infrastructure and limited staff and operations to provide these types of opportunities close to populations and with easy access.

Water and energy conservation, requiring a paradigm shift from the currently unsustainable "American way of life". Ensuring access to public land boundaries

Support grassroots efforts with federal and state money. Tough legislation to face individuals and cooperation to take appropriate action.

Discussion Question 1

Bozeman, MT

(cont.)

We are not creating any more lands, but we are supporting more people. We must preserve our diverse and unique public lands and landscapes, watersheds, wildlife, fish and bird habitats for future generations and engage young people in their protection. Uses must be appropriate not destructing public lands belonging to all Americans- whether or not they even visit them- they are out national heritage. Local people must avoid seeing these lands as theirs not ours. Politics, money and climate change.

Engaging all stakeholders in a collaborative approach resulting in solution on issues of public lands for the common good. Uses must be sustainable. Bring people together to solve problems- leave divisive rhetoric behind.

How do share access to wilderness and out doors without people feeling left out- There should be NO snowmobiles in National Parks- but there should be places for them - some with atv's on some trails ect. Balancing is the key!

To create buy in for balance- by insisting on more dialogue and more education

Climate change and building resilience into our ecosystems so they can adapt to this change. Connecting people to natural landscapes and fostering future conservation leadership. Protecting our remaining core habitats on public and private lands that do not currently have permanent protection

Local partnerships informed by the best available science. Fed govt providing funding and technical assistance to inform collaborative partnerships. Support for legislative efforts that grow from local collaborations such as SB 1470- The Forest Jobs and Recreation Act.

1. Carbon initiative- pricing 2. development guidelines 3. use less/ guidelines

Fractal landscapes form development sprawl, great demands in fewer resources - (water, air) as well as transportation routes. Threat of "no net gain "of public lands is strong in Montana, but is very shorts sided and destructive. Please protect against "no net gain" policies.

Protective laws for watersheds and lands including cluster developments and enforced air and water quality standards

Maintain large intact national areas that are interconnected to allow movement of animals and plants as the climate changes

Reconciling agenda 21 goals and maintaining private property rights. Agenda 21 specifically eliminates private property rights as well as most agricultural freedom. We cannot destroy these freedoms without destroying our way of life.

Revise our game flow to promote not destroy private properly rights. Most of the best managed lands in American are privately owned and the worst are federally owned

Discussion Question 1

Bozeman, MT

(cont.)

Fundamentally, recognized that current populations density and levels of resource consumption create pressure on ecosystems and wildlife that did not operate as strongly in the past. Consequently stronger policies for preservation of ecosystem function and species conservation are necessary.

1. strong federal policy for the preservation and expansion of protected areas and endangered species! 2. strong federal policy to internalize the environmental cost of economic activity for extractive/ pollution activities. (as with ozone, so2). 3. Strong federal promotion of the development of carbon-neutral energy.

Maintain historic western culture of agriculture producers and recreation of the past 100 years.

Back to basics, of sustainable and recreation and natural resource management

Fully fund WCF. Plus more and into working lands conservation programs like FRPP, GRP, FLP, WRP

Conservation issues in Montana are most successfully addressed by bottom-up, grass roots efforts that are based on collaboration. These are inclusive of multiple issues (forestry, weeds, wildlife, water) and the local privatization of the issues

Most land managers recognize the impact of invasive but lack of resources and energy commitment,. I reenergizes NISC give it the same emphasis as the Clinton administration did. 2. include basic funding for invasive in agencies and field units.

Lack of understanding that all the natural world is connected and we are part of this web. Showing how a philosophy of what is the common good is important not just "what's in it for me"? Implementation use of education in schools about connectedness. Get children off electronic games. understanding how to show people to understand what each does and what one state does affects all of us. (environment is not a bad word)

Keeping connection to outdoors in forefront of children. Lack of understanding of importance of natural world, everything we were given for free! We cannot create new native shows how native Americans, an ancient cultural sites are important

1. leaving natural resources , especially wildlife, of NPA Parks unimpaired for the use of enjoyment of future generations. 2. To easy, inexpensive access, for use and resulting degradation, to our public lands, by private interests at the expense of public interest . 3. dewatering rivers and streams 4. continuing decline of wildlife toward endangerment.

Support financial and with policy local watershed/ conservation groups. Support flexibility with work and school programs to encourage people to get outside. Start educating kids about restoration early -middle school, continue through college, Support these programs. Support financiers for salaries for people working on these efforts.

Discussion Question 1

Bozeman, MT

(cont.)

More trails and existing roads open to motorized vehicles. We can take turns like what was done in the 70's in the Gallatin National Forest for snowmobilers and cross country skiers. They each has designated days of the week and or weeks of the month to be on the trails and roads, and it worked.

Enforceable standards to maintain core needs and values. Financial and other assistance for coordination , communication and collaboration. Applied to a comprehensive national strategy to ensure wildlife and ecosystems can adjust to a changing climate and a national network of conservation lands sufficient to ensure all our wildlife and ecosystems will be available in abundance for future generations. Key strategies- maintain core areas such as public lands. Through short, clear, understandable and enforceable standards and through full funding for the land and water conservation fund. -Maintain wildlife and ecological connectivity including across private lands, through: strategies and programs that promote coexistence with wildlife and ecologically improved land management, including more funding for existing programs such as Forest Legacy Program, WDF- Livestock assistance program as applied to wildlife conflicts.

Education. Participating outdoor conservation programs

Future generations will judge us favorably if we are able to sustain what we have today. In the Rocky Mountains West, the best way to sustain out open spaces, forest and range land ecosystems, and wildlife habitat is to sustain our working landscapes. Working landscapes provide the buffer to public lands and the corridors between public lands.

Bottom up national development plan (including industrial and conservation components) to be the basis for all federal funding of infrastructure, subsidies, land use regulations, energy development ect. Resurrect the old 701 planning grant to combine city- county councils of government.

education, fund LWCF, work with local groups to support successful programs and efforts

An ecologically and nutritionally bereft agricultural commodity systems that could be restored to a more diverse, healthy, economical vibrant systems that would not only address the key concerns voiced by Michelle Obama but would also reach into virtually all of our sociological / economic/ political issues

Tree fight is a scientific and social experieiment that utlimateley aims to prevent the extinction of the Whitebark Pine. The purpose of Treefight is twofold: First to raise awareness of Yellowstone's most serious environmental calamity in recorded history, and second to investigate solutions into this massive ecological problem. A regionally groundbreaking effots, Treefight is using modern digital tool, social media and grassroots volunteerism to tackel an environmental problem that is rooted in climate change. Volunteers will experiece and share with the world.

Discussion Question 1

Bozeman, MT

(cont.)

Wilderness and parks, forest service and BLM land are all important to me personally and professionally. Our forests and rivers are why so many of us live and recreate in MT. Balanced use is important, but preservation can help keep our recreational opportunities pristine. Thank you for giving us this opportunity.

Thank you for the opportunity to express our thoughts. Count on us for support and leadership in helping communities organize safe access. We are the number one educators of canoe and kayak instruction and work for 2 million people who paddle every year. We work/ veterans and kids to carry on the heritage.

Thank you for the opportunity to come together with like minded individuals. I would be interested in participating in more projects that would help preserve and protect wildlife, water and lands in Madison Valley of Montana

Timber could be useful (e.g. 2 minutes max) with a bell!

Thank you President Obama more of this bottom- up approach

Thank you so much for listening, engaging all of us in a huge challenge how to maintain and enhance our outstanding system of public lands at a time of population growth and economic downturn, a time of climate change that will certainly affect many of our natural resources. Political divisiveness after stands in the way of collaborative solutions concerning our public lands. Sen. Tester's Forest Jobs and Recreation Act shows that there is a better way, Users must be regulated to provide for the common good- the best for the most in the long run. TR had it right- the recognized the diminishment of our landscapes as wildlife disappeared. We must make sure this never happens again. Inappropriate private uses- like overgrazing and industrialization- threaten biological diversity and our future. Decisions must be based on science!

Thank you reinvigorating this discussion on outdoor recreation. It is important and commendable even during this time of economic and worldwide issues to address and provide outdoor recreation. It's an important part of our heritage and provides significant health, enjoyment and understanding of our part in the greater with of life and our responsibility to understand and care for it. Fully fund the LWCF with an equal allocation to the stateside of the LWCF.

I appreciate the idea of an initiative aimed at reconnecting Americans citizens with their public lands. Make it work.

Thank you for asking citizens and groups involved in their own environments and efforts in the Americas Great Outdoors in all its forms to engage at a local level to improve our outdoors. Please inventory the many efforts so that we may work together.

Discussion Question 1

Bozeman, MT

(cont.)

Thank you for coming here, Montana holds the last examples of large intact ecosystems in America. The only place in the lower 48 states where you can find grizzly bears, lynx, wolves, sage grouse, and wild bison! Wow!! Reconnecting youth to the outdoors should be as important as music and art education in schools- all of which is disappearing. The federal government needs to invest as much into these areas as the private, non profit sector has it's time to recommit to the areas that shaped America!

Connecting people to the outdoors, especially young people as they are our future, is incredibly important. The benefits of people spending time outdoors is multifaceted. Building a respect for the environment and desiring conservation/ protection efforts, exercise in the midst of childhood obesity epidemic and enjoyment. If we could use federal funds to help youth get plugged into groups like Montana Conservation Corps (MCC) to build a hut system similar to that in New Zealand and Europe, more people could get outside and get deeper into wilderness areas. This would bring money into our state and would create jobs now in the future.

Many landscapes are degraded-much of BLM and USFS lands among them. I'd like to see a national attention to restoration- Healthy Lands Initiative has done a lot- perhaps a national designation of restoration lands. Then use science and metrics to measure progress and communicate the benefits (ecological and economic) to the public. This effort should include public- private partnership at landscape scale

Great focus on initiating and support of youth programs which get kids outside and empowered!

Encourage the development of locally driven, comprehensive water management plans at a community / watershed scale. With the development of these plans (stakeholders that much be involved include youth , local government, federal agencies, private landowners ect.) communities can receive federal or state financial incentives to institute/ implement water conservation, water quality restoration projects. Potential funding sources could include recreational equipment/ extractive industry tax... similar to hunting logger fees.

Thank you for beginning Americas Great Outdoors to Bozeman and Montana. It is a privilege for our community to participate

Youth conservation corp. is working well. Needs more funding. Work with existing groups - don't need new ones.

Youth voice is important. They suggested the greenhouse bus that is outside. Has kids as board members for the group. Strategy for success is to engage youth

Encourages NRCS to continue CRP and WRP. Utilize all WRP funds available. MT NRCS sent funds back. Fully fund CRP. Consider requiring public access on easement programs.

Discussion Question 1

Bozeman, MT

(cont.)

Trail systems around Bozeman are good. Wants to see the "complete streets" initiative implementation to make streets walkable/bikable and connected. Fund Land and Water Conservation Fund

Outdoor recreation is good for the economy. 250 billion dollars annually and 34,000 jobs in MT. Only 16% of Forest Service budget goes to recreation but results in 60% of the return. The administration needs to recognize this contribution.

Supports maintaining back country air strips. Blanket federal programs won't work - need local control

Example of an unknown, poor organization that had significant input into the Gallatin Forest Plan. Climate change is important and a concern for ice climbing. Grass roots organization - funding is important to allow them to contribute.

Supports Land and Water Conservation Fund being fully funded. Compliments the administration for supporting it. Gave examples of local and federal uses of the funds. These federal tools are just a compliment to the other state and local resources and help to leverage them. Open space and recreation are what support our local economy.

Supports reauthorization of Secure Rural School and Self Determination Act - which expires in 2 years. Decoupled from commodity payments for production on federal land.

Discussed Nature Deficit Disorder. Need to start early with kids education. Suggests reading book "Last Child in the Woods". Starting program called "land snorkeling" which focuses on slowing down, backyard habitat. Give kids time to create, invent, etc. with out a lot of adult supervision.

Take personal responsibility for kids outdoor education. Don't need federal dollars to do it. Concerned about Treasured Lands initiative locking up land in eastern MT. His kids like 4 wheelers and don't like to walk.

Promoted Boy Scouts and Girl Scouts as only national organizations that get kids out through every age group.

Water conservation is needed-more aggressive education plan-save water-low volume toilets? Watering lawns? EDUCATION!! need more aggressive conservation program, low flow toilets, smaller backyards, new technologies to use less water

Strong support of continued funding for the state & national park system Willingness from industry to support Federal government any way they can

ARRA funding, fund authorities, matching funds, tough to meet, support youth corps act of 2010, good changes, 25% cash match (big deal for non-profits), work with existing non-profits rather than creating own corps workforce

Discussion Question 1

Bozeman, MT

(cont.)

What's working ARRA- abundance of \$\$\$ benefitting our program Trying to educate agencies using cooperative agreements not contracts Benefits to all-work together

Active volunteerism, save the white bark pine, new group, taking pictures of individual trees, Facebook, new media to be used, looking for advice,

14 listening sessions around MT - riparian habitat, impacts to riparian corridors, transportation issues, snow plowing, connect rural to urban areas – riparian habitat conservation. Protect these, education , involve youth, plantings, supported by Fed. \$\$\$ – keep \$'s coming, challenges – BMP's competing and conflicting policies

protect land and sustain lifestyles, N. P. – ecological heart of the landscape, reconnect citizens to land, what's working – agreement habitat outside YNP for animals, part of broad group to provide habitat for MT bison population, working together, Protect the core NP, funding issues, YNP shortfall \$18m/yr, look at landscape not within boundaries, restore impacted landscapes, use youth, Fed bring \$'s, assistance programs, L&WCF full funding needed, collaborate!

Wanted to reiterate ideas-FS has local needs-keep roads plowed in winter for use-animal migration corridors important-get youth involved with efforts-facilitate more people to engage in activities

Make this a priority landscape to reconnect and protect remaining special places and the ecosystem, work together both on public and private lands to meet needs, Fed. Govt – encourage partnerships at local level, policies and D&S's need to be workable, Restore key and degraded habitats with partnerships-Look at broad scale initiative projects-fish & wildlife habitat restoration

What works-Public/private partnerships Accelerate conservation on the ground-working together Programs successful when done the local level Challenges-Government programs not matched well with local needs-lack of funding-NRCS program adapted to allow grazing on wetlands-

Watershed education! locals bring each other together, support needed from feds-education-get kids outside-work with curriculum-time is an issue with work, school, financial obligations, What works? Skilled facilitators to bring diverse audiences together

Civil collaboration works-appropriate uses while preserving lands, watersheds for future generations-support more folks on landscapes, need to preserve lands, No destructive uses!! Local people need to see land as "ours not theirs"

Supports wilderness, makes \$ on outdoor recreation, economics benefits to wildlife and wilderness, tourists, locals make their livings in MT as well,

Support LWCF, balance state side portion of this. Give this gives local control. Struggling to provide local communities with funds to get youth initiatives going, \$\$\$ to state parks as well and cultural centers as well.

Discussion Question 1

Bozeman, MT

(cont.)

Provides physical exercise, kids climb on these, use private funding, civic groups, see as a concept springboard across the nation-gets kids outdoors, supports full funding of LWCF

This outreach great, maintain populations of plants, animals in concert with humans, protected areas of parks are not large enough. Need community based partnerships to preserve for future, Challenges- energy development, climate change – don't compromise the environment, support scientific best science available, help funding, guidelines & regulations where necessary

Likes this initiative, encourage kids to get out is great, educated kids and general public, all people own lands

Open spaces-un-roaded spaces like the lungs-keep land open- The west lands open Thank you to the Administration for starting the listening sessions here Thanks for cancelling Bush's oil drilling in Utah No new wilderness policy needs to be revisited Lands in Utah open to ATV use & abuse & oil drilling BLM has authority to San Rafael Desert protect-do not road illegally Don't stretch authority so thin-can't enforce infractions What's working- Private groups Challenges- Group coordination Dollars stretched thin Time stretched thin Need to be showing how everything is connected vNeed to speak for fish, birds, animals, and water Like to see fear combated-change causes fear-working together is strength not weakness Vandalism-Big problem-makes her sick Teaching connectedness will help with vandalism- Last child in the Woods great book Last word- we are all connected

Won national wetlands award, wetland & riparian program working a partnership to protect large landscapes, partnerships based upon trust are the best. Find common ground, what am I willing to compromise on? Diversification of assets, 10 bird species to over 100 species, key players could go on, obstacles – trust, willingness to work with others, what's in it for them, cleaner air, water, biodiversity, common elements to all. Fed. Role - \$, expensive work to do. Need \$'s LWCF, All part of the problem all need to be part of the solution, energy, water, power, demand energy orgs help preserve what's left. Feds – flexibility is needed to be constrained by regulations & manuals. Each situation is different, CREP – 400 acres enrolled in MT, 375 acres on his property. Critical point, \$\$'s there but \$'s are being sent back to Washington, Modify programs to make it work.

Strong advocate of public ownership for hunter & angler access 2 programs have been great- Pittmann Robertson Act Dingle Act- Industries-hunters & anglers spend large amounts of money for management of wildlife & fisheries-working & working well Need to improve & expand on program-state wildlife agencies are strapped for funds-expand product or user based LAWCF funds-can't emphasize how important program is-needs to be expanded-support working landscapes & improving access

Private land conservation meets needs of wildlife, rivers, stream preservation Intersection of public/private efforts Help families who are land rich cash poor Trail programs-fewer opportunities Safe routes to schools effort-based on population-rural areas receive less funding-balance

Discussion Question 1

Bozeman, MT

(cont.)

- outdoor adventure, build partnerships, have \$'s to partner with others, reaching out to locals for partnerships, define different experiences that folks want to have.

Discussion Question 1

Charleston, SC

my focus on recreation – not to be too simplistic, but for people to reconnect to outdoors, we need access to it. I understand it's important to restrict to something. Thinks National forests are the most user friendly – they have fewest restrictions on use and still do a good job conserving resources. With Private Lands there's no avenue for them to open their lands for recreational users – too much fear of liability;

proponent of municipal and local parks; local parks are the low-hanging fruits – it's the introduction of most urban people to the outdoors – then as they get older they go to state and national parks. Municipalities have more flexibility because they're not tied to goals of fsw, etc.

Put learning stations around all the land they own' they have an old cabin so you can see how people lived in the 1800's and they have different agencies man the learning stations; lesson plans for schools; there is a liability issue for them though except they think permission forms take care of that; schools can only do one field trip a year and it's a challenge to get transportation; if we could get transportation for the kids, it would help teach the children – otherwise, they'll be taught by people that are maybe scared of the woods (ewww... snakes!). Can't get the kids to come out. They were overwhelmed that they could measure a tree. Sometimes simple logistics – coordination of the agencies to get them there.

Gullah need to connect people to their cultures. A cultural connection and history of an area are crucial to having people want to protect the area, otherwise they don't see how cultural resources and conservation and making a living can come together.

National Trust for Historic Preservation – What works is something combining historic/cultural preservation and conservation – looking at the broader picture that makes up the conservation landscape. Eating at a local business that's been there forever, or at someone's house;

Tall Timbers – game bird research facility and we have fire ecologist, too. TT is interested in managing for diversity. The overlap of interests really helps. A LO may approach us for quail, but when I go over the plan with them, they'll see there are other opportunities for income when they plant LLP; this makes them receptive to the multiple use; regular occurrence of fire brings in native plant species and wildlife community that's better suited for this area. Education is what's needed so we can get folks to see how all these elements work to create a healthy forest with multiple species (v how a forester might see things as board feet per acre).

one is a place charitable groups and others go to; another property, he charges for – please for hunting; because they pay for it, they feel responsibility – some ownership over it; people talk about how all these things should be free; I feel even if it's on public lands, you use it you pay. Then you remove the expectation that it's all for free. It costs to maintain it and do a good job of it.

American rivers. Blue ways and blue trails are a great way to connect the kids and people to the outdoors and to the cities and towns that are along the way.

Discussion Question 1

Charleston, SC

(cont.)

nationwide system of blue ways – great way to connect rural and urban areas; trails are already there – working with federal partners to develop a toolkit to help communities create their own blueways.

quality of life – trying to capture the things that people moved to area – look at wildlife values; habitat protection. People move here specifically to recreate & we're one of the only areas – it's a fine line

historical district is overlaid – zoning can allow protection of culture; for over 25 years she's done eco-tourism or cultural tourism; she calls it ecos-cultural tourism. Take the m to established buildings, etc. Where do we pull sweetgrass, where do we cast net; they have interaction with the people and don't have to go to a visitor's center; when you create people with the holistic view point, you get stewards; people are so affected they want to become stewards

forests valued like gasoline, coal; with renewed values then a lot of the small tree farmers would have incentives to keep it in trees rather than subdivide.

ecosystem services – no payback for the clean air, clean water – should be an additional funding source for those folks – we've been lucky that we've never been taxed for those amenities.

a lot of people will donate part of their land and get a tax credit

landowner workshops, meetings on weekends, evening; that's when we educate them about what easements are ;

There's a CRP program where people are paid to plant LLP – need to expand that program so it's attractive to LO's to plant LLP. Survival rates on LLP are good as loblolly or slash with containerized seedling. Give the LO's incentive to plant that tree versus another kind. LLP has as good a growth rate as loblolly on comparable soil. Thin CRP stands properly, gotta have fire – be able to burn. Quail needs it as well – that open, pine forested savannahs; help them out on the extra seedling costs, site prep , planning & offset the income they're losing & pine straw harvesting.

lo point of view RCWs love mature LLP; LLP are penalized because of the mature pine because of the RCW. If you get that there, you can't cut down the trees around the area – you've spent all that time to grow those trees and now you can't cut them and can't send their kids to school. There need to be incentives, not penalties to folks who do the LLP. They say they want to grow LLP but

Discussion Question 1

Charleston, SC

(cont.)

education – got to pay peple to be out there educating kids – teach 4, 5, and 6th graders. A cost-share prog thru FWS that match salaries of teachers and staffing the visitors center – at wildlife refuges, etc. education often isn't seen as the integral part of things and is the first thing cut. Also, when creative programs come along, they don't always match what the local prgm says. FS won't allow the land in because it says FS will always have to use the land that way, but the local prgm says because there are local tax dollars in there, they shouldn't -- Charleston County Greenbelt has a program. The piece they need has a clause that says it can revert back to the state/forest. I'm confused. \$26 million to leverage federal dollars. Definitely thinks there should be leveraging. Need to take where lessons have worked.

think about a local citizen task for ce in conjunction with this national one

The entry point for a lot of people is to introduce their children to the outdoors, conservation and outside environments. Then later in life they will visit National/State/County/Municipal Parks as they get older and have a respect for conservation practice.

donate land to use by municipality for tax credit.

Has two ways that has worked. One is a place for friends & family to enjoy – had worked for him. On another property he leases the land to hunters and since they pay to lease the land, they take care of the land and help to preserve and use conservation practices to enhance the land. They have a vested interest in the land since they pay. When the expectation is removed that everything is free, then people get the wrong idea because they tend to forget that someone is paying to provide the service.

What Works. Bring in school children and introduce them to the facility/land and history. Educate the children in conservation measures and practices. Later these will be the constituents and give support to conservation laws/regulations/practices in the future.

School children visit their land and they have placed learning station throughout the property about wildlife indigenous to the area, and an old cabin is also maintained during the tour. Different and diverse agencies come and man the stations providing education to the children as the tour and interact with the environment. The tour is set to follows the 4th grade curriculum. Classes can only take one field trip per year because of funding. We must teach children about the culture, environment, woods and what is safe. This provides a wonderful hands-on day to educate children. It is true that a picture is worth a thousand words and during the day the experiences provide many multi-sensory pictures to educate about habitat and environment. Need coordination of agencies to get the children to these events.

Forests should be evaluated the same as gas/coal, etc. The public must be educated to look at the forests as a renewal resource when other natural resources are not.

Discussion Question 1

Charleston, SC

(cont.)

Resources is the difference. Gamebird facility and fire ecologist. Goal is to manage diversity. Overlapping the interest of people helps. Landowners approaches us to increase quail population when the plan is established and reviewed, the landowner sees opportunities for income when they plant longleaf pines. This also increases the species in the wildlife community. Education is a tool and challenge to let people see how everything comes together to enhance a healthy forest.

Tax incentives work. Federal government can restore tax incentive. CRP programs work. Need to establish reenrollment for continuous CRP when CRP contracts expire to allow landowners to sign up for new contracts which will require the landowner to thin, burn and plant native grasses. Programs need to place a value on forestry land to mirror the row crop programs without a limit on it.

One pot of money to be divide - ½ cent tax deal – been great in Charleston Co. Money is divided between parks/recreation and two other agencies. Has funded these departments in the past several years for 3 counties.

Suggest landowner workshops – 3 times per year in different communities within the state/areas.

We have zoning laws locally to protect the culture and then there much be regulations to keep the environment and this ties back to protecting the culture. Eco-tourism – bio diversity – tours will visit a cultural community to established local businesses and observe how the business ties back to the culture and environment; such as sweet grass, throw shrimp nets. Connect them with people and allow them to experience the culture/environment connection through hands-on experiences. People remember when experiences make a difference in life on a given day.

Ecosystem service – no payback for the clean air, water – should be an additional funding source or a tax incentive. These things are not taxed – been lucky so far.

American Rivers - Blue ways and trails are a way to connect people and kids - to help them want to protect the waterways. When they enjoy the water this inspires them to want to protect conservation and resources.

nationwide system of blue ways. Great way to connect great outdoors to the water. Working on a tool for cities to use to utilize the blueways website. The trails and waterways are already there, need to publicize and get people to these locations

Working with partnerships on the Waaccamaw River through easements to preserve land along the river has been successful. The goal of the project is to involve children and families with the value of our natural resources on the river. Children have been able to benefit from learning conservation ethics and protecting our rivers. Children are reconnected to the outdoors by offering paddle trips and becoming engaged in identifying hardwoods as well. The value of the project is seeing a child's facial expression

Discussion Question 1

Charleston, SC

(cont.)

The Conservation Bank maintains the State's forest lands, protect and enhance significant historical and archeological sites, enhance public access for outdoor recreation and preserve uses such as hunting, fishing, and other types of outdoor recreation, and encourages cooperation and innovative partnerships among landowners, state agencies, municipalities, and non-profit organizations

NWTF has done a great job connecting state and federal agencies in restoring the turkey population as well as schools and coalition building. States have begun to understand the local culture. There has been more than 100,000 youth in the JAKES program which is dedicated to informing, educating, and involving North America's youth in the wildlife conservation and the wise stewardship of our natural resources. The success of the NWTF is "Listening" to what partners and private landowners say. Volunteers from local communities doing local fundraising to help accomplish local projects have been a successful

Clemson Extension has many youth and outdoor programs such as: H2O, hunter education classes, shooting sports, and Environmental Technicians to teach children specific outdoor activities and usually partner with local, state, and federal entities that are professionals in a specific area

The Penn Center is certified as a National Landmark Trust. The property also has worked with federal, state, and non-government agencies in order to refine and manage Longleaf Pine acres

County level funding has helped recreate and certify a national historic district as part of conservation efforts with of the Penn Center to connect local culture and get diversity into the faces working with minority landowners. It has given 10 acres of land to the county in order to build a library on the property and build walking trails. The library was built in order to help improve sustainable development among the community

stewardship contracting. Authorization set to expire in 3 years. We want to make sure that tool does not go away.

tax incentives for private land conservation. Chilling effect - enhanced benefits private tax incentives critical. Least expensive tool in the box. Low country open land trust. Leverages other funds. Greenbelt - w/ Chas. \$250/ac

partnerships between conservation agreements w/ NRCS

SCPRT LWCF funding. Public lands public access. Leverages funding that define who we are .

city of Columbia - support groups American Rivers. Blue water trails maps. Rivers are natural connections. LWCF. Greenways connecting and expanding 1st and 2nd order waterways Partnership w/ Congaree National Park

Discussion Question 1

Charleston, SC

(cont.)

Longleaf Project Nature based – early childhood education align state standards to align teaching materials. Nature based inquiry program at Univ. of SC. Getting teachers to influence natural curiosity. Capitalize Imperilled butterfly project The conservation bank – private /public partnerships. SC has a unique state/private model not seen in other states. CRP – program works great but funding is inconsistent part of the ethic .

Army Ft. Bragg – partnerships. Military, too. Funding sources. REPI – funds. DOD – WHIP and EQIP \$\$\$ Partnerships best way to get conservation work done. Focus funding where good partnerships working

Local communities – getting them involved. Ordinances developed locally. (Maine for ex) Open space/connectivity Developers (maine) had incentives to work with a local open space organization – trails, open space.

Wild scenic river.

Investment in a rural place, gives kids an incentive to stay interested. Nature trails

What is working are working forests – 2/3 of state is forested. 12.9mm acres. More forests and timber than we had in 1936. Why – because we have trees, which attract forest industry. Landowners grow trees to sell. Family forests that work and are sustainable and managed under BMP's. Once maintained, recreation opportunities follow. Private timber land around our communities. We are competing in a global mkt. PRO FORESTRY CLIMATE,, COST SHARE INCENTIVES, TAX INCENTIVES. Can continue . . . it all starts with the tree. Wood Magic, Project Learning Tree. There has to be financial incentives to continue.

Private property rights. Conservation easements – once landowners realized they could design them, pvt landowners starting trusting conservation easements. 22 land trust orgs in SC. Now landowners WANT to put easements on property. Federal programs have restrictions attached – suspicious of taking cost share \$\$ knowing there is fine print and an encumbrance may be involved. Don't over regulate private property rights.

Rx fire – reduce fuels around communities. Public needs to feel confident about use of fire on their private lands

LWCF – KEEP IT FUNDED.

WHIP

EQIP

(cont.)

Grants

different dimension of access- visual considerations of recreational opportunities

hopes America's Great Outdoors Initiative will facilitate the ability for us to network among ourselves better; encourage more holistic thinking; get us out of our comfort box and talk more about other opportunities beyond our special interest; improve collaboration among various agencies, organizations and interested parties; enhance coordination of messages about farms, forests, and ranches, wildlife, water, and recreation and sharing right messages as appropriate at the right time; stimulate contact among people with different expertise; and capture and communicate and build upon all the great stuff that is currently going on

need to start early in order to reach kids and make them ambassadors of interest in the great outdoors; following initial dialogue need to work at building relationships and trust; made reference to the declining number of hunters and evolving recreational interest

need a conservation, recreation, reconnecting with the outdoors strategy or plan developed and prepared with interests of appropriate people considered and included

inclusiveness of everyone, especially those you wouldn't normally think of, especially in urban communities; when you exclude partners, you really undermine your efforts; building relationships is important; some kids in Jacksonville may never have seen the ocean; need for parental encouragement, children's interest, opportunity, available resources, and access to come together and everyone might be more inclined to get involved in the outdoors; we need to provide resources, for example, a free day on the bus/metro system to get people out to the woods or the beach; or find out who in the neighborhood can take others to the outdoors; made reference to restrictions related to land ownership affecting national trail connectivity because of individual parcels of land being owned by different agencies

participates in programs to teach kids about nature; recruits older persons that serve as volunteer instructors to work with the kids; activities include camping on the National Forest and trips to the South Carolina Aquarium; public/private partnerships; support of grassroots organizations ; Air Force Earth Day event, networking with many partners to reach 5th graders; "Are you smarter than a fifth grader when it comes to the environment"

interest of older people/retirees participating in outdoor and environmental education activities; has partnered with REI on outdoor programs to reach inner city youth; and worked with local Parks and other agencies

introduced daughter to hunting and fishing; need outdoor activities that really connect people to the environment; need to reach kids early, connect them to the outdoor world, and have them participate in activities that allow them to get their hands dirty in real world experiences.

Discussion Question 1

Charleston, SC

(cont.)

holding tours of the Joseph Fields Farm, three different school and a senior citizens group has toured so far, somebody has to take on continuing the tradition of farming and educate kids where agricultural products come from, tours are designed to get children involved in farm-related activities, and educate them about importance of farms and agriculture. "A Day on the Farm" is an teaching tool that could be replicated elsewhere

NWTF conducts outreach to kids, women and the disabled, in partnership with State, federal, other public agencies and membership, volunteers, private corporations and private landowners to host 1500 events touching approximately 150,000 people on an annual basis

trail events, trail maintenance and construction can be environmental and outdoor education opportunities; kids remember areas where they have worked and return to visit; need to extend beyond individual events to include the community, such as Disney Give a Day get a Day program, a great incentive to encourage connection between participants and land stewardship and conservation

spoke to South Carolina's wild and scenic rivers, and their efforts and successes related to use of trees and appropriate buffers practices and maintaining swimmable waters, and available places with access to water-related recreation and associated opportunities for outdoor activities.

promotion of land integrity through partnerships between public ownerships that provides the core of the land base, buffered by adjoining and willing private landowners and acceptance by non-landowning community, is important to successful landscape conservation efforts such as the ACE Basin, and piecing together conservation areas sufficient to provide environmental, economic and social benefits, including recreation opportunities, and large enough to facilitate land management activities designed to maintain landscape viability

South Carolina very active in partnership efforts (5th in the nation)and aggressively uses tools such as acquisitions, easements and incentives to protect conservation/recreation areas such as the ACE Basin where partnership accomplishments have far exceeded the original vision and over 200,000 acres are being conserved and open to access

Charleston County currently owns land, partners with other public lands, and has funding to acquire or provide access to land; frequently brokers land deals with land trusts and non-profit organizations; generates revenue for green space; developing business model to help raise funds to enable other actions. Park Districts are often forgotten and not on the radar but can play a prominent role

National scenic trails are a huge partnership effort in Florida; State of Florida built into State statutes liability protection if private landowners wished to provide public access across their land; Bill in Congress (HR1912 Completing America's Great Scenic Trails) aims to provide tax credit for private lands providing public access for national scenic trails; there are examples of things that can be done to help encourage or provide incentives for private landowners to work toward these goals

Discussion Question 1

Charleston, SC

(cont.)

Florida also has a policy of no net loss of hunting/recreation lands, which enables the State to create increased land-base for recreation and conservation

conservation education materials to reach kids; promoting the kids book "Longleaf"; working with businesses to support employees getting out with family members in the outdoors; working with landowners to manage and restore longleaf pine; longleaf pine systems are a great venue for outdoor education with hundreds of species, some of which are threatened or endangered, found in such systems; and technology transfer activities to increase awareness and knowledge of natural resource managers and practitioners as to the values and benefits of longleaf pine

environmental education and literacy needs to begin in Pre-K and continue and integrated with curriculum throughout the education process

outreach to kids is great but don't forget the parents; need to educate parents as well; if parents not interested it will be difficult to recruit kids

hands on events initially get kids and others involved; but once exposed it is important that follow up activities take place to retain interest; access to such opportunities may be lacking; how are they going to recreate, reconnect with nature and cultivate that interest if there is no place locally available for them to do so; access, both public (Making Public Lands Public) and private (Voluntary Public Access) initiatives need to be encouraged and expanded to enhance ongoing outreach and incentives, especially to private landowners, to make more lands accessible; spoke to each affiliation must first support the mission of their own organization, but that there are many commonalities that we can all work together on, making reference to longleaf pine restoration and the newly signed agreement between USDA, USDI, and DOD; expressed concern over the continued loss of rural lands to development

fully fund Land and Water Conservation Fund; need enhanced tax incentives for landowners who hold land for conservation purposes and enhanced programs for private donation of land and resources; mitigate conflicting government policies especially between natural resource conservation and rural development; exercise due diligence help to eliminate conflicts over different agencies policies and programs and what activities are being supported within the same areas; difficulty for federal government to accept non-federal funds; local county has one-half cent tax initiative that lead to \$65 million to benefit land acquisition for the Francis Marion National Forest; federal government needs to resolve this issue because of the great potential for use of the funds raised

regional planning efforts such as the Southeast Regional Partnership for Planning and Sustainability (SERPPASS) offers opportunities for interested entities to keep in touch and help cement holistic approaches; some of our activities can be emotional moments that will stay with people for a long time; attendees at this listening session can be advocates for conservation and should go back home and network with colleagues to elevate the ideas discussed here, change the direction of things and reconnect people to the great outdoors

Discussion Question 1

Charleston, SC

(cont.)

People inherently attracted to water; use rivers to connect with the outdoors

Saltwater paddling program along the coastline – extending up the coast from Hatteras to Virginia; need more funding and resources to maximize recreation uses – most programs about staffing

Getting teachers out to show forest management; Wood Magic – hosted at 3 places in SC (4th grade classes); talk about forestry and conservation

Reforestation; CRP programs allowed him to jack up the amount of conservation; the programs work; use resource professionals from industry and different organizations; provides for educational tours of his property to show how the conservation tools work

Driving power or jobs; economic incentives; cash flow needed to do good things

Cultural and historic preservation; historic connection to the land

Federal gov't "Blue Trails Initiative" -- connecting people to the water; need similar program for connecting people to the land

Done research on landowner; most won't make money on the land but still have a connection to it; Nat'l survey on recreation and environment showing people's use of/connection to the land has been going on since the 1960's but in jeopardy because of fundin

Land has been in his family since the 1860's; still farm it; successful strategy is that it still be profitable; allows for his family to keep it – lease to hunt, timber production, corn, cotton, wheat crops; intensively manage; CRP soil banks, EQUP progr

Connect people to the land, outdoors by mingling with the arts; hold plays/performances outdoors

Take the lessons to the classroom and teach kids/build on what they have learned outdoors

Connection of the public to outdoors – In some places, TNC lands are the only lands that folks can access if they do not live near public lands; day-to-day maintenance of these areas an issue, though

Aging stands of longleaf attract RCW's – endangered species issues; environmental laws need to be incentive based, not penalty based; Safe Harbor a good thing for RCW but Estate Taxes another deterrent; Need to have better environmental education so that

Discussion Question 1

Used to be that you got perpetual tax benefits for gift of 30 years conservation easement – but no more. When the gov't took that away, they deterred a lot of people.

Money given to counties by the Fed. gov't to help with infrastructure placement – no one living there but have added infrastructure – now the development follows – not most efficient use of funds. When you continue to give the money to the counties for i

Placement of infrastructure not only encourages sprawl but costs the landowners – not a good way to achieve the goal of protecting 8 million acres of LLP; In some ways, septic systems (when properly installed and maintained) are better than running water

Access to funding and technical assistance

Friends group SEWEE (Southeastern Wildlife and Environmental Education Association, partners with agencies Major focus of education spend too much time inside, parents do not take them, field trips bring them along (parents) Earth Stewards program Kids love habitats, never been to beach, field trip gets them there to appreciate 4 entities only 2 professionals rely on volunteers

Project Learning Tree-how to think not what to think Increase attentiveness, thinking skills no child left inside, pass bill

Healthy markets, capitalism works non-industrial pvt landowners, tax codes need changes, help to owners keep Land prices/hard to keep in forests Conservation Reserve Program works

zone and tax accordingly, need to keep the viable level of keeping people there Public and private, can't purchase enough for public ownership

Extend ACE basin model, good relationships among partners, then they help do each other's work

Trust important cultural landscape also part of natural landscape bring in different values, partners

Demonstration sites Management plans qualify people for programs

Talent at the ground level National Wild Turkey Federation---build there

Hike through the hardwoods, kayak the swamps

School yard habitats

Discussion Question 1

Charleston, SC

(cont.)

Western focus on invasive species, need more money here—equitable distribution of funding

Active land trusts in South Carolina very helpful

First experience feedback. It helps us to understand what people want/need in an outdoor experience

Hands on experiences. It turns young people into nature lovers. Focus on middle/high school and elementary. Get them out planting trees, etc

Not all lands are public, a lot is private, but I think staff is important. For instance, Lowcountry Open Land Trust, they go out of their way to help folks who want easements, and they provide assistance, and helping people with land planning, and we are lucky to have a resource like this

Stable rural economy, and we are seeing how to connect urban and rural environments, so that urban folks understand the importance of a stable rural economy so they grasp how important this resource is to them, and therefore will support it

Provided an overview of the South Carolina Master Naturalist program which seeks to create a corps of citizen volunteers well trained in the fundamentals of natural history, nature interpretation and the interface of humans and nature. This is a regional extension program, and it's a very successful program which can help people manage their land. Using satellite/computer tech. to promote and providing on site experience and they can learn from each other. Master naturalist program is for non-landowners to teach them history of where they live, and this is 72 hours of instruction, and they learn about natural history, and wildlife/habitat/forest/fields, and they become engaged, and will hopefully volunteer at schools, and it's very successful. Graduates of all 3 programs pay back volunteer time

Litter programs, and a positive first experience for kids in the outdoors, so they appreciate it and want to take care of it. We have education in the schools where they learn about bugs/snakes, so when they get out there they will have a better understanding of what to expect, and not be scared of the outdoors b/c it's new to them

Rivers are plentiful in SC, blackwater, piedmont, and we want to encourage people to use these rivers appropriately and safely, and have knowledge about water trails, and this is a great tool to highlight natural/cultural features. In Columbia, we take kids down Congaree River and it's a first camping experience for many kids, and the city of Columbia is unique b/c of our river system, but like many other cities, folks live within miles of navigable rivers, and don't know it, but they are a great recreational resource. Need a blueways initiative on a national level. Water trails are cheap/cost effective/b/c the resource is there, they are connectable, they bridge the gap b/t urban and rural, and in SC you paddle for two days and then paddle through a national park (Congaree National Park). By providing this experience to kids, we can create a future generation of riverkeepers

Discussion Question 1

Charleston, SC

(cont.)

We are funded by half cent sales tax, and we listen to the public and this helps them become part of the process and they feel invested in it. County gov't didn't have the expertise, so we don't purchase them, but the proceeds go to the groups who do know about land, and the partnership helps the money go further, and b/c the funds are from a public source, we had to find a balance. Easements are cheaper, and donated by landowners, but b/c this is public land, we had to find a balance b/t public and private land protection.

Low country recreation is important and unique

The issues he picked up on during this discussion on What Works are: Connecting urban and rural; Corridors are important and serve as mechanism to get folks outdoors; A centralized database is essential to show these connections b/t private/public opportunities to get folks outdoors. And environmental education is important

Comments have been awesome. Glad you are taking notes and hope it comes to something

Loblolly is also good. It secured the land/soil. LEED certification encourages importation of wood.

Closing Comments: Listening Session was valuable. It shouldn't be conservation vs. industry. Great that all agencies are working together. We have the tools we must work cooperatively. Fix capital gains tax.

Free enterprise system with capitalism- we have to provide economic incentives to grow LL Gov't incentivizes people well

Adjust the mindset that the goal of restoration is preservation. Conservation of LL (wisely use) is not the same as preservation of LL (lock it up)

Healthy markets for trees make healthy forests-provide an economic incentive for forests

NIPL's control 80+% of the wood supply in the US South. Most of them are motivated by economics/few motivated by preservation. Conservation Reserve program (CRP) has provided incentives to plant LL. LL is the preferred species of SYP for pine straw production.

Lower taxes for forest landowners (that use little or no gov't services)...Greenbelt in FL Capital gains tax rates on timber, estate taxes..keep forests with forest owners. Avoid selling forest to pay taxes.

Sustainable Forestry is largest in N. America

Discussion Question 1

Chicago, IL

National Scenic and Historic Trails implement a goal of America's Great Outdoors by bringing the outdoors to people. They provide both close-to-home and long-distance healthy recreation opportunities.

100 communities of 50,000 or more people lie along the National Scenic and Historic Trails.

The National Historic Trails provide hundreds of opportunities to experience key events of our nation's history in the places they occurred, and to learn about the people who lived them.

National Historic Trails and National Scenic Trails interpret the natural, cultural, and historic resources along them in a variety of ways, including providing locations for school and other guided field trips.

There are more than 1100 National Recreation Trails, and there is at least one in each of the 50 states. They range from less than a mile to 485 miles and cross federal, state, municipal, and private lands.

Outdoor recreation supports over 6.5 million jobs and contributes \$750 billion annually to the U.S. Economy, according to the Outdoor Industry Foundation.

The National Trails System, if completed, would implement a goal of America's Great Outdoors by establishing connective corridors to ensure adequate distribution of habitat for vulnerable wildlife... -rest of comment is cut off in PDF document-

Beginning of comment is cut off in PDF document-... Scenic Trails and 114 miles of five National Historic Trails were already located in or along the boundary of wilderness areas. Another 660 miles of yet-to-be-completed trail are projected to cross wilderness areas. The scenic and Historic Trails also connect more than 300 state parks.

The National Trails System exists through complex public/private partnerships of shared responsibility involving Federal, state, and local agencies and non-profit Trail organizations. The National Trails System is the only major system of our public heritage that is managed in this innovative and inclusive way.

A hallmark of the National Trails System is people-based stewardship of significant national natural and cultural resources. Volunteers not paid professionals often take the lead in nearly all aspects of managing the trails: resource inventorying, mapping, database construction, planning, development, interpretation, and maintenance.

In 2009 alone, 27 non-profit Trail organizations contributed a total of \$11,746,238 to the National Trails System. From 1995 through 2009, National Scenic and Historic Trail organizations have invested cumulatively \$98,971,055 in our National Trails System.

Discussion Question 1

Chicago, IL

(cont.)

National Trails volunteers are committed. In 2009, the volunteers for the National Trails organizations contributed 907,435 hours, valued in excess of \$18.6 million. Since 1995, volunteers have donated over 9 million hours, valued at over \$154 million.

In 2009, nonprofits provided \$30.5 million in volunteer labor and dollars to help sustain National Scenic and Historic Trails. For 2010, Congress appropriated \$29 million to NPS, BLM, and USFS to administrate and manage these trails.

The Supreme Court of the United States in the landmark case of *Tennessee Valley Authority v. Hill*, 437 U.S. 153 (1978), relying on the legislative history, observed that the ESA as it was finally passed, represented the most comprehensive legislation for the preservation of endangered species ever enacted by any nation. The Court stated that one would be hard pressed to find a statutory provision whose terms were any plainer.... Its very words affirmatively command all federal agencies 'to insure that actions authorized, funded, or carried out by them do not jeopardize the continued existence' of an endangered species or result in the destruction or modification of habitat of such species.... Thus, the Court stated, examination of the language, history, and structure of the [ESA] indicated beyond doubt that Congress intended endangered species to be afforded the highest of priorities.

WPC is developing an outreach program to conservation organizations, educators, and environmental specialists, and communicates freely with them. This increases the pool of volunteers to achieve common goals.

WPC is responding to national concern for improved nutrition in inner cities by developing education in horticulture, diet, and health. Note: more support is needed for this program.

Keep doing what American does better than any other nation in the world and provide new, expanded and better protected parks, wildlife refuges, monuments, rivers and trails that will benefit us all.

US EPA Clean Water funding through State EPAs (319 funds) is providing \$7,348,000 to 20 projects across the state of Illinois in 2010 and will continue to be a critical funding source in implementing GIV on the site scale. Additional directives to State EPAs from US EPA are promoting green infrastructure funding. This, and other US EPA programs such as the Water Quality Scorecard and Municipal Handbooks provide much needed guidance for local jurisdictions and the State of Illinois, Wisconsin, Indiana and Michigan.

-Beginning of comment cut off in PDF- ...natural landscape and astounding biodiversity that provide close-to-home recreation opportunities readily accessible to the public.

-Beginning of comment is cut off in PDF- ...engages at-risk, low-income, out-of-school youth ages 16-24 by helping them obtain their GED and providing on-the-job training in construction and carpentry skills, and natural area restoration activities. YCC employs a full-time staff of dedicated professionals, some of who are serving as Americorps VISTA's.

Discussion Question 1

Chicago, IL

(cont.)

The best way to save entire forests, mountain ranges or rivers is through regional planning for conservation that connects large natural areas through partnerships across all levels of government, and with land, farm and historic trusts and other nonprofit groups and private landowners.

The Chicago Metropolitan Planning Agency for Planning (CMAP) has just completed the Go To 2040 Plan. Based upon three years of research, deliberation, and public input, the plan recommends action in four themes: Livable Communities, Regional Mobility, Human Capital, and Efficient Governance. By implementing Go To 2040, our region will: emphasize support for existing communities; encourage more compact, sustainable development patterns; increase the efficiency and transparency of government through better decision making; reduce congestion by emphasizing modernization (rather than expansion) of the current transportation system; give residents more options for getting around, including transit, walking, and bicycling; improve parks and preserve open space; and reduce consumption of energy and water. Federal support and funding for Metropolitan Planning Organizations and for implementation of regional planning efforts is vital to sustainable land use planning, especially in resource rich areas. Go To 2040 Plan implementation through HUD funding is particularly important now.

Invest in public land and support local entities

Protection of public lands, and the scenic and recreational amenities they provide, supports our local economies. In total, active outdoor recreation generates over \$4 billion in revenues annually to Illinois' economy and supports 30,000 jobs. The National Survey of Fishing, Hunting and Wildlife-associated Recreation data from 2006 showed 3.7 million people in Illinois and 4.1 million people in Wisconsin participated in fishing, hunting and wildlife watching contributing \$2.3 billion in expenditures in Illinois and \$3.7 billion in Wisconsin. In the Chicago region alone the birding community generates more than \$356 million for local economies.

Technology is something you can do when you are outside. How do use screen time to promote going outdoors and then cycle back to the screen.

Outdoor Bill of Rights Activities- Provided stations for the children and parents and hoped to plant seed to help parents realize they don't need to go far- bring in fishing staff to show parents and kids what fishing is like Dealing with olde

Programs that travel to schools/communities introducing outdoor activities

Clubs that get kids and parents into being outdoors, getting them to know what we could potentially lose, and showing them what the forest preserves really is.

Most enjoy- Monarch, coop for chickens and eggs and farmers market- helps community buy organic

National program run by youth in certain radius picked them up and took them out of the neighborhood. Program run by youth and organized by youth and paid for by government.

Drill team in the park. Dance team in the park. Large screen video games competitions in the park.

More programs like Eden's Place, where I love the monarch garden for butterflies, coops for raising chickens, and a farmers market to sell/buy organic food in the community.

Likes marketing idea- point out benefits of outdoor activities

Marketing is great idea- promote benefits of being outdoors. Hard facts. Give kids a good reason to go outdoors.

SCA Friends of forest preserve Get excited about the outdoors, making outdoors appeal to kids. Share stories/great experiences with kids- get anyone who has had good experiences share this so that kids can have a better attitude about outdoors.

Continue education and awareness on a local level/ supporting grassroots efforts, letting them educate. Marketing- in this country we can market anything- use the media to promote getting outdoors, and showing the benefits of being outdoors. Youth are s

Getting kids something in return; giving them life skills in return

Getting parents and families involved; need to get families engaged to get kids outdoors.

Let this message go home, and get parents and children involved. Get the message in the community. People need to start thinking out others, and not themselves. Give kids something that will be fun outside, other kids will see that there are opportunities

What people really want to do is have fun and going outside is fun. Need to propagate that idea and model that going outside is fun. Implement these programs in preschools, outdoors learning about the outdoors. Need to start being creative and move and

Discussion Question 1

Chicago, IL

(cont.)

A lot of people can't get to programs; why don't we send programs to schools/communities. Bring animals to schools and show kids what they can see if they go outdoors.

Message needs to start at home and get the parents involved. Have parents kick kids off facebook and get outdoors. Safety awareness; community needs to take heed and invest in youth and invest in future. No one will make a change if kids aren't encoura

Have organizations at a local level that can provide opportunities, and access to funds/resources. Transportation is an important issue, getting kids to places. Use media to create funds. Create something global on a marketing scheme to get funds.

Adults need to recognize that they need to use social media to get kids involved.

The outdoors is always going to be there, and we need to take the initiative to protect it, need to see what's out there, how mankind messed it up, and be out there and have fun.

Would like to change the perception of how youth view outdoors. Chicago has 68,000 acres of forest preserve, and see it as a place to recreate, want to see that perception go from recreation to preservation and conservation. Need to be in different lang

Woods and animals Where is outdoors? Springfield, IL

Trees bugs, flowers

Fresh air , spring, having fun

I'm exploring, science, wildlife and a lot of opportunity outdoors.

Forest and mountains but not really a camper person or nothing like that.

Place to get out and have fun with friends outside at the lake or wherever you are at.

Nicer environment trees, fresh air, birds chirping; going to beach, Where-Lake Mi- was fun , jet ski

Grass and at the park and basketball court. Fun and playing.

Chicago, IL

(cont.)

Partnerships at local level with after school programs provide outdoor experience for many people. Changing family structures with two working parents there is a need for trusted caretakers (YMCA, after school)
Supports Moving Outdoors and Nature Act legi

Learned that keeping things simple is very important. Groups go to campground property – Joliet housing authority. Kids had never had experiences with outdoors. We had activities and games planned, but kids just wanted to look at acorns and spiders. Don't

Many organizations would like to partner with school systems – make it part of the science program. Field trips are important. They could host and sponsor field trips for schools via money and time.

Its all about partnerships.

In the disadvantaged neighborhoods where my Community Greening program works, it's often not safe to be outdoors, especially for children in unstructured situations. We support situations that bring children and adults together outdoors -- community gardens do this.

As a child my public schools took us on overnight, multi-day camping trips to wilderness areas and day trips to local parks and ponds (where we observed animal life and tested water quality). These kinds of programs really help connect people to nature.

Maybe if people who have resources and the like could come to CS and other university colleges regularly to talk about how to get funding, it would help.

NOAA Community Restoration Program itself and its various regranting and other non-government organization administered partnerships have been potent factors not only in restoring coastal river system and benefiting diadromous fish passage, but in developing environmental stewards among the many volunteers involved in their programs. The impetus for community-driven, small dam and river barrier removal provided by the Open Rivers Initiative lacks only depth and significant, secure and continued funding.

Ensuring adequate stream flows that support fish and other aquatic wildlife is a prerequisite for the health of natural ecosystems. Streams and rivers are the arteries of our natural landscapes.

Discussion Question 1

Chicago, IL

(cont.)

National Fish Habitat Conservation Act (NAHA) is intended to broaden, deepen, and assure federal support for the National Fish Habitat Action Plan (NFHAP) which is the widely supported national coalition of concerned community groups, non-profit organizations, trade associations, local watershed groups, Native American tribes and state and federal agencies comprehensively and strategically addressing the continuing and alarming downward trend in the health of our nation's fish populations resulting from loss in the amount and quality of our country's most important freshwater, estuarine and marine habitats. Trout Unlimited has helped drive the introduction of the Act, the Plan and several of the regional implementation partnerships. The organization has done so because the dramatic decline in the health of the nation's fish populations over the past twenty plus years--leaving some 700 species in an imperiled state--demand urgent, landscape scale attention.

In this region, the Driftless Area Restoration Effort (DARE) partnership operates in the unglaciated areas of Minnesota, Iowa, Wisconsin and Illinois near their common borders on the Mississippi River. For the past five year, under the rubric of TUDARE, Trout Unlimited has mobilized chapters in the four state area to undertake projects with willing landowners--many of whom, as a result, grant recreational access to their properties--to remediate the wholesale sedimentation problems found in this area.

Today TUDARE--just one of the entities implementing DARE projects--annually counts its restored stream lengths in tens of miles. Trout Unlimited see similar progress and similar constituency building successes in other of the regional NFHAP implementation partnerships and considers it to be a model for intelligent, strategic recovery effort in the Twenty-first Century.

Farm Bill funding has become, especially in that legislation's 2008 iteration, a much more active engine of restorative conservation activities. Funding through the Environmental Quality Incentives Program and the Wildlife Habitat Incentive Program, for example, is now a major catalyst uniting the resources of Trout Unlimited Chapters and those of willing landowners in stream habitat restoration projects foestered by the above mentioned DARE Partnership of the National Fish Habitat Action Plan.

Keep doing what you are doing the Chicago Wilderness region

Grand Victoria Foundation launched Vital Lands Illinois -- a statewide collaboration of nonprofit conservation organizations to catalyze land conservation and to provide space for innovation and new means of public engagement. As a private founder, we have invested more than \$6.5 million in land conservation in the first year.

John Rogner described a CW Green Infrastructure Vision that includes 370,000 in the public trust. These lands provide ecological services, support species of regional and global significance. Despite those successes, natural resource managers have learned that you can't put a fence around and protect lands -- they need to be managed. Managed lands better respond to challenges presented by climate change.

Discussion Question 1

Chicago, IL

(cont.)

I am the president of a NW Indiana-based paddling association that is located in the heart of the Indiana Dunes National Lakeshore. We have started in 2008 with 50 members and grown past 300 in less than 1.5 years. Our goal has been to make Northwest Indiana a premier destination for paddling throughout the country. Our group has worked closely with the NPS INDU and the RTCA on developing water trails, paddler education (especially with youth groups), blueways, stewardship, and organizing the NW Indiana paddling community. Since forming, we have developed several community based water rails and are working on nationally designed water trails on Lake Michigan and the Little Calumet River Water Trail.

By connecting conservation lands already protected by the McHenry County Conservation District and the DNRs in both Illinois and Wisconsin, refuge lands would provide strategic landscape linkages necessary to provide wildlife migration corridors. Recognizing the agricultural heritage of the area, integrating federal programs and policies to protect agricultural land which promote local food production and implement the Federal Farm and Ranchlands protection program will be an asset to this proposal.

The Hackmatack refuge will provide educational experiences to children from underserved populations from the urban core as well as Latino populations that represent 30 to 50% of the school districts in Harvard and Woodstock. Unique collaborations with social service agencies, recreation organizations and outdoor businesses are already in place to facilitate development of curriculum, outdoor classroom resources and field trips.

Secondly, people connect with natural areas and open space through recreation. The refuge area sits at a cross roads of an expansive trail network in both states. Recreation such as hunting and fishing and wildlife viewing contributes billions of dollars in expenditures benefitting local economies. Canoeing, kayaking, bicycling, horseback riding, snowmobiling, hiking and picnicking all take place currently on protected land within the refuge study area. Raising the stature of the area to national significance through a refuge designation will increase these recreation activities benefiting the health and wellness of the participants.

Third, the potential refuge can be an economic driver to gateway communities. These communities can create a new vision to grow that integrates natural resource protection and treats it as an amenity. The refuge will help these communities to attract business and economic development while maintaining their unique environment, heritage, culture and identity.

Overall the potential Hackmatack National Wildlife Refuge is "the opportunity many of us have been waiting for" to protect important biodiversity and habitat while providing a significant protected landscape to truly address connecting people from urban, and suburban areas to nature, within an hours drive.(Hopefully also eventually by train.) The federal government can make a significant statement in support of health, education, habitat protection and helping people value and understand the importance of nature by moving forward with a designation and funding appropriation to establish the Hackmatack National Wildlife Refuge.

Discussion Question 1

Chicago, IL

(cont.)

Land and Water Conservation Fund (LWCF) has been a potent factor in both protecting high value aquatic systems nationally and regionally and in securing places where Americans may freely reconnect with their natural heritage. In this region, for example, it has supported the protection of Indiana Dunes National Lakeshore, Picture Rocks National Lakeshore, Sleeping Bear Dunes National Lakeshore, Apostle Islands National Lakeshore, St. Croix and Lower St. Croix National Scenic Rivers, Voyageurs National Park, and Minnesota Valley National Wildlife Refuge and Mississippi National River and Recreation Area. It has benefited a multitude of Illinois outdoor recreation facilities as well, among them Illinois Beach State Park. However, it could be a much more potent tool for protecting special places.

Wilderness and other protective designation for important federal lands has been an essential component of securing the integrity of high value aquatic ecosystems in this country.

Enactment of protective designations has been hindered and sometimes stymied by divisive battles among the users of federal land. Many have recognized that, where such controversies rage, local efforts to reach compromise plans are valuable tools to secure more designated protected areas. The effort to end Montana's twenty-seven year hiatus in new Wilderness designations through the Forest Jobs and Recreation Act is a case in point.

Roadless areas on national forests are an important component of protective designation.

Roadless areas are a documented factor in the preservation of native species. Indeed, the vast majority of remaining populations of native trout are found on public lands that have remained free from roads, including our wilderness areas, national parks, and inventoried National Forest roadless areas.

The evidence of habitat recovery resulting from Remediation Initiative projects -- often done in conjunction with volunteers reconnecting with nature in the process of providing jobs for local residents -- is widespread and incontrovertible. Native Brook Trout have benefited from improved passage and improved water quality in multiple streams in Minnesota, Wisconsin, and Michigan.

Youth education is a priority for Trout Unlimited. The organization is as cognizant of the implications for childhood health and development of the direct experience of the natural world as it is of the implications of those experiences for the development of future generation of environmental stewards. The organization understands the significance of just getting outside or of experiencing the occasional opportunity to visit, perhaps even learn something about, a more natural venue.

Discussion Question 1

Chicago, IL

(cont.)

Trout Unlimited is more oriented, however, to providing skills that just may keep youth going back to nature and in providing them with a richer appreciation of natural processes. In Illinois, Trout Unlimited members spend full days teaching fly fishing merit badge classes to a group of Boy Scouts. They sponsor Trout in the classroom projects in which students learn about the juvenile life history phases of fish and the habitat necessary to support them as they hatch and raise those fish before releasing them into the natural world. Trout Unlimited also provides older Illinois youth with the opportunity to attend a week-long camp for an intensive introduction to streams, their aquatic inhabitants, and their condition, even as those young men and women first learn, then practice fly fishing skills. The first of these activities taxes our volunteer capacity, the second taxes our budget, and the third taxes our ability to recruit.

Trout Unlimited chapters and councils around the country offer substantially the same suite of programs and other conservation and environmental groups proffer more or less similar opportunities. Those facts encourage the Illinois Council to suggest three federal agency initiatives for assistance to the grassroots effort to reconnect America's youth to their natural heritage. As Chris Wood, Trout Unlimited's President has observed, the staff of natural resource agencies constitute a tremendous repository of conservation skills.

Chicago's parks, playgrounds, lakefront park system and forest preserves provide spaces for conservation and recreation purposes, where Chicagoans exercise and play for health and fitness

We know that physical activity is an important factor in healthy children and adults. Studies have shown where there are neighborhood parks and trails in close proximity, residents increase their frequency of exercise. Conversely, the same studies show that where there are no parks, residents often go without exercise. In dense urban environments, particularly in low income neighborhoods, parks, playgrounds, greenways and trails are often the only spaces for children and adults to engage in play and fitness activities. In these low-income communities, people do not have access to nor can afford health club memberships.

Unlike many conservation partnerships around the country where federal agencies intentionally and perhaps necessarily stay behind the scenes, federal agencies have been front and center in Chicago Wilderness since its inception. This has been of great benefit to both the federal agencies and to the greater partnership. In the Chicago region, federal agencies have fulfilled several roles and these have been critical to our mutual success. These include roles as landowner, as deliverers of federal programs, and as organizational leaders.

There is great opportunity for leveraging dollars in urban centers and Chicago is no exception. Federal funds have been multiplied five-fold through Chicago Wilderness. Federal agencies have reaped important benefits in return. They have effective outlets for delivering existing programs. In return they get program focus through initiatives like Chicago Wilderness. They are also able to work across federal agencies through common initiatives. And they help develop partnership models that can be exported around the country.

Use light pollution data in studies of nature and wildlife

Discussion Question 1

Chicago, IL

(cont.)

Protect and preserve the right to starlight

Limit the use of lighting that contributes to light pollution

Protect the night sky over national parks

Increase public awareness of light pollution issues

Government and public-owned properties should not contribute to skyglow

Every community should register Star Parks with the Global Star Park Network

It's critical to start where people are when introducing new ideas and going outside can be a new idea to city dwellers. Please don't assume children growing up in Chicago's low income communities have had the same experiences you have had. Find out first what they want, need, and care about and tailor programs to move them from an indoor lifestyle to an outdoor lifestyle.

Place-based education, or the use of local community and environment as the starting point for teaching and learning give students opportunities to get engaged in problem solving in their own backyards through both formal and non-formal education, fund trips (via schools) to natural areas, integrate effective curricula and create meaningful experiences. Repeat it all again kids need multiple opportunities to conduct stewardship in order to develop a sense of ownership for a place.

What I believe is an effective strategy for people to reconnect with the environment is to get the people engaged. For example, my principal planned a surprise visit to the forest preserve. At first, nobody was doing anything but as soon as they saw other people doing it, they got engaged too.

Channeling federal funds to state through EPA, ACE, and USFWS; programs like OSLAD, trail programs and federal fines being channeled back to local projects was effective.

Building multi-use trails through natural areas, community garden plots, pre-school nature education, volunteer projects to help restore natural areas, along with grant funding on a cost-sharing basis.

Volunteer opportunities: we have community gardens. A project started in 2008. Networking with Greentech resources and volunteers have been our biggest help. Partnerships with (non-green) city/state programs have been less than inspirational or no help at all.

Discussion Question 1

Chicago, IL

(cont.)

Hands-on outdoor learning opportunities for kids and adults alike.

With 80% of our population in urban centers, city parks provide access to city citizens. Chicago parks have rich natural areas and creative programs bring people to parks to discover nature.

Leave No Child Inside Outdoor Bill of Rights--Play in the mud, camp under the stars, etc.

Family Adventure Day event based on the Bill of Rights for parents with kids under 6

Adventure Day Camp at Northerly Island--First ever nature camp in downtown Chicago

Urban Campers, Under Illinois Skies, and Nature Oasis--Teaching the basics of camping--a once in a lifetime opportunity to camp in parks

Funding small groups

What is making a difference for the biodiversity of the nation? I say people. Take the success of Chicago Wilderness, Kansas City Wilds and Houston Wilderness. These efforts work because of people. As a land manager and a regional planner with Chicago Wilderness, I speak from personal experience that several factors are issues for biodiversity in this region and they are, in no particular order: invasive species, climate change, the need to acquire more large core preserves, research of restoration efforts, and the inclusion of children and inner city residents.

Family fun outdoors events

I would like to challenge you to focus on a broader landscape level, and transition your efforts on protecting ecosystems and the processes and functions that occur within them. This strategy will help develop resiliency and make the places we care about better able to withstand climate change and other pressures we place upon them.

Here in Illinois, I would like to note two such projects where The Nature Conservancy is working with private landowners and governmental agencies at the federal, state and local levels which demonstrate our commitment to the specific recommendations I will submit in this listening session.

Our work in the Mackinaw River in central Illinois aims to frame conservation science at the watershed scale, protecting biodiversity and clean water supplies. We do this by providing extensive outreach to private landowners and promoting our science based models for improving water quality in a large agricultural landscape.

Discussion Question 1

Chicago, IL

(cont.)

The Emiquon Preserve along the Illinois River in west-central Illinois is focused on restoring floodplains to improve the health of our rivers for people and nature. Working with the Army Corps of Engineers, and the US Fish and Wildlife Service, The Nature Conservancy has been able to establish collaboration on a large-scale project as a private landowner, working tandem with federal partners.

Contribution of \$1 million to date to support Chicago Wilderness initiatives.

Primary Sponsor of the biennial Chicago Wilderness Congress, the 2008 Chicago Wilderness Benefit, and the 2009 Green Infrastructure training program and reception.

Major sponsor of The Conservation Foundation's 2009 & 2010 Beyond the Basics conference series.

Three Day of Service volunteer events have been conducted in 2009 & 2010 at a number of Chicago Wilderness member forest preserve districts and parks within the region, attracting several hundred participants, including several high school groups, to each event.

The first Internship relationship was developed with the University of Chicago Metcalf Fellowship beginning in summer 2010, with the intent to do the same with other Chicago Wilderness academic members to attract and facilitate quality internships for members.

The Corporate Council funded the establishment of the Teaching Academy to aid area high school teachers in teaching regional ecology.

Members serve on the Chicago Wilderness Congress Planning Committee to ensure the inclusion of topics of corporate interest in the November 4th Congress, for which the Council is again the primary sponsor.

Through the efforts of the new officer position, Liaison to Chicago Wilderness, members are kept up to date on activities and opportunities for participation on Chicago Wilderness committees and task forces and Council members are becoming more and more involved.

Presentations at Corporate Council meetings of topics which contribute to the conservation of biodiversity in the region, address an important need or action as stated in the Biodiversity Recovery Plan, and show innovation, member collaboration and transferability of information. Examples in 2010 are the CenterPoint Intermodel Project, Joliet, Marquette Park Greenway, Indiana Dunes, Prairie Crossing Charter School, Grayslake, and the Bartlett Ravine, Fort Sheridan.

Discussion Question 1

Chicago, IL

(cont.)

The Forest Preserve District of DuPage County was established in the spring of 1915 with a mission to "acquire and hold lands containing forests, prairies, wetlands, and associated plant communities or lands capable of being restored to such natural conditions for the purpose of protecting and preserving the flora, fauna and scenic beauty for the education, pleasure and recreation of its citizens." Today, roughly 12 percent of DuPage County's land is preserved at over 60 forest preserves, which greet more than 4 million visitors annually. The District's president, D. "Dewey" Pierotti Jr., and its Board of Commissioners continue to be guided by the belief in the preservation of open space and the availability of lands for outdoor education and recreation for the county's nearly one million residents. Many Forest Preserve District of DuPage County projects and programs receive funding in whole or in part by grants and are backed by the District's AAA bond rating and a corps of volunteers, which provides over \$2 million in in-kind services each year.

Over the course of its 95-year history, the Forest Preserve District has learned the importance of securing lands along waterways and was the first open-space organization in Illinois to implement plans to protect DuPage County's streams and rivers. Forest Preserve District acquisitions have helped to buffer and protect watersheds, which provide habitat, recreational access and flood-water management. Since the late 1980s, when the government distributed the President's Commission on the Americans Outdoors report, the Forest Preserve District has also understood the value of a well-developed trail system, establishing over 145 miles, which hundreds of thousands of visitors use annually for fitness, relaxation, social gatherings and nature observation.

The Washington Park Conservancy (WPC) involves teens and young adults in conservation and park restoration programs, which helps ensure a new generation of park stewards and environmental leaders

Through the Calumet Stewardship Initiative (CSI) network our 39 environmental, cultural, and civic organizations along the 50 or so miles of the Calumet River Watershed in Northwest Indiana and Chicago's Southeast Side, share the membership list, a hard copy newsletter printed 3 times a year, an up-to-date web site and mingle with each other at least twice a year at semi-annual meetings.

These means allow members at no cost to them to: publicize their events; become aware of events sponsored by other member organizations; collaborate with other members on projects on common interest, such as the biennial Calumet Summits, and the Association for the Wolf Lake Initiative fests among others; Participate in relevant projects beyond the CSI sphere, such as the 2009 Burnham Plan Centennial, the 2009 Dunes Bio-Blitz sponsored by National Geographic, the 2010 Chicago Wilderness Leave No Child Inside program, and the annual 10th Ward Green Summits. In addition, our Education team offers area schools a free hands-on 3rd grade through 12th grade environmental curriculum, which we hope to extend to include pre-K through college.

Collectively, environmental members provide free structured activities for volunteers at various fantastically beautiful natural and restored sites in the Calumet throughout the year. Cultural and civic members organizations preserve the historical and industrial past and plan for a sustainable future for the Calumet region.

Discussion Question 1

Chicago, IL

(cont.)

The Greencorps Chicago-Calumet program is funded through a US Forest Service grant given to the Chicago Department of Environment. My crew members and I began three months ago learning ecological restoration techniques, chainsaw operation and safety, seed collection, plant ID, regional ecology, and prescription burn training. We have been restoring sections of local forest preserves and Chicago Park District sites. I think that the work that we do is very important to us and the Calumet region, we have learned so much about the history of the community, the local prairies and wetlands.

After our 19 months training we would love to have an opportunity to work in the green field by educating the community on restoration practices and continuing to preserve our local parks, forest preserves, and wetlands. In our opinion, it is imperative that future generations are given the knowledge it takes to better their immediate environment so that they can then go on to help the environment on a national level and only with the continuing of program such as Green Corps Calumet will this be possible.

The best way to reconnect the community to conservation and recreation is by introducing it to the youth. Children and young adults are seen as naïve, but are very influential. Youth influence over youth and they also influence their family to practice environmentally friendly activities.

Also, being outdoors and enjoying nature by going on walks is a way to help people realize the everyday harm that is created from others' ignorance. Others' passion and enthusiasm helps others believe that they can also make a change for the better.

Local implementation in urban settings is a necessary 21st strategy for conservation action.

Urban settings have so many important partners, and the Chicago Wilderness alliance has shown capacity to engage and inform all partners

The majority of the U.S. population is urban; need to engage people where they are

Reinvestment in impacted sites (ex: vacant land, brownfields) as open space including parks, community gardens and urban agriculture protects

Place-based education, personal fitness, public health and local examples make nature relevant for individuals

Social pressure working through trusted agencies(churches, schools, etc.) engages constituents/participants more effectively than government agencies

Creating open space plans that incorporate the voice and role of members of the local community. Recognizing and valuing cultural diversity, incorporating history, art and local needs into park planning and implementation.

Discussion Question 1

Chicago, IL

(cont.)

Chicago Wilderness represents the best practice for regional coalitions focused on biodiversity and is being replicated across the country.

The model of an alliance of organizations working collaboratively across organizational boundaries.

Setting regional priorities for scientific research, restoration, and public outreach and engagement

Large scale land conservation, both in single sites (example: Midewin National Tallgrass Prairie) and as networks of natural areas (example: the Calumet region and proposed Hackmatack National Wildlife Refuge)

Federal recognition of Green Infrastructure concept as a conservation tool

U.S. FWS initiatives--Landscape Conservation Cooperatives (LCC) and Strategic Habitat Conservation (SHC)

U.S. EPA leadership and tools on green infrastructure such as the Water Quality Scorecard and municipal handbooks

Federal leadership in development of State Wildlife Action Plans

The Chicago Wilderness Green Infrastructure Vision (GIV) has set the stage to begin comprehensive work in our metro region

The Chicago Wilderness Sustainability Team and Green Infrastructure Task force; Chicago Wilderness funding for SWAT--Sustainable Watershed Action Team

Chicago Metropolitan Agency for Planning's work on its GoTo 2040 Plan, which embraces the green infrastructure concept for the area's future

Illinois EPA 319 funding for site-based best management practices

Illinois EPA funding for watershed planning

1.3 Billion in passed referenda funding the last 15 years through public self-tax for open space

Discussion Question 1

Chicago, IL

(cont.)

Dedication of the local forest preserve districts and other land-owning agencies in assembling landscapes-scale sites

Adaptive management of landscapes is a vital tool to address climate change.

U.S FWS New Initiatives--Landscape Conservation Cooperatives and Strategic Habitat Conservation as possible solutions

State Wildlife Action Plans

The Leave No Child Inside efforts of Chicago Wilderness engage youth and their caregivers in nature, which benefits children's health and fosters the next generation of caring stewards of local nature.

Identify local barriers to outdoor recreation. Focusing on local-level obstacles allows us to devise actions that meet specific needs and make an immediate difference in the lives of families

Offering programs that build up a basic level of comfort among caregivers with taking their children outside.

Enabling parents, teachers, youth ministers, and other trusted figures in the community to bring children to outdoor events in a safe environment

Providing resources that a broad range of organizations can use to raise awareness of the benefits of time spent in nature to children's healthy development. Devising marketing campaigns that target specific segments of the population can be a key strategy

Engaging youth carries the message of nature and well-being to parents and care-givers

Works closely with CAPS and Beat leaders to engage in positive loitering and the formation of walking clubs to clean up surrounding communities. Encourages communities to form a walking club to get more people outside to enjoy the outdoors.

Advocates for innovative use of technology to bring kids and teens outdoors interactively across all generations. It is possible to connect youth to outdoors through encourage integration of parks and technology to improve the health of teens and youth

Intergenerational approach needed to connect the elderly and youth demographics. Create a bond to explore the outdoors, fishing, and recreation and also teach life lessons. Also work on opportunities for team building and problem solving for youth with disabilities like ADD.

Discussion Question 1

Chicago, IL

(cont.)

Coordinates a train-the-trainer program that goes out into diverse communities to train pediatric health care providers to prescribe nature to their patients. Also provides informational brochures to patients on green spaces to enjoy in their area.

Building a Healthier Chicago

Nutrition in inner city

Partner with dr Galloway

Consider safety in underprivileged area – day to day safety is #1 priority

Large open areas/buildings to move freely in urban areas

New innovative ideas need to be promoted more to inner cities –

Working with police dept in inner cities

Opportunity to take advantage of the current schools – as well as not used land – build small parks in communities

Utilize current resources.

Supports no child left inside act – input environmental education in pre k-12 curriculum

Connect youth to nature – continue obama’s initiative

Educate the children on the benefits of outside resources to aid in their development.

Represents 70 million Americans.

Open streets for physical activity for people of all ages

Open streets- modeled off Columbia

Close streets on Sundays to get physically active – million people in Columbia

Part of Chicago culture every 5 yrs

Mix communities share network of street out in front

Invite leaders in US to DC to be a leader in open streets

Utilize community service assignments & projects at parks/forests; Agencies need to find a way to incorporate partnerships into Position Descriptions for all employees to foster volunteerism and partnerships to accomplish goals of parks & forests

Age appropriate learning 7-10 free exploration

Use more social media to reach kids. Kids are not apathetic, but are ignorant about outdoors, Need to use technology to get information and tell story. Loss of storytelling skills, use social media to make issues relevant

Don't need a big space to connect with nature. Have a forest children's garden, or theme gardens that connect kids to their environment. Connections small ideas and scale up to big picture.

Need to bring outdoors to people. Use student volunteers & partnership with girls scouts to simulate an environmental community locally, then can come to the real resource, i.e National Park/Forest. Use cell phones to take picture of resource in the outdoors

Discussion Question 1

Chicago, IL

(cont.)

Partnerships @ local level, provide funding for trusted programs like Corps Network, YMCA. New legislation moving toward outdoor education more funding with partners at state & local level. Funding- 27% increase of science scores with kids have outdoor education. More fed community come together on research

Found keep thing simple works, not so important to schedule formal activities, let them appreciate outdoors, let kids get dirty, experiential learning. Teach importance to giving back to community.

Recognized that membership & support of youth in conservation is low, try to get youth interested in conservation, exposure at young age. Developed program for schools called Project Webfoot, teachers interested, failed due to cost & funding. Conservation needs to be a part of school curriculum. Need to become partners with school systems, conservation organizations & state & Fed need to s

As a child I was exposed to the outdoors through public school athletics. Luckily for me, I could run right in my neighborhood. Safety was a major factor for that. We need to address a proximity barrier. Or even the psychological barrier of thinking that

The key to anything is knowledge and education. I was educated in healthy foods and health. They took out health classes in schools and they need need to go back. And gym class.

Build trails that are shared-use and sustainable. The tension between conservation and allowing uses. Recreation falls into the category of high use. There is a need for science to look at true impacts of recreation on our natural resources.

Physician for 40+ years, and has faced air quality issues the whole time. Everyone should be able to walk 3 miles (roundtrip) for school or work, shopping, or to a bus stop. Do not get in the car when you are going less than 3 miles. They take kids on h

mother of 4 kids, will do outdoor activities with her children at home: COFI/Power-Pac

Discussion Question 1

Chicago, IL

(cont.)

I am Director of the Illinois River Road National Scenic Byway, Designated by the Federal Highway Administration as one of seven in Illinois and one in a collection of 150 of America's Byways throughout the US. These treasured roadways, deserve...We tend to think of Byways as the offspring of the 20th century conservation effort to manage and protect National Forests and Grasslands, National Parks, National Wildlife Refuges, and BLM lands. Byways are the "doorways" to experiences, connecting people...Byways remarkably combine recreation, tourism and quality of life with an emphasis on experiencing each place for its unique intrinsic qualities. While Byways work to attract and educate visitors, Byways also strive to reach those who live in the region... We recommend: 1. A greater emphasis needs to be placed on experience than on place. Outstanding outdoor experiences can be found anywhere if the intrinsic qualities, including history and culture, are well-protected and these stories are well told. 2. Include America's Byways in the federal resource that connect Americans to the outdoorsy. These are local grassroots public and non-profit organizations that rare deeply connected to the people, local, state, and federal governmental agencies. 3. Place the emphasis on "America's Great outdoors" that not only include the treasured outdoor assets that are in federal and state ownership but also those that are in the communities where American's live and receive the most frequent daily use. 4. Much of any outdoor experience is in the journey to and from the destination. Involve the transportation, tourism and attractions sectors in the project. Encourage the road less traveled and remember= the journey is part of the destination. 5. Please keep us involved. Contact us at www.Nsbfoundation.com

Park service program. Rivers and trails conservation assistance works. This program connects with communities and smaller towns to bring park service to the people where you don't have a lot of federal public land and then educate those people about the nps lands further away but still in the area. We are attempting the L. Michigan water trail which will provide safe stopping off points for kayakers and canoeists to circumnavigte L. Michigan. This is a community driven process.

Insert environmental education into K-12 regular curriculum

The 100K + schools in the nation is the prime interface between children and the outdoors. The edible schoolyard in Berkely is the kind of activity that introdces children to the living ecosystem.

Got kids w diabetes in the parks via partnership w Kaiser, 2nd year couldn't get enough kids. Need better communication with health care providers.

Integrated their project into the smaller and medium size communities, went to city boards, had communities volunteer and construct trails, and now working to connect these communities together.

Provide leadership training. Job programs to train and introduce workers to environmental field. Diverse folks participate in this, but need funding. Foundations like to start these programs, but hard to get funding to sustain efforts.

Discussion Question 1

Chicago, IL

(cont.)

Partner and collaborate. Educate inner city parents on programs.

Outdoor living, need to teach what that means. In suburbs how can you increase trails so folks can get around without cars. To combat ecological illiteracy, need to teach with living landscapes in yards and in parks.

Utilize school networks, libraries. Have assignments, e.g. where is the closest park? Provide in multiple languages.

Education! Most kids will never see what IL looked like (the Prairie State), need to manage the land for natural areas. Teach what is special about their own locality.

With obesity rising and disposable resources shrinking, is there any consideration of financial incentives to improve health through promotion of active lifestyles? We have successfully encouraged home ownership, retirement savings, and education via incentives.

Chicago's parks, playgrounds, lakefront park system and forest preserves provide spaces where Chicagoans exercise and play for health and fitness.

We know that physical activity is an important factor in healthy children and adults. Studies have shown where there are neighborhood parks and trails in close proximity, residents increase their frequency of exercise. Conversely, the same studies show that where there are no parks, residents often go without exercise. In dense urban environments, particularly in low income neighborhoods, parks, playgrounds, greenways and trails are often the only spaces for children and adults to engage in play and fitness activities. In these low-income communities, people do not have access to nor can afford health club memberships.

Discussion Question 1

Concord, NH

Our organization has a long term interest in promoting long term sustainable forest industry in the four state region. This includes creating new markets for forests.

Highest value in forest is saw logs and having markets for these is key for keeping forests as forests.

Mr. Rohde supports and works with the Regional Wood Products Consortium that provides specialized innovation workshops and how forest owners can innovative.

Our company has been working with Sustainable Forest futures. SFF has helped us expand from a pure wholesale business to include retail business as well. With SFF's help, the retail business is "going gangbusters".

Maple syrup producer. Local eating movement is growing, how about establishing a local building movement. Establish a movement to buy local wood from local wood producers.

NH has a native lumber law. Most local mills are not even aware of this law. Local sawmills may not be aware that they can sell structural lumber directly to the retail market. BUT building codes prevent the use of non-graded lumber. USDA can help by getting building codes to accept non-graded lumber for structural purposes.

We will not run out of wood in regard to demand for biomass. We no longer have the paper mills to maintain the market for low grade mills, so Biomass is a great use for that. Remember that biomass is mostly tops and leaves. One tree produces sawlogs, then pulp wood for the larger branches and then biomass from the smaller branches and leaves. Biomass does not displace the sawlog or pulp market.

We have learned a lot about forest markets through history. Consistently, forest markets have remained consistent or, as now, seen an incredible increase in market demand, yet our forest inventories have increased.

Biomass markets are generally local. The efficiency is for the local use of biomass for combined heat and power.

Innovation and multi-jurisdictional approach will have best long term effects. We need to look at all Forest resources, including recreation, is essential. Engage the private sector in developing public policy. We need to accelerate our positive efforts - we don't have time to wait.

Market access and market development funding is essential. Can we sell wood at the highest possible price

Discussion Question 1

Concord, NH

(cont.)

In MA, we are working with temporary conservation easements. The farm and forestry viability program helps landowners write a business plan that includes temporary restrictions on the land (10-20 years) and allows the landowner the assurance that the forest will remain and allows a timber purchaser to know that the land will be available for forest management, yet it does not confer permanent easement rights. The program has been successful in MA.

NRCS established the Technical Service Providers program; many foresters tried to become certified, but it was too arduous. Subsequently, several employees of the Vt Dept of Forest and Parks became Technical Service providers. NRCS should recognize the professionalism of consulting foresters so that they can approve forest management plans without going through the arduous task of becoming Technical Service Providers. (The program is changing to reduce some of the requirements to make it somewhat easier, per Rick Ellsmore)

Important: Parents taking kids to the White Mountains, enjoys taking his kids and wants them to want to go back. Should be no barriers no barriers. AMC has huts so minimum of equipment is needed. Federal program not necessary; anything that would facilitate opportunities for kids.

Wetlands conservation, Fish & Wildlife, etc. North American waterfowl recovery. Joint ventures to implement. Has brought together state, private, and federal. Most successful in the world. We should use it as a model for other programs. Preserves habitat and connects people to it. Continue funding. Continue encouraging private landowners. (How adapt to forest concept?) Has already been adapted. Great Bay partnership. Forested land. (was a valuable partner. [submitted statement])

Northern Forest Canoe Trail and CT River Joint Commission. Headwaters subcommittee. Don't know if others are in existence. VT River conservancy establishing campsites on CT River and provide outdoor rec. Ask govt to look at existing organizations because they are working.

Board made up of fed, private, non-profit. Work with teachers to get kids outside and learning about the outdoors. Lot of great pgms (Project Learning Tree). Teachers frustrated with No Child Left Behind – teaching to the tests for fed requirements that don't fit. Would love to see federal mandates that cater to outdoor pursuits addressed.

Oldest interstate hiking trail in Northeast, older than AMC. The 21 mile trail crosses 34 privately owned properties. Two problems with our northern trail terminus: land is designated forever wild, so no cutting or improving trails. Also, MOU with USDA prohibits dogs on trail. A private land owner whose property trail crosses trains dogs and was told that's illegal. Another regulation prohibits jogging. For many years a race on the trail has been allowed once per year. But no parking available at northern terminus. Would like a half-acre for parking there. For first time, a landowner refused to let trail cross property. Had to reroute. Later comment: A unique program is Municipal Trails Act: we fund easement for existing trails and turn over to municipality.

Discussion Question 1

Concord, NH

(cont.)

Paid attention to what was attracting people to northern NE. Read that Forestry association had evidence that proximity to trees actually improved health and quality of life. Even being able to see trees from a hospital room is beneficial! From Emerson and Thoreau to our own experience, trees are important. I propose that there's a real power that has the economic capacity to drive people to do something that is healthy to them. But no one is paying attention to that benefit. That underlies all the conversations we've had today. Why they call it a natural attraction. We need to learn more about it.

No Child Left Behind is a challenge. One of our successes is bringing kids to the outdoors, but need access. We have wonderful places, but schools don't have money to visit these places – busses are obstacle in connecting to tree farmers. Field trips are the first thing taken out when budgets tight. Instead, we have to focus on school yard to learn about habitat. Hard time getting this generation of kids to think critically about things that are complex. We need to get them to look at local issues. What works and barriers go hand in hand.

Reconnecting to outdoors. We have wonderful resources in White Mountains, but we do very little to tell people about the cultural resources. We have historic roads, abandoned homesteads. Need signage to tell people what's there. Signage would be inexpensive. If people know would out they would be more likely to support.

What works. We are nature center and shelter in southwest NH, and a land trust. What works well is that we are in a mosaic of protected lands, created largely by conservation easements and land trusts, and what works is the opportunity to lead programmatic trips to protected lands. A great asset to have these places to show off. Every weekend we have hiking trips with 40-50 people going. Without the mosaic of protected land we wouldn't have this. Need to provide more incentive to landowners for conservation easement, funding to make it possible to donate (many are land rich and cash poor). Also think about ways to connect people and children to outdoors by linking to strategies such as sound health, combating obesity, promoting healthy minds. Target is health and getting people outside.

We are model of grassroots conservation groups. Help six towns talk to each other on shared issues like drinking water protection. Land trust with strong educational component. Ranch and Farmland protection program, along with 600 donors that protect farmland south of the Sandwich range. Hire grad student every summer doing research. Takes us months to get a stipend for them. Need a federal program that would allow us to pay the stipend and ensure we continue the program.

Discussion Question 1

Concord, NH

(cont.)

NH strength: collaborating well; only way to get things done. Challenge is what's happening in school system. Passage of No Child Left Inside act would greatly impact what states can do. Supports teacher professional development, also connecting schools to outdoors and supports field trips. Funding must be appropriate, and more than \$100K/state. We know the benefits of getting kids outdoors – they do better on standardized tests, problem solving, become more holistic citizens. I'm also watchful wildlife coordinator. In 2000 we had funding but those dollars have dried up, and we need a dedicated fund. Look at extension of existing programs. People need to thank their hunters and anglers because they are paying the bill. Later comment: Some places should be left wild, with no human influence. Education is critical; holistic approach needed.

I have 40 acres under conservation easement and am preparing for final 20. Foresters and extension service have been helpful. Keeping connected is to allow people on to see what is going on. But 100 acres abutting has been sub-divided for lots. When I asked for non use of fertilizer, was told OK as long as 50-foot buffer not violated. I'm concerned about what happens to landowner when changes happening around them. Trying to get people to bear the expense is hard. My son doesn't understand the land, wants me to sell to someone who does. Program to match people looking for such an opportunity with people like myself.

Speaking as parent, has two sons who played team sports, but were not interested in outdoors. One went to a college that had a state-funded outdoor program that got him on backpacking trip. It changed his life, and he majored in environmental science. Maybe federal government could force people to go outside.

NH's inclusive nature makes it special, has promoted more harmonious relationships. Work with private landowners to include motorized recreation, often maintaining roads at own expense in exchange for access. Offer donations to landowners for privilege of using land. Often there are restrictions such as prohibiting summer motorized use. Federal government can help by extending RTP (Recreational Trails Program – dollars from gas tax). The greater the amount of motorized trails, the more money received.

This [listening session]series is an example of what works. What works with our organization is recognizing that we don't have all the answers. Knowing we're right divides and creates animosity. Simple act of listening, asking someone for their own story about what's special for a piece of land is important.

Discussion Question 1

Concord, NH

(cont.)

In NH a number of state-specific programs to encourage recreation use on private lands. State has hold-harmless law which encourages landowners because it reduces their liability. If you receive payment, though, this doesn't hold true. Another encouragement of public use of private land is incentives from local property tax – more land, more money. Network of trail clubs (e.g. snowmobile clubs), self policing, helps out. Maybe a model at national level. Challenges: simple economics: if I can't afford to own land, it becomes a liability. Government should support local markets for lumber/timber over imported projects, should also support alternative energy (windmills). Expenses: vandalism, management costs, taxes. Sunsetting of estate tax break will hammer private landowners. Federal government should be an example in the management of their own lands, showing public how active management works.

A unique thing we do is stretch federal and state dollars, as well as funding a lot of volunteer programs (Fish & Game and others do this, too). Volunteer programs get the word out beyond what we can do as staff members. Challenge is how do we fund them /support them (e.g., conservation ed, Urban Forestry). Federal funding should be made available for these efforts.

Wildlife Action Plan, funded through state wildlife grants, is celebrating tenth anniversary. We need to plan for next ten years. The program has allowed our game and wildlife programs to thrive. Specific to working forests: public needs to be educated about term clearcuts, needs to understand that a 5-acre cut is important for wildlife habitat. Planning for future, we need to incorporate that notion and help people understand how important to future to habitat and wildlife in general.

Greatest NH success was establishment of the White Mountain National Forest a hundred yrs ago. It brought more people outdoors than any other single thing. New England is unique and WMNF unique, and forest need to be managed as a NE national forest, not a western forest. Federal government needs to recognize this. Multiple use sets an example (I'm also a tree farmer). Fed should continue and promote WMNF as multiple use, enhancing all aspects including recreation and economic development.

Androscoggin River has gone from industrial sewer to recreational use. It's now possible to swim in it. We take 7th and 8th graders on canoe trips, and they end up wanting to do more. This is a wonderful way to engage kids with nature.

Company manages 3 million acres in New England, New York, and Canada. Education works – get people outside. White Mountain National Forest is good example of management and research. Challenges include committing to education, especially about working forests. Also to help private landowners with the costs of keeping land open and for trail and road maintenance. Incentives, especially tax incentives for landowners to maintain working lands. Win/win situation.

An example of a program that works is the Mahoosic Initiative. Previously, land ownership was in disarray. Land trust and Chamber of Commerce used variety of tools such as forest legacy and landmark conservation fund, state and local partnerships. \$280 million invested over 12 years, most for conservation use, and 2/3s from private sources. Conservation and economic development go hand-in-hand. Federal/local/private form 3-legged stool.

Discussion Question 1

Concord, NH

(cont.)

Important to share respect for outdoors with both veteran and new campers. Explain why important to stay on trail, for example. Educate them on good practices, Leave No Trace, etc.

The poor economy has increased use of state parks; people seeking low cost, nature-based activities. Challenge is how this will play out: private landowners face new expectations from enthusiastic new users who don't want to see cutting, hear chainsaws. Need to educate recreating public on multiple use, working forests.

Bring your children outside. Some places have to be left alone. Environmental education should begin early and continue through high school. As important as 3-Rs.

Property owner who wants to pass on the land and legacy to his family, with the assistance of the government (deduction, etc.) to make an incentive to put land into conservation easement - as opposed to costing money to do so.

Incentives, investments, and partners are about where to conserve lands and whether these tools are applicable in all areas of the country or under all economic situations. Saving special places is not the whole solution to the question of land uses, and the solutions vary from region to region. Market incentives (by policy) are more important thru incentivizing markets - thereby allowing private monies and landowners to work towards this goal. Government funding is not the total answer, leveraging private interests will provide a lot of motivation and results. Easements are not for everywhere, and there is not enough \$\$ to purchase all protections that are needed. Economic incentives and market forces would create the same results for working forests.... The dis-incentivising of private working forests through rules and regulations (of these wood markets in general and the bio-mass market particularly, etc.) would also prevent natural market driven forces from maintaining these working forests.

We have compact lands with multiple ownership in N. E. With 400 land conservation land trusts - each doing their own projects one at a time - is inefficient. A new initiative is proposed, where by in western Mass.... Combining 72 individual projects was combined into one project purchase (needing about 21 Million \$). But the efficiency, synergy and collaboration approach has huge benefits through combining knowledge's, economy of scale, and individual landowners being part of a larger effort. Another ongoing effort combines 120 land trusts and 400 purchases - but requires a large amount of funding and (hopefully) federal assistance to complete the process. Aggregation and bundling saves money on administration. People like that they are part of a large effort, part of a large conservation effort.

Carbon releases from 57 million acres of pvt. Land if turned into developments.... Would kill any change in climate change that other efforts might accomplish. Incentives are needed to maintain these private lands in forest status. They have to be economically feasible for this to occur. The future needs to be conservation - not fragmentation. Reducing development, and the subsequent reduction in carbon sequestration will be detrimental to the environment. Additionally, increasing incentives for wood product heat sources versus continued increases in oil heat would benefit the climate concern scenario as well. Tax incentives for developing markets and providing raw materials for wood markets will be key.

Discussion Question 1

Concord, NH

(cont.)

The federal government can establish new programs or adapt existing programs to aid in the development of wood product energy uses and market place incentives to provide for private forest land management and the continuing development of these alternate energy sources and uses. Wood energy programs need federal funding to develop.

Community Forests - play the same role of providing resources like non-industrial landowners provide where stewardship is a large part of their goal but they do not have the same access to Federal incentive programs. Doing good conservation - resulting in public good - would be more likely if they could tap into some of this federal funding.

The need for more Money and the ability to consolidate purchases of the many smaller parcels at the local level so small towns with limited resources can compete with larger entities and parcels.

New Englanders put in huge effort collaborating during Forest Plan Revision and would like to see the Plan Implementation funded. Funding the WMNF Plan is extremely important to N.E. timber industry and workers and to the larger economy of NH and ME.

LEADS, tree farm, federal forest programs, SFI certifications are resource tools to encourage sound management that could be incorporated into the 'easement'. These are good programs that should be extended and improved

Please incorporate into the final report the " New England Governors conservation report as a useful template or blueprint for the current administration to use.

Tax Credits for Conservation - not just deduction, like the Colorado and Virginia model.

Forest Stewardship Program's work, Tree Farm Programs however need more support. Connecting small tree farm owners with professionals is critical. These programs help small family landowners and are critical to keeping this type of ownership. And States need flexibility from regulations imposed by Federal Regulations on how monies can be spent on Conservation and Legacy Programs.

Link resource professionals to landowners - State and Private Forestry and funding State Forest Resources, so with federal assistance, States and professionals can continue to help implement conservation on the ground and these professionals can often be most knowledgeable with local on the ground conditions and what works.

simplify Land Trust Regulations to allow land trusts to hold easements under federal programs

Make the tax incentives permanent. Fund outreach to landowners who might be considering donating their land for conservation easement is needed.

Discussion Question 1

Concord, NH

(cont.)

Market the fact that many benefits come from pvt. Land owners who allow public access.

Land and water conservation fund has not been funded well yet but needs to be - to bring people together for mutual conservation benefits and economic benefits. Funding for Community and Town Forests, and open space - to be conserved permanently but managed and owned locally, and which provide a working forest with recreation and wildlife benefits - is so valuable (see Errol NH town forest story).

Building markets in this region for combining wood use & wood energy (pellets, wood fired boilers, etc) through energy programs that utilize the raw materials and industry facilities available locally, mostly on private ownership, and thereby develop this regional economic opportunity.

NRCS should focus more on the educational resources that private land can provide for schools, other landowners etc.

Wood heat for New England (including pellet stoves) is very locally efficient. Additional homeowner tax incentives for purchase & installation would benefit Climate Change rather than continued oil burning dependant on imported oil.

Government support (tax breaks etc.) are the only incentive that allows continued ownership and forest retention, and they also provide public and wildlife benefits.. This landowner would not have been able to retain (the land) if it had not been for govt assistance and tax incentives.

The states and pvt. Landowners who provide these benefits to all Americans - could use more help to keep these lands open to public and forested.

Fully funded forest Legacy programs are critical

Collaboration is critical and Land and Conservation and interplay with collaborators is so important. Like the Northern ME and NH initiatives that have conserved so much land,,,, and prioritized lands to be conserved, etc... The main point is that Collaborative, Incentive, and funding is needed to continue accomplishing needed conservation goals. Fully funding LWC is needed.

AT - through the Mahoosuc's, with Dillon CC to the north. But in 30 - 40 years it will be forested again (Town of Success).

1. establish conservation priorities in the NE region with connectivity across these separate land areas.

Keys: Collaboration, incentives, funding

Discussion Question 1

Concord, NH

(cont.)

Priorities need to be evaluated by local and regional groups - collaboratively - and funding sought in a consolidated effort.

Recognized ecosystem services that forested lands and conservation easements provide to the greater public. Regarding Biomass - start with science based lessons.

45 schools in Vermont are now heating with wood chips, offsetting more than 1 million gal of heating oil. They are leveraging more to do the same.

Mud season is longer now and therefore the timber operating season is shorter. They have helped operators convert from old-style harvesting equipment to balloon-tire equipment, which can operate for a longer season and leave less residual stand damage to a forest. There should be incentives for contractors to convert to this type of equipment, which also uses 50% less fuel than old-style equipment.

It has become increasingly apparent that deforestation is big contribution to greenhouse gases and climate change. We can play a critical role in mitigating climate change by protecting forests and getting people out in nature/forest. It needs to be a combination of education and awareness—if you know something you're more likely to care and more likely to protect it.

Their area became an Americorps site for land conservation, protecting 24,000 acres. 7 regional land trusts came together (240 towns) with 20 staff to do conservation and stewardship. There is more of an economy of scale with a larger organization of partners. They want to incorporate strategies in selecting projects to help mitigate/adapt to climate change, but are having difficulty finding direction. There should be more connections between local/regional land trusts and the feds, partnering at the federal level to implement policies. We should also be talking more to the public about how what we do in our daily lives affects climate change.

He expressed a concern about the stated purpose of this meeting. Obama said that ideas from these meetings will help better protect our natural landscape and history in the future. People here have not used "natural landscape", only working landscape. Why are we avoiding using this term? He does not log his land, and is allowing it to return it to "natural landscape". He don't sell woodchips, etc. So we should remove the "working forest" from this discussion—it does not belong in a "natural landscape."

They partnered with Trout Unlimited for climate change and protection of a valued resource—the eastern brook trout. TU figured out where conservation priority areas for the trout are—TPL works to protect the lands and TU works to protect/restore the habitat. They involve other organizations, too, all brought together by the desire to protect this species. Another idea—protect carbon values and create economic incentives for private landowners. For example—the Forest Carbon Incentives Act—Senators Shaheen (NH) and Snowe (ME)—this is an opportunity to create these incentives.

Forests in NH are young in geologic time—we should protect them. Pathways for species migration can successfully build and conserve the landscape.

Discussion Question 1

Concord, NH

(cont.)

Critical to get young people into outdoors; he takes his college students out every week into the forest. Discussed in the morning was the concept of getting carbon credit for using sustainable forestry rather than only for leaving forests alone. Can landowners put their land under conservation easement (with no logging permitted) and also be eligible for carbon credits? This would make it more attractive for folks to get conservation easements.

Concern that there is confusion with the American public about biomass energy and whether it makes sense. There is a public education need. There is a way to do biomass responsibly and well, the government should think strategically about how it is incentivized.

The general public is unaware of the role that forests play in climate change—we need to get the information out. People have heard about climate change but don't know what to do about it; they don't understand that keeping land in forest is key in mitigating climate change. We need to communicate without scaring people away and share that the land conservation we're already doing is making a difference.

During White Mountain NF plan revision in 2004/5, he asked if anyone was considering the effects of climate change on forest composition projections in 100 years? The answer was: well, we don't think that is important. He is happy that we are now recognizing that it is a problem and thanks for thinking about it.

SPNHF believes that sustainable forestry is responsible forest management. A lot of good things have been done in NH in the last 100 years. Our forests take up 50% of the man-made emissions that we generate. You can have healthy forests, healthy economy, and have a net gain on the carbon front. Wood is not a silver bullet, but it fills a role. It may not fill the same role in 100 years as it does today, but it plays a role. Government policies need to pay more attention to what is the most efficient/appropriate use for wood, because there is evidence that what we're doing now is not the most efficient.

FS shows real desire to put all the pieces of the puzzle together—"all lands" model is mission critical for success, especially in New England. Updating to federal grant criteria is taking climate change into account, including LWCF. Any program that isn't already updating their program should be doing so. Forest Legacy program, etc. If it still feels like there is a missing tool it would be that we need forest and agriculture carbon incentives programs. This would maximize carbon benefits on the landscape.

Feels that state and private forestry is an important role that the Forest Service has filled—encourage this program. Within that program, Forest Stewardship Program helps landowners understand their forest, develop objectives and sustainably manage it. This is an appropriate role for the federal government and encourages continuation of that role.

The national partnerships, e.g., Boy Scouts of America sent teams to National Parks for service projects. Would like to see that national partnership model more at the local level. E.g., scouting program to bring NH kids into the WMNF and engage them in their local environment.

Discussion Question 1

Concord, NH

(cont.)

There is new legislation allows groups to engage in service learning projects locally.

A state bank could solve some of these problems.

There is diversity of opinion; there are multiple ideas of the best use of a particular parcel of land. Encourage the President and Fed. initiatives to include the word "sustainability." E.g., don't just talk about growth and jobs for the sake of jobs; need to incorporate "sustainability."

Outdoors is where children learn creativity, risk taking, and responsibility and the those are characteristics that make them strong.

A vision for the future: every citizen has a conservation ethic.

Would remind the president that everything is connected: making environmental stewards of our children-it gets them outside and in touch with their local communities, and increases their health.

Support volunteerism!

Need to make volunteering cool! Volunteers also do that because they are passionate about it. They get paid by the change they make in the world.

Not just about being cool, but also about being practical. It is important to value AmeriCorps, SCA and other programs. They get money for college for this program and that also makes it valuable for them.

Make the SCA and other programs more accessible and do even more recruiting across all communities!

Thanks for this initial step; the dialog on America's Great Outdoors!

Biochar is important and comes from forests.

We need to increase the biological literacy of citizens. Suggest we need to find a way to make parks "destination points" and so individuals can watch them change over time like working forests do, including signage built locally from local materials.

Discussion Question 1

Concord, NH

(cont.)

It is important to educate the voters so educated decisions related to the environment can be made. First we need to protect the land and then build educational trails on protected lands and engage teachers to write a trail guide. Then take the trail guide to the school and encourage kids to share that with their parents. The input from that small effort is what we are all about here: reaching out to the young people that are our future, but we need the connected strings on this violin to make that work (need the land, connect the kids, etc.).

SCA is actively getting youth out, high school and college age, and they realize they can be part of something larger than themselves, especially during the recession when sometimes they can feel powerless. SCA has partnered with AmeriCorps. Liked Gordon's points--it is a matter of connection across the age ranges.

Being in a place like VT, is quite a contrast from DC which is so culturally diverse. At the Marsh-Billings Rockefeller site, they have a 200 year land ethic history and that is part of the mission. There are examples of Hispanics preserving land in the SW or native Americans in other places. These stories often get left out-it is important to keep these stories alive. They recently had a program with urban youth brought to the park to camp and participate in a program (cleaning trails, etc.). Felt this program was a success and really brought a hands on and close connection to the natural environment. How do you replicate these programs and secure the funding to keep them up?

Her group is going into schools in the Manchester, NH area which is a large refugee area. They teach environmental education and engage the kids in a service learning project in the community. E.g., mural on earth stewardship, community gardens.

It is important to be place-based and experiential and get students to participate in a program with environmental themes. It connects kids to their local environment in a meaningful, personal way.

These experiences and place-based education is critical, but is important to not have it be a single time in their school career. It would be better for it to be integrated throughout the students education. E.g., extend through the High School years (from Elementary up throughout H.S.).

Environmental literacy is development and sequential. We often let the bottom numbers dictate what is taught because the teachers may not have passion or education to teach science. "No Child Left Behind" has been detrimental-it has squeezed out science and made it difficult to get kids out for hands on experiences. How do we scale the Manchester SCA program out to other school districts? That works when there is a really interested teacher or an administrator that really understands the importance. We can do huge things to change the experience for kids.

There is a partnership in NH between the state, USFS (WMNF and S&PF), and others that provides a teacher's institute focused on environmental education. They do intensive professional development with teachers and follow-up over with additional workshops. The Federal Government role is to pass the "no child left inside act." If we are serious about this, we need to pony up the funds to support this.

Discussion Question 1

Concord, NH

(cont.)

Finding that it works better to build in short field trips to teach more hands on.

We have a generation of parents that are afraid to take their kids out. Some teachers are just as bad. Need to expose the kids early in school--so they go home and ask their parents to take them out.

Going outside to do something free with your family can be attractive, esp., while we are in a recession.

We need good program evaluation. E.g., they worked with one elementary school for 3 years and they evaluated throughout the effort so they could clearly show how it was successful-for replicating elsewhere. We have a growing base of good evidence of the positive value of environmental. education.

As a parent, there is such pressure to enroll children in structured programs and pressure to do the best by our kids. Richard Lourve's book was monumental in allowing kids to have free time. Another good book is: "The Blessing of a Skinned Knee." Scheduling a safe outside experience for families has to be a first step to allow them to be comfortable to provide kids these experiences (unscheduled) in the future.

In their school system they have a program that involves parents in helping with an environmental education program. Often the parents learn a lot and enjoy it just as much as the kids. In this program the parent chaperones are paid a stipend for helping out.

Great Parks Pursuit-is a state parks program (there is one in CT and NH), whereby families participate by visiting parks around the state. They get points for each park they visit. There are some scheduled events and they also go on their own. They sign up for free and get to explore the parks and can win prizes (there is a celebration at the end of the summer). It would be great to see this in other parts of the country.

Looking at Scout clubs, citizen science clubs, etc.. That can provide connection between historic resources and conservation groups.

In the Epsom town forest, they discovered a number of old sites, e.g., mill house foundation, etc.. Preservation and conservation can go hand in hand in conservation work.

He gave seminars on White Pine and was called to help with planting density for a program. It was successful-the trees are growing a great rate. If they do the right thing, they should be able to generate \$100,000 per acre every year, but they may not be able to keep it up due to lack of funding.

It would be neat if we could find a way to remove the danger of people being responsible for their selves and taking a look at wildlife that moves and trees (that don't move).

Discussion Question 1

Concord, NH

(cont.)

School administration be aware of outdoor opportunities close by and connect that to the required school physical education program.

Don't forget the key to success with young people is their parents and that is a gap that is often left. Parents are often not invited in to participate with the kids. Need to invite parents more. He gave an example of a program he did a trail walk with the kids and invited parents. When is was one of the kid's birthday, that is what she wanted to do with her friends for her birthday (go back up and walk the trail).

In addition to parents, there are other important adults too, such as scout leaders.

Idea of modeling in addition to mentoring. E.g., tremendous example is Michelle Obama's Move It initiative and organic garden. Those are key models that can go back and be replicated in our communities. When kids have experiences with hunting, hiking, fishing, etc., they build strong environmental ethics.

Programs like the Great park Pursuit also have great value. But looking at families, it is also important to have programs that are extracurricular and are not parent let. Kids need to be getting muddy at much younger ages!

SCA has put together some programs with cities-they get kids to participate in programs weekly or bi-weekly and by the end of the program they go out on a week or 2-week trip. Allows them to safely experience the hands-on and experiential learning. It also positions them well for additional opportunities.

Idea of Conservation Leaders is important. For example, how could they take the Environmental Teacher's Institute model they are using in NH to other places to help increase the collaboration.

They emphasized getting kids to do something with their own hands, by their design, for the community. That is so important. They put themselves into the project and can see the results of their efforts over time. It sticks with the kids.

Concord Public School system students choose outside activity (ski, ice skating etc) one afternoon per week.

Walk Talks – several nonprofits lead a walk into the woods (flowers, soils, etc)

Dark Sky initiative in Waterville Valley – surrounded by NF, star gazing in the town square weekly

Health Initiative (community supported agricultures) – some health insurance gives you money. You pay a flat rate then you receive a weekly share of the farmers produce. Several in NH, the Rey Center is one. Includes community gardens.

Discussion Question 1

Concord, NH

(cont.)

Cooperative Extension Service – great programs.

Incentive to get adults outdoors is to give health insurance break – may be hard to monitor

Statewide Archeology program (Scrape program) – survey, catalog historic sites.

Project Archeology for teachers – train the trainer program. (Information on website).

History Underfoot - interesting too all

Using websites for marketing & word of mouth to get folks involved.

Link to other programs/agencies

Hands on programs

LCHiP matching grant program

Land & Water Fund – good for economy, leverages \$,

Discussion Question 1

Concord, NH

(cont.)

Although New Hampshire does not lie within a Priority one region for DU. It is non-the-less important in achieving overall vision and mission for waterfowl, especially for the American black duck, a species of special concern under the Atlantic Coast Joint Venture (JV) of the NAWMP. The JV is a partnership of federal, regional and state agencies and organizations, including DU, focused on the habitat for native bird species in the Atlantic Flyway of the US from Maine to Puerto Rico. NAWCA was enacted by Congress to provide federal match dollars to accomplish habitat goals established under the NAWMP and implemented through the JV. The current JV approach for black ducks is to protect large blocks of relatively undisturbed breeding habitat in the Northeastern U.S. forests. Breeding black ducks are linked to forests in general and beavers in particular and growth in beaver populations throughout northeastern forests has provided an increase in the quantity and quality of breeding habitat for black ducks. Habitat conservation for black ducks and numerous other species of fish and wildlife in NH is experiencing tremendous success through the assistance of JV partners and NAWCA grant funding. Since 1990, sixteen NAWCA grants totaling \$7.9 million have been approved to protect over 125,700 acres of critical wetlands and associated uplands in NH. These grants have been matched by nearly \$27 million in non-federal funds. Many of these properties are now under the management of state and federal agencies and conservation organizations like the Society for the Protection of NH Forests. The Nature Conservancy and others. In all cases, every effort is made to make these properties available to the public for a variety of recreational and educational uses. The NAWMP, and the JV model for implementation, is recognized as one of the most successful conservation initiatives ever undertaken. The American Great Outdoors Initiative should explore ways to replicate this model when and wherever it is appropriate.

Discussion Question 1

Concord, NH

(cont.)

DU was founded 73 years ago by a handful of conservation-minded businessmen/sportsmen concerned about the decline of duck populations and habitat on the prairies during the dust bowl days of the '30's, Today we have over 2,000 members here in New Hampshire, 15,000 in New England and 1 million supporters nationwide. We appreciate this opportunity to listen in and respond to the future of conservation in America and the need to reconnect people to the out-of-doors. I'm pleased to say that an overwhelming number of DU supporters are outdoors enthusiasts and participate on a regular basis in activities that bring them close to nature. Whether it be hunting waterfowl over an early morning marsh, hiking a mountain trail or simply enjoying a peaceful moment in a natural setting, they understand and support with their time and money DU's important habitat work and the relationship between conservation and the added value it brings to their lives. It is that kind of connectivity and passion for all things wild that needs to be generated in greater numbers of people, young and old alike, if we hope to kindle the political and financial support it will take to conserve enough of our natural heritage for the use and enjoyment of generations to come. Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors. In addition, sport hunting and fishing generate billions of dollars of revenue across the nation and support hundreds of thousands of jobs in related industries. State, federal and private conservation organizations need to do all they can to promote and support hunting and fishing and other outdoor recreation opportunities on lands that they control and manage.

Discussion Question 1

Concord, NH

(cont.)

DU's conservation programs are science-based meaning we use the latest scientific information learned from research, coupled with cutting edge technology, such as geographic information systems to map, plan, develop and deliver our habitat work where it will be most effective for the resource. Although our work is accomplished one project at a time, it is done in the broader context of vast landscapes necessary to sustain waterfowl through their annual life cycle of breeding, migration and wintering. For example, the prairie pothole region of the United States and Canada remain our number one priority for conservation in North America. It is where 80% of all waterfowl are produced.

Example:

The North American Wild Turkey Management Plan (NA WTMP) is designed to identify wild turkey habitat and potential habitat projects throughout North America, by State and on a regional basis. It incorporates information such as; statewide comprehensive wildlife plans, statewide forestry assessments, and the ability to import other information from cooperating agencies to use in identifying focus areas. The NA WTMP may be sorted by state or by bird conservation region to help integrate actions with other organizations. Once state strategies are in place it saves our members who serve on their respective state board of directors goals and tasks that they may put the state Hunting Heritage Super Fund monies toward fulfilling. The NWTF is a recognized leader and valued partner in efforts to retain working lands and protect open space/green fields. The NWTF is not just about wild turkey habitat, but conserving and maintaining the ecosystems throughout the United States. Sustainable ecosystems lead to stable communities with good jobs and stable outdoor recreation opportunities for current and future residents.

Examples include:

Managing thirteen separate and distinct conservation programs and initiatives providing seed, seedlings, technology transfer and technical assistance to NWTF members and corporate and private landowners involved in habitat enhancement and management projects;

Engaging in habitat projects on 35 National Forests; Partnership results---over 2,000 restoration projects exceeding \$26 million:

Promoting landscape level conservation projects such as riparian restoration throughout the Great Plains and longleaf pine restoration in the Southeast (over 10,000 acres planted).

Discussion Question 1

Concord, NH

(cont.)

Examples of some of the most successful collaborative efforts using the NAWCA/JV model in New Hampshire include:

The Great Bay Resource Protection Partnership: over 8,000 acres protected; rich and diverse habitats; key waterfowl wintering area and migratory bird stopover; state, federal and private partners leveraging a combined total of private public money in excess of \$60 million.

Connecticut River Watershed Project; Largest ever public/private land conservation project in NH- resulted in the creation of a 25,000 acre Natural Area surrounded by 146,400 acres of working forest protected through conservation easement.

Quabbin-to-Cardigan Conservation Initiative; Encompassing nearly 2 million acres. This region is one of the largest remaining areas of intact, interconnected ecologically significant forest in central New England. Nearly 7,000 acres were recently protected using LWCF and Forest Legacy Program and partner funds.

Families Afield

- Getting more youth involved in outdoor recreation remains a key component of the mission of the NWTF. Through the Families Afield Initiative, the NWTF and its partners are taking action that allows more youth the chance to carry on America's time honored hunting traditions. To date, Families Afield has helped bring legislative change to 30 States resulting in 418,000 new hunters.

Good afternoon and thank you for the opportunity to participate in this listening session and to offer a few comments relative to the President's Great American Outdoor initiative. My name is _____ Whittemore and I am here representing Ducks Unlimited. DU is recognized as the world's leading non-profit wetlands and waterfowl conservation organization dedicated to the protection, enhancement and management of wetlands and associated upland habitats necessary to sustain a healthy continental population of waterfowl. What we do for waterfowl also benefits many other fish, wildlife and plant species and people. Wetlands provide numerous ecological services including the purification and recharge of our drinking water, protection of property from storm and flood damage and places for people to go to recreate and enjoy these wonderfully rich and diverse environments.

NWTF programs and activities to reverse the current trends and introduce people of all ages and genders to the outdoors: Inadequate access to land is often cited as a primary reason hunters and anglers stop participating in these traditional sports. Since 1987, the More Places to Hunt Initiative of the NWTF has worked to reverse this trend. To date, the NWTF has spent nearly \$10 million helping to obtain and retain more than 428,000 acres available for hunting and fishing.

Discussion Question 1

Concord, NH

(cont.)

The NWTF hosts approximately 1500 outreach events each year.

Juniors Acquiring Knowledge, Ethics and Sportsmanship (JAKES)

- The NWTF program that introduces young people to conservation and the hunting tradition. Kids under 12 participate in JAKES events; teens 13 to 17 participate in Xtreme JAKES events, and learn about firearms safety, archery, game calling, hunting and conservation in a fun, hands-on way.

Women in the Outdoors (WITO)

- The NWTF program designed to help women over the age of 14 to learn about conservation, hunting and the outdoors through fun activities taught by expert instructors that can be shared with their families, such as archery, outdoor cooking, camping, hunting, hiking, and gardening for wildlife. Wheelin' Sportsmen

- The NWTF program that provides people with disabilities opportunity to hunt, fish, shoot, and participate in other outdoor experiences and enrich their lives in a manner that might otherwise not happen.

Education

_ Since 1999, the NWTF has distributed 30,000 Wild About Turkey environmental education boxes to classrooms and other community educational settings. In some cases, it is the first positive association young impressionable minds have with hunting and of hunters.

Discussion Question 1

Concord, NH

(cont.)

Over our history, DU has raised in excess of \$1 billion dollars and conserved over 12 million acres of wetland and associated habitat in North America. However, this could have never been accomplished without the assistance of numerous state, federal and private partners. Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife (PFW), Forest Legacy Program (FLP), the Land and Water Conservation Fund (LWCF) and conservation programs of the farm bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential to dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations. These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

The National Wild Turkey Federation has since our inception been dedicated to the conservation of not only North America's valuable natural resources but also our hunting traditions. The motto of the NWTF, conserve, hunt, and share reflects our commitment to the conservation of the wildlife population of North America, preserving our hunting traditions and sharing our enthusiasm of the outdoors with those willing to listen.

Since 1973, the NWTF has helped to restore wild turkey populations throughout the species' historic range in the United States, Canada, and Mexico. Wild turkey numbers have increased from 1.3 million to 7 million, and the estimated number of wild turkey hunters has increased from 750,000 to over 2.8 million.

The NWTF has been a leader in procuring and allocating resources for the completion of projects on important landscapes. To support its mission, NWTF generates revenue through approximately 3600 banquet auctions and special events conducted annually by 2,272 local chapters, membership dues, merchandise sales, grant awards, donations and advertising income. Since 1955, over \$300 million has been spent to improve 14 million acres of habitat for wild turkeys and other wildlife. Many of our projects are carried out through the joint efforts of NWTF staff, state or federal agency staff, our members and the general public.

Discussion Question 1

Concord, NH

(cont.)

The NWTF also works to increase outdoors interest, bringing new hunters into the fold through its education events and outreach programs. Approximately one-half of the membership of NWTF is comprised of women, children and disabled sportsmen. We have unfortunately watched as fewer Americans participate in their hunting heritage. The dwindling ranks of American hunters will have a profound impact on the operating budgets of state wildlife conservation agencies around the country, many of whom are fee funded through license sales and also receive project funding through the PillmanRobertson Fund. The NWTF has long been an advocate of enhanced opportunity for wildlife dependent recreation and improved access to both public and private lands. Overall hunters contribute 30 billion dollars into the American economy annually. The hunting industry also supports over a million American jobs. Economic projections show that if hunter numbers continue to fall at their current rate by 2025 license dollars for state wildlife agencies may drop by as much as 25 percent. The decline in the number of hunters is also projected to cause a 24 percent decrease in revenues for the hunting industry.

The Oconee Stewardship agreement project is one of 22 stewardship projects NWTF is currently working on. This project started small and over the past 3 years has leveraged forest Service funds (\$60,000) with a Corridor offlight Grant (\$70,000), NWTF Stewardship Agreement (\$200,000) to do;

- Timber Sale (thinning)

- 320 acres of mid story control

- 24 acres of wild life openings

- 16 RCW inserts

- RCW Monitoring

- 2000 acres of prescribed burning

Discussion Question 1

Fort Pierre, SD

I have to compliment the partnerships. The partnerships both in the private and public sectors are the most effective. The development of partnerships has been very good.

Commented on federal legislature, funding and working with partnerships. In South Dakota, the main conservation opportunities exist from the Farm Bill. It's most beneficial to have incentives on the conservation and production side of the Farm Bill for private landowners. The Farm Bill in 1998, actually back to 95 gave conservation organizations land base programs that became available for landowners; providing conservation incentives. Without this possibility a huge opportunity to work with private landowners would be lost. No incentives exist on the conservation side for most people to go out and spray 5 acres of weeds in CRP with the low payments offered. Incentives need to be gained along with reasonable alternatives to cropping lands and turning over grasslands. Private land funds are critical. Proper funding is needed. Angela Ehlers works hard to find money to get projects on the ground. Without the ability to fund projects, conservation programs don't work. Trying to compete for funding is a challenge critical to SD. Look at the land mass in SD: 80% private, 10% tribal, and 10% public. Need to involve all the people to figure out how to do proper incentives.

I have been working with land managers; specifically with a local group in the Black Hills area. Volunteering to help with projects to improve areas is a good way to get people involved. Volunteering works. By employing those tactics people get to continue to use that area, which is incentive for them to help out and maintain that area. It's hard to get people involved by putting up fence and not allowing them to enter back in. By helping people maintain these areas people need to know that there is a benefit in doing such things. Needing a benefit is just human nature; local users need to see a benefit. Volunteering is a good way to do that. Local organizations have come to talk with me about doing projects through volunteering.

Is there any consideration to redo water easement contracts from 20 plus years ago, through the FWS. The reason I bring it up is because a friend bought a quarter of land with a water easement. Originally his friend got \$600 for it, now he can't get anything. The land has been destroyed because of this. It could make very productive land with a very large wetland. I would like to have a contract redone.

I have seen what works as a rancher on my land. I've been involved with EQIP, the old Great Plains, working with NRCS with those programs; also GRP and CRP. Also, through the state connecting people to the outdoors, John Cooper started walk-in-areas. This program paid private landowners to have walk-in areas; which is another way to connect people to what we're (ranchers) doing. Public access is behind it; it goes beyond economics for us. It show off what we have and puts us on the map.

The very important roles of the private sector over last century, such as The Nature Conservancy, has been working with government partners to set aside groups like hunters, ranger ricks, etc., and conservationists in general, to understand the need for habitat protection. These organizations have helped in connecting people to the outdoors.

Discussion Question 1

Fort Pierre, SD

(cont.)

The programs are already there; need time for them to work. BLM people institutionalized and allow off roading to direct it and manage it to be very viable. Dirt biking is a large industry. The Travel Management Plan has done a great deal, and needs to continue to do so.

The Y has traditionally been supportive of outdoor recreation and education. The partnership side is already in place; it can piggy back. Need to get the word out about getting back to nature. The Y has had local partnerships. Last spring with a Pierre school they offered Kindergarten classes during the school schedule. The Y taught water safety lessons; so that the parents could feel comfortable knowing their child could swim safely. Safety is a very important issue. I enjoy what we have and do it safely. We want to do a district wide basis with the Pierre/Ft. Pierre schools. Little things like that work.

An important part of the programs is the benefit they provide for the rural communities. The walk-in program and hunting in general have filled up the motels and restaurants in rural communities and has brought about jobs. These strategies bring about quality of life. They strengthen the community.

Need to recognize that not only the farm bill but the Land and Water Conservation Fund need to be properly funded on both federal and state sides of ledger. It is needed for trails and parks. Another critical need is for the North American Wetland Act. This body works in Canada, the US, and Mexico on large landscape projects; which we would like to see it properly funded at 75 million like last year. We need to continue to have the money come directly to the ground. The increase in the duck stamp price is an option. 1992 was the last year the stamp increased in price. It is critical that the duck stamp be raised. People would step forward and pay the increase. The wetland loan act works, which would allow LWCF or FWS projects to happen, based on project revenue from duck stamps. A batch of revenue comes from people who are paying and dealing with local partnerships, which are all critical.

For those of you that don't know the mission of the SD Grasslands Coalition, it is to teach and educate farmers and ranchers how to properly manage their resources. The Coalition has been highly successful at doing so. The Coalition is in cooperation with several agencies on all levels. It is a voluntary organization for private land owners to properly manage their natural resources.

In my opinion working with kids, they won't value land and nature unless you get out in nature. If you keep kids inside; they will not appreciate what they have outside. There are lots of projects and programs that the Discovery Center uses, like Project Wet, Project Wild, and becoming an outdoor woman and family programs, which have been effective. You let kids and families try a wide variety of things to do in nature, and you teach them how to do it. Some may not want to shoot a turkey, but they still can appreciate nature and sit in a blind and look around at the nature around them. Those kinds of things, and programs that are guided by national high quality resources, can be very effective.

Discussion Question 1

Fort Pierre, SD

(cont.)

On the visible side realize the importance of native grasses. Environmental, clean water, recreation, food security. What works – it could work better. Looking at the programs from the state – there are a variety of them – NRCS programs are great. One concern that some of the programs and demands for the funding for that this year was put in 5 counties and only limited to a number of persons. The statewide interest. Interest in willing landowners to habitat but not because of money. States should have more say to what the money goes into. Not good mgmt of the \$s.

Grassland program – help northern plains – work together!!!

increase the funds. Grassland on the buffalo gap national wilderness – the league supports, grazing would continue. Increase CRP funding.

293 acres out there, 120m bring in to SD and ND for grass easements. Money is hard to raise, grass is working land and others think it is idle. It is cheaper today – put the money into their pockets and do the right things.

Protecting the resources defines – children exposing them to the outdoors. Having another generation following. This is taking our children out of the outdoors – computers etc. They worked on getting their match. 2 things that are unaffected. Funding has diminished about 10 fold. State side represents 10% now. States and locals are left with hardly anything. Do contemporary things to get the kids outdoors. Must get them out or there won't be anyone to enjoy it in the future.

Rotational grazing 6 generation on the ranch – tripled with NRCS and improved the grass. Grazing became very important, birds. Cattle – the best use of resources – grazers are important part of this. Funding programs - graze is the best use. Keep those programs in place. Best is not to kick out to recreate – but to graze. Represents herself and working hard with AG tour and show them what is the right way to use resources – grass is the best product. Some state and fed land. Always consider Private Landowners!!

Parks recreation – 98 have been impacted by land and water. – We really need to have it funded to the max. Everyone has probably been effected by this program LWCF. Not only to maintain but increase. Municipal recreation first responder – they interact with kids and that is where it starts – they need help to interact with them They will help get them interested through parks etc. Not enough mountain bikes – they need equipment, supplies and staff to get the kids out. The parks can do but need help.

Teacher training. Training them help the kids get outdoors.

We need think outside the box. Waterfowl in the spring – people should be staying as they come see this in the spring. The monthly media rule – everyone should see who runs your county paper?

Discussion Question 1

Fort Pierre, SD

(cont.)

Private partnerships – extremely important. Winter wheat initiative. Winter wheat moved into north Dakota – money for resource inform the landowners about the program. The landowner needs the incentive to use - private, connected with other folks, used current funded program. Where we can partner!

Partnering with non-profit who are already concerned about outdoors. Raise funds for it and they will give it there all.

Heritage tourism in our state is very important to draw them outdoors. 1-programs that could compliment historic preservation funds, save America's Treasures grant promote and market them to draw people to them. Examples – dc booth fish hatch. Partners – used many to get that accomplished. Need to fully fund the programs.

The cost share of EQIP that has a funding mechanism is currently working for farmers and ranchers, but the problem is funding. The first CRP had 1,000 applicants and only 10 got funding. There is more demand for grassland easements, but not enough funding available for the demand of landowners that want to enroll in easement programs. There are many landowners that want easements. Just not enough funding. Locals started a Leopold reward to acknowledge local landowners in conservation. The reward is a crystal and \$10,000 for conservation, innovative practices, that recognizes local citizens. The award will announce the winner on Earth Day.

Gardens on the top of roof tops in urban areas is a great thing. Need to promote research on farmers markets and local grown food. Need to expand local food markets. Create local opportunities. Need to tax the X-box, play stations, and other digital technologies to get funding for local recreational programs. Discretionary funding from parents is not going to local parks but to x-box and other digital technologies. Wal-Mart should provide funding to expand opportunities for local recreation (soccer programs), why does it have to come from tax payer money? Private sector has a responsibility.

Multiple use approach works (range, wildlife, recreation) collaborating on decisions. Black Hill National Forest (user groups) gets good direction from the user groups. Federal goals should be from the local users and should have a bigger voice then someone from Washington D.C. Locals should have a bigger say in what happens at local forests. Social and economical sustainability is key. We don't need more wilderness areas or parks. Need to deal with what we got. NPS service is severely underfunded for what we already have. Most people don't understand what wilderness is. Can't just lock up land and set aside without managing. Schools should have more education on how well managed lands should be. There should be more after school programs to encourage kids to get involved in the outdoors. School sports competes with hunting and fishing.

Discussion Question 1

Fort Pierre, SD

(cont.)

It is important to keep native prairies intact. For bird watching and hiking. Birds banded in SD have been found in 30 other states. Need to keep grasslands intact. There is an accelerated loss of grasslands and wetlands from pressures of commodity agriculture. You can't raise nearly as many wildlife on crop land compared to grasslands. Grasslands are some of the most productive ecosystems in the world and we're losing it. Need to support ranchers to keep grasslands and wetlands intact. Need to support ranchers over commodity crop production. Increase funding for beef production on grasslands. Farm bill is critical for funding the Wetland Reserve Program and the CRP program. There is a need to increase funding of CRP acres. EQIP program is important. Use of easements are critical to pay private land owners to keep native grass. Easements are important as it keeps land in private ownership. Not enough easements for the hundreds of ranchers that want it. Need more funding for easements. Increase the value of the Duck stamps and have the duck stamp loan act to pay for easements to meet the demand for easements. Need to protect grasslands through ranchers.

In 2006, the U.S. Fish and Wildlife Service Montana Partners for Fish and Wildlife Program was granted an innovation in American Government Award for community-based conservation in partnership with the Blackfoot Challenge, a watershed group in the Blackfoot watershed of western Montana

The \$100,000 award from Harvard University's John F. Kennedy School of Government was used to transfer the model of cooperative conservation, build trust and partnerships between private landowners and public agency managers, provide consensus-based solutions to natural resource issues and recommend ways to improve cooperative conservation at local, regional and national scales.

In 2008 and 2009, meetings were held in Montana and Colorado with representatives from eleven western states to share information, experiences, challenges and solutions to private land conservation.

Partners for Conservation (PFC) developed from these discussions and represents the private landowners and partners that are practicing innovative, measurable and effective conservation practices on the ground for the long-term health and productivity of working landscapes and rural communities across the United States. Current representatives include landowners from California, Colorado, Idaho, Kansas, Montana, Nebraska, South Dakota and Wyoming. Learn more about PFC and join us in the conversation.

The grassland and wetland easement programs administered by the U.S. Fish and Wildlife Service in cooperation with key partners like Ducks Unlimited has proven to be a resounding success with 880,000 acres perpetually protected to date.

These areas remain in private ownership, remain in cattle production and continue to provide critical breeding habitat for waterfowl, shorebirds, songbirds and raptors.

Many of these landowners enroll in South Dakota's private land access program increasing opportunities for people to get outdoors.

Discussion Question 1

Fort Pierre, SD

(cont.)

The Off-Road Riders Association is a grassroots, not-for-profit organization formed in 1992 to create a positive, long-term future for the Black Hills Off-Road Community. Our primary purpose is to protect the rights of those who enjoy motorized recreation in the Black Hills and Grasslands of western South Dakota. We encourage safe, environmentally sustainable riding practices and cooperation with other motorized and non-motorized users of our public lands.

The Off-Road Riders Association distributes materials and information from: Tread Lightly!; NOHVCC Adventure Trail activity books that teach safety and trail etiquette; the Black Hills National Forest and our own "Recommended Rules of the Trail".

We partner with the managers of the Black Hills National Forest and Nebraska National Forest. We have volunteered thousands of man-hours in development of local trail system, reclamation of damaged areas, clean-up projects, etc..

We host riding events throughout the year, including two major off-road poker runs as well as numerous other rides and get-togethers where we promote rider safety, trail courtesy and responsible riding practices. These efforts encourage people to get out and enjoy our public lands in a responsible and sustainable way.

We stand opposed to any plan or action that limits access by American citizens to any of our public lands. We support instead, a sound multiple-use management strategy that incorporates a cooperative, shared-use philosophy.

Land management decisions should not be made without broad local support. Public land should be protected for the public, not from the public. Multiple-use management uses an adaptive style that allows managers to respond to the dynamic nature of the land using input from all local interest groups.

Motorized and mechanized recreation is the fastest growing segment of outdoor recreation on public lands. We believe that education, cooperation and volunteerism among interest groups and land managers is the key to a successful future for outdoor recreation on our public lands.

Ducks Unlimited has proposed that the portion of the U.S. Prairie Pothole Region (PPR) with significant expanses of native prairie and abundant wetlands - the eastern Dakotas - be designated a "Treasured Landscape". Sometimes called "the duck factory" by waterfowl biologists because of its propensity to produce at least 40 percent of North America's waterfowl population, the prairie pothole region is a national conservation priority.

The goal of the PPR Landscape project is to secure in perpetuity 2.5 million acres of grasslands and associated wetlands, most of which (95%) will be protected through purchased conservation easements. The balance (5%) will be acquired in fee title and added to the existing inventory of National Wildlife Refuge System lands in the Dakotas.

The PPR project would be implemented over 10 years at a total estimated cost of \$1.38 billion. It's anticipated that various partners and existing sources of revenue will finance \$427 million, with the balance of \$956 million coming from a "Treasured Landscape" initiative currently being discussed by the Administration and several Federal Departments.

Discussion Question 1

Fort Pierre, SD

(cont.)

The U.S. Fish and Wildlife Service is the primary federal wildlife landownership agency in the PPR proposal area with the following ownership classifications and acreages: Waterfowl Production Areas and National Wildlife Refuges: 608,000 acres Grassland easements 713,000 acres Wetland easements 1,088,000 acres FHA easements / managed by the USFWS 11,414 acres

The South Dakota Game Fish and Parks and North Dakota Game and Fish Department are the primary state landownership agencies in the proposal area with the following fee title acres: South Dakota Game Fish and Parks 81,873 acres North Dakota Game and Fish Department 156,833 acres

The following conservation organizations are also owners in fee title of the acres listed in the proposed project area: Ducks Unlimited 19,300 acres National Audobon Society 2,250 acres Nature Conservancy 17,000 acres

Over the course of ten years, it's anticipated that the following sources of funds could be used to help accomplish project objectives: Migratory Bird Conservation Funds ("Duck Stamp") \$160 M North American Wetlands Conservation Act \$95 M Ducks Unlimited, Inc. \$50 M Other state, NGO, and corporate partners \$15 M USDA Wetlands Reserve Program ("WRP") \$97 M USDA Grasslands Reserve Program ("GRP") \$10 M

During 2005-09, expenditures on grassland and wetland easements in the project areas were as follows: Migratory Bird Conservation Funds ("Duck Stamp") \$48.2 M North American Wetlands Conservation Act \$9.4 M Ducks Unlimited and other partners \$11.3 M USDA Wetlands Reserve Program ("WRP") \$48.4 M USDA Grasslands Reserve Program ("GRP") \$5.3 M Land and Water Conservation Fund ("WWCF") \$2.1 M

Easements are popular among many landowners, particularly ranchers. Currently, 805 landowners are on a waiting list to be considered for a grassland or wetland easement in the Dakotas. This represents approximately 364,000 acres of habitat that could be secured in perpetuity if funding was available. Since the inception of the easement program, landowners have enrolled 1.8 million acres in the easement program. All easements are secured on a willing seller basis and the land remains in agriculture productions with the basic provision that, under Wetland Easement, they cannot drain, burn, level, or fill in wetlands that are designated within the easement contract. Conservation also provisions apply to lands enrolled in Grassland Easements which pays to keep land permanently in grass.

A 2006 survey conducted by the University of North Dakota found that 89.1% of North Dakota residents thought that landowners should be able to choose whether or not they wish to sell or donate perpetual easements. In that same survey, 75.7% of residents agreed or strongly agreed with the statement "we have an obligation to preserve some natural areas for future generations and perpetual easements are a good way to do that."

Discussion Question 1

Fort Pierre, SD

(cont.)

In South Dakota, because of the current high water and sheet water flooding in the central and northeastern counties, landowners have stepped up their interest in the Wetlands Reserve and Grasslands Reserve Programs offered by the U.S. Department of Agriculture (Farm Bill) and have continued to contact US Fish and Wildlife regarding the selling of USFWS Easements to protect wetlands and Grasslands. In addition to the basic programs mentioned above to improve habitat, both North Dakota and South Dakota Wildlife Agencies have hunting access "Walk-In" programs in which the landowners can earn extra annual payments if his/her private land habitat qualifies for the Walk-In program. These hunting access programs have proven to be very popular with landowners and it adds directly to the economic benefits of having bird and big game populations. Pheasant hunting provides an estimated \$200 million per year to South Dakota's income base.

Discussion Question 1

Godfrey, IL

I'm pleased to say that an overwhelming number of DU supporters are outdoor enthusiasts and participate on a regular basis in activities that bring them close to nature. Whether it be hunting waterfowl over an early morning marsh, boating on the mighty Mississippi or Illinois rivers, or simply enjoying a peaceful moment in a natural setting, they understand and support with their time and money DU's important habitat work and the relationship between conservation and the added value it brings to their lives. It is that kind of connectivity and passion for all things wild that needs to be generated in greater numbers of people, young and old alike, if we hope to kindle the political and financial support it will take to conserve enough of our natural heritage for the use and enjoyment of generations to come.

Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors. In addition, sport hunting and fishing generate billions of dollars of revenue across the nation and support hundreds of thousands of jobs in related industries. State, federal and private conservation organizations need to do all they can to promote and support hunting and fishing and other outdoor recreation opportunities on lands that they control and manage.

Our work would have never been accomplished without the assistance of numerous state, federal and private partners. Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife (PFW), and the Land and Water Conservation Fund and conservation programs of the Farm Bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations.

These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

Discussion Question 1

Godfrey, IL

(cont.)

In Missouri, DU has conserved more than 100,000 acres of habitat over the past 25 years. A focal point has been the protection and restoration of wetland habitat near the confluence of the Missouri and Mississippi Rivers. Here, DU has helped build a partnership of federal, state and private organizations that share a common conservation interest in this important confluence region. This partnership has helped support habitat restoration on public sites such as B.K. Leach Memorial Conservation Area. It also is working in cooperation with farmers, duck club owners, and other private landowners to restore and protect wetland habitat on lands subject to natural flooding. So far, DU and its partners have conserved more than 27,000 acres in the floodplain of the Missouri and Mississippi River. Included in this total are conservation easements donated by conservation minded landowners that are protecting 3,772 acres in perpetuity. Even more landowners are lined up to become part of this important conservation effort. This is clear evidence that this private-public partnership is making progress, thanks in part to DU's conservation leadership.

In Illinois, DU also is working with a similar consortium of conservation partners to acquire, restore and protect vital waterfowl habitat along the Mississippi and Illinois Rivers. DU has purchased 2, 211 acres of flood prone land adjacent to existing federal wildlife refuges, state fish and wildlife areas, or national forests. DU's conservation strategy is to restore wetland and bottomland forest habitat on these acquired lands and then transfer title to the adjacent conservation agencies for long term stewardship and public access. DU also uses its local biological and engineering expertise, as well as its privately raised funds, to help its conservation partners restore wetland habitat on existing public lands. In some cases when funds are available specific for that purpose, DU has been able to assist private landowners with multi-purpose wetland projects that conserve soil, water and wildlife resources. More than 50,000 acres of waterfowl habitat has been conserved across Illinois thanks to DU's effort. This is yet another great testimony to the conservation work and the conservation partnerships that DU has developed and that can help provide a foundation for America's Great Outdoor initiative.

America's Great Outdoors will help provide a focus for conservation in several key regions of our great country and will reaffirm the local significance of these regions to fish, wildlife and people.

The America's Great Outdoors Initiative may be the last and best opportunity to preserve the world class resources of the Mississippi, Missouri, and Illinois River watersheds, the Prairie Pothole Region and, of course, the southeastern Gulf Coast where estuarine and freshwater wetlands are not only threatened by the Deep Horizon oil spill disaster, but also by chronic problems associated with nutrient enrichment that causes large hypoxia zones out in the Gulf that are void of fish and other marine life.

Discussion Question 1

Godfrey, IL

(cont.)

North American Wetlands Conservation Act (NAWCA). This federal program administered by the U.S. Fish and Wildlife Service provides competitive matching grants to federal, state and non-profit conservation organizations for local wetland protection and restoration. DU and its partners have utilized the NAWCA program to conserve thousands of acres of habitat in Illinois and Missouri. Typically, non-federal sponsors provide up to \$2 for every \$1 they receive from NAWCA for local habitat projects. Lands acquired with NAWCA funds are generally open to the public for compatible recreational uses such as hunting, fishing and birdwatching. Federal appropriations for NAWCA are critical to the success of this program. Funding should be maintained or expanded in order to leverage federal funds to the greatest conservation good.

Conservation Reserve Program (CRP). This federal program administered by the Farm Service Agency of the U.S. Department of Agriculture pays farmers to convert environmental sensitive cropland to wildlife habitat and to maintain it as a privately owned conservation area for a period of 10 to 15 years. Populations of grassland nesting birds, including ducks, bobwhite quail, and native songbirds such as the dickcissel, have rebounded thanks to CRP. The program also conserves soil and improves water quality by reducing nutrient run-off. Often, CRP lands are open to sportsmen for hunting with permission from the landowner. CRP caps limit the amount of lands that can be enrolled in this successful and popular program. Acreage levels should be maintained, especially in geographic regions like the Prairie Pothole Region where CRP is providing critical habitat for waterfowl and other wildlife.

Wetlands Reserve Program (WRP). This program administered by the Natural Resources Conservation Service under the U.S. Department of Agriculture is used to restore and protect wetland habitat on private lands. Typically, this involves the acquisition of permanent conservation easements by the federal government on lands that are voluntarily enrolled by private property owners. Such lands are restored to wetlands or planted to trees at no cost to the landowner. In addition to establishing vital habitat for wildlife, WRP lands provide recreational opportunities for landowners and their guests. Authority and funding for WRP is due to expire. This program should be re-authorized in the next Farm Bill with more opportunities to target enrollment and to encourage conservation partnerships.

Land and Water Conservation Fund (LWCF). This federal program provides funding to federal agencies like the U.S. Fish and Wildlife Service and U.S. Forest Service to purchase new lands for public stewardship and public access. State conservation organizations also can use LWCF to supplement state funds available for land acquisition and recreational development. Increased appropriations from LWCF are needed for federal agencies to acquire critical lands within existing boundaries of national wildlife refuges and national forests along the Mississippi, Missouri, and Illinois Rivers. To the extent practical, LWCF should provide incentives for states to increase their investment in land acquisition as part of a comprehensive program to expand outdoor recreational opportunities for their citizens.

Discussion Question 1

Godfrey, IL

(cont.)

Navigational and Environmental Sustainability Program (NESP). This program administered by the U.S. Army Corps of Engineers is authorized to provide federal cost-share funding for navigation and ecological restoration projects on the Upper Mississippi River, including the Illinois River. Appropriations are needed to implement ecological restoration projects designed to enhance habitat for fish and wildlife species along these important river corridors. Most lands subject to NESP restoration are either owned by a public agency or are considered to be public waters open to public access. Federal funding for NESP project should encourage partnerships with state conservation organizations and with private organizations like DU.

The watershed covers 10% of IL and has multiple partner types. They are concerned about rapid erosion runoff. Erodes banks and the sediment clogs rivers. WRDA 2007 and grants are being used to help with this. We have language to study it, but it needs funding. 3 years have gone by since authorization, but it still has received no funding. Kaskaskia can be a model for similar rivers in the U.S. IDNR is willing to be a cost sharing partner.

AmeriCorps teams have partnered with state, federal and NGO for invasive species removal, cleaning, studies, trail maintenance, etc. AmeriCorps program is extremely cheap and you get a lot from utilization. The program targets youth and directly gets them involved. This program is already in place, it just needs more staff positions funded.

It is my opinion that if the Presidents Initiative is to accomplish great things in our public land, and increase the involvement of youth and the public at large, all while taking into consideration the constraints on our budget, the funding of programs that are already in existence and proven to be effective is imperative. The AmeriCorps program is one such program, designed to be utilized fully in times of economic hardship to revitalize our public lands, provide jobs, and give the younger generations a chance to take direct action for positive change in our environment. Just as its predecessor program the, Civilian Conservation Corps, was utilized during the Great Depression to provide jobs and training while accomplishing great public works, so too should the AmeriCorps program be considered today. The AmeriCorps St. Louis program, as well as NCCC programs throughout the nation are proof enough that the funding works in our region. The labor that they provide can be utilized to cheaply accomplish the reforms that are needed, as well as address the needs that are identified by local land management agencies and conservation groups as a priority. All that is needed is funding and more positions can be filled, providing jobs and training for young adults, opportunities for higher education and debt reversal, and the maintenance and stewardship of our public lands.

I will be out of town and unable to attend the session, but I would like to congratulate the local officials of our area for the tremendous improvements made to our riverfront, especially the cities of Alton and Grafton.

Looking forward to this great opportunity to talk about America's first national park area to protect a wild river system and the gem of our state - Ozark National Scenic Riverways!

Discussion Question 1

Godfrey, IL

(cont.)

One strategy for actually accomplishing maintenance and construction of new trails and management of our natural areas and public land that has worked exceedingly well in Missouri is the utilization of highly trained volunteers, namely AmeriCorps members. AmeriCorps teams in Missouri have partnered with the Missouri Department of Conservation, the Forest Service, Park Service, Department of Natural Resources, as well as many non-profit groups throughout the state. They have completed a variety of tasks ranging from removal of invasive species, maintenance and creation of trails, removal of storm debris, wildfire suppression, assisting in biological studies, stream cleaning, and a host of other valuable conservation tasks.

The benefits of the AmeriCorps program are far reaching, as the cost of maintaining a full time professional, factoring in training, wildfire bonus compensation, the cost of a salaried position with benefits, and overtime, are many times more than the cost of an AmeriCorps volunteer trained to the same level of service. The program targets youth and involves them directly with conservation issues, accomplishing tasks at a price far below what is needed to pay professional workers, and at a level of training you cannot get from a normal volunteer, all while providing jobs for high-school graduates and college age individuals. It also encourages them to continue their experience into college with the Segal education award, and provides them with leadership experience and skills to be applied in the field of conservation if they choose to seek a profession in our great outdoors.

The Ozark Regional Land Trust (ORLT) encourages the administration to support the work of land trusts. There are several ways in which this can be done. First, federal tax policy can be used to encourage landowners to conserve important farmland, forests, and wildlife habitats. ORLT urges the renewal of the enhanced tax incentive for donated conservation easements as well as a renewed estate tax exclusion for land subject to a conservation easement. These policies represent a modest investment for the leveraged conservation gains that are obtained through private landowner generosity. Second, ORLT encourages federal agencies to work with land trusts to further their statutory mandates. For example, much can be done in a cooperative fashion with private landowners to protect endangered species habitats by supporting conservation easement projects. ORLT has a current project in Missouri that is acquiring conservation easements on habitat essential for recovery of the federally threatened Ozark cavefish. This also represents a modest investment with significant long term gains should it continue to be supported. Federal land management agencies can also further their missions in cooperation with land trusts by protecting critical buffers around wildlife refuges, Wilderness areas, or national parks. ORLT thanks the administration for its commitment to conservation and for your consideration of these comments. I look forward to attending the listening session.

Discussion Question 1

Godfrey, IL

(cont.)

The Tourism Bureau Southwestern Illinois supports outdoor recreation in many forms around Carlyle Lake. The visitor market that we look to attract to our region enjoys many activities, including: boating, sailing, fishing, hiking, biking, golf and many other forms of recreation. These visitors spend money in our region. They buy gas, meals, stay in our lodging establishments and entertain their families in our area for much of the spring, summer and fall. Economic development through tourism is a great way to create that highly sought after visitor spending.

Kudos to the City of Carlyle and the US Army Corps of Engineers for their continued support and work in developing permanent and sustainable bike trails in Carlyle and areas around the Lake. It is a great way to attract/retain visitors and create new citizens through relocation. This truly is a great quality of life addition to our community.

This sounds like an admirable initiative, but instead of starting new programs, it would be better to fund those already authorized such as WRDA 2007. The Kaskaskia Watershed Association has been working to get the planning study for this program started since 2007 to no avail to date. I would like to expand on this comment during the 20 August session.

We are trying to deconstruct unused, dangerous low-head dams (also known as "drowning machines") in Jefferson County Missouri and turn them into rapids for kayakers, canoes, fishermen, swimmers, tubers, etc. to enjoy. The website: www.missouriwhitewaterpark.com has a little more information on what we are trying to do. The areas we are interested in are owned by Jefferson County Parks and Recreation. We hope that this meeting will provide us with some insight on how to successfully complete this project and obtain funding for the project.

Youth outdoor activities include gardening, running, fishing, swimming, catching frogs, biking, walking, and hiking.

USACE- Balance being near the river while dealing with the flooding of it. Alton has built an amphitheater and bike trails are being linked in with area facilities

Wilderness isn't cool anymore. Needs more exposure. Need to get people to bring their friends out there. Free stuff to make it cool.

Making outdoors cool: education. News is often negative. Bear mauling in Yellowstone. Educate positive aspects of outdoors and remove fears people may have.

More events held at the riverfronts. i.e. concerts, bike race.

Have outdoor classes and visit the river. There are people who have never been there but lived here their whole life.

More family oriented events in the outdoors.

Discussion Question 1

Godfrey, IL

(cont.)

Boat tours on the river would help develop a connection

Regional planning efforts: The river ring here is a 600-mile web. Parks and conservation are important.

Agencies take what public thinks for granted. 2009 survey- 95% say Missouri outdoors make for happier lives, 90% say parks make people healthy. Parks should be a budget priority.

St. Vincent Greenway connects forest park through the most impoverished areas. Land and water conservation fund will help with this crime ridden, gang controlled park.

We need to connect people to outdoors. This helps health, sustainability, and livability. River ring efforts is a great example. Forest Park is the largest urban park. Forest Park Forever is a non-for profit that takes care of it. Columbia Bottoms was owned by St. Louis. It was sold to state and restored. It's a great example of a successful effort where people in an urban area can enjoy the outdoors.

95% of America lives within 50 miles of a USACE project. This is a unique area. This are best demonstrates partnerships coupled with interests like navigation.

Land & water conservation fund is very important. Legislation is in Congress to make this fund permanent. Language about gulf oil spill will be included. Efforts to revitalize the ARCH have moved amazingly fast. These ideas will really help to focus efforts on regional initiatives, like the river ring on a parallel track with the Arch project. These efforts are equally important. you make believers out of people when you can show results.

We have developed an MOU between 2 regions of both NPS and USFWS. MOU seeks to connect over 50 parks and refuges on the river. We have opportunities for recreation and education that need to be marketed together. It should cover the whole Mississippi River.

Efforts will address access, history, conservation, stewardship, and education.

Riverlands Migratory Bird Sanctuary: Established in 1989 by the Corps of Engineers as the Riverlands Environmental Demonstration Area to showcase low-cost restoration potential of large river floodplains.

Received \$2,999, 891.37 in ARRA funding to replace the access tour control facility with upgraded Class C Visitor Information Center- National Audubon Education Partnership. Riverlands Environmental Education Facility to promote the Corps message and education for the migratory bird sanctuary.

Discussion Question 1

Godfrey, IL

(cont.)

Beginning in 1989 twelve hundred acres of native grasses, aquatic plants and trees have been planted in an attempt to restore the site, the current landscape is representative of the way this confluence floodplain looked over 200 years ago before Europeans settled here.

The benefits of this more than 20-year- old restoration project are evident throughout the seasons. Tens of thousands of people visit the Sanctuary every year to reconnect with the river and enjoy the diversity of wildlife that lives or visits the area.

Partners with the St. Louis Audubon Society and the Webster Groves Nature and Corps biologists have recorded 299 different species of birds at the Sanctuary over the past 20 years. In 2005 the Sanctuary was designated an Important Bird Area by the National Audubon Society for the habitat provided at this crucial resting spot on the Mississippi Flyway.

Outdoor recreation like biking, hiking, paddling and fishing are also popular within the sanctuary and draw a multitude of people to the area.

In 2005 a world record blue catfish was caught on the Mississippi River just on the boundary of the Sanctuary. This catch along with other exciting sport fishing opportunities draw people throughout the year to the Sanctuary targeting river fish like paddlefish and catfish.

With several miles of hiking and biking trails and 100's of acres of paddleable waters the Sanctuary is an ideal outdoor recreation destination within minutes of the large metropolitan St. Louis community.

Management of the Sanctuary's natural assets for the benefit of wildlife in balance with enhanced outdoor recreation opportunities will continue into the future through partnership efforts. In the fall of 2010 the Corps in partnership with the Audubon will open a new sanctuary orientation center that will serve as the Corps hub for environmental education in the Sanctuary and will house the Audubon Center at Riverlands effort for National Audubon's Upper Mississippi River Campaign. This partnership effort will provide one more opportunity for the public to continue reconnecting with their rivers.

Has had more than 500,000 visitors since opening; 65,727 visitors in FY2010 (thru June), 6% increase from FY09

- ARRA projects:
 - The St. Louis District has two task orders that are providing exhibits and exhibit maintenance at the National Great Rivers Museum. We have an indefinite delivery/indefinite quantity (IDIQ) Exhibit contract with Formations, Inc. from Portland Oregon.
 - The total for the two task orders for work at the National Great Rivers Museum is \$183,869.64
 - Both contracts will be completed September 30, 2010

Discussion Question 1

Godfrey, IL

(cont.)

Each year, millions of people travel to the Mississippi River to learn and experience its history and learn about its impact on our Nation. The National Great Rivers Museum at Melvin Price Locks and Dam provides a unique opportunity to tell the river's story in a comprehensive, meaningful and relevant way. The museum is dedicated to telling the story of the Mississippi River – from its grand history and cultural significance to its ecological importance and role as a transportation corridor.

Opened in October of 2003, the museum is a 12,000 square foot facility with a 7,000 square foot exhibit gallery, a multi-purpose classroom and a 110-seat theater. Exhibits and the learning experience continue outside to the river water feature in front of the museum and along the lock tour route and main lock overlook. Free public tours of the Melvin Price Locks and Dam are given daily (weather permitting) at 10 AM, 1 PM and 3 PM.

The National Great Rivers Museum is managed by the U.S. Army Corps of Engineers with assistance from the Meeting of the Rivers Foundation, a non-profit friends group that operates a museum store and assists with special events and fund-raising activities

Since its inception, NGRREC has funded more than \$285,000 in research and maintains an expert staff involved in research funded by other sponsors.

Research conducted here will expand our understanding of the structure and function of floodplain-river ecosystems

NGRREC is formed by a unique partnership of the University of Illinois, the Illinois Natural History Survey and Lewis and Clark Community College. In addition to the scientific advances and educational opportunities that NGRREC staff members provide, they also stimulate the local and regional economy by obtaining funding from federal, state and private sources, the majority of which is used to employ people in the area and to purchase equipment and supplies from local vendors. LCCC is a USACE partner

The Field Station, strategically located near the confluence of the Mississippi, Illinois and Missouri rivers, will serve as an international center for science, education and public outreach, related to key issues that will improve sustainable management of large rivers.

The National Great Rivers Research and Education Center hosts international conferences, symposiums and information exchanges aimed at discovering linkages in existing research and acquiring new information to fill knowledge gaps related to large rivers and the human communities that depend on these ecosystems.

The field station will provide researchers with access to the river and the riverine mesocosms and wet lab facilities will allow researchers to conduct unique experiments to expand our understanding of the structure and function of floodplain-river ecosystems, information that is vital to the development of conservation strategies to sustain the natural resources these systems provide and economic benefits derived from these resources.

Discussion Question 1

Godfrey, IL

(cont.)

The Field Station building itself incorporates many green elements, including solar, wind and hydro-kinetic systems, internal and external water recycling systems, a vegetative roof and more. The project's goal is to attain LEED (Leadership in Energy and Environmental Design) certification at the platinum level, which is the highest rating possible.

Lewis and Clark Community College (LCCC) is one of the founding members of the Illinois Green Economy Network and is a leader in sustainability initiatives and green efforts in the community. The College is currently working to reduce its carbon footprint and encourage recycling. Serves more than 25,000 students annually. Boasts the state's largest Associate Degree Nursing, dual credit and workforce training programs.

The college is dedicated to the environment and creating a green campus, helping the underserved areas of the community get proper healthcare through their Mobile Health Unit and Nurse Managed Center (which is the only one of its kind operated by a community college) and their constant innovation in education.

Obtains most or all of its energy from clean renewable energy systems
Uses eco-friendly substances and materials
Minimizes the use of, and properly disposes of, hazardous materials
Conserves energy and other non-renewable resources

Educates students, employees, local citizens and others on the importance of conservation, recycling and other sustainability practices

Provides training in green-related occupations such as installing and maintaining solar technology, hydro-kinetic turbines and other hydro-powered technologies, wind turbines, geothermal systems, alternative fueled vehicles, wastewater management, pollution and water quality management, carbon / GHG footprint analyses, and energy audits.

Discussion Question 1

Golden, CO

The Suite of Colorado shares your commitment to sustain working ranches, fans and forests. to provide places for outdoor recreation that will leave (he next generation healthier and better connected to the outdoors, to protect land and water for our native wildlife and to revitalize local economies.

Under the leadership of Secretary Salazar and others. Colorado has built a strong foundation for community efforts to conserve and restore natural places. Diverse partnerships that include the Great Outdoors Colorado Trust Fund, landowners, government agencies and land truSIS have come together to conserve river corridors and wetlands in the San Luis Valley, mountain valleys in western Colorado and grasslands on the eastern plains. These projects all work across ownership boundaries to restore and conserve public and private lands and recognize the link between conservation and economies of local communities. With funding from these organizations and individuals, Colorado has now conserved over 1.5 million acres of open space and working lands.

I invite you to bring your Listening tour to Colorado to hear directly from our landowners, conservation practitioners, agency personnel and others about our accomplishments, our lessons learned and our ongoing collaborative projects that seek to accomplish landscape-scale conservation in Colorado's most important places.

Need to create a sense of place, a place where people want to be. Look at the South Plate. Great Outdoor Colorado

Representative as a kid explored the mountains enjoys the mountains. Wants her kids and other kids (Keystone Science School), will have access to the mountains. Wellness issues, kids that are outdoors are healthier, happier and do better in school.

Bark beetle epidemic, what is a healthy forest is bringing together that have not in the past history. What do we want for the next generated. Now we can look forward for the next 50 years, how do we plan for the population growth (human). Access to public lands is crucial. How to balance it? Collaboration and conversation

More and intergraded funding (between departments) for conservation. For getting youth into working, preservation, working with the non-profits, etc.....Do the conservation community know the funding streams? However, a lot of the large groups know the funds available not the small groups. Having technical support would help.

Build upon the waterways in cities. Can transform out cities. It is the backbone. Talk to the kids about the history and conservation. It is our transportation stream. Take those areas back from the industrial waste areas. Salazar: is this (waterways issues) true across the country? Look at Philadelphia, what we have done in Colorado can be done in other cities and around the States. We can protect and focus on the waterways.

Discussion Question 1

Golden, CO

(cont.)

Collaboration is necessary to get things done. We need to talk, look at storm water. Look at the economic development issues. Look how the river improvements have generated economic benefits to the State.

How do we move beyond jurisdictions? it is a challenge, the bark beetle forced summit into crossing the boundary. The lead agency was participating and not leading. It was collaborative. Be in the dialoged with people.

How do we move beyond jurisdictions? Grant programs can hold out a carrot. Rather than funding the individual group provides more strength in the program by collaborating.

Camping, fishing, National parks

Ride bike at Cherry Creek. Playing basketball at rec centers.

Forrest Land, Hiking fishing

Camping, hiking in Rocky Mountain National Park

During the week walk dog in city park, go to mountains at least once a week.

Seeing the different things public lands have to offer encourages more to do more to help and protect the environment.

Camping trips, Grand Canyon, Fishing, Parks, Bike paths, Volleyball

Non-profit mentor, fishing, hiking, Identifying types of insects and trees

Field hockey, hiking, backpacking, camping, environmental education

camping, hiking, biking

racing (?)

Discussion Question 1

Golden, CO

(cont.)

volunteer to clean rivers, keep trash empty

Never went outdoors much until joining ELK, camping

out with family, visit reservoirs, mountain biking, Colorado has made big impact on my outdoor activities

moved from Connecticut to Colorado, complete change in outdoor activities, biking, horseback riding, triathlons.

hatching, shocking fish to measure and weigh them, planting trees

Clearing wetlands

pick up trash to protect wildlife, clean up old/used fishing line because want to leave land as it was for next people,

I go to the park to play sports and take walks

Fishing, hiking, and having fun

I spend time in the Rocky Mountain National Park, and ride bikes

I traveled to Alaska national park for hiking and backpacking

I like to jet ski, plant trees, and maintain trails for the Larimer County Youth Conservation Corp

I plant plants in the National Forest, and repair fences

I went to the Grand Canyon this summer to watch the sunset

I teach kids how to fish

Discussion Question 1

Golden, CO

(cont.)

I trail run in the Fort Collins natural areas, and I like to hike and go backpacking

trail restoration, trail build, hiking and mountain biking

I help out the community by picking up trash

I recycle at school, and plant plants during ecology class

I clean and maintain trails

I recycle and support bicycling and carpooling

I practice Leave No Trace, pick up trash, and am part of the student organization "Society for Conservation Biology"

hiking, skiing, biking, rivers, camping, fishing, snowboarding, skiing

in front of the computer, white water rafting, sand dunes

walks in the neighborhood with dog

trails, camping, fishing, walking

fishing, camping

state parks are great for camping, easy access and great facilities

mountain bike, snowboard, skate, swing, baseball, basketball

went to border of Utah. Loves hiking but it is expensive, loves sand dunes, playing in the sand

Discussion Question 1

Golden, CO

(cont.)

rock climbing

horseback riding, extreme mountain bike

pickup trash

get people to eat less fast food, bad for the environment

pulling weeds, learned about how important it is to keep hiking trails clean

make sculptures, ride bike

group has been sending clean-up supplies to help with the oil spill

Dad uses composter to make fertile dirt and doesn't use water for lawn

trash collection while camping

trash collection while camping, cutting down on car pollution (running cars in idle), conservation of energy

pulling weeds on trails, trail preservation,

trash pickup, park cleanup

lay own eggs, raise animals, conserve resources

hanging murals, helping out homeless shelters, planting gardens at schools, help clean up Denver

Discussion Question 1

Golden, CO

(cont.)

Barbeques, camping, go to the lake, hiking, fishing, snowshoeing, jet skiing, snowboarding, basket ball, football, soccer, pool, hunting and fishing, sleeping, biking, jogging, group fishing, camping - group, boat ridding, amusement parks, go cart racing.

Use renewable water bottle, recycling on campus city, ride bike as much as possible, biggest problem is waste, aluminum cans go right into trash. One of the easiest things to do is recycling

Cut water when teeth brushing. Problem is trash and litter. Help pick up trash

Walk everywhere I can, recycle. One of the biggest problems is neighbors riding atvs, eroding the land

Set example, encourage recycling. Biggest problem is resource use. The way we use the resources, managing waste. Best thing I can do is be an example and a leader and pass on the knowledge

Water conservation, turn off water when teeth brushing, watering timing. Set example for the neighbors, tell people it is better to turn water on at night, outreach

Community compost, one of the problems for community is access to recycling and resource centers and flexibility to help people out.

Fishing clinics, play sports (volleyball, football) - 1.

Snow shoeing and sking, rock climbing, and hiking -1.

Restored a trail, pick up trash - 2.

Hiking after work, walking their dogs - 1.

Teaches youth how to camp, fish, and use the national parks - 1. Recycle things - 2.

Camping, Rock climbing - 1.

Play Basketball in Washington Park

Discussion Question 1

Golden, CO

(cont.)

Bikes the Cherry Creek trail

Outdoor activities at Sloan's Lake

Frequents Montbello Rec. Center, and Utah park near her home

Running in Cheaseman Park

Camping with family in surrounding national forests

Educate and teach others, mentoring

"Leave no trace" ethic, works with Denver water to install high efficiency toilets, energy work with Xcel to promote use of CFL lightbulbs.

Encourage the Hiring of environmentally conscious youth, mentor youth.

Pick-up trash, trail maintenance in the summers, remove fencing at local urban parks.

Pick-up around the lake near his home, watch out for local wildlife.

Be a steward, "Leave no trace" ethic, help communities with bike paths, etc.

Pine Beetle Observation

Sen. Udall committed to environment at the state and local level.

When I go biking, I go on the Cherry Creek Trail.

I go to the Colorado parks, to Golden Gate for hiking and to Castlewood.

Discussion Question 1

Golden, CO

(cont.)

I play basketball at Washington Park, and go to Rocky Mountain National Park.

I go to Montbello Rec Center, and any kind of park or city park.

I recently went camping at National State Park and did lots of work helping around campsites, mulching and cleaning up Lake Agnes.

Help restore and create urban gardens around Denver.

Need to mentor people, intern youth to see how can make living doing things we all love outdoors - create jobs for young people.

Pick up trash, help clean up campsites, go on trips every summer and to Rocky Mountain nearly every year, help redo trails, grab logs and bring them over to the trail to eliminate people from going off the trails, remove fencing so animals (elk, deer) don

I promote biodiversity, learn more about forests, ecosystems, pick up trash; issues - lack of awareness of where products, resources come from, which allows things to get devastated, polluted; need education, be aware of where things come from, help peopl

Recycle as much as possible, CFL lights in house.

Promote and practice Leave No Trace, work with Mile High Youth Corps, phases of conservation (energy work, go into multi-family homes to install lightbulbs; work with Denver Water to install high-efficiency toilets; in Golden Gate State Park chopping tree

Educate kids on environment, how to protect it and yourselves.

Take groups of kids out fishing, teach how to fish and walk around the lake and pick up any trash we see.

Try to practice Leave No Trace ethic, do the best I can every time I'm outside to be a steward of where I am, what's around me, and how I impact it, whether it's community parks, city parks, national forests, etc.

Transportation - access, being more mindful of how we transport ourselves.

Augment what is already happening with more collaboration, I hope to see that. I agree with Brett, LWCF funding, it's important and works well.

Discussion Question 1

Golden, CO

(cont.)

Effective strategies with engaging people, it comes in so many forms in how to engage the community. City of Golden's "Golden Vision 20/30" technique was storytelling; it's a way of having a 2-way communication with people. Part of the outreach was with youth, utilized the technology and provided flip cameras, the Flip Company offers 2 for 1 grants for such projects, and 20 students went to places in Golden and told their story-why they loved those places, highlighting what's important from the youth perspective.

From the home rivers aspect, student aspect, we researched water shed; students were involved in monitoring program and informed management, so they could see the effect of water, and how it changed. GOCO is a good example too, and the aspect that enables large-scale land protection, GOCO public and private lands has been successful, what makes it work is real money, drives partnerships, and can be more visionary. I work in Washington state, it takes those elements of a partnership, public/private, for the Washington Watershed Restoration Initiative, a lot of entities have come together to drive the restoration. Today no more roads and on to healthy rivers and streams.

It's great to have these high level discussions but some mechanism to take this, and have a resource to filter it down so that all the efforts can be put rubber to road, a strategy to take this really good information, and how do you filter all that. I hope someone has an idea about what is necessary to take this info for our own use and even more, funding, grants etc, so we can enhance what we have documented today, how can we do something productive with this info?

We involved the parents in our programs so they can be a part of the process and make for a successful venture. Another key to our success is the matching of programs to our open spaces, on-going activities, facilities. We need to connect these to our schools. As part of this we need to give credit to our schools.

Service learning volunteer opportunities-- youth-- VOC, YCC, SWCC

1. Use Jefferson County open space as a model

1. Open space model (Jefferson County) 2. No sunset on sales tax

1. Volunteerism is working well 2. Keep federal funding coming

1. GOCO as a national model 2. Low maintenance opportunities

1. Seconded GOCO support

Discussion Question 1

Golden, CO

(cont.)

1. GOCO support

1. No fees for land access

ELK program started under Ken Salazar. Connections within families. Older siblings participate then younger siblings want to do it. Making connections with parents. Long term mentoring is important.

Trips on the river include geologist, botanist, astronomer. Working with schools is very difficult. Used to do kids trips with Denver Children's home. Now the logistics (number of staff, managing kids' meds, etc.) make it impossible. Build multi-million dollars sports complexes but no tents, backpacks, etc. to connect kids to the outdoors. Getting kids outside is not viewed as part of the curriculum. Each school has to have a staff person who will lead it.

Colorado just passed "No Child Left Inside" law that is funded by grants, etc. Focus is on teacher training.

Boy Scouts and Girl Scouts have a strong service and leave no trace ethic. Exposure as children is important. These organizations get challenged by bureaucracy. Schools used to sponsor these groups. The Federal government should support these organizations.

Outreach through nature centers has really decreased. Used to be State Parks, National Parks, etc. would visit schools. This increases interest in participation. State and Federal programs could help with this.

Douglas County also has a nature based education school. Federal government could encourage this model. Communicate these successes. Develop common messages.

Part of a group where people can just get together, go do things, it doesn't cost money and they don't have to tell somebody ahead of time if they'll show up. Just come and enjoy the outdoors, feel safe.

Most of our NGO funding comes from grants. We have a program for disadvantaged kids – if can find funding for that kind of a fund, can reach even more kids out to Dinosaur Ridge, which is next step to the wilderness.

Angler education works. Take kids fishing.

Challenges - What obstacles exist that prevent you from achieving your goals for conservation, recreation and reconnecting people to the outdoors that you have used

Discussion Question 1

Golden, CO

(cont.)

"At a time when our natural resources are disappearing at an astonishing rate, the government has an obligation to promote sustainability, biodiversity, and conservation in any way possible: education, regulation, provision for quiet recreation (hiking, biking, fishing, enjoying animals and birds, etc.), discouragement of destructive practices such as off road vehicle use and destructive extraction processes.

School administrators need to be made more accountable for bringing students into the natural environment and promoting the outdoors.

Lack of local green space. Denver currently has programs that we should emulate - Some schools are turning school grounds into native landscape and natural areas that are being used for onsite education. We have a need for more natural areas conservation within the urban environment. Funding - Water conservation act. Lack of initiative. Advocacy - inspiring cooperative action. Lack of protection for natural areas - need to protect - and the resources to support existing legislation.

Examine alternative ways to generate funding for restoration and rehabilitation projects. Examine the renewal of SuperFund money for environmental work. Review of 1872 Mining Act - Are large corporations paying their share of rehabilitation cost?

Through the conservation trust system, _____ has contributed 12K acres of his ranch to study wildlife species, how development was affecting wildlife and other education opportunities - as a private land owner, how can he generate the dollars required to administrate the program through high schools and colleges, and how best can we approach the cooperation of the educators.

2nd question - What are the most effective strategies for conservation, recreation and reconnecting people to the outdoors that you have used?

Model - "Alpino" has a program that trains kids and their families in how to camp and be safe in the outdoors. Hands on outdoor training is available in a group setting so that kids get to recreate and learn about the outdoors with their own family and friends. getting kids up to te city. They are seeing success in partnering with corporations and local businesses. We need to go beyond creating an event, we should be designing the program to work with federal agencies to get more families going outside.

Replicate the model used by the CO Cattleman's land trust - which is a precursor to over 7 land trusts in the west. Provide outreach to constituents who may be averse to the conservation community. Cooperative use of the existing model. After only 3 years Texas is seeing progress in cooperation between stakeholders.

Partner with colleges and retail outlets to endorse sponsorship of outdoor activities for youth.

Discussion Question 1

Golden, CO

(cont.)

Implemented RAW "Ranch and Wildlife" youth program. Science students are responsible for the curriculum - agricultural and habitat based, as well as riparian and watershed, soils, etc. The Instructors noticed how much improvement the hands on participation provided rather than reading text in class. They indicated that the kids were engaged and actually retaining more information.

Use conservation leases to generate funds and initiate local and regional partnerships in education initiatives.

Participates in the TEN "Teaching Environmental Science Naturally" program. Working with school districts to provide teacher training so they can be certified to take students outdoors. Once trained - the instructor can obtain grant and other funding to take the kids outdoors. (This program is currently only available in Loveland) Some of the areas incorporated are wildlife skills days, fishing and hunting outreach and various outdoor clinics.

The Western Energy program participates in the junior ranger program at Nat'l park - The kids receive a badge, passes to parks and education on natural resources. The key to the success of the program is the federal designation and endorsement.

The DOW programs are comendable. The connection with nature creates invaluable influence in the lives of children. Once you make the connection, you are able to establish an interest that they can see and feel themselves. When kids are allowed the opportunity to learn hands on, their research indicates that there is a higher graduation rate, higher math and science test scores, and a higher percentage of college enrollment. Unfortunately, these outdoor programs have been cut from 5 days to 1 - 1 1/2 days to accommodate CSAP requirements.

Incorporate and build programs that re-establish habitats within the urban setting. For example, turning public areas or even your own back yard into a wildlife habitat. Continue to restore urban waterways. Find ways of involving businesses, communities, and governments working collectively on solutions. Addressing the problems with transportation to natural resource and recreation areas. How can we build partnerships between entities to accomplish these goals? The federal government needs to be involved.

Federal Gov't role. Nature close to home and first experiences must begin at a younger age. Large minimally inhabited areas and control and balance of the management of offroad vehicles and RV's.

Discussion and planning across agency and corridor markers to build partnerships in conservation. Using youth programs like alpino or TEN to train children how to be comfortable in the outdoors.. Training outdoors. Design the program to work with federal agencies to get entire families going outside.

Federal funding for Environmental sciences programs for kids and the transportation to get there.

Discussion Question 1

Golden, CO

(cont.)

Travel management, resource management planning and coordination of fee based services to ensure costs are better controlled and agencies align.

Funding for youth programs that encourage development in the sciences and land planning careers. Hands on participation to allow students the opportunity to develop an interest in being a steward of the land.

Partner with groups like the Co Mtn club to generate interest in the management and conservation of the land for future generations. Develop plan for long term costs - Use tools such as the wilderness act, and less stringent oversight. use resource mgmt planning - agencies. Enforcement.

MAPPING - LODGEPOLE PINE - MIGRATORY CORRIDORS - AND GETTING EVERYONE TOGETHER AT THE SAME TIME - Looking at the different mapping layers, agencies could begin to understand the values and resource uses of each group.

Use Forest Service and National Park Svc partnerships to teach urban forest, parks and waterways management, and then relate that education to build respect of our urban parks and waterways...Getting these kids early enough to establish a real connection with the lands or land management.

"Recognize that broad eco-systems are at stake and must be addressed beyond any particular state's preferences. The red rain that falls on the Denver area and covers cars, houses, and my expensive photovoltaic solar panels so that the sun can no longer reach them originates in abusive "historic" land practices---read over-grazing---in the Utah desert. If "scientific management" is the guide, why is this happening? Barren drilling and mining sites likewise destroy the land and water. Have we learned nothing from the Dust Bowl of the 30's?"

Tools*** How much time we are spending developing a state and federal clearing house to get the most out of the grants and money available through various agencies and non-profit organizations? We should be developing ways to share the limited resources we have.

Financial incentives for working lands conservation - clean water, open space habitat, state tax development incentives. *** Tax incentive for conservation easements***is working in Texas.

Initiate a citizen involvement program and incentives to participate in existing programs.

Initiate a public information marketing campaign. One of the most effective campaigns that affected _____ personally was the "Crying Indian" - 1970's?

We need a campaign to address the over-sensationalizing the media does regarding the "danger" of nature. If people are consistently bombarded with the "danger of nature," they will be less apt to seek out recreation outdoors. The media plays an enormous part in the stifling of our children and the decisions parents make regarding the activities their children can participate in.

Discussion Question 1

Golden, CO

(cont.)

Better use of commercial funds for public lands sites that film-makers use for movies. Use this additional funding for recreation and habitat protection. Smarter use of existing resources.

Build urban habitats people can connect to . Forest service needs to retire abandoned roads to restore habitat. Policies on rangelands need to be examined for land leases Land lease costs are consistently low. Initiate subsidies for stewardships of public lands. Climate change - work with states, private land owners and local and state agencies. Citizen stewardship would serve to encourage participation in stewardship and volunteerism.

Winter travel mgmt planning US AG dept. exemption for snowmoibles.

Citizen Stewardship. Better management of volunteer resources. Trail and park programs for restoration and upkeep.

National database to share the names of the people attending today's presentation. (Note*possible FOIA and privacy issues) Provide an easy way to keep track of the sessions and the problems and solutions being discussed. Summary of the sessions on website with contact database.

Youth campaign within the schools to promote "America's Great Outdoors." An outdoor education summit with actors, sports figures and other celebrities to bring youth into the big picture.

Clearinghouse - to consolidate efforts into one place. A large campaign may be overwhelming. Consolidation of efforts seems like the best route.

We have to keep in mind that solutions developed in one state may not be applicable in another. The nineteen western states need to be working together as well as partnering with the Federal government for better land use planning across jurisdictions.

Parting comment* It might be time to reinstate the Civilian Conservation Corp.

Submitted DVD for further review by the committee. The DVD is entitled "Wetlands and Wonder, Reconnecting Children with Nearby Nature." (produced by US EPA)N07

Education of accessibility. Little information saying it's okay to go certain parks, and it's okay to go outside to the parks.

Personal benefits to people from public lands can be made stronger known.

Bark Beetle demonstrates what is important for our forrests. We can't leave our forrests alone.

Discussion Question 1

Golden, CO

(cont.)

look at eco systems more broadly, and don't really recognize the adaptability of eco systems. Working public land managers together.

South Platte River, Grand Junction, Prioritize protecting River for drink and also keep people out and going to these treasured places for camping and swimming. National watertrails or blueways trail --cost effective and connect people to the outdoors and create generation of stewards.

I own stretch of river, beautiful country. Something brought tot my attention, only funded about third of project where we created fish habitat, and five years later have a fabulous patch of river today.

My sisters middle school had a program and I went with her planting plants and it was hot and I hated it, but I looked over and it was a mess before so I thought it looked good. Next time we went camoing. Family started to come and brought friends.

Just turned 21 want to go out and party. 18 can do that too. We go to clubs and it gets tiring and boring, so then we go out and go camping and hiking, and get lost. Remember something we saw that was cool and have to go back a nd find it again.

program at my sisters school, took her and she thought it would be good for us so I went fishing. And we've been out a lot since.

Transportion getting to those places is an issue. Programs (ELK) pick kids up to take them out and make it work. The kids in the program but also friends they want to take. Funding for these programs is very important

As simple as getting kids out fishing. It's huge. Federal government shouldn't forget about the tribes. They get little money, but the eco tourism for the public. Many are intimidated, and the governement is a huge part. Transportation to these reservations is a big part.

Compeling power that water has. We live and eat with it. The successful parts CO has with it. Protecting riverflow is very important.

What the local communities need and want. Important for efforts to be locally and voluntarily driven. 95% of the land is Federal. Ranchers were the first environmentalist, and most are willing to participate, but there's gotta be incentives. Peopl ewant to participate but need the oppurtunities. Wyoming kids grow up hunting and fishing, but as it becomes more urban we face these things too. Local economies and local peices are critically important. Three things in this initiative are Urban, Parks, and Lands.

Kids start having access at very young age through thte school systems, etc.

Strong urban presence -- education, etc. More Local nonprofit groups. Willing to volunteer and get kids out.

Discussion Question 1

Golden, CO

(cont.)

Weekend trips to Mountains are great, but more daily stuff--just going outside and gardening are even better. Drought hinders a lot, but shouldn't stop it forever.//What about school shaving their own gardens? AquaponicsSystems

Draw people from the cityoutside. Some neighborhood associations would help with the kids by showing them insects and other creatures. Leadership in the neighborhoods. I was afraidn of the mountains, but what helped me was trip to the National Parks and meeting up with the rangers

Local community. Some who live in an apartment and don't have the yard to go into and look at nature, need the parks (National and Local) to see.

Becoming part of the comuntiy is imprtant. Being able to talk to thecommunities.

Public transportationis there but can improve greatly. Federal involvement in transportation to get people places more safely.

Keep the federal government out until you need them. Having the fed gov't be the solution shouldn't the primary choice. There' sgotta be a local determination. Not at the first level. They help implement it after.

Convening----bring the local community together to talk about what it is about the future of valley they are concerned about. How do they want th e future to look. Community discusses it and the county is listening. This has done more to help folks see they are a community.

Funding, Creating a national Strategy, having leadership that can help out, and other tangible things.

Partnerships

Method to helping fund equally across the board, communities

National Landscape Conservation would love to see a secretarial order issued to give further guidance

What is working: in boulder a symbol of how you merge the outdoors and the communities. 4.7 million visits to the boulder open space, more than Rocky Mountain National Park. Make it as part of the life style. It is there to use. Sees Boulder being a leader for the country. Overcrowding due to 4.7 million visitors. Accessible open space around the whole town. Making the park become part of the city.

Discussion Question 1

Golden, CO

(cont.)

What is working: Across the country and work with many agencies. It is a unique partnership with volunteers, youths, adults, integrate with local communities to leverage what we can do. Long-distance trail that goes thru 5 states. Work multi-jurisdictionally. Unique partnership consisting of locals and volunteers engaging stewardship. They economic development and leverage with partners. Powerful network.

What is working: Engaging the communities who benefit from lands, grass roots outreach, - Is there a lot of resistance? Have to explain what the land is being designated for to get them to understand what the uses are. Groups educate communities. One-on-one contact. They explain the designation to overcome opposition, repeatedly.

What is working: Cattleman's and the land trust are moving forward in partnership, and stronger organizational structure. Access for the public to the Sangre DeCristos. What is not working the IRS. They have a strong organization regarding access to the Sangre de Cristo Mountains.

What is working: Local open space programs is working well. Every community in Boulder has an open space program over 100,000 acres. Get kids out to the land, buffering, local food production. It is a revolution.

What is working: Connecting kids to the out doors, creative partnerships with organizations they have not worked with in the past. Creative partnerships and thinking outside the box. They're forging new partnerships.

What is working: Land owner driven conservation. Successful around the State. Leadership that is invaluable. Routt County protecting farming ranch properties. Landowner interests.

What is working: Colorado bar associated, holding its CLEs by combining meetings on reservation easements, age law section, cattleman's sections, etc.... Bringing forward the issues throughout the state. Think about professional organizations reaching out to the advisor communities. Looking to professional organizations to help families consider willing their lands.

What is working: Private lands issue and recognize the USDA releasing moneys for land owners to open up areas for outdoor recreationists. USDA funding is for open fields initiative to continue conservation and increase opportunities.

What is working: Reforms for onshore gas - leasing reforms. Need to continue to promote multi-use and restoring balance. Restoring balance to the way public lands are used.

What is working: Concept of the programs farm bill based programs based leveraging private land dollars.. Look toward more programmatic and leveraging the private dollars and lands.

What is working: Colorado is a great example to facilitate all of the groups (environmental groups) and the federal government on working the conservation issues. Seven other states have followed Colorado's lead regarding conservation.

Discussion Question 1

Golden, CO

(cont.)

What is working: Colorado model, seven other states have followed suite and formed cattleman's conservation groups that have replicated what CO has done. SCORP is funded by conservation money. Every five years, all 50 states. Collaborative planning. Federally-funded programs sent to states for implementation. Brings together folks to discuss and build partnerships and vision.

What is working: Collaborative effort across the Nation sent to the State for collaboration. Colorado good model.

Challenges: IRS fraudulent accusations, encourage outdoor use, increases the impacts and waste disposal on the land. Group size damage, impacts to the environment. Need to educate about what the outdoors are about and preservation. Concerns from San Isabel involve the IRS; Crystal Mountains and problems with massive trash, etc. from people who use and damage the area because some people being allowed to do whatever they want when there while others' accessibility is limited. Educating youth on preserving the area. LEGACY FUND.

Good for kids to have experience working with animals. Protecting the wild mustang. Save the native mustang, horses can live in harmony with the cattle.

State 4H. Interest is working with education. Debt relief or college credit. Educating youth via debt relief, etc., (incentivizing secondary education).

What is working: creating small groups of kids and helping them connect to the land.

What is working: Working landscapes are a good way to protect our lands and plants. [*THESE REMARKS CAME AFTER WILL SHAFROTH GAVE PEOPLE AN OPPORTUNITY TO SHARE ANYTHING THEY'D LIKE TO SAY.]

How we utilize private sector partners, ranchers and others. Look at best-case, best practices, GOCO is a good example of an org that understands the big picture, understand locals and engage with local entities, engage those in existence. Affordable housing is a good example to.

Being able to communicate the relationship between outdoors and the health of our communities. Everyone thinks it's nice but not fundamental in tight economic times and they don't get the importance. Tie it to health.

State, federal and local funding, but non-profits are not always an eligible recipient of some programs. Should make non-profits eligible as well, they can take money from more sources, foundations, and give tax credits to the corporations you can't get when donating to county/state.

One program, that may already exist where you could have a self-guided tour that highlight the attributes of natural and cultural resources, maybe telecommunications could get some cell coverage, and combine with an interpretive service, features of the conserved lands and what they have to offer. It's a PR opportunity and educates people about why those areas are special.

Discussion Question 1

Golden, CO

(cont.)

Recognize cultural and historic resources, would like to see a greater voice for that. Obstacle of course is funding.

I echo the remark about funding, barrier is leadership. Another issue in Colorado is it is hard for youth groups to get the permission to be on federal lands.

Opportunities to partner with agencies. Fed government is not the most welcome partner, so utilize the existing programs with federal funds. Water rights in CO are contentious, it's an experiment but we are using a state program that has the resources to protect, and how we can protect using existing infrastructure.

The value of partnerships, GOCO has been enormously effective in this way in Colorado and that has resulted in a # of conservation movements, interest in conservation and has transformed CO vision of how that can happen. It is a model for the rest of the country. Focus on private lands and the general public and conservation groups, it's amazing. Partnership also working Colorado Rare Plant Conservation initiative has brought diverse stakeholders together and gained funding from a variety of sources, it's a good model of a partnership.

Maintaining private lands is important in addition to the public lands we have, we have a dedicated funding source, homegrown partnerships, that are diverse, include local and state governments and non-profits, private, come together to problem solve to protect landscapes. It requires leverage. You have to bring other dollars to the table from other sources. America's Great Outdoors can learn from where we are doing private lands conservation programs, landscape by landscape. Private/public partnership is valuable. Community engagement is necessary, at the local neighborhood level in the urban environment so the community defines what its needs are and the health and the community's access to the outdoors. Make connection between lands, people, outdoors.

A compelling reason to go, a story to tell, which is easily accessible. "Cites in the city" has a cell phone feature to tell you about what is around you. Regarding the Public/private issue, keep your compass straight and do not compromise with private funding.

We're doing it; kids wanted to come here and are genuinely engaged. If we don't reach kids, these are our future supporters of our conservation efforts and that's what works, if they hear about it in school and hear about in science, or archery programs, some will develop a life-long love of outdoors.

Mentoring Academic Program/Educating Families - access to paths via bicycle - have to ride to destination.

Youth activities - mentoring them; need more support w/family programs due to both parents working.

Introduce the good ethics of four wheeling - problems with insurance coverage. Boys N Girls Club participated in four wheeling in mtn's - help kids recreate - educate kids/outreach.

Discussion Question 1

Golden, CO

(cont.)

Lookout Mtn Nature Ctr - funds availability for transportation

Access to websites/communications to find information; create a website consistent with all the agencies and keeping them updated.

Full and dedicated funding for Wildlife. Implementing /wkng with state & local agencies. Living in Boulder and having the rtd, railways

Camping Equipment - It is hard to buy these items when you are living day to day

Appreciates the conditions of campsites in CO area. No outhouses, area in Natl Forest was not kept up; was not clean. Need funding for keeping up the campsites/ toilet/ water will be beneficial for families camping/hiking.

Age limit for younger kids- encouraging Girl Scouts, ELK, finding time/research on outdoor activities. Advertising/encouraging for kids and parents.

Urban Gardens are awesome - in town and keep supporting them. Local/State funding/process.

One strategy that has worked huge network of volunteers. Take care of the people that help agency. Saves \$\$ /County money - They in turn also share their experience to the public.

Environmental Education - there are lots of agencies - no coordinated strategy with those agencies - Envi Literacy in process of creating. Oregon, Maryland have this going on.

What has worked is a coalition put together ie. www.outdoor.net - have great info on website on how to volunteer - whats going on in your neighborhood, trails, etc..

Great Outdoors - Americore important for CO.

Using outdoor classroom time for our kids today - as well is indoors. Educators are doing well on passing info to kids in school.

take a deeper look at recreation plans - take reports, group them together and hilitte accomplishments and collaboration needed on state & fed level.

Program incentives on roads being worked on/Wildlife bridges for animals that need to cross.

Discussion Question 1

Golden, CO

(cont.)

I'm a common man living in Denver. Have lived here over 30 years. I very much hope this policy will integrate the non-profit community, GOCO, etc. into helping non-profits to help kids get outdoors. 2nd - I fully endorse initiatives to get kids outdoors. Growing up, our folks used to kick us outdoors, but that has changed and we need to help get kids outdoors. River programs are a good idea. Mission programs on weekends and off-school days help to get kids out. Lastly, the elk example seen today helps get kids out. We need to train kids to be future environmental educators. We should create a whole new "Force" (both adults and youth) with love for the outdoors.

Preparing for the "Heritage Area" - this pulls the history and land together in South Park, Colorado. There's reality and authenticity. Outside mentoring with kids on the range and Platte River. Heritage Area connects volunteers, grass roots, and others, ranchers, ranch experience, miners panning, miners with engineering thinking, partnering with other groups and offering Heritage Area resources. Include this with what's happening with the land. Visit an old miners cabin, ranch, one room schoolhouse, and see and feel what it would have been like for a kid to live there. We have a museum with 35 buildings in South Park, to visit history. Partnering with other places and other resources. Huge ranches in South Park, but putting in easements for the future. We need to ask ourselves, what can I do, how can people appreciate this as much as I do?

Support leaders of outdoors in kids and others being in even just their backyards. Support initiatives - getting people out, revitalizing cities. North of Denver are working farms - I love to see these. Important to see areas outdoors is not exclusive, and you don't have to travel far. You can even just plant flowers on your doorstep, or you can just stay close to home sitting under a tree. All this is really getting outdoors, too.

Recently, Colorado was awarded for their outdoor rec. plan. This needs to be recognized across the country! We work as 65 people who meet downtown at the REI store monthly, and this successful grassroots volunteer work can be replicated nationally. Available is Water Land and "Conservation funding for staffing, with initiatives, to continue partnering with many non-profits. We have a successful Landscape approach with our recreation issues (Gave out handout).

The outcome of our work should be a reasonable number of visions. We must celebrate or nurture the collaborative successes that have celebrated great outcomes, across multiple jurisdictions, with healthy forest initiatives and youth. Inspiring a new outdoor use paradigm would be a crowning achievement of your administration.

We have a shared vision, a request for administration on how funding can work, with more collaborative partnerships. Dollars follow objectives. Dollars flow to joint contributions.

Example - 750 environmental education teachers who could be empowered by giving them lift tickets. Lots of skiers .

Discussion Question 1

Golden, CO

(cont.)

Challenge cost share - national historic and scenic trails that are funded are important to have. There are over 100 communities with large populations which are encouraged to get out and make use of these. Inner City kids can get on a bus and go there. Costumed trail guides and history are available at several. Walking where their ancestors had walked is an important notion. Trails connect everything. Historic landscapes, land, animals, etc. It's important to get kids out on these. Lewis and Clark Trail System - is a great example of where visually impaired kids are using trails successfully.

We have a great vision - differing habitats to see, and the need to drive special folks to use these.

Parks and recreation are big in the City of Denver and in Lakewood. We should continue to try and reach kids, families, all demographics, and don't need to take kids off on grand adventures, but to give them local outdoor experiences close to home. Important to work into parks programs. Walk a trail.

Psychology of going on a hike diminishes stress, diminishes pain, connects us spiritually. Need to create desire. Look at advertisers and food. Only create a positive vision. How great you feel when you move!

Have the agencies work together. Private land owners and gov't agencies can be helped together with a catalyst agency like Trout Unlimited. Partnerships work with mediator group. Hundreds of successful examples are out there to help more partnerships forward. Keep inspired.

lack of mentoring young people, mentoring provides better education than booked based curriculum, we need to bring kids into environment of learning

more incentives for private land owners to provide conservations easements and other similar private land conservation programs

awareness, where do we target these kids, school, having outdoor youth organizations available in school, mentors, makes it easier to get to the kids

it's equally as important for State Historic Fund to be fully funded, Hisotic Corps, education, mentoring, integrating historic and environmental education is just as important

Outreach in Schools really helps, it started me, raised me to be a role model for younger kid, working for ELK in outreach for young kids

ELK is an inspiration, do you do more outreach in other schools

Plan trails using GIS to make sure they lay lightly on the land, "bundle" trails for different uses but yet separate.

Discussion Question 1

Golden, CO

(cont.)

biking community passionate environment, bundling of trails works well

Scenic Byways a great way to get people out and educate them about the environment

involving the young people today needs to be the trend, because there has been a huge disconnect between young people and the outdoors.

it would be beneficial for us to have programs that don't need people to sign up, and don't cost money, and help people enjoy the outdoors safely. It costs too much money to get into a national park, which excludes a large group of people.

I work for a non-profit, and all of our funding comes from grants. We also have a program for disadvantaged kids, but we don't have funding for it. If there was money, more children would be able to take part in the activities. Funnel the money through the non-profits!

It is important to positively influence people to value public lands and resources. It is our support system! We need to raise awareness about what wilderness is all about, and promote the designation of new wilderness areas.

Has worked for a wheel-chair camp for children; wilderness on wheels

Works with a program that is seeing Federal funds, and feels supported.

Just wanted to point out that there are programs with support.

In Colorado.. had good success building on partnerships.. the focus is on jobs, but also noting that private businesses are evil.. However, it's the partnerships between private business with the non-profits that are making things happen. President needs to embrace every opportunity to get private funding.

Need to focus on undeveloped lands.. ability of President to establish national monuments.. through antiquities act. Govt has ability to protect wildlife, air, water.. more pressure for development.. as energy sources get more scarce.. we need to use this mechanism to take this action

Was on school board, requiring performance bonds along with a permit

We get money from gov to buy on water rights, donate those to state, funded through Federal Dollars, State Dollars and sometimes GOCO, private individuals donate- somewhat of a partnership

Discussion Question 1

Golden, CO

(cont.)

People should be encouraged to write a conservancy trust in their wills; a donation of strategically placed land

And there should be a Federal match.

How much money does this region get. Accountability, for mineral and oil extraction

bring disparate groups together under one umbrella, and let's start working together. We made many recommendations, but there is no way to get those recommendations going because of funding and other challenges. There is a lack of awareness about the benefits of getting outside. The government should provide answers to questions: What is there to do? Where will I find it? And how do I do it?

It is important to have a vision of success from the beginning. It is easy to become overwhelmed with all the details. It is important to conserve the areas that we love. As a population, we will not be comfortable with public lands if we are unfamiliar with them. It is important to get nature areas (parks, rec) close to home so everyone can be involved!

get more kids involved in outdoor programs, like ELK

Mineral impact funds, most distributed to local governments.

It goes to infrastructure, not watershed.

IF there is a way that President can work with admin to give local forest ability to work outside the box.. instead of one big forest policy.. dealing with san juans that your not gonna see somewhere else... put a directive to enforce existing MOUs

Discussion Question 1

Grand Island, NE

I wanted to briefly. Dimensions Educational Research Foundation. Have seen huge success with partnership with them. People's Gardens. They provide research based field tested for providing nature based outdoor spaces. Can be used anywhere a traditional playground. My kids go to public school in Lincoln they go to where a nature playground is being put in. If we can provide a place for kids to go out and play right at the school instead of going somewhere else. Then that starts with curriculum and getting hands on. Fund on average about 6 million trees on public lands. Work with state foresters. I am trying to find a fit with private landowners. How do we make a fit on private lands to fund reforestation on private lands. It's the program I run. I came here today to talk to people about partnership's These forums are great. Continue building partnerships.

One of challenge we've faced is balance between ground water and water resources. One of State's AWEPS in central state has worked very well with money from EQIP, Conservation and urban development program? In case of Platte Basin Habitat this is a challenge .

JAKES State Women's Coordinator. We have programs for women, parents, and kids to get them out doing this. They need to start when they're 4 years old.

Saw the tour this morning, there's an incredible partnership between landowners. 3600 miles, 700 landowners. Missouri River has Wetland Reserve Innovation Program. First state in the nation to have this. Common resources can be targeted to land scale initiatives. Common landscape scale objectives is hugely important. We are lucky in Nebraska to have Steve Chick. He is a good listener. He's open minded enough to listen to ideas from the field. Then he sets that tone with his staff to also be good listeners and try new things. We need that kind of leadership. With 97% of land privately owned you have got to have cooperation. Forcing realization, working partnerships and targeted collaborations that have been very successful.

Working with landowners is key to a lot of what has worked in Nebraska is that in the Natural Resource District System has allowed us to deal with natural resources issues in an integrated and comprehensive way .that a lot of other states have not been able to do. We are now dealing on things on a watershed basis in an integrated sort of way, taxing authority, resources to deal with and the local ownership connection between landowner and... Successful wildlife conservation and habitat relationship between people and land. Ownership that local folks have is a larger part of why things are successful. NRD's are tied closing to folks who own the land and natural resources. That is why Nebraska structurally has a huge advantage and why Nebraska is the only state in the nation that has the kinds and amounts of local funds spent on the land. Looking at it thru the eyes of landowners, incentives work. You can educate all day but if you don't have the carrot/incentives to go with it, if they don't have the money and the where withal then they don't do it. If you do a good job of education and you have the incentives, landowners will do the right thing. Going all the way back to Section 208 (Public Law 92-500, Section 208). If you want to be successful, you have to have the support from the bottom up. That's why we are as successful as we have been. A lot of NRD programs are things that came from the local folks. Folks said we have this resource problem and we solved with ideas that came from the ground up

Discussion Question 1

Grand Island, NE

(cont.)

NACEE is working with Nebraska organizations to create a web site that would provide a web site for someone to go to find out opportunities in the state. Game and Parks, Ducks Unlimited, etc. Include all web sites to a single location. Each organization could have their own password to keep their own dates, etc. updated. Others can sign up to find out what is happening in other parts of the state. Hopefully online by next summer.

Local people find solutions. For every one dollar of federal received, they provide twenty dollars locally.

Handout on North Star Neighbors Farm Tour near Fullerton, Nebraska. Will have demonstration on things they do on a farm - now certified organic, grown natural beef, raise chickens and eggs. Have a field day to help people understand where their food comes from. Work thru food system and educate them on how food is produced. Bought metal canister and split in two. Going to make cabins. People can go out on pasture and rent a cabin. Identify and support these people. A free will basket will be available to cover costs. We undervalue our resources in Nebraska.

Environment and sportsman organization. Nebraska says we take pride in fact that we are 97% private land ownership. Average across US is 70%. Is that the fact that we are the leader? Should others aspire to what we have or should be finding more public lands? As soon as this happens their property taxes goes up. Same thing happens in Sandhills. Ted Turner bought ground and rancher's properties went completely out of reason. Landowners are furious. Is 97% private ownership to crow about or does it need to be fixed Spent a lot of years in education. A year after I retired I was called back for a half year because an auto mechanics instructor retired. Even without knowing how to teach auto mechanics, I could go in office and sleep as long as you let kids get "hands on". I'm an avid fisherman. I raised 3 boys and nothing compares to raising children. I have 9 grandsons and only 4 have any attitude positive toward hunting fishing, etc. It bothers me. Anything we can do to facilities getting those kids out getting hands on.

Mentioned partnerships being key. Takes local initiatives that understand local issues; folks who understand local issues and can deliver. State wildlife grants program works great. Have biologists in local communities who know the folks and find win/win solutions. Go out to all states and have impacted over 200,000 acres. Can find landowners objectives meet wildlife objects. This is working.

Talked about her experiences of mayor of small community and what we face in order to accomplish this great outdoors. My town has parks, ball fields, swimming pool and frisbee golf. We revitalized an old zoo into a park. It is hard to keep all of these going. One thing that has worked well is the RC&D program. They received help from the Department of Economic Development and Tourism. Hall County RC&D program did a presentation and told them they needed one central area to go to get help. From this group we got two scenic byways – Sandhills and Loup City, the Junk Jaunt, and chalk mines—needs to be developed further on. Helped with Spalding Dam and Lake Ericson project. Partnerships that we have with NRD's, Game and Parks, land-grant colleges, and university extension. Family activities. We are a family place to come and visit. Over 100,000 kids go thru program. This works.

Discussion Question 1

Grand Island, NE

(cont.)

The UNL Extension Office uses a facility in Hastings at the old Regional Center. This center for outdoor and agricultural learning, Prairie Loft, is using grant monies and private donations to operate. Most of the work is done by volunteers and privately funded. I want all these agencies to work with schools more.

Historic trails have been a great way to tie kids to the environment. Having the kids walk the ruts of the Oregon Trail gets more across to the kids than just talking about the Oregon Trail.

Free transportation to a park or lake.

How about taking kids who need a job and pairing them up with farmers? Someone else mentioned there are regulations on this, so be careful.

Taking a kid on a field trip, getting the parents involved.

We need to have the parents involved. He was involved with the Boy Scouts as a youth. It got him involved.

How do we reach the parents? Do they care? Can we get the parents to take their kids outdoors? Buses generally do not go to the nature spots. Sometimes the kids need to experience it themselves, and then get their parents involved.

Nebraska NRD's own and operate facilities that are free to the public. It would be nice if we could have access to more federal dollars to promote NE. The gov cannot be everything to everyone. We can be a resource to a volunteer organizations and public schools. I am a farmer, not at it actively. We started a program with Gothenburg High School and worked with FFA/biology/science for outdoor education. We obtained materials from NRCS and NRD. My family ran this program for 20 plus years. We passed the program on to our neighbor and it is still running today. It is a lot easier to run a program like this in a small town. We targeted 4th & 5th grade students and showed them how to husk corn in the fall, milk cows, etc., and exposed them to the environment. It is up to us to take the initiative to expose them locally. Another project one of the NRDs is working on is an educational trail. We are working with the local ag organization to promote the trail and place signs with points of interest, i.e., who it was settled by, heritage, history, culture, etc.

Has been interested in the conservation taking place. He has had school children to his place and taught them to identify different plants, roots, shown them corn, earth worms, bugs, etc. We need to pay farmers not to irrigate. Farmers are using way to much water. Use the water appropriately; they need education on this issue. How do we get the kids to the farm? We need to make the parents be there. We fed the kids by roasting hotdogs on a stick. The kids had never done this before.

Discussion Question 1

Grand Island, NE

(cont.)

We are using less water today than we have in the past.

Why is it so important that we are talking about outdoor activities? Conservation/stewardship (especially in Nebraska) is so much better than 50 years ago when he was a kid. His home county of Saline used to flood every year, but not now because of the improved conservation practices.

He is involved in outdoor education. The kids need repeated exposure to outdoor activities. Education is important and relevant. We are one generation away from the farm. These kids need to be educated about the farm life.

A water park may be their connection to nature. Families need to do things together. We are competing against other activities. We need to get stuff in the urban areas to compete.

There is a club that has purchased canoes to take the kids out for an overnight fishing adventure. She has asked what the kids do when they find out there are no TVs, computer games, etc. The kids are awestruck when they can see the stars. This is a real success story.

That is a good way to get people back to nature. Bonus points for adult. Kids need to climb the tree by themselves. What about back to a heavy duty volunteer program. We have baby boomers who are retiring. Set up volunteer programs for the baby boomers. We could have community gardens in Grand Island. We could teach them to preserve their food, healthy eating, etc.

She would add recipes to her vegetables when she sold produce at the farmers market. There are a lot of things we can share if we could reach individuals? Maybe through churches, help at a community garden, or teach canning?

He grew up on a farm and hunting was something he wanted to do. He recommends using mentor programs from Pheasant Forever. There is a difference between conservation and earth science that is taught in schools. He learned a lot of useful information in FFA, but FFA is not available in urban areas. As kids get older they need to know about conservation issues, i.e., what is a buffer, etc. Project Wild (a conservation and environmental education program) is a program we need to get into our schools. Also need to continue this education at a higher level.

Movement to natural grazing processing. Product all the way to the consumer. People with different ideas are doing some amazing things.

Need to work with urban people. Need to build relations. Fire (prescribed burning) works with Loess Canyon, need to work with urban because of smoke issues. CRP management. PF can be a natural. Look at the bigger picture. Cooperation/coordination.

Grandson likes to learn the different kinds of fields of crops. Would like to ride on a tractor. Great opportunity to work with farmers.

Discussion Question 1

Grand Island, NE

(cont.)

Social support after event, free, family accessibility, community-based projects. Reconnect kids with nature. Will be involved after. PONCA program worked- the community wanted it. Lincoln safari has been very successful to bring people to the city parks. It was representative of the general population. If 10% of population is Hispanic, they had 10% of their participant were Hispanic. Better ways to reconnect. Teach art - bring in environment. Great Park Response has been very successful.

CRP great. CRP is huge and glad there is a signup this year.

Have to go where the students are and provide information. Move programs to venues that are already set up. Public believes that others taking care of issues for them. Water festival over time has become more difficult to get students to come. Have to take it to the kids. After-school programs. Pioneer days . Take programs to new venues. Communities at large are hard to get involved. Think someone else is taking care of the problem. At Wayne at the Chicken Show to present water programs. Festivals -Summer Enrichment Program-Protecting water-media campaigns-Foundation has succeeded (I think).

Stated that she has been a camp counselor. Raised money for scholarship fund by auctioning off quilts that were donated. \$26,000 was the highest bid. Opportunities.

Need to reconnect people via education, access, opportunities. People take part in recreational activities close to home - put parks there. Why reinvent the wheel.

Need Ag in the classroom through regular curriculum. Farm Bureau supports program. Use Ag examples for English paper and math problems. Bigger challenge as people move farther from the farm now - two generations, Grandma and Grandpa, not on the farm.

Kudos to the federal government. CRP great program – conservation benefits. Challenge to continue due to locked-in rates. Value/tax - @ full Ag value.

Need to involve high school students and have them contact younger students rather than having adults contact students. Students will be more perceptive. Benefits high school students too because they realize that younger students are interested in what they say. Especially HS students who are very Ag oriented. Ag days- HS student can realize the impact they can have on other.

Need more free or low-cost opportunities that are family-oriented. Need accessibility. Must market tourism to outsiders. Collaboration works – schools, scouts, museums. Exposure promotes interest. Does not have to be your own resources. Farmers getting interested...

There needs to be a balance, perception, and education. Everything in moderation. Progress hippie gardener or everything - a parking lot or grass. From one extreme to another.

Discussion Question 1

Grand Island, NE

(cont.)

Boys Scouts try to make sure that children are connected to the outdoors. Single contact great – Girl Scouts, 4H, Boy Scouts beneficial. Effective even if a single contact it is a great opportunity. Civic organizations are great at making sure people are still connected to the outdoors. A continuing opportunity is even better.

“Kennedy said we can land a person on the moon – why can’t we land a person in the country”. Society does not understand how we all fit together. If we do not know how to balance things can we fall (like the Roman empire)? Reconnect-peace corp was a great thing. It will be great all around.

Organization’s values need to match people’s values. Reach/target individuals and they can reach their friends, etc, etc.

Youth programs, social media works - connects people across the country. Ag Chat tells rest of the country about Ag. Environthon all work very well. Stick up for geeks who are into technology but it is a way for them to connect. AG chat is a whole opportunity to let people know what is going on on the farm.

Stated he is involved with the Kiwanis which sponsors 100 low-income youngsters to attend Camp OK which is a 4H camp. Eighty percent really want to be there. Some have fear of the outdoors – trees, bugs, animals. Had two extra kids wanting to go to camp - private individual paid the \$700 needed for the two to go. _____, UNL extension, runs it. Most Kids really want to be there. Some just put up with it, but yet they leave with having experienced it.

I hope McKenzie Barry's suggestion to form a Got Nature campaign didn't fly over everyone's head.

I think we need to go back to No child left behind but we need the no child left inside act to be passed to promote environmental education. There are a lot of conservation grants out there that get conservation work done; but allow for those grant programs to do environmental education. Some grants provide the money, but it has to be tied to a big on the ground million dollar projects.

It is being appraised at highest and best use with the easement in place. To the individual landowner, everyone is going to pencil it out. They keep it or sell it.

Some of the more successful conservation planning efforts usually involve accumulating folks that have a lot of buy-in in the area, with much landowner representation.

Every conversation with a landowner has property taxes in it.

Extra curricular activities, in high school especially, it seems like there is some room for environmental education to fit in there.

Discussion Question 1

Grand Island, NE

(cont.)

It's important to maintain the support of the State Wildlife Grant Program.

My organization would like to create a conservation corp, a work corp of interns to do stewardship, prescribed fire, and other management activities. That idea at some point, since it has a historic idea (the conservation corp) may be adapted to different settings.

National Audubon here in Nebraska owns over 2,000 acres. We pay taxes through the good neighbor policy just to keep on the good side of our neighbors.

Nebraska has the Nebraska Recreational Liability Act...as long as the landowner is not taking money he is covered.

Non-financially, if those rules could be loosened just slightly (No Child Left Behind) it would help.

Some of the things we do affect people downstream so landowner buy-in is important.

The reorganization process was actually fallout from my job. We tried to organize some local working groups to get this job done, and a planning process was in place. It took a year of monthly meetings to get a process in place and getting it incorporated under a new name and entity...after that, issues of legalese would pop up and we had to wade through gobs of stuff after 3 years and 5 years. During this time, people started to get pride in what they were doing that hadn't been there before. It is a much more intimate, more local initiative. They needed to support a local idea. We're commodity driven and we don't think of ourselves as park managers. It's a cultural thing. Let's add some new things to the landscape to make us more diverse without hurting everything else.

There's a group of nonprofits and organizations involved in an organization called green infrastructure. It's an idea that green infrastructure is just as important as gray infrastructure. Part of this involves collaboration and a process to talk about how, if something needs rebuilt, that you can incorporate green infrastructure into the mix.

We develop new programs that could have easily been subsets of existing programs. We need input to our senators and representatives constantly as to what the priorities are so that when

We have a variety of programs to assist with the management and payment for access.

We use the Farm and Ranchland Protection Program to protect places we love on the landscape. We also use the Nebraska Environmental Trust to place working lands easements on properties. Our working lands easements are unique and we use these programs to assist in our mission

Discussion Question 1

Grand Island, NE

(cont.)

We've started a master naturalist program. This is a compilation of many, many organizations as another way to reach out to people, helping NGO's and Feds to do conservation service.

When you think about ways to monetize their land, one is leasing land to a rich hunter. A community based recreation program would be another way to provide access through a partnership between the community and the land. The landowners benefit by getting a cut of the income hotels, etc. make.

Discussion Question 1

Grand Junction, CO

disconnect this generation from technology and get that back outside. Kids go through withdrawal when they are away from technology - don't know how to disconnect. Kids will not support public lands unless they experience them - need to overcome apathy

need transportation to get kids outdoors, more partnerships

If people can all work on a project as a group (anglers, motorcyclists, etc) it gives people an idea of what we're trying to protect. Makes people more likely to respect signs, etc.

find a way for all user groups to get along and for continued access to trails while protecting resources

lack of funding is a major challenge. Fiscal partnership tools can be too complicated to figure out - simplify. Use agreements rather than contracts between partners.

Education - biggest obstacle - people do not understand value of large, intact ecosystems. Focus should be on value of intact ecosystems.

People do not see value of natural land/intact ecosystems; public information campaign to connect people with those ideas

emphasize rivers - healthy flows for recreation, health. Extend that emphasis to riparian areas

tourism/recreation are a big part of economy - remind decision makers of that

balancing act relative to multiple uses is a huge challenge, funding is a big challenge, balancing short term desire to use/access lands vs. long-term impacts which present conservation. Conservation ethic held by federal employees is great but challenge

Her students – gives kids opportunity to raise endangered fish - her challenge her kids are raised in the area and some have not seen CO River or Monument – need more than just one field trip to get kids invested.

Funding education

Balance between conservation and recreation, educate public that motorized users are conservationists

Federal government should get out of the way

provide education about what ranchers do as stewards

Discussion Question 1

Grand Junction, CO

(cont.)

Great Outdoors Colorado – put that money into recreation/outdoor education

GOCO education program

DOW environmental education curriculum

Working with local high schools – education, teaching kids to tie flies, fly fish, stream ecology, etc

work with multiple stakeholders to develop protections for lands that everyone agrees on, educate folks on what uses are available in wilderness

public/private partnerships and public/public partnerships

works to have kids work in the outdoors

collaboration works

once people decide to help build trails, etc, they take better care of them

funding - motorized community gives portion of funding for work on ground

lands trusts are working

youth corps working

get up get out and go program works

CDOW 10 program works - all agencies work together to develop kids for teachers to use

more listening tours on a regular basis

Working with different organizations is the key. Partnerships work well

Non-profit organizations have really started to pick-up the effort that public land agencies once did. Non-profits are putting forth the initiative to get people involved. Individuals can make a difference. Takes arm twisting sometimes to get things mo

Pairing up with nonprofit groups. Nonprofit groups are working with sportsman's organizations. Nonprofits are valuable.

Discussion Question 1

Grand Junction, CO

(cont.)

Successes come with working with partners and non-profits. His group is working with CDOW, sportsman's groups. When working with school groups, teacher training you need to work up through the channels of the agencies to reach kids.

Industry is the forgotten step-child. Resources are needed to connect people to the land. Industry is in contact with USFS, BLM. Agencies need to sponsor conservation assessment program and help farmers and ranchers obtain conservation easements. Arc

The River Front Commission has a wonderful forum. It is a way to have a free exchange of information, and hear about what other groups are doing. They have regular meetings with a variety of agencies and the public to share ideas, exchange information,

Community involvement is critical for planning, and helps to set rules and parameters for user groups.

The government has to treat all user groups equally, otherwise their efforts are fragmented. If one group is favored, other groups go off on their own. Nothing in the AGO video showed motorized use on public lands. Processes work better when everyone i

Colorado National Monument offers guided walks that aren't too difficult. Organized walks should be offered by agencies. They should be easy enough for everyone and free. Those kind of activities motivate people to get out and enjoy the outdoors.

The Bureau of Land Management's National Landscape Conservation System (NLCS) name is misleading. People don't know what NLCS is or what it represents. NLCS is a way to get folks out in special areas, but is not well known. There is an identity problem.

Wilderness is a very effective strategy for conservation. Advocate Wilderness -need large undisturbed habitat to deal with climate change. Wilderness works well in western Colorado. Keeps large systems intact, hunters come here to hunt, protects watersheds

Reconnecting what works. Organized an event partnering with BLM. We had stations set-up on BLM land. Kids went around from station to station. This was a great way to get kids involved. We are planning to do it again.

Funding: When funding is available, people are more likely to collaborate in working together. Taxes are important to acquire critical linking habitats, protect summer range. Private lands provide winter range. Need to buy property or conservation easements

Encourage land trusts to conserve land because it keeps private land open.

GOCO fund has had a huge impact. It is extremely important recreation. Talk to legislators let them know how important this program is for funding programs.

Discussion Question 1

Grand Junction, CO

(cont.)

Movies can really help to connect people to the outdoors. We should make more movies or nature programs. Look at movies like Crocodile Dundee and what that did for the Outback in Australia.

Why aren't there more ways to share trails? Agencies need to accommodate more than one user group on trails instead of closing access down. Mountain bikers and hikers are losing ground.

Give youth a chance to do something in the outdoors. National Conservation Areas work really well in this regard.

Involve stakeholders: We need more collaborative, science-based decisionmaking and management practices, ways to conserve species, more of a holistic approach for managing lands, utilize best available science, open or close trails-understand impacts, us

GOBW members are going to areas with maps and GPS units documenting where things need to be corrected. They are trying to help managers care of things. They realize managers don't have personnel and funding to take care of things needing to be fixed. Th

Listening sessions are very important, hopes the result of sessions will be a balanced approach. Trout Unlimited's youth effort growing exponentially. Engagement at the elementary and high school levels is critical. Need to start at a young age to get

Motorized user groups pay registration fees to keep up trails and parking areas. All user groups should have fees. OHV registration fees being used to fund other programs. People in other groups should do similarly raise money instead of trying to dive

EISs are overwhelming science based. Most people have no idea that mining is even going on underneath the area they are in. In most cases, recreation is not impacted by mining.

Encourage more management contracts and term easements as opposed to conservation easements. Agreements in perpetuity scare folks who don't want to tie-up the land in future .

Discussion Question 1

Helena, MT

Create more education based programs for young adults. Create opportunity!

Diversity in levels of conservation protection. Increased unbiased federal oversight and regulation of resource development (i.e. coal, oil, gas). We don't need another catastrophe like in the Gulf to realize our Federal Shortcomings. Allow more anonymous volunteerism in policing the lands. Without enough Federal employees to cover every acre have a more open door policy. Example: some of the argument among motorized/nonmotorized traffic is missing/deteriorated signs-allow citizens to return signs to restricted areas to prevent further conflict.

We have the opportunity to use our history to provide the motivation to get people out into the outdoors. By connecting these heritage and natural resources, we can tell a very powerful story-that people must see.

2) Better management or elimination of domestic livestock grazing on public land.

Appoint strong individuals with scientific background and clear sense of history and how our public lands have come to our time. To connect landscapes focus on identifying and protecting linkage corridors for wildlife and ecosystems.

Move as swiftly as possible away from oil and coal use, encourage thoughtful development of renewable energy. Encourage individuals home use do solar and or wind energy. Avoid transporting electricity long distances- use and generate it locally. Focus on healthy wildlife population and distributions- "A healthy environment for man is a livable environment for wildlife" Keep as much wild land WILD as possible- even reclaim areas back to wild state (good wildlife, habitats) truly road less areas don't contribute to water quality problems or habitat fragmentation, or attribute wildlife species or noxious spray. Apply presidential executive orders to maintain and protect soils and vegetation set up to the plate and apply protective measures to assure that we have functional and healthy ecosystems- they must not be compromised for the sake of pushing people into the outdoors. Introducing people to the outdoors must be orderly and educational so the landscape we are introducing people to are not ultimately sacrificed though our use or abuse. Stop "out" sourcing efforts that should be taken care of by dedicating knowledge, federal scientist/ employees. Take pride in the agencies, encourage them to take action to restore watershed and landscapes. Listen to people and communities but when even more importantly, please listen to the earth and its needs.

Empower teachers with conservation materials to connect youth with the outdoors. Support connecting youth with volunteer and non-profit conservation opportunities.

Discussion Question 1

Helena, MT

(cont.)

Supporting the programs that help to serve our youth in areas which will both encourage their development and ability for them to be stewards of their (our) public lands. Conservation Corps and other programs which incorporate national service and an introduction to issues facing public lands are a step in the right direction. Drawing youth and young adults into programs which are supported by federal land management agencies will give them a stronger education and an ability to be more engaged citizens.

What works? The education of our youth. Once our youth get a taste of the outdoors they become passionate, and they get work done. I can't tell you how many young adults have come to work for MCC for a fun summer job and have caught on to the excitement and made careers out of conservation and environmental work and the number of people the impact is amazing.

Redistribute funding to match a sustainable, long term solution to benefit conservation efforts and the sustainable economy that arises from it. Also, increased education. Visibility for unexposed communities can help increase interest for conservation issues and therefore help support funding for the local programs discussed today.

Use the good will, motivation and concern for the environment and our public lands on the part of American citizens, especially youth/ children, to overcome some of the work that they long to do and that needs to be done to protect these resources. National Parks Forest Rangers can help facilitate this by partnering with local, non-profit and other groups to get Americans out in the land. Imagine that you could go to a National Park or forest or state park and on any given day find a program, sanctioned by the park, where you and your family could help preserve the park (e.g. paint a picnic shelter, pick up trash, pull weeds, build a trail, etc). Our parks are underfunded and in need of repair. If we can budget the money to get the work done then ask citizens to help. This will get people involved, give them a sense of ownership and accomplishment and ensure that future generations grow up learning how to care for our national treasures.

1) Please continue to support and fund the AmeriCorps and Conservation Corps programs. It helps connect youth to nature and the outdoors, builds job skills, and supports community service. 2) Please continue to support the national Leave No Trace outdoor ethics program as a means of promoting responsible outdoor recreation and stewardship of public lands. 3) Establish federal and state funding sources and mechanisms to match local money with children and nature initiatives. Improve recreation management funding in agencies and streamline the ability of local, state, and federal agencies to develop programs that effectively bring partners together to protect recreational river corridors and opportunities and other public lands across jurisdictional boundaries.

Incentivizing Private landowners to conserve America's special places.

Make permanent the enhanced tax treatment of private conservation easements. Enhance funding for support programs like FRPP, WREP, LWCF

Discussion Question 1

Helena, MT

(cont.)

Thanks for hearing my comments. Allow private non-governmental non-profits to hold conservation easements with LWCF funds. Remove the private cash match required by the FRPP for conservation easements.

1) Allow private land trusts to hold conservation easements purchased with LWCF funds. 2) Allow donated match for FRPP conservation easements rather than private cash match.

We need a dramatic shift in how we regard our public lands. Unfortunately, our current orientation is to open them to exploitation by private interests for their own, private profit. Instead, we need to regard our public lands as the last remaining natural and wild places, the last places where intact ecosystems continue to function, the last places where people can walk in the quiet and unmechanized natural environment. It is especially important to conserve and protect these lands in our era of climate change, which threatens the plants, animals, and people of these lands.

Use good science to manage our public lands in the ways that best protect their natural ecological character.

Equitable funding of the stateside LWCF program. Declining over the years. Stateside LWCF funds many local community protests that could not be funded locally. Funds from stateside LWCF goes to important heritage state park sites -- bannack, Lewis & Clark Caverns State Parks --> recognized National Heritage Sites.

Thanks to the administration for holding the listening sessions. Open government and transparency are key to solving our environmental programs. Yes we can. Suggestion -- hold an evening listening session so the little guys working stiff can attend.

1) Hold responsible parties responsible -- tougher government regulation 2) Policy change to address climate change ie. Greenhouse gas regulation 3) Transparency, public involvement and government accountability

Thank you for your commitment to conserving open and working lands, wild and agricultural lands. I appreciate your seeking local and fresh ideas. I would encourage you to also recommit to programs and policies that are already proven effective. Voluntary conservation on a local level relies on LWCF funding as an engine to spur local investment like the bond funds in this county. It spurs other private and state funding. Please consider making this permanent. Tax incentives are an essential piece and the third-leg strong partnerships with private conservation groups.

Get programs in the schools, more funding for conservation programs, Government working with grassroots organizations, listening

1) Passing climate/energy legislation and putting a price on carbon. 2) more presidential leadership 3) building on the increases in renewable energy research.

Discussion Question 1

Helena, MT

(cont.)

- A) Noise of motorized vehicles is significant challenge (sic) -- reducing noise should be a priority
- B) Maintain multi-use
- C) Conservation easements

Stop shutting (sic) down roads and putting land into wilderness. Let the people use it. Let them have easy access to it.

Thank you for listening. Stop the Forest Service road closures and wilderness take overs. Make it easy for the public to use our public lands.

1) Crown Managers Partnership: 20 land management agencies in MT, BC, and Atlanta working together to coordinate management of the large complex Northern Crown landscape. 2) Crown of Continent Geotourism Council: collection of hundreds of business people including organizations, local governments in MT, Atlanta, and BC working together to develop sustainable local economies around the Northern Crown: www.crownofthecontinent.net

Big demand, insufficient funding. On the Rocky Mountain front and in the Blackfoot Valley, there is 150,000 acres of "easement demand". Investments in easements on ranches contributes to local agriculture/ rural economics, secures America's beef/food supplies, and keeps wildlife habitat intact.

1) Keep good agency partners in rural communities to facilitate conservation practices and transactions. 2) make conservation funding consistent/dependable/permanent (land& water conservation fund, farm bill programs- GRP, FRPP, WRP, WREP, etc.)

Science education concentrating on data, ecological concepts-not belief systems of parents

This comment is from me as an educated, concerned, owing citizen of this great nation, and of Madison County, Montana. Our environment and our health. Put money into researching all of those points. There is potential for jobs, food, fuel. For clothing, tools, nourishment and it medical properties are proven. Changing this antiqued, racially driven law would allow ranchers to add diversity to their crops for industrial use and would create a cooperatively beneficial situation in so many ways/ Please consider this solution to many problems in our nation.

Modify the budget process. Resource utilization (example logging) and site reclamation (road removal) must be in a single appropriation process.

Confront the budget and planning deception- budget honestly and appropriate accordingly.

Discussion Question 1

Helena, MT

(cont.)

This is an idea on how to connect people to the outdoors. Awareness of outdoor activities is a major problem. It would be great if there was a website for a national calendar of outdoor events. People could search by state/city to find outdoor activities near where they live or where they are visiting. Organizations could submit or post themselves their activity, with the details, why they are having the activity and contact information. This website would have to be greatly advertised so organizations across the country know they can post an event and citizens know they can find information there. It could be similar to an outdoors Craig's List...

The most important thing that the U.S. government could do to help conservation in the West is: raise the monthly grazing charge from \$1.35 to fair market value.

Apply funding to research and qualified staff. Continue working from the ground up- great idea with the look at environmental issues from a watershed session perspective - ridgeline to ridgeline.

A meeting in eastern Montana would have been nice.

Trusting the land managers on the ground or local control to manage and make decisions.

Collaborative grass roots efforts can and do work, especially when awareness, education and outreach accompanies the effort. Fed laws management agencies can assist by providing data and information so groups can make intelligent choices and recommendations.

MT. has enough wilderness area- also against federal ownership. Need our forest "open" and mud "closed" Leave historical buildings and cabins standing on Pouhand. Important to have access to forest service roads and trails- a hiking b. snowmobiling c. 4 wheel divers d. ATV use e. horses f. hunting g. lakes. Recently joined an ATV club and have enjoyed seeing clean up of the trails- keeping the trails open and working with the forest service on hand, it works

Adequate and sustained LWCF funding-community involvement-consensus building-continued investment in involving children in the outdoors thru land management agency programs.

We need a Governors Water Summit in Washington D.C. to address water uses and conservation- best practices for use, limits on distribution if necessary, awards to States with working effective conservation innovations as regards to water.

Discussion Question 1

Helena, MT

(cont.)

Something that worked: Last year, I worked as a volunteer to a 2nd and a 4th grade classroom on a combined outdoor education project. Their teachers read them my manuscript, Wood Lily, throughout the year (the story is about an 11 year old girl living alone in a forest cabin) and we did related art activities from the book. In May, we had a full day of classes at a campground near McDonald Pass just outside of Helena. People from the Helena District Forest Service and two retired Scientists staffed a number of sectionals. The students rotated from station to station and learned about pinebark beetles, timber, geology, anthropology of this area, birds, wild flowers, and insects. The love it! The adults reinforced the "leave no trace" forest use ethic. School administrators sometimes need to be convinced of the value of such a project. Our Principal was not one of those.

UMRBNM nomination process was divisive; however, next week a collaborative effort with the National Riparian Workshop, permittees, conservationists, media, ranchers, Friends of the Monument will look together at riparian areas and endangered species habitat •A free hiking map of 10 hiking areas is available

Block Management is working well [a state-MT FWP and federal program for hunting access whereby MTFWP pays landowners for providing access] •The Iron Mask property is now in the public domain [a BLM LWCF purchase with multiple partners]

Likes block grant matching funds that can be used for open space acquisitions and for preserving farms and ranches

Working with schools to explore off highway vehicles, communication with youth is important...especially since we are so urban... today's kids need special attention to connect up with outdoor situations. •Conservation easements as a tool: example with American Public Land Exchange (APLE) facilitated an easement with the flexibility to allow motorized recreation and successful in maintaining open space

Bottom up and local control works best (eg. Block management program). •Conservation easements should be considered for 90-100 years instead of in perpetuity so as not to dictate to subsequent generations, ability to revisit and possibly tweak at some future point. •Local control in determining types of access: hikers, hunters, horseback, mountain bikes, ATVs, snowmobile [travel management]

The organizational structure of 53 watershed organizations and conservation districts, inviting partners to the table to find solutions

Partnerships between adversaries, break gridlocks. •Stewardship works instead of the timber sale model. •Public land managers contribute to conservation by setting sideboards so recreation is not diminishing the character of the lands, set limits so don't destroy the special places of MT, so can pass on undiminished to the next generation. •Use collaborative processes

Discussion Question 1

Helena, MT

(cont.)

Block management and conservation easements work because of the “localness”. •Local needs, desires, and control; management not dictated from West Coast or Eastern US, the locals know and outsiders don’t have a clue. •Red trees [beetle kill] due to higher management dictates, locals know what the land will support. •Handicapped and aged can’t use lands because roads are being closed on the national forests; keep roads open [travel management]

Red trees not due to mismanagement, due to climate change – winters are not cold enough to kill the beetles, global warming is impacting our environment. •Consider climate change as the number one issue, it impacts people, wildlife, watersheds, native vegetation is dying. •Local control in the abstract is good and is also the “Tragedy of the Commons” from overuse, exploitation by locals, an example is Haiti deforestation. •Get local scientists into the environments for best ways to make functional, on-the-ground, enlightened decisions. •Public lands are owned by all Americans, not just locals. •Protect Montana for all generations, help ecosystems to survive

Partners with USFWS in weed management, wildlife habitat, establishing trust •Grassland reserve is chronically underfunded, the demand is great but only able to work in 3 counties

Voluntary conservation planning and assistance programs work well ... Big Hole CCAA and DNRC HCP. •Need more FWS staff and funding to help foster programs such as Candidate Conservation Agreements with Assurances (CCAA) and Habitat Conservation Plans (HCP) which are US Fish and Wildlife Service programs that issue permits to nonfederal entities (state and private people and organizations) to allow unintended (incidental) take of threatened or endangered species so that normal farming, ranching, silviculture or other business practices can proceed without fear of prosecution. •habitat conservation, state lands habitat conservation plans, federal dollars, staffing and funding

Would like small ranches/farms recognized for their conservation efforts. •Advocate for more wilderness in MT especially along the Rocky Mountain Front, disagrees with those that don’t think we need more wilderness. •Weeds, can’t do enough. •Education is essential for children and grandchildren. •Maintain virtues... honesty, integrity and passion for what we believe. •Government isn’t the enemy, help make it work, be more effective

Block management program (a program whereby Montana Dept. of Fish, wildlife and Parks pays landowners in exchange for providing access for hunting and fishing) works well for wildlife management in Montana

Communication with youth is important...especially since we are so urban...today’s kids needs special attention to connect up with outdoor situations

Bottom up and local control works best...(eg. Block management program)...programs are tailored to local ranch settings expressed concerns about conservation easements into perpetuity..maybe should consider 100 years easements that can be revisited and possibly tweaked at some future point

Discussion Question 1

Helena, MT

(cont.)

Really likes the block management program....because of its "localness" didn't want dictatorships in CA telling Montanans what to do with their conservation dollars... locals always know best.... wants enough roads left open to provide adequate access now that he is older and can't walk as well as he used to

Voluntary conservation planning and assistance programs work well....Big Hole CCAA, and DNRC HCP....need more FWS staff and funding to help foster programs such as these (Candidate Conservation Agreements with Assurances [CCAA] and Habitat Conservation Plans [HCP] are U.S. Fish and Wildlife Service programs that issue permits to nonfederal entities (state and private people and organizations) to allow unintended (incidental) take of a threatened or endangered species so that normal farming, ranching, silviculture or other business practices can proceed without fear of prosecution.

Need to measure conservation restoration work in terms of its value to society....helps set the value of conservation effort for use in planning. A youth restoration partnership is under development to help teachers take kids into the field to conduct conservation work

Discussion Question 1

Hyde Park, NY

I go everywhere outside. I sleep in a hammock in my yard. I love going on the Hudson River. I'm part of a group that takes kids out on the Hudson, finished the Hudson river paddle. I'm always outside; there isn't anything inside that's all that appealing to me.

I work on a reservation in Ossining, NY. It's 900 acres of what was once farmland, now forest. Do lot of hiking there, learn about animals. I try to learn from there. I live a 15 min walk from the Hudson. There are a bunch of parks in Croton. Anywhere there is a park that's free I try to go there.

We just came back from camping a week ago or so. My family and a couple of my family's friends. We do crabbing, mussels. I like to fish. And I also like to canoe. Fascination for me in camping is that I can write and I can draw there and I can feel the atmosphere and write to my heart's content. It usually calms me down.

I live in the city so it's not an outside all the time. We have gone snowboarding with my family in Colorado. There was no outside world influence. In terms of my job, this morning we went to Norrie Point and we were out in the water identifying fish.

I like to be in the water or at the beach or at the pool swimming. Me and my brothers really like to do that. Today we went to Norrie Point in the Hudson River and played with fish. I really like the water.

I do pretty much anything and everything that is outdoors. My family has a farm, we hike a lot in the back country. I sketch outdoors. Whatever I can get into.

When I go outside I like to go hiking, kayaking

I live in Albany. Me and my best friends go bike riding, go swimming in a pool and ride back.

I live in the city. Go to a public pool or go to a park or to the church or something.

I go outdoors I like to play soccer, go swimming, take hikes

Waterski, I like to go swimming. Me and my friends go on the walkway a lot. The railtrail. My family goes camping too in the Adirondacks.

Most of the time, during the summer, I play basketball. During the school year I go to the community center. It kept me out of trouble.

I like to do a lot of things outdoors. Walking dogs, tennis, camping. Enjoying a local stream, park, gardening. Just sitting outside. We have a picnic table outside our house, so eat there.

Discussion Question 1

Hyde Park, NY

(cont.)

a painter and I go outside to paint. I have an outdoor studio, which I prefer. There are places like pavilions where I go to set up and work.

I like to play basketball and volleyball and walk with my friends and talk and relax.

I recycle.

Keep trash picked up.

I go to school up in Ithaca. It's difficult living on a campus still being green. I try to compost and recycle, take buses or walk. Hydro fracking is a big issue. Most of the campus is very against it. I know it has done some terrible damage in W. Virginia and other places. A lot of people at Cornell are against it.

I go to school in Vermont. I'm an eco-rep. I teach kids who live in the dorms to save energy by turning off the lights, keeping showers shorter, reusing a water bottle. I am an environmental engineering major. Sustainability is my life right now. We have all the time in the world, but the earth doesn't. Taking a solid look at everything – food that you waste, raw materials that we can't just be greedy all the time. I spend a lot of time thinking about that.

I like to take materials that people throw away or recycle and turn them into art. Last year I taught an art class at the Beacon Community center and we made masks using recycled newspaper and flour and other resources that we found around the campsite. We also made a huge turtle that represents the creation story from many cultures around the world.

I run a small farm about 30 min north of NYC. We're a small organic farm. Everything we practice is about protecting the environment. Composting, irrigation. We encourage people in the community to bring their compost to us rather than to landfills. Big problem in Rockland county is development. Turned a great deal of land to housing.

In my city in Albany is a lot of garbage. Our summer job is to go around our town and clean up the garbage, the weeds. Make parks.

During the year I live in Houston. In Houston, there is no recycling. In my house, I take little steps. I've changed out all the light bulbs, try to do my laundry in the off-peak hours. I decided to go with an elec company that uses wind power. My apartment complex does recycle. I try to get my children in the habit of taking things to the other dumpster for recycling. When I'm able to use recyclable bags of that sort.

What I personally do is I don't idle my vehicle when I'm driving and I try to remind others. And I also recycle everything that's possibly recyclable and I encourage everyone in my family to be mindful about the environment.

Discussion Question 1

Hyde Park, NY

(cont.)

Beacon resident. I really love to grow food. I love to maintain a garden and I love to buy food from people who live in my area. It's hard to farm. I've learned a great respect for it. I have an honor for that profession now. I know that there is a lot of waste that goes along with industrial farming. I try to use my food wisely. I see a lot of misuse of public lands. Where there is a lot of green space, but people aren't able to use it.

I do recycling and I like to remind the younger youth that we are using 25% of the world's natural resources in the United States but we are only 5% of the world's population and we need to think about the other 95%.

In my school we have a back yard for playing. There are wrappers, straws, everything even though food is not allowed there. Students are supposed to pick up all the stuff, but there is so much trash, even cigarettes. Smoking is a problem.

A lot of schools, my high school, have a national wellness day or week. School or community could have a national "Nature Day or Week" Not everyone would have to take a science course, but a day a month or something, but where the school could go out, take a hike or some place outdoors.

I'm on a sports team, but I see a lot of kids excluded from sports. I think involving everyone, from inner city could be networking with sports.

I think to have some partnerships between schools and non-profits. Maybe there needs to be a contract between people getting recovery act money is to partner with a school by adopting a school. Some of these big companies could pay it back in the form of community service. Giving it back to the community or sponsoring outdoor programs.

I think we need to embed conservation, character education, and environmental standards in new national curriculum.

I came here for one main reason because I used to work for the Beacon Community Center and it closed. Working with kids from 6-12, we provided a lot of those things to kids. We gave them that parent, that attention, we was the reason they might want to do better than that. We provided so many activities for these children that no other center was doing. I also mentored teenagers. What we did was provide things for the kids. I had kids coming outside. We reached out to every teen. The reason I'm here is because my main goal is to search for a helping hand, another organization, that can lend a hand and refer me to somebody because I see the same teenagers that I was mentoring on the streets drunk or high. We opened the doors to the youth and elderly. I recommend to Obama to single out, focus on these organizations that are in the communities by themselves. Between 7-10 towns there was only one community center. It needs enough funding, enough money. We all need to work together. Gave kids a reason to get out of house, off of computer, do outdoor activities. Focus on community organizations, provide resources for community centers to help youth elderly. Things can be done. I came here today to try to find help. I hope somebody is understanding that what I'm trying to say that these people need somebody. We were that somebody and want to branch out.

Discussion Question 1

Hyde Park, NY

(cont.)

The LWCF is important, but there are other funding sources we depend on – recreational trail grants from DOT for example. Are you looking at this at a broad enough scope that includes other departments? Answer: Sometimes it feels like the other departments have a lot more money. DOE is an example – they are interested in these issues. Funding for trails is very helpful. Major initiative in DC along Anacostia River. Takes enormous amounts of funding, but there are examples of agencies and funding sources working together. We're working on a trail system. Thanks for your for comments.

In the Hudson Valley we work in partnerships and we do this with the heritage area and greenway. We need to promote heritage resources for tourism – heritage areas help do this. Funding for national heritage areas was zeroed out in the President's budget for FY 2011 and nine NHAs will go away in 2011 after their authorizations run out. What do you think the long term outcomes are for NHAs? Answer: That's a tough one. Everyone agrees that the national heritage area program and Rivers and Trails program and others like it are centrally important to the mix of activities here. The challenge is the budget situation. The president has said we'll freeze domestic spending for the next 3 years. There's a lot of concern about federal spending. So we are not going to be seeing increases. And we are forced to make choices. Some agencies have lots of grant money. EPA has a lot of grant funding – easier for them to deal with budget cuts by not issuing grants. We face tougher choices at DOI. My advice is to continue to build a constituency for these programs. You need to keep at it. Can't assume that funding will continue. You have champions inside the Department and on the Hill. It's so important that the LWCF is mandatory fully funded.

When we design summer youth programs or youth conservation programs we need to make it worthwhile for kids. Consistency and predictability is important as well as funding. Answer: goal – We had a goal at DOI to increase the number of youth in our summer programs from 8K to 12K. We actually hit 15K thanks largely the NPS and SCA. We are working hard on this. Want to hear about new partnership opportunities. We should have 100K kids

Programs like Rivers and Trails work great and I want to thank Karl Beard for his help with trails. I suggest that all levels of government foster an entrepreneurial spirit among staff to break down barriers among agencies. Answer: We're trying to break down silos among federal agencies. It's hard in government. We're working at it.

Discussion Question 1

Kissimmee, FL

Beach, lakes, white water, likes to be near water

vivid contrasts, horizon with mountains, clouds big view

fishing, off-shore fishing, beach

have more outdoor activities in school....construct more bike trails...learn more about the affects of an industrialized economy/nation

Ocala National Forest, springs, lakes

green, open spaces, wildlife habitat

Biking, Mt. Biking

wildlife

Springs, snorkeling, biking

few people, big open spaces

Bike, hike trails, swim in springs

Ecology and Marine Science is required at his school. More schools need to make it a requirement and/or they need to get the students outside through school curriculum or projects.

Mottled Ducks depend upon many of these wetlands (including the Everglades) more than we thought. If we didn't study these species, we'd have no idea what area is important. DU works in partnership with refuges and other groups to restore wetlands. Power to vote is important to protecting resources. Freshwater areas serve as nurseries for much of the seafood we eat.

If youth get credit for volunteering in school, then working in the environment is a good opportunity.

Discussion Question 1

Kissimmee, FL

(cont.)

The FL Fish and Wildlife Commission manages 5 million acres of Wildlife Management Areas (WMA) in Florida. The state is out of money. Need to work together to save what is left. Next generation needs to be educated about our environment if we are to have it in the future. Recreation is managed very carefully on our areas. Florida Natural Area Inventory (FNAI) inventories each WMA and creates maps of critical areas before roads or firebreaks are built. Need to have people out on the land to learn to love the land and have voices to speak for the land. She invited the YMCA participants in the group to come out to Three Lakes WMA.

Florida Fish and Wildlife Commission, Dept of Environmental Protection, FL Natural Area Inventory biologists work. What they do works. The study and data they get works. She is fearful that the state is not funding these three agencies enough. The state needs to understand how much these agencies support the public and other agencies. These agencies work, but they are endangered due to funding cuts.

With Ducks Unlimited, what works is our partnerships with refuges and landowners. Take DU dollars and write a grant that leverage money to multiple it. That works. North American Wetland Conservation Act works. Involving NGO's, state and federal agencies and private landowners works. Large ranchers don't want their land developed, can put an easement on it to protect it. Partnerships go a long way. They work well.

Citizen Scientist's program works by utilizing technology to engage citizens.

Florida Fish and Wildlife Commission helps us in Palm Beach County with teaching kids how to fish. Kids get to go out for 2 hours in boats and catch fish. Before they go out, they get to see a touch tank, learn how to tie knots, ID fish, learn about tackle, etc to give them knowledge to learn how to fish. This is a great way to get kids involved in the outdoors.

Elect the right people. Check the people out that your vote for and work with friends.

A hotline for the public to report apparent counter-productive efforts by the federal government. We restore part of the watershed with federal money, while spending money to develop land in the watershed. The developers claim that overlays are not a Development of Regional Impact (DRI), but create a sustainable community.

Tools: partnerships work very well. Migratory species – we need tools that work for these species. Prairie potholes is where many of our migratory birds come from. This area is facing a lot of change, especially the changes caused by ethanol use. Ducks Unlimited would like to see more tools like the Federal Duck Stamp to put more land under protection. Since 1932 duck stamps have protected 5.2 million acres. Buy more duck stamps to save more lands. This tool helps this area because it protects the area where ducks breed in the prairie pothole area, consequently, more ducks are protected and return to Florida.

Discussion Question 1

Kissimmee, FL

(cont.)

exposure to the outdoors— personally and professionally is important.

Don't forget about Get Outdoors Florida! Everyone should join.

I have attended FWCC meetings to support youth camp and has worked with scouts to build fences, bird houses, as well as with Boys and Girls Club.

walked into my optometrist's office and he asked me what can I do with my son?Gave him info. On Youth camps. They were able to get involved. He reported that kid enjoyed himself and told his friends and they want to get involved. Here are things in our backyards. Need to educate parents and children.

we have environmental schools – magnet schools – they do a lot of field trips. Use Everglades Youth Camp – now run by FAU and Pine Jog Center. Afraid to come out for overnights. Younger kids – elementary? Transportation hard to line up

to get outdoors, you have to be close to home – there has to be access, land, trails. We have completed 2/3 of Florida Trail – need access from private landowners and to purchase land. The Trail is a facility to get outdoors. For specifics as to what we can do – have Congress fully fund Land & Water Conservation Fund (LWCF). Support existing volunteer efforts.

Has to be fun for the kids. Make it something they want to do. Want to be with their friends.

family dynamics have changed so much. When I grew up, we were always outside. Later, went outside with my kids to National Parks and Forests. Something needs to be done to get today's families outside.

Everyone supports kids getting more education and getting outdoors and land conservation

met with (name deleted) in FWS/WO in July and others and was talking about 600,000 acres coastal conservation areas, which should help save \$. Sell this as an investment. President needs to look at existing programs and look for duplication and not just saying, we need this much more money. Consolidate programs. This should not be partisan. More efficient. Cooked the program down and will partner more with the states, who will partner more with local communities.

Get Dads involved, too.

have to go where kids are – soccer companies, gaming companies and get them thinking of mindset to utilize outdoors – to tease kids to get them outside.

Discussion Question 1

Kissimmee, FL

(cont.)

success story – Circle B Bar Preserve – all 7th graders are bused in during the school year to do hands-on science and really have fun out there. Accessible. So, obstacle is so many of us are urban now and both parents are working, so difficult to get kids outdoors. Need something close.

when you think kids are not paying attention – you may be surprised. Take them outdoors anyway.

several years ago, heard this comment about teachers and their load. The teachers at Circle B Bar have designed a curriculum to fulfill FCAT as well as support outdoor exposure. If people take the time to work this out correctly, should improve. Federal Government maybe needs to help field trip funding.

Get Moms involved.

thinking about high school level, they have clubs. Maybe they could have someone with her (student who spoke) passion start an environmental club and fundraise to do conservation efforts. Getting more people involved. Going camping. Getting more people of that age group excited about the outdoors. That way, starting that effort in the high school – making them take the lead. Doesn't need Fed. Assistance or other \$. Honestly, sometimes you just have to do it on your own. Listening to her speak, really moved me. Just start small and it might get other schools going.

80% of my land is in easements and that works well for them. Currently, we have 8 easements and we are asked what do you want to do and we are willing to work with you. 8th generation of ranching now on this land and it is in my kids blood now. Estate planning devalues your land and we love the land and don't want to see their ranch become a housing development.

Great example of program: Pelican Elem School kids raised money for Florida Scrub Jay habitat and the govt matched. Grant programs to match schools help buy habitat near schools add trails etc.

On coastal trails, paddlers need access to launch boats and primitive campsites. Some in good condition, some are not.

Sustainable recreation not just ball parks, make land accessible.

The City Apoka has 200 acre complex ballfields. Need walking area get people out need to offer multiple things to do.

Occachobee protection act required legislature to reduce TMBL by 60% reduction of phosphorous.

Discussion Question 1

Kissimmee, FL

(cont.)

Natural Resources Conservation Services, conservation grants with the Department of Environmental Protection and Florida Cattleman .

Trail around Lake Occachobee

Expansion of access on storm treatment areas

Providing access in Palm Beach

Partnership for Florida trail

Florida Fish and Wildlife Conservation

Passive recreation in Florida

SFWMD Partnership to provide birding on their land.

Florida Master Naturalist VIP program through Institution Food and Agricultural Service.

Partial restoration of Kissimmee River at least the part they filled in.

Best Management Practices using less phosphorous.

Environmental Education is good but need more proactive youth into the environment.

Great system of state parks

Adams State Ranch is a good example of how to keep ranchers on the land.

Discussion Question 1

Kissimmee, FL

(cont.)

Environmental services extensive land holding generation who hold and love the land beginning to find ways to keep land holder on the land we need to figure out ways to keep them on the land.

Generational transfer of land makes it difficult to continue to operate with taxes etc., and the National Resource opportunities to those lands are incredible.

Conservation easements in some cases have proven positive. Conversely the value of the land goes down.

Partnership with Federal government, Work on Everglades' restoration project and the SFWMD.

Educations of the children, anytime you have kids in urban areas that can educate them it makes a big difference. Outreach works field trips work even better.

The Nature Conservancy Florida State touring entity is doing a fine job promoting natural attributes, challenges Federal and State agencies having enough money to manage and resources to provide access, with greater funds and staff they can provide better

I teach college and take them into the field. Don't see what is even close to them. Many get a great experience and lets them see what they are missing

How do you fund this over the long term as a private citizen. Our conservancy founded over 20 years ago. Started pushing eco tourism in Florida, educated tour guides, low impact, horseback rides. Developing a zip line worked. Pulls in people for one thing and then they see everything else and get interested in other Has to be adventurous that grabs your attention and gets you out there. Summer camp with children very successful. things. Turned ranching operation into a heritage project in terms of cattle and horses Spanish brought over in 1500s.

In high school had Ag programs. Funding not available for it. Children who get into FFA is where conservation starts, learning how to care for their land. Gets the kids thinking. Doesn't wipe out economic value of a township or city with conservation. Needs to be a balance. Sometimes this turns people off.

Florida Forever program was working great and now there is no money. Now that land prices are less wish we could have bought more

Louisiana produces fish, etc. more so than Florida. Federal government should connect Red River to basin in southwest LA that would restore it to wetlands and redirect river to wetlands. Value would be much greater than the cost. Salt water intrusion killed rice crop continues to leech because of what we did to wetlands

happy to see the first family is excited about the great outdoors. Publicity is it.

Discussion Question 1

Kissimmee, FL

(cont.)

when Roosevelt said this is an issue and we have a president and first lady they can bring it back in vogue-we need a more out front leader on getting people outdoors. They will encourage others.

Green swale areas-grow native vegetation

Connected to the water through surfing. A lot of development, lot of beach is private and can't access it. Less and less great outdoors.

Great Outdoors lots and lots of untouched land.

large lakes

Until recently never seen commercials that promote getting outdoors or areas.

If you are going to play a game-can't force outdoors on people. Sometimes have to find it on your own.

Parks had a good time and show kids-kids will want to take their parents.

Environmental club at school but don't really go outside that much. Reward schools that go outside and do environmental programs outdoors.

Florida has the best conservation program (Florida Forever Program) in the country. Palm Beach County has 35 sites covering 35,000 acres. Fully fund land and water conservation.

Stewardship Program has been very successful utilizing volunteers to work trails, maintain grounds, etc. Some schools require a certain number of community service hours in order to graduate and this has enabled many high school age kids to participate.

Florida Forever. A variety of people, including elected officials, builders, and conservationists speaking on behalf of the program is effective.

Connected system of public and private lands needs to be accomplished and added to. Expanded National Wildlife Refuges is suggested.

Partner with the Forest Service on National Scenic Trails. Federal money is matched two to three times to provide more trails and greater programs.

Discussion Question 1

Kissimmee, FL

(cont.)

The Sierra Club has organized outings for people and children in urban settings to visit natural areas to enjoy the outdoors. The 16 Sierra Groups in Florida promote these opportunities through groups and organizations from volunteers that also assist the club.

Volunteers in any group that contact those that handle the money often find allies for that group in the future.

People learn by experiencing. Incentive programs that challenge the general public to take part in activities that offer prizes have been effective. The prizes are provided upon receiving a comment card (feedback) from the individual.

The programs that work are WRP, FRPP, HFRP and GRP as administered by USDA-NRCS. The programs work because the incentives are appropriate to landowners to enroll in the programs and provide conservation benefits.

Leveraging funds is the most successful. Also being aware of what other partners are working on so that multiple groups are not working on the same things is highly beneficial.

Worked to move “digital couch potatoes” from the house to the outdoors. The Lighthouse Kids Explorers Club is a two hour session at the lighthouse grounds helps reconnect children to nature and the outdoors.

Partnering is critical in stretching dollars to accomplish goals. Eco-Heritage Tourism has picked up due to the poor economy. Part of the selling point could be that local economies can benefit from this new stream of revenue.

Fund land and water conservation, don't cut challenge cost-share, community festivals (wildlife, endangered species day, etc.). Partnerships among all levels are important. Eco-tours are effective (kayak tours, etc.), school trips to parks, refuges.

Blueways festival is an eco-tour that has been effective in bringing people out and engaging them in future activities.

The Lightsey conservation land program is very good for us, it has been great since in 1981. We now have the 8th generation on the ranch, this is what we want to do. The easements work well. I do not think my grandchildren will one day say “why did you do this easement”. We have 8 easements, each outfit (agency) has been asking us what they can do to help us, and it has worked well.

Discussion Question 1

Kissimmee, FL

(cont.)

I've said it before, the different programs and funds help us get from year to year. Some of these programs have helped, we've received an infusion of capital and to address future needs, but it might not be best for future generations. Ranchers all have different plans, estate taxes. We can't speak for future generations we don't know their destiny and not give them a less than viable ranch for conservation. These priority areas will only work if they are big, if you carve them up into little chunks it's not good. Need some things that are short term. We don't have enough young people that want to continue to do this and it may not be viable in years to come. I have one thing to add, if program is less than fee, my ranch is family owned for generations and I wonder if I am sinking the boat. If we do less than fee, then maybe less than perpetual, say 20 or 30 year easements, would be a good tool that families could look at.

At first blush you may think the military training is not a partner in land conservation, but for many reasons, the Air Force has a vested interest in the surrounding lands. We certainly have an interest in maintaining lands rural, we are also a conservation organization and work with cattle leases and timber leases and that sustains our partnerships. We can develop partnerships for conservation easement and maintain a strong interest in military.

As communities are developed or retrofitted, they need to make bike trails and walking trails so people can see wildlife and where they can safely be outside with their family. If they have it, they will use it. A planned community with trails can work so you don't need to use your cars all the time. In my community, the "Y" is connected with the school when you go by there, bikes are outside. Kids are riding to school instead of taking the bus or being driven

What's happening in Tampa and other communities is urban gardens where families and kids can grow food. Kids are beginning to learn where their vegetables come from

Kids need to make that connection to where their food comes from. Urban gardens are really a good thing.

All of the communities in Tampa Bay are working together to coordinate and connect with the Rails to Trails.

We need to talk to the CRAs (Community Resource Areas) in impoverished areas, they can help rebuild communities, apply for grants from DEP, purchase flooded properties so homeowners could move and go somewhere else. Then they can clean-up areas and turned them into a linear park, clean it up so kids can go swimming.

CRAs are set up by county or state, but not municipalities. Places like Panama City, Fort Lauderdale and other cities have CRAs but they restrict how money can be sent.

Continue to support conservation actions that have a record of success. One of the biggest problems is not having long term funds. Just continue to support long term, continuous funding.

Discussion Question 1

Kissimmee, FL

(cont.)

No one will say were against motherhood, but the earth is our mother and we need to do whatever we can to protect her. Money talks, that's how we can help. The first lady is trying to cut down obesity, maybe there should be a mandate to tie money to education and get kids out. If you want things to happen, you need to do this and that. We need to give school boards the incentives to get kids out.

The DOD is one of the strongest supports of conservation. Avon Park and Pensacola bases are conserving lands and reintroducing endangered species. It's amazing.

We need some sort of website for people to see what's going on..

Disney had a program called "Give a day, get a day" for volunteer work. Volunteers could pick from various organizations, then give a day of service, and get free full day admission to Disney. Is there something like that that the federal government can do?

Bass Pro has something like that where people can look at their website to check out opportunities.

It would be great to have a website that would show what different educational programs are out there. Organizations could send in information of things that work and others could use those plans and not reinvent the wheel each time, basically a success story site.

Do this kind of program again, that's what works. Let us know what is decided.

FWC used to have a one-page info sheet that they handed out with photos and information about the critters. It would be great to have something like that

What we need is to fully fund Florida Forever and LWCF

Audubon offers a curriculum for grade, middle, and high school, but only one school is interested. It is not important to the schools. School administrators are not interested in the environment even after the FCAT tests are over, this could be a good time for environmental education to be implemented. Teachers may be interested but not the administrators.

Our group has a program for disadvantaged youth, they get to go out on field trips and learn. They end the year with a big camping trip. Some kids are in the program year after year so they only reach a small amount of people.

Our boys grew up in Scouts and they got to do lots of stuff outdoors that they probably would not have been able to do. It would be great if more kids could be involved.

Discussion Question 1

Kissimmee, FL

(cont.)

Our organization presented our proposal with the Kiwanis and school board. The board and the community was so eager to be part of our program. Boy Scout memberships were down and they also went for it. Youth Conservation is part of the oath the Boy Scouts take. They can get more membership. Kids need to get connected to nature.

The Youth Program with Florida FWC is really working. Wilderness Park has the ability to provide a place for kids to go. The kids can fish and then keep the fish, it's not catch and release, it's catch and keep. The kids learn to catch the fish, keep them, clean them and them.

Kids like GPS and they can do a sort of geocaching. We should work on an event where kids can get out, and they're working with private land owners, tribes, ranchers to collaborate with everyone. Kids can get things like little geocaching tags. Friends group is working on a fossil pit where kids can find things that they happen upon with the GPS.

Before agencies didn't work together, but now they are starting to. Everyone needs to work together, with private landowners so kids can connect with the ranchers, tribes.

What works well is their county is the association between the Environmental Lands Program and the Homeschoolers.

Homeschoolers and virtual schoolers can be a part of this. They are now doing hunting safety courses online, and then people go outdoors to do the field work. Over 60,000 people now participate in virtual schools.

Federal funding to implement what we know what works – 1) expansion of FL Panther NWR, 2) protect water programs of the Kissimmee Valley and work with cattle ranchers to conserve water. There exists fear on behalf of landowners that by making their property attractive to endangered species that they would be hampering their ranching management. Need to have working partnerships with ranchers and government to conserve wildlife and habitat and restore water for Everglades habitat.

Youth archery programs, shooting, fishing, hiking, bird watching, etc, and they need to get back into the schools.

USDA sponsors 4H program that is federally legislated in every county in the US. The 4H program gives the city kids a chance to get outdoors. There's also a wildlife habitat program that we need to expand and create more networking opportunities (training, webinars) with other programs across the nation. We need to work with other youth programs, creating seamless connections between federal-state-county-local for opportunities for action. For example, "Florida Outdoors" website coordinates all outdoor opportunities.

Operate conservation and private landowners to expand FL Panther NWR. Kissimmee Valley – set up and expand programs to compensate private landowners for what they provide rather than them having to sell their land for development. Develop Cooperative Programs.

Discussion Question 1

Kissimmee, FL

(cont.)

Where are they going to swim, fish, mountain bike? Conflicts exist between preservation and recreation. There are a very small number of zero impact experiences and Florida's environment is harsh in July. Look at things they want to do and participate with them. Fishing and hunting are most important here in Florida.

Partnerships work. Our MOU with USFWS has created the opportunity to bring thousands of people to our refuges. We need to promote those partnerships to get people engaged.

The mentoring program, but needs to expand to cover liability and improved family access. There's no social structure to get the kids outside.

We need to get back to the business model to get kids outside. Interpretive programs are key to create the spark yet we've cut back on them in both federal and state recreation areas. Yet we need to let the youth tell us what gets them excited, don't just decide it for them.

Recreational Boating and Fishing Foundation. We need a national marketing program to increase participation in these activities.

Duck populations (management?) in the prairie pothole region is working.

Estate tax issues in Florida is a inhibitor. Rich 3% is floating the rest of us. This is the time to correct the estate tax on land. Consider a policy that would split land off. Ranch land should be exempt from estate tax.

Public Lands Youth Day – September 25th. National Wildlife Refuge Week – October 11-17.

Being able to talk in this forum.

Our high schools is very focused and does emphasize recycling.

parents gave me controlled, supervised environmental experiences. Helped me become a teacher and lead walks. Parents should feel that there is a safety net.

I like to go kayaking and to the Itchetucknee and Weeki Wachi Rivers - we ride horses on trails, dirt-bikes and 4-wheelers.

I like to go to the beach with my family and I play soccer and swim.

swim in the ocean and walk on trails.

Discussion Question 1

Kissimmee, FL

(cont.)

I enjoy getting outside anywhere – bugs don't seem to like me! – fishing, camping, walking. I lead tours. I have a canoe and like boating, birdwatching.

I have a garden in my backyard and I am out there watering peach trees. I basically hate to go indoors. I planted trees all around the house – now 11 years old. Gives lots of habitat. Just back from Joyce Kilmer NF in NC. Go walking every morning and we do 2-3 miles every morning

I made it my job to be outdoors and guide kayaking, biking. I obviously like to be outside. I grew up in the city and now, I am anxious to be outside.

I used to do trip-leading with schools. I like the different ages on tours. Outdoors – I like to bird by ear. Don't need binoculars. Don't need to see the critters. It's a lot of fun!

asked if anyone born or lived in rural areas. ___ – farm area. ___ considered it rural if lived on 2 acres. But we had a creek and put a small boat in it.

I don't think of my backyard – I think of the Grand Canyon, and paying money to go to a National Park.

meant going to Grandma and Granddaddy's and running out into woods and cow pastures and we found something to do on our own. No Nintendos.

let's take out the "Great" in outdoors.

I remember as a kid, we drove to New Hampshire, we stopped in NC – we went hiking and it was really fun. We went rappelling. They had a little lake there and we went swimming. Seeing everything made it fun.

like trees at Joyce Kilmer that are this big around – you just don't see those.

we drove out to Colorado to look at colleges and it was cool seeing the mountains. I never have hiked in the mountains and I always wanted to rock climb. Seeing hummingbirds by the hundreds in Missouri at a feeder – awesome. I like places that are untouched.

I would like more opportunities for skydiving, scuba diving.

I would like more opportunities for snow-skiing, snorkeling.

I would like more opportunities for snow boarding, haven't seen snow in years.

Discussion Question 1

Kissimmee, FL

(cont.)

I would like more opportunities for hunting.

Always wished we had more biking trails on the east coast like we have in other parts of FL.

when we lived in Illinois next to the cornfields, we didn't have cable or video games, so we were outside every day. I liked to climb trees. When it snowed, we made stuff in the snow. We made playgrounds. Then, we moved to FL and we tend to stay inside.

Discussion Question 1

Kissimmee, FL

(cont.)

TRIES TO MANAGE SPECIAL TIME TO BE OUTSIDE

Enjoy Wekiva state park with family

Build more fields for the public not for just school.

Family bike rides, kayaks, camping and biking

Crosscountry runner, running through woods best experience, seeing deer, enjoying the peacefulness, before it is disturbed.

Scouting got him interested in outdoors.

Likes camping

in this county limited opportunities for camping, seems like lots of open space but not used for that.

Remember being outside at summer camp all day.

Distractions from technology.

South Fl, loss of wetlands, pushes agriculture out into wildlife, not so much opportunity to get away from urban sprawl.

Like to visit Lake West Toho here in Orlando

Western National Park; Quiet wildlife recreation

Place where I cannot see other people or life

More park area to enjoy; developing nature clubs; better information and advertising; learn about local recreation and parks at school environmental class in school

Discussion Question 1

Kissimmee, FL

(cont.)

restrict development

create wetland around the treatment plants; use of wetland to augment

More volunteer /increase number of student hires; high school or college credit for outdoors contribution)

water farming allows for storage and pays lease or BMP Best Management Practices based on types of use that land area has need funding

backyard farming - give incentive for to encourage it; incorporate organic farming; student could grow food for the school eat and get credit for; youth birding clubs; community gardens; smart grow for urban sprawl; inter cities beautification add trees

youth conservation groups with the everglades area week long stays

youth hunting programs; NRA challenge/competition; Florida Forever Program

work with kids at school with hands on farming –egg hatching

education of parents

incentives for landowner /conservation easement being donate instead provide a dollar for dollar tax credit for the easement

save our Rivers program

Walking the dog outdoors.

Hiking in the mountains.

Enjoys being around water.

Discussion Question 1

Kissimmee, FL

(cont.)

Being in the backyard.

Biking in the woods and state parks.

Rough camping in state/national parks.

High-mountains, canyons, grasslands, rivers and fresh waters, Everglades, Camp Wewa in Apopka.

Fresh and peaceful, mangroves and wading birds.

More secluded areas, not as impacted by people.

Wild areas that are free of development, sand pine scrub; Juniper Run and Alexander Run in the Ocala National Forest.

Forest by a lake, camping, fish moving through the water.

The great plains, mountains, vast open areas.

Incorporating school sponsored trips to state parks and/or natural areas as part of school activities and field trips. Restructure Physical Education to include outdoor activities such as nature walks, planting trees.

Discussion Question 1

Lawrence, KS

"play day" where students don't use technology rot v and instead enjoy their families communities outdoors

Lake, Forest, Trails., Beach

Fishing, Hiking, Biking, Swimming, Hunting, Horseback riding

Enjoying being outside

Pretty scenery

Value you have being outside and your surroundings

A time to travel, or see sights

Discussion Question 1

Los Angeles, CA

We need a national resourced Area designated to include the San Gabriel Mountains URBAN River Corridors. To achieve this, I strongly believe that the Emerald Necklace will be able to transform the densely gray and urbanized San Gabriel Valley Region into a vibrant green landscape. The Interconnectivity of parks and trails have the ability to improve communities and will give residents greater accessibility to local and regional resources. Here are the many benefits the Emerald Necklace can bring to the San Gabriel Valley: it will bring green infrastructure jobs to local communities (water resource protection, urban forestry, sustainable landscaping careers) Emerald Necklace can be a valuable public asset it serves as a public park space and many youth adolescents in the San Gabriel Valley, It will help expand and preserve natural habitats and wildlife, It will also establish a more efficient transportation corridor for humans and native animals. Connecting with the San Gabriel Mtns. to the beach via natural and urbanized waterways. We have the following support: 25 cities, 3 HOAs, 3 school districts, 1 environmental group, 1 trail group, 1 state conservancy group and 1 county board of supervisors

Amigos de Los Rios is a working nonprofit whose mission is to create a San Gabriel Valley Emerald Necklace. What will make our mission possible is fully supported interagency cooperation and collaboration at the local level, in particular between the Department of Transportation, The Army Corps of Engineers, and the Dept. of the Interior. Additionally, we seek designation of the San Gabriel Mountains and Forest and the Urban River Corridors as protected National Recreation Areas, fully funded, staffed supported and maintained. In order to continue our mission, we request that the Federal Clean Air and CWA funding go directly to the creation of multi-benefit community based green infrastructure. Thank you!

Allow the USACE to use credit and funding from different funding sources to be used on the same projects e.g.: Flood control vs. ecosystem restoration. The USACE prioritizes projects in part on a \$ per acre criteria. Due to the cost of urban development this puts urban projects at a disadvantage compared to projects in areas where land is less available. The USACE typically requires a 35% total match which does not allow the match to be met from another federal funding source. This local match requirement should be modified to facilitate collaboration between federal agencies. Funding for land acquisition should be available. Increase funding for the Land Water Conservation Fund for urban projects.

Challenges: Getting all of every group's ideas and efforts coordinated (when possible) and communicated well. The sharing of information is a key! If we can work with other groups that we didn't know about before, we may help each other solve some of our own challenges. Get the kids outside!!! if they are in school all day, they think (are taught) that it is normal existence. What works? Get kids outside!!! Not only will they enjoy it but they will want to return outside. Getting them out and involved also will create a new generation of concerned active citizens. 3) Federal Government Role: Require cooperations that have land leases on public land, to give back in a way that benefits the public (in the long term). Repair the damage caused, not take us out for a latte! 4) Tools: Funding of course!! But getting the funding to each group's pet project isn't feasible so get into the schools to get the kids involved, have them go on field trips and camp outs and "day projects" to work on some of these grass roots organizations. They want to get their hands dirty.

Discussion Question 1

Los Angeles, CA

(cont.)

How can the Feds help??? In CA a landmark environmental legislation, AB 32 & SB375 are in jeopardy of being repealed in November 2010. The senior leadership here today should be more visible in CA and signal to candidates the Administrator support of these initiatives. Support Federal incentives to induce in basin/Urban Solar development to offset out of basin development such as solar feed. Visit website: www.solarfitylad.com to learn about the LA Business Council's campaign to induce urban and in basin solar generation.

Why not have urban naturalist guides like the naturalists in national parks to tell about the urban environmental history and cultural? Why are people allowed to carry guns in the National Parks? To kill animals? To kill people? Grizzly bears should not have been delisted from endangered species list. After study in glacier they were deemed not in danger-well all that would be necessary is one or two years with low berry crop or climate change and how likely is that? What can be done to prevent aerial gunning of wolves? Is that a state right to allow that or could the Federal Government step in and make a law against it? I believe it was allowed in the area just outside Yellowstone or in Utah and Alaska.

Engage the individual: sustainable landscape@home/local activities neighborhood parks 2) Redirect current funding away from "old" thinking projects like expanding mass transit, rail systems. Will work to alleviate port traffic out of the LA urban area. Rail the cargo-expand the metro rail for commuters. Look to other urban areas for creative solutions to urban sprawl and public transportation.

The San Gabriel "Emerald Necklace" is park and trail network that provides multiple benefits we provide green open space, green job opportunities, and community outreach. The Emerald necklace needs to be fully supported by all the departments: Army Corps of Engineers, Transportation and the Interior we have faced many obstacles with funding and government department of the interior and our projects are eligible the obstacle we face are when we move into Army corps territory, our projects are halted. We need inter-agency cooperations in order to make this multi beneficial projects. We provide not only Green open usable space in urban environments training, increased public health, education and conservation we celebrate local natural and cultural history. Creating community investment which will allow successful urban parks and trails

Allow user groups to maintain trails. Contact schools to adopt a trail. Build more trails so it lessens traffic and trail evasion. OHV clubs and Mtn. Bike Clubs can maintain and build trails.

Create funding sources for multi-benefit projects and funding sources for urban parks in low-income urban areas.

Discussion Question 1

Los Angeles, CA

(cont.)

"No Child Left Behind" in taking away opportunities for children to learn in their classrooms about environmental issues. There needs to be a federal mandate that would require students to have environment/conservation training including hands on, field trips, community service, to visit wild spaces, mountains, beaches, deserts, parks. Environmental Science camps should be a regular part of curriculum, once in elementary once in middle school, once in high school. Working on an environmental project and reporting on it should be requirement for graduation. Children need to be educated because they are going to carry on our passion. 2) Federal Government needs to fully fund the land and water conservation fund. Have a common sense, methodical plan for renewable energy that involves a variety of stakeholders. Plan renewable energy closer to urban centers where it is needed most. Get developers to NOT BUILD or develop - give them incentives to develop urban areas already built-rehab houses empty or up for rent. Fund community gardens, school gardens-kids need to know where their food comes from. More collaboration between grass roots agencies to work together-user friendly websites, kids' sites, that they will want to go to learn about environmental issues. More youth involvement.

I would like to see public lands remain open for multi use: Mt. Biking, Hiking, Off Highway Vehicle Use, Legal use of vehicle access to back country. Much of the land is being closed at a high rate. I would like to see that what is available today to remain open for future generations. Also that the federal government would not recognize ignore those who enjoy using motorized travel to explore the public lands...

NPS Service: Fund Urban Park Program, Prioritize low-income areas, land water conservation fund and increase funding for urban projects, school gardens and community gardens. NEPA/CEQA are required allow CEQA to suffice for 2 reports, as CEQA is the more stringent and includes NEPA requirements. Interagency Strategy Coordinate EPA, HUD, USDA, Task Force in LA

Supporting Education to get kids out to the LA River. We need to connect with the communities. More funding for children's program and to focus more community issues.

LA supply of Water: A century of misguidance-regular funding and mandates

As secretary of the Interior Ken Salazar mentioned early this afternoon, "Historic Preservation" is part of telling America's story and getting people into the great outdoors". We need to embrace our national as well as our historic and cultural resources as part of this initiative. A big challenge to conserving our historic and cultural resources is the lack of full funding of the national historic preservation fund, which is the sister fund to the land and water conservation fund this gentleman in the audience just mentioned. The Federal govt can more effective by fully funding the historic preservation fund and increasing the capacity of local agencies to preserve and protect our historic sites through technical assistance and federal incentives

Discussion Question 1

Los Angeles, CA

(cont.)

Work with NGOs, Land Water Conservation Plan we are very interested in what Mr. Salazar is proposing on funding programs. How do we improve effectiveness of fund program. How do we increase ceiling of program fund. Message to Fed Reps: Failure to look at local success stories, Humbolt County resident, phone call to BLM-CA Office to know about successful stories OHV Community, Road decommissioning-not exclude OHV Community.

Challenges-support for responsive renewable energy development in the CA desert. It needs to happen on private disturbed lands closer to urban load centers, NOT in the treasured, pristine, untouched public lands in the core of the Mojave Desert. 2) The Federal Gov't needs to take the pressure off the BLM public lands in the CA Desert for renewable energy development by looking at ways to make it easy for cities and counties to have solar/wind development on private disturbed lands&solar panels on commercial buildings. 3) Fully fund LWCF and AB811 program funding 4) Whats working: Private, local, non-profit land trusts. We are able to purchase & protect & then manage large landscape level chunks of land that the federal gov't doesn't have the tools/resources to save. We (TWC) through private donations and grants are able to save critical habitat "islands" between already protected lands National Parks to protect ecological corridors so we dont end with islands of biodiversity and unhealthy ecosystems. Help us to get funding so we can continue our jobs & mission. (ie: UCF stakeholders in federal process,

In order to ensure that the connections we help people make to the outdoors are lifelong and life-changing education must be a core component of how we make that connection. Getting youth out to our National Parks as part of residential environmental education programs, such as nature bridge field science programs will build a gnerating of enviromental stewards who will make responsible decisions and take actions to protect and preserve our environment. The connections to nature young people make through residential environmental education programs such as NatureBridge Field Science Programs often light a spark in students the aturn inot a lasting love of the outdoors and lifelong stewardship. The Federal Governement should work to spur growth of NatureBridge and similar programs to increase the scale of these programs and number of youth that they reach. Invest dollars and resources. The Federal Govt: could be more effective partner by having more flexibility in the kinds of partners it works with and should work to remove obstacles to partnership or growth or partnership for nonprofit organizations. Provide resources to nonprofit partners to allow them to house and educate students in national parks.

1) Stop closing land to people who wish to use the trails and roads 2) Less Federal involvement 3) Cutting the Fed. Gov't 4) Tools-Chain Gangs use to work Fed trails and lands.

Speaking as an educator, he thinks what works is not having pressure to pass standards. It is important for kids and adults to have fun so they get a "Huck Finn" type experience. Then they are interested in field guides, etc. Students and adults need immersion experiences e.g. getting dirty, hands-on. There is a need to connect people's hearts through direct exposure to the outdoors. Don't get too hung up on meeting curriculum standards. Experiences are the seed to passion for the outdoors. Challenges include too much administrative paperwork.

Discussion Question 1

Los Angeles, CA

(cont.)

For LA, important to focus on spaces in people's backyards. Neighborhood parks. Focus on things like water conservation, community gardens. A small park can demonstrate some of these concepts. Prioritize low income, populations of color

Don't underestimate the influence of parents. Many nonprofit organizations give money for children. He also has issues with power lines in backcountry areas of San Diego area – Cleveland Nat'l Forest, BLM lands.

Look at how indigenous people deal with issues like climate change, mineral extraction. They have stories about desert areas that used to be green and lush. Mining and water extraction are degrading to the landscape. Their ancestors have seen many impacts – talk to indigenous people to learn from past. He gave Yucca Mountain as an example. They look at protecting the land.

It is important to be able to communicate bilingually. Need to reach out to different audiences.

Wants to talk about the importance of rivers. Need to stop building around the Santa Clara River in natural hazard areas.

National parks are a tremendous success. They have a great program for hiring college interns. She has been involved in examining a renewable energy initiative in the Mojave Desert. The desert is a tremendous biodiversity hotspot. Renewable energy could ruin it. Build renewable energy projects in brownfields. Federal gov't intervention is needed.

When people experience gardens and flowers firsthand, they are more likely to appreciate. Good to cross pollinate gardening, recreation

Works with LA Mayor's million tree program. Link kids to nature by turning concrete in front of their homes into trees. She talked about urban forests. She related a story about a young man who didn't conform to neighborhood mores. Neighbors worked together to plant trees. They included the nonconforming young man who became part of neighborhood. The experience changed the dynamic of the neighborhood. Tree planting helps connect and reconnect people. It is good for kids that can't get to parks. They need money for the maintenance of trees. Could employ kids if there is money – from federal gov't? Urban forestry is too expendable in public budgets.

Conservation back bone. Put more lands into conservation to create parks. Availability to students, need idea of making conserved lands and resources available by subsidizing transportation. Need for money and access to outdoors.

Get to something local not just places where you need buses. Create local parks that are close.

Linear parks that connect small parks are needed. Challenge is need incentives for cities to embrace.

Discussion Question 1

Los Angeles, CA

(cont.)

Safe routes to parks not just schools.

Active management and funding in place at local level not federal government. Work's well at El Mirage off road.

Park retrofit Example at Rio Hondo is a good example in LA of what works with working with past heritage and incorporating into park design. Extends into the river.

A river park can have a great impact on a community—e.g. Kernville CA, the river park is a great example. Also, Downtown Reno on the Truckee River is another example.

Met with Senator Feinstein. Was given the opportunity to prove claim and share ideas. CDPA 2010 allowed opportunity for recreation for OHV. Tools: CDPA 2010 Should be used as a national model for collaboration.

Sustained a 25 year organization. Located in a park-poor area. Forming collaborations and getting people excited about Park Plaza. Own two “Wonder Mobiles” for kids that contain pelts, skins and other educational materials etc. for education.

What works: We get kids excited about nature then take kids on field trips.

What Works: Partnering with Sheriffs has worked to help purchase offroad vehicles for them to patrol OHV areas.

Need to use rail from LA to Palm Springs to get kids out to Joshua tree. Rail to Palm Springs not used. A bus takes people from Palm Springs out into the basin.

Converting areas to parks with local, state and federal \$\$.

We look for under-utilized land.

What works: HUD Community Development Block Grant Program (CDBG) money has been useful.

Having appreciation of parks at young age can translate to appreciating trails later on. Cultural and historic preservation of trails are important and they can provide corridors.

Working in collaboration is a difficult challenge. Need a strong focal point, such as the San Gabriel Mountains National Recreation area. Would require the NPS and USFS to work together. USFS could provide technical support to the effort.

Discussion Question 1

Los Angeles, CA

(cont.)

Building parks along the river (i.e. pocket parks), will add more connectivity for young folks to access wilderness.

Identified 7 high priority parks. Flier from Whittier Narrows session shows this. Urban nature in the cities. E.g. Duck Pond near San Gabriel River—90 acres in size. It is also an energy corridor—Southern California Edison (SCE).

Lots of transitioning lands that are along our corridors to provide movement of wildlife of people and nature. How to work with SCE on license lands to promote wildlife and conservation. Need help to smooth through the difficulties with SCE and others.

Schools: lack of green in schools in the inner city. Bring nature to the schools. Onsite water capturing. Gates are closed on weekends. Risk management.

hiking

beach

someplace with a view

camping

hiking through the mountains and forests - Santa Monica Mountains

community parks

Volunteering

being a good example

have fun and show it!

Pasadena is increasing recycling programs

Discussion Question 1

Los Angeles, CA

(cont.)

South Central is planting trees

people are picking up trash and turning them in for cash

Beach

City parks

Lakes

Forest

Picnic tables

Anywhere that is beautiful or quiet

Rivers

Swimming pools

Outdoors is hard to define - its relative to each individual

Jogging

During the spring session: going out to explore the new flowers, animals, vegetation, new sights and smells, and meeting/educating new people about the forest/trails

Soccer

Football

Discussion Question 1

Los Angeles, CA

(cont.)

Frisbee

Relax

Riding bikes on bike paths

BBQ

Hiking

Spending time with family

Mexico

Camping in the mountains

Hiking

Jogging on a trail and JPL

Horseback riding in Pasadena

Bike riding

Hiking at JPL

Angeles Crest and beach

Walking in parks and beach

Wilderness

Discussion Question 1

Los Angeles, CA

(cont.)

Trees

Never-ending

Fishing

Grand Canyon

Freedom

Unchained

Personal Challenge

Peaks

Peace

hike in quiet and peace and see wildlife, appreciate silence so you can hear wind in trees and the rattle of grass. LA River is not just concrete-there's water and birds and the garbage people throw-I realize you need to take care of it and teach people not to throw things in. Realize that animals are real, not just cartoons. Spending time in parks with friends 10 years ago all I knew was Pocahontas.

More time to be outdoors. Spend more time with my wife at a park. More time to be able to learn about how many trails are out there to hike and then go hike them. Get out more in the wilderness. I would like to have more places to go to. Help do beach cleanups. Be able to be out in open without a game plan. River cleanups. Trying to get people involved to do river cleanups which helps bring out what the river is supposed to look like. Expand my love for outdoors so I can have more time to be there.

- So Central-doing more tree planting

Discussion Question 1

Los Angeles, CA

(cont.)

- Pasadena-a lot of recycling

- People are picking up cans and turning them in for cash

- Tell people how much fun you had

- Be a good example

lack of transportation to open spaces

lack of outdoors nearby

ignorance to parks

lack of advertisement

trasnalate advertisements for minorities - reachout to those youth

lack of recyling bins

start young

develop programs that continue into college

better access to parks

more information about parks

The park

Discussion Question 1

Los Angeles, CA

(cont.)

the beach

lakes

being able to walk around the neighborhood

road trips

hikes

peaceful places

grassy fields

increase field trips

conserve water

explore nature

get exposure to the elements

hike

protect animals

go to parks

recycle

Discussion Question 1

Los Angeles, CA

(cont.)

don't pollute

protect animals

"Beach bus" for mountains and other places

Implement in the media

Give more tours of canyons

Media -- promote through advertising campaigns

Create more jobs for youth in the outdoors

Hold more environmental classes

Plan for environmental education

After school programs to learn more about the environment

Advertise more for parks and host events

Give more information about where to go

Hold meetings with residents

Encourage use of parks

Describe the dangers of not helping the environment

Discussion Question 1

Los Angeles, CA

(cont.)

Need more parks and open existing parks

Provide more sports and recreation equipment and staff (i.e. coaches)

Promote sustainability in our communities -- reduce pollution, recycle more, advertise solar lamps

Increase volunteerism and stewardship -- incentives to volunteer in the community, develop volunteer awards, contests and tournaments, such as hiking x miles the fastest

Beach

Mountains

Rivers

Anywhere outside of house

Run

Friend

Work

Self

Outward bound

Far away

National parks

Back country

Lake

Fishing, often and still do

Beach, lots of people.

Rose Bowl

Park

Playground

Lake but too far

More camping

Discussion Question 1

Los Angeles, CA

(cont.)

Wish we knew more of what was available

My parents didn't even know what opportunities

Lack of info. Restoration needs to be looked at from all angles before any work is done. Transportation systems need to be beefed up in restoration process.

More public info on National parks

San Gabriel Mountains

We just worked with what we had.

People organize e.g. SAMO

Recycle

Conserve water

Shorter showers

Turning off lights

Turn off TV

Fluorescent light bulbs

Bring own bags reusable

1st time in mountains was with work

Discussion Question 1

Los Angeles, CA

(cont.)

10 minutes

Around the block

30 minutes

15 minutes but closed down, no park

Only 3 members can bring whole family outdoors

7 cant access

Not enough transportation

Takes too much time

Working / Tired

Provide outdoor jobs (e.g. internship for F.S.)

More programs (outward bound)

Funding for organizations to get more programs and outreach

Restore parks, improve aesthetics

Make parks bigger

More accountability for funds that are available, see that money is put into action

Discussion Question 1

Los Angeles, CA

(cont.)

Maintenance of parks

Money for school outings

Construction at parks should focus on greenery and grass and trees, not half completed buildings

Handicap accessibility

Clean bathrooms

Sport field only available for organized sports, should make open for all

Swimming pool, water features

More info and outreach

School gardens, community gardens, botanical gardens

Funding and accounting

Jobs

Maintenance – keep it clean

Trash – big problems

share the road relationships work if safely administered.

Language in government planning works once people understand it.

Discussion Question 1

Los Angeles, CA

(cont.)

Santa Monica Mountains - residence programs and tools.

Off-highway use, kiosk, maps, and Federal land management works.

Desert Protection Act works; and added other legislation does too.

local community people works, helps get tech assistance with local and federal assistance.

environmental stewardship works.

San Diego Area's desert wilderness designation worked. The Santa Monica Trails is a model for everyone. And the San Elijo designation also worked.

making information on-line easy to get volunteers out to help works.

San Gabriel confluence project worked. DOT/ACOE/DOI worked collaboratively to support that vision. San Gabriel Mountains as a national recreation area worked. EPA's support of the clean water and air acts worked.

what works is all levels of government to protect lands.

language from the people - simple message - works regarding parks, recreation, and open space. Supports economical environmental messages.

BLM Open Space works. Concern with closing some sites.

putting nature in neighborhoods works.

public lands - open them up to make them usable, protect our history, and conserve green space.

open space through a regional approach works. Connect with it.

Discussion Question 1

Los Angeles, CA

(cont.)

teachers outdoor education works. Connects kids with nature, uses community partnerships.

understanding habitats works. Educating children - listening to experts that have passion is powerful. Suggested constitutional amendment could protect our public lands.

children to nature works and so does commitment to nature work.

Off-road vehicle users have rights, too.

Discussion Question 1

Minneapolis, MN

Fishing on the Mississippi River

Walking around area lakes

Parks and fields to play baseball

Backyard – safe feeling

Some place I haven't been, because there is the new feeling of discovery

A lot of trees

Camping out

A place without distractions

Sunshine

Nature and excitement

Biking or hiking

Sleeping under the stars

Fishing

Swimming

Clean up the Mississippi River, so kids can learn to swim somewhere natural, not just a pool.

Discussion Question 1

Minneapolis, MN

(cont.)

More programs, such as sports, ways to volunteer with nature, and other ways to get involved.

More school field trips that allow for hands-on experiences because that is the best way to learn.

Better communication and advertising because there already are great programs out there, people just don't know about them; pass information through the schools and commercials on television and the internet.

Create more camps – "I love camp!"

Create more recreation centers and have transportation to and from these places.

Where do you like to go to be outdoors? Everywhere

Como Parks

Lakes

Places close to bike, be with friends

Sometimes I like to be alone

Univ. of Wisconsin Campus – Japanese Garden. UW Arboretum

Ice Age Trail for day hikes (geology, by self and also with friends)

National Parks
Indiana Dunes
St. Croix National Scenic Riverway (canoeing and camping)
Voyagers
Joshua Tree
Black Hills, Mt Rushmore (camping)
Enjoy the historical/cultural aspect

Discussion Question 1

Minneapolis, MN

(cont.)

Willing to travel for some areas but want close accessibility for running

Open spaces –Indianapolis’ big park/sanctuary in the city. It has a combination of woods/grasslands, gravel trails, a reservoir and also biking

There is a dilemma faced with having to drive a few hours to get to an area so it is nice to find closer alternatives

A view of the wilderness with the trees, etc. but most of the time it is not convenient to get there because of the drive.

Wilderness can be something you can go to in the winter also: Downhill skiing, Sledding, Snowboard, Skating, Hockey, Hunting, Ice Fishing

Sports, basketball courts, going outdoors of an activity instead of being inside

Have more wild/romantic aspects of the wilderness experience

Crowd Control - Visited the Grand Canyon anticipating a wild experience and there were so many people.

Organize shuttles to help get to wilderness areas

Canoeing would be nice to do more often.

There should be more minority representation in parks – lower income people don’t have the opportunity to visit the parks (referring to traditional parks like Yellowstone, Grand Canyon, etc.)

More environmental/conservation classes in school (all ages) to increase awareness

More time to go outside in the school curriculum, not just stay inside

Start more initiatives with youth to encourage them to go outdoors

Would like to see more room for green space in cities – rate of development is crowding it out

Discussion Question 1

Minneapolis, MN

(cont.)

Working jobs

Money, fees at the parks: There is a need to help preserve the parks but they should be free, and they should be free because they are a public park and the fee could stop people from coming

The national park admission fee is not a factor because it seems reasonable for what needs to be provided

Equipment costs – There should be programs that offer rental services at the park, possibly at the visitor center

It helps to have a rental because everything is all set up and not everyone has the items needed to do a sport (example-biking, soccer balls)

Transportation – the more privileged have more access to the areas

The cultural surroundings play a role in who visits – there is a barrier for minorities and often they are working long hours with limited time to drive

Use social media and advertise through these

Provide transportation – especially from metro areas to more wilderness areas

Exposure through friends and other family members

Provide Equipment

Service Learning – educates, brings people together, is hands on

Environmental study classes/awareness – have it mandatory in the curriculum, as kids get older there is less time in the educational system to get outside

More funding – especially for land acquisition to preserve wild spaces. The Ice Age Trail was given as an example of how it costs more now to pay for lands than in the past so more funding is needed.

Discussion Question 1

Minneapolis, MN

(cont.)

Fishing on the Mississippi River

Parks and fields to play baseball

Flowers

Camping out

Sunshine

Biking or hiking

Sleeping under the stars

Fishing

Swimming

Partnerships are important, but are similarly stretched by budget issues.

Need federal grant programs to keep good programs alive because youth and nature programs are viewed by many as non-essential and cut early in the process of budget cutting.

Explore funding from various federal agencies, not just the land agencies, to develop partnership programs on public lands. Education funding, crime prevention, health programs etc.

Continue to grow the Corps Network for youth opportunities and connect these programs up to programs that work with younger students, land management projects, and other partnerships.

Expand service learning opportunities in coordination with the needs of the schools and the needs of land agencies. Start earlier with these kind of programs to get kids invested in a "land ethic"

Discussion Question 1

Minneapolis, MN

(cont.)

Keep the conversation with youth going. Don't let this be a one shot listening effort but an on-going commitment to including the voice of youth.

Expand the scope of what might be included in the services that come from youth jobs corps type programs. Don't just assume that manual labor is the only thing that young people have to offer.

Include more integrated training and educational efforts into the various jobs corps and connect these better to both K-12 and college level educational and training programs.

Include youth representation at the board levels of NGOs and somehow in the decision making bodies at governmental agencies.

Don't just focus on the problems and obstacles, but also on the solutions that seem to be working and models of success. Fund the expansion of successful models, including ways to help people learn more about what works. Include evaluation so we know

Recognize what resources are nearby and develop these local connections as a bridge to engaging youth in caring about the larger system of public lands. You don't need to go far to find a chance to engage with nature.

Don't divide the world so clearly into nature and not-nature as this reinforces the idea that we are able to be separate from the larger systems of nature. People are nature too and we should help youth develop a sense that they are within nature rather

Pay more attention to the connections between experiences with nature and education. Look not just at math and science but also at the social and emotional learning and the sense of self that comes from an awareness of connection to the larger world.

Involve businesses for funding, in-kind resources, mentors, and other help. Understand that because businesses care a lot about having an educated work force that they can be supportive of using experiences with nature to improve education.

Appalachian trail (Kentucky) as a child

How would you push someone who is connected to technology to experience the outdoors... take them out to the middle of nowhere, get them on a river, that's how we did it when I was 15 16 they put me out for 30 days and I went 50 60 miles hiking and down the river, it brings you back to reality.

Advertising to make kids more willing to leave their houses

Be cautious of what you use, what you use on your lawn people need to be a little more conscious of what they are putting into our environment

Discussion Question 1

Minneapolis, MN

(cont.)

Get stronger environmental protection on our resources so that they are actually going to be there when our youth grow up.

Healthy body creates a good brain, promote model for leaders to promote sports and getting people outside. More fun for outside, tell our young people to create running tournaments and biking tournaments

How many people had their parents take them out to a park when they were little? Maybe that's why they were here?

We could identify people in our neighborhoods that like going outside then encourage them to invite people to go out with them, invite their neighbors to go with them. Share the costs as a community

Caterpillars and insects

Eating LOCAL organic food, to prevent fuel and pollution. A change in lifestyle

Education for the youth and building green

Fort Snelling, because I like to throw rocks into the river

If all the kids in his neighborhood went to the parks then they would care about them more. Getting kids out to parks will spark an interest in learning about issues and caring about their resources

Lake Calhoun, the lakes, sailing and biking. I don't use my car anymore, I like to bike on the Greenway.

Living by the greenway, it really encourages people to bicycle and you see all these people biking, they look so free.

Minnehaha falls to walk down the stream and go hiking

Mississippi river to connect with the Native American people

More involvement in schools to get involved with conservation efforts. Have people educate them and have them experience something for one day. Build getting outside into their curriculum, they will bring their knowledge home and share it with their families

Discussion Question 1

Minneapolis, MN

(cont.)

Native American conservation corps, maybe creating a native American specific conservation corps who could be trained to take care of their own lands

Need help to lower prices of local foods, why are local foods more expensive than mass produced foods? I guess it's because small farmers and food producers can't compete with the big corporations.

Need money to start a Native American Conservation Core, to get our kids outdoors. Funding is needed to go on bike rides, snowboarding or canoeing. Conservation Core is good way to teach people how to care for their environment, maintain trails, take away trees in the way, build bridges over swampy areas. It gets people outdoors and teaches them how to care about their land and the history of how our cultures have used the land for centuries

Preventing chemicals from runoff into the river

Ride shares could help everything

Show up to stuff like this, hear people talk, share your voice

Start involvement at the neighborhood level, work with small communities to get people outdoors. Encourage small, local scale efforts to protect the environment and educate youth

Teaching kids. You don't need a huge organization or have to take them way out of the city; we can do it in our own neighborhoods

There needs to be some kind of funding allowed to people who don't have the means to pay for trips to parks or don't have the equipment. It's too expensive to go to a park with seven kids and have to pay to get in.

Traveling in the west, through the US

Working collectively with people to use greener lawn care solutions

Would like to learn to survive outdoors, self sufficiency

You can canoe and camp and hike by valley fair, just thirty minutes away, I just discovered it which shows that advertising might get people out more. I drive there its 30 minutes away

Discussion Question 1

Minneapolis, MN

(cont.)

City park

Lakes

Harriet Island

Back yard – parks nearby but choose to stay home

Rec center

Main activities

Sports - tennis, rugby, biking, rollerblading, kayaking, canoeing

Alone or with friends

With friends or during school

Family

Whoever is available

Sports teams

How much time do you spend outside? 4 times a week – football 3-4 hours at a time

How much time do you spend outside? As much as possible, doesn't like staying inside

Do you like to be outside? Staying home is boring, likes to get out and see the world, found the Mississippi River and waterfall.

Discussion Question 1

Minneapolis, MN

(cont.)

Dance at Lake Phalen at the stage, bring music and practice

Conservation corps, Bruce Vento rehab, rain gardens

Remove invasive species with the school

Part of the adapt a highway program and clean up trash

Why do you like to do this, what keeps you going? Trips on the gun flint trail to plant trees and see progress from year to year, see own impact, reusing bottles,

Are you alone in this or do you have friends or family that help you outside of a group? Easy when in school or job to recruit people with the same interests, but hard to recruit friends.

Are you alone in this or do you have friends or family that help you outside of a group? Triggers for action include teaching them what effect invasive species have and see results of work later.

Do you do anything in your own yard? Vegetable garden, small farm,

Is gardening outdoor recreation? A little

Growing own food is important because the big companies take the environment for granted

BWCA

State and national parks, complete wilderness, no motors, no sound pollution

Big national parks, trees, wilderness, animals (bears, deer, other stuff not usually seen in urban environment)

Flowers

Indoors = artificial light, stuffy

Discussion Question 1

Minneapolis, MN

(cont.)

Outdoors = sunlight, moonlight, fresh air

Preferred way to get outdoors is tennis and biking

Interesting to see what effect is from going out to in, eyes need to adjust, not enough sunlight or fresh air, very confining, many walls, not enjoyable. just the back yard is preferable to indoors.

Being outdoors you feel more free, just being there is better than inside

Would like to spend more time outside in school and try not to be a couch potato

Some schools have taken away outdoor recess, takes convincing at some schools to let students go outside

Seasons because each offers something different. Canoeing , skiing

What you see on a post card from a national park, a grand landscape, untouched places of the country

Are these more satisfying or is the urban outdoors okay?

Depends on what exposure you have had. If you go to BWCA as a child that is what you think of. If you have never left the metro a city park is the great outdoors.

Is there a threshold?

Outside = outside for the most part

Don't know that the great outdoors could mean the Mississippi river or a city park or is close to the city. Have to know about it to want to use it.

More classes outside, field trips to open spaces not buildings, experience wilderness firsthand (3 day canoe trip)

More programs in schools to experience what is out there, skill and orientation, clubs things kids can do

Discussion Question 1

Minneapolis, MN

(cont.)

Trips to state parks and more rural places, overnights = more outdoors and more community in a school, you get closer

More outdoor education and activities

More flexible requirements for outdoor ed classes

Do you feel constrained?

More community programs in the communities, more availability for local outdoors, Organized classes for communities

More advertising for opportunities that already exist

How do you get ads for activities?

Friends, planners, calendars, write on hands

Electronic ads are more important than paper, paper wastes trees

Learn about it in school, do it in school then want to do it on your own, paper you forget about when you set it down, enroll in a reminder

Using technology in the outdoors, geo-caching in state parks is great.

get kids outdoors, not just high students but elementary kids as well

Discussion Question 1

Minneapolis, MN

(cont.)

Outdoor activities help students/kids retain the concepts better and allow them to tie the concept to a memory. If we get kids starting at an early age, teaching them animals and letting them see them, they will start to care more especially about the world they live in instead of western culture. They need to understand and appreciate the intricacy of how it's taken billions of years for atoms to arrange in a certain pattern to create offspring, plants, and fruit. We need to instill a sense of wonder and fascination it would create better world. If we realize the immense odds that brought us to this place we would connect with other people more; we'd have a sense of common understanding.

Use education (especially at a young age) as a tool for change.

Overhaul the education system, it needs a complete 100% overhaul. Kids need to be more enlightened beings.

Keep businesses as usual out of the classroom, especially standardized testing.

Education should be utilized more than it is right now.

Remove the strangle-hold that businesses have on government.

Create more of a connection between students and natural systems instead of our made up systems.

If the President wants to change the direction of the world, he needs to do it through education and start with the youngest generation because his generation is a dud. The President can be the one to create a stable vessel by setting up a better education system.

Increasing incentives for private landowners (private agricultural) to put good practices in place more filter strips along rivers

get the younger generations outdoors

tell the younger generations about it – need to reach the families that didn't do outdoor stuff growing up

greater accesses

provide free programs

more information and training to help people that don't know where to start

canoeing (today), sports, fishing, camping, picnics – bikes and drives to get to some of those places

camp and hikes with his family

canoeing (*note this participant canoed for the first time today as an event leading up to the listening session)

fishing with her family

Discussion Question 1

Minneapolis, MN

(cont.)

meditate in the woods (uses it as a center for spirituality), nature is a perfect example of balance and organized chaos

really likes learning outdoors (in school at Rivers Edge – his high school) because it's hands on, and everything people need to learn can be learned through the outdoors/universe
learn about it as he sees it and have more of an opportunity to see the cause & affect relationship
does things outdoors with school like biodiversity surveys and pollution testing
deeper understanding of the concepts than just learning facts in a book and can see what we are learning is actually happening outside

canoeing (*note this participant canoed for the first time today as an event leading up to the listening session)

family goes fishing a lot

canoeing (*note this participant canoed for the first time today as an event leading up to the listening session)

likes to be outdoors running on trails
access is sometimes available in urban areas and sometimes not
discovered the outdoors on his own and from friends

likes to participate in sports leagues managed by the Minneapolis Park and Recreation Board
searches for quiet place in the city
discovered the outdoors on her own (family more likely to rent a boat) by getting into gardening, gardening was her gateway into the outdoors

more programs like Earth Club at school that got her into the Green Team
attracted to the outdoors by flowers which made her interested in earth club
more hands on education - learn about pollution by seeing pollution

thinks of it as some where far away that offers camping, fishing and canoeing

thinks of the Boundary Waters
thinks of it is isolated places
wishes there were more protected places that feel isolated near where we area

thinks of it as a place that is far away with waterfalls, cliffs, and scenic overlooks over natural landscapes and trees

thinks of the Grand Canyon even though he's never been there

not necessarily a place that is far away, he finds places here in the metro that he considers to be the "great outdoors" but he's from the suburbs

Discussion Question 1

Minneapolis, MN

(cont.)

thinks of it as a place that is far away

giving young people jobs in the environment

found out about Green Team from brothers and sisters but otherwise wouldn't have known about such a great program to get involved in

Swimming in lakes and being totally immersed in the wild. Especially swimming in a clean lake, which is an extra special experience.

Minnetonka

Wilderness programs, our latest trip visited Boundary Waters Canoe Area for a week, paddling through the connecting waterways, fishing and enjoying evening campfires

Prairie restoration with local organizations

Skiing in beautiful snowcapped mountains

Exhibition, an elementary school program, is aimed at introducing kids to environmental awareness and displays examples of water pollution, air pollution, etc.

Boys & Girls Club collects trash and has a compost bin.

Boyscouts of America, biannually collects trash along the same stretch of road

Community Design Center of MN is involved in prairie restoration and a rain-water collection/filtration project that prevents erosion by routing rainwater to a collection area.

Chalchiutlicue tribe seeks to reclaim traditions by putting tobacco in waterways to symbolize healthy water/earth. (Danza Mexica Cuauhtémoc Multicultural Indigenous Academy, girls dance group)

Community compost collection for a community garden.

Discussion Question 1

Minneapolis, MN

(cont.)

Monitor energy use and efficiency in living space

Take batteries and cell phones to a recycling center

Ride bike instead of driving car whenever possible

Join clubs such as Boy Scouts and Pheasants Forever

Boys & Girls Club give "Go Green" bags at Cubfoods and distribute flyers that inform people how to reduce their water consumption.

Pheasants Forever Leadership Council designed a youth village aimed at introducing youth to shooting and conservation principles.

Collaborate with friends, neighbors, clubs, cities, states to participate in a "day of service" where people choose a day to do an environmentally friendly activity. Perhaps add friendly competitions to see who can collect the most garbage.

Share with friends and family what is learned in school. Spread the word.

Give tours around the area regarding places of historic, cultural, recreational interest.

At home, turn off lights when not in use; turn off faucets when brushing teeth. Don't overfill the bathtub.

Teach young people the ethos "Leave no trace"

It is easy to find a park in Minnesota. In Minneapolis there are several campsites along the Mississippi River.

There are several small local parks with a swing and playground, but a 20 minute drive to a hiking park is a totally different story. It takes too long to get there, and safety concerns are present. Will I get mugged there?

Hidden Falls is within walking distance of my home, but I need to cross a highway and I am concerned about the suspicious cars in the parking lot.

Discussion Question 1

Minneapolis, MN

(cont.)

A lake is nearby my home and I bike around it.

I don't do much alone, but I do many outdoor activities with my dance club

For the past 10 years a youth dance club has organized an annual family camping trip. Evaluations of the trip uncovered that for 90 percent of participants, it was their first experience camping as a group, and for 75 percent of participants, it was the f

More programs to encourage kids, more parks and zoos

Encourage kids to join a club or organization

Spread a "Go Green" message

Encourage outdoor activities in school. Ski club, camping trips

School student-councils spreading the "green" message, having green parties, using green supplies, playing green games

Get environmental issues into school curriculum. In Madison, WI, teachers take lessons outside. For example, groups of 30-40 students visit the Ice Age National Trail where teachers instruct basic lessons, blended into outdoor activities (i.e., trail dist

More physical education funding is required. Today some 6 year olds have no outside time while obesity is a growing epidemic.

Lessen the bureaucracy for grants, especially physical education grants. The paperwork is overwhelming and a major barrier.

Swimming and canoeing at Welch Hidden Valley.

Hunting and fishing at nearby lakes and wildlife management areas

Cascade Bay waterpark.

Discussion Question 1

Minneapolis, MN

(cont.)

Running at Harriet Island

Canoeing and hiking along city trails and the Ice Age National Trail in Wisconsin.

Baseball, archery, fishing, biking, softball, soccer, volleyball

Sea kayaking at Apostle Islands National Park

Anywhere outdoors I can go (comment by NPS Ranger)

Walking and biking at Sweet Hollow Park near my home.

Minnehaha Falls and natural spring area

Camping and hiking in the mountains with my family. I remember hiking up a mountain. At the top we saw mountains all along the horizon and a lake in a valley far below.

Seeing flowers

Taylor Falls

Being outside and watching clouds

Going to the lake

Allow locally grown food into school cafeterias. Make it a community effort and/or school activity. Local gardening should be encouraged and is a family activity that kids should learn. Moreover local food is more healthful than processed cafeteria food.

Discussion Question 1

Minneapolis, MN

(cont.)

President Obama's America's Great Outdoors initiative to craft a 21st century strategy for our landscapes, our parks, and our wild areas is a bold step toward bringing families together in pursuit of active exploration of this country's wonderful public lands. And what better place to gather input to accomplish the goals of this initiative than in one of America's great urban national parks?

I am pleased to hear that a listening session is scheduled in the Minneapolis-St. Paul area in August and hope that the National Park Service plays a prominent role alongside the Environmental Protection Agency. Here in the Twin Cities -- at the Mississippi National River and Recreation Area (MNRA) - we have shining examples of programs that actively engage young people in their first "national park experience"

The park is home to dozens of partnerships with state and local governments, non-profits, corporations, schools, churches and individuals. For example, the Urban Wilderness Canoe Adventure program provides 10,000 urban youth with an outdoor experience by getting them on the River. This partnership program builds confidence, strengthens outdoor skills, and encourages a healthy, outdoor lifestyle. MNRA is also one of the first 20 national parks in Michelle Obama's Let's Move Outside program because of the park's program impact on urban youth.

The park's many strong partnerships are also put to work protecting the River's resources and the rich cultural history of the Mississippi. The park and its local partners restore wildlife habitat, construct walking and bike trails, and remove invasive plants to restore and protect bluff lands.

General Mills cares about the national parks. Our parks are testaments to our past and our common values. With its corporate roots along the Mississippi, General Mills has enjoyed a long relationship with the River and with this national park. The Mississippi National River and Recreation Area is one of our nation's special places that brings families together for a unique national park experience in the heart of an urban area. please consider "listening" to the people who have helped make strong partnerships at the national park by holding a session with the National Park Service and the EPA at this great park.

The Twin Cities have joined together with a national park - the Mississippi National River and Recreation Area (MNRA) - in many partnerships to protect the riverfront while making it accessible as a recreational resource to thousands of urban dwellers. The park is an exceptional location to showcase innovative partnerships and youth-based outreach.

The Urban Wilderness Canoe Adventure program, implemented by the National Park Service at MNRA, reaches 10,000 urban youth by getting them on the Mississippi River. This model partnership program builds confidence, strengthens outdoor skills, and encourages a healthy, outdoor lifestyle. The partnerships are forged between the national park, its non-profit partners, area public schools, and church and youth groups. MNRA is also one of the prototype parks for the First Lady's "Let's Move Outside" program because of the park program's unique impact on urban youth.

Discussion Question 1

Minneapolis, MN

(cont.)

In addition to the listening session, a canoe field trip with staff from the Urban Wilderness program would highlight the amazing and lasting effect that this innovative partnership has made on so many young people in Minnesota. The success stories at Mississippi River National Recreation Area are many and provide a great opportunity to set a high bar for the partnerships and outreach at our national parks that are embodied in the vision set forth by America's Great Outdoors initiative.

I have been raised knowing the value of the nations nationalparks forest and wildeness areas.. Our parks and wilderness continue to provide an enriching and learning environment for everygeneraion from ttodays citizens all the way back to the grand ladies of the victorian era who used to walk the trails of places like pikes peak in their dresses and heeled shoes.

I am fortunate to live in Minnesota where there are bike trails, bike loan programs and state parks to create an outdoor hardscape for recreation.

Curriculums for schools such as Audubon Adventures (National Audubon Society) and Roots and Shoots (Jane Goodall) exist. Yet it is the citizen who takes time to teach a classroom or after school group that make these lessons come alive. I am thrilled to show my young neighbors how a rain gauge works and point out the brilliant yellow and black of the goldfinch at the birdfeeder. Clearly, the students who are outdoors today are the stakeholders holding the future of our natural resources.

Discussion Question 1

Missoula, MT

With the extreme beetle kill in our forests we need to allow logging and cleanup before the fires. Montanans need to be employed -- keep jobs available for us.

I propose that the National Park Service boost its mass transit initiative to a high profile by taking a few selected parks and making them public transit access only (i.e. no cars). The NPS has an educational function as well as a stewardship/leadership mission and could promote mass transit as a national good. Glacier NP could be a pilot. Railroad connections could be revitalized. A carefree going-to-the-Sub (?) Road could be a new national treasure.

I like the idea of say a spring kick off front page local fair booth weekend where family and friends could attend a buffet of volunteer sessions that are explained (?) and developing.

There is a need to re-staff each Federal agency involved with public lands with Landscape Architects! Our profession can greatly help to connect people and their needs to this great land of ours!

Better Federal agency coordination of these efforts: funding!

The US is headed for difficult times if we continue to abstract natural resource industries from producing these resources. We are at the mercy of other countries for our energy (oil) we will soon be not importers of hard mineral commodities. Why hasn't a meeting planned on the east side of MT, the largest population is not considered in Montana (sic).

Climate change is a challenge on all levels -- environmental, economic, health, social, equity, agriculture, national security, etc.

There must be a way to reduce use of fossil fuels that add greenhouse gases to the atmosphere -- best way is a carbon tax.

1) Protect roadless lands (IRAs) from motorized uses, especially use created routes and conversion of hiking and horseback trails to off-road vehicle uses. Use RARE II inventory of existing routes as only motorized routes to continue as motorized routes. 2) Better enforcement of unauthorized ORV uses including 1) more in-field law enforcement 2) streamline and better communication with Federal court judges on meaningful court actions to deter violations 3) give citizen vehicle identification regulations to aid law enforcement 4) careful selection of routes that discourages illegal uses.

1) Protection of roadless lands from motorized uses permanently 2) Better ORV law enforcement 3) Better coordination on administrative and judicial on ORV law enforcement 4) More use of fire in fire dependent ecosystems

Discussion Question 1

Missoula, MT

(cont.)

1) Fire is fire, and it should only be fought to save structures. 2) Have the flexibility to make common sense regulations that allow everyone to enjoy, use their lands. Regulations for hiking trails/road users do not need to be strong as those for logging, and other activities that can potentially cause more damage.

Our soils, forests, and open lands are places where carbon is fixed and sequestered. Carbon budgets should be studied to encourage sequestration on all open and conservation lands.

Regarding this forum and format: I strongly feel that there is an agenda (and questions that the Fed would like to see addressed by the public); we should stick to it. The Forum should not be a place to air petty grievances about local issues. The forum should be about over-arching issues and values.

Climate change -- lands must be managed to provide resilience and connectivity for threatened and endangered species as their climates change. Impactive human activities should be minimized in order to allow this resilience to expand unhindered.

Remove roads, limit off-highway vehicle use, stronger/enforced travel plans; more/better monitoring. More wilderness.

Place the right people on the ground. Community-led conservation where the people are part of the decision-making and solutions so they feel they have a stake and that their input is valued.

Funding for schools to engage in outdoor education -- equipment (sic), bus money and substitute teachers. Practical programs that help keep working landscapes intact. More local resource (sic) managers. We have unfilled positions in our State, Federal and county positions and the employed are spread too thin.

Recommendations to Federal Govt: 1) (\$) support existing cross-jurisdictional partnerships, such as the crown managers partnerships whose mission is to "achieve/maintain an ecologically healthy crown of the continent." 2) think big about scale of crown of the continent 3) uphold our iconic federal laws --> ESA, Clean Water Act, list new endangered species eg wolverine 4) protect our water quality and riparian areas, use this to prioritize conservation efforts, including headwaters of rivers and streams 5) support local citizen efforts to protect water quality through growth planning and zoning 6) complete Montana and Idaho road less review and designate wilderness 7) (4) support objective science from academic institutions 8) don't be bullied by the loud anti-conservation minority

Fund youth conservation corps, conservation corps for youth. Education changes to prioritize environmental/outdoor education

Discussion Question 1

Missoula, MT

(cont.)

We must look at facilitating outdoor experiences with out schools -- there is a conflict in the current No Child Left Behind legislation and required testing and more testing is preventing and eliminating field trip opportunities for teachers and students. We need to prioritize science, field-based research and other content areas such as language arts (writing), fine arts (painting, ceramics) and music-blended with outdoor experiences.

Stop mining coal and shift to nuclear power. Quit subsidizing cattle raising and emphasize plant foods. Put more lands into national monuments.

Instead of land exchanges between open land parcels look at land exchanges between infill urban parcels or building and undeveloped open space land.

Keeping youth active in programs outdoors is very important, but also having multiple agencies (government and NGOs) collaborate on various outdoor service/recreation projects is important as well. Participating in the residential program with the SCA, AmeriCorps, and the National Forest Service has given us a chance to work on multiple projects and learn a multitude of skills to use for the future. I feel much more connected/responsible to the land from completing the various projects. I live close to SF in California and it is a huge change for me to come out here and experience the outdoors. I am very grateful for the collaboration and enthusiasm from the various agencies in teaching us land stewardship and passion for the environment.

To keep people connected with the Nations natural resources three things must be provided: 1) Access for all -- not only backpackers 2) Ability to do -- work -- have a stake in projects, local natural resources industry -- sawmills that provide more funding for conservation than any other group 3) Liability reform: landowners can not be held liable for everybody that uses their land!

I hope the Federal Government will follow and support John Tester's Forest Bill -- and not follow in the misguided path of the Wolf Reintroduction Program. That last program has been a disaster for ranchers and hunters in Montana!

Funding for LWCF and other programs would help. Transportation Department support for trails needs expansion.

Fragmentation of open space eliminates access and confounds land management without "access" kids can not develop a connection with the outdoors.

As a real American Indian, the real people! Protection of sacred sites has been very difficult to produce real protection. Often government to government consultation fall to the way side, because of miss-directed (sic) policy's (sic) and real decisions get lost to give the grassroots people a chance on the decision-making.

Discussion Question 1

Missoula, MT

(cont.)

American Indians of the Great state of Montana have many significant sites. These sites need continued protection. Many are within Federal lands, MT. St. lands and private lands. Suggested pdnership (sic) is strengthening the present MT St. Antiquities Act of 1903. Agencies loosening contract language, Ex. are of potential effect (APE). This has and is constraining vital information that can be shared by the tribes and the general public.

It is very important to connect people with America's landscapes in order to understand when food and wood fiber comes from, however, the state of MT federal timber lands are so poor that recreation may be hazardous with dead trees falling and wildfire. The forest service must be given the budget, the staff capacity and removal of federal policy barriers in order to manage our natural resources.

Education, land grant and regional food programs that will support a new generation of sustainable family farms which produce food to be consumed locally and regionally. Federal, State, and local initiatives that support clean energy development, efficiency and the reduction of greenhouse gas (sic) emissions. Focus on walking, transit and bicycling and focus on livable communities.

1) Continue to focus on state-based collaborative initiatives such as forest jobs and recreation act. 2) Sustainable energy development that has protective stipulations for fish and wildlife. 3) Manage federal dams with an eye towards sustaining healthy fish populations.

Concern for fish habitat and fish populations should play a role in decision making for fish management.

*Recovery Fund. I would like to see the government take initiatives to change the public views internally, such as reducing, reusing, recycling and sustainable housing. Garden and local food co-ops in the government housing districts; FS, Army, D.C. and AmeriCorps etc. Planting native around government facilities. All done and advertised by, with, for the government.

* We need more funding for leadership, schools, programs, and camps. *Funding for job opportunities, incentives, marketing, soliciting. *See Federal agencies (sic) adopting outdoor education and activities there self (sic).

Federal conservation tax incentives should be made permanent. Continue to adequately fund the farm and ranchland protection program. Fully fund the land and water conservation fund. Increase funding for the forest service state and private land programs. Make acquisition of federal water rights a priority and fund appropriately. Keep a focus on using federal programs and funding to accomplish restoration work. Develop incentives for private land owners to keep their private land healthy. Federal funding needs to be consistent and dependable -- local groups need to have some confidence their work will continue to be supported.

The fundamental issue is to get people to interact in a sustainable way so we have open spaces for future generations. This means long-term educational programs in the formal and non-formal setting that provide awareness, understanding, problem-solving skills and participation (action) and connections with their local place.

Discussion Question 1

Missoula, MT

(cont.)

Environmental education.

What strategies work: dam removal, administrative land management and travel plans, land purchases/acquisition, project partnerships with early collaboration, restoration efforts. What are obstacles: adequate federal funding of agencies, difficulty of removing inappropriate uses such as motorized vehicles, fossil fuel development. the agencies should use the NEPA appeal process more seriously to avoid litigation. Ability to hold polluters accountable.

Agencies need to recognize and plan for the impacts of climate change. Adequate funding of land and wildlife management agencies. Limiting inappropriate uses such as motorized recreation, oil and gas develop.

Protect water quality and quantity and improve it. Limit permitting of fossil fuel extraction from all public lands. Stronger travel and management plans that include better monitoring and enforcement standards and indicator species. Protect old growth forest (sic) for carbon storage and biodiversity. Establish wildlife corridors for movement of wildlife.

The U.S. Bicycle Route System is a project that promotes bicycle travel across America -- partnering grassroots efforts (bike advocacy and trail groups) and transportation to promote tourism and recreation. This is good for communities and promotes an environmentally (sic) friendly, economically beneficial form of tourism. Cyclists stay longer, have no carbon footprint and bring people into a community in a "human" way. I think we need to stop incentivizing things that promote pollution and global warming -- vehicles: emissions, parking lots, distracted driving, built environment.

Unplugging our nation from electronic world (sic) and getting them "replugged" into the public lands/private land -- both engaging them from a recreational perspective (providing physical activity) and in conservation (providing volunteer hands (?) to help). In the words of REI President, Sally Jewell, "Best Buy is one of our biggest competitors."

Trails, school programs which utilize our public agencies -- BLM, FS, DNR, etc. liaison educators. Investment in our wild places -- reclamation, national and state parks etc, incentivize sustainable transportation such as biking/walking, transit, etc. Get airlines and trains to support these.

I think one of the most difficult is convincing conservatives that conservation is NOT a middle step to socialism! As the oil addeon in the Gulf exemplifies we need to place a true value and cost on scarce resources. We need to end corporate welfare first of all. The current subsidies for non-renewable energy are a disgrace! What we need is a surtax on all mineral royalties to be used to place solar/wind/renewable systems on every building in America. Begin with all public buildings followed by private residences and then small business or reverse the order -- just start somewhere! The boost to over economy and National Security would be incalculable. Such distributed generation would insure (sic) no more blow-outs, no Chernobyl's (sic) and no cyber-terrorism, I could go on for pages but this is a good start.

Discussion Question 1

Missoula, MT

(cont.)

America Highway Program: The signs of the adopted sections of the highway that are supposed to be kept clean. I find that they are majorly neglected and wonder who is in charge of any sort of accountability to those groups who have adopted these sections because if they are not held accountable the sections should be given to someone else. Recycling: It should be made one of the easiest processes available in every city/town. In most places the search for a recycling center is long and when found, they tend to have so many restrictions. And although we are making movements to conserve, there is a lot that has been wanted and recycling is the chance to make up for that. Please help make it easier .

The ongoing degradation and fragmentation of biological systems -- ecosystem collapse.

Encourage environmental and conservation cooperation between agencies and citizens -- FUND restoration.

Provide or guide funding resources into stream restoration and watershed conservation, including support for citizen involvement in watershed groups...

To connect kids and people in general to nature adequate access must be present that is easy, marketed, and accessible to diverse groups. This means both urban and rural opportunities. Full funding of the land and water conservation fund will provide both rural and urban opportunities through large scale land conservation, fishing access sites and urban parks. In addition, our first lady has the "bully pulpit" to make getting kids outside a part of our national education curriculum. If we don't connect kids to conservation at a young age, they are less likely to have an affinity (sic) to keep pass along out country either better or the same that they experienced it. Lastly, private land provides some of the best wildlife habitat in this country. Particularly between federal and state governments for access promote opportunities that are win/win for landowners and recreation. MT has the block management (bm) program the (sic) voluntarily enrolls eight million access of private land for hunting. Landowners are paid for impacts to their land. The last farm bill provided additional funds for state programs like (18 million) a larger commitment would gore this program (sic).

Education opportunities in these wild places. Somethings cannot be taught any other way than by getting people outdoors.

Full funding LWCF including state/local set aside policy, incentive, education, research documenting and educating as to the value and importance of the outdoors to our individual, community, environmental, and economic health.

Please consider policy changes that incentivize, regulate, and educate toward goals of preservation, sustainability, healthy built community, education curriculum supportive of the great outdoors, human powered transportation, work programs such as conservation corps for all ages. *Please stop the polarization and negative discourse of recreation is bad. Example -- no stimulus fund for park, recreation facilities.

Discussion Question 1

Missoula, MT

(cont.)

It is fine to hold listening sessions, but where and how will this information be utilized to encourage a grassroots movement to encourage and motivate the public and agencies to focus on the "Great Outdoors"?

Private land incentives so that developers can contribute to providing/maintaining open space/parks and trail that connect with other public lands. Protect and enhance LWCF program for local use. Fund and support federal land agency conservation education programs. Re-organize the Forest Service to provide more organizational focus on recreation.

Thank you for enabling us to voice our concerns/comments about conservation. Please encourage/provide more teach-ins/discussions like this one. Thanks again!

Great idea bringing this to Montana first - we appreciate and support the President's commitment to conserve working lands in a way that preserves the environment and protects local communities. Collaborative approaches work - support Senator Tester and Senator Baucus in their efforts to this idea. Can be win-win situation using existing infrastructure.

Great session. Maybe break into specific subjects next time. Education, recreation, private lands, etc.

1) protect intact habitats and restore degraded habitats on both public and private lands, 2) make the outdoors a more integral part of school curriculum, i.e. No Child Left Inside; Ways Federal Government can help: 1) Foster more cooperative efforts like the Forest Jobs & Recreation Act that bring together diverse interests based on shared common ground, 2) Mining Law Reform that provides opportunity to restore degraded habitats, 3) Fully fund the Land and Water Conservation Fund, 4) Provide better stewardship of public lands; Secretary Salazar's oil and gas leasing reforms are a good start for BLM lands, need something similar for the Forest Service. It is easier not to degrade important habitats than to have to try and restore them after they are degraded.

I suppose a multi-pronged approach with federal agencies, educational systems, non-profits, religious organizations, philanthropists, everyone promoting knowledge and stewardship; My state (Montana) is known for its Great Outdoors. As a young adult, I made a conscious decision to live here, next to nature. Native or transplant, I think a lot of people here appreciate nature, although their ideas of stewardship may vary. In recent years, people with different points of view have gotten together, recognizing their similarities; Good starts are Michelle Obama's war against obesity and White House garden. Promoting the national parks even more (?). Education is huge (the oil spill is one heckuva educational experience.) Encouraging gardening and eating fresh food; Promote local sustainability!! garden plots, small farms who sell locally. Make this a part of every new development. How about walking clubs or routes, with places to stay at night-- a day's walk between them. Thank you!

1) pass laws that encourage and not inhibit cooperation, 2) Provide incentives that reward developers for conservation practices

Discussion Question 1

Missoula, MT

(cont.)

Collaboration is key but the most important thing is creating public awareness of conservation

increased education/information/access/advocacy for conservation; contribute to increased collaboration fed-local; restructure fed agencies; limit (mal)development

Citizen Science Monitoring; User group involvement in monitoring/restoration

1. Educational programs funded; 2. Fund trails (alternate transportation); 3. Subsidize volunteer programs; 4. Support awareness; 5. Provide successful samples (&workshops) for public/private interactions; 6. Continue similar meeting & require political reps to attend!

1. Increase awareness through heavy advertising online and on T.V. Let people know conservation jobs exist and you can help w/things like global climate change. 2. Cut down on car usage in parks by offering shuttle services for tours and transport bicycle rentals. You can charge for them as well to help raise money for parks. For example, a \$2,000 mountain bike rented out at \$25 a day would only take 80 rentals to pay off. Maintenance would run at roughly \$10 per rental, so after the bike is paid off, the parks would make \$15 profit per rental day. This may not be ideal for smaller parks, but Glacier Park and Yellowstone could make lots of money which could help relieve their funding from the Federal gov't and that money could be distributed elsewhere.; 3. The federal government is already doing a good job through AmeriCorps by offering the education award which can be used to pay for part of school or pay off school loans. By offering this to high schoolers, it may entice them to study environmental concepts in post-secondary education.

Engage the community, especially at a young age, in physical, natural recreational activities that are treaded into the urban landscape. Bike path networks that are connected to the most beautiful parts of the city. Alternative physical education for kids like yoga, mountain biking, hiking, skiing, martial arts. School gardening programs.

Reducing our dependence on fossil fuel

I think urban bike access is such a simple but powerful solution to so many of today's problems, obesity, air pollution, the daunting amount of money spew on our over-used road ways. Towns with bike lanes and green belts have an amazing increase in exercise and community in the youth. Give us bike lanes!

Actively managing our federal forest lands at the landscapes level.

Large long term goods for Services Stewardship Contracts available to both BLM and FS which are allowed to be up to 10 years. Streamline NEPA process

Discussion Question 1

Missoula, MT

(cont.)

coordinate

Prioritize educating youth about value of nature to their mental well being

Good way to focus education is start a garden at every school. Everyone has to eat. It's a good way to get everyone involved on many different levels.

Increased funding for FRPP, Land & Water Conservation Program. Maintain/extend laws which provide tax incentives for donation of conservation easements.

Finding a balance between the real conservation of our environment and economic growth in there given areas

Focus on sustainable natural resources and practice safe and reasonable harvesting of said resources. Plan for future of resources, ensure that the land is able to foster economic growth for all generations to come rather than an immediate pay check.

abolish or downsize DOI

Farm to school!! (Thanks to Mrs. Obama efforts) Creating local growth policies that work collaboratively and house growing population and facilitate working farms.

Need permanent extension of Conservation Easement tax incentives to assist in private land conservation. Need full funding for the LWC Fund including a portion dedicated to obtaining access (linear) to land-locked public lands

Finally a collaboration of ideas from multiple agencies. What you need now is more site visits: People on the ground offer realistic solutions that people in offices tend to overlook. People on the ground prescribe better than people in offices. People in offices describe better than people on the ground. too often we play the role of opposite.

One of our largest obstacles to getting kids outside and into their local natural areas (National Forest) is the outfitters permit process, as an educational non profit we are placed into a category with other for profit outfitter groups. However our goal is to connects kids and people with nature, teach stewardship ethics and explore the natural world. the permit process limits our ability to use national forest. Honoraries have to be specific, planned a full year in advance are inflexible (regardless of weather or condition) and limit what we can do. We'd accomplish so much more if we had more specific permit process or new designation.

Discussion Question 1

Missoula, MT

(cont.)

Programs that work- Teachers are the key to increasing kids interest and comfort with the forest - Existing Natural Programs- USFS kids in the forest, Project Learning Tree sponsored by American Forest Foundation. Mt. Natural Resources Youth Camp at U of M school forest can be replicated across the country for 1 week lands exposure to all natural resources discipline, discovery days in Missoula for 5th graders sponsored by Chamber of Commerce.

Programs that work "Connecting Kids to Nature" -Techy go caching/photography- reason to go outside. Volunteer- stewards of land- even as little as litter removal- Does not have to be restoration. Obstacles- forest service- special permits costs.

Engage parents in the outdoors so they can pass it on tot heir kids and create future stewards. Volunteer based groups- citizens science, rehabilitation trail work to engage communities to they experience the value of the lands 1st hand.

Missoula's high schools participate in a joint agricultural program which is unique to the NW. What a great partner for learning about agriculture and how to integrate it with land conservation.

we need to make it as easy for people to get outdoors as it is to turn on the TV. Access and communication is an obstacle. There are several non-profits out there organizing and doing great things, but they have limited funds for advertng or new media communication to get volunteers involved or youth active we need a told for communication and funds to get our message out. Partnerships with the state, local and federal governments could help communication efforts. also partnering with private sectors would be beneficial. How do we connect parents as well? we cant rely on education to do it all.

Although there are a number of challenges facing our culture and world today, a reconnection of children and youth to the outdoors will provide a fundamental change and growth in education among our population. The federal government can provide both financial and political support to outdoor education programs, youth conservation corps, and public school education programs focus on giving children and you an incentive to love the outdoors.

Their company hosts Farm Tours for 3rd and 4th graders from Seeley lake area and Lincoln, MT schools, where they teach about their livelihood: production agriculture, weed mgmt, Water Quality, predator control; Often adults from this effort and the Potomac area attend.

2 pilot projects her organization is involved in: 1 – Access to information on outdoors. One stop shopping where they have partnered w/ State Parks and FS. Focus is on NW MT, providing general recreation information, along with accessibility and other outdoor info resources to the public 2 – Recreation Program focused on wildlife viewing, fishing, and hunting. They offer an equipment loan program, much of which is adaptive equipment designed to facilitate use by people with disabilities. Also provide mentoring and education components. Many partners – FS State parks, private land owners

Discussion Question 1

Missoula, MT

(cont.)

CFAC(?) Works on land use issues. They have been forming committees to bring landowners, user groups, business and others together. Working on policies at local level; smart growth promotion; connect people w/ food source (farmers/public)

Comments related to inner city and getting kids outdoors. Ran a 2004 summit – spin off which was captured by Richard Louve (Last Child in the Woods). A result is the North American Conservation Education Strategy: internet-based clearing house on environmental education opportunities, resources, and events. Partnership of 43 organizations (conservation and education, NGO's, Federal/State Agencies, etc) came together to create the Conservation Education Network, scheduled to launch this fall. Strongly encouraged visiting the website: www.outdoorresource.org Also, national survey key conclusions: 1. Kids better connected through teachers 2. Electronics – computers, etc, are competing with attention of youth -- need to get kids outside! As this (America's Great Outdoors) initiative moves forward, need outreach a major part of effort.

Working on oil and gas issues. Friend has son that was affected by air pollution. Their group has had conversations with over 7500 people across the country. Oil drilling affecting many parks in the NPS; public needs to know this, and we need to pass strong legislation to protect these areas.

Resources for action – there are many foundations and grant sources for available to the community for projects at local to national level. Also at federal level – need more incentives: how to give tax benefits to landowners for supporting this work; also land use planning (e.g. setbacks) important to coordinate federal & State land use management.

Worked as “fish checker” w/ Lolo National Forest, on her recent job, she was not clear on why she was doing this – not connected to objectives. After learning about efforts such as Senator Tester's bill, the Blackfoot Challenge, etc. she feels inspired by this work. If people have a say, and understand more about the projects and restoration, they will feel more empowered. Employees need more info to see the fruit of their efforts. Restoration is important, can bring people together, create jobs, and conserves open spaces. Helpful for honeybee conservation. They need open space. Ties to collaboration.

Need parents and families to be involved – They have a pilot program reconnecting children w/ nature (Park Service) to get adults comfortable in nature. Federal govt can be involved in getting parents connected and over their fear of the outdoors, and enabling them to pass on to children.

Montanans usually think conservation. The Montana Conservation Corp. is alive and well and put hundreds of high school age youth out in the field: performing trail construction, trail maintenance; fuel reduction, other construction projects. Employ high school students throughout the state. Develop and implement education curriculum. Foster stewardship and support for leave no trace ethics. Feedback after term of service term ends: can't retain; no jobs available to go from seasonal to year round employment; chasm from seasonal conservation corps program to permanent employment; no bridge. MCC is committed to young people in outdoor field ranks but no way to get them into system.

Discussion Question 1

Missoula, MT

(cont.)

Accessibility is important. What has worked in childhood - family camped all summer long. Want to promote free camping. In 50 and 60's there were station wagons, coolers, camping tents, and access to camp sites all over. As a citizen in MT – hunting and fishing accessibility was based on an ethic – ethic started with family camping with group of folks that know how to do it right – also had camp fire and girls scouts that re-enforced concept on how to behave – finding a way to bring an ethic training is crucial – maybe no one told them when they were young not to throw trash. Need to educate – this is key. She was lucky to have ecology teachers. We don't have these now because we are teaching to standards and are losing concepts of outdoor field trips and outdoor education. Want to see promotion of education and need to prioritize to educate on the outdoors. Field trips when young and youth conservation core – these put her life on outdoor trajectory. At 15-18 yrs.old, youth were paid you to work in outdoors – plant trees – build trail – and it included environmental education. We should re-instate these nationwide. Need training in classroom and outside classroom. In Missoula, MT flagship outdoor program is funded through mental health program. Want to facility flagship to educate on outdoors – use programs like this in place – e.g. like afterschool programs. Maybe also support teachers in environmental education training. Need to build ethic that grows through youth. Help them be comfortable teaching outdoor education. What Works – rural assistant committee and FS partnered so school can be accessing an outdoor sport – FS folks came into school – they facilitated field trips to the space with the school. Need to fund gas in tank to get them outside.

I'm a rancher – landowner and a neighbor of a forest. I appreciate the USFS. We have the same issues. The MT legislature is working with us. I think they understand the need for a win-win scenario. Family forest owners are all about the outdoors. We promote family forests for a win-win. We work to sustain the forests. There needs to be wood products thinning around communities. We need to keep the timber in America for made in America products. This will sustain wood locally instead of it being shipped elsewhere and overseas. The Montana legislature has a really good policy. In 2007, their proactive approach was needed.

Thinking about sensibilities, there is the Ravalli Rural Assistance Committee. A USFS partnership allows access to the Willoughby area for accessibility. This partnership facilitates field trips to the area. It's a nice 3 prong partnership. There's grant money for transportation. Field trips. Keep tours short on private lands. USFS can provide access without liability.

FRPP – Great farm & ranch land protect/program. Great way for land trusts & USDA to partner to tweak and combine for landowner contributions. It's already realized and recognized. It's an example of what good program already does.

Thank ____ for being here. I'm here representing private land conservation. We partner with landowners to protect farms, ranches, etc; to keep lands intact.

Discussion Question 1

Missoula, MT

(cont.)

We hosted Tuesday's session on the Blackfoot. It was a great day. I focus on the Blackfoot watershed. With regard to the question: what's the role for federal agencies. The best example I can offer: yesterday and today. Provide more of these opportunities. Local community efforts are well grounded. They have good handle on how to address these issues. Seek local group's ideas and council; better to work from locals on up; not top down. Effectiveness of our organization (all partner organizations) is to break down and examine, identify useful tools, find the right people to represent the issues. Agencies need to have right faces/resources available on the ground level such as Tim Love & Amber Camp. They are useful and helpful folks who live in the local community. It's good to have the local staff at the table – they live in the communities.

One of things attempted a decade half ago was Teaming with Wildlife Program – excise tax on backpack and other camping/recreation equip (backpacks, binoculars, birdseed, etc.) – money funneled back to states – instead of pitman robinson tax – the teaming with wildlife tax would be for states for use on nongame programs and other programs that are inadequately funded – there was opposition to that but admin at the time supported it – but has been replaced by state wildlife action plans – but these action plans come with annual congressional appropriations of that money and they decide where money goes. Instead the Teaming with Wildlife would focus on species and wildlife that are currently not addressed. Wildlife draws people to outdoors – not all use on big game – shouldn't put all burdens on hunters and fisherman. The administration supported the legislation, but it met with opposition. Now, programs are not guaranteed. Annual appropriations & allocations are so limited, there needs to be a different way to fund these needs.

If ideas run too far afield, there's always the nuclear family option. There are local, good programs – make it kinetic/physical and it sinks in. Volunteers for preservation. Work, hit liability wall. If ways for Gov't to make easier, would help. Excite them. Parents not much different than kids. Own experience and stories. Best way to convince. Bring down to local level.

Pretty proud of MT headway brni8ging opposing factions together before court. Show examples to court – require sitting down first. Get together before it gets confrontational. Get word out early. Start building local team to hash out. Here's a bizarre post to create: the Czar of Commonsense. As spokesman for local federal agencies, this position would be close and could advocate for it approval process. We live in such a litigious society; this would allow forests and other agencies to deal one on one before an issue heads to court. Find a way within the agencies and offices and overall system to recognize and deal with matters early on. Look to best examples.

projects work well when they have a recreation component. Keeps the community connected; voting for land bonds; helps community support conservation. Don't discourage recreation; it allows for conservation. Question – how do land bonds help? Having a range of tools in the tool box is great.

success story, Restoration of the Clark Fork River

Discussion Question 1

Missoula, MT

(cont.)

Multi ownership land exchanges – had a tremendous positive impact on economy.

local bonds help communities take advantage of federal grants that need matches. Has had recent partnerships with banks – FDIC finding they can partner in ways they hadn't before.

geo tourism – National Geographic led an effort on both sides of the border in the Glacier area (including Canada) that shows how tourism can enhance the natural resources of the place. They pick places that are important with a focus on how the tourists can sustain the economy of the locals, for example by buying from farmers, and going to festivals, instead of going to the box stores. Important to get tourists to understand their role in protecting what is special about their place – a very great process.

DNRC and Blackfoot challenge – successful because it is led from the ground. And then the fed and state have been there to support the efforts. If the agencies had come in and led it – it wouldn't have worked. It's the partnership with locals and fed and state agencies that makes it work.

local bonds are seen as one way to express the community's passion for open space and a way to leverage partnerships with federal and state agencies– a lot of positive feedback. Expanded tax incentive had been extremely successful and there has been an order of magnitude of difference in the amount of acres that have been conserved with this incentive. Room for improvement – land and conservation program –it is real money to the ranchers – the ranchers donated value isn't recognized or valued as great as the cash donation yet it is a real donation and it needs to be better recognized.

people on the ground need to be empowered, if agency personnel are not empowered you run into roadblocks. Agency people need to be supported. Farm and Ranchland Protection Program is an excellent example of a tool that works. Represents the interest on the ground; garners public support.

We are working in a changing landscape. At one time people thought that plum creek land was public – didn't know it was private. As changes in ownership occur – access is changing. He manages over 1000 miles of motorized trails. That infrastructure is greater than a private landowner can support. Liability is very scary – really worried that trees will fall on people or people will get hurt. Important for folks to understand these issues. There are children in Seeley Lake who don't go hiking, fishing, don't go outdoors. His wife created an adventure club and taught them how to go outdoors, ethically, safely, at no cost. It doesn't take a pile of money to get kids outdoors.

the place based community driven efforts have been very successful here. Ground up – local land conservation groups.

Discussion Question 1

Missoula, MT

(cont.)

What makes a local partnership work? Need identified issue with a tangible outcome. Needs to be a desire to improve or rectify the situation with a specific outcome to get the ball rolling. This is the way to attract interest groups.

Regarding his involvement with 4H - it doesn't always take DC to get money – important to realize that the local timber companies have been very generous. As we lose these industries we lose so much money and support. Regarding access: He is a backpacker but when he wants to take out his 90 year old grandparents to hear wolves he used to drive – but now the roads are closed. He heats his house with firewood. Used to go up roads with family to cut firewood– it is a family activity and gets kids outdoors. But now people can't get out as a family to collect firewood. Also lots of families camp in non-designated areas – when the roads are closed they can't do that.

He's 29 and he finds it weird to be called a youth. Since not a govt agency can move quickly and give youth opportunity to make decision and be empowered. They can make decisions that make a difference on the landscape. Changes lifes a lot – getting emotional. Give young people an opportunity a chance to have responsibility. Young folks dug a trail on Mt Sentinal and every day they can look up there and say – wow I did that – and everyone uses it and likes it.

state parks with historical features are a great draw to get folks out. But need to be careful so that you don't hurt the resources.

In the blackfoot challenge the 80/20 rule has worked which means that people knew that we weren't going to agree on everything but were willing to work together if they could get 80% of the way there. The other thing that made it work is that the blackfoot challenge isn't the only thing they do – they work in other places and spread the word. Conservation through our youth and our school boards – get the word out and spread the news. Important even in Missoula to get the kids out, leadership skills, confidence to be in the natural world.

success story, State and local landowner conservation groups

giving young people opportunities to be out in the woods. SCA focuses on kids 15-25 yrs old.

For them – liability issues aren't a big issue.

Farm Bill has been very helpful to help farmers keep their land.

Rode his ATV – trespassed on a lot of Federal land and he had a very good time but there's no way he could walk to the M – because he's beyond that. Need open roads for people to be able to enjoy the outdoors.

Discussion Question 1

Missoula, MT

(cont.)

not associated with a conservation group – born and raised in MT – his parents were homesteaders – issues not being addressed in this session – There is a move in DC to designate lands in MT as national mounument. His Dad couldn't walk but he had a jeep and he could drive all of the FS roads to hunt. Are moving towards roadless areas and access by foot only and that takes a lot of people out of the ability to recreate. Need to make the land better and one of the ways of making it better is to make it accessible. In past FS treated land as a renewable source of energy and products. Letting trees grow old and die is not using them wisely. Also observed that local agencies and local people do a better job of keeping things in perspective then the folks in DC. The bureaucracy of Fed govt keeps things from happening. Things really happen from local knowledge and local funding. The further DC stays out of MT the better.

Boyscouts of America: totally led and funded by local people – no government funding or supported. Boys and Girls club are also funded locally. He wants to put a plug in that there are young people and organizations that go into woods and don't need federal govt to tell people how to do it. He understands why plum creek closes the roads but it didn't use to be that way. Now private and public all close roads. Now if don't backpack 20 miles you can't see the roads. NO MORE roadless areas. Let's log the forests and keep the roads as trails.

MCC incorporates the service work with educational components and encourages members to get out and do more community work. It connects young people to the environment. People in Montana are lucky.

She has some add on to some previous comments. Try to get local organizations to participate or engage; they already exist. Organizations such as YMCA, Flagship, Camp Fire, and other after school programs (don't reinvent the wheel). Also include troubled youth. Expand and fund what we already have. Provide jobs for more youth leaders like MCC. Need people with ideas and what we already have in place. Get the Forest Service or BLM into these organizations speaking, and giving slideshows. Get kids excited about this. She remembers D.A.R.E. – that stuck with her (as an example); an hour with a policeman and getting out of class. Bring the Forest Service in to schools. It comes down to the school systems, advertising, and after school programs.

To find people for programs, try advertising on the internet and spreading by word of mouth. It's just like music: we get it off the internet. Focus on going to websites. Advertising on different media websites would work; pay for advertisements. That's how AmeriCorps found him.

Create social responsibility. The direct way to do this is to teach kids in the third, fourth and fifth grades. He went to the Teton Science School when he was in grade school; he may have drug his feet to go but he's now infinitely grateful he went. This early on interaction with wilderness fosters a great relationship. He doesn't recall much emphasis on natural sciences in high school; thinks having a curriculum that you continue in secondary school would be good in the long run. It will benefit and create a generation of people with social responsibility

Discussion Question 1

Missoula, MT

(cont.)

We achieve higher success by getting people involved on the ground and in partnerships with other agencies. We have good groups like Rocky Mountain Elk, and Blackfoot Foundation. These groups have shown over and over if you engage people on the group level there is great success. Also successful with engaging federal employees.

Madison elk working group; diverse group addressing elk population. Key is to open groups to all people. Forest Jobs & Rec effort was hand-picked & doomed to failure. Groups must include those from the bottom up & not be hand-picked.

Conservation ethic & leadership has brought time for renewal. Need to talk of use of YCC & CCC that were used to implement and expose & carry the ethic forward. This sustains ethics by involvement; particularly in these economic times

National Trust- Problem is shortage of funding in the government. Make the best investments possible. Goal-keep our rural population in place in the sites. The National Trust Main Street program & Preserve America program helps small communities to create livable communities/preserve heritage. These programs bring in a 50:50 match & produce jobs. This is a good long term investment in communities.

Lives in Seeley Lake which is a small community. She and another Mom (Jeannie - sitting next to her) started an Adventure Club at the Elementary School from first grade on where once a month the children go out for an entire day. It has been enormously successful. The program has attracted kids that don't usually do that sort of thing (would usually play video games indoors). It has captured kids. They take them on hikes. They've been amazed at how well the program was received. Five mothers have taken this on and they have a supportive Superintendent. It's at a small school so it's easy to get the word out and there hasn't been much resistance. Another comment about science: she would like to see, as a Mom, more emphasis on science. With reading/math and the standards for "no child left behind" we've dropped the ball on science. Kids want science and they need it but aren't getting it because of the reading/math emphasis. They should focus on science and how it applies to real life. The parent group is toying with the idea of starting a garden and greenhouse on school grounds and implementing some science and connecting kids that way. You have a captive audience at school so give it to them that way. Take advantage of it so the kids can feel a connection to the natural environment.

Comments on Geoff's input: It all starts with bringing this into the schools and creating awareness on a daily basis. If kids have exposure to the land and a connection to the land they will be more likely to care about it. Waiting to deal with people who are abusing the land now is a backwards approach. Many parents do work with their own children (to instill value for land) but we can't count on all parents, as many parents don't work with their children

These organizations & vo ed are often cut when funding is cut. Agricultural funding goes down when environmental funding goes up. Young farmers and ranchers groups help kids get started in ranching. Ranching is interrelated to conservation/hunting. FFA has helped finding jobs & speaking skill.

Discussion Question 1

Missoula, MT

(cont.)

She just moved back to Missoula and can compare it to where she was previously. Bozeman is so incredible and different mainly in their biking, hiking, and cross country trails from town to the outskirts. They are for fun but also for getting to the stores and businesses. People are using these systems a lot more there (than Missoula)

A comment on volunteerism: if there is any way to promote and/or subsidize volunteerism (the government) we should be doing it. There are baby boomers retiring in droves; what will they do after retirement? They have the experience and education (to volunteer), they have 40 years of life left and it would keep them alive longer

Thank you for this meeting; we need more meetings like this. It would be beneficial. We should require our Representatives to be here and involved in process and hear what is being said

The community is like a cell membrane; she compared this to the notion of engagement. Every Forest Service employee should sit on a community board and transfer some of their knowledge – have a flow back and forth. Another idea regarding Heritage Resources: everyone in the community has stories – i.e. the place where someone kissed his wife for the first time. There are tangible values and attachment to place. We're missing the boat by not connecting these stories. Volunteers connect it all. They help us understand the power of community. We need a rubric in the Forest Service volunteer program to put people's skills to work. Some volunteer out of the goodness of their heart s; we need to formalize.

Yellowstone Business Partnership is a success story. Connecting folks. Sustainability is key; establish a long term vision & include the business community. YBP is a model for success. Identify economic models for sustainability. Establish long term vision for economic sustainability. Common values. Sierra Business Partnership is also a model.

By contrast he says he had a great childhood growing up in Montana but his childhood was sterile due to lack of time or access or something (to the outdoors). But when he went to high school he read about the wilderness and realized 'it's out there'. He went on the internet and was lucky to find the Montana Conservation Corps. Now that he's here and going into the wilderness, there will be a satisfaction when he's finished with his term of service; he can talk to others about it. He knows the internet was mentioned as a communication method but thinks word of mouth is the most important. When they're done with their experience, the most important thing is to get the word out and share their experiences with others. He thinks we'll find a lot of volunteers waiting in the wings.

Tree Fight. A response to mountain pine beetle devastation. This group is recruiting volunteers to document what is going on in forests & help with experimental regimes. Have 200-300 volunteers, mostly from Jackson, that will go in Bridger-Tetons & take photos/record data/experimental pouches. Will save trees & do something positive.

We need to establish more of an identity and be carbon neutral. We need to have access to wilderness and public land and have green spaces connected to public lands as the model. He echoes everyone's comments so far; he's heard a lot of support for education

Discussion Question 1

Missoula, MT

(cont.)

She believes Service Learning is the best model at a young age. She suggests using the same method for recruiting used by an organization called "Teach for America". They have recruited huge numbers of youth; their target age is the 22-28 age groups. They use alumni from their organization, who are excited about the program, to go out and get more people involved. If there are alums with our program, you could do this. They (Teach for America) may have incentives. This could apply to high school and middle school. Have alums come talk to schools and say this is what I did and it was cool. Do research on this.

Said he was very fortunate to have grown up in the Five Valleys (Missoula, etc.) because this school system did encourage kids in outdoor activities. They could also go home and climb a tree. They were able to go to Plum Creek Timber Company locally and see how trees are processed into wood products. He knows this works because he has these memories still from back in the fifth grade.

Thank you for holding this session. This agency does a good job when it does educate – i.e. "Leave no Trace" and 'Pack it Out' are so effective; light switches goes off in people's heads "this is not just green clothes people who do this (pack it out/leave no trace) we, the people have responsibilities to do this too". We can do more to give Americans pride in their public lands and define for them the gradations of management. From what the wilderness act calls for in maintaining 110 million acres to recreational areas in National Forests to where ATV's are allowed. We're in a period right now where there's confusion – "where am I entering; what are the other opportunities?" We need national education to develop pride and an owning of their responsibilities

Missoula Open Space Plan passed with 60-70% approval in 1995. Bonds for open space funding have passed with over 70% approval. People in Missoula love our sense of place and being able to look up to the hills and know that they are protected forever. They are willing to pay taxes to support these areas. The partnership that was created in order to leverage that money was with the Five Valley's Land Trust, Rocky Mtn. Elk Foundation, USFS, etc. Funding from Land and Water Conservation Funds were key to leveraging the money and partnership.

We should look at empowering more youth. There are a lot of us who are older (youth) who didn't get an early education in conservation. The Montana Conservation Corps is a way to get us out there connected to the land we cherish. It's about starting a foundation with them too

There do seem to be some successes going on in Montana. It appears to be reflective of a deep desire of the people. There seem to be good bridges built between conservation groups and other locals. Getting together at places like Trixies in Ovando is key to process. There is a deep desire for it to work with communities. People are connected to the land. In Montana bridges have been built between a wide range of users. That is unique when that happens and out of that great things occur.

Discussion Question 1

Missoula, MT

(cont.)

224 Americor members doing service in Montana. Emphasize service as a strategy to bridge education into careers as contributing members of communities. Conservation Corps are tremendous assets. Treated weeds/ build trails. FS has rapidly aging workforce. Cons Corps provide leadership and group management skills. Pipeline to future employees. All agencies are working with these corps & creating opportunities.

Teton Park programs: Friends organization; ensures protection of resources. Started own YCP- kids do trail work, learn skills, transferable skills 16-19 yr olds. Work 10 weeks in the summer. Paid for with private donor money. Also funding multi-cultural program for High School program- Latino- underserved populations. 80 kids in 40 schools in Wyoming. Trying to get kids more interested in great outdoors. 12 day trek is being planned- statewide. Youth in the Parks

Org helps create trails & do conservation projects on private land. Enhanced tax incentives for conservation easements doubles the work they can do. Without the tax incentives, it won't work. These tax incentives expired in 2009 and she would like to see these incentives made permanent. GVLTP preserves working ranches/ wildlife habitat. Keeps ranchers doing the good work.

Strategies that are working are the Extension Program and Institute for Recreation Research. We need to increase collaboration between these programs, do outreach into the community and enhance partnerships. We need more folks in the Forest Service or Park Service to come in and also get different levels of government working together (i.e. county commissioners and go statewide) to build it up. These two programs would work

Invest in America's youth through conservation corps programs This has broad impacts. Many MCC alumni go on to work for federal agencies. Many people come to MCC to serve their country. This opens their eyes to the great landscapes this country has.

He likes what he's hearing today. I think one of the hardest parts of getting youth to the outdoors is to provide a reason to go there. The Education Award is a good thing. He participated in a Career Fair where they got to talk to kids face to face and the kids got excited seeing all the tools they brought with them. Developing leadership skills is important; youth can then carry it on further into their lives. You need to probe what motivates those kids: is it cranking out 10 miles of trail? Or being better speakers? or more engaged in community? Find out what motivates youth. Youth will motivate youth. It's like a baseball team – someone tells a friend, who tells a friend, etc.; the ripple effect. The YCC focuses on leadership – but the Forest Service doesn't do this. It's so important to your community.

Discussion Question 1

Missoula, MT

(cont.)

Northern Great Plains. We have overlooked the grasslands, as evidence by decline in grassland birds & species. We are focusing on North Central area of Montana. CCPI program with farm bill is effective; working with ranchers on conservation measures to protect grassland birds. Need regional NRCS people to deliver these programs on the ground. Meet with ranchers and discuss opportunities. Science based organization that works with BLM/ FWP on research related to grassland birds. Leveraging of public/private dollars is effective. CMR-largest grassland reservation. Better integration between DOI agencies needs to occur. CMR managing for ferret. Not effective. BLM trying to find incentives for landowners to allow ferrets. DOI agencies need to do better at working multi-jurisdictionally.

Stewardship ethic. Connecting kids to outdoors-Fed Gov't can continue with fee free days including in winter. Make the park more accessible by increasing fee free days & public outreach related to those days. Bring the parks to the local communities; bring the resources to the kids to encourage visitation. Resume matching program (like the Centennial Challenge) to incentivize donors. Although the Centennial Challenge was cumbersome, encourage it to resume.

Interagency Bison Plan working group with Federal/ State/Tribal & Private. Wide range of interests & is a work in progress. Looks at wildlife management in a broad context. Through this group & public involvement, there has been some success in managing bison. Works with private landowners- Royal Teton Ranch. Not perfect, but complicated issues & this group is a good example of working together between federal/ tribal & state.

One thing I've seen work in this area is citizen science monitoring; it gives the average citizen a responsibility. Promotion of this kind of program would help connect people to the landscape. How can we have citizens gather information and do effective monitoring? The Audubon Society has done some of this

When open space bonds are used, there should be more allowance of public access on private lands.

Hunters are conservationists & promote through foundations. Hunters brought in \$270 million in Montana. Outfitters brought in \$170 million with \$51 million payroll. Hard dollars. He works with private landowners & brings in hard dollars.

When she was growing up, she was outside all the time even though it was in suburban areas. She and her brother played along a creek bed. Education is the key. She was in the education field and the year she left education she was told to bring the kids inside not go outside. You can educate, mandate, regulate, but at the core you have to have things available. On any developments in the future, housing or commercial, there should be a space there that is nothing but nature. People on their lunch hour can sit outside maybe by a creek. The longer you do that the more you appreciate it. It's the same with agricultural spaces, small spaces, in housing developments; if you take care of it, you'll appreciate it and you'll know that the rain, sun, and soil are important. Kids need to be out there in it – digging, eating worms, and throwing stones - every day. It (nature) needs to be around us

Discussion Question 1

Missoula, MT

(cont.)

Coalition building from the bottom up works. Need consensus from people all over the country. Owners of the public land; locals and all owners. HPBH-Hyalite Porcupine Buffalo Horn WSA example-contentious.

The Federal government could help support bridges by engaging knowledgeable people who know the history and ecology of an area. If we look at a system that already exists we could get people out enjoying what we have. State parks are being threatened by budget cuts, if we don't engage people we will lose these lands.

River protection works in Montana; at all levels. Blackfoot Challenges/ North Fork protection Act/ Forest Jobs & recreation act- Tester. One of the largest river restoration projects- Mill town dam removal in Missoula. Streamside setbacks- riparian corridors are needed to survive. 2 major pieces of legislation to protect rivers-Wy & ID

It is important that in Bozeman; doorstep of 1st National Park; many accomplishments around Yellowstone. GYCC (coordinating committee) promotes collaboration & brings agency managers in to meet on a regular basis; common issues & solutions. Unique structure; functions at the level of people involved. Reconnecting people to outdoors; National Parks plan an important role in this. Almost everyone has a connection to Yellowstone. Important to focus on national parks as a focal point to reconnect people to nature. Also the greater landscapes. Builds future conservation with children and surrounding landscapes.

Gallatin Nat Forest Travel Mgt was a long process. Urges other Forests to pay attention to dispersed camping & the value of dispersed camping in their travel management planning. For many people, this is their first experience of the outdoors. In travel management plans, be sure and include dispersed camping.

Develop trust but get a steady infusion from knowledgeable private land holders and trusted bureaucrats. We need people who know the issues and can give firm direction. How about getting federal agencies to work more effectively at the community level. Local communities need a steady infusion from knowledgeable bureaucrats and knowledgeable local people. Have the agency people get out of the office and really work at the community level to find common ground. Really have them work for the public. Have them help build understanding and support for the agency.

Going off what Jenna just said, when we're working with noxious weeds or building trails, it helps us understand things and makes a connection with community and with government

REI Mission: inspire, educate, .Stewardship component is important. Partners with non-profits/ provides grants. REI targets youth & getting them outdoors; promote volunteerism; work on local trails. Family Adventure Journal At REI stores- take journal outdoors & observe & make notes on plants/tracks/bugs. Gets kids involved in the outdoors.

Curriculum with lesson plans that get kids outdoors. Curriculum supplements what they are doing in classroom; provide materials not available in schools. Takes the resources to schools.

Discussion Question 1

Missoula, MT

(cont.)

The people of communities have come together to create bonds and conservation easements where people can hike and bike, an example near Missoula is the Rattlesnake Recreation Area. Need to look at the big picture: other Montana communities are following examples of protecting lands around cities as has been done in Missoula. We have good leadership to support these efforts in Missoula, but the resources (funding) are stretched.

Every time the government gets active, we have to be reactive/ wolves/ water/ cap & trade. It makes it tough to use resources. MT has a lot of resources. Keep in mind that ideas have to be good for everybody, especially those trying to make a living and not just environmentalists.

Flood plain & wetland conservation. Work in Madison river valley on floodplain restoration. USDA- Conservation Reserve Program & NRCS- wetland program are working. WRP programs in Montana. 2008 Farm bill allow grazing pilot programs. Challenge in conserving these areas with various funding sources –once protected by conservation easements, the wetlands are not restored. Legacy we leave should be the ability of the lands to store water. Restoration projects we need to fund, we have money for easements but not conservation work. No money appropriated. Need funding through agencies to do cooperative restoration projects. Greatest hedge against climate change

We will have lawsuits with streamside setbacks. How will we protect private property rights? We should not take private property rights to protect corridors. Bankrupted due to spotted owl-friend.

Reexamine the role of national parks in this initiative. National Parks drive the State economy. Look at the relationship between national parks and the communities surrounding the parks. Parks are important part of community and have a key role as we think about building relationships with communities. We need to continue to connect youth with parks.

She is originally from Minnesota. She came from the suburb and urban areas. Getting kids outdoors should be emphasized in school programs. They had local people from the State Parks come to her school sometimes; they went to the pond in back of the school yard where they could get in the mud. We should encourage kids to take what they learned back to the classrooms. She had an Arctic Explorer doing programs in her school when she was in the 6th grade; she thought it was very important and sort of unique – others didn't get that experience. Getting kids outside, for half an hour will have a huge impact. They know there's something bigger out there. Also, set up more urban outdoor spaces like community gardens. People can be working in gardens growing things and we can be encouraging parks to outreach to kids in education.

Discussion Question 1

Missoula, MT

(cont.)

Mentioned youth who live in Los Angeles who have never been to the ocean even though it's just a few miles away. He grew up in Boston and there are kids there who haven't been to the woods there, even though they aren't far away. There was a Sierra club program that tried to help with this. His 'in to' working with the Forest Service and was working for the YCC. He really hopes the Obama Administration will establish a national service framework to bring back the CCC – the New Deal. We could reach out to new student high school graduates. Could make parents realize this is a great experience before college – to do work for the government and perhaps get education awards like having tuition waived. This is a huge opportunity in our country.

Regarding the Bob Marshall Wilderness Foundation and other associations who outreach to young people and have partnerships with the Forest Service: I hope agencies will fund these associations more. These are ways to connect youth to ground.

They (youth) are influenced by things like humor – make them laugh and they'll listen to you; if it's boring they will turn it off. Try to draw on their interests or the music they listen to. Advertise through TV shows.

his organization provides workshops on preservation on culture resources. Works with local communities showing them how to restore and preserve the important pieces of their communities. Focus on importance of what these communities have and what they need to do to preserve them.

working with schools curriculum based for kids to experience outdoors. Provide funding for kids to visit park with rangers. Provide Internet activities that link back to the visit. 1/2 day training sessions at the park that focus on loons, mountain goats, pica, clarks nut cracker, and invasive weeds. Enables anyone who's interested to come in and learn more about the park and what's in it.

working with schools curriculum, programs based for kids to experience outdoors. Provide funding for kids to visit park with rangers. Provide Internet activities that link back to the visit. 1/2 day training sessions at the park that focus on loons, mountain goats, pica, clarks nut cracker, and invasive weeds. Enables anyone who's interested to come in and learn more about the park and what's in it.

Huge movement in corps to provide manpower (supervision) and jobs for youth who want to get out into the woods and nature. Provides education and jobs at the same time. On line connectivity, increase awareness with administration that these groups are out there and if funded more, could very well bring in more youth

economy important. Need to see groups working together, dovetail natural resources and cultural resources together. Tamarak festival held at the same time as the brew fest, provides several types of groups all working together to focus on natural resources and bringing community together to combine all interests. Economic value is brought to the community.

Discussion Question 1

Missoula, MT

(cont.)

public schools play important role in this AGO initiative. Look at teachers as the coordinators to help spread the word. Then call in the other resource specialists to assist in the teaching/learning programs.

NRCS has good incentive programs for private lands. Need to work better on the outreach to those land owners.

water and climate change. Water is a limited and defining feature of our landscape. Attended a river honoring session on the Blackfeet reservation. Elders give history and importance of the river in their lives. Kids gathered to learn about and experience the river. Canada—citizen based groups to become more aware about their watersheds community based activity.

Community is like a membrane of a cell around public land. Everything that enters the public land comes through community. The people in a community know what happens on the federal lands. Forest Service employees should sit in on community meetings to take advantage of the knowledge of the community. Participation helps the knowledge cross the membrane.

Value heritage resources. Community has stories: where they went finishing, where they kissed the first time. These are intrinsic values that get attached to places, heritage resources.

Volunteers connect it all. Need a rubric in the Forest Service to connect volunteers to it all. Need to connect those skills, to harness them. Resources are slim, but people volunteer out of goodness of their heart. Harness them.

The federal land managers have the option to add “caring for” in wilderness there is a lot of caring for. Funds to add to the effort. There is ability for others to add. That’s true of a lot of conservation organizations.

I have a wish list, 1. better planning strategies across the board, 2. Incentive to save conservation areas, 3. More information and advocacy, 4. Increased collaboration between local and federal agencies. More gets done by the locals than the feds.

Thank to Obama for my job. I am funded with stimulus funds.

The biggest obstacle is lack of awareness. It seems reclamation is backburner. It takes one life cycle for a vacant lot to develop an ecosystem. Drive through any town. It probably has a vacant lot. Make an incentive for the owner to donate use of the lot to the community in neighborhood fashion like community gardens. When there is a neighborhood garden you can feel the neighborhood. There is less trash, its cleaner. The people are more neighbors. In my community there is a year long waiting list for the garden. Need many, many, many, many more gardens. The gardens put the conservation effort at the forefront of daily life.

we need expansion of programs like MCC.

Discussion Question 1

Missoula, MT

(cont.)

Create more federal incentives and funds to public schools to implement outdoor learning programs. We do it with reading and math. Like "Project Wild" on a more regular basis. More than bring the trunk to school once or twice a year.

Music is big, radio or festivals. The environmental movement started in 70s. It connected through music. It reaches through generations. Have someone announce or someone at a festival to make music. It's strong no matter how you use it.

Adventure club kids will bring their parents. Some parents have never x-country skied or been on a trail. The knowledge to get there and access the trails is created. Kids can say let's go again and parent will be able to take them.

Empower more youth. People have said educate starting young. Those who are older have missed that bus and need to be empowered too. I didn't get the opportunity when I was a kid. But I got the opportunity. MCC is a way to empower us. Education empowers older kids. We want to help conservation. We have a better understanding of what the agencies do to conserve the resources.

Looking at conservation strategies. 80% of open lands are private. Conservation easements are used to conserve private lands. People donate the conservation easement. The incentive is tax breaks. From personal experience, I entered an easement 13 years ago. I talked to my neighbor about it. When congress passed an increased incentive for easement, spreading tax break over 15 years, then my neighbor also did an easement. Encourage congress to do the incentive again. For some it takes the added incentive. On other hand, there are those who want the land that they lived on and their parents lived on protected for their kids, but they don't make enough money to take advantage of a tax break. A purchased easement would help. Need a federal program to meet this. The video said that private land should be looked at for protection. The Farm and Ranch Protection Program has a minimum size. Congress should look at that to include larger and smaller acreages in the program. But that program needs matching funds, which are hard to come by. One thing that works well is the passage of a law like the Missoula open space law. Bozeman passed a second open space law. The local program provides the local funds to match the federal matching requirement for the easement program.

The important thing for me was summer camp. I went one summer to camp and then I wanted to volunteer. I can't volunteer enough. Camp allowed me access and the gear to get outside. That's what did it for me. More important than education is getting out.

Our organization does well. It gives an opportunity to lead and gives ownership of their experience. The kids come to be outside and work and to not be at school. Participants take ownership over the direction they go. They work in projects in woods and make decisions on how to shape the environment. It creates a sense of self work creates leadership opportunity. It bonds people to woods and creates leaders. I don't want to knock the Forest Service, but some of my friends just sat through the entry training. The Forest Service entry training is horrible. The instructors have 30 years experience or more, but they can't teach how to use a chainsaw or cross cut saw. Its exciting stuff, but they make it dull. Keep the youthful energy going.

Discussion Question 1

Missoula, MT

(cont.)

The agencies are good at inventory and monitoring on public lands. Extend inventory and monitoring onto private lands in the large scale conservation model. With that in mind we need public access. Access is based on consumptive uses. Focus on non consumptive uses. Would be more palatable to public.

With crisis in Gulf it's an opportunity for kids to see how important it is. Here we can see clean water, and then we look at what's there. We need to take care of it.

Get kids outdoors. The book "Kids in the Woods" sets up the problem well. Lewis and Clark Trail teaches kids conservation out on a trail setting. It is an important developmental step to get outdoors, not just in yards, on lawns, but in the wilderness. We are at a time right now, and people say the Lewis and Clark Trail is over. But it's wrong. It's a terrible thing to just drop the ball and not follow up with what they saw at Travelers Rest or wherever. Get them to look where we are and the history that we have here.

Outdoor education— my turning point to conservation was a 21 day experience with backpacking and outdoor education. It was fully funded by a corporation. We probably can't repeat the funding. My point is that the people who had the biggest impact on my development and learning were forced to live like transients. They didn't make enough money so they couldn't rent an apt. Let's fund them. They need to make a living wage. Establish living wage for these teachers.

Collaboration is working great. We have the first chance at creating wilderness in many years. It's a great rallying point for the youth

The 3 predominate means for conserving private lands has been: • Acquisition by public land manager or Conservation organization (e.g. USFS, NPS, BLM purchase of private in-holdings, County or City purchase for open space or park with bond funds and LWCF funds), a private land trust purchase for wildlife habitat using combo of private donations and federal, state, and/or local funds etc). • Conservation easements (again, a mixture of private, state, local & federal funds are often used to purchase easements) • Land use regulations (some states have been much more successful than others with this approach)

couldn't afford to spend time in the outdoors so he took a job that paid him to go in the woods. It's a great organization – everyone comes for a variety of reasons but they all end up working in the outdoors. Some come from an advocacy background. What drew him was the educational component. The incentive for education would be good for other programs too.

took part in a non-profit called Greenbeans who brought the outdoors to the urban setting. That is what led her to Missoula. 80% of Americans live in the cities so it's important to bring the outdoors to the city such as by community gardens.

Discussion Question 1

Missoula, MT

(cont.)

Not every community has access to the forests around them. It's important to bring the outdoors to the communities such as through community gardens. Or take the kids out to the woods – but not every community has a national park so embrace what you do have, such as regional parks.

Use the model of Montana Conservation Corps and build on collaboration at the local level. Partner with successful programs like Knowles (??) or Yellowstone Expeditions which takes city kids out in the Yellowstone ecosystem to learn about the outdoors.

Around Missoula there are a number of outdoor conservation camps are a good way for kids to. Learning adventures for kids in the summer, hiking, biking, rock climbing etc. Need more opportunities like this to expose more people to the outdoors.

people's access to lands is critical – One successful program in MT for private lands is the Block Management program whereby landowners can voluntarily sign up to provide for hunting and access allows for 8 million acres in the program. Landowners are paid per hunter day. We need more new fishing access sites for rivers. For public lands that are land locked the state is pursuing conservation easements for access.

For good access to public lands a good network of trails is valuable and it makes it easy for schools to access it by walking which is cheaper for field trips by students.

access is critical for dirt bikes and mountain bikes. We need to hook people to support conservation by providing access to trails where they can play and that leads to volunteering to help maintain trails. Not lock people out by allow them in and they will partner for many other conservation efforts.

1. aviation acces to wilderness – for disabled folks or older and they can spend a day in the wilderness. Airstrips are maintained by the pilots not the agency. Internal trailheads.

conservation is the responsibility of individuals. Blue Mountain folf course established. Many folks involved and it caused people to come together a way to bring folks of a variety of ages and kids learn from example of their elders. Grandkids taken up with their classmates. It is a cheap way to get people out of doors. Not texting or doing video games. The more they get out. Problem is we need more space for courses to spread people out and available year round. A local person just graduated from law school and he won a national title. He is being an example to other young people.

Moved here less than a yr ago form CA. 90% of people treat the land w/ respect 10% don't. The obstacle is that government's solution is to shut it down and that is the wrong solution. We need to educate the 10% people to proper use and keep it open to folks, that should be the government's role. Girl & Boy Scouts used to be a great training place for youth but they are being destroyed and government needs to correct this. Perception that private landowners are only in it for money, but they are also in it to be good stewards. Government needs to cut down the dead and dying trees and it is spilling over to private lands.

Discussion Question 1

Missoula, MT

(cont.)

Engaging the community, he came from urban setting and the difference here is the ease of access through trails and so folks are more engaged here than in urban settings. Winter skiing programs, gardening programs, etc. the more kids can get engaged early in life the more they care. Expansion of the fossil fuel industry is problematic and we need to keep them out of our wilderness.

People need to leave our preconceived perceptions at home. People need to work together to find common ground to establish a relationship around. On the front noxious weeds has been that point of common ground that has allowed discussion to proceed to deal with other more contentious issues. The common ground allows people to stay connected.

1. young people are intimidated by going camping when they aren't in shape and don't know how to set a tent up, etc. He thinks bikes are a great stepping stone for other activities; people can be in better shape and develop confidence to do other activities. We need more trails and bicycle lanes in cities that people can use on a daily basis.

generation MT grew up in eastern MT. Appreciates this opportunity. Feels it is important to connect kids early in life. GUTS (girls program with YWCA) – girls want to get outdoors and they appreciate the land and they have an innate connection with the land and we need to increase the opportunity for that connection. Through schools, after school activities, etc. Create space for people to help heal the land, volunteer to do trail work or help decide how the land will be used. Sometimes it is hard to find opportunities to do volunteer work on federal lands. Success by engaging girls from cities and bringing them to Missoula and help them connect to the land. It is important for kids to gain self-confidence through outdoor activities.

because of experiences provided to kids on the ground as discussed here this is an important method of connecting people to the land. The challenge of college students to take a summer off from income generating work is very hard, they need to be earning money during the summer to help pay for college. We need to be providing programs that allow college students to do a summer of conservation work that will pay them for the work. On the FS agency side it has been very rewarding to find money to hire interns. It has been good opportunities to help the interns sort out what they want to do with their lives related to the

Lewis and Clark Trail- national historic trails are a great way to get kids outside, learn about history, culture and conservation

300k ac availability -- seely swan program -- availability to log, etc

108k ac Blackfeet challenge

Working landscapes and collaboration are critical

Discussion Question 1

Missoula, MT

(cont.)

Recreation opportunities

Place to leave for our kids and grandkids

Putting differences aside and work together

Grazers, fishers, hunters, etc - came together - no one will remember who's here today, but will be

This effort must be bottom up - far be it from me to think I know better - we need enough flexibility in our programs to work well across all these landscapes and local situations. The focus needs to be on the results. Also creating job opportunities - passionate about rural communities.

Rural America 16% of US population - but 45% of service men/women come from rural areas. Why? Because of values they have learned.

So much of our identity is tied to place.

It's really about individual people more than landscapes - that's what Ken Burns was told

A lot of times we sit around complaining. Going to DC he learned the folks in DC were glad to hear success stories. This is a job we all have to do. We need to help our representatives by doing what we need to do.

It's about how people work together - Partners for Conservation - the 27 LO's have the same issues regardless of where they are. We can help our representatives sell programs if we connect with the folks on the ground - they can look at Jim Stone and what we have done for Blackfeet.

Conservation is important to rural and vice versa - not just because rural people want to use the land/resources, urban-based conservation tend to alienate rural.

Now rurals tapping into love of land and using partnerships.

Local, sustain food, energy, wood, fiber helps blend the urban and rural- collaboration on the forest restoration program - they like that because it helps fund collaboration in a ranked approach.

They're partners in every respect:

Discussion Question 1

Missoula, MT

(cont.)

Need key communication leaders in place

LWCF funding critical to fulfill this mission

Public education works - _____ was a student, someone else too

Swan Ecosystems Center

Grants for National fur program

Pass \$ to LO's so they can d{) forest management plans

1996 tribal conservation districts started - don't care ~ political boundary -looked across landscape to eliminate weeds, etc, took 3 years to do plan, got some \$ to do resource inventory - 5 year effort; worked collaboration with ARS and partnered with 1890 land grants to research a plant the tribe has used for years and learned it's good in treating type 2 diabetes and anti-coagula - this tied into colleges, too.

North Fork Flathead is good opportunity for state and local feds to work together

Working with Salish to land exchange to eliminate checkerboard

Montana legacy, Montana working forestry

Put land in conservation easement at urging of his kids, who wanted the land someday - the federal tax incentives are critical to make this work - a very impOliant tool that needs to stay in place

Baucus said Rock Ringling is the one who came up with the tax incentive concept and

4th generation of a family owned guest ranch and it would not survive without coop conservation that's happening in Blackfeet; folks coming here who have contributed funds, etc, to conservation efforts all because they happened to come here and learned to understand the importance of the conservation issues; have the accessibility to their representatives

Discussion Question 1

Missoula, MT

(cont.)

Rural Initiatives allows people to communicate directly with their commissioners

In Montana, you don't separate nature and culture; deep connection to landscape - open

USFS program allowing partnership agreements with private land if it benefits public lands

Likes when organizations include tribes in the process early - it works well

Guided recreation - watching sense of discovery helps appreciate how special area is

Need to target program so they are hand ups - not hand outs - seed money is what's needed to leverage private funds

Thank you for work protecting cultural resources in the Flathead Region

I.i.Im ac of best fish and wildlife habitat in the Nation

400,000 mile streams

1st tribal wilderness area in the Nation established lots of other amazing

Clean vessel

LCWF

River-honoring on Flathead River

There are successful programs funded by NF to do restoration on public lands. Example Clearwater road decom, fairly effective to get students out to provide realistic orientation toward coursework, to bring relevancy to classroom learning, includes college age kids, rural high schools, city schools - improves connection. Good partnership opportunity.

Discussion Question 1

Missoula, MT

(cont.)

When you talk about programs that are successful in connecting people to outdoors, the MCC has really opened my eyes, from upstate NY. In terms of education support system, getting young people out in the outdoors to understand nature. Especially important that meeting the people and community. Grad from college the way the economy was going, sick of waiting tables, especially wanted to learn how to backpack, opened his eyes, exploded his world to what is important, became of how the outdoors is an integral resource and part of being an American. Being ushered into the wilderness v. just going on own.

MCC works, grew up NE came out to go to school, joined to show he earned his right to enjoy, American monetary incentive draws youth into programs, especially when it is earmarked for education. Working in wilderness, beneficial start off being naïve, re beetle kill and they learn, air strip. discourse between multiple agencies, they want transfer of ideas between agencies. winter work, too many government employees who run out of dignity in season go on unemployment and food stamps - put them to work v. government can provide more winter work. tools needed Idaho residents don't want to work, people who are surrounded by wild lands are not as inspired.

Land and water conservation funding good tools. Advocate for permanent extension to conservation easement incentive tax. Sometimes the public can get access to eas

Connecting people with personal schedule to help open volunteer avenues, affordability for parents, can't afford kids camps. Biggest tool that we can all use, stop bailing out banks, start bailing people out.

Discussion Question 1

Nashville, TN

Tennesseans have always shared a strong commitment to protecting our mountains, open spaces, farms and water and our state would provide a great venue which would engage a full range of interested groups.

Governor Bredesen and Tennessee Commissioner of Environment and Conservation Jim Fyke are very interested in the America's Great Outdoors Initiative and stand ready to assist with the event.

Tennessee Parks and Greenway Foundation success using property transfer funds, used in 4 ways, 16 Million dollars goes back to TN, however those funds can be taken by legislature to balance the budget, it is a fight they will have to fight every year, even though it is dedicated fund, never fully funded, there should be more federal incentive to states to have this type of forward thinking approach to take money when developed and preserve the land, this would be good incentive to state legislatures if the feds would match the money they might set aside. Match all money set aside for conservation.

Poor areas is a problem. Suggest Urban hubs through public transportation. Driving is getting very expensive. Camping equipment is now considered a luxury. Develop a tax incentive for people to donate their camping equipment or canoe to find homes for people that will use them.

What works: Cherokee national forest PolicyPublic and Private funding, Land trust, Land trust easement conservation

What works: Civil war heritage sites

What works: Sierra Club funding land purchase

What works: Mix of easements and land acquisition

What works: Green ways and space working for public use

What works: State Parks and greenways. Simple for scouting and schools. Lots compared to other states. Really works

What works: DU and other org. NWTF Youth orientations with outdoors. Wood Duck Boxes hands on Exp. Gets Kids outdoors

TN Civil War Heritage. Authentic exp. step back in time for the visitor. TN is number 8 for Tourism. Civil war sites has played a great role in that.

Discussion Question 1

Nashville, TN

(cont.)

YMCA every child outdoors. Bredesen working to getting kids outdoors

Historic sites like Hermitage blend historic and outdoor recreation

Volunteer Friend Groups Wheeler Refuge: Listening session and getting needs to the public. Helps lobby btw public and private usage to allow coordination between groups.

DU in Memphis: Public and Private group's work well together.

Warner Park Getting kids outdoor in to parks and so forth works to get kids interested in the outdoors.

MTSU Historic Preservation Public and private funding provides the glue for historical parks across the state.

Sierra Club (Tennessee Chapter) Land purchase ie. Land and Water Conservation Fund State, City and County purchase programs need to be funded.

Linear Greenways (Chat. Area especially)

Rec. Trails program, Local park and rec fund. Continue to utilize these programs to purchase natural areas.

Combine the effects of getting an outdoor experience with attending our historical sites like The Hermitage, Carnton Plantation, etc.

Seek more ways to find funding to preserve natural areas using a combination of public and private groups.

internet marketing for zip code cross reference for natural areas

Talk to Parents about TN history, get parents to take responsibility about history and about how to be good citizens.

Nashville, TN

(cont.)

Tennessee Department of Tourist Development—approach to sustainable tourism has been a holistic approach inclusive of business development and communities—sustainable tourism summit was successful because it was designed for those who realize the importance of protecting our destinations while maintaining economic growth through tourism—sustainable tourism sustains the environment, culture and heritage of a region while at the same time sustaining the economic growth through tourism—the tourism industry has the potential of increasing public awareness and appreciation of environmental and sustainability issues—the implementation of sustainable tourism practices can preserve and protect a region’s sense of place for future generations—the states initiative was not a top down program, but a grassroots initiative which has grown from community to community (Must be a regional local based program, i.e., Gatlinburg green, Ripley From Red to Green, Ruby Falls, Chattanooga Green Lodging)—Make sure there is a WIN in the program for all stakeholders including businesses, community leaders, developers, preservationists, and environmentalists—The very same resources you are developing allow citizens, visitors, and children to be involved in sporting events, nature and outdoors, preservation of land, agritourism, development of sustainable cities, and will ultimately lower the state’s obesity rates—to get kids involved it has to be fun!—create sustainable strategies recreational stories that allow kids to learn while experiencing nature, i.e., geocaching which utilizes the latest technology while experiencing the states national parks, battlefields, and recreation areas—Tennessee’s greatest outdoor classrooms, such as the partnership between the Great Smoky Mountains National Park and the Tremont School, provide our children and visitors with opportunities for life-long, place-based sustainable tourism experiences—the economic piece is Key to the success of the program as it will bring additional resources to the table, and for businesses the program has to positively impact their bottom line—create recreation resources at the state and local level to move citizens and visitors to the rural areas of the state—These new tourism based businesses will increase recreation and education opportunities across the state—important to remember and recognize that the groundwork has been laid by many others before us Land Trust of TN, TN Civil War National Heritage Area—These partnerships work because the focus is on conservation, preservation, and education creating a WIN for all stakeholders involved—State and federal agencies can provide resources and best practices, however program must not be top down but local driven in order for stakeholders to embrace all facets of the program (business, schools, churches, communities, environmentalists, preservationists)—Remember the best ideas come from the local communities and businesses—The implementation of sustainable tourism practices allows communities to develop their economic, cultural, and natural resources while at the same time enabling them to keep their natural resources beautiful—sustainable funding opportunities for land conservation—historic hermitage hotel in Nashville encourages visitors to donate \$1.00 per day—They partner with Land Trust of TN and will create \$1 million for land conservation—What would happen if all historic hotels in U.S. did this

Boy Scouts of America works with adult mentors and conscience of outdoors and landscapes are the results

Discussion Question 1

Nashville, TN

(cont.)

4H extension and summer camping programs work—educate in water quality programs—Need more effort to encourage young people to participate in summer camping programs and tying outdoors to their quality of life—need immediate interest for young kids—support new programs and get parent involved

Great Outdoors University focused on bring kids from inner city outdoors—TN clay target program which is a shooting sport introduces kids to the outdoors as well

taking advantage of diverse array communication tools such as facebook and twitter at the sametime maintaining traditional technological tools—Need state and local facilities to take in consideration of communication tools as well—need state and local resources to take advantage of new technology tools

promote mountain bike trails and maintain these trails—get people involved in getting in the woods—mountain biking is a sport that can participate in and get a lot of exercise—needs to be promoted as a family event to include children participation

Conserve at least 5% of TN farms and greenways to set aside—add prime farm lines and working corridors to set aside to protect trees, air quality, etc.—connectivity is key—NEED cash incentives from federal government to support management and maintenance so efforts can continue—the job program produces pay and a good quality of life—support and incentive is crucial to adding more land

Funding for federal agencies with a line item budget dedicated to conservation and recreation—Park flow program in state of TN is needed for land trust foundation to establish additional area for bridge sites—no water trail system—scenic river program can protect the scenic quality and recreational qualities need to be in another category—no sustainable way to protect those rivers and trails

Family education conversation and having access—help maintain OHV trails and putting in water bars and physical labor to make things happen—feedback and communication is necessary to improve maintaining trails—trainers advertise classes to know where to take new jeeps, etc. hiking fishing biking to be able to see things that you cannot see from the interstate—preach and educate the correct way to go into the woods so as to not destroy the resources—need nonprofit help and work together

Urban Park serves 1mill people/year no hunting fishing etc only observation get great funding from private, local city governments. Biggest challenge is raising federal money to buy land Fund LWCF pull out from larger Energy Bill Congressional Decision needs support

Reexamine criteria on grants and further streamline process, look at strategic reduction of mowing money on highways etc and put \$ back into schools; reduce nitrogen and phosphorus and utilize oil spill clean up efforts to publicize nature conservation in farming communities

Youth Conservation Programs provide segue for young people to get into nature positions. Need incentive for States to look to these programs as apprenticeship programs.

Discussion Question 1

Nashville, TN

(cont.)

Not always about money instead educate kids, Last child in the Woods

Core of success is a respectful unified community

Make resources available to local organizations and initiatives

Internet access to let people know of local opportunities.

Meet with community centers, create connections among people, work with organizations to create programs.

Example of Cumberland Trail, extensive new trail system. Success has been funded by grants, now State Park, needs funding to maintain these trails.

Working with schools to promote outdoors education.

Works with programs that get kids outside. Program works with Forest Service. Field trip funding has been cut. Put money into local lands, can do amazing things for the community.

collaborations and partners—emphasis ever child outdoors program—programs that worked—governor summit and outdoor bill of rights—MOU that feds put out with let's get moved outside program needs to involve resource management agencies—Using parks within their local area—Need funds for local parks and programs to stress obesity in children program

service learning works—put things in the hands of children and when you can, tie in environmental education

collaboration with groups focusing on species specific and habitat planning—dedicate funding to program

collaboration with local clubs and organization along with national because people are willing to work hand in hand and need to partner with off road groups—local groups are willing to do the work but they need the guidance of the national groups

Identify particular land resources in TN that need to be protected—working to protect the largest known waterfall—have private organizations identify key resources—need access to sustainable funding to ensure targeted acquisitions are funded—benefit of the knowledge that can identify some of things that federal organization

Discussion Question 1

Nashville, TN

(cont.)

Incentives—one incentive should be that TN does not have a state income tax and is depending upon sales tax—not much funding available for programs—where are additional opportunities—loop holes in guidelines and policies—landholders were overlooked—grant money is being available for these non-profit organization to work with private land owners to help—want to continue making sure all plants are native—dedicated funding needed—look at and review at policy and procedures for funding programs—people are not aware of conservation procedures—need some education and/or incentive to help people understand

areas are closing down due to not having sufficient money to keep the areas trimmed and open—farmers were willing to go in and maintain the park—Need better cooperation from the federal agencies to allow public to help maintain areas—people are willing to follow the law and build necessary items, but federal restrictions on using local people to work on federal land—need some easing up on locals—need more understanding to allow the local community to assist with projects on federal lands—Need more people involved in volunteerism

319 program works because it allows in kind match allowin organizations to use their own resources and community involvement to come up with their portion.

Heritage education encourages land conservation—several historic resources on the land but disappearing because land not being preserve—educate the public on why land is important not to sell—need to educate to help preserve land and motivate preservation—TN land trust is a wonderful organization in TN

partnerships work—enjoy relationships with local parks—DOES NOT WORK—federal partners and federal managers do not work well together—All agencies are not on the same board—more communication between federal agencies

dialogue between two entities works—demographic shifts and demands on the resources—educate county and local planners and decisions on the cost savings by implementing simple solutions like working and developing partnerships to preserve those areas because of the benefits as far as in fracture savings

Discussion Question 1

Nashville, TN

(cont.)

Conservation district and conservation district movements—sole conservation district by state law in TN—works of improvement on privately owned agriculture land—local people or volunteers that are elected to their conservation district that work with the federal entity or state entity to help make the decision on how that money can be spent—involving locals WORKS—lagging support though—increasing the amount of available funds but fewer employees—struggling to get the work done and help from federal agencies lacks—look at better ways for cost share programs—shift some of those cost share funds to the other side—conservation is a conversation—it takes private conversation for the conservation to be preserved—look at rededication to provide assistance to the public in natural resource—farmland protection—how to figure out how we make agriculture profitable?—how do we look at things?—regulations impeded people staying on the lands—the age of farming is becoming a thing of the past—no local mentoring programs—need to look at the inheritance tax so the farmers can pass down to youngsters so they can continue to farm—need farmland protection programs—what are hinders to people staying on the land—person cannot bake biscuit in their home and sale it—hurts helping people stay—younger people are not farming—how can federal help older couples finder a younger helper to farm

Department of defense is one of the largest federal land owners in the country and we need to adopt the green movement—bring DOD into the system such as taking a look at Fort Carson who utilizes the solar panels and utilize the veterans because A. they are returning service men B. they are knowledgeable C. make military bases more user friendly to the community—land is well preserved

Need to have more reward programs for land owners for conserving and preserving land—Ecosystem markets have great potential for influencing things—need to reward land owners to keep forest and family farms and credits that they generate

private enterprise wants to use solar panels which will produce more electricities—town will have benefit through power array—could be replicated—solar arrays on their buildings could power needs of the park and sell into the system

people vote with their pocket books—setup market in a way that provokes people to do things—to bring in a whole new revenue source—setup incentives for programs you want to enhance

TN wilderness act 2010—expansion of wilderness areas in TN and nation—do not exclude mountain biking, etc. for these areas—mountain biking is a new sport and not on the books when laws were passed—government needs to take a look at the law to embrace biking in wilderness

having kids participate in natural resources—schools need gardens for students to participate more in their upbringing—start young to encourage these options in adulthood—put more money into supporting people willing to help—pay into what is being talked about—Do not have field trips to the source but take the children to the outdoors

Discussion Question 1

Nashville, TN

(cont.)

people need to get out there to show the kids they need to be outside—monkey see monkey do—get parents out there to get kids—Educate public in volunteerism

Urbans need to be addressed more—educate getting outdoors and understanding the soil and water—education program would be ideal in TN—success agriculture program to show how much agriculture is important—Farmville benefits more than people in rural TN

Blue way concepts working well. It gives people access. Not a big investment that can make a difference. Misconception about BIG government taking private land. NRCS programs, there's a disconnect. Locals do the paperwork, but the process fails to get the actions/expectations to met. The small grants are not the effort, work and paperwork! Not going to waste time on a small piece of pie. Need a critical mass to make it worthwhile.

Land trust for Tennessee. Joint venture program is working well, set larger picture conservation values for areas. Build on this good thing.

Comment added to (name deleted). Storm water management. Communities have no strategic partnerships that are vested in the water quality goals and help the communities. Need to know the players so communities can partner up. Small communities need to know who to go to for help. Rural communities don't have as much money nor the access to people for help.

Something that works ...building on environmental attributes, i.e. ducks unlimited buys the conservation easements.

2 initiatives that has works. Alliance for the Cumberlands brought a lot of groups and agencies together. Mississippi Corridor Project worked well to help promote and protect these lands. People in rural communities would stay and protect the valued lands if there were job opportunities but they leave. There's a need for a Green Initiative.

We do environmental education. What has helped us as a small non-profit is the TN Wildlife Federation. They helped bring a lot of children outdoors. Army Corp too.

Do we do anything with Geocaching? Take kids to places with a story. There many places with a story in TN, i.e. battlefields. Make it fun, 4-H works well in TN.

Project Learning Tree program helping get youth out and learn how to grow trees.

TN land trust. If we could change the rule to have less than 50% match on purchase of lands? It would greatly grow our success.

Ag tourism program in the state is working well. Forms are complicated and scary even for a government worker. Emphasize soil and water with kids.

Discussion Question 1

Nashville, TN

(cont.)

Land trust TN. Share examples of what's working with groups across the nation.

Cam Sholly, Natchez Trace Superintendent, his leadership as really woken up the trace and getting people involved in partnerships. Leadership helps inspire.

Obesity rates. School field trips are going away. Need to be supported at a national level through education. It is of great value. The costs are making field trips prohibited.

we have teenagers work in the park and sponsor camping trips for inner city kids. A support group is helpful.

Help knit private and public lands together for conservation. No one wants to think all lands will be public lands. This is not a federal land grab.

Great Outdoors University has thousands of kids who have a chance to experience the outdoors that does not normally engage in the outdoors. They are the instructors that partner with groups like Girl Scouts, Boy Scouts, etc. This program facilitates getting these kids partnered up with those to take them hiking, fishing, with community naturalists.

All spoke to the Great Outdoors University. It is an extremely effective program. TWF serve as the partnering organization. They are working with non profits that want to work with the kids, but don't have the people to lead the field trips, or activities. This program supplements with funds to hire people, pay for transportation, etc. Many of these trips go to public outdoor places like National Wildlife Refuges, state parks, national parks or state conservation areas.

Working with Natchez Trace

Best way to get people outside is simple land trust. Land trusted areas have put a big effort to conserve these outdoor places.

Tribes Current generations are not the first generation to loose touch with the outside. The parents that have been disconnected and the ones that vote and take their kids. For some of this, we need to look a little backwards to past generations. Several tribes in NC have been able to collaborate on Center for Cherokee Plants. They bring in kids and parents to show them the plants and showed them traditional uses. They also distribute seeds and plants for tribal communities. Programs like that are successful in many different ways. This program of getting back to tribal traditions is helping to solve many of the problems with in the tribal community. This program can be looked at as an example for getting people outdoors.

Discussion Question 1

Nashville, TN

(cont.)

Historic Nashville - Talk about the other side of the conservation coin is cultural historic and archeological sites. One program is the historic preservation fund, distributed to the historic preservation groups. Other successful program is the Heritage Areas such as the Mussel Shoals area. The Save America's Treasures program is another great program it helped to preserve the Hermitage in Nashville.

Trees Nashville Get kids involved in tree planting is a great way to get them outdoors. Programs like this take public and private partnerships.

watershed NGO they connect people with the resource. They also work to connect private and public people together. The boat day is a great event to get people connected to the resource. They work to educate local governments, and education community about serving their needs but also serving the conservation needs. They work in local communities to be ready for Climate Change. They focus on forest and water conservation in climate change. They work at a local level in communities building conservation teams. The challenge around that is getting grants. She will never do a federal grant again, it was a horrible experience. The administration of the grant is a big job to do. It would be wonderful to have the government to look at foundations and help them because they can distribute the money easier. Give them general support, and expect reports, but don't overdo the administering portion. Non profits can distribute these funds so much better than the federal government.

Stones River Watershed Association boat day where they invite public to river, get together as many boats as they can, and let people try out different boats, up to 450 people in attendance, more appropriate use of the river is the result - also GLOBE (Global learning opportunities to help the environment), use stormwater funds to train teachers and get kids out into the field, teachers need more time to do that.

Mussel Shoals Natural Heritage Area local fisherman with Bass Masters have take kids to fish day, teach kids to cast, etc., focus on kids who have no one else to take them fishing

Tennessee Scenic Rivers Association Involved in access to the rivers and creek, have group working with others (REI, etc.)to build access points so people can get on the river

Friends of TN NWR Discovery series, held monthly, bring in speakers, do hands on stuff, also fund scholarships to fund bringing kids to the NWR (transportation grants), also do service learning projects in invasive control (educate them also), remember young kids don't drive so you will have a captive audience while there.

Lots of tribes trying to bring the youth back to the resources, getting youth out to the wild, not just inner city youth, too many technology uses, too little nature time, Cherokee have been trying

TN NWR North American Conservation model is success, look at Duck Stamp, paid for by hunters and fishermen, problem we are seeing is that it needs help, now the user has changed (more wildlife viewing, more wilderness use), but they aren't paying for their part of the resource use, need to expand the model to include fees/taxes on other users beyond hunters and fishermen.

Discussion Question 1

Philadelphia, PA

Edgar Allan Poe Museum is one of greatest success stories. Museum contains very little, what's important are the stories the rangers tell – “troubadors” – do great job. We need more of this -- CCC type projects -- look for people with this talent, bring places alive again. Set up websites – outdoor enthusiasts; pieces of our heritage out there. Go to the places, the exuberance is there. Need a “processing house.” Help small organizations start websites about tomatoes, wines, saving the foodways of a place. Many disparate pieces that need to be brought together Bring together cultural & environmental history. English do this very well.

developing a private non-profit that covers all 5 aspects of this; historical structures & agriculture; developing an educational research facility and edu-tourism facility for people to visit & have a first-hand, hands-on experience.

Highlands region (NY, NJ, PA) – US Forest Service (USFS) studies link historic & recreational resources. Multi-use trail networks span across Highlands region; there are historic trails. USFS role in identifying where they are -- gives communities strength to enhance, preserve. Get the trails off the road surface.

Concept of touring is really a recreation activity. Tourism = Recreation. International concept of conservation of our patrimony. Also, program in Spain “Workshop Schools”, an intervention program for at-risk students that engages them in historic preservation and develops job skills in craft trades.

shared stewardship, brings Lockheed -Martin and have a number of volunteers working on living history, have many home school children and have an interactive history

Teacher-Ranger-Teacher Program is a great partnership

people are really committed, we have to meet kids at their level, and technology has a role(Especially when little of historic resource/landscape/scene remains intact) , we need to be diverse in how they present material

Philadelphia Zoo developed successful intern program, career ladder

Building on earlier comment that tourism IS recreation, Must look at integrating multimodal transportation - combining regional rail and trail networks (This goes to recreation, sustainability, affordable access – getting urban populations to green places inexpensively)

Discussion Question 1

Philadelphia, PA

(cont.)

Statement read from (not in attendance): As communities across the commonwealth prepare to host you this fall, we've discovered "cultural Erosion". The hallowed grounds where USCT soldiers were laid to rest were vanishing from our Landscapes. Descendants, stewards, and community caretakers of history have decided to help out. This autumn, while you enjoy the riches and splendor of Pennsylvania's fall foliage, pull over, get out, roll your sleeves up and stick your hands in history! Choose from 24 conservation roadtrip weekends along our splendid main streets and elm streets. Plan a few hours of service during a weekend drive or check into a Pa Inn or B&B for a weekend of conservation and voluntourism. For more information - log onto visitpa.com/grandreview On November 14, 1865, citizens from 25 states and the District of Columbia convened in Harrisburg to honor African American Patriots and the Civil War. A Grand Review , parade and reception shaped the day and placed the commonwealth in American history as Harrisburg became crossroads of the nation. On November 14, 2010, Pa will re-enact this great moment in history. 24 communities across the commonwealth will each convene to conduct concurrent commemorations at community USCT grave sites throughout Pa. Stand with us on Hallowed grounds; Claim your legacy, Come help us make history as we prepare for the landmark Civil War 150 experience,. To find a participating site nearest you , contact visitpa.com/grandreview

Our consortium (Historic Germantown, a consortium of 15 cultural and historic sites) works to increase visitation & relevancy. We started by doing a lot of community engagement. Our mission is historic preservation & education. We had to figure out a larger role like safety, improving the community, revitalization; we started to do things we haven't done before & take an active leadership role. We're developing a brand, Historic Germantown (section of northwest Philadelphia, PA). Promoting programs that make sense. NPS can bring a lot to it.

Seed money can bring in outside talent. Very effective way to find movers & shakers in communities.

We conduct tours on specific topics & get 100-150 people. We show silent films to raise money.

At Independence National Historical Park -- volunteer opportunities are great; a friend of mine leads tours. Lots of people are very interested in history. Many more people could be connected to historic sites as volunteers if opportunities were provided and more publicized.

other organizations could develop specific curriculum about core subjects and throw in lessons on math, social studies, history. It would be more beneficial for students to learn local stuff.

NPS has a successful Ranger-Teacher-Ranger program. Invites teachers to come to parks & learn all the resources the park has & take it back & incorporate into their curriculum. Shows them how to use what's right in their backyard. Students will then bring their families to the parks. A great program NPS is doing well.

Discussion Question 1

Philadelphia, PA

(cont.)

Mystic Seaport in CT – interpreters, do a great job. Sea chanties; hear about struggles of whaling; emotional. A good place makes you feel things. Another example – small local museum in central NY – it was run down but you got a feeling for the place & local life. So not very well known places are doing good jobs also.

our organization (AMC) has been very involved in “No Child Left Inside “ program. That should link directly into heritage education. Inner city sites as well. Great Falls in Paterson, NJ. Great opportunity to make community ties. Historic but also a majestic outdoor experience.

Success story: the most popular thing attracting tourism is “Weird NJ” book. Silly book, urban folklore, but people love it. Captures the imagination. Bring back the lost art of story-telling. Special skill set. Gets people in & then sucks them in.

In Germantown (section of Philadelphia) – challenges with blight & crime, getting visitors there is a challenge, so we focus internally & get community involved first. Make the green spaces of cultural sites available, this brings people in. Building affinity groups such as brewers group, jazz concert, through these you build appreciation of the cultural site, people begin to understand it’s important & they come back.

our tax credit program – state & feds cooperate, very successful but being threatened in new budgets; needs to be strengthened.

PA’s Cultural Data project is a good example – a form, you register with them Penn’s Cultural Data Project. Collecting a massive amount of data. Visitors, jobs, etc.

Underground Railroad Network to Freedom was driven by NPS. Bottom-up approach to finding sites, a good model. Seed money from NPS. Today there is a counter-trend to preservation – sagebrush rebellion sort of thing, people who don’t want a single site added. Better if requests come from communities & not from NPCA or NPS.

Sustainability & enlightened historic preservation. – plus green design, opportunity to emphasize how preservation merges with sustainability. NPS visitor centers (Zion a good example), state & local sites can be poster child – tell the story & use energy in a thoughtful way.

Look at regions & landscapes already designated by federal gov’t or that need to be. Prioritize efforts; be strategic, create hot spots for heritage, eco- & agri-tourism & make sure you protect the resources to keep tourism going, will bring money into area. Use regional planning & all 3 -- conservation, recreation & heritage. Not that federal gov’t should manage but it should be a partnership of agencies at all levels & local non-profits. Comprehensive regional plan.

piggyback – don’t re-invent the wheel, partner with state, local, private organizations who are already doing, help accomplish the goals, build on already successful programs.

National Archives does a great job of introducing you to what’s fun via Facebook.

Discussion Question 1

Philadelphia, PA

(cont.)

National Underground RR Network to Freedom program – really neat, still underfunded. Provides expertise & resources to people in communities to help them tell the Underground RR story. NPS was having difficulty engaging African Americans in community. Underground RR Network to Freedom – success story.

Delaware Water Gap – implementing program with Charter School where kids learn history and then teach the history to older/younger peers as well as older adults. ‘Elder Hostel’ is now rebranded as ‘Road Scholar’ program - Stack Service learning and “Voluntourism” and partnership and turn that into funding, service learning is a great way to tap into financial resources.

Save America’s Treasures – community based efforts – a very minor investment from federal government leverages millions of dollars in community investments – communities small & large. To get people outdoors, look at Main Streets too; walkability, downtowns, not just open spaces & rural areas.

Challenge Cost Share Program – a program already in place, highly successful, has been on chopping block, try to build it up & improve or change it rather than invent something new.

Pres. Lincoln’s cottage in Washington, DC. (National Monument) To walk down the stairs & touch the banister that Lincoln touched, sends shivers up your spine. Gives you a tangible connection to leaders who made this country what it is today. Heritage travelers contribute about \$200 billion annually. They travel more often & spend more. More people now travelling locally to see what’s in their own backyard [because of recession].

Angel Island in San Francisco – “the Ellis Island of the west” where many Chinese Americans were detained. It’s a state park & beautiful area. Tourism Cares is one of our partners, we were just there with them. When you see that detainees carved poems in their native language on the walls, it’s so moving. So the natural landscape is really important, but the cultural resources are also.

the Acama Pueblo is a great example – they’re building a wellness center across from school. In addition to the usual health services, they’re addressing recreating within natural context of surroundings. Traditional dry farming methods , organically grown nutritious foods. Blending the historic & natural. Pueblo preserves the way of life; oral history; adobe building practices taught from one generation to the next; lots of ritual in farming, building, basket-weaving, etc. Preserving the traditions.

encourage conservation and heritage and experience it

environmental education programs and works in conjunction with the parks, do very well getting children, teens, college. Challenge getting post-college age adults to 30-somethings is difficult; getting message out is an issue. Youth do not have a place to go to find places where I can information on job opportunities

Discussion Question 1

Philadelphia, PA

(cont.)

we can design almost any tour for a particular group, because of information in our database. We can check our records (of people interred in our graveyard) & find people relating to any special interest group. Tourism is probably going to be our salvation. Looking forward to new Revolutionary War museum (to go in at 3rd and Chestnut Streets).

We have had success in attracting funding because we can say how many jobs Historic Preservation efforts create. We must all be prepared to answer how many jobs will be generated. Tools needed to help Increase information base and connection Historic Preservation efforts and Broad Job Opportunities and what that economic impact is.

business plans are being rewritten to be more reflective of cultural stories/resources. A younger voice should be present in this listening session.

Teachers do sabbatical in National Parks and bring “ranger” experience back to classroom.

People want to know what their parents did, what our tie and our parent’s tie to history is. We need to tell the story of past generations. It is the key to connecting the past to current and future generations. This is a natural connection in the northeast.

Have developed successful local history program for Grade 4. It has expanded to a 5,000 kid program. Our core program has changed as a lot of people moved in and more moved out of the area and the demographics changed. The current communities don’t have an idea of what is in the valley. They are fascinated to hear what was there before them. Big part of the issue: our society is now mobile and that parents don’t know the local history to pass on to their kids.

A lot of historic project sites are owned by non profits that can’t afford to upkeep the site. Various corps programs would be helpful to support the sites – example: a green jobs program, something that would support the aging structures/older cities on the East Coast

Focus on small groups to educate youth and focus on heritage areas.

Ground Work Trust EPA program is a successful program.

New initiative – working with OPM for an easier transition for seasonals or people already working for the NPS or Federal Agency. Historic Corps in Colorado is a great intake program.

The reuse of federal historic resources at national parks & forests. Example: restore cabins & use for public use as camping facilities. Promoting communities that are gateways to cultural & natural areas

Frustration with standards based movement. You can’t grow or teach beyond what’s required by the tests. Bigger part is to convey to powers that be in the world of education that these tests are stymieing.

Discussion Question 1

Philadelphia, PA

(cont.)

Townships determine zoning in PA – not the counties or state. It's difficult because it is a fiefdom and they are run by people who have agendas for what is to happen on the land. Ideally there should be more incentives, financial or other to help with design issues or other issues. Some of this happens at Gettysburg but there is a Historic District that could be expanded. The amount of help; design, technical or financial along with easement programs would greatly help protect the boundaries and growth pressures that so many of the national parks in the eastern area are subjected to.

have federal government work with historic preservation groups. Outstanding opportunities for trails to connect historic and cultural sites as well as open space. Thousands of people volunteer with Appalachian Mountain Club chapters through Memorandum Of Understanding's with local national parks and perform trail work, MOU's with community groups and more that can be done with more agencies

dedicated open space and farmland preservation trust funds, farmland that is preserved also has historic benefits- 45% of PA's communities have benefitted from FPT funds

National Heritage Area model is a great example of Linking Natural, Cultural, Recreational, & Economic Initiatives. Lackawanna area has a strong historic preservation history, coal and industrial history, work through a public and private partnership, partially funded through PA DCNR, monthly roundtable with partners and work together, wish more people use heritage areas, strong ethnic history and support all their festivals...Echo panelist comment that we leverage all public money 5 to 1! Disconnect between Secretaries (Departments) and Administrations. Arts can play an important role, iron program (at-risk youth do an iron-pour), NCCC – 18 and 24 bike tour program Museums as classrooms, teacher mini-grants - \$500 goes a long way in the hands of a creative teacher.

Preserving Civil war battlefields – what has worked is civil war battlefield protection program - \$ provided through Land & water conservation program – free simple or fee easement.

The challenge at Gettysburg & other wilderness battlefields is a problem with local gov't and committees not respecting the power of what they have in their backyard. Is there a way for NPS to have more power within the park boundary or where the park is located? Having a postage stamp of green within a developed landscape doesn't have the same impact that a natural area does. A tax incentive should be created for local gov't or follow a no net loss to preservation areas like wetlands.

Expressed strong support for The Secretary's Standards and recommended they be expanded with new leaflets on specific topics related to greening historic structures. Expressed strong support for the Save America's Treasures grant program. Expressed strong support for the American Battlefield Protection Program, and recommended that its funding be increased and that its authority be expanded to more aggressively protect battlefields. Expressed strong support for the Land and Water Conservation Fund and recommended strengthening its links to cultural resource protection

Discussion Question 1

Philadelphia, PA

(cont.)

Provide education that includes history. For example, the school program called the Jerseyman club in NJ. The program involved getting youth into community as docents – it was a hands on experience. It was a history lesson combined with an environmental education component that got kids into the field to do hands on work and experiments. There is a lack of hands on experience both with history and the environment. There is a lack of what students don't know – what works is education. Connect kids to their ancestry or to a place through immigration. _____ was blown away by her experience at National Parks and how well the NPS rangers teach and conduct programs at the parks.

Engage youth programs to green our cities, do urban youth gardening/agriculture programs.

Student Conservation Corps (SCS)– it's impressive to see what these people are able to achieve. The program should expand to student historic preservation group – trade schools or programs. Expand this new group to a national level to explore the ability of trade groups to train young adults in preservation. Take success of SCS and expand it and include historic preservation. Historic communities that can retrofit themselves and move into the industrial economy. Communities are used to thinking on their own (isolated from adjoining communities) and not planning with one another in mind. Communities need to think about planning on a regional level and how actions in one community affect other communities.

Have 47 min video that was done – 1st as a series of 6 at the Fairmount Waterworks. The organization has connected w other initiatives like the Rochambeau Trail. It's documentation via media presentation. It's worked to reach out to communities, educating children about water and historic preservation. It's a unique situation.

- transportation is an issue at Philadelphia waterworks, so Dept. of water will pay to transport kids from an inner city school to visit the site. EPA & DEP require local municipalities to do some public education about water quality. People don't have any idea where their drinking water came from – it's important to educate where people things come from in their area.

Cultural education; working at a local level with our schools. Leveraging other initiatives from the Federal level to the local level.

Agree with MD on growth mgt on larger scale. Add importance of creating regional identity. Brings together lovers of nature & history into common

historic resources even in a historic place should be reused. In pine lands have some that are not currently actively interpreted or used that could be reused and therefore, preserved. USE is vital to historic preservation.

VAFO YCC program started Energy Conservation Corps which is working – going to NER parks and retrofitting historic buildings – dual benefits for buildings and for youth.

Discussion Question 1

Philadelphia, PA

(cont.)

Best projects are the ones that bring in many different partners. LWCF is great way for people to protect their history, and LWCF money funds many projects at the local level, historical preservation programs.

People become interested in a historic site when they have a personal relationship. Partnerships work. Connecting cultural heritage tourism, preservation, natural landscapes, exceptional stories, education. We worked with a University to hold an archeological field school that revealed important sites.

outreach education to teach communities during projects- got developers interested in history of the land and shared w community

priority has to be riparian buffers. Have historically been railroads. Trails provide connection w environmental, riparian buffers and historic sites along the way

National Heritage Areas work at the grassroots level with communities to help them use the resources that they care about. We find that multiple partnerships are successful, first starting with local citizens to help them connect.

Preservation planning process works. Engaging/educating private landowners on how to protect historic lands that are owned privately. NHA is a model federal gov't can use to work w/ private land owners.

Friends groups have been doing good jobs to fill in when state funding dries up (example – Brandywine Battlefield).

Works in environmental ed. Looking to engage youth as well as public in general. Personal experience: urban Phila. Girls rafting/kayaking down Delaware and historic Lenape sites along the way. Girls transfixed by the story (first person) and created their own poems and stories from it. Engaging youth in ways to understand how they are not that much different from those who came before and connecting youth w nature

people need exemplified in own backyard to connect them w bigger themes & bigger picture ex: rehabbing octagon bldg in Oyster Bay which has involved community and jumpstarted other preservation projects in community. Challenge – act locally and build following for global values

Save America's Treasures and Preserve America Grants were very successful for the SHPO's office to work w/ local communities.

Wheeling NHA is the center of historic preservation in their community as well as education and assistance for historic preservation, jobs. Importance of heritage areas in advancing communities, historic preservation, enriching smaller organizations

The public/private partnerships and the strength that comes from joining with federal agencies that have great strengths, but limitations, and the public, which don't have the same limitations.

Discussion Question 1

Philadelphia, PA

(cont.)

Save America's Treasures, Preserve America, & NHAs work! The metrics might need to be improved but I urge you to continue these programs that work

idea of connection. Trails, water, inextricable link btw land & water. Get people to and in the water. Reclaim some of the riverfront areas and get people to the water. Great way to create stewards of the environment

National Heritage Areas, Save America's Treasures, Preserve America. Colorado's hands-on training for preservation – HistoricCorp (could be replicated in other states or on a national basis). HABS/HAER. Youth Conservation Corp. National Trust's diversity programs. Youth education programs to connect students to historic resources and natural resources. What State and local programs are doing using existing HPF funding. Tax Incentives program and the jobs it has created.

National Heritage Areas use conservation, recreation, culture and education as tools for economic development. Use of an event works, for example, the Schuylkill River Sojourn. People on the sojourn connect with the communities they pass through and the communities have the opportunity to welcome them in. Events are a great way to gather people on a larger scale.

Example - Laurel Highlands in PA – one of our initiatives is a trail that connects towns and which shows an economic benefit. It connects historic preservation (communities) with recreation.

Civil War Battlefields Preservation Fund, Farm and Battlefield Fund grants, Transportation Enhancement funds, Conservation Tax incentives

Partnership w/ INDE has worked. INDE reached out to organization to create a Flag Day Ceremony for park. Other groups participate including student organizations. This event costs little - \$350 to order the flag. NPS reached out – great way to build interest and reciprocal partnerships.

Sagamore Hill nearby. Formative place for Teddy Roosevelt and his conservation ethic so it is a good lesson for others to educate on conservation.

MD is a leader in smart growth. One thing working in MD that feds should pay attention to: smart growth is double edged sword. Impetus comes from high urbanization brought pressure to save as much open space as possible. Decision makers realized can't acquire all open space. Need to change development patterns to existing population centers. Make existing communities places where people want to live. Or people will look to sprawl. Get people to reuse existing infrastructure so don't sprawl and add new. Can't preserve existing open space unless redirect dev to existing urban centers

Discussion Question 1

Philadelphia, PA

(cont.)

Regional tourism marketing works in partnership with conservation groups and historical organizations. Examples using public/private funding – “Boundless Philadelphia” – raise awareness of our outdoor recreational assets. “Quest for Freedom” - UGRR project to create the capacity of UGRR sites to promote themselves and develop cultural tourism programs. “Philly Homegrown” – promoting Philadelphia’s foodshed assets and preserving local farms. These efforts work on a grassroots and regional level to build capacity.

There are mechanisms in place that are in place but could work better. Ex: sect 106. Puts hspv on level playing field w business. But process only as good as people who get involved. Too often people wait until it is too late. The remedy is people taking a more affirmative stance in these actions.

NPs and NPS work! First, parks are incredible infrastructure and ludicrous to not continue to reap benefits. Second; the service itself leads the way in historic preservation, NHAs, outdoor recreation. Continue to lead and grow.

experience of ghost walk tour. Wonderful way to connect people to historic sites in Phila.

building on that. Locals value what others value from the outside. Get the word out so local communities are aware of their own places and what is important to others.

Historic Preservation Act works great. NJ has developed partnerships with private land trusts in the state, we have been working to try and address the issues of cultural resources that exist on every piece of land.

Places don’t exist separate from their surroundings. The preservation of places is connected to the preservation of their surroundings (such as land conservation).

Tax credits are working, but mostly in Manhattan – want it to work other places. National Heritage Area programs are working – they help impoverished communities.

Be hands on especially with history - what happened there? Don't only teach through books and Internet. (service learning).

You have fun in the program you are learning so much about what is going on outside of the city - you forget you are even being paid.

Advertising in print and on tv.

Chaco Canyon, interesting to see something so old in aa country so young.

Discussion Question 1

Philadelphia, PA

(cont.)

People tend to be more aware of large national sites and that promotion on a local level so people know what is in their own backyard.

State park near my house. I walk my dog there. Good scenery, walking trails. I am from Reading, PA. I like it because it gets me away from everything. It is pretty and convenient.

Liberty Bell and Independence Hall. Graffiti in INDE hall from 1776 is a must see.

Blue Ridge Parkway. Worked there last year. Likes big estate overlooking lake, carriage trails, fan of beauty and work that goes into preserving 100 year old manor house and outbuildings, craftsmanship. How it stood up to the test of time.

Important for people in the future to understand where we came from. Seeing the real place makes it tangible.

People have out of sight, out of mind mentality. With historic sites, if you see the real place, it makes it more interesting, and will learn more but will also experience what they experience. Same thing with an environmental site. Helps you to connect

From built up suburb near Monmouth cultural battlefield. Think about how things were before cars, buildings. I go alone because I can't convince my friends to go.

Community organizers that advertise activities for people who are home but might want to go out. Example - community organized walk in central park versus having to go for a walk in central park on your own. City park rangers.

NYC has organization that organizes hiking trips for students and other activities.

Bandelier National Park with his boy scout troop. Likes really well-developed houses carved out of the mountainside and village. Interesting how they lived and defended themselves. Got learn something, see something they wouldn't normally see in Philadelphia.

Hard to connect what's on tv with actually getting outside. The sheer volume of the things that won't help far outweigh the things on tv that inspire you to go outside.

So people can see what happened before. Also, like VAFO, see green open places that you can hike. Not like a city that is entirely paved over. Important to have somewhere natural to go for folks in the city to get away. Fresh air.

Care of artifacts and buildings it is not just the outdoors - there is much more to the park service.

Discussion Question 1

Philadelphia, PA

(cont.)

New Yorker. Fan of Gettysburg - I like the history and graves but also like walking the trails to mix history with the outdoors. See cemetery and hills from walking trails. Nice vistas. A lot do outside in New York as well.

Cape May - Preserving endangered birds (piping plovers). Preserving space and more education will help when species are threatened. Public education is an important issue.

From NY in bayshores different sites preserving nature banding osprey because of the conservation birds are making a comeback. Working with nature conservancy with environmental high school classmates.

More school programs with schools for internships, field trips, volunteer opportunities - reaching out to schools for awareness of programs and opportunities.

American History is our history

Archaeology - documentation doesn't always survive or tell the truth - the artifacts supplement or provide information. Work well with historical studies. If you lose these resources, you don't get the full story about the past.

At least once a week I go hiking in a forest preserve or a park

At lunchtime, I'll go to Washington Square. Does that count? I can't go to a huge park, but I'll go to an urban park quite frequently to relax, take a break from city life, see trees, enjoy looking around.

Balance businesses use with preservation

Better access to information

Better access to transportation

Better information access.

Better promotion and advertising for smaller sites - beyond signage.

Discussion Question 1

Philadelphia, PA

(cont.)

Better than reading in a book. Can read about something and want to go see the real places. If there is no real place, no point in reading the book. History and nature, great to read a book and then go see the real place.

Better to see real things than watch tv. Better than watching National Geographic channel but actually be outdoors. Being outdoors gives you a cleansing feeling. Outdoors is a way to recharge and a way to connect with our natural selves.

Central information - consolidated information resource.

Close to home, a great place to take family and friends

Communication - Get the word out including in mainstream media where people who are not already interested will see and perhaps become inspired. How do you get movie makers to put national parks and historic sites into movies? As a setting. Government sponsor an environmental movie or a substantial documentary in theaters. More casual, constant placement of national parks rather than one big ad campaign. Send mailings to communicate with park information on special events. Look at past successful ad campaigns.

Consistently placing parks and sites in movies.

Create programs and activities that are relevant to youth.

Delaware Bay Shore, New Jersey. A place for connection with natural cycles such as migration. Enjoy hiking and bird watching.

Delaware Water Gap National Recreation Area

Depends on which school you go to. Up to grade 12, never once went to a national park, last 6 years, no field trips at all. Felt getting out of the school building was not important anymore. Getting students out of schools to national parks to teach what happened nearby and what is important. Give students exposure to real places.

Discounts for transportation to parks.

Ellis Island

Discussion Question 1

Philadelphia, PA

(cont.)

Encourage / sponsor friendly competition for youth to engage with parks and spark interest in parks. Trash clean ups, hike x# of trails, take a photo of x# of places, visit x# of parks

Encourage universities and businesses to visit / volunteer

Engage the Locals

Essential to the mission of the NPS, future generations

Establish / maintain a community focus and partnership.

Expand funding for youth programs that help them to take steps toward their future. Start targeting younger grades to spark interest at earlier age.

Expand Teacher-Ranger-Teacher program.

Fairmount Park

Field trips. I used to live in New Jersey, but now I'm at Temple and live in Philadelphia. At Temple, every one of my classes has gone on field trips - Elfreth's Alley, etc. I wouldn't know half of Philadelphia area historic sites if it weren't for professors taking us on these trips. Starts with educators knowing about the resources and taking their classes on the trips.

For future generations to enjoy

French Creek State Park

GETT - It appeals to everyone - (battlefield, town's rich history, sense of community). Live close to personal heritage

Getting students out into parks and historic sites every year. Field trips with follow-ups. (Not a great idea to force everyone to do an activity because they may react against. If it is a requirement, will get negative energy. For example, I have to do service hours but it is a requirement so I don't want to do it. Make it positive rather than negative. Give options - natural or historic park or alternate).

Discussion Question 1

Philadelphia, PA

(cont.)

Give a sense of who came before - groundwork sacrifice

Government sponsor documentaries to be in theaters.

Governor's Island

Great place to take family from out of town

Groton State Forest, Vermont. Diverse habitats. Hiking, camping.

Hands on experience is vital to understanding history.

Hands-on programs. Raise the mast and the sail, walk through the salt marshes. More than walking around with a tour guide leading you.

Hands-on.

Have local celebrities talking about local issues / parks / history. (Similar to how musicians native to Philadelphia area featured at the Ben Franklin PW July 4th Celebration each year.)

Hickory Run State Park

HOFU - no one famous worked there, it represents everyday people.

HOFU - We as a nation don't make anything anymore - what and how the U.S. use to make things.

Hopewell

Host events that would attract a portion of the public that would not necessarily otherwise visit

I go about once a month.

Discussion Question 1

Philadelphia, PA

(cont.)

I go about once a week.

If there's a Megabus for \$5 to Buffalo - then why can't you run cheap trips to parks or historic places?

INDE - It's fun and exciting to walk past the liberty bell on the way to work every day.

Instill a sense of pride in the Locals. Create content/ programming that speaks to the Locals and the underserved population

Integrate more environmental education into school curriculums.

It is important to preserve elements of our collective memory, people's ability to interact with our history helps offer an understanding of our shared history.

It's interesting what we choose to preserve, value, give access

John Heinz and Gettysburg enjoyed because of expanse history and country's past with trails has gone with boy scout troops.

John Heinze conservation center city, access to nature outdoors. In SCA, has seen bald eagle on its nest, which would never happen in an urban area. Goes with other students.

Keep the appreciation of nature and history alive

Learn

Learn from other people (our history), more powerful to experience places and spaces than to read about them, tangible, the real thing is better than hearing about or just reading about it. Seeing for yourself gives you connection to your emotions and the complete picture.

Mailings / pamphlets on park special events.

Make going outdoors more part of the classroom, afterschool curriculum or environmental education.

Discussion Question 1

Philadelphia, PA

(cont.)

Make more incentives for families - if Six Flags has family passes so should parks and historic sites.

Make part of curriculum.

Manumuskin River, New Jersey, for the scenery. Canoeing, kayaking, hiking. Picking up trash that others have left gives a sense of pride and ownership.

Market via radio and television

Money and transportation - everyone goes to Europe to backpack - how do you do that in the US? Where do you stay? How do you get around? It's easy in Europe with travel passes on trains and buses,, youth hostels, how-to guides. To travel the US you need to rent a car and figure out where you're going to stay, where to go, how to get there, what there is to do there.

Monocacy National Battlefield, MD for personal reflection. Enjoy visiting a particular hill that provides a view and a quiet retreat.

More access to resources

More advertisements / commercials / marketing

More advertising about what's going on

More internships and college resources

More programs and less expensive programs. Young man hunted the internet - community serve teams for \$4,000 plus \$1,000 for stuff. \$5,000 to go volunteer?

National Geographic - You are already interested in being outside. Video games are more appealing. Integrating parks / nature into popular culture would help. A poor example, when smoking was put into movies, cigarettes became popular. Maybe put parks in movies and people will be more interested. Other than the big parks people already know about. I saw on slideshow parks that I didn't know existed and I live in New York. Not straight advertising but subliminal messaging. Get the message out in mainstream media and other youth-oriented interests.

Discussion Question 1

Philadelphia, PA

(cont.)

Natural Resources

NYC Central Park. Urban refuge, enjoy walking, people watching, personal reflection.

Offer volunteer discounts

Organizations that encourage youth to visit (boy scouts) should be augmented.

Our school is environmental school - get a lot of funding - hiking, etc. All environmental based - beach clean-up, see what it all means.

Park passes are expensive. Is there a youth pass for NPS? What is "youth" cut off? Is it 18 years old adult or youth?

Parks as settings for movies.

Parks should market less as schools / learning, more as recreation and fun, more activities, less passive visiting

Part of history, I guess

Partner with educational facilities

Partner with schools to have a "museum" day where kids are required to go to a museum on a certain day for school credit. Solve problem of time.

Personal enrichment

Preserve the history of it, but also to go see how it happened, where it happened is more profound than reading it in a book or something

Preserve what is tangible to keep it real.

Provide a connection to the outdoors

Discussion Question 1

Philadelphia, PA

(cont.)

Provide funding for you to visit the parks

Provide low cost activities for low income families.

Provide opportunity for community locals to be a leading voice through internships.

Relax

Revamp historic buildings to use for the purposes of today. Is this still preservation? Where do we draw the line?

Schools incorporate outdoors into curriculum - annual field trip.

Sense of what happens, spiritual, entertainment, reenactment

Serve as a reminder

Share our story and identity with the world

Shubal Trail. Opportunities for physical activity and learning about history.

So future generation can enjoy them; deserve to be able to see the greenscapes.

Speaking about Boston and Philadelphia - A sense of what happened

Speaking about Boston and Philadelphia - City of Philadelphia, see the past through layers of history, you don't need to visit a museum to experience it. Everywhere you go you will find historic significance.

Speaking about Boston and Philadelphia - Tangible reminders of our heritage

Discussion Question 1

Philadelphia, PA

(cont.)

Start a remote ranger program where rangers go into the classroom instead of expecting the classroom to go the park.

STEP program into Independence Hall - so maybe I can get into NPS. Temple has a Pro Ranger program - one of only 2 in the whole country. I get to work on Independence Hall bell tower; it makes my work exciting. Should be more of that.

Student Temporary Employment Program (STEP); internship, training, and your application goes to the top of the list as long as there's a position open, but there aren't a lot of jobs. Would be great to see that program for high school kids too.

Sustainability

These are fundamental places we connect to; connection is a good way to say it - we'd lose the connection.

These places are different from Parks & Recreation outdoor spaces, historical sites don't force you to learn, but provide a place to learn and social space - place to communicate, connect, be social.

These places provide recreation opportunities

To preserve our historical past and to show our appreciation for those who made sacrifices before us.

Upenn's historic preservation program is divided in two concentrations: material conservation vs. planning / policy. That doesn't make sense. Planning and historic preservation should go hand in hand. Philly does a pretty good job - Phlash bus and stuff is good to get you to historic places. But I've lived in Seattle and Portland - there it's complicated, not marketed to youth, wasn't incorporated initially in how the city was planned.

Valley Forge

Valley Forge. Streams and water habitats. Enjoy fishing for trout.

Volunteer for a day - insider experience, bond on another level.

Western Mining Towns - It's like visiting a movie set, mystery and ghosts.

Discussion Question 1

Philadelphia, PA

(cont.)

Where I lwork, I go to Washington Square to have lunch, to be outside in a park in the city. Relaxing. A lot of history in Washington Square.

Working at VAFO now but been there more times than could count. Hike Mt. Joy and Misery every 4 days with boy scouts to prepare for a big hike. Knew t he trail by heart, every rock and tree. Fun but eventually too much to see same hills every day so if

Discussion Question 1

Poughkeepsie, NY

WANT TO PREVENT THE LOSS OF FARMLAND. HER FARM IS PROTECTED THROUGH THE STATE PROGRAM. IT WORKS IN PARTNERSHIP WITH THE STATE AND LOCAL LAND TRUST. AGO GOALS CAN BE ACHIEVED THROUGH PROTECTION OF FARMLAND. CHILDREN DO NOT KNOW WHERE FOOD COMES FROM. 400,000 PEOPLE COME TO VISIT HER FARM. THEY ANSWER QUESTIONS FROM THE PUBLIC ABOUT BASIC KNOWLEDGE ABOUT NATURE. 5000 SCHOOL CHILDREN HAVE COME. SOME THOUGHT THEIR BROWN SHEEP WERE BEARS. FARMERS NEED HELP TO HANG ON TO THEIR FARMS.

AS A CHILD HE LEARNED FARMING. HE NOW OWNS BIODYNAMIC FARMS. HE IS VERY SUCCESSFUL IN SWITZERLAND. YOUNG PEOPLE APPRENTICE. THEY WILL KNOW ALL ABOUT FARMING. THIS COULD BE A WONDERFUL PROGRAM TO APPRENTICE CITY KIDS. COULD ALSO BE A HELP TO FARM FAMILIES IF FARM BILL COULD FUND THIS FARM HELP. NYS IS FACING GAS HYDROFRACTOR – SMALL FARMS DO NOT WANT IT BUT NEED THE INCOME.

WORKS TO PRESERVE LOCAL COMMUNITIES AND THE PRESERVATION OF FARMLAND THROUGH LIMITING OF SPRAWL. DO THIS TO CONNECT PEOPLE TO DOWNTOWN THROUGH FARMERS' MARKETS. HPF HELPS BUSINESSES STAY IN BUSINESS. FARMLAND PRESERVATION EASEMENTS HELP.

LOCAL PEOPLE KNOW WHAT THEY WANT PRESERVED. HUDSON VALLEY HERITAGE WORKS TO PLAN CONSISTENTLY FOR SUSTAINABLE COMMUNITIES. THEY VERTICALLY INTEGRATE LOCAL STATE FEDERAL. OVER 12,000 KIDS HAVE BEEN CONNECTED TO THE HUDSON VALLEY TO HELP FRAME THEIR LARGER EDUCATION. OUR RESOURCES ARE THE BASE FOR THE ECONOMY.

EXPANDING RETAIL OPPORTUNITIES. FARMERS MUST BE VIABLE. GREEN MARKET SYSTEM, CSA. GET PLANNING RESTRICTIONS OUT OF THE WAY TO PROTECT LAND. WHAT IS NOT WORKING – MOST OF FEDERAL PROGRAMS ARE NOT FOR FARMS IN THE NORTH EAST. NEED TO LOOK AT TYPES OF PROGRAMS FOR SMALL FARMS – CONSERVATION AND PRICE SUPPORT. MOST IMPORTANT IS TO MAKE A LIVING. NEXT GENERATION NEEDS TO KNOW THAT FARMLAND WILL BE AFFORDABLE.

THEY USE PDR AND FRPP - AN IMPORTANT TOOL TO KEEP LAND AFFORDABLE. FEDERAL PROGRAM'S REQUIREMENT OF 50% IS TOO STEEP FOR THE LOCAL MATCH. NEEDS TO BE RETOOLED. A DIRECT LAND TRUST UTILIZATION OF FUNDING IS WORKING. MUST HELP MORE WITH FARM VIABILITY.

LESS THAN 10 % OF FARMLAND LEFT. RAISED FUNDS TO BUY EASEMENTS BUT COULD HAVE DONE MORE IF THEY COULD HAVE HAD THE 50% FUNDS. NEED HELP BECAUSE THE STATE DOES NOT HAVE FUNDS ANYMORE.

NEED ECONOMIC INFRASTRUCTURE TO SUPPORT FARMERS MARKETS. HAS IMMIGRANT STUDENTS THAT HAVE A CLOSER CONNECTION TO FOOD. SHE CALLS LACK OF UNDERSTANDING WHERE FOOD COMES FROM THE "BLUE BOX WAR" - KRAFT MAC AND CHEESE. THIS IS AN UNAPPED RESOURCE. INCLUDE AND REACH OUT TO IMMIGRANT COMMUNITY TO GET TO FARMERS MARKET.

Discussion Question 1

Poughkeepsie, NY

(cont.)

SMALL FARMER CAN BENEFIT FROM SMART GROWTH INITIATIVES. AGROTOURISM DOES WORK HERE. ORGANIC FARMS RUNS AGAINST MONSANTO. THEY END UP SUPPORTING MONSANTO. IN EUROPE THEY HAVE GREEN ZONES THAT HELP.

IN HUDSON VALLEY MARTIN VAN BUREN PARK WAS RECENTLY EXPANDED TO INCLUDE AN ORGANIC CSA FARM. FDR NHS HAS OPPORTUNITIES TO PURCHASE LANDS THAT WOULD ENHANCE THE PARK BUT NPS DOES NOT HAVE THE MONEY.

FARMERS ARE ENTREPRENEURS GOING DIRECTLY TO THE CONSUMER. CREATING FOOD SOURCES FOR PEOPLE. URGE FEDERAL GOVT TO INCREASE FUNDS FOR FRPP. RENEW COMMITMENT. THERE IS LIGHT AT THE END OF THE TUNNEL. LOOK AT REGIONAL PROCESSING FOR LOCAL FOOD SOURCES.

NETWORK OF GOVT. IS WORKING. LOCAL BUDGETS ARE LOW. DON'T HAVE MONEY. THE STATE FUNDS CANNOT BE USED TO MATCH. FRPP NEEDS TO BE MORE THAN 50%. FARMERS NEED TO MAKE A LIVING. HUGE POLICY ISSUE TO PURSUE. DON'T NEED IDEAS. DON'T HAVE MONEY TO GET PROGRAMS STARTED. NEED POLICIES TO PROVIDE INFRASTRUCTURE TO SUPPORT

OPERATES A BAKERY ON HIS OWN GRAIN. WHAT WORKS – LOCAL SUSTAINABLE FOOD SYSTEM THAT HAS WORKED FOR THOUSANDS OF YEARS. ONLY IN THE LAST CENTURY HAVE FOOD BECOME CENTRALIZED. WE HAVE BECOME DEPENDENT ON IT. BUT WHAT WILL LAST IS A LOCAL FOOD SYSTEM. HE IS A BUSINESS AND MUST MAKE A PROFIT. FROM HERE TO CANADA THERE AND OTHERS WANTING TO REPLICATE THIS SYSTEM REMOVED FROM THE COMMODITY SYSTEM. LOCAL NETWORK WILL SUPPORT EACH OTHER. FEDERAL GOVT CAN PROVIDE GRANTS TO BUSINESS. MOST GO TO NON-PROFITS. COULD ADAPT DISTRIBUTION FOR FOOD SECURITY. ALSO LOOK AT REGULATIONS TO ADAPT ON IMPORT OF SEEDS. REEVALUATE THE CONTROL OF SEEDS INTO THIS COUNTRY. NEED TO SHARE WITH OTHER YOU HAVE HERITAGE GRAINS. HAVE LOST OUR SEED DIVERSITY. WE NEED TO REBUILD THE SEED BASE IN THIS COUNTRY. SEEDS ARE SELECTED ON FLAVOR AND NUTRITIONAL VALUE. DAUGHTER WENT TO GERMANY – BREAD WAS A DOLLAR A LOAF FOR WHOLE GRAIN. ALLOW SEEDS TO FLOW INTO THIS COUNTRY. IT WILL IMPROVE THE QUALITY OF PRODUCTS.

NEED TO HAVE HELP TO TRANSITION TO LOCAL FOODS. ALSO PLACES IN CITIES AREN'T BEING UTILIZED. NEED TO MAKE PEOPLE AWARE OF RESOURCES LIKE EXTENSION. NEED TO HAVE AWARENESS OF FEDERAL PROGRAMS.

LAND TRUSTS WORK. LOCALS KNOW WHAT WORKS EFFECTIVELY. PARTNERSHIPS WORK. SAVED 6600 ACRES THROUGH EASEMENTS AND FUNDING. WHAT DOES NOT IS THAT THERE IS NO MONEY AVAILABLE AT THE STATE AND LOCAL LEVEL TO HELP. NEED FEDERAL SUPPORT FOR EXTENSION OF TAX BENEFIT.

KNOWS FEDERAL PROGRAMS – NAWPA WORKS. FUNDING HAS BEEN GROWING FOR 20 YEARS. USFWS PARTNERS FOR FISH & WILDLIFE WORKS. NOT A LOT OF PAPERWORK. FLEXIBILITY HELPS. LIKES CONSERVATION IN FARM BILL BUT FIVE YEARS TURNOVER BUILDS UNCERTAINTY. USES WHIP BUT MONEY DIRECTED FROM TOP DOWN LIMITS WHERE MONEY CAN GO. LET LOCALS DECIDE.

Discussion Question 1

Poughkeepsie, NY

(cont.)

COULD NOT FARM IN THE HUDSON VALLEY SO THEY MOVED TO MAKE A LIVING. PRIMARY INDUSTRY IS FARMING. MANUFACTURING IS GONE. SMALL DAIRY IS BIGGEST INDUSTRY. TO MAKE A LIVING IS A NIGHTMARE. SHE WORKS THREE JOBS. LOOKING AT GETTING OUT. RAISES HORSES, CHICKEN, SPECIALTY HORSE HAY. WE NEED BETTER COMMUNICATION TO RURAL AREAS. BY THE TIME THEY CALL THE SERVICE CENTER MONEY IS ALL GONE. ALWAYS BEHIND THE EIGHT BALL. AS DAIRY FARMS GO OUT, MANURE LAGOONS ARE GOING TO BE A HUGE ISSUE TO TAKE THEM OUT ONCE THE FARM IS GONE.

CONCERNED WITH NUTRITION. OPENS FARM TO PEOPLE WHO NEED OPPORTUNITY TO CONNECT TO THE FARM. PEOPLE HELP ON THE FARM. HELPS PEOPLE WITH BACK YARD CHICKENS. WHAT WORKS IS THE CONNECTION TO PEOPLE AND WHEN THEY TASTE GOOD FOOD. NEED REGULATORY RELIEF FROM LOCAL TAX ISSUES, NUISANCE. SMALL FARMS NEED HELP – USE INTERNS. PROMOTE FARM INTERNS FOR SMALL FARMS, INSURE INTERNS. SHOW THAT FOOD IS ALIVE. GET KIDS TO WORK IN THEIR OWN BACKYARD FOR GARDENS. INNOVATIVE ENERGY TECHNIQUES WILL HELP. SMALL GUY NEEDS RELIEF.

FARM WAS CORN AND CATTLE. NOW BRINGING IN CSA TO FARM PORTION OF THE FIELDS. CSA WORKS. BROUGHT VIBRANCY TO AGRICULTURE. EASEMENTS ARE IMPORTANT BUT DEVELOPED AREA DOES NOT WANT VERY SMALL FARMS. NEEDS ACCESS TO NORMAL THINGS FOR BUSINESS.

EASEMENTS ARE GOOD TOOL – IT WORKS. FOREST, FARM, EASEMENTS. HELPS PEOPLE USE THEIR LAND. LAND TRUST HELP WITH VOLUNTEERS FOR MAINTAINENCE. THEY HELP PEOPLE CONNECT. TAX INCENTIVES FOR EASEMENTS WILL HELP. NEED EDUCATION FOR PLANNING BOARDS ON LOCAL SCIENCE AND PROGRAMS. THEY NEED TO KNOW CONSERVATION AND TOOLS. WHAT WORKS IS WHAT THEY BRING TO LANDOWNERS LIKE TAX INCENTIVES. NEED TO RENEW TAX INCENTIVES. FUNDING FOR NY CONSERVATION PARTNERSHIP ALLIANCE TO HELP LAND TRUSTS TO GROW. PDR AND TDR ARE KEY TO PROTECT FARMS.

HELP PRESERVE LAND AND OVER DEVELOPMENT. SUPPORT LOCAL GROUPS. NYS PARK WAS PURCHASED WITH FEDERAL HELP. MINNEWASCA WAS TO BE CLOSED BUT 25,000 FRIENDS ON FACEBOOK HELP TO KEEP IT OPEN. MORE HELP IS NEEDED.

FLOODPLAINS – FEMA SHOULD BE HELD ACCOUNTABLE. ONLY FARMING AND RECREATION SHOULD BE USED IN FLOOD PLAINS. COST TO FARMERS WOULD GO DOWN. ACCESS TO RIVERS IS POOR. OPEN TO FLOOD PLAINS TO PUBLIC.

SEED PROPAGATION PROGRAM. "SEEDS OF SUCCESS" GO OUT WEST – SOME MORE NEEDS TO COME TO THE EAST. HARVEST NATIVE SEEDS TO KEEP IN THE REGION AND TO MAINTAIN THE HABITAT FROM FRAGMENTATION. SUPPORT THE PLANT MATERIALS

ROLE OF FORESTS PLAY A PART. HELP TO PROVIDE SUPPORT TO LOCALS WITH PLANNING. CONSERVATION INNOVATION GRANTS ARE HELPFUL.

Discussion Question 1

Poughkeepsie, NY

(cont.)

SUPPORTS VOLUNTEER EFFORTS TO KEEP RIVERS CLEAN. HELPS PEOPLE GET ON THE WATER. USDA HAS ASSISTED KINGS MARK RC&D TO PAY FOR ACCESS TO THE RIVER. FEDERAL GOVT SHOULD SUPPORT EXCISE TAX. FUND LAND AND WATER CONSERVATION FUNDS. SUPPORTS RIVER ACCESS AT BRIDGES.

What works to engage people are community gardens, school gardens, theme farms, fresh air farms, things to get kids out and experience their environment and to understand the food system. Community gardens are a fabulous way to get people even in small spaces in urban environments to connect with the outdoors, to preserve that land. Tools/resources – public land trusts, protection of land rights for community gardens, assistance of soil remediation in brownfields and urban areas, sites that exist and are neglected, mini-grants, funding to get school gardens going, efforts to bring fresh food to children. Challenges – state and local regulations that are seen as barriers right now. Lack of incentives, short term goals for development that fragments the land and takes land out of production as a green space. Green spaces or community gardens being sold. Maybe if they are sold could have some percentage of the fund be put into a coffer – when public land is sold, to put some of that money into a coffer to use for other public lands, soil remediation, etc. Food modernization act is an opportunity to amend that in certain ways not to overburden small producers. Can't be one size fits all, right now it's five hundred dollar blanket fee for every farmer that participates. We need to mitigate that and make it more flexible for small farmers or a variety of farmers.

I'm here as a private citizen. However, I'm involved in a number of businesses and activities related to the subject. Regarding the two other areas I'm involved in, I'm the designated developer of a project called Longdock Beacon, a collaborative project in Beacon with Scenic Hudson, constructing riverfront land there in the city of Beacon into a tourist destination, a facility that will be developed according to sustainable practices. Connecting to outdoors requires a place to spend the night. That dramatically increases the chances of people spending more time there, because they have the chance to spend a second day and can take advantage of more resources. This gets into the private sector and development. I'm also on the Board of Directors of Hudson Valley Fresh and also interested in economic development to the dairy cooperative. What struck me in my various roles is that I believe that it's a mistake that the U.S Department of Housing and Urban Development is not involved in this initiative. In each of these projects I've been involved in, HUD has been involved as well. Most recently, Hudson Vallley Fresh has been a recipient of HUD funding for job retention at one of the oldest family-owned dairies in the state. HUD plays a very important role and since money is constantly being mentioned as a challenge, those are potential deep sources of financing. HUD loan programs can help finance many projects and any tourist association can be financed in part by HUD 108 loans, do not need congressional appropriation for the full amount of the loan. It's a wide open source of capital.

Discussion Question 1

Poughkeepsie, NY

(cont.)

I work for the NY state office of parks, recreation and historic preservation under _____ as a community liaison. One thing that really does work is to link the many programs out there. Many times we are working in bubbles without connections to others. What we do in the state historic preservation office is provide an awareness and a protection of resources that lead to an incentive for preservation. Farmers have to make money. Money goes where the opportunities are and where the path is clearest. But we have an amazing amount of infrastructure that is already established in historic sites and towns and we need to reinforce what we already have. We have a federal-state program "Certified Local Government" that the federal government stepped up to the plate to provide assistance to communities to incorporate preservation. We provide grant money to those communities to do the preservation work, training, and planning. It needs to be fully funded. if we keep our infrastructure and our historic communities viable, people want to live there and we leave open space alone. Speaking under my parks hat, we have enormous number of parks, we pioneered the CCC effort here in this state. All these things that were built that need cash. Cottages, cabins, admin buildings, that important for families to get out. We are so behind in our capital investment because we can't do it anymore. I see all our historic resources and parks, we have any interesting hinge part between communities and parks that are economically important. It takes funding. It takes cash. Land and Water Conservation Fund has gotten so much attention, trying to keep attention on Historic Preservation Fund.

Poughkeepsie, NY

(cont.)

attorney and involved in Walkway over the Hudson. Most people thought I was nuts to try to turn a railroad bridge into a walkway. It's become the 3rd biggest tourist attraction in NY State. We've had 600,000 visitors. I think it's popular because it's very simple – it's a way to get people outdoors without cars. Shared for bicycles, skaters, runners, walkers, small scooters. It takes about half hour to walk across it. Until you get out there, you can't understand the beauty of it. It's quiet, it's peaceful and people just love it. It's going to connect with 25 miles of traffic-free trails on both sides. I've been pushing for a number of years with the Dept of Transportation not just to concentrate on providing motor vehicles access, but on bikes and pedestrians. Not enough attention to sidewalks and traffic-free lanes. There's no shoulders, sidewalks, traffic free lanes. I think that's the reason for the obesity problem because there isn't a safe way to get out and walk around. We've concentrated on motor vehicles for too long. Dept of Transportation needs to take into account and consideration the impact on bicycling and pedestrian traffic. Maybe some incentives that every project they do, they take into account the impact on biking, walking, take that into consideration. Even with the project we did, we had transportation funding and it took us 3 or 4 years to use that. We had to get most of the money through other means. In the Hudson Valley in general, we are the original great outdoors. It's the most beautiful area in the world and I think the federal government should concentrate on this area by making it accessible to people not just in motor vehicles. Railroad transport—one of the problems we had, csx a new freight line, not really cooperating in helping us use old rail trails. Trying to get commercial interests to buy them, but the federal government could help. The feds could take a role in providing incentives or leaning on CSX. Senator Schumer helped with the walkway. We are working on other things. CSX owns a key piece that we need for the trails. It is all coming into fruition except for the one piece we are trying to buy from CSX. We're within close proximity of 10-15 million people in New York City. Local people can't get out West, but by protecting the Hudson Valley we helping people get outdoors in an area that's close to a concentrated population. We were overwhelmed with the success. By word of mouth we're getting people from all over the world. You just have to go talk to people to see they're coming from everywhere. We're still working on parking issues, an elevator, benches, but it's been a remarkable success. Until you get up there, you can't understand the beauty of it. With those trail connections, we could make a trail from here to NYC, but there is a lot of resistance to it. But if we could get the federal government to help us lean on the railroads.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Great example about the partnerships and working together is the Walkway over the Hudson. It's our newest state park. It was also an historic preservation project as well, it's a community resource, it's sustainable because the iron was forged in the 1880s, we didn't have to mine for it. It was already constructed and we put it back to a new use. It's kept a landmark of the Hudson Valley that's already constructed and in good order and put it back to working order. One point of access to the outdoors is historic urban parks. There was a huge park movement in American city life started in 1860s, too many of those are languishing. They have mature landscapes, beautiful buildings, and the state cannot put money into them. The cities cannot afford to put the money back into the parks and provide the maintenance. So in the urban areas, there experience of nature can be pretty lousy because the parks aren't kept up or aren't safe. We have those parks all across NY State. We're called the Empire State, it's a nice name, but it'd be good if it meant something. We have these great communities, everyone needs help to keep legacy alive.

GIS Director of Highlands Institute. US. What works? The USGS and the USFS. I can't say enough about the scientific work those organizations have done, their diligence in organizing it and their increasing ability to make that publicly available. The Rockland County Water Resources spread new light on the water treatment plant, for example. Getting solid science about how the entire water cycle works allows us to be informed, will have impact on generations. In the U.S. Forest Service, Martina Barns and her colleagues, they have done studies (Forest, Water, and People Study) that analyzed several indicators of water quality so we now have the information and data. With this data set I can help individual municipalities establish targets, impairments, threats to that water and actions. What are the best water sheds, what are the challenges? The work the at the U.S. Forest Service is invaluable. In terms of natural resources, Harriman State Park has a long tradition of group camps for less advantaged children. There is a balancing issue between recreation and biodiversity. Recreation does have a significant impact on biodiversity. In Harriman state parks we have many visitors, but if something isn't done we will have no forest in 40-50 years if we do nothing. The management is the issue. Establishing of base lines and ongoing monitoring. More study and management.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Small grass roots group working in Putnam County. Being an advanced senior, I will read my comments. (Written comments were submitted.) The great swamp of eastern Putnam and Dutchess County is a different type of river system – 20 mile length encompasses two major river systems. The Housatonic and the Hudson. The East branch of the Croton River also is part of the NYC water system. The great swamp is known to supply about 20% of water to the Croton system. The great swamp is the 2nd largest fresh water wetland and the largest red maple swamp in the state. Many thousands of acres are included in this area, fresh water swamp habitat and critical resources that provide areas where children and adults can get out and engage in science in the field by tracking turtles or simply enjoying the joys of being outdoors. Hunting, fishing, kayaking and canoeing are possible. Many species live here, many species of birds, major breeding population of turtles, amphibians, reptiles, etc. Over 25 species of mammals, rare plants are numerous. Eight natural communities support rare plants. Success – the answer is a coalition of partners led by an entirely volunteer organization. Friends of the Great Swamp (FROG) that has been able to obtain Recovery Act funds, with 11 partners as well as local land owners have all come together to preserve over 600 acres in the swamp and more acres in conservation easement. Major challenge – funding. Potential for new homes and development in the great swamp watershed. Demand for open space has driven prices beyond which feds are willing to pay. We need more open space lands in the Hudson Valley. Land prices and taxes are exorbitant here. There are few other grants for open space preservation. What can the federal government do? Now is the time before it's gone to create unique and valuable open space. We support that creation of the Hudson Valley as a National Park. FROG would like to propose that the federal government acquire additional acreage in the Great swamp to create a national wildlife refuge to protect the habitat of the wildlife in the great swamp to protect habitat of waterfowl and songbirds and rare reptiles, amphibians, mammals, and butterflies. This refuge could also act as a biological research station as well as preserving water quality and provide public education. The addition of a north woods element is a thought. The northeast would then have a national refuge and a national forest similar to what is out west. People cannot connect to the wild world, if there is no wild world out there. Preserving the great swamp is an important first step. We look forward to partnering with the federal government.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Hudson Valley is the birthplace of the modern environmental movement. We have partnerships and incredible collaboration through the government, organizations to help provide food to our incredible farm stands, tourism. Great opportunity to build on what we have here as a great resource and collaboration. One aspect of that collaboration is "Saving the Land that Matters Most" 17 land trusts are working together. 65,000 acres that we estimated cost about \$500 million dollars to implement. There are other estuaries around the country, but the idea that in 5 years we could preserve that green corridor of the Hudson Valley is within our grasp. We think it can be done through a number of exiting funding sources with a collaboration with USDA, DEC, etc. If we all work together to fight for full funding of existing initiatives is what we need. We have the Land Conservation Fund, the Highlands Conservation Act authorized for \$100 million, the National Estuary Program – full funding is essential for these. We've asked Governor Patterson and Mayor Bloomberg for funding. USDA farm and ranch protection program is miniscule amount of funding. I would love to work with the Dept of Ag to identify other funding sources because we have land trusts on the ground, working in our communities with the farmers and land owners. We need a federal partner here. Working with NRCS, USDA, land trust community to protect what is a great source of food for the valley and for NYC. Many of our farmers are trucking their food to NYC. If the land is lost at the rate, Hudson Valley agricultural sector is one of the 10 most threatened nationally. This is a time of real urgency and a great opportunity for collaboration.

I like to garden. I go out and weed, harvest, plant seed. I have a garden in my backyard now, with green beans and beets.

I go to the beach, because it is very environmental because there are lots of creatures and animals. While I like going during the day, I also like going at night because the moon and stars are so bright, and you can't see them in the city. I really appreciate the natural light and stars.

Mountains and forest likes plants and plant biology creates foundation for the environment also like seeing plants here because they are so different from California. You can see the differences in plants at different altitudes.

I like hiking on rail trails in the Mohonk region and preserve (in Hudson Valley NY), swimming in lakes and natural swimming holes. I like biking as well.

I like to hike and I live right next to a trail. I am from Albany but now live in country. Used to be from the city, nice change. Jogs in the mornings. No open spaces in city.

I like to hike in the forest, where you can lose yourself. I like to find areas where you can't find evidence of where humans have been, especially old forests.

I like to go to parks because they have nice scenery. Woodland Park is a nice park. I like to hang out there with friends

Discussion Question 1

Poughkeepsie, NY

(cont.)

Growing up in Brooklyn, you don't see much nature. Here (in mid-Hudson) you have trees makes you feel motivated to think positively.

Feel cramped inside so I like the openness of space outside. I feel a rush of energy when I go outside.

I like to go out with my dogs to walk for 2-3 hours. I live in beacon. I enjoy looking at trees and different paths. This way, I get exercise and they get to see different things.

Likes to observe nature itself it reminds you not to be selfish and reminds that humans are not only thing on the planet

Being indoors can make you feel depressed, but when you breath in fresh air is calms you and gets rid of the toxins.

I feel more relaxed when I am outside.

I detest littering. I tell people to not litter. Trash cans are everywhere. I tell my friends that they shouldn't litter. People shouldn't be disrespectful. We have a beautiful world.

Keep environment clean. Treat it as our room. Recycle. We have a generator (motion sensor) to shut off lights when we're not there.

One of the big things people can do is compost. 40% of what is in landfills is compostable. It's F.B.I. -- fungus, bacteria and invertibrates. Composting is nature's recycling. I have an area on the side of my house which is compost area. It works! You can see it working like a corn cob that I have seen decomposing over weeks. At work we get compost from worm bins that are inside. Compost is an amazing fertilizer.

In high school I worked for student conservation commission and Americorps. This was a huge life changing experience. I now work for Parks Service which has also changed my life. All of this taught me to be a leader. I feel that teaching others is my way of helping . Small organizations are connecting people to the environment and teaching others.

Pay attention to the environment. Notice what changes are happening, so you can respond to them. For example, there are less and less deer from development in my area. If you pay attention, you can find the root of the problem

I work for the Green Team and everything that we do, we learn about the environment. We plant and eat the food and you actually see it (how food is grown). Growing organic is a better way to utilize what is here and we have learned how. We have also learned different ways to recycle.

Discussion Question 1

Poughkeepsie, NY

(cont.)

People, especially in urban areas, should be responsible consumers, know where your food comes from. For instance don't buy bp gas. Start with yourself.

Our group is taking abandoned lots in Albany and cleaning them up. We have planted areas and worked with local churches, etc. We need tools to better this activity. We work with young people like ___ to teach them about these things and we need schools to do better and teach more.

Using less electricity and less water helps the outdoors because it preserves resources.

We waste a lot of energy and water.

The less we use, less we need.

I stopped speeding on freeway because it wastes gas. Now that I don't speed anymore, my car is much more efficient.

In Brooklyn we have tons of cars and I carpool.

Organics grew up on organic farm. Education is needed to tell people how to eat local and support sustainable farms. Need to get it out there. We here are all educated and many people don't know, so we have to educate them. ___ did some teaching and farm work with little kids.

The best thing we can do is to be a good example. I lead interpretive hikes. If the kids see you, they will see you as a role model. It's easy and simple.

We can lead by what we do in our own homes. People get used to certain human comfort and that disconnects people from the outdoors, i.e. it's "hot outside, and not the perfect temperature,

We do need to teach the community what is morally correct letting them know what is good and what is not.

Consumerism always told to buy stuff, and lots of stuff. It is important to get high quality stuff and less of it. Lasts longer. Saves money. Having something last and is high quality.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The best thing to have happened is the “Buy Local” promotion. It has created a greater awareness for the public to purchase from their local farmers where possible. It seems as though the message is finally getting to the consumer.

For example Farm Markets have made it accessible for small farms and the public to have access to each other. With the loss of local auction centers where farmers were able to sell their produce the introduction of farm markets have made it possible for farmers to have direct marketing access

There are so many ways you have all been helpful to the City of Poughkeepsie. As mayor, EPA regulations would hasten our cleanup of toxic wastes leaching into the Hudson on the Southern waterfront. Today, it is the site of a successful restaurant and catering facility and DEC's Brownfield programs provided beneficial assistance as well. Through Interior programs we would re-engage activities in our parks, promote urban tree canopy and creek cleanup.. Along with the DEC and USDA we not only saved a champion Butternut tree, we are not using it to help propagate other tree of this threatened species.

These and other creative programs are not only valuable they are necessary in a very changing environment. Case in point – Upper Landing on the Poughkeepsie waterfront.

Upper Landing is where the Dutch and Huguenot settlers would come ashore in the Poughkeepsie settlement in the late 1690's. Located on the Fall Kill Creek and Hudson River, through time it would become an active trade center with historic names like the Van Kleeck's, Vander Bogarts, Livingston's, Reynolds's and even Madame Brett attached to it. Sloops, such as the Clearwater would dock here to carry cargo north and south on the river. 100 years ago, in 1910, it became part of Central Hudson Gas and Electric until the city acquired it in 2006

There are many positive components about this property – it sits right under the Walkway Over the Hudson, it proves an important Greenway link on the Waterfront, the property was used as a land swap with another park to upgrade our reservoir, it sits strategically on the Fall Kill Creek and the Hudson River and it still has two historic houses the 1717 Hoffman House and 1810 Reynolds House on site.

A citizen group, Friends of Upper Landing, along with other green and planning organizations are looking how to do this. Part of that plan involves history and the Dutch. Last year as part of the Quadricentennial a Dutch architectural group from Freisland, Hans Achterbosch and associates visited Upper Landing and began developing a concept to bridge the Fall Kill with a wooden bridge – the same type of bridge they have successfully completed in Holland. This bridge will help re-connect the greenway and be part of a path to an elevator that will go up to the Walkway Over the Hudson. More, they would use Dutch green technology to help assist the city in upgrading the Dutch built Hoffman House, and connect the Fall Kill Creek as well, with an historic mill.

Imagine what this can do for visitors and residents who use the Walkway, or the riders on nearby train station, or those who walk our waterfront. Providing a new chapter for historic sites through green thinking and it would be a global project.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Nowhere in Poughkeepsie is there an interpretive center that tells our history. This can do more, with new green technologies both from the Netherlands, as well as local companies – we can help provide a new sustainable site for the 21st Century. One that blends both old and new.

How can you help? As you have in the past, your educational programs on estuaries, watersheds, and alternative energy resources, not to mention historic oriented programs and interpretive centers through such programs as Preserve America can be very beneficial. They can provide the educational, creative and financial assistance small cities, like Poughkeepsie, need to retain their historic sites and become models for the 21st century.

Located in the Hudson Valley, Mohonk Preserve is the largest member- and visitor-supported nature preserve in New York State. Managing 7,000 acres of the Shawangunk Ridge, the Preserve works to protect the ridge and to inspire people to care for, enjoy, and explore the natural world.

Economic Impact – Park/preserves are important economic engines. A recent study employing economic impact models used by the National Park Service determined that tourism and operations at Minnewaska State Park Preserve, Mohonk Preserve and Sam's Point Preserve drive 392,695 visitors annually, generating an economic impact on the local area of \$12.3 million and supporting 352 local jobs.

Decisions Based on Sound Science – Mohonk Preserve is one of the nation's premier sites for the long-term collection of scientific data on weather, landscape change, and species. Preserve staff and research associates have continued to add a continuum of over 80 years of natural and cultural history records and 113 years of daily weather data – all collected uninterrupted and with methodological consistency over time. These records make up the oldest and most extensive natural history record in the Hudson Valley region. Because of the Preserve's standardized field methodologies and breadth of information, researchers can compare current and historical data and use it in comparative studies with researchers both on the Preserve and from research sites around the country.

NatureAccess™ – Each year, parks and nature centers are visited by an increasing number of people with a variety of physical, cognitive, and learning disabilities. Taking steps to accommodate people with disabilities improves program effectiveness for all audiences by incorporating a variety of learning styles and supported by appropriate aids and services. Mohonk Preserve's NatureAccess™ program provides outdoor leaders with training in specific strategies and accommodations. A hands-on workshop provides participants with effective educational strategies for adapting and modifying programs, advances planning, and the skills to modify on the fly.

Discussion Question 1

Poughkeepsie, NY

(cont.)

No Child Left Inside – Environmental education can help us understand the connections between economic prosperity, environmental health, and our own well being. However, studies consistently reveal that the U.S. Public suffers from a tremendous environmental literacy gap that appears to be increasing. When integrated into the core curricula or used as an integrating theme across the curriculum, environmental education has a measurably positive impact not only on student achievement in science, but also in reading, math, and social studies. For over two decades, the Preserve has been a leader in environmental education through our partnerships with local school districts and universities. The Preserve strongly encourages passage of the No Child Left Inside Act.

Scenic Byways – An 88-mile byway encircles the northern Shawangunk Mountains and travels through the Rondout and Wallkill valleys, linking communities that have a common relationship to the northern Shawangunks and forming a distinct region of the state with its own special character. An inter-municipal partnership implements a corridor management plan to help improve transportation systems and to advance a mutual goal of gaining economic growth through tourism while preserving the important natural and cultural resources of the region. The Preserve is located in the heart of the Byway.

Hudson River Valley National Heritage Area – The Hudson River Valley National Heritage Area was designated by Congress in 1996 and is one of the forty-nine federally-recognized National Heritage Areas throughout the United States. Through a partnership with the National Park Service, Hudson River Valley National Heritage Area collaborates with residents, government agencies, non-profit groups and private partners to interpret, preserve and celebrate the nationally-significant cultural and natural resources of the Hudson River Valley. In this way, we encourage public stewardship for these resources as well as economic activity at the local and regional level.

NPS Rivers, Trails and Conservation Assistance Program – RTCA helps identify resources, navigate the planning process, and convert ideas into action. Program staff provide technical assistance in conceptual planning, organizational development, and capacity building.

FHWA Recreational Trails Program – The Recreational Trails Program (RTP) provides funds to the states to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. Between 1870 and 1929 Albert, Alfred, and Daniel Smiley build the Mohonk/Minnewaska Carriage Road network, which also served as a model for John D. Rockefeller, Jr. in the development of carriage roads at both Acadia National Park and the Kykuit estate. At Mohonk Preserve, RTP funding will be instrumental in replacing a bridge on Cedar Drive Carriage Road over County Route 6, thus restoring the continuity of the network along the Shawangunk Ridge.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Hudson River Valley Special Study Act – The House approved a bill authored by Congressman Maurice Hinchey (D-NY) that would authorize the National Park Service (NPS) to conduct a study on whether the Hudson River Valley should become a unit of the National Park System. Unlike a traditional National Park, this designation would be founded on close cooperation between the National Park Service, state and local government and private landowners, with federal funding going to support and promote the unique region. The Preserve supports passage of this Act and fast-tracking of the study.

Hudson River Valley Greenway provides a "big tent" where communities can plan for the region's future, and link/promote cultural and heritage destinations.

Shawangunk Ridge Biodiversity Partnership – The Shawangunk Ridge Biodiversity Partnership is composed of non-profit organizations and several New York State agencies, and uses science and land management strategies to preserve the beauty and ecological integrity of over 40,000 protected acres of the Shawangunks, while maintaining high levels of public access and enjoyment. The Partnership has been instrumental in implementing "Green Assets", a project funded by the Emily Hall Tremain Foundation, Hudson River Estuary Program, and others, that has helped communities identify open space assets, provided build-out analyses, improved wildfire preparedness, leveraged funding for land protection and provided information to residents interested in wildlife, habitat change, and land protection.

Industrial Heritage Association, Troy Waterfront Farmers Markets, Farmers Market Pavilion in, distress cities, Capital City Community Garden, Industrial Heritage Site

Public partnerships are working, e.g. NY State Parks & Land Trust, Starting the residence Stable, bidding project

Getting people out to see and learn about these important land vistas, Specific programs like Teaching The Hudson River Valley Programs, Hudson River Ramble (Heritage weekend), The concept of the Hudson River Valley Greenway

I like hands on activities, where I can interact with the environment. For example, Norry Point trail, where I work to restore wetland marshes.

Black Rock Consortium – taking students outdoor or exposing them to the outdoor environment. (Infusing in our curriculum to expose students to all the possible jobs they could be doing in the outdoors).

Infusing local land trust and encouraging them to make or preserve rail trails. Appalachian Trails Society which runs through the NY.

Work of grass roots organization which organize to support parks and public parks, Play Street, CSA and Compost Gardening.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Investing in existing in to historic preservations and providing the tools and funding, Federal Rehabilitation Tax Credit for smaller and building and infrastructures, Emphasis on outdoors and historic preservation.

Coacher Crew – introduce 100's of kids to the outdoors, Rescued race horse, raising awareness, about the Marcellus Shale.

Community Gardens are growing and are working because its raises the awareness among kids and get them outside.

Change all the models and all the rules that provide food and faming in the county, Creating a new model or business model that can promote cost share in sustainable farming, Community involvement and community ownership.

NY Recreational Water Society

Working with the local townships which give the parks money, volunteers, and expertise to do their service, Non-profit partnerships that support these efforts, Working with the great towers – forest services.

People being involve works but the federal government is missing from the table (engaging all the support that the feds can provide).

Teachers needs more profession development about the environment – getting teachers to expose kids to the outdoors more essential in raising a society that is aware and appreciate the outdoors more.

How do we get the people from sustainable transportations to the places that they need to go, shuttles that can get people to these places, support the initiative for local state transportation projects.

Fragmenting out communities with new development, new ways for people to think about the, big picture, centers of green spaces.

Industry has left the county and these needs to be reinvested in, need help with people to help us with revitalizing the outdoors in the Hudson; we need more visionaries to help us see the good in our environment.

Breaking the bond with students with the TV and inside to get them to come back outside; bring back Captain Planet.

The out of doors is a place where children and adults alike develop strong bodies, healthy, vibrant minds and where indomitable spirits are fostered. It is important to recognize that numerous internal and external pressures influence the self-esteem of today's young people.

Discussion Question 1

Poughkeepsie, NY

(cont.)

I support full funding of the Land and Water Conservation Fund (LWCF), and increased funding for the Forest Legacy Program, which encourages public use of working forests and increased advocacy for the funding for programs that get children outdoors, such as the Forest Service's "Forest in Every Classroom." Additionally, I support increased funding incentives for land conservation projects that support children's activities outdoors and reach underserved rural and inner-city youth populations.

Parks and Trails New York wishes to thank President Obama and the federal agency representatives for the opportunity to join in this important conversation. Parks and Trails New York is a statewide not-for-profit organization whose mission is to expand, protect and promote a network of parks, trails, and open spaces throughout New York State for the use and enjoyment by all. For 25 years our focus has been on connecting and reconnecting New Yorkers at the local level to the outdoors through parks and trails because we believe so firmly in the benefits they offer for individual mental and physical health, stimulating tourism and civic engagement, conserving natural resources and open space, and for improving the economy and quality of life.

Through our Healthy Trails, Healthy People program we have lent our expertise to hundreds of rural, suburban, and urban communities seeking to build new multi-use trails or promote and increase the use of existing trails. With our Campaign for Parks we have energized thousands of supporters to speak out for their state parks so these parks can receive the funding they need to continue to remain open, provide the public with multiple recreational experiences, protect unique natural resources, and maintain and rehabilitate the infrastructure which is so essential to a safe and enjoyable outdoor experience.

And, in partnership with the NYS Canal Corporation, Erie Canalway National Heritage Corridor, and Hudson River Valley National Heritage Corridor we work to promote the 524-mile Canalway Trail System and Hudson River Valley Greenway to residents and tourists through publications and events. Each year our Cycling the Erie Canal and Great Hudson Valley bike tours attract hundreds of cyclists from across the nation and the world. Our 136-page guide to cycling the Erie Canal is about to enter its third printing and next year our guide to cycling the Hudson Valley will be published. All of these activities and resources, which received Heritage Corridor support, are designed to encourage more people to get outdoors, visit historic attractions, and engage in a variety of recreational pursuits.

Build upon first lady Michelle Obama's campaign to combat childhood obesity by demonstrating how getting children to engage in outdoor recreational experiences can provide the physical activity they need to control their weight. Use "Madison Avenue" popular marketing techniques that get the attention of and resonate with children and their parents.

Fund programs that offer children and families an opportunity to try out bicycling, canoeing, or other recreational pursuits at no cost as an incentive to experiment with new activities and visit parks and trails and other natural areas.

Emphasize life-long outdoor activities in physical education classes rather than solely focus on team sports.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Raise the importance of parks and trails in the minds of the public and decision makers at the highest levels of government

Integrate programs across agencies, such as health, transportation, conservation, parks, economic development, housing and urban development, agriculture, to provide a more holistic approach and coordinated and reinforcing effort. There is no place for turf wars when trying to address such an important issue.

In NY, and for all states, we advocate undertaking an initiative to plan for and create a statewide, interconnected network of primary, regional and local trails linking communities and parks. This would be established as a high priority coming from the Governor's office in order to include participation of all levels of state government, citizens, and stakeholder groups

Seek to comprehensively identify existing parks and trails and missing links

Prioritize and incentivize recommended actions to fill in gaps in the network with emphasis on underserved areas and major trail corridor links

Use the plan to inform allocation of resources - For example, Parks and Trails New York's Healthy Trails, Healthy People program is funded by the Healthy Heart Program of the NYS Department of Health to specifically provide technical and community organizing support to low-income rural and urban communities to help them develop new trails or promote and increase the use of existing trails because low income rural and urban population have been identified as those who most often fail to meet daily physical activity targets.

Develop user-friendly and standardized processes for data gathering and work with local colleges and universities to undertake surveys that will more accurately determine park and trail usage, visitor dollars spent, issues of safety, and property value impacts.

The report PTNY released last year, *The NYS Park System: An Economic Asset to the Empire State* found that direct spending by the state parks agency and park visitors supports almost \$2 billion in economic stimulus for the state and local economies; 20,000 jobs; and \$5 in benefits for every dollar in costs. This information had a huge impact on lawmakers, the media, and grassroots groups and was central to galvanizing support that prevented the closing of 90 state parks.

PTNY has been conducting user counts on selected sections of Canalway Trail for the last five years. The counts are used to generate estimates of annual number of visits. The National Bicycle and Pedestrian Documentation Project has also developed a template for conducting trail user counts and encourages nationwide trail counts each year on several specific dates.

Distribute the information gained from surveys using communication channels and presentation methods that are popular with the general public as well as decision makers. Facebook played a major role in galvanizing support in our campaign to stop the closing of state parks.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Capacity building grants can provide much needed assistance with activities associated with organizational start-up and development, training, communications, and volunteer recruitment and management - activities often not funded by more program-focused public and private grants. Two examples demonstrate the value of this approach.

In NYS, the New York State Conservation Partnership Program, a public-private partnership involving the NYS Department of Environmental Conservation and the Land Trust Alliance, provides competitive matching grants for qualified NYS land trusts to build organization capacity, strengthen partnerships with state and local government, and support critical program to conserve land across the state. Since 2003, the program has awarded almost \$4 million in grants to 67 land trusts and leveraged more than \$10 million in private funds.

A private donor has made it possible to PTNY to award \$30,000 in capacity building grants to park and trail not for profits in the last two years that has helped 17 organizations grow their membership, develop new promotional materials, and increase public usage of their trail or park. To illustrate the magnitude of the need, we received eight applications for every one that we funded.

During our 25 years of existence, it has been gratifying to note that more and more communities - from the most rural towns and villages to large cities - recognize the value of parks and trails and want to either expand what they have or create new resources. While they are very willing to contribute time and materials from volunteers and/or their work force, rarely do many of these municipalities have sufficient resources to fully undertake these often costly projects. But, this is why the Land and Water Conservation Fund (LWCF) stateside program, the transportation enhancements programs, and the Rivers, Trails, and Conservation Assistance (RTCA) Program have been so beneficial as they have helped many communities establish their first-ever park, trail or pedestrian path for their residents.

Continuing and increasing support for the National Heritage Corridor program. The grants, promotional materials, and technical assistance that the Hudson River Valley and Erie Canalway National Heritage Corridors offer to communities have made a huge impact in stimulating regional cooperation and partnerships around a common purpose. With Heritage Corridor assistance, communities are empowered to more fully interpret and promote their history and uniqueness, attract additional visitors, and improve the economy and overall quality of life for their residents.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Hudson Valley offers unique opportunities to showcase collaborative conservation initiatives poised for higher orbit. If government-NGO-business partnerships can be strengthened. The region's scenic beauty and natural resources, historic and cultural assets, and pivotal role in American history have led to numerous federal accolades. Congress has designated the Hudson Valley a National Heritage Area, while the President has named the Hudson an American Heritage River. NOAA has designated four coastal areas as National Estuarine Research Reserves. The region contains working landscapes with prime agricultural soils, whose farmers represent 80 percent of the vendors selling produce at New York City's GreenMarkets. The region's rich history and natural resources have led the U.S. House of Representatives to approve a bill to study designating the Hudson Valley a unit of the National Park Service. The region's role as an incubator for cutting-edge conservation continues today as a consortium of land trusts implements an ambitious, science-based land and farm preservation initiative known as Saving the Land That Matters Most.

The Hudson River estuary ecosystem is of national importance and offers one of the greatest conservation opportunities in the Northeast. A spectacular biological mixing zone, the estuary and its watershed are home to over 180 rare or threatened species and globally significant freshwater tidal habitats. The Hudson Valley's rich biodiversity is part of American's heritage, linking us to our natural and commercial foundations, and provides recreation for nearly 18 million people.

Hudson Valley residents are reconnecting with nature in record numbers - for solitude, recreation, fitness and companionship. The most direct evidence of their thirst for the great outdoors is the popularity of Walkway Over the Hudson, which has attracted 600,000 visitors since its October 2009 opening. This adaptive reuse of an 1888 railroad bridge and an associated loop trail connects people with spectacular Hudson River views, a forested state park and attractions in downtown Poughkeepsie.

Commuter rail service in Metro-North's Hudson Line and Amtrak connect millions of residents from New York City with the Valley's nine urban centers that serve as departure points for myriad outdoor destinations, cultural and historic sites - many a short walk away. The Hudson River Valley Greenway is linking bicycle, hiking, and water trail routes; the state Hudson River Estuary Program facilitates public access and education at many sites. These efforts support kayak outfitters, bicycle rentals and local accommodations and eaters that contribute to the region's \$4.7-billion tourism economy.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Hudson Valley is primed to reinvigorate children's connection to nature. The state Department of Environmental Conservation's Hudson River Estuary Program has developed k-6 curriculum that encourages and supports teachers to use the Hudson River as a learning tool. Citizen science projects span the estuary's length, using its ecosystem as a focus of study. Via its Teaching the Hudson Valley program, the National Park Service shares our region's heritage through curriculum development, grants and an annual summer teacher institute that promotes professional development with a place-based approach. Hudson River Sloop Clearwater connects youth with the river through its Next Generation of Environmental Leaders initiative. Scenic Hudson and other land trusts offer place-based, hands-on learning in a variety of urban and rural park settings along the riverfront and throughout the watershed.

The Hudson Valley's world-class natural beauty and historic attractions-linchpins of a \$4.7-billion tourism economy - make the region one of New York's top three tourist destinations. Within an hour's drive of 1 in 12 Americans, the valley is a true gateway. Its landscapes offer renowned rock climbing, hiking, and kayaking, while its heritage sites tell America's story. Cultural opportunities include scenic farms, fine dining and myriad arts venues.

The public has a strong interest in accessing these resources; 2009 festivities marking the 400th anniversary of Henry Hudson's voyage up the river drew crowds to its shores. Destinations such as Olana State Historic Site and Walkway Over the Hudson (which has drawn 600,000 visitors since its October 2009 opening) are major attractions. Regional events like the Great Hudson River Paddle and Hudson River Valley Ramble help sustain our economy. Plans are underway for a 2011 Hudson Valley Heritage Weekend offering education and recreation all along the river.

For over four decades, Hudson River Sloop Clearwater, Riverkeeper and Scenic Hudson have worked together to protect the Hudson River and its shores while enhancing resident's quality of life. All three organizations played important advocacy roles in passage of the federal Clean Air and Clean Water Acts and led the 25-year fight to compel General Electric to clean up the 1.3 million pounds of PCBs in our river. Now, the America's Great Outdoors Initiative presents us with the prime opportunity to spur increased awareness of the Hudson River's importance as a natural resource and a foundation for creation a sustainable economic future for the valley.

Discussion Question 1

Poughkeepsie, NY

(cont.)

This project will contribute to progress in achieving two critical national needs, namely the redesign of buildings to enable much smaller environmental impact, especially regarding energy and water use, and the restoration of dysfunctional urban neighborhoods to become vibrant and efficient centers of human activity. Opening communication channels between academics from several disciplines and the urban community will allow a two-way benefit: students at SU and CMU will experience neighborhoods as complex systems to be understood from several perspectives, while neighborhood residents and students in neighborhood schools will be exposed to research where the findings can have a direct benefit for them. Underrepresented groups are included among both the faculty researchers and the neighborhood residents; members of underrepresented groups will be sought for the graduate and undergraduate research positions in the project. The partnerships developed here are likely to continue well after the project is completed, especially because the final plans for buildings in both neighborhoods are intended to be implemented as public and private funding becomes available. As the project progresses, the findings will be presented at national conferences of professional societies representing the many disciplines included in this work. Undergraduate and graduate students as well as faculty will participate in these conferences .

Green Infrastructure has multiple environmental, economic and social benefits, both for current populations and future generations. Urban forestry, greenways, parks, and urban agriculture: contribute to the cleanliness of water supplies by reducing the amount of stormwater runoff and erosion, as well as the frequency of sewer overflows; thereby reducing the need for costly erosion control structures. improve air quality and reduce greenhouse gas concentrations by decreasing emissions and removing atmospheric pollutants. naturally cool cities and combat the "heat island" effect of dense urban areas by shading streets and rooftops; this also reduces energy costs, pollutants, and UV radiation levels stimulate economic activity by increasing residential and commercial property values and providing short and long-term employment opportunities. increase the aesthetic value of a city. can produce fruits and vegetables within dense urban areas, which provide healthy food choices and educational opportunities in traditionally underserved communities .

Recognizing the importance of regional green infrastructure corridors for water and air quality, aesthetic and economic value, this project will focus on older industrial cities that are spatially situated in linear, corridor-like patterns. Taking a regional-corridor approach, the Institute proposes the development of a series of urban green infrastructure projects (tree canopies, urban gardens, parks, etc) that aim to educate elected officials and the general public about the importance of green infrastructure and significantly increase the percentage of trees in cities linked by common geography and history

Discussion Question 1

Poughkeepsie, NY

(cont.)

Due to the large number of older industrial cities and the scale of this proposal, the Institute would initially identify and work with only one set of cities at a time (as opposed to all older industrial cities). The Institute has identified three different geographic approaches to commence the initial phases of the project. Presumably, only one of the following scenarios would be chosen: One state approach: This approach would concentrate on bolstering the urban green infrastructure of cities that developed along New York's Erie Canal (between the cities of Albany and Buffalo: e.g., Albany, Auburn, Batavia, Buffalo, Rochester, Schenectady, Syracuse, and Utica). Multi-state approach: Transportation corridors played a major role in the development of urban areas. Cities took root along canals, roads and rail lines, ultimately forming spatially linear patterns distributed across multiple state lines. This approach would focus on improving green infrastructure in cities in multiple states. For example, the Baltimore and Ohio Rail Line (B&O) passed through cities in Maryland, Pennsylvania and Ohio— cities like Baltimore, Cumberland, Pittsburgh, Youngstown, and Cleveland. Targeted cities approach: Many older industrial cities have particularly challenging concerns related to clean water, vacancy, and economic disinvestment. With this in mind, the Institute would work with its partners to identify five to eight cities, irrespective of spatial distribution. Future iterations of this project could then expand the green infrastructure goals to the related corridors. For example, the initial set of cities might include Buffalo, NY, Youngstown, OH and Lawrence, MA. Follow-up projects could then concentrate on the Erie Canal, the B&O, and the Merrimack Valley in Massachusetts .

Regardless of the geography, the goal of the project will be to have all of these selected cities sign a Memorandum of Agreement (MOA) that would outline a commitment to increasing their use of green infrastructure. For example, the document might stipulate that the cities would increase their tree canopy by XX (TBD) percent by the year 2025 (or TBD). The document might further specify that cities capture a measurable amount (TBD) of rainfall using green infrastructure. To garner support for the MOA, the Institute will directly engage municipal officials and stakeholder groups in each city. Through conference calls, web-based meetings, and site visits, Institute staff will educate officials and stakeholders about federal urban forestry programs available to their municipality and outline the environmental, economic, and social benefits of increased greenspace, tree coverage and small urban farms. To further the outreach needs of the project, the Institute will work with Members of Congress and their staff to educate constituents about the value of green infrastructure and relevant federal programs aimed at "greening" urban areas .

After officials from each of the cities have committed to improving their green infrastructure, the Institute will convene a conference wherein representatives from each municipality will publically sign the Memorandum of Agreement. This document will cite various benefits associated with trees and green infrastructure (water quality, cooling effect, economic value, etc.) and contain a statement of commitment from each official.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The following proposed outcomes are listed in order of significance: “Buy-in” from stakeholders in older industrial cities located along the former Erie Canal about the significance and importance of green infrastructure and a healthy tree canopy, especially as it relates to water quality, air quality, energy benefits, improved economic conditions, and social benefits. Agreement at the local level to increase the use of green infrastructure within the urban area. Agreement at the regional-corridor level to increase the use of green infrastructure and subsequently publically sign a commitment to do so. The use of chosen sites as case studies from which we might learn more about the implementation and enhancement of green infrastructure in older industrial cities. The eventual, long-term goal of this project is to transform cities into greener, cleaner, more economically viable—and thus more livable—places

Because of its unique ties to Congress and because of its success in working on place-based projects that have national significance, the Northeast-Midwest Institute is ideally situated to undertake such a project. The Institute is unique among policy centers because it was formed at the behest of Members of Congress over three decades ago and throughout its history it has incorporated this relationship into developing groundbreaking initiatives that shape federal and regional policy .

The Northeast-Midwest Institute will partner with other organizations in order to achieve project outcomes. Utilizing expertise at the College of Environmental Science and Forestry at the State University of New York (SUNY-ESF) will be essential in determining the necessary percentage of increased green infrastructure and therefore establishing quantifiable goals for each city. Through the use of geographic information systems (GIS) and modern spatial analysis technologies, experts at SUNY-ESF will be able to quantify local-level benefits—such as rainfall capture and runoff control—associated with improved tree canopies, greenways, park space, etc. The mapping of regional scale green infrastructure improvements and analysis of subsequent regional benefits will require the capabilities of an organization like the Regional Planning Authority. Other organizations, such as the New York State’s Department of Environmental Conservation, will be indispensable for their ability to reach out to urban foresters, local stakeholders, and the appropriate state and local agencies .

a. Outreach and Assessment. Identify national partners. Determine city interest and fiscal ability. Identify local partners. Report to USDA and appropriate Members of Congress on progress. Goal Setting and Education (working with national and local partners). Establish overall tree canopy/green infrastructure goals. Develop educational materials and documents. Create training seminars (web- and community-based) and technical assistance workshops explaining federal programs available. Report to USDA and appropriate Members of Congress on progress. Signing of Memorandum of Agreement. Garner local-level agreements to increase tree canopy/green infrastructure. Convene a summit (attended by Members of Congress, stakeholder groups, partner organizations and municipal officials) to publically sign the Memorandum of Agreement. Report to USDA and appropriate Members of Congress on progress

Discussion Question 1

Poughkeepsie, NY

(cont.)

WCS fulfills many of the pillars of the Initiative, including a decade-long commitment to local river restoration. WCS has been engaged in the restoration of the Bronx River since 2001 when WCS joined forces with NOAA to administer the WCS-NOAA Lower Bronx River community partnership grant. The purpose of the grant was to restore the Bronx River, to improve public access to the river, and to engage the community in conservation through outreach and education. Since 2001, WCS and its partners have educated 8,000 students about river restoration, preserved or restored 8 acres of threatened landscape, remediated one brownfield site, and graduated 60 people from a special low-income green collar job program that trains area residents in restoration skills. Based upon its success, the program has been expanded to include sections of the East and Harlem Rivers in the Bronx, so that now the partnership works to restore a large part of the South Bronx waterfront .

In addition, WCS seeks to broaden its commitment to the lower Hudson Valley through its New York Seascape initiative which will study the New York harbor to identify opportunities for conservation. WCS has a long history of working collaboratively with NGO's, governments and community groups throughout the world. As a Bronx-based institution, WCS is uniquely positioned to help preserve the New York environment and to educate the public about the natural resources in this area .

For more than one hundred years, WCS has worked to save wildlife and wild places. As one of the first conservation organizations in the United States, WCS has played a central role in North American conservation by working to save wildlife in some of the most remote and wild places on this diverse continent for more than a century. In 1897, WCS completed the first survey of Alaskan wildlife, leading to the legacy of protecting the National Arctic Wildlife Refuge and informing legislation to limit over-hunting, thereby beginning WCS's campaign for new laws to protect wildlife in the United States as a whole. Less than a decade later, WCS led a drive to save the American bison from extinction when we successfully reintroduced bison back into Yellowstone. Today, WCS conducts an impressive array of more than 500 wildlife research and conservation projects worldwide in 60 countries, and is a leader in identifying effective solutions to wildlife conservation challenges. Headquartered at the Bronx Zoo in New York, WCS manages the world's largest network of urban wildlife parks connecting its flagship the Bronx Zoo to the NY Aquarium, the Central Park Zoo, the Queens Zoo and Prospect Park Zoo receiving more than 4 million visitors annually .

Serving as the headquarters for the Wildlife Conservation Society and our more than 200 PhDs on staff, the Bronx Zoo is the largest metropolitan zoo in the United States sitting on 265 acres of land. From the beginning, this grand addition to New York's cultural institutions included an amazing group of animals from around the world as well as native species such as the American bison. By 1905, uncontrolled hunting had reduced the great herds of bison to fewer than 1,000 animals. Theodore Roosevelt, who helped found WCS, along with William Hornaday, the Bronx Zoo's first director, were founding members of the American Bison Society (ABS), an organization formed at WCS's Bronx Zoo to preserve this icon of America's prairies. In 1907 the Bronx Zoo sent a group of zoo-born bison to Oklahoma to provide the core of a new herd that would help re-establish the species throughout the plains .

Discussion Question 1

Poughkeepsie, NY

(cont.)

In addition to American Bison, the Bronx Zoo is home to the following species found throughout North America, including: California Sea Lion, Grizzly Bear, Polar Bear, Bald Eagle, American Alligator, Alligator Snapping Turtle, Flamingos, The Bronx Zoo's award-winning Education Department is dedicated to teaching youngsters and adults about wildlife and wild habitats through engaging, interactive zoo programs. Budding zoologists can get an insider's look at the Zoo's animals and exhibits by participating in our interactive children's programs. They'll meet like-minded kids and experts who'll offer a glimpse of what would it be like to work at the Bronx Zoo. In addition, the Bronx Zoo Education Department's Teaching Fellowship program is a unique opportunity for college students, recent graduates, and graduate students to explore conservation education in-depth. Fellows acquire the skills needed to provide a wildlife classroom that invites and fosters student-directed learning, and learn pertinent information about conservation issues with a global impact. Particular emphasis is placed on the Wildlife Conservation Society's efforts to protect wildlife and wild lands .

Congressional District: The South Bronx, represented by Congressman José Serrano and the location of the Bronx Zoo, is one of the five poorest Congressional districts in the U.S. with roughly 42% of its residents living below the poverty line. In addition, this district is the most Hispanic in the State (about 63%) and is one of the youngest (34.5% under the age of 18). Working to engage this community in conservation is of the utmost importance to the Wildlife Conservation Society. WCS is the largest employer of youth in the borough, providing employment opportunity, job skills training, and scholarship opportunities for more than 700 teenagers each

In 2007 the Wildlife Conservation Society founded the Urban Assembly School for Wildlife Conservation (UASWC) in cooperation with the New York City Department of Education, Urban Assembly and the Phipps Community Development Corporation. Based in the Bronx in one of the poorest and most ethnically diverse areas of the country, this public school's mission is to engage underserved middle-and high-school students in a challenging curriculum centered on conservation, to successfully graduate students with Advanced Regents Diplomas, and to cultivate the life skills they will need for success in college and beyond. The Bronx Zoo serves as an extended classroom for students and their families, and its scientists, educators, keepers and other staff serves as mentors, role models and teachers. In 2009, The School for Wildlife Conservation after only two years of operation was given a grade of A, the highest score awarded by New York City's Department of Education, on its first ever progress report. The school began with a sixth grade only (six classes), and has added another grade each year since. The 2010-11 school year will see the addition of a ninth grade. Of note, the School for Wildlife Conservation has a yearly attendance rate of 93.6%, which is higher than that of the Bronx school district at 89percent

Discussion Question 1

Poughkeepsie, NY

(cont.)

The ongoing WCS-NOAA South Bronx Waterfront Partnership began in 2001. The purpose of the grant is tri-fold: 1) to ecologically restore the South Bronx waterfront, 2) to educate the public about the South Bronx waterfront, and 3) to promote public access to the South Bronx waterfront. The program's geographic scope has changed since its inception. From 2001 to 2008, the program focused exclusively on the lower Bronx River. Beginning in 2008, the scope was broadened to include the East and Harlem Rivers in the 16th Congressional District. A new grant round that began in the winter of 2009 has funded East and Harlem River projects for the first time. Below are a few highlights from the project including work of our project partners

In March 2006, NRG reintroduced a species of fish called an alewife to the Bronx River. The alewife is part of larger group known as river herring and is an important food source for multiple species. It is presumed that any native alewife population had been eliminated from the Bronx River in the 1600's because of dam construction. The reintroduction took place after two years of study in which it was determined that the Bronx River could safely support an alewife population. In April, 2009, three-year-old alewives were identified at the base of the 182nd St. dam, the southernmost dam on the Bronx River. It is assumed that these fish are mature offspring from the 2006

The Bronx River Restoration Crew, run by the Bronx River Alliance, is dedicated full-time to restoring the Bronx River. To date, the Crew has removed 77 tons of garbage, 1,050 tires and 13 cars and motorcycles from the river, and they have planted 43,845 trees, shrubs and plants in or near the river. They regularly work with schools and community organizations to teach ecology and to demonstrate river restoration practices. Additionally, the Crew conducts weekly surveys of the River, watching for spills and illegal dumping and monitoring restoration

Sustainable South Bronx's BEST program gives low-income people valuable job skills by training them in environmental-related activities. Most participants come from the South Bronx and are on welfare. Many graduates of the program have been hired by the Bronx River Alliance as members of the Bronx River Restoration Crew, and are currently helping to restore the Bronx River. There have been 60 graduates of the program to date, almost all of whom find employment within months of

WCS has created and launched a Bronx River-based online curriculum, River on the Rise. Dozens of teachers have received training on how to use the site and incorporate it into their classroom instruction. Though based on the Bronx River, the site can be used to discuss topics relevant to any

The positive influence of Heritage Areas and the Scenic By-ways on small municipalities

The positive influence of the Historic Saratoga-Washington on the Hudson Partnership

Discussion Question 1

Poughkeepsie, NY

(cont.)

We would like to commend the Obama Administration for taking on the initiative of reconnecting Americans to the great outdoors. What I would like to focus on today is transportation- how Americans are going to actually get there.

Are there ways that Americans can use public transportation to access our natural resources? Yes, one example in the Hudson Valley is the Metro North railroad, and I believe one of the reasons Walkway over the Hudson has been such a stunning success is because it is accessible by this train. There is a lot of discussion of late about Transit-oriented Development. Perhaps we should coin the term Transit-Oriented Preservation.

We support the initiative's stated effort to promote community-based recreation such as urban parks and local waterfront projects. Local parks, distributed throughout the state, will help cut down on congestion and on vehicle miles traveled.

The New York State Canal Corporation works on long-term planning efforts like the NYS Canal Recreationway Plan, which provided a 15 year blueprint for recreation, development and conservation along the canal system.

Providing recreational access to waterways both on landside and waterside for bicycling, walking, boating, kayaking, canoeing, swimming, and fishing. Recreational access needs to be local and accessible to population centers without requiring long drives to remote access points, but at the same time have a regional, statewide and national appeal to boost tourism and economic development.

Production of hardcopy and electronic guidebooks, maps and interpretive information that provides the link between the user and the resource.

National Park Service Rivers Trails and Conservation Assistance Program (RTCA) technical assistance. The NYS Canal Corporation has worked with the RTCA on successful planning and community engagement initiatives for the Erie and Champlain Canalway Trails. The RTCA assistance has been invaluable in generating public interest and enthusiasm for the projects that has resulted in tangible progress.

Private partners and non-profit advocacy groups like Parks & Trails NY (PTNY) are needed. The Canal Corporation has worked with PTNY on a number of initiatives to promote and enhance the Canalway Trail. PTNY organizes the Cycle the Erie Canal ride that connects hundreds of people each year with the Erie Canalway Trail from Buffalo to Albany.

Dedicated revenue streams like the federal Transportation Enhancement Program through the FHWA have helped fund a number of projects.

In our experience, the most effective strategy for promoting conservation, recreation and connecting the public to the outdoor experiences is building partnerships. We need strong federal support for collaborative efforts between public and private agencies, as well as local, state and federal agencies. This needs to be coupled with consistent, sustainable funding for conservation programs that improve our economy while restoring our environment.

Discussion Question 1

Poughkeepsie, NY

(cont.)

For the past four decades, conservation and service corps have proven that young adults engaged in stewardship projects can make significant contributions to their local communities. Expanded funding of the AmeriCorps program will help ensure completion of a backlog of needed conservation projects as well as help train and support the next generation of environmental leaders.

The idea that students should become involved in natural resource conservation and recreation work on public lands was hatched in the Hudson Valley as part of a Vassar College student's senior thesis. In 1957, Elizabeth Titus Putnam's vision became a reality with the creation of the Student Conservation Association, which proved that young adults could make lasting and significant differences in the stewardship of public land. Now operating in all 50 states, SCA was the forerunner of national state and local youth conservation corps programs, including today's AmeriCorps program.

In the Hudson River Watershed, members of the Student Conservation Association's Hudson Valley AmeriCorps program provide essential education and outreach services to students and area residents. They engage volunteers to restore streams, eradicate invasive species and conduct citizen science activities needed by researchers and biologists. In the Adirondack Park, SCA AmeriCorps members conduct a variety of stewardship projects that enhance the safety and enjoyment of visitors to the area, such as repairing boat launch sites, doing erosion control projects on states, and removal of invasive species.

AmeriCorps members have also been instrumental in launching the After-School Conservation Club (ASCC), a program that engages elementary school children in hands-on environmental education activities and stewardship projects for 10 weeks each fall and spring. The goal is to bring environmental education to and foster a sense of stewardship in inner-city elementary-aged children involved in after-school programs.

Our local estuaries, the Long Island Sound (LIS) and the Peconic Estuary are locally beloved and federally recognized as estuaries of national significance. Suffolk County has been committed to the protection, preservation and restoration of our natural resources including the national estuaries. Since the formation of the Peconic Estuary Program (PEP) in 1993, Suffolk County has been an active partner with the Federal government in matching federal grants awarded to the PEP with in-kind services, non-federally funded PEP projects and through the Suffolk County Water Quality Protection and Restoration Program (WQPRP).

Suffolk County has invested nearly \$6,000,000 in matching grant funds in the form of in-kind staff time as well as a number of surface water quality monitoring programs. In addition, through the WQPRP, over \$10,000,000 has been invested in projects recommended by the USEPA's approved Comprehensive Conservation Management Plan (CCMP) for the PEP. These projects include such activities as aquatic habitat restoration, stormwater remediation, agricultural stewardship, aquaculture, eelgrass restoration, and fertilizer nitrogen reduction initiatives.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The time has come to step up federal commitment to our estuaries as ecosystems, recreational areas, and working waters, and include national estuaries in the next big conservation initiative, America's Great Outdoors, and making NEPs and NERRs eligible for funding through LWCF.

First, the task force asked what is working effectively in our strategies for conservation, recreation and connecting the public to the outdoors. In our experience, the answer is partnerships. We attribute our successes to our full embrace of public and private partnerships, including those with local, state and federal organizations, for conservation activities and initiatives that make sense, improve our economy and protect and restore our environment. Strategies that marry responsible, predictable funding with sound local and grassroots planning with partnerships that engage all levels of government and private organizations are at the heart of our long list of successes.

In describing a recent historic DEC land acquisition funded by New York's Environmental Protection Fund, Rochester Mayor Robert Duffy said of the state's acquisition and commitment to preservation of Canadice and Hemlock Lakes, the only two undeveloped water bodies among the string of Finger Lakes, "This is a deal that represents the best that government has to offer, and its importance and impact on our region's natural resources is something that we all are proud to have played a role in." (Guest Essay, Rochester Democrat and Chronicle, July 31, 2010). As this collaborative effort illustrates, government works best when it works in partnership, in this case with local government and with community organizations.

AmeriCorps (U.S. Corporation for National and Community Service)

For the past four decades, conservation and service corps have demonstrated that young adults engaged in stewardship projects make significant contributions to their local communities and develop crucial skills and attitudes needed to become productive citizens. As pressures on our nation's land and natural resources grows and youth unemployment soars, an enhanced AmeriCorps program provides a holistic approach to addressing challenges faced by communities, natural resource agencies and families alike. Expanded funding of the AmeriCorps program will not only ensure completion of a backlog of needed conservation projects; it will help train and support the next generation of environmental leaders.

In the Hudson River Watershed, members of the Student Conservation Association (SCA) Hudson Valley AmeriCorps program provide essential education and outreach services to students and area residents. Through hands-on, fun activities such as exploring marshes in a canoe, hiking a trail with a trained naturalist or conducting family-oriented programs about New York's wildlife, AmeriCorps members connect New Yorkers to nature and help them understand the ecological concepts needed to make sound environmental decisions. They engage volunteers to restore streams, eradicate invasive species and conduct citizen science activities needed by researchers and biologists. In the Adirondack Park, SCA AmeriCorps members conduct a variety of stewardship projects that enhance the safety and enjoyment of visitors to the area, such as repairing boat launch sites, taking on erosion control projects, and removing invasive species.

Discussion Question 1

Poughkeepsie, NY

(cont.)

AmeriCorps support has also been provided for crews to complete much needed stewardship projects at DEC environmental education centers and on state lands. Western New York AmeriCorps crews removed invasive species and made trail safety improvements at Reinstein Woods Nature Preserve near Buffalo. The Headwaters Youth Conservation Corps provides trail maintenance and habitat improvement services to Rogers Environmental Education Center and state forests in central New York.

The state's fiscal situation has eliminated funding for these two important partners recently; federal waivers for reduction or elimination of partner matches would help restore these important stewardship collaborations on state lands.

No Child Left Inside Act (U.S. Department of Education)

The Department strongly supports the passage of House Bill 2054 and Senate Bill 866, the No Child Left Inside Act. Provisions from this Act would enable New York to train teachers to deliver high quality environmental education, utilize the local environment as an extension of the classroom and develop State Environmental Literacy Plans to insure that students are prepared to understand and address the environmental challenges of the future. DEC educators stand poised and ready to implement these components in New York State.

Urban and Community Forestry Program

As you know, the US Department of Agriculture's Forest Service has an Urban and Community Forestry (U&CF) program in every state. The majority of New Yorkers live in urban areas. The U&CF program promotes community street tree planting and planting trees in parks and school yards to draw children and adults outside and to improve the quality of life. The benefits of urban trees are well-known - energy savings, clean water and clean air, wildlife habitat and reduction of the urban heat island effect. In addition, urban trees and tree plantings create a strong sense of community.

New York State's U&CF program is a partnership of public, private and volunteer organizations and individuals that fosters comprehensive planning, management and education throughout New York State to increase healthy community tree cover that will enhance quality of life for urban residents. Special attention is paid to support urban forestry efforts in communities that are under-canopied, underserved, have limited access to open space, or bear disproportionate environmental burdens. In short, this important U&CF program supports the on-going effort to make communities better places for people to live. More than 200,000 volunteer hours were logged in 2009 to help plant and care for our urban forests for the residents of New York to enjoy.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Forest Legacy Program

The Forest Legacy Program (USFS), while currently underfunded, has proven to be an effective tool when resources are available. The Department of Environmental Conservation has used Legacy funding to acquire key working forest conservation easements that have worked extremely well to keep forest land in private ownership with sustainable management requirements and strategic public recreation rights. While New York has developed highly effective conservation easement programs for forest and farm land protection, the current fiscal crisis has diminished the ability of New York's Environmental Protection Fund, to sustain these efforts. Absent scarce state resources there is a great need for federal funding to support these critical state programs.

Community Forest Program

Community Forest Program grants was authorized in the 2008 Farm Bill. If fully funded, the program would directly support local governments' acquisition of community forests, following the extremely successful New England model. The Forest Service is currently developing guidelines for implementation of the program and we have been told expect to release these guidelines for public comment by August 30, 2010. After public comments are considered and any needed revisions, it is expected the program will be ready for consideration of grant applications in the fall of 2010. New York and DEC are looking forward to supporting local governments' participation in this program.

Forest Stewardship Program

There are approximately 14.4 million acres of privately owned forestland in New York State, which represents 76% of the state's forest resource. The USFS' Forest Stewardship Program offers technical assistance, through state forestry agency partners like NYSDEC, to nonindustrial private forest (NIPF) owners to encourage and enable active long-term forest management. A primary focus of the program is the development of comprehensive, multi-resource management plans that provide landowners with the information they need to manage their forests for a variety of products and services. Stewardship plans motivate landowners to become more active in planning and managing their forests, greatly increasing the likelihood that their forests will remain intact, productive and healthy, and that the social, economic and environmental benefits of these lands will be sustained for future generations. New York supports the continuation of the Forest Stewardship Program, which has yielded many benefits to New York's forest landowners as well as all of its citizens.

Farm Bill Conservation Programs

New York has benefited from many of the Farm Bill conservation programs including the Environmental Quality Incentives Program, which provides incentives to farm and forest landowners to implement conservation practices; the Grassland Reserve Program; and the Wetlands Reserve Program. The state supports the full funding of these beneficial programs and looks forward to their reauthorization in the next Farm Bill.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Wildlife Habitat Incentives Programs (WHIP)

The Wildlife Habitat Incentive Program (WHIP) is a voluntary program for conservation-minded landowners who want to develop and improve wildlife habitat on agricultural land, nonindustrial private forest land and Indian land. WHIP in New York has two focus areas: enhancing early successional wildlife habitat with scrubland and establishing and enhancing grassland habitat for declining bird species, pollinators, and other grassland wildlife species. DEC practices and strongly supports WHIP at its Rogers, Five Rivers and Stony Kill Farm Environmental Education Centers. DEC promotes increasing collaborations across the state that will positively benefit a broad range of New York wildlife species.

Land and Water Conservation Fund

In 1963, President John F. Kennedy made a pledge to the nation that, as this country exploited offshore oil and gas resources, the proceeds would be invested through the Land and Water Conservation Fund (LWCF) into the outdoor recreation needs of the states and local communities. It worked, and worked well to re-connect people to the outdoors in their own communities. The state side of the LWCF has been used in the past by virtually every community in New York State to acquire and build local parks and preserves. We are encouraged that legislation is pending in Congress to fully fund the state side of the LWCF; this would address an immediate and pressing need that can quickly help the AGO meet many of its goals to reconnect Americans to nature and promote community based recreation and conservation. In New York, the Office of Parks, Recreation and Historic Preservation administers this program in conjunction with funding from the State Environmental Protection Fund. The infusion of new federal funding could re-invigorate this program and stimulate extensive local conservation and recreation projects.

Other Department of Interior programs that need additional funding, as well as a temporary reduction in the state match requirement in light of states' dire fiscal situations, include the North American Wetlands Conservation Act (NAWCA) and the Coastal and Estuarine Land Conservation Program (CELCP). Both programs have been instrumental in conserving valuable wetland and coastal habitats and leveraging private investments and support from not-for-profit partners.

Discussion Question 1

Poughkeepsie, NY

(cont.)

New York Conservation Partnership Program, a partnership with land trusts
New York is proud of its work with and investment in the state's land trust community. The Conservation Partnership Program (www.dec.ny.gov/lands/48901.html), a partnership between the state and the Land Trust Alliance, is a model not-for-profit capacity building grant program for the country. Development of a nationwide grant program to provide capacity building assistance to local, regional and statewide land trusts and other conservation not-for-profit organizations could leverage substantial private conservation funding and build even more effective networks in communities across the nation. Pairing this concept with the ability of land trusts to access LWCF, NAWCA and CELCP land acquisition funds, similar to the Great Outdoors Colorado model, would yield even greater results and leverage of private conservation dollars. In addition, we support the recommendation to DOI Deputy Secretary David Hayes from Karen Roux of the Orange County Land Trust regarding federal support for establishment of urban community gardens. There is currently no central source of information free of charge to the general public that offers consistent, practical and valuable guidance on establishing and maintaining community gardens in an urban landscape. A federal program which provides technical assistance through regionally based agents specializing in community garden design and implementation would offer valuable assistance for urban communities.

Tax Incentives for Land Conservation

In 2006, New York passed and implemented a state Conservation Easement Tax Credit (CETC), which offers landowners a refundable tax credit up to \$5,000 per year to offset the property tax burden on lands for which a conservation easement was donated to a qualified conservation organization. The CETC has proved to be a benefit to both the public and landowners. Similarly, the federal conservation easement tax incentive enhancements, first enacted in 2006, have increased the rate of land conservation benefiting landowners and the public. The enhancements raise the deduction a donor can take for donating a conservation easement from 30% of their adjusted gross income in any year to 50%; allows qualifying farmers and ranchers to deduct up to 100% of their income; and extends the carry-forward period for a donor to take tax deductions for voluntary conservation agreements from 5 to 15 years. While initially enacted for the period of one year and extended each year, the enhancements expired at the end of the 2009 calendar year. New York enthusiastically supports the renewal of these enhancements and making them permanent.

Highlands Conservation Act

The Highlands Conservation Act, passed in 2004, provides funding to protect the Highlands region, which extends from Pennsylvania through Southeast New York and Northern New Jersey to Northwest Connecticut. In the four states, the Highlands region serves as a critical public drinking water supply. It contains exceptional natural resources including contiguous forests, scenic vistas, wetlands, pristine watersheds and important plant and wildlife species habitats. The region contains many sites of historic significance and provides abundant recreational opportunities for residents and visitors. This area is also one of high population density and development pressure, and is highly susceptible to forest and landscape fragmentation. New York supports full funding under the Highlands Conservation Act.

Discussion Question 1

Poughkeepsie, NY

(cont.)

National Park Service

The National Park Service contributes to conservation, recreation, and education through programs like Teaching the Hudson River Valley and Saratoga Battlefield. These valuable programs work with NGOs (SaratogaPLAN, Agriculture Stewardship Association) and municipalities along the northern stretches of the Hudson River that are working in partnership with overlapping National Heritage Areas (Erie Canalway, Champlain Partnership). In this way, the Park Service is supporting work to protect the Battlefield's scenic viewshed, revitalize the river communities and generally advance stewardship and outdoor recreation in this upper Hudson River area.

New York State is honored to have four designated national heritage areas that complement and collaborate with more than twenty state heritage areas. A new plan in the report of the National Parks Second Century Commission recommended that a clearly defined system of national heritage areas have base funding and work closely with national parks.

Sustainable Food Sources and Agricultural Education

It is or should be axiomatic that the best way to learn about the environment is to experience it directly. A unique program in New York, Operation Explore, offers New York City public school students in grades four through six the opportunity to link classroom science activities with the outdoors. Three distinct but interrelated environments—aquatic, farm, and forest—are explored through hands-on day and overnight experiences. At Stony Kill Farm, a 1,000 acre environmental education center operated by NYSDEC in Dutchess County, students learn how their food is produced and discover the interdependence of urban and agricultural communities. Everyone gets to see and do things they may have never experienced before: a chance to grind corn, feed cows and chickens, and use their senses to explore plants in the greenhouse, and run or walk around the perimeter of an acre to get a sense of its dimensions. Funding from NPS and partners to continue and expand Operation Explore would enhance our opportunities to inform urban youth about the importance of agriculture and natural resource protection.

Hudson River Estuary Program

New York is proud of the outdoor legacy created through innovative community partnerships like our Hudson River Estuary Program (HREP) related to the New York-New Jersey Harbor Estuary Program. We believe that HREP can serve as national model for protecting watersheds using ecosystem based management and connecting people of all ages to world class outdoor recreational opportunities. HREP protects and improves the natural and scenic Hudson River watershed for all its residents. The program was created in 1987 and extends from the Troy dam to upper New York Harbor. Its core mission is to ensure clean water; protect and restore fish, wildlife and their habitats; provide water recreation and river access; adapt to climate change; and conserve world-famous scenery

The program is guided by the HREP Action Agenda — a forward-looking plan developed with significant community participation up and down the river. Built on sound science and principles of ecosystem-based management, it achieves progress through a collaborative approach that includes: grants and restoration projects; education, research and training; natural resource conservation and protection; and community planning assistance.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Implementation of the HREP Action Agenda relies on partnerships with federal and state agencies, as well as local municipalities, non-profits, academic and scientific institutions, businesses, trade organizations, landowners and dedicated volunteers. The Hudson River Estuary Management Advisory Committee provides guidance to the program, helps the state define goals and evaluate progress, and provides a communication bridge to a wider group of partners and stakeholders.

DEC would like to replicate this successful model in other key state watersheds, including the Mohawk Valley and the Upper Hudson River, Long Island Sound, the ocean on the south shore of Long Island, and the watersheds of the Great Lakes. Cooperation and financial support from several federal programs including the National Heritage Program, National Estuarine Research Reserve program, and support for water quality monitoring and geographic mapping has made it possible for the HREP to be effective in its mission. Similar partnerships will be integral to the successful replication of the HREP in other areas of the state.

This year, Governor Paterson and Mayor Bloomberg requested a necessary and appropriate increase in federal funds for HREP through the EPA National Estuary Program that would address issues in the Raritan River in New Jersey, the New York/New Jersey Harbor Estuary and the Hudson River Estuary. The request for \$52 million for FFY 2011 (copy of letter attached) would implement the existing, consensus-based plans for the restoration of these estuaries: the Hudson-Raritan Estuary Comprehensive Restoration Plan (prepared by the Port Authority of New York and New Jersey and the Army Corp of Engineers in partnership with the New York-New Jersey HEP) and the related Hudson River Estuary Action Agenda (developed by New York State in conjunction with federal, local, and not-for-profit partners).

The Hudson River Estuary Program is an excellent model that could be replicated in watersheds with additional federal funding.

Environmental Education Grants

The Environmental Education Grants Program provides seed money to support environmental education projects that increase the public's awareness about environmental issues and provides them with the skills to pursue responsible courses of actions. Smaller grants to local schools and communities have supported hands-on education programs on ecological topics and provided teacher trainings to enhance environmental literacy within schools and neighborhoods. Larger grants have fostered the development of programs with wider focus, such as online teacher trainings in environmental education. With additional funding, standards-based national environmental education curriculums such as Project WILD, Project WET (Water Education for Teachers) and Project Learning Tree could be offered to a wider range of audiences, providing educators with both skills and knowledge to infuse environmental education into the broad spectrum of their topics. Continued and enhanced support for these grants would allow states to expand existing partnerships, establish environmental literacy plans and a database of resources for educators and community members.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Trust for Public Land (TPL) applauds the administration's leadership in convening a diverse constituency to develop a sound approach to 21st-century land conservation that will protect our natural resources and keep Americans connected to the land. Community-driven conservation is most successful when it engages a wide range of interests, but it needs federal leadership to bring together stakeholders and federal resources to leverage state, local, and private dollars.

Increased and consistent funding to support federal, state, and local conservation, including full funding for the Land and Water Conservation Fund (LWCF). LWCF investments ensure continued protection of America's public lands and enhance public access to recreation through grants to states, counties and cities. Federal funds like the LWCF that leverage state and local investment in outdoor recreation lands are critical to a successful conservation outcome and require active partnerships among federal, state, and local governments. Increased funding for LWCF should include a competitive matching grant component to incentivize state and local investments in conservation.

Here in New York, LWCF has helped protect critical additions to federal public lands across the state including both the Home of Franklin Delano Roosevelt and the Eleanor Roosevelt National Historic Sites in Hyde Park, the Finger Lakes National Forest and Montezuma National Wildlife Refuge, the Long Island National Wildlife Refuge Complex as well as the acquisition of Sterling Forest through the Highlands Conservation Act and the Forest Legacy Programs.

The LWCF state assistance grants have helped protect parks, trails, and playgrounds across the State from the Jones Beach and Niagra Falls State Parks, the the coordinated effort to develop Confluence Park and Chenango River Promenade in Binghamton, to the ongoing effort to extend and protect the Hudson Valley's Long Path. These close-to-home recreation opportunities are essential to the public health and getting our nation's youth outdoors.

Protection of public lands, and the scenic and recreational amenities they provide, supports our local economies. Today, according to the Outdoor Industry Foundation, active outdoor recreation contributes \$11.3 billion to the New York economy and supports 130,000 jobs across the state. The U.S. Census Bureau reports that each year over 4.6 million people enjoy hunting, fishing, and wildlife watching in New York contributing \$3.5 billion to the state economy.

1. Local land trusts are the most effective means for protecting open space and watersheds because they leverage gov't funding with private donations and local partnerships and they privately manage their properties and conservation easement lands cost-effectively. Nonprofit land trusts protect more than 10 million acres of open space and farmland in the US. Land trusts not only protect open space and farmland, they: Build public access trails; Establish parks; Educate planners and communities on conservation issues; Manage community assets like community gardens; Build partnerships with municipalities and other nonprofits

2. Renewal of the extended federal tax incentive for conservation is critical to increasing the pace of land conservation. Congress should make permanent the 2006 extended federal tax incentive for land conservation. When in effect from 2006 through 2009 the pace of land conservation by private landowners increased enormously.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Purchase of Development Rights funding in New York State. One of the most effective ways to permanently protect farmland.

The USFS works in the research they have done to quantify environmental benefits. Also, in providing grants that are enabling GI implementation, green collar jobs training, etc.

The Great Swamp is the second largest freshwater wetland and the largest red mapleswamp in the state. This wetland encompasses 6000 plus acres with a surrounding watershed of over 60,000 acres. Included in this area is freshwater marsh habitat, shrub scrub swamp, wet meadows and rich calcareous fens. This critical resource also provides education and recreation where children and adults alike can get their hands dirty finding salamanders, engage in science in the field by tracking turtles and banding birds or simply enjoy the mysteries and glories of being out of doors. The traditional values of hunting and fishing is strongly pursued as is canoeing and kayaking the Croton River.

Wildlife is an important component, especially the 92 species of songbirds that breed here, and the 95 other neotropical species that find the Swamp a stopover place to refuel as they migrate in their seasonal migrations. There are major breeding populations of the endangered Bog Turtle, sixteen other amphibian species, 20 species of reptiles, 66 species of butterflies including the recently documented Northern Metalmark and over 25 species of mammals call the Great Swamp home. Rare plants native to calcareous soils are numerous. there are eight significant natural communities supporting 19 rare plants in this relatively undisturbed landscape mostly free of invasive species and pollution.

To answer the first question that was posed, what has created some success in conserving this area as open space? The answer is a coalition of partners, led by an entirely volunteer organization, Friends of the Great Swamp that has been able to obtain North American Wetland Conservation Act funding. FrOGS with its level partners including Bedford Audubon, The Nature Conservancy, Putnam County and Oblong Land Trusts and New York State as well as local land owners wanting to preserve family lands have all come together to preserve over 600 acres in the swamp and protect 100 additional acres through conservation easements.

Zero access to Hudson River in Town of Newburgh. The City of Newburgh has 400 ft of access. Feds bought riverfront years ago and sold it to private business. EPA bought a large parcel recently. Would like to see access to river for community, not condos or restaurants. People and kids don't get out on river and don't know about it.

EPA has control of property. Make it into a park. Don't sell it to developers. Don't understand why that happens.

What works. State has member items to get money to small groups that get things done.

Discussion Question 1

Poughkeepsie, NY

(cont.)

NY/NJ Trail Conference has dealt with hiking trails for 90 years. Hiking is a low cost part of a healthy lifestyle. Walkway over the Hudson and areas in New Paltz are good examples of access to hiking areas. Public Officials should be seen outside on the trails as examples. Many afraid to go out-doors and parents can't educate when they are afraid or haven't done it. People new to hiking in nature ask us questions like "what do you do about mosquitoes"? Need Education. Urban Parks are a backyard for children. Partnerships are important. Me and my husband are working with bike riders to create trails in our town. We hope the Town will work with this.

35000 acres of Parkland n NYC. It is the backyard to many children. Urban areas need to be included. Problem in urban areas is alienation of parkland. It is too easy for land uses to change and it is not preserved as open space. Urban areas have natural areas too. Our cities and council people are selling our historic and natural areas. Oldest part of Poughkeepsie settled by the Dutch. As mayor I acquired the property to access walkway over the Hudson. Can't make these types of areas inaccessible to people. Friends of the Upper Landing with partners hope to build a bridge (taken from Dutch technology) and help restore old buildings. Need to pursue global projects to boost tourism.

Parks and Trails and Greenways need to be treated as the "main dish" not the side as far as infrastructure. Fully fund the land trusts and heritage area programs. Communities are changing in a tourism economy. NY has a lot of history in the Hudson Valley. Heritage areas need to be connected. Create programs to allow all grass root organizations to have access to funding. River and Trails program thru NPS is only access for tech assistance for many. Needs to have continued funding. The River and Trails program is the only place to preserve, expand and continue the program.

Worked with many different groups to restore watersheds and natural areas. National Estuaries is an organization already in place to restore areas. Incentivize local action such as issuing local bonds for others to match. Many communities are raising their own money. Missing a partner in the Federal government. Federal tax credits are a great option.

Historic Preservation When your restore areas of historic sites you keep open spaces open. Funded from Fossil Fuel Resources. Need full funding for historic preservation as well. Conservation and preservation should work hand in hand.

Many grass roots agencies already work together. Need feds to join. We will have a US travel office thanks to the President. We need Federal partner help with having tourists come up river from city to see the Hudson Valley. We just got a grant but the pre-approval application alone was 115 pages. No public transportation to get from train station to farms and parks and trails. Tourism in HV is \$4.7 billion dollar business.

Making first whisky in NY since prohibition. We are a farm. The biggest disconnect between people and farms is that they don't get there. Tourism helps bring some people to the farms, but we need an education program to get more people to the farm. Farming in NY is a difficult and dangerous job. Feds need to help the state understand the importance of connection.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Purpose is to connect people to natural resources and history and culture. Please include Americas Byways as equal partners with the park service and others in this initiative. Make sure funding programs are not for just bricks and mortar. Have some for grass root organizations that bring people together. Volunteering is an American activity. These people in these groups can spend funds wisely.

374 acre learning center for arts and nature. Connecting kids to nature by bringing underserved kids into the environment to give them hands on learning. We get kids there for 3-5 days. It is enlightening for them. Kids learn about history and importance of conservation and perform better on testing when outdoors. Need a stronger educational component.

Too much emphasis on testing. College campuses are great resources for local organizations. College kids and help reach out to youth and non-profits.

We just celebrated 400 years of history in NY. We celebrated by making everything sustainable and built 3 big projects. Walkway over Hudson, Crown Point Lighthouse and Governor's Island. We have seen thousands of tourists. We had several events including River Day. We brought together every single constituent. This initiative can build on momentum of this celebration.

We discovered a revolutionary war monument. Had kids who had gotten in trouble with the law restore it and they didn't go away. They kept coming back. Convenience is needed to get people out. As a physician we need to get people out. This is a public health emergency. 40% of sophomore girls were overweight who were going out for sports 5 years ago. We need to work on this.

Environmental movement is future to our society. Yesterday was a great event. We need to pull the youth in. Good diversity in youth. We want to become a model in the nation as we have been in the past. Include young at the table and young people with solutions. Create a CCC but on the level with kids involved.

Have an idea. Raise your hand if you believe that anything is possible. We always hear we need more funding. What if what we do is profitable? All the groups that are here. Small gardens in the Bronx can't produce enough. But if all the groups work together we can produce enough to sell and make our own money. For example Rockin the boat builds boats. They are not for profit but they don't need money. They are making their own. The Carpenter School in Maine only gets a little bit of funding. They sell what the kids make. Think Profit.

Teach the right kind of things to youth. Take kids outdoors. Spiritual growth is more important than physical growth. Spend time with kids outdoors. Parents need to get kids involved in the environment.

70 acres of historical property was going to be developed near a soldiers grave yard. His project would hopefully protect the value of a battlefield. The Hudson Valley grassroot effort is made. funding is needed

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Conservancy supports this initiative's mission to protect and restore our lands and waters, and connect people with nature.

The Nature Conservancy in New York has three recommendations which can be used to achieve the program's goals, while taking advantage of existing public-private partnerships that have local government and community support and in some cases available matching funding. These programs protect habitat, create and protect jobs and enhance quality of life for millions of people.

3. Investing in programs like Leaders in Environment Action for the Future (LEAF), which provide environmental jobs to urban youth, creating life-long connections to nature and career paths in environmental conservation and stewardship.

These recommendations can be best accomplished by better partnering with local governments and residents, and by investing in protected areas (waters and lands) that provide the public access to natural areas and allow communities to benefit from the value of natural areas, including clean drinking water.

Connecting millions of urban and suburban people to nature with new blueways and greenways;

Protecting jobs by sustaining healthy "working lands" and "working waters" which support local and regional economies;

Creating new jobs for young people in conservation

Improving existing federal programs for national estuaries is a great opportunity, with the potential for significant, achievable conservation victories in the next three to five years. Local collaboration is already in place as a part of the NEP and NERR programs, and an enhanced federal commitment would do much to advance the goals of the President's AGO Initiative

We urge the Administration to continue the Northern Forest's designation as a Treasured Landscape. This will help assure that the Northern Forest receives the federal resources necessary for the region's people, their economy, and the magnificent ecosystem of which they are stewards, and on which they rely, remain truly resilient and sustainable.

The Nature Conservancy's "Leaders in Environmental Action for the Future" (LEAF) program is one model of an existing local program which brings young people to nature with summer jobs in community-based conservation projects. LEAF is in its 16th year, supplies stewards to nature preserves in 11 states, provides jobs, and connects young urban people with nature. To date, hundreds of young people have attributed their first extended time in nature, and their first paid job, to LEAF. These experiences empower youth to protect natural resources, support energy conservation efforts, and become actively engaged in creating a more sustainable future

Discussion Question 1

Poughkeepsie, NY

(cont.)

By connecting federal resources and career opportunities with private jobs programs like LEAF, AGO will: Advance job and volunteer opportunities related to conservation and outdoor recreation that should be tied in to long-term federal agency career opportunities;

By connecting federal resources and career opportunities with private jobs programs like LEAF, AGO will: Connect urban/suburban youth to local open space and waters, by increasing protection and restoration of New York's lands and waters;

By connecting federal resources and career opportunities with private jobs programs like LEAF, AGO will: Promote community based- recreation and conservation, including local parks, greenways, blueways, beaches and waterways;

By connecting federal resources and career opportunities with private jobs programs like LEAF, AGO will: Create effective public-private partnerships, for job creation and natural resources management.

Millions of local residents make use of our clean and healthy estuaries for boating, swimming, fishing, shellfishing, bird watching, walking the beaches and shore trails - and their economic contribution to the region is significant.

The Hudson Valley offers unique opportunities to showcase collaborative conservation initiatives poised for higher orbit, if government-NGO-business partnerships can be strengthened. The region's scenic beauty and natural resources, historic and cultural assets, and pivotal role in American history have led to numerous federal accolades. Congress has designated the Hudson Valley a National Heritage Area, while the President has named the Hudson an American Heritage River. NOAA has designated four coastal areas as National Estuarine Research Reserves. The region contains working landscapes with prime agricultural soils, whose farmers represent 80 percent of the vendors selling produce at New York City's GreenMarkets. The region's rich history and natural resources have led the U.S. House of Representatives to approve a bill to study designating the Hudson Valley a unit of the National Park service. The region's role as an incubator for cutting edge conservation continues today as a consortium of land trusts implements an ambitious, science-based land and farm preservation initiative known as Saving the Land That Matters Most. We look forward to working with you to shape a broad national initiative, but also in demonstrating early action in a region with a long history that is primed to demonstrate tangible successes under your enlightened leadership.

For over four decades, Hudson River Sloop Clearwater, River keeper and Scenic Hudson have worked together to protect the Hudson River and its shores while enhancing residents' quality of life. All three organizations played important advocacy roles in passage of the federal Clean Air and clean Water Acts and led the 25-year fight to compel General Electric to clean up the 1.3 million pounds of PCB's in our river. Now, the America's Great Outdoors Initiative presents us with the prime opportunity to spur increased awareness of the Hudson River's importance as a natural resource and a foundation for creating a sustainable economic future for the valley.

Discussion Question 1

Poughkeepsie, NY

(cont.)

The Hudson River plays an essential role in sustaining the region's prosperity and quality of life. Each year, millions of citizens spend time in or on the river, boating, swimming, fishing or simply walking along its banks. Thanks to the hard work of individuals, environmental organizations and governmental agencies, water quality in the Hudson has improved dramatically since passage of the Clean Water Act in 1972.

Working with Hudson River Estuary Mgmt Committee. Connects lots of groups – rec fisherman, industry, gov. Agreeing on overall vision for Hudson and has worked well. What do we really need? Need regional funds. Have been using state money with little fed input and these fed dollars could help. Example of area that feds could play larger role – fisheries that are on the decline. In Hudson, fisheries are important but are on decline. This is first year of moratorium on Shad (fish), river herring, American eel. Other parts of country also having decline. Problems not caused in Hudson River Valley, but other places. Not enough money to monitor. Little fed support. Have plans that work to bring people together, but short on resources.

Modest exception to _____ comment with regard to availability of deductions for conserve easements – major pieces of lands in Hudson valley are farmland. This is land that is not being protected by tax deductions, because help the rich, but not really farmers who don't have enough income. Feds to should support efforts to sustain farmer – even greater as you go throughout state of NY because most of upstate NY is farmland or forest land. Deductibility of land conserve should be continued and strengthened, but major fed effort should be to keep farms in production.

Family owns small 44 acre organic farm in NJ and use FRPP and works full time for NJ Conservation Foundation. Foundation has used FRPP to preserve working lands with impervious land cover in perpetuity with focus on preserving soils. Support FRPP and thanks NRCS for upholding a limit to protect soils and hopes that next farm bill increases funding for FRPP because it keeps farmers on farmland.

Looks to farms as different type of open space. It's an industry and we have to provide availability of lands and create markets. NY has tried an Interstate commerce challenge which failed to do what it needs. It required organizations in state to purchase a certain quantity of local produce. 50% of NY produced items (apple, milk, etc) have failed those attempts and limit to allow farmers to grow more who can't because there isn't a market to support them. Competition is from other states. Feds could get states together to support and encourage local buying. Can have procurement policies to buy NY food, sell it, etc.

In regards to procurement, the last Farm Bill allowed for regulation of regional food procurement in school-based programming, but agencies don't know how to utilize that. Aggressively market this info and have educational opportunities for agencies to know how to use this process. New farmer development programs in New York City is one that should be duplicated– positive signs that there is interest in creating rural and urban linkages. This program provides technical assistance and business assessments to new farms and immigrant farmers. Please USDA look at this model.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Private lands conservation works well in our region because of good collaboration between State and NGO's. Problem is funding. Estuary program is great model of collaboration, but there's lack of funding – NYC is proposing harbor management and how much of that is going to fund estuary restoration? Land and Water Conservation Fund and other funding could go directly to NGO's or Land Trusts which are more nimble than agencies and can respond faster to preserving farm lands.

Target to farms that transition from existing farming families to see specific dollars targeted to national land trusts when those actions go from existing farm families to new generational farmers. More young people interested in farming but even after easements still can't afford to buy farms. Becoming more common than intergenerational farming. Have the know-how and ingenuity to have success. What is working is farm markets. Putting face to product continues to educate public.

TPL is part of large coalition enhancing the Land and Water Conservation Fund which is for conserving critical lands. Hope that one of the outcomes is that LWCF can be funded at \$900 million annually. They hope administration support fully funding LWCF.

Purchasing development rights on farms. Funding is key. When NY state puts program funding in place, 10 out of 20 towns also put in matching funds. If State provides funding, there's opportunity to get more funding. In Hudson River Valley there is architecture to get things done. NY state grant program where money goes to communities do conservation work. Enhance fed tax incentives to broaden ability to conserve by making it available to more people. State tax incentives for maintaining farm land. Transferable tax credit where people can be rewarded if they have ability to take advantage of tax incentives. Need estate tax wiped out for family farms.

There are great partnerships with EPA and NRCS. Specifically for NRCS in this region, an investment in urban conservation issues is needed because these are complicated. Technical assistance needs to return to support locals. Feds could also help in ag environmental management– in NY there is great Ag Environmental Management Program – but what happens is that when fed programs get delivered to state, the state has to override/adjust them instead of working cooperatively because feds don't look at what state/local programs already exist. Feds could look closer at effective state programs and invest in them so fed goals are being accomplished. It takes lots of trouble to get funds for successful programs. EPA in particular looks for “next magic bullet” and thinks there are no successes in this valley and this state. Maybe not so important to find this “bullet”.

One of the things that's shown up from successful value-added producers is to help folks develop strategies for assessing capital. That could be a high leverage use of funds; even those in early stages of development could move to a growth phase.

Allowing coalitions to have direct access because that's how they work when they're pursuing projects. They are small and have to partner with other organizations, including towns, counties, larger land trusts and that's an appropriate avenue for funding because of all the broad support.

Discussion Question 1

Poughkeepsie, NY

(cont.)

Participated in Future Farmers Club when young. That no longer exists so something has to be done to incorporate education in elementary, middle and high school to encourage farming and an understanding of farming. There's big threat to folks in her town from DE aqueduct for water supply and the tiger extraction threat is a real threat. EPA should address this and not allow a big oil company to extract.

I have forest land and rent to another farmer. What works is enhanced conservation easement tax break and it should include rentals. Farmer could get 100% deduction, but renter can only get 30%. Rentals are important because farmers need them, not having enough property on their own. Also, if someone wanted to donate land, you only get tax breaks on the easement, not on donations. Easements don't protect farmland - the tax code protects against ABUSE of the farm land. For forests, NY State has a 488 program. There are 4 ways to account for sale of timber land - why not just make it a fixed stump tax for forestry. Skip income tax on that and do flat stump tax.

Thanks for growing the food upstate and providing water. We want more people to ship upstate ag goods downstate by water and not by road to reduce oil usage and traffic. We need docks and piers. Youth need to be involved and work on ships to develop a sense of community and love for the river.

The Hudson River watershed is a community with many different local governments. What doesn't work is a lot of different parks that charge their own admission and you can get one pass for all the non-state parks for each park in different towns. This discourages recreation. There are great parks, but they Bay way is identifying wonderful spots to kayak and routes. Resources are not available or known to people. Wants a pass that is good for lots of parks.

_____ wants to commend the federal groups for holding this session. Kids need to know how to swim. 69% of African American teens can't swim. 42% of white teens can't swim. We need to do a lot more to teach young people to swim. The CCC provided infrastructure in the 1930s that is still used today. NYS closed parks and the Feds stepped in requiring state to keep open fed. funded parks. Please build in accountability in federal grants. Write in assurance that parks using fed money require that they remain open. Build in enforcement that money is spent in compliance.

Wildlife Conservation Society educates Kids about the river in the Bronx, has had success. Don't forget the urban population! Need to have outdoor experiences in urban centers. So important to inner city youth. CSOs are the biggest threat to the Bronx River and stormwater runoff.

It is important to understand it is the kids that are going to carry this work on, kids need to be involved in river activities and kids love to be on the river. The more they are on the more vested they get. Kids like being on the river with their friends. They are more invested if they are with their friends for longer periods of time. Just need a strip of beach with nothing else on it. Kids don't know you can't be on the river after a hard rain because of CSOs. River keeper is working hard on this issue. There isn't timely knowledge of bacterial levels in the river.

Discussion Question 1

Poughkeepsie, NY

(cont.)

It is worth reminding ourselves that we have globally rare freshwater wetlands in the Hudson Valley, we need to conserve the ecosystem, need big picture plan of attack (this is work here-Greenway program). This would be a great test case. We have the resources, plan and people. We are all invested in this plan and would love a federal partner. Expand NY & NJ harbor Estuary program should expand up the river. \$52 million dollars requested to President to expand funding for EPA. Combine 2 programs to combine the harbor program with the DEC program. Sea level rise will travel up the Hudson. A green ribbon of protected space along rivers is a great idea. Federal government needs to provide more science on sea level rise and more interpretation and outreach about that data.

Use non-profits to bring kids to the outdoors. www.liwatersentinel.org Does water testing with volunteers. Families participate

Discussion Question 1

Prior Lake, MN

Trial Leaders are aware of taking care of the land and the need to discuss what we are doing and how we can do it better.

Representing Assistant Secretary Echohawk, stated that it was unfortunately that the Secretary is not here today. Opening remarks, noted the Executive memo (for the AGO program) was signed by President Obama on April 16th. Mr. Laverdure defined the session, goals and objectives. State, private, tribal and local governments need to continue to improve on partnerships. Indian country has unique challenges. (Fee to Trust Initiative) Mr. Laverdure will be happy to discuss the Fee to Trust initiative after/outside this discussion today. He is here to listen and learn and will now turn it over to tribal leaders. Wants to highlight that the goal is to build on partnership efforts.

Thank you SMSC for hosting and others for their time and participation. The President has made it clear how important this is. Clean and healthy places are important for fishing and hunting in Indian Country and they need to be protected and restored. In the United States people/children are losing connection to the outdoors. Pollution and development is threatening the environment. We need to think of ways to protect and renew. We need new and old solutions to invigorate the effort.

Commented on the fact that this is the first official listening session incorporating the tribes with America's Great Outdoors.

Just got back from Alaska where she spent time with Chief (name deleted) whose father moved around a lot and kept diary of his time. Many diary entries read, "I have no gold today". Then one day an entry read, "I found my gold today". This gold relates to natural resources for Alaska's climate that can help support his family, children, and grandchildren. Today we need to focus on the young people, listen and learn from them, protect the air, water, and get young involved in our future.

The issue in 1969 was the tribe only had 260 (?) acres and not much Natural Resources. Tribal members were jammed into the reservation/community. Now we have about 2000 acres, plenty of walking trails, restored wetlands, recreated meadows and preserves. We have a watershed district, a wind generation plant and utilize recycled water for irrigation of the golf course. We will continue to improve and work on opportunities like these. (name deleted), SMSC Land Manager, works with EPA to obtain grants for these opportunities. We would like to have funding maintained for these purposes. Cooperate with Prior Lake on trails policy and roads. Concern is not to cut current funding.

Discussion Question 1

Prior Lake, MN

(cont.)

Role the agencies play is all hinged on funding. Likes the initiative. He feels that a kindergarten program in Europe where the classes are held outside". He referred to it as "No child left inside" Build on green space, kids outside 365 (no child left inside). Help with language and education component, creating and managing green spaces all play a role. With that comes land management. Ho-Chunk is unique in that they are spread out to 14 counties. This makes it difficult for them to put a management plan together. Joint management, working with department of WI Natural Resources, environmental water management has worked for them. Cooperative Management in (our dispersed land base) (Kickapoo is open to all). How do we protect cultural heritage in those coop areas without funding? How can tribes help? When we create these initiatives, what kinds of impact will that have on the mounds? Yet our laws are not favorable to the tribes. They impact funding, polices are not strong enough to enforce. Ho-Chunk is trying to do organic gardening and composting. He noted the climate change and a story his uncle told of a medicinal plant in Illinois. They were shocked to find this plant was (growing so close) (global warming) to where they reside. How are we enforcing the initiative?

What works? They have a New Director in Natural Resources that is working, a Green Thumb program, elders beautifying the community and they are stocking lakes with fish, they are acquiring GSA surplus equipment and work cooperatively with State and Fish and Game. They are a small reservation with a small land base. They have buildings on dumping grounds. (A Middle school and a former housing unit that was torn down 18 months ago, which is not cleaned up yet.) Since it is not cleaned up people are getting hurt, there is vandalism, and it poses a hazard to the members. There is not enough law enforcement on these sites. They must protect the aquifer on their land. They also have Chippewa Tribal Industries, which is performing home inspections and energy audits. They have Community gardens. Another challenge is they are losing the willows for basket making. Would like to see more tribal, state, governmental teamwork on these issues.

They are moving into a regulatory phase from acquisitions and working with state on wild rice issues. Lake front open space (initiative). They are interdepartmentally moving towards "green building certification" with DNR.

What works? What fits this is CCC. Civilian Conservation Core with youth doing natural resources. (Rails to Trails program, projects such as trails from WI to MI., campsites and deer surveys) This got the young into the outdoors. This all ended when (name deleted) became Governor. They only receive funds to build, not to operate & maintain these parks, ball fields and trails. Doesn't want other programs to be fleeced in the process. Wants them to be 638 so tribes run the program. (MI mine to be destroyed) Get young away from crime and into traditional sites/values. Doesn't want sites open to the public. (Mention of Monuments /site where they collect pipestone where there was graffiti. He wants no graffiti on rocks.) He cited GLIFWC as an example of off reservation cooperation to protect resources. Can we purchase off reservation and close it to the public?

Discussion Question 1

Prior Lake, MN

(cont.)

What works? Culture is Paramount. 1st tribal historic preservation office (THPO) program for inventory of cultural sites, prevented desecration, development. (Brian was previously a tribal preservation officer) Highlighted issue that money for THPO is cut or stays the same as participation increases. Their tribe can't subsidize/fund programs. They lobby for more funding.

Commended other tribes with the management of their lands and does not know how it happens but believes that positive management comes from the heart. Their tribe has the best second-growth forest. A sense of community may have helped. Land into trust is important. Law Enforcement, how do we keep game wardens? There are interaction difficulties with external law enforcement in a PL 280 state. In today's world could kids tell what time of day it was if they were dropped in the woods? We don't cut trees with holes in them; they are homes to small animals. Congratulations to those tribal leaders who have realized success. He felt tribes weren't always invited to the table. Tribal resource management comes "second-nature". Others need to work at it. He applauds having the listening session early in the process. Thinks the government should use the tribes as a role model for management of land resources.

AI is head of Natural Resources. Red Lake sent letter to Secretary Salazar and he won't go into that now. This initiative needs to be funded with new money. They are looking at 7% (BIA/tribe) reduction. The cut doesn't leave room for this. How can we support this? What works? They work with USDA, EPA, MN DNR and the young. They have a Water Fest every year. "They" took it away, the grant for the water Fest? Soil and water shed district, they will have to find the money somewhere else. Tree plantings with the kids/young help give back to mother earth. They are a closed reservation so it is easier for them to do things since all their land is in trust/closed. They have the sixth largest fresh water lake in the United States. Their reservation is like it was way back and people come there to take pictures. They have been bombarded by government on land issues and giving back the Angle. They have diminished land all the way to Canada. Many don't know that Red Lake owns the Northwest Angle in Canada. Red Lake has pre-settlement resources.

They rely on their own tribal capacity to work on natural resource issues. They have good technical advisors on their staff who works on sustainable energy. Work well with EPA in Region 5. "Thank you". They focus on protecting high quality resources instead of saving compromised natural resources. Polymet project was wholly inadequate and the tribe's input into the environmental process was reduced. Environmental Impact Statement (EIS) is a Federal trust responsibility and the hat stays on through the entire process. (GLIFWC helped in this effort.) Their natural resources are integrated with tribal initiatives. Iron range problems result in damage to the Great Lakes. We can't survive cuts. Keep us even. More money would be great. This is a great new initiative. She wants to know "how do tribes initiatives match what the feds are trying to do?" Let us tell you how our priorities match what you are doing.

Discussion Question 1

Prior Lake, MN

(cont.)

The youth focus of America's Great outdoors is great! Our assets are our children. The greatest gift is a world where they can sustain themselves. We are losing our moose population, seeing raccoons and wood ticks, which they have not seen before. Their ceded territory saw their first Turkey hunting season last year. No one knows how to hunt turkeys. Concern: Treaty rights as they relate to subsistence which is important to the tribe. Mining is a big issue for them. Asian Carp & VHS (fish disease) is big problem for them too. Don't do enough implementing; instead they do too much studying. We did the same thing with the lamprey. Now they are managing them. We need quicker action on invasives. Partnerships are important; both sides must have total honesty. Need every one to come to the table with no hidden issues/agenda. We need more direct tribal contracts. Hopes this initiative doesn't stop.

She got a lot of "Food-for-Thought" and ideas on how to make this an important initiative. For her this is a beginning, not an end on the America's Great Outdoors. She will look for opportunities.

Thank you. How do (we) keep tribes input happening? He directed everyone to the web site for continuing to make the issues known. <http://www.doi.gov/americasgreatoutdoors/> He asked, what does the forest of the future look like? Should we be looking to new ways? Liked the second generation forest mentioned by the Stockbridge Munsee tribe. The CCP program and youth can become the new natural resources care giver. Community gardens and USDA can be of help. The Forest Service has learned how to manage forests from studying Native American practices. They are struggling on how to manage forests to anticipate climate change.

The Cultural Resources issues were heard loud and clear. Message received to support THPO offices, Historical Preservation, assistance, partnership and the role that tribes have in overall management of parks and natural resources is the theme they are hearing around the country. Landscape scale management (needed) (park service, us agencies and Canada). Thank you and sorry they couldn't have set aside more time.

Discussion Question 1

Salt Lake City, UT

Public school - soft money - funding in schools goes away year to year

Huge burden on certain fishing rivers. I've seen it degrade as it becomes overused. Economy is dependent on the river. Take a step back and relieve pressure on the river, but the economic situation keeps it going

Reconnecting people with the outdoors is important; satellite TV, generators linked to RV's ~ need to get away from those things. Obstacles to reconnecting are television, satellite, etc., Ideally, make it available by your own power.

User fees are a necessary evil. They theoretically go to support the lands we use. Has problem, as a hiker, paying the same fee as someone with a trailer (and he doesn't need a corral)! The obstacle is that in the Unitas, you have to pay to park your car

Motorized vehicle users pay all kinds of fees, yet there continue to be many problems with the signage of trails; correcting will help people stay on the trails. Negative image of ATV noise. Get trails systems signed.

Associated Press is obstacle. Get down to common sense so we can communicate; effective communication will eliminate barriers. Use common sense instead of polarizing words. Need to come back to the notion of using non-rhetoric, effective communication.

Southern Utah has the most beautiful wild scenic areas! 'Past administration enacted "no more wild policy." That is an obstacle. These are core habitats and core migration corridors. More wild and scenic areas exist than have been identified as wilderness

Great Salt Lake - funding needs to continue to come to wetland areas around the Lake.

Words tend to divide people, and people become distrustful. Collaboration can work. If it's not done in an honest way, breeds distrust. Doing it the right way is better than just saying you're going to do it.

Collaboration is an issue. There are many nonprofit organizations that are trying to do a good job, but people don't know about them. It's a challenge to get programs into the school system and educate adults. There are two sides to an issue.

How to separate the people who enjoy motorized recreation and those who enjoy non-motorized recreation. They don't appreciate the smell, noise, etc., We all enjoy the outdoors, but not all in the same way. Should have separate tent-only campgrounds, campe

We need to see the end and beginning product of what we're talking about. Many children do not go outdoors, even in their own backyards. Cost... transportation and access. Get rid of obstacles. We have to do better in the field of education. Education of th

(cont.)

Incredible treasures above us. #1 challenge is proliferation of inefficient lighting. Need timers and motion sensors in businesses and communities. From Wheeler farms, a few dozen stars are visible, but >8000 stars are visible from Zion's.

Many people young and old are inspired by access to dark night skies. Get the people out to where they can experience the stars.

Four wheeling for 33 yrs and feels challenged by closed roads. Goes back to spots a year or 2 later and then it is closed. He wants "it saved for his grandchildren for four wheeling". Wants balance here.

Funding is lacking need money on ground to make things work. Financial backing is needed. 2nd challenge is related. He loves to hike, four wheel drive, ski, and mountain bike. But also wants pristine quiet places. Needs to find recreation in concert with

Biggest obstacle is that it is hard to have a conversation on this. Not all stakeholders are even heard in San Juan County. International people come to SJ county too and these voices are not heard. He has worked on Factory Butte issues and bringing peopl

Worked with Price FO to make a plan for designated routes, roads, oil & gas issues, etc. All tied in with conservation. Dispersed camping was not defined, however but now within 5 years this will be tackled but in the mean time the resource continues to b

Works on cultural issues. Feels like things are not as smooth as it seems with San Juan county. Voices were heard by Sen. Bennett but county commission has not told their side. Need more healthy dialogue and give people adequate opportunity to present the

She is a youth and thinks youth do not get out there to state their views. Both extremes get heard.. But not the middle minorities.

It is easier to just sit on couch then get out there. Lack of info. On where to hike and access areas outdoors.

There is a fear of feds remaining from original homesteaders

Agrees that there is too much federal control. Does not like money going to feds then state.

Sometimes efforts are not coordinated with the land managers and private lands.

A biggest obstacle for land managers is to not let things go. We do not have enough law enforcement or education out there. Thinks it is best for people to be educated and then self enforce things. Need to tell people the info.

Discussion Question 1

Salt Lake City, UT

(cont.)

_____ said USFS has analysis paralysis. Management decisions are based on making things litigation proof so based on what holds in court but not best on ground. Decisions not made for right reasons.

SUWA has large budget to get word out, but his group does not have a big budget. Feels that is not fair. He takes his time to be heard on 4 wheeling. This should be on a Saturday or Sunday so more people are heard.

SUWA people do not make much money either..

During the week is a bad time to have this session.. People need to work but need to be heard

People can go online to register their comments.

County has conflict w/WSA's and 5K miles of roads and trails. What works is land based, science based decisions rather than political decisions. Get out on the ground for true land based decisions.

How can we get youth back into waterfowl interest. It is access to these areas. Many areas are restricted and inaccessible as a result of encroachment. Being pushed into smaller areas. I'm not encouraging my grandkids to go. I need to change my way of thi

Big problem with water access and wild game. Change in the political front. Tremendous battle because they won't really listen. Access is the key Now a lot of water heads have been privatized. Big challenge and step backwards.

Mining co. traded for land and BLM fenced the WSA. I had been going up there for mining for 50 years and now it is closed. Use common sense. People need to learn to share.

Sufficient funding is big issue and it's hard to go fast enough to get things done.

We focus too much on our differences instead of our commonalities.

Knuckleheads! Some are back in D.C., lobbyists, land managers and local people.

OHV challenges. Everyone who registers their OHV some of the \$\$ goes to enforcement on all land. If there were more funding opportunities, if we could work more with the agencies, it would work better.

Discussion Question 1

Salt Lake City, UT

(cont.)

Burden of proof for closure no quick decision for roads. Difficult for counties to take on. Access to existing roads

Not sure which land is managed by whom. Frustration - Increase knowledge of land boundaries where they can camp and can't

Funding is always a challenge. If we want to encourage local communities to get involved with conservation need to provide communities with tools for education and outreach. Funding for good cooperative programs. Streamline process.

Partnering - and treat partners as real organizations and not separate stakeholders. More fluid running with those groups. There is a disconnect through field and grants and agreement folks. More emphasis on partnerships.

Limit of funding. Bring up incentives, taxes. Disincentives at local level - numerous private lands are important. Property taxes are a disincentive. Green belt if 5 + acres get tax benefit. State tax code on private property of smaller portions of proper

Education panels on rock art. People try to take and destroy. Work on education messages and teach kids what they can do to preserve conservation.

Everything that we are discussing refers to kids, preserving, recreating and getting future generations out to the field. 4th grade students out to experience activities they have never done before. Get kids involved to do outdoor activities. More natural

View land as something we can take away from. Need to learn how to enjoy land and learn how to give back to the land. Problem with narrow mindedness.

Mindset that funding, conservation education are discretionary and we are finding that partnerships are necessary. Health professional communities need to be involved with what we are doing. Get right people to table together for partnerships. Very few sc

How do we implement bill. Working with field office with partnerships. Under staff of agencies. Almost beyond what groups can do alone and with the lack of people. Difficult way to communicate and need to make partnerships easier.

Education is a big part of this. No child left behind is an obstacle for field trip approval. School board has to approve field trips, no trips are being made. When opportunities are available only capturing the higher educated. Missing a wide swath of po

Litigation is major issue when dealing with agencies. Large number of resources being tied up. More mitigation needs to be done. Quit tying up attorneys

So much litigation - creates obstacles to work with communities. People are scared that resources are going to be limited by Washington. Work against communities instead of with. Must find way to make conservation work for local communities.

Discussion Question 1

Salt Lake City, UT

(cont.)

Worried about urban farm land being obsolete in future. Older farmer generation not being able to pass farms on due to pressure of turning farms into resident. Expensive to purchase land. Can't afford to purchase land and support families. Preserve farms

Working with large amount of youth in year round programs. Camping trips try to stress respect land, leave no trace. Biggest conflict. Everyone wants it for different reasons. Quiet vs. OHV. Respect others and their wishes.

Work on public lands changes thoughts on land. Reconnecting young people with land through work.

Intergovernmental Agency will not work. Too expensive. Money could be applied to separate org. One major source of funding to one agency. Potential to be molded and put on paper like health care bill. Not going very far, very fast. Simple solutions and ge

Real disconnect with youth. Only see outdoors as a place to recreate. Actual uses need to be built in. Urban agriculture Centers. Youth and inter cities are disconnected from where their food comes from.

Work with scouts. Kids would never get out if it was not for scouting program. Federal govt. should get out of way and allow local government to make decisions.

Limited funding and litigation. Due to the recession, settle now out of court and deal with at a later point.

Access and leadership to communicate accountability. Very clear and prioritize

Work through school districts. Success with some core curriculum so teachers can work with students and know the programs have relevance for students and fits in their classroom. Students know less and less about their communities.

Local groups take responsibility with different interest groups to come up with solutions to reach processes and fill gap instead of going through litigation.

Information that is given is not going up - now it is coming down. Listening session is good idea.

Went conservation camp and learned more about conservation. Great experience.

Not quite sure who belongs to whom and who is going to take control. Would like to see meeting like this on a quarterly basis - would be able to find better common ground. Want to have it available to us.

Discussion Question 1

Salt Lake City, UT

(cont.)

Can't say federal government needs to get out of the way. Needs to be engaged

Refreshing to hear of education and youth. Field trips and camps are more meaningful to the youth. Business, farms, - has influenced how I live my life. Public schools are the root of getting youth into the outdoors. Funding for education programs.

Challenge-difference between business and recreation. Major change over the past 15 years in appearance of public land and solitude when using it. Views on outdoors of today's younger folks are different than past. Need to talk about consequences of deter

Volunteer groups to help with education and monitoring. Need to make them aware of what is appropriate in the outdoors. Back country horse patrols can help along with the bikers/

Kids oblivious to outdoors. Need to get word out to kids.

Need for consistent rules across agencies. Agencies need to communicate and coordinate. Reactive process is what we have. We need to get ahead of the curve.

Bicyclers need to be out on the trails as volunteers educating folks. Get people excited enough to go out and do it.

As a user we need better maps, consistent from one agencies jurisdiction to another. What is available to the public, and what is off limits?

Need maps, consistent rules across agencies. There is a major PR issue. Mistrust of Fed. Gov't needs more information and effort to bring people together and understand issues and share the land.

Need to identify best places for renewable energy. Better preparation to establish process, not just default for fossil fuels.

Issue that has a lot of synergy with snowmobilers and back country cross-country users. Use outdated all agencies charters. Problem: no one responsible for avalanche forecasters-needs to happen today and be funded by Fed Govt.

Green River is deserving of Wild Scenic Protection. Frustrated that we aren't protecting our most valuable!

Need help with grazing permits. Air quality is an issue. Lack of capacity from oversight agencies for enforcement. Have industry fund oversight person through cooperative agreements with Fed Govt.

Discussion Question 1

Salt Lake City, UT

(cont.)

Lack of understanding between the stakeholders. Inventory of raptor nests -- decline in nests as ATV use has increased. It's because the ATVer's don't understand that they can't be out there in certain months. Need education.

Access is important to involving youth. Invasives restrict access to use for waterfowl areas. Many people pushed into more confined areas because of invasive restrictions.

Restricted water access - water privatized, but water belongs to all the people. Water restrictions should be for the good of our resources first.

Don't have data for other uses of economic impacts, such as outdoor recreation industry impacts from agency decisions.

How do you account for long-range cost revenues, job impacts from restrictions? What are the long-term effects?

Discussion Question 1

Seattle, WA

Strong partnership with NPS very powerful to get work done. Family programs crucial to get kids involved

Working with school system for forest restoration projects. Summer youth employment programs is great for reaching under-served opportunities, requires some funding

Monthly work parties that attract young volunteers, working with private companies for grants to get kids into the field, scholarships for high school students. Build stewardship for the future by working with young people and encouraging their interest, but need more funding

Beneficial to work on global level. Focused user groups to work through multi-user conflicts

science. Have opportunities within schools to experience this first hand. Pursue as a career. Prioritize science within culture and provide opportunities for people to pursue as occupation

Park Rangers are the best to inform & inspire the public – need more interpretive rangers

from Samammish: decommissioning of forest roads is diminishing access;

Public-private partnerships to reach broader audience. Education component is effective

Quality of staff in National Park Service very high. Knowledgeable, professional, a great benefit

LWCF works well. Historic Preservation Fund also works well to support needed preservation work. SHPO, tribal offices supported by this. Full funding is needed

In Cameroon, we visit schools near end of term, give a tree or bird. Follow up in 3 months – how has your bird or tree grown

organization has issue with dams in eastern WA; worked with WSU landscape architecture class and had students envision the town without the dam and see ways that dam removal could play out from urban landscape of Lewiston; exhibited at coffee shop and created conversation in the community about pros and cons of changing landscape

access to wild and scenic and natural areas makes this a great place to live; drives quality of life and economic perspectives; fortunate that we have preserved areas in this region

outdoor events such as concerts are great ideas; Sasquatch music festival at the Gorge gets people outside for many hours; powerful experience with lots of people; should be promoted

Discussion Question 1

Seattle, WA

(cont.)

many organizations involved in stream remediation for salmon streams (govt and ngo ie people for Puget Sound); take a bigger concept such as ecological footprint back to a personal experience

Funding is main barrier. What are some new and innovative ways to obtain funding for interp and outreach programs, to reach out to new groups. Centennial challenge was a means to phil. Donate funds to assist land management projects and programs.

Liability is biggest barrier. Attempts to engage urban youth creates fears of liability. People hesitant to lead, train, create opp. Because of liability fears. Too much red tape, documentation, to obtain liability ins. Hard to get youth involved in canoe club.

following '06/'07 storms at MORA, communities affected were inspired and motivated to get to the park and contributed thousands of hours of volunteer service; good that NPS put out the call for help and good to see people from all around come and help out; get more volunteer opportunities

Difficult to sustain funding for urban youth programs. Big budget cuts ahead for Seattle urban youth programs. Need incentives for private business to fund.

are good programs within city but program can expand – urban agriculture, etc, funding is a huge problem. Next year, city will have 56 million short fall. Link to other outdoor programs

volunteer programs work well. Partnerships work well. There is always work to be done and volunteers become committed to seeing land preserved and maintained. It takes money to run volunteer programs

Coalitions are successful if all partners benefit.

Maintain budget for park maintenance and upkeep

works with youth groups in western US, focus on middle school youth. Cannot get special use permits on public lands. Unable to get access on USFS lands for these groups because can't get permits. What can govt do to help obtain permits to use public lands. These groups are considered commercial under present rules

thing missing in parks is environmental education with local school groups; Indiana Dunes NS had an active school program and included school groups who learned how to do farming; environ ed programs and interaction with school groups is important

Increasing congestion between cities and big parks. Loss of character (ie farmlands, open space) is more difficult to find. Need local rural areas as connection

Discussion Question 1

Seattle, WA

(cont.)

environmental education is best done in situ; can't impart the value of a place by reading it in a book; get them in the moment; however, too much of a good thing can have too great an impact (ie seeing whales); American Camp at SAJH NHP linked to Limekiln State Park, land bank lands and county park – connection of publicly owned land to view whales as opposed to paying for a tour boat;

access is very important to us; local bike parks are a great way to get kids outside and active, provide unstructured recreation; but need more than small local areas...would really like to see top down direction to the local managers to encourage and provide bike access. Importance of bike parks and access acknowledged by several other participants, and need for more access....a big opportunity for USFS to better manage this, and provide more access.

mistake to assume young people are not interested. Lack on information, access (transportation), opportunities in how to get involved in the outdoors. May seem like lack of interest, but really lack of info. Idea-instead of career day, have an "outdoors" day at school. Disconnect between opportunities and info and young people having this info.

Parks are key to people's physical, mental, and emotional health. Esp maintenance of urban parks. Key to getting youth into Great Outdoors is in getting urban youth into urban parks.

bypass 4 snake river dams. Restoration of salmon would help cultural resource Outward bound expeditionary learning – effective in getting students outside and engaged in environment. Emphasis on standardized testing does not allow for these types of programs.

reiterate first-time experience that is safe, simple, engaging. Example – Skagit River – view eagles – all populations – disabled, homeless, non-English speaking, etc. They share story with friends and family

problem that the federal agencies have is the lack of funding to maintain roads/access to safe standards; NW Forest Plan has not meet harvest, and consequently funding goals;

children and grandchildren have same opportunities. Pollution is main barrier, specifically CO2 poll. Econ cost of CO2 \$ 10K per pers per year. Consider economic cost of pollution.

AmeriCorps volunteers provide workforce, trail groups for restoration projects. Land Trusts provide acquisition power

important to get user input into which roads to keep and which roads to close; important to include recreation users in the conservation agenda/AGO initiative;

need to start young with children to get them outdoors. Local opportunities important to make that possible and multiple experiences for adults and youth.

program bringing kids from the cities to work on a ranch; most powerful thing for city kids was the stars/night sky/milky way – need programs for urban youth to experience things like night sky

Discussion Question 1

Seattle, WA

(cont.)

Impressed with process of stakeholder partners working in watersheds (agencies, groups, organizations, etc). Funding is needed. Need to tweak NCRS funding to make it more available to local groups.

from Bellevue: problem with roads that are not maintained; impact streams

many years active in Mountaineers and other groups; problems gaining access because gates are now closed on forest roads, example of gate access to Alpine Lakes Wilderness Area, Middle Fork Snoqualmie Road, formerly open; would cost nothing to unlock the gates; promote LNT; access needed to encourage and promote use; people now crowded into fewer areas

bring the younger generations into the woods. Green City Partnerships. Start where they are and build a portal or bridge through open space. Bring kids and adults to care about their local environment. This will spread to the larger landscape

Need managers for public lands. Assistance of Friends groups are critical to running education programs. When funding for Friends groups dries up, programs and opps are lost also.

LWCF works well. Recreation and Trails program works well to encourage volunteerism and local funds

partnerships to target grants, use science and get land managers on the ground with us. Provide science perspective, get everyone on the same page so that limited funding is spent effectively

National Park Service, USFS, competition, population expanding – Feds need to get on board and have a campaign about how the natural resources are under pressure. Have a policy that addresses this

Nisqually NWR and education program – works to have a strong volunteer program to engage the public; they can lead tours, activities on weekends; also free/inexpensive programs for families/kids on weekends that can also be run by volunteers

from Seattle: resent the NW Forest Pass; eliminate it; nickel and diming people

Lack of time is barrier for people connecting to outdoors. Too many other time drains (school, work, etc). Make sure plenty of family friendly easy activities to get started. More public transportation to outdoor areas.

Discussion Question 1

Seattle, WA

(cont.)

work with various nonprofits working on sustainable agriculture; looking at the overlap between natural places and agriculture that supports nature – ecological approach to farming; conservation reserve program with USDA has been one of few programs in USDA that really applies to farmers trying to do something sustainable; Farming with the Environment profiles creative farms and ranches around the country; in WA state, also Beefing up the Palouse could be a model program, focusing on commodity meat growing and ranchers looking at natural grazing systems and restoring native grasslands on Palouse while also providing a farming opportunity

Buffalo soldiers of Seattle; group struggling to maintain public attention but has been taking kids outdoors and realized the power of making things relevant to the kids – give them an experience; most powerful tool has been the horse with kids – military history story and story of first secretary of DOI was African American makes the story relevant to young kids – connecting with animals and making it relevant to kids – need to get the right way to spark kids attention

collaboration works in conservation. Government needs to be more effective at partnerships and crossing boundaries. Need to help leverage efforts more effectively

the younger people are to get connected to the outdoors, the better. Has “adopt a highway” worked in parks? If so, this is a great way to get adults involved. A multi-stakeholder approach. We must do this for our kids but do not lose the adults. People are more likely to take care of what they love

communicating to young people that opp. Exist. Grants and funds go unused at times., Need for communication and how to communicate to less fortunate people. Y Guides (K-3) is an opportunity

with groups and agencies for planned trail systems. Collaboration of volunteers working with DNR helps create places to play for everyone.

as society becomes increasingly urban, consider green spaces in urban environment, roof top garden, recognize plants, enhance “green” urban environment

Project Learning Tree. Creating partnerships with school districts really works; public instruction in environmental sustainability. Any time you can support these programs with funding is powerful

Allowing private land trust to hold easements and perform monitoring and stewardship. Allow Legacy easements to be held by land trusts rather than state agencies. Use easements where fee acquisition has traditionally been used to decrease costs.

87% chance of fishing on a regular basis whether new at fishing or avid fisherman. To bring new people fishing. Model this program. Word of mouth sales. Good example of success

Girl scouts, conservation message. Advise working with children from a very early age

Discussion Question 1

Seattle, WA

(cont.)

Urban and community forestry provides great benefits to connect urban people with their every day life

Methow Valley Classroom in Bloom program well supported – could be widely adopted

has had success in completing conservation efforts begun many years ago. Completed Wild Sky Wilderness. Protected second growth forest. Working on expanding Alpine Lakes wilderness area. Hoping to move on to North Cascades. Relentlessly framing the issue. Having Congressional delegation that gets it. Spreading message these are works in progress that need to be finished. Setting the goal.

closure of wilderness to bicycles impacting opportunities; multiple access passes from multiple federal and state agencies expensive and aggravating/not user friendly;

neighborhood park has become a teacher; park doesn't operate by itself without a city government; hard to work with city government; mayor, city council, park staff; public trust and even a local park, citizens have expectations for how they can recreate; quality of life and neighborhood parks are really important; government plays a role, but to understand how it works is difficult

Rainier Valley is one of the most diverse in the US. This might be a good place to start.

engage school children. Earth corps. Adjacent to open space area, kids worked activities into science curriculum such as reduce invasive plants, etc. Required reading – Last Child in the Woods. A truck load of dirt costs the same as a video game – one suggestion that help illustrate this. Find influential teachers

increasing scientific literacy and natural history knowledge works. Empower local planners with biodiversity knowledge to do job

healthy partnerships between land trusts, tribes, local governments very effective

Facilitate. making it happen. Find groups of kids who have never been outdoors and get them there. Partnerships can be replicated. Partnerships with land managing agencies is key to helping it happen.

Passages Northwest, inspiring courage and leadership in girls. Very difficult obtaining permits that provide access to public/federal lands/forests; labor intensive reporting; very pleased to see the AGO initiative: challenge to White House, invest in youth education programs that teach youth how to care for the

Discussion Question 1

Seattle, WA

(cont.)

partnerships that allow public agencies to work well. Use those partnerships that get best out of each partner.

Nisqually River Council model for collaboration. Works totally voluntary, non-regulatory approach. Find common ground. Communicate. Find human element. Education program that establishes connections early in kids lives. Finding connections with community and people on the ground. Focus on positive things everyone agrees on. People in power are tired of being sued and resisted; they like people to come in with unified voice. Organizing around watershed is powerful. Having Nisqually Tribe as a partner and leader is also powerful.

juniors and seniors, 3 programs available in Seattle. They are adding sustainability to the curriculum. The normal school curriculum has been altered, and these themes are added to the normal curriculum. These kids graduate with higher GPAs and graduate from college. Part of Seattle Schools technical programs. Sustainability or conservation academies should be considered. Develop scholastic models based on national academies based on conservation

Emphasize match in agreements to get long term investment

Public-Private partnerships are effective for funding streams and capitalizing on opportunities.

grassroots organizing to expand MORA, and info about carbon river corridor; being able to go out and do grassroots organizing has inspired

Connecting inner-city youth to natural environment. Employing youth for summer jobs provides wages and work experience, and changes attitudes. Encourage opportunities for underserved youth to become attached to public lands. Phased approach: 1) expose youth to working outdoors; 2) introduce job opportunities; 3) provide educational requirements for achieving jobs

Ranger programs are useful, but declining. Hands on volunteer work such as tree planting is effective for all ages. Just getting people out on the ground is helpful.

Volunteer trail mntce – WTA (7-70 ages) connects people to outdoors. Finding Urban Nature (Audubon) nature in the play ground and school yard.

Passport in Time – opportunity to be hands on with Archaeology and appreciate land more

Expertise in community to help w/schools. Friday Harbor program – clam project allows students to learn and work with professionals. Also allows them to be part of team in real world setting.

Landscape level thinking – private conservation groups are getting much better at this and agencies could learn from this.

Discussion Question 1

Seattle, WA

(cont.)

Seattle school partnership – Olympic peninsula learning experience; balance connecting students w/nat resources, fun stuff and learning; new kids learning this 1st time. Science class walks to park and works on science project one day a week also did volunteer trail building.

Landscape level (city) successes connecting community.

Endorsement of Saul's point about partnerships. Need to work in sustainable mode; alignment of strategic things (youth initiative, but FS permit system does not align)

Clean ups getting youth outside, but fed permit system does not work.

Diff kids have diff skills – encourage fed gov to support expanding school programs that look at teaching kids diff.

Some schools have intern partnerships w/businesses and nonprofits – encourage/expand this. Expand students boundaries thru partnerships; go beyond local areas; have HS students lead elemn students in enviro projects.

Have to get people from 7-70 out.

Grants to local cities for enviro projects or natural resource/parks projects.

Incentives – free camping, free pass to park, pass to Disneyland,

Volunteerism with 'friends of' groups works. Don't need to wait for agency programs or funding.

Eco-system based land management works

Having private non-profits partner with agencies works (e.g., State Parks and Seattle City Parks). Builds trust among stakeholders. Agencies benefit.

Permitting access – Olympic NP has good permit system. Low beauracracy and protects/manages backcountry. Other agencies could replicate their system.

Sound Experience in Port Townsend operates adventures with sailing on Puget Sound directed towards young people. Learn about maritime history on historic landmark.

Recycle

Buy in bulk

Student Conservation Association (SCA)

Buy second hand clothes

Plant trees

Compost

Take the bus

Carpool

Don't waste electricity/water

Ride a bike instead of driving a car

Unplug electronics when you're not using them

Switch to compact fluorescent bulbs

Solar, wind power

Eat local

Maintain natural habitat for animals

Discussion Question 1

Seattle, WA

(cont.)

Don't build dams

Pull out invasive species

Dirty, not pretty

Parks aren't taken care of

Technology, computers, phones, texting

Transportation

No games, nothing to do

Cold, weather

Homework

Unsafe - Lack of knowledge to be safe, safety education

Crime in parks = creepy people, drug dealing, drug using, robbery

Lacking tools to be active (i.e. no camping gear, no kayak)

Lack of people to go with you

Health, allergies

No social interaction like there is online, no people to meet

Discussion Question 1

Seattle, WA

(cont.)

Everything on the list above, but the opposite

Group of positive youth, peers leading activities & programs (i.e. youth camping groups)

Youth teaching youth outdoor skills

Increase funding for parks and programs that get youth into the outdoors – this year community programs got cut

Don't close parks

Stop cutting down trees

Support partnerships between federal & state agencies & non-profit groups that help groups get into the national parks and share curricula and other resources

Maintain trails, better upkeep, remodel

Increase access – public transportation to parks

Include outdoor education in school curricula

Pick up trash

More activities to do outside (i.e. more basketball courts to reduce crowding, more equipment to go around like basketballs)

Support community events (i.e. basketball tournaments, community BBQ's, parades)

Year round sports instead of just having them for a season

Have more outdoor jobs & access - how to get them

Discussion Question 1

Seattle, WA

(cont.)

More outdoor activities in schools

There should be recess middle school and high school

Access to outdoor equipment (footballs, basketballs, tents, kayaks)

Increase awareness about problems so that community can help get it fixed faster

More community center funding

Tried to provide avalanche training in USFS lands but could not obtain permits to do so. Snowparks are grossly underfunded, everyone is using the same relatively small areas.

does a great job, needs more funding

Looking at innovative ways to bring money for conservation. Transfer of development rights to conserve working lands by giving development rights to builders in urban areas.

helping with grants, volunteer work parties, setup training for users

Youth clubs are a good way to involve youth in long term projects. Working with the same group for several years and having a strong leader

Education & outreach services, working with landowners, providing classes – worked well, but have lost funding

Landscape level conservation with focus on protecting pristine lands. Cascade agenda successful. Private-public partnerships successful for connecting military families to outdoors.

Tenacity in partnerships. Building trust levels with FS to accomplish work to standard. Champions in the agencies

Global warming, increased fire risk on east side of Cascades-what will we do to mitigate effects?, Address climate change locally

___: individual users have a history of volunteering and helping; engage them in helping; not always a question of money.

Discussion Question 1

Seattle, WA

(cont.)

Basketball

Beach

Skateboarding

Woods/camping

Fishing

Mountain biking

Snow boarding

Skateboarding

Recycling

Composting

Plant trees

Clean around the schools and community centers

Community service

Make sure no gun shooting around

Stop gun violence/ gangs

Discussion Question 1

Seattle, WA

(cont.)

Give to parks (dots=6)

Program with education [incentives] (dots=4)

Make parks more fun

More activities

Make the parks look better (dots=6)

Paid to work at the parks (dots=3)

Make parks looks better

Transportation (dots=4)

Obama come and tell them to go to parks (dots=2)

Provide opportunities for kids to get out into woods with parents and connect with nature. Getting families out and have fun in the outdoors makes a huge difference if it is accessible, outdoors, and fun

Volunteer stewardship provides a great savings, and a great way for young people and others to get out into the environment

Dog friendly

Incentivizing land stewardship

Address diversity in marketing outdoors

Discussion Question 1

Seattle, WA

(cont.)

Incentivizing tax credits

Restore rivers, remove dams

Pay a stipend to help disadvantaged youth and get them into the outdoor

Junior Ranger program used by NPS

Incremental training programs for youth

Connecting preservation

Listening to First Nations and tribal communities

Diversity of recreation activities

Access info

Hands-on experiences in education – colleges teaming with local school (stream adoption, etc.) – should require in curriculum at early age

Collaboration between groups – Rainier seeking volunteer help from WTA, SCA, NPCA after floods – finding commonalities

Government agencies acting as resource facilitators to help volunteers with their work

Interagency collaboration – more cost effective and efficient tool to solving conservation challenges

Localizing efforts – collaborating with federal & local agencies

State standards requiring experiential education – but needs improvement

Discussion Question 1

Seattle, WA

(cont.)

Urban students in NYC maintaining parks/gardens – benefit from their own work, excites kids

Leadership is willing to invest in relationships, spend time to work and talk about addressing shared concerns

Working on small projects to accomplish, be proud of and grow

Celebrate successes – lets others know what is successful

Making outdoor experiences fun for children so they want to be outside – need new ways to connect them

Special accommodation for youth & therapeutic riding

How do we merge this with existing programs such as no child left indoors

Break the fear barrier. Help those who can not get to a hiking trail

Engage all recreational groups in volunteer efforts for trail maintenance, etc

Student run – peer program – Garfield HS POST – 20 trips per year. brought diverse groups of kids into the wilderness. Education – effectively connecting to the out of doors. Access to rock climbing. Hands on activities rather than instruction in the classroom. Mentoring programs are constantly part of budget cuts

Partnerships with groups such as REI and outdoor recreational companies

Rx Play – doctor prescribes outdoor recreation specifically target obese children and ensure they have access

We can not underplay the importance of National Park system. We are fortunate to have some in our back yard. The Feds have a key role in NPS – this is a resource that we can use, be vry aware of

Bring more green spaces to urban areas. Emphasize urban parks – to demonstrate ecological principles

Discussion Question 1

Seattle, WA

(cont.)

Beaches

Discovery Park (parks)

Lakes

Neighborhood

North Cascades National Park (mountains, lakes, rivers)

Gold Creek Pond

Basketball court

Pools

Hiking

BBQ

Sailing

Kayaking/Canoeing

Remove invasive plants

Pick up trash

Make duck boxes

Carpool

Discussion Question 1

Seattle, WA

(cont.)

Education

Using energy efficient lighting/appliances

Pick up litter

Ride your bike

Waste minimization

Eco-friendly gardening

Plant trees

Walk

Clean up after your animals

Ride the light rail

Joining the SCA (student conservation association)

Politics (voting)

Provide more outdoor job opportunities

Make service learning requirements for graduation strictly environmental ones

Have a clean environment

Discussion Question 1

Seattle, WA

(cont.)

Provide H.S. classes about environment

Create smaller groups to help environ.

Move events in parks

More school field trips

More diverse leaders in national parks

Build more parks

Strong partnership with FS, DNR staff. Volunteering opportunities to maintain trail systems.

Partnerships are successful if there is a specific, focused goal with committed parties. Partners also bring diverse skill sets to the table.

Professionalism of park rangers are great for engaging public

park

lake

mall

beach

fishing

basketball court

Discussion Question 1

Seattle, WA

(cont.)

football

walks

biking

hiking

camping

boating

swimming

kayaking

BBQ

tennis

golfing

soccer

(cont.)

water park

dog park

workout

Woodland Park Zoo

backpacking

mountain biking

snowboarding

Seattle Center

dancing in the street

rollerblading

paintball

pick up trash

compost

recycle

use environmentally safe products

Discussion Question 1

Seattle, WA

(cont.)

use public transportation

limit what I buy

biking

dispose of garbage properly

use cloth instead of paper towels

turn off lights when not being used

gardening

remove invasive plants

open window instead of A/C

grow trees

walk to store

save on gas

check car for low emissions

help animals with home

use less paper

Discussion Question 1

Seattle, WA

(cont.)

use water filtration system instead of bottled

buy local

carpool

bike lanes are narrow

video games

punishment

weather

internet

TV

transportation

lack of equipment

safety

not mainstream

lazy

chores

Discussion Question 1

Seattle, WA

(cont.)

lack of experience

school

lack of leadership, direction

homework, studying

make it part of the school curriculum

make students know how they impact the environment and how it impacts us

fund organizations that support youth engagement

create more jobs between high school and college

promote use of local nontoxic products

work study for college

give jobs

advertisement campaigns

create free camps in national parks

add funding to alternative energy

Parks- city parks (Discovery, Alki, Golden gardens, SAM sculpture park)

Discussion Question 1

Seattle, WA

(cont.)

Beaches-City Parks (Discovery, Golden Gardens)

Nearby Wilderness- Steven pass, Snoqualmie Falls, San Juans, Mt. Rainier, North Cascades, Olympic

City Areas- Seattle center, community centers, greenlake, waterfront, walk around the neighborhood, backyard.

Outdoor sports- Basketball and tennis courts, running in city streets, bike trails (Burke-Gilman Trail)

Don't litter, Clean up public spaces

Volunteer (restoration and conservation projects)

Use water responsibly- conserve turn off the faucet, don't water grass

Became a vegetarian

Recycle, compost

Ride bike, longboard, walk, use public transit instead of driving

Bring own bag to grocery store

Plant trees and other plants, vegetables

use gas efficient car and drive in an efficient way

leave nature and wildlife alone- don't feed animals or pick plants

Shop secondhand, donate old belongings, instead of throwing them away

Discussion Question 1

Seattle, WA

(cont.)

Carpool

More events in parks-increase awareness and appeal to kids

Make it easier to get to popular events

make sure programs that get kids outside are well-funded, especially in schools

Increase awareness so kids know that opportunities exist-advertise to kids and families, get them involved in getting other kids out

More funding to parks in general-must be a priority

Create programs that appeal to students, like activities, sports, community events, funthing

Subsidize student admission the outdoor places, like zoos and parks, and outdoor activities,

Create incentive for volunteering to get kids out and involved-even just a t-shirt

Utilize the way kids communicate-advertise and emphasize the importance of getting outside on the internet, on TV, in schools.

Put wifi in parks- draw kids in

Find a way to provide equipment necessary for park enjoyment-provide to public for free (people don't have supplies to play at the beach or bikes for bike parks)

Create playground equivalents for older youth-rock climbing, bike parks, skate parks

Keep parks safe for kids

Make it easier to organize large, fun events like capture the flag, kickball nerf gun fights

Discussion Question 1

Seattle, WA

(cont.)

More boating and fishing opportunities; water parks in general- We don't have any outdoor water access

More programs to get kids out to nearby wilderness

Create interesting parks with cool art and design appeal to kids

More community farms and gardens where people could come work and then take food to connect them to the environment and teach nutrition skills

Free wi-fi in parks

More unstructured opportunities/activities (rock climbing, canoeing, frisbee golf, fishing, kayaking, rafting, mountain biking, etc)

Checkout or rental equipment in parks

the beach

city park

national parks

greenlake park

forest service trails

skateboard park

hiking

movies

Discussion Question 1

Seattle, WA

(cont.)

sport fields

downtown Seattle

the mall

parties

coffee shops

fast food

Pike Place market

swimming

Alki beach/park

picnics/bbq

biking

volunteer

avoid littering

pick up garbage

recycle/composting

Discussion Question 1

Seattle, WA

(cont.)

use reusable bags/water bottles

conserve energy

fundraising

buy local food

increase employment opportunities with organizations dedicated to the outdoors and increase awareness

advertise recreational areas

fund environmental groups

make env. Education programs mandatory

fund field trips to outdoor locations

provide options for all students to go on field trips

highlight benefits of getting into the outdoors

presidential organizations to improve and build outdoor resources. This will also create jobs

lately programs at the MBS district offices have been working closely with communities. Opportunities for the community to engage their local agency staff. Better relationships at the local level.

Let locals manage their land

Discussion Question 1

Seattle, WA

(cont.)

Want jobs on a local level

Lives on Columbia River

Concerns about what happens in NHAs

Lost logging, fishing—no jobs left, do NHAs interfere?

Clean energy isn't always efficient, ? Where can we get information to know how to make that work?

Big problems with water in our WA state rivers, especially on east side of state

ESA has taken hold of state in good and bad ways

Economic opportunities for fishing in small communities is important

Get fish off ESA lists to get sustainable populations

On local efforts: It's also non-profits, conservation districts

In some parts, government is a bad name

Making it local makes it more appealing to citizens

Continue support for federal government to keep funding going

Wildlife recreation coalition started by Republican and Democrat governors, ? Good model for other states, ? Citizen led process

Seeing something bi-partisan would be hopeful

Discussion Question 1

Seattle, WA

(cont.)

Archaeological excavation helps—it gets people involved including adults and kids, o Private property owner herself, supports sharing the land

education is talked about being important, but doesn't get funded as a priority.

Environmental Ed. Programs—are they being able to pay?

Where is Dept. of Education in this discussion?

Education aspect: kids have better connection when they're introduced young

Success in Denver and Boulder with accessibility, • Jump on a bus and get to the outdoors, • That infrastructure should be replicated, • Don't need a car or mode of getting there

Volunteer stewardship—it works, o Youth involved, o Issue sometimes: land manager to help guide

Conservation needs to start young

She graduated in 2003, and it was never part of the curriculum

Youth want to do something about conservation, but don't know how or what

Start in public schools young

incorporate science based, environmental activism, conservation experiences into classroom curriculum. Design ways people can recreate in their communities who cannot or do not want to drive to recreate.

Product of going to outdoor in school in Southern California

Environmental Education programs are important, even if it's just in the neighborhood

Discussion Question 1

Seattle, WA

(cont.)

Funding issues

Property owner, ? Concerned with impact of gov and NHAs may have on her property, ? Is government interfering with her private rights and having too much control over how she uses her property—lives on Columbia River

fully fund Land and Water Conservation Fund— It works. It's 17 Billion in arrears since inception in the 60's. Nature Conservancy in OR land purchasing

Save America's Treasures Program. Provides funding for preserving historic properties, conserving resources, employs more people on a dollar for dollar basis.

Restore LWCF funding, National Park Service system works and is a great model.

Washington Trails Assoc. has an amazing trail database that allows anybody to find trails accessible to them in their community. Model example that helps me, my students and other people access trails and get involved in conservation efforts. The Mountaineers are another example who engage youth.

King County Eco-Net, Puget Sound Partnership, tying funding to the collaborative processes drives people to work together more effectively.

No Child Left Inside initiative has helped to get kids outside. Local learning centers!

Miles of lights in LA means millions of people

Drastic discrepancy between city people and ability to travel to the preserved lands

We need to build connective trails in the inner-city

Issue with people who live on critical lands and want to use land for profit—how do we overcome this thinking

Cons. NW early consultation with tribes, and coordination between agencies and landowners for collaboration.

Helping in the park creates a more profound connection with the outdoors. It creates a sense of stewardship. Need to enhance and encourage volunteerism.

Discussion Question 1

Seattle, WA

(cont.)

landscape project – experience in bringing together, plan the process. Strong leadership, Reaching out to stakeholders, Identify challenges and opportunities, communicative clearly logical projection

The magic of being outdoors. Learning in outdoor environments goes beyond learning about the outdoors. Get kids engaged and find new ways to make that happen.

Water issues—how do we manage water in Region 10?

Sports and recreation also means jobs

Infrastructure to support hatchery fish

let those who pay manage the funding. Allow user groups to be more active in the way fees are spent locally.

Save the Salmon Weekend, ? On Quinault River, salmon get trapped in pools and die, ? Concern with problems facing wild salmon, ? Go to pools and relocate salmon into running areas of the river, ? Not allowed to do that in the national park, so they did it in state waters instead, ? Families and children excited to participate • “When is my salmon coming back?”—little girl

Delighted with commitment that Aramark has made to preservation

Works on Olympic Peninsula doing variety of environmental activities, ? Elk festivals, Mushroom festivals, ? Tribal event , all backed by Aramark

Need corporate buyout on funding outdoor activities

Access to grants, ? Can’t fund programs they want to do without grants, ? Applications are complicated, time-consuming, ? Have smaller grants that are more streamlined for smaller programs

Kesner Homestead Restoration, ? Grants don’t apply to corporations, only non-profits, ? Potential of homestead for school groups, etc. —only remaining one in national forest

Education programs don’t have to happen at school but schools can be a segue to outdoor recreation for youth.

Opportunities for environmental education

Discussion Question 1

Seattle, WA

(cont.)

Worked in Nisqually Wildlife Refuge

Discussions with children, ? Without emotional connection to land, decisions weren't going to be made for the land, ? Decisions based more on own enjoyment, ? As they had more ties to the land, more understanding, the whole attitude expanded about what's important

Need to support more opportunities for kids

Collaboration of school districts with recreation agencies. Afterschool programs for K-12 focusing on environmental education. Family camps in the parks. More time spent making personal connections.

What works is private property ownership where owners are educated about environmental issues and able to be better stewards of their land

Areas in our nation of tragedy of the commons with waterways and public lands

See where private ownership is working with stewardship—PERC.org in Bozeman, MO

Private property is what made this nation wealthy—facing tough economic times, so we have to find ways to do more with less

Elwha salmon recovery—only federal government could have done it

Federal participation needs to be there—it can't just be local

Last year, national parks visits almost doubled, ? Sound investments for local economies, ? Counties with nat'l parks in WA state have lower unemployment

Government can do more to support clean energy, drive these industries

Weekly trips to local parks sponsored by schools or recreation agencies. Need to solve the problem of transportation, but if the kids can get there it is fantastic.

Observe federal-local governments in this up close

Discussion Question 1

Seattle, WA

(cont.)

Served on advisory board to issue grants

Challenge for fed. Government: Coordinating and speaking with one mind, one voice

Disheartened when EPA greenlighted another mountain top removal this week in W. VA

Good strategy for fed gov is to have better grant or revenue sharing program, and pushing implementation to state and local governments.

Grants for acquisition and local development

Grants for maintenance

Federal lands generally inaccessible to general population

State and local parks are easier for people to get to and enjoy

Underinvestment is an issue

Local governments more responsive to citizens

Better participation in decision-making

Better volunteer response—seeing some great volunteering in his community

Area between Eastlake and Capitol Hill under I-5 is mountain bike stunt park with stunts and trails, also another one in suburbs

More coordinated response to trail usage issues

Bottomline: Get grant money to state and local governments for the parks

Discussion Question 1

Seattle, WA

(cont.)

Use of private funds for adult education and other

putting solutions back into local hands

Partnerships are important. They are what works and need to be given a higher priority. Agency staff needs greater latitude and support to form the partnerships that the public wants. More money invested in partnerships = more relationships = more work getting done. Recent partnerships have demonstrated that people with different interests can work together. Take Pride in America authority is a good example of how agencies can work with the community.

Many youth parents have to work and their parents cannot provide recreation activities. Use schools as an outlet to get more kids onto public lands. Partnerships with schools work.

Citizen science works. Audubon's program is a good example. Engaging youth in citizen science encourages conservation practices. Public ROW in Europe is a model we could learn from.

Bring back Youth Conservation Corps.

Paying young people to do conservation work. This initial incentive can be just enough to get them hooked.

Add campaign – media driven society – see themselves in the park (Coming soon!!!!)

- Partnering, networking, collaboration - raise pollution tax above 5% - use for damages when funds weren't there.

Partnerships – can help connect people to the woods – stewardship is happening

Involve local business communities – local organizations, clubs, etc.

- Money

Youth corps groups - and what other gateway opportunities are available or technology to get kids out.

Honor your volunteers – give thought of how to use effectively

Discussion Question 1

Seattle, WA

(cont.)

Get students out in the land. Having the experience in nature is what changes people.

Invasive weed pulling and stewardship in the parks is a great way to get involved.

Washington State has learning standards focused on sustainability, the environment and civic engagement. The standards are integrated into core content. This model should be replicated across the nation.

Using off road vehicles as another experience to get outdoors.

Boy Scouts is 100 years old and they have done more to get kids outdoors than any other organization. We must support organizations like this regardless of politics.

Service hour requirements for graduation.

Jobs for working in the outdoors for youth.

National Wildlife Federation: Outdoor Alliance for Kids

Sierra Club – H2O Sentinels Program – Water Gardens

Conservation Easements to protect working lands

State Citizen Committees to look at applications for projects

Easements on part of the parcel only so the landowner stays actively engaged in the land management – to keep viability of working lands. No total parcel acquisition.

NPCA – working to make Mt St Helens into National Park

Cultural Resources, Section 106, NHPA – ensuring agencies are engaged in cultural resource conservation.

Discussion Question 1

Seattle, WA

(cont.)

Community Service hours for high school graduation, gets youth into community and outdoors. Need more program funding. E.g. Seattle Inner City.

Recreation users too restricted on public lands. Heard that the new administration may restrict or prohibit people's access to public lands.

Mountains to Sound Greenway.

Center for Wooden Boats in Puget Sound

Wilderness Areas, National Parks – purpose includes conservation, environmental protection. Need to look at expanding these areas while also encouraging recreation.

Mountaineers Club – volunteer supported, outdoor recreation courses, education, connecting people to the outdoors.

North Cascades Institute (North Cascades National Park)

World Wildlife Fund – Missouri Breaks area - bison protection

U.S. Fish & Wildlife: Wildlife Corridors Program – scattered among various legislation, hard to track and follow or know what is intended.

Sierra Club – Cascade Snohomish, Earth Day – tree planting on Tulalip Reservation, protecting headwaters, top ten carbon storing forests found here in the Pacific NW.

Partnerships – agencies and tribes

Restoring lands impacted by development – private and public partnership, conservation incentives

Salmon Recovery through watershed-based groups, bottom-up approach

Need more state-run programs, instead of Federal based in Wash. D.C.

No more expansion of federal parks, need to maintain what we already have

Discussion Question 1

Seattle, WA

(cont.)

Focus on youth, the future of our outdoors/conservation

Develop opportunities for communities who have not had experience or access to outdoors

Urban youth need opportunities to join organizations such as Campfire Girls, Boy Scouts to connect to outdoors

Get feedback from rural communities

Continue conservation ethic

Free gas at national parks

Ducks Unlimited – conservations program committee, CRP program

Discussion Question 1

Spokane, WA

The Department is responsible for administering the United States' trust obligations toward tribal nations. These obligations are rooted in the hundreds of treaties executed between the United States and sovereign tribal nations. Each of those treaties acknowledged the importance of lands to tribal nations, and secured perpetual rights of Indians to continue to use reserved and non-reserved lands for cultural and spiritual purposes, as well as for hunting, fishing, and gathering.

Today, the Department of the Interior oversees more than 55 million acres of land that is held in trust by the United States for Indian tribes and individual Indians. These lands constitute "Indian Country" -- the homelands for 565 of federally recognized tribal nations and their citizens. Tribal nations use these, and other public lands, to practice their religions and carry-forward their culture. They also use these lands to exercise treaty-secured hunting and fishing rights. Tribal nations are therefore deeply invested in the conservation and preservation of natural and cultural resources.

The Department is poised to partner with tribal nations to protect vital natural and cultural resources through the America's Great Outdoors Initiative. This partnership is consistent with the longstanding nation-to-nation relationship shared between the United States and each Indian tribe.

President Obama acknowledged the importance of this relationship when he signed the November 5, 2009 Memorandum for the Heads of Executive Departments and Agencies on Tribal Consultation. That Memorandum requires federal agencies to "[engage] in regular and meaningful consultation and collaboration with tribal officials in the development of Federal policies that have tribal implications.

Consistent with the President's directive, senior members of the President's administration met with tribal leaders and Indian Country youth on three occasions to learn about and discuss the unique issues facing Indian Country, in relation to the America's Great Outdoors Initiative. In addition, tribal leaders participated in numerous public listening sessions across the country.

Tribal participation in this initiative will be based upon the President's directive of federal-tribal collaboration, and will draw upon the experience and expertise of tribal citizens and tribal organizations to protect sacred natural and cultural resources.

Federal collaboration with tribal nations in the America's Great Outdoors Initiative will be guided by the following core principles:

Consultation and Collaboration: The President's November 5, 2009 Executive Memorandum, which is rooted in the federal government's trust relationship with tribal nations, mandates federal consultation and collaboration with tribal nations prior to undertaking actions that impact Indian Country. Tribal nations should drive the America's Great Outdoors agenda, where the Initiative impacts tribal cultural and natural resources.

Discussion Question 1

Spokane, WA

(cont.)

Self-Determination: United States policy, with respect to Indian tribes, recognizes that tribal resources are best managed by Indian tribes and Indian people. This Initiative should be based upon this policy of self-determination, and should seek to maximize tribal control over cultural and natural resources important to tribal nations.

Access and Consolidation: The United States should seek to secure and restore access for Indian tribes, and their members, to areas with important cultural and natural resources. Federal protection in this area is paramount where Indian tribes have reserved such resources under a treaty with the United States.

Where practicable, federal agencies should aide tribes in the acquisition of cultural resources and culturally significant sites, as well as the consolidation of existing tribal land-bases. This principle is consistent with the overriding principle of tribal self-determination.

Management: Where tribal acquisition of such resources is not feasible or practicable, agencies should seek to ensure that relevant tribal agencies and intertribal organizations have an opportunity to participate in the management of such resources.

Successful stewardship of the land requires a comprehensive strategy. Ecosystems rarely align perfectly with property boundaries on a map.

Land consolidation and elimination of checkerboard jurisdiction will save tribes millions of dollars in costs associated with determining jurisdiction issues;

An effort to consolidate tribal land bases will save the federal government billions of dollars over the long-term;

Elimination of checkerboard jurisdiction will allow tribal nations to implement comprehensive land use plans and ensure the protection of ecosystems on a "landscape" scale.

Checkerboard and fractionated tribal lands are problems that have vexed the United States and Indian tribes for decades. This objective will require agencies, particularly the Department of the Interior, to work closely with Congress to ensure adequate funds are appropriated for land consolidation. The Department of the Interior will also work closely with tribes to expedite the process of acquiring tribally-owned fee lands within existing reservations in trust for the benefit of tribes.

As one tribal leader noted during a dialogue between senior federal officials and tribal leaders, "[for Indian Country] natural resources are cultural resources." Whether wild rice and buffalo, burial grounds, or sacred mountains, many things and places deemed "natural resources" in the public lexicon hold significant cultural and spiritual value for Indian Country.

The protection of tribal cultural resources is a key component of the United States' trust obligation toward tribal nations.

Discussion Question 1

Spokane, WA

(cont.)

Consistent with our nation-to-nation relationship, tribal nations should exercise control over the management of cultural resources to the greatest extent possible. Stemming from a deep-rooted understanding of the significance of these resources, tribal nations are best-positioned to ensure their preservation and protection.

Lastly, a number of tribal leaders educated federal officials on the importance of tribal languages to efforts to protect natural and cultural resources during the federal-tribal dialogue sessions on the America's Great Outdoors Initiative. Place-names, cultural significance, and resource management practices are best articulated in tribal communities through tribal languages. Language is important to carry-forward longstanding teachings, and to enhance the self-esteem of tribal youth in order to engage them in efforts to connect to the outdoors and protect cultural and natural resources.

3. Tribal management of federal lands

Our nation-to-nation relationship with Indian tribes requires acknowledging the value that tribes can bring to the relationship.

There are a number of existing federal programs, and collaborative partnerships involving tribes and tribal organizations, that would support tribal participation in the America's Great Outdoors Initiative.

The Land and Water Conservation Fund (LWCF) was established in 1965 to secure access to outdoor recreation and to strengthen the health and vitality of U.S. citizens. Since then, LWCF has been the principal fund that federal agencies use to acquire land for outdoor recreation, and to date it has protected millions of acres for future Americans. The Secretary of the Interior has discretionary authority over a large portion of the LWCF, and could potentially allocate funding to tribal governments to acquire land for outdoor recreation in and near tribal communities.

The Indian Land Consolidation Program was created to acquire as many fractionated interests as economically feasible, and to consolidate these land interests into tribal ownership. This is done to enable better tribal utilization and management, and to promote and enhance tribal self-determination, economic, social, and cultural development needs while reducing government administrative costs.

The Tribal Forest Protection Act of 2004 (TFPA) provides a framework for beginning this component of the TTL Initiative. Under the TFPA, tribes may enter into contracts and agreements with the Forest Service (FS) or BLM to reduce fire threats from on Federal lands adjacent to tribal trust lands and Indian communities. Several tribes, including the White Mountain Apache Tribe and Hoopa Valley Tribe, have already entered into agreements under the TFPA.

Discussion Question 1

Spokane, WA

(cont.)

The Department of the Interior Fee-to-Trust Initiative involves the use of existing authority, under which the Department is seeking to expedite tribal applications for the United States to acquire land in trust on behalf of tribes. Secretary of the Interior Ken Salazar issued an internal directive on June 18, 2010 that the Department should "diligently and expeditiously exercise its responsibility and move forward with land into trust decisions." This initiative would complement the America's Great Outdoors Initiative by facilitating the consolidation of tribal landholdings, and easing tribal land management efforts.

Rights Protection Implementation Funding allows tribes to meaningfully exercise their treaty fishing, hunting, and gathering rights. This program supports the exercising of off-reservation hunting, fishing, and gathering rights by 49 tribes located in the Pacific Northwest and Great Lakes regions and their five umbrella inter-tribal fish and wildlife organizations.

In addition to the federal programs and initiatives described above, various federal agencies, states, local governments, and private organizations have undertaken collaborative partnerships with tribal governments to promote resource conservation.

Salish Sea Project. The Project is a USGS partnership with the Coast Salish Western Washington Tribes and British Columbia First Nations. This cooperative effort combines traditional Tribal ecological knowledge and USGS science during the annual Tribal Canoe Journey up the Salish Sea, which includes Puget Sound, Georgia Straits, and Straits of Juan De Fuca. During the Tribal Journey, members of western Washington Tribes and British Columbia First Nations travel in more than 100 canoes from locations throughout Washington and British Columbia to Cowichan First Nation in Duncan, B.C. Five canoes tow state-of-the-art water-quality probes and Global Positioning System units. From north of the Strait of Georgia to southern Puget Sound, canoe families played a very big part in recording the health of the Salish Sea. In all, 607 miles of the Salish Sea was mapped and over 45,000 data points for specific water quality components were recorded including; surface-water temperature, salinity, pH, dissolved oxygen, total dissolved solids, and turbidity. Canoes are ideal because they are slow moving and do not add any toxins to the environment.

Confederated Salish and Kootenai Tribe (CSKT) and the U.S. Fish and Wildlife Service (FWS) Co-Managing the National Bison Range Complex (NBRC). Since 2008, the CSKT and the FWS have co-managed the NBRC in accordance with the CSKT Annual Funding Agreement, under the Tribal Self-Governance Act. The NBRC is part of the FWS Refuge System and lies in its entirety within the boundaries of the CSKT reservation. Interestingly, the bison on the NBRC are the descendants of a herd of bison owned by CSKT members over a century ago. That herd was started and managed by tribal members at a time when bison were on the verge of extinction due to non-Indian activities.

Discussion Question 1

Spokane, WA

(cont.)

A Cooperative study on climate change effects on moose survival involving the Fon du Lac Tribe, the U.S.G.S. and the Minnesota Dept. of Natural Resources. This collaborative study tests the hypothesis that moose survival rates would be a function of heat stress, defined as the frequency and magnitude that ambient temperatures exceed the thresholds identified in earlier studies. A primary objective is to estimate annual and seasonal survival rates in adult moose in northeastern Minnesota and determine whether heat stress explained variation in these survival rates. Another is to determine the implications on moose population migration in the face of a changing climate.

Discussion Question 1

Written & Online Comments

Wonderful Outdoor World -- people respect parks; educational programs, campgrounds, no connection with NPS, show people there is a bigger world than immediate residential areas, use urban parks, employees from communities they serve

Working at the right scale is critical in order to create a sense of community and solidarity as people are more likely to feel an emotional connection to projects that directly impact their own communities; larger scale projects can seem impersonal and I

Corporate partnerships with Toyota to create fellowships for the disadvantaged

Support private lands conservation efforts -- some of the most important conservation of land is by the private land owners

Northface Co. (Outdoor industries) Outdoor Nation -- summit in NYC's Central Park -- Activities and youth leaders, want to connect kids

Put rangers in urban areas to form a connection

Social media: Cal State Parks Foundation example -- threatened park closure, drew in members. Way to reach people short on time or out of our loop. Twitter, inexpensive, technology is not the enemy, SCA success with online

Restoration: Tribal/NRCS joint effort, successful stream restoration, BOR;BPA, youth engagement

Landscape conservation: 1976 Chattahoochee Recreation Area, small land access points to H2O, engaged public in forming conservation vision, develop "grand plans", engage communities in planning proves -- deeper "outside the box", find new sources of partn

Transportation: NPS/other agencies could provide buses, require states to create envt. Literacy campaign/curricula; nature bridge -- public/private partnership, 40,000 children/year, continuum of care to involve children in the outdoors, keep listening --

Reinvigorate partnerships with urban parks and local conservation systems -- need fully integrated systems at all levels of government

Dedicated reliable funds outside of appropriated \$ to support partnerships

Need consultation process/infrastructure with DOI.FS for concerns to be aired before decisions are made

Discussion Question 1

Written & Online Comments

(cont.)

Portion fo land and conservation fund needs to go to urban parks

Ducks Unlimited web site -- youth activities/education. High school sponsored events -- run by kids. College chapters -- raise funds for conservation efforts

Out of work, out of school young people need to be a part of this initiative ages 18-24, and people of color should be at the forefront

We first need to build up urban recreation in cities, where people can have a safe outdoors environment close to home

Long distance scenic trails require interagency cooperation and many partners but they are also great ways to connect communities, habitats, and people

Connect youth to the outdoors through communities

Build trails on abandoned rail corridors

Creating a conservation and preservation ethic in younger generations and with an increasingly diverse society that is not related to traditional American heritage

From a cultural heritage perspective: service learning through public private partnerships. Public lands volunteer stewardship programs. Heritage tourism -- telling America's story through its historic cities, town, landscapes and trails. Look at Colorado Preserve America Youth Summit Program as a model of state-based youth engagement in heritage

Making cities more healthy, affordable, and sustainable for all residents. To conserve open lands, we have to make cities better, so they offer residents what they want and need. From a conservation perspective, investing in urban parks, creating additional parkland, ensuring that pocket parks, schoolyard parks, and neighborhood greening will improve quality of life, health, and environmental function.

I would like to see a multi-agency urban greening imitative with White House leadership and visibility. This could integrate existing work of USDA, USFS, NRCS, EPA, and others. Greening our communities starts on the landscape at home, in our schools, neighborhood streets, and parks. Forestry and park restoration in cities at a greater scale, engaging volunteers, schools and creating jobs. If there is a CCC revival, urban parks and recreation systems have plenty of work to do as well. Last, I hope the administration can shift resources from other areas to use up more budget for conservation programs. We would like to see the US Forest Service Urban and Community Forestry Service Programs & Research increase substantially.

Discussion Question 1

Written & Online Comments

(cont.)

Private working lands protection in face of increasing competition for land and increasing demands to promote food.

Engaging the next generation -- not only children, but the next tier of conservation and public lands professionals, particularly of diverse backgrounds. Ensuring all people understand, enjoy and care for public lands, wildlife and cultural/historic sites.

Work through established community organizations, conservation organizations, park and public land support groups. Outreach, awareness and marketing campaigns. Internships within agencies and partner groups.

This was a wonderful event. I have never seen anything like this kind of commitment to starting a conservation movement since perhaps the first earth day. Please keep this going - talking, listening, inspiring, people to bring their ideas to the table and try harder when they go back home. I will never forget this day. Thank you.

our ability to mobilize America's greatest asset it's people who have invested interest enough the organization missions to support these challenges (Strategic, Plan/Execution)

Thank you for this invitation! It was inspiring and impressive to see the coordination and passion of the Agency secretaries, EPA, CEQ and others. Private land conservation is becoming more cost effective and successfully than ever. We strongly encourage funding and support for more of this landscape protection.

Funding for private land conservation. Estate taxes. Generational succession of landowners.

Collaboration, funding, allowing third parties to hold conservation easements from all funding sources (including LWCP). Incentives for landowners to be part of the solution.

Community Forestry Bands

Recognizing, developing, and mentoring community leaders as role models, school based environmental education, community based projects that are fun.

Urban parks create jobs, spur growth, increase property value, prevent obesity, clear pollution, and build community. Yet they're often dismissed as frivolous in hard times and remain severely underfunded. How can we change the perception that they are not just a "nice thing to have" but an essential part of our urban infrastructure?

Discussion Question 1

Written & Online Comments

(cont.)

Developing policies that promote cross sector, cross jurisdictional collaboration and partnerships. There are many innovative public and private partnerships that have been developed to create, restore, and maintain urban parks - and that would serve as great models for replication. City Parks Alliance, a national network of urban parks leaders, looks forward to serving as a resource as The America's Great Outdoors program is developed.

Engaging youth through Youth Corps is too late. These are also short term jobs that youth just see as a paycheck. Need to engage and remain engaged with youth from a young age. Need to create in young people (age 6-10) a conservation environmental ethics.

Educating our youth that conservation and preservation is important. Start educating youth at a young age. The need of agencies to see instant gratification. Working with kids is a long term commitment.

100 years ago Teddy Roosevelt initiated the great public lands conservation system. 100 years from now, let them look at on this as the time that our country accelerated a private land conservation system that leverages public resources while also making connections with rural landowners and urban populations, especially kids.

1. Managing future population growth to conserve our most important natural resources 2. Growing the next generation who will know, love and be great stewards of our great natural resources 3. Managing our public lands and resources (including funding) in ways that respect and engage private landowners and communities (including our forests, ranches and farms)

1. Engage private non-profits in conserving our great privately-owned natural resource lands 2. Engage community groups in devising and implementing conservation programs in urban settings 3. fully fund LWCF; implement increased private landowner conservation incentives; authorize tax-exempt community forest bonds

Speak with authenticity to kids. You must engages at a grassroots level. Identify the best and scale! I would be happy to assist

1) connecting young people to beautiful places to learn and love, 2) projection of clean air water topsoil and safe food, 3) the fragmentation of wildlife corridors especially in light of climate change

1) "burrow in" long term, many administration leaders with stable funding 2) fully fund the land and water conservation fund 3) closely study the mono like program and program of tree people in LA 4) permanent protection for the article national wildlife refuge

Balancing conservation and use (recreation, energy, etc.); Connecting conservation to economic development

Invest in science to guide decisions, invest more in private land conservation (easements), promote nature-based tourism

Discussion Question 1

Written & Online Comments

(cont.)

Great concept-super audience- Outstanding members of the Administration IF the nation can recover financially. The Obama team is the best ever and can change the face of America. I wish them and-collectively-God Speed

Maintaining a critical mass of Americans who are adequately connected to the outdoors in ways that foster a strong appreciation for conservation and active support

1) develop and deploy programs and hubs for connecting communities with outdoor recreation and conservation. Bridge the gaps and rebuild community networks of support. Build Youth Conservation Centers. 2) reach kids and patterns, reach schools, engage private landowners. 3) build programs that will influence large numbers of people

Maintaining nation's memory open landscape lands-recognizing they are privately owned and important economically as "awaking" fauna, forests, etc. Conserving lands for people as well as for wildlife and ecology.

1) conserving watersheds and water resources. Water sustains life. 2)disconnect of Americans to natural resources

1)water should be a pillar of AGO, project reconnect and restore 2 connect Americans to land and water resources through education and recreation

1) Give direct grants to those org. that do the work of reconnecting youth and families to the outdoors.

wilderness bills and W+S river Bills, new monuments and NLCS units, redraw NPS boundaries to reflect geography, fully fund L+WCF

Grass roots partnerships that are inclusive constantly reaching out and finding common ground to tackle issues big and small. These local efforts need to be supported at the Federal Level. Trust, communication and flexibility are the keys. The fundamental question that needs to be answered is what are all parties willing to compromise. Energy policy is also important as conservation and energy are on a collision course.

Sustaining habitat integrity & associated ecological services. Convincing general public & private landowners that habitat integrity is essential

Comprehensive long-term land use planning. Education outreach; increased education of teachers. Challenge: Property rights of private land ownership

Exemplary landscape-scale initiatives such as the Blackfoot Challenge, the Maldai Borderlands, and the Wild lands and Woodlands vision for the forests of New England. Also, promising, are USDOJ landscape conservation collaborative.

Discussion Question 1

Written & Online Comments

(cont.)

Stable conservation program funding; conservation block grants that address the needs not by habitat but address broad needs. Conservation tax incentives. Trails - connecting, and natural - healthy, economic impacts.

Programming educating communities & awareness of issues. Incentive to support all kinds of project.

Community-based visioning of values and collaborative implementation. We need to engineer a social evolution of rewarding private landowners for assurances of providing fish & wildlife habitat in the long term. LCC's are a good start to this foundation.

1) culture of disconnect where families have no history with the land; and the land in the cities does not speak for itself but rather for crime, pollutions and disinvestment 2) dollars

1) elevating the economic importance of our green infrastructure to a value level equal or greater than the level of infrastructure. We are losing out and falling behind 2) Given growing urbanization/suburbanization of country need demographic changes 3) failure to target all conservation organizations that represent the best of all conservation leaders. Continue to compartmentalize fed parks, with working lands 4) the continued march of sprawl development

1) continuing the protection, restoration and enhancement of private lands for conservation purposes 2) targeting public and private lands conservation dollars

1) extensive use of the tax code (i.e. tax credits and estate tax) to further private lands conservation 2) extensive use of land exchanges to increase the amount of high environmental value lands and reduce the amount of low environmental lands with high economic value

While strategies to address this need are evolving, the core of any successful approach lies in understanding the economics of private land ownership and the critical need for viable markets and market incentives that keep working lands economically competitive with alternative land uses. Approaches that add costs to maintaining working lands drive down its economic value relative to other land uses and increase the potential for land use conversion. However, approaches that use markets and market incentives to enhance the economic value of these lands will contribute to their long-term viability and continuation on the landscape.

Regional (landscape level) interagency planning efforts with local, state, and federal participation (use the LWCF SCORP effort to accomplish this)

bring new voices into the conversation, non traditional voices. Consider environmental education a conservation tool.

Discussion Question 1

Written & Online Comments

(cont.)

1. Helping people who live in rural areas, evaluating farmers and fishers, to make a decent living by receiving fair prices for their product, will help to help them doing what they do best -- making the best use and serving as the best stewards of the land and water resources. (obviously I don't see Dept. of Interior in charge of some prices but USDA is an agency that can help and I hope they are listening to the concerns from family-owned farms and fisheries) 2. CRP and NCRS are great programs -- but is make sure they are properly funded and the program is managed well so that the right people are rewarded, that it's not an easy gift for non-farmers/non-fishers who happen to own a lot of land 3. allowing GMOs (on public lands) is a real concern -- why has the govt. taken this stance, providing one more foothold by Monsanto in agriculture? (Perhaps some of this is state-owned land, but it is still a concern) 4. Local people -- fishers, farmers, teachers, students, etc. -- must be involved at many and different levels to find solutions -- long term and sustainable -- urban and rural must care, young and old, rich and poor -- Pepito's notion of linkage.

Awareness and appreciation; Communication effectively - what needs to be accomplished - How to do it - What's being done in progress already; Education

Think big! Create central website. Let our nation know! Volunteer youth of the great outdoors for each school, college, and university. Coordinate as well with the Dept of Education and private foundations. Promote "town hall meetings" everywhere. Create AGO free membership/media campaign. Engage corporate America. Bipartisan unity on this! Set up mentor program. Cross-agency training.

Encouraging our racial/ethnic families/communities to enjoy the great outdoors - parks, beaches, etc. close to home in their urban areas.

We are interested in helping you to serve as spokesperson/champions in your initiatives as well as the other administration agency initiatives to build healthier communities.

While opening remarks made by Secretary Salazar and The President referenced cultural + historic sites, there was very little mention of these resources during panel presentations. The land includes human stories evidenced by archeological sites, historic farms + ranches

The best way to understand our shared American Experience and identity happens outside of the classroom and in the place. The teaching of American history has taken a back seat to the teaching of math + science. They are all important. America's historic places need more funding to address deterred maintenance, better interpretation, more engagement w/youth. The federal government should play a leadership role in promoting heritage tourism, encouraging more families to visit important places in American history. We need to develop a youth corps to help address the 2 billion in deterred maintenance needed for historic structures in national parks. Provide real experience doing meaningful work in a real place (I wrote this before Secretary Salazar asked his last question and I agree with Bill Cronan's response- human history and natural history are not disconnected and shouldn't be treated as if they are).

Discussion Question 1

Written & Online Comments

(cont.)

Immediate action to drastically reduce carbon pollution, and a dedicated funding stream for natural resource restoration and adaptation is critical to the future of our lands, waters and wildlife. This will also create American jobs on American lands.

1) DOI + USDA should partner with D of Education and mandate every American child has environmental education as a core class from K-12. These classes should begin by giving children a "wow" moment with wildlife- seeing manatees or fox kits or raptors, or fishing. As children grow, they learn about clean air, clean water + values conserved lands have on ecosystem services and in high school learn about the economic benefits + drivers in communities of conserved lands. 2) DOI should partner w/other federal departments (DoAg, DoEnergy, DoDefense, DoCommerce, etc...), states and all NGO's to create the "United States Conservation Plan" This would incorporate state wildlife action plans, National Wildlife Refuge Comprehensive Conservation Plans, National Parks, BLM, Forests, TNC Ecoregional plans, Conservation easements, etc...it would incorporate everything and create a map of currently protected lands and waters and show the priority opportunities (regardless of current ownership + its political implications) to provide a roadmap of where we as a nation should go. We don't have to protect everything but people should understand the true value of lands + waters in relation to the following: ecosystem services (cleaning the air + water+ providing storm buffers), wildlife corridors, urban refuges and parks (they are different) places to recreate, show where counties + cities should should grow and develop and where they should not. People like plans and they like maps. We need to know where we need to go; only then can we decide if we actually want to go there.

Keeping family farms and ranches viable. Sustainable agriculture is key to good conservation.

Eliminate the Estate Tax for family farms and ranches so they can pass their places on to their kids. Insure that BLM and Forest Grazing permits remain intact

Great regional collaborations act as state jurisdictions as well as the private and philanthropic areas? , in partnership with the Feds in a new model. 2. Collaborative partnerships up the great, historic rivers with the urban populations, along recognized regional pathways.

Funding, Focus, Vision. The problems are many but having 1 funding, focus and vision for the administration across all agencies will ensure success.

Large initiative to create work around forest, range, marine restoration + management

Getting children outdoors into nature, interacting with plants, animals and the natural elements- soil, water, etc.

Federal Estate Tax deferral for working farms and land of conservation value. Permanent Conservation easement tax incentives for farmers

Discussion Question 1

Written & Online Comments

(cont.)

1) make sure we have another generation ready for waiting to take over as stewards of our lands
2) making sure we have them natural resources worth inheriting

1) get the next generation involved—listen to them—recruit them and let them lead and be ambassadors. 2) support grassroots efforts and conservation volunteers

Having programs to help urban parks which could be accessed directly by private non-profits which are park-focused. Help is needed for capital repairs as well as programs. Please hold a regional listening session in Pittsburgh.

Local city parks are the first place and least expensive place to connect civilian kids to nature. Stop neglect of urban parks. Great conference.

With respect to educating youth -- focus on the end product. We determined 5 characteristics that a conservation-minded program would instill: 1. A sense of wonder 2. An understanding that everything is connected 3. A realization that nothing is free 4. it's your responsibility to do something (lift a shovel, write a check, plant a tree) 5. Vote (it doesn't matter who -- we advocate only that to vote is an act of conservation -- many land issues are decided by officials of local, state, and federal governments. These 5 concepts can be taught in engaging ways at all levels. Great meeting -- thank you for a terrific START!

The pattern of each successive generation becoming increasingly disconnected from nature. Decreasing modeling by adults, for children, as to the value of learning about and spending time in nature.

Focus all efforts, all strategies, on children. Ongoing PSAs by top govt officials promoting value of nature and in getting outdoors. (Make them creative, hip, youth-oriented). Invite at least 100 people under 20 years old to next year's conference (youth infusion). Engage landscape artist Clyde Aspevig's concept of "land snorkeling" as a new way of enticing kids back to the outdoors/nature.

the creation of parks, tracks and open space in proximity to urban areas. Too many children don't have access to safe places to play to ride their bike or just goof around

shine the spotlight on innovative projects like the Met Branch trail here in DC that seek to provide safe class for children, their parents, and grandparents in urban neighborhoods

Bipartisan efforts that recognize conservation is conservative. Alternative energy/pricing carbon. Full funding for LWCF. Expanded federal agency law enforcement to protect public lands from abuse by OHVs and other illegal activities. New mining technologies and regulations that reduce mining's environmental impact. Particularly important due to demand for rare earth metals for alt. energy. We need to address maintenance costs concerns by increasing wilderness designations, and thus having less infrastructure to maintain. Develop a land acquisition vision that prioritizes areas in greatest need of additional public lands/open space-- with an eye towards keeping development in check

Discussion Question 1

Written & Online Comments

(cont.)

Urban Parks, greenways, incentive programs at state, local, federal level to connect children + families w/the great outdoors- address park deserts-establish SAFE ROUTES TO PARKS. Funding for programs that connect kids w/outdoors and greening initiatives that green urban areas.

Communities can be a powerful force in implementing environmental and conservation programs. Schools can teach children about these issues through a more intensive curriculum starting in early grades and continuing through college. Dept of Labor can design special training programs that will encourage youth to become stewards of our land. We must go beyond awareness to crafting laws that will support awareness, education, and resources.

1. Allow multi-federal agency grant programs to match each other. For example, why couldn't CELP money (NOAA) be used to match FLP grants to state agencies. 2. Expand the allocation of New Markets Tax Credits for economically distressed rural communities. These tax credits can become a huge incentive for directing private investment to help with landscape scale conservation endeavors. Get the US Treasury into Obama's Green Team.

Team all federal, state, and city agencies with the non-profit, community-based organizations to approach each neighborhood and community one at a time, inviting new and non-traditional partners into the work, celebrating success and sharing elsewhere where there is potential.

To expand support we must maintain the legitimacy of already preserved landscapes. An ongoing program for the acquisition of private holdings from willing sellers within designated protected areas, such as wilderness, is vital to opening legitimacy.

protecting natural and cultural heritage resources for future generations and creating functional human settlement patterns to accommodate population growth

1) public lands acquisition and voluntary perpetual conservation 2) European densities (>10 residential units per acre) with 750% open spaces (high density/high amenity human settlements) 5% of land can accommodate 90% of population

1. Connecting large urban populations to our parks and forests 2. Preserving sufficient buffer areas around our existing parks 3. Stewardship education

1. Expand NRA's urban communities programs such as the NPS River, Trails and Conservation Ass't program. 2. Undertake an extensive assessment and plan to identify critical lands necessary to protect our ecosystems. 3. Establish and enhance programs in our schools, communities re: stewardship

Conservation education will determine the future of our outdoor heritage. We must start young to make the connection to nature. By sparking the natural wonder of the outdoors in our youth we will develop stewardship. We have tools (field guides, lesson plans, etc.) as do others. Inventory and select best tools based on results. Share knowledge. Let the work begin...

Discussion Question 1

(cont.)

Ensuring a reliable, predictable funding stream for land/water conservation year to year to encourage better planning, public-private partnerships, multi-year projects, and the like. Overcoming the turf battles/fragmentation in Congress, among federal agencies, among state-led jurisdictions the make coordinated planning, priority setting investments on management needs impossible.

Informity and educating a citizenry that values and supports conservation efforts and that experiences our great outdoors.

Connections: Connections of land use to water connection people, children to the land formation of habitat and the need to connect people to landscapes

Thank you Secretary Salazar for your vision of unity within conservation for beginning this conversation about community. May it be extended in the senses to include all life forms, not just humans - plants, animals and rivers - engaging all in this reverence toward life. May you continue to be bold and compassionate, at once.

1) funding for public lands that can restore taff, construction, and maintenance budgets 2) look at policy changes that could make people feel more welcome! (work with private sector)

Will - we have helped restore over 1 million acres of BLM lands, and raised tens of millions of private dollars to restore/transplant herds of elk, mule, bighorn sheep, mtn goats, moose, cougar bear, and wild turkey. Would love to come and meet with you and others in interior. Thanks for this conference.

1)collaboration 2)capacity building 3) innovation incentives 4) dissemination and learning across agencies, the public, and communities through monitoring

The Great American Outdoors Initiative. The LCC effort to provide GIS and science and huge partnerships to leverage \$. You are on the right track. Find money.

In June (19th-25th) we will launch Outdoor Nation in Central Park - the first national youth summit aimed at reconnecting young people and the outdoors. The Central Park summit will kick-off the next American Revolution.

Engaging young people to lead our way back to the outdoors. We need a youth movement that is by and for young people - politically and civically engaged.

Discussion Question 1

(cont.)

Involving you in environmental and conservation issues. The importance of environmental preservation should be infused in our Educational Systems throughout the country. I believe that educators are amount the worst perpetrators of "de-prioritizing" environmental preservation and encouraging conservation. Programs that allow youth and children to explore the outdoors are constantly cut from school budgets. Physical fitness programs are cut and there are little or no opportunities for organizations or schools to engage youth in exciting outdoor activities that could spark their interest in environmental preservation and conservation activities and initiatives. Youth are easily excited by issues of environment but they don't know what to do now - or how they can contribute.

Want to thank _____ for working so hard towards conservation. Take away our gratitude.

Land and water conservation fund needs permanent funding. Better distribution of funding and flexibility to apply the funding better. When energy bills are passed, we need that profit to be reinvested into conservation programs and projects.

We regularly go hiking and fishing around lake berryessa. We want to ensure this remains.

Keep permitting access to public lands and support the multiple-use concept. All public lands should be available to our citizens with no limitations.

Mammoth lakes has a great recreation program and we need more programs like this.

Supports land and water conservation fund. Needs to ensure that it is fully funded. • Establish a national pool for national insurance emergency fund.

Want more advanced mitigation planning by infrastructure agencies – environmental review to access impacts on projects. To buy larger offsets (land acquisition) with more federal support.

I love cash creek river. I appreciate the environment and hope it is maintained into the future.

Stebanzgold canyon. We take kids into the outdoors. We bring story into the outdoors and kids love it. Kids are thrilled to see a natural place with creative stories. W use teens as mentors to engage each other to have a better appreciation of the outdoors. We hope to partnership for funding.

We maintain 65 regional parks. We are working with DOI and NPS on joint venture on concord naval warfare station to be an open public space. Support public access and want more access in the future. We also support more easements throughout CA.

Discussion Question 1

Written & Online Comments

(cont.)

More easements. Klamath cascade region – we are trying to encourage retention for water production and wood production. Working with forest service, blm and need more collaboration. Forest legacy and land and water conservation fund must allow nonprofits funding.

3M people participate in our group. MOUs with BLM and others allow us to do projects on forest and public lands. We work to build more sustainable trails. We protect wide open spaces. We need more trail upkeep. Increase in mountain biking supports more kids getting out into the outdoors. Need more money for trail upkeep too. King Range supported by Thompson – thanks.

A-Accessibility - people need to be guided to the outdoors at an early age - K-12 schools

I-Promote safer parks with free events and youth programs, have schools partner with the youth programs to get kids outdoors.

G-Having the media promote healthy role models, athletes, real life people. Have these role models speak to youth about Outdoors and being healthy.

E-Create natural play areas in structured environments such as schools.

F-Designate money within Parks & Recreation Agencies to allow for jobs that concentrate on the diverse marketing and promotion of outdoor initiatives and activities.

B-Advertisements that promote the outdoors: newspaper articles, TV commercials, bill boards, in busses and trains, social networking (Facebook), in order to have people interested in getting outdoors.

D-Create a call to action to get into the outdoors with media by showing real time activities and events to inspire action. : TV, radio, newspapers, Facebook, and text messages should broadcast events and causes created by the young generations to get people inspired to go outside.

K-Teach detailed nutritional education in schools.

J-Small competitions in communities based on the outdoor activities that kids already do... for example: kick ball, jump rope, Frisbee. Instead of winning IPOD's and X-Boxes, you win a new jump rope and running shoes to promote outdoor activities.

H-Public awareness and marketing to increase participation with diverse groups by using research, breaking barriers, being aware of language use and association, media logos, and public figures of our era.

C-Bring the technology to the outdoors. Setup days in parks with multiple Wii's to play for the community.

Discussion Question 1

(cont.)

G-Partner with universities to provide internship credits for students who help educate, provide recreation experiences, and mentor the youth on outdoor issues.

C-Create an outdoor ambassador internship that provides training and encourages teachers to incorporate the outdoors into the curriculum within their school.

H-We must create a social norm that moves away from electronic companionship and moves toward outdoor experiences that inherently fulfill youth's physical, mental, and spiritual needs.

D-Create connections and partnerships with local government departments to use the resources readily available to provide outdoor opportunities. (ie: partnerships between schools and park and recreation departments).

F-Find and foster role-modeling relationships (mentors) that involve the outdoors in communities.

E-Incorporate the outdoors into standard curriculums through field trips & life skills.

G-Advocate with dept of education & bigger organizations to get funding for Environmental and Outdoor Education programs in schools/classes and provide scholarships to get people involved in the programs. (ie: afterschool programs).

B-Establish pilot programs throughout different areas in the country, to test the validity of putting outdoor ed into the schools, then integrate outdoor education & experiences into Urban K-12 schools

F-Informing the Community about what's in the outdoors; getting the information to the schools & parents about breaking the stereotypes that the outdoors is only for privileged people or only for people who can afford to go.

A-Actively outreach and go into All communities & educate people on all the different opportunities (conservation, physical organizations, people documentaries, etc.) and benefits of the outdoors. (goal of leading to ownership of the value of the outdoors)

D-Holding free and safe outdoor events at schools in communities to get neighbors outside.

C-Create safe, green spaces for kids and families to exercise and grow their own food within their communities by inspiring and supporting local outdoor leaders and sustaining those positions by offering internships/jobs/money/support.

G-Safer and easier access to parks, fitness opportunities, and outlets.

Discussion Question 1

Written & Online Comments

(cont.)

F-Provide exciting incentives and choices for outdoor activities in schools, both for healthy living and exercise.

B-Create outdoor mentorship programs - in neighborhoods and throughout communities.

A-Create incentives to revamp health requirements that encourage healthy lifestyles. Give benefits to people exercising healthy lifestyle components - increase taxes on unhealthy items (remove or reduce taxes, or a tax credit/incentive on healthy items like fruits and vegetables) Purchase something that encourages outdoor recreation: bicycle, youth camp, etc.

E-Identify role models in specific communities and target those individuals for advocating healthy lifestyles.

H-Starting at kindergarten - changing physical education's image to have a choice because it is important to Millennials. Make it club time" instead of PE and give choice between activities like rock climbing yoga reading in the shade. Make it more fun. "

F-Website and cell phone initiatives. Outdoor Volunteer website paired with non profits. Phone - take cell phone pictures of areas that can use a project and send it to local agency that supports the above website.

B-Create an Outdoor Nation mobile national tour; and a mass media activation with a crew of Outdoor Nation representatives from North Face and go City to City and do outdoor service projects and activities. Documentary, Facebook, UTube, Twitter, Blog, big network commercials and promotional websites to promote and follow the event.

A-Create an on-line directory to provide a list of outdoor service projects from local to national - best way is to create a section on Facebook.

E-Provide training for volunteers and find funds for people to get certifications for their projects and training to learn to lead service projects.

C-Creating fun promotional events - that start small (like at school) to motivate others to get involved in service.

D-Establish an informal day, nationally, (Sunday?) or period of time (hour? Half-hour?) where people take the time to help the environment through community service. To build into a routine.

E-Outdoor classes a requirement in schools and make sure that after school programs are funded well enough to be accessible to all kids.

G-Have environmental education part of the curriculum at schools and make outdoor time as well as hands on outdoor classes mandatory.

Discussion Question 1

Written & Online Comments

(cont.)

N-Outdoor education in schools and outdoor clubs; place based learning youth stewardship programs, subsidized outdoor clubs, summer camps, green civil service opps for kids to go experience the outdoors on trails and camping and recreation.

A-Keep recess in schools as a time to learn more about the outdoors. Let them explore the outside.

L-Supporting public school curricula that take a multidisciplinary approach to outdoor experiences - art, history, sciences, English - such as the mighty acorns program.

K-School sponsored outdoor opportunities - give monetary bonuses to schools/teachers that engage in these activities.

O-Have youth and child tree planting programs in their neighborhoods.

M-Get a program to set the students education about outdoors, educate on issues and introduce outdoor activities outdoor unit in PE classes or science classes.

D-More kid friendly websites about department of interior organizations. Utilize sites that kids already use and advertise in a more relevant way. (Ex. Games relate local parks sites and make them more interesting.) Re-evaluate liability policies in schools and programs to allow kids to have better access to the outdoors and other outdoor organizations.

I-Financial aid programs as incentives to get outdoors.

J-Partnerships; teach for America and boys and girls club, americorps, do something.

B-Employment/HR companies that share millennial experiences for face-to-face hiring at events, shops etc.

K-Bring nature back to the city - urban/nature are two separate things - perception. This creates a problem and nature becomes less accessible for all people and requires resources people don't have and cant afford.

E-Jobs that protect natural places and species like forests, watersheds and fish.

F-Jobs that restore natural places to balance, for example returning brown fields and strip mines to productive land.

G-Jobs that innovate to produce consumer goods that, cradle to grave, create zero carbon.

Discussion Question 1

Written & Online Comments

(cont.)

H-Most adults who care about conservation and the environment spent a lot of time outdoors as children.

G-I have fond memories of camping, hiking, fishing-being outside-with my family.

C-The outdoor recreation areas (parks, trails, lakes/rivers) are easily accessible in my community

B-There are enough areas designated for outdoor recreation in my community

D-The youth programs in your community are affordable and accessible

E-I prefer to recreate outdoors alone rather than in groups.

B-Jobs in renewable energy like solar or wind

C-Jobs in energy efficiency like energy measurements and insulating buildings.

D-Jobs in manufacturing products for both renewable energy production and efficiency like the caulk, windows and appliances

J-More education - a two-year program.

K-More education - a four year degree

L-More education - a four year degree, plus graduate school.

M-On-the-job training.

N-A great internship with a company that is already doing this kind of work.

O-An apprenticeship in a trade or field that helps me learn all the components of this job.

Discussion Question 1

Written & Online Comments

(cont.)

P-An internship with a federal agency supporting or doing this kind of job.

E-I believe that we should make the Outdoor Nation Summit an annual event.

F-The interactive technology was helpful and used effectively at our Summit

D-I am excited about bringing this work/these ideas back home to my community/ongoing work

C-We are on the right track

A-We had a successful Outdoor Nation Summit

B-I felt heard

Having an outdoor experience at a young age can make a huge difference in someone's life.

I believe that we can, and will, make a real difference on the issues that we are addressing here at the Outdoor Nation Summit.

Outdoor education in schools and outdoor clubs; place based learning youth stewardship programs, subsidized outdoor clubs, summer camps, green civil service opportunities for kids to go experience the outdoors on trails and camping and recreation.

Lack of exposure, resources, awareness, fun and adventure family and community support to get outdoors.

Accessibility - people need to be guided to the outdoors at an early age - K-12 schools

I believe that we should make the Outdoor Nation Summit an annual event.

The interactive technology was helpful and used effectively at our Summit.

Be sure that partnerships on public lands take into consideration putting youth to work

Local projects oak restoration in Central Valley

Take advantage of unused space to creat habitat on roadsides

Advance mitigation planning by agencies transp. Water and power

Environ. Review must happen early and buy larger pieces of mitigation property and integrate into greenprint for community

Fund initial purchase of land for mitigation and land acquisition

Enjoys outdoors

Environmental education is a way to get children outside

Guidance for statewide education standards for teachers and administrators

Transportation for students to outdoor sites- need to fund buses

we live in a world where too many young people often have no opportunity to experience the joys of our natural world. The unfortunate reality is that, for these young people, video games and indoor activities are common practice and there is no bond with the rhythms of nature. The result is a generation that lacks this important connection. Children and families need natural areas within easy reach of our cities. The Rio Grande Nature Center or a neighborhood park, a special place like Tingley Beach or the river or the bosque - some accessible natural environment that provides that crucial connection.

Discussion Question 1

Written & Online Comments

(cont.)

Our collective desire to preserve our states' natural wonders and limited resources for future generations is something I take very seriously. We owe it to our children, and to our children's children.

Activities and youth leaders, want to connect kids

Bring core values to people; motivate through education

in-park science programs, build challenge courses, urban camping programs, canoeing programs, less traditional, training inner city kids in green careers

empowering grass roots organizations that are in communities, fresh air fun -- expose kids to a new world

Tax inducements work great as market transaction for conservation

Meet kids where they are -- do something that is meaningful, they need a job, real skills training, advancement opportunities

Science is important - good data about what is happening to our resources

People connect through local parks - promote more bond initiatives

work with 14-17 year olds -- corporation networks; involve youth -- convert them to stewards

-- people respect parks; educational programs, campgrounds, no connection with NPS, show people there is a bigger world than immediate residential areas, use urban parks, employees from communities they serve

Columbia Land Trust (OR): ways to engage private investors, strictly government route is not always successful. Land trust can build different relationships with private owners

-- youth activities/education. High school sponsored events -- run by kids. College chapters -- raise funds for conservation efforts

Florida Trails Association: Connect via local chapters. Alliance program: allows youth groups to become involved. Gateway program: volunteers, org, and community. Brings economic impacts

Discussion Question 1

Written & Online Comments

(cont.)

Farm Bill is where we can make most gains for conservation

Need to make conservation relevant to people

Need to bring stakeholders to the table

Meaningful youth programs and jobs

Environmental conservation education

Engaging citizens in conducting localized mapping that are then used by them for conservation decision-making

Early exposure to the outdoors builds life-long appreciation

Best practices for developing metrics about conservation initiatives -- improves chances for knowing audience and developing relevant responses and programs

End goal of education efforts should not be to just to create conservation knowledge and awareness but to change peoples behavior-hospitalized children holding insects had positive experience that were profoundly poignant to those witnessing it

Value of partnering with the travel and tourism industry

Some degree of land restriction is positive -- there can be negative consequences to opening access to all lands

Get kids connected with the land, with being outdoors, with nature at an early age. Teach kids how important conservation is, make it real and doable to kids, make connections between local, small scale activity and the wider good.

Engage young people by giving them concrete tasks, internships and/or jobs. They can do it and will feel accomplished and invested through this direct work. These experiences can also be lifechanging and create powerful stories on an individual level.

Use the political process to build momentum and consensus. For example, put a ballot question on to buy land, levy a tax, direct funds, to preserve open space. This could include ballot questions regarding retrofitting or expanding infrastructure to access green space.

Discussion Question 1

Written & Online Comments

(cont.)

Don't forget private land owners when considering the map of open or green space in the country. Encourage conservation easements or other tool usage to promote preservation by private citizens. These lands can informally be part of migration corridors and could serve as a critical resource to connect important lands.

Good science comes first and then resolve social conflict

LWCF criteria should recognize projects that have partnership components

Partnerships with local governments; organization and planning should occur at a regionalized level with federal support

Redefining what the "great outdoors" means

Service learning: integrate science, conservation, history and cultural values into curriculum, ways to teach math, science, national heritage; example: students at Harper's Ferry used modern media to tell the story of John Brown

Better federal partners: "extending the reach", listen to the people most affected, e.g. monuments, most people consider themselves good stewards, listen to urban America

Private lands conservation: NRCS = assistance only/land owner does conservation, half the land in ag., could use more employees/range conservationists to work with farmers, one place where additional public employees would be welcome, landscape conservation/private lands -- flexibility in funding and programs, need creativity/loosen reg's that stand in the way, success -- FERC and state examples of creative interp. and use of regs., need message from agency that applicants need to work together to develop a creative solution

Add for-profit businesses to listening tour, use business principals -- park fees, increase inside service fees

Rural legacy program -- block grant model -- administered by nonprofits in an area

2008 Farm Bill -- socially disadvantaged farmers formed an alliance and made sure that conservation came back to communities with 30% advanced pay that was advanced to people/groups who could not afford to start conservation efforts on their own

Importance of community gardens

Discussion Question 1

Written & Online Comments

(cont.)

Urban green spaces reduce crime

Urban farming

National Wildlife Refuge Foundation: People get ownership when there are things to do and use (e.g. bathrooms, shade, programs). Importance of WOW! Movement

Colorado's SCORP Planning efforts and resulting plan are an example of an effective strategy. SCORP implementation is the challenge. There needs to be dedicated support and funding for SCORP implementation and a commitment from the feds and states on this effort. More efforts involving federal and state agencies partnering in schools and establishing effective programs that connect people to the outdoors. Nation-wide marketing and advertising in support of outdoor recreation and conservation initiatives (and the Great Outdoors America initiative, in general).

Dedicate Funding. Fully fund the LWCF program with a 50-50 apportionment b/w the federal and stateside funding. Additional sources of funding may need to be dedicated to conservation, outdoor recreation, and connecting people to the outdoors. SCORP Planning. SCORP planning should be strongly supported, with federal agencies playing a meaningful role in each plan's development. States need to be provided with additional resources and support for plan implementation. Partnerships. Continuing and expanding partnerships with private industry groups, non-profit organizations, state agencies and local governments to leverage support for outdoor recreation initiatives and programs. Standardized Data and Defensible Research. By providing standardized, high quality data (GIS or otherwise) pertaining to land conservation and outdoor recreation (i.e., acres conserved trail mapping, etc), progress in specific areas can be meaningfully measured and contrasted over time and between states. This may be helpful in identifying regional needs as well. In addition, defensible research on the benefits of outdoor recreation and connecting people to the outdoors is critical. Connect the Dots. Land conservation, paired with outdoor recreation, play an integral role in building healthier and more sustainable communities. Continue to expand dialogue and the connection between outdoor recreation, conservation, public health, and overall quality of life.

Agriculture and food generate powerful connections to the land – for some these are life-long connections, for others newly discovered ones. In either case, these connections encourage stewardship of the land - a deep sense of responsibility for careful management and use that respects its environmental importance as well as its economic value

Discussion Question 1

Written & Online Comments

(cont.)

Glynwood Center is a nonprofit organization located outside Cold Spring in the lower Hudson Valley. A primary focus of Glynwood's work is to help communities save farming, with a special focus on the Hudson Valley and the Northeast. Through our community-based work, we identify other needs that must be addressed at the regional level. We do this through workshops, training programs, studies and reports and, most recently, by taking the lead in the creation of critical infrastructure. Through this work we have developed a deep understanding of the importance of farming to the future of the Hudson Valley and the challenges inherent in retaining agriculture within the sphere of a major metropolis.

The Quadracentennial Visioning Process: As a culminating effort of the Hudson Fulton Champlain Quadracentennial celebration, six Task Forces were created to develop a vision for key elements of the Valley and to make recommendations for how the vision might be achieved. One of the six Task Forces focused on Food and Agriculture. "The Hudson Valley is universally recognized as a world class landscape producing world class food. The Hudson Valley and the Napa Valley are coastal brackets for a country that has rediscovered its respect for food and for the people, water and land that produce it.The importance of agriculture to the region's quality of life – its economic and environmental well-being and the health of its residents – is understood and supported by public officials at every level, as well as residents in the entire metropolitan region....The Valley stands as a national model for how the many and complex components of a major metropolitan region can work together to support a food and agricultural system that benefits all residents."

A primary focus of Glynwood's work is at the community level, where both landowners and local governments make critical land use decisions. Through our community-based programs we have demonstrated that once communities understand the value of agriculture, and develop strong networks of collaboration, they will take sustained action to support its continuation.

For example, our Keep Farming[®] program empowers communities to support farming and conserve farmland. The program engages community members to generate the data they need to assess agricultural resources and the contribution they make to the economy, environment and quality of life, including access to fresh, local food. In so doing new relationships are established among community volunteers, farmers and local officials.

We then assist each community in designing and implementing a strategy based on its unique circumstances. The new constituency developed through the program provides the basis for sustained action in support of agriculture, including enacting policies to create economic opportunity and growing essential infrastructure for local agriculture.

"In the Keep Farming process I was impressed how residents and farmers began having new conversations, developed a better understanding of shared issues and have continued to support agriculture in our community..."

Discussion Question 1

Written & Online Comments

(cont.)

As a result of the Keep FarmingÒ program, the town of Chatham completed a comprehensive plan with a strong section on retention of agriculture, which has recently been supplemented with its Agricultural Land Preservation Plan, which has been approved by the Town, County and the Commissioner of New York State Department of Agriculture. The plan includes the Town's vision and goals for preserving farmland and promoting a viable agriculture economy. The organization that developed from the Keep FarmingÒ program continues to promote the importance of farming through activities including an annual farm film festival and production of an agri-tourism brochure. A recent evaluation of the Keep Farming program in Chatham revealed that there has been no net loss of farmland in Chatham in the five years since the conclusion of the program

Keep FarmingÒ is the first cousin of the Countryside Exchange program. The Exchange uses the visit of a team of carefully selected volunteer professionals to catalyze a community to develop new networks of collaboration, define key issues, develop new strategies for the future, and take action. The Countryside Exchange program, which has been conducted in partnership with the National Park Service and US Environmental Protection Agency among others, again reveals the powerful impact of using new incentives for collaboration, development of new information, and "fresh eyes" to encourage community residents to connect to the land and become active and effective stewards of their communities.

In 2008 Glynwood created a Task Force composed of a broad array of stakeholders to develop an effective response to this longstanding bottleneck. In April, Glynwood launched the first mobile slaughterhouse for large animals with a USDA license east of New Mexico. The Modular Harvest System (MHS) is in operation on its first docking site in Delaware County. Now we are beginning to create the network of docking sites through which the MHS will rotate to serve farmers throughout the region. Our goal is to have one or more of the docking sites become the site of a cluster of food related enterprises, ranging from aging and butchering and value-added meat production, to vegetable cooling sheds and community kitchens. This clustering would encourage cooperation and synergy among the businesses and facilitate distribution.

Glynwood is fortunate to have among its programs the operation of a farm and garden, which allows us to demonstrate the type of management practices that we advocate. This also allows us to provide a limited number of young people with the opportunity to work with our highly experienced farmer and head gardener. Many of these young people hope to start farms or garden operations themselves someday and this is a first step toward that career. This growing interest in farming as a career is reflected in the Ag Census data. Despite the fact that the average age of farmers is going up, and over half of the Valley's farmers are 55 or over, between 2002 and 2007 there was a 49% increase in the number of farmers under the age of 2

By developing a corps of new farmers, with some solid experience, a business plan and access to mentoring, we could leverage the investment that the landowners, land trusts and municipalities have already made in protecting farmland while providing new jobs and economic activity

Discussion Question 1

Written & Online Comments

(cont.)

The farmland and farmers of the Hudson Valley make an extraordinary contribution to public health and welfare. Agriculture in this region already provides fresh, healthy food to hundreds of thousands of residents of the Valley and New York City. It has the potential to produce a great deal more. If this potential is met, it will help respond to many of the pressing issues of our era – from public health to job creation to climate change to the preservation of a working landscape that is at the heart of one of America’s iconic ‘great outdoors’

The Know Your Farmer Know Your Food initiative and the recognition and assistance it has provided to small and mid-size farmers has been a tremendous boost. This broadening of the USDA’s thinking to reflect the importance of farmer of all sizes should continue. All federal programs (including grant programs) should be reviewed and revamped if necessary to ensure that they are flexible enough to serve the needs of the different types of agriculture and the different scale that characterize the Valley.

Of course, while funding is tight everywhere, there is no end of ways in which federal dollars could leverage the funding that can be raised from both public and private sources within the Valley. Here are a few:

Funds to support creation of a comprehensive new farmer training curriculum and mentoring program that would include a range of new resources and providers, including a farm incubator

Funds to build capacity for development of agriculture- and food-related businesses

Funds to support programs that develop the constituencies needed if agricultural viability and conservation efforts are to be effective over the long-term;

Funds to support voluntary land and easement acquisition programs.

Funds to compensate farmers for ecological services and the many other benefits they provide. (Possibly in conjunction with private carbon sequestration projects.)

(cont.)

the Town of Chatham, NY: In 2003 the community was in the process of updating its 30 year old comprehensive plan, a direct result of development pressures and a sincere desire by residents to have input regarding how and where the development would occur. The community was also interested in learning about land preservation tools that could be used to protect their farms. When Chatham began Keep Farming, it was interested in developing a Purchase of Development Rights program. But, an advisor brought in by Glynwood showed that Chatham could not support a PDR program. Glynwood's training helped the town gain a better understanding of other tools and strategies that could be used to support land preservation. Chatham has moved ahead with creating a Community Preservation Fund for farmland preservation that is funded through a 2% real estate transfer fee. Chatham completed its Comprehensive Plan and incorporated the recommendations from Keep Farming into the Plan's section relating to agriculture. In 2007, Chatham was one of the first communities in the state to receive a Municipal Planning Grant from the NYS Department of Agriculture and Markets. The grant was used to review the Town's agriculture and farmland protection efforts. Chatham completed its Agricultural Land Preservation Plan in 2009. The plan includes the Town's vision and goals for preserving farmland and promoting a viable agriculture economy. It has been approved by the Town, County and the Commissioner of New York State Department of Agriculture.

As champions of our regional farmers, we need to have data that helps us to illustrate the state of agriculture in our region – good data that we can hold up to say: “farming isn’t dead!” The Census of Agriculture is an important source of such data, particularly important because it is often the only source of periodic and consistent information on farming at the county level.

The new inclusion in 2007 of farm typologies took a step in the right direction by correlating things like farm sales and the primary occupation of the farmer. It shows us how many farms are being operated by someone with another career, vs. farmers who rely on farming for their livelihood, and their general level of sales. We need to have more information related to this kind of scheme. We need to be able to filter information by typology, but also show what farmers in each typology category are producing, what they're spending, how big their farms are, etc.

Regarding the "Great Outdoors Initiative" itself, I am in favor of prohibiting commercial logging of our National Forests. Timber sales of public forests operate at a financial and ecological loss to the citizens who own these lands and sell out our public treasure for private gain. Many of our National Forests, including the White Mountain National Forest, should be turned over to the National Park Service where they will get the protection they deserve. This is particularly true in the east, where public lands make up such a tiny portion of our landscape and represent the best chance of leaving some intact forest ecosystems for our children.

3. Providing incentives, investments and policies to reconnect Americans, including outdoor recreation and educational experiences to working forests.
 - a. The American Tree Farm System does a great job on this issue. I believe the best way to accomplish this goal is to ensure that forest landowners are ensured freedom from frivolous lawsuits, unnecessary regulatory constraints and ever increasing permitting bureaucracy. Investment only occurs in an environment likely to generate a potential for profit.

Discussion Question 1

Written & Online Comments

(cont.)

5. Engaging youth to be the future conservation leaders of working forests.
 - a. The easiest way to do this is to ensure that working forest are profitable and thus citizens can see they are worth saving. Otherwise our real estate courses, which teach highest and best use, will continue to emphasize development over protection of working forests. Societal priorities are often at cross purposes of each other and thus America remains a country intent on paving our way to oblivion.

Please do your job for the citizens, not for the logging industry. I hardly need to say that you work for us, not for them.

Thank you for the opportunity to comment

I also believe recreational off-road vehicles should not be allowed in national forests and parks. They often do irreparable damage to the landscape and ruin the outdoor experience for others.

With regards to the "Great Outdoors Initiative," I am in favor of prohibiting commercial logging of our National Forests.

Timber sales of public forests operate at a financial and ecological loss to the citizens who own these lands.

Many of our National Forests, including the White Mountain National Forest, should be turned over to the National Park Service where they will get the protection they deserve.

This is particularly true in the east, where public lands make up such a tiny portion of our landscape and represent the best chance of leaving some intact forest ecosystems for our children.

Agriculture families, programs and initiatives instill young people with a lifelong connection to the land and its resources, and can serve as a model for reconnecting people to the outdoors. Current youth programs should be engaged such as 4-H, FFA, Extension, and scouts in order to capitalize on existing efforts and infrastructures. Of equal importance is keeping intergenerational ranches and farms in production. Key changes in law must take place to ensure that the next generation returns to our farms and ranches:

As referenced in previous sections of this document, the Land and Water Conservation Fund will be a critical mechanism to ensure greater and more effective conservation and reconnection to the outdoors. CCA and its members will consider full funding support after a clear design is determined of how the fund will be allocated. CCA is not indifferent to most agriculture organizations in that our policies require a clear understanding of how federal funds are to be used prior to requesting additional appropriations.

Discussion Question 1

(cont.)

Thank you for the opportunity to participate in the America's Great Outdoors initiative by attending the listening session in Denver and submitting written comments. America's Great Outdoors is an opportunity to transform conservation for the 21st century, and leave a legacy that future generations can enjoy. The Wilderness Society supports the principles outlined in America's Great Outdoors and hopes the initiative will lead to lasting protections for our treasured public lands while connecting Americans with wilderness. We are greatly encouraged by the Bureau of Land Management's recent decision to protect the spectacular Vermillion Basin from oil and gas leasing in the revised Little Snake Resource Management Plan. We would like to see the administration take more bold actions like this to protect key landscapes on a large scale through America's Great Outdoors.

Effective conservation takes place at landscape scale and is directed by local partners and multiple funders working together in watersheds like the South Platte and Yampa River Valleys and the San Luis Valley. Employing these strategies, Colorado continues to be a national leader in conservation efforts.

Great Outdoors Colorado provides a public funding model for leveraged strategic investments in key landscapes throughout the state that encourages collaborative partnerships between local and state conservation entities, landowners and multiple funding sources.

Colorado Conservation Partnership continues to identify strategic priorities in the state and partner with public, agency and private conservation investors to attract and invest more funds to meet the highest conservation needs. Coordinated conservation planning at the watershed level ensures maximum effectiveness.

Landowners in Colorado are critical to conservation success on the ground having voluntarily conserved over 2 million acres of private lands through protective tools such as easements. Federal and state tax incentives remain critical to this effort.

The idea of a land trust specifically for agricultural landowners was new in 1995, but other states quickly followed in Colorado's footsteps. From Kansas and Texas to Wyoming, Montana, Nevada, California and Oregon, there are now seven rangeland trusts which together have protected more than 1.6 million acres of land across the West. This is clearly an idea that works, both for landowners and conservation.

Directly engaging landowners and federal land permittees will maximize the return on investment made through the America's Great Outdoors initiative. Payment for performance principles should be established to ensure that conservation objectives are being met and that every dollar counts toward a more sustainable environment. For agriculture and the vast majority of landowners, the program must allow the use of our natural resources and lands in order to produce goods and services for our citizenry. History has illustrated that voluntary incentives over mandatory requirements will equal increase participation and effectiveness.

Discussion Question 1

Written & Online Comments

(cont.)

Reach out directly to landowners and organizations that directly represent landowners. Offer an opportunity to partner with these landowners to achieve specific conservation, recreation and reconnection goals. Arrive at mutually-obtainable and beneficial objectives that are rewarded based on performance.

On July 12 just past, the New England Governors received the second report of the Commission on Land Conservation and, by unanimous resolution, endorsed the five, closely-related national demonstration projects the Commission proposed, to: • Keep Farmlands in Farming, • Keep Forests as Forest, • Connect People to the Outdoors, • Protect Wildlife Habitat, and • Safeguard Coastal & Estuarine Lands.

Each of the five initiatives was designed by a working group assembled by our Chief State Officers with appropriate leadership, six-state membership, and senior officials from your own federal agencies. The working groups responded energetically to this opportunity in the belief that effective regional action will add value to their own state's related agenda and goals, especially in a time of severe state budget stringency. At the same time, they believe this a most auspicious time to undertake these initiatives in light of the Obama Administration's express interest in addressing the nation's resource management issues at landscape and regional scales, especially through demonstration projects that link the public, private and philanthropic sectors, and honor the nation's heritage of private land ownership.

Educating the general public to the many public benefits of the landscape and its wise use, and cultivating a conservation ethic as an active duty of citizenship;

Making the landscape with all its benefits more accessible to underserved populations, and our settled places, more livable and healthy;

The overall goal for this effort will be to set in motion a farsighted and far-reaching effort to conserve New England's diverse, iconic landscape, and help ensure that it will remain indefinitely healthy, productive, and accessible to the citizens of New England and the nation.

The outcomes we foresee offer a strong, self-renewing legacy on the New England landscape, including: • Farms and forests - a new, national model to increase reliance on the region's privately-owned farms and forests to grow, produce, and consume more local agricultural and forest products, and to displace building materials with carbon footprints vastly exceeding that of wood;

Climate mitigation and adaptation - more large, contiguous tracts of forest and farmlands that will increase their carbon storage capacity, facilitate their adaptation to climate change, and mitigate their loss with new forest cover in cities, suburbs, and marginal farm land;

Energy - development of greatly increased renewable and sustainable energy resources across the region where consistent with other values;

Discussion Question 1

Written & Online Comments

(cont.)

Sustainable development - maintenance of a diverse landscape on which economic opportunity, environmental integrity, and community development are effectively linked across the region, in both urban and rural places;

Biodiversity - conservation of the existing natural landscape and effective adaptation of plant and wildlife habitat adversely affected by development, climate change, and invasive species;

Culture and recreation - maintenance and enhancement of the natural landscapes cultural, recreational, and educational opportunities;

Public education - greater opportunity to experience and learn from nature close to home, wherever one may live or visit in New England.

The July 12 resolution of the New England Governors asks that the Congressional delegations of the several states support development of these five national demonstration projects; and that the Obama Administration apply related federal programs, staffing, and funding across departmental lines in new and creative ways to help us achieve their goals.

This summer, we are sending out hundreds of volunteers into the forests of the GYE to document this blight, and also to deploy pheromone pouches on selected stands of trees. This pheromone, verbenone, dissuades beetles from landing on these trees. Grand Teton National Park and the National Forest Service have seen success with this treatment, but its effectiveness is questioned by some scientists. So we are going to be deploying verbenone carefully, to certain stands of trees across the forest, and gathering some environmental data along the way, so we can better understand the pheromone's true efficacy across a spectrum of conditions. This data can actually be gathered by using GPS apps and iPhones, which can also be used to document the volunteers' excursions and efforts in the field. Our plan is to have volunteers upload their data to treefight.org so it can be used in the scientific study of verbenone, and also added to an interactive map on the site and to their own treefight profile pages, which they can then share across their social networks, thus calling attention to the situation.

A regionally groundbreaking effort, TreeFight is using modern digital tools, social media, and grassroots volunteerism to tackle an environmental problem that is rooted in climate change. The idea is to give people a more personal, tangible means of responding to environmental degradation by inviting them to come to one of the most renowned wild areas in the U.S., hike into the forest, staple a pheromone packet to a beautiful old tree (which may save its life), then step back and feel a more intimate connection to that tree, that forest, and this environment, and then go share that experience with the world.

(cont.)

We hope that the America's Great Outdoors program will take its lead from local conservation efforts that are working like those we have here in Colorado. Based on the name of the program alone, we know that you have been looking at our very successful lottery-funded Great Outdoors Colorado program. Today I urge you to follow the lead of those visionary landowners who created rangeland trusts across the West and support the state and local communities who have found ways to bring conservation funding to the table. These programs work here in Colorado and I invite the Federal government to invest strategically in those programs that have proven a success.

Investing in private land conservation and particularly the agricultural lands that make up the majority of the private lands in the West, is a critical part of achieving our collective vision of intact landscapes across the nation. These lands provide key ecosystem services and natural resource benefits at a low cost to the public as they are managed by private ranchers and farmers. They also provide key human needs, notably the production of food and furthermore agricultural families are the human fabric of our rural communities. Conservation easements are a particularly effective, low cost tool to achieve our collective goals. Lands trusts like the Colorado Cattleman's are particularly well positioned to achieve the most conservation on the ground.

1. Local incentives - We have several very effective sources of funding here in Colorado, including Great Outdoors Colorado, but they alone are not enough to meet the demand for conservation from landowners. CCALT has an immediate backlog of more the \$100 million in high quality projects. Federal investments, particularly in those areas that are not wealthy enough to develop local funding sources are a critical part to being able to protect key ranchlands that buffer National Forests, BLM canyon country, National Wildlife Refuges, and even State and National Parks.

5. Finally, we urge you to make the conservation easement income tax incentive permanent. Nationally, this single incentive nearly doubled the pace of land conservation since it was instituted in 2006. In closing, we have the opportunity to protect the West's iconic working ranch landscapes, but only if we work with private agricultural landowners. Based on our success and the backlog of conservation projects waiting for funding, the landowners are ready and we have the appropriate tools to accomplish this work. We simply lack the funding to allow all of us to accomplish our conservation goals. Thank you again for coming to Colorado to listen to our vision for conservation.

(cont.)

Dr. Fritz Reid did a good job in describing the importance of the Central Valley Sacramento-San Joaquin Delta and the coastal wetland of California from Bay to the Fraser River Delta in terms of their global significance to migratory birds. As you know, significant portions of these habitats are found in your congressional district. Ducks Unlimited is working diligently to restore these critical habitats and we appreciate your continued support as well as that of the agencies of the Obama Administration. In particular we have developed very active partnerships with the National Oceanographic and Atmospheric Administration's (NOAA) Office of Habitat Conservation, the U.S. Fish and Wildlife Service and Natural Resources Conservation Service. The impact of these partnerships has been profound. Together we have restored thousands of acres of freshwater and coastal wetlands, providing habitat not only for migratory waterfowl out for shorebirds, special status species, anadromous fish, and outdoor recreational opportunities that are becoming increasingly scarce. Thank you for your past support of this work and we hope you will continue to be one of the primary advocates of wetland conservation in the House Representatives.

Dr. Reid also reminded the panel of the interrelationship and co-dependence of our California wetlands and wildlife with that of the Alaska's boreal forest and Prairie Pothole Regions to the north which supply the critical breeding grounds for waterfowl of the entire North American continent. Your long-standing support and that of the Obama Administration for the North American Wetland Conservation Act (NAWCA) and its critical role in providing funds for much needed restoration and enhancement work has been vital. We would like to reiterate, as we indicated to Will Shafrath earlier in the day that the Administration has pledged to support funding NAWCA at its fully authorized level of \$75 million, whereas the current year's proposed budget level actually reduced this extremely successful program. We understand the nature of the budget process and the need to reduce the national deficit, yet this program attracts at least a two to one match of non-federal money, many times much more than that, so we urge you to help us in our efforts to maintain and increase funding levels for this critical program.

Another issue we raised with Will Shafrath but were unable to mention to the other members of the panel is our Sea Level Rise Adaptation Initiative (SLRAI). We would you know that Ducks Unlimited is not only interested in maintaining existing programs for wetland conservation, but is pursuing new approaches to deal with the negative impacts of climate change. An important example of this is the SLRAI. We know that sea level rise will continue to squeeze our coastal wetlands and their wildlife into smaller and smaller space. Therefore, Ducks Unlimited is proposing this initiative, in partnership with NOAA to preserve - through the purchase of conservation easements from willing seller -- those existing open spaces that potentially could serve as replacement habitat as the sea floods out the present ones. The initiative also involves a renewed effort to restore wetland that have been degraded. I've attached a copy of this proposal and a summary for your inspection.

Written & Online Comments

(cont.)

In California, water supply is always an issue with respect to wetland conservation. The Central Valley Project Improvement Act (CVPIA) almost two decades ago held great promise, providing water allocations for both wintering habitat and for summer irrigation that provides the waterfowl food, and mandating the construction of the needed water conveyance facilities. Yet, we have seen a declining amount of summer water and very little activity in construction of conveyance, all the responsibility of the Bureau of Reclamation. We need a commitment from this Administration that the Bureau will make good on its legal obligations.

The way to get people reconnected to the outdoors is to promote recreational activities, not limit access to the place. Promote things like: • Challenging roads and trails • Scenic roads, trails, (including hiking) and areas • Access to wildlife in their habitat • Photography opportunities • Multiple trailheads • Access to water sports (rivers, lakes, streams) • Good camping • Hunting and fishing opportunities People with motorized recreation in mind want a challenge for both their machine and their driving skills. The constantly maintained routes will see minimal use compared to the primitive routes when there is a choice.

Leaving challenging roads and trails open gives the public an outlet for satisfying that pent-up boredom without creating other problems. When they close an area or trail, management often has to react to the actions they have created. This circle of closure/ misuse/ closure due to misuse/ more misuse/ closure due to misuse, is not working and therefore should be re-evaluated. One way to help with this problem would be to have educated user groups police the general public. Arm user groups with the knowledge of how to identify the misuses and the ones doing it so they may be held accountable. Make it relatively easy to have people who misuse public lands to be the ones who must either pay for and/or actually do the reclamation necessary. Confiscation of violator's vehicle(s) up to and including their tow vehicle and trailer should be mandatory as well. If the above proves to not be effective enough, create and implement a mandatory course teaching the proper etiquette and use of public lands. Have a "User License" issued to those who pass this course and have special privileges to holders of the "User License". Those special privileges might include legal use of certain otherwise closed trails, roads, and areas.

A "License Fee" could be charged to those having an interest in access to "special privileges" that would pay for the course and promote better users of public lands. Here again, the holders of such a license have a reason to "police" the roads, trails, and areas. The privileges can be subject to being lost if misused.

On behalf of the residents of North Carolina, I would like to welcome you to our great state. We are pleased you have chosen North Carolina for the location of this listening session of the America's great outdoor initiative. North Carolina is one of our country's great forested states, and it boasts of a strong tradition of conservation and forest product production. We are proud of our working forests, and I am writing today as both a mother and a family forest landowner.

Discussion Question 1

Written & Online Comments

(cont.)

I also manage a 75 acre tract for my 25 year old daughter, which is within three miles of the national forest boundary. We family forestland owners view the stewardship of our land with the same commitment and have similar inspirations as President Theodore Roosevelt. In order to get back on tract with the earlier goals of Theodore Roosevelt, we must educate our youth about the intrinsic values of our forests. That is why I am happy to be able to teach my daughter about the joys and challenges of managing forestland and hope to be able to pass mine on to her someday. There are a couple of challenges I am particularly concerned about as I seek to manage my land sustainably and pass it on to my daughter.

First, I have enrolled in several Farm Bill Conservation Programs, including the conservation Reserve Program (CRP) and have encountered some unexpected hurdles and challenges with these programs. For instance, CRP helped fund the initial establishment of longleaf pine on my land but offers little assistance for the maintenance costs of this tract, including maintaining roads and controlling invasive species. Additionally, I have run into some challenges with applying prescribed fire to the tract that borders the national forest, the USDA cost-share programs have been extremely helpful in defraying costs of forest management including seedling release, reforestation, pre-commercial thinning, and control of pin beetle infestation.

Bottom line, these programs can be a very helpful tool to family forest owners who want to practice sustainable management, but some tweaks need to be made to make the work better for family forest owners.

I want to thank this Administration for your insight. All ideas begin with education, and it is intuitive to have these listening sessions to gather ideas. I think you'll find that most family forest owners invest in their land because they love their forests. And monetary incentives to outdoors would be paid back exponentially.

I would like to share a couple of specific impressions with you about last Monday's forum that might be helpful. The panel discussion was excellent. The comments made touched on virtually every key issue concerning our New Englanders forestlands. Of all the points that were raised, I think those about the economic challenges forestland owners and the industry face was most important. These directly link to the difficulty landowners have in keeping forest as forests and as such, continuing to provide the environmental benefits we enjoy.

These comments focus on regional factors to bear in mind and a new paradigm for conservation -- called aggregation -- that we believe can be replicated in other parts of the U.S.

In addition to the specific thoughts below, I would like to add my support for existing federal programs and incentives that support the conservation of our working forestland -- specifically funding of the Land and Water Conservation Fund, the Forest Legacy Program, increased funding in the Farm Bill and extension of conservation tax incentives. Consideration also should be given to new federal programs with regional applicability.

Discussion Question 1

Written & Online Comments

(cont.)

Points to bear in mind with respect to New England forests and conservation. Landscape scale is relative. Relative to other parts of the country -- New England is small. Yet, its natural resources are of global significance: the Northern forest represents the largest intact temperate broadleaf forest in the U.S. In contrast to other parts of the U.S., the forestlands in this region are overwhelmingly in private ownerships. Some 80-85% of the forests are privately held. Much of the forestland is in small ownerships. The current economic recession notwithstanding, land holdings continue to be subdivided -- driven by underlying real estate values and the transfer of land to younger generations. New England has a long tradition of conservation. Today, there are some 400 land trusts in the region and many conservation innovations were developed here.

New England Forestry Foundation is the only regional conservation organization focused on conserving forests and actively promoting sustainable forest management. A hallmark of our work has been landscape scale conservation. Our organization has conserved more forestland than any non-profit in the region -- 1.164 million acres, larger than the State of Rhode Island. We hold the largest forestland conservation easement in the United States -- the Pringree Easement which totals 762,000 acres.

We believe that aggregation is the solution to this conservation dilemma. Aggregation bundles individual land trusts' projects into one larger project. As such it: Capitalizes on the local land trust infrastructure, provides access to funding not possible with smaller-sized projects, achieves economies of scale for multiple appraisals, baseline documentation, shared common documentation, etc. It is an initiative where land trusts are fund-raising together! Aggregation prompts land trusts to think beyond their geographic region and as such how their individual projects fit into a larger landscape scale effort that protects watersheds, ridgelines, important species habitats, etc. Aggregation is exciting to landowners who like being a part of a larger innovative effort.

New England Forestry Foundation is moving forward with the first pilot aggregation effort in Western MA. It is comprised of and includes the following: 72 projects totaling 10,344 acres sponsored by seven land trusts, projects are in 32 towns and 5 counties, landowners who have signed options to sell conservation restrictions (CRs) at 75% of the CR value, The project is \$21.3 million of which \$13.5 million remains to be raised.

As the Western Mass pilot effort gets underway, New England Forestry Foundation has identified 14 other targeted conservation areas throughout the region for future aggregation projects. We are reaching out to the land trusts in these areas and have met with representatives in nine of the 15 areas. Our hope is to engage up to 120 regional and local trusts in this expanded aggregation effort resulting in 500 individual projects totaling 120,000 acres.

I am writing to express the support of Pheasants Forever for this project and to note our willingness to become a partner with the Administration, Ducks Unlimited, and other organizations that ultimately we expected to play leading roles in conserving this ecologically important landscape.

Discussion Question 1

Written & Online Comments

(cont.)

Easements are popular among many landowners, particularly ranchers, in the Prairie Pothole Region. In fact there is a long list of landowners representing roughly 300,000 acres of habitat waiting to be considered for a grassland or wetland easement. Since the inception of the easement program, landowners have enrolled 1.8 million acres in the easement program, and it is anticipated that primarily through this mechanism we can conserve an additional 2.5 million acres. By doing so, we can thus ensure that this critically important ecosystem, which provides habitat for so many species of upland birds, waterfowl, and other wildlife, will continue to do so in perpetuity.

We think of byways as the 21st century offspring of the nation's conservation efforts that brought us National Parks, National Forests, and National Wildlife Refuges - all these lands were acquired for Federal agencies to manage and protect for future generation. Byways, on the other hand, are corridors through America's communities that are managed by local grassroots organizations. They often link the State and National Parks, Forests and natural areas, unifying the recreational and educational opportunities of a region. In essence, when the secretary of Transportation designates a route as one of America's Byways, the management organization is committed to working with Federal, State and local communities to protect the unique resources while providing access to the experience.

Byway travelers are encouraged to get out of their cars and experience "recreational travel," connecting with the history, culture and natural resources. In fact, Lakes to Locks Passage travelers walk, bike, hike, boat the byway - and only drive it if they must. We encourage the visitor to connect with the people who live and work in the community they have come to visit; to hear the stories, enjoy the smells, taste the food, sway to the music, and experience the place.

Another key strength America has to offer is a willingness to engage as volunteers - both donated time and money. Organizations that have strong leadership and organizational management will have programs, events and activities that serve the community need and attract volunteers and organizational members. The "cream" of these people will rise to leadership roles and continue the cycle of organizational sustainability and stewardship of precious resources.

I am the Education and Outreach Coordinator for the Peconic Land Trust, located on eastern Long Island, New York, and I create and conduct educational programs that connect many, many children, families and senior adults with a variety of outdoor spaces, including our beaches and bays.

There are growing and exciting efforts here to restore New York - New Jersey Harbor Estuary. It is a partnership that brings together the Army Corps of Engineers, National Park Service, Environmental Protection Agency, and numerous state, local, and civic partners. Its epicenter is Jamaica Bay, approximately 25,000 acres of wetlands that are part of Gateway National Recreation Area and Jamaica Bay Wildlife Refuge. Several related efforts in and around the Bay provide a model for how local-state-federal cooperation can restore damaged ecosystems, improve public access and quality of life, manage growing, flood hazards, and create jobs and economic opportunities. These are key opportunities in engaging young people in outdoor recreation and stewardship of our natural resources.

Discussion Question 1

(cont.)

To highlight one project in Georgia, much of the floodplain along a 50 mile stretch of the Ocmulgee River between the cities of Macon and Hawkinsville is already in public ownership, but is managed under a patchwork of federal, state, and local jurisdictions. Because of this fragmented management, recreational access to the river has traditionally been very limited. RTCA is helping to change that by working with the city of Hawkinsville and Bleckley, Houston, Twiggs, and Pulaski Counties to develop and improve public access points along the river, thereby creating a canoe trail, or Ocmulgee Blueway. When the Blueway project is finished, RTCA's partners will be able to promote river events such as festivals, river races, and run/bike/paddle races that can be combined with other eco-tourism promotions in each county. These developments will support local businesses, such as outfitters, restaurants, hotels, and shops, as well as create new constituencies for environmental stewardship.

RTCA is a successful Federal program that helps communities. It should be expanded by Congress and serve as a model for future efforts.

The Georgia Wildlife Federation and the National Parks Conservation Association would like to commend and express our support for efforts by the Greater Macon Chamber of Commerce, the Macon-Bibb County Convention and Visitors Bureau and others, in consultation with the National Park Service to seek to undertake a study of the potential for enlarging the boundary of the Ocmulgee National Monument. Such a study is long overdue. In supporting these efforts., however, we feel that it is critically important for Congress to also examine the conservation and recreation needs of the broader Ocmulgee River corridor south of Macon, as was requested by the Georgia General Assembly in 2004.

It is our belief that a Special Resource Study would recognize significant parts of the river corridor as being worthy of inclusion in the National Park system as a National Preserve, an envisioned by the Georgia General Assembly. A boundary adjustment for the National Monument could be used to protect the archaeological resources and Muscogee Creek historical landscape between the Monument and Bond Swamp. A national Preserve designation could then safeguard in perpetuity public hunting lands and natural areas from Bond Swamp south, incorporating the Oaky Woods and Ocmulgee state Wildlife Management Areas.

An SRS would accomplish a thorough inventory and evaluation of the cultural and natural resources of the corridor. It is the only thing that will adequately fulfill the intent of the Georgia General Assembly resolution by making a determination as to whether these resources are 1) nationally significant, 2) suitable for inclusion in the National Park system, 4) feasible additions to the system, and 4) in need of direct National park Service management expertise, instead of protection by some other federal, state, local, or private sector entity. The SRS would produce a range of options and a recommendation that could then be acted on by Congress.

I want to reiterate our offer to host an America's Great Outdoors Listening session in Chicago at the Brookfield Zoo. Attached is information about out facilities, as well as two recommendation for topics on which to possibly focus the session.

Discussion Question 1

In addition please know we remain interested in exploring a partnership with the Department to provide quality opportunities for teachers and college-aged participants within the Society education and career ladder programs.

Chicago Zoological Society (CZS) is pleased to offer Brookfield Zoo as a venue for a listening session in the Chicago area. Brookfield Zoo is owned by the Forest Preserve District of Cook County and managed by the Chicago Zoological Society.

A listening session focused on the Great Lakes with emphasis on the local, state, and federal public programs and outdoor recreation opportunities located within the Chicago Wilderness focus area - From southeast Wisconsin to northeast Illinois into northwest Indiana and southwest Michigan is proposed. The boundaries of the Chicago Wilderness "footprint" is based on watersheds, but in this highly populated and developed region there are numerous local, state, and federal resources within less than a day's drive from Milwaukee, Chicago, Indianapolis, and Detroit. Such a session could also include the Zoo and Aquarium Partnership for the Great Lakes, a consortium of over 40 U.S. and Canadian institutions that annually host more than 30 million guests - including millions of school-aged children- and serve more than 1 million member-households.

Prescribed fire. The use of prescribed burning in the Southern Appalachian mountains is misguided. Prescribed fire in this region does not replicate any natural condition, or natural process. Fire in this region would not occur unless ignited by humans. Lightning caused fires are so rare and their impact so small that they have an inconsequential effect. Prescribed fire does far more harm than good. It has the potential to do substantial damage to the forest and plant community. It interferes with the life cycle of ground-nesting birds. It threatens to destroy soil nutrients. In the Southern Appalachian mountains prescribed fire should be prohibited on all lands managed by the National Park Service and on all lands managed by the U.S. Forest Service, except, in the case of the U.S. Forest Service, when used to prepare land for replanting. Please note that this comment applies only to the Southern Appalachian mountain region. I make no comment about use of prescribed fire on public lands elsewhere.

Timber sales. The U.S. forest Service should stop selling timber and other forest products. I am an owner of commercial forest land. The U.S. Forest service competes directly with me in its selling of timber and other forest products. The competition is unfair. The products sold by the U.S. Forest Service are highly subsidized by the U.S. Government. This places me at an unfair disadvantage. The U.S. Forest Service has no place and serves no public good by selling subsidized commodity forest products. Private, unsubsidized producers have adequate capacity to fill the entire demand for timber and other forest products.

Outdoor recreation. The primary mission of the U.S. Forest Service should become one of providing outdoor recreation. The Service should be selecting at least one Ranger District on each National Forest and developing on each a recreation intensive usage. Creative ways must be thought up to help finance such programs. On an experimental basis license fees, analogous to hunting and fishing licenses, should be considered.

Discussion Question 1

(cont.)

National Parks Work! The National Parks embody America's natural and cultural heritage. They preserve the exemplary places and tell the defining stories of the American character and experience. National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning. Consequently, National Parks are the heart of America's Great Outdoors and should have a prominent place in the President's initiative.

We are pleased to hear that there will likely be a Great Outdoors America Initiative listening session in the Los Angeles area, perhaps as soon as July. We believe the Great Outdoor America Initiative will provide an excellent opportunity for the Environmental Protection Agency, the Council on Environmental Quality, the Department of the Interior and other agencies to hear from diverse constituencies about the need for improved access to healthy recreation opportunities on our public lands.

We strongly support the objectives of the Great Outdoors Initiative. In particular, the Conservancy commends the President for recognizing in his memorandum of April 16, 2010, that "communities are uniting to protect the places that they love, and developing new approaches to saving and enjoying the outdoors." That is, indeed exactly the role that the Conservancy aspires to for historic structures, cultural properties, and landscapes in the Apostle Islands region.

We also agree with President Obama that the federal government "must look to the private sector and nonprofit organizations" to carry out the Initiative. The Conservancy stands ready to play that role and encourages the agencies charged with carrying out the Initiative to meet the President's charge of providing "the support of the Federal Government to help [our] community-driven efforts to succeed."

As the federal agencies develop and implement a strategy under the President's directive, the Conservancy asks that recognition be five to the fact that virtually every national conservation system unit has historic and cultural resources. That is certainly the case for the Apostle Islands National Lakeshore, where there are an abundance of cultural and historical resources. It is proven experience that public visitors respond very favorably to interpretative activities that involve stories about the past, especially when presented first-hand by those who have lived through, or are personally connected with, those events. We therefore urge the agencies responsible for the Initiative to make the protection and interpretation of historic and cultural values a top priority.

Discussion Question 1

Written & Online Comments

(cont.)

This historic legacy of many national parks, especially those like the Apostle Islands, is often defined from the experiences of the people who lived in and used the area. History is not limited to artifacts, old buildings, and cultural landscapes. Highlighting and perpetuating the importance of the human experiences that help define the historic and cultural setting of a conservation system unit should be as much a part of federal management efforts as building restoration, artifact display, and archival preservation. In those areas where historic communities remain present and active, a special effort should be made to maintain the relationship between people and the cultural resources. The Apostle Islands region represents an ideal test case for this proposition, as many of the historic and cultural properties in the area are still linked to the local community which is, in turn, deeply interested in the protection and interpretation of such resources.

The Conservancy itself is engaged in Park Service-approved activities to restore the historic West Bay Club property, currently under a use and occupancy estate. In addition to taking steps to maintain the relationship between people and places, federal agencies should do all they can to meet their own historic preservation duties. Unfortunately, despite the hard work and commendable effort of federal agency staff, funding is not sufficient to carry out his mission.

The Buffalo Gap National Grasslands are for the most part, well maintained and being exceptionally cared for and preserved for the next generation. Allotments are managed as an economic unit with private area ranches in order to fulfill the goals of Title III of the Bankhead-Jones Farm Tenant Act of stabilizing and perpetuating the rural, agricultural economics of the arid plains of the western United States.

Reconnecting people to the outdoors must include proper management of our collective resources and wildlife so people will be able to view aesthetically pleasing vistas without soil erosion and fear of disease. Further, closing existing roads and trails creates obstacles to people enjoying the grasslands. The Interior Department should be facilitating, not discouraging, the public's enjoyment by making it easier, not harder to access public lands.

The Buffalo Gap National Grasslands has traditionally been managed for and achieved: conservation of the land and sustainable use of the resources, provided vehicle use for access to private lands and recreation; and equal opportunities the disabled, aged and/or infirm. Recently, these conservation and recreation achievements have been threatened by ideological management of the National Grasslands.

I strongly support this idea and see this as a great opportunity for the Department of Interior and the other engaged agencies to hear from the public about the on-the-ground needs and opportunities to protect and manage our natural resources across a broader landscape for all Americans.

Discussion Question 1

Written & Online Comments

(cont.)

We have a number of local initiatives working to keep private forestlands intact as working forests while continuing to provide important ecosystem services rather than be lost permanently to development. I have worked to provide the resources needed to ensure that our federal agencies are able to restore landscapes damaged by poor practices in the past and in the process provide jobs for our communities.

Back to Grayson County and surrounding counties. I mention surround counties because to participate in the contemporary marketplace, a certain volume of product is required. The number of people cooperating together is determined by how many are required to get the job done. To start the ball rolling, to attract investments, businesses, and jobs, Grayson LandCare has taken the lead with livestock and forestry -- steps are being taken to increased farmer incomes and secure investments for locally owned and operated businesses. This past year, the committee has explored with Congressman Boucher's Office, Virginia Tech Colleagues of Natural Resources and Agriculture and Consumer Services, Natural Resources, Forestry, and Resource Conservation and Recreation: Lorenz Meats of Minnesota, USDA Washington, Atlanta and Richmond Staff members, New River soil and Water District, New River Highlands Resource Conservation Council, Mount Rogers, Planning Commission, New River Community Partners, National Committee for New River, Army Corps of Engineers, New River Land Trust, Virginia Outdoors Foundation, Blue Ridge Forest Cooperative, Private investors, local enterprises, Grayson County Board of Supervisors, the creation of a value added livestock industry.

the US Department of Agriculture has awarded Grayson LandCare \$23,000 to create a viable plan for a local meat processing facility. The Virginia Department of Agriculture and Consumer Services; the Virginia Farm Bureau; the Virginia Tech College of Agriculture and Life Sciences, Business Technology Center, Land Care Center, and conservation Management Institute; and the USDA Natural Resource Conservation Service are working with Grayson LandCare to design a value-added locally based livestock industry including local processing and distribution. Discussions continue with potential investory and managers who are interested in participating in a branded product based upon the quality forages and water in the upper New River Basin.

The Blue Ridge Forest Cooperative collaborates directly with forestry committee of Grayson LandCare, the Virginia Department of Forestry, New Ruver Highlands Resource Conservation and Development Council, Virginia Tech Department of Forestry, Virginia Tech LandCare Center, Foresters, Inc, and Matthews State Forest to establish an increasingly profitable and sustainable forest management practices which will support local industry while protecting the quality and quantity of water in our streams and rivers. Harvesting starts this year in Grayson County.

Until recently, LandCare has been a relatively small effort of the New River Land Trust supported by the National Fish and Wildlife Foundation. With the amazing response of the people of Grayson County, Virginia Teach and more recently of the US Department of Agriculture, Grayson LandCare has grown in statue and influence both nationally and internationally. Virginia Tech has created the LandCare Center to provide Grayson LandCare with the necessary research and development tools so that decisions can be made on the best possible information. Many USDA agencies are poised to assist.

Discussion Question 1

Written & Online Comments

(cont.)

Grayson LandCare now actively seeks financial support to build upon its accomplishments to date. Increased wealth flowing into an area creates a number of opportunities for investment in local enterprises that will support local families and improve our quality of life.

Charlotte Metz Hanes is president and CEO of River Ridge Cattle and Cattle Co, a 1200 acre farm located along the New River in southwest Virginia Grayson Country specializing in naturally raised beef. The far serves as a demonstration of livestock production for the region's cattle farmers and is an on-going research partner with Virginia Tech. Through Grayson LandCare (www.graysonnatural.org), she and four other cattle producers formed Grayson Natural Foods (www.graysonlandcare.com), a company specializing in naturally raised beef. The company strives to improve the income of local livestock producers by direct marketing a value added product. The farmland also includes a business, River Ridge Outfitters, www.riverridgeoutdoors.com where Hanes serves as the President.

Charlotte is a strong advocate of proper land stewardship and conservation easements. "Easements will conserve the farm way of life and can be part of a landowners' estate planning. The New River is the "Golden Apple" for the 21 counties through which it flows in three states. If you misuse it, you lose it," she said.

Thank you for the opportunity to participate in "A 21" Century Strategy for America's great Outdoors." I applaud the demonstration of national leadership to address this critical issue. Minnesota and specifically, the Minnesota Department of Natural resources (DNR) are advancing the three major goals of America's Great Outdoors Initiative (Initiative). I invite you to conduct a listening and learning session in Minnesota to learn first-hand of our innovative work.

Minnesota is blessed with a wealth of natural resources and heritage of an engaged citizenship support conservation. Because of this, Minnesota continues to be adaptive and innovative in response to 21st century natural resource challenges. On Nov. 4, 2008, 1.6 million voters (56% of Minnesota voters) approved a proposed constitutional amendment to conserve our natural and cultural heritage. It dedicates an increase in the state sales tax of three-eighths of one percent for the next 25 years to protect, enhance, and restore our outdoor heritage, surface and ground water resources, parks and trails and arts and cultural heritage.

The 2008 Legacy Amendment reinforces the state's continuing efforts to conserve the diversity of natural lands, waters, and fish and wildlife that provides the foundation for Minnesota's recreational natural resource-based economies. As the state's lead agency responsible for conserving Minnesota's natural resources, DNR works to integrate and sustain the interdependent values of a healthy environment, a sustainable economy, and livable communities. However, we recognize that to achieve conservation results during these dynamic and changing times, we cannot go it alone.

Discussion Question 1

Written & Online Comments

(cont.)

DNR's a Strategic Conservation Agenda 2009-2013 highlights critical natural resource trends reshaping Minnesota's natural resources and identifies strategic directions that help move us forward. DNR is engaging citizens and harnessing the energy of partnerships and the power of the market place to build a conservation legacy for tomorrow's generation. Below I highlight Minnesota's efforts to accomplish the goals set forth in America's Great Initiative.

Promote community-based recreation and conservation: DNR Examples: The 10/25 Parks and Trails Legacy Planning: DNR is leading a planning effort in collaboration with other park and trail providers, non-governmental organization, and citizens that will provide guidance on how to spend a portion of the funds generated from the state sales tax increase on state and regional parks and trails. The Park and Trail Legacy Plan will include strategies for addressing the issues, trends, and needs for the state and regional park and trail system. A series of 17 workshops are scheduled across the state in May and are seeking public input on what Minnesotans envisions for our future state and regional park and trail system. This plan will be completed by February 2011.

A 21st Century State Park and Trail System: Promote state parks and trails as gateways to the outdoors by ensuring high quality, easy to access, safe recreational opportunities, especially for families and new participants. A targeted redesign of state parks, focusing on innovative facility design, new technologies, and improvements to existing infrastructure, will attract future generations to the outdoors while improving the economic health of surrounding communities and providing for continued resource protection. For example, Minnesota's state park visitation rates increased by 1 million visitors in 2009 -- in part due to successful new initiatives including the introduction of state caper cabins.

Support existing programs and projects that educate and engage Americans in our natural and cultural heritage: DNR examples: Outreach and education: innovative partnerships enhance DNR's outreach efforts. Best Buy recently sponsored a geoarching history challenge in state parks for Minnesota's sesquicentennial. DNR also partnered with REI to provide "I can camp" programs. DNR outdoor and education programs provide recreational opportunities and promote stewardship outdoor building, and safety. Examples include MinnAqua, Fishing in the Neighborhood, Project Learning Tree, Project WET, project WILD, Project get outdoors, Archery in the schools, and becoming an outdoors woman.

Discussion Question 1

Written & Online Comments

(cont.)

Goal 2: Build upon state, local, private, and tribal priorities for conservation and advance those priorities through public-private partnerships and local conservation strategies. Minnesota Forests for the future program: DNR works with citizens to encourage development that conserves natural resources. This program brings together state, federal and private partners to secure permanent, large-scale conservation easements to help maintain undeveloped forest land as unfragmented wildlife habitat, a sustainable source of timber, and a place for public outdoor recreation. In 2009 the program received Legacy Amendment funding to complete one of the largest conservation projects in the state by protecting 189,000 acres of forest through a "working forest" conservation easement. This easement will protect that private working forest land from development, while continuing to provide public recreational access and produce sustainable forest products.

Forest Certification: ore than 4.8 million acres of DNR-administered forest are dual-certified as "well-managed" under the international standards of the Forest Stewardship Council (FSC) and the Sustainable Forestry (SFI). Forest certification ensures sustainable management practices that promote diverse, healthy, and productive forests. Certification is essential to maintaining the competitiveness of the state's forest industry in the face of global competition and markets demanding assurance that wood products come from sustainably managed forests.

Working Lands Initiative: DNR promotes integrated approaches to managing private and public land and water resources. This initiative works to unify, coordinate, and improve conservation investment on public and private lands Minnesota's prairie pothole region. The partnerships leverage state investments with non-state dollar and achieves conservation goals at the lowest possible cost by protecting and managing state lands and by providing technical assistance and cost-share incentives to private landowners. The goals to restore and protect an additional 2 million acres of grasslands and wetlands while maintaining the existing the habitat base.

Wildlife Management Areas (WMAs): DNR manages 1,433 public wildlife areas on 1.3 million acres in 87 counties. They maintain critical fish and wildlife habitat, improve water quality, and provide recreation for hunters, anglers, and wildlife watchers who continue significantly to the state's economy. New biomass harvesting pilot projects on WMAs support development of conservation-based energy sources. to meet landscape-scale goals WMAs are managed in coordination with the Prairie Stewardship Programs, the Scientific and Natural Areas Program, state parks and deferral farm and other essential programs.

Groundwater mapping and monitoring: two thirds of Minnesota's public water supply comes from ground water. Demand for water is increasing at a rate greater than population growth. As demand increases, communities in some areas of the state are now struggling to find an adequate water supply. Minnesota is taking a proactive approach by mapping and monitoring of ground levels with state, local and private partnerships to provide information needed for water supply planning and the long-term protection of the state's most valuable resource -- water. In October 2009, DNR developed a plan with a public and private partners for a comprehensive groundwater monitoring network in the 11 county metropolitan region , an area in which many communities are 100% dependent on groundwater for drinking water supplies.

Discussion Question 1

(cont.)

Minnesota have come together to protect the places they love and develop new approaches to reconnect people to the outdoors, create innovative solutions through broad public-private partnerships, and use science-based management practices to ensure effective results. I look forward to working with you on America's Great Outdoor Initiative.

On behalf of Outdoor Industry Association (OIA) and its member companies. I want to thank you for speaking at OIA's industry breakfast and visiting Outdoor Retailer. The 800 executives who attended the breakfast greatly appreciated your insight into the important role active outdoor recreation plays in fueling the nation's economy, encouraging Americans to engage in healthy lifestyles, and in shaping land conservation policy. Your presence on the tradeshow floor reinforced President Obama's commitment to the America's Great Outdoor Initiative.

I would specifically like to acknowledge your support for fully funding the Land and Water Conservation Fund (LWCF). The outdoor recreation industry depends on healthy natural lands and quality outdoor recreation infrastructure to thrive. We are extremely grateful for your long support of and frequent call for dedicated funding for LWCF, legislation crucial to the success of the outdoor industry. 1

I would also like to take this opportunity to thank you for hosting the America's Great Outdoors Listening session in Salt Lake City. By working to engage the American public in an outdoor recreation and conservation policy discussion you continue to prove the administration's commitment to a 21st century conservation strategy built from the ground up.

OIA looks forward to continuing to work with you and the administration as the America's Great Outdoors Initiative listening session wind down and the president's report is prepared. OIA will be submitting a list of policy recommendations based on our own "homegrown" listening sessions conducted across the country this summer. Thanks again for your time and support.

On behalf of the New State Department of Environmental Conservation, than you for convening the recent America's Great Outdoor Initiative listening session in Poughkeepsie, New York. The historic Hudson River Valley is the birthplace of American traditions of conserving and enjoying the "great outdoors". As you examine how to reconnect Americans with nature and heritage and how to enhance and benefit from America's natural and cultural resources. I appreciate the opportunity to weigh in on the challenge we face and offer suggestions on how 'the federal government could best support state efforts'

In our experience, the most effective strategy for promoting conservation, recreation and connecting the public to outdoor experiences is building partnerships. We need strong federal support for collaborative efforts between public and private agencies, as well as local, state and federal agencies. This needs to be couples with consistent, sustainable funding for conservation programs that improve our economy while restoring our environment

I have included an extensive overview of our federal and state program partnerships in the enclosed statement. However, I would like to highlight two examples of programs that could generate both immediate and longer-term environmental benefits with increased federal investment.

Discussion Question 1

Written & Online Comments

(cont.)

For the past four decades, conservation and service corps have proven that young adults engaged in stewardship programs can make significant contributions to their local communities. Expanded funding of the AmeriCorps program will help ensure completion of a backlog of needed conservation projects as well as help train and support the next generation of environmental leaders.

The idea that students should become involved in natural resource conservation and recreation work on public lands was hatched in the Hudson Valley as part of a Vassar College student's senior thesis. In 1957, Elizabeth Titus Putnam's vision became a reality with the creation of the student conservation Association, which proved that young adults could make lasting and significant difference in the stewardships of public land. Now operating in all 50 states, SCA was the forerunner of national, state and local, youth conservation corps[s programs, including today's AmeriCorps programs.

In the Hudson River Watershed, members of the Student Conservation Associations Hudson Valley AmeriCorps programs provide essential education and outreach service to students and area residents. They engage volunteers to restore streams, eradicate invasive species and conduct citizen science activities needed by researchers and biologists. In the Adirondack Park, SCA AmeriCorps members conduct a variety of stewardship projects that enhance the safety and enjoyment of visitors to the area, such as repairing boat launch sites, doing erosion control projects on states, and removal of invasive species.

AmeriCorps members have also been instrumental in launching the After-School Conservation Club (ASCC), a program that engages elementary school children in hands-on environmental education activities and stewardship projects for 10 weeks each fall and spring. The goal is to bring environmental education to and foster a sense of stewardship in inner-city elementary-aged children involved in after-school programs.

Conservation Corps and Green Jobs. With funding from the US Department of Labor, our department -- working with partner agencies -- could develop a youth employment program which trains workers in green job skills in conservation and stewardship, energy conservation and green construction technology. Unemployed young adults could be placed at various department facilities such as fish hatcheries and education centers to work on natural resource conservation projects and to assist with education, outreach and environmental studies. Participants would gain not only a great awareness and appreciation for the environmental studies. Participants would gain not only a greater awareness and appreciation for the environment but, as important, on-the-job experience as team members with DEC staff working trail maintenance, campground upgrades, invasive species removal, tree plantings and disability access enhancements. This program would serve as both an investment in meeting current environmental challenges and in creating a skilled workforce for the emerging green economy.

America's Great Outdoors Conservation Initiative is something that I personally would like very much to be involved in. I am a natural, out-of-doors type person being more comfortable in the "wild" than in any city. I know my parents worried about me as a child when I would spend all day in the woods; but they soon knew it was my passion and my life.

Discussion Question 1

Written & Online Comments

(cont.)

I was delighted to get an invitation to hear Secretary Salazar speak at the American Rivers reception on June 4th. I am representing a grassroots organization called Grayson Land Care www.graysonicare.org that is based in the New River Valley in Virginia.

We feel it is very important to include private landowners of forest and farmland in the new America's Great Outdoors conservation Initiative. You stated on your webpage: "The great outdoors that field the American spirit," and you followed it with: "the American economy is fast disappearing..." LandCare is a grassroots effort of concerned citizens who want to make land profitable so it will continue to be open space and start being sustainable. Most small private landowners are the best conservationist for the land. Please include us in American's Great Outdoor Conservation Initiative!

Some of the projects in our SW Virginia area: Grayson Natural Foods: www.graysonnatural.com, River Ridge Outdoors www.lodgeatriveridge.com, Sustain Floyd www.sustainfloyd.org, Blue Ridge Discovery Center www.blueridgediscoverycenter.org, Blue Ridge Forest Co-Op www.blueridgeforestcoop.com. We have partnered with Virginia Tech as they are the institution of higher learning in the United States which is associated with LandCare. VA Tech is a Land Grant University and has been helping landowners in our area realize the Land Care potential.

It is my intention that you will find LandCare a worthwhile addition the America's Great Outdoors conservation Initiative and that Secretary Salazar will be informed of our organization. Please let me know if you have any question.

Having been asked several times "what is LandCare?" I would like to respond. LandCare is a democratic approach to community development with three goals, 1 increase the incomes of the citizens, 2 improve community services and amenities, and 3 protect the resources upon which our lives depend, our food, water, and air. This is about making sure that our great, great grandchildren have the same quality of food, water, and air as we do while we remain secure with an acceptable lifestyle.

there is also an ethic of civility that requires that we be open and honest in our dealings with each other, willing to listen to other points of view, and, when in doubt, seek expert counsel to guide our decisions. We wish to be as well informed as possible. We wish to understand the cause and consequence of the events in our daily lives. This requires that we listen to others or else we will remain ill-informed. In the end though, we decide and it is up to each one of us to live with our consciences knowing that we have done the best possible for all concerned. 1

LandCare is about feeling good about what we do and where we live. Knowing we can count on our neighbors in a tremendous advantage. LandCare is an ethic that everyone looks after everyone else.

LandCare focuses on ventures involving both local people and local resources.

Discussion Question 1

Written & Online Comments

(cont.)

LandCare is about building community wealth by establishing locally owned and managed enterprises. LandCare is about local economic cooperation. LandCare is about investment in local enterprises both by locals and by others outside the region aware of the value of our enterprises.

LandCare is about bringing out the best in each of us. The best can only appear if we're willing to pause and consider the consequences of our actions, attend to what others are saying, carefully consider our direction, and be responsible for our actions. In a community, people listen to each other or else there is no community.

LandCare is rooted in the belief that ultimately each community must decide what is best for itself. Experience in Australia over the past 20 years has shown that, with the involvement of the people, communities can better serve themselves. The magic of LandCare is no magic at all. What has made the difference is that when people sit down with enough time to fully weigh their alternatives, community solutions can be found that benefit everyone.

The Australians early on had their scoffers claiming that people cannot work together for the common good or that people WILL refuse to cooperate in order to improve their circumstances. But in the end, when farmers learned that by cooperating with their neighbors and changing management practices, they could maintain a better income, have more control over their water resources, and provide more benefits for themselves; when consumers learned that they could get healthier and safer food and LandCare producers, and when state and federal agencies, universities, financiers, commodity buyers etc, worked together to solve food, fiber, foodler, fuel, and financial problems. LandCare had established itself as a cooperative movement among many communities in Australia. 1

As a member of the Senate Committee on Energy and Natural Resources, I understand the need to protect our great outdoors while concurrently encouraging their responsible use. Each year, millions of tourists visit our state to enjoy our lakes, mountains, forests, and beaches. As a result, our residents have valuable experience in managing and preserving these natural treasures, and a long tradition of outdoor recreation, exploration, and education. Our treasured landscapes include: Mt. Washington and the Presidential Range, the heavily-visited White Mountain National Forest (which is within a days drive of some 70 million people), the famed Appalachian National Scenic Trail, the Umbagog National Wildlife Refuge, Franconia Notch State Park, and many other iconic outdoor places too numerous to mention. New Hampshire is one of the premier destinations for experiencing America's great outdoors.

It is also important to note the economic benefits of protecting our natural resources. According to the Outdoor Industry Foundation, active outdoor recreation contributes \$730 billion to the U.S. economy. In New Hampshire, outdoor recreation fuels economic growth as well. The same Outdoor Industry Foundation report concluded that active outdoor recreation in New Hampshire generates \$261 million in annual state tax revenue and produces nearly \$4 billion annually in retail sales and services across the state -accounting for 7.8% of gross state product.

Discussion Question 1

Written & Online Comments

(cont.)

The Piedmont Environmental Council was established in 1972 to promote and protect the natural resources, rural economy, history and beauty of the northern Virginia Piedmont region, an area of approximately square miles, all within the Chesapeake Bay watershed with literally thousands of sites on the National Register of Historic Places, as well as more than a dozen Civil War battlefields, large and small.

We appreciate that President Obama has made the future of the United State's land resources a high priority. We look forward to a continuing discussion with you and the Federal agencies that are partnered on this initiative. We are particularly encouraged that the President seeks to recognize the importance of conservation on private lands and the hard work that local communities have undertaken to establish land conservation priorities. All of these are worthy of expanded funding in recognition that they are investments in the natural infrastructure of the nation, supporting many basic services and economies.

Finally, we would like to recommend that at least one listening session be devoted to the role that motorized recreation can play in connecting more Americans, young and old alike, to our public lands. We all recognize that many of our citizens spend far too much time indoors working or playing in front of a computer screen. While perhaps intellectually stimulating, it certainly does not foster physical fitness so critical to a healthy lifestyle. Responsible motorized recreation can and does connect people to the outdoors and in many cases serves as the prime motivator of connecting our young people to America's Great Outdoors.

I am writing to express the support of Pheasants Forever for this project and to note our willingness to become a partner with the Administration, Ducks Unlimited, and other organizations that ultimately we expected to play leading roles in conserving this ecologically important landscape.

President Obama has launched a national dialogue about conservation in America to learn about some of the smart, creative ways communities are conserving outdoor spaces. The public listening session and discussions are an opportunity for leaders of the America's Great Outdoors Initiative to hear from you about solutions for building a 21 st century conservation and recreation agenda and reconnecting all Americans with the outdoors. We would like to have your thoughts on the questions listed below in addition to any other ideas or stories.

Digital photography

wise, use -- stewardship model

Economy - dollars for restoration and stewardship programs.

Discussion Question 1

(cont.)

Facilitation with NGO's and agencies to help make things happen.

LWCF is critical

Tribal conservation districts. Tribal colleges – education. Collaboration with States.

LWCF needs to be fully funded. Cleaning up abandoned mines. Funds for clean up. Conservation easements and federal tax incentives. Renewable energy and siting is important.

Guest ranches. Rural initiatives. HPF Historic funds combining with conservation funding. Reclaiming mines. Small steps in achieving goals.

AGO= fracture zones, landscape zones for conservation.

To turn the CRP into reality: need programmatic authorities and apropos. For the family of federal agencies participating in CRP. This makes us steady and predictably reliable partners to our state, local, civic area, and NGO partners.

Jamaica bay as a living museum of the region's ecology and the environment geared toward educating students of all ages in the metropolitan area about changes - both historical and about climate change and the future.

Harbor access - ferry and all modes of transportation to national parks of New York Harbor. Harbor experiences - create water as a place-worthy of support, education, and recreation. Harbor treasures - Jamaica Bay as a treasured landscape!

A great jobs program - to build docks, restore lands, river transport, to connect city and beautiful NY state National Park status for HV to Guttruss NP in Harbor

From the perspective of a scientist: integrate geographic unites that are connected by moving water and a related ecosystem. Focus on restoration of "ecosystem engineers," species that provide the matrix for ecosystem function: e.g., marshes, oysters, eel grass, etc. Avoid any organizational structure that defeats pts 1 & 2

What Central Park is to NYC, the Hudson River Estuary will be for the entire region. To get innovative plans, engage the innovators - the civic sector.

Identify, preserve, and protect the remaining natural areas surrounding Jamaica Bay. Promote the significance of the national resources on a national level - not something local. National significance = national decisions.

Discussion Question 1

Written & Online Comments

(cont.)

For public involvement - find the "big idea" that links all experience - water's role in NY/NJ history. Coordinate partners' efforts consistently.

Need "administration" culture change - that the best investment in environmental restoration and urban park improvement are in a city like NY where we have 400 years of urbanization and deterioration. NYC has lost >75% of its wetlands and struggles in contaminated sites. 26m people need these quality of life improvements. Need to maintain robust federal, state, and local funding in restoration projects.

HRE Comprehensive Restoration Plan (CRP) seeks to fund new restoration projects. Additional needs are maintained and management of CRP projects after they are "built" and maintenance and management of existing resources.

Start with the children in school and create an education program on conservation and scholarship for students that want to work in conservation. Like what NYC does for the teachers program - pay for their masters and they work for the school system. Create parks in every neighborhood and Burroughs in NY.

Dream that every child that goes through our pre-K-16+ system has an experience in a NP. The standards going forward are based in education and required for all.

The nature conservancy (NYC office) has a successful and growing program - LEAF - that places students from 10 environmentally-themed high schools in summer internship projects at nature preserves. 5,000 young people, and 300 teachers are linked with over 700 working scientists in the field. This should serve as a model for AGO's effort to connect young people with nature.

Stewardship and educational opportunities to the community and schools. They are the future. Environmental interns from colleges, HS and other environmental groups. Comprehensive plan that is curriculum based.

Use the Hudson River to build together the region and its resources - think in terms of ecosystems. Get the facts right - base management decisions on science.

Access - all types including water borne; multi-harbor shuttle stop. Park partners - sustainable operations combined with free access.

Teach ethics and conservation in the public and private schools as part of the curriculum.

There are opportunities for public private partnerships in the Floyd Bennett Field. Dilapidated structures should be refurbished or razed.

Canarsie Pier is a model of environmental preservation and education and recreation and concessions in J-Bay.

Discussion Question 1

Written & Online Comments

(cont.)

Given the success of the Ken Burns film, and willingness to support parks, would you ask congress to allow a check off box on 1040 forms to donate \$1 or more to support the many national parks?

Longterm success of marsh restoration in J Bay will depend upon understanding and reversing the causes of marsh loss. Successful partnerships have been forged for restoration. Investment and partnership is also needed to provide the science to ID causes of marsh loss. As the president moves forward with an ocean agenda, the opportunity to engage the public at urban marine interfaces (such as J-Bay) should be maxed. Programs to engage youth are important not only to develop stewardship but to increase diversity in our Fed workforce

For too long we have rested on the laurels of America's greatest conservation leaders, from President Teddy Roosevelt to Secretary Udall to President Carter, who assembled the greatest collection of National Parks, Forests, Monuments, Wildlife Refuges, and Wilderness on earth. Preserving these lands required perseverance and a willingness to override local opposition to land preservation, which had stood in the way of protecting the Grand Canyon, Alaska, and other national treasures. Preserving America's greatest places also required meaningful levels of funding, particularly for the Land and Water Conservation Fund. We must be willing to emulate the leadership of Roosevelt and his successors if we are to provide our constituents with the recreational and wilderness opportunities that distinguish America from all other countries.

Just as we could not have witnessed the unspoiled glory of creation without the leadership of Roosevelt and others, so too generations 100 years from now depend upon us to protect lands and waters that will otherwise be desecrated by the relentless march of development.

As residents of the magnificent Puget Sound region, we can easily recognize the importance of the great outdoors and how critical its preservation is to both our culture and economic livelihood. I applaud the Obama Administration's search for solutions to conserving and increasing access to our public lands, improving outdoor recreational opportunities, and celebrating the role that the environment has played in our rich cultural heritage.

As naturalist John Muir so eloquently told us a hundred years ago, we need places to play and we need places to pray! You cannot do that with an LED screen! The metrics show us that in order to exponentially increase outdoor recreation experiences for children and families we have to figure out ways to teach them and empower them to understand the value of these experiences for their families- the education value, the health and wellness benefits, the inspirational quality and that there is value in learning to embrace and protect public lands for the future because they belong to all Americans.

Created Alpine, advocate for kids in the outdoors. Sit on numerous boards, write about the subject. A significant part of what we do is pure advocacy and going forward, we all need to be more conscious of the need for an ongoing "media component"- which would constantly keep the issue in the public eye.

Discussion Question 1

Written & Online Comments

(cont.)

National Parks and Forests and BLM sites.

President Obama's family didn't wait for a government program or some non-profit to take him to the mountains. They just did it because they saw value in it for themselves and their grandson! We are here to promote increasing outreach to pre-existing infrastructure/partnerships everywhere that are capable of creating an expanded way to exponentially increase outdoor world experiences for kids and families. I'm talking about outreach to faith based groups, community associations, boy scouts and girl scouts, teachers and most important of all- ordinary families- like my own father and Barack Obama's family who didn't wait for some government program to take them to enjoy the majesty of our national parks. They just did it and empowering these families to take individual responsibility is much like teaching a man to fish as opposed to just feeding him.

We have 750 environmental education teachers -organized under the banner of CAEE (Colorado Alliance for Environmental Education) - who are located throughout the State of Colorado and who could exponentially expand natural world experiences for kids tomorrow through a mini grants system- consider the fact that these teachers are already in the classrooms, have a demonstrated passion for the work, are in touch with kids, active in their communities and can bring economies of scale to creating the experiences! And let me emphasize direct grants to teachers- don't set yourself up to have substantial amounts of your grant dollars lost by filtering through administratively overburdened and expensive school districts or city or state governments. Go directly to the trenches!

Frankly, one of the primary answers can be found in President Obama's own personal experience with our legacy of public lands. At a very early age, the resident's own family obviously saw some VALUE in visiting the outdoors and our national parks so they took him there. That is our fundamental challenge today, "How do we get ordinary families to see value in experiences in the outdoors and on public lands?" We believe our Camp Moreno Project is one of those ways; it empowers ordinary families to create mountain recreation experiences for their children and is absolutely one of the most cost effective ways to make families understand the simplicity, low cost and value of recreation and camping experiences in National Parks and Forests. It represents one of those unique collaborations which by working with the Denver Public Schools Balarat Outdoor Education Center, private sector business partners like REI, North Face, the National Park Service and the Alpino Mountain Sports Foundation we have created a 53 year living history retrospective/campsite which documents one Latino family's half century and five generation association with our National Parks and Forests. It's something for emerging population to identify with and works to inspire families to embrace the outdoor world and public lands. On a per capita basis it's creating mountain recreation enthusiasts with a very minimal cash outlay.

Fully fund the LWCF. In state, the Wyoming Wildlife Natural Resources Trust Fund takes money from the extractive industries and returns it to conservation.

Discussion Question 1

Written & Online Comments

(cont.)

Encourage development of groups of teenagers/youth that would get together go do things outdoors. If it becomes popular, it would spread.

- for example, start a NOLS partnership at the high school, an extra curricular activity with year round outdoor recreation,

- FFA (Future Farmers of America) does organized activities going to the Popo Agie falls, BBQ's and outdoor outings. We could introduce agriculture and NOLS and have the opportunity to get kids to intern and see what's really out there.

We want a community driven outdoor group that goes viral and is cool.

Offer PE credit for students to take a NOLS course (or similar); in order to receive credits you have to have a certified instructor through the board of education.

Apply the secrets of the popularity of youth sports to outdoor pursuits. Organized sports works because it is competitive. Consider outdoor games with prizes; create a competitive aspect with winning involved.

Make access cheaper (fee free days, locals' days).

Consider a "recreation easement" akin to the conservation easement that would provide tax breaks for providing recreation access.

Use the internet to make more info available.

Maintain clear, sensible rules and regulations and then provide the people/resources to understand and enforce them.

Build stronger positive connections between federal agencies and local organizations (e.g. National Park Service RTCA program).

Create incentives/subsidies for schools to increase outdoor education curricula at all grade levels; make conservation/environmental education mandatory in schools; funding is now tied to whether students know facts; the education system must recognize the legitimacy of outdoor education.

Tap into the technology that kids use to get them outside (social media, computers, video, etc.)

Make Physical Education a requirement in all schools again.

Discussion Question 1

Written & Online Comments

(cont.)

Fully fund LWCF. Wyoming gets less of that funding than Puerto Rico. Make sure that there are mechanisms in place that allow us to make that work in Wyoming.

Make a big push to reinvigorate conservation corps.

The Secretary of Transportation could emphasize United States Bicycle Route System to identify routes that are rideable/bike friendly in all states that are connected (e.g., Adventure Cycling model)

Support recreation more as one of the “many uses;” it is a sustainable use that does not go through the boom-bust cycles like the extractive uses do in our region.

Provide federal or private sector funds to buy outdoor gear for schools to start outdoor clubs. Outdoor gear companies could sponsor high school outdoor programs. They do it for youth sports.

It would be cool if Game and Fish provided outreach education to school with science teachers to take students to go bird watching.

Every agency should have a local youth coordinator.

We need to be sure we don't only give this info to the federal government but to the local government and school boards as well.

Family interaction is key- family involvement and tradition.

Youth organizations have traditionally gotten folks outdoors – GSA, GSUSA, church clubs, 4-H, school clubs, etc.

Proximity and access encourage success.

Fun and appropriate levels of fear – meaning that challenge or “edge” is valuable to hooking kids. Risk might be objective or human.

The Outdoor Expo in Casper by Wyoming Game and Fish brings sportsman groups - schools bring their kids, weekend brings families.

Activity clubs encourage recreation, such as jeeps, ATV's, etc.

Discussion Question 1

Written & Online Comments

(cont.)

Interpretive materials that help explain the outdoors. Examples: Self-guided stuff and guided learning combinations.

Interactive outdoor activities in the schools, and classes that get kids outdoors.

Public service ads by game and fish, etc., that keep outdoor thoughts and images in mind, provides background and outdoor affirmation.

Work and community programs, such as trail building, etc.

Taking urban kids into wilderness makes a big impression. It blows their minds because wild places/outdoors are so different. The impact is often life-changing.

Gear access makes the outdoors more accessible, and dulls the hard edges of difficulty - especially for kids.

Protecting places, keep them whole and healthy, and keeping access.

A wide variety of outdoor activities opens the door wider. For example, 85% of Shoshone National Forest is roadless, so only 15% is open to actions that require roads. Cramming all those folks into the limited 15% creates crowding impacts and increases damage, which causes further closures.

Clear rules and regulations with consistent, fair enforcement is a positive

Having safe areas, without bears or grizzlies, enables kids and people to get into the outdoors.

Bear education via hunter safety, for example, makes for more successful experiences.

Lander Parks and Recreation Department has added new outdoor programs, including traditional items like camps.

Recent local flood challenges brought many federal workers to our locale, which built connections and potential partnerships.

If trails are in disrepair or rivers are blown out, you're not going to have repeat customers—ensure access is there.

Discussion Question 1

Written & Online Comments

(cont.)

We have to potential to love our wilderness ares to death.

We can think about natural systems and social systems—what falls short is the education piece--the connection between the two

Teach more of the tread lightly program, not just in motorized recreation (horses and others as well). Wilderness areas are great, and people need to learn how to act (eat, drink, go to the bathroom) in the wilderness.

Campaign on national level to say getting outdoors is cool, camping is fun, state/national parks are the place to be (analogy to the “Crying Indian” ad from the 80’s for no littering).

We need something emotional to connect with. The public won’t remember who paid for the ad.

Integration of outdoor curriculum into schools. Orientations, gardening. Seeing more of it and want to see more.

Extra-curricular/volunteer activities in school involving kids. Parks. Cody Middle School integrated a curriculum that involved camping outside in teepees with wild game and lit a fire.

When I was in school they used to teach a survival class, and there were ski clubs that took kids out on weekends. We need more of that.

Roadside access points to beautiful places and fishing areas work well. We would like to see more pavilions and picnic tables and more family friendly places that would encourage families to get out.

Education and coverage of existing resources. How many miles of trail people do have access to and what do we already have in our backyards?

Outdoor, hands-on education paired with stewardship and community service

The sense of adventure and the perceived rarity of the experience awakes one’s sense of adventure

Capitalizing on the curiosity of youth

Making outdoor experiences fun and challenging, to compete with video games

Discussion Question 1

Written & Online Comments

(cont.)

That sense of accomplishment an outdoor experience provides for someone encourages them to come back

Like sports camps, youth can participate in working situations, building trails and bridges.

Working to improve a place increases your desire to protect it.

Organizations have youth camps that get kids into the outdoors, and NOLS has scholarships

Mentoring programs

Using existing institutions and structures to get kids outside, like doing an outdoor camp as a class group

Wyoming Game and Fish does the BOA program for women (bowhunting clinic)

Informing people of the options in their own community

Boy scouts, and Fathers in the Field, are opportunities for youth whose parents can't take them outside.

Creating a connection between recreation and conservation helps build a conservation ethic in communities. Wind River Alliance takes youth on an annual camping trip, with structured activities, that builds on the values of leadership, communication, and trust.

Limiting youth access to cell phones and TV, as they are a barrier to kids' going outside.

Strategic uses for technology, such as the Ken Burns National Parks PBS TV special

Community youth groups, or summer programs at Lander Parks and Rec. There are only sports teams right now.

FFA does organized activities such as going to the falls, holding BBQ's and outdoor outings. We could introduce agricultural programs.

Discussion Question 1

Written & Online Comments

(cont.)

NOLS should consider younger interns, to give kids the opportunity to see what possibilities are out there.

The high school could start a NOLS-related extra curricular activity, encouraging year-round outdoor recreation

Community-driven outdoor groups, that grow virally and are cool

Schools could offer PE credit for students to take a NOLS course, but in order to receive credits you have to have a certified instructor through the board of education.

The USFS teamed up with Central Wyoming College and taught an intro class to cross-country skiing.

The USFS helps students apply for USFS jobs, and prefers to hire locally.

Applying the secrets of the popularity of youth sports to outdoor pursuits. Sporting activities are so successful that people volunteer.

Organized sports work because they are competitive. If there are outdoor games with prizes, one can create a competitive event.

Getting popular people to do outdoorsy things.

Even though camping is cool most kids don't like it because it is hard work and they are attached to their phones and technology.

Our community has tried to do a big brother and big sister program, so youth can go with someone who has a little more confidence to take folks out. A lot of people don't know how to go outside, and impoverished people can't go camping because they don't have reliable transportation.

The high school just started a mentoring program where the mentors go on a NOLS course to learn leadership - hopefully they can start an outdoor club. Funding such an initiative is a challenge.

Youth idolize popular athletes, and if they go backpacking and say it is part of their lifestyle it will be more popular.

Youth leaders can inspire their peers to recreate outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

The high school should start an outdoor club. We have some of the best backpacking in the country but how many backpacks does the school have?

Outdoor gear companies sponsor high schools, they do it for youth sports. They could also sponsor high school outdoor clubs.

Leadership and dedication to conservation initiatives, and perseverance, such as historic conservation leaders demonstrated.

Make a holiday where parents take their kids outside

Using outdoor rewards to motivate students. For example, if you do well we will do a hiking field trip.

Mandatory outdoor field trips would get more kids outdoors. First grade could be fishing, and so on.

Field trips, like going with fish and wildlife to track birds, can be amazing.

Community members are already reaching out to teach students about fly fishing.

Taking students climbing lowers the cost for school board to get more students out in the field.

One strategy is getting more opportunities to get students out for an extended time, and access to affordable outdoor education

Opportunities need to be available to everyone despite cost.

It's important to look for good quality experiences to enjoy time outside; to find programs with a track record, and organizations that have been at it for a while.

Partnerships across diverse organizations provide opportunities. Public land agencies and non-profits, for example, should work together.

Public involvement with land trusts, and with other organization that have land easements, can increase the size of wilderness, conserve wild spaces, protecting important habitat and open spaces.

Discussion Question 1

Written & Online Comments

(cont.)

Working with private landowners, including agricultural operations, to keep open areas open, rather than splitting land into ranchettes or subdivisions.

Focus primarily on conservation of private land, but also on general management of Forest Service and BLM lands.

Incorporate open spaces into the education system, educate kids in wild spaces and teach about ecosystems in schools.

Training teachers to integrate outdoors into everything, and take them out once in a while. In CA, teachers were trained to integrate the outdoors into their teaching topics, and they understood the topic better, and students retained more.

Federal land management agencies don't work, the DEQ and EPA don't function well, because there is no one there with the know-how. Public lands need to be returned to the public, and the public should own and manage public lands, few folks left that know how to run the lands.

Go back to the basics. The state should allow people to access public land, not shut down public lands to the public.

What works now is access and more access.

Someone still needs to be in charge so make it more local.

Emailing information to everybody, and better communication in general, help agencies involve the public in lands decisions.

Connecting youth to local parks.

Supporting all local groups that involve education of youth and of environmental science.

There is an increase in demand. Yellowstone had record numbers.

Yellowstone had record numbers

Getting kids outdoors! You need to get them there. Children age are 8-10 open to the strongest impact. It's a problem that they can't get enough kids to go to the park.

Discussion Question 1

Written & Online Comments

(cont.)

Programs similar to Big Brothers/Big Sisters, where a mentor adopts a kid and takes them outside.

Adventures in Learning (a local youth program) provides outdoor activities for children, whether it's for a day or for an entire weekend. They use facilitators with a great deal of experience who also know how to deal with children.

Scouts do a great job of teaching outdoor skills to the younger population—they aren't scared to go outdoors.

The hunter safety program through Game & Fish works well for adults and children

The Access Program through Game & Fish provides some of the best hunting and fishing opportunities are through private lands—some are open to the public, and others have limits to the number of hunters/fishermen that can access them, but both solve the problem of “I want to hunt/fish, but I just don't have anywhere to go.”

NOLS introduces people to the Wind Rivers but also teaches them to get along with one another.

State Parks are a great resource for learning anything from geology to botany.

The Nature Conservancy had a program that was structured such that kids would progress and gain access to more and more difficult concepts, integrating their previous learning in subsequent years. But there weren't enough people to keep it going. The kids were a vehicle to their parents' involvement too.

The Lander Nordic Ski Association and skiing in the Beaver Creek area.

The Land and Water Conservation Fund - \$900M

The Conservation Corps does high quality conservation trail work in the Lander area, and the Fremont County Youth Camp has had some success in bringing youth outdoors.

The Nature Conservancy grants public access to properties they have conserved, while still leasing them out for ranching.

Conservation funding programs successfully fuel habitat restoration, water projects, etc.

Discussion Question 1

Written & Online Comments

(cont.)

There is a good program for younger kids at the Summer Parks & Rec. that takes kids to Sinks Canyon.

The High School has an outdoor education class

___ has a 5th grade program that gets kids outdoors. California has a requirement that all 5th graders go to a weeklong outdoor education camp

Teton Science School has a 5th grade weeklong program for ALL kids.

Data indicates that most kids who enjoy the outdoors were introduced by their parents, and opening roads, such as the road to Dickenson Park.

Road easements from private and tribal landowners to allow access to public lands

Wyoming Kids Extreme has been a successful program and cannot accommodate all the kids who are interested. Caving in Sinks Canyon, winter activities near Cody, ATV training, and a helmet distribution program. This invites people to take advantage of our resources. WY Game and Fish also has a great program for kids, and for training public schoolteachers to bring this to their classrooms.

Hunter Education Programs.

Communicate well with people to let them know what is available, make it "less scary" for adults

Riverton and Lander have fishing ponds. Bring the activity closer to the community.

Lander schools take the 6th graders to Yellowstone National Park.

Open field trips to ALL schools. My brother did a field trip at his elementary school, but I didn't get to do that.

Get kids involved through working in agriculture, or 4H. More chores=less plugged-in device dependency.

High School rodeo program, horse shows.

Discussion Question 1

Written & Online Comments

(cont.)

The CCC created many of the trails and recreation structures we have today.

Use electronic media (Facebook, Twitter) to advertise outdoor recreation opportunities

Wyoming Wildlife Natural Resources Trust Fund takes \$ from the extractive industries and returns it to conservation

Shoshone NF is popular with volunteers nation-wide because they support volunteers with pack teams etc. This encourages partnership.

As a rural mountain area, Lander and Fremont County are unique to other AGO session locations in that we are surrounded by vast areas of federal land, as well as significant state lands. Economically, our communities are highly dependent upon the resources provided by public land. The session was clearly marked by emphasis on the importance of access to land, both to sustain our economies and maintain our active lifestyles and cultural heritage. Regarding federal involvement in land management and formal protection of public land, we heard both ends of the opinion spectrum. Many expressed strong desire for less federal government control and no more additional protection (e.g., Wilderness designation) as a means of improving access. Others supported the concept of additional protection to encourage more recreation access and relieve pressure from extractive uses. A common theme involved the need for more consistent and clear regulations and administrative processes to remove barriers for visiting the outdoors. Differences across agencies and a lack of clear expectations prevents many people from visiting the outdoors, or gives them a bad taste that prevents their return.

There was a great deal of discussion about the importance of private land and the partnerships with landowners that can be effective mechanisms to keep working land working, protect wildlife habitat, and preserve cultural heritage, while also increasing access for public recreation.

The topic of education was dominant in two primary realms: education that facilitates visitation for all people, and school education that exposes children to the outdoors at an early age and provides the tools to become lifelong recreators and appreciators of the land. Attendees consistently expressed the concern that many don't visit the outdoors because they don't know where to go, what programs and resources are available, or feel they don't have the skills to do so safely. People almost unanimously agreed that our existing education system fails to introduce children and youth to the outdoors in a way that connects them for life. The importance of parents in exposing their children to outdoor pursuits is seen as critical, and conversely the role children can play in involving their entire families in the outdoors is also important. Some terrific ideas about how to address these concerns were offered and are outlined in the detail below.

Discussion Question 1

Written & Online Comments

(cont.)

Participants at the session told numerous stories of effective partnerships at a local level that utilize existing resources and organizations to connect people to the outdoors and conserve open spaces. Sadly, many stories ended with reports of partnerships dissolving due to resource scarcity. This region, like others, is blessed with incredible ingenuity, motivation and capability. Coupled with adequate funding and resources, these efforts could be sustained over time to significant long-term positive impact. Many conversations focused on building and sustaining partnerships between federal, state and local agencies and school districts, and also incorporating non-profit groups, local landowners, outdoor education institutions, and local businesses.

In addition to the themes presented above, a number of consistent specific ideas emerged from the small-group conversations. We set these apart as “presidential messages” – ideas we believe warrant special attention based on the frequency with which they were raised and their importance to session attendees.

Create incentives for schools to increase outdoor education curricula at all grade levels; make conservation/environmental education mandatory.

Promote private land/public land partnerships to offer expanded opportunities for access, enhance the protection of wildlife habitat, and discourage urban sprawl.

Explore a “recreation easement” concept to create financial/tax incentives for private landowners to offer access.

Identify effective partnerships at a local level between community organizations, private sector and state and county agencies. Then sustain them with funding and support and enable local control.

Putting goals of individual organizations above those of local government and communities.

Expose children to the outdoors at an early age. Family interaction and involvement are key to this.

Provide more access to public lands (open the door wider to provide more opportunity and less crowding in concentrated areas).

Establish clear rules and regulations with consistent and fair enforcement.

Build and support partnerships between agencies, non-profit groups and private landowners and then give the public access to the land (akin to what The Nature Conservancy does in Wyoming). Conservation easements can be very effective.

Discussion Question 1

Written & Online Comments

(cont.)

Expand the number of roadside access points to beautiful places and fishing areas. Pavilions, picnic tables and more family friendly places would encourage families to get out.

Identify effective programs already working at a local level and keep them going with funding and support: FFA, 4-H, boy scouts, girl scouts, church groups, school groups and youth organizations, hunter safety programs (e.g., Adventures in Learning in Lander).

Increase partnerships between agencies and private landowners to provide access for hunting, fishing, and recreation to increase access potential.

Schools: Promote and support interactive outdoor activities in schools; encourage development of extra-curricular and volunteer activities involving kids.

Establish an outreach campaign on national level to say that getting outdoors is cool, camping is fun, state/national parks are the place to be (analogy to the "Crying Indian" ad from the 80's for no littering).

Expand the use of interpretive materials and programs (e.g., state park talks, public service ads by Game and Fish departments) at a state and local level; teach more of the tread lightly program, not just in motorized recreation.

Use challenge or "edginess" as a useful hook to attract youth; iPhone applications to connect people to outdoor opportunities.

Work programs; revive and expand conservation corps, trail building education and work opportunities.

Create and use local outlets for communication about outdoor opportunities (e.g., LanderTalk community listserve, chambers of commerce, signage on Main St.).

Maintain healthy wildlife populations – this brings people out.

Work with private land owners to keep areas accessible; discourage subdivision and loss of working open space.

Access to gear takes the edge away from getting outdoors; create funding programs geared toward providing gear to schools and community organizations).

I am from northern CALifornia and plan to go into forestry, i hope this helps in any way it can because if we're really a nation under God then we should respect what he's given us.

We love the National Parks today and if this land wasn't protected we wouldn't have been able to enjoy it. Its a great lesson in history. sincerely, .

Discussion Question 1

Written & Online Comments

(cont.)

Please protect the greatest gift we can give our children.....our Parks, You are all for family time what a better place to do it where there is no cell phone service, no tv's, no computers just each other.

I am a avid outdoors man and my children really enjoy the outdoors. I would love to have these for my children and grandchildren to enjoy. I grew up at sanchris and was there the day I was born. Ever since then I have spent almost all my birthdays have been spent there. We spend lots of time at river and creeks. We always clean up after ourselves and everyone else we leave it better than we found it. I am also an eagale scout and have spent many years trying to help protect please keep this in mind thanks very much.

I lived in Kalispell, Montana for most of my life where I was right next to Glacier National Park and spent many summers hiking and camping up there. I have also been very lucky to find a summer job two summers in a row in Jackson, Wyoming, home of Grand Teton National Park. I have experienced some of the most beautiful parts of nature out here, not only in the park, but also in the National Forest. These are some of the most beautiful places in the country, let's keep it that way!

I'm teaching my grandchildren to cherish this incredible world God made for us and to thank Him for it by doing everything we can to preserve it. If more people were able to get out and enjoy open spaces and forests there would be less violence and upheaval in our society. Please help me and all parents and grandparents by encouraging legislation to protect and conserve our beautiful land. We also need more programs that get families involved in outdoor activities, especially those about conservation. Thank you.

I have hiked miles and miles of this great country - please protect the parks and wilderness areas from exploitation - some of it subtle - some very obvious. Please Please Please.

Partnerships between groups. When multiple organizations come together to work out logistics and then present an agency like the Forest Service with a plan, they are able to address more challenging projects. When groups work together, it can be a way to overcome the staff and resource limitations of an agency.

Private business making room for recreation as well as volunteering. Paid time off to volunteer with an organization and flexible schedules to allow for recreation promote wellness and the desired goals.

Role models in diverse populations. Kids especially can benefit from people they identify with who can advocate for the outdoors, and even lead them on trips. I. For example, this session had only 5 women and was almost entirely Caucasian, unrepresentative of the general population, even in Jackson Hole.

Ambassador programs. These programs, where volunteers organized by local groups make themselves available at trailheads and put-ins, can go a long way towards making public land more welcoming. Additionally, these ambassadors provide a vehicle to rally support from users when lands are threatened.

Discussion Question 1

Written & Online Comments

(cont.)

Groups lobbying together. When groups work together they can identify regulatory obstacles and advocate for policies and regulations that address multi-lateral concerns.

People are looking to be introduced to their public lands, especially if there are not specific maps available. By leading guided hikes we open up the outdoors to everyone.

Treasured landscapes are good, but local and county parks are sometimes the first step that people take into the outdoors. If people never have that individual first step - exploring other areas will never happen.

Get schools involved and engage corporate partnerships, outdoor business employees and help get kids outdoors.

Although the best way is to be a leader and take others with you, internet outreach, public workshop sessions, and books can be useful tools.

Be encouraging, but realize sometimes too much access can be detrimental. Availability may not create the backcountry experience that people expect. What attracts people initially, is the remote feeling of wilderness not a paved road to the trailhead. Undeveloped and dispersed recreation opportunities are important.

Communication with the land managers can be one of the most important things a recreational group can do. Sometimes land managers are surprised by a recreationist's perspective, and are very willing to have conversations.

Creating a common thread with motorized and non-motorized users and creating a sense of community with the people that you work and play with.

Access points are important - especially when crossing private lands.

Understand that trail building brings money and tourism to a community.

Education
o Schools should invest in gear/equipment (e.g. bikes, harnesses, etc.).
o P.E. should include overnights in schools or outdoors.
o Retailers should be engaged (private costs, donating product, etc.).

Mentoring--Boys and Girls Clubs; Boy Scouts; BCM; Camps

Volunteerism--conservation coupled with recreation and education (e.g. adopt a crag).

Discussion Question 1

Written & Online Comments

(cont.)

Value your health--body images

Creation of trails between national and historical sites; between farms and conservation easements.

LWCF!

Environmental outreach to remind people to protect 'their' land.

Education--how to play/where to play.

Conservation easements.

Partnerships work.

Overpasses for wildlife.

Land exchanges to eliminate in holdings on federal land.

Benefits-based management.

Volunteerism/philanthropy.

Supportive public for more opportunities to provide recreation on public lands.

GOCO

Please commit and follow through on AGO's vision to build a 21st century portfolio of protected land and robust recreation opportunities.

Recreation knowledge within agencies o Better understanding, more pros, better communicators, better facilitators.

Discussion Question 1

Written & Online Comments

(cont.)

Education. Ensuring longevity and excitement around any educational initiative/pursuit, be it for youth, parental, societal initiatives within/out of school, surrounding outdoor recreation and conservation. Effectively tapping onto the existing online infrastructure to promote outdoor endeavors and explain economic, social, and health benefits.

Private-group/organization outreach. Many outdoor retailers initiate or partner with others for outdoor recreation opportunities and/or service projects. Also, a number of successful mentorships and volunteer opportunities exist within the private sector.

Public/private partnerships. Government grants for non-profits and small businesses have proven successful (e.g., Austin Parks Foundation).

Outdoor-related events. Events that cater to entire families are a good foundation for extended use. The Texas Parks and Wildlife Expo is one good example of such an event.

Public lands near urban centers. And the preservation and maintenance of existing natural resources and places to recreate.

Exposure and repetition. Programs and policies that are modeled after successful examples.

Targeting non-traditional methods. Creating a different spin on getting outdoors and providing folks with new ideas about how to connect.

Youth. Catering outdoor educational programs specifically to young kids and families with children. Also, encouraging life-long sports versus short-term sports.

Determination and persistence.

Nurturing programs.

Funds, people and organizations who can sustain longevity.

Proper management of resources.

Exposure and repetition of existing successful policies.

Creating a different spin on "getting outdoors" --giving folks new ideas about how to connect and targeting non-traditional methods.

Discussion Question 1

Written & Online Comments

(cont.)

Successful mentorship.

Catering to whole families (esp. parents) with events--regular, scheduled events.

Volunteerism, empowerment, ownership.

Focus on KIDS (cub and boy scouts).

Retailers reaching out in conjunction with public service projects (e.g. cleaning and building trails).

Austin Parks Foundation--public/private partnerships.

Groups reaching out to have outings and service projects.

Texas Parks and Wildlife Expo--great event for education/connection with the community. This event introduced kids to every activity available in a state park. (The expo was cancelled two years ago due to lack of funding).

Encouraging life-long sports versus short-term sports.

Utilizing the online infrastructure that kids are tapped into to get them outside.

Small-business grant to help outdoor growth within communities (i.e., not just non-profits).

Creating lasting impressions for kids.

Public land near urban areas.

Youth, parental, and familial outdoor recreation, and conservation education.

Discussion Question 1

Written & Online Comments

(cont.)

The economic impact of recreation on a family-by-family level.

Government funded programs.

Ensuring longevity and excitement around any educational program.

Partner better with non-profits or even advertising agencies.

There should be more evaluation about how better to wed the non-profit world with the business world.

Support non-profits and small businesses with incentives and funding.

Funding recreation infrastructure on the local level--need coordinators to drive non-profits, small businesses, and expend networks. Texas Parks and Wildlife state program is a good example.

Micro-grants.

Provide incentives and tax breaks to tap new/under-tapped resources (e.g., the economic impact of the outdoor industry should itself drive more support from large corporations).

Systems of measurement and accountability for grants.

Volunteer programs and partnerships. Many user groups recognize the limits that resource agencies face and welcome the opportunity to engage in good volunteer projects that address needs and connect people to land and water. Partnerships between outdoor gear companies and non-profit organizations have also been effective in providing opportunities for those who might not otherwise have them.

Connecting spaces within a community and across the landscape. Several projects connect green spaces within urban environment to each other and connect urban areas to backcountry through hiking/biking trails, water trails, and greenways. In the greater Portland Area the Intertwine is an effort to do this. Guides such as Walk There guidebook series identify routes that connect spaces in the greater Portland Area. Friends of the Columbia Gorge is engaged in an effort to provide trail connections through the Columbia River Gorge that connects communities. In addition to these local and regional connections, landscape level connections such as those that are part of the Freedom to Roam Campaign are important.

Discussion Question 1

Written & Online Comments

(cont.)

Events that engage the public as a gateway to experiences in the outdoors. Public land days, free activities, sponsored trips, festivals, and events are all important in introducing the public to the outdoors.

Youth programs. Programs that engage youth as part of a family experience are particularly effective. Outdoor educational opportunities that allow kids to see nature in action are especially valuable such as the Salem BLM District's Cascade Streamwatch Trail at Wildwood Recreation Site. Kids can be effective ambassadors for their family. Exposing kids at a young age also creates the future advocates for wild places.

Personal invitations, safety

Working with business community-getting business community buy in and support

Finding significant projects

Engaging faith community

Focusing on commonalities

Introduce them early

Support outdoor education

Popular spokespeople

Physical Education in school

Peer group education, develop leaders

Advertising (sponsorships, email, competent guides)

Discussion Question 1

Written & Online Comments

(cont.)

Seek variety of offerings

Indoor programs to promote outdoors

Free activities

Golden Age pass forever

One-on-one conversations-inviting someone to come hiking/camping with you. Getting people outside to share experience

Start with kids-kids can serve as ambassadors to their families

Spirit of volunteerism-e.g. Mazamas as an all volunteer organization

Doing community meetings-church groups, community groups

Federal agencies using "regular language"

African American Outdoors Association helps to encourage black families to get outside-build confidence that "you can do it"

Experiencing things first hand is the way to go

Make it easy-if you want someone to take action, make it simple. Provide lunch on hikes or give people a ride

Clothing exchange for people to acquire outdoor gear

Remind people that it's OK to get dirty. Remind people that it's OK to have fun-redeem your inner child

Make getting outside fun

Discussion Question 1

Written & Online Comments

(cont.)

Industry brands can help develop loyalty early on that factor into a desire to get outside

Donations from outdoor companies can help aid people with their outdoor experience

Get kids started early

Encourage kids to get outside and hike instead of going to the gym

How can federal agencies and non-profit organizations support community organizations in such a way that there is continuity-leverage these resources by empowering volunteer citizens

The more that people are individually empowered the longer the initiative will last. Avoid having federal resources that trickle down and then dry up.

Create a connection for people by making it relatively ease for people to experience an outdoor experience-like the Sierra Club Owyhee Rendezvous

Kaiser's "Walk There" Guide-map different neighborhoods so that they can get around on foot

Motivation-find what motivates people

Suite/menu of options-make it friendly for a range of people

Accessible funding and partnerships with outdoor recreation businesses

Specific designation of land-setting aside land for conservation, migration corridors-let nature do her thing

Culturally specific approaches to engage communities who have been disconnected-bring scale and connect across states

Freedom to Roam, Yellowstone to Yukon-look at land on a large scale

Discussion Question 1

Written & Online Comments

(cont.)

Connecting green spaces within urban environment to each other and connecting urban areas to backcountry 1) Metro Portland area Intertwine <<http://theintertwine.org/>>, 2) Congaree Blue Trails in South Carolina connecting urban environment to wilderness in Congaree National Park <<http://www.nps.gov/cong/planyourvisit/bluetrail.htm>>, 3) Mountains to Sound Greenway <<http://mtsgreenway.org/>> connecting Seattle waterfront to backcountry of Alpine Lakes Wilderness as well as communities along the way, 4) Work of Friends of the Columbia Gorge <<http://www.gorgefriends.org>> to connect trails and communities in the Columbia Gorge Scenic Area

Creative Partnerships

Tie in federal transportation dollars with urban parks and natural environment-recreation, conservation, and non-motorized activities.

Involving community

Connecting people

Stewardship

Transportation-sponsored trips

Inviting someone

Community outreach

Connecting with family! And community (community specific days dedicated to wilderness; family-based programs)

Programs that ask for a fee (vs. free) to guarantee attendance

Community-based organizations to translate show trust

Job opportunities in wilderness for young people: outdoor experience to lead to income generator and incentive that offers long-term benefits and educational access

Discussion Question 1

Written & Online Comments

(cont.)

Tri-Met routes (e.g. new route from PDX to Astoria to PDX)

Inspiration via presentations

L.L. Stubbs State Park (30 minutes outside of town)
<http://www.oregonstateparks.org/park_255.php>

City parks and sidewalks to get there-safety

Safe outdoor city infrastructure

Summer park parties, festivals, and events

City incentive to visit every park in the city

Expose kids at a young age-then its ingrained to love these places and we have future advocates for wild places

Good volunteer work projects-connect people to land and water

Non-profit organizations partnering with the government

Diversity of levels for activities that are accessible

Public days - e.g. National Parks day - free access. Think of these events as a gateway to experiences

National Park Service - community outreach

SCA - non profits / others - collaboration o Introducing and exposing key populations to outdoors
o Recreational experiences with inner city strategies

NBH - programming o New ways to old days o Outside box

Discussion Question 1

Written & Online Comments

(cont.)

Collaborative programs o School programs o Economies

Network coordination/oversight

NPS RTCA program - collaborative

Grants from Government and foundations

Land protection

Non-profits

Public agency/private advocate role

Environmental Education

Internal Planning, policy, collaboration (Greenway)

Conservation leadership at Student Conservation Association (SCA) experiences for youth outdoors o opens up new possibilities - local > national crew - progressive opportunities o curiosity about the outdoors

Appalachian Mountain Club Youth Opportunities Program - o opportunity for discovery o consistent opportunities

Youth initiatives - Let's Move Outside (SCA)

Youth Summit (OIA)

Youth Camps - exposing kids to the outdoors

Discussion Question 1

Written & Online Comments

(cont.)

local stewardship efforts (Friends Groups) o Local ownership/partnerships

Start with neighborhood > State > National

Drive Traffic to Parks

Range of properties and accessibility and proximity

Convenience (ex/recycling)

Place based learning

Structured Activities o Welcoming and engaging o Show (model) ways to have fun o Social norms - learning from family (kids teaching parents) o Trip facilitators - AMC and other non-profits o Family walking groups o Field trips/groups activities - helps spread the word

Summer Jobs

Volunteer Programs

Providing opportunity for intimate relationship with outdoors o educational, experiential, and spiritual - intentionality and reflection opportunities - value in outdoors

Make conservation profession a valued career as it used to be

Conservation = cool so that is working (tipping point)

Raise awareness on importance of getting outdoors as strategy on obesity

Building leaders through youth o Programs need structure and guidance o Building citizen stewards for conservation o Lifestyle shifts

Discussion Question 1

Written & Online Comments

(cont.)

Partnerships - need to create a chain

Reinforcement of contributions of others

a. Networking interested parties, collaboration 26%, 349

b. Focus on youth, engage next generation of stewards - 25%, 339

c. Convey health, education, economic benefit - 25%, 335

d. Provide structure for facilitate outdoor experiences - 24%, 329

1.) Landscape is a core value so should be preserved. Engage next generation of stewards and users.

2.) Focus on kids and the adults will come. Minimize barriers and provide opportunities (i.e. Maine DOC's first time campers, WinterKids)

3.) Getting people around the table, brining diverse interests together - goal of having all interests represented, focus on shared successes. Landowner liability laws are very protective. Public investment encourages private investment. Scale matters - local, regional, state, national - apply right tools to right scale.

4.) Internal networks that determine limits and strengths of partners (collaboration). Connect with youth through schools. Grassroots bottom up approaches. Reaching out to teachers, offer a "multiplier" effect based on classroom material gathered.

5.) Convey to public the health, education, and economic benefit of land conservation and outdoor recreation. Build on existing organizations/programs and successes. Conveying to outdoor recreation. Build on existing organizations/programs and successes. Conveying to people a sense of ownership (think local land trusts, active members in organizations, environmental education). Provide a quality experience, people will come. We need environmental education in our schools as this would connect almost all youth to the outdoors. Larger scale initiatives and coalitions based on regions - Mahoosuc Initiative in ME and NH. Using technology to your advantage.

6.) Integrate connection to outdoors with healthy lifestyles initiative. Partnerships and community-based orientation. Articulate full range of values of recreation and conservation and reconnection: health, emotional, cognitive, etc.

Discussion Question 1

Written & Online Comments

(cont.)

7.) Structured access and guided experiences (either people as guides or materials to guide) that are age specific and described for different activities. Good relationships with private landowners as exemplified for instance through conservation easements that ensure public access to private lands. Urban trails in urban areas gives urban areas easy access to the outdoors. New environmental funders network.

There was a great deal of discussion about the importance of private land and the partnerships with landowners that can be effective mechanisms to keep working land working, protect wildlife habitat, preserve cultural heritage, while also increasing access for public recreation.

Identify effective programs already working at a local level and keep them going with funding and support: FFA, 4-H, boy scouts, girl scouts, church groups, school groups and youth organizations, hunter safety programs (e.g., Adventures in Learning in Lander).

Establish an outreach campaign on national level to say that getting outdoors is cool, camping is fun, stat/national parks are the place to be (analogy to the "Crying Indian" ad from the 80's for not littering).

Establish student mentoring programs (e.g., Lander High School) in which older students introduce younger ones to the outdoors and provide training encouragement and inspiration.

Use challenge or "edginess" as a useful hook to attract youth; iPhone applications to connect people to outdoor opportunities.

Create and use outlets for communication about outdoor opportunities (e.g., LanderTalk community listserve, chambers of commerce, signage on Main St.).

Maintain healthy wildlife populations - this brings people out.

Access to gear takes the edge away from getting outdoors; create funding programs geared toward providing gear to schools and community organizations.

Use of federal funds for trail projects (bike paths, multi-use path) is getting more people out on bikes. More extensive trail systems in towns and cities connecting parks to schools will increase opportunity. Safe routes to school will increase safe activity outdoors.

Family interaction is key- family involvement and tradition.

Youth organizations have traditionally gotten folks outdoors – GSA, GSUSA, church clubs, 4- H, school clubs, etc.

Proximity and access encourage success.

Discussion Question 1

Written & Online Comments

(cont.)

Fun and appropriate levels of fear – meaning that challenge or “edge” is valuable to hooking kids. Risk might be objective or human.

The Outdoor Expo in Casper by Wyoming Game and Fish brings sportsman groups - schools bring their kids, weekend brings families.

Activity clubs encourage recreation, such as jeeps, ATV’s, etc.

Interpretive materials that help explain the outdoors. Examples: Self-guided stuff and guided learning combinations.

Interactive outdoor activities in the schools, and classes that get kids outdoors.

Public service ads by game and fish, etc., that keep outdoor thoughts and images in mind, provides background and outdoor affirmation.

Work and community programs, such as trail building, etc.

The Youth Conservation Corps. Years ago, trips had work and conservation – caring for the land combined with work projects.

Taking urban kids into wilderness makes a big impression. It blows their minds because wild places/outdoors are so different. The impact is often life-changing.

Gear access makes the outdoors more accessible, and dulls the hard edges of difficulty - especially for kids.

If trails are in disrepair or rivers are blown out, you’re not going to have repeat customers—ensure access is there.

More public conversation and media coverage of recreation to balance the focus on energy.

Seeing kids and families out on trail is great, but the negative part of that is people who ruin things and tear up the land. So balancing use with preservation.

Affordable hiker/biker campsites at state parks that are cheaper than car/RV camping sites.

More sharing of information about economic impacts and opportunities that exist for individuals to engage with the outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

Tourism doesn't stop in the summer.

Teach more of the tread lightly program, not just in motorized recreation (horses and others as well). Wilderness areas are great, and people need to learn how to act (eat, drink, go to the bathroom) in the wilderness.

We're still getting accumulation of annoying impacts. Firewooding is everywhere. Even though there are fewer people camping, we're leaving a legacy of that everywhere, and that's something we can focus on. We need more education on how to minimize impact.

Campaign on national level to say getting outdoors is cool, camping is fun, state/national parks are the place to be (analogy to the "Crying Indian" ad from the 80's for no littering).

We need something emotional to connect with. The public won't remember who paid for the ad.

Integration of outdoor curriculum into schools. Orientations, gardening. Seeing more of it and want to see more.

Extra-curricular/volunteer activities in school involving kids. Parks. Cody Middle School integrated a curriculum that involved camping outside in teepees with wild game and lit a fire.

When I was in school they used to teach a survival class, and there were ski clubs that took kids out on weekends. We need more of that.

Outdoor, hands-on education paired with stewardship and community service.

Making outdoor experiences fun and challenging, to compete with video games.

That sense of accomplishment an outdoor experience provides for someone encourages them to come back.

Like sports camps, youth can participate in working situations, building trails and bridges.

Working to improve a place increases your desire to protect it.

Organizations have youth camps that get kids into the outdoors, and NOLS has scholarships.

Discussion Question 1

Written & Online Comments

(cont.)

Mentoring programs

Using existing institutions and structures to get kids outside, like doing an outdoor camp as a class group.

Wyoming Game and Fish does the BOA program for women (bow hunting clinic)

Informing people of the options in their own community.

Virtual trail tours

Boy scouts, and Fathers in the Field, are opportunities for youth whose parents can't take them outside.

Creating a connection between recreation and conservation helps build a conservation ethic in communities. Wind River Alliance takes youth on an annual camping trip, with structured activities, that builds on the values of leadership, communication, and trust.

Federal agencies should get together with the local state agencies and the school districts to get together to talk about how to facilitate an outreach program

Taking student climbing lowers the cost for school board to get more students out in the field.

It's important to look for good quality experiences to enjoy time outside; to find programs with a track record, and organizations that have been at it for a while.

Partnerships across diverse organizations provide opportunities. Public land agencies and non-profits, for example, should work together .

Public involvement with land trusts, and with other organization that have land easements, can increase the size of wilderness, conserve wild spaces, protecting important habitat and open spaces.

Working with private landowners, including agricultural operations, to keep open areas open, rather than splitting land into ranchettes or subdivisions.

Training teachers to integrate outdoors into everything, and take them out once in a while. In CA, teachers were trained to integrate the outdoors into their teaching topics, and they understood the topic better, and students retained more.

Discussion Question 1

Written & Online Comments

(cont.)

What work now is access and more access.

There is an increase in demand. Yellowstone had record numbers.

Yellowstone had record numbers

There is a good program for younger kids at the Summer Parks & Rec. that takes kids to Sinks Canyon.

The High School has an outdoor education class

___ has a 5th grade program that gets kids outdoors. California has a requirement that all 5th graders go to a weeklong outdoor education camp

Teton Science School has a 5th grade weeklong program for ALL kids.

Data indicates that most kids who enjoy the outdoors were introduced by their parents, and opening roads, such as the road to Dickenson Park.

Wyoming Kids Extreme has been a successful program and cannot accommodate all the kids who are interested. Caving in Sinks Canyon, winter activities near Cody, ATV training, and a helmet distribution program. This invites people to take advantage of our resources. WY Game and Fish also has a great program for kids, and for training public schoolteachers to bring this to their classrooms.

Hunter Education Programs.

Lander schools take the 6th graders to Yellowstone National Park.

High School rodeo program, horse shows

The CCC created many of the trails and recreation structures we have today.

Wyoming Wildlife Natural Resources Trust Fund takes \$ from the extractive industries and returns it to conservation

Discussion Question 1

Written & Online Comments

(cont.)

Shoshone NF is popular with volunteers nation-wide because they support volunteers with pack teams etc. This encourages partnership.

Organizations can work together to better to coordinate their efforts and to communicate. Fremont County ATV Association has to contact many different organizations to find out where they can ride.

Make Physical Education a requirement in all schools

Have more days where fees are waived to enter National Parks

The education system should emphasize high-stakes testing less and encourage outdoor activities and experiential learning more.

Create incentives/subsidies for schools to increase outdoor education curricula at all grade levels; make conservation/environmental education mandatory in schools; funding is now tied to whether students know facts; the education system must recognize the legitimacy of outdoor education.

Field trips, like going with fish and wildlife to track birds, can be amazing.

Strategic uses for technology, such as the Ken Burns National Parks PBS TV special

Community youth groups, or summer programs at Lander Parks and Rec. There are only sports teams right now.

FFA does organized activities such as going to the falls, holding BBQ's and outdoor outings. We could introduce agricultural programs.

NOLS should consider younger interns, to give kids the opportunity to see what possibilities are out there.

The high school could start a NOLS-related extra curricular activity, encouraging year-round outdoor recreation.

The USFS teamed up with Central Wyoming College and taught an intro class to cross-country skiing

The USFS helps students apply for USFS jobs, and prefers to hire locally.

Discussion Question 1

Written & Online Comments

(cont.)

Applying the secrets of the popularity of youth sports to outdoor pursuits. Sporting activities are so successful that people volunteer.

Organized sports work because they are competitive. If there are outdoor games with prizes, one can create a competitive event.

Getting popular people to do outdoorsy things.

Even though camping is cool most kids don't like it because it is hard work and they are attached to their phones and technology.

Our community has tried to do a big brother and big sister program, so youth can go with someone who has a little more confidence to take folks out. A lot of people don't know how to go outside, and impoverished people can't go camping because they don't have reliable transportation.

The high school just started a mentoring program where the mentors go on a NOLS course to learn leadership - hopefully they can start an outdoor club. Funding such an initiative is a challenge.

Youth idolize popular athletes, and if they go backpacking and say it is part of their lifestyle it will be more popular.

Youth leaders can inspire their peers to recreate outdoors.

The high school should start an outdoor club. We have some of the best backpacking in the country but how many backpacks does the school have.

Leadership and dedication to conservation initiative, and perseverance, such as historic conservation leaders demonstrated.

Make a holiday where parents take their kids outside.

Using outdoor rewards to motivate students. For example, if you do well we will do a hiking field trip.

Mandatory outdoor field trips would get more kids outdoors. First grade could be fishing, and so on.

Community members are already reaching out to teach students about fly fishing.

Discussion Question 1

Written & Online Comments

(cont.)

The session was clearly marked by emphasis on the importance of access to land, both to sustain our economies and maintain our active lifestyles and cultural heritage. Regarding federal involvement in land management and formal protection of public land, we heard both ends of the opinion spectrum. Many expressed strong desire for less federal government control and no more additional protection (e.g., Wilderness designation) as a means of improving access. Others supported the concept of additional protection to encourage more recreation access and relieve pressure from extractive uses. A common theme involved the need for more consistent and clear regulations and administrative processes to remove barriers for visiting the outdoors.

The topic of education was dominant in two primary realms: education that facilitates visitation for all people, and school education that exposes children to the outdoors at an early age and provides the tools to become lifelong recreates and appreciators of the land. Attendees consistently expressed the concern that many don't visit the outdoors because they don't know where to go, what programs and resources are available, or feel they don't have the skills to do so safely. People almost unanimously agreed that our existing education system fails to introduce children and youth to the outdoors in a way that connects them for life. The importance of parents in exposing their children to outdoor pursuits is seen as critical, and conversely the role children can play in involving their entire families in the outdoors is also important.

Participants at the session told numerous stories of effective partnerships at a local level that utilize existing resources and organizations to connect people to the outdoors and conserve open spaces. Sadly, many stories ended with reports of partnerships dissolving due to resource scarcity. This region, like others, is blessed with incredible talent, motivation and capability. Coupled with adequate funding and resources, these efforts could be sustained over time to significant long-term positive impact. Many conversations focused on building and sustaining partnerships between federal agencies and local school districts, and also incorporating non-profit groups, outdoor education institutions, and local businesses.

Open field trips to ALL schools. My brother did a field trip at his elementary school, but I didn't get to do that.

Federal land management agencies don't work, the DEQ and EPA don't function well because there is no one there with the know-how. Public lands need to be returned to the public, and the public should own and manage public lands, few folk left that know how to run the lands.

It is hard to balance our need for industrial development of these lands with my love for these lands. I drive a car. It has an impact. To best address this, we need to be smart with our impact. And balance development with protecting lands.

Getting kids outdoors! You need to get them there. Children age 8-10 open to the strongest impact. It's a problem that they can't get enough kids to go to the park.

No child left behind is forcing teachers to find the most objective parts of education, and forcing them to teach to the test. Funding is tied to whether students know facts. It needs to change. Students love to learn outside.

Discussion Question 1

Written & Online Comments

(cont.)

Communication between public lands folks and the public could be better, and many forms of communication should be used.

The system has rid itself of good teachers that would take them outside. Access to our youth is biggest and school system don't provide funding.

Go back to the basics. The state should allow people to access public land, not shut down public lands to the public.

Communicate well with people to let them know what is available, make it "less scary" for adults

One strategy is getting more opportunities to get students out for an extended time, and access to affordable outdoor education.

Supporting all local groups that involve education of youth and of environmental science

Riverton and Lander have fishing ponds. Bring the activity closer to the community.

Limit cell phone use - it's an obstacle; employ strategic use of technology.

Encourage development of groups of teenagers/youth that would get together go do things outdoors. If it becomes popular, it would spread.

- for example, start a NOLS partnership at the high school, an extra curricular activity with year round outdoor recreation,

- FFA (Future Farmers of America) does organized activities going to the Popo Agie falls, BBQ's and outdoor outings. We could introduce agriculture and NOLS and have the opportunity to get kids to intern and see what's really out there.

Improving communication. This includes two aspects. First, communication between groups and agencies about what is working and what is not. Second, between groups and the public, where better messaging, promotion and advertising can make a give difference. In some cases, opportunities exist for people underrepresented in the outdoors (like inner-city kids) but they do not get the message.

Protecting places, keep them whole and healthy, and keeping access.

Discussion Question 1

Written & Online Comments

(cont.)

A wide variety of outdoor activities opens the door wider. For example, 85% of Shoshone National Forest is roadless, so only 15% is open to actions that require roads. Cramming all those folks into the limited 15% creates crowding impacts and increases damage, which causes further closures.

Clear rules and regulations with consistent, fair enforcement is a positive. Heavy-handed enforcement turns people off and frustrates them.

Having safe areas, without bears or grizzlies, enables kids and people to get into the outdoors.

Bear education via hunter safety, for example, makes for more successful experiences.

Maintaining healthy wildlife populations brings people into the outdoors.

Game and fish walk-in areas are successful, which are agreements with private landowners to allow people hunting and fishing access.

Lander Parks and Recreation Department has added new outdoor programs, including traditional items like camps.

LA County Fair YouTube videos showing silly LA County behaviors illustrate that urban folks don't have great outdoor connections. Or iPhone apps.

Adventures in Learning (a local youth program) provides outdoor activities for children, whether it's for a day or for an entire weekend. They use facilitators with a great deal of experience who also know how to deal with children.

Scouts do a great job of teaching outdoor skills to the younger population—they aren't scared to go outdoors.

The hunter safety program through Game & Fish works well for adults and children

The Access Program through Game & Fish provides some of the best hunting and fishing opportunities are through private lands—some are open to the public, and others have limits to the number of hunters/fishermen that can access them, but both solve the problem of "I want to hunt/fish, but I just don't have anywhere to go."

NOLS introduces people to the Wind Rivers but also teaches them to get along with one another.

Discussion Question 1

Written & Online Comments

(cont.)

State Parks are a great resource for learning anything from geology to botany.

The Nature Conservancy had a program that was structured such that kids would progress and gain access to more and more difficult concepts, integrating their previous learning in subsequent years. But there weren't enough people to keep it going. The kids were a vehicle to their parents' involvement too.

The Lander Nordic Ski Association and skiing in the Beaver Creek area.

The Land and Water Conservation Fund - \$900M

The Conservation Corps does high quality conservation trail work in the Lander area, and the Fremont County Youth Camp has had some success in bringing youth outdoors.

The Nature Conservancy grants public access to properties they have conserved, while still leasing them out for ranching.

Conservation funding programs successfully fuel habitat restoration, water projects, etc.

Conservation easements are an effective way to protect land and provide additional public access. And we have a lot of federally protected land.

Lack of a Secure and Fully Funded, Mandatory Land and Water Conservation Fund. The Land and Water Conservation Fund (LWCF) was established in 1965 by Congress as a bipartisan commitment to invest in our natural areas, working lands and historic and cultural heritage, and to increase access to recreational opportunities for all Americans. The LWCF has protected land for our national parks, national wildlife refuges, national forests, national historic and scenic trails, and wild and scenic river corridors. In addition, the LWCF state assistance program has helped develop new state parks, trails, and recreation lands in every state in the nation. The LWCF has also helped farmers and ranchers protect working lands with conservation easements and saved some of America's richest wildlife areas for hunting and fishing.

National Parks Work! The National Parks embody America's natural and cultural heritage. They preserve the exemplary places and tell the defining stories of the American character and experience. National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning. Consequently, National Parks are the heart of America's Great Outdoors and should have a prominent place in the President's initiative.

Discussion Question 1

Written & Online Comments

(cont.)

The National Park Service Works! The National Park Service has become legendary for doing amazing things with few resources. To give one example, the Rivers, Trails, and Conservation Assistance Program (RTCA), which receives less than one percent of the National Park Service budget, is making outstanding contributions to community-based conservation efforts around the southeast. The program offers NPS staff assistance to community partners for planning, organizational development, project coordination, facilitation, and public involvement in achieving locally-defined goals for natural resource conservation and outdoor recreation.

To highlight one project in Georgia, much of the floodplain along a 50 mile stretch of the Ocmulgee River between the cities of Macon and Hawkinsville is already in public ownership, but is managed under a patchwork of federal, state, and local jurisdictions. Because of this fragmented management, recreational access to the river has traditionally been very limited. RTCA is helping to change that by working with the city of Hawkinsville and Bleckley, Houston, Twiggs, and Pulaski Counties to develop and improve public access points along the river, thereby creating a canoe trail, or Ocmulgee Blueway. When the Blueway project is finished, RTCA's partners will be able to promote river events such as festivals, river races, and run/bike/paddle races that can be combined with other eco-tourism promotions in each county. These developments will support local businesses, such as outfitters, restaurants, hotels, and shops, as well as create new constituencies for environmental stewardship.

Ultimately, this project has the potential to link the city of Macon and the Ocmulgee National Monument downstream to the Altamaha River Canoe Trail and the city of Darien on the Georgia coast, over 200 miles away. From Darien it will connect to the SE Coast Saltwater Paddling Trail, running along the coasts of Florida, Georgia, South Carolina, North Carolina, and Virginia. RTCA is a successful Federal program that helps communities. It should be expanded by Congress and serve as a model for future efforts.

Luckily, groups like the Conservation Trust for North Carolina (CTNC) are working hard to encourage natural resource conservation on private lands bordering the Parkway through the use of conservation easements. To date, CTNC has protected over 30,000 acres along the Parkway in 39 locations. The National Park Service is also reaching out to surrounding landowners and communities in an effort to forge closer ties around issues of planning and land management. There is even talk of creating a Regional Institute to formalize these ties and to facilitate stewardship of the Parkway through consultation between Federal, state and local planning jurisdictions.

The National Park Service and the Appalachian Trail Conservancy have a unique management partnership. Serving as a model for landscape conservation, the trail's protected corridor encompasses more than 250,000 acres, making it one of the largest units of the National Park System in the eastern United States. Preservation of historic structures along the trail offer hikers the opportunity to pause and learn something about important people and events in the nation's history.

Discussion Question 1

Written & Online Comments

(cont.)

Currently, the AT provides a venue for state-of-the-art science, with 65 institutions, ranging from National Geographic to NASA to a half dozen universities, conducting research along the trail in a coordinated effort shepherded by NPS and the Appalachian Trail Conservancy. Finally, the AT runs through 14 states and 20-plus congressional districts, providing a great platform for programs that many legislative offices can get behind, such as National Parks as outdoor classrooms where children can learn about and appreciate wildlife, rivers, canyons, mountains, and see history come alive. Once again, the stewardship of these lands requires a fully and permanently funded Land and Water Conservation Fund, able to finance acquisitions and easements that protect the trail's scenic corridor.

The Altamaha River, on the coastal plain of Georgia, is formed by the confluence of the Ocmulgee and Oconee Rivers. The Altamaha represents one of the most ecologically intact rivers remaining in the southeastern United States. It is the site of multiple Georgia state Wildlife Management areas (WMAs). It has also been a major southern conservation focus of The Nature Conservancy since the 1970s.

I appreciate very much the recent introduction In the Senate, of the wilderness bill by Senators Lamar Alexander and Bob Corker that will protect some additional areas of the Cherokee National Forest under the provisions of the 1964 Wilderness Act.

We see it as critically important to nurture a young and diverse constituency and are especially pleased that we have so many young people here tonight speaking out about their views on nature and conservation

While perhaps not unique to urban youngsters, the disconnection from nature is certainly related to the opportunity – or lack of opportunity – to experience nature, which may be more acute in urban areas. Protecting and restoring nature and the opportunity to experience it will be of increasing importance if we hope to develop a citizenry that broadly shares values of a natural world, whether we label it conservation, ecological literacy, or biodiversity. In nature-filled cities may be the preservation of the wild.

These values germinate through the simplest of experiences, like an adult showing a child how to catch a fish. Promoting these experiences is at the heart of the Chicago Wilderness Leave No Child Inside initiative. At stake, quite simply, is the future of conservation.

There is great opportunity for leveraging dollars in urban centers and Chicago is no exception. Federal funds have been multiplied five-fold through Chicago Wilderness. Federal agencies have reaped important benefits in return. They have effective outlets for delivering existing programs. In return they get program focus through initiatives like Chicago Wilderness. They are also able to work across federal agencies through common initiatives. And they help develop partnership models that can be exported around the country.

Discussion Question 1

(cont.)

There is a need for urban parks to provide a threshold experience for all Americans; we need these places close to home. You here in Chicago have done a terrific job creating an urban park system here. We also need a collaborative approach to conservation to be implemented across the country so that more urban centers can take ideas and inspiration from the leadership that has been demonstrated here.

· A community's economic well-being, the health of its citizens, and their quality of life are inextricably interconnected with responsible stewardship of their natural resources and human capital.

Indiana is part of Chicago Wilderness and the Chicago Wilderness ecosystem along Lake Michigan. One of the things we've done in northwest Indiana is to establish an environmental learning center at the Indiana Dunes National Lakeshore, which is a public-private partnership to provide environmental education to children. We know that access to nature benefits children's health and also improves their academic performance

Recently we did an inventory of restoration projects in 2007 in three counties, identifying 169 projects restoring natural areas in the heavily industrial locations in Indiana. We are now documenting the results of what happens when you restore nature in these types of areas, and that information is being used by the agencies that own and manage those lands to improve their results. This was federally funded through a program that sponsors service learning by college students. The federal government is already doing a lot to support these kinds of efforts, and we need more federal leadership in setting priorities and facilitating local public and private partnerships.

I've worked as a community environmental organizer for a number of years, much as our esteemed President did. I encourage everyone here to speak from the heart to the federal representatives here, because there are so many promising opportunities in Chicago and Illinois for conservation and restoration – so let's get to it!

. In our system of preserves we have captured examples of all the original landscapes. These preserves form the backbone of the region's green infrastructure. Our protected lands are diverse in terms of their setting and function. In our most highly developed settings they are represented by lakefront parks that provide important stopover habitat for migrant songbirds, to diverse, pre-settlement quality prairie and savanna remnants in the suburban fringe and along stream corridors throughout the region.

The entire Chicago region is blessed with this raw material: more than 350,000 acres of protected land set aside, a joint accomplishment of Federal, State, and local governments, open space organizations, and taxpayers who have repeatedly said natural open space is important. Taxpayers in the region have voted for nearly a billion and a half in tax increases during the last 15 years to protect open space.

Discussion Question 1

(cont.)

To better protect, manage and restore this rich natural heritage, in 1996 a founding group of 34 organizations launched Chicago Wilderness. The purpose was knit together the entire biodiversity conservation community into a single focused initiative. It is inclusive to an extreme: if your organization shares an interest in promoting the goals of Chicago Wilderness you have a seat at the table. You will see here how our membership breaks down. The membership is made up of roughly 2/3 non-governmental organizations to 1/3 government. Over half of the governmental organizations are local governments, including municipal governments who view the conservation of natural areas as contributing to their quality of life.

We have clearly laid out what we stand for. People thrive when ecosystems thrive, people are necessarily the agents of stewardship and science informs our actions, and we will only succeed if we work together across boundaries.

Our vision is articulated in, and robustly described in the Biodiversity Recovery Plan – that describes the status of biodiversity in the region, discusses threats, outlines recovery goals for these species and communities, and recommends specific actions and strategies. Over our 15 year history, members have come together to implement hundreds of projects that further the goals of the plan.

Where we do these things is graphically shown in the Green Infrastructure Vision, which overlays the entire region with Resource Protection Areas (RPAs). These include both protected and developed landscapes.

Within these RPAs, one of our strategies is traditional land protection, perhaps best illustrated by a study underway by the U.S. Fish and Wildlife Service to site a new National Wildlife Refuge in the Chicago region. Again, people have said repeatedly at the ballot box that they want more land protection. These RPAs are also places where we want to re-imagine how we live on the landscape and better harmonize our presence with the natural world, for mutual benefit.

This is where all of the principles of green infrastructure come into play. We're working with our municipal and regional planning members, like the Chicago Metropolitan Agency for Planning, who you will hear from in a few minutes, to get these ideas into broad circulation.

The alliance has also developed a suite of communication tools that help people become acquainted with the wealth of nature in their backyard and provide guidelines for conserving it on the protected land base and in the developed landscape.

We have also made an initial attempt to assess the health of the region's ecosystems, as a base against which to measure progress. There is a critical federal role in providing assistance in monitoring and assessment.

At its core, Chicago Wilderness is about connecting with and engaging the people of the region in the work of hands-on restoration, citizen science, and advocacy. The long-term health of the region's natural areas will depend on developing in the public a broad and enduring stewardship ethic of concern and personal responsibility for the health of the land.

(cont.)

Thank you for the opportunity to comment on the America's Great Outdoors Initiative on behalf of the Agricultural Drainage Management Coalition (ADMC.) Upon launching this important initiative, President Barack Obama made clear his Administration's commitment to developing strategies to better protect our nation's natural and historic treasures for generations to come. The ADMC is stepping forward to answer the President's call to action by assisting the Administration in identifying the "best ideas on conservation; how we can pursue innovative ideas that local communities embrace; and how we can be more responsible stewards of tax dollars to promote conservation."

The ADMC welcomes this opportunity to submit comments to help achieve your objectives. Most specifically, we believe tremendous improvements in water quality, reductions in greenhouse gas emissions, reduced flooding and an increase in productivity of American agriculture can be achieved through better water management practices. Attached with this letter are a number of recommendations for achieving our shared goal of expanding and enhancing wildlife habitat, outdoor recreation and the environmental health of our nation in manner that benefits the economic well being of our rural communities. We would be happy to provide you and your staff with additional information related to the recommendations set forth in our attached comments.

Vast portions of the American agricultural landscape have had the hydrology substantially altered to efficiently move water from the land. This can significantly improve agricultural productivity and provide substantial environmental benefits, but can have unintended consequences to downstream water quality and quantity as it relates to volume and velocity. The application of drainage management tools and practices can be utilized to cost effectively manage surface and subsurface water in a manner that results in improved water quality, reduced flooding, added recreational opportunities, enhanced and expanded habitat conservation and, oftentimes, improve agricultural production.

One of the most effective techniques to reliably improve the productivity of row crops is to improve field drainage. Doing so allows earlier access to the field for spring planting and reduces the likelihood of flooding once crops are planted. Unfortunately, improving drainage can facilitate nitrogen loss from the field. This robs crops of essential nutrients for growth and may make excess nitrogen available in undesirable locations like drinking water or marine estuaries. By managing the hydrology of agricultural fields it is possible to retain the positive benefits of drainage while significantly reducing nutrient loss. Production improvements can be supported, nitrogen losses demonstrably reduced and habitat protected.

In addition to enhancing and improving agricultural production, these drainage practices can also be utilized specifically for environmental and conservation applications such as creating and maintaining wetlands and saturated buffers for nitrogen treatment and habitat creation. Importantly, this can be accomplished in a manner that benefits the emergence of market based approaches to achieving watershed-scale goals for habitat conservation and other environmental outcomes such as improved water quality.

Discussion Question 1

Written & Online Comments

(cont.)

It is important that we work to establish an even greater symbiotic relationship between environmental health, habitat conservation and the continued viability and growth of our agricultural economy. Achievement of these goals requires enhanced partnerships between Federal, state local and tribal government entities, conservation, sportsmen and environmental organizations, agricultural organizations, private landowners and industry. The ADMC believes that the America's Great Outdoor Initiative has the potential to be a powerful mechanism for coalescing these diverse partnerships around common goals and we are committed to ensuring that occurs.

To that end, the ADMC proposes two actions we strongly believe will concurrently result in significant benefits to farms, watersheds, wildlife and outdoor recreation throughout the nation through expanded utilization of hydrology management practices. The practices and tools used to achieve these goals on the ground will: ? Provide the science and education needed to enrich conservation planning, implementation, management decisions, and environmental health. ? Measure, monitor, quantify and utilize project outcomes for the development and enhancement of market based approaches for achieving conservation and environmental goals on a watershed scale

The ADMC commends USDA for recently completing and issuing the "Assessment of the Effects of Conservation Practices on Cultivated Cropland in the Upper Mississippi River Basin," (CEAP.) While we have found CEAP to be a helpful and informative tool, we also believe the potential exists to broaden and expand upon its applications through a new USDA-NRCS led initiative. The initiative would include consist of collaboration between your departments and agencies, the conservation and sportsmen's community and the agricultural sector to identify and pursue opportunities to expand the capacity for actively managing our water resources to provide economic, environmental and societal benefits for generations to come.

Drainage Water Management: Field installed devices that regulate outflows and control surface or subsurface water tables. By managing water flow, major reductions in nitrogen can be achieved while reducing flooding, protecting and even increasing agricultural yield. See:

Bioreactors: Trenches filled with organic matter at the edge of fields to remove nitrates from subsurface drainage systems. These low cost systems can reduce nitrogen loss by as much as 80% without taking land out of production. See:

Saturated Buffers: Thousands of miles of buffers are bypassed by sub-surface tile lines. Tremendous environmental benefits can be achieved by providing for water from these conduits to be connected with buffers such as reduced nutrient loss, improved wildlife habitat, reduced water velocity and reduced flooding and increased biomass production. See:

Wetlands: Properly designed and operated wetlands can be extremely effective at reducing both nitrogen and phosphorous loss to waterways, provide flood storage, provide important wildlife habitat, reduce sediment loss and provide significant recreational potential. Managing the hydrology of a wetland can significantly improve its environmental performance. See:

Discussion Question 1

Written & Online Comments

(cont.)

Progress in developing and testing ecosystem markets in the United States continues to lag. Selected pilot projects can help overcome some of the impediments to potential innovation. The ADMC recommends establishment of pilots in the Chesapeake Bay, Great Lakes and, subject to funding availability, additional watersheds. The purpose of the pilots would be to demonstrate on operating farms the potential for ecosystem service markets to advance cost effective conservation strategies. As a result, the pilots would provide real world experience to foster environmental improvement within the agricultural sector and between sectors such as point source industrial and municipal facilities and agriculture. Initial pilots could be targeted at the development of a pilot water quality and conservation credit trading. Tools and practices utilized to initiate development of the initial credits could include nitrogen removal, flood and water quality management through temporary restoration of landscape functions and the establishment of wetland and riparian habitat.

Our public lands are among our most important birth rights as Americans, whether we visit them or not. President Obama and the Administration deserve congratulations for undertaking the America's Great Outdoors Initiative (AGOI). The opportunities for ordinary Americans to make their views known at public listening sessions and through the website are invaluable. The Administration needs to continue to be proactive in involving Americans in order to give them a sense of ownership over the program and its results.

Future listening sessions should be announced well in advance so people can plan their calendars and so interested organizations can assist in spreading the word. The website needs to be kept upto-date. It also needs to be kept simple. I have heard some complaints from people who find it hard to navigate. And while I understand and support the need for registration to make comments and to vote, I think it is not a good idea to have one's votes linked to one's personal profile for all other users to see. (I have no problem with the comments themselves being linked, however.) Of course, AGOI does not exist in a vacuum, and there are other issues which affect it, but which were probably beyond the scope of the listening session. But without an examination of these other issues, AGOI cannot be totally successful. Most important is funding, although population (which was mentioned at UCD) needs to be taken into account as well.

Discussion Question 1

Written & Online Comments

(cont.)

FUNDING

This is a big issue, but the main issue is really one of national priorities. There is money available for programs, but the Administration and Congress need to push much harder to shift spending priorities toward programs that directly benefit Americans and our environment. That might mean, for example, that departments that have huge budgets, like Defense, have funding shifted away from them. Also, the current system of government subsidies needs to be overhauled so that money

is not going to support activities that harm the outdoors, like oil and gas companies (which seem to have no problem being very profitable). Agricultural and transportation subsidies also need to be examined for their environmental impacts.

The Department of Interior needs to undertake a study to determine what would constitute full funding for proper management of our public lands agencies. The Administration should then use this information to request full funding every year. The Administration should support full funding for, and the extension and renewal of, the Land & Water Conservation Fund as well as the Historic Preservation Fund.

INCREASED VACATION TIME

As part of the Initiative, but also as part of broader social policy, the Administration should support initiatives to increase family vacation time, so that Americans can actually plan relaxing trips to our public lands. Other developed (and economically thriving) countries, like Germany, have very liberal mandatory vacation laws. It is time the United States followed their example. The benefits to psychological health (and productivity) are many. Take Back Your Time (www.timeday.org) is one organization promoting these ideas.

USER FEES ON PUBLIC LANDS

Americans should be able to enjoy federal public lands as the citizen-owners they are. That means that in theory, access should be free. Tax revenues should pay for the majority of costs associated with the management of our lands. Entrance fees to national parks are traditional, but should be kept minimal. Fees for camping and the use of other developed sites such as boat launches should also be minimal and affordable. Picnic areas and parking for day use and hiking should be always be free and subsumed into the general budget of the jurisdiction in question.

HISTORICAL RESOURCES

Though not mentioned at the Davis meeting, the Administration should include the preservation of historic and cultural resources in its final proposals. The Historic Preservation Fund should be fully funded.

Parks built around cultural and historic sites provide opportunities for field trips for schoolchildren as well as getting adult citizens outdoors. In fact, historic sites provide a perfect "gateway" for people to get outdoors. If there is a historic trail, then there is an opportunity for exercise. Lands surrounding historic sites can and should be bought for native habitat restoration areas.

Discussion Question 1

(cont.)

CONCLUSION

Thank you for holding the session in Davis and a subsequent one for youth in Berkeley. Californians for Western Wilderness fully supports the America's Great Outdoors Initiative. We look forward to reading the final report and sincerely hope that the Administration makes its implementation a top priority.

Members and supporters of Ducks Unlimited have taken part in twenty of the Administration's America's Great Outdoors Initiative listening sessions held around the country from June to September. DU is especially interested in seeing this initiative advance conservation of the key wildlife habitats that are at jeopardy across our nation, and has presented recommendations for these regions at the sessions.

In our view, it is critical that important wildlife habitats across the country Wildlife-related recreation, such as hunting and wildlife viewing, are deeply meaningful for those who participate in such activities and important to the nation's economy. We anticipate this aspect of America's Great Outdoors will receive thorough consideration in the crafting of the final report and plan. remain intact and be secured from development or restored. Our national heritage of wildlife and other renewable resources is at risk unless we devote more financial resources to their future.

Discussion Question 1

Written & Online Comments

(cont.)

Ducks Unlimited is especially interested in ensuring the protection of key Great Outdoors and national economic and conservation objectives. However, we are focusing on the Prairie Pothole Region in these remarks as an example of how to be effective in this most endangered habitat. All of these recommendations include programs and initiatives that are both beneficial to waterfowl and will promote, support, and sustain the goals of America's Great Outdoors. These recommendations are:

1. Designate the Prairie Pothole Region as a key part of the AGO initiative;
2. Focus key conservation programs in the Farm Bill on the Prairie Pothole Region;
3. Provide full funding for the North American Wetlands Conservation Act;
4. Increase the price of the Migratory Bird Hunting and Conservation Stamp;
5. Fully fund the Land and Water Conservation Fund; and
6. Create a market mechanism to sequester carbon in ranch lands.

habitats of the Prairie Pothole Region (PPR) in the North Central States. While we are interested in a number of key landscapes across the country, the Prairie Pothole Region is at the greatest risk of loss, and there is a need (and opportunities) for immediate action. The following recommendations relate to the overall policy goal of keeping the PPR's native grasslands and wetlands intact for the benefit of all Americans. Many of the programs and policies that are needed to accomplish this objective will benefit other aspects of America's We look forward to working with your Administration and its agencies on these programs, and offer our assistance and expertise as requested, particularly on waterfowl, wetland and grassland-related projects. Many of these efforts require Congress to take action and we are already working with them to shape and implement appropriate legislation. We hope the Administration will include these legislative efforts in its work with Congress.

Discussion Question 1

Written & Online Comments

(cont.)

The Prairie Pothole Region as a key part of the AGO initiative

The most important ecosystem in the country for waterfowl and many other migratory bird populations consists of the grasslands, native prairies, and wetlands of the Prairie Pothole Region. PPR grasslands and wetlands provide quality breeding habitat for waterfowl and other wetlands-associated wildlife. Numerous other migratory birds, many of which are in decline, also depend on this critical habitat. Portions of this landscape, stretching from southeastern South Dakota to northeastern Montana, appear much as they did when Lewis and Clark journeyed there two centuries ago. The PPR is the most productive landscape in the world for breeding waterfowl and many other migratory birds due to the unique mixture of native prairie and very high densities of wetlands that remain since the glaciers retreated over 10,000 years ago.

This region is extremely important for sportsmen and women, youth, and other outdoor enthusiasts. The wide-open nature of the landscape is renowned for providing abundant opportunity to be active and get outdoors to hunt and view wildlife such as ducks, geese, pheasants, deer and many other species. The landscape of the PPR supports an outdoors-focused culture with links to the past that have proven to be key elements of mental and physical health, and helping youth grow up to care about nature and all its elements.

Farm Bill priorities

The Farm Bill and waterfowl are inextricably linked. The management of our nation's agricultural lands greatly affects duck populations, particularly in the nesting grounds of the grasslands and wetlands of the PPR. DU's approach to the Farm Bill is pragmatic: we realize that quality cropland should and will be devoted to providing food, fiber, and fuel for our nation. We also realize that not all ground is suitable for crop production. Some of it is too rocky, steep, wet, or dry to reliably produce a crop; hence, DU's commonsense approach of "Farm the Best and Conserve the Rest."

The remaining 22 million acres of native prairie in the U.S. portion of the PPR produce an abundant fall flight of ducks, geese, and many other migratory bird species from this country each year while simultaneously providing the backbone for a robust ranching industry. Unfortunately, this native prairie habitat base is being whittled away, the victim of drought-tolerant crop varieties, high commodity prices, increasing demand for food, and federal policies that encourage farming marginal cropland. The PPR has already lost 70 percent or more of its native grassland, and DU researchers have documented annual loss rates of up to 2 percent of this habitat in the heart of the "duck factory." This loss rate of 2% translates into the loss of 50,000 or more ducks each year, and means that 50% of the remaining prairie will be gone in about 30 years.

Discussion Question 1

Written & Online Comments

(cont.)

We must remove farm bill policies that subsidize the conversion of native prairie and wetlands, fully enforce swampbuster, make sodsaver mandatory, and take other policy steps to remove all federal incentives that encourage the continued conversion of our native prairies and wetlands.

Through the America's Great Outdoors Initiative, the Obama Administration has the opportunity to influence the impact of Farm Bill programs on critical lands and vital waterfowl habitat in the PPR by increasing funding for these critical conservation programs. Increased funding of these programs will allow the U.S.D.A. to continue to work with landowners to make their working lands beneficial not only for themselves, but also for the numerous species of waterfowl and other migratory birds that rely on them as breeding grounds, and for the many people in the region and throughout the nation who enjoy the outdoors and the birds produced in the PPR.

Increase the cost of the duck stamp to \$25

The Migratory Bird Hunting and Conservation Stamp Program, initially created in 1934, has conserved over 6 million acres of waterfowl habitat in the National Wildlife Refuge System. Since 1991, the price of the duck stamp has remained set at \$15 while land prices have skyrocketed. A recent analysis of land values in South Dakota's Prairie Pothole Region found that land prices have increased sevenfold in the last ten years.

An increase of the price of the federal duck stamp from \$15 to \$25 per stamp would ensure that the buying power of the stamp remains stable. The proceeds from the stamp should continue to go to important waterfowl habitat conservation as directed by the Fish and Wildlife Service. The Obama Administration can assist in this effort by including the needed increase in the price of the duck stamp in their final report on the America's Great Outdoors Initiative and encouraging Congress to take swift action to increase the price. Further, the Fish and Wildlife Service could direct a greater portion of the funds from this program to the PPR.

Full funding of the Land and Water Conservation Fund

Since enactment in 1964, the Land and Water Conservation Fund (LWCF) has provided funding through matching grants to acquire land and water resources, easements on land, and recreational lands. These funds have been used for federal land acquisition and a variety of state-based outdoors programs.

Authorized at \$900 million, the program has only been funded at that level a few times. LWCF has the potential to provide additional funding to the PPR for the acquisition of both easements on private lands and additional lands for the National Wildlife Refuge System. The Administration should request full funding of the LWCF through dedicated appropriations above and beyond the Interior Department budget, with significant annual dollars going to the PPR for use by the Fish and Wildlife Service for habitat conservation.

Discussion Question 1

Written & Online Comments

(cont.)

Create a market mechanism for sequestering carbon in managed ranch lands

The Administration should create a market mechanism that allows farmers and ranchers to be rewarded for sequestering carbon dioxide in grasslands and wetlands. Market forces could be created to provide a more stable economic incentive to protect existing grasslands and wetlands or to take marginal cropland out of production to restore them. Ducks Unlimited has shown that such a mechanism works ecologically and helps to cleanse the air of excess carbon, but a stable regulatory framework is needed to provide a foundation for this market. The program could be voluntary and result in significant public benefits from the private market that would be established. We are prepared to assist in outlining this program effort.

The above-described package of initiatives would go a long way to raising the additional revenues needed to protect the great outdoors of the Prairie Pothole Region landscape and all the benefits it provides to the people who live in the area and across the nation.

Need to integrate electronics and technology with outdoors

People in outdoor-related and recreation-related positions need to do what it takes to get youth involved in the outdoors

Safe areas in parks, forests, etc. for youth ("safe nature")

"Natural" playgrounds in city parks

City park district/local youth programs help out parents with little time. Need more similar programs in State/Nat'l Parks, Forests, etc. to get families involved

Need to support farmers/ranchers -- large contributor to conservation of open spaces. Private initiatives for conservation work -- Farm Bill, etc. can be better allocated

Game & Fish depts. opening private land to fishing and hunting works (HMA's, etc.). Keeps pressure off public lands

Programs like Recreation Trails Program and LWCF work. Need more funding and add'l programs (a Recreation Trust Fund)

Nat'l/State Parks work -- need add'l funding to keep operating effectively

Discussion Question 1

Written & Online Comments

(cont.)

Outdoor recreation is a more economical than many other options

Volunteer programs work -- and don't rely on much funding. Need to form more partnerships to foster volunteering on public and private lands

Mentoring youth works - #'s of youth hunter/fishers/outdoors-people are declining -- mentoring youth will help to increase

Wildlife Trust Fund is an important source of matching funds -- needs to become fully funded to be effective

From the great southern wildlands like Great Smoky Mountains National Park to places like the Ocmulgee National Monumen, which memorializes our continent's Native American history, the national parks provide some of the best means of connecting Americans, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation.

National Parks Work!

The National Parks embody America's natural and cultural heritage. They preserve the exemplary places and tell the defining stories of the American character and experience. National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning. Consequently, National Parks are the heart of America's Great Outdoors and should have a prominent place in the President's initiative.

The National Park Service Works!

The National Park Service has become legendary for doing amazing things with few resources. To give one example, the Rivers, Trails, and Conservation Assistance Program (RTCA), which recieves less than one percent of the National Park Service budget, is making outstandign contributions to community-based conservation efforts around the southeast.

RTCA is a successful Federal program that helps communities. It should be expanded by Congress and serve as a model for future efforts.

The Appalachian National Scenic Trail

The Ocmulgee National Monument

Discussion Question 1

Written & Online Comments

(cont.)

The Altamaha River (Georgia)

Opposes LWCF (FED) going to cities, towns, States Should continue to be used to acquire large federal landscapes

Partnerships work, and we need to continue to grow private/public partnerships with Federal assistance. Treasured Landscapes effort should focus on key habitat areas, including the Missouri River, Dakotas, and preserving the Prairie Pothole Region

Prairie Pothole Landscape should be preserved using Grassland Easements. Several hundred thousand acres are now available but not signed up due to lack of program funding. We need better funding for the Conservation Reserve Program (CRP).

Beyond LWCF F&W Conservation PR, DJ, Wallop Breaux, Affinity License Plate revenues, O & G Royalties From FED

Lands should form the nexus to meet the overall needs for managing Fish & Wildlife and habitats.

Full funding for LWCF should not mean \$900 M as specified in the original legislation, but should be adjusted for inflation to \$3.2 B

We should mandate outdoor conservation education in the public school curriculum, to increase awareness and interest in our youth, and to recruit the next generation of conservation advocates

Wildlife for the 21st Century Vol 3, containing 68 Action Items developed by the American Wildlife Conservation Partners, is hereby submitted in its entirety as a comment (subject report attached) <http://www.wildlifepartners.org/files/21century.cfm>

- AGO is a Public Process, and needs to focus on the needs of people for outdoor recreation. Engaging people in hunting and fishing is a tested and proven successful method of getting people outdoors and developing conservation stewards.

Need Access Maps/Info, similar to State of Minnesota on –line Maps of all Public Hunting Areas

Designers and Planners should incorporate “Wild” natural areas as part of school campuses.

Incentives from Dept of Education are needed to help develop Conservation projects and Education curricula.

Parks are very expensive and it is better to subsidize school programs to teach conservation education than build a lot of new parks.

Discussion Question 1

(cont.)

Need to reach out to where People (Kids) are (where they live), and work with NGOs who already have established local connections in Partnership. Outdoor Recreation is the portal to Education, and established programs like "Save Our Streams" should be utilized and supported.

What works for Urban Kids, Easy access is key.

Identify the nexus between nontraditional partners, programs, and funding sources, including the Department of Education, Health and Human Services, and Veteran's Administration.

Administration officials should fully implement Executive Order 13443 - Hunting Heritage, to expand and enhance hunting opportunities.

"Making Public Lands Public" document is hereby submitted as a recommendation

The Stewardship Contracting Authorities of BLM and FS should be re-authorized and made permanent.

Include in FY12 Budget a provision to ensure that at least 1.5% or no less than \$15 Million of LWCF funding is dedicated to hunting, fishing, and shooting access.

Giving a voice to sportsmen at all steps is very important. Special places and treasured land scapes. Energy and mineral extraction should be carefully thought out, especially drilling and extraction. Make sure the industry is held responsible for drilling chemicals, hydraulic fracturing impacts on water quality and quantity, and negative impacts to kids and families enjoying the out of doors.. Connect kids and families is important, priority.

The Eastern Forest Partnership is a coalition of national, regional and local organizations working to advance permanent protection of forests in the Eastern United States. The partnership seeks to raise awareness about the value and importance of these forests and to promote sound public policy in order to conserve these lands.

Our coalition is pleased to support President Obama's America's Great Outdoors Initiative. We are grateful to have been given the opportunity to participate in many of the listening sessions that were held across the country this summer, and applaud the Administration's efforts to involve a diverse constituency in the development of your plan

The vast canopy of eastern forests that stretch from the cool pines of Maine to the rich hardwoods of the Deep South, are a critical natural resource area in America. These forests provide a stunning backdrop to the hundreds of millions of people that live in the densely populated East and are essential as they provide clean and plentiful drinking water, wildlife, timber, and outdoor recreation that meet the needs of local populations and distant cities alike.

Discussion Question 1

Written & Online Comments

(cont.)

Eastern Forests = Economic Growth and Jobs

The Department of the Interior 2009 Report found that annually "federal parks, refuges and monuments generate more than \$24 billion in recreation and tourism."

Active outdoor recreation, including hunting, fishing, camping, bird-watching, climbing, hiking, paddling, backcountry skiing, mountain biking, wildlife viewing, and other activities, drives a total of \$730 billion in annual economic activity, supporting 6.5 million jobs (1 of every 20 jobs in the U.S.), and stimulating 8 percent of all consumer spending, according to the Outdoor Industry Association.

Eastern Forests = Clean Water

According to the U.S. Forest Service "the majority of the U.S. drinking water supplies originate on forested land." As such conservation of forests is essential to maintain clean and plentiful drinking water for all citizens

Studies have also found that protection of water supplies is the most cost efficient way to ensure clean and plentiful drinking water supplies to communities.

The value of water flowing through our national forests alone is worth \$4.3 billion annually.

Numerous polls show that clean water is a top conservation concern for 89 percent of Americans

Eastern Forests = Public Health

Eastern forests provide places close to home for the millions of families living in the densely populated eastern seaboard to enjoy the outdoors, to get exercise and to improve their physical and mental well being

Access to natural areas reduces stress, mitigates obesity and other health issues, connects families and communities, and enhances the quality of life of all Americans

The Eastern Forests are also the "green lungs" of the highly-populated eastern part of the country -- providing fresh air and healthy ecosystems that balance the pollution and overuse that characterize large urbanized areas such as Atlanta or the megalopolis that stretches from Richmond VA to Boston MA.

Eastern Forests = Recreation

Eastern forests provide abundant recreational opportunities right out America's back door, including the Appalachian Trail, world-class whitewater rafting, and hunting, fishing and wildlife watching close to home. They are located within a day's drive or less for more than 60 percent of Americans living in the most densely populated portion of the country

Established in 1965, the Land and Water Conservation Fund serves the national interest as the primary source of funding for federal land conservation efforts

Through this fund, states throughout the country have preserved critically important lands including national forests, wilderness areas, historic and cultural sites, significant battlefields, trails and recreation areas.

In addition, the stateside portion of this program accounts for the creation of thousands of local recreation projects such as ball fields and community parks

Our protected federal lands and waterways provide an opportunity to address the unprecedented challenges that climate change poses to our forests, fish and wildlife, and riparian resources.

These natural areas also store carbon, buffer flooding, conserve water, and support healthy fisheries and wildlife populations.

Established in the 1990 Farm Bill, the Forest Legacy Program is a partnership program that "protects 'working forests'...those that protect water quality, provide habitat, forest products, opportunities for recreation and other public benefits."

To date, this program has protected over 1.7 million acres in 36 states and Puerto Rico.

Every federal dollar invested in this program is matched 1:1 by private or non-federal government funding, making it a sound use of public resources.

The Highlands Conservation Act became law in 2004 and authorizes \$10 million in land acquisition and \$1 million in technical assistance annually to the states of Pennsylvania, New Jersey, New York and Connecticut.

Traversing over 3 million acres the Highlands provide clean drinking water, local food, and close-to-home recreation to the more than 25 million residents living within an hour's drive of this nationally significant landscape.

The year 2011 marks the 100th Anniversary of the Weeks Act. The Act, which was one of the most notable conservation achievements of the 20th century, authorized the federal purchase of cutover and denuded forestlands in the headwaters of navigable streams and rivers

Discussion Question 1

Written & Online Comments

(cont.)

The Act provided the mechanism for the expansion of the National Forest System to the eastern United States, and today 26 eastern States are home to 52 National Forests encompassing over 24 million acres.

With renewed interest in our eastern national forests generated by the celebration of the Weeks Act, we believe there will be an opportunity to identify critical private land-holdings in eastern national forests that should be acquired using LWCF funds to fulfill the vision and goals of the Weeks Act.

As you seek conservation solutions for the 21st Century, we urge you to look to and build upon the success of the Weeks Act in transforming the eastern forests into the asset they are today.

Since 2008, drawn out 20 Year Land Plan proceedings have been taking place to decide permitted uses on the 26,000 acre (40 square mile) federal portion of the former Champion lands known as the Conte Refuge, Nulhegan Basin Division. Heavily funded, well staffed preservationist groups such as the Conservation Law Foundation, Center for Biological Diversity, Siena Club, and Wilderness Society are all pushing to end virtually all of the snowmobile trail network and road network within the Refuge. The road network and snowmobile network each exceed 40 miles. These are the exact amenities that the vast majority of Refuge users rely upon to enjoy the region.

The Vermont Traditions Coalition (VTC) is a coalition of over 20 organizations from the forest product, maple syrup, agriculture, sporting, snowmobiling, outdoor guide, and lake association sectors. We have a daily presence in the Vermont Legislature and play a prominent role in all major public lands issues in Vermont due to the depth and breadth of our statewide network and our knowledge of issues involving Vermont's predominantly rural landscape. VTC believes that a healthy economy, healthy communities and a healthy environment are inextricably linked. VTC works with local and state organizations, state agencies and leaders to protect Vermont's rural traditions, identity and ways of life.

It is our hope that this new Great Outdoors Initiative will truly create new policies dedicated to working better with local communities, landowners and state agencies, discovering new ways to protect traditional values and land use practices that connect a large number of Americans to the great outdoors. Let's cut through the red tape and celebrate Rural America, not work to destroy it. Let's continue to conserve important lands, but allow the people to continue to use it and the natural resources it holds, not lock it up and shut it down.

Discussion Question 1

Written & Online Comments

Despite the numerous amount of planets suspended within the multiverse, ours is the only with advancing life we are yet aware of, or at least at our rate of development at this time in our history. Thus we need to preserve the planet's beauty, space and virtue; cherish and appreciate the opportunities it provides us, and bestow on it utter respect, which we seem to have lost and must redeem. Our multitude of chance, our fate may be faltering.

The once vast expanse of the historic plains now feeds the entire world from crops grown within its rich soil. Let us reclaim and restore even a portion of these lands to allow prairies a foothold to perpetuate their own legacies. Gazing upon a Grand prairie will enrich and renew the spirits of present and future generations and show our children the role that human beings can have in the stewardship of the land.

As a low-income citizen not currently getting out and traveling the country, I'm lately more concerned about the livability of the city I live in every day. So let's see more porous ground surfaces, less concrete, more nature in the day-to-day. Kudos and thanks to the local heroes who influenced the government to declare the L.A. River a traditional navigable waterway, qualifying it for environmental protection.

History is what makes the present relevant and the future predictable. By saving our battlefields we are providing today's youth a lesson in why we are the nation we are today. By destroying it we say it is not important and then promptly go and create the same tragic mistakes that the Civil War tried to teach us not to make. In addition we are preserving open space for those who follow behind us. I live in the Chicago suburbs. In the last few years of development mania have taught me anything it was that we need to preserve open space where and when we can. The sprawl added to the existing overbuilt environment I live in has few positives to show for its impact on the natural environment. If it wasn't for a few farsighted government officials when the area was less developed there would only be another parking lot where we now have beautiful green space. By combining saving battlefields with the creation of open space we create a win win situation for everyone.

Like many Americans, I am the direct descendant of a Civil War soldier. Preserving Civil War battlefields keeps alive the memory of those soldiers who fought on them and especially those who died on them. Not only that, battlefield preservation helps protect wilderness areas from commercial encroachment, helps conserve watersheds and wildlife habitats, and lets our descendants enjoy their cultural and historic heritage.

A few environmental groups seem to have been hijacked by the corporations they were supposed to watch and help protect the environment against, so being a so-called leader of one of these groups may not be a good litmus test for choosing heads of agencies like the FWS. On the other hand, the environmentalists who have a proven track record of caring about wild places and who have fought in the courts to uphold environmental laws for little or no money; absolutely and of course they should be at the top of FWS, BLM, USFS, etc.

Discussion Question 1

Written & Online Comments

(cont.)

A panel of biologists needs to be assembled to determine the areas that should be included. The alternative is to allow a huge number of species to become endangered and let the Endangered Species Act and the courts take full control of our economy. Right now, that's where we're headed.

A park like this would be a huge attraction and would create hundreds of good jobs in a area that certainly would be chosen because it had a seriously bad economy. There are large areas where water shortages have held back development or over extraction of groundwater have made development worthless. I am no advocate of forcing unwilling sellers to do anything they don't want to. Please don't put words in my mouth.

Designate 10 million acres surrounding Moab, Utah as a OHV, ORV only National Recreation Area and charge admission to maintain erosion control and for plant restoration

Designate a National Monument along the shores of the Gulf of Mexico where oil is inundating the shoreline and preserve it as a reminder of man's potential to destroy himself by doing something so seemingly innocent as driving an OHV.

I'm disappointed. You're trying to vilify people saying they are anti-human because they think wildlife needs should have precedence over roads. If the environment doesn't get healthy for wildlife, then it's not healthy for humans. People who are trying honestly to solve some of they problems they are studying are pro human because they are trying to maintain diversity and diversity is good for humans. If that means closing some roads, that's not anti-human.

I have never felt locked out of any public land. There are no places barring nuclear test sites that are closed to the public. Park your car and hike anywhere you want to. What you are talking about is not an access issue, but a welfare issue. You want the government to make roads so you can get where you want to go with an OHV. I do not want to pay for those roads and I don't want you ripping up the land and making me pay to fix your damage.

I was at a rally about 25 years ago where we were urging the government to get moving on climate change. One person carried a sign that said "no jobs on a dead planet". The gears of massive change are beginning to turn now at a pace where the average person can see the cumulative effects. Those gears are not going to be stopped easily. Global is BIG.

Idaho and Montana National Forests are some of the most cut over, clearcut forests in the country. In Montana, when I was a kid, I visited mountain areas like this and was amazed at how it connected me to the natural world for the rest of my life. Now, to my surprise, there is almost none of that wild country left. Every inch of what is left should be protected. This is a little island in a big clearcut, but somewhere, sometime, there will be a kid who falls in love with nature because it is protected.

Discussion Question 1

Written & Online Comments

(cont.)

In order to get kids interested in nature, you have to have natural places for them to grow up near. In the Eastern US there are painfully few opportunities for youth to come in contact with raw nature. This and other National Park proposals for the Eastern USA are contained in the New National Parks organization's list of 100 new NP proposals. Another place that is on the list is the Maine North Woods National Park. It's big and wild and not far from the maddening crowd.

Interesting. There are a lot of people who want to see a suitable wild habitat set aside for pure DNA buffalo. It seems that this species is being ignored as an endangered species. Maybe it is because every one of us imagines the huge stampedes of buffalo of yesteryear, and we can't bring ourselves around to believe that they're down to a very few animals.

It costs nothing to have a designated wilderness area and the set aside does a great deal of good for society in providing clean water, clean air and wildlife habitat. The government could accomplish a lot with zero dollars by just leaving government land wild.

'we are sometimes told that in our few remaining patches of old growth, there are no species which cannot live in hundred year old forests' , There's is one very obvious change that happens in an old growth forest which is not usually in a hundred year old forest. The tops of the trees start to die and some tops break off. This allows for a new habitat high in the forest canopy that is home to many birds and small mammals that probably don't exist in your area of the country anymore. These very old trees are majestic and thought provoking. Where they are near river banks, they usually lean out over the river and provide a great deal of shade for fish and a fishing platform for fish eating raptors.

Let all logged over public land return to natural condition so OHVers will have a place to enjoy wild nature. Let the roads grow over, let the trees grow thick, help the wilderness flourish again, make potholes in the roads, remove culverts, run plows over the road surfaces. Make all those millions of acres accessible to OHVs and ORVs and noone else. Don't ever allow logging or mining in these areas to protect their pristine quality so OHVers can enjoy the solitude and family recreation memorable experience.

Most, by far, of the lower 48 is covered with people. The only places that are not covered are places that are too dry, too cold, too high or too far from a mall. Protecting land is for wildlife, not humans. The areas that are protected already are too small to have thriving, vibrant interactions between life forms that most folks don't care about or understand, even though protecting them may benefit humans in some way.

Discussion Question 1

Written & Online Comments

(cont.)

My biggest problem with OHVs is the noise, but the biggest problem with trail riders is the damage they do to watersheds and the cost to taxpayers of fixing that. I don't want to spend taxpayer money on this sport. Wilderness doesn't cost taxpayers one thin dime. That's what I like about keeping wild places wild. You get all that clean water and clean air that comes from wilderness and you don't have to spend any money for it. So what if there are no trails and you can't look at it. There are huge economic and health benefits to leaving land alone. You OHVs should quit talking from both sides of your mouths. You hate welfare. You hate spending taxpayer money. But you want to get out there with your federally subsidized sport and rip it up. Pay the full cost of driving an OHV or start walking.

Now, considering the horrible mess that's been made in the Gulf of Mexico, it's not unreasonable to reclassify every single roadless acre into wilderness. You see, even if land is supposed to be preserved, we are still losing it to development. This oil mess is ruining a billion pristine acres of Earth. How can we make up for that legacy? We can't, but we should try. Quit squabbling over individual areas and set it all aside.

People who look at the Bob Marshall Wilderness and see something BIG should think about the coast to coast wilderness we've lost. If you look at my other posts, it will explain the perspective more fully.

Promoting is something that the chamber of commerce can do, but to spend taxpayers money promoting so called "wise use" is exactly the type of welfare government program I've talked about in other posts. The term "wise use" is a loaded slogan for the industries you refer to in your "idea". The really wise thing to do on government owned land may be to leave a lot of it alone.

The NPS is doing a wonderful job of administering the 392 sites (your figure, I didn't verify) and I'm sure they would be glad to administer even more. They provide healthy jobs that are competed for fiercely, which proves that people like working in national parks. Like any other government agency, their budget fluctuates. The thing that is important here; more and more people spend their vacation time in national parks so more and more of them need to be established. And the win win situation: parks are good for wildlife and the environment too, and the economy.

Scenario 3 - People accept responsibility and get educated People conserve energy and resources and pursue the most environmentally friendly technology. They recycle as much as they can and quit digging new holes to find new resources, because there is plenty of scrap metal and paper in the dump. They carefully tear apart old houses to make new ones because they want the clean air and clean water that heavily forested land provides, so they do as little logging as possible. People decide to eat the foods that take the least resources to grow and they grow those foods without chemicals, because they don't want their kids to have cancer and health problems created by chemicals. They use computer technology to commute and visit their distant families instead of driving or flying. They vacation in vehicles that use as little fuel as possible. The economy keeps on chugging along, and some people aren't happy, just like today. But everyone can still breathe relatively clean air most of the time and get a drink of pretty clean water out of the tap.

Discussion Question 1

(cont.)

Siskiyou Crest National Monument Proposal could exclude private land and solve some of the local landowner issues. Private land is not a good reason to can the proposal though. Most of the land in the proposal is USFS and definitely worthy of NM status. Restoring the land there would create forest and heavy equipment jobs for the community, and once the land is restored, it will bring in more recreation jobs. It's a win win situation for the locals and the USA.

The National Park system expansion proposed by www.NewNationalParks.org would join together many of the wildlife areas, roadless and wilderness areas, wild and scenic rivers and other protected land under single NPS management plans. Their list of 100 new National Park proposals is largely designed to end the fragmentation of some key wild areas, including the Klamath-Siskiyou area of California and Oregon. The Ancient Forest National Park proposal is at www.ancientforestnationalpark.org

The new national parks should be huge and not necessarily be for people. Wildlife should be the factor that dictates what new parks are established and where they should be. The new parks will not be "land grabs" but will be just a change of use of already government owned land. As far as I'm concerned, there is no backlog of maintenance that needs to be done in National Parks. If the parks can't accomodate visitors in ways that certain visitors expect, maybe those people should go to Vegas or Disneyworld for their vacations.

The reason our cultural heritage is important is because our distant ancestors were small in number and remnants of their deeds are few and far between. Now that there are 350 million of us in the USA, I wonder how much importance future generations will put on finding one more plastic piece of junk, one more chemical killed landscape. Will archeologists in the future think finding the remnants of one of our billion ugly buildings requires a closer look, or will it be more important for them to study a remnant of wilderness.

There are plenty of clearcuts within close proximity to wilderness areas that the OHV community should restore to natures best condition so you have a place to "explore" outside of designated wilderness. Restore all of the National Forests and all of the BLM lands for OHV use and set aside all of the roadless areas as wilderness. It's a win win situation!

This is National Park quality land, should be added to the Wild Rogue Wilderness and then added to a much larger National Park. This is a tremendously important, nationally significant landscape and the fact that the ground grows trees should not consign it to land use decision making by chainsaw, as has been done with so much of this beautiful canyon in the past. See: www.ancientforestnationalpark.org

Wilderness costs taxpayers not one thin dime. If you are really worried about funding, designate all federal lands as wilderness and dismantle all overseeing agencies. Nature doesn't need your help.

Discussion Question 1

Written & Online Comments

(cont.)

You can access plenty of remote areas with your ORVs already. Very little of the US is off limits to ORV use. The lower 48 is 1.9 billion acres. About 1.8 billion have no restrictions on ORVing. Go make friends with private land owners and have a blast. Explore to your hearts content in logged over lands. Go find a rock pile and drive straight up it. If you need a wilderness experience, get off your butt and walk.

You say "We are tired of having land set aside and "preserved" by the federal government." You should speak only for yourself. The Cascade-Siskiyou area is a vital biological bridge that needs to be preserved.

You say: "A little or maybe even a lot of human influence needs to be incorporated into our outdoors". Just go outside in your back yard and you can find what you're looking for.

Civil War battlefields must be preserved for their history and significance to our history. One visit to Gettysburg many years ago showed me how important these sites are. How sad it is to go to Manassas or Fredricksburg and have the interpretive signs say "at the stop sign at the bottom of this hill". If they can be preserved while protecting open space, what a win - win.

Government promotion of local environment coops that could unite together for the restoration and maintenance of wild lands within the community. Coop members could buy individual plots of land to care for, which adjoin national or state parks, or just have a lot of wild acreage. This would expand the wild areas locally, land owners would take responsibility for their own areas, decreasing the burden on government agencies. They would live close to the land they buy and have more insight and working knowledge of their own individual land. The privately held lands would be restored and maintained by the individual owners who would utilize the coop to pool wholesale buying power and resources, work as a group with local forestry, fish and wildlife services to make land management plans for the land. Land owners would have pride of ownership and feel responsible for their land, the animals living there. It would give people something tangible that they would want to visit to enjoy, but more importantly, to care for. Coop members could receive financial assistance via government cost sharing programs.

Located less than 100 miles from the Bay area and Sacramento, the region stretching from Lake Berryessa to Snow Mountain is our outdoor wonderland. It gives us clean drinking water, spectacular views, and places to hike, kayak, and more. Local people have come together to support designating the Berryessa Snow Mountain region as a National Conservation Area so future generations can enjoy this natural treasure. The administration should defend this treasured area against threats and protect this landscape for future generations.

Discussion Question 1

(cont.)

By opening up our parks to horsemen, you have an invaluable source of financial support, volunteers to build and maintain trails. In return, they ask very little.. staging areas for horse trailers, picnic tables and portapotties. Trailriding by families as well as individuals is one of the most healthy and enjoyable activities one can experience. Also, much wildlife is not disturbed by horse visitors and the human visitors have more opportunity to see what you cannot see on foot.
They also can experience in our National Civil War Battlefields a greater appreciation of the brave men and horses who died there in support of their beliefs.

Horsemen can also report any dangerous or illegal activity with greater speed than someone on foot.

Through language and perceptive differences as to what is important, and unclear definitions of cultural and historical value, we frequently end up alienating what we should embrace and demolish what we should develop. As a consequence, individuals, organizations and communities suffer needlessly. Only when we cultivate and actualize more effective communication, embrace with sincerity inclusiveness and establish together across race, ethnic and cultural lines defined cultural principles that allow for the introduction of creative ways of implementing the process of development will success in sustainable cultural development proceed as an enduring public resource.

The US has to change backwards, mistaken, endless-frontier land policies from planning "no more wilderness" which wil ensure that their isn't, to planning for our open spaces and unique places. The endless frontier exists no longer and as individual Americans like myself recognize, our wilderness areas need to be protected from further development in order to ensure the health of our selves, the remaining plants and animals, and the planet.

I have participated in the ELK program for several years, both as a board member and a family participant. My nieces and nephews love the ELK program. My 4-year old nephew was thrilled to catch his first fish at the 2010 Cast-a-Line event. Thanks for a great day and a wonderful memory!

What if the "fee" was a deposit that was returned to the user if they documented positive impact they made on the public space? For instance, I pay \$5 to enter a park and remove a bag-full of trash from a streambed while I am there. If my deposit were refunded, I would be "rewarded" in a monetary way (not just personal fulfillment) for improving the public space. This thought just developed in reading your comments, and I am certain there are stumbling blocks to the idea, but I think any opportunity we have to reward folks for showing respect to the land (or others) is a great one to seize. I also think there is an enormous difference between overuse and misuse. Sadly, I think the latter is often the larger issue. Formal education about proper use is overwhelmingly lacking for the general citizenry...environmental education is a necessity for current and future generations.

Discussion Question 1

(cont.)

Although we certainly need to improve our existing wild places, we desperately need to improve our urban communities, too. The fastest, cheapest, and easiest way to do that is to plant trees. How about a national "One Billion Urban Trees" initiative? Urban trees have been shown to significantly improve the environment and quality of life. Urban Trees: - Reduce air pollution - Add beauty and personal health - Fight the greenhouse effect - Conserve water and reduce soil erosion - Save energy - Reduce the "heat effect" in urban environments - Increase economic stability - Reduce noise pollution - Create wildlife and plant diversity - Increase property values Source: { Link } Urban trees provide other sociological benefits, too. Trees have the potential to reduce social service budgets, decrease police calls for domestic violence, strengthen urban communities, and decrease the incidence of child abuse according to a University of Illinois study. Additionally: - Residents who live near trees have significantly better relations with and stronger ties to their neighbors. - Researchers found fewer reports of physical violence in homes that had trees outside the buildings. Of the residents interviewed, 14% of residents living in barren conditions have threatened to use a knife or gun against their children versus 3% for the residents living in green conditions. - Studies have shown that hospital patients with a view of trees out their windows recover much faster and with fewer complications than similar patients without such views. - A Texas A&M study indicates that trees help create relaxation and well being. Source: { Link }

Definitely promoted this one! I also linked it to the "One Billion Urban Trees" idea. :-) { Link }

While I agree that it's preferable to limit government spending, the positive effects of trees will ultimately save tax dollars by reducing costs of existing tax-dollar-funded programs and services. Over the long term, this would be a net-gain in terms of government cost.

Fully agree. Fund the LWCF!

Funding for LWCF must be increased to the envisioned \$900 million/year. Also important is focusing those funds on areas lacking in public lands and where environmental degradation is hurting our Nation's future the most, particularly the Mississippi and Great Lakes basins. One specific example is targeting LWCF toward the completion of the two Congressionally designated National Scenic Trails in these basins: the Ice Age National Scenic Trail and North Country National Scenic Trail. Completing the Appalachian National Scenic Trail involved the purchase of over 120,000 acres by the National Park Service and U.S. Forest Service. National Scenic Trails are not just quaint places for backpackers, they potentially represent far reaching conservation, recreation and education projects located close to home for tens of millions of Americans.

Greater tax credits for solar power on existing roof-tops is a great idea -- a win-win.

Discussion Question 1

(cont.)

I could support a program similar to this if the access gained were entirely for wheeled recreation. Remember that the pace of walking/hiking is so much slower than wheeled recreation, walking/hiking for miles under powerlines is mind numbing and uninspiring. I just don't think enough people would walk/hike the powerline corridors to justify the cost. But wheeled recreationists are clamoring for more trails and having wheeled bikes and vehicles riding through these corridors might keep vegetation growth down thus saving the power companies some of the costs of trimming vegetation under the lines.

I have done a lot of camping within the USFS Pacific Region campgrounds, and have found them to be very well managed. Kudos to USFS employees and the concessions which run the campgrounds in the Sierra.

I support Civil War battlefield preservation as a high priority. Preservation is precious to both the history and traditions of America and increasingly to the environment as well. Civil War battlefields should be preserved at all costs.

I'd much prefer to see a tax on something destructive, such as fossil fuels or coal-based electricity (just to name two simple examples; I'm sure there are others we could target), with those revenues going to the same conservation goals you mentioned -- rather than taxing the very items that help people enjoy and experience the outdoors.

In the BLM Ukiah District, Cal DFG and BLM work together to develop cooperative management on adjacent state and federal property. DFG often acquires land adjacent to BLM to allow for better access, which helps hunters and other recreationalists. This works very well, as shown in the Knoxville State Wildlife Area and Cache Creek Natural Area. This kind of state and federal partnership should be encouraged and continued.

Interesting idea. Another downside to Wind Farms is that they kill many unsuspecting birds. I wonder if we might want to go the opposite route (orange?) to help make them more visible to wildlife? Hmm....

It seems that there is a huge divide between those who like OHV use and those who don't. We need to find a way to work together so we can all enjoy our wild spaces. Education, training, and respect are the keys. Towards that end, let's create a new class of driver's license for Off-Road Driving. It could include training in safety, technique and skills, rules of the (off)road, courtesy and respect, and conservation.

I've seen 4x4 off roaders on both sides of this issue -- those that are stewards of the land (myself included), and those that are destructive, both by the way they drive and the wake of trash that they leave behind. I applaud your organization for taking the lead in this respect -- how can we encourage more active "associate land managers" while at the same time discouraging the destructive "users" of the land?

Discussion Question 1

(cont.)

My suggestion is a simple vision of having 95% of the population within a 15 minute walk of a natural area or park. We can't reconnect with natural areas if there are none close to where people live. It's as simple as providing access and proximity to clean, safe and attractive natural areas. Granted, this would take money and planning but it is an inspiring vision and one that could be succesful over a multi-year campaign.

Noise pollution is an extreme cause of distress for wildlife and other recreation users. How about strengthening limits on how loud motorized vehicles can be? I think that would go a long way towards improving relations between OHV and non-OHV users.

is wrong; most ORV users are responsible individuals who want these areas available to our kids and their kids. We teach responsibility. Don't spout anti rhetoric without knowing facts please. I ride a great deal of trails in the PNW and they are actively maintained by a large number of volunteers and are in excellent shape. And will remain so as long as they're accessible for maintenance. Remove access and then you see bad things happening.....

On the surface, I love this idea. However, it's just a band-aid. Instead, we need to encourage Congress to act, and to do it in a timely, positive, and non-partisan way. Better that we put the pressure on our representatives to stop bickering and instead take action to preserve our wild spaces.

Perhaps the problem is that 96 dB is actually *very* loud. Wikipedia says that "Traffic on a Busy Roadway at 10 meters" is 80 to 90 decibels, and a jackhammer at a distance of 1 meter is about 100 decibels: { Link } This { Link } says that a "noisy factory floor" is around 90 dB and a "Racing Motorcycle at a distance of 50 feet" is about 95 dB. They also claim an "EPA Legal Street bike, wide open throttle, at 50'" would be about 80 dB. Here's something else to give some perspective: OSHA limits daily exposure of sound levels of 96 dB to no more than about 3.5 hours a day for workers: { Link } I sure don't want my wilderness experience, whether I'm hiking or driving my own snowmobile, to sound like a "Noisy Factory Floor." Perhaps I should edit this idea to read "Reduce maximum allowable noise levels of OHVs."

Discussion Question 1

Written & Online Comments

(cont.)

I'd say that if we didn't have driver's licenses, our streets would be significantly more chaotic. Another thing I keep noticing in these conversations is that there's a wide variety of off-road vehicle types, but that's rarely discussed or considered. Mountain Bikes, Dirt Bikes/Motor Cycles, Quads, 4x4 SUVs all have varying degrees of impact on the land, air, and noise -- and it also depends on what kind of terrain they're on. A self-absorbed jerk doing donuts in a meadow with his Suburban of course is going to shred up the land. However, a responsible and respectful driver on a dry dirt "fire road" won't have the same level of impact. As with all things, there are many nuances here, and I think it's helpful if we can all find a way to include those in our discussions.

The AT is wonderful! It is a treasured resource for us all. But some of the ten other National Scenic Trails (NSTs) have hundreds of miles of corridor that needs to be acquired, just as was the case with the AT 35 years ago. The federal government needs to bring to the other NSTs the same commitment that it so successfully brought to the AT before additional NSTs are designated. The NSTs in the Great Lakes area like the NCT and IAT in particular, where there is tremendous public support for increasing the amount of public land, are ready and ripe for the federal government to begin acquiring land from willing sellers.

True, there are more important issues facing our nation than increasing the size of the Wilderness Preservation System. But let's not confuse "users" with "uses". Anyone, any user, is entitled to enjoy any Wilderness Area, state park or public trail. But not all uses can possibly be allowed everywhere. There are good reasons we cannot ride our OHVs into the Capitol, into a museum, into a stadium, into a shopping mall, into a school yard, into a state park, and into a Wilderness Area.

This idea is more like the civilian conservation corps than the peace corps. But it was a good idea and it may be needed again for similar reasons.

ELK is not only a great program that promotes conservation, it is also an educational encirhment programs for youth, many who are at risk, and a vital tool that connects them to nature!!

This is so true we need more tent and Rv spots at alot of places and maybe some new ones to some small some big

Your comments are all right I went to DC May 9-12 for the Audubon part of a National Coalition on Invasive Species.To lobby for a bill Senator Nelson is introducing to the Senate in June to help stop new invasive species to screen them before coming into the USA it is not perfect but it is a start. A previous stronger bill faded. I have lots of info on the costs to control invasives all ready here and types that are here if any one is interested let me know and I will get it to you. I will be at the Helena meeting

Connecting children to nature is important. Here in Southern California we are working to establish more animal corridors with the help of local government agencies and non-profit organizations. These connections will allow more biodiversity and an oppourtiniy for children she see our native wildlife in the outdoors.

One of the greatest ideas the United States ever had, our National Parks, are falling apart. The State Parks are even worse. We need creative fixes NOW. Let's use the Peace Corps, or the Conservation Corps (from long ago) ideas, and pay people who are out of work to fix the problems in the parks. The money the US government gave to the banks would have been better spent paying people to work in our parks. At least everyone would have benefited. Combine the need for environmental conservation, and the need for people to work. Put in solar panels on the roofs of all buildings in the parks to reduce the need for electric power. That would take care of two important issues at once, reduce the need for electric generating plants, and put people to work.

Such a good idea to have some of the amazing wide horizon of the prairie preserved. Just to go there and breathe in the open space would be a healing experience. I love it!

The sites of critical events in the history of our nation support the continuity of our free society. These include battlefields where men gave their lives in defense of their beliefs. They call people in the present to continue to defend and propagate our freedoms.

I am a so-called treehugger (actually I am more of a bear and deer hugger :P) and I don't really see a problem with this idea. I see more and more that conservation groups are coming to the table, trying to make collaborative agreements that benefit all parties and still manage to help the environment. Sadly, more and more I see every attempt they make is met with stonewalling and refusal to give up a single thing by the off-road community, even when compensated elsewhere to no net loss. It is met with ire and anger instead of an attitude of trying to find solutions. Yes, there are zealots on BOTH sides. Let's just try to figure it out civilly. Look for and support those groups that are making an effort to collaborate. Here in WA, there is a great group, the Northeast WA Forestry Coalition that is making a real effort to bring everyone to the table. Even Sec. Vilsack pointed out how great it is.

I am asking this respectfully, hopefully I sound that way: Why do you think people who want to preserve core wildlife habitat and some small piece of primeval land are "anti-access"? I am not a backcountry hiker, have no need to ever hike wilderness, but am a huge proponent of preserving just a small slice in perpetuity just as it is, like our forefathers found it. Our wildlife and our ecosystems need wilderness. It doesn't have to be all about whether or not we can play in it. There are SO many access points out there for all kinds of rec--I honestly think the OHV community is operating under this scarcity myth (created by hugely profitable lobbyists... like the BRC) that just doesn't equate to reality. Sure, things get closed when they are being abused, but the ORV community should do more to educate people not to abuse trails, not to get trashed and act like jerks. Same with hikers, same with horses. If people treated the land with respect, there would be less push back from other users against ORVers.

Gary has said everything I would want to say. These scenic trails allow us to explore our beautiful country, with its diverse landscapes, from deserts to wetlands, from creeks to rivers, from mountains to valleys; the historic trails tell the stories of this nation, and of its people of many races, creeds, and beliefs, and of the events that inspired them. We must complete these trails, and we must adequately fund the non-profits and volunteers who work so hard to protect these trails and steward the trails' stories. Proceeding on, Barb Kubik

The Land and Water Conservation Fund was established over 40 years ago as a powerful tool to bring recreation access to the great outdoors for millions of Americans by using a portion of fees collected from oil/gas operations. What a great use of a little bit of the money made by these industries to give back to states' conservation needs, reconnect people with wild places, and ensure working lands are not converted to development.

This tool helps states acquire open space or conservation easements, to build recreation areas, and to protect ecosystems by underwriting projects that bring a broad range of people to the outdoors.

From small things like ballparks to wild ecosystems, the Fund gives states the power and leadership role to determine their own healthy future. The Fund has helped create or improve national treasures like Harper's Ferry, the Big Sur Coast, Yellowstone, NYC's Central Park, and San Francisco's Golden Gate Park.

There is just one thing wrong with the Fund: It has only been fully funded twice in 45 years. There is so much more this fund can do to get people outside, get them playing, and get them thinking about wild places.

Fully fund the Land and Water Conservation Fund: Make the powerful tools we already have work to their fullest potential!

This is a wonderful idea. I would only add that in the process of determining "wilderness" areas to preserve for future generations, relatively small parcels should be included for consideration. In places like central Indiana where the European settlers deforested the entire region, the only remnants, and there are thousands of them, are mostly under 100 acres. What I've discovered when walking hundreds of these areas is that a surprising number of them are quite ecologically diverse. They stand as monuments to the majestic temperate, deciduous forest that once stretched from the eastern slopes of the Appalachians to central Illinois. The best of them deserve our attention as much as vast stretches of open space.

Me and my family love the outdoors and nature. We ride and use OHV with no more impact to the environment than a road has. Plus this is our land as US citizens and we have the right to enjoy it and use it!!!!

Historic Preservation is crucial; it preserves our uniquely American identity.

The wildlife are flourishing and God is restoring the prairie with abundant rain. Why take land that is productive and put it back to unproductive land. Do you want to have to depend on other countries for our food also?

I also do not feel that cattle grazing should be included as being "damaging" to public lands. History in my area shows that ranchers working with the government programs have actually improved the land and improved the wildlife numbers. On the other hand if they put bison on this land it would totally ruin what these programs and the ranchers have accomplished.

I think that the U.S. Congress has helped to promote land conservation by enacting several incentives for landowners. But the Internal Revenue Service is putting a damper on landowners' interest in giving conservation easements by encouraging certain IRS agents / 'engineers' / 'appraisers' to harass easement donors. I am now in the process of being 'audited' because of a conservation easement that I donated to a local land trust. The claims of the 'engineer' have been petty, often false, and almost always presented antagonistically. I am confident that a reasonable judge will decide in my favor, but the cost to me in time and money will be enormous. It makes little sense to me for Congress, on one hand, to promote conservation easements while the IRS, on the other hand, discourages them.

Saving the battlefields is essential to our understanding of our history. As a teacher I know the power of having the chance to visit and have students visit these historic sites. Please save them for future generations.

The Historic Preservation Fund should be fully funded at the Congressionally authorized level of \$150 million. Give State Historic Preservation Offices and the communities they serve the financial and human resources they need to help ensure that the places that matter are attractive and viable parts of a sustainable future. Also fund Save America's Treasures, which is a critical source of funds for nationally significant properties. Preservation creates jobs, stimulates community development, and promotes sustainability, environmental stewardship, tourism, and our cultural identity.

Almost every suggestion on this site asks for government funds to buy more land or preserve land or to fund education programs. I don't see anything in here that is suggesting that individuals step forward and do their part to contribute money to these projects. How many people participating on this site will die with money in the bank and no will to designate who gets the funds? My suggestion is for more people to donate to the National Park systems or to set up a land trust both during their lifetimes and in their estates. We all have the ability to do our part. The government does not have unlimited funds to keep paying for our recreational areas. { Link }

Although I wasn't really inspired by this idea when I first read the title, it really might be a very good idea. I bet there are already i-phone apps for birders that allow you to search for birds to help ID species while you are out birding. I think the self-guided trail thing is a good idea

Anyone who saw the WONDERFUL PBS series about our national park system had to have been inspired by the writing of some of our country's more prolific nature writers, such as John Muir. Encouraging our children to READ the words of those inspiring environmentalists and then taking them on field trips where they can pen their own thoughts, is a wonderful way to get them to really take a look at what they are seeing and feeling about nature.

Community gardens are popping up around the country. More emphasis should be put on encouraging butterfly gardens and other wildlife gardens to help connect children with nurturing nature.

Encourage more green building programs to focus on attributes that create environmentally friendly landscapes, and provide tax incentives to builders and/or buyers for these programs. Encouraging homeowners to create and maintaining environmentally friendly landscapes at the own home is a huge step for environmental conservation.

What's the best way to effect climate change on a broad scale? Bring the problem home and teach each citizen to Take Care of Their Share www.takecareofyourshare.com of the planet. When you try to explain the concepts of global warming or carbon offsets to the average citizen, you can almost see their eyes glaze over and their mind begin to wander. But, show them a butterfly emerging from a chrysalis or a tiny, iridescent hummingbird zipping by and it's easy to get them hooked on the environment – and the steps they need to take to help protect it. One of our primary beliefs is that we should encourage people to go outside and really get to know their own landscapes, and the wildlife that lives there, as a means to get them to accept responsibility for taking care of the planet. We believe that this interaction with one's own personal landscape is one of the best ways to get both children and adults outside, active and involved with protecting the environment. On a global scale, climate change and the environmental health of our planet is an issue that is too huge and abstract for most people to feel a personal attachment to. The depletion of natural resources seems too distant; the ozone layer too far away. People may feel that they should be concerned about these issues, but it is easy for them to see them as someone else's problems – scientists, perhaps, or future generations. By bringing the issues home, into people's own backyards, I believe that we can make much greater strides in encouraging personal responsibility. Since 2003, the Take Care of Your Share initiative (www.takecareofyourshare.com) has been encouraging and educating people to get to know their own share of the planet – the flora and fauna that make up the ecosystems in their own backyards. Our hope was to one day encourage the government to create a national program called Take Care of Your Share which would provide the information and encouragement for every citizen that wanted to learn how to be good environmental stewards. Through websites, articles, programs and books, Take Care of Your Share has been providing the information necessary to encourage good environmental stewards. The Take Care of Your Share tools provide suggested activities and encourage participants to keep a journal as they get up close and personal with the wonders of their landscape. I strongly believe that this personal look at nature provides the tipping point necessary to turn environmental responsibility from an abstract issue into a personal one. We have repeatedly seen how fostering a sense of personal knowledge and protection for local species has resulted in an overall desire to protect the environment on a broader scale. The journal aspect is somewhat unique. It is a great way to get kids and parents outside together, learning about the wonders of nature. In addition, our instructions for keeping an online journal help to appeal to the computer generation as well. Additionally, we provide instructions to use government websites, such as Search.Usa.Gov, NRCS, EPA and others to locate appropriate information for specific areas of the country. People that create and keep a Wildlife Habitat Journal are encouraged to share their findings with others through their journals and online blogs, thus allowing their new environmental enthusiasm to be spread exponentially. Our materials are specifically written for those with little previous knowledge about creating a healthy landscape. They are basic enough to encourage immediate participation, but comprehensive enough to make a huge impact. I would LOVE for organizations involved with America's Great Outdoors Initiative to take over the efforts of the Take Care of Your Share initiative to provide the encouragement and education necessary to help more people on their path to environmental responsibility. For more information about the Take Care of Your Share initiative, visit: { <a href="http://www.takecareofyourshare.com/"

You need to re-read this suggestion. It is all about getting people outside. It is just suggesting using an i-phone to view maps and trail guides. I, for one, sure could have used a map on my phone on more than one occasion when I got lost in the woods.

As a Master Naturalist volunteer in Texas I can say that this is the most rewarding "work" that I have ever been involved with. Not only do I have opportunities to teach others but I have opportunities to be the "learner". It is a perfect fit for a retired educator who wants to continue educating others and having fun.

Careless OHV or ORV use has damaged the cryptobiotic crust in many wilderness study, and wilderness areas - a crust that protects the sands and dirt from blowing away, a crust that takes scores of years to rebuild. If the proposed wilderness does gain protection, the vast majority of OHV or ORV trails will still be available. Only about 10% of the 'trails' (which in most cases are not even two-tracks) will be removed from use. Certainly 17,000 miles of vehicle trails should be enough to make anyone happy. Just because the land is pristine, it should not be seen as something to despoil and conquer for a single persons pleasure.

I do believe that our youth will be the basis for a wiser environmentally friendly generation, and these are the types of seeds that need to be planted in their minds.

I just returned from Utah and found that not only do Americans from all over the country come to enjoy the unique rugged beauty and solitude found in the red rock wilderness, as well as the historical cliff dwellings, petroglyphs and pictographs - but so do tourists from all over the world. Wherever we went, we found so many foreign visitors we had difficulty finding lodging. The idea that there should be no more designated wilderness boggles the mind. This is the people's land, the people's treasure, and needs to be preserved as wilderness for the generations to come.

Wow! The lands in question belong to the public. Wilderness designation would not change that. It would protect those wilderness areas for public use in a peaceful protected environment, untouched by the industrial results of man. In 1936 there was a national park proposal that included all of the current protected wilderness in southeastern Utah. It was whittled down to Arches and Canyonlands. The wilderness quality of these lands, including the ancient petroglyphs, pictographs, and dwellings, will be lost if not protected. As for the mining, oil and gas argument - there are stacks of leases that have been issued over the years, that remain undeveloped except for a two track to keep them viable. If the land is so important for oil, etc. why haven't they been used? For the OHV vs ORV debate, in some states ORV is the correct term and refers to Off Road Vehicles; in other states the preferred term is Off Highway Vehicles - same difference.

Discussion Question 1

Written & Online Comments

(cont.)

Considering the cost of the vehicles and the positive economic impact you would think there would be more public land available for OHV use. Most of us are not that picky on the quality of the land, it can easily be developed by the users. I live in Orlando, FL and the nearest public area is over 60 miles away and you have to pay to participate. Most equestrians, mountain bikers, hikers, etc. have more land available and most of the time don't have to pay to use it. I understand the environmental impacts are different but there needs to be places for all American families to enjoy their outdoor recreation. Some areas are closed and protected until someone approves developments to raise their tax base and then cuts every tree down and bulldozes all the land anyway. Happens over and over. I would support legislation that would eliminate liability issues for OHV use on public and private lands. If you are going to participate in something that could get you hurt, don't blame the landowner..

I agree that the government should take a leading role in sustainability. It has taken a back seat for too long. I know that many government agencies are already taking a role in changing their vehicle fleets to improve their sustainability. Of course this is not done overnight. However, they do need to make a transparent plan for leading the effort to reduce pollution from motorized vehicles, including fleet, vessels and OHV vehicles.

I agree that we need more trails of all varieties. These trails need to meet sustainable standards. Users must be taught how to treat their public lands with respect. Hikers and equestrians need to learn not to short cut switchbacks. OHV users need to learn not to go cross-country in sensitive ecosystems and to remain on designated trails.

OHV also refers to really cool things like off road motorcycles that are in fact excellent exercise and super fun.

There should be a place where everyone can do their thing in peace. Hikers, equestrians, bikers, are all welcome on my piece of American as long as they don't try to take over and kick me off of it. I will extend the same courtesies to them, as well as keep my dirt bikes and ATVs off your preservation areas.

This is a noble activity with benefits all Americans. To contemplate the struggles and their motivations in detail is to learn what was and is great about this nation and its people. Giving up these lands to development or other mundane uses is to remove their influence forever. Protect this amazing piece of truly American history.

I have an interest in preserving OHV operations in Utah. Many of my friends are OHV operators and business owners. I am an ATV Rider safety Instructor that not only promotes responsible land use but makes a living in the ATV industry. A race is to be held in Monticello, Utah the weekend of 6/19/10, how do you think 300 families depending on that little town will help the economy there. We buy fuel, food, snacks, supplies, pay for hotel rooms, eat at restaurants, and my family alone expects to put about \$700 into the local economy that weekend. I know for a fact, that no wilderness advocate, SUWA Member, or any other version of a tree hugger will be supporting the families of the region.

Discussion Question 1

Written & Online Comments

(cont.)

I have been riding OHV's in Utah for over 40 years, getting the opportunity to enjoy many of the wonderful landscapes of the state with my parents and children at all stages of age and physical abilities together as a family. I have NEVER come across a backpacker in the extreme remote areas I am able to get to on an OHV or in a 4WD. I want to experience the state, not observe it on some postcard or calendar image. I also wish to preserve the land for use by future generations, not lock it away. Utah is far too remote to access the vast majority of the state on foot. The only way to experience it is by allowing responsible motorized use.

Over 27 million acres of the most amazing BLM lands are included in the BLM National Landscape Conservation System. The protect biological diversity, offer opportunities for recreation consistent with that goal and help with the economic sustainability of gateway communities. Protecting these lands as part of the NLCS makes sense on many levels. It should be strengthened, the science mission should be expanded, and conservation programs with gateway communities should be encouraged.

The National Trails System ranks right up there with the National Park Service as one of America's great ideas. When Americans hike our trails, they come closer to understanding our natural and cultural heritage than those who do not have such an experience. My major interest in trails has centered on the Lewis and Clark Trail, most of which I have explored, in some sections many times. The story of Lewis and Clark is central to understanding America's past and can open new vistas on our future. During the recent Bicentennial of the Lewis and Clark Expedition (2003-2006), millions of people retraced their route over land and water, and gained a deeper appreciation of our history, our resources, and what we can do to improve our environment in the future. All the trails serve a similar function. I am extremely pleased with recent progress in expanding the system!

Preserving our past protects our future!

These are all great suggestions. All of them should be implemented before there is irreparable damage to our environment and wildlife. The time has come for our government and compassionate caring citizens to take actions such as those voiced here.

Fully funding the HPF will promote sustainable communities through the redevelopment of existing structures and preservation of our neighborhoods. Sustainable communities are communities that work and are places that have jobs and services for residents.

Mountain bike riders should be allowed in USFS designated wilderness areas. They are not motorized and have little impact when operated appropriately. Put in place a system where riders would have to earn a license to access the trails in the Wilderness areas. IMBA could develop training and testing. Riders should also have to perform a number of hours (50?) of trail maintenance within the annually to maintain their license. I believe most serious riders would have no reservations about earning the right to use the Wilderness areas. This would address some of the problems of inappropriate riding practices and provide the USFS with some much needed trail maintenance.

Discussion Question 1

Written & Online Comments

(cont.)

Enjoyable trails have unique characteristics relative to a given activity. ATV trails are not fun for motorcycles, hikers, bikers, horses. Motorcycle trails are OK for hikers and great for bikers and horses. Bike trails are good for bikes, hike and horse. Hike trails for hike and horse.

America and its history - our heritage - is not just important to Americans; it is valued and cherished. Funding of historic preservation resources will be the Administration's acknowledgement of this.

As a Master Naturalist I have particularly liked working side by side with like minded people on conservation and interpretive projects. We have educated, built facilities, interpreted the outdoors and generally added much to the process of connecting people to their natural world. Personally it is the most fulfilling volunteer work I have ever done. The role of citizen scientists is a great fit for leveraging limited federal and state resources. And have fun doing it!

As a responsible motorized recreationist, I fully support this idea. I have taken folks along a designated motorized recreation trail (Snowmobile) to an area preserved for the protection of huge White Pines in northern Mn which includes signage describing the growth of these magnificent trees dating back well before the arrival of Christopher Columbus. The area also includes signs along a small trail describing the fauna lying beneath these trees. Contrary to some beliefs, most motorized recreationists (including ATVers) have a profound love of nature and use this form of transportation to access areas that most folks will never see. I would like to see more signage along motorized vehicle routes to first of all keep us on designated trails, and furthermore, to educate folks about some of the features, both geographical and ecological that we are exploring. Education through signage only enhances the appreciation of the outdoor experience.

I don't see why we can't dedicate an area for motorized use just like they do for Wilderness Areas? Call it a Recreation Area and it can never be changed to anything else just like a Wilderness Area. I also like to backpack, hike so I am a bit of an environmentalist to the fact that I think we ALL need to respect the land. I also love to snowmobile which when not ridden on low snow you don't see any signs but still we get kicked out for BS reasons. It's time to fight fire with fire and dedicate land just for us OHV users just like the tree huggers do for their hiking or skiing which gets labeled a Wilderness Area. Reality is Wilderness Areas just kick out the average American who is not able to hike 10 miles in the high country. Also I noticed a comment that a guy that likes to ride his motorcycle but wants to help protect the earth donates to protection groups. I hope you realize ALL those groups are trying to get you and your bike kicked off ALL public land. I don't care what group it is, they ALL hate motorized users and you should stop donating money to them....their priorities have changed and actually protect squat these days.

I fully support this idea and have made comments similar to this under the "sustainable rural communities" post.

Discussion Question 1

Written & Online Comments

(cont.)

I have a great idea and that would be to fully fund and manage existing places where people can go to recreate. Land grabs and Wilderness closures seem to be nothing more than efforts by politicians to show their "green" side. America is full of all types of parks that allow or have allowed all different forms of recreation and it should remain this way. Current legislation and local management efforts are already in place. The input of ALL groups must be counted and I have a feeling the polls will begin to reflect this need!

I live in far Northern CA where you can't throw a stone without hitting a park or preserved forest of some kind. I observed this throughout the state as well. I respect the fact that America and its people need places to recreate that are free from mechanised travel, plenty of these places already exist and so do many federal lands where even allowed motorized use is rare. Local control must continue and the current administration wants to end that along with locking up more land from a variety of users. My future votes at all levels of govt. will reflect my opposition to this as I'm tired of knee jerk reactions and politicians that use environmental causes to get into office.

- Preserved Civil War battlefields are tangible links to our country's past.
- The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites.
- Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation.
- Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses.
- Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict.
- Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation.

This is a great idea. A tribute to America's history and a great step forward for the future. I love the name "Buffalo Commons National Park," but as others have said the name is less important than the idea. This is a great example of how history can be preserved as both a story of our collective past, as well as an on-going testimony to the our current and future values. What more can I do to make this happen? I am prepared to spend my tax dollars!

We often ride quads, I encourage my kids to pick up garbage while riding, Some days we actually make money on cans we pick up. I think all of public lands should be open for riding. We shouldnt let a few carless riders close land for the rest of us.

ELK is an invaluable program that needs as much support as possible in order to help secure our nation's natural resources.

Discussion Question 1

Written & Online Comments

(cont.)

Our nation needs not only ONE solution. As we can see in the "Gulf spill", the demand for oil is becoming a catastrophic disaster. The desire to find more oil is becoming detrimental to those in the drilling areas. Every facet of life in the gulf coast area is being tried beyond what we can imagine - not just for the wildlife but for those who depend on it for their own livelihood (fisherman, restaurant employees, hotels, recreation destinations, etc. from the CEO to the dishwasher). The recovery time is going to be long, the environment will sustain itself but not quickly without the ingenuity and labor from mankind. When we focus on one solution other great ideas are overlooked. We need to not ostracize the "sustainable energy" ideas (wind, solar, water) but use them in conjunction with the nuclear power so that jobs and incomes are created in all areas where the resources are plentiful. You don't need land to put up solar panels. Set up funding to encourage people to use them on their roofs. Office buildings can lease out the space on top of the buildings as well as have their power bill reduced. Be all and End all is not a solution, combining ideas and utilizing both nuclear and nature will benefit all of us.

I am OK with setting this area aside for conservation if we absolutely must, but on one condition: There are designated OHV areas within the boundaries of the proposed Monument, one is Chappie Shasta and the other is Knoxville. When the CWC went to Senator Feinstein they were told they could not propose areas where there was legal OHV activity for wilderness. From what I can tell they have honored this promise, and I certainly hope they will do the same in Snow Mountain-Berryessa. We OHV folks have few areas left and we are not being allowed to have any more. I know, you probably think that is just fine, but thousands of acres are set aside for conservation in one way or another and we get nothing. We got not one dime of ARRA money, it all went for non-OHV projects including hundreds of thousands of dollars for wilderness trails very few people use. I like wilderness trails too, but please don't ask us to give up our legal riding areas. We have to do hour and hours of volunteer work and compete for a few measly dollars to keep out existing areas open in spite of all kinds of hassles a sane person would never endure. Please give us a break on this area. At least let us keep what we have.

If you compare naturally occurring erosion to that caused by ORV's you can easily see that ORV's cause minute damage compared to other causes. But they are visible and an easy political target. You can ban ORV's if you want, but then all the hunters, fisherman, campers and hikers will still have to get to trail heads and destinations somehow and that will defeat exactly what this initiative is trying to do. What needs to be done is to promote responsible ORV use, not target this use for elimination.

It would be surprising if a great nation such as ours did not have many pivotal moments in its history. Having said this, I would like to respectfully suggest, that the four years of the American Civil War represents the most important years in the history of this Republic. All that we have, and are, and believe, today, had its origins in this titanic struggle. The battlefields of that war are not merely parks, or repositories of monuments. They are shrines, bathed in the blood of hundreds of thousands of our ancestors who -- on both sides -- fight and died so we could have the nation, and the life, we share now. Preserving these battlefields offers the best way to help preserve their memories, and in doing so, help keep alive the values that created these United States in the first place.

Discussion Question 1

(cont.)

Last time I checked our public land are managed for multiple use. Mountain Bikes have lots of opportunity and there is also plenty of land for those who think wheeled vehicles have no place - it's called wilderness. Over half of Caalifornia's public land is wilderness. That is more than enough. If you want all wheeled vehicles banned from public land that is pretty extreme. There is plenty for all and there have been major strides toward managing land for different uses so damage is controlled. Lots of people volunteer countless hours to do this, and we would be very disappointed if there was no place for us. Think about a scenario where all land is private and we have just a few parks where people can do only highly regulated managed activity. Sounds like a county without much personal freedom doesn't it? I prefer living in a democracy where everyone has rights, don't you?

Outdoor Community & Industry Leaders Endorse SCORP – Look to Combat Beetles Destroying Colorado’s Forests “Great Outdoors” Essential to Colorado/USA Future Denver, Colorado, Friday, July 9, 2010 – At REI’s Flagship store in Denver an unprecedented number of outdoor community & industry leaders and advocates throughout Colorado met and joined forces endorsing the national Statewide Comprehensive Outdoor Recreation Plan (SCORP), highlighting Colorado efforts responding to President Obama’s concerns about the future of the Great Outdoors. Support for stopping the Pine-Beetle’s unprecedented killing of Colorado/US Forests was highlighted. The meeting was a direct response to President Obama’s White House Conference on America’s Great Outdoors in May where he challenged Americans to come forward with ideas, recommendations and best practices to better help direct and shape United States outdoor policies. This meeting, held in lieu of the monthly Colorado Outdoor Recreation Resource Project (CORRP), was attended by scores of Colorado’s outdoor recreation industry leaders and focused on those programs, organizations and initiatives addressing SCORP recommendations. The Colorado Alliance for Environmental Education, the Responsible Recreation Foundation and Leave No Trace focused on efforts educating Coloradans on environment stewardship and respectful use of our public lands. Great Outdoors Colorado outlined how Colorado Lottery funds recreation and conservation efforts; Vail Resorts and the National Forest Foundation Skier Conservation Fund highlighted ongoing efforts to fund grassroots organizations through voluntary donations associated with lift tickets and accommodations. the National Ski Areas Association detailed their Sustainable Slopes Environmental Charter as a framework to support greater ski area environmental sustainability; the motorized recreation community detailed their Responsible Recreation Foundation’s efforts to help public agencies to better support growing public outdoor recreation needs. (Colorado SCORP endorsement continued) Additional presentations on Colorado’s commitment to fostering greater environmental stewardship was showcased by Colorado Youth Corps Association’s employing and training youth statewide for a variety of land, water, and energy conservation projects. Captain Zach Taylor, Regional Health Administrator, Department of Health and Human Services spoke on the increasing support for the annual national “Get Outdoors Day” where healthy, active outdoor activities are offered; Denise Escobedo from Safe City Youth Leadership Team spoke about the acclaimed North Face Outdoor Nation and Planet Explore initiatives where US youth commit to bringing their friends and family into outdoor activities making healthy and lasting connection with nature; Seth Winnerman of City Wild addressed initiatives involving more inner city youth in outdoor activities through the SOS Outreach/ City WILD/ Big City Mountaineers curriculum. Sue Anderson, Program Director for Outdoor Colorado Outdoor Stewardship Institute (OSI) described the environmental stewardship training provided to volunteers, land management agencies, and other Colorado and US organizations. GreenWay, a Colorado company salvaging and recycling Rocky Mountain beetle-killed Blue Pine wood, addressed the group about the looming catastrophe for Colorado and the western US from millions of acres of trees killed by Pine beetles. Already nearly 4 million acres in Colorado have been killed; almost 18 million acres of pine are dead in the western US, with millions of additional acres under attack. Before a fire of unprecedented size blackens Colorado and the Western US destroying billions of dollars of infrastructure and risking tens of thousands of lives, attendees pledged to work together to increase awareness and develop programs to help stem this growing

crisis and protect forest health and sustainability for future outdoor recreation.

We need more non-motorized pathways especially within urban communities where the use of bikes or walking is more out of necessity as well as for recreation. However it takes people who care to work with the local government to create these systems and watch over them, to be the eyes and ears, to keep the trails clean and safe. There is a large pool of seniors who would be willing to give a few hours of their day to be on the trail checking for problems and assisting other users. Employ these people with minimum wages that will help them to support themselves, will give value to their lives by giving back to the community, and will create additional cash flow within the communities.

I agree with the idea of using land for OHV use, but we shouldn't shut people out. Shutting people out is the problem. Millions of acres of land are being closed to hikers, mountain bikers, hunters, and OHV users because the government is redesignating land as Wilderness. We can all share the millions of acres. One public land area can have an area for hiking, an area for mountain bike trails, a hunting and shooting area, and a trail system for OHV use, all in one park. I'd like to quote a movie, "if you build it, they will come", tourists that is. Build us parks on public land that will accommodate all users and they will come.

I enjoy OHV use, specifically riding dirt bikes, with my family. My wife, son, and I all have dirt bikes and we are very thankful for the open areas we have to ride, although there is only one within a hour drive. Luckily our fee to ride on public land is much cheaper at \$15 and honestly, I don't mind paying to ride. I just don't have time to volunteer to maintain the trails we ride on, I wish I did, but I don't. Paying to ride, as long as it is a reasonable price, is a good way for me to support trail maintenance and improvements. As long as the revenue from the trail fees go back into the trails I don't mind. What I don't like is when I'm charged a fee to take my family to ride and then the trail revenues are used for something totally unrelated to the riding area. OHV use is a great way for families to spend quality family time together, enjoy the outdoors, and stay fit all in one activity.

The Great Plains or the northern United States are a treasured area for those who live there. Farmers and Ranchers. They are the people most closely tied to the land and they are the ones who have managed the resources on a very intimate level. If not for their conservation efforts and management skills there would be no more great plains. The lack of commercialization and government intervention has left the region looking as though it did 200 years ago.

students of all ages can record one site each year, recording all plants and animals seen with a digital camera. with the help of science teachers and avocational enthusiasts, the identification of many organisms can be achieved. Construct a database similar to USDA plant database for all organisms, establish protocols, upload GPS coordinates for each site and all organisms found.

(cont.)

People who are not experienced in the outdoors will usually choose the easy way to interact with it (ride in a car, see a movie, shop in a store). They need naturalist programs to teach them how to enjoy untamed wildlife and unspoiled landscape. Don't cave in to pressure to Disneyfy our parks. With encouragement and opportunity, people can get beyond golf courses and tennis courts.

I like your idea about nature clubs for families but I think you should make your entry more generic. Rather than just talking about the group started by your family, why not suggest that individuals and families (or churches, scout troops, etc.) should start their own nature clubs. You can certainly still list your club as an example, but you might get more people to promote the idea. I hope you don't mind my suggestion. I like your idea and would like to see it get the votes that it deserves.

It sounds like you are the kind of nature educator that I think is needed. I believe that it is important to share "right-brain" activities rather than just "left-brained". Kids need to feel and touch what they are learning about rather than just hearing some lecturer on a hiking trail.

Homebuilders have long been seen as the bad guys when it comes to harming the environment. This is despite the fact that the majority of current homeowners take no steps to create environmentally friendly landscapes on their own properties. All builders should accept the responsibility of learning the requirements for green building programs. As the construction industry begins to rebuild itself, they should all focus on including environmentally friendly options. Some green building classes should be requirements for receiving a license as a building contractor.

I agree with this, as well. Certainly there are some fishermen (and hunters) that don't respect the great outdoors, but it seems like a majority of them do. I know that it was my husband, an avid fisherman, who helped to teach me the "errors of my ways" when it come to protecting the environment. Between him and my fisherman father, I've turned into quite an environmentalist! { Link }

I am not going to promote or demote. BUT I think that national parks NEED concession areas, rest rooms, restaurants and places to relax and browse. This allows every generation to enjoy the parks more.

I remember travelling out west back in 1984 and seeing wild horses running free. It was one of the most amazing things I've ever seen.

I think all of these comments sum things up pretty well. What we need to teach is a respect and an appreciation for nature. I know people keep demoting a lot of my ideas such as teaching nature writing and teaching people to Take Care of Their Share of the Planet and teaching nature photography in schools. But I really believe that is where everything needs to start. We need teachers that will fill their students with awe over the incredible wonders of nature. We need to inspire people to protect the planet.

(cont.)

I think it is unpopular because people don't understand it. Some people see all electronic devices as anti-nature when in fact, this idea would help get the electronic generation more interested in nature. I wish I could vote again for it.

I think its an interesting idea to provide park passes to people in exchange for volunteer hours and wouldn't be suprised to find that this idea is already in play. However, I don't see why it should be restricted to government employees. The people with the most time to devote to volunteer are probably retirees or other people that are not employed full-time and these are the same people that would benefit the most from free passes and discounts.

I would love it if all of our parks were free. However, our we certainly do need to pay for the support and upkeep of our parks. I'm not sure who would police them, keep them clean, etc. if there were no entrance fees.

The government has resources that the rest of us do not...scientists, money, and the means to influence, ie. provide inventives for green building, etc. If there are funds associated with the Great Outdoors Initiative, they will be government funds. Organizations such as the EPA and NRDC and National Parks System may be the decision makers on what to do with these funds. My personal opinion is that these organizations are the best ones to educate and encourage our citizens. They are the only groups that don't have any outside agendas. As I said, that's just my opinion.

Just to clear up any confusion, Take Care of Your Share is a not-for-profit endeavor. Materials are always distributed at cost.

Nature photography is an excellent means of getting kids to look closer at nature. Nature photography should be an available class choice in at least junior high and up.

Nature writing or keeping a nature journal would involve taking kids outside in nature and having them write about.

This is a good idea AND could be used as an educational tool to get more kids outside. Kids of high or college age could help create the descriptions for the signs. Scouts could visit parks and help select which items should be labelled, etc.

This is a great grass-roots plan and is similar to another one that is listed on here by someone named _____. Perhaps if you can link this idea to the website of such a club to help encourage others.

Private Property owners are usually better Stewards than the government due to fewer regulations and private interest, so it would be counterproductive to have the government involved in Landscape Wide Planning. This would degrade private property, reduce Landscape Health and infringe on private property rights. Local Stewardship projects are the key to improving forest health. This has been proven time and time again on both private and agency lands where active stewardship has produced better forest health and increased biodiversity over non managed preserves.

(cont.)

The health of the land is not determined by who recreates there. It is determined by how many people recreate there. In the case of many popular hiking spots the areas are overused and in very poor condition. The same is true where OHV recreation has been forced onto too small a trail system by those who seek to close our public lands to the majority of the public. The reality is every form of recreation has impacts. Water runs down the hill on every trail. How the trail is laid out determines how much erosion takes place, not who uses the trail. Many of the hiking trails I have been on had really bad erosion since hikers are most likely to shortcut switchbacks, which increase the speed of water flow and erosion. Trails that allow OHV use are often better laid out and receive more maintenance due to OHV self funded programs than other non motorized trails. People who enjoy motorized recreation volunteer and provide more trail funding than all other groups combined.

The manufacturers all comply with the 96db limit, so all vehicles come quiet. However people can buy an aftermarket exhaust or modify the existing one. Over time most exhaust systems need to be serviced to remain as quiet as when new, but most people are not aware of that. There are decades of louder is better at work here, so it is taking time to educate people about the benefits of a quiet vehicle, but it is happening. There are companies that make very quiet systems and people are buying them. There are also add on units like the DB Snorkel and DB Dawg that will quiet most existing systems. If you meet people who have loud vehicles you might want to mention it and ask them if they have heard about these add ons. The risk of a \$500 ticket is usually motivation for most folks once they know about it.

The National Landscape Conservation System- our National Conservation Lands, include some of the most spectacular scenic, historic, natural, cultural, and archeological sites in our country. These lands consist of the last places where you can experience the history of the American West. They are home to rare plants and animals, dinosaur fossils, and native American sites. These lands conserve the essential fabric of the West, by playing a role in protecting lands, water, and wildlife for future generations. The National Conservation Lands deserve strong policy guidance from the Department of the Interior that ensures their protection.

The same environmentalists who lobbied government to mandate Solar and Wind Energy are now crying out that paving our deserts and other natural areas with solar panels and wind generators should be stopped. Regardless Solar and Wind cannot reasonably provide for our energy needs and now we are seeing the downside of the land they require. However modern safe nuclear energy plants that use 98% of the radioactive material could provide ALL OUR ENERGY NEEDS FOR 700 YEARS. We have already mined the uranium needed and best of all these new plants would use the waste uranium from old plants. Each radioactive rod would be encapsulated in ceramic material that does not melt even during a radioactive meltdown, so the risk of a nuclear disaster is extremely remote. The final low level waste uranium would be suitable for medical uses. We do not want to see America's Great Outdoors covered with Solar Panels and Wind Generators. The President should shift National Energy Policy to nuclear energy which is the only current true Alternative Energy. He needs to act quickly before we lose the experts in nuclear fields.

(cont.)

The successful management of OHV can be seen in many designated areas in California. Hollister Hills and the Rock Creek areas are good examples. However, these areas are impacted by the number of visitors due to the lack of other opportunities. We need more places designated for OHV use! The California OHV fund needs to be spent on buying land for OHV parks and managing them and not on EIS studies and the like. OHV commission needs balance representation and should not be staffed by environmental extremists.

The USDA recently released report on Jobs, Economy and Sustainable Communities which identified the following three priorities needed for the survival of rural communities near National Forests: 1. Recreation 2. Resource Harvesting such as timber and mining 3. Renewable Energy The Outdoors Initiative should make these the main priorities. They are the basis for a comprehensive conservation program by encouraging people to get out and recreate in nature people will care more about the environment. Thinning and logging will promote forest health by reducing fuel loads in our overgrown forests and renewable energy can be created using Biomass.

There are converging problems in the nation including weight gain and poor health for school age children, migration to urban environments, destruction of open space, and Attention Deficit Disorder (ADD)-type problems increasing in numbers at an alarming rate. What is needed is to institute outdoor play and educational programs for all school age children throughout their K-12 years. Nature and the outdoors provides an excellent, and mostly free, science lab for schools, which could help with budget constriction problems as well. The children are in need of additional physical exercise in order to reduce body weight and body fat %. Outdoor play also stimulates the brain and reduces the effects of ADD-type symptoms and resulting problems. Outdoor play and outdoor activities including learning and challenge type activities, must be reinstated or expanded at public schools.

This country has millions of abused and neglected children who have lost their ability to trust others. The sport of rock climbing is all about trust. When you are climbing your life is in your climbing partners hands. The Pacific Northwest is ripe full of crags and mountains. Meanwhile our at-risk youth are isolated in the cities and towns. Let's bring the children to the rock, where they can develop that trust in each other

This is more urgent than ever, now that there is an oil spill endangering the great Salt Lake. As a resident of the Florida Keys, I can certainly relate. Perhaps members of both of our states and other affected states should get together on this issue, online. Also, remember that the most powerful voices in government that citizens have are their *congress members*. Keep your congress' feet to the fire. Don't be shy about reminding your congressmen/women that they are representing you and must listen to and abide by the wishes of their constituents!

From the mountains to the sea, this outdoor destination is the backyard for urban L.A. For millions, it's important for recreation, drinking water, clean air, open space, wetlands, historical and cultural significance and habitat. But it needs improved park access for the San Gabriel Valley, more services to link diverse communities, and federal protections for the last wild places.

(cont.)

Protecting working lands and ranches from development ALWAYS provides strong public benefits. That's way states most under threat of development -- New Jersey, Pennsylvania, Maryland, Delaware, Virginia -- are spending hundreds of millions of dollars for agricultural conservation easements from willing landowners. The federal government supports this effort financially through the USDA NRCS Farmland and Ranch Land Protection Program (FRPP). A debt for easement swap would be a great additional way of reaching landowners that might not otherwise consider selling or donating conservation easements. For me, the bottom line is that we need multiple tools in the preservation toolbox to help motivate landowners to conserve America's Great Outdoors.

I am the owner of Honda of Glendale, Motorcycles for over 40 years, I have raised my children with off road riding and now my grandchildren. I contribute them all to growing up to be responsible adults because of the dirt bike riding since they were 5 years old. We need to keep our youngsters busy whether it be hiking, bike riding, and with winter or summer sports. It is all good and we need the public lands for these opportunities for them to experience the out doors and know what a pleasure it can be. Our children need to know there is more to living than in the big cities. I am now in my 70's and still go out with my children and grandchildren. I ride a HONDA Big Red and get to go to places that I never thought I would get to see at my age. Some week ends I will put on 100 miles riding in legal areas in the desert. Here lately those areas seem to be getting smaller and smaller. What ever we can do to preserve these places for our younger generation will be worth it.

I never fully understood Pickett's Charge until I walked that mile and imagined a hundred cannon shooting at me. The clash of ideals at Gettysburg exacted a terrible human toll, and it's difficult to comprehend the cost until you walk that battlefield, and others. These battlefields are part of our national soul. Plus, they create greenspace for wildlife, and also encourage physical fitness, which can reduce Medicare expenses. I have donated money to battlefield preservation since 1993, and it's always been a good investment. People in future generations will benefit from our efforts today.

I think that OHV use is a fantastic use of a family's time. I feel that the process of building a vehicle capable of tackling wilderness terrain is something the whole family can be involved in. They can all be involved in planning and exploring in the wilderness, on trails older then the whole family together! The family experience is undeniable, just as much as it is for travel and tourism! Especially in these remote areas, small business are boosted, if not kept alive by these types of travelers! .

leave public land open to the public. seems so simple.

Many DNR forests in Washington State are working forests, where lumber is cut to fund schools and trails are provided for all recreational users. It is a win win combination for everyone.

Discussion Question 1

Written & Online Comments

(cont.)

OHV (Off highway vehicle) use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Allowing OHV use on logging roads provides great opportunities for families to enjoy a day in the outdoors. Motorized recreation is a healthy family activity and provides a chance for families to “get away from it all,” and to join together as a family. OHVers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities such as geocaching. The overwhelming majority of OHVers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. OHVers are eager to volunteer. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors. Let's make it easier to get out into the woods by opening our forest roads to responsible OHV use.

Three Rivers Land Conservancy is steward for natural areas in the Portland Metro urban area. Urban land is too expensive for a land trust to acquire. We hold easements and provide stewardship for land that we do not own. Owners of ecologically significant land are more likely to grant a conservation easement if there is a tax incentive to do so.

As a child, I came to love American history more than partly thanks to visits to Revolutionary War and Civil War battlefields in Pennsylvania and Virginia. As an American Soldier I benefited professionally when studying lessons in leadership and maneuver on some of these same battlefields, as well as those in France, Belgium, and Germany. Preserving and improving these battlefields helps to conserve critical open space and resources, creates splendid vacation opportunities for the entire family, contributes to local economies, creates jobs. Even more importantly, money and hard work spent on these battlefields actually invests in the hearts and minds of our children, enabling them to visualize and to an extent experience the triumphs and tragedies of our past, as well as the sacrifices made by so many throughout our nation's history. Encouraging civic spirit is a noble goal enabled by effort put into preserving our national past.

- • • Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict.
- Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation.
- Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can benefit quality of life for residents.

As components of the human habitat, cultural resources ARE natural resources.

(cont.)

Hey tree huggers (sorry but if the shoe fits).....guess what.....the trails we (OHV users) often make are the very same trails you then "claim" as yours. How's that for Democracy! We are claiming more land for OHV use? - give me a break....there is virtually no legal places to ride anymore (NJ has zero!) I grew up in the NE. During the 70's & 80's my friends and family built many miles of trails for motorcycle riding. During the 90's the tree hugger movement stepped in and claimed the trails as their own, forcing OHV users off the land. Guess what happened, the trails saw extremely limited use and were virtually non-existent for the past decade. As soon as the next generation of OHV users (local family kids and the OHV parents, like myself) cleared the trails and began using them.....guess what..... the tree huggers started crying again that "their land" was being used by motorcyclist and now they want to claim it all over again (bet they sure enjoy all our work!). I hike, camp, canoe, mountain bike and ride off-road motorcycles. I have a tremendous respect for nature and I do think that certain OHV use does cause excessive damage. STANDARD 2-WHEELED OHV USE DO NOT! For the past 2 years I have monitored the damage caused by hikers, mountain bikers, horses, motorcycles, and quads. The largest damage is clearly from quad users followed by horses. Motorcycles and mountain bikes keep the trails clear and accessible to hikers. They leave a very minimal contact patch on the ground and churn things up just enough to keep from getting overgrown. The path they leave is easy to walk on. Successful off-road use has been done for years in many states and there is more than enough land to accommodate all. Its just a shame that some people feel they are more important and have rights greater than their neighbor. Not very American if you ask me.

I agree off roading is a great way to get the family together, we have enough land that is already locked up in wilderness, we need land to play on, land to grow trees we need access to fishing and hunting, for atv, motorcycle, horses , hiking whatever you like to do. we need land for everyone to enjoy, I do not promote irresponsible or reckless use of our land but conserving and using it, wilderness just takes away the land for most people, so lets use our land together and not bury it in a hole for some future use. we need lumber, we need minning, we all need the land so we need to be responsible and use it wisely and not just take it away from use to use, I support joint use of our land.

I am fortunate enough to belong to a dirt bike club that leases 1800 acres of private property. We have been at our current location since 1972! We maintain a use permit with the county, one of the greenest in Ca, and maintain our trails and property as if it were our own. As the chairman of the trails comitte, I recently met with the rancher next door concerning adding some cattle gaurds to our trail system. He had nothing but nice things to say about our club, and I quote " you guys have been excellent stewards of the land". This is your typical off road rider, not the guy who tears up hillsides etc.

I can't think of a better cause - preserving history, preserving nature, limiting sprawl, encouraging people to spend more time outdoors, all in one!

I do not think we need more conservation areas just more responsible people, we do not need set more land aside for special purosos

Discussion Question 1

(cont.)

I think this idea deserves promotion simply because it is a step in the right direction. Do I think mt. bikers should need a license to ride in Wilderness areas, no I do not. Just as equestrians don't need a license to use those areas. But if licensing makes the opposition feel better about sharing the land, then sure, let's do it. The only reason I see for prohibiting mountain bikes in areas which are otherwise open to hiking and equestrian use is when it is a popular area and there are frequent trail conflicts due to overuse. It is sensible to manage and restrict use to specific users in those cases only. But in remote wilderness areas where trail conflicts between different users are extremely rare, it is absolutely ridiculous that mt. bikes are banned yet equestrians are not. Motorized use is a different issue due to the higher environmental impact, however there is no reason why we shouldn't be able to support a reasonable number of managed trails open to them in all these areas as well. The key is "management", as there's plenty of land for us all to be happy!

Shelter, Safety and Good Nutrition come with the JOBS that are generated by Recreation, Resource Harvesting, and Renewable Energy.

The input from ALL groups is what's needed to be fair to all Americans. Furthermore the idea of "Management by Closure" should be eliminated at all levels.

Well said, I personally have donated 1000's of hours to my favorite trail system. I clean up trash and make it sustainable. In my opinion the the people that stereotyped OHV's in a negative way just are not willing to share. There is enough for all!

This would make a great idea so much better -- we need our youth to appreciate all our public spaces, both the Great Outdoors and the "Great Indoors" at so many of our historic places.

"The "No More Wilderness" settlement opened the door for the BLM to essentially give away wilderness-caliber public lands to the oil and gas industry and motorized users in places the BLM itself recognizes as wilderness-quality." Wilderness makes land useless to American citizens. It locks out the handicapped. I am strongly in favor of CITIZENS have access to the PUBLIC lands we own collectively. I am also in favor of utilizing the resources that the land makes available to us. I fully support NO MORE WILDERNESS! Roll it all back!

"The public enjoys motorized access and OHV recreational opportunities on our public lands. It is a very healthy form of recreation and provides a great connection to the out-of-doors. " Absolutely!!!

I couldn't have said it better. Public land for all to enjoy equally. There is room for everyone so enjoy.

Discussion Question 1

(cont.)

Is a lasting windshield vista what a senior citizen wants as their outdoor experience? Is a babbling brook that is cold enough to chill your beverage something a single male wants in his outdoor venture? Is a forest of flowering trees comprised of basswood, locus and fruit trees someplace where adolescence teenage girls would enjoy spending a day? Our western society needs to develop, enhance and offer areas of specific outdoor interest to specific age groups. Our culture has advanced far enough where Henry Ford's comment on you can have any color of car you want, as long as it is black; no longer works. In my observation, the federal government past approach to offering outdoor experiences was almost always only wild and scenic with little or no human development visible to the eye, and this offering is kind of like the same mind set of Henry Ford's comment. The federal approach needed to get everybody outdoors needs to conjure up and incorporate the concept of different strokes for different folks. A little or maybe even a lot of human influence needs to be incorporated into our outdoors, as the majority of US citizens are urban dwellers and most are foreign to the outdoors and have been so for the last 50 years. With the fact that the majority of US citizen have been out of touch with the outdoors for almost 4 generations, we need to entice them back with some human luxuries, such as cell phone guidance instead of reading a compass. I think we need to focus on these types of paths into the future, as we are now dealing with "golf course" mentality.

Not only do they honor the brave men who fought there but also are a living history lesson and another way to encourage outdoor activity.

The preservation of Civil War Battlefields for future generations is the duty of every citizen. These Historic locations represent the full measure given by those who fought for the freedom to express their ideals and beliefs as guaranteed by the Laws established by our Founding Fathers, and MUST be preserved as examples to our desendants of what the cost of freedom for all citizens can be.

The time is NOW to preserve what is left of Civil War Battlefields! Why the urgency? Reflect for a moment what has happened to so many of the Revolutionary War Battlefield sites. So many of them are in the heart of a city and are not preserved. We have an opportunity to save and preserve the remaining Civil War battlefields. Our government and our citizens must act NOW! Battlefields are memorials to those who helped to make our country what it is today. Battlefields are lessons of what has shaped our society. Battlefields are outside in fresh air and not in a room full of electronics or gizmos.

There are several grass roots and regional not for profits dedicated to getting children and families outdoors. As with all worthy causes, funding is a challenge. Federal or state grants could help these organizations reach more children and families in their areas. By getting children and families into nature they develop a respect and appreciation for the wilderness areas. Without this experience this conversation would be very one sided against maintaining wilderness areas.

We should never have any net losses of recreation opportunities. Any time a trail or area is closed, a requirement should be that a replacement is provided before the closure.

Discussion Question 1

Written & Online Comments

(cont.)

Motorized use of public lands MUST be considered. It is a viable form of recreation and one that connects people to their public lands.

I've just completed my 2nd year as a Galveston Bay Master Naturalist in Texas. This is a hands on, community based program that can fit into anyone's schedule. Numerous outdoor opportunities are posted and allow volunteers to make personal connections to improving our environment while also interacting with the public of all ages. Comradeship and respect for our natural environment build a strong community.

Require permits for dispersed site camping with requirements that: 1. people have a system of human waste disposal...be it a porta potty or wag bag 2. people use existing fire rings or a firepan 3. people sign a pledge to follow "leave no trace guidelines"

I'm so excited to be involved in this program. I belong to the El Camino Real MN Chapter in Milam Co, TX and feel like we are making a positive difference in our local community. Although Milam Co. is a rural area, we are definitely on the right track to helping promote awareness & education about nature. We are about to have our 1st Annual Nature Festival in Cameron on June 11&12 and we have some excellent activities & presenters scheduled. So, come & join and learn with us. I am sure that we will learn as we go, & it should be even better each year. We are excited about sharing lots of the things we have learned & are always ready to help others learn about the amazing nature resources to be enjoyed for free that are available to us on a daily basis. So, slow down a bit & come see for yourself why we enjoy being part of such a great organization. And, in answer, the MN organization is another source to contact to get other speakers, ideas & involvement in ecology in the public sch. Cirriculum. That is one of our goals to work together w/ others to promote nature conservation. Personally, I believe that all states should have a program like the one here in TX. And, for the folks who are against this organization, all I can say is make an effort to come see & hear what we are really all about before you decide you disagree w/ what we are doing. I don't think some education about the environment could really hurt anyone.

Invasive species, especially invasive plants, are a top threat to our wildlands. Many local initiatives bring together public and private stakeholders to plan and implement restoration projects. At the same time, more states are organizing inter-agency councils to ensure strategic efficiency. Both local and state efforts show the kind of working together that we need to conserve our great outdoors. Support from the federal government is key. First, leadership from federal land management agencies is vital for supporting state and local efforts. Second, development of biological control agents, our only truly effective tool against many widespread invasive species, needs federal expertise and resources. Finally, small but steady amounts of federal funding can leverage extensive action at the state and local level. Lastly, it's important that all of us who spend time on our public lands learn about how we can prevent the spread of invasive species and protect the places we love. Coordinated education campaigns can aim at this important education.

Discussion Question 1

(cont.)

Let's identify and protect our premier wild country as Wilderness, using the 1964 Wilderness Act. This is the simplest and most durable way to protect wild country for future generations.

Off road vehicles are the best way to explore the great outdoors, particularly, the National Forests. Most OHV enthusiasts are very 'green' and care deeply for our national treasures. Please don't let the actions of some under educated kids pollute your view of OHV. I ride, my kids ride and my wife rides too. We consider ourselves Stewards of the Forests. We will happily 'share our wisdom' with these outlaw personalities when ever we can.

This may apply more to CA State Parks but many of MY CA State Parks simply ban access to certain user groups because of real or perceived incompatibility. For example, many of my favorite trails ban dogs, bikes in favor of equestrian use. I understand that these uses are not very compatible but why not set up time windows to allow for other uses. Maybe people can take their dogs from 7AM to 10AM, the horses can go from 10-3 and the mountain bikers can have it from 3-6 or some such arrangement. At my count over the past 24 months of using Henry Cowell State Park I have counted more than 15 dogs, about the same number of people and maybe 5 horses. Its not fair to favor single use trails in State or Federal managed lands.

Preserving battlefield land is a win on multiple fronts. It saves ground where Americans fought and died, it creates green space for the enjoyment of all, and it presents opportunities for teachers to bring life to the past through the use of outdoor classrooms where citizens can learn about character, perseverance, and what it means to be American.

I grew up around our nation's very first National Military Park-Chickamauga & Chattanooga NMP. I have also visited many other NMP's in TN, GA, MS, VA, PA, MD, NC, SC, etc. Battlefield parks are one of the best places to spend time with your family & friends & help connect you to our nation's past. Future generations need to be reminded of what our ancestors sacrificed to ensure we would have a good life & a great country to live in. Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. Plus, more battlefield land preserved = more natural, green areas for all of us to enjoy.

Red Clay State Historic Park is located in southeast TN-just east of Chattanooga. Here is a weblink to more info. on it if you are interested.: { Link } Red Clay commemorates an important area associated with Cherokee Native American heritage. As someone who has a strong Cherokee heritage, I highly support any protection possible for Cherokee as well as other Native American related historic/heritage sites. We must do all we can to help preserve & protect historic areas for future generations.

A lot of the hiking trails in my area (and I've heard similar anecdotes from other regions) are practically destroyed every spring by masses of ATVers (including trails where ATV use is supposed to be restricted). The trails are rendered practically unuseable to anyone but ATVers, making the designation "multi-use trail" a joke. Off-roading is a perfectly legitimate form of outdoor recreation even if not my chosen way and I respect that, but it's clear that offroading in inappropriate settings (non-motorized trails) as well as responsible offroading (tearing up multi-use trails) is a problem. It's my belief that stricter penalties need to be imposed, but more importantly, that enforcement be taken seriously. The non-motorized status of hiking trails is completely unenforced in many areas and as a result no one hits the trails but the ATVers themselves. There are many responsible ATVers and offroaders out there who certainly deserve the right to do so (in fact, perhaps there should be more motorized-specific areas to reduce the wear on multi-use paths). In order to preserve their rights, it's essential to keep the irresponsible users off the public trails. Every ATVer who wants to go mudding has a few acres (or a buddy with a few acres) where they can go do so. Law enforcement needs to get serious about showing that public trails are NOT the place to do so.

The AT, PCT, and CDT are great, and now so are the PNT, NCT and the rest, but the more major trails there are, the better. Each of these trails relies on major community involvement to stay open and well-maintained, and that raises awareness of the need for conservation within the community involved. Right now trails like the Great Eastern Trail and the Great Western Loop are still mainly grassroots movements (as many of the others were when they began) and a little more government recognition would do a lot to help them out.

There is a strong connection between our natural and cultural heritage. While some people visit the great outdoors solely for the solace of nature, others see a link between our present and our past. In a huge number of our parks, historic resources are a vital component to engaging visitors. Despite this fact, funding for our historic resources and related programs via the National Park Service lags so distantly behind what is spent on our natural ones, that many are poorly maintained, poorly documented, and poorly interpreted. They seem to be, in some parks, nothing but an afterthought. Full funding for the Historic Preservation Fund, structured the same as the Land and Water Conservation Fund, will help restore some focus to our cultural heritage and provide resources that will help get people out to connect with their heritage.

I object to spending over \$2 billion of my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations. Wilderness and Monument are the most restrictive forms of land designation and reduces access to most people. The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. Multiple Use lands are where the majority of people recreate, as well as where much of our timber and beef products come from, but these lands have been closed at an alarming rate. The President must protect these precious lands by designating them permanently as Multiple Use. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation. The President is interested in local involvement in his plan, yet no multiple use groups have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands. The President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors. That would be Off Highway Vehicle recreation and Mountain Biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors. The proposed Wildlife Corridors along with the proposed Wilderness and Monument designations would harm rural areas, push people out of their homes and force them into cities. This destruction of our Rural Communities, also known as the United Nations Wildlands Project, is detrimental to the interests of all Americans and should not be supported in any way by the Outdoors Initiative.

Reading about history is a good thing. But walking over the same ground after reading about the history that occurred on that ground can give a child an experience that no book alone can.

You don't have to keep everyone out for it to be a wilderness area. A few OHV trails here and there do not destroy the land. Of course there are always a few bad apples tossing out garbage and being irresponsible. But there are clubs and good ol' fashioned "Do-gooders" that build bridges over streams and pick up other people's trash. Trails make up less than 1/2 of 1% of the land. There are many reasons that people do not hike. Handicapped, too fat or too lazy... it's none of anyone's business really. The point is, it can be wilderness and still let people use it. Just don't let people log and develop the land.

I think these areas in Colorado that have been devastated by the mountain beetle should have the standing trees removed for timber or paper and the areas reforested with seedlings. At least we can have some hope that the forest will be returning, rather than allowing invader species taking over.

A Buffalo Commons National Park with a western Kansas core offers a marvelous 21st-century American opportunity: politically creative, socially pragmatic, economically practical, sensitive to ecological and energy issues, rooted in the past, hopeful for the future. It would be firm sign that America's best days still lie ahead. And the state's two largest papers have already endorsed it! So has a Republican former governor, Mike Hayden, who still serves as secretary of parks and wildlife in a Democratic state administration. A Buffalo Commons National Park offers logic, history, passion, economics, ecology, scenery, poetry and on and on. It should not be a partisan or otherwise divisive issue. It should be an American one.

Agree 100%. Add Big Cypress National Preserve (BCNP) and the Addition Lands, North of BCNP to the list. Problem being that the true legislative intent is not being followed. Example - Senate report says NO construction except for land mg't. needs (equipment shed or pole barn)but yet many visitor support facilities have been planned and built which flies in the face of intent. One more example is that ORV's that provide the only means of accessing many areas of these places have been banned from large areas which goes against the intent which never mentioned bans without scientific justification. One part of the reason is that the NPS says the Senate and House reports are not part of the law. If that is the case someone needs to figure out how to append them to the wigggle room filled enabling acts that get passed by some minimally informed legislators too worried about being re-elected. Cultural tragedies have happened there due to enviro-extremist induced law suits and pressures being applied to an agency and government lacking the funds and expertise to refute their lying junk science. This is a really good idea that could bring folks together and eliminate confusion for visitors, land managers and the courts.

All bicyclists should understand they are not wanted in Wilderness either since they use the mechanical advantage of a basic machine (the wheel). Interesting idea though - 50 hours of slavery for the privelege to ride a bike. I don't think Mr. Obama would support that one if he ever saw it.

As the Federal government begins to connect land to people they need to take into account living cultures (people) such as the Gladesmen Culture in So. Fl. For cultures to survive their cultural community members must be supported by land management entities in accessing very remote areas of public lands in their traditional ways that existed prior to gov't. takeover. The association of place to cultural community members is critical to the cultures survival. Failing to do this will breed very stiff opposition every time to any plans being developed on a public property.

At first glance this idea seems very positive and harmless. There might be a few unintended consequences associated with this idea. Many power line easements may be private property owned by power companies who own the power transmission systems. They very well may not want the liabilities associated with formally inviting recreation activities onto their property. Unless one has touched a high voltage power transmission tower when it is damp one does not understand how serious an electrical shock one will receive. I have experienced that situation. It wasn't fatal but it might be to someone with a sensitivity to such things (e.g. person w/heart problems, pacemaker etc.). Cost and coordination of such a program in my opinion would be prohibitive during the austere times that taxpayers are and will be facing for decades into the future. Now if the beneficiaries of such a program (hikers and bicyclists could fund it entirely themselves including insurance that problem could be avoided. Possibly a license tag for bicycles and a permit for hiking-who knows. As far as orchards growing food for the homeless goes that cost would also have to be borne by someone (e.g. you and me) or the beneficiaries. I do not think the homeless can afford to pay and I doubt even the beneficiaries would want to. This idea could assist getting folks outdoors but not without a massive coordination and cost. Nice idea but too costly in my humble opinion.

The Federal Highway Administration already diverts vast some of gas tax revenue away from highway upkeep to bicycle pathway programs. Bicyclists are hostile and arrogant to motorists also. I have seen them takeover 4 lane highways as they peddle 8 or 10 abreast through an area with total disregard for anyone but themselves. Possibly bicyclists should begin paying for the infrastructure they demand. License tags for bicycles to pay for their infrastructure is long overdue. That might slow down their outrageous requests. Believe it or not \$28,000,000 dollars was spent to pave the top of the flood control dike that encircles Lake Okeechobee in Florida for a handful of these folks who do not contribute a nickel as far as I know. This is one example of many that should not be allowed.

The reason for the permit being issued could have been because nobody went to the County complaining about the project. In fact everyone in the locale might have been supportive of the project and the jobs it would create. Project mitigation might have produced a net gain for wildlife and habitat. Sometimes the glass is half full but we cannot allow ourselves to realize it.

(cont.)

The situation is in our Nation's first National Preserve. The problem is in applying adaptive management (am) to an ORV plan Record of Decision signed and adopted nearly 10 years ago. A FACA committee composed of extremely diverse people (some whom were usually diametrically opposed to one another) has been established for about 2 years. Over the last 2 years committee members have grown to understand each other much more than they did at first. The previously opposed factions actually have dinner together with NPS after some meetings. The committee and others all agree that some of the guidance provided by the ORV plan ROD could be modified slightly in order to accomodate some special situations but NPS says that can't be done because there isn't a statement that am applies very near to that particular subject in the ROD. NPS says it would take an EA at minimum or an EIS to accomplish folks desires due to NEPA requirements rather than using the more informal adaptive management process. Some of us suspect that the real reason is the rapidly approaching ORV plan implementation schedule deadline of 2010. I hope I am explaining this so it is understandable. If what NPS says is accurate my suggestion is that NEPA somehow be modified to authorize broad application of adaptive management throughout an ROD so as to provide NPS and FACA committee members the ability to come together on issues that folks have been diametrically opposed to previously. I have witnessed Defenders of Wildlife, NPCA, Fl. Wildl'f. Federation and ORV advocates surprisingly come to agreement on some very tough issues only to have their consensus be prevented by something in the NEPA process. I am not a NEPA specialist but do know it has a lot to do with public input into decision making. Hopefully this further description helps someone more knowledgeable than myself to chime in here with on the ground knowledge.

This idea is perfectly understandable from a wilderness proponent's perspective. It may not be appropriate for the American Great Outdoors Initiative seeking to draw more people to the outdoors so they gain an appreciation of them to support conserving them. Many new outdoorspersons who may not be as physically fit as others and may need the help of some modern amenities in order to develop themselves someday to the point of enjoying and/or supporting the Wilderness Designation concept. I do agree with some facets of this idea such as NO cabins, fancy gov't. campsites, bathrooms or helicopters at low altitude. That being said though I do feel the military (e.g.aircraft) need places to train so they can perform the tasks we assign them to do. If one has ever been buzzed by a buzzard dropping from thousands of feet to pull out of the dive just overhead and heard the roar of the air ripping through its wings one would understand that soundscape is very close to a fighter jet on maneuvers. I have heard both while in extremely remote areas and have had positive feelings towards both. The buzzard gets them from me for his natural abilities and the fighter jet evokes major feelings of pride towards the America that built the aircraft and the pilot America trained to control it. Allowing Jets to train as required where necessary even Wilderness is appropriate in my opinion. That is a small price for us to pay for properly trained defenders of liberty and the security of our Nation enabling a conversation such as we are having here.

This is easy. Whatever percentage of the land value the recipient receives for the easement an equal percentage of the property should be open to the public (e.g. fish, camp, hike, hunt?,bicycles etc.

Those who want to kick the Feds out of their State must do it one step at a time. What lets the Feds into a State is the State itself, otherwise it is treason. States routinely and willingly get into cooperative agreements with the Feds for grant money. One example is Section 6 cooperative agreements set up by the Endangered Species Act. The bait is federal money and States bite on it like starving fish. In the process of swallowing the hook, line, and sinker the State gives the Federal Government the authority specifically reserved for the States in the Constitution. This process in my opinion is legalized treason. Most folks don't have a clue. It is not irreversible though since in these 10 page agreements there is an escape clause for either party to the agreement. All one party has to do is write the other party a letter stating they want out. It is that simple. Sadly there are many of these type agreements allowing the Feds into many areas of our lives. First find out which of your State agencies has entered these type agreements with the Federal gov't. and second attend that agencies meetings repeatedly demanding vociferously for them to withdraw from them until they do it. It shouldn't take too many attempts to succeed since cockroaches run from a bright light quickly as a rule.

We also need a listening session in South Florida. It should be near a population center such as Broward, Miami Dade or Broward county.

What a shame. So much hate exuding from comment 1's sad soul. One should open ones arms to all of our fellow American's to witness Americas Great Outdoors and this initiative, designed to draw more Americans into our wild lands to see, feel, touch, smell and be in awe of them so they will desire to acquire more of them to be similarly enjoyed by all Americans. Some people understand that the more acres we have to enjoy the less the impact any form of enjoyment will have per unit of area. That is why allowing more OHV, hiking and bicycle trails everywhere is a fantastic decision that eliminates the potential of concentrated impact that could be more unsightly. As the Spanish say "Calmate- Tranquillo - Por Favor.

What a wonderfully balanced idea to actually assist Americans of all physical abilities to enjoy and preserve our American legacy. Why is it I sense it will receive many demotes from the regulars here. Come on folks prove me wrong, please.

When one installs a 4 inch Onan generator muffler behind a stock Honda 450 ES muffler on stock ATV the exhaust sound is negligible. The main sound then is the clicking of the valve train which isn't audible at 30 feet. Sound is not the issue some make it out to be. Relegate purposely loud vehicles to race/motocross tracks - problem solved unless you live near the track. Of course next we will have to develop levitation systems to satisfy some commentors here.

You don't need to go racial sir since there are all colors running around America now. A whopping bunch of them have the firepower to prevent any species from running them out or worse. The feral horses don't have guns so they receive what fate hands out. Adoption is better than being dog food.

Discussion Question 1

(cont.)

The demand for motorized access to diverse outdoor recreation opportunities is rising as opportunities for motorized access on public lands have dramatically decreased in the past two decades. Americans are working longer at more jobs/worker than ever with less leisure time. Retired seniors who must have motorized access to enjoy high quality outdoor experiences comprise an increasing percentage of the US population. Most Americans simply do not have the time or ability to access high quality hunting, fishing, skiing, and hiking on large tracts of public land. They need motorized access to high quality recreation areas. The US Forest Service recreation visitor monitoring studies show that the huge supply of non-motorized trails are under-utilized. Even the majority of visits to designated wilderness areas are day hikes from the trailhead on a road . Existing motorized access points to picnicing, camping, waterbodies, trailheads, and viewing areas are often congested and overused. Motorized opportunities must be expanded.

Animals that walk, fly, or swim to do have national boundaries. We should be looking at connecting several migratory routes in the United States with the nations of Mexico and Canada, for joint International Parks. The Monarch Butterflies of Mexico, feed in Michigan. The birds of Alaska, travel the entire coastal areas to nest and feed. Four International Migratory National Parks should be created in the United States, Mexico and Canada. They should include an area from Quebec to Florida, from Alaska to Mexico, from Alberta, Canada to Mexico along the Rockies, from the Grasslands of Manitoba to the grasslands and deserts of Mexico. Animals, like man, can swim, fly, walk and run. Plants can also. Let's start looking at this magnificent New World of ours and work with our neighbors to create a giant preserve involving all three of our nations. Each segment, can still run its own jurisdiction, just like the State Parks in Redwood National Park in California maintain their jurisdiction, within the greater National Redwood Park. We have national parks and recreation areas, that can be connected with others by trails, states parks, city parks, recreation areas etc. All into a very large idea of what we can do to protect our wonderful heritage given to all of us.

I certainly agree with you, as did John Muir. When Julius Caesar was writing about the Gaelic Wars in what is now France, he asked his generals to find out what and where these Gauls (Celts) worshiped. He wanted to know what they considered sacred, so that they might destroy the places. For the Gauls, their most sacred places were the ancient forests where they connected with their gods on the holiest spots they knew. Caesar ordered that they all be cut down to demoralize the people so that he could defeat them. It worked. England learned this same lesson in the conquering of Ireland with the confiscation of the churches, cathedrals, and all school and monasteries. Take what a cultural and people considers its most holy, and destroy it. This worked and still works to this day in our own country with Native American tribes. Yes, it is in wilderness that we can connect with powers so much greater than we can ever be. Right on! I hope you have been to the Cathedral of Redwoods in John Muir Woods north of San Francisco.

Preserving the sacred grounds of our pass to future generations is a MUST. The educational benefits to our children about these historical sites will increasingly enhance their understanding on what took place. We need to preserve and protect these sites at all cost for the tremendous sacrifice of lives given by those who fought for what they believed in.

Discussion Question 1

Written & Online Comments

(cont.)

I think the program was a success. It filled an important niche and resulted in improved habitat for at-risk species on private lands. It's unfortunate that funding for the program was eliminated before results could be demonstrated.

The Historic Preservation Fund comes from the licencing of outer continental oil, gas, and mineral explorations. Considering the news from the Gulf this last week, we need full funding for the HP Fund in order just to protect the many thousands of "at risk" cultural properties in the Gulf Coast. These properties promote tourism, better quality of life, and a historical connection between the people of the Gulf and their homeland. People are worried about the loss of their Gulf Coast "Heritage" and this matching fund would greatly help these people.

The Land and Water Conservation Fund (LWCF) is the perfect vehicle for preserving open space, developing parkland and greenway trails. LWCF is a competitive grant program, which one component is a federal, state and local partnership called the State Assistance program. The BP oil spill has degraded some of America's most treasured recreation land and water, which prompts an urgent call to action for Congress to provide full and dedicated funding for the LWCF program. LWCF is a critical part of America's energy and outdoor recreation future.

The National Trail System is a prime and unfilled opportunity to implement place based education in our schools. The Trails System is a way to tie curriculum (State and National Standards) to students own backyards. Trails are natural outdoor history and natural resource laboratories that promote action oriented and participatory learning. Hiking on trails provides physical activity (to address America's obesity issues), opportunities for public service and can connect people of all ages to the natural landscape. We need to reinvent President Kennedy's advocacy of the "50 mile hike" as a way to reconnect American's with the outdoors. The National Trail System provides the framework.

The preservation of Civil War Battlefields is one of the most urgent issues facing the United States today. Once lost, these fields can never be recovered. Not only is this the history of our great nation, but it is truly the blood of it. Fields that knew the intense horror of the war and the intense belief in each individual's cause. Walk the fields of Gettysburg or Antietam and you will never be the same. For our children's sake. So they can learn what so many did a long time ago. So they can walk in their forefathers footsteps. So they can stand where freedom was born and paid for at such an awful cost.

The preservation of Civil War battlefields (and other historic sites) should be of the highest priority. This is one of the ways the Federal Government can work with citizens groups on both the local and national levels to form public/private partnerships that get real results. Saving land from development will encourage future generations to connect with our country's history and develop an appreciation for the enormous sacrifices made by previous generations of Americans. It is refreshing to note that respect for our country's history, particularly the Civil War, is one of the things that helps bring American's together, regardless of their background or political affiliation. Finally it is a proven fact that Civil War battlefield parkland is of tremendous economic benefit to nearby communities.

Discussion Question 1

(cont.)

There are many thousands of miles of rail corridors across the country that could provide corridors for excellent pedestrian pathways. One benefit of rail corridors over other utility corridors is that they are normally graded at a very reasonable grade, whereas electric transmission lines often navigate very hilly terrain. There is a non-profit organization dedicated to converting rail corridors to pedestrian pathways, please visit and support them at: { Link } One other side note, while not wishing to rain on such a great idea, some individuals have concerns that walking underneath high voltage transmission lines can be a health concern. Before dismissing that idea, try walking underneath a high voltage transmission line at night with a fluorescent light tube in hand. Besides hearing and feeling the crackle of electricity in the air, you will find that the tube will glow.

these threads are informative. there seem to be handful of professional anti-access agitators posting the same crap in every one, and a fairly broad spectrum of sensible and respectful multiple-use advocates that appreciate the need for a variety of recreation.

This is a relatively inexpensive way to spur conservation of private lands.

This is my third year as a Texas Master Naturalist. It's a tremendous program that both educates and connects local residents with their region's ecology.

This our last chance to preserve valuable portions of these battlefields where thousands of men gave their lives in our country greteast crisis. The land required is small when compare to what will be lost if not conserved. Stand up for for American History and preserve these battlefields.

Visiting and camping and recreating in our beautiful public lands is what builds the connection and leads people to value those lands. Whether it's responsible OHV use, bicycling, rock-climbing, hiking, horse-back riding, rafting, hiking, hang-gliding or simply sitting in camp watching the sunset over the mountains with a cocktail, promoting responsible recreation of all sorts is key. We need to get away from separating people into distinct user groups and looking at each other as the enemy. We need to get away from people thinking these resources only exist for them, and that others can/should be excluded. When we camp (20+ times a year), we hike, pedal, motorcycle, and many other diverse activities. We have no trouble finding zillions of non-motorized trails to hike on, and when we choose to hike on motorized trails, we have no problem sharing those trails the motorized users that share our love of the outdoors. We need more trails of all varieties, but especially motorized ones, since those are the ones that seem to be most frequently getting closed or restricted or attacked by intolerant zealots.

We need to be innovative so that "nature activities" can compete with sports and electronics and make the activities convenient for busy parents

We need to make conservation of tallgrass prairie a national priority. It historically was one of the largerst biomes in North America and has been reduced to about 1% today. Prairies played a unique role in our history and is important to many at-risk fish and wildlife species

Discussion Question 1

Yes we need multiple use areas, but motorized use does not always mix well with hiking and walking trails. However i am all for off road areas for motorized use and we need more not less.
Mark

I think the more varied the medium of communication is the better. Everyone learns and perceives things in different ways. At my company Link } SEO, we often cross-post information. It is the same information, but it is delivered in different formats and in different media outlets to maximize exposure and reach everyone possible.

I have brought my son up in the back seat of our Jeep, and now, he is doing the same with his children. We go out with friends and as a family, promoting respect for the environment and those around us. My grand children are very lucky to get to go out into the back country and have the experience of seeing wildlife and open spaces. 95% of our children in the cities haven't a clue that there IS open space and back country. All they know are video games, and that is a sad commentary of our times.

It would be a wonderful idea to set aside land in Kansas for a national park. The wide open prairie is a treasure that should be preserved.

Many private landowners would like to take advantage of this means of ensuring open space for wildlife, streams, the future.

Methane is a difficult greenhouse gas to control and everyone knows that. Before you can successfully burn it to provide energy, effective equipment and methods must be in place so you are not trading one problem for another. However, we went from cathode tube to transistors to solid state to microchips in short order, and the time between innovations is shortened. Surely we can meet that challenge. We would want to spend the R&D time, energy and money for this reason: Using methane to generate energy is a smart way to go because there is nothing more renewable. Cities, towns, burgs, businesses, and farms all generate many metric tons of sewage, a primary source of methane gas. Let's capture it, refine it, and burn it instead of dump it. Separate out the water for the water reclamation facilities (we have them in Arizona and they are used to water golf courses) and use the resulting matter to generate methane. Once the methane has been processed out, the remaining material has enough safe nutrients to be made into fertilizer. They do that in Pennsylvania now. There may have been an experimental community in Virginia or Maryland years ago that did exactly this. If they are still functioning as a community, let's look at their success. If they are not, then let's examine their failures and learn from them. But, let's do it. It is the ULTIMATE recycling venture!!

Discussion Question 1

(cont.)

Sustainability requires learning one's environment; it requires learning how to grow or gather food there, create shelter from what occurs there naturally, harvest water, etc. All sustainable systems are local. In traditional societies these skills were part of growing into adulthood, and they should be for our teenagers as well. With that knowledge young people grow into confident adults; without it there is little incentive to be respectful of resources or confident in your own ability to survive. Without it others will always be in charge of your life. For these reasons Sustainability should be the most basic course that should be taught in high school.

We bought our first Jeep back in 1969 and brought our son up in the back seat. He was taught to Tread Lightly, not to litter, stay on existing roads & trails, etc. Now he has his family and we all go out together as a family with friends, and the same values are being taught to my grandchildren. We all love the great outdoors, whether we are exploring what is around the next corner, searching for old mining camps and our history, taking photographs, watching for wildlife, or collecting rocks. It is an important part of who we are and a way to get away from it all and enjoy each other.

Programs that engage volunteers in invasives removal, trail building, erosion control, and the like are a wonderful way to get people of all ages, economic levels, and cultural backgrounds outdoors, offer healthy and fun exercise with a sense of teamwork and accomplishment, showcase the beauty of nature, let folks learn about the fascinating complexity of our environment without preaching, and inculcate a sense of personal responsibility for the Earth.

The Texas Master Naturalist (TMN) program provides key information and access to workshops that help educate young people and adults in regard to challenges, opportunities and overall responsibility we all have to protect our local and regional ecosystems. Hands-on workshops bring people into contact with local natural areas, demonstration projects and other like-minded volunteers which help spark creative and innovative thinking- and most importantly action. Local participation means people taking ownership of their own front yards/ backyards, neighborhood resources and provides them the ability to participate on a community level, and to teach their neighbors by example.

When you think clearly about this - plants do not have the same mobility as humans or animals. Because of that they are much more at risk of being invaded. As to definitions of what "invasive" plants are, we have some excellent regional groups that would be more than willing to use their knowledge and ability to communicate in order to develop some working methodologies. Authentic living, meaning living close to nature and our surroundings, requires specificity. And specificity is lost if all places look alike as certain strong monocultures develop. Florida and California are not alike. Let's love that difference.

(cont.)

For the second time in five years, investors have applied for a license to operate a casino on the Gettysburg Battlefield's doorstep. In 2006, a local grass roots movement, assisted by a coalition of state and national organizations, defeated the first application. This year, one of those investors, now in league with a former legislator and racetrack operator, has applied for a gambling license once again. While the 2006 casino site was 1 1/2 miles away, this site would be 3000 feet from the southern entrance to the Battlefield, close to where Pickett's charge occurred and right on the Journey Through Hallowed Ground Trail, a National Scenic Byway originating in Monticello and ending in Gettysburg. Incidentally, creators of that Byway rejected Charlestown WVA's request to be included on the Trail despite its historical significance specifically because the gambling venues in Charlestown were considered antithetical to heritage tourism. In 2006, 86% of those who testified during 3 days of public hearings spoke against locating a casino in Gettysburg. Despite that, our state legislators have either been unwilling or have lacked the political courage to protect this national treasure and other precious sites in our Commonwealth from such threats. Now, the future of one of our nation's most significant and consecrated places is now up to the PA Gaming Control Board, a group of seven political appointees with gambling connections, who have the authority to either grant or reject this license application. We are, therefore, beseeching the federal government to enact legislation requiring a buffer zone around Gettysburg National Military Park specifically, and other such historic national parks generally, so that gambling establishments and other incompatible venues will not be permitted to threaten the priceless quality of experiences that these solemn sites provide for all our nation's citizens. If we fail to do this, then look for an amusement park or a miniature golf course near Shanksville after the Flight 93 Memorial is completed. Are there any places left in this country that are so powerful, so meaningful, so intrinsically a part of the American fabric that they are not for sale? If there are, then Gettysburg is one of them. There are thousands of casinos. There is only one Gettysburg. If we can't preserve our history, then shame on us all.

A fine idea. This suggestion is better, in my opinion, than simply extending the enhanced tax incentives for conservation easements, as promoted by the Land Trust Alliance. The difference is that these "targeted" lands potentially would offer greater-than-average public benefits through their protection.

A great idea! There are huge expanses of the high plains in the West where agriculture has not been economically successful. A park of this sort would give an economic boost to its region, as well as provide an anchor for this largely-lost ecosystem. We could see the Great Plains as they appeared 200 years ago to Lewis and Clark.

A great many social and economic problems worldwide, as well as most of our environmental and conservation problems, have roots in human overpopulation. No one denies the right of people to have as many children as they wish. However, for a very long time, businesses and religious groups have effectively blocked our addressing overpopulation as a serious national and worldwide concern. For the sakes of our children, our societies and our fellow creatures, the President of the United States and other world leaders should make a strong case for intelligent family planning.

Access landtrustalliance.org and click on "Find a Land Trust" under the Quick Links. From there you can click on individual states and counties to find the organizations that work in you area.

on most topics I'm with you and I'll promote this one, but entirely too much is made of religious thoughts, things that are sacred to some people, beliefs of various ethnic groups, etc. Fact is, each of us is here for a limited amount of time; and the things that rattle around in our heads are not all that important. We each should strive to be happy and productive without harming others. Where we agree is that "others" includes the rest of our fellow creatures and the ecosystems that gave rise to us. It would be nice if we each could leave this world without trashing it. One of the positive things we can do is protect sufficient wilderness areas where the hundreds of thousands of other species can exist and evolve without our interference. No development, no mining, no forestry, no trails. That doesn't mean there shouldn't also be ample places for motorized recreation, but we have converted entirely too much of this planet to human uses.

Barbara, a good idea, but take a look also at the comments attached to these two ideas: "new national parks" and "Great Plains National Park". They make considerable mention of the Buffalo Commons. Most supporters are advocating western Kansas for greater space.

Environmental organizations usually aren't trying to undermine each other, though at some level they compete for donors just like commercial businesses compete for customers. It's a little like a "survival of the fittest". The groups that are perceived to offer the best "products" for the dollars-spent are the ones that are most likely to thrive. In my opinion, this is not all bad. Just support the ones you think are best.

Few landscapes were more inspiring to view than the vast wind-blown "seas" of grasses and wildflowers that made up our country's native prairies. And very few ecosystems possessed greater biological diversity. Restoring large-scale prairies should be among America's top conservation missions.

For a hundred years, we've had this debate where those of you who want to "use" our public lands for everything from timber harvesting, to mining, to grazing, to OHV riding, will whine and complain about not having access to every single acre. Please allow the rest of the Earth's creatures to have a chance to be left alone somewhere. Thanks!

thanks for replying. I think the Big Cypress National Preserve is wonderful. It put a limit on the sprawl from East Naples. The preserve's visitor center on U.S. 41 is a real treat, alligators and all. Good work on your group's ability to find compromise and friendship. I'm voting against your idea not because I disagree with your group's consensus, but because I don't think it would be a good precedent (assuming it is one) to weaken the NEPA process.

Franklin Roosevelt's CCC left a legacy of park improvements, environmental ethics, Depression-era income for thousands of families, plus physical fitness and confidence for a generation of young men, many of whom went on to serve in WWII. The CCC was a great program and deserves being imitated.

I think it would be a wonderful idea if our active duty service men and women did not have to pay to enjoy the very national parks they work to protect and defend. My son was a ranger with the National Park Service for 6 years, and it always bothered both of us that our active duty soldiers are required to pay admission to our national parks. They deserve to be treated better than that!

Having been an educator for over 37 years, I have found the Texas Master Naturalist Program my favorite venue for reaching the public, both children and adults, with timely, accurate information about their environment, its resources, and use/conservation of resources. In 2007 I certified with the Lindheimer Chapter of TMN in Comal County north of San Antonio. This year we developed the Lindheimer TMN Travelin' Trunk Show, which is an interactive, hands-on display of some of the activities we are involved in. Children love the ability to touch and ask questions about display objects, as well as dig in a sand bucket for fossils. The adults are amazed when they watch the children, then asking questions of their own. We have had many adults sign up for the Fall training after seeing what the program is all about. Each member that we certify equates to a minimum of 40 volunteer hours a year in local environmental projects and parks. Many of our chapter members already have their 250 volunteer hour pins. The Master Naturalist model is an excellent way to involve the public in the understanding and care of their environment.

I believe that we as a human race need to better understand the value of land that goes beyond the dollar and the wish to use up land that we will never be able to replace. Gone is forever when it comes to species displaced because humans must have access when ever and where ever and by any means they wish to wilderness. I may never hike across some wilderness land in this country. However I understand and appreciate its value - For it is like our lungs - it is our breathing space. My father at 92 did not cry "foul" when he could not access his favorite fishing river or favorite mountain top. He knew the value of wilderness to the world even if some never saw it. Today , for instance , bears have only 2% of their original territory. Land that is thumped by seismic thumpers is solidified beyond life. And the areas that should be set aside as quiet places where every living part of them is understood as valuable to our future health--- If we do not learn to understand that we are connected to them and part of them then we are lost. Wilderness is our source- where things begin - The living beings and water born there cannot be replicated in a test tube or computer screen. It deserves good stewardship, not being left in tatters.

My husband and I have just returned from Utah - hiked and camped in the San Rafael Swell. Nothing can compare with a night under a star-stuffed sky surrounded by only the sounds of river, wind, and the song that rests in the monumental colored and faceted rock. As our country grows we will need more of this type of land. "No more wilderness" is a bad promise that needs to be repealed. It is in wilderness that we find our source and where the source lies not only for restoration for us but where our lives begin - the water, and all living beings that depend on wilderness for their lives cannot be overlooked. I am happy to drive 2,000 miles to find this kind of beauty - of geology exposed, of stories on rock from thousands of years ago, of the rivers that wind and the wind through the canyons. We will not be given any more Nature - let's take care of what's left

(cont.)

The TRACK (Trails, Ridges, & Active, Caring Kids) program provides adventures for children and families of all ages. Whether following the clues from a brochure, an interpretive sign or with a guide, TRACK trails encourage kids of all ages to explore the world, find answers to questions and uncover hidden clues along the trail. Each TRACK trail provides multiple self-guided brochures or adventures at the trailhead and downloadable versions are available on the website (www.kidsinparks.com). Modeled like a motivationally based scavenger hunt, as children search for the 'treasures' along the trail, they are promoted to traverse more of the trail's length. When children successfully complete the trail and register their adventure on the web site, they are sent an 'award' or incentive. With each adventure registered, the prizes get better and better. Overall program success and assessment is built into the delivery of those incentives.

Background There is mounting pressure on our time, pocketbook and physical condition. Park visitation has decreased, our waistlines have increased and our resources to deal with either have dwindled. Our children's preferred setting to play is inside, "where all the electrical outlets are," as one child said. At the Blue Ridge Parkway, only 7-12% of visitors bring children. Statistics show that children spend about 8 hours a day interacting with electronic media. With about one in four children overweight or obese, clearly nutritional and recreational choices are having a detrimental and devastating impact on our youth. Our challenge is to get kids unplugged, outside and onto the trails in our parks and public lands.

From studies that show increased brain activity and higher SAT scores when children play in natural settings, to research that links lower incidences of bullying, ADHD and depression in kids that play outside, there is clear evidence that children benefit from time in nature. Nature has restorative and healing qualities; our public lands are not just places set aside and protected for future generations, but are places that hold both significance and meaning for our lives today. We know that it is through a personal meaningful connection with natural and cultural resources that lasting positive impacts can be achieved both for the children and for the place. Getting visitors outdoors and children moving helps develop healthy stewards connected meaningfully to their heritage and their home. The TRACK program is designed to make hiking and walking more attractive to kids and families in order to increase physical activity and connection to the cultural heritage and natural resources of our local communities.

Kids in Parks is an Initiative of the Blue Ridge Parkway Foundation, the Blue Ridge Parkway and the Blue Cross and Blue Shield of North Carolina Foundation. It represents a unique partnership joining the public and private sectors in one common goal: to promote the health of our kids, our parks and our communities. Partner groups include schools, City and County Parks, State Parks, the National Forest Service, the National Park Service and private foundations throughout North Carolina and Virginia. The mission is to promote children's health, combat childhood obesity and reconnect youth with the outdoors by increasing physical activity, improving nutritional choices and engaging and educating families using outdoor activities along trails that are fun, exciting and promote stewardship.

The TRACK Trail Program The TRACK Trail program is a series of networked TRACK Trails on and in communities along the Blue Ridge Parkway. The idea is to create incremental steps with built in motivational incentives (discoveries made with each step along the trail and prizes sent after completing each trail) that lead families and children into the outdoors where they can have a fun family adventure along a trail in their local National Park. TRACK Trails are networked and linked through the web page www.kidsinparks.com, consistent trailhead signage, unified

(cont.)

brochure design and overall theoretical approach. A family could go on a TRACK Trail adventure in their local community park, visit the website to register for the prize and then see the other TRACK Trails. In this manner, we are building in the small steps of change needed to move a family from not even knowing about the possible avenues for recreation in their National Parks and public lands to having hiking on trails become a preferred option or at least a known choice. Our program is available for everyone with no real limits on participants. We have designed a sustainable program that does not require an initial major shift in existing norms, is easy to participate in, provides instant feedback allowing participants to monitor success, has multiple points of entry, utilizes multiple mediums of communication, and is FUN.

This idea has merit - If you do not know a place you will not love it and if you do not love it you will not take care of it. A sense of ownership is needed. Certainly there is more room in our schools for the importance of having a healthy planet while you are doing this

As a certified Texas Master Naturalist, who is concurrently employed at a large plant nursery/greenhouse/grower, I am able to use my passion and training to positively influence retail customers in the business environment. I gently and effectively guide folks in making plant-wise and water-wise decisions/purchases/landscape planning which enhance the environment, Texas natural resources, our watershed, our native plants and wildlife and the quality of life for the community at large. I am fortunate to have an employer who is willing to re-direct his income toward native and sustainable plant choices and practices. I am usually successful in steering customers away from the use and selection of invasive, or potentially invasive, plant species while providing them with solid, pleasurable native alternatives. Our particular area (Hood, Johnson and Somervell counties) holds a population base of large and small ranchers, small farmers, wealthy retirees, stereotypical homeowners and some condo/apartment dwellers. I use my naturalist training to show each one of them how to provide creatively and selectively for the native flora and fauna and for our environmental futures in their home gardens, deck plantings and acreages. The average customer is much more inclined to listen thoughtfully to my suggestions and comments because of my training under the auspices of the Texas Parks and Wildlife Department and the Texas Agriculture Extension Service. This program continues to add to my own base of knowledge with a wealth of opportunities each year as I re-certify annually. Unlike many other-wise worthy programs, the Master Naturalist venue provides a much more broad-based and solid foundation for all other natural science, environmental, agricultural and horticultural disciplines. If anything, this program should not only be retained, but be enlarged. It is a flexible model easily reproduced for every state and territory of these United States of America. The potential for good has not even been fully realized to date. I believe I can confidently declare on behalf of all our naturalists, professional and amateur, that we look forward to an enhanced and expanded program for the benefit of our country's future and the generations to come.

I have been in a ORV ever since I was a baby. I have done this my whole life and now my child loves it. I sure hope her children get to enjoy it. I also hike, snowshoe, ride quads and jeeps. I love all kinds of outdoor activities. Anti-ORV should see that there are many people that love the outdoors and need to share them.

(cont.)

And we can live off the herbs and berries and lay around in the wilderness smoking natural herbal substances and eating mushrooms and live happily ever after. To get Obama to the forest will take 10 jets, 100 vehicles and 1000 government employees. All so he can listen to the sounds of nature and fulfill his role "one of example". That's what I call a good idea-NOT!!!

If you want to learn about being an environmental steward, hang out with a farmer or rancher who for generations has been taking care of the environment for hundreds of years. Come to NE Utah and see the hundreds of acres excellent wildlife winter grazing area. It is utilized by thousands of elk, deer, moose and other wildlife. This land has been mined and then been reclaimed by the mining company that has managed the property for a half a century. This land was originally barren wasteland (or pristine wilderness as radical environmentalists call it).

Preserving Civil War battlefields is a conscientious way of remembering and honoring the hundreds of thousands of men that fought and died in that devastating war. It is our history and these battlefields ARE hallowed ground. It is absolutely imperative that we do all we can to save ALL of the land fought on during those four horrific years. Please preserve these battlefields for those now long gone, for ourselves, and for future generations to come. I cannot think of any cause more worthy. Let us not forget those who sacrificed the ultimate price...we honor each and every Civil War soldier when we preserve this sacred ground.

_____ is currently under prosecution for assaulting a mountain biker in the Bay Area. His anti-mountain bike activity has risen to a criminal level. The challenge and idea he posted here is being DEMOTED. I wonder whether this website will ultimately delete an idea that is simply not supported by most Americans. Mountain bikers are not advocating for riding in existing wilderness areas. There's vast acreage of congressionally designated wilderness for hikers and equestrians. Nor are mountain bikers promoting the construction of roads in wild space. What mountain bikers can do, is to ally with hikers to protect wild lands using really good protective designations, like National Recreation Areas. Simple. Mountain bikers are very interested in sustainable trails for multiple (non-motorized) use & enjoyment. Trails stewardship is hugely popular in the mountain bike community. Trail volunteerism helps land managers and builds community. Our National Trails Day event at our county park was attended by hikers in their 70ies, families with toddlers, and strong mountain bikers. Awesome.

Mountain biking is a great way to get kids who don't want to hike, involved in the outdoors. They get excited and spread that interest to their parents. Then they all show up for great trail stewardship events, like on National Trails Day every June. Mountain bikers are great volunteers who are interested in working with land managers. It's a win-win for the environment, for the people, and for the great outdoors!

"Those who cannot remember the past are condemned to repeat it." --George Santayana
Preserving these battlefields and other historic sites will help remind us of this time in our history and, hopefully, prevent us from another civil war.

As a life long owner of off highway motorcycles I will agree that it has developed lasting family memories. Starting with exploring the back roads of the national forest and desert roads on the lands managed by the BLM. Off Highway does not mean go anywhere it will go. I am a strong believer in staying on the roads and designated trails. I now have four children who have each learned to properly operate a motorcycle and ATV. We spend 10 or more weekend a year exploring the public lands. Our family is closer and healthier because of the time we have spent together thanks to ATV's and motorcycles.

Great for promotion of the great outdoors but does nothing for actually getting the younger generation off the couch. Stand up walk out the door and go see america.

I can't improve on most of these comments in support of preserving battlefields. If we don't preserve the history of this awful chapter our nation's story, ancestors many centuries from now could repeat them!

i'm an environmentalist AND a motorcyclist (OHV'r). i hike, snowboard, camp, AND ride an off-road motorbike and it allows me to see the wilderness and have fun and connect with my friends and meet new friends. out of all the activities i do, i enjoy motorcycling the most and i ride off road almost every weekend and camp once a month. i am not happy with reckless OHV riding as much as reckless mindless horseback riding, reckless mountain biking, and hikers that drive their Subaru's up the forest roads and park in the road(i am a former Subaru owner). all these arguments come down to one thing..... RESPONSIBILITY! i love the outdoors and i love riding a motorcycle. i am in shape, i love the environment (i've been in protests for the environment), i write letters to the govt, i donate to protection groups. so i hope the people on here complaining about OHV'rs as being the problem look in the mirror. here's a quote from Rodney King ... "can't we all just get along?!?"

Our young people are woefully ignorant of the causes, personalities, and events of the American Civil War, if not of American history in general. Walking the very ground where great events took place and, in this case, where men North and South, bled and died for what they believed, makes history come alive in ways a book or internet site never can. The Civil War was truly the defining event in the history of this country. Many of the issues that led to war still make the news today, such as sharing of authority between individual states and the federal government, equal access to the benefits of citizenship for all of us, and speaking out and "fighting" for one's beliefs as opposed to the apathy and indifference so often surrounding us. Civil War battlefields bring all this to life and preserve forever the sacred ground where young American heroes believed certain truths worthy of fighting and dying for.

we love to go atv riding as a family. were out side, looking at nature explaining things to the kids. n y state dosent give tax payers nothing for atvs but take our money. we ride in pa. other states have it. my family loves riding on the atvs..

(cont.)

After 40 years of posting "Public Land - Keep Out" signs on the boundaries, it's time for the US Fish and Wildlife Service to allow the public to visit Featherstone NWR on the Potomac River, just downstream from Washington, DC. The Federal officials who recently completed the "Strategy for Protecting and Restoring the Chesapeake Bay Watershed" recognize that the general public will get more engaged in protecting places that they can experience, in person. The vision is "A Chesapeake watershed with ample access to provide for public enjoyment." Blocking public access to land already owned by the Federal government, with a mile of Potomac River water access, is counterproductive. Wildlife-dependent recreation is appropriate for the 325 acres of tidal marsh and riparian wetlands with mature oaks, tulip poplars and red maples. The dramatic population growth in Northern Virginia has made it even more critical to connect people to nature. If no one but Federal biologists are aware of the natural assets, don't be surprised if local officials propose developing the refuge site for commuter ferry landings, school bus parking lots, or other inappropriate uses.

Environmental and outdoor education is the foundation of efforts to reconnect citizens, and particularly our youth, with America's Great Outdoors. It also improves student achievement in STEM and other subjects, provides the knowledge and skills needed for the "green" jobs of the 21st Century and to address the increasingly complex environmental and natural resource challenges facing the nation, and helps contribute to healthy lifestyles. The Obama Administration should support and the Congress should promptly enact the No Child Left Inside Act, sponsored by Senator Jack Reed and Representative John Sarbanes. The NCLI Act provides incentives for states to provide high-quality environmental instruction, outdoor learning activities, and teacher professional development and will help ensure that every student graduates from high school environmentally literate and prepared for real-world challenges and careers.

How can we incent school districts to set aside land on school campuses serving inner city neighborhoods for environmental education and outdoor recreation? Just a patch of woods, prairie or riverfront can provide a tremendous outdoor lab where teachers can augment classroom science and math education with hands-on research. This avoids the time, expense and hassle of transporting kids offsite and enables year-long projects such as CityGreen's GIS forest mapping curriculum, cataloging climate change's impact on native and invasive species, monitoring water quality, geocaching, camping, orientation and other recreation and teambuilding exercises. I currently work with an outdoor club at a Title I middle school adjacent to seven acres of woods, where we have built a fire ring and hope to install a nature trail this year. However, the school district plans to level the woods in coming years to build a new school. Plans have been delayed by the economy and I'm contemplating lobbying the school board to rebuild on the existing site to preserve the woods and develop a neighborhood EE center that could be accessed by two nearby elementary schools and a high school. I can foresee developing a K-12 program that would put some kids in a position to apply for high school internships with federal land management agencies and the Student Conservation Association and other conservation youth corps groups. Has anyone had success persuading their local school districts to preserve natural areas and create neighborhood EE and outdoor recreation centers?

I'd love to find out if such workshops are available on line, or near Charlotte, NC.

The Texas Master Naturalist program is an outstanding program! Volunteers contribute their talents to help conserve, preserve and educate! The Texas program has served as a model throughout the nation.

Consider starting or joining a nature club for the families around your area. In January of 2008, the _____ family started one and we have enjoyed it very much (www.kidsadventuring.org). Starting this group has given us the opportunity to connect with other families in the area and has encouraged an increase in local volunteering and park use. You can choose the size of the group and invite people from your neighborhood, or you can invite everyone in town. Prepared families are happy families. A Nature Club for Families will encourage others to get out together! Check out Family Nature Clubs at { Link }

I have changed it around a bit. Hope that helps. We are not the only Nature Club for Families. There are now 75 listed on the Children and Nature Network's website.

Actually there already is a 96db limit on Off Road Vehicles. You have probably heard some folks who are running vehicles that exceed that limit. Most Off Road Events on public lands check for compliance and will not allow loud vehicles to participate. Forest Enforcement officers also check vehicles to ensure they are quiet and give a \$500 ticket to those who are not.

Agreed...People don't truly appreciate or value our natural resources unless they have the opportunity to experience them first hand. Introducing people of all ages to recreational fishing provides one of the easiest mechanisms to create that experience and instills a strong conservation ethic. Anglers were among the nation's first and foremost conservationists, and still are today. Somewhere along the line, new anglers need a successful fishing experience to keep them connected for a lifetime. Good fishing is a result of good aquatic habitats. I agree with _____ that the National Fish Habitat Conservation Act should be a cornerstone of America's Great Outdoors Initiative.

All too often special interest groups promote Wilderness areas as a way of excluding the public. Lets keep BLM land open to all, not just a group of backpackers. Spending public money on these projects is not what the public wants now, or any time in the future. These projects are about excluding the public, not preserving public land. If the same money wasted on these projects (taxes and private funding) was used to improve BLM lands and access, we could put thousands of people to work with worthy project. The BLM has a poor record of how it manages it's land. Look at the Wild Horse over population in Nevada. Ever wonder what caused the "over grazing" ?? The BLM caused the problem by leasing the land to ranchers to graze cattle, no feed left for the Wild horses. This is just one small example of their management style, for a price, public land used for special interest groups at the expense of nature and native animals.

Forest Health is important to everyone and President Obama has wisely stated in order to protect and restore Americas Forest that he wants to use science based management practices. Last year the Sierra Nevada Conservancy in partnership with the USDA released their Climate Action Plan which studied our National Forests and scientifically concluded the need to thin and log our overgrown diseased and dying forests to promote forest health and reduce greenhouse gas emissions. As the President noted Conservation is a part of economic growth. The Initiative should encourage resource harvesting as the best way to provide jobs and economic growth for rural communities while promoting forest health, as well as providing products America needs and paying taxes.

Forest Health is important to everyone and President Obama has wisely stated in order to protect and restore Americas Forest that he wants to use science based management practices. I am a hunter and pro-OHV. Yes there the 1% OHV who are irresponsible just like the 1% of hunters who poach or shoot signs. Deal with the issue and educate. It was education that made hunting/fishing groups ultimately improve wildlife populations and habitat. It is not feasible to hike in 20 miles to hunt and then turn around and pack out a harvested animal. The various hunting and fishing groups have done more to restore the wildlife than any environmental group ever has and for a lot less public money. Although I'm sure the Enviro nuts will be happy to take credit for it. Here in the Republic of Californication there is constant flow new laws coming up in congress to limit hunting. Most recently is one that would outlaw lead for use in all bullets used for hunting despite lack of data showing any issue. Also the registration of long guns which will cost all of us tax dollars to administer and gain nothing except to make it easier when the gov't comes to take all of our firearms. I know tell me "there's no right to own firearms".

I happen to live in rural Montana (which is most of Montana) and I find it exceptionally surprising that people believe that open and protected space is disappearing. I work in (oh my God, he's one of them) a natural gas production/gathering company and most of my days is driving on specified trails through the "disappearing" open spaces. Coyotes are increasing this year, snakes are abundant (nice Bull snake in one of my measurement houses just this week!) rabbits and hares galore, deer so abundant I fear they will starve in the winter, antelope (my God, the antelope!) are everywhere. Gophers? More gophers in a square mile than citizens in New York City! The animals here, as well as Wyoming where I lived for 8 years, aren't in any danger. They adapt to us faster than I adapt to them (at least snakes). What we need is actual education on the issue. The issue is these "wildlands" are someone's home, and it is in our best interest to take care of these lands because we live here. We also have to make a living here. If you aren't born into a farming/ranching family it is doubtful you can break into it, and energy is something that we were blessed with by our Creator (to use Thomas Jefferson's language. Please don't think my neighbors and I are eco-terrorists (is there even such a thing), we are American citizens due every right and privelege that is ours by birthright.

I have an idea, let's take land in your home state that is being used to supply the world in beef and wheat and make it a nice tourist stop that the elites can go to after everyone else starves to death. Great thinking, sport.

I strongly support making the tax incentives on conservation easements permanent. Easements are particularly effective in communities that are concerned about having too much tax-exempt land owned by the government or land trusts. Local officials and residents who are concerned about lost revenues are more willing to support this approach when they understand that the private landowner will still pay some taxes, even if the amount of tax on land under easement may decrease.

I take my family camping, exploring, and trail riding on OHVs as much as possible. We try to support the local communities we visit on such trips. I sure hope I can continue this form of recreation with my grandchildren.

I voted "promote" because it can work. Just make sure it managed by neutral, reasonable people and not GREEN extremists. Make sure the use of the budget is for OHV support and not the general fund of the state.

I'm sorry that have been having such a bad time with federal management. I have found that the partnerships between groups like CAMBA in northern Wisconsin have resulted in amazing opportunities for great mountain biking on federal lands in the Midwest. The partnership between the USDA Forest Service and the mountain biking organization have helped to establish the area as a premier mountain biking destination. This has helped the area to develop and sustain a more diverse economy based on the revenue generated from events like the Fat Tire Festival, which in turn help to develop support for the preservation of these lands. Furthermore, the Ozark Highlands Trail Association does an awesome job maintaining the OHT, a hiking trail running through the Buffalo National River and I believe parts of the Ozark National Forest. Again an organization has partnered with the federal government to provide the rest of us the opportunity to enjoy our public lands. Not sure how you can argue that doesn't work. The challenge is to continue working with those groups and to further develop more such relationships.

Stay in your manicured gated community. That is not Nature.

This is a good idea for a number of reasons: It helps the trails and parks, puts money into peoples pockets, gives retired people a purpose, and gets them active.

Kids who learn about the natural world will grow up to appreciate and protect it.

I have been a Master Naturalist in training for several months and have gained tremendous respect for the program. The program works for me on several levels, connecting with the environment, with people respectful of the environment, learning from experts and understanding the high level of connectedness among species, both flora and fauna. I'm looking forward to many years of continued involvement as part of a movement focused on restoring habitat, educating the general public, and other work required to ensure the ultimate sustainability our small piece of the global environment. Extending the movement nationally makes a lot of sense.

Please visit a wilderness area and see more than just hikers making use of the land. Fishermen, hunters, packers, and equestrians all use the land. So, the hikers are not considering themselves elitists, they are considering keeping the wild wild. I enjoy mountain biking and ohv's, but would never want them in a wilderness area. But, I guess I also enjoy eating elk steak.

I don't think any new trails should be opened in the National Forests. I spend a lot of time in wilderness areas and national forest on backpacking trips and on horseback. Hearing an engine out there takes the wilderness out of it. I would like to see more areas myself made into wilderness areas. If people want to experience the wilderness, as it always has been, they can walk or pack a horse, just as it has always been done. I'd say that the reason you have never seen anyone walking on your loops is because the walkers try to stay away from OHV's when they get outdoors.

Discussion Question 1

(cont.)

I vote for more wilderness.

I will promote this idea as long as provisions are made to incorporate alternate motorized trail routes into a National Trail System. The vision should be that both motorized and non-motorized users should be able to experience a contiguous trail system.

One other law needs to be followed--the Wilderness Act. If an area is not pristine and untrammled, it should not be considered for Wilderness.

The social/cultural, economic and environmental benefits of historic preservation are becoming more widely known to a wider segment of the population every day. If it were just about saving old buildings, the historic preservation movement would have died a long time ago with the destruction of Penn Station. This goes well beyond sentimentality. Full, permanent funding of the HPF ensures the on-going efforts of our State and Tribal Preservation offices to assist in preserving our cultural identity, preventing the need for new developments on agricultural land or natural areas and creating good paying jobs in the construction trades, among other benefits. The State and Tribal Preservation Offices are often the driving force behind many historic preservation efforts at all levels and, without them, we would have to rely too heavily on grassroots efforts to keep the momentum going.

Great idea! I support multi-user designations (even motorized if/where appropriate). More trails & better inter-connections to existing trails will further enhance outdoor & fitness opportunities for all users.

Sorry to hear about your problems; my experience was very different. The IRS accepted our appraisal, our deduction went through without a problem. I hope this gets resolved in your favor. I too think conservation easements are one of the best hopes to preserving open space in the US. I know several people who would consider granting easements, but don't feel they can afford to reduce the marketability of their property and the tax deduction would be of little benefit because of their tax bracket. I would love to see a fund established so that these people could be paid upfront for the conservation easement.

There is the Great Society's federal Senior Community Service Employment Program which is a training program for people 55+. Seniors are paid minimum wage to train at nonprofits and governmental agencies. This program can be used for trails.

Discussion Question 1

Written & Online Comments

(cont.)

I agree that preservation of our lands and the history that goes along with them must incorporate more than setting aside places for people to enjoy them. A well rounded approach would be most effective and I think starting with the base of our population, the youth of America, should be a large part of the equation. I propose that we do more to educate our about the land they live in and introduce them to it. Education is often one of the highest on citizens lists of concerns in our country, and America often focuses on Educational reform. In the past, it has been in the form of more money and the issue has been presented to the public in that forum. Instead of simply pushing the money issue, we could introduce programs that educate students about nature as a subject... its upkeep an art, the tools to do so a science, and the enjoyment of Nature's resources a part of well rounded life. Give schools the opportunity to invite children and their parents to the parks and public lands around their communities. I know that improved public transportation is often a local goal in cities. What if their was a bus families could take to go camping? Not simply to the mall. What if the Parks and Forests could be a summer job for teenagers? Instead of McDonald's. What if our children grew up in green cities with grass on the roofs instead of just the city park? All of this is possible if we start by encouraging and educating the children of America about the wonderful world that already exists in their country.

I appreciate the attempt to promote some balance in this debate. Generally speaking most land that is not designated as wilderness remains open for some form of off-road vehicle activity. If all the wilderness eligible public land was so designated it would still leave the majority of public lands open for off-roaders. However, the crux of this debate is not really about access for recreation. It's about whether or not there will be sufficient space left for mother nature to allow her to remain healthy; its about whether or not our natural heritage will remain so that people (and animals) will continue to benefit in the many ways other than recreation that are essential (clean air, clean water, soil creation, etc.). Unfortunately, though nature isn't even attaining 1 for 1, 1 for 1 won't get that job done.

Multiple Use is one of those ideas that sound really good until you take a closer look. The big problem seems to be that allowing one person to do what he or she pleases can pretty much ruin it for another user. An example would be trying to go for a bike ride in an area that is being mined for coal really isn't going to be much fun. Nor is going for a hike with a bunch of ATV's generating so much noise that you think your at a NASCAR rally. Definitely every group should be allowed to have an input(and they do), but we have to realize that opening up every thing to every use is neither realistic or fair, nor good for the land. You notice I talked about regulating use and activities-not "locking people out". You can go any place that you want on public land, but you do have to obey the rules

Discussion Question 1

Written & Online Comments

(cont.)

One of the biggest threats to Wilderness Areas is the gradual erosion of protection by various user groups such as mountain bikes and ATV's that want access for their use. The big problem with multiple use trails is that they really aren't: the dominant group turns to be the ones with the biggest most intrusive machines and everyone else is relegated to a secondary status and a vastly degraded experience. Certainly everyone has a right to do their thing, but this has to be done by segregating conflicting uses-not by cynically calming to want it for "everybody" when in fact they want it for their own uses. In this increasingly crowded and mechanized world we need places to escape and be in nature without being harassed by machines.

Saving and preserving these battlefields are essential, not only as lasting monuments to the brave men that fought and died there, but as virtual classrooms for all future generations that they may truly understand the great sacrifices made by each and every soldier to help forge and make this country into the truly free and united country it is today. Maintaining these battlefields also protects the environment and they contribute to the economic well-being of the areas surrounding them through tourism.

I wish everyone the opportunity to learn and enjoy nature through a program like the Texas Master Naturalist Program that trains, shapes, and challenges volunteers to take an active role in educating others about our natural resources. As an advisor to the Coastal Prairie Texas Master Naturalist Chapter of Ft. Bend and Waller Counties, I have assisted and encouraged programs from the 2009 Agricultural/ & Household Hazardous Waste Collection event in Waller County that collected 69,000 lbs of waste to educational programs on conserving darkness and light pollution. This chapter's volunteers direct the educational programs and events. Last year's Prairie Heritage Day (PHD) at the wonderful Brazos Bend Texas State Park was a banner type event promoting our most endangered ecosystem (THE PRAIRIE), and enjoyed the participation of over 20 vendors and 1,000 participants.

The Memorandum for a 21st Century Strategy for America's Great Outdoors requested emphasis be placed on involving our youth. So, once again, we must turn to the education system. P.E. instruction in all schools could contain an outdoor education component. This could include field trips to local wilderness and agricultural areas. The emphasis must be on educating youth about our relationship with the earth, how we depend on the earth for our own survival, and how everything we do affects the earth and, ultimately, our own existence. The earth will be a better place if we can put it in the hands of informed people who can be good stewards of our earth, no matter what career path they choose. This education program will require a commitment of funds and adequate resources, but an investment well worth the benefits.

It's about jobs, community development, character, jobs, sustainability, environmental stewardship, jobs, sense of place, tourism, cultural identity, and jobs. The Historic Preservation Fund should be fully funded at the Congressionally authorized level of \$150 million. Give State Historic Preservation Offices and the communities they serve the financial and human resources they need to help ensure that the places that matter are attractive and viable parts of a sustainable future.

(cont.)

All wilderness quality land should IMMEDIATELY be protected. Period. Including the Arctic National Wildlife refuge. All roadless areas protected under Clinton should be in this category. And finally, all available wilderness areas in the Tongass National Forest in Alaska should be protected. They were left out of the roadless rule in the first place. Even if every bit of wilderness left in this country is protected, it will still leave plenty of room for the off road crowd. Some day, as this country gets more and more overcrowded, our children and grandchildren will thank us.

I like the focus on family activity. I will be definitely checking this out online and seeing how it could be incorporated in our local parks here in Florida. The idea of incremental incentives would help motivate parents and children. As a lover of outdoors and learning, I still treasure my Senior Ranger badge I earned at Fossil Butte! I would like to see programs like yours and theirs more often in our state and national parks!

Service learning projects really helped with our local park. Our students have volunteered over 7 years at a local state park and have a strong connection with it as a result. Two years ago, we reforested an area with long-leaf pine seedlings and students are constantly checking to see how they are doing! Long-term commitment is crucial, as well as recognition for the volunteers work!

We worked closely with a local state park via service learning projects and designed a "Family Activity Guide" for the park. Children and parents learned about the park through activity pages designed for each section of the park. The guide contains historical information, math activities, invasive species identification, puzzles, games, etc. This guide is more requested than the Junior Ranger Guide! Often Ranger led-activities are at a time when parents/children cannot attend. As a result families miss out on these valuable activities. Teachers, working closely with park rangers, could design these guides for use in both national and state parks. The guides need to be designed specifically for each park, not generic like many of the Junior Ranger Guides. Guides could be posted online (pdf) for easy download and would encourage parents/children to visit and learn at local state/national parks. Teachers would love to help work with projects like this!

I understand how, to those of us who recycle and try to do with less disposable materials, this is such common sense. A no-brainer. However, I don't want to see the oversight organization that the feds would put into place to regulate it. It would be repulsively large--it would have to be. When it comes to recycling, this is a MORAL issue. We need to get peoples heads and hearts engaged, so that they WANT to do this, naturally. Legislating morality has never changed behavior. Prohibition is the classic example. MADD and related organizations have done more to reduce irresponsible drinking than that law ever did. Same with smoking. Public education is what will push recycling into the realm of "just do it," not federal laws and federal offices to watch-dog them. But God bless you for your concern for our beautiful world!

(cont.)

The role of the Federal government in facilitating the preservation of the sacred ground embodied in the Civil War battlefields through making available matching funds for non-profit organizations is vital to our ability as a nation to the continued recognition of our heritage. Private sector groups have had great success in laying the groundwork and developing the arrangements for critical land acquisitions. These efforts, when parleyed with the ability to show financial leverage through matching gifts from sources with common interests such as governments, individuals, and grass-roots organizations have proven invaluable. These successes can continue if reliable public funding is established/continued.

100 Stories of Youth in the Great Outdoors I see that the fewest contributions thus far are in the area of 'Tools' and that there are very few suggestions that focus on fostering the engagement of youth in the Great Outdoors. Perhaps the expression of the most precious experiences we have had in natural settings can be found in those indelible, unforgettable and absolutely one-of-kind happenings that sometimes occur when a mother or father, grandparent, aunt or uncle or an adult friend takes us out, when we are young, into wild waters and landscapes in a boat, on an ATV, on foot or horseback or bike, and something wonderful, awe-inspiring or amazing touches our hearts in ways that connect us forever afterwards to that place and activity. How we are captivated and captured by such outdoor experiences that are brought to us by a special person who cares for us and for whom we deeply care when we are young are conveyed in the stories we share with one another over a campfire on future journeys with our dearest friends and family in later years. Let us gather together and select 100 stories submitted from youth 8-18, one each from a boy and girl in each of the 50 states, who have had the gift of a special experience in a national park or state natural area with an adult family member or friend, and publish a book with a picture of the place and person accompanying each story, for other youth to read and see what possible and precious gifts might await them if they explore the wild treasures available to each of them across our nation wherever they might live.

(cont.)

A host of rules and regulations, missions and methods might be more cleanly and clearly organized with more distinct definitions that differentiate the primary concepts employed by departments, agencies and NGO's. I propose the following specifications for the primary constructs of preservation, restoration, conservation and consecration ...

To Protect and Preserve: We work to safeguard the existing integrity, quality and health of the water, its associated diversity of land and wildlife, from further declines and losses (threats) through monitoring (watch and ward) and advocacy (shield and defend) activities with other individuals, families, organizations and communities. [save ... maintain] "A thing is right when it tends to preserve the integrity, stability and beauty of the biotic community. It is wrong when it tends otherwise. A thing is right only when it tends to preserve the integrity, stability, and beauty of the community, and the community includes the soil, waters, fauna, and flora, as well as people." -Aldo Leopold [To Preserve: keep safe from harm or injury; retain (a condition or state of affairs); maintain or keep alive]

To Restore: We seek to improve water quality (recover and reestablish), recognizing its interconnection with land use by humans and wildlife, and seek to restore (rehabilitate and reclaim) important natural and scenic areas along waterways and throughout watersheds and landscapes by partnering with other organizations focused on ecological restoration (repair and reconstitute). [secure ... manage] "Every creature is better alive than dead, men and moose and pine trees, and he who understands it aright will rather preserve its life than destroy it." -Henry David Thoreau "On the mountains mistakes are fatal. In politics, mistakes are wounding emotionally, but you recover. Personally, wilderness helps me get back in touch with natural rhythms, helps me reflect and, in the process, restore my creativity." -Mark Udall [To Restore: bring back (a previous right, practice, custom, or situation); reinstate; return (someone or something) to a former condition, place, or position; repair or renovate (a building, work of art, vehicle, etc.) so as to return it to its original condition; give (something previously stolen, taken away, or lost) back to the original owner or recipient]

To Conserve: We engage people living within the river corridors and habitats, increasing stewardship through educational, recreational and volunteer stewardship activities that give them the understanding and motivation to advocate at the local, state and national levels on behalf of the river's values. We partner with other conservation organizations seeking to insure long-term stability through land purchase (sequester in reserves, parks, and sanctuaries), easements and other mechanisms to sustain (perpetuate) a legacy of high quality land and water ecology into the future. [sustain ... mind] "In the end we will conserve only what we love. We will love only what we understand. We will understand only what we are taught." - Baba Dioum [To Conserve: protect (something, esp. an environmentally or culturally important place or thing) from harm or destruction; prevent the wasteful or harmful overuse of (a resource); maintain; retain]

To Celebrate and Consecrate: This watershed/landscape/habitat is a national treasure. We live, work and play here because we love the place, and we celebrate that love at every opportunity. [serve ... deference and devotion] "O if we but knew what we do when we delve or hew -- hack and rack the growing green! Since country is so tender to touch, her being so slender, that like this sleek and seeing ball but a prick will make no eye at all, where we, even where we mean to mend her we end her, when we hew or delve: after-comers cannot guess the beauty been." -Gerard Manley Hopkins [To Consecrate: declare something sacred; devote (something) exclusively to a particular purpose]

(cont.)

Rotarians are actively involved in the outdoors and service projects involving positive environmental actions in many, if not most communities, as are Boy Scout troops. These beneficial efforts are typically widely scattered, without sustained focus or coherent, coordinated impact. We are seeking to train paired teams of adult Rotarians and Scout youth in many communities up and down a watershed to take more coordinated action, linking them together for more cohesive, effective and sustained impact. If only a third of such paired and linked teams are initiated of those available in a particular watershed or habitat type (woodland, savanna, prairie, wetlands), very potent effects are possible. Add in other possible pairings of other local adult organizations like Lions, Vets, church adult groups, with local youth organizations like 4-H, Boys and Girls clubs, and school student groups and the impact would be considerable. Pairing and regional linking would promote intergenerational sustainability of effort as well.

America's cultural resources define who we are and are indispensable. HistoriCorps is the future of preserving these resources on public lands. It comes at a critical time when these resources are fading just when budgets are being trimmed to take care of them. It is also important as an opportunity for the participants, primarily young people, to learn more about the resources themselves and the skills needed to preserve them.

For persons who insist on a quiet experience on public land, we invite them to visit Wilderness Areas which are reserved for their exclusive -- repeat exclusive -- use. Wilderness Areas are abundant and readily accessible to most people who require solitude and peaceful experience.

I have grown up riding and have always been respectful towards the environment by staying off closed trails and abiding by the rules. The majority of riders are the same way because they want to be able to continue to ride on the trails they love. Keep public lands open to the public!

I totally disagree with your comment. I am an avid off road user and it's what has brought my family and I to the outdoors and to the wilderness. It's the enjoyment and the ability to take my family into places that we normally wouldn't go that has brought us closer to the outdoors. We have so much fun going off road on our Quads and four wheel drives that it keeps us coming back year after year. We do not tear up the land like you suggest, instead we invest in our off road vehicles and we abide by the tread lightly standards of use, and we enjoy the outdoors. We also enjoy the hiking, fishing, camping that you enjoy but we do it once we've made it to our destination. If you want to protect from the pollution of of the air, rivers and streams that we all love stop targeting the very little OHV use and start looking at the major destruction that comes from daily driving on our roads and highways. People need to get out and enjoy the wilderness so that they can see what is out there to protect, and if they want to bike and backpack to get there great, but it's also great if they want to have some fun and go four wheeling or on a dirt bike ride to get there! Try it once you might just enjoy yourself.

In most cases, user fees are necessary to provide revenue for Land Management Agencies who are broke. Land Management Agencies are broke because we have eliminated revenue-generating activities from Public Lands. There really is no reason the FS and BLM cannot be financially self-sustaining if we would allow responsible, sustainable land uses such as timber harvest, grazing permits, and recreation for everyone.

Discussion Question 1

Written & Online Comments

(cont.)

It is rare when we have "win/win" opportunities. The multiple use of public lands is such an opportunity. Renewable practices such as timber harvest and grazing have obvious economic benefits (including funding of FS and BLM) but they also have environmental benefits, some of which are pointed out by commenters on this idea. In particular, responsible, selective timber harvests contribute to our local, state, and national economies while at the same time increasing resilience to wildfires and bug infestations, and the resulting modest additions of roads and trails provide improved public access.

Keep the trails open for the public to enjoy and partake in! There are plenty of trails out there where protection steps are being taken to minimize the impact of vehicles off road. Bridges being built and cleaner emissions from automakers keeping the air pollution down. Our major impact on air and water quality comes from our daily drivers not from OHV use which has a very minimal impact. Consider the awareness that OHV use brings towards our environment by simply introducing people to the outdoors and how great it is! My family enjoys the outdoors camping and hiking at least 10 times per year because of our OHV's, and we introduce our friends to the outdoors too! Our country has many beautiful places to see, and the way they will stay that way is to keep people aware. Ride, Hike, Bike, wheel, run, or walk through the outdoors, just be safe, courteous, and respectful and most of all enjoy!

Please consider two things. 1- Requiring the use of a trials tire in designated areas. This virtually removes all destructive effects of ORV use. 2- Consider that in the next year a significant amount of electric ORV two wheel vehicles are going to be sold. Three large companies now produce these vehicles including KTM. thank you.

Speeding up progress on a National Trail System is a good idea -- provided those trails are available for motorized as well as nonmotorized use.

Man is a visitor in America's great outdoors, not the resident. A good visitor respects the wildlife and the wildlife habitat that are an integral part of the great outdoor experience. This means in America's great outdoors natural process control wildlife populations and wildlife habitat. If the presence of wildlife interferes with Man's enjoyment of the great outdoors, Man must yield to the wildlife and the preservation of the wildlife habitat. Man does not choose the wildlife numbers and species. Natural processes control the balance. The only exception is when Man must correct an imbalance greater by their intrusion into the great outdoors or pollution of neighboring spaces. And when making this correction no wildlife should be a loser. The Great Outdoors is first the home of wildlife, free from disturbance of Man. Man must be a benign presence in America's great outdoors. Private lands adjacent to America's great outdoors must be tolerant of the wanderings of wildlife onto their lands as those lands provide the buffer between America's great outdoors and Man's world where wildlife are sometimes the visitors. That is the challenge.

(cont.)

Preserved Civil War battlefields are some of the last tangible links to our country's past. With the 150th anniversary commemoration beginning next year, there will be renewed interest in the conflict and (hopefully!) unprecedented tourism to Civil War sites, which will help the economies in those areas. Preserved battlefields create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. This is good for America no matter how you look at it! Even more, battlefields are outdoor classrooms for all future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. Even if you are not a history buff, preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for outdoor recreation. It won't be long before, in many areas, these beautiful preserved battlefields may be the only open spaces in vast seas of development. It is a shame that only a fraction of actual Civil War battlefields have been preserved, and a crime that so much hallowed ground has already been paved over, denied to future generations. The public - private partnership between the federal government and the Civil War Preservation Trust (where the Trust matches private gifts raised from its members dollar-for-dollar with federal grants to help save actual battlefield land) may be the most effective and efficient use of taxpayer dollars in all of the government. If these important places are ever going to be saved, it will likely be during the next 5-year period. We owe this to our children and grandchildren.

The Texas Master Naturalist program is an outstanding education program driven by a dedicated corps of volunteers. I feel the best thing about the program is it gears programs to the volunteers local area. People live in a particular area for a reason, and educating them about conservation and ecology in their region motivates them to improve their local region. There is also excellent state support and interaction to keep people informed of what is going on in other areas of the state. This gives new ideas for individuals to take back to their region and incorporate.

We must have free ranging, wild bison again. A national prairie park is an absolute must!

Exerpts from another comment I posted: When the new technologies are perfected to replace fossil fuels in cars they will eventually be incorporated into all vehicles. The amount of fuel used by OHV recreation is not anywhere near that used for everyday transportation. If anyone thinks banning OHV will solve America's energy problems they are mistaken. This form of recreation has been growing dramatically and at the same time areas to enjoy it have decreased due to pressure from well funded environmental groups and sometimes one single person with a seeming vendetta against OHV use.

When the new technologies are perfected to replace fossil fuels in cars they will eventually be incorporated into all vehicles. The amount of fuel used by OHV recreation is not anywhere near that used for everyday transportation. If anyone thinks banning OHV will solve America's energy problems they are mistaken. I agree with everything in this idea. Managed OHV parks can be a great way to preserve the land and protect the environment from developers. I know I could not walk very far into a park and responsible OHV use is a great way to enjoy the nature I would not otherwise enjoy. It is also my preferred form of exercise and recreation because I can do both at the same time. Many families enjoy the sport and the environment at the same time. It sure beats computer games for the kids. This form of recreation has been growing dramatically and at the same time areas to enjoy it have decreased due to pressure from well funded environmental groups and sometimes one single person with a seeming vendetta against OHV use. I say expand the number and size of OHV parks and keep them well managed and teach the kids about nature while they enjoy it. More parks closer to home would discourage illegal activity elsewhere. Dirt bikes don't damage a trail much more than horses and as said above, they are maintained by the agency in charge and by volunteers.

I am sharing information from the Active Living Research (ALR) program, a national program of the Robert Wood Johnson Foundation. The chief aim of Active Living Research is to increase knowledge about active living by supporting research to identify environmental factors and policies that can increase physical activity and prevent childhood obesity, particularly among children in low-income and racial or ethnic minority communities. Parks and outdoor recreation can play a significant role in helping kids and adults be more active and healthy. Two research summaries: The Economic Benefits of Open Space, Recreation Facilities and Walkable Community Design Research Synthesis reviews the peer-reviewed and independent reports on the economic value of outdoor recreation facilities, open spaces and walkable community design, and focuses on "private" benefits that accrue to nearby homeowners and to other users of open space. (March 2010) The Parks, Playgrounds and Active Living Research Synthesis summarizes the growing body of evidence concerning the role of parks in shaping active lifestyles across a variety of study populations, including children, seniors, lower-income families, specific racial and ethnic groups and other populations at high risk of being inactive. Areas where additional research is needed are also discussed. (February 2010) To access the above reports, as well as other ALR resources, go here: { Link }

(cont.)

-Direct land preservation. Take the example of 2200 acre Chapman Forest, which was purchased in 1998 by the state of Maryland and the Conservation Fund to prevent a huge new development. Now designated Chapman State Park, this site is used for environmental education in an authentic setting that harbors considerable biodiversity, including more than three dozen state-rare species, an old-growth tract, a rare Shell-marl ravine forest, and one of Mattawoman Creek's finest tributaries. Also helped by the purchase was Mattawoman itself, one the Chesapeake Bay's most significant fish nurseries. Also preserved was Mt. Aventine, a remarkable antebellum manor house that housed the Chapman family, whose presence at the site oversaw history from 1750 to the twentieth century. -Past preservation of land works, and continued preservation to thwart degradation by encroaching development. Examples include Chapman Forest in Charles County, Maryland, Piscataway National park that partially preserves the view from Mt. Vernon, and Maryland Natural Environment Areas along Mattawoman Creek, one the Chesapeake Bay's most productive finfish tributaries. Mattawoman is under such concentrated attack by local land use policies that it is now showing the signs of wear predicted twenty years ago by fisheries biologists. Federal investment in land preservation is one of the sure-fire tools known to help. Know that the Mattawoman is to the Chesapeake Bay as a babybottle is to a baby. If the Mattawoman is allowed to degrade, so goes the Chesapeake.

I am a conservationist by trade and actually deal with landowners and conservation easement issues. A conservation easement is placed on private land whose owner has forgone development rights and therefore forfeits any financial gain that might result from the developing of that piece of land. This is PRIVATE land, not public, and most of the time no federal dollars are used (a lot of the time the easement is donated by the landowner). Most land trusts are not-for-profit organizations who hold these easements as a public service to preserve farmland, green space, and wildlife habitat. The general public has no more right to these lands than they do my back yard. Any threat of opening private land up to the public will effectively put an end to conservation easements - that is the first question landowners ask me ("this won't make my land into some kind of park, will it?"). I think the public doesn't truly understand what a conservation easement is.

Youth and adults need social support systems and places in nature that they identify with positive experiences. Urbanizing populations need to experience nature close to home through frequent encounters over extended periods of time with supportive mentors as the major part of their recruitment and retention into nature. Community Conservation Clubs should be formed in every local community for persons to gather, to share programs, to plan, to support each other, and to have fun. Clubs should be supported through joint efforts of local, state, and national nature-based agencies and nongovernmental organizations and businesses. Existing leadership would be central to expanding their memberships and actions and they can add new Community Conservation Clubs locally. Businesses have a role to provide meeting spaces, program support, and participation by their employees.

Support funding for historic preservation and heritage programs like Save America's Treasures, Preserve America, National Heritage Areas, the Historic Preservation Fund, and historic and archeological sites in our National Parks and on public lands. This will ensure that America's Great Outdoors truly preserves our national heritage, including our natural, historic and cultural legacy so that all Americans and especially young people can better understand, learn from and appreciate our rich and diverse past.

As Americans it is incumbent on us to protect the hallowed places where so many of our forefathers gave their lives. The protection of Civil War battlefields provides this opportunity to our current generation. Battlefields are rapidly disappearing because of unwise development that disregards our historic resources. We do not have much time to act. Those of us who share this common interest and sense of responsibility must act now. Our numbers are many, and our will is strong. Our battlefield organizations, National Park Service, and government officials must be strongly encouraged to protect these legacies of our national fabric.

As a member of the Civil War Preservation Trust and Hagerstown (MD) Civil War Roundtable, please allow me to offer my comments on the Administration's America's Great Outdoors initiative. I would like to see some of this money spent on Civil War battlefield preservation. Battlefields are essential for several reasons. Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. Battlefields are outdoor classrooms for this and future generations. Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Finally, what better way to observe the 150th anniversary commemoration of the war by preserving battlefields where men fought and died. Thank you.

I was going to comment that "destroy the environment" was a bit alarmist, but then I went back and reread some of the recent literature on predicted changes based on increased heat trapping from carbon dioxide. "Destroy" about sums it up for a lot of wild areas. As for the cost, I recently went from a gasoline-powered car to a turbo-diesel car. Similar size, similar comfort (better actually), better safety due to more modern features. Highway mileage increased from low 30s to near 50. My city/highway commute loop went from upper 20s to 40 mpg. Functionally I didn't notice a difference. Idiotically simple. People who say it can't be done haven't looked very closely.

I would love to live on a golf course for its beauty. The same goes for most of our civil war sites. Most are wonderful places to go to enjoy a few hours in the outdoors...take a lunch and enjoy the scenery as well as the history.

The sport of hunting and fishing over the last 30 + years has restored more wildlife species in our nation. These sportsman/women are truly concerned about all wildlife and the preservation of it. True conservation groups such as National Wild Turkey Federation, Duck Unlimited and the Quality Deer Management Assoc.(to name a few) have helped restore America's game species to historic levels. Through the preservation of these games species, non game species have benefited greatly. The money these sportsman/women spend helps the local and nation economies. Please consider the preservation of these activities as a benefit to our Nation and not as harmful as some believe.

There is so much land. There is so much beauty. Why can't we all have access. Locking it down prevents access to those who might only access via OHV. The joy that this has brought to my family, especially the kids is beyond question. Come join, with an open mind, and experience what families experience together via responsible OHV living. If hiking were the only way, so few would ever experience our vast, grand outdoors. Live and let live friends.

I suppose it depends on what you mean by "functioning system". A landscape managed for cattle isn't necessarily a better home for wildlife, plant or animal. My admittedly limited experience has been that rangeland is a good place for cattle at the expense of native critters. We have to STOP accessing oil, natural gas, coal, and we have to stop trying to convince ourselves that we need to. As for other minerals, nothing trashes a landscape like mining. Seems like every place I go in Colorado I see ugly-colored water running out of the rock into streams, the leftovers from mining a century ago. Mechanized mining has not improved the impact any. And what about the value of functional watersheds to aid in flood control, forests for wildlife, groundwater recharge, space to find solitude and recreation. These things have value as well. Yes! I've made several trips to Germany in recent years to visit a brother that lives there. Germans love their forests. Love Them! But they waited waay too long to start loving them. German forests are like Disneyland - yes there are trees, but the blocks are too small to really work as a functional forest with wildlife and room to roam in solitude. America IS a special place, the first nation to recognize that undisturbed landscapes had value. I say let's keep those wild landscapes before we look like Europe. No offense intended, but wilderness should be BIG, not a little corner left over from the farms and factories.

When electric power was first developed in the 19th century, production required large machinery. Producing power in large plants and running it to the users over transmission lines really didn't have an alternative. Today it's possible to generate significant electricity in a distributed manner is achievable in many areas. Solar cell arrays, wind turbines, turbines run by burning methane from cow (or human) manure, small hydropower, the list continues to grow. The facilities can be smaller and less burdensome, the losses to transmission are less because the power will travel a shorter distance, and the loss of power to an entire region (due to failure of a production facility or a natural disaster) is much less likely. This idea can work. 'Course it will make some major investments (power plants, large grids of transmission lines) worth a lot less. I personally am unmoved. The writing's been on the wall for at least 5 years, and many of these facilities have been flouting clean air act rules for decades. Time to pay the piper.

(cont.)

As a backpacker and hiker who's been known to lug a saw himself, I think your last comment is off-base. Hikers can go around and through blowdowns, and some of us at least don't mind doing trail maintenance either.

Most people live in cities; most national parks are outside cities; thus we need national parks in cities, or city parks need to receive a fair share of LWCF funds to that they can be accessible and well maintained, as well as providing quality programming for the public.

Maybe a bunch of your domes could be built, only smaller and less expensively, for hikers, bikers, tree huggers, bird watchers, daisy pickers, and whomever else you wish to control and oppress. I am an avid OHV rider, rancher, equestrian, and hiker. There are several trails in my area that are not accessible by OHV as they are too narrow and rugged to accommodate one. My most frequented OHV area is the Imperial Sand dunes in Southern California. There are several square miles of sand dunes there to enjoy with whatever mode of transportation you may choose. Even this area, unvisited by most hikers, is under attack. Massive closures have been enacted in order to protect an "endangered" weed, that is showing no signs of eradication and also grows unmolested a few feet away from the closed areas, in Mexico. The only hikers we see in this area are illegal immigrants, (or undocumented Democrats as I see it). I don't believe a 1:1 plan would work because the OHV community is typically ignored in most hearings anyway. Just restoring the previously available areas for our recreation would be a great start. If someone wants to hike, bike, camp, ride horses, or perform any other activity in this area, be our guest. Just remember that you had to use a truck, car, trailer, or some other motorized vehicle to arrive there to enjoy your activity as well. Remove the hypocrisy and see where we all end up.

This is a great idea. OHV's are misrepresented in most issues regarding wilderness usage. If the OHV's "tear huge pieces of earth out of dirt roads and trails" and "without monthly maintenance these roads would become impassable to normal car use", then wouldn't this create jobs for the local road maintenance crews, encouraging them to stay in the community as the original idea suggested? Sounds like a win-win situation to me.

I can demote this idea. Since when is CO2 a pollutant? Did you know that the leading cause of the greenhouse effect is clouds and not CO2? But, since the climatologists would get laughed out of existence for trying to abolish clouds, they pick on a, naturally occurring, gas in the earth's atmosphere. Just because a few scientists say something is true, doesn't mean that it is. The same community claimed that the earth was flat centuries ago. Cap and Trade is money redistribution and nothing more. Dennis, nice choice on the new car. I wish more people would look at the turbo diesel's mileage instead of those, ridiculous, hybrids.

I would be happy if the land, previously available for OHV use, was restored to this capacity. More land would not be necessary.

(cont.)

_____, When running cattle on public lands, the rancher MUST own a percentage of private property before he can do so. It is this type of ignorance that effects laws out of conscience instead of reality. Ranching and mining on public land is also profitable, where wild horses are not. Ranchers in particular are responsible for the water supply, fence upkeep, and road maintenance, which costs the BLM, (and the American taxpayer), nothing. I agree that the BLM is flawed, like most government agencies, but allowing the land to be managed by private businesses, like miners and ranchers, is an improvement.

Where was a dirt bike mentioned in this? If federal land truly belongs to all of us, then why should anyone ride their dirt bike in their own driveway? By reducing the federal government's role in public land use, the federal government wouldn't get to decide who "all of us" are.

Diane Kerr The Texas Master Naturalist program provides an education and training unique to one's local environment. This type of learning promotes better/wiser choices. The learning is hands on and those armed with the knowledge and understanding of their local environment has contributed to informing thousands of local citizens. Private and public entities continue to benefit from having Texas Master Naturalist volunteers carry their land stewardship to others. This can be seen in the better choices that the Houston/Galveston communities are making due to the training from this program. The public at large is learning, private citizens, children/students, and employees all become better citizens through this most valuable knowledge of learning about one's local natural resources, how to conserve those resources as well beneficially manage them.

Hunters and Anglers deserve much credit for their conservation and preservation activities. The money spent on licenses and tags have provided the funds to maintain many of the National Parks and other things we all enjoy freely. These activities should not always be attacked for several reasons. One being a lot of the wild game is a food source and often donated freely to feed the hungry that many people turn their back on. Just because people hunt or fish doesn't mean they hate animals, they just understand the cycle of life and that is why there are small seasons to hunt. If there was no hunting at all there would be an over run of wild animals every where causing people more harm, it is scientific and spiritual. Now the main problem with the Outdoors Industry and Organizations is that they don't embrace Diversity of People, they have just started including women and that was mainly to embrace what they would consider diversity they could digest for now, but with the changing demos and mindset it would behoove them to sincerely reach out a lot better than to their wives and daughters.

The Texas Master Naturalist program provides a community with an educated corp of volunteers that really care about the environment and are willing to work hard to care for the environment and educate the community. I have been a TMN volunteer for 3 years and I am so encouraged by the work this organization does. TMN makes a difference.

(cont.)

I would have no great argument against OHV designated areas so long as: One, the areas contained sufficient buffer zones surrounding them so the OHV noise could not be heard by persons living in, or using, nearby land, and Two, no taxes be used in their development (we have far greater needs than such areas, i.e., let those who want to use OHVs, and/or those who want to sell OHVs, pay for them.)

It is no secret that Oregon and the Intermountain West have a terrible pine beetle problem and fires are well outside the historic norms. Could it be attributable to federal forest policy? E.g., of Oregon's non-reserved federal forest's annual growth, 8% is harvested while 19% is lost to mortality (i.e., left to rot, feed bugs, and fuel fires). The remaining 73% is left as growing stock. NO piece of ground has the ability to add that much growing stock year after year after year. At some point it no longer has the moisture, nutrients, or sunlight necessary to sustain that increasing amount of vegetation. It becomes susceptible to drought, insects, disease, and fire. This is known as 'carrying capacity', a concept that explains why a farmer can not feed a hundred steers on an acre of pasture, why a wildlife biologist can not sustain a 1000 deer on a section of land, or why the gardener does not plant tomatoes 3 inches apart. It is simple biology. This concept is not politically correct and is not one a politician wants to hear. To ignore the concept is to wear blinders or to keep the head in the sand. Until our politicians in both the Executive and Legislative Branches have the political gumption to put politics aside and base federal forest policy on biology, our federal forests will continue to decline. Though this is a biological given, I am not holding my breath. Politics (i.e., gaining power and getting re-elected) will ALWAYS trump biology.

I fully support this idea and encourage our government to STOP locking OUR public lands up. We have enough public land to share with all.

Motorized recreation is a legitimate use of our public lands

We must preserve & protect our historic sites for future generations so that those generations will know the story of how our country came to be. Future generations need to know the sacrifices our ancestors made so that they could have a better life & a great country to live. Plus, preserved battlefields & historic sites help revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses.

I agree! A focused effort on the most important lands is the best way to ensure effective conservation versus a scatter shot approach that is used now.

(cont.)

I don't believe that ORV users are tearing up our land and clogging up our streams and making our wildlife extinct. Every person I know that rides wheelers or sleds are responsible people and are courteous to others. We do not need any more public land taken away from ORV users. There are more areas to hike then to ride a ORV. I hunt and pursue trophy mule deer so I know that there is by far more areas to get off your butt and hike and leave ORV trails open. NO MORE WILDERNESS!!!

I have to argue with comment #4 as it has no credibility. To say that people who ride sleds, waverunners, and ORV should be put in a high fence with a Mountain Dew dispenser so no one has to hear or see them is the dumbest thing I have read on my computer screen. I enjoy all forms of outdoors which include hiking and spending days up in the mountains with nothing but freeze dried food and a water purifier while I pursue trophy mule deer so to tell me that there are other ways to enjoy the outdoors other then on my sled or wheeler is obvious, I don't need a gasoline engine roaring between my legs either to enjoy the outdoors. I hike and scout for big bucks from July to the end of November and then I get on my sled and ride sleds from November to June. It amazes me how only a few want wilderness and no ORV and so many want to have more ORV and less wilderness. Further more sleds are not damaging to anything other then your day dreaming. I know this because I am involved in sledding. Just this past weekend I was up looking for deer where I also sled and guess what I seen on the mountains where I sled?????? nothing but green forage and wildflowers. Amazing how when the snow melts you can't see any tracks from sleds. So tell me how snowmobiles are damaging to our planet, and you can't bring up pollution cause I promise you that your daily commuter car makes thousands more of pollutants then my sleds or wheelers.

There is 900,000 sq miles of desert in the US western states. Currently less than 1/10 of 1 percent of that area is available for any type of OHV use in any form. The arguement that OHV use is making any significant impact on wildlife is like saying that one drop of chorine in a 100,000 gallon water tank makes the water unusable. The are some that would argue that any harm to wildlife no matter how small is unacceptable. This idea of "Zero Tolerance" if applied to any human activity would rule out everything, highway use, farming, mining, any type of military activity, any outdoor activity whatsoever. Sure there is some impact from any outdoor activity, whatever it is and there must be some limits to OHV use, however the reasonable use of our public lands for OHV recreation is just good public policy.

This is such a critical incentive for all farmers and ranchers across the country that are interested in conserving their properties for future generations. It maintains bipartisan support, a rare achievement in modern politics. Making these incentives permanent is critical for the future of private lands conservation.

I agree. Any vet with a disability rating from the VA can get the Access card for all public lands, free entrance and half off camping. My value my Access card as much as I do my GI Bill.

(cont.)

The Civilian Conservation Corps was one of the most successful government agencies during the depression. The CCC built trails, visitor centers, amphitheaters, campgrounds, roads, and had a hand in about everything you see in a state and national park or forest. Millions of trees were planted by the CCC to combat soil erosion and reforest logged out areas. Corps members had opportunities to learn job skills and further their education. In an era of almost 10% unemployment and near 20% under-employment, a new CCC would provide jobs and skill training while attacking the maintenance backlog on our public lands. A new CCC could help our country deal with the effects of climate change and repair damaged range and forest lands.

Active management of recreational use works. With management (maps, kiosks, partnership agreements, adopt a trail, on the ground signing, etc) land managers increase capacity while decreasing impacts to natural resources. Involvement of federal land managers with local communities works. Community based FACA committees formed from a broad base of stakeholders can well serve as advisory councils to assist the land manager in critical planning and decision-making efforts. Asking for assistance and volunteer hours from local user groups and clubs can do wonders for the management of OUR lands for ALL users. Trail clean ups, trail maintenance and blocking off improper routes and bypasses are but a few of the things that volunteer time can be put to good use.

Have units embrace substantive volunteer programs. Utilize proven management principles such as the Recreational Opportunity Spectrum and ensure that all aspects of ROS are served. EDUCATE YOUR CHILDREN! Practice Tread Lightly! Follow the principle: Pack it in, pack it out with a little extra.

The federal land managing agencies serve a critical role in supplying a diverse range of recreational opportunity to the American public. Recreation is a key multiple use value. The federal agencies should seek to enhance recreational opportunities on lands that they manage. Training for local recreation program managers is essential, especially in the area of developing funding opportunities through private sector and federal grant programs such as the Yamaha OHV Access Initiative GRANT Program or the Recreational Trails Program at the federal/state level. Federal agencies can provide many tools and opportunities for all to enjoy OUR lands. One thing I have seen work well is a federal agency supply dumpsters for trail cleanup while local clubs and local users do the work by volunteering time.

Human access is not "damage". Most people do not and cannot access land through wilderness hiking.

LWCF has been a major source of political privilege for those who want to take over private property through acquisition and land use prohibitions. It should be abolished.

I agree with most of your statements but you need to broaden your description to natural resources agencies in all points and the introductory statements. Most state, regional and local natural resource agencies offer education programs to children and adults. Many of these agencies also manage natural areas and conduct a variety of educational activities on these areas.

Return to a Multiple Use philosophy. Before the great (?) environmental and preservational movements of the '70s, this worked best. We all shared the land with respect for those who recreated on it and for those who produced commodity resources from it. Commodity production creates wealth. If we don't create our commodity resources, we must import them, exporting our wealth in the process. It seems hard for urban America to grasp that land, whether public or private, is the larder from which we derive all our needs to maintain our quality of life, but this we must understand and respect. The chief obstacle now to Multiple Use is the fragmenting of our public lands into special use areas. The Federal Government should cease being intimidated by vocal minorities and return to a Multiple Use philosophy for the common good. Our political leaders can assist in this by de-politicizing our land management agencies. These are staffed by trained professionals that we have hired to manage our lands. Let them do their jobs. One tool that would help in these regards is to allow no more life-time appointments for Federal District judges. Far too often, with no accountability to hinder them, they follow their own agenda, with little regard to the impact their decisions have on those trying to produce raw materials and on the rural communities affected by their decisions. Another tool would be to rescind the Equal Access to Law consideration for all of the professional protesters who seek to inhibit any further meaningful development of our public lands. Our public land management agencies must pay these court costs out of their own budgets. This seriously erodes their ability to meet their more important obligations. A third tool is to amend the NEPA and ESA laws so that only those appeals of public land management programs by folks who have standing and credibility, and whose appeals have substance, will be considered by the agencies. This would do much to inhibit the myriad of appeals filed by bored college students with nothing better to do on Saturday nights. Finally, with regard to public lands conservation, we need no more. We have National Parks, National Monuments, Wilderness Areas, Wildlife Management Areas, and Areas of Critical Environmental Concern, to name the most common. Enough is enough! It is time we start managing our public lands in a more realistic, responsible, and mature manner, and bring an end to the public land wars of the PAST THREE DECADES. Montana

your incorrect best example is yellowstone national park. Snowmobile started being used when there was no wolves and 400 bison. Today there are many packs of wolves and over 6,000 bison. OHV isn't anything different than your Subaru driving down a dirt road. The problem is extreme environmentalist breeding hate towards any user group that doesn't recreate the way they do. The current roads need to remain open for the enjoyment of the majority of people using public lands. With the sierra club having less than a million members and atv sale reaching close to 10 million it is clear to see what the American people want.

In order to insure individual user's access to their expectations without conflict, there needs to be carefully crafted user designation applied to public lands. For example, a non-motorized user's expectation of solitude and peaceful exploration can not be realized if motorized use is allowed in the same area. These designations need to be located on front country as well as back country. Non-motorized users should not have to travel all the way to a Wilderness to experience quiet solitude, free from noisy distractions.

(cont.)

Saving our battlefields helps keep alive the memories of those who fought and died there. It allows us to touch a place where our history was created. Additionally, they are places where families can visit economically which in-turn helps our communities when visitors buy fuel, meals, hotels, etc. These are positive, tangible benefits for everyone.

As an elected municipality official of Washington Township in Franklin County, Pennsylvania I strongly support Civil War battlefield preservation. I would encourage all Municipality, County, State and Federal elected officials to take a strong stand to protect and preserve our heritage. Battlefields are our outdoor classrooms for our and future generations. They allow educators and visitors to walk in the footsteps of our Civil War heroes and ancestors while experiencing the landscape much as it was during the battle. Protection of America's Civil War battlefields as well as protecting areas where smaller and important battles have taken place, but not yet recognized will leave a lasting legacy of our nation's commitment to preservation, and education. I am very proud that Washington Township Supervisors of Franklin County, Pennsylvania has taken the lead to work with The Battle of Monterey Pass Association to raise funds to purchase a plot of land to monument Lee's retreat from Gettysburg. Please visit our web sites to learn more. { Link }

3. What works – We have hundreds of stories and letters acknowledging some of the “life changing” experiences that take place in outdoor education. Here is one of many stories pertinent to environmental stewardship. a. A group of students attended a 5-day backpacking program in Yosemite National Park and at the conclusion of their program they were so inspired by their environmental stewardship calling, they returned to their communities and began a crusade to educate their peers and local residents by providing them with alternative on saving on the cost of electricity, within a short period of time, they reported a total of 200,000 pounds of carbon as a result of a program they have launched called the "pay it forward" project. b. A Salvation Army group of youth based out of Los Angeles and grant funded for a 3-part series of outdoor education combined with leadership, service learning and environmental stewardship taught these “at risk youth” and provided them with the tools necessary from the “Leave No Trace Behind”, what they can do to contribute in their communities, reconnect with the outdoors and understand the importance of conservation. This particular group's last program was in the wilderness backpacking in the San Jacinto Mountains. Upon their return, they exchanged all paper and styrofoam eating/drinking utensils and now bring in their own washable eating utensils, maybe a small contribution but monumental to this group of youth.

I disagree with this idea entirely. There are reasons we have environmental regulations - it's called the Tragedy of the Commons. While reform is a good idea, I think it also needs to be well-thought out. And as for your statement that we don't need land conservation anymore, I wholeheartedly disagree. As the populations of our cities and towns increase, we will need more public land to recreate on/ filter our water and air/produce our timber/protect displaced wildlife/provide ecosystem services. Many places are already overcrowded as it is - even wilderness areas! I can't even get a permit during certain peak times.

Discussion Question 1

(cont.)

I second this idea. Not only does the enhanced tax deduction make it easier for landowners to work with land trusts, it also enables conservation organizations to keep on doing good work to protect outdoor spaces. Local land trusts provide services to communities by preserving and enhancing water quality, water quantity, wildlife habitat, recreational lands, agricultural lands, open space and scenic vistas. In rural areas, these amenities attract visitors and tourists and bring money to local businesses. It's all connected.

Create programs within Grade and High Schools to immerse children into learning how to care for the public lands and water. The knowledge they take back with them to their classrooms will be invaluable.

Great idea. Yellowstone is a perfect example where the wolf was reintroduced.

Impact studies are the only way land, water, and wildlife will remain sustainable. We are ALL special interests when it comes to wanting a voice for how our Federal, Public, and Private lands are put to use. Sadly, money has been a huge factor. That has to stop. The gulf was the victim in that battle. Please continue to have scientists and conservationists maintain a watchful eye over all the lands. Once they are gone....they are gone forever.

Local residents and groups have a keen eye for watching over nearby Federal, State, and Local lands. Although they may not have the expertise, they have to live with the consequences. So if the land, water, and other natural resources are exploited, they are the ones who suffer. Short sighted profits, land development, and mining operations driven by greed and profit are not viable options anymore. All of our resources are becoming scarce and polluted. I wish we could trust Congress and Administrations, to "do the right thing" but money talks too loudly. Big media backed by our Supreme Court's "human" corporations will distort whatever message is delivered. If this process continues, America has lost its heart and soul - its waters and lands. Open the dialogue for "new" development of any sort to local people's vote as to whether or not they want wells drilled, and water exposed to pollution. As for land subdivision, good luck with that one - We need to build UP not OUT. Once the land and water is GONE, it's GONE.

This is a great idea, but transparency is needed to determine you don't get any wolves in sheeps clothing. As long as the sites are fact checked as to whether they are in the business of protecting instead of exploiting - I'm all for this.

This is merely a suggestion which I am sure has been proposed before and perhaps withdrawn. While visiting Sedona several balloons went over the area, and I could hear the rider's excitement at seeing wild places without noise, impact on that trails, or frightening the wildlife. I'm just posing this idea....maybe it will fly?

(cont.)

To repeat what previous posters have said: 1. Battlefield preservation offers tangible links with the past. 2. Battlefield preservation offers needed green spaces in which people are able to exercise through walking, jogging, biking, and hiking. 3. These green spaces are needed barriers to prevent erosion, pollution, and increase oxygen levels. These spaces are also preserves for wildlife, some of which are endangered species and have fewer places to go in a time of increasing suburbanization and urbanization. 4. Preserved battlefields promote heritage tourism which in turn promotes the economic health of many communities in an era of an increasingly service driven economy. 5. These battlefields serve as some of the best spaces to learn about the best and worst in humanity as interpretation allows people to understand slavery and its downfall, patriotism, nationalism, bravery, disloyalty, savagery, horror, and the unfinished work of the post-Civil War Amendments to affirm and solidify the right of all Americans in being treated equally under the law.

Civil War Battlefields were paid for with American blood and are sacred places. We need to be more diligent in preserving and caring for them.

ATV owners can install after market mufflers in addition to the stock muffler on an ATV. Manufacturers could solve a majority of the sound issue by manufacturing much quieter ATV's. There is no excuse for them to let this ongoing issue continue.

Bottom line. There is only one Gettysburg. There are many casinos. Putting it 10 miles down the highway will still supply jobs to the region and allow for those who wish to gamble and see the park to do so. But common sense says that the mix of gambling and history within such a close proximity are a bad mix. Protect the military park by having a reasonable buffer for "adult-only" activities to provide a family-friendly atmosphere. This would be truly sensible planning.

By all means this would be a positive step in reconnecting people to Americas Great Outdoors. It is not done nearly enough in my opinion. Most of all current living cultures such as Native Americans and even newly discovered living cultures such as Gladesmen Culture should be portrayed in a positive and uplifting manner. Often nowadays man within a natural landscape is portrayed in a negative manner by many agenda driven entities to suit their myopic narrow set of goals. That breeds hard feelings and contempt towards those entities and their goals. These backlashes can set conservation back years in attaining justifiable goals. Cultural respect and acknowledgement may well be the missing link in connecting Americans to Americas Great Outdoors. Google Gladesmen Culture to find out more.

Discussion Question 1

(cont.)

Everyone should also know that in order for a highway to be designated the local elected officials with authority over the highway must give their authority to the Scenic Highway oversight group (Corridor Mg't. Entity) or whatever other name they use and adopt the Scenic Highway - Corridor Management Plan - for the highway segment being designated. That is how the Florida program functioned the last time I checked. This looks like a good idea until the bait of Federally funded amenities (boardwalks, scenic overlooks etc.) is swallowed and then the highway is reeled in under the control of the Scenic Highway group in charge. Elected officials in Florida have de-designated at least one National Scenic Byway after 8+ years in development after finding out they were having their authority removed. Suggestion - Be much more up front with elected officials in the beginning of the process and treat regular citizens that become involved with much more respect than what happened on the Tamiami Trail in So. Florida.

Federal and State agencies that provide services (e.g. primitive - RV camping) in locales where those same services are provided by private businesses need to be much more sensitive in seeing to it that their fee structure does not undercut a private business's ability to at least compete with them on a level playing field. I have been witnessing for years a 2 generation family owned small campground in So. Fla. being financially devastated by a Federal agency's regulatory actions and camping operations at the Big Cypress National Preserve. NPS's fee structure is either free or well below cost. How would anyone here deal with that scenario? People need to understand receiving services for free or at below cost from a governmental entity can have some very financially destructive side effects upon their fellow citizens. I do agree that parking one's vehicle along side a road within public land and going on a hike should be not necessarily (free) but knowingly subsidized by other revenue generators so that everyone possible can experience nature thus drawing them possibly into supporting the place they're in or another similar place someday. Some here are concerned about overuse but many of the public feel that if they are taxed to pay for something called "public land" they should be entitled to enter that land. Without solid justification, limiting visitation should not be considered in my opinion.

Federal, Records of Decisions pertaining to National Park Service management plans need to allow adaptive management (am) to be applicable throughout entire ROD's. Currently we are being told am is only applicable to whatever specific topic is near the mention of am in an ROD's text. This situation is preventing folks who are usually diametrically opposed who are wanting to come together on issues from doing so. We are also being told by NPS that the NEPA process causes this. If this is accurate than NEPA should be modified to allow carte blanche use of adaptive management throughout signed ROD's.

Florida and Collier County, Florida in particular is doing a great job of promoting youth hunting, fishing and conservation. At the last minute Collier County actually stopped a plan to turn 2500 acres of conservation land scheduled for only passive use into a hunting area with the help of knowledgeable volunteers, the State wildlife agency and their County Commissioners. It saved the County from having to pay professional USDA hunters to come in and kill feral hogs considered an invasive species there. The whole operation from beginning to end only took a month or so. The Future of Hunting in Florida program is a whopping success with large landowners with large game populations and volunteer hunting mentors for the youth flocking to participate. States and Counties are more appropriate for these type programs though since the Federal government takes years to implement any projects and would inevitably have to overcome HSUS or PETA protests over programs such as these. The other problems would be Federal strings on the money.

Granted our human existence depends to some degree on a healthy environment. In no way though does having healthy environments depend upon the exclusion of human access to them.

Having worked for the USFS for fifteen years in a Timber Department, I can assure you that this idea has been implemented for decades. Trees are climbed each year (when there is a good crop) and the cones are picked and then cataloged as to species, seed zone and elevation, then shipped to the various nurseries where they are stored under exacting conditions. When planting stock is needed, a request is placed to the nursery and the seed planted for the seedlings will consist of the collections from that zone and elevation. In this way, the newly planted seedlings will be acclimated to the site where they are to be grown. There are exceptions - these are generally research projects and are of very small scale and are carefully watched. I've got to tell you - there are few greater feelings than being at the top of a 120ft Sugar Pine and just looking around while you rest up from the climb before you start actually picking the cones. I have been up hundreds of trees through the years, and collecting cones is one of the most enjoyable things I did while in the FS. Sure beats busting your ass planning a quality timber sale only to have a bunch of hypocrites that do not in any way understand the dynamics of the forest sue in order to stop it so they can extort money out of an ill informed public.

Here is where the environmental communities hypocrisy is abundantly clear. Green folks want us off of oil but cry Crocodile tears when it begins to happen. Someone needs to grow up. We will never have our cake and eat it too. Life forms at ground level will adapt although birds may have a few more problems adapting but will over time. In fact cantilevered nesting platforms for threatened bird species might provide environmental mitigation for the windmills.

I did try to submit an idea on a different topic but the site did not accept it. The administrator said it was a site glitch and to try again. I may at some point but after wasting an hour and losing it I am shy to have a repeat of that. Upon rereading the idea I still see that DOI could determine the priority level and/or the Secretary would decide the targeted lands - that is a lot more power. Easements are not free either and the taxpayer unknowingly foots the bill for paying the landowner. Easements paid for with public funds are not but should be opened to public access proportionally to the easement payments relationship to gross value of the property. I must also admit that I do not accept all of the hoopla over bio-diversity and pending catastrophies predicted by folks like E.O. Wilson and his associates. I believe those involved are in it for money and control of others and I mean total control which I also believe will lead to a revolt in America. The tales of woe from loggers, ranchers and those desiring meaningful access to psuedo-public lands in the West tell that story. Private property rights and many freedoms guaranteed by the Constitution have been infringed upon by those seeking to supposedly protect our habitats. Most citizens outside these groups are not believing a word of that anymore. There is a backlash building within this Nation to what has been and is happening and I hope I am not here when it unloads.

I had to vote to demote this idea mainly because the author could not just promote the idea but was compelled to criticize other users (horses,OHV's). To me that exposes the author as being simply another selfish special interest with no concerns for anyone but himself and his way of having a good time. If this idea had not included negative remarks against other Americans it would have gotten a promote vote from me even though I do not use mountain bikes.

I may have possibly seen that map of which you speak. My main impressions of The Wildlands Project (TWP) came from the Special Issue of Earth First totally devoted to TWP. The land management strategy was written by a fellow named Reed F. Noss or his alias "Diamondback". His out of the box extremism gets unleashed under his alias Diamondback. TWP is without a doubt one of the most anti-human manifestos in print. The map mentioned is small potatoes compared to the TWP copy I have. The black helicopters are not on their way - they have landed in the Special Edition of Earth First.

I think the 100ft. x 4 mile easement is about 48 acres. One should check and see what 48 acres of land in LaHabra, Ca. is worth. If other property in the vicinity goes for around \$20,000 an acre - the \$1,000,000 fee is reasonable. Union Pacific is a private business that apparently owns this property if I am understanding this correctly. Private property owners rarely give away their land. I feel bad to demote but the Constitution is what it is and serves a very important purpose in America.

I thought NEPA was instituted to improve management in general and provide an avenue for input from citizens. NEPA is a somewhat cumbersome and expensive protocol to work within. Once that process is completed it seems as though NPS or other Federal agencies should have some leeway as to how a plan is implemented based upon research results accrued over nearly a decade. Otherwise why do research when the knowledge gained cannot be applied without a 2-3 year million dollar plus NEPA re-run.

I went to one listening session that was held by the Bush administration. It was full of movers and shakers from the Environmental groups and State and Federal agency officials. They were taken aback quite a bit when they heard from a mere citizen (me). I think we may be misunderstanding who they want to listen to at a listening session. They very possibly may want to hear from bureaucrats and NGO's so as to provide justification for their intentionally incorrect assumption that these preservation agenda driven folks are speaking for everyone else. Then our government uses the record of listening sessions as a foundation to justify the American Outdoor Initiative as developed is supported by all. My suggestion is to keep ones ears open and to the ground (and the Federal Register) to find out when and where these sessions will happen. Attend them and provide a loud voice that conveys your message.

If one pays all should pay to create and maintain the infrastructure required for their play. All play has impact.

In a previous comment I made the concern was about living human cultural community members with strong association with their traditional landscapes being accommodated by land managers so as to sustain the old cultures still remaining in America. I believe this would greatly aid in the acceptance of the Great American Outdoor Initiative. Failing to do so will increase opposition and litigation costs of programs, especially when they do not take a Federal actions impact upon cultural resources and cultures into account during the embrionic stages of planning. That is the law and failure to do so will open the door for ESA style lawsuits that supply plaintiffs with a refund at everyones expense. It is cheaper to do a job correctly the 1st time and have an efficient program.

In case anyone has been subjected to a trail plan lately severely lacking in reasonable ORV access do a little calculation to determine how many miles of trails per square mile were authorized. The Wildlands Project or Network desires no more than 1/2 mile per square mile which is basically a closure for all intents and purposes wherever it is implemented. One area of the US had 22,000 miles of trails in about 900 square miles. Those trails had a total net effect to only 1 1/8% of the almost 600,000 acres involved. NPS by using the TWP formula reduced them to 400 miles which left less than 1/100th of 1% of the area for ORV's. It wasn't technically a closure but it sure as hell felt like one to those effected. TWP is real enough to have folks thinking revolt and doing civil disobedience (Hooray Kane County Utah) etc. Think about it - African Americans had to light up a few major cities to get the attention they sought.

(cont.)

In Florida first the bicyclists had a strip paved for them all around the approx. 180 mile levee around Lake Okechobbee, then hikers came along and demanded a soft grass strip for their tender feet - at a combined cost of \$28,000,000 dollars to the taxpayer. I ask you - where does the waste of money stop for those who don't chip in but enjoy a free socialist ride off the labor of others. Those who canoe in Florida do not want to pay for a boat sticker as all motorized boats do yet they want specially designed and built canoe ramps. Who do you all think you are - the chosen ones. So called passive use sure as heck is not economically passive. I recommend that so called passive users of our American Great Outdoors begin to pay for what they get and stop being parasites as they currently are from what I've seen. The expenses caused by construction of designated trails is driven by those out to ban the ORV activities. I have never seen ORV or most consumptive users ask the gov't. for anything where I come from - So. Fla. Most if not all of us would prefer the gov't., outsiders and carpetbagging enviro-extremists to just leave us alone. As screwed up as our government is so far they have not caved completely to the enviro-extremists and use their extremism to create blue collar jobs for many that wind up increasing man's carbon footprint. Way to go environmental community and freeloaders.

In pursuit of goals adopted by the Americas Great Outdoors Initiative and to Reconnect Americans with the Great Outdoors, managers of this process should acknowledge and be sensitive especially to all living cultural communities and never support or engage in the removal of (50 year +) old objects (vehicles, shacks, hunt camps, barbed wire fences etc.) still out on the land that easily can evoke emotional impact to an observer that may provide an impetus for them to protect the land or become interested in our diverse heritage. One sight I've seen in a Cypress swamp was amazing and an impetus to my becoming interested in my own heritage and cultural identity associated with the swamp I was in. It was a long run of barbed wire that must have been nailed to the trees 5 or 6 decades ago. I saw trees that were 8 inches in diameter 4 feet off the ground and the wire was running right through the center of the trunk from tree to tree. One would also think that nailing into a tree would harm it but apparently not Cypress trees. Now maybe I am just easily impacted but I was impacted in more than one way by that observation. Shortly after I was culturally sensitized by that and a couple of other experiences I was equally upset to see Students for Conservation of America(SCA) removing old fencelines from within the swamps under the direction of an NPS superintendent that considered them old junk. Intergration of cultural sensitivity into Americas Great Outdoors via an acknowledged intent to respect ethnographic resources and by signage, brochures or other media would increase the AGO project's reach and build loyal support.

It is always good to be supplied accurate statistics that are understandable by persons of reasonable intellectual capacity. The problem with the data at the link provided by comment 11 is that the actual data gathered was manipulated by weighting in many directions. This weighting process allows those who controlled this study to also control the results of the study. Dropping all the results gathered in the South Appalachian focused study (Version 12 of a 13 version study) was very regrettable. Many of the categories of recreation reported upon overlap heavily and unless the reader of this study has access to the exact questions asked of the interviewees one is not capable of ascertaining the level of bias if any built into the study and its results. People may hike but what they love the most is camping. A person that uses an ATV might only use it to facilitate hunting and game removal post hunt. Depending how and what questions were presented to participants drastically impacts the results. Considering the minimal info available at this link I would recommend the good citizens taking the time to participate here putting little faith in this particular study. It would also be nice to be more precisely directed to the stats referred to by the author of this reasonable and positive idea to attain goals of the Great American Outdoors Initiative. We all must resist allowing personal bias, bigotry or prejudice to cause limitations in our ability of hearing what others are trying to say. I have caught myself in both ends of that spectrum on occasion. Seeing the other persons side is difficult but we must pry our minds open sometimes to really hear others.

It probably died due to the will of local people overpowering a minority group promoting it. Sounds like a very nice trail the way it is. This glass should possibly be considered half or more full.

Looks like y'all have succeeded at running off the regulars who have much disdain for OHV activity. The ideas here are balanced and caring making it hard to understand the sincere regulars avoiding commenting on them.

(cont.)

Many very serious albeit very (hidden)subtle problems are associated with the intermingling of environmental priorities within agencies who's name is indicative of a specific priority such as Transportation. A few worth mentioning here are that dollars collected from motorists through Federal gasoline taxes thought to be for improving Transportation are diverted into many projects having nothing to do with improving the efficiency or maintenance of our Nations transportation system and are spent on items such State Scenic Highway Programs which morph as quickly as their proponents can cause it into Federal scenic Byway programs. The sales pitch to sell these programs to an unsuspecting public are all of the freebies that come with the program (e.g. boardwalks, government visitor centers, wildlife underpasses etc. etc.) that contribute not one iota to the efficiency of getting people or goods from point A to point B. In fact these programs prohibit any of the dollars appropriated from motorist contributed tax dollars from even being spent on pre-existing necessary road repairs. If this isn't enough to bring question to programs such as these here is what happened on one Florida highway designated as a National Scenic Byway due the State's own Program Manual. The manual specified that authority over decision making on that segment of the highway was slated to be taken away from local elected officials and transferred to a group mostly comprised of Federal and State land managers along the highway. This was one of the State mandates controlling their program. Luckily in Florida when local elected officials found out 7 or 8 years late that this theft of their authority was imminent they quickly demanded that both the State and Federal designation be removed from the Tamiami Trail in South Florida. Elected officials were totally unaware of the onerous implications of such a nice sounding program they had supported years before. In the end the unimpeachable grassroots opinion was to retain the elected officials control rather than give it to a bunch of unelected folks in a back room called a Corridor Mg't. Entity (CME) with only environmental goals and looking to spend motorist contributed transportation dollars to attain them. Protecting the environment and bio-diversity is worthwhile but the funds to do that should be raised by up front programs rather than programs containing issues that are subtle to the point of being invisible to average citizens much less elected officials. In this particular locale attaining environmental initiatives was set back decades by the exposure of this programs real intentions in my opinion. From my experience with this intermingling of priorities I have witnessed it causing internal conflict at many levels within Departments of Transportation. What I have seen is that most folks go to work in a Transportation Dept's. to build roads not boardwalks and visitor centers. That is very sad. I don't know how to put a link here but I would suggest participants to google the following topics to gain a better understanding what drives the idea here: The last 2 do not agree with the 1st 3 Agenda 21 Rio Summit The Wildlands Project Freedom 21 Sovereignty International Environmental Perspectives Inc.

Most of my reading centers on land management issues and I don't doubt there are many other anti-human manifestos out there. I choose to care about Noss's venom because it impacts people I care about. I am not out to fix a broken world just a few areas close to home. I do believe it is justifiable to refer to Reed F. Noss as anti-human in view of the following quotes attributable to him. These quotes come from an article titled "The Ecological Effects of Roads" he authored using his alias "Diamondback". "..... the net effect of all roads is nothing short of catastrophic."; in reference to Okefenokee Swamp "...the area is riddled with roads and swarming with gun toting 'Crackers' and their hounds."; "... no new roads should be built and most existing roads - especially on public lands - should be closed and obliterated."; "....nor can we expect the slothful, ignorant populace to give up what they see as the benefits of roads." (easy access to recreational areas). The most telling Reed F. Noss/Diamondback quote "...the collective needs of non-human species must take precedence over the needs and desires of humans...." verifies to my satisfaction that he is most certainly anti-human and a threat to human life everywhere. As far as the black helicopters go, I believe my likening them facetiously to TWP in my 1st post here has been misinterpreted by Mr. Sutherland who seems to know enough about TWP, Biospheres, Bio-Diversity Treaty etc. to be one of their sponsors and ongoing promoters. I do agree at this point that TWP has no regulatory authority but on the other hand those students whose brains have been washed by the TWP philosophy since it was born have infiltrated every land management entity having anything to do with America's Great Outdoors and instituting TWP's principles if not fought vigorously by those who are aware of them.

My experience with Wilderness in So. Fla. has lead me to believe serious harm can be done to natural areas by this designation. The lack of feasible access to Wilderness areas prevents public access except on foot and severely limits agency access for land management activities. The public are the eyes and ears of the environment and without them underfunded agencies don't have a chance of knowing what is taking place within the area as far as illegal activity goes. The lack of rapid access a Wilderness affords to agencies is very detrimental to fire supression as well as myriad other mg't. actions required. Considering that all the areas that truly met Wilderness criteria were designated many years ago, nowadays a new classification should be developed that would authorize off road vehicular access on limited prescribed multi-use trails for the public and land managers. That method would limit outlaw activities. Of course I'm speaking of large, not small land masses. One I know of now being considered as "W" is 147,000 acres. Without meaningful access this piece of land will have next to NO enforcement within its vast area.

(cont.)

One can demote this idea all day long but if the shoe fits the Feds need to wear them. On the other hand local folks with the most at stake must begin demanding exactly what they want in their comments to management plans - no more whining about how it used to be. That means when necessary the agencies must be supplied detailed maps of where desired trails should be located to facilitate hunting, fishing, OHV's, hiking etc. General statements to management plans do not tell agencies what they are looking for. The extremists know exactly how to work the comment system with precise comments demanding EXACTLY what they want and where they want it - LOCALS must do the same. Oh one more thing - don't waste time fighting the junk BS science citations touted by enviros since honest agency folks know it is BS. What the agencies can't do is give you anything you don't ask for specifically in comments because they can't prove you want it if it is not in their legal record of the NEPA process. Your comments are part of that record. We are doing this in Florida and it works. Good Luck.

One large source of the existing skepticism of myself and others is from witnessing the "precautionary principle" being used as some sort of scientific fact when it is exactly the opposite - the lack of facts. I have seen it used in many instances only to rid wild landscapes of many of the folks who actually fought to have those areas protected in the 1st place. In my mind the psuedo scientists that promoted those actions using spun citation sound-bytes are criminals of the highest order. Any education of impressionable youngsters must be balanced and speak of those who built this Nation utilizing its resources to do so, in a respectful tone at all times. If not the education is nothing more than brain washing propoganda. I did travel to the links above and noticed more of the sky is falling concerns over bio-d. I high school we learned of the Malthus theory claiming that we would all starve because the planet could not feed all that would inhabit the planet soon. In the meantime many very efficient methods of food production were developed so that we now have an overabundance of production capacity. Now getting it to those in need and starving is another problem. We could go on a road building campaign worldwide but Oh MY God that would fragment habitat and probably be prevented by those concerned about bio-d. Balance is what is needed in accessing Americas Great Outdoors and most other issues but bio-d promoters do not want any of that from where I sit. Balance and mutual acceptance of diverse desires could yield REAL hope. It is also maybe the most illusive of goals.

One should be sure to include all land management agencies inanimate objects such as fire fighting equipment, ranger vehicles and their guns, helicopters to patrol the vast Federal holdings etc. etc. Yes, let's keep all that bad anthropocentric junk out. Then the pot growers, poachers, illegal aliens and other outlaws can have the solitude, peace and quiet I am sure they long for. Really good idea. LOL

Perfect alignment with nature brings us full circle to "Survival of the Fittest". Is the author up for that?

Discussion Question 1

Written & Online Comments

(cont.)

Possibly the author could ponder the concept of people accepting one another rather than supporting the separation of visitors of different persuasions which prevents them from ever understanding each others desires and different physical abilities. Merely a thought to promote everyone being able to at least see all of the wonderful sights our public lands hold in store for us all.

Sadly but truly these animals are regarded probably as invasive exotics. The habitat they use and consume may be caused to become unsuitable for many native species by the horses. That is probably why the government thinks they are doing the right thing. Penning and auctioning them is better than putting them down - the cheapest option. One might want to consider the glass half full and thank the Feds for not simply killing them and/or turning them into dog food.

SCORP data in Florida failed miserably to correctly guide the US Army Corp of Engineers(USACOE) with their development the Comprehensive Everglades Restoration Plan (CERP)/Master Recreation Plan (MRP). CERP is the \$20,000,000,000 Billion dollar plan to supposedly fix the Everglades or as some claim create a lucrative jobs program. Hopefully the science data for CERP is more accurate and timely than the SCORP data was. I surely hope SCORP data is of higher quality in other areas of the nation than it is in Florida. They need to learn to include active land use not only passive. Excluding active use breeds opposition. Luckily Florida's Gladesmen cultural community members came to the rescue advising them as to the SCORP data integrity defects and how to get in compliance with the Nat Historic Preservation Act as amended 2000 and avoid possible lawsuits. The Corps taking that advise to heart lead to them seeking out more accurate recreation data and conducting a comprehensive ethnographic survey of the Gladesmen Culture and Traditional Cultural Properties related to them in the entire CERP region including at least 14 counties of So. Florida. This is an excellent example of how culture and a governmental entity can respectfully cooperate to address land management issues and at the same time build a coalition of support rather than being the impetus for opposition. I have assumed here that SCORP is a reference to a State's, Statewide Comprehensive Outdoor Recreation Plan (SCORP). Possibly government employees writing here could explain acronyms used here for the benefit of all. Maybe even include the name of the government agency one is employed by if that is the case.

Discussion Question 1

Written & Online Comments

(cont.)

So mad over so little. Just so you know - I do not carry a gun on my person and do not possess a concealed weapons permit although one can in Florida. I am ignorant in the sense that I have not allowed the cries of eminent catastrophe on all environmental fronts to totally permeate my entire thought process. I apologize to you and others if you don't appreciate my attempts to bring balance or a different perspective (sometimes facetious) to this site. My belief is that in order to improve the environment it will take support from more than those with an extreme eco-centric viewpoint. Being insensitive to the needs and desires of fellow humans breeds opposition to everything that extreme Gaia worshipers desire. Oh by the way the Feds and States have given themselves authority now to declare anything they want to be FERAL. In FL the Florida Fish and Wildlife Conservation Commission's "Invasive Species Working Group" handles that with 8 other State agencies. They have declared wild hogs as feral. They have been here as long as the horses. Fla's wild hogs are being eradicated by increased hunting opportunity with no size limits and professional trappers that catch them and sell them to hunting leases etc. We have fought the State on this with only minor victories.

Not all environmentalists are or were from large cities and not all environmentalists are against ranching. Sustainable ranching and farming and recreation, using practices that respect the land, water, and other inhabitants of the land are positives for the earth and for the ranchers. Once the bottom line includes more than personal financial gain, things can improve - including long term impacts to the land and the environment in the ranchers' bottom line, changing how ranchers produce their meat in short term for the long term benefit of the land and the environment is a win-win prospect, but one which requires vision.

America's fisheries are not producing fish and fishing opportunities at a rate that is needed to offset development pressures and human needs. There is an initiative that is already started that has shown it can improve fisheries habitat and is "shovel" ready to get fully to work, the National Fish Habitat Action Plan (NFHAP). This voluntary plan is bringing together broad groups of stakeholders to protect intact, rehabilitate degraded, and improve engineered fisheries habitat. The plan is at the edge of full development and only needs to the Administration to: 1) actively support passage of the National Fish Habitat Conservation Act (current support is on the record, but has not been actively pushing passage); 2) put in place an Executive Order that encourages all Federal agencies to participate in NFHAP; and 3) consider NFHAP needs when proposing budgets for enactment by the Congress. This plan has a broad fish habitat assessment system in development that will provide insights into habitat priorities and allow the measure of success of plan projects. It has an administrative structure ready to go and has a fully science and data backbone. It just needs to be formalized with Congressional action and provide some federal funding to allow for the operation of the plan and to attract new partner and foundation funding. The time is now for administration action on this plan that is ready to move fisheries habitat forward that will provide new outdoor opportunities for America.

(cont.)

Congress authorized the creation of a National Trails System in 1968. Since then 11 National Scenic Trails and 19 National Historic Trails have been authorized spanning more than 50,000 miles through 49 states. They touch or go through 100 of the metropolitan areas with 50,000 or more people. These trails are managed through innovative public/private partnerships that rely essentially on the contributions of citizen stewards organized by nonprofit trail organizations. These trails involve all of the Federal land managing agencies and numerous State and local park, recreation, and resource agencies. However, after more than 40 years only one of these 30 trails (the Appalachian National Scenic Trail) is fully open for Americans to use, appreciate and enjoy. We need to hasten the work to complete all of these trails for public benefit by providing more operating funding to the Federal agencies that administer and manage them. We also need substantial annual appropriations from the Land & Water Conservation Fund to purchase land from willing sellers to close the many gaps in the National Scenic Trails and protect critical historic, cultural, and natural resources along the National Historic Trails. Finally, we need to support and assist the nonprofit organizations that are recruiting and training the citizen volunteers that build, protect, interpret, and sustain these trails. In short, we need to complete the National Scenic and Historic Trails as corridors that link together the many parks, wildlife refuges, conservation areas, wildernesses, preserves, and historic landmarks into a network of "green infrastructure" that spans across America.

Full, guaranteed annual appropriation of at least \$900 million from the Land & Water Conservation Fund is absolutely essential to enable long-standing Federal projects, such as the 30 Congressionally authorized National Scenic and Historic Trails, to be completed and fully opened for use, enjoyment, and learning by Americans and our visitors from throughout the world. With the great increase in land values since the 1960s, when the Land & Water Conservation Fund was authorized by Congress, the annual appropriation from the Fund should be increased to at least \$3 billion to maintain the buying power that the authorized \$900 million had then. Preservation and restoration of our natural, cultural, and historical resources by local, State, and Federal governments in partnership with private land trusts and other nonprofit organizations is one of the most magnificent manifestations of American democracy and our culture as a Nation. Our investment in preservation and sensitive stewardship of these lands, waters, and resources will ultimately save our Nation from collapse. Parks, trails, wildlife preserves, conservation lands, etc. are not just nice amenities to enhance our communities. Rather they are critical elements of the "green infrastructure" that sustains our lives and our livelihood. The Land & Water Conservation Fund fully funded and assertively and strategically used is one of our most essential tools for sustaining and enhancing our life sustaining "green infrastructure."

Discussion Question 1

(cont.)

I agree, that each area should be looked at by the local forest managers, to designate fragile areas, protecting our environment, with the local knowledge and skill that they have. There is no better manager than one on the ground, not directing from afar and in general terms. Some areas should allow for more freedom, like his "National Protection areas", while others may need the lock down of a Wilderness Area. Could some trails be placed within a corridor, rerouting around protected or environmentally sensitive areas, allowing access to all Americans the Great Outdoors that are currently locked up? As a motorized recreator, I am offended in the extreme to see other motorized users exercise the opposite of Leave No Trace. I too enjoy the outdoors and the relationships it builds. I do invest my time in volunteer work (Way more than just 50 hours) to preserve our public lands. The idea of special restrictions for use of special areas that are currently locked up in Wilderness would be welcomed. Prior to the Wilderness area locking up the trails in my area, volunteer MOTORCYCLE groups did 95% of all trail maintenance on this patch of 300miles of trail. Since then, we can't, and those trails mostly remain closed to everyone, just by the lack of USFS manpower/dollars and volunteers willing to maintain them under the current restrictions.. Mr Barnes may not agree, but limited traffic of motorcycles, has as much impact as Mountain Bikes and far, far less than any level of Horse Traffic (which is currently allowed in most Wilderness Areas). So if the exception with extra training for Bicycles is allowed, lets talk about responsible motorcycle use. Hey, the motorcyclists could open up the Great Outdoors for all Americans in no time.

I've been a Texas Master Naturalist for almost four years and enjoy it more each year. The program will provide the ideal model for training and developing a nationwide corps or highly motivated conservationists and educators. Jump on this bandwagon, it is truly worth it!

Nationwide easements also include buried utilities such as gas pipelines and fiber optic lines. Both offer long corridors that are so hard to put together from scratch for trail development.

Thank you ELK for promoting the importance of the outdoors for kids.

More ELK more often more needs met.

A win-win for America. Preserving civil war battlefields is a win for the environment, and a win for our citizens who cherish our rich history. As we approach the 150th year anniversary of the conflict we also approach the last chance we have in many cases to preserve the land that witnessed the bravery and sacrifice of those who fought during the civil war. Strategies and tactics used during the war are fascinating and nothing compares to actually walking the fields and seeing the terrain that these soldiers fought over. Preserving these fields also provides open space, and a positive return on investment for those communities that benefit from the tourists that visit those sites. Lets preserve more battlefield land, and invest in interpretative signage so as to pass on to future generations the rich history of our Country.

(cont.)

I often despair of convincing adults, especially politicians and public officials as well as business interests, of the need to protect our environment and to concentrate more on local (rooftop) power generation. HOWEVER, kids are blank slates. Take as many kids as you can into the outdoors and just let them enjoy it. The Sierra Club's Inner City Outings is one such successful endeavor. Kudos.

The Forest Service is doing a far better job of managing the forests now than 40 years ago, with a real appreciation for the multiple resources of the forest and an understanding of the effects of different management actions. Their field staff includes diverse expertise far beyond silviculture and logging, including wildlife and fish biology, watershed management, and soil science. I've been seeing the results in project proposals and environmental documents over the past 10 years.

Wilderness is for everybody. My wife and I are in our 60s, and we don't hike as far as we once did, but we still seek out wilderness areas where no motorized or mechanical vehicles are allowed. We share the trail with visitors of all ages, even down to 1 or 2 years old. We are happy to leave the more remote areas to younger visitors. We were young once and we treasure our memories of those wild mountains. Tomorrow's young people will want them, too.

Both my children participated in the ELK program. They loved it and I loved watching all the kids take ownership of their education by asking environmental questions, presenting possible answers to present conditions and offering ideals for future leadership. Outstanding example of how education can be fun. Cheers.

Many states have Master Naturalist programs similar to the Texas program. This is an excellent way to engage adults. These programs should all be eligible for funding under the State Wildlife Grants program - whether the volunteers are engaged in habitat conservation or education.

California's Central Valley is identified as one of America's most completely altered eco-regions with the fewest remaining natural landscapes. Remarkably, many of its last natural landscapes are still intact near the city of Sacramento. These include riparian forests, fresh water marshes, vernal pools, wildflower prairies, alkaline prairies, oak woodlands, and chaparral. Sacramento is also one of the most underserved of America's great cities for nearby recreational experiences in natural landscapes. Even its one remaining natural park, the American River Parkway, is threatened because of its shattered economy. This situation presents a great opportunity to save the Central Valley, provide recreation for Sacramento, and stimulate its economy through development of a regional park system similar to the one Golden Gate National Recreational area provides for San Francisco. Habitat 2020 of Sacramento has initiated an effort to do this called the California Heartland Project. It is endorsed by the Environmental Council of Sacramento, Sacramento Urban Creeks Council, Save the American River Parkway Association, California Native Plant Society, Sierra Club, Audubon Society, Save Our Sandhill Cranes, and Friends of the Swainson's Hawk. On behalf of these organizations we urge Federal help to implement this project.

(cont.)

Multi-use is probably ok ONLY if it is in areas of the parks that can tolerate it. Not every park is a good place for OHV...physically won't remain healthy or sustainable. I don't like hearing the sound of a machine when I'm trying to get away from my urban life, but the parks belong to everyone. Parks need to be monitored for deterioration both for the beauty of the park and the safety of users.

Urban youth too often don't know WHAT a national park looks like nor do they understand the significance of the DIVERSITY of parks. Perhaps encouraging companies or corporations to fund school field trips to national parks, would show our kids how awesome their 'country' is. The scale of any national park is so impressive...easily rivaling the action films kids see. I imagine these partners would do this out of love of America, not as a way to curry favor with government officials.

In Colorado, the wild Elk population has dramatically increased over the past 50 years. During this same period, OHV use, on public lands has also increased dramatically. In many cases, wildlife adapts faster than the biologist's theories. Will this be taught? Will you be taking the children on a pleasant ride through the forest on ATV's? Let's present all the possibilities.

The Montana hospitality/outdoor recreation industries and land trusts partner to seek small voluntary donations from travelers and tourists to fund private land protection projects. Open land is one of Montana's major assets and this program creates a process for Montana's 10 million tourists to help protect the reasons they travel to Montana in the first place. Travelers for Open Land has 120 participating businesses and in its first year (2009) the program awarded four \$2,500 grants.

The Texas Master Naturalist program has introduced me to a multitude of opportunities for action in conservation projects and teaching situations.

This program is a great way to work with landowners to protect open land and increase private land conservation.

Years ago we agreed that to manage water resources we needed to plan and manage watersheds; that to plan and manage wildlife we needed to manage for their home range; to manage timber we needed to plan and manage ecosystems. Likewise, to manage outdoor recreation, parks and open space we need to plan and manage at a larger regional scale than the boundaries of our agencies. We need cross-cutting planning/collaborative efforts that will build interagency/multi-communities vision and connections. We need federal leadership and support, but not federal planning. Statewide-comprehensive outdoor recreation plans are required by LWCF, and they provide the closest example of regional landscape-scale planning across communities, agencies, partners, etc. This is an existing tool and program that can be valuable with some improvements.

(cont.)

After many years of maturity, I have come to the conclusion that the CCC's (Civilian Conservation Corps-1934) was an excellent solution to the very large unemployment problem. What I would like to see is a similar program today, but, would include women as well as men that desperately need work. City parks, state parks and national parks are in desperate need of help. Their budgets have been cut, so help from a similar program (CCC'S) would do wonders in the conservation area.

I believe the solution to this problem lies with volunteer service and patrol. In our locality east of Sacramento, we have a volunteer uniformed group working with park rangers at the Auburn State Recreation Area (ASRA). They're called the "ASRA Canyon Keepers". They carry radios with them wherever they go in the ASRA, and call in Rangers whenever there is a problem requiring law enforcement. It works very well, enabling each ranger to enforce the law and promote harmonious use over a much wider area of land. This has helped a lot in lessening conflicts between users.

Save the Wilderness, Va.

Battlefields are a link to who we are as Americans. Preserving them provides us and those following us, a way of walking in the footsteps of our ancestors who played a major part in the development of our country.. a tangible link to our country's past. Letting them be forgotten would be a crime ! greg haugens (9 July 2010)

Our opportunities to preserve the remaining Civil War battlefields diminishes every minute as development encroaches upon the finite number of acres where Civil War soldiers fought. The timeliness of this proposal is critical. If we want Americans to get out into the great outdoors, what better way to do so than to preserve those woods, fields and streams of Civil War battlefields so the public can get outside and make a connection with the most desperate span of our nation's history at the same time?

There are so few original Civil War fields left.....we should protect what we have and save whatever is still intact and save them completely not allowing any development anywhere near them. It is important to keep these vistas pure so that generations of Americans can see the same fields and woodlots that those boys in 1861-65 fought and died on. Greg Youngstrom

With the Civil War Sesquicentennial just around the corner, now is the perfect time to take action to save our nation's treasured Civil War battlegrounds. The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. The protection of America's remaining Civil War battlefields will leave a legacy of national commitment to preservation and conservation. These lands will be open spaces for the public to enjoy, preserved in their natural and pristine state, allowing visitors to walk in the footsteps of their Civil War ancestors. This experience will be unlike anything they could have read in a book or watched on television about the conflict. Preserved battlefields revitalize local economies and create jobs encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses.

About time someone suggested this. We should be allowed to hunt more of the buffalo in Yellowstone too. They are way overpopulated, and wolves do NOT control the buffalo population. Humans are the buffalos only predator. So it is natural that we can hunt buffalo. Great idea Brett!

How much buffalo can this area really sustain? The population control would have to be regulated in order to not overgraze the land and damage it. There would need to be buffalo hunting in order to control the population. The only predator of buffalo is the human. So in order to control this herd, hunting would have to be allowed. Otherwise overgrazing would occur and the land would be destroyed. Also what would private land owners do that lived in this area? Would they have to take down their fences? It is not fair for landowners, who have perserved this beautiful land, to sustain the buffalo. This would be equal to putting buffalo in your own backyard. One man's land is not greater than anothers. Thus it would not be fair to push buffalo on another man's land, if you do not put them on your own land.

I disagree with statement about the "200 years of highly subsidized soil exhaustion, human depopulation and economic malaise" as her reason for a park. Today's farming practices work against soil exhaustion and actually work to increase the productivity of the soil. Farmers and ranchers today use agricultural research to guide their production practices. Ranchers actually look to increase the native grasses on their land because native species thrive more in that environment and aid in production. As for human depopulation, agriculture is the main reason why there are people living in Eastern Montana. If it were not for agriculture the small towns there would not exist. Now for the "economic malaise", I do not agree with this statement either because I would not call supporting yourself, your family, and your community off of the land economic malaise. Putting a park in this area will NOT significantly change the economy either. This area is 250 miles from a larger airport, hot and dry during the summer, bitterly cold in the winter, and swarming with mosquitos. I do not see people coming there to visit because of it's very remote location and climate. I do NOT support this proposal.

I do not agree with idea of ranchers needing to pay for resource damages of public lands. Rancher's have to pay yearly to use public lands along with buying the rights to use the land for the set period of time. Also, the gov't sets standards of how much cattle can graze on certain areas, and for what period of time. It's called an AUM (animal unit month), and it differs for different areas in conjunction with the type and productivity of the land. This stops overgrazing and protects the land. It is illegal for ranchers to overgraze public lands. Please do your research before commenting.

I think you have been misinformed about GMOs and nano technology. I have a cell biology degree and I can tell you that I have never heard of GMOs killing cattle and causing human illness. Producing GMOs requires inserting a new, desirable, piece of DNA into the existing plant. GMO DNA is destroyed by catalyses, enzymes, and acid in the stomach, just like any other DNA. There has been NO RESEARCH supporting claims that GMOs are bad for humans. Also, many scientists that are concerned about supporting the growing number of people on the planet actually stress that we need to use research, GMOs, nanotechnology, and other technologies in order to support the human race. If we do not evolve, use research, and/or our brains, we will cease to exist. We cannot sustain the human race using all organically grown or GMO free food. Eating only organically grown food is actually a selfish act since, many people in this world have nothing to eat. If the organic farm you got your produce from was actually a well managed sustainable farm (your regular farm), it would have produced much higher yields. Thus feeding more people. Also, I did a research project in undergrad on GMOs, and found that many "USDA organic" corn products actually contained GMOs. Most corn grown today are actually GMOs. Food for thought.

I would not call Yellowstone National Park, "returned to it's former ecological functioning". The buffalo population there is around 3300, way OVER POPULATED for that amount of area. In the 1960s, the park had about 300 buffalo, which was what they said the park could sustain. That's a 10x difference. Talk about mismanaging. The elk and deer population in the park is almost nonexistant because of the over population of wolves and the overgrazing from the buffalo. Wolves do not kill buffalo! Humans are the only predators of the buffalo. Not to mention that over 50% of the buffalo in the park have brucellosis. I DO NOT support another park, the feds can't properly manage the parks they already have. The farmers and ranchers in the area are the only reason the land is in the good condition it is in now.

(cont.)

If you are going to slander ranchers, you better have PROVEN SCIENTIFIC research. It is extremely rude and ignorant to have such hatred and strong opinions toward people or a way of life you know nothing about. The 2006 UN study, "Livestock's Long Shadow" was very POORLY conducted. In the report it read: "The livestock sector is a major player, responsible for 18 percent of greenhouse gas emissions measured in CO₂e (carbon dioxide equivalents). This is a higher share than transport." This is all the study said, but if you look at the methods section of this report you will find HOW THEY ACTUALLY GOT THESE STATISTICS. In order to do a scientific study you must eliminate independent variables, and measure each dependent variable in the same manner. The UN study FAILED to do so, just ask Frank Mitloehner, UC Davis Professor of Animal Science. There is no doubt that livestock are major producers of methane, one of the greenhouse gases. But he faults the methodology of "Livestock's Long Shadow," contending that numbers for the livestock sector were calculated differently from transportation. In the report, the livestock emissions included gases produced by growing animal feed; animals' digestive emissions; and processing meat and milk into foods. But the transportation analysis factored in only emissions from fossil fuels burned while driving and not all other transport lifecycle related factors. This is not how a scientific research is conducted. This study needs to be redone, and should not be referenced by ANYONE because it does not uphold the high standards of scientific research. "This lopsided analysis is a classical apples-and-oranges analogy that truly confused the issue," he said. Also, according to the American Chemical Society, we can do a lot of things to reduce the greenhouse gas emissions often blamed for climate change, but cutting back on consumption of meat and dairy products isn't one of them. Giving cows and pigs a bum rap is not only scientifically inaccurate, but also distracts society from embracing effective solutions to global climate change, says UC Davis Professor of Animal Science Frank Mitloehner. He noted that the notion is becoming deeply rooted in efforts to curb global warming, citing campaigns for "meatless Mondays" and a European campaign, called "Less Meat = Less Heat," launched late last year. "We certainly can reduce our greenhouse-gas production, but not by consuming less meat and milk," said Mitloehner. "Producing less meat and milk will only mean more hunger in poor countries." The focus of confronting climate change, he said, should be on smarter farming, not less farming. "The developed world should focus on increasing efficient meat production in developing countries where growing populations need more nutritious food. In developing countries, we should adopt more efficient, Western-style farming practices to make more food with less greenhouse gas production," Mitloehner said. Developed countries should reduce use of oil and coal for electricity, heating and vehicle fuels. I am done here. I have better things to do than slander the people who produce my food.

why are you so against private fences? Last time I checked I saw furishing deer, antelope, coyotes, rabbits, and birds on fenced private land. The wildlife there is doing great! Deer can jump over fences, and antelope go under the fences. They are not caged in by any means. Putting up fences on PRIVATE LAND on the grasslands has done NO damage. Also, thanks to area farmers for allowing these wild animals to feed on their crops and grains to increase their populations. Without farms, the wildlife populations wouldn't be as inflated on the grasslands as they are now. The land wouldn't be able to sustain such populations, an winterkill would be outrages. Thank you farmers and ranchers for maintaining and supporting the beautiful grasslands and wildlife.

This is a great idea! It's about time people start thinking about investing in the future: through education. State schools are so poorly funded, and it's a shame since their research is top notch. You really can't buy cheaper research than what comes from State schools. Land grant universities are some of the leaders in agricultural, wildlife, environmental, engineering, and biological research. Increased funding would allow for more research, and also get the next generation interested and involved. There would be so many more research opportunities for undergraduates. BRAVO great idea! Supporting education at any level is good for America, you can't debate that. My money goes to state school.

This is a poorly planned idea. Do you know how many acres it would take to support 1,000,000 buffalo, along with all the elk, and grizzlies you are proposing?! Also, what is your definition of a "seriously bad economy"? Not having large cities and manufacturing close by? I was under the impression that not having a metropolis near by would actually preserve the land. There is no way that you could create this "Mother of all Parks" with out forcing private land owners off.

Wow... that's how I feel after reading some of the comments following this idea. Wow. I think the American people need to start supporting public education again. It's also amazing how people can have such radical views and opinions about something they know nothing about. Patricia, ruminants are not the leading cause of global warming. Where did you find this BLATANT LIE! Seriously?! I am also curious about your statement on how cattle producers destroy the land. How is this done? Why do you assume all cattle producers overgraze the land? This is also a lie. Ranchers work to preserve and enrich the land. If overgrazing was the case, the meat industry would cease to exist. By the way, I eat red meat several times a week and am not obese, do not have heart disease, have low blood pressure, low LDL, and low cholesterol. My great grandparents and grandparents have all lived past the age of 80, eating red meat several times a week. Red meat does not kill. It's the potato chips, fries, candy, and soda people consume, along with the lack of exercise that causes obesity. All NOT meat products. Also, I do not believe cattle growing is the scourage of the earth, it's the lack of education. Do your research, your ignorance is a disgrace to the human race.

Vacationing this summer, I was very disappointed to learn that the location where one of my ancestors lost his life in the Civil War was not protected and in fact was one of the most endangered battlefields - Lovejoy Station in Georgia. I would like to add that in New England, many key sites related to King Phillip's War are also endangered and unprotected. These sites have many fine qualities in addition to their outstanding historic relevance to that time period. Key locations of the conflict include elements of the outdoor landscape that were and are sacred to Native Americans of the Northeast. The full meaning of these sites has long been overlooked in historic accounts and their cultural context is only beginning to be explored and appreciated by professional historians and archeologists. There is no complete, systematic identification of these sites; a coherent regional heritage district linking these significant places would be ideal. In the meantime, sites not already protected for some other reason remain in great danger of destruction. Often located adjacent to wetlands or on overlooks of scenic beauty, these ancient and historic lands deserve protection and full recognition for their past and for our future benefit. Please consider including protection of these Native American landscapes within the scope of our nation's great outdoors.

You can read lots of first hand accounts of civil war battles, look at maps from the time of the war, read present day historians who use the first two sources mentioned above and fill in a graphic image of what the battle was like, but until you walk the ground and study the terrain and measure the steps taken by individual soldiers and officers, you cannot understand a civil war battle. For this reason we must preserve what battlefields we already have and add to them so that when we visit the battlefields our very psyche is filled with the fear, terror, and uncertainty of the soldiers who gave the last full measure to preserve the cause they fought to preserve and some of them died fighting. For this reason the care of civil war battlefields and additional acreage must be not only be encouraged, but demanded.

Battlefield preservation is, at least, a triple win. It protects history, the environment and provides space needed for quiet recreation,

The Vanishing America Project is a multi-year journey to promote conservation and raise awareness about what we are losing – our culture, our wildlife, and our landscape – in hopes that some of it will still be around for future generations to enjoy. As I travel the country, I record images, I write articles about what I see, I give presentations to school kids about how they can make a difference, and I donate a portion of my image sales to The Conservation Alliance -- providing real grants to real conservation efforts around the United States. It's a journey that shows America that what is out there, in our own unique country, is as majestic and awesome as anything on the planet. And it's not just a bunch of pretty pictures. It's detail, drama, emotion and excitement all expressed through imagery that not only transports you into its world, but inspires you to look for the beauty in your own backyard. It is designed to serve and be accessible as the unofficial promotional and marketing arm of each and every conservation effort out there. If it raises awareness about endangered areas so the conservation efforts can get more support without having to dip into their limited budgets. It's just getting started, but WOW, what a start! If you like what you see on the website, tell your favorite conservation organization to contact us. Together we can raise awareness and it won't cost them a dime. The website is www.VanishingAmerica.net

Get on a dirt bike. You can ride out to a quiet place in no time.

Get your kid a dirt bike and he/she will thank you for the rest of your life. Kids get bored with nature walks but not with nature rides.

In Lassen National Forest we have a great example of private vs. Gov. forest management practices. We are lucky to have Collins Forest in our area. The Collins forest lands are managed in an exemplary fashion. The difference is plain as night and day where Collins property butts up against Lassen National Forest.

Living free means allowing others to enjoy their freedoms. Sometimes it's a hard pill to swallow but it's what's right for America. Intolerant people don't belong in this country.

Singletrack vehicles like dirt bikes and mountain bikes are a great way to get to remote locations and do minimal damage as they tend to steer around obstacles not run over and destroy them. It kills me that people who have never ridden a dirt bike think they have a legitimate opinion. You have no experience so you just don't know what you are talking about. Singletrack vehicles should be in a different category than Quads and jeeps.

Singletrack vehicles like dirt bikes and mountain bikes should be in the same category as quads and jeeps.

(cont.)

While I like all of these ideas, some of the best ideas that jump out at me are: - long distance, interlinked OHV-accessible trails similar to the Continental Divide National Scenic trail - trails with minimal technical challenge for beginning OHV users [additionally, I would like to see a greater variety technical challenge levels available and an increased mileage of trails] - sharing single-track trails with mountain bikes and motorcyclists

America's Battlefields have served as critically important outdoor classrooms for generations of military cadets, noncommissioned officers, and officers. The great value of actually standing on ground that was fought for is that the visitor is able to develop an enhanced appreciation for time and distance, for the actual topography of the area, and for the reasons that particular ground was viewed by the men who fought for it as "key terrain." We must save our battlefields!

In the West, there are millions of acres of wilderness-quality, Bureau of Land Management (BLM) public land, including 6 million acres in Utah; 650,000 acres in Colorado; over 5.5 million acres in Arizona and over 2 million acres in New Mexico. The BLM should provide interim protection to the lands it has already identified as having wilderness quality until Congress makes a decision about wilderness designation, as prescribed in the Federal Land Policy and Management Act of 1976 (FLPMA). In addition, the BLM should conduct a new wilderness inventory to identify additional wilderness-quality lands and offer them interim protection as well.

I believe many government agencies are trying to satisfy the public's need for more nature projects. However, I think the government should empower more people and organizations to steward lands beneficial to the public. For example, the BLM governs hundreds of thousands of acres and has little man power to improve these lands. "We the People," need to stop relying on the government to create these projects for our children and force the government to give us back our land. "We the People," can decide how best it should serve the public. We do this by land stewarding and land grants for non profits that benefit our communities. I am tired of seeing the government give more rights to big companies for drilling oil and natural gas, then using public lands for projects that could help our children.

The government should give land grants to organizations that want to increase fisheries. Currently, our fisheries are struggling to keep up with demand on waters. A few causes are habitat destruction, increases in population, diseases like whirling disease, and watershed diversion. Fishing is a great way to get people outdoors, but hard to do without fish. This great outdoor activity produces billions of dollars in revenue from fishing licenses, watercraft fees, tournaments, and countless other retail streams. Fishing also increases the number of trails created for hiking, biking, and horses.

(cont.)

HistoriCorps is an idea already in action. It's purpose is to save special places on public lands by teaming preservation experts with volunteers to work on the restoration of cabins, ranch houses, and other types buildings on or eligible for the National Register. Participants get to work on historically significant publicly-owned buildings on U.S. Forest Service lands with the purpose to returning them to productive use as rental facilities that can be enjoyed by hikers, equestrians, campers and others. Along the way, participants learn preservation and building trades job skills, get to work in the great outdoors, meet interesting people and have fun while making special places on our public lands more accessible and useful to anyone who wants to experience them. Colorado Preservation, Inc, the U.S. Forest Service and Volunteers for Outdoor Colorado began to pilot this new initiative in the Rocky Mountains in the Fall of 2009 (over one third of Colorado's lands are owned and managed by state and federal agencies). Mandated to preserve the historic resources under their control, our public land managing agencies, like the Forest Service, have core missions that often make it difficult to meet their legal obligation to safeguard our cultural resources. HistoriCorps is a solution to this problem that extends the capacity of our state and federal agencies to preserve historic resources while also reducing the costs, ultimately shouldered by the taxpayers, to get the work done. Although initiated in Colorado, HistoriCorps is an initiative that will work anywhere in the U.S. and with any agency (BLM, DOD, NPS, etc.). You can help by asking your public officials to learn more about HistoriCorps by going to www.historicorps.com and/or contacting Colorado Preservation's HistoriCorp manager, Jonas Landes, at jlandeshistoricorps.org

If public lands are not protected, they will eventually end up being no good for anyone or anything. The nature of the land should determine the nature of the protections. Some lands will be appropriate for development of mining, logging, ranching, hunting, or ORV's, and regulations suitable for each should be adopted accordingly. Other lands will be appropriate for wildlife habitat, sources of drinking water, hiking and camping, aesthetic appreciation, and even solitude, and again regulations should be adopted accordingly. Obviously the many uses will span the spectrum of possibilities with extensive development at one end and National Parks and wilderness at the other. In between, multiple uses will dominate. And this is where regulations will require great judgement. We cannot allow any one use to dominate to the extent that other uses are excluded or degraded to the point they they are essentially eliminated. I definitely believe that when public lands meet the qualifications for wilderness, they should be seriously considered for that purpose, and without limitations.

Discussion Question 1

(cont.)

No single recreational group has any more right to enjoy public lands than any other. OHV-users are part of an old hobby that has a tradition of exploring remote areas that would be impossible or impractical to reach for the overwhelming majority of Americans without motorized assistance. Many OHV'ers engage in this activity as a family - either riding as a group on quads and motorcycles, or together in 4x4s. The friendships, bonds, and memories formed on these adventures will last a lifetime, and instill values of self-reliance, and resourcefulness, as well as a deep understanding of nature and the outdoors. What is more American than that? Many of the trails in the West that are designated for OHV use were originally mining routes, and are an important part of the history of the settlement of the West. Without question, OHV groups spend more time maintaining these trails than any other recreational user group. Without them, the trails would fall into disrepair and eventually vanish. Think about this the next time you hear the assertion that OHV's constitute the most impact to the environment of all recreational users: What is going to cause greater surface erosion; a pair of rolling large-diameter wheels supporting 500lbs of weight, or a 1,000lb animal exerting force through a few square inches of hoof contact patch? And if it's the burning of fossil fuels that concerns you, I would suggest that you pay attention to how horses are typically transported to trailheads. Public lands belong to the public. All of us.

Nothing can replace the educational and patriotic value of walking the ground over which Civil War soldiers fought. These precious lands must be saved before they are lost.

OHV's allow more of the public to enjoy our public lands by making them accessible to a greater number of citizens. The vast majority of OHV'ers are responsible conservationists.

Restore Long Leaf Pines along their historical range, long leaf pines restoration in Florida, with their low water usage, would mean billions of more gallons of water in the ground for Floridians to have for drinking water. Loblolly planting for timber has consumed huge amounts of water and required government paid fire suppression to protect timber for private companies. Long Leafs thrive if fires are not suppressed. Long Leaf Pine Barrens are the main habitat home for many species such as the Red-Cockaded Woodpecker, the Fox Squirrel, the Gopher Tortoise, and Virginia Pitcher Plants.

Discussion Question 1

Written & Online Comments

(cont.)

Support and promote community-based fishing events. We take an interest in matters that serve our selfish interest. When people are introduced to fishing, the vast majority of us cannot help but take an interest in the habitat that serves the fish we enjoy catching or eating. Suddenly, those of us who previously thought we had no interest in riparian buffers, wetlands protection, pollution prevention and water quality enhancement, stormwater mitigation, aquatic organism passage, and wastewater and drinking water infrastructure find ourselves with a stake in these often overwhelming or not so sexy or inherently complex issues. A child introduced to fishing is quite likely to become an advocate for the environment and the communities that depend on the health of that environment. I don't know a single fellow angler that will tolerate the destruction of their favorite fishing hole or shoreline. If more Americans felt this way, an investment in the environment would always be seen as an investment in our economy, and even ourselves. Consider the following. According to the Outdoor Foundation, "fishing is the most popular gateway activity that often leads to participation in other outdoor activities (77.9% of fishing participants participate in multiple outdoor activities)." Additionally, "nearly half of all youth ages 13 to 17 are influenced by their friends to participate in outdoor activities (46.9%)." Given this data alone, it seems, putting a fishing pole in the hands of every American may very likely be the key to reconnecting our children to America's Great Outdoors and ensuring those outdoors remain great putting us well on the path to accomplishing the President's goals outlined in this admirable and much needed initiative. Thank you for your consideration.

The historic resources of the Copper Country, the U.S.'s first major mining district, are too vast for any single agency to manage with available resources. Thus, when a significant portion of the Copper Country on the Keweenaw Peninsula was designated a national park, Congress utilized a developing model of partnering in national parks, leveraging financial and professional resources of the National Park Service (NPS) through the collaboration of many partners, aiming for a broad, cohesive national park experience and working with a passionate local community in protecting the many hundreds of historic and natural features that communicate the importance of the region's history. This allows for a national park of much greater scope and much broader visitor experiences, requiring significantly smaller Federal investments than those made in the traditional national park model. Though administered by the National Park Service (inside official boundaries) and a permanent, volunteer National Park Advisory Commission (that provides advice to the NPS but also is authorized to operate programs inside and outside official boundaries), many organizations jointly operate this "parknership." These partners bring to the effort their own museums, historic resources, and the enthusiasm of the hundreds of volunteers and volunteer board members. The model does require testing, however, to determine if it is meeting the needs and expectations of park constituents, locally and from afar. More information about the park is available at www.nps.gov/kewe .

The Shenandoah National Park, Jefferson, George Washington, and Pisgah- Nantahala National Forests preserve Drinking water resources for many, provide recreation for many and preserve many species. I have counted the Cerulean Warbler in Shenandoah National Park which needs large tracts of land to breed or it will get displaced by the Brown-Headed Cowbird. Many species depend on these lands for survival. It would be terrible to let them vanish because of logging.

(cont.)

This is our last chance to give future generations a lasting heritage about the story of our nation's most historic event. I support Civil War battlefield preservation.

Utah's Henry Mountains & Tarantula Mesa were the last mountains to be mapped in the continental United States in 1872. Today they are among the most inaccessible places in Utah. I believe that this, along with the wild beauty of the range should qualify the Henry Mountains for National Monument or Park status. Located in Garfield and Wayne Counties, they symbolize the end of the wild frontier in the continental United States, as all lands were finally surveyed and mapped. The Henry Mountains are made up of almost entirely BLM lands, with some privately held parcels just to the west and south of Mount Ellen, the range's highest point. Additionally, the Henry Mountains National Park/Monument can be easily connected to Capitol Reef National Park through the wild Tarantula Mesa, running west from Mount Pennell. There are already 3 BLM campgrounds in the Henry Mountains, from north to south: Lonesome Beaver, McMillan Springs, and Star Springs. The nearby town of Hanksville, UT stands to benefit economically from the likely increase in tourism that comes with a National Park/Monument in the area. The Henry Mountains and Tarantula Mesa encompass some of the finest history and natural beauty to be found in Utah, and are the best candidate for preservation as a National Park or Monument.

We bike along the San Gabriel Riverbed. There are so many parks along the trail I can't see the need for any additional open space. We bike the whole trail too, from Seal Beach to the Angeles Forest. Would like to see a bike trail on Walnut Creek, that would be nice. We really don't see the need for the Duck Farm property plan, its only a couple miles to Whittier Narrows and Legg Lake parks.

In deciding how to manage public lands, DOI should recognize that not all uses have an equal impact on the land or the resources. Therefore, proposals like 1:1 acres of OHV use or oil and gas use for "wilderness" do not take acknowledge the unique nature of the land and the large impacts of high intensity uses like OHV trails or oil and gas drilling.

Wilderness quality lands are a precious resource and should be treated as such. DOI should protect wilderness quality lands and over turn the "no more wilderness policy." Thoughtfully preserving wilderness quality lands and intact ecosystems is a more responsible way to start thinking about how we are going to manage our public lands to address the challenges of global warming. Allowing rampant oil and gas drilling and unlimited OHV use is managing with a pre-climate change mentality.

Encourage BLM and National FS to support collaboration of diverse interests in development of new NCA and Wilderness Areas. The coalition of interests, such as OHV, Jeeps, hikers, bikers, horse riders, ranchers and cultural, as in the CEC [Colorado Environmental Coalition] works to build support for preservation of our Great Outdoors. Current effort includes planning by FOND [Friends of the Northern Delores].

Use NCA and Wilderness designations to conserve and preserve appropriate areas for our future generations. Excellent example: Dominguez Escalante NCA and Wilderness Area near Grand Junction, Colorado.

(cont.)

I also agree with _____ and all of the others above that we should preserve the prairies in Western Kansas. The Buffalo Commons National Park is needed now. Restoring a million acres back to its natural habitat will help the environment and allow wildlife to return. Most people do not know what the prairies are supposed to look like. A national park will make Kansas a destination place instead of just a drive through state and will help the economy of not only western Kansas but the entire state.

I would like to promote the idea here of preserving land dedicated to hunting and fishing. NWTF and Ducks Unlimited, Quail Unlimited and such are good helpful programs. I was unable to vote to promote, however.

The Lewis and Clark Trail is officially recognized from St Louis MO west. This trail actually extends from "Sea to Shining Sea" and involves the towns where Lewis & Clark stopped along the Ohio, Mississippi, Missouri and Columbia Rivers and across passes in the Rocky Mountains. Today's "explorers" can enjoy and visit the wonderful sites developed along the above rivers as well as Philadelphia, Washington DC, Harper's Ferry, and of course Monticello, home of President Thomas Jefferson. These modern explorers will increase the tourism all along the trail. Come join us in the excitement!

The non-profit organization, American Forests already plants trees in our country. Perhaps the U&S Gov't could give them a little money instead of having to start a whole new bureaucracy. One dollar plants one tree when you give money to this organization---we do need more trees but let's do it without the gov't having to do one more thing.

Agree -- it struck me as a little odd at first, but that's just because I'm not a gadget person. But this does seem like a way to let the younger crowd bring technology into the woods, without creating any noise or disruption to harass wildlife or other people. So if this would be fun for them and get them out in the woods, then why not?

Discussion Question 1

(cont.)

Estimates of greenhouse gas production by various sources are just that -- estimates. Should we dismiss them all, or just the ones we don't like? Have you a better estimate? Perhaps someday we will, but until then, I'm going with the one we have. Note that I was referring to conventional farming in general, not specifically to ranching. The tallies of animals killed in the name of livestock protection are staggering and cannot be denied. This information can be easily found online and in books. If livestock producers, or wildlife officials on their behalf, are not controlling "problem" animals as much now as in the past, it is because they have already extirpated, or nearly extirpated them. Land that is used to grow grain for livestock can be used to grow vegetable foods for human consumption. This would result in more food available for people, since only a fraction of the available calories can be converted to edible meat, as explained in my last post. Therefore, if we could reduce our consumption of animal products, we would need less land for agriculture to feed the same number of people. The grazing land that cannot be used to grow crops would not be needed, and those extirpated and nearly extirpated wild animals could return to the landscape in ecologically meaningful numbers. The view that ranching increases biodiversity may be held by ranchers, but not necessarily by the scientific community. There are many articles which explore the subject. Here's one for a start. It is a 2003 article, so some of it might be dated. Search for yourselves for further reading. { Link } Lastly, I had no intention of treating ranchers "like the enemy". I was merely making the argument that we are going to have to make some changes in how we eat and in how we produce food if we are to feed the world sustainably. I apologize if you took it as a personal offense. We are all in this together and all are responsible for the habits we have now and for changing them for the better. Most certainly, ranchers will have some valuable input.

For a long time, I was resistant to using a gps unit for the reason Christiaan describes. However, I finally caved in and now I LOVE it. Where bushwhacking is permitted, I am now perfectly comfortable wandering way off trail in unfamiliar places, deeper and deeper into the woods, because I know I will be able to get back to the trail head without angst. Also, now I use gps mapping software to map my excursions and photos of animal tracks and sign, plants, etc. That's one gadget that has added tremendously to my outdoor enjoyment and learning. Maybe this "app" that describes can do this for other people.

Geocaching is a fabulous way to engage kids with the outdoors. It's great fun, kids love it, and it's inexpensive. One GPS unit per family is enough.

Hi TMNP folks! This looks like a fabulous program! I am thrilled to see so much excitement about something so positive, and I plan to look into getting such a program started in my state, where we don't yet have one. But could you please take a look at another idea which I fear might get buried, amidst this flurry of enthusiasm for the MNP? It's about teaching ecology in school: { Link } Lets teach our kids in PUBLIC schools, in the required core curricula, so virtually ALL will have access to the education that will allow them to make informed decisions about anything impacting our precious outdoors!

Discussion Question 1

Written & Online Comments

(cont.)

I agree with public use on public lands. That is what public lands were set aside for in the beginning, to be used and enjoyed by the people of this great country.

I agree. Consumptive use does not equate with better stewardship. Much more effort to teach stewardship should accompany any effort to encourage consumptive use. In my neck of the woods, discarded pieces of fishing line are almost as common as blades of grass around any fishing area. During deer hunting season, you can find trash bags of decapitated deer on the side of the road, punctuating the collections of discarded beer cans. That said, I think encouraging fishing and hunting CAN be a great way to reconnect people with the outdoors.....BUT stewardship does not follow naturally for many people, and needs to be actively taught if the ultimate effects of fishing and hunting are to be positive.

I am sorry to demote this. MNPs are very positive and I have voted to promote it elsewhere. However, repetition of the idea has become distracting, potentially steering attention away from other equally valuable ideas. Since the text of this idea speaks to the importance of teaching sustainability, not specifically to MNPs, perhaps you should consider changing the title to "Teach Sustainability" or something like that. I would certainly promote such an idea.

I believe EVERYONE should be kept out of Wilderness areas IF ANY ARE KEPT OUT. That is the only way that Wilderness can develop it's own system, no interference, for good or bad. Hikers, join the other public land users and share the areas open to use, don't be elitists thinking you do not impact where you go. If everyone is kept out, I bet the wilderness proponents will change their tune, since they are kept out also. Do not restrict the lands just to allow a few to use it. All or none.

I have some experience leading a nature club, and it can be difficult to compete with sports and electronics. After school programs that are too academic or involve too much quiet, sustained activity (such as drawing, writing, nature photography) tend to be unpopular. Those involving more physical activity, such as hiking or animal tracking draw a slightly larger following, but those that attract the greatest number of kids are the consumptive activities. Kids love foraging for wild edibles, for example, and then preparing and sharing a treat or meal with them. Younger kids also like gathering bark, acorns, seed pods, etc. to use for sculptures or "fairy houses", and treasure hunts and geocaching appeal to some. I think the more academic and quieter nature activities should be offered during school hours. They can be worked into other subjects like writing, art, and science, but in my experience cannot compete with organized sports and electronic games. It's the rare kid who chooses to spend his free time birding or photographing flowers.

I think it's a great idea in general to offer many types of outdoor activities to satisfy physical education requirements. To adventure activities, add gardening, foraging, animal tracking, geocaching, and plain old hiking. All of these are great ways of helping students appreciate our interconnectedness with the nature world. And not everyone is interested in soccer.

Written & Online Comments

(cont.)

I think this is an excellent idea. It will get kids outdoors, improve awareness and attentiveness to the natural world, and improve reading and writing skills. The goal need not be to teach kids any particular philosophy. They can be exposed to a wide range of ideas, opinions, and scientific information in the reading assignments. Not necessarily a particular agenda. The important thing is that it brings nature into the classroom, and the classroom out into the natural world. In less urban settings, the "field trips" can be in or near the school grounds.

I think this is in reference to the 110 million acre National Wilderness Preservation System, not all nature areas. The NWPS was established by congress in 1964 "to assure that an increasing population, accompanied by expanding settlement and growing mechanization, does not occupy and modify all areas within the United States..."

I totally agree that it is not who recreates that impacts the health of the land. It's how they recreate. Of course every form of recreation has impact. But OHV use has a far greater impact than hiking. Erosion is affected not only by how the trail is laid out and how heavily it is used, but also by the type of recreation. Where either OHV or hiking trails show signs of overuse, it may be appropriate to limit use. It does not mean that trail systems should be increased to cover larger and larger expanses. That's like saying that suburban sprawl is a good thing because it spreads habitat degradation over a larger area. For wildlife conservation, it is better to restrict our own impact to smaller, rather than larger, areas, and leave more unfragmented land for wildlife. Species conservation benefits all of us, not just one special interest group. Erosion is but one issue. Let's not forget about air pollution, loud noise, and wildlife collisions, all unique to motorized use. For anyone unfamiliar with the impact on wildlife of ORV use, peruse the following summary and note the long list of references: { <http://www.wildlandscpr.org/biblio-notes/off-road-vehicle-impacts-wildlife> } It is wonderful that motorized users contribute to trail maintenance, given the degree of disturbance caused. I am not opposed to ORV use in general. There is a time and place for everything.

I, too, like to get my information from scientists rather than celebrities, but I think TV and the internet are valuable opportunities to do more than merely present the science. Education is necessary, but often not enough by itself to change behavior. People are more likely to change in response to a story that appeals on an emotional level, involving someone they seek to identify with. It's called Education Entertainment. It works for public health issues. For example, in South Africa, a popular weekly drama ("Tsha-Tsha") in which HIV prevention was addressed, was much more effective in getting people to practice safe sex than education alone ever was. There are other examples of this from around the world. I am not aware of any such thing addressing sustainable behavior, and no specific ideas are jumping out at me now. I think the raw facts are best presented in the classroom, where you have a captive audience of young minds, and more of a focus on ecology is critical. The education will help people understand the consequences of their actions. Some may change in response to that, but while others may strive to change, many are unlikely to do so until the new behaviors seem natural and comfortable. To propel that transition, it helps to appeal on an emotional level. TV and internet could be powerful tools for that.

Discussion Question 1

Written & Online Comments

(cont.)

In the northeast where I live, we are sometimes told that in our few remaining patches of old growth, there are no species which cannot live in hundred year old forests. I'm not convinced, however, that we can know that with any certainty. Tree bark does continue to change with aging beyond a hundred years, so doesn't a 300 year old tree offer a microhabitat not present on a 100 year old tree? Can we be sure that there are no micro-organisms unique to old growth? I'm all for managing forests, but it would seem prudent to retain some old growth, even if there are no identified endangered species occupying it. At the very least we hold on to the opportunity to study old growth structure and properties.

In general I agree that compassion towards animals should be taught in school, but I am not sure a government agency for that is the right approach. On the one hand, your comment appears off-topic, yet it is probably true that if people were better able to empathize with animals - more able to understand how their own actions impact them - they may be more inclined to tread lightly on the planet. That would be better for animals, and, inasmuch as our own well-being depends on biodiversity, better for us, ultimately. I voted "promote" on this because I support the general idea of humane education and believe it will also promote conservation, not because I agree with a government agency as you describe. For an excellent educational video on compassionate treatment of farm animals, you might want to check out the following link: { Link }

I agree with much of what you say. Thank you for having the courage to say it in this forum. But I think that society as a whole is a long, long way away from seeing animals, wild or domestic, as more than resources which exist merely for our own use. I disagree that "we have become brainwashed to the point that we do not value animals as individuals". I think we, as a species, had that perspective to begin with, out of necessity, when there were no other options but to get our food in whatever way was possible. Failure to do so meant starvation. However, we do have options now, we can do a lot to minimize pain in animals we use for food, we have many other food choices available to us, etc., and we are ever so slowly finding our way to a less abusive relationship with animals. Until we get there, though, I think the way to give more species the chance for continued existence, is to encourage "sustainable behavior". The most effective way to get people to do this, is, as Charlotte suggested to Wilbur about gaining Templeton's cooperation, "appeal to his baser instincts". In this particular case, that means teaching people that our very own continued existence depends on biodiversity. Perhaps few people are motivated to conserve a species for its own intrinsic value. But many will do it out of sheer self interest. And that is certainly a valid reason.

Limiting access to wilderness areas is good for all of us if it benefits wildlife. Species are dropping off the planet at an alarming rate. Ecosystems collapse as species disappear or habitat is degraded, yet our own continued existence depends on a healthy environment. Some forms of recreation cause more disturbance or damage than others, and should be limited. That is not anti-human, and it's not about depriving any specific group of their pleasures. It's about thinking beyond one's own special interest and protecting the environment for all of us, and for generations to come.

Discussion Question 1

Written & Online Comments

(cont.)

Maybe all states should have an equal percentage of lands set aside for wilderness. Take those well populated states in the east and depopulate a percentage of area, remove all human made objects, restore it to the natural state, and save it for posterity. Let those of us in the western US determine the lands use of states in the east. Fair is fair.

Our continued existence depends ENTIRELY on a healthy environment, unless one has plans to colonize another suitable planet. ORV/ATV/OHV use negatively effect air quality, cause soil compaction and create mud holes and gullies that alter hydrologic patterns and intensify erosion. They widen and rut forest roads and increase sediment load to streams that may threaten fisheries. Snowmobiles cause snow compaction impedes subnivan mammal activity. Wildlife are generally negatively impacted by the noise, though some may habituate. All of this is not to mention the conflicts with, and potential displacement of, non-motorized users. Wildlife are under enormous stress with the staggering human population and climate change. The latter is likely to result in major changes in land usage by humans in many areas, further increasing the challenges wildlife face for future survival. All of this is more than enough for me to want to err on the side of caution and think carefully about our impact on the land. Sometimes this will involved restricting some human activities in some areas.

Discussion Question 1

Written & Online Comments

(cont.)

Patricia is mostly correct....though not entirely. A report by the UN Food and Agriculture Association says livestock production is responsible for 18% of the world's total greenhouse gases, more than the emissions of all the world's cars, buses, planes, and trains combined. Look it up yourself. Many studies have evaluated the connection between meat consumption and human health and disease. Results have been inconsistent, but the emerging pattern appears to be the following: 1. Processed meats (hot dogs, some deli meats, etc) are associated with an increased incidence of both heart disease and diabetes, but unprocessed red meats may not be. 2. Animal products from grass fed livestock are significantly higher in omega 3 fats, which probably REDUCE the risk of coronary artery disease, hypertension, and possibly some cancers. Herbivores may have to be grass finished in order for the meat to be significantly higher in omega 3's, while omnivores such as chickens just need meaningful access to grass and bugs. 3. Meat from (at least some) wild game is also higher in omega 3 fats, and therefore probably also confers some protection from CAD and cancer. 4. Products from grass fed animals are not the only source of omega 3 fats. Flax, walnuts, and some algae contain appreciable amounts (Some vegans take algae pills instead of fish oil pills, to boost omega 3's) 5. Very low meat consumption appears to be associated with greater longevity in general. 6. Cholesterol levels, heart disease, hypertension, diabetes, stroke, obesity, some cancers, and many other diseases are also somewhat genetically determined. Diet is just one piece of the puzzle. Some lucky people can eat loads of conventionally produced animal products and still not develop any of those problems. But this does NOT mean that certain dietary habits are not serious risk factors for other people. 7. Soy is an excellent substitute for animal protein. Nutrition summary: A diet much lower in animal products than that of the average American is perfectly healthy, and possibly healthier. Food from animals that are allowed to forage normally are healthier than foods from conventional large scale animal farms. Some people appear to be able to maintain good health on a totally vegetable diet. As far as feeding the world, production of animal protein places far greater demands on land, energy, and water. It would be much more efficient to use cropland to grow food for human consumption. This is because animals use much of the nutrition to move, keep warm, and form inedible body parts. The world's human population could be fed a predominantly plant based diet using much less land, water, and fuel. As for wildlife - yes, there is wildlife everywhere, even in cities. But developed areas and farms, especially conventional large scale farms, generally support diminished biodiversity, for many obvious reasons: Use of pesticides, herbicides, water pollution, large monocultures, "control" of wild animals whose needs conflict with those of humans, fragmentation that prevents animal movement, and reduced space and resources for feeding and reproducing. Note that I am NOT saying that animal agriculture is BAD. It's just that there are an awful lot of us, we use a lot of space and resources, and feeding the world sustainably is going to require some changes, both in diet and in farming practices. Reducing meat consumption in this country creates space and resources for more people and more wildlife (assuming human population stabilizes). What I've said here touches on many different studies. Do your own research, and do it before you accuse others of ignorance. Now, if you'll excuse me, I have to get some work done!

Discussion Question 1

Written & Online Comments

(cont.)

I agree that it's time to move away from intensive animal agriculture and reduce per capita consumption of animal products in this country. This would benefit both human and environmental health, and reduce animal suffering as well.....But only if the human population stabilizes. If, on the other hand, we continue to crowd more and more people onto the planet, we could continue to blaze forward wiping out species after species, even if we all become vegans. And, production of vegetable foods still causes animal suffering and death, under the plow, or as a result of competition for space or resources. There simply isn't any way to disentangle the human animal from the food chain. I think it's great idea to reduce our footprint by reducing meat consumption....but it will be of benefit only if we are willing to talk about that other, taboo of a variable in the equation: human population.

I like the idea of telling the human story of the landscape but not exactly in the way you suggest. I think the signs and structures are best left to outdoor museums, and there is some value to helping people feel more comfortable venturing out to the remaining places that don't have those things. Nonetheless, I agree with the need to think in terms of story based education as a way to engage people. Teaching just the facts is necessary but often not sufficient to influence a person's behavior. I can see a couple of ways, other than outdoor museums, to apply your idea: 1. Infuse "the human story of the landscape" into public school social studies curriculum. Educating people about how other cultures have used land and resources, and how that related to their rise and/or decline, would emphasize the importance of sustainable resource use, something of obvious relevance to the present. 2. Hikes guided by people who know how to read the landscape. Some of the most inspiring outdoor experiences for me have been walks led by people who can determine the human land use history by examining the vegetation and various other clues. Developing an awareness of the mark people leave on the land, and, further, how that can influence wildlife use of the land, encourages a sense of connectedness not only with the landscape and with past human cultures, but also with its non-human inhabitants. All good things for instilling the importance of conservation.

Sounds good, Ron, you've won me over. I, too, occasionally lead hikes for kids or adults, and you are right -- there are some who are afraid of the forest, afraid of getting lost or of being attacked by animals they know nothing about. Fear is fear, and cannot be undone by force. Better to meet people where they are before you try to educate them, and this piece of technology seems to do that.

This idea appears to refer to only the 110 million acres within the NWPS, not all public land. Those 110 million acres amount to a bit less than 5% of all the land in the US, and almost half of it is in Alaska. Wilderness areas are potentially core areas of biodiversity. Evidence from around the world has shown that only places with limited human access retain their full complement of species for a long period of time. Understand that ecosystems function best when all or most of their native species are present, and that we ourselves depend upon healthy functioning ecosystems for clean water, clean air, food, flood control, etc. Therefore, strictly protected wilderness areas benefit ALL of us, not just hikers. If you understand that, then 5% of the land in the US, or just 2.5% of the lower 48, does not seem like a heck of a lot.

Discussion Question 1

Written & Online Comments

(cont.)

To what you've already said, add that land use by humans is likely to change substantially as people adapt to climate change, possibly causing even more fragmentation and barriers to animal movements. And, we need to think in more than just south-north migrations, since temperature change will not be the only issue. Species will not be able to adjust at the same rates and to the same degree (think of the speed with which a moose can migrate, vs. that of a tree species), so significant ecosystem disruption could occur. The more we leave intact and the better the connectivity, the more fully that species and ecosystems will be able to adapt. Although this is a duplication of an idea already posted, it is so important that I am glad to see it expanded and given more tags that will allow people to find it.

True, but if it were not for conservation on the basis of recreation and aesthetics, some of the species that occupy those "rocks and ice" would be in even greater danger than they are today. Protecting land for recreational value and aesthetic appeal is what conservationists have been able to sell to the public. This is selfish interest, as you say, but you cannot change human nature. You won't accomplish much by trying to convince people that other species have any inherent right to occupy space on the planet, or any intrinsic value beyond their use for humans. People will not set aside much land for those reasons. The key for the future is, in my view, to sell the concept of biodiversity. This can be done by once again appealing to the baser instinct of selfishness. That is, by teaching people that our very own continued existence hinges on biodiversity: a diversity of intact habitats which support as many of their native species as possible. This is the urgent truth, not just a marketing tool. Thus, protecting land that is good for other species is also good for people. This is why I posted these non-federal initiative ideas: { Link } { Link } Existing protected areas can be our core areas, our starting point, for rewilding portions of the US.

Yes, I am aware of those changes in architecture as a forest matures, but here in the northeast there are no known species which require that to live, and, as far as we know, there never have been, not even birds and small mammals. However, as I stated above, maybe we cannot know for sure if there are/were invertebrates or microorganisms that require old growth. Those structural changes you mention are beneficial, as you say, but even so, there are ways to manage forest to accelerate development of old growth structural characteristics. By selectively removing trees to release others from competition, maintaining a diversity of tree sizes, creating canopy gaps of various sizes, leaving some standing dead trees and some downed logs, etc., old growth architecture can be replicated (or at least approximated). So, at least here in the northeast, true "old growth" may not be necessary to provide for all of the known flora and fauna. This research on managing for old growth characteristics comes out of the U. of Mass. Dept. of Natural Resources. That said, I was agreeing with you that we should leave what little old growth is left. Destroy it all, and we lose the opportunity to study true old growth for a very long time.

Discussion Question 1

Written & Online Comments

(cont.)

Yes, I think people might think that this is a sort of virtual tour that you can do from the couch (see comment #9). Before demoting, please read the idea carefully, as well as the additional information provided in comment #6.

'Outdoors' is what professional Landscape Architects 'do' for a living. It should be required that we are a member of any team that is assembled to review, consult, design, or manage any 'outdoor' system or idea. Best Management Practices (BMP's), conservation understanding, environmentally sensitive design, creative thinking, and effective communication are what we are trained to do. Professional Landscape Architects are environmental design experts need to be a part of any new public or private initiative that the government creates from now into the future.

Why are these lands in such good condition? Because they are part of someone's ranch. The grazing rights on BLM land were allotted to adjacent ranches under the Taylor Grazing Act. Each ranch coordinates with the BLM to develop a grazing plan that provides habitat for all the species on the range. Each ranch is managed differently, which leads to a diversity of habitat and increased biodiversity. These lands have been managed under this system for over 50 years. Obviously, the grazing is sustainable, else these lands would not still be wilderness-quality. This proposal seems to suggest that we change a functioning system. But you cannot preserve an ecosystem by changing the way it is managed. Protecting these lands from mineral exploitation would be good for them, but anything that threatens the current system of management could destroy them. Wilderness designation is not the right tool. We need a new designation that protects the land by acknowledging and protecting the important role played by the local humans who have historically cared for the land.

These tax incentives are an inexpensive use of federal taxes to promote agriculture production, wildlife habitat and retention of open space. The Montana Land Reliance holds conservation easements protecting nearly 850,000 acres of productive agricultural and timber lands.

This idea is right on in the world of land trusts and private land conservation. The private match requirement should be eliminated altogether or amended to allow donated land value as a match to the FRPP funds. This simple fix doesn't congressional action.

Discussion Question 1

(cont.)

The local community park, trail or natural open space represents the first and most accessible opportunity for Americans to get outdoors and connect with nature. These local park jurisdictions are the grassroots of great American park endeavors. Without the facilitation and financial support of federal resources, local park providers will continue to struggle as the lowest infrastructure priority, competing with other municipal services for diminishing fiscal resources. For the majority of Americans, their first experiences beyond their backyard (if they have one) will be on an urban trail or in a local park. The urban core has been neglected as a focus for land conservation for decades yet the bulk of humans are exposed to nature in the city as their first steps to recreating in natural landscapes outside the urban area. If this Presidential directive to get Americans outdoors is to be successful, it must help bridge the gap between the urban environments where the bulk of Americans reside and the great outdoors of our national parks, forests and larger landscapes. Financial resources need to pour in to local park jurisdictions where dense populations reside and the first steps to outdoor experiences can be encouraged and enhanced.

We must tie our National Historic, Scenic, Recreational, and Rails-to-Trails trails system to First Lady Michelle Obama's "Let's Go!" campaign. Our national trails link our environment with our shared cultural heritage, and our personal and community health and well-being. Jean Fulton, Executive Director, El Camino Real de Tierra Adentro Trail Association (CARTA) Mesilla, New Mexico.

For me, walking these historic battlefields is a spiritual experience that every American should have the opportunity to partake in. We still have time to preserve these sacred parcels of land for posterity, so our children and generations to come will have the opportunity to learn why brother fought against brother for the ideals which they held sacred and to create the great nation that we have become. It is so easy to take for granted that these battlefields will be with us forever but nothing could be further from the truth. We must act now to preserve this part of our heritage so the memory of the great events that happened there will be remembered forever.

Hello America's Great Outdoors, This message is from a group of history educators in Pennsylvania who have developed a Civil War project that is in the process of raising a modest amount of money to build prototypes for gathering additional partners. Our project, the Civil War Augmented Reality Project, is intended to enhance the experiences of visitors to Civil War sites. It is also intended to increase attendance and revenue for historic sites by offering both "high" and "low" tech experiences to best reach the majority of the population. We feel that our project is fulfilling a need that educators, park workers, technology enthusiasts, and Civil War enthusiasts have discussed in the past: How can historic sites both raise public interest in their institutions through technology, and not alienate the non-technical history fans? We have worked hard on the answer, and are interested in promoting our creative solutions. We would like to make clear that the project is not intended solely for Pennsylvania. It is our hope that the project will expand to other venues, as we feel that we have the ability to use our ideas to enhance the experiences of all Americans at historic sites. If you have a chance, please check out our blog: { Link } And our fun, Civil-War flavored funding campaign on Kickstarter: { Link } If you think that our project has merit, we would be delighted if you could help spread the word, and give us a vote. Here are a few other links of interest regarding our project: A recent newspaper article: { Link } Other recent blog posts: { Link } { Link } { Link } { Link } { Link } Our Facebook page: { Link } Our Twitter account page: { Link } Thanks very much for considering us! (cont.)

Keep designated wilderness, all 110 million acres, as wild as possible. That means keeping the machines out, the cycles, ATVs, cell towers and cell phones, recreational cabins, visitor centers, permanent climbing anchors, motor boats, chainsaws, helicopters, backhoes, and military trainings. Out! We don't want watered down wilderness, or WINO (wilderness in name only). We want the real thing: big bold dangerous get lost in it wilderness. Wilderness is the way the earth really is, without all the "improvements" and distractions. Please don't go there if you want to ride around on your machines or talk to your friends on your cell phone. Don't go there if you can't handle it. Stay away if you want the men and women in uniform to come rescue you. Or if you are afraid of wild animals. Let's stop the slow degradation, a new lookout here, a chainsaw there, a communications tower, an artificial watering hole for the critters, a research project that depends on helicopters, a steel bridge, a four-lane trail, big signs everywhere, permanent outfitters camp . . . Stop! Federal agencies must manage these lands so they are wilder today than they were yesterday. They should have to prove to Congress and the President every year that they are wilder and wilder.

My wife and I enjoy hiking. As a matter of fact, we just got back from a road trip where we did several hikes in National Parks. During the trip, I saw thousand of acres of land that sit empty, unused, lonely and desolate. It's great we have all these National Parks for hiking, but can't we also open a few more places where I can ride my mountain bike and/or ride my dirt bike or take my wife for a drive in the jeep? There really is plenty of land out there and it would be nice if we could access the remoter areas that are inaccessible to hiking. My wife and I drive off road to enjoy nature, camp and see new places. It's just another way we like to recreate, in addition to hiking. And let's face it, hiking can get boring and tiring after a while. It's nice to mix it up with other activities. Our little jeep is perfect for carrying a tent and sleeping bags into the harder to reach areas where we can set up camp and enjoy the wilderness. Let's all support this kind of multiple use! Families and those unable to hike long distances (disabled) shouldn't be discriminated against and need a way to enjoy the outdoors.

Please note that wilderness is clearly defined in the Wilderness Act. It is "an enduring resource" that must be managed "as will leave them unimpaired for future use and enjoyment as wilderness." The driving force of the Act is to preserve their "wilderness character." These are places "where the earth and community of life are untrammled by man, where man is a visitor who does not remain . . . retaining its primal character and influence, without permanent improvements or human habitation . . . with the imprint of man's work substantially unnoticeable." They are places with "outstanding opportunities for solitude or a primitive and unconfined type of recreation." All new wilderness areas must meet these standards. There should be no "wilderness lite" where machines are excused, managers can take short cuts, and commercial interests dominate. Call them natural resource areas, national parks, whatever, but don't call them wilderness.

Discussion Question 1

Written & Online Comments

(cont.)

Thank you, for your thoughtful comment, which brings up the question, who are the absolutists here? It's okay to prefer "settled land" with machines and conveniences, and certainly the vast majority of our public lands already accommodate this preference. My question in starting this discussion is, do all public lands have to be that way? Millions of Americans prefer what the Wilderness Act calls "untrammelled" lands and want to keep them so. While many of us appreciate the benefits of civilization, we want to leave them behind occasionally, to strip away the illusion that we humans control nature rather than the other way around. As Wallace Stegner said, "Something will have gone out of us as a people if we ever let the remaining wilderness be destroyed."

Thank you. Here's a brief attempt. Let me know if I should jump to another idea. "Wilderness is unspoiled wild nature," says wilderness guide Howie Wolke, "with no roads or houses or strip malls, where natural forces rule, often amidst a magnificent physical setting. . . . [B]ecause wilderness designation is our highest form of land protection, wilderness areas are our most special wild landscapes." The idea of saving wildlands, keeping them wild, without developments that make it easy or convenient (yes, even without clean restrooms and phones), is a strong, constant imperative, going all the way back to American writers like Emerson and Thoreau. Some thinkers even express the idea that being savvy and self-confident in wild, dynamic nature is what has formed the American character and deep independence. In any event, Aldo Leopold and Bob Marshall brought the idea of saving wilderness into the 20th century. Their ideas -- that some lands should be "self-willed," that is, managed for their wild qualities separate from national forests or national parks -- took hold and eventually resulted in the Wilderness Act of 1964, which set aside 9 million acres "in contrast with those areas where man and his own works dominate the landscape." With great work by the Wilderness Society under executive director Stewart Brandborg, these 9 million acres have grown to 60 million, then 100 million, and now 110 million acres of federal land. President Obama signed the latest designation of 2.1 million acres of new wilderness just last year. We now have 756 wilderness areas, the smallest being the 5-acre Pelican Island Wilderness in Florida and the largest being the Wrangell St. Elias, almost 10 million acres, in Alaska. Only 6 states are without at least one wilderness area. Wilderness is a tribute to our humility, that we don't know everything, that we are a part of, not in control or dominion over, nature. As we develop other lands and manage nature to suit our preferences or whims, wilderness is where we leave nature alone. It's a baseline on the way nature works, our window on nature's own essential complexity. For me personally, wilderness is where we unplug ourselves, where we experience unadulterated reality, the world as it is. It's only when we silence the machines, use our legs to circumnavigate, our eyes to absorb the splendors of the wild, our ears to listen to its murmuring subtlety, our skin to feel its breath, that we know ourselves and our place in the universe.

(cont.)

we need to keep the trails open to all the ohv are great for the handicap and just the older people to get out and enjoy the out doors.They also help the hunters get to there spots and its the outdoor people that pay and donate there money and time to help the outdoors weather with trees or animals.hunting clubs acroos this country spend milloins a year on just habit repair.I for one help the wood ducks and we put out over 1000 new nest boxes every year to help the population come back and we are also helping the elk heards grow each year so that our grandkids can enjoy them like we have.

Battlefield preservation isn't just a cause for Civil War buffs. It also appeals to environmentalists and anyone with a love for green space and smart growth policies. I've never forgotten one day driving south from the increasing suburban sprawl around Frederick, which is gobbling up the countryside like a hungry monster, and then suddenly encountering green fields, trees and a peaceful river -- the Monocacy battlefield. Similarly, the Balls Bluff Regional Park is a remarkable oasis of unspoiled forest, riverside cliffs and trails wedged between the sprawl around Leesburg and the Potomac River. And it's amazing to drive west from Washington, through the suburbs of northern Virginia, and suddenly come upon the unspoiled terrain at Manassas, which still shows you something of what nineteenth century America looked like. For those reasons, although I have trouble remembering when I last read a volume of Civil War history, I contribute towards battlefield preservation every year.

Family OHVing is the best quality time that a parent can spend with a teenage child. I was so impressed when I saw a 40 something year old woman and her 15 year old son riding quads at Hollister on the weekends, I remember what I was doing at that age and it wasn't with my parents. OHV is a great sport and I hope that our children will be able to participate in it as we have. Save and preserve our lands for our children. Ride on!!

Really encourage each and every state to adopt our TX Master Naturalist program. Participation in this program has taught me more about plants, animal species, geology, meteorology and much more. I volunteer and enjoy nature. I look forward to sharing the knowledge I have gained with others and hope to foster a love of nature and outdoors with everyone I come into contact with as a Master Naturalist. Outstanding program and saves our State so much money.

We have travelled and toured many Civil War battlefields including just returning from a trip to VA. It is important to preserve these historic spots for the generations to come. Once they are gone, they are gone forever. It is important for children and adults to understand the the history of this great land. Hopefully the next few years with the 150th anniversary will increase interest in these great sites.

Get the kids out into the natural world. let there be an incentive to take more of the classroom outside. Schools should all have gardens, grow vegetables etc.

People are unwilling to curb their use of recreational resources until they are personally and negatively affected (get sick or hurt). It is up to the land managers to have an effective educational message that illustrates our destructive habits and then for the land managers to have a zero tolerance for destructive actions- actions that damage federal lands.

(cont.)

There is nothing wrong with employing seniors for trail work on both motorized and non-motorized trails. Many seniors already volunteer for such work and/or do it on their own! I don't believe we need more motorized trails, but there is a need for comprehensive maps, signs regarding trail difficulty as well as trail maintenance. There is a greater need for non-motorized trails and trailheads. People need to be able to get out of the vehicle in order to really connect with nature.

There is plenty of access in the lands, including wilderness areas. Very few wilderness areas are inaccessible from a vehicle, since most have a road right up to the boundary, if not many roads and/or a road that circles it! Many wilderness areas can be crossed on foot in a day, others in a few days. Other lands have more vehicle access, more roads; most places where on a day hike across the land you cross many roads open to vehicles. There are other lands where access by motor vehicles is unlimited (Open Off road Vehicle areas) where vehicle play is allowed. My experience with dirt bikes is that they can cause extreme damage to the open trail and then the rider "steers around" the erosion or creates a short cut around it. Very few dirt bike riders recognize the damage that these machines do and many do not follow the "Tread Lightly" ethics.

Our environment would be vastly improved if all adults would become involved in the Master Naturalist program. There simply is no better vehicle to teach citizen scientists to become better stewards of their natural resources. I have been involved in the Texas program for 8 years and continue to be amazed at what can be done when citizens receive the proper training and support in caring for their environment.

This topic could be linked to others such as: Trails, Open Space, Livable Communities

Trails and open space near cities help build a citizenry that uses and supports open space of all kinds. Start where people live and build support for a connected open space network.

Discussion Question 1

Written & Online Comments

(cont.)

According to the Forest Service's own studies, in the year 2001 only 13% of National Forest receptionists visited current wilderness areas. Why eliminate uses such as mountain bike riding, snowmobiling, automobile camping, motorcycling, 4-wheeling, automobile scenic viewing, group hiking and camping, and many, many other uses for 13% of the forest visitors? If 13% of Wilderness users in the National Forest are to use 42% of the land, then the other 87% of users are squeezed onto 58% of the land. Does this seem logical? Remember, these are all forms of family recreation and as such bring families closer together while allowing for exercise and promoting fitness. OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units.

- Motorized recreation is a healthy family activity and provides a great opportunity for families to "get away from it all," and to experience the great outdoors.
- OHVs, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities.
- The overwhelming majority of OHVs are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren.
- OHVs are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities.
- ATV and off-highway motorcycle riding encourages and promotes physical fitness
- OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

OHV access is the best way to enjoy our public lands responsibly. Let's go ride!

Discussion Question 1

Written & Online Comments

(cont.)

Keeping public lands open to OHV (Off-Highway Vehicles) will have positive financial, environmental, and social impact. By definition, public lands are to be used to fulfill the needs of the public. To keep lands public, basic yet minimal regulation must occur. The tendency has been over regulation and on some extremes, individuals believe public lands should be closed to humanity, allowing roads to deteriorates and over grow. This extreme thinking is not a responsible use of our lands and resources. On the other side is no regulation, allowing irresponsible pillaging and raping of the land. Often the best response is somewhere in the middle. I am 29 year-old male that enjoys riding dirt bike or taking my jeep into the wilderness. My friends are like me; they enjoy doing the same activities and have the same respect for our environment. In fact, most organizations of people who enjoy OHV recreation have the exact same respect for our lands. Going off trails, littering, harassing wildlife, destroying property are all unacceptable behaviors among the vast majority of OHVers. Why? Because we respect the land and know that this type of behavior only adds to reasons of why the land should be closed. However, anyone that spends a lot of time in our country's great outdoors will know that individuals who behave irresponsibly are rare and often punished. We cannot make decisions that affect the majority based on the poor behavior of a minority. There are by far more positive results that come from allowing our lands to be open to OHVs. The positive financial impact is both public and private. The selling of permits to operate OHVs helps to maintain these government lands. People travel to areas where they can operate their OHV, which brings the sale of food, lodging, and gas to local business. I live in a small community that thrives on the winter tourist season of snowmobilers that travel from a 500-mile radius to enjoy the use of both public and private lands. This has a positive financial impact on our community. If trails are shut down, communities will feel the financial impact. Take the positive example from the state of Michigan. The Upper Peninsula opens much of its public lands to OHV and this is the reason I and a large group of friends travel nearly 500 miles to enjoy time in the Michigan U.P. Michigan takes a proactive approach to making it known that they welcome OHVs and sees a positive financial impact on both the private and public sectors. Allowing our public forest road and trails systems to be closed could have catastrophic affects on the environment. Take for example forest fires. How is one to fight fire with out the use of roads to travel? Our great outdoors is vast and currently as an excellent infrastructure of roads and trails. Hard time and money has been spent making these roads and trails. Let us appreciate the time and money spent as a community of people who enjoy the use of these roads and trails to interact with the great outdoors in different ways. Really that is the bottom line, OHV recreation is a meaningful way for families and friends to spend time together and enjoy our great outdoors.

Incredible opportunity for kids!

The Texas Master Naturalist program has gotten me involved in my community in ways I never would have thought possible. Not only am I learning about native plants and animals; I'm meeting new people as well.

Discussion Question 1

(cont.)

Preserve our history at all costs.

yes you are so correct. I too have lived here surrounded by wilderness all of my life. I take care-tread lightly and protect the environment. I can not see any harm done in the 40 years of me on my dirt bike. I have ridden the same trail for over 30 years and it looks the same as when I first started. The tree huggers are just using the "protect our environment" to get what they want, any excuse they can find. We have Enough closed wilderness areas to last them several generations. I still think the ATV manufactures should help fight the ecofreaks, it is in their best interest.

Deer and Bear huggers hmmm, you know if they all hug a wild bear-problem solved. Come on don't you "huggers" have enough wilderness?? really? Oh wait, we can't ride anywhere, we have to be like you, live like you, dress like you,etc.

I agree! These people are so narrow-minded, they only think of themselves. EVERYONE should be able to enjoy the wilderness. I will continue to fight road closures so my children can enjoy the outdoors just like I have.

I agree, maybe we should take trails away from non-OHV groups and make them for OHV only use! They think that everyone is as fit as them, are not handicapped or elderly. Wake up tree huggers, think you will be able to hike when you are 80? I love the outdoors and have been riding since I was 8. I respect the land, tread lightly, pack out dried food trash (wonder where those came from?), help maintain the trail and report those who abuse the land (including hikers). Can Yamaha, Honda, Kawasaki, etc help us fight these people?

I agree and I fully support Blue Ribbon Coalition for trying to help us so we can ALL share the roads and trails. The 70's were great, we had trails and roads open and you know what? The roads and trails looks the same then as they do now. No further damage-the same, same animals, etc. But, guess we need change huh? I for one don't want to let these narrow minded people dictate how we use the great outdoors.

I am so tired of hearing how OHVs have ruined the environment,etc. I have seen many a hiking trail that was an eyesore. I have been riding the same trail for 30 years and it looks the same as when I first started (I have the pictures to prove it). My bike is not loud as it has a noise dampened muffler, I shut it off when hikers approach and pack out trash. What other areas need protecting, you have closed off millions of acres already!! You just want everyone to act and think the same way you do. I will continue to fight road and trail closures!

Discussion Question 1

(cont.)

I am so tired of the "tree huggers" trying to make everyone do as they do by shutting down roads and trails. This is supposed to be a free country. How are the handicapped, elderly and children supposed to enjoy the wilderness without a OHV??? Is the wilderness only available to those who can walk it?? When I ride my dirt bike I do it with respect to others on the trail, pack out trash when I find it and help maintain the trail. I do enjoy nature and my bike is no more noisy than the yelling of the hikers, etc. How many "endangered" species have you stepped on? Don't give me the crap about endangered species that we are destroying. I bet that is what happened to the dinosaurs-it was the OHV users.

I disagree with new parks. The ones we have are not being taking care of already. They are not managed properly and do not create enough jobs and revenue. American farmers and ranchers do a much better job taking care of land and preserving it for the next generation then the government will. Why are you people slapping the hand that feeds you. The farmers and ranchers put food on your table not the government. Remember that some day when your kids are hungry because there is not enough you voted against the farmers and ranchers. Everybody needs to wake up and smell the coffee food is why america is a wealthy nation.

I think hiking around with heavy packs also worsens erosion. I have an idea, lets shut off all wilderness areas to everyone, I am sure we have pictures of wilderness that we can look at and enjoy. It is urgent that we keep our roads open to everyone to enjoy. Erosion is part of the earth, get used to it!!

If I could ride my bike in church that would be awesome! Seriously though, why can't you share the trail? Great that you are able-bodied and can hike, what about those who can not? I guess they are not allowed to enjoy the wilderness-too bad for them huh? Don't give me the sacred ground bull, this country is for everyone, not just you.

Discussion Question 1

(cont.)

It seems that some people want to shut people out of the forests and other outdoor recreation areas over that last few years. Gates are going up all over. Some companies that own parts of the forest are closing their section off unless you buy a \$35 or \$60 pass to get through their gate to access the forest. Rather than cut a tree up and get it off the road, a gate goes up and the road is closed. These National forests are our National forests; and we should have the right to use them responsibly, not be shut out or have to be rich so that we can pay \$35 or \$60 or what ever the cost is so that your family can go through a forest companies gate or paper companies gate to get to the National forest because they bought up the land around it. My family uses OHV to enjoy the outdoors. We go huckleberry picking. We just go for rides to see new areas of the forest that we have not seen. We check out the wildlife. One summer we rode to every fire look out on the map we had. Our children noticed real fast that they were all different, and that it was because of the surrounding area and the hill they were built on. My parents love to take the grandchildren on rides to show them the beauty of the forests, to see animals, and go berry picking. They have shown them many historical places, and old mining places dating back to the 1860's. They have seen where Wyatt Earp had his White Elephant Salloon and gone through ancient cedar groves. I also use my OHV to get to a base camp. Then go out on foot from there to hunt. I ride responsibly, and teach my kids to do the same. Every spring the OHV shop that I bought my OHV from holds a clean up ride. They make it fun for the whole family while everyone is out riding, cleaning up trails. This is all volunteer work. We should not be shut out of the forests, forest roads should not be closed because some one does not want to remove a fallen tree from the road, and we should not have to be rich to be able to have access to our National Forests and recreation areas. Furthermore, OHV allow people with disabilities to experience the great outdoors. I have a friend who got paralyzed falling off a two step ladder, with an OHV, he can experience more of the forests now rather than see just what he could wheel himself through or we could push him through.

My thoughts exactly. I am tired of being told what I can or can't do by tree huggers. They are the most narrow minded brain washed people I know.

News flash. Research your family tree a bit and I bet you don't have to look back very far to find that your ancestors had to hunt and trap as a way of survival. Hunting still to this day for a lot of folks is a way to feed their children. Not everyone can afford to buy meat to put on the table everynight of the week for their family. We were put on this earth with the animals and they have been used as food since the beginning of time it's the way it was intended. Just recently people like yourself have adopted the idea that its ok to see a wolf eat a deer or a elk but its not ok to see a father put one on the table for his family to eat. Hunters like myself actively support wildlife because we care about them and want to have the wildlife around for the gerations to come. People like Patricia call it "killing" to make it sound bad. Don't get caught up in that talk and remember it is called hunting and it is natural to nature to do so. Something to also remember is we humans are also classified as mammals we to are an animal and it no different for us to hunt our prey then it is an eagle or wolf. I disagree with keeping humans out of the wild and nature because we are a big part of it.

Discussion Question 1

Written & Online Comments

(cont.)

OHV's do not make species extinct, gosh try to blame everything on us. I am done trying to point out why we enjoy our recreation. You will never understand and I will NEVER understand your point of view. I still think we can share and share alike, isn't that what our parents taught us? I am-Republican, conservative and Patriotic-I will stand next to any soldier to fight for this country. I am an educated college graduate and very common-sense. I eat meat because I like it with my salad. Nuff said, no sense in further discussion. I will continue to fight road closures, but I also would like you to have trails that you can enjoy without OHV's.

If you have your way, we won't be able to ride our Ohv's anyway. You are telling me that the millions of acres that are already off limit are not enough? What about the elderly, handicapped and children that won't be able to enjoy wilderness because they can't hike through it? I guess maybe a picture is good enough for them huh? I am not talking about strip mines, clear cuts, etc, I am talking about keeping existing roads and trails open so we can enjoy them. Believe it or not, I tread lightly, maintain trails, pack out others trash, shut my bike off when people pass, etc. Why can't we share the trails? What if there was a group that wanted to keep YOU off the trails, how would you feel then?

Your head is in the sand-elderly do enjoy 4-wheeling, I have seen it first hand. So I guess no one can enjoy the wilderness because we might harm some creature. How much harm are you doing to the human race? Of course I know a lot of you don't think that humans should even be on this planet. Have you even ridden an OHV? It is fun and to see the smiles on kids as they ride is priceless. Also, if the wilderness can not be maintained because of road closures, wildfires will certainly harm your precious endangered species. What if you are hurt in the wilderness, guess what you will have to wait until someone can "walk" to where you are to help, how much time would that take? All I am saying is why can't we share or do you want it all?

OHV use promotes economic growth and gives the american people a way to see and enjoy our National Forest lands. Wilderness promotes nothing....except the potential for more job lose as more area is locked up.

I am sorry to hear about your wife. This is exactly what I have been saying-what about people who are handicapped, elderly, etc. that can not hike around. I guess they are not allowed to enjoy the wilderness. I can't tell you how many times I have seen hikers chasing deer,etc. and they blame us? We are in and out of an area much quicker than hikers. I feel we have less impact than hikers with their yelling, going off trails, leaving trash. I have packed out lots of "freeze-dried" trash on my bike. Anyway, can't we all enjoy the trails without kicking the other off?

Right now our Public Open spaces are under assault by Big Energy companies looking to keep cheap land for solar and wind. In the meantime, millions of rooftops and other already built environments are being ignored as prime real estate for renewable energy. This is because Big Energy wants full ownership. We need to cover our rooftops with solar panels, before we bulldoze and scrape any open spaces. This is a no- brainer.

Discussion Question 1

Written & Online Comments

(cont.)

Thank you, well stated. A few can ruin it for everyone. When I am on the trail I respect others, when I see horses on the trail, I will shut my bike off until they pass. I do ride slow and the muffler on my bike is quiet. We can all use the trails if we respect one another. Let's keep our trails open so everyone can enjoy them.

The greatest inheritance I can leave my kids is to be able to enjoy the outdoors however they would like. This INCLUDES OHV, not just a narrow view of the wilderness. Stop trying to make everyone think and act like you. What has happened to individuality?? I enjoy riding my bike, it brings joy to me and my family. I am not trying to force my views on you, DON'T force them on me!!

Umm OHV's already pay registration tags that is supposed to help with this. I feel that hikers and bicyclers should also pay for a registration tag. This would bring in more revenue. I, like many OHV people maintain the trail and report those who are damaging it (which includes hikers). Come on people let everyone use the trail, not just those who are able-bodied.

We all pay taxes and have a right to enjoy our OHV. We need to fight the anti-ohv groups every chance we get.

Why can't we have both? For those who want to hike, etc share the trail with the OHV groups. When I was younger, I did alot of backpacking, but I also did alot of dirt bike riding. You have made an excellent point, not everyone is able-bodied to hike or even walk. Why can't they also enjoy our great outdoors? I have friends and family who have never seen the magestic mountain passes because they are elderly or handicapped. To see their joy when they gaze upon a beautiful mountain is so uplifting. When I am riding my bike, I always respect hikers, horse-back riders,etc. I stop, turn off my bike and wait until they pass. I also pack trash out that others have left and maintain the trail. Most of my friends that ride do the same. I hate to see trails closed so that only the young able-bodied can enjoy them-how sad.

Yes,yes. My dad started me out on a mini bike when I was 8 years old. We would ride the trails together and those are some of my best memories. I started my two daughters out on the same mini bike and we rode the same trails. When the stress has got to me, just riding in the mountains makes it all go away. I have taught my kids to respect others on the trail and to pack out trash left by others. We also maintain the trail and report those who do not stay on the path and are being destructive. Please keep our trails open so EVERYONE can enjoy them!!

- I'm not quite sure how using motorized vehicles promotes physical fitness. - Have you ever been x-country skiing in a quiet stretch of trail only to be practically run over by a snow machine blazing around a corner at 25 miles an hour? Not real pleasant and not exactly "compatible." - I have never heard a quiet ATV, dirt bike, jet ski, snow machine, etc... in my life. EVER! They're all obnoxious. That said, I do believe there is room on public lands for ORVs, OHVs, whatever acronym you want to use. Just realize that these uses are in direct contrast to many purposes of public lands - protecting areas from development and noise pollution; preservation of wildlife habitat, water quality, air quality; and for recreation like climbing, hiking, skiing, backpacking, photography, etc.

Discussion Question 1

(cont.)

The Land and Water Conservation Fund Stateside Assistance program provides matching grants to local and state governments for the acquisition and development of parks that provide outdoor recreation resources. Local and state parks represent one of the best ways to fight obesity, connect children and families to nature and develop future stewards for America's great outdoors.

You should consider connecting the Flint Hills as a unit to the existing Tall Grass Prairie Reserve and bison herd in Oklahoma South of it. That would give a large enough land area to sustain a much larger number of bison and would allow the inclusion of mature bulls in the mix that smaller areas preclude.

As a long time resident of Michigan's Copper Country which is now a part of the Keweenaw National Historical Park I am excited to see the many opportunities there are to share the area I love with so many others. The Keweenaw National Historical Park has provided the open door to share the my Copper Country with the world. It is partnership parks like we have in Michigan's Keweenaw Peninsula that allow so many folks to be involved in enabling others to learn and share in the many cultural and natural resources that exist in our local area.

Corps programs, such as the California Conservation Corps (CCC), are excellent ways to re-engage youth with nature, teach them employable skills while protecting our heritage, and give them the responsibility of civic duty. I was one of the youth that benefitted from the CCC, and now I have the honor of being a crew supervisor in that same program. Everyday I get to be with urban and suburban youth as they make discoveries in nature for the first time. Most recently, several saw their first bear while we were building a trail near the border of the Siskiyou Wilderness. Corps programs instill so many of the values that we as Americans hope our youth receive. Sadly, however, corps programs are always struggling for funding. We can continue to be arm-chair critics of this recent out-of-touch with nature generation or we can support corps programs that develop these youth into the responsible citizens that are necessary for the perpetuity of our nation.

Great comments from all three of you. My point, and I suppose it is skewed because I live in Colorado, is that thinking you need to purchase a \$300 sleeping bag and \$400 tent is the only way you can camp. Yes, a 15 degree sleeping bag is a nice item to have when camping at 10,000 feet elevation, but there are more cost effective ways to getting that \$300 bag and that is renting it. Yard sales and thrift stores are also an excellent option.

Discussion Question 1

(cont.)

I agree, education is key and it has to be taught in school, not in after school clubs. We must incorporate ecology into all levels of education using the land, ecosystems, and cultural resources that surround us. I just spend 7 days with 14 high school students on a National Forest allotment discussing Rangelands. We put book learning like Carbon Cycling, Nitrogen Cycling, Watersheds, rangeland types, and physical features of a landscape right in front of them. We discussed biotic factors (plants and animals) and abiotic factors (soil, sun and precipitation) and witnessed the affect on soil which affects plants, which are used by herbivores. We discussed Multi-use, recreation, hunting, hiking, off road vehicle use, ranching, fishing and wildlife viewing. We saw the affects of misuse by some of these uses and discussed the need for educating users in how to be responsible. These are things our government is managing through agencies like the Forest Service and Bureau of Land Management. Why not teach citizens what our government is responsible for? Students participated in an ongoing carbon cycle study using state of the art near infrared spectroscopy. Students surveyed a riparian area, sampled and recorded stream bank vegetation, floodplain tree density and performed a substrate count. Using the collected data they evaluated the condition of the stream and then discussed how to preserve or restore this area. Oh and these students received 1/2 credit elective or used it for science credit recovery, in two weeks! Expeditionary Learning is a great direction to move education. { Link } { Link } Look what wonderful people in Idaho have created for teachers in the classroom! { Link }

I agree. { Link } Go to this great Idea and promote it! We need to be teaching ecology and the history, etc of our lands and how science is used to form management decisions. Oh, yea, history, science, reading and Writing, all subjects in school. Why not incorporate field trips that remove the student from the brick and mortar classroom and put them into the land that provides life? Let's develop some lesson plans, learning objectives, etc and share with each other to move this along. K-12 is where to start.

I don't know this area or the art project that the artist Christo is contemplating. But I do live in the area of Tejon Ranch where he had his 1991 "The Umbrella Project". This visual art project had an impact, not negatively on the environment – but positively upon the people who were privileged enough to be there and experience it. When completed the land was restored to its original condition.

I fully agree with this. Public school educators should not have to jump through hoops to use Public Lands as an extension of the classroom. No permit should be required and all rules and regulations need to be followed.

I have been involved as an instructor in the Texas Master Naturalist Program since its inception and must say that this program is one of the best vehicles to attract citizens, equip them with knowledge about local natural resources, then send them out in partnership with various federal, state, and local agencies to accomplish great things on the land. I am proud to be associated with such a wonderful program designed to connect the public with my agency and the natural resources we all love. I have not only witnessed great conservation being done by these dedicated volunteers, I've also enjoyed great friendships because of my involvement.

It worked for Colorado. Tax and fees are regressive. Citizens in Colorado know that playing the lottery ensures great outdoor facilities. Let's use what we know will work and everyone will understand.

Key is to teach ecology. Each organism affects another. We need to shy away from the conquer kill and take attitude with out tempering it with caring for the land that provides the game or plants that we are there consuming or collecting. And lets not equate conservation with removal of all human activity.

Many school use journaling as a method for students to reaffirm what they have been learning about or observations. I hope it is not new. How is nature writing different than other writing styles? We just need to teach students to research both sides of issues and how to make a fact based decision and form their own opinion.

More field trips linked to the land and ecology of each special area of the United States is what will start the seed to grow in young minds. History of management not just the Native Americans, but early Euro/Americans, what they did right, what they did wrong. How Science is involved in forming management decisions then and now. I don't know why there is not a standard curriculum that encompasses these things into science and history classes at several grades between K-12.

Much of the cause of the increase in damage to public lands caused by reckless and criminal OHV use is due to lack of funds to patrol these areas and prosecute OHV riders who are where they shouldn't be. If we begin to throw some of these criminals behind bars, or take their OHVs away, then perhaps other riders will stop ignoring the law too. And if there is less destruction caused by OHV riders, then the rest of us will have less reason to object to the creation of new OHV routes. OHV users on this site claim that transgressors are a small minority of all users. This idea gives us all an opportunity to see whether they are being honest about that appraisal.

Discussion Question 1

Written & Online Comments

(cont.)

OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors. OHVers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHVers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. OHVers are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

Once again short sighted greed is at play here instead of thinking beyond ourselves and the Quarter End Statement. Keep the land wild where we can and allow people to enjoy it in a low impact fashion. I ride dirt bikes and mtn bikes, but there are plenty of established areas without having to rip into pristine areas. Let's develop clean energy instead of strip mining our beautiful nation to bits.

Provide federal support for trail associations, without taking them over or mandating how they do things. Federal support could be land management agency collaboration, coordination of training for association managers, coordination of a seasonal volunteer system that combines travel with service learning, or other support that helps the association get their mission accomplished while increasing local ownership of the natural resources.

The Oregon-California trails were the primary routes for populating and connecting the West Coast to America east of the Mississippi River and through development have been effaced by perhaps as much as 90%. Let us act now to preserve these historic arteries of transportation and communication before they disappear completely and in doing so honor the 350,000 plus emigrants who fulfilled the 19th Century American dream of Manifest Destiny.

This is a great need. Education is Key to this an many other ecological concepts. Education people. K-12 lets teach our kids about the land and what needs to be done to manage it.

This is a no-brainer. The battlefields MUST be preserved, they our history, our soul, our reminder. We have lost to many to greed and sprawl and cannot for the memories of who all fought and died on those hallowed grounds afford to lose...anymore.

This is my second year as a Texas Master Naturalist. I especially enjoy programs dealing with elementary schools. I believe they are the hope for conservation and preservation of natural areas and endangered species. The Master Naturalist Program continuing advanced training keeps me learning new things. Volunteering gets me more active in the community. The whole program is very fulfilling while having an impact on conservation.

(cont.)

We need to educate the population on tools of management. Logging is a tool, grazing is a tool, fire is a tool, so is rest! BLM and Forest Service are managing millions of acres in accordance with federal regulations including EPA guidelines. This could be taught in our public school system so the population is aware of the processes that govern management of public lands. { Link } teach ecology in public schools

We should only add another Federal program if we fund/populate it with folks already on the "dole." CCC should be for folks who would otherwise be on welfare or extended unemployment. Directors and the other staff should be funded from other departments that have been bloated with "jobs" that serve no true function.

With no net loss or gain, trade away or sell small land parcels that are not attached to larger federal lands and acquire acreage adjoining the large tracts. Be strategically smart- don't just add acreage but improve corridors and be habitat-savvy. Think ahead 7 generations and consider the sustainability of both the new wildlands and the new private lands: both systems need to be more economically and environmentally sustainable for this pattern to be mutualistic

Connect conservation districts and local school districts through a sustainable, competitive micro-grant program (\$250) for funding environmental education projects in local elementary schools. Conservation districts in both urban and rural areas are local champions for conservation on public and private lands. They are coordination points for many local, state, and federal initiatives and have well developed communication networks. Elementary schools across the nation have audiences eager to learn about the environment and can be the grass roots for a systemic behavior change towards our environment through knowledge and fun experiences with the outdoors.

Motorized recreation is a healthy family activity and provides a great opportunity for families to "get away from it all," and to experience the great outdoors.

-OHVers are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities.

-OHVers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities.

put your money where your mouth is' is what I say... that's why we pay extra for Green Mountain Power 100% renewable and clean energy... we bought a Neuton* brand electric -battery mower for the yard so we're finished with the smoke, noise, and gasoline for that old style approach... and soon .. we install 5.3 Kw of solar Pv by solarworksny... along with the 2010 hybrid civic.... we are on target for total decline of our energy use (and cost as well) by almost 50%.....

(cont.)

sounds like a lot of you folks need to get off your butts and go out for a nice long hike on your own two feet... nothing worse than seeing a bunch of fat and sloppy people who don't apparently give a rat's butt about their health as it is arguing amongst themselves over who needs to do what while no one does anything..... you can leave those obnoxious and noisy, stinky toys in your play pens and shriek horror as I dare you to come out and face the woods and it's creatures on it's terms instead of yours...

Great idea, but I think it needs to be taken a step farther. The federal government should recover land and homes around large urban areas. The houses could then be removed and the land returned back to the way they were before development. This would increase the wilderness areas for those living in major cities and give residents more opportunity to see nature. It would also lessen the massive negative environmental impact large cities have on the land around them. It may result in the removal of a suburb or two, but the environmental gain would be more than worth it.

I completely agree, government has absolutely no place touching private land. My previous comment was an attempt to make those who advocate the federal government requiring the sale of private land for preservation purposes stop and think how it would make them feel if their home was taken from under them. I am quite aware humans and wildlife can coexist in the same area, but many on AGO do not see this. There are numerous ideas on AGO that suggest private rural land be taken for conservation purposes, and I believe if that rural land could be taken, then so too can land in urban areas. Its only fair.

(cont.)

you make some very good points. It is good to see you have done some research, but a few of your statements are flawed. I am not convinced the UN's studies on carbon emissions are completely accurate. I have had college math and science professors tell me that in order to do a proper study on carbon emissions and global warming, computers significantly more powerful than those that currently exist are needed. There are tens of thousands of variables that need to be taken into consideration, and any study released up to this point has likely omitted many of these in order to reduce computing time. I am not saying some current studies couldn't be correct, but they are likely closer to a guess than a fact given our current technology. Also, livestock like cattle are able to utilize land that can't be used for the production of any other human food (like soybeans). Cattle spend most of their time on land like this and most put on a significant portion of their weight through grazing. By restricting livestock production, there would be literally millions of acres that wouldn't be utilized, making feeding ourselves and the rest of the world that much more difficult. Finally, saying ranchers support diminished biodiversity is blatantly incorrect. What animals do ranchers "control"? Most animals are either protected or regulated by state or federal wildlife organizations, making their "control" not only difficult but illegal. Besides a few flies and other insects, most ranchers make little effort to "control" wildlife population. If anything, ranchers help support increased wildlife biodiversity. Whether it is grabbing a drink at a livestock watering tank or stealing some hay to make it through the winter, many animals benefit from sharing the land with ranchers. Animal movement is also not greatly affected by ranches, as wildlife can move from pasture to pasture with little difficulty. I have yet to witness any wild animal that can't easily go over or under any fence in their path. The average rancher is very concerned about land preservation. Most have families and make it a point to pass land on to their children in better condition than it was when they began. Maybe instead of treating ranchers like an enemy that needs to be removed or altered, they could instead be included in making environmental decisions. After all, they are the ones most familiar with their land and would likely have some valuable input about maintaining its well-being.

Discussion Question 1

Written & Online Comments

(cont.)

that is quite a bold statement, and one I do not believe you can completely back up. How do you expect to feed the entire world on plants alone? Animals can convert food not fit for human consumption (ex. grass), into food we can consume (unless you plan on grazing the countryside sometime soon). The protein provided by sources such as animal meat is necessary for a healthy body. Blaming the overconsumption of animal meat on ranchers is like blaming a car company for drunk drivers. I think if you were to actually visit a ranch instead of reading about them in a PETA magazine, you would find quite the opposite of what you have described. Wildlife habitat is aided by farmers and ranchers who plant crops and actively monitor prairie conditions. Most ranchers are quite proud of the way they keep up their land, just as those who live in cities are proud of their homes. Ranchers are usually very concerned about water conditions as well, because they are consuming that ground water in their home. I am not telling you to agree with me, but to instead do your research and not make assumptions about a way of life you have never witnessed. Conservation is very important, but it is individuals like you who are absolutely unable to see reality and do more harm than good. (P.S: If you would like to see some proof small mammals such as gophers or prairie dogs are abundant, just give nearly any farmer or rancher a call. They might even give you a couple to keep in your garden)

You are exactly right. What happens when the new horse territory is overrun by horses? Will the government buy more land to put the horses on? At what point will it end? Any wild species without an adequate number of natural predators will overuse the land it lives on until the land is decimated and nearly unable to support them anymore. If land is allowed to be overgrazed, it can take decades for it to recover. This is the reason removing some of a rampantly growing species from time to time is necessary. In the long run, it keeps herd numbers more constant and land quality better, something I think we can all agree is a good thing.

Are you familiar with Nature's Bridge? It was formally known as Yosemite Institute. The program is designed to do just what you are suggesting. It is not just for inner city students, however. It is for any school who want to bring a group of students to the park for exposure, redirecting ideas of what's possible, to learn the interconnectiveness of all nature including humans. It is extraordinary how most students come away changed in some manner; knowing more about themselves, what they are capable of, and how they interact with nature.

Many national parks are threatened by number of visitors traveling in private cars, yet little has been done to encourage use of public transport. National Parks should work with concessionaires within their borders to offer discounts on park lodging (and perhaps other services) to those visitors who show proof of having traveled to the park by bus or train.

Don't forget full funding for historic preservation! Reconnecting to the great outdoors includes reconnecting to the roots of our history and culture, as well as the roots of natural environment. What makes us fully human includes our physical world but also our historical and cultural values.

Discussion Question 1

Written & Online Comments

(cont.)

Funding has been cut so drastically to our National Parks that they in turn have had to reduce their services. Reducing campsites in many places, especially Yosemite, does not promote people to enjoy and recreate in the outdoors. All it really does is make them feel not welcome. We need to increase campsites in our National Parks and Forests, not reduce them. Encouraging people to get out of their cars and walk around, like in Yosemite valley, is another great way to help connect people with the outdoors. The Inyo National Forest is also grossly underfunded, now relying heavily on the non profit group, Friends of the Inyo, for projects and funding. They recently closed almost 100 campsites adjacent to Yosemite national park, at a time when visitation to the Forest and Yosemite is up, mostly due to the economy and the fact that camping is about all many people can afford to do on vacation. This is a prime time to encourage people to get out in the outdoors and camp, but unfortunately, many people returning to their childhood favorite spots find them now closed. Increasing funding to the National Parks and Forests will also produce much needed jobs. As an aside, do we really need the National Forest under the Department of Agriculture anymore? Or would it make more sense to put them under the Department of the Interior?

Yes, a Buffalo Commons National Park is a great idea. Anyone interested in learning the story of the genesis of this idea should read Ann Mathew's Pulitzer Prize finalist book "Where the Buffalo Roam" (1993).

Yvon Chouinard, founder of the clothing company Patagonia, already started a very successful program called "1% for the Planet" which donates 1% of sales revenue to environmental causes. And it's a program open to any organization around the world that wants to join. (see onepercentfortheplanet.org) Rather than forcing consumers to pay a tax, perhaps a better approach is to let responsible organizations have the option to donate some of their proceeds to environmental causes? Of course consumers can voluntarily donate as well, which "feels" much better than paying a tax.

I think that large wilderness areas are a good thing but I also think that there is enough room in the national forests and BLM lands for trails accomodating different modes of transportation. If the needs of those preferring silent soltitude are so insatiable that all of the public land is to be made roadless then I would say that they are a too one sided and selfish. Hiking creates damage to the environment as do other forms of transportation if not managed properly.

But this is about protecting all land. I live in Ohio where, due to cutbacks, all trash receptacles have been removed from state run parks. The idea is "carry in, carry out", but no one wants to. The land is being damaged and no one wants to go to a park. The latrines are full of fast food packages and the ground is decorated in cellophane. Who wants to hike ten miles to see an old sandwich wrapper in a tree? Mandatory trash and recycling containers should be in every state park. It seems so simple....

I live in the Eastern Panhandle of Wild, Wonderful WV, and there are four National Parks within half hour, to hour and half, from me. Harper's Ferry, Antietam, Shenandoah and Gettysburg National Parks. My son also works for a National Park, altho not one of these. One of my Great-Granddads was a Rebel, two were Yankees, so I am very much for preserving these National Parks/Civil War Battlefield sites. I agree with the first two posts, that these sites are Hallowed grounds and very patriotic and educational for our Children, Grand-Children, etc;. May God Bless our Troops and America..

I stopped eating beef about 10 years ago. Factory farming gives me the willies. Bring back the small farms! Small crops and ranches are more Earth friendly!

Land is not just for people. We need to share the land with a host of other species. We are all part of a web and need to live together. If we upset the balance beyond return, there is no planet B. I do not think it is most important for people to be amused at such a great expense to habitat. This habitat is where our water comes from, and plants that produce our air.

Preserved Civil War battlefields are tangible links to our country's past.

These are great ideas! The sooner they are implemented the better for all of us, human and animal. Action must be taken before it is too late. We are fast approaching that time.

Yippy! California is on the verge of banning plastic bags! Consumers for canvas unite! We need rid of unnecessary plastics and Styrofoam. Styrofoam you are next, here I come!

These outdoor products are already expensive. Hunters take away "product" from their environment, so naturally the product has to be replenished. A hiker/camper is only taking away memories (hopefully!). Additionally, most "green" products, such as organic, energy efficient and sustainable are already significantly more expensive than standard products. I am afraid that taxing products that are used in "green" recreation will not encourage the people that have not discovered the outdoors and discourage current users. The small tax is a good idea, but it needs to encourage people to make "green" choices such as taxing fertilizers and insecticides. People toss these chemicals on their lawns and gardens. Both insecticides and fertilizers are bad for the environment by adding chemicals that pollute our waters and kill wildlife. Let's tax the stuff that destroys our environment.

Preserving battlefields means preserving history as well as the environment. Battlefields offer opportunities for learning, communing with nature and exercise. It's a win-win for everyone-- including wildlife.

Currently H.B. 4318 in the Congress is proposing to recreate the CCC. The Corps Network website has much good info on current efforts at state and local levels, but a new federal Corps can do much needed conservation work and benefit the youth. The alumni of the New Deal CCC are now part of an organization "CCC Legacy." There are statues in many parks built by the CCC.

Discussion Question 1

(cont.)

My experience with the Texas Master Naturalist has been a great opportunity to learn about the ecosystems where we live and to see places that are not usually open to the public. It has also been an introduction to the sustained work that goes in our parks and wildlife refuges.

America is a very special place in that we actually have some undeveloped land to support our native wildlife, provide solace, quiet and exercise for the people that work in cities. We must do all we can to make more wilderness and protect the wild lands that we have. Thank you.

I will never forget walking the battlefields of Gettysburg and Antietam with my family. It was awe inspiring to realize that not only was I on the very spot where so many had fought and died, but that I was even able to be there! It was amazing that these places hadn't been turned into strip malls or parking lots. They were being saved so that every American could experience our history. Seeing a movie can be great. But actually being on site is incomparable. But preserving our Civil War Battlefields does more than just save our history. It also preserves nature, promotes conservation of resources and encourages us to get outdoors. The parkland created near so many urban population centers enhances the quality of life for those residents. Local economies are stimulated by the tourism created. The upcoming 150th anniversary commemoration will surely generate even more interest in visiting the battlefields. It would be difficult if not impossible to find a downside to supporting Civil War Battlefield Preservation. With the Sesquicentennial (2011–2015) on the horizon, it is a perfect opportunity to recommit ourselves to our history.

(cont.)

As a non-OHV user, this has been quite an interesting discussion to follow. There are a number of really great topics in here, and I've learned a lot scrolling down this page. I'm a hiker, backpacker and a climber, and all of these outdoor pursuits have access issues. It's impossible, and wrong, to blame one group for the destruction of trails and adverse impacts on public lands. There will always be hikers who don't pack out their trash, but closing trails to hiking as a result isn't the way to combat the problem. It's with education and organizations like Leave No Trace. My first issue with OHVs as a non-user is, as is commonly mentioned above, the noise. I go out into nature to experience peace, quiet, and to listen to the way places sound without all of our machines. Even a quiet engine, one that sounds like a lawnmower, makes me feel as though I'm back in the places I'm trying to escape from. The problem is, everyone escapes to the wilderness in their own way, and finding a balance is important. However, it seems OHVs and other off-road vehicles cause the largest impact, noise-wise, of most outdoor pursuits. My second issue is the fact that OHVs by nature are not sustainable, and in general, the less we depend on machines powered by fossil fuels for any purpose, the better. So, I'm looking forward to whomever comes up with an electric OHV! Even so, OHVs impact air quality in other ways, spewing dust and combustion by products all over vegetation. Finally, there have been studies done that describe adverse impacts of off-road vehicles on vegetation - { Link } - { Link } - { Link } - but the key seems to be finding best management practices and making sure people use them. Also, a long, yet incredibly interesting read about the ecological impacts of mountain bikes on public lands, a lot of which can apply to OHVs as well - { Link }

I think one of the hardest parts about that is it's hard to get people to conserve and protect what they don't understand and can't touch. If you don't give people a chance to connect with a place, they might be less likely to want to protect it. That being said, I definitely think there are ways to manage access and use of lands, but it seems to be an interesting problem.

Much work has already been done to create national trails that celebrate the parks, wildlife, and historical landmarks that make our country great. We need to continue this work so that the rich history and natural variety that exists in the United States can be appreciated by as many Americans as possible.

(cont.)

The creation of a nutrient reduction credit market would take bold steps in monetizing and quantifying the amount of non-point run-off that destroys the water quality of the nation's waters, specifically the Chesapeake Bay. Nitrogen, phosphorous and sediment discharges from agricultural land in the Bay watershed have a dramatic influence on the biological diversity of ecosystems and the attractiveness of the Bay's water to local citizens. Assigning credits to a certain amount of nutrient reduction from restructured agricultural land has the potential to effectively decrease hazardous nutrient levels as well as support the future of those local communities. A system requiring credit purchase and rationing creates an efficient market of exchange. The newly created Chesapeake Ecofinance Company LLC (CEFC) of Annapolis, MD, focuses on implementing ecologically sound restoration and conservation practices on agricultural lands to create improved farm economies that also clean the waters of the Chesapeake Bay. It operates by purchasing, restoring, and reselling farm properties. It improves the land by restoring wetlands, installing riparian and vegetative buffers, restoring natural hydrology, and increasing biodiversity, instituting best management practices (BMPs), and selling conservation easement and ecosystem services credits. Government support, on all levels, could encourage nutrient reduction markets, successfully preserving ecosystems and reconnecting individuals with their natural surroundings.

I agree that learning the human cultural element adds meaning to the landscapes and natural areas we visit. It helps us to appreciate the history as well as the geology of a place, and to imagine ourselves in its context. Effective interpretation of human history is an important component of this understanding. For example, knowing how fast a wagon train could travel or how a team of oxen and horses forded a river adds a deep level of connection to a place. Knowing that a hiking path was originally a tribal hunting trail gives us a new appreciation for its twists and turns. These and many more stories can be told by trained, professional interpretive guides and by well-thought out signage, exhibits and materials in our National Parks and other wild places.

(cont.)

You said it perfect! My family has been riding and camping in Washington State for 15+ years. I LOVE the wilderness. Riding is an amazing FAMILY activity. I know that I am fed up with the bad rap that us ORV'ers have gotten because of a few bad apples. My husband is a double amputee. he's 30. HE has missed out on being able to see a lot of our lands because of the restrictions of motorized use. I think that there are places that should not be accessed by bike, horse or foot. I think that four strokes should be the norm and that the race bike belong on the track or at organized events. There are those that think you should haul ass through the wood, I don't . Don't get me wrong I love speed. But when you get a young hot rodder headed right at you 3 or 4th gear it is scary. We've had a few close calls with guys like that but thats why I think most of our trails should run one loops, and possibly a speed limit . But you have to remember that the majority of us LOVE the outdoors. I live in a area that used to have legal riding...not anymore, we've been chased out by Down hill MT bikers, Horseman and Hikers. Why should we be banned from the PUBLIC lands? I've seen the destruction the mt. Bikers cause with thier ramps and bridges, Pulling bark from the tree's ,chasing off wildlife and leaving their garbage on the side of the road. Horse's are hard on the enviroment as well, Ever had to walk around hors shit near a creek? or seen the hoof marks on the river banks because they didn't want to dismount a walk the bridge provided? or how about the the lead line strung between the trees the ruin the bark because a horseman was to lazy to use a tree saver? All you hikers that claim we are ruining the trails.... We buildt most of those trails you took them from us. without the clubs to maintain those trails where would you hike? I have seen back country hiker leave garbage and take veggitation. You could argue all day about who does the most damage or who works the hardest but the fact is that PUBLIC lands are just that, PUBLIC lands and should be open to us all. We all have a duty to protect them and use them responsibly. The land does not belong to any one group no matter how much they think they deserve it. The extemist eco people that are in the pockets of our elected officals seem to be stoking this firey debate. they are pitting all outdoor lovers against each other. Instead of these groups coming together and working out a mutual plan we've spent the 1st 10 years fighting each other. While we've all been fighting over who can use the lands those extremist had swooped in and closed many trails and camping area that will never be opened to the Public Again. How about we just stop arguring about it and get out side fix the trails and share!

I think you should spend some time exploring us ORV's point of view. I am the wife of a Above knee double amputee... the only way he has seen much of Washington's forest if by a 4x4 ATV. I understand that there are lots of Yahoo's out there that do ruin the trails but the MAJORITY of us want to preserve and protect these lands. Those guys with the race bikes and loud pipes belong on the track. and most do. Our NMA clubs work year round to restore trails and build bridges so that we don't ruin our lands. ORVing is a great family event. It get's kids outdoors and away from the TV. It gives them something to keep them out of trouble. I Know many kids who If it weren't for the threat of losing their bikes/quad would have been into some trouble. Dirtbike events bring familys together. Most of us dirtbikers want to get along and share the area's with the horseman, MT.bikers ect.

(cont.)

France, Denmark, Britain, Germany, Spain, Sweden, Belgium, Hungary, Lithuania, Slovakia, South Korea, Brazil, India, China, Russia - all and more have nuclear power stations. Chernobyl was a poorly managed and outdated design even at the time of the accident, which has been surpassed by a factor of ten today. Three Mile Island was a big scare but nothing happened other than hype and fear-mongering. Wind turbines are insufficient and momentary producers, kill birds by the thousands, and raise the temperature of the surrounding grounds - AND they kill the people who work on them - there is no set-and-forget operation for power. Hydroelectric is the cleanest form of power generation, but many environmentalists oppose and want to dismantle existing dams.

I cannot say it better than many of these people before me. However, I believe as an American and a member of the human race, that we have to maintain this history for ourselves, our children, and theirs. Our ancestors fought in these battles for ideals that they believed in. We need to understand what they fought for, and what they were willing to do for their ideals. We need to remember what has passed before so we are not doomed to repeat our mistakes again. I have found that visits to these battlefields, and the wonderful museums and visitor centers that have been created for them, are wonderful places to learn and remember. The dollars that we spend are small but can have a huge impact. Please support this effort and work to maintain and expand the preservation of our history.

OHV access means those with disabilities won't be denied!

ORV is good family fun, and good for you. Stop being so selfish with "your" activity. I maintain trails at Gifford in Washington state. See hikers up there using the ORV trail all the time. about half are cool and thank us, the other half try to get us kicked out of the area we built and maintain and they hike!!!! The roads you take up to hike do WAY more damage than the 6 inch wide trail that we make and will disappear in a year if left alone. We are a small group, hurting nothing and promoting good family fun and bring our spending to many small towns out in the middle of no where. Leave us alone. Recently a very popular ride area near Seattle was closed. several months later several places (food, gas etc) went out of biz. How is this good for anyone? Share the trail, we do, even the one we build for you.

Strongly support idea of Civil War Battlefield Preservation as a terrific means of conserving open space, particularly in the highly populated states of Virginia, Maryland and Pennsylvania. This will help preserve and hopefully improve the Chesapeake Bay watershed, which has suffered enormous degradation over the past several years, and help provide opportunities to teach and educate everyone on the incredibly important history of our Civil War, whose 150th anniversary will be upon us next year.

Discussion Question 1

Written & Online Comments

(cont.)

Land acquisition funding is critical to close gaps in the Florida National Scenic Trail. To date, the USDA Forest Service has acquired 41 separate tracts (4,625 acres) protecting 28 miles of the FNST. In FY11, \$5,427,000 is needed for an eighth year of funding to protect 15 critical segments (3 miles on 347.7 acres) of FNST, including one tract in Lake County that will protect one mile and 125 acres at an estimated cost of \$2,500,000. The acquisition of these strategically located tracts will close gaps in the trail along the Yellow, Choctawhatchee and Suwannee rivers, and along Blackwater Creek in Lake County.

Nearly all of the National Scenic and Historic Trails within the National Trails System have significant gaps in each of these trails. There are multiple existing opportunities for obtaining properties that are strategically located to close gaps in these trails while providing for the greatest recreational opportunity. Some of these properties are facing immediate threat from rural residential and industrial development. The Nation's economy has been harshly affected by the current recession and the rapid rate of land development in many parts of the country has sharply decreased. With this slowdown in growth comes a rare opportunity to acquire essential parcels for national scenic and historic trails if money is appropriated. Now that the cost of land has decreased, it is a "buyer's market" and landowners have renewed motivation to sell lands for conservation and recreation. Unfortunately, land acquisition funds for these trails are not sufficient to take advantage of these motivated sellers. In the absence of Federal funding, the trail program managers and non-profit organizations work with state and local government land acquisition programs to protect these trails. However, these partnership approach is now constrained by decreases in state and local revenue and sharp cutbacks in state funding for land acquisition. Because of: 1) the USDA Forest Service's and the National Park's great success in spending the Land and Water Conservation appropriations to protect the route of these trails, 2) the willingness of landowners to consider a government offer in today's real estate market, and 3) the real-world limitations on protecting these trails through state and local funded programs, Congress is strongly encouraged to appropriate supplemental land and water conservation funding for the FNST. The window of opportunity is open; the time to protect segments of the national scenic and historic trails is now.

NO MORE WILDERNESS. A beautiful forest with one trail through it is not begging for protection-- it is begging to be visited and enjoyed.

The 1 to1 idea is fair taking into account that we are the only group that pay for the right to ride the trails through the green sticker program. Would it be beneficial to see who is really using the wilderness area through a sign in program? That way you would see who it really is impacting.

This idea has merit, but perhaps should be re-framed: Areas should be designated and mapped as 4x4, ATV or single-track trail (they already are in many places). It is important to provide quality single-track, and just as important to provide quality 4x4 and ATV trails. Users should not widen trails.

After reading the editorial in 6/6/2010 Kansas City Star, I enthusiastically support the creation of a national park in Kansas. Great Plains National Park, or Buffalo Commons, or whatever you wish to call it, I would make it a priority to visit.

(cont.)

I moved to Texas from Colorado many years ago and knew nothing about the landscape of Texas. Then in 2005 I heard about Texas Master Naturalist. I was one of the 10 founding members to start the South Plains Chapter. Every year I learn something new. I love the fact that I get to do my part when it comes to the environment. A few years ago we did a project at the Lubbock Lake Landmark. It was to show visitors what flowers and native plants grew on the south plains. In 3 years it went from being a showcase of flora to a habitat for a cottontail and her bunnies. A bull snake also moved in. It showed me that in 3 years we could take a dirt pile and turn it into a habitat for the wildlife that roam the Landmark. So now I can make a difference in my environment and make it better.

My family uses both OHV's & horses to get out into nature. Yes there are those who are not respectful of nature (both on OHV & on foot). To the statement about 3% of the population riding OHV's on public lands, I'm sure most people on foot never actually hike out into the vast acres of wilderness that are set aside - they stick to places near the parking lots. Not to mention that OHV's offer those with disabilities the opportunity to really get out into the wilderness.

While the AGO initiative places much greater emphasis on the preservation of and access to natural landscapes and features than it does to cultural sites, a small number of national historical parks (NHP) provide examples of the type of partnerships described in the President's letter launching this initiative. Keweenaw NHP is a partnership park that is aiming at providing a cohesive national park experience where the National Park Service owns and operates only a very small number of resources and facilities, but collaborates with more than 20 local and state organizations and sites, plus many private landowners, to preserve and interpret a vast cultural landscape running the 100-mile length of the Keweenaw Peninsula. The park was created through local efforts. Focused on the history of the country's first major mining effort, the national park incorporates NPS technical and financial assistance, minimal NPS facilities, two state parks, a community-based Advisory Commission, a National Scenic Byway, locally owned museums and historic sites, a Main Street and other locally organized historic districts, and, potentially, many related natural and recreational resources. This nascent partnership arrangement is on the verge of creating a more cohesive visitor experience, but still struggles with issues of cross-community recognition and buy-in, fostering preservation in a severely depressed post-mining economy, and funding the Federal assistance programs sufficiently to promote a successful partner-wide resource conservation program. The Keweenaw NHP (and other similar models at Dayton Aviation NHP, Lowell NHP, and natural park partnerships such as the Mississippi National River and Recreation Area) should be analyzed to determine how well this model is working and how to amend the model to better meet AGO objectives.

(cont.)

Conservation Subdivisions, also called "conservation development", are a better way for every beautiful place in America slated for development. I founded the national nonprofit LandChoices (www.LandChoices.org) to promote conservation subdivisions and make them the standard neighborhood method across America to preserve water, natural areas, wildlife and working farmland that otherwise will be needlessly destroyed by conventional subdivision development. Conservation subdivisions preserve 50% - 70% or more of the buildable land, plus unbuildable wetlands, steep slopes and floodplains. They can be 10 acres like Trim's Ridge, 177 acres like Sugar Creek Preserve or 2,300 acres like Bundoran Farm. Conservation subdivisions preserve 40% to 70% or more of the buildable land, in addition to unbuidable wetlands, steep slopes and floodplains. In urban, sewerred, high density areas zoned at 2-3-4 units per acre, preserving 40% open space, in addition to the unbuildable wetlands, floodplains, and steep slopes, is the norm. In rural, suburban edge areas at densities of 5 and 10 acres per dwelling, easily 70% or more of the land can be preserved. The same number of homes can be built as allowed in conventional "cookie-cutter" subdivisions. Conservation subdivisions greatly reduce or eliminate stormwater run-off due to large tracts of natural areas that absorb and filter water. Narrower, shorter streets reduce impervious areas while swales instead of curb and gutters absorb stormwater instead of polluting lakes, rivers and streams. Conservation subdivisions connect children with nature and help reduce obesity levels as families are often outside enjoying the nature trails. Conservation subdivison are proven more profitable, faster selling and less costly for the developer and landowner compared to a conventional "cookie-cutter" subdivision. From "The Economics of Conservation Subdivisions", a study done by Wayne State University (MI): "The results show that lots in conservation subdivisions carry a premium, are less expensive to build, and sell more quickly than lots in conventional subdivisions." "Together, the results show that conservation subdivisions are more profitable to developers than conventional subdivisions." "That lots in conservation subdivisions sold in about half the time as lots in conventional subdivisions must be advantageous to the cash flow of developers." "These numbers translate into premiums for lots in conservation subdivisions ranging from \$13,000 to \$18,000 per acre over lots in conventional subdivisions." Big Builder magazine on conservation subdivisions: "Leaving land in its natural state or building trails through it is cheaper than building infrastructure or golf courses." Big Builder magazine (May 1, 2006). Similar to lake or golf course developments, conservation subdivisions consist of lots that tend to appreciate faster than lots those in conventional subdivisions. One study on appreciation rates compared two subdivisions in Amherst, Massachusetts. Homes in the conservation subdivision sold on average for \$17,000 (13%) more than homes in the conventional subdivision where lots were twice as large. From "Growing Greener", by Randall Arendt. It works! Hamburg Township in Livingston County, Michigan implemented conservation subdivision design and has protected nearly 2,000 acres at no cost to the community, representing a land value of \$40 million. Applied on a county-wide basis, Hanover County, Virginia has protected over 5,000 acres through conservation design at no cost to the community. Communities that adopt these standards (conservation subdivisions) are preserving an average of 62% of land each time a property is developed, according to the Natural Lands Trust, in Media, PA. LandChoices has launched the press release "Top 10 Ways to Preserve Land and Water in Your Community" which focuses on helping communities and volunteer and professional planners update outdated ordinances to implement conservation subdivisions to

Discussion Question 1

(cont.)

preserve their communities. One note: Conservation subdivisions are NOT the same as outdated and failed "clustering". Clustering normally only preserves 25% to 30% of the land and this protected land often includes land that could not be built on, i.e. unbuildable wetlands, steep slopes and floodplains. (A blanket statement used in outdated "clustering" stating a percentage, say 60% for example, of the GROSS land preserved as open space is problematic considering the variation in the amount of land on a given tract with environmental constraints - wetlands, floodplains, steep slopes - already restricting the buildability of the site.)

All of the land management agencies receive appropriated funding from Congress, and a portion of that is for managing recreation. These budgets have gone up steadily, the Forest Service for instance over 60% since 2000. There is plenty of funding to manage recreation. The problem is getting it to the ground. Far too much is sucked up into administrative overhead. The agencies have legal authority to charge for camping in developed campgrounds and for use of specialized and highly developed facilities and they can retain that revenue to manage the site where it was collected. I think those kinds of fees are appropriate. But to say, as one commenter did, "If you can't pay \$3-\$5 to spend a few hours outdoors, then your [sic] not really serious about it" that is so arrogant and elitist it just takes my breath away. There are plenty of people in this country who have to watch their pennies never mind their 5 dollar bills. You would deny them the chance to take a walk in the woods? If the agencies put half as much effort into enforcing the laws about trash, vandalism, and other misuse as they now dedicate to catching people who don't have the right "pass" to be there (Achtung! Papers please!), those problems would go away. In southern California they issue so many "Notices of Non-Compliance" to people without an Adventure Pass that they have had to set up a special website and contract with a private company to collect all the fines. This is a waste of effort that would be much better invested in education and resource protection.

Discussion Question 1

Written & Online Comments

(cont.)

Entrance fees (modest ones) for National Parks, or fees for use of specialized facilities like developed campgrounds, are reasonable and have never been controversial. But charging a fee merely for access to the outdoors was a new idea first tried as a demo program beginning in 1996, during one of the most prosperous economic periods in American history. Fees are not an economic necessity, they are the manifestation of the philosophy that everything is a commodity and should have a price tag. If we want people to love and care for our public lands, they have to experience them. If we want people to engage in healthy active outdoor recreation, it has to be accessible to them. Placing financial barriers in the way works against these worthy and important goals. Several studies have shown that even a small fee deters half of low-income people, and a third of people at all income levels from visiting a National Forest. Yes, managing these lands costs money, and that is why we pay taxes. The Forest Service, and even the National Parks, did not charge access fees through two World Wars or the Great Depression. The federal land management agencies get ever-increasing appropriations from Congress (Forest Service appropriation up over 60% since 2000), but too much of that gets spent on administrative overhead and never makes it to the ground. In regards to the Forest Service for example, the GAO said in 2009, "Regarding its performance, the agency has not always been able to provide Congress and the public with a clear understanding of what its 30,000 employees accomplish with the approximately \$5 billion the agency receives every year." People who want to enjoy some time in the Great Outdoors should not have to buy a pass just to be there.

Many popular areas have used permit systems since the 1970s to limit use to what the resource can support, and I am all in favor of that. However since 1997 almost all of these permits cost money, and I think that is wrong. Also permit systems are being put in place where they are not really needed, just to generate revenue. (Example: Cedar Mesa Utah, less than 10,000 visitors per year - brand new visitor center in the middle of the desert built with permit fee money they couldn't find any other use for since the actual land is managed for primitive recreation which doesn't cost much.) As to BWCA, you failed to mention the \$12 reservation fee to reserve a permit, which is for all practical purposes required because you won't get one without a reservation. The fee started out at \$10 but was raised to \$16 (60%) in 2007. If fees are the tool to be used to limit use, then we can expect the most popular places to soon become affordable only to the wealthy. Is that what we really want our public lands to be? The lands belong to all of us and we should all have reasonable access. Limiting use to what the resource can support is one thing, but using money to determine who gets to go and who doesn't is something else entirely. It's not whether any particular fee is "debilitating" or not, it's the basic idea of selling access to nature. If we want our young people to truly learn to love their public lands, we cannot allow them to be commercialized and privatized just like any other market commodity. It's like the difference between sex for love and sex for money. Do we really want our public lands to be whores?

Discussion Question 1

Written & Online Comments

(cont.)

One barrier to getting people outdoors is the requirement in many places that they purchase a pass just to go for a walk in the woods. Fees for basic access to undeveloped federal lands, such as National Forest hiking trails, lakes, and streams, as well as backcountry fees in National Parks, should be eliminated. All citizens should have access to nature without regard to their financial resources. Private entities should not be operating recreation on public lands as a for-profit venture.

My idea is "Trails for America" - a program where people volunteer to live in a camper at a trailhead (like a "campground host" in the park system) during the summer months. They would act as volunteer backcountry rangers/ naturalists for the drainage or ecosystem they are located in, and would supplement the capacity of the public land management agency responsible for the area. They would be expected to hike the trails and do cleanup, upkeep and maintenance while also educating users about best practices and outdoor recreation etiquette. The individuals would also be expected to be able to act as local naturalists, as well, providing ecological and historical information about the area to visitors. The program would be akin to the "Teach for America" program, with tuition and student loan benefits and/or other benefits similar to those in the TfA program, the VISTA program and SeniorCorps, etc. There would also be a rigorous application process and there would be ample oversight, training and accountability built into the program. The end result being that our nation's trails and natural areas stay clean and safe, visitors enjoy their experiences more and feel more connected to the landscape, and individuals are given the opportunity to serve their country through caring for our iconic natural landscapes. This idea has similarities to the Texas Naturalist program that others have mentioned in this forum.

Kieran, Historic Preservation is about the Great Outdoors. The "great outdoors" is walking around neighborhoods and communities, it's about urban parks and landscapes. The "great outdoors" begins when you step outside your front door. Historic preservation is about viewsheds, cultural landscapes, protecting archaeological sites and battlefields. We work to protect the places which have been formative to the human experience and to the creation of our country, which is far more than just downtowns and urban sites. Additionally, by working to protect and revitalize existing infrastructure, and livable, walkable communities, we are combating the rampant development that threatens the wilderness and natural environment. The Historic Preservation Fund is an absolutely essential part of the effort to protect and enhance the Great Outdoors.

The Historic Preservation Fund is a key component to successful Smart Growth, by promoting through financial incentives for private investors to rehabilitate existing infrastructure in downtown commercial districts and neighborhoods. Consider promoting the idea of fully funding the Historic Preservation Fund as a way to reinforce the idea of encouraging Smart Growth.

The HPF also supports Tribal Historic Preservation Offices.

Preserving Civil War Battlefields promotes tourism first and tourism results in economic activity. Young minds touring battlefields eventually begin thinking about our countrys struggles. This eventually leads to a better understanding of our history.

Active management of recreational use works. With management (maps, kiosks, partnership agreements, adopt a trail, on the ground signing, etc) land managers increase capacity while decreasing impacts to natural resources. Involvement of federal land managers with local communities works. Community based FACA committees formed from a broad base of stakeholders can well serve as advisory councils to assist the land manager in critical planning and decision-making efforts.

I've been recreation dirt biking in our wonderful public lands for over thirty years. Riding dirt bikes with my father on public BLM land has made our lives richer and our family bonds stronger. It is a great stress reliever to get out in the forest and ride responsibly with quite mufflers and staying on designated trails. I hope in the future to enjoy the great outdoors with my two young sons like I have with my father. Please recognize this when planning the future of our forests and wilderness. Please don't shut us out of OUR land. It is public land, and should be open to the public. We should be able to recreate responsibly on OUR LAND. Closing it down and forcing people into the suburbs is a disaster. We need to get out and enjoy the great doors more, not be shut out. Our kids are obese and obsessed with T.V. and video games. Let's give them opportunities to enjoy the great outdoors and get exercise and create friendships and bonds with family members. Off Highway Vehicles (OHV) are a wonderful way to get exercise and enjoy the great outdoors. Please don't close down our forest and wilderness from the off road enthusiasts. I recognize not everybody wants to enjoy the outdoors like we do, but there are places already designated to enjoy the outdoors that way. Fourteen percent of the population of California has registered OHV's. We are a sizable group, so please listen to us. It is not fair what you are planning on doing. This is OUR land, not YOUR land. Sincerely, Off Road Enthusiast Mountain Biker Concerned father of two future dirt bikers

OHV is a great way to experience the great outdoors with your family. I ride with my father, and plan to ride with my two young sons. Riding dirt bikes has kept me fit, has expanded to other exercises like mountain biking and wait training so I can keep on riding well into middle age and beyond. Because of this, I've kept my wait down, lowered my LDL cholesterol and raised my HDL cholesterol, and lowered my blood glucose level. I believe this will lower the burden on our health care system because I choose to live a healthier life style. I owe all of this to riding dirt bikes on OUR PUBLIC Land.

ELK Is ABSOLUTELY AWESOME!!!

The Lewis and Clark story, including the tribes they met, continues to capture America's imagination. Where else can you find a more comprehensive analogy to the life journeys we all make? Because we have a written record of that particular exploration from the east coast to the west, let's also "complete the Trail" by including eastern states which were also vital in the saga.

In California, we have the California Conservation Corps. This version of the CCC gets young people outdoors conserving land. It is a fantastic program. Their website is { Link }

Discussion Question 1

(cont.)

Most of the trail work is done by volunteers. The Government role to to design where the trail would work best and then assist wit the purchase of the land from willing sellers. It seems to me that this is one of the finest examples of our citizens being involved with a parternship with government. I would ask our legislators to continue to support and fully fund this recreational opportunity to buy land from willing sellers.

That is a great idea! A version of it is already in practice. Check out the Americorps service program. Americorps provides internships at public lands units and nonprofits that promote environmental stewardship. College students participate in Americorps internships through the Student Conservation Association (www.thesca.org). I did two SCA internships during my college career at Great Smoky Mountains National Park and Sequoia National Forest. These internships prepared me for a career in land conservation and helped support these public lands units. College graduates may participate in Americorps through programs such as the Sierra Nevada Alliance Program (SNAP) in California. SNAP interns work at nonprofits and public lands units, providing these organizations with affordable help and preparing the interns to take leadership roles in the conservation field. I suggest looking into these two programs. They are really fantastic, well-run, and are making a huge difference in our public lands. It is one of my favorite federal programs, certainly.

The Minnesota School Forest program helps schools establish long-term outdoor classrooms at any educational facility in Minnesota. The best way to cultivate environmentally literate citizens is to provide frequent exposure to nearby nature. Since children spend so much time at school, why not use the nearby nature of the school yard? Benefits: no or reduced transportation costs, academic subjects can be taught outdoors just as well (or better) than indoors, students and teachers cultivate a "sense of place," and outdoor classrooms build visibilty and community pride. Many teachers have attended "How to Teach in Your School Forest" workshops. It must be working... there are more than 100 school forests in Minnesota, and more are lining up! www.mndnr.gov/schoolforest

There has to be a middleground. As with fishing, and hunting,we are all one people, and in my opinion I think there is a place for ORV use. As with people collecting rocks as a "hobby", there are more laws governing us. My main question is "Why can't we just all get along?".

This is a fantastic idea and should offer opportunities for the preservation of wildlife, the ranching way of life, soil conservation, native flora...and would do justice to the people who were the original managers of the Plains (and who did a much better job than the intervening 200 years of highly subsidized of soil exhaustion, human depopulation and economic malaise).

Discussion Question 1

(cont.)

I am a Director of the National Scenic Byway Foundation. The National Scenic Byway Foundation is the not-for-profit partner of the federal National Scenic Byway Program that was created in 1991 under the Intermodal Surface Transportation Efficiency Act. The program now encompasses 150 of America's most treasured routes that have been designated by the Secretary of Transportation as "America's Byways®." The Foundation would like to call your attention to these byways and urge their inclusion in the resources associated with the America's Great Outdoors initiative and to make a few suggestions. First, the byways: To be eligible for designation by the Secretary of Transportation a byway must contain and commit to the preservation of at least one of six intrinsic qualities. The qualities are: • Scenic • Natural • Historic • Cultural • Archeological • Recreational We think of byways as the 21st century offspring of the nation's 20th century conservation efforts. In the 20th century; National Forests and Grasslands, National Parks, National Wildlife Refuges and BLM lands were acquired and federal agencies created to manage and protect them. Byways, on the other hand, are treasured places that remain in current ownership and are managed by local grassroots public or not-for-profit organizations. In essence, when the Secretary designates a route as one of America's Byways® a franchise is awarded and support provided with the expectation that the organization receiving the designation will protect, maintain operate, interpret and market the byway to accepted standards. Byways place great emphasis on experiencing rather than traveling or visiting unique places. While the program operates within the US and state departments of transportation where the major focus is on safe and efficient movement of goods and people, byways are as much about stopping as they are about going. Byway travelers are provided with information and opportunities to pause, get out of their cars and sense the qualities of the place. They are offered opportunities and are encouraged to connect with the intrinsic qualities and the people who live and work or who once lived and worked along the byway; to hear the stories, smell the smells, taste the food, dance the dance and to sense the wonder of the place. In many cases, these experiences are delivered by public and not-for-profit organizations but a distinguishing feature of the byway program is that the for-profit sector is also a full partner. We hope you will examine America's Byways® and include them as equal partners with National Parks, National Forests and Grasslands, National Wildlife Refuges and BLM lands in your deliberations. Now our suggestions: • Place more emphasis on experience than on place. Outstanding outdoor experiences can be found anywhere if the intrinsic qualities including history and culture are well protected and the stories well told. • Be inclusive. The title "America's Great Outdoors" suggests a federal effort to market outdoor assets of national significance. Although many of our most treasured outdoor assets are in federal and state ownership, those that receive the most and most frequent use are in neighborhoods where American's live. • Provide a place at the America's Great Outdoors table for national not-for-profit partners. Government cannot and should not try to do it all. • Remember, much of any outdoor experience is in the journey to and from the destination. Involve the transportation, tourism and attractions sectors in the project. Encourage the road less traveled. • Please keep us involved.

Discussion Question 1

Written & Online Comments

(cont.)

OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors. OHV'ers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHV'ers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. OHV'ers are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHV's provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

There are valuable cultural resources on federal land throughout southern Utah, especially in San Juan County. These "Treasured Landscapes" require preservation and protection from encroachment. In these cases, facts must trump local public and private interest; no new roads, no improved roads, no grazing, no minerals exploration. And in most cases, at least until stabilization funding improves, even visiting should be restricted.

Nature is perfect within itself..why must mankind inflict their unnatural conditions? Look at Yosemite and the Grand Canyon,,they are perfection

I agree 100%. For some of us older folks, the only way to access the back country is on an OHV. I am no longer capable of hiking 20 miles into the mountains to enjoy the beautiful scenery. If areas are closed to motorized recreation they are closed to me and many other tax paying citizens like me. We need to promote responsible motorized recreation and educate the morons who ride around tearing up stuff and riding where they shouldn't. Stay on the trail or road! If you are not already a member, I encourage you to join the Blue Ribbon Coalition and your state OHV association. United we stand!

I am part of the 95% who don't kill wildlife. But I am smart enough to realize that without some sort of regulated hunting, wildlife populations grow so large that the environment can no longer support the large population. Then the animals starve and suffer. It's better to let hunters have some venison in their freezer versus a bunch of rotting corpses in the forest. Elk and deer are not in danger of extinction.

By a contract finalized on 6 February 2010 the Department of the Interior, TVA, the State of North Carolina and Swain County, North Carolina agreed to a monetary settlement of the North shore Road Controversy. The agreement calls for the Department of the Interior to pay Swain County \$52 million in lieu of building a road in the Great Smoky Mountains National Park. Of the promised amount, \$12.8 million has been paid. The contract contemplates payment of the balance in installments. Care must be taken to make sure this agreement is not forgotten, or the payments becoming intermittent. The Department of the Interior should have its budget preparation process programmed to provide for appropriation of an annual installment on this debt.

Discussion Question 1

Written & Online Comments

(cont.)

We need better coordination, collaboration and cooperation between TVA, NC Wildlife Commission and local people on the management and improvement of the fisheries. With resources limited more can be accomplished with less if all could and would work together managing WNC lakes. Fontana Lake is bordered by the Great Smoky Mountains National Park and the U.S. Forest Service along the major portion of it. They too should cooperate and help with the needed funding of this resource.

I admit I have a preference for folks to keep to the general discussion rather than use this forum to bicker with or insult each other. Having said that, I think there should probably be a place for everything as well as designated wild areas in EACH state. And (this is important) wild areas should be connected along migration pathways/corridors without any major interruption. After that, keep specified areas for folks to ride what they will and keep building in "brown" areas (footprint with pre-existing development) as much as possible. As much as I HATE irresponsible riders who create their own trails through untrod soil over and over again, construction sprawl does more to kill habitat than bicycles.

I agree there's problems but I'm already subsidizing the financial institutions and the car manufacturers, helping their CEO's take home bonuses that are more than I'll probably see in a lifetime - not sure I can add to the long list of subsidies I'm already supporting with my tax dollars (I won't even talk about the public school system) so I would like more clarity on what or how you propose the government should regulate the large scale farmers et al.

I agree with the idea that controlling invasive species is imperative if we are to keep our native species thriving. I would also like to extend the definition of "invasive" to include rogue GMO seeds that wind up where they are not intended (usually carried by the wind or on tires, etc.), resulting in theft lawsuits against the property owner (who had no idea they were even there) by the seed company.

I agree with the lack of real oversight where the Dept. of Interior is concerned. I do think certain areas need more funding and they would have to be held accountable with full transparency or give the land back to the states so we can attend hearings in person and have a voice. Otherwise, can we make the financial institutions and the car manufacturers pay back the money and funnel some into the DOI? Sorry, I'm bitter.

I take exception to #5- banning ranching on public land. Here in New Mexico, ranchers have used what are now "federal" lands since long before this was even a U.S. territory. I know many seventh and eighth generation ranchers with small herds who, for them, this is a way of life. They are the ones who, year after year preserve the land so it can sustain them. If they couldn't ranch on public land, their way of life would end. They do more to take care of the forest, even to the extent of putting out other people's campfires on a weekly basis, than anyone I know. I suggest we not paint everyone with such a broad brush that we miss the people that we would like to hold up as good examples of responsible stewardship.

Discussion Question 1

Written & Online Comments

(cont.)

Riders might need to take responsibility for their image here. Manufacturers love to advertise their vehicles mudbogging, riding through streams, spraying dirt, etc. Riders could stop other rogue riders by agreeing to licenses that are readable from a distance, making sure they and their friends register each vehicle (with \$\$ going to repair trails and enforcement), and finally, holding those accountable who ride off the trail or misbehave. If you don't want the black eye, you will have to do more to prevent it. Meanwhile, I guess it just doesn't make sense for the Forest Service or BLM or any land mgt. agency to dedicate more trails than they can maintain or enforce.

This sounds like a worthwhile program that should be expanded to include more than just one day a year. People learn through repetition and reinforcement and overcoming screen entertainment dependency (SED), will take quite an effort but I applaud the idea!

Wilderness is important. No, imperative. However, I suggest that if you agree with ranching locally (and considering the income that small scale ranchers make, permitted ranching on public land is sometimes the only option) and if you disagree with large food factory ranching and keeping animals contained under inhumane conditions, you might (unless you convince a great majority of the population to go vegan) want to consider that responsible ranching is a useful and desirable thing, providing local food source. Balance is key.

Federal and state governments should be promoting wise use of public natural resources to help create jobs in private sector resource extraction businesses. Careers in forestry, logging, oil & gas extraction, and mining are all outdoor careers. These are the true green jobs. By allowing resource extraction, albeit carefully and in accordance with NEPA regulations and BMPs, we can grow a class of professionals that is intimately connected to the outdoors. By promoting resource extraction, thereby promoting outdoor work, we can reconnect more people to the outdoors. It is one thing to spend a few days camping and hiking in the woods. It is quite another to get up every morning and go work there. As the Ben Meadows people say, "the outdoors is [their] office."

Since man began sharing carefully remembered stories of their forebearers around the clan fires, the importance of remembering history and understanding how places and sites figured into the development of that history, civilization has treasured the tangible reminders of where we come from, where we are going and what we have learned from our ancestors' experiences. Historic places and landscapes still resonate with people today - hence the rise of heritage tourism. Fully funding the Historic Preservation Fund will not only save important buildings and sites, but with that preservation, promote economic development through continued use of historic buildings, providing income for preservation workers during rehabilitation, and also regenerate local business and attract heritage travelers. The newly designated South Park National Heritage Area can build on the strong preservation ethic already in place and preserve the natural and cultural resources that are so abundant in the area, improving lifestyle and increasing the economic health of the residents while helping visitors to enjoy and understand the legacy of this unique area. Fully funding the Historic Preservation Fund can trigger a wave of repetitions of this pattern all across the nation, thus promoting economic health while preserving the stories and lessons of the past.

(cont.)

Texas Master Naturalist program is awesome!!! What better way to provide education, promote volunteering and promoting conservation, etc.... It gets people back outside and enjoying nature.

The Lewis and Clark Trail needs to be preserved in its entirety for future generations. To let our national parks and trails suffer to budget cuts is cutting our national treasures and forgetting our nation's history.

The Texas Master Naturalist program is an excellent way to match volunteers with organizations needing help. There are opportunities for any nature lover, no matter what one's special interests. Help create butterfly gardens, work with youth groups, participate in bird studies, patrol for sea turtle nests, write articles for local newspapers...the list goes on and on. There is truly something for everyone. It's a win-win situation: I keep learning more all the time, & I get to give back by helping to make things a bit better. When we work together as a group, we can achieve more than we could as individuals, & we have a lot of fun doing it.

The Texas Master Naturalist program is awesome!!! Provides education, activities to get people volunteering and outdoors. I have been very impressed with the professionalism and resources available to this program. It brings the best resources together for common goals.

These battlefields help us learn about history, while at the same time providing a chance to experience the sort of landscape that our ancestors saw. In many areas they provide a buffer against urban sprawl and a habitat for birds and wild animals.

Reconnecting with our local food system is an important aspect of conservation and education. I am also curious what sorts of efforts are being made by local and national governmental agencies to engage youth in this area? I am aware of countless non-profit and school/college-based local food programs around the country (to answer your question), but not government-based. These programs are making huge impacts on their local communities. If we were to initiate government programs, the Department of Agriculture would be the logical source, however, more urban parks and recreation areas (i.e. NPS, FWS, BLM, etc) could expand their education programs to include local food systems. The idea of planting fruit trees is a great idea. City parks could involve youth in transforming their water-intensive lawns into more productive and/or natural landscapes of edible and native plant landscapes.

Having lived and worked in Alaska for 30 years and seen ANWR, its need for protection is not overstated. As a retired oil company employee, I support the idea that not all areas need to be drilled and produced. I would challenge the "small footprint" idea the industry likes to promote because from my experience I don't see it happening that way. Whatever is done, don't let BP there.

I would like to suggest that anyone who is making this suggestion come out to Montana and learn what you're talking about. Just drive the 150 miles between Roundup and Malta and see what it's like to go past one town -- Grass Range that has maybe 25 homes there and then not be able to see more than 10 houses in that drive. Look out and realize that in some places for 70-100 miles on either side of the road, there is nothing but open landscape to the casual observer, but actually know that there are ranches producing beef and farmers producing wheat that may have been part of your meal this last week. You don't need to waste government money taking our ranches to "preserve it" -- we've done it for a 100 years already. Years ago, when I was living in Missoula I had a roommate who was working on a masters in wildlife management. She was from New Jersey and her boyfriend was from back east. She was a nice girl but she got her masters by doing a study on what kind of animals are predators of duck eggs. When she told me she was going to do a study like that I asked her what it was going to prove. "Everyone knows what kind of animals eat duck eggs -- racoons, skunks, coyotes... And what will you do with that -- you can't teach ducks to build their nests in different places?" I asked her. I wasn't upset, but I just thought that if you were at a masters level program that you should be working on figuring out something new not just coming up with something that a 5th grader could tell you. Well, she blew out the insides of 144 eggs, filled them with wax and even "duck scent" to make them real. She thought that when the animal bit into the egg, it would leave a tooth mark and from the tooth mark she would know what animal was preying on the nests. See anything wrong with that idea? Think you're going to learn something that most native Montanans who lived on a ranch didn't already know? Well, first of all those of us who know animal behavior know that if you've got a mouth full of wax, you're not going to carefully extract the wax egg from your teeth and gently set it back in the nest. Nope - you're going to break it up and do whatever you can to get rid of the wax. I asked her what her results were after she had carefully planted these nests of fake eggs all over the state in a variety of reseviors (using grant money of course). The answer: She couldn't get any valid results because the wax was too broken up to tell what it was. (My suggestion would have been to look at the tracks of the animals but that evidently didn't occur to her) . But she's now probably one of these idealistic geniuses who want to play in someone else's backyard and take over their ranch and do nothing more productive than sit on a ranger station with a nice salary and benefits to "watch over the buffalo". Her boyfriend's study was about some kind of ferret that he wanted to transplant to Montana. So he went out to MN, spent 3 mos. living in a cabin and cross country skiing and finally came up with 6 little critters to bring out to the Yaak. Well, he got to stay in a beautiful 3 story cabin and outfitted them with radio collars to see how they'd do. Do you think a radio collar slows down a little animal? Well, one by one in short order they were all eaten before spring -- but he still got a masters degree out of it and is now qualified to make decisions like this. I asked her one time if any of the wildlife majors were Native Montanans and she thought about it and said no. It explained everything to me then -- and it explains why we're having this conversation today. People from back east come from places where development is guaranteed -- populations grow and stay there. But in a ranching area, most ranches don't support more than 2 families. They support the family who started it -- and then the one son or daughter who's going to take it over in the next generation. Those people don't get it -- our growth is limited by the ability of a ranch to sustain a family. And as for wanting to come enjoy it -- well come out during hunting season and you can enjoy our

hospitality. I doubt any of them would let strangers onto their land to walk around fairly freely for hours on end. So here are my questions when you're examining feasibility. 1. Exactly how many people do you think are really going to come out here to watch these buffalo? And how long would you actually spend watching these herds? 5 minutes, 10 minutes, maybe 20? My cousin had buffalo on his farm in Illinois for years -- right next to a highway with 10,000 cars a day going by. Less than 10 cars a year ever pulled in to simply watch the buffalo. 2. Did you know that some of the Indian reservations have buffalo herds. Why not offer your money to those tribes to develop and increase their herds. Wouldn't it be nice to give them back the staple of their diet that was taken away when the white man came? I think it'd be cool to see them use a buffalo jump the way they did a couple hundred years ago -- if they wanted to. If the tribes were open to it and were allowed to hunt them and money was given to them to vaccinate them, build fences, even process the meat -- this would become a win/win/win situation. Frankly, I think this is an idea that's used to con people out of their money and then scam our government out of more money. It makes a really cushy job for someone to sit on a foundation, pull down a good salary and benefits and work people up into a lather about a romantic idea of buffalo running on the plains. But if you took those same people out to a buffalo herd, I doubt they'd stay entertained for more than half an hour -- and maybe 3-4 hours for the truly hardcore -- provided they were sitting on the back of their camper, or maybe hiking on a groomed trail looking at some of the great scenery in Yellowstone Park. You can't justify destroying an entire county or two for that.

The Town of Gilbert, Arizona partners with the non-profit Riparian Institute (www.riparianinstitute.org) to utilize a passive water reclamation site for wildlife habitat, outdoor recreation, volunteer projects, public events, and environmental education programs, connecting 10,000 schoolchildren and 80,000 public participants with nature each year. The urban location of the property, along with the innovative design of passive water collection basins surrounded by native habitat and un-intrusive trails invite diverse wildlife and diverse people to share the land together.

I moved to Texas from North Carolina in the summer of 2008, discovered the existence of the Texas Master Naturalist program in September, enrolled in a class in January, was certified in May, 2009. I brought some knowledge of flora and fauna with me but the TMN classes and field trips have brought me up to speed on central Texas. This education program is never over - we just keep on learning and passing on what we have learned. The program has terrific sponsors and interacts with other groups for advanced training and volunteer programs. TMN is absolutely outstanding.

Keeping grazing leases available benefits wildlife when a grazing lease maintains watering facilities and grazing reduces fire hazards. Keep roads in National Parks and Forests for access especially for fighting fire access and for easier access for exploration via horses, hikers and search and rescue personnel.

In addition to the non-profits listed above, I would recommend also consulting with non-profits that are not exclusionary in their thinking and in their "scientific analysis". NOHVCC, American Trails, American Motorcyclists Association, and any number of State and Local non-profit organizations that have been involved in trail work and conservation/preservation of sustainable multi use trail systems in various locations across the nation.

The Texas Master Naturalist program is an outstanding model of nature-oriented outreach to communities. Our volunteers, well-trained and prepared, share their time and talents by working with school groups, improving trails, leading hikes in public areas, educating children and their parents in wildlife education, fishing regulations, historical perspectives, and much more. I was delighted to find the program in my community when I moved to Texas from California; what a wonderful way to learn about the local ecoregions and share my love for the outdoors in concrete ways!

"We have met the enemy and he is us." This popular quote came from the comic strip "Pogo" by Walt Kelly published on Earth Day in 1971. Since then this comic has been quoted and misquoted by many a teacher, politician, and cocktail party comedian. I remember hearing the Pogo quote in an environmental studies class in the seventies. It was a time of great environmental concern; a discouraging time of burning rivers, oil spills, and an unpopular war. It is hard for me to believe that was 40 years ago. As we look ahead to the next 40 years, I would like to propose a new quote to guide our efforts to get along on this earth: "We have found the solution and it is us."

asks us to live within our limits. I agree with this idea. The less we "need", the more we can focus on the basics of life: plentiful healthy food, clean water, clean air, shelter. I believe public lands can help us meet our basic human needs. Not many of us live within a "space" that can support us completely. This fact will only become more true as our population increases. I believe that all people on this planet are much more interdependent than we care to admit. It's just easier to ignore that interdependence when our "neighbors" are far away, whether they are in another country, or in the rural American West. Most of the ranchers I know have plenty of experience living within limits. Maybe that means living in a 1,000 square-foot house or looking after their animals and families in a spring blizzard. I hope I can learn to live more simply myself, but I will still eat, drink, breathe, and seek shelter from the blizzards.

I believe this country's public lands can be used to produce the food that people need, as well as providing wildlife habitat and watershed protection. Beef production can be balanced with other goals for public lands. I would like us to manage our public lands in a way that allows for food production and also protects the natural resources on which we all depend. Recreation is another use of the public land that can be very valuable, but it is also not without impacts. Let's look at the long-term health of the land and work to balance the human uses of the land. I don't want to destroy the mother who provides us with food and shelter.

I think we need to acknowledge that we are all on this earth together. We "inhabitants of this small planet" share many of the same needs and desires, and we need to think of the solutions in that way. I think the Great Outdoors Initiative is on the right track! I know my comment is philosophical and not a precise suggestion for the Great Outdoors Initiative, but I would hate to see us get back into some of the guilt and hopelessness that was part of the seventies. Especially now when times are feeling so tough. I'm glad this initiative is focusing on solutions!

If states truly want to work with ranchers and farmers on private land conservation, which can also benefit wildlife, states need to implement programs that work for the farmers and ranchers. These landowners need to be able to continue to make a living from their property by producing food for our country. If the programs are not tailored to the needs of working ranches and farms, I foresee two outcomes. Either the "protected" lands will no longer be available for food production, or the only landowners who will participate will be wealthy individuals who do not earn a living from agricultural production. I believe it is possible to design such a program, but farmers and ranchers need to be involved in the design and the details of each project.

lucy coward (24may 2010) I have been with the Texas Master Naturalist and really enjoy getting out in the community along with other Texas Master Naturalists and learning about our plants, wildlife. It's a wonderful program that more people should get involved in.

Awesome idea! America has (had) the greatest prairie on earth. Let's save a piece of it.

Please, preserve our battlefields, civil AND revolutionary war. They are tangible links to our past, and it is one of the best ways to honor those who fought, and to teach those we hope never have to fight.

I agree. There is no better education on nature and life than to be where it is. Place-based environmental education should be in every school for every child. There are several good studies on the valuable effect on behavior and learning in children when they have access to the outdoors. Roger Tory Peterson Institute has a great place-based environmental education program on their website.

(cont.)

A couple thoughts come to mind some of these thoughts may have been mentioned in one manner or another... • Education and Re education - I believe the future of conservation will rely within the will of the people, but unfortunately large aspects of our society are disconnected from the land value of open space/wilderness. There needs to be constant/consistent reminders about the positive values of land/open space/wilderness. People need to understand the linkage between riparian buffers and water quality. I would think that the government could partner with the talent of colleges and university programs to educate the masses. There needs to be a more organized/aggressive effort to encourage people to embrace the outdoors and to support the land/sustainability of the land. • Government organizations/restructuring/promoting cohesiveness – I think there should be some heart to heart discussion about creating teamwork/vision between the Forest Service, the Park Services, the Land Management Bureau, and Fish and Wildlife Services. If there is going to be a national dialogue about conservation in America, the individuals within these departments need to be willing to work together. It seems that the visions of the Forest Service could sometimes go against visions of the Fish and Wildlife Services. One groups “vision/role” could hamper/take away from another departments. If these groups are unable to work together in a fruitful manner, why have these discussions? • Continue to Reward individuals/companies who choose easements. We face the reality that in order to encourage conservation - the private landowner plays an enormous role. I think that greater opportunities/creative economic & tax incentives should be given for small farmers, companies, individuals willing to put their land into an easement. With this said, I believe the government should make sure that organizations caring for easements meet national/state regulations. I would even suggest that open space easements should be encouraged within urbanized regions/near wilderness & national/state parks. Easements provide a great opportunity to buffer between open space and developed regions. • I would encourage the president to expand the national parks and designated wilderness areas. • Eco regionalism and wilderness corridors should be a priority within the focus of conservation/wilderness expansion. Within this topic, I would even suggest finding ways to create conservation routes to link different areas nationally. This will require compromise and willingness to work together. If government organizations are willing to work together, if easements are encouraged, if there are aggressive education efforts, and a variety of organizations like The Nature Conservancy can assist with data...I think there can be great progress towards conservation within America.

Could someone explain the negatives (Not that I'll agree philosophically, but I would appreciate the perspective) of ... 1. Educating the public about the positives that land and open space provide society 2. Encouraging different branches of government to work together in national parks and wilderness 3. The development of easements for private landowners 4. The expansion of national parks/wilderness 5. Developing wilderness corridors and an eco regionalism perspective to preserve wildlife. ex. The recently discovered Jaguar population in Arizona

The Siskiyou County Board of Supervisors is opposed to the proposed Siskiyou Crest National Monument and the proposed expansion of the Cascade Siskiyou National Monument on most of the area in California north of the Klamath River. { Link } Hearings were held and hundreds of people expressed strong opposition to this proposal. Only one person expressed support. -

Siskiyou_Crest_Monument_Proposal_05-18-10_1pm_Part_TwoSecretary" rel="nofollow" target="_blank">Link } At Congressional hearings, Secretary Salazar stated that they would not declare monuments against the will of the people. If he is true to his word, then these two proposed National Monuments are off the table for further consideration. Local residents are getting very angry and upset that this is being proposed. Klamath River communities down to Happy Camp are wallpapered with signs against the Siskiyou Crest monument. I am the Supervisor from this district so I can tell you that this designation is definitely not wanted.

Forests are one of our greatest natural assets. They help clean the air, naturally filter the water that millions of Americans drink, provide ample opportunities for recreation, and protect fish and wildlife habitat. Working forests are also an integral part of the economic vitality of many local economies. Substantial funding for the Forest Legacy Program to meet needs across every state and territory will assist private forest owners to keep forests intact, healthy, and resilient, ensuring they continue to provide multiple natural resource benefits. This idea was originally posted in the Private Lands Conservation category where it had a total of 50 votes.

Our nation's heritage of public lands is a national treasure. Ample funding to acquire and protect key inholdings and expansion areas throughout our national parks, forests, trails, refuges, wilderness and BLM areas as well as grant funding for state and local parks is necessary to protect the integrity of these special places. Funding for this purpose comes from the Land and Water Conservation Fund and has been low and inconsistent for many years. The solution is full and dedicated funding of the Land and Water Conservation Fund. This will ensure that Americans will have greater opportunities to enjoy outdoor recreation, wildlife, natural settings, and historical and cultural sites. Consistent and reliable full funding of at least \$900 million annually, as authorized by Congress, would fulfill the goals of the program and protect the American outdoors for future generations.

(cont.)

Once these historic sites are gone, they cannot be replaced. Battlefields and other Historic Sites are a part of everyone's Heritage. The preservation of these sites also supports the environment as in most cases the land is kept as it was or restored to its historical date.

If there is one thing that our government deserves credit for in the past, it is creating (in 2006) the enhanced tax incentives package for conservation easement donations. These incentives have greatly accelerated the win-win movement to place family farms and natural lands under the protection of a conservation easement. These incentives have provided landowners with moderate or low incomes an opportunity to reap some financial benefit from giving up their development rights in order to save the conservation values. But the real winners are the public and the federal government because the cost to protect natural lands is negligible and there is no on-going cost to keep it protected -- the privately funded land trusts perform this stewardship in perpetuity. I fervently implore Congress to extend, and make permanent, the enhanced tax incentives package.

I support having multiple venues for serving our country. I'm familiar with Americorps serving nonprofits, but didn't realize they also benefit public lands. At this time in our history, we need to place more emphasis on serving a common good -- that concept is all but lost. I'd love to see that effort directed to environmental stewardship.

has proposed a way of implementing this idea that will directly help public parks. I believe, though, that bringing recycling into our public life is necessary to promote cleaner water, air and land. Reusing resources (by recycling) reduces our need for natural resources -- this will indirectly benefit our public lands. All our environmental issues are interrelated. I'm astonished by how much we throw away (and waste) in our workplaces, restaurants, and other public areas. Recycling in these settings will increase household recycling as well.

Ohio tax forms already have a provision for donating all/part of a refund for conservation and wildlife protection. I like this idea and am voting to promote it.

I agree; supporting the American Family Farm and Ranchland Protection Act, H.R. 3050, is of paramount importance.

Bring back the Landowner Incentive Program that was started during the last administration. The program provided funding to states to build technical provider expertise and financial incentives to private landowners who voluntarily restore habitat for priority at-risk fish, wildlife and plants.

Build and promote an after school program in schools that involve school-aged children in active learning about nature and the outdoors. Partner with and provide subsidies for underserved children to attend local nature centers, natural areas, etc. and bring in experts to the school to lead activities that encourage inquiry-based learning about wildlife and the outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

I think your view of these plans is in the minority. Are State Wildlife Action Plans perfect? No. Will they get better during the revision process? Absolutely. To have a comprehensive wildlife plan in every state and territory is a giant leap forward. I suggest you stay engaged in the process and work to make Florida's plan better. I know the staff that were involved in developing the Florida Wildlife Action Plan and they are hard working, have high integrity and would be responsive to your concerns.

the State and Tribal Wildlife Grants Program provided the funding to develop state wildlife action plans and now to implement those same plans.

Get those kids out on some bikes, they will love it. It's a great way to spend quality time together for families as well as learn about how to enjoy the outdoors and be responsible for your foot print. Great OHV communities out there to help the little ones learn to enjoy and be responsible

Hunters and shooters pay an 11% excise tax on guns and ammunition (anglers also pay a fee). These revenues are collected by the federal government and used as a dedicated source of funding (trust fund) to support the management of game species. How about expanding this fee (but smaller) to other outdoor recreation products such as tents, hiking shoes, bird seed, bikes, binoculars, snowboards, etc. and then using it to support conservation of all wildlife.

I like the idea of assessing a fee for developing undeveloped lands - a development impact fee. A parks and green infrastructure bank could be established.

In 2005 Congress required each state and territory to develop a comprehensive wildlife conservation strategy (state wildlife action plan). These plans identify at-risk fish and wildlife and their threats and the conservation actions needed to conserve species that may be headed towards future endangered species listing. The plans were a collaboration of state, federal and private conservation interests and each plan was designed to meet each state's specific needs. Dedicated funding is needed to implementation and revision of the plans and to help ensure they can be used in a regional contexts (e.g. landscape conservation cooperatives). More than 6,200 organizations that are part of the Teaming With Wildlife coalition support dedicated funding to implement these plans.

I don't think a small user tax would deter most who buy outdoor products. The return on the investment would be substantial. I think the tax could be on a sliding scale so the more expensive products would have the lowest percentage tax.

Lest we forget: The ground on these battlefields was soaked with American blood!!! Would you build a McDonalds on the cliffs overlooking Omaha Beach??? How about a Walmart??? What kind of American would even propose developing land on which American soldiers and civilians fought and died??? It is unfathomable! Yet it is happening now. Please protect this hallowed ground.

Discussion Question 1

Written & Online Comments

(cont.)

the beauty of state wildlife action plans is that most states collaborated closely with private landowners such as farmers and ranchers to create their plan. We can not sustainably conserve wildlife on public lands alone, we need incentives that help private landowners meet their business and conservation objectives.

Multi use trails can work. All parties must realize that they have enjoyment of the forests as their goal. If everyone behaves responsibly, hikers realize that they do not own the trail, bikers need to slow down when encountering other users and , motorcycles and 4 wheelers be aware of everyone else. The system can work. More mountain biking/ multi use trails are a benefit.

The creation of a Buffalo Commons National Park is such an obviously sensible idea that it deserves the backing of everyone who sees what has been happening to the mid-section of the country and its people. There are more who do see and understand because of the Poppers.

As a current student of the TMNP I am impressed with the varied curriculum, knowledgeable speakers and compassionate team of instructors. If more adults were aware of the opportunity awaiting them through this program they would be just as inspired to volunteer their time and efforts to the natural wonders in this state.

America's Great Outdoors should place a high priority on protecting, reconnecting, and restoring aquatic systems. Collaborative efforts and partnerships with state and local agencies can produce valuable tools to protect our streams and rivers. We must fully understand the impacts of oil shale exploitation to our water and agriculture before we even begin to consider commercial oil shale leasing. Oil shale is a fuel of the past, and is a dirty fuel with serious impacts to water and wildlife.

BLM should implement its authority to establish Wilderness Study Areas (WSAs). The Federal Land Policy and Management Act of 1976 directs the BLM to inventory and study its roadless areas for wilderness characteristics. Since 1980, Congress has reviewed some of these areas and has designated some as wilderness, and released others for non-wilderness uses. This effort should include giving the BLM authority to establish new WSAs and to protect the wilderness characteristics of all WSAs. Hundreds of thousands of acres identified by the public and the BLM as worthy of wilderness designation have been leased for oil and gas development, and they deserve meaningful protection.

I don't see how a business being able to claim equipment purchases and capital improvements is a subsidy. This is one way that the federal government can actually help by rewarding the creation of economic development by reducing the amount of money it confiscates from businesses and individuals. As for roads and trails: Fine, don't maintain them. There are plenty of us involved with off road groups, hiking clubs and others that have been maintaining the trails and roads that we use for many years. Projects like this usually end up being a lot of fun for everyone involved and they provide the users of these areas with a real sense of ownership and responsibility. As long as the Park Service wishes to have visitors, they will accommodate those who visit.

Discussion Question 1

(cont.)

OHV recreation is a family oriented activity that allows for father/son, mother/daughter, husband/wife to spend quality time outdoors. Too often OHV recreation is defined by the renegade few who behave irresponsibly. The reality is, every group, be they OHV or Environmentalists have that "5%" that causes problems. We should not all be punished for the actions of the few, this has gone on too long. Millions of Americans responsibly enjoy motorized recreation on public lands and this right and privilege needs to be continued and enhanced. OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. It is a healthy family activity and provides a great opportunity for families to "get away from it all," and to experience the great outdoors together, away from cell phones and television sets. We, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHVers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. There's not a time we go out that we don't bring back more trash than we generate ourselves. We are constantly maintaining the areas we ride in. OHVers are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. ATV and off-highway motorcycle riding encourages and promotes physical fitness, as does mountain biking. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors. This is of particular importance to us so that our parents and grandparents are able to go out and see these lands as well, they cannot hike in and can't ride horses/don't own them. Please make sure that any and all future legislation regarding conservation of land takes into full account and involves the OHV community to ensure that our rights are considered and enhanced, not trampled upon.

The outdoors are a great classroom for young people to learn not only about the natural world around them, but also leadership skills, integrity and personal responsibility. There are many organizations, like 4H, Scouting and the YMCA that offer programs of this nature. Definitely worthy of support.

There are two ideas here and they should probably be separated. The scientifically managed harvest of timber is something that is both needed and sustainable. The ESA is a different issue. While the goal is laudable, it needs significant reforms that protect private property rights and prevent the abuse of the law.

This should be expanded to include cultural sites, as well. Things such as historic buildings, bridges, etc. It's relatively easy to geotag photos and a program like this would be a good way to introduce students to arts, as well as the use of GPS and computer technology.

Discussion Question 1

Written & Online Comments

(cont.)

This sounds like a great program and one worthy of being promoted. Getting young people out and into the backcountry is something that always has lasting positive effects. It's unfortunate, however, that there are those who would use this as a means of promoting their narrow-minded, one size fits all version of public land management. This sounds like something that would be a lot of fun to do and would encourage families to spend time together in an outdoor setting.

(Note, I do not proclaim to be an "official spokesman" for RMSSN). Thank you for your thoughtful questions back and sounding interest in the work of RMSSN. As for our broader mission in collaboration with the National Science Foundation, we are the pilot program for what aims to be a 21st century response to increasing calls for ecological literacy, especially amongst a burgeoning youth population. Over the course of the week, we learned about how to deliver effective policy addresses that unite rather than divide demographics, how to accurately chronicle and observe changes in natural environments from systemic forces including but not limited to climate change, human disturbances, insect infestations, etc. However, the most organic lesson gained from the five days of the actual Summer Academy and of RMSSN over the coming weeks and months would have to be the passion, the immediacy, and the stirring of an ecosystem almost wholly based on environmental leaders. Our ranks did include the likes of wildlife management and conservation biology majors, but also included fine arts and environmental studies-English majors such as myself. As for the focus of accomplishments in the Rocky Mountain region, yes we aim to confront and resolve the issues of pine bark beetle infestation, near-epidemics of forest fires, related climate-change induced developments, and human development disturbances through a broader leadership and knowledge base. However, our Academy has a range of students from California all the way East to New Hampshire and including four Mexican students to form a truly international delegation. One of the goals of RMSSN is to begin confronting and tackling environmental issues on a more national and international level, too, so we could become ultimately a global "human ecosystem." If you are finding yourself with more questions or curious about more of the plans and goals of RMSSN, feel free to check out our main website at { Link } Thanks for your comments and I look forward to more commentary in the future.

This might seem too obvious, but need to be said. Money used for the preservation of wild lands and wild water resources can not be better spent. They become, over time what people and wild life together seek out.

I would like to see the mineral development restrictions addressed so that oil & gas development and ranch protection can coexist thru this program.

I would like to see the mineral development restrictions addressed so that oil & gas development and ranch protection can coexist.

The Texas Master Naturalist Program: A program model for developing a corps of natural resource volunteers aiding in the conservation, education, management and research of our local public lands. The short supply of dedicated and well-informed citizens and volunteers is often cited as a limiting factor for community-based conservation efforts. The Texas Master Naturalist™ program works to address this need by developing local corps of “master volunteers” to provide service dedicated to the beneficial management of natural resources and natural areas within the volunteers' own communities for the State." Communities and organizations across the state rely on these skilled volunteers for implementing youth outreach programs; for operating parks, nature centers, and natural areas; and for providing leadership in local natural resource conservation efforts. In addition, private landowners depend on the expertise of these volunteers to help them gain a broader scientific understanding of the ecology and management of their biological resources. This partnership among the Texas Parks & Wildlife Department, Texas AgriLife Extension Service and over 300 local partners has resulted in a unique master volunteer organization. At the state level, the organization is directed by two program coordinators and a steering committee responsible for providing training guidelines, program marketing and promotion, curriculum resources, and advanced training opportunities for the chapters and their volunteers. At the local level, chapters consist of our trained volunteers aided by personnel from the partnering agencies as advisors and partnerships with additional community organizations sharing our mission. For an individual to gain the certification and designation as a “Texas Master Naturalist,” he or she must participate in an approved training program with a minimum of 40 hours of combined field and classroom instruction, obtain 8 contact hours of approved advanced training, and complete 40 hours of natural resource-related volunteer service—all of which is provided through local Master Naturalist chapters using guidelines of the state program. Upon enrollment into the initial training program, trainees have a maximum of one year in which to complete their 40 hours of volunteer service and 8 hours of advanced training. To retain the Texas Master Naturalist title during each subsequent year, volunteers must complete 8 additional hours of advanced training and provide an additional 40 hours of volunteer service coordinated through their local chapter. Founded with the first Master Naturalist chapter in 1997 and officially established as a statewide program in 1998, the Texas Master Naturalist™ program was the first of its kind. Since then, the program has grown from just four chapters and 150 volunteers in 1998 to 42 chapters and over 6,300 volunteers serving Texas' diverse communities across the state. To date, Texas Master Naturalist Volunteers have provided over 1.22 Million hours of service valued at more than \$25.6 Million. TMN volunteers have impacted more than 135,000 acres of habitat; developed and/or maintained some 1,100 miles of trails; and reach more than 200,000 youth adults and private landowners annually with outreach and education efforts. The Texas Master Natrualist Program has become a model program by which 25 other states have come to develop. Just think of the national impacts if agencies had the ability to implement these programs in every state of the nation!

Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict.

(cont.)

How about if we look for people to head our agencies who have character and are not out to promote an agenda. I don't want a leader of either the Sierra Club or Weyerhaeuser Corp placed in an agency to promote an agenda.

I agree, wonderful idea. Lots of current and proposed management policy denigrates massive expanses of wonderful land into lands that few will be able see or enjoy. Most of these areas should be open to mechanized recreation, such as OHVs and mountain bikes. Where I live, the trails created and used by OHV users are almost always also used by other groups as means to access otherwise inaccessible wild lands.

I agree. Don't spend money you don't have to buy new properties. I have another scandalous idea. Go back to cutting timber. Use that money to pay for federal programs. Did you know that when National Forests were set aside, they were expected to pay for themselves?

I concur. Having and keeping and improving places to learn about nature close to home (i.e. easy access) is critical. Our national parks just don't serve that role in most urban areas. Urban park systems and natural areas and nature centers need help to keep the majority of our public connected and benefiting from contact in nature.

I have a family of 5, my wife and I and 3 kids. We very much enjoy the outdoors, America is a great country and to really appreciate it you need to get out and explore it. We just visited Yellowstone, Mt Rushmore and Zion as part of our summer vacation. In addition we love to ATV in the Glamis area with other families. This is a chance for us to stay close to our kids as they get older and to keep them interested in family activities. Taking away this great family fun would leave us city bound. I agree with balance and love the environment that we live in, but a very few individuals should not be commanding the rights of many many more..

I like this idea. This could also serve as a type of apprenticeship / job training activity for anyone interested in pursuing a career in Conservation. Do you envision this program to be a sort of twenty-first century version of the Civilian Conservation Corps or something else?

I would like to get everyone to encourage the "TREAD LIGHTLY" . This would help immensely. When we are on the trail I encourage my family to pick up trash others have left.

Lots of other people enjoy (or should enjoy) the outdoor opportunities that logging areas provide. Anyone who has actually visited and spent time in a well-managed forest through the various stages of cutting and regrowth should know the great bounty of nature. Throughout the stages there are fantastic opportunities for wildlife observers, hikers, hunters, botanists, ecologists, OHVs, and myriad other groups. Literally a perpetual wealth of natural, recreational, and economic potential. Read between the lines, here. Again is proposing shutting huge groups of people out of public land, and denigrating huge tracts of valuable natural resource to narrow or non use. Again, the goal of this initiative is to connect people to the outdoors. We need constructive ideas in that vein, not counterproductive drivel.

Somebody explain these subsidies. I've never heard of them. Recycled paper costs more to make. There would be more on the market if people would pay for it.

Teachers interested in a balance approach to environmental education should research a program called "Project Learning Tree".

These battlefields are hallowed ground where many Americans fell. If these spaces were in a foreign country, no one would argue the need to preserve them. Preserving CW battlefields not only reserves this sacred space, but also preserves wetlands, forests, and open space, which is an environmental benefit.

This might be a good approach, but I believe it would be over used by the ultra greens to remove lands from public use. Wise use, (Conservation), is a superior concept to no use, (Preservation).

We have a moral responsibility and duty to preserve the battlefields of the Civil War. This war more than any other conflict defined us a people and a nation. We owe it to all who fought in this conflict, no matter which side, to preserve these hallowed grounds and the memory of the sacrifices made by all. Too many children find history a boring subject to read about. I know my kids did, but not long ago I took my oldest and her kids to Gettysburg, and the reaction emotionally was unbelievable. I've heard many stories like mine and they almost always end with the kids, and adults, eager to learn more about the Civil War. What a waste if we loose these great places of conflict and history. It must also be remembered that these great historical parks are also a place for fanmilies to spend time together, of financial benefit to the local towns around them. We must move to save these historical sites as soon as possible. They are good for the economy, preservation of land/nature, and a promise that our history will live on.

Whatever means are used to educate the public, we must avoid the desire to use it for propaganda. Let people hear both sides of issues, without name calling. Then let them decide for themselves. It is clear I very much disagree with the two previous commenters, but I won't help anything by calling them names.

Absolutely! there are Master Naturalist programs that exist in other states. The Texas Program presents good statistics on what each and every state could be doing to conserve natural reoursces while reconnecting people with the land and their natural resources in their local communities. To find a Master Naturalist program in your local state check out ANROSP.org for member programs. Just think of what could happen when program adoption takes place in every state of the nation!

(cont.)

ATVs, 4x4s, dirt-bikes, Mtn-bikes horses and hikers, snowmobilers, x-country skiing and snow shoes etc.etc all need a trail network Most of these activities would prefer trails be designed for their purpose and visitor conflict between activity types are common place. Land managers just need to become more transparent with their decisions regarding access, restrictions and limits. Ratios showing comparing recreational opportunities available within each planning area to participation rate demographics for each activity would provide a helpful tool for planners and highlight the available trails for visitors. Rivers should be treated the same as trails. Motorized watercraft, paddlers, anglers and swimmers all desire to recreate and travel in these waterways causing obvious potential conflict.

I am also in agreement that OHVs are too loud for many trails...but the idea of making them more quiet, and more stealthy, will also make them more dangerous for bikes, Horse, and hikers. I would rather know if an OHV is about to round a blind corner when I am hiking with my kids or biking with friends. OHV riders deserve opportunities to enjoy the outdoors, just not everywhere and separated from hikers.

Please look at the commodity prices for Timber over the past few decades. Prices for timber have not kept pace with inflation even during the building boom. The Timber industry is still viable, but harvesting more trees on public land will not help timber prices during a building slump or be necessary as we move toward a paperless society. Some sections of our forests should be dedicated to non-use values while others should be open to varied types, and amounts, of recreation while other areas should provide for sustainable forestry.

Protecting the 'surroundings of preserved assets' is simply asking the agencies to dictate use on the private land surrounding the parks. NEPA should include how agency planning will impact (directly and indirectly) the landowners as well as how local land development might impact the resource. The expansion of NEPA beyond the boundaries of the park should look both ways; NEPA should include the impact the park has on local landowners as well as what local landowners might have on the park.

Turning wildlife conservation areas into free-for-all zoos, is not the answer. I am comfortable with being limited from wildlife conservation areas, so long as the reason provided for this conservation is transparent to the public. If wildlife-dependent recreation demand is pent-up in this area, registered tours conducted by the fish and wildlife service at the appropriate times and in the appropriate places, should minimize wildlife disturbances while offering those eager to visit this area the desired opportunity.

Agencies should only be involved with Access to public lands should when access is a necessity ,not simply a "convenience". The inability of easy access to every square inch of National park has more often been a benefit to the resource.

Discussion Question 1

Written & Online Comments

(cont.)

Agree, there are a few areas in my neck of the woods (NW Montana & N Idaho) that have been proposed to be wilderness and are managed as potential wilderness, such as the Mallard-Larkins (Idaho Panhandle and Clearwater NF) and Scotchman Peak (Idaho Panhandle and Kootenai NF)- I think most people support Wilderness designation of these areas and its a known fact that Wilderness designation would increase awairness and recreational use - many people love being in a wild & primitive area - they would come & local economies would benefit.

Allowing easy public access to every corner of public land from every direction is not an agency directive. Often the difficult to access areas are the best conserved sites within a park. Reducing access routes to every site within a park might be the best way to conserve these areas from recreational overuse.

As a biker, I think access to Wilderness is a bad idea. Having areas with no bikes is just like having some Mt.bike trails without ORVs. HOWEVER, Wilderness designation should consider the impact designation has on bikes and fish stocking. Wilderness (and Wild and Scenic)designation should be forced to consider the negative consequences of designation under a public NEPA process. Designation is often marketed to the public as a 'positive', while the downside of designation is too often ignored and not considered during public and congressional reviews. Public agencies should be mandated to consider and publicize the negative consequences of special area designation.

Bicycles should not be allowed in any natural area. They are inanimate objects and have no rights. There is also no right to mountain bike. That was settled in federal court in 1994: { Link } . It's dishonest of mountain bikers to say that they don't have access to trails closed to bikes. They have EXACTLY the same access as everyone else -- ON FOOT! Why isn't that good enough for mountain bikers? They are all capable of walking.... A favorite myth of mountain bikers is that mountain biking is no more harmful to wildlife, people, and the environment than hiking, and that science supports that view. Of course, it's not true. To settle the matter once and for all, I read all of the research they cited, and wrote a review of the research on mountain biking impacts (see { Link }). I found that of the seven studies they cited, (1) all were written by mountain bikers, and (2) in every case, the authors misinterpreted their own data, in order to come to the conclusion that they favored. They also studiously avoided mentioning another scientific study (Wisdom et al) which did not favor mountain biking, and came to the opposite conclusions. Those were all experimental studies. Two other studies used a survey design, which is inherently incapable of answering that question (comparing hiking with mountain biking). I only mention them because mountain bikers often cite them, but scientifically, they are worthless. Mountain biking accelerates erosion, creates V-shaped ruts, kills small animals and plants on and next to the trail, drives wildlife and other trail users out of the area, and, worst of all, teaches kids that the rough treatment of nature is okay (it's NOT!). What's good about THAT? For more information: { Link } .

Discussion Question 1

Written & Online Comments

(cont.)

By claiming "They know better than anyone" is why this idea is ridiculous. Environmentalists groups are also lobbyists like the OVH access groups seeking to force their agenda on how public lands are managed. Although I agree with many of their proposals, the balance required between use and conservation is best handled through an objective coordination of the needs and values associated with all sides of each argument. In place of embedding lobbyists inside of an agency, consider a more transparent land management agency that has open accountability.

By increasing the 'productivity of the parks' through better management of the resources, agencies (like farmers and everyone else) can supply more output (conservation, types of recreation) with less. There exists a mathematical optimum balance between recreational use and preservation. In place of seeking a political solution for every management plan, agencies should be looking to maximize public benefit by zoning public resources to provide the optimum balance of visitor use and preservation. For instance, providing public access to delicate headwater streams is not a 'too many people problem' it is a poor management problem.

For those urban dwellers...this seems like a good idea. HOWEVER, If you are at a parking lot with 20 visitors a week in a rural area, the idea of a few different types of bins is absurd. What will happen is that no trash can, or pick-up, will be provided making the trash problem far worst. Instead of a LAW, the idea should be a goal or recommendation, not a mandate.

Full, permanent funding of the the HPF would cement a linkage between conservation of both natural and constructed resources which have major implications for reduction of energy use and decreasing negative impacts on the environment. Re-use of all existing buildings, and specifically historic ones, garners their embodied energy while reducing landfill, and construction-produced greenhouse gas emissions. The America's Great Outdoors initiative would do well to partner these allied interests to the betterment of our holistic environment!

Here I am, the future generation for which parks have been designated. Since these are My parks, Only My conservation desires and My selected activities should be considered when establishing management policy. It might be easiest to have all land managing agencies report directly to Me in order to maximize the benefit to Me. MY parks should be protected and conserved for My benefit by keeping everyone else out. No one should be granted access unless they are fixing My trails and My waterways, or protecting wildlife for MY benefit. Trails and waterways should be designated specifically for MY activity, and access to all others should be prohibited until I arrive to enjoy My park. More taxes should be collected from all others so that My parks remain in good shape for My purposes.

I agree that moving productive lands into non-productive(non-taxable parks) is often detrimental to the tax base of local communities. A county should prioritize maintenance of primary roads over access roads to federal lands; there is nothing wrong with this. If access roads are only critical for access to Federal parks, the road maintenance should be turned over to the federal agencies by withdrawing local funding.

Discussion Question 1

Written & Online Comments

(cont.)

I am for multi-use, but not for multi-use of every inch of public land. Certainly we do not want boats in swimming areas or ORVs in playgrounds. Agencies should provide a diversity of opportunities by varying access limitations by area and types of activity. A diversified approach to management policy can provide something for everyone. The demographics of an area - along with available inventory- should provide the legal basis for access limitations and recreational zoning.

I don't think an aggressive approach is going to get the desired result. By far, the majority of off-road people are very conscious of maintaining responsible forest use and are aware of keeping the environment safe and not damaging it. There are a few though that don't follow the rules. One of the most effective ways to maintain responsible use of public lands is to continue to post the rules and laws on the public land signage as you enter the public lands and at trail heads. The presence of rangers always helps keep people in line, but an over abundance of rangers, in my opinion, would be very costly and be applied only to a small minority of abusers. When the Forest Service OHV co-ordinators establish contact with local 4x4 clubs and get them involved with trail maintenance and volunteer work and forest maintenance, then the clubs themselves teach their members to tread lightly and be responsible users of public lands. This has been very successful in many areas of the country. You would be surprised how many people volunteer to help keep their public lands open and cared for.

I explored the great outdoors with my father and grandfather while learning to hunt and fish. My daughters and now my grand kids explored and appreciate the great outdoors while riding a motorcycle on U.S. and WA state public property. The enthusiasm and enjoyment experienced by our kids could never be matched by a more sedate and conservative adult activity like just walking around. Kids need to be excited about getting out and doing something and orv use gets them out there and away from Madison Avenue things like Wii and game boys. How many families can enjoy a long weekend doing the same activity together week after week for minimal cost close to home and not see or hear a TV or monitor of some type? Share the great outdoors, that's what we do while also being good stewards of public property at the same time.

I think this is a very reasonable request. Most all green sticker and street legal vehicles are required to come with a approved spark arrester and should be made quiet enough to not be a nuisance.

Discussion Question 1

Written & Online Comments

(cont.)

In response to comment #8: I agree that hikers are responsible for some of the multi-use trail problems. I am a hiker, x-country biker that spent years riding a dirt-bike. I think each activity has its place and because of the variation in speeds at which they travel are better suited to designated single-purpose trails. This will likely result in fewer hike, bike and Off-road trails, but a safer and better experience for each user type. I do not agree that because an activity moves more quickly, it deserves a larger area. Numerous ways Off-roaders and mountain bikers can improve trail use is by improving the traffic on existing trails. A: One-way trails (especially down hills single track) would greatly limit trail near-misses. B: Maximum speed areas and unlimited speed areas could improve multi-use trails, especially near access areas. C: Trail design associated with curves, steps and banks can physically limit access for some activities; these are most effective when located near the trail head. Each activity should have a place in the outdoors, but only by limiting access to foot-travel only areas. Less controversial to those on this sight is the idea that water trails require limitations. Certainly limiting PWCs from fishing areas would benefit fishing. Also keeping paddlers from swimming areas might be less dangerous to those using a rope swing. This all comes back to allocation of use for various uses. From timber harvests to nature preserves, the agency is mandated to provide recreation, conservation and sustainable natural resources. These multi-uses can only be provided by allocating the resources to a variety of uses with a variety of use patterns.

It always surprises me how little people know about the Civil War, how little it is really taught, how it is really easy to forget about our country's past. The same is true of the Revolutionary War. I visit CW battlefields and have an emotional response at each one. They need preservation!

Mr. Moffatt: Overuse of riparian areas is an ongoing problem. here are some links for the 'showmez' { Link } { Link } { Link }

Discussion Question 1

(cont.)

Natural areas are wildlife's home. Wildlife should be given our top priority, because they can't protect themselves from us. In particular: Bicycles should not be allowed in any natural area. They are inanimate objects and have no rights. There is also no right to mountain bike. That was settled in federal court in 1994: { Link }. It's dishonest of mountain bikers to say that they don't have access to trails closed to bikes. They have EXACTLY the same access as everyone else -- ON FOOT! Why isn't that good enough for mountain bikers? They are all capable of walking.... A favorite myth of mountain bikers is that mountain biking is no more harmful to wildlife, people, and the environment than hiking, and that science supports that view. Of course, it's not true. To settle the matter once and for all, I read all of the research they cited, and wrote a review of the research on mountain biking impacts (see { Link }). I found that of the seven studies they cited, (1) all were written by mountain bikers, and (2) in every case, the authors misinterpreted their own data, in order to come to the conclusion that they favored. They also studiously avoided mentioning another scientific study (Wisdom et al) which did not favor mountain biking, and came to the opposite conclusions. Those were all experimental studies. Two other studies (by White et al and by Jeff Marion) used a survey design, which is inherently incapable of answering that question (comparing hiking with mountain biking). I only mention them because mountain bikers often cite them, but scientifically, they are worthless. Mountain biking accelerates erosion, creates V-shaped ruts, kills small animals and plants on and next to the trail, drives wildlife and other trail users out of the area, and, worst of all, teaches kids that the rough treatment of nature is okay (it's NOT!). What's good about THAT? For more information: { Link } .

YOU are not welcome in MY Park, and congratulations on you 1,340th post to this site! Public land agencies are mandated with the dual mission of proving land USE and PRESERVATION of resources. Since their governing statutes are in conflict, the conflicting opinions on this site should be of no surprise. The 'public' consists of everyone from mining companies to conservationists , or from snowmobilers to birders; there is no singular solution that will satisfy ALL citizens. Those uninterested in hearing solutions involving limiting their own use, or providing varied levels of impacts for different areas, are just as self-centered and closed minded as those asking to strip-mine the parks to supply cement or those spiking trees to protect old growth. The point of this post was to mimics most peoples 'ideas' on this site. Most posts argue for more land management under their own values and less under the values of 'others'. Just like YOUR 1,340 posts.

One great way to improve water quality within the parks is to limit recreational access to headwater streams and small tributaries. Creeks and tidal marshes are being overused by paddlers who create erosion on the riverbanks and crush tidal marshes. Overuse of the gravel riverbeds destroys the spawning habitat critical to fish regeneration. Increased recreational access to these areas does not benefit the downstream water quality nor the fisheries. Here is a great place for agencies to start protecting water quality.

Discussion Question 1

Written & Online Comments

(cont.)

Providing an atmosphere at home, school, and in the community that fosters a connection to the outdoors is a place to begin. Supporting existing youth groups such as scouting and wilderness 4-H, and church programs with a bent towards back country experiences, is a place to begin. People are so busy making ends meet the necessary adult leadership to actualize the experiences is getting fewer and further apart. If the federal and state government would implement volunteer tax incentives (beyond the current mileage and expense deductions), more people could afford to not work second jobs or cut back on overtime motivations, or even take time off.

comment # 4. As genius as you sound, could you tell me and others here, people who have limitations how without ATV we could go and enjoy the outdoors? I as example have broke my spine and both legs on car accident years ago (lucky me I still walk with my own feet but can't hike nor practice martial arts etc I used to) and so ATV have been my way to up to mountains to enjoy same nature I used with mountain bike and with hiking. It seems this is another good example how the bad apples damage the reputation of good ones as there is more riders with common courtesy than the huligans / racers with loud pipes. If the trails are closed, then close them from all, no hikers, no bicycles nothing that involves human being.

Some bikers do travel too quickly and some trail systems would be better to remain foot-travel only due to trail design, soil conditions and heavy use. However their is a place for bikes on dirt roads and on single tracks. With off-road bikers near 20% of the overall population and hikers at 50% of the population, it would seam that around 40% of all the public trail systems should be open to off-road cyclists.

SOME trails should be open to bikes, but not ALL trails. Visitor conflict as well as ecological damage is sufficient to LIMIT access to some trails and some areas, but bike should be allowed on many trails including single track. Those who argue that bikes no more damage than hikers, have not biked on steep trails, or during wet conditions (which ar both loads of fun). Agencies must balance access with conservation and all visitor interactions. Agencies should use demographic data to insure sufficient trails are open to accommodate mt. bikers as well as hikers, horses,OHVs and wildlife.

The Clean Water Act considers siltation a pollutant and therefore the legal argument to minimize erosion by stopping recreation in sensitive areas already exists. Recreation has been documented to cause significant amounts of erosion at access sites, destabilized banks and trampling/hardening of the vegetative buffers along headwater streams and wetlands. Many land managers turn a blind eye to recreational impacts instead of closing down some streams to access, or having to build excessive crossings. Often a simple solution might be to just closing down sensitive areas after periods of heavy rainfall.

Discussion Question 1

Written & Online Comments

(cont.)

The idea of providing access to let everyone enjoy the outdoors should be available to everyone. Whether it be hiking, mountain biking, bird watching, horse back riding, flower gazing, rock climbing, ohv use....Why should someone be excluding the other? I am for responsible land management for ohv use. Many many families use the great outdoors to promote healthy family ties. Not everyone is a 'mad max' outdoors terrorist like what is portrayed by the close everything everywhere minded folks. Unfortunately areas are being closed down for ohv recreation in an alarming rate. The idea of 1 for 1 might seem drastic to some but consider what has been lost in the past couple decades. There is a green sticker program in California that pays for ohv opportunities to be opened and maintained. Responsible use means providing for and keeping areas open to the enjoyment of the masses not only for a few elitist who want to close/shut down opportunities for the average citizen. Thank you.

The long-term cost associated with managing public lands is not considered when new land is proposed as parks or forests. These costs should be presented to congress before any proposed designation becomes approved; the necessary funding should be approved and allocated up front. .

The non-profit, all volunteer, Arlington Outdoor Education Association owns and maintains the "Arlington Outdoor Lab" --- a 210 acre natural area in Broad Run Virginia that is used by 9,000 Arlington County public school children each year for their outdoor education and science classes. The 40 year public-private partnership has a long track record of success in getting urban and suburban children outside and connecting them to the natural world. Just google "arlington outdoor lab" or visit { Link } to learn more about this innovative concept.

The shoes, clothes, backpack, tent, and everything else you pack into nature is unnatural....so if you are really a naturalist go hiking naked and we will see how far you get and how much you enjoy it. As with most of these issues there are plenty of designated hiking only trails out there they just aren't the easiest to get to. You only want the ones you have to share for some reason. If you want to hike where you won't see any mountain bikes or OHVs I am sure you can find hundreds maybe thousands of places where you won't. Just step on those boots and start putting in the miles!!! After all that's what hiking is all about right???

The vast majority of National Parks, National Forests and wilderness lands are already closed to mechanized travel, thus leaving ample areas for hikers to have serenity without the noise of OHV's. In the National Forests, mechanized travel is limited to numbered established routes designated by the National Forest managers, and most of the hiking trails are distanced from the vehicle routes. I enjoy it very much to drive through the backcountry in a 4x4 vehicle and enjoy the wonderful forests we now have, and would like to see the mechanized routes stay open. I think multi-use of the forests are in the best interest of the public. Not everyone has the ability to hike and walk long distances to view our wonderful forests. The majority of the forest routes allow only street legal vehicles as it is, and must have DOT approved spark arrester mufflers. The OHV routes also require DOT approved spark arrester mufflers.

The Wilderness Act of 1964 is a wonderful tool for people to use to protect their very special places for them to enjoy today and for our children to enjoy tomorrow. President Obama signed the Omnibus Public Lands Management Act to protect 2.1 million acres across nine states and helped citizens to save wilderness for them to hike, hunt, fish, and enjoy America's Great Outdoors. More can and should be done. The President can ask land managing agencies for their wilderness recommendations, and pass those ideas along to Congress to act. Acting expeditiously will help stem the tide of loss -- 6,000 acres a day of open space disappears, according to Secretary Salazar. We need to pass along the gift of wilderness to future generations.

This is an excellent idea, and is an extension of the great work done by the Civilian Conservation Corps many years ago. The idea can be extended to the stabilization or scientific excavation of archaeological sites as well.

Wilderness appreciation should be taught in schools - there are so many who simply don't have a clue!

With all the laws protecting sensitive water areas, the BLM, NPS and USFS appear oblivious to the impact recreational overuse has on these sensitive areas. Landowners are asked to 'protect riparian buffers', while the federal agencies promote and encourage use of these areas by recreationalists (paddlers, anglers, hunters, bikers and hikers). Although OVH and bike use is prohibited in some areas due to water-quality concerns, the impact scouting paddlers and hunters have along steep-creeks and tidal marshes remain undocumented and ignored. Limitations on access to headwaters streams and tidal marshes would not only create more consistency in public land management, but would also end the hypocrisy that conservation over land-use is critical for wildlife habitat ...except when the special-interest access-groups wish to recreate.

Without spending a dime, Consolidation of the BLM, USFS and NPS bureaucracies would help get more rangers in the park and away from the desk jobs. Certainly by designation of an area as 'forest' v. 'park' would be sufficient in determining if the area could be timbered, set aside for wildlife or become an OHV park. The overlap in laws, rules and overhead associated with these departments is extremely wasteful and no longer necessary. Like our public schools need more teachers and less administrators, our public parks could be much improved by investing more money in up-keep of the resource with fewer rangers sitting behind a desk. We do not need more parks, they just should be managed more productively.

Individual must have the opportunity to personally experience and appreciate the natural landscape in their local community before they can become stewards and advocates of our nation's natural resources and parks at the larger scale.

I have been with the Master Naturalist program for 5 years now. We are constantly learning about the environment around us and passing on what we have learned. This is an excellent way to reach the public and especially school children. Raising awareness in our youth directs the future of this planet. If you come to appreciate your role in the environment, you will better protect that environment for the future.

Thanks for visiting the Tx Master Naturalist site! We all agree that education is the key. It is very important to make sure our children understand their role in the environment. The TMNP gives us a great way to educate both children and adults and I encourage you to get a program started in your state. Just last week I took 120 3rd graders on a nature trail and taught ecology. We make our school programs very hands on learning. We do the same with adults. We participated in an Earth Festival for Earth Day and are planning another for next year. We had 900 students from 2nd to 5th grade attend. Education, education, education!

A growing body of rigorous scientific research demonstrates positive effects of nature and outdoor activity on individual health and development (cognitive, social, emotional). At the sociopolitical level, Peace Parks are a successful global model for promoting conservation while resolving intergroup conflict abound (Ali, 2007, MIT Press). Scholars and their scholarly organizations can be key allies in this initiative. PLAN 1 -- INTERAGENCY COORDINATION: The Dept of Interior is to be congratulated for efforts thus far on the Great Outdoors Initiative. However, coordination with other agencies -- in particular, Dept of Education, NIH (NIMH, NIA, NICHD, NIDA), and NSF -- is critical to advancing this agenda. PLAN 2 -- PARTNER WITH SCHOLARLY ORGANIZATIONS: Govt agencies should support and consult with scholarly organizations (e.g. APA, ASA, NCA, APSA -- all in DC) that can (1) link govt officials to the experts who do vital basic, translational, and applied research and (2) work together to facilitate interdisciplinary research and its application. Examples of research to be used and scaled up include: attitudes and behavior change related to conservation, recycling, etc.; the restorative effects of nature, e.g. on attention, emotion, among the elderly, etc.; developmental impacts of exercise, interaction with nonhuman animals, etc.; organizational effectiveness of community groups; the Nature Divide" (socioeconomic disparities in nature access, environmental racism); strategies for reconciling conflicts among groups such as the "Wise Use" and "Green" crowds; and so on). PLAN 3 -- NEW, COORDINATED FUNDING OPPORTUNITIES: Interior and other agencies need to creatively pool, or at least link, funding opportunities for Great-Outdoors-relevant research, so that the overarching rubric is clear and efforts are coordinated and efficient (e.g. issue new multi-agency Requests for Proposals). Create an online clearinghouse for research related to this initiative so that the public, policy makers, educators, and researchers can find information and see novel connections among diverse research activities that all relate in some way to preserving and engaging the Great Outdoors. PLAN 4 -- SIGNAL LEADERSHIP FOR A NEW ERA: President Obama hopes this initiative ultimately will be regarded as comparable to Teddy Roosevelt's historic environmental policies 100 years ago. A few bold, unequivocating moves are necessary for him to own and lead real change. Without some clear, targeted, symbolic, binding action from the top, all of the above -- all sustained, intelligent, complex efforts -- will be for naught. The moratorium on off-shore drilling -- and re-assertion after the adverse ruling on it -- are a great example. A ban on wolf-killing would be another. Compensation is reasonable -- but efforts to eradicate one of the few remaining large predators that are grounded in 18th century mentalities and unsustainable lifestyles have no place in a 21st century conservation movement. President Obama, it's great that you have opened this discussion to all. But everyone can't get everything they want. Lead. Leave no doubt that we have turned a corner, we're going ahead, not back, and tell everyone who isn't on board get out of the way because whether we should ensure a sustainable future is not on the table.

Check out what the Bureau of Land Management has done to our supposed public lands. They were mandated to protect wild horses and they are demolishing them in favor of cattle. Our public lands are full of toxic mines that compromise our underground water systems. The land is leased out so cheaply that cattle ranchers and miners use our land instead of their own. In the meantime, despite laws already on the books, the BLM cruelly rounds up the horses by helicopter, running some until they drop--all at the taxpayers expense. The entire BLM should be closed.

I agree. The technology we have moves fast, and the government should keep up with it. The use of our public lands under the BLM is so badly managed its a disgrace. They need to look at input from independent, qualified individuals and they don't. Look at the horrible mess they have made out of the Wild Horse and Burro Act as they try to manage based on outdated, incorrect and sometimes purposely misconstrued facts to appease cattle ranchers.

I am going through the Texas Master Naturalist training and it is an excellent program. I am learning lots of information that I once knew and forgot as well as new information. I believe that every state should have such a program and the Texas program is a great model.

I think the system used on this website should be required for all elected officials so their constituency can vote per issue. In that way our elected officials will know exactly what their constituency wants and should vote in that manner on the hill. How the representative votes should also be obvious on their website so the people can choose the candidate that votes with and for the people instead of for campaign dollars.

It is impossible to understand the significance of the Civil War in our current time without preserving these historical sites for our children and grandchildren to visit. This portion of American History is barely glossed over in our schools today. The understanding and appreciation of the sacrifices that these men and women made for their freedoms are lost on today's youth. Preserving these sacred sites will not only demonstrate respect for their heritage but also provide them with the opportunity to touch, see and feel the past.

The enhanced tax incentive can make all the difference in the world. It represents significant tax savings, thus significant incentive for a landowner to donate a conservation easement. As a land trust we could be buying easements but donated easements make our budgets and thus our impact go farther. In general we try to appeal to landowners interested in conservation as their first priority. With the additional incentive offered by the enhanced tax incentive I can also pull in landowners who are somewhat committed to conservation to whom the tax savings appeals. I think this is a good move for us collectively to make as a conservation community as, I believe, a large part of the future for all of us involves doing conservation work on private lands in lieu of public land management. Northern Prairies Land Trust

Subsidize Scouting !!!!!!!

Those "dead sticks" 1. provide shade and housing for new growth 2. prevent against erosion 3. will NOT start another fire

We can't just let fire burn wherever it wants. I think it IS being managed responsibly.

What a great idea! I recently visited the National Heritage Museum, in Lexington, Massachusetts, which is showcasing exquisite photos of the 58 national parks taken by Quand-Tuan Luong, who traversed the country to get to all of them. The photos are simply breathtaking and give all who view them a sense of pause about our national parks and, by extension, all our public lands. Indeed, the photos serve as a reminder to us about what our national patrimony really is. More exhibits like this one are just what we need.

I find the fact that bicycles are lumped in with OHV users a bit misguided. I think that bicycles should be allowed into 100% of the places a horse is allowed. Bicycles have a considerably lower impact on the environment and the trail systems than horses or OHVs. To directly compare them to a horse bicycles weigh in at about 10 to 75lbs depending on the bike compared to a horse weighing in at around 1,000lbs. Bicycles use rubber tires to contact the ground, horses usually have ridged steel shoes to put considerably more weight down. When was the last time you had to step over or around bicycle poop? I think that in many cases bicycles should be allowed into the same areas as hikers. Not all hiking trails can facilitate bicycles but there should be an easy way for bicyclists to request access to a particular trail, possibly by submitting a video of them hiking the length of the trail, or a forest service employee should hike the trail. These should be processed in a timely fashion, ruled upon, and the signs should be updated. I would think that a trail designation could easily be changed in a 1-2 month period. To overview I think that bicycles should be removed for the mechanized travel restriction list and allowed anywhere that horses are allowed as well as being allowed on the hiking trails they make sense to be allowed on.

I agree, why do people who have never been and will never bother to even set foot on our forests, lakes, and streams get more input if any on the way they are used. I spend a lot of time in the woods near my home, I don't make any money off those natural resources but I greatly enjoy my time in them. There are also two things that often happen that really bother me. There has been a recent push to shut bicyclists out of the woods, many miles of trail that were previously open have been closed for no apparent reason. Secondly I also ride motorized dirt bikes which have also been getting shut out of the woods, I have no problem with these being managed. Montana had a great plan that allowed us to ride on certain days of the week and only during the dry season.

(cont.)

Under Section 319 of the Clean Water Act, states have access to Clean Water State Revolving Funds (CWSRF's) that may be used to upgrade local water systems but also to reduce nonpoint source (NPS) pollution. Low-interest loans are available to local governments, water systems, and qualified nonprofit borrowers such as land trusts. In some cases there have been 0% loans, and in other cases state agencies have obligations to provide "additionally subsidized" loans; this means that some portion of the loan is, in effect, a grant. For example, in Maryland loan applicants "undertaking an eligible non-point source, green infrastructure, water or energy efficiency improvement or environmental innovation project that does not have a dedicated source of revenue, such as a user charge system to repay a loan are eligible to receive up to 50% of the project costs as grant." (MDE) In other states, the rules may be different (?) Data on this is hard to come by, but it would appear that very little of the CWSRF funds are being spent on land conservation and restoration projects to reduce or prevent NPS pollution. On the front end, private entities, such as land trusts and watershed organizations, do not receive a formal mail solicitation to apply for CWSRF loans - as local governments do. In Maryland a few such loan transactions have been successfully completed, helping to protect the waters of the Chesapeake Bay and restore wildlife habitat lands, but such projects are little known. State agencies need to hear from land trusts and other conservation groups who can bring project proposals to their doors. We need to demonstrate demand for NPS project funding, shine a light on this resource, sit down with the agencies that have the Section 319 money, and work out some land conservation deals.

Battlefield land is the most valuable artifact of the American Civil War. Civil War Battlefields tell the story of the war: from the way people fought, to where they fought, and why they fought. Walking a battlefield where men fought and died defending what they believed in is an emotionally engaging experience, one that will cause people to find a personal connection and interest in the past.

We as Americans need to preserve Civil War Battlefields. It is important that future generations know about the struggle and the horrible cost of this war. They need to know that people of this time held their beliefs so high that they fought in war to defend them. I believe that most Americans don't know their own Nation's history. This is a very sad thing, we as Americans come from a long line of hardworking pioneers and trail-blazers. Some of these people were the first Americans to go somewhere or to accomplish something. Think of Lewis & Clark, Daniel Boone, Jedidiah Smith, and Samuel Morse. How can we know as a country where we are going if we don't know where we've been? We need to know the past in order to understand the future.

The 'NATURE' is now becoming aggressive than ever by showing her anger to us in her way of Cyclones, Tornadoes, Floods, etc. The first reason for this situation is global warming which is mainly caused by great reduction of green shade through out the world day by day by human being. The time has come to improve the green shade by at least doubling the shade. Every possible single square inch of the earth has to be covered by green ... BECAUSE ONLY GREEN CAN CONVERT THE ENERGY OF SUN IN TO A DIFFERENT MEDIA AND THEN CAN REDUCE THE NATURAL DISASTERS BY REDUCING THE NATURAL HEATING BY THE POWER OF SUN. So the green the global airconditioning is the only answer for the global worming

(cont.)

ELK blends science and leadership in a way no other organization does! The program is extraordinary as are the outcomes.

Large animals such as elk, bears, antelope, and bison generally have natural ranges larger than the protected area in which they may be located. We need to provide corridors between natural areas to permit large animals to migrate between such areas without crossing highways or disrupting or endangering human activities. Solutions such as passages over or under highways and keeping natural migration routes free from obstacles are available. We just need to make the effort before too many obstacles are erected.

Access during the school day is really not a problem. When I was in school some 25-35 years ago teachers would take us field trips to forested areas near the school to teach us about nature. It cost nothing and it was the best days of my school life and along with my parents love of the outdoors set me forth on lifetime of loving and protecting the forests and the wildlife. There is no reason why practices like this cannot continue.

The reason you do not see hikers or horsemen on ohv trails is because we avoid them as much as possible. Your machines scare the horses and they ruin the outdoor experience for hikers so we do our best to stay on non motorized trails which is not always easy given the amount of ohv access today. Maybe if you got off your butt and actually walked around on a non motorized trail you would see hikers and horsemen.

Amen, Amen! I applaud environmental groups for being the watchdogs they are and not only doing such a good job of keeping land owners and governments honest but in safeguarding our public lands, wilderness and wildlife!

So what if they turn them in or someone else turns them in? Either way they do not end up in our waterways or our oceans. Much like a bottle tax charging and extra 3 cents per cigarette and then refunding it when returned would work. This is a great idea and I am shocked it is not getting a better response.

Excellent idea. I support this 100%. I would even take it one step further and impose higher donations depending on how destructive that companies practices are. For example a drilling company drilling for oil or natural gas is much more damaging than say a logging company that follows environmental laws to the t and does everything possible to minimize their impact on the forest and wildlife.

Good idea. I believe China has already begun doing something just like this correct? I read about a year ago they had plans to plant about 1 billion trees in an area the size of Ireland. I have heard nothing more about it since. Seems like a great idea and maybe it will help the bird population regain some of the catastrophic losses they have suffered. PS- I am fine with it if my tax dollars go to something this worthwhile.

Great comment and I agree 100%. We DO NOT need more ORV access in this country. It has already done tremendous damage to what little wild land remains. I say curtail ORV use and return the land to the people that actually enjoy it and the animals that need it for survival.

Discussion Question 1

Written & Online Comments

(cont.)

Great idea and I fully support the idea of cutting down on the use of motorized vehicles of all kinds on public lands. They scare wildlife and the damage they cause to the land injures and kills animals. Leave wild lands for foot use only!

Great idea. Not one the OHV lobbyists enjoy but a great idea all the same. I was hoping Obama would grant permanent protections for ALL of ANWR but as of yet that has not happened, hopefully it will along with the Tongass. These areas are too important to give in to the oil, mining and logging companies.

Great idea. With wilderness areas disappearing at such a rapid rate we need to protect as much land as possible. Not for human use either but for the preservation of animal and plant species so future generations can enjoy all that nature offers.

Do you have nothing better to do than bash everyone's ideas on how to conserve land and promote a greater bio diversity of wildlife? The only ideas you support are ones that either kill animals or destroy our public lands. Here is an idea, since you are so concerned how about putting in an idea of your own. Try not to include the killing of Buffalo (what is it you have against buffalo anyway?) and other endangered species please. I support any conservation of public lands and I would love to visit another national park and having never been to Kansas I can think of no better way to get me there than to preserve the 300,000 acres and repopulate it with wild buffalo, elk, deer and grizzlies!

Here we go, I almost thought you were going to pull out the constitution card on me. I suppose you think the science behind climate change is unscientific too? You have only yourself and your fellow OHVs to blame for the reason why access to land is being taken away (if indeed that is the case because that is not the case here and I think you just want more and more and more and you do not care the consequences) because you are ruining the land with your destructive vehicles and the science is finally catching up with you. You are not nature lovers, you are not the lovers of the outdoors and you deserve no more access than you have already been given because you do not respect either or care what condition you leave the land when you are done with it! Nobody is denying the right to private land or even land designated to you. What the argument here is the ORVs non stop lust for more and more access to remote wild areas where endangered species live and access to national parks and wildlife refuges where there presence would be detrimental to the land, the animals and the visitors of those parks and refuges who really do enjoy nature and the outdoors.

I already do these things so nothing would change for me but I am all for a leave no trace guideline as it would virtually eliminate all ORV use which would be wonderful!

I just recently planted several butterfly bushes and other flowers that attract butterfly's and hummingbirds. I cannot wait for them to flower and for the birds and butterfly's to arrive!

Written & Online Comments

(cont.)

I love idea of using volunteers to clean and maintain a park in exchange for a free yearly pass. I would take it one step further and say that take one week a year and do this gathering volunteers and assigning them a specific duty such as trail maintenance, rubbish removal, roadside maintenance, etc, etc, This would be a great way for people with a love for the parks to not only enjoy the beauty of it but to relish in the knowledge they are taking care of something they love and will be rewarded for such. In my town we had a very nice park right on the river and it was free but teenagers and adults alike ruined it by leaving their trash behind from their picnics and beer parties. The loud noises from their radios and drunken mouth's scared both the animals and hikers away. At first I would take a bag and pick up cans and rubbish but over time there became so much litter it was useless. Even the trails I loved to walk with my dog became treacherous from all the broken glass and with no money to fund clean up the mess remained and I left to find another park to enjoy. Because of things like this I hope there is always a fee to use the parks. Those who love the outdoors will gladly pay the small cost to enjoy it because they know it takes money to maintain such beauty while those who only want to use the park with little to no regard to its natural beauty will just have to fork over the fees or find someplace else to ruin. To just let anyone in without paying will lead to overuse and in time the park will become destroyed by those who do not love the land as we do.

I promoted the idea but I agree here. You do not need to shop at expensive chain stores for name brands to enjoy the outdoors. All you need is the love of nature to enjoy yourself. A little training can teach you how to build a shelter from sticks and leaves and how to find food in the wild which will cost you nothing. For those of you not wanting to "rough it" second hand sporting goods stores are a great way to find items at reduced cost.

I totally agree. Some areas need to be off limits to ALL HUMAN CONTACT!! That includes hikers, backpackers, campers, ohvs, mountain bikes and anyone else. Rangers can be allowed in to monitor for poachers and biologists can be allowed in to monitor wildlife and of course in case of emergencies like wildfires or plane crashes exceptions would have to be made but otherwise no human contact at all. You missed the entire point of this idea. The importance of nature is not to "bring in \$\$" but to be preserved for future generations at all cost. A very daunting task considering the rampant, needless and senseless amount of development going on. Nature does not need our help to sustain it with logging and burnings, it survived and flourished very well without mans help for millions of years but it does need man to stop destroying it if it is to survive.

I was going to demote this idea but after reading the comments I have a better understanding of what this proposal is and I now recommend it. While I would not use it myself and I hate cell phones with a passion I can see how the younger generation would use it and how it would hopefully get them outside and into nature more.

I would much rather see predators reintroduced to wild areas that have hunting escalated. On top of having a rare opportunity to view these wonderful animals in their habitat it would greatly help the eco system of the parks and forests and would bring a greater number of visitors to the parks as well.

(cont.)

As far as I know I am not doing much damage to the human race, certainly less than most but maybe I am. Lets see, I drive a high millage vehicle with low emissions so I pollute the air as little as possible. I recycle everything so my garbage does not end up in some landfill, ocean or incinerator further polluting the environment which would cause even more harm to mankind, I have high efficiency products in my home and regulate my energy consumption plus have signed up to get my energy from wind and solar even though it costs more so my carbon foot print is much smaller than most which again will cause less air pollution which will decrease lung disease, I am a vegetarian/vegan so I do not promote further green house gas buildup from factory farms. I could go on but that seems like enough for now, is that enough for you? Please though tell me how you help mankind since you are such an upstanding and obviously intelligent member of society. As far as me being injured in a wilderness area, if the area is off limits to everyone how would I be there to get injured in the first place unless I were an irresponsible person going where I was to supposed to be? Plus I never said emergency vehicles should not be allowed into wilderness areas, of course they should. I would venture to guess more animals are harmed and killed by habitat degradation caused by ohv use than wildfires but I would have to look that up to confirm it. The goal for everyone here who claims to be a "responsible" person who enjoys the outdoors no matter what their choice of recreation is, is to enjoy the outdoors WITHOUT DOING ANY HARM TO CREATURES otherwise it pretty much makes your argument of being "responsible" moot! I have seen many a child smile at the sight of an owl in a tree, turtle in a pond or rabbit in a meadow, all things that are pretty tough to do on a noisy, speeding ohv. But maybe those smiles are not as important since they come from kids who walk to enjoy nature? No I have never ridden a ohv nor do I want to. My enjoyment of the outdoors is to hear the wind in the trees or the babbling of brook, the call of a bird or elk, the sound of a moose or buck cleaning his rack on a shrub or tree or the noise a black bear makes as he eats blueberries. All things I could not do from a noisy ohv. Who exactly is "a lot of you" anyway? What group do you want to label me in? I will make multiple choice since I know you must be busy. A)environmentalist B)animal lover C)democrat D)educated and intelligent american E)all of thee above Why is it you ohv people come up with the same ludicrous arguments? Is it really all you can come up with or do you get it from the same book? I never said we should ban ohv use altogether, go ahead and look up my comments before putting words in my mouth. You have your areas so enjoy them but you, nor anyone else, deserves to go into wilderness lands, disrupt and possibly end the lives of endangered species. If that is too much for you to give up then it is you that is self centered, greedy and just plain stupid. PS-the answer is E, cannot get any easier than that for you

(cont.)

Leaders of non profit environmental groups are brilliant people. They are not radicals or extremists and do not oppose all development like some believe. Instead they are people who have dedicated their lives to a cause, saving wilderness and wildlife. They know better than anyone what areas are okay to develop on and what areas should be off limits at all costs. They are great motivators as well using the power of persuasion to win cases over the big money of the oil, gas, coal, logging and ohv industry. This is a fact that has not gone unnoticed by our President who appointed the head of the NRDC to the council investigating the deepwater horizon disaster and suggesting new and improved regulations for the oil industry. With that being said I propose putting a lead figure in a non profit in high level positions within the MMS, BLM, and Fish and Wildlife services. With their love of nature they will be much less likely to take bribes or trade off land rights for drugs and prostitutes. They will help restore some of the balance that is so badly needed in these organizations who have such a long and storied history of abuse and corruption. In a country that more and more looks like it is being taken over by the corporations (see the supreme court decision to grant corporations the rights of people) and where it is harder and harder to find a honest judge (see the case against deepwater drilling moratorium) and politicians (need I say more) there is an ever increasing need for balance and this would help establish some.

Nature has plenty to see and enjoy, all you need do is look around. If you cannot enjoy what nature has to offer then nature and the outdoors are not for you, and this includes the OHV crowd who wants to build roads over and through everything!

regardless of whether they can get in for free everyone, soldiers included, should WANT to pay to get in because the money is used to preserve the parks and their upkeep which is greatly needed!

Seems to me there are a few farms in my area that still grow organic produce and we have an organic dairy farm nearby as well. I shop at these places every week for my supplies so how exactly is what says uneducated?

Set up camps for inner city youth to explore and enjoy the outdoors. This will not only get the kids away from the crime, drugs and poverty they are exposed to everyday but it will teach them the benefits of nature and expose them to the all the beauty that nature provides.

Some of my favorite memories of school were when the teacher would take us on a nature hike to see birds, frogs, turtles and even the occasional deer. Since I highly doubt you were suggesting bringing a group of school children into the woods to shoot defenseless animals, as suggests, I support your idea . It really seems strange to me that some people think enjoying nature is killing it or destroying it.

Some things are much more important than money. Building a road through the most popular National Park in the country and a place of tremendous beauty is just plain stupid and irresponsible even for america.

Discussion Question 1

Written & Online Comments

(cont.)

Sorry but they do know better than anyone. They have had years of study, research and dedicated their lives to this cause. I trust if you had heart problems you would see a cardiologist and not a podiatrist right? They are not lobbyists whose only gift is that of a silver tongue, a high tolerance to alcohol and low moral standards. They are people who have an extreme love of nature and the animals that live there. You say you are against embedding "lobbyists" inside an agency but how do you feel about embedding ex ceos of logging, oil and coal companies in agencies that are supposed to oversee those operations and keep them honest like we have had in the past? I am not proposing these people be put in charge but be part of a panel that all have equal say in decisions. At the very least the environmental leader would be the watchdog and whistle blower giving you the transparency, accountability and balance of voices we all want!

That is true, our industrial military complex is by and far the largest use of tax dollars in the world. How about cutting out the tax breaks to oil companies, coal mining operations, logging companies and mega corporations and using that money to help fund the national parks and forests? They have been damaging and destroying the environment for a long time how, I think its about time they started to give back don't you?

The erosion issue is a very big hurdle for you. I like the idea of electric ohvs as they will cut back on our dependence of gas and reduce pollution plus noise but as long as trails, streams and meadows continue to be ruined you ohv users will continue to take heat. It is a good starting point for you though. Maybe something can be done about the weight?

The value of nature cannot be measured in dollars and cents. My time with my wife hiking on trails, watching wildlife, listening to the birds and sitting by a stream, lake or pond enjoying the quiet, peacefulness of nature (when it is not spoiled by the noise of a dirtbike, atv or ohv) is the only time in my life that I am truly happy.

There are already millions of acres of what once were wild lands that have been ruined by clear cutting, oil and natural gas drilling and coal extraction. Turn those acres into playgrounds for ORV users but save what little wild land that remains for wildlife and the people that enjoy the peace and quiet that nature brings. I would say considering americas over consumption and runaway destruction of our public lands that would more than make your 1 for 1 plan.

There are already several excellent organizations devoted to getting young people into the outdoors, and they are providing outdoor and environmental education without dipping into the public purse. While there are many others, Scouting, Campfire, 4-H, and YMCA spring immediately to mind as organizations that operate programs year-round. One of the problems with recruitment into these programs, though, is the peer pressure coming from the cool kids deriding them as being so totally uncool. We would have a lot more of our youth in these programs if there was a concerted effort toward dealing with that peer pressure element. How about we work harder on what we've already got in place before we go running around inventing new programs that are beholden to the public purse and all of the strings that come firmly attached?

(cont.)

This is a great idea as is any idea promoting protections for our wildlife. Our wildlife services which were organized to protect species has proven to do anything but and we need a new organization run by conservationists and environmentalists to insure that wildlife species will continue to survive in this country. I completely disagree with you that hunting should be allowed in refuges. Refuges were set up to protect species from extinction and to provide them with habitat so they can reproduce but instead refuges have been turned into areas where so called "sportsmen" can get their jollies shooting defenseless animals. They (and several national parks as well) have also been opened to logging, oil drilling, mining, ohv use and trapping. We need to restore the protections these places once had to insure they perform the necessary duty they were made to do. I also totally disagree that nature needs any hand from humans in regulating the wildlife population. Nature seemed to do very well before the white man showed up and started destroying everything. As usual the OHV crowd is killing another good idea. It is a true shame that such a good idea as this forum is being ruined by right wing loons and organized OHV groups.

This is a very good idea and I would actually like to expand on it by suggesting you build natural areas in abandoned industrial areas. In the town I live in large areas of former industrial parks like empty and in different stages of deterioration. They are a blight on the community and benefit no one other than a handful of drug users who use the buildings for shelter and hideaways from the police. With millions of americans out of work and construction companies going out of business it would not be hard to find people who would do the demolition relatively cheaply and then hire a modern day conservation crew to go around planting trees and shrubs. By doing this it would benefit many by providing jobs, getting rid of and eyesore and a magnet for crime and drugs and providing a great number of people with easy access to a natural area for exercise and enjoyment.

This is actually the best idea I have read so far. If we did follow the laws as they are now and tweaked a few that need changing we would not need more national parks or more government funding to save land and wildlife because the laws exist to do so we just need a government that has the backbone to follow them and the morals to reject the bribes the cause them to overlook them!

This is not a bad idea but I worry about the same things as that this might make people stop buying items and more businesses would go under. ___'s response does have merit as I buy products that I know use environmentally friendly practices or donate a percentage of their profits to organizations that help forests and animals. jI would say have those businesses that do that advertise the fact so people can make their own decision. I think most nature lovers and environmentalists would gladly pay a few extra cents to help the thing they love most. The question is how do you get to the crowd that does not love nature and constantly abuses it? The one area that would be nice to see get heavily taxed is the OHV industry. You could tax them and earn much more dollars since their products are so expensive. That money could be used to restore the wilderness areas their machines have damaged or destroyed and if it causes people to stop driving their SUVs, pick up trucks and atvs through forests that is all the better.

(cont.)

This is one of the best ideas on this forum. Let the ORV user have their area but make them pay for the destruction they cause and the upkeep of those areas. As you can tell the McDonalds eating ORV crowd that is too lazy to get off their butt does not like that idea. They are fine destroying trails, ruining wildlife habitat and ruining the enjoyment hikers and backpackers have for the outdoors but make them pay for it? No way, we cannot have that now can we.

Very well said by both of you. While Obama got off to a good start permanently protecting nearly 3 million acres of forest and open space and reinstating the ESA that the Bush administration gutted on their way out he has dropped off substantially since. I was hoping for so much more in the way of further protections for threatened and endangered species, more funding for national parks and further restrictions on oil, gas and coal extraction but so far I have seen no initiative for him to do so. As you said we are much better off than we were 2 years ago but there is a long way to go before we reach anything even close to a balance between man and nature. Fully funding national parks and endangered species would be a nice start though.

We have enough Wilderness let us enjoy what is left and if it wasn't for ATVing my father who was hadicaped would never been able to enjoy the back woods. We explored old mines, old railroads and many more while all the time he had to be on oxygen for cancer. Please keep our forest open!

Well said for both of you! It is about time we stop the stupidity and stop the move to drill on every last inch of americas public land and protected wilderness areas. It mean nothing at the pump and does not provide the jobs the right want us to believe. Haven't we destroyed the beauty and tranquility of america enough?

While federal programs do a good job, at times, protecting large tracts of land local land trusts are invaluable in protecting local wild lands that would otherwise be developed. Along with private donations they work as a go to source for grants from state and local government and can even attain federal grants to save forest, farms and wildlife habitat. In my town the local land trust has saved nearly 4000 acres since it was founded in 1976. Of that total several farms have been saved as has a vital wildlife corridor that bridges a state forest to a wildlife sanctuary to more sate forest land and now stretches nearly 23 miles of protected land. These lands provide many hiking trails and an abundance of area for wildlife and plant life. Local land trusts also clear, mark and provide upkeep of trails with the help of volunteers and run education programs for the young and old alike. So support your local land trust, it may be the best chance for your town to retain some of it's disappearing forests, farms and open space.

(cont.)

Yes things are being done globally to combat climate change/global warming but sadly in america little is being done. President Obama has taken some bold moves to get the country moving but with the republicans obstructing everything and still throwing out the same old arguments that are so false and ludicrous but believed by the idiot sector or our country baby steps are the best we ever do and then when republicans take charge they move the country 10 years behind again. WE need to do more and we need to start now! Remember when this country actually used to lead the world in things like this? Now we are nothing more than a laughing stock to the rest of the world and a scourge to those that do not think our over consumption of everything and wanton destruction of the environment is funny.

You are riding low there and your tea bags are showing. Just to let you know, this is a forum on how to reconnect people to nature not destroy what little is left.

You people should consult not only scientists but non profits such as the Sierra Club, NRDC and WWF before implementing any plans dealing with our national forests. These people have been working tirelessly for many years protecting our forests and wildlife from bad ideas and development so they know best what should or should not be done. By including them in the planning stages you will avoid costly legal battles and time delays that would further hinder any forward progress in saving what little open space that still remains.

As a Texas Master Naturalist for the past 10 years, I am deeply involved in the study of bats and the bats in bridges program of batcon.org & Texas Parks & Wildlife. My wife & I conduct surveys of the mexican free-tail bats at Houston's Waugh Drive bridge and give presentations to the public and at nature centers. As webmaster of the Waugh Bat Monitor, the public can learn the latest information about spread of the White-nose syndrome which has decimated 90% of NY & CN hibernating bats. we also give rainwater harvesting to nature centers & garden clubs. We collect milkweed seed to enhance the recovery of the Monarch larva & butterflies. We also conduct bird and butterfly counts throughout the year. We maintain a certified front yard wildscape and tag monarchs all year. And as the webmaster of NPSOT-Houston chapter, I keep current volunteer and educational events for master gardeners, master naturalists and Native Plant society members. There is not a day in which we are not involved in sustaining nature. GET INVOLVED!

The Virginia Living Museum is one of many private nature centers in the country educating children and families about natural resources in their own backyards. Our science educators lead school field experiences, teach Master Naturalist courses and train volunteers, lead public eco-tours and design and teach K-12 classes correlated to national standards. However, most organizations have seen decreases in local government funding that cannot be replaced with earned income and giving alone and limit our schools ability to participate. Targeting multi-year Federal support to nature centers (and similar local conservation organizations) will enable existing successful programs that connect people to nature to continue grow. By making these programs easily accessible to smaller organizations would engage whole communities, especially at-risk populations, in effective conservation education.

(cont.)

A far better bang for limited conservation bucks – and greater support for fully funding the Land and Water Conservation Fund – could be had if we allowed its dollars to be used for private land conservation through qualified conservation organizations. Four reasons why:

- The cost of a permanent conservation easement is about a third of the cost of outright acquisition and is often less, particularly when negotiated by a community-based, local land trust.
- Management of conserved lands would continue at the expense of the private landowner, not the federal government, which struggles to maintain lands they already own. In the western states, we see the management and habitat improvement of federal lands increasingly reliant on state and private funds to provide necessary services.
- Assurance of the terms of the easement overseen by – and at the expense of – qualified conservation organizations avoids added burden and expense to federal agencies. Local land trusts are comprised of staff and volunteer boards familiar with the customs and needs of their communities. Allow such groups to serve as grantees of easements funded with these dollars.
- More private land conservation opportunities would be available. Working family ranchers and farmers are more likely to consider working with local organizations. While coastal states with more urban populations may feel the need to expand their federal land base, most of us in the west do not! Nor do we believe that the purchase of additional federal lands is the best use of tax dollars at this time of unprecedented national debt escalation. Utilizing LWCF more efficiently and allowing participation by local, community-based organizations would gain expanded support from a broader base of constituencies. It would also increase conserved acres of wildlife habitat, continued delivery of ecosystem services and the protection the working lands which produce food and fiber – and, the security of producing American needs within our borders.

Discussion Question 1

(cont.)

The 2012 Farm Bill will be challenged to continue funding at current levels, especially for private lands conservation programs like FRPP and GRP. These programs provide excellent return on federal investment through private and state match. • Private lands are the most productive throughout the US - agriculturally as well as from a broader biological perspective as they typically encompass riparian areas, migration corridors and provide winter range and breeding grounds for many species. For these same reasons, they are also highly sought after for development. • Ranchers and farmers are hit hard with regulatory programs – voluntary, incentive programs like FRPP and GRP have the potential to do far more good in the long run, at less cost. • These programs ensure unfragmented landscapes into the future, at a one-time cost to the tax-payer. • Purchased conservation easements provide landowners with capital without liquidating acreage and keep ranches and farms intact, and at ag values, for future generations of producers. These dollars get turned into local economies, too, as willing landowners use funding to pay down bank notes, purchase additional acreage, improve breeding stock, develop water supplies, or improve infrastructure. • FRPP and GRP funds help private land trusts ensure that community needs and values are also conserved. The cost of conserving private lands costs taxpayers just a fraction of the cost of federal land purchase and administration. How we can make these funds go even further: 1. Allow for an increased percentage of landowners' contribution of value. Many landowners are willing to increase their in-kind contribution of 25% of the value of an easement or more. Cash match is much harder to come by. 2. Consider funding the transaction costs for donated easements. Many landowners would be in the position of donating a conservation easement to a qualified organization if the cost of the appraisal, minerals report, attorney fees and stewardship contribution could be covered. Local land trusts would be able to make dollars go even further if this opportunity could be realized. Every minute, two acres of farm and ranch land are lost to development. The average age of American farmers and ranchers continues to increase, leaving many working lands open to fragmentation and uncertainty. FRPP and GRP help conserve our working farms and ranches and the food, fiber and natural resources for the stewardship of future ranchers and farmers -- and the benefit of us all.

(cont.)

Keep the killing OUT also. 95% of us do not kill wildlife, but the 5 % who do control wildlife for killing through our state agencies and federal agencies. Wildlife WATCHING has doubled in the past ten years as the most popular outdoors activity. While wildlife watching is growing at 8% a year, the government agencies at the state level are frantically trying to enroll younger and younger children into killing our wildlife - more species in more ways with more weapons. Yet hunter numbers have been declining about 1%/year for the past decade. While killing licenses as the main funding mechanism internal to the state Departments of Natural Resources ("RESOURCES" says it all - as though nature were just a big department store for humans to exploit), wildlife watchers bring TEN times the revenue to state and local tax coffers as hunters and trappers and have had ZERO say in what happens to our wildlife. In fact, in Wisconsin, the DNR boldly states itself to be a "killing business". At a time of massive human overpopulation and take, loss and fragmentation of habitat, human caused destruction of species equalling the sixth great extinction (first extinction entirely caused by one species), we continue to have a heads on wall, trophy, recreational killing focus of wildlife as just living targets for an organized special interest, hunters and trappers. They can pay a few dollars and kill our commonwealth, but wild LIFE appreciators have no venue to pay a few dollars and save any wildlife. It is anti-democratic and totally unfair. If I try to protect any wildlife, I am fined for "hunter harassment". Hunters are the elite NRA protected destroyers of wildlife, and it is orchestrated by our DNR which has a mission statement to "protect and preserve our nature for all citizens". Aldo Leopold, himself an avid hunter, 70 years ago, warned that wildlife and nature should be managed with "GENERAL PUBLIC FUNDS" (NOT special interest killing licenses). Follow the money. With killing licenses funding our state and federal agencies, the killers of wildlife are the ONLY clientele. If we all kicked in ten dollars a year, we could all decide what happens to our wildlife and preserve much more habitat and safeguard our wildlife from the most egregious abuses - captive hounding in fenced enclosures, wild hounding, trapping, and trophy/sport killing (which is 99% of the killing going on now.) Leopold also warned that the environmentalist and landowner should be as much a part of the decision process as the hunter and trapper. I see people across the entire country trying to break into making policy, but they have not been able to break the killing stranglehold. So leave the man-made weapons and guns, night sights, and tree stands and lures and scents and camouflage, packs of dogs and ATVs out of our public lands. Period. Save our wildlife while there is some to save. What we know is that we need: 1. Large Core Areas left WILD and without man's biases to let nature work naturally - the larger the core area, the more biodiversity saved, and 2. Connect those wild areas by corridors for migration of larger mammals, and, 3. Return large natural predators to the environment in NATURAL NUMBERS - they are the guardians of biodiversity. Reverence for all life is key. Please view the Declaration of the Rights of Mother Earth and ALL BEINGS, drafted with indigenous people and with input from all over the world in Cochabamba, Bolivia, two months ago. It is revolutionary, and set out to balance the Human Rights Declaration. It gives all beings the right to exist, not to be harmed, and to fulfill their natural role in the ecosystem. Common sense. As one of the largest employers of people, the Federal Government could give incentives to workers for volunteering at parks. Individual or groups of workers could volunteer to help with existing conservation projects, suggest new ideas for local recreation areas or lead local weekend activities in science education at parks. Such incentives could be yearly park passes or discounts on passes.

I spent over a week at Gettysburg and did not see it all. I felt like I was on hallowed ground and had to see every inch. Battlefields are our last tangible link with the past that we can actually touch and walk on. There is nothing like exploring these battlefields. I can actually see the battles raging out on the fields, I can feel the pain, the horror - this helps us to understand the past. We must preserve these battlefields so future generations can also FEEL the past. When the battlefields go, so do the links to future generations. Patricia Seivert

ELK provides amazing opportunities to educate the next generation!

Land grant universities are usually designated with a "State" following the universities' name (ex. North Carolina State, Ohio State, Oregon State, etc...). Land grant universities are often at the cutting edge of research in agriculture and have provided many modern farming and ranching practices. Land grant universities also offer many other degrees in areas such as engineering, business, and natural sciences. A list of the top universities in the United States always includes many land grant universities. Funding education is always a great idea and there is no better way to invest in the future. Public universities are drastically underfunded as it is and often look to students to make up for rising costs and lagging funding. Funding state schools would be a very beneficial use for public dollars.

Historic preservation funding has been key to the economic recovery in our area promoting tourism, retaining population, rehabilitating neighborhoods, downtowns and open spaces. Adequate funding would have an exponential benefit to the economy.

I find this idea one of the most exciting on the board so far. I study and work with the restoration of old growth woods harvested during the 18th-20th centuries. Because of old growth woods' exceedingly better properties as a building material than new wood and its' modern scarcity, we recycle and restore it where it has been used as a building material. Our nation lost one of our greatest resources when we allowed our old growth forests to be used up. I don't mean simply that we should grow them back to cut them down, rather it's amazing to learn that old growth forests looked as different under a microscope as they do on a hike and most of our generation has been robbed of seeing it. Old growth/ancient forests should be on an extinction list and be actively nurtured back just like any species of animal would be. I think we'll find that this is the way to restore our ecosystem allowing us to not have to constantly try to repair symptoms of a failing ecosystem.

(cont.)

OHV recreational use of public lands should be preserved for the benefit of current and future American families. OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors. OHVers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. The overwhelming majority of OHVers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

Presently, federal funds from the Land and Water Conservation Fund supply the money to federal and state agencies to acquire land (and at the state level create recreation facilities). Fully funding LWCF to its \$900 million authorization is a first priority, but LWCF should also be opened up to qualified conservation organizations (land trusts) to fund projects that achieve the mission of LWCF. Land trusts have a proven track record of protecting important lands, and a grant program similar to the current Stateside LWCF program (that funds municipal, county and state projects) should be established for competitive grants to land trusts. These could be matching grants that would encourage land trusts to leverage private and non-federal funds toward the protection of critical wetland, riparian, agricultural, forest and recreational resources.

President Clinton put together a new National Park in Colorado and created a wildlife reserve in New Mexico. The BLM administers some outstanding wilderness areas in many places in the west such as Nevada. A new National Park could be created without having any roads. The United States invented the National Park, why not be the first country to have a Park without roads? A lodge could be built in the center and it could be accessed with a monorail similar to what is in Disneyworld, Orlando, Florida. The animal migration would be left intact and the area could still be considered roadless. The lodge could offer camping, fishing and horseback riding. Access to the monorail could be connected to Amtrak routes so that people could access our parks without having to rent or drive a car.

Providing income tax deductions for land owners donating conservation easements or land for conservation has been a key element of private land conservation for many years. But if we are to accelerate the pace of land conservation to address the urgent need to secure the carbon sequestration provided by forests and farms, we must do more. Congress should provide a tax CREDIT to landowners donating easements or land. Like renewable energy credits, these should be based on the value of the donated easement or land, and be an alternative for landowners to selecting a tax deduction. This would encourage owners who have limited income, but who own important lands, to make donations. We give tax credits to people for buying new windows, why not one for protecting the lands that protect our water, air and wildlife?

Discussion Question 1

Written & Online Comments

(cont.)

Similar to Great Outdoors Colorado Lottery revenue generation and Jefferson Counties' tax levy for conservation, a sustainable revenue source must be created to support programming. The contemporary business model of an L3C could provide Leadership and Wellness training/programs to the industries directly related to this effort (Natural Resource, Healthcare, Education, Outdoor, Tourism/Hospitality) as a revenue stream. Profits from these efforts would subsidize youth programming in schools. Agencies/Organizations receive training and healthcare cost reductions while creating a sustainable revenue stream for youth programs. A cyclical systematic solution to the ever present need for funding.

This incentive is important to many landowners who are giving up substantial value by donating conservation easements. It's a much less expensive way (to the overall taxpayers of the nation) to conserve essential natural resources than would be the purchase of easements or land at fair market value using public dollars.

Most conservation easements should provide for at least pedestrian public access. State and local governments should be encouraged to review new easements and easement amendments.

Roughly 60 miles south of Canada, the 88,000 acre Scotchman Peaks roadless area spans the Idaho-Montana border. Since the 1970s, when the U.S. Forest Service carried out extensive evaluations of lands suitable for wilderness, this rugged, scenic and biologically diverse portion of the Cabinet Mountains has been managed for its wilderness potential. The Friends of Scotchman Peaks Wilderness believe now is the time to preserve the Scotchmans, one of the last, and largest, wild areas in our region.

Instead of having all wind turbine towers white, paint them a color to match the surrounding landscape.

I believe that ATV's and hikers both have claims to the use of outdoor trails, but if the trail was built for hiking than hiking is what it should be used for. ATV users should have their own trail systems.

Why doesn't the federal government require any company that wants to use America's natural resources to donate 5% of their profits directly to supporting the National Park System? That way the parks always have a source of income, regardless of attendance or congressional funding. This would solve the budgeting problems for the parks and force the exploiters of our resources to give something back for being allowed to us them.

Now is the time to complete the national trails that resulted from conservation efforts from the 1960s and to reaffirm our nation's commitment to our national heritage and cultural resources. In fact, one of these trails, The Lewis and Clark National Historic Trail, is being studied now due to Public Law 110-229, Sec. 343. It became law on 5/8/2008. The law states that a study is to be conducted and the results with recommendations are submitted to the Committee on Natural Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate. This is an effort to complete the Lewis and Clark National Historic Trail from "sea to shining sea" with the sites associated with the preparation or return phases of the Lewis and Clark expedition, commonly known as the "Eastern Legacy". The potential impact that inclusion of the Eastern Legacy sites is likely to have on tourism visitation to the western portion of the trail will be weighed. My personal experience tells me that once those in the Eastern Legacy get out on the trails in their area, they are anxious to travel west and enjoy the entire trail. What a marvelous way the trails provide in reconnecting us to America's culture and heritage and keeping Americans fit at the same time! Let's use this time of difficulty in our nation to complete these national trails to fully realize the promise of the National Trails System

We have opened our small city's first historic museum this year with enthusiastic community support. We now have plans to produce a small farm museum and operating ranch to document the importance of small family chicken ranches in our area's history. Any financial help we might obtain would be put to good use to help our children understand their heritage.

Let's protect Wild Country as Wild Country which means keep the air pure, the animals natural and air pure. Also, keep the land natural. No ORV use. Use it for recreation and to educate other generations about our planet. How do I vote for this idea?

Our Civil War Battle sites should be preserved. I have visited numerous sites and always find myself taking way more time than I plan exploring these places. I know that, like myself, there are many people who have direct ties to these hallowed places via ancestors that fought there. What is my connection? _____ Battle of Champion Hill Siege and Battle of Vicksburg (surrendered and parolled) Chattanooga Campaign (Battle of Missionary Ridge) Captured shortly after, parolled again in Jan., 1864, no further participation.

I finally agree with you- if you shop around, you can find great gear cheap. Ebay, craigslist, walmart, amazon, homemade - lots of ways to get and keep the gear you need. Last time I looked at renting, it was more expensive than going to the local surplus store, and buying an overstock tent in a weird color. If you own your own gear, you will go more often.

Over the last decade or so, national park units have developed records on the maintenance they do not have the funding to complete but which should be finished to prevent even more damage to built features of the parks. A few years ago, the amount of the deferred maintenance totaled to about \$6 billion for all the 400-ish units in the NPS system. Working with the Facility Management Division, which generates and maintains these records, let's put folks back to work fixing the problems in parks that have already been identified and that need to be addressed to further preserve our parks.

(cont.)

The Problem: Federal agency officials continue to resist the idea that easements and other alternatives are effective cost-saving alternatives to fee acquisition of lands. They talk about using alternatives but rarely try to implement them. The Solution: Incentives need to be established for officials to use easements and other cost-saving alternatives. Penalties need to be created for buying more than the interest necessary to achieve project objectives. Federal officials have often, and inaccurately, misrepresented the cost of easements. A popular notion is that easements cost 80% or more of fee title. The key is to buy easements early when development is far away. Easements increase in cost as development gets closer. However, officials have made little or no attempt to use easements or other alternatives, and instead go to great lengths to avoid them. Inholders have actually been scared out of using easements because of very restrictive terms and negative statements from federal officials. For example, the State of Minnesota successfully used easements on a cost effective basis on the Kettle River. The Park Service was unable or unwilling to use easements on the nearby St. Croix to the degree suggested by Congress. The result was costs much higher than necessary on the St. Croix and poor landowner relations. The Fish and Wildlife Service has also successfully used easements to protect wildlife habitat at costs approximately 40% or less of what the fee title would have cost. The inability of the federal agencies to use alternatives to fee title has actually slowed the protection of some areas and wasted funds. The result is that there is now a huge backlog of unprotected lands. Some landowners want to sell but can't because of the shortage of money. In addition, relocation and human costs associated with fee acquisition are not considered by agency officials. Nor do they consider the project benefits when inholder communities are left intact. There may, in fact, be lower long term management and maintenance cost, especially when landowners remain in areas where significant cultural and historical values exist. An example is the Buffalo River. Local landowners were so mad at the Park Service that they would not even show the agency how to run a historic grist mill. How much better it would have been to have kept the grist mill in the hands of the original owners so visitors could have seen living history. There needs to be better training of land managers and acquisition officers and more information for landowners, so that all parties can understand the benefits of using reasonable alternatives and avoiding unnecessary conflict. The bottom line from the federal agency viewpoint must be to acquire only the interest in land necessary to meet the intent of Congress. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

(cont.)

Both the Forest Service and Park Service have ignored the intent of Congress while implementing new park and recreation areas. While Congress intended more public use in some areas, the Park Service manages all areas the same way. The results have been: far more land acquisition than anticipated by Congress; greater cost; and almost no use of alternative means of land protection. As a result, local land owners and communities have turned against federal recreation schemes. The Solution: A clear understanding of the intent of Congress by the federal agency before it begins to develop new parks and recreation areas. Require all land planning, acquisition and management personnel to read and be familiar with all legislative histories for their areas. Require land protection plans in each area before acquisition begins. The Government Accountability Office (GAO) (formerly the General Accounting Office), the investigative arm of Congress, has been extremely critical of federal land acquisition programs, particularly those of the Park Service. It suggested in a series of reports that the Park Service had gone so far beyond congressional intent, that it should sell much of the land it purchased back to the original owners because it was not needed to meet the requirements of Congress. The GAO suggested that the Park Service managed most of its areas the same way, regardless of congressional priorities. Examples:

- Lake Chelan National Recreation Area – GAO said that Park Service land acquisition had actually cut overnight lodging in half. Other Park Service actions cut available recreation activities. Far more land was acquired than was intended by Congress. This turning point report recommended that the agency sell the land back to private owners.
- Buffalo River – Land acquisition destroyed the unique farming culture that existed along the river. It was so special it was featured in National Geographic. Almost no easements were used, although they were recommended by Congress. The Park Service is now trying to re-establish the culture and rent the farms back to private owners, yet is continuing to make the same mistakes in other areas.
- St. Croix River – GAO found in 1978 that the Park Service had purchased over 21,000 acres when they were only supposed to buy 1,000. Again, in 1979, GAO found more people facing condemnation than the agency was legally able to condemn. The State of Minnesota was able to protect as much land as the Park Service, but for far less cost, using easements.
- Mt. Rogers NRA – In 1980 the Forest Service published a master plan indicating many more condemnations. A review of the legislative history showed that Congress specified 39,500 acres as the amount of land to purchase, 40% in scenic easements. At that time the agency had purchased 26,000 acres in fee with no easements. After intervention by the local congressman and American Land Rights, the Forest Service curtailed their plans.
- Many other examples exist. In one report, the GAO only found one area out of 21 examined where the agency was managing it consistent with the intent of Congress. Each agency should be required to have a complete copy of the legislative history, including congressional debates, House and Senate Committee Reports, Conference Reports and other important documents in the park or recreation area available for inspection. All personnel associated with management, planning, and land acquisition should be required to be familiar with this information. Other oversight procedures should be set up to make sure the agency is obeying the law... and the intent of Congress. Part of the problem is that the Park Service rotates its personnel often. As a result, Park Service personnel begin to manage all areas the same regardless of what Congress intended. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

Federal agencies and Congress have at various times and in different ways attempted to extend federal authority outside the boundaries of the area itself using buffer zones and perceived threats to the park as a tool to control land outside the park boundary. The Solution: Federal agencies should focus their efforts and attention on the management of the area within authorized boundaries and on cooperative management with other agencies and landowners outside their boundaries. Attempts at extending federal authority outside area boundaries raises suspicions as to motives and intentions of the federal government, causes conflict and tension with nearby communities, and undermines local and state zoning authority and private property rights. Where federal lands are concerned, buffer zone initiatives tend to cause unnecessary interagency feuding by making the interests of one agency subservient to another. Forcing buffer zones through legislation that has been proposed in Congress at various times, or by national directives, also preempts the proper methods of dealing with common resource concerns, methods based on cooperation and good will among neighbors. Similar buffer zone legislation passed the House of Representatives at various times and caused great controversy and negative feelings from local government, commercial recreation interests and private rights owners in areas adjacent to national parks. This type of legislation raises fears about the long term goals of the National Park Service regarding its neighbors. It turns local communities against the potential for new National Parks because the agency does not have the reputation of being a good neighbor. In the long run, this prevents the creation of parks and other conservation areas and exacerbates exist fears in landowners and user groups. This idea was submitted on behalf of the American Land Rights Association www.landrights.org

Grazing rights are threatened. Grazing is a long-term, legally established economic use of the federal lands. Grazing rights and water rights are privately owned property rights established in a recent Hage Case in the US Court of Claims. Agencies and some special interest groups are attempting to take these rights or legislate grazing out of existence. The resulting threat is causing ranchers, normally friends of recreation, to close access to private land, as well as public land where access requires going through private land for recreational purposes. The Solution: Grazing must be recognized as an activity that subsidizes recreation. The investments by ranchers in grazing permits, roads, water development and range improvements on federal land help wildlife and subsidize recreation. These investments must be recognized and compensated, or traded for, when a conflict over recreation develops. Continuous attempts have been made to eliminate grazing from federal areas with the idea that it is an activity that conflicts with public purposes and diminishes recreational opportunities. In reality, ranchers invest large sums of money in roads, fences, and water improvements that enhance wildlife propagation. Wildlife often feed on private land at lower elevations in the Winter as well as Summer. This advances and subsidizes such recreation as fishing and hunting. Failure to acknowledge the existence of privately held water, grazing, and range rights, and the possessory interest in federal land they generate, has led to unending conflict. The solution is to recognize grazing and water rights as private property rights. In addition, we should acknowledge the economic benefits other segments of society receive from privately funded range improvements. Grazing on public lands lowers the overall cost of food for America, and increases the economic activity of local communities. Efforts have been made by the federal agencies, as well as special interest groups, to regulate out of existence, or legislate the removal, of grazing without recognition of or compensation for the huge investment by most stockmen in range improvements. These activities are gradually turning stockmen away from their traditional support for recreation activities. In large areas of grazing land managed by the Bureau of Land Management and Forest Service, there is so much private investment and so many private rights, that the area is actually not public land, but split estate land, with the stockmen owning a significant percentage of the bundle of rights to the land. In some cases, the percentage owned by the stockmen is so large, and the government's percentage so small, that the land title should be conveyed to cut management costs and get land on the tax rolls. Recreation conflict resolution and allocation of recreation resources would be easier if the investments by stockmen were recognized and they were compensated for their economic loss in the event of a conflict over a recreation use. Grazing should be recognized as a positive contribution to recreation. This issue was developed in cooperation with the American Land Rights Association www.landrights.org.

(cont.)

Planning, acquisition and management costs of new park and recreation proposals need more careful scrutiny. Present methods result in huge costs overruns, angry landowners, and high overhead while taking funds away from other important agency needs. The Solution: Require a thorough study of each proposed area with carefully developed cost estimates for planning, acquisition, and life costs of management. An economic impact study should be completed with a full cost-benefit analysis. Recent proposals for new parks and recreation areas have underestimated the costs for acquisition, planning and management. The result is higher than expected costs taking funds away from other projects and priorities. According to a recent Interior Department Inspector General's investigation (E-FW-NPS-5-81-A), when Santa Monica Mountains NRA was created, Congress was told the cost would be \$155 million. The Inspector General found that the Park Service had eight estimates in hand, when the bill passed, ranging from a low of \$242 million, to a high of \$675 million. None of these figures were ever shared with Congress. In the case of Redwood National Park, estimates were about \$250 million. The final cost is not known, but it's presently over \$2 billion and growing, causing a great strain on acquisition funding nationwide. Former Assistant Secretary of Interior Robert Herbst estimated the acquisition backlog was approximately \$3 billion in October 1980. Some estimate that the figure may now be as high as \$10 billion. With complete estimates and proper implementation this did not have to happen. The Columbia Gorge National Scenic Area passed Congress in 1986. \$35 million was the cost allocated to the bill, yet it was common knowledge in the area, and even among some members of Congress that the cost could exceed half a billion dollars. No quality cost estimate has been completed. Costs are not just the funds to acquire interests in land, but in losses incurred to local businesses, local government in lost taxes and in social and welfare costs associated with the lost jobs and economic activity. The Tall Grass Prairie Preserve in Oklahoma was another example. Cost estimates were \$70 million with no plan for the possibility of having to purchase the oil rights of the Osage Tribe underlying the entire area. Those costs could have been in the hundreds of millions. Congress chose not to go forward with the proposal in 1986. While most landowners do not wish to sell, some are forced to by hardship, change in circumstances, or deteriorating living conditions due to ongoing acquisition programs. Poor initial planning and understated costs often leave landowners in limbo, ultimately turning them into angry enemies of the acquisition agency. Before Congress passes legislation, and prior to endorsement by the Administration, a thorough study of each proposed area should be made showing the economic impact and costs related to the project. A clear understanding must be developed between proponents, the agency, and the Congress about expectations for the future project. Without such an understanding, many parks and recreation areas suffer from creeping size, expenditures, and expectations far beyond what was envisioned by Congress. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

(cont.)

The Department of Interior created the Land Protection Planning Process for the purpose of protecting more land at less cost, but plans have not been effectively implemented to meet that purpose. The intent was to prioritize the lands that needed conservation the most and acquire the appropriate interest in those lands. The Solution: Land Protection Plans should be rewritten where Department purpose and intent has not been achieved. They should be updated with public involvement every two years. The Land Protection Planning process is one of the most innovative and necessary programs to be initiated in the conservation process. It is a logical approach to the broad question of “what are we buying, why are we buying it, and at what cost?” Land Protection Plans both identify the land and degrees of title to the land needed by the federal government to protect the resource and designate cost-effective alternatives to full federal purchase, such as easements and cooperative agreements. Local government officials need to be part of the public involvement process because of the potential of long term damage to the tax base and development planning options. During times of severe fiscal constraints, this approach is even more valid. Aside from the issue of social and cultural disruption associated with large-scale acquisition of lands, our government can no longer afford to buy lands at the same rate as in past years. We must begin to determine how much is enough. The general Accounting Office, now called the Government Accountability Office, in their report GAO/RCED-86-16 dated October 31, 1985, “New Rules For Protecting Land In the National Park System – Consistent Compliance Needed,” “ found that 25 of 38 Land Protection Plans it reviewed did not implement Interior policy or comply with National Park Service rules.” “If the Park Service implements the plans’ recommendations that do not comply with its rules, it could acquire more interest in land than it needs, incur unnecessary acquisition costs, and deplete the limited funds available for land protection.” The Land Protection concept should be revived with the idea of achieving the purpose for which it was intended. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

Benefits of the original CCCs: They constructed cabins, shelters, etc. on public lands that are still used today, e.g. in NJ, in Stokes State Forest: the current School of Conservation and the State 4-H Camp were both CCC Camps, as were many lean -tos and cabins. But this happened in just about every state. Today, those facilities, most of which still survive, I suspect (they were built to last) provide inexpensive places for people to stay! Young people from cities got experience in the Great Outdoors, and learned to love it. Years later, they took their families camping, hiking, etc. in the Great Outdoors, based on their happy memories of their CCC days. They also learned teamwork, discipline, practical skills and had fun! They sent most of their money home, to support their families. Since maintenance is one of the first budget items to be cut, most parks in the country have a long list of maintenance projects that could be started quickly. Many are labor intensive.

I think this is a great idea. The OHVers could have their own 'natural' parks after the other environmentally warped have left the area. Keep the fuels contained. Where and how do the OHVers plan to refuel their vehicles in our national forests, by the way?

Well, I appreciate your position however, if one wants to 'recreate' Disney style and wants that incorporated into nature - it simply will not work. If you want Disney - go to Disney. If you want bike trails - go to bike trails. If you want nature - go to nature. Bikers can exist and disrupt nature. Nature doesn't disrupt bikers but it sure can't exist long with them. I don't think any of us want a huge police force trampling the woods either.

The American Discovery Trail (ADT) is a new trail idea that connects America's metropolitan areas with our great outdoors. The ADT stretches from California to Delaware crossing 15 states, passing through several large cities, more than 10,000 historical, cultural and natural sites of significance. It is America's first coast-to-coast non-motorized recreational trail. The ADT was named a National Millennium Trail in 2000. Legislation is pending in the House of Representatives (HR4671) to have the ADT added to the National Trails System. More information can be found at www.discoverytrail.org

People are hungry for the truth in history, properly interpreted battlefields provide the truth. People are on the spot listening or reading and have a feel for being there. As a Civil War living historian I go to schools, museums, battlefields and give presentations on America's history. Preserving the land without modern obstructions blocking the view, give Americans pride of what it took to mold our nation and leave a lasting legacy of the men that did it. The battlefields provide outdoor classrooms for this and future generations. Protecting battlefields, create jobs by encouraging heritage tourism. To understand America you need to understand the Civil War and to understand the Civil War you need the battlefields to tell the soldiers stories.

I hiked and backpacked for many years, and thoroughly enjoyed it. Now I'm older and my knees and back can't take the long hikes anymore, but I still really look forward to trips into the back country for camping and enjoying scenery with friends and family, I just do it in my Jeep. We need to preserve all of the off road trails that we currently have and build more. While backpacking I could never come close to hiking all of the available trails in my area, but in my 4x4 I drive the same routes over and over. Nearly all off road enthusiasts are very careful with our resources, and clubs are willing and able to work to help preserve and maintain trails. Let's work together to provide the most opportunity for the most people.

I recently lost my wife. She suffered from Huntington's Disease. She could no more walk around the block, let alone backpack far into a "Wilderness". I am amazed and saddened by those who believe that our Public Lands are only meant for the most physically fit. I am and we were responsible "off roaders". We were able to visit some spectacular places when I loaded her into the Jeep. Mostly all the trails we ventured on were created nearly a hundred or more years ago by our forefathers. These are trails made by loggers, miners, pioneers, and the people who made this country. Many of these are now closed to our children and grandchildren. Why are these to be considered the sole property of a very few? Our founders are turning in their graves.

Let's not only establish new trails but also consider linking old trails to new ones. We also need to maintain the trails we currently use.

(cont.)

My knees are in lousy shape. I can't hike more than a few miles, but I can bike many more. Bicycles do not pollute like OHVs, and their impact is not necessarily greater than a hiker.

Nuclear energy has not proven itself safe until a safe repository has been established for spent fuel, and the Yucca Mountain depository is not safe. We have enough energy to supply the world through solar, but this person does not seem to know this.

Preserving the battlefields achieves two goals: 1. protecting sacred ground in the history of our nation and 2. maintaining open space. It's a win-win. We can't talk about recognizing the efforts of our soldiers and at the same time put strip-malls on top of the historic locations where they fought.

Shut off the engines and take a walk. My daughter, at age 4, was able to spot the wild strawberries along the trails and the fossil fragments in the limestone gravel on the narrow lane leading to our pond. She relished being out front and finding the next blaze marking the trail in the wilds of New York state (Adirondacks.) Later in life as a teenager, she was roped behind the lead climber when she summited Mt. Rainier in Washington. As our nation gets more obese, we must encourage physical recreation and satisfaction from our natural surroundings.

The quality waters of the San Juan River over the past ten years has been an important place to spend time in the outdoors. The river meets many needs which includes quality fly fishing, water for local communities, the safeguard of endangered species, and future long range Native American needs. A study revealed that the Quality Waters brings in an annual revenue of \$40 million dollars, primarily to the hospitality industry as 64% of the fishers are from out of state. Regretably, today the river's health has deteriorated and now requires dynamic stewardship to return it to its "crown jewel status" days. River silting and inappropriate water releases create endless harm. Cooperation between BOR/BLM and New Mexico state agencies for a comprehensive study and long range plan is crucial for its health.

There are many, many examples of multiple-use groups cooperating/collaborating with government agencies (such as the BLM) to maintain and even restore public land with great success. Unfortunately, these stories are generally ignored by the mainstream media. It's a shame, because the public needs to see the positive results of government agencies working hand in hand with recreational vehicle enthusiasts, mountain bikers, hunting and fishing enthusiasts, and even loggers. Bringing together representatives from all stakeholder groups is a common sense approach that balances access and responsible land use with conservation and sustainable land management. These interests are not mutually exclusive. I'm very concerned with this administration's land management approach as detailed in the Great Outdoors initiative. There is something intrinsically wrong with a government arbitrarily restricting access to our public lands without listening to the voice of the users of that land. If President Obama truly wants a long-term solution, then each stakeholder group must be invited to the table with an equal share in the decision making process.

We need more opportunity, not continually less opportunity. Politicians need to become much more familiar with the real issues, conditions, and needs of recreationists and not just support those ideas that cater to the outspoken few. The 14 ideas listed here all have good merit and should be considered.

I am a very fortunate individual who can take my children to American Civil War battlefields and show them where their ancestors stood and fought for what they believed in. Some very smart individuals had the presence of mind to save hallowed ground permanently at Chickamauga, Georgia and Shiloh, Tennessee and as a result i can walk some very meaningful ground for my family. Others should also have that right/chance and that is why battlefield preservation has always been a priority in my life. Gift matching programs offered by the Federal Government have helped to reduce the cost of land acquisition and is a necessary ingredient for future preservation opportunities.

Incorporate green infrastructure into comprehensive plans at the local, regional, and state levels. Not green infrastructure in the sense of stormwater infrastructure, but rather linked networks of natural and working lands intended primarily to allow native biodiversity to flourish in a human-dominated landscape. The nonprofit Green Infrastructure Center, Inc. (www.gicinc.org) has successfully developed methods and a process for green infrastructure planning and has piloted them at the local and regional levels. Lots of great material on the website. Highly recommended. Federal role: Indirect: funding and encouragement. Mostly the action is at the state and local level.

This idea works. It is funded by those who use this program via a fee paid per vehicle for off-road use. The fund is administered by the coalition and used to supplement Federal Funds for multiple uses: Education, Responsible Off-Highway usage, trail maintenance, etc. Other states should consider similar programs. Visit { [Link](http://www.cohvco.org/) } for additional information.

Save our civil war battlefields

I've been involved in battlefield preservation for many years. I also understand the myriad of issues confronting the government today and I understand that somethings must be pushed to the back to allow for more pressing matters to be dealt with. Having said that, I would add that our history is the single thing that defines us as a nation and to allow the second most important era (the period of the revolution being the most important) of our history to fade in obscurity would be a crime against our descendents. How can we ever hope to know where we are going as a nation if we do not know where we have been? As Americans we all owe so much to the men and women who gave so much during the era of the civil war. Everything we are today can be linked back to the people who survived the fires of the war. The civil war was both our greatest tragedy and our supreme triumph as a nation.

Discussion Question 1

Written & Online Comments

(cont.)

We have a moral duty to preserve Civil War battlefields. The benefits to the nation are innumerable. One benefit that they offer is uniquely powerful: Civil War battlefields are perfect places for intensely engaging project-based learning for school kids. Many kids, unfortunately, find history, as taught in the classroom, uninteresting. But most kids get engaged when presented with projects. The more battlefields we preserve the better, and the more of each that is preserved the better, for this will offer stimulating environments and endless opportunities for learning projects. The United States will become a more rational and healthy nation in direct proportion to the depth of understanding our future generations gain of the lessons of our Civil War.

BATTLEFIELD PRESERVATION OFFERS A MEANS TO MEMORIALIZE OUR ANCESTORS AND PRESENT CLASSROOMS FOR FUTURE GENERATIONS TO UNDERSTAND A PART OF OUR HISTORY •

Preserved Civil War battlefields are tangible links to our country's past. • The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. • Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation. • Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. • Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. • Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation. • Battlefield preservation in Pennsylvania, Maryland and Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. Parkland created through battlefield preservation near growing population centers like Nashville, Atlanta and elsewhere can benefit quality of life for residents.

Responsible HV use should be encouraged and promoted on public land especially on land that may have been mined. This would bring in much needed revenue to rural communities that otherwise would not have any type of external revenue source. Many groups could volunteer their time and resources to help keep build & maintain trails thus creating a beneficial relationship with the surrounding communities. The groups could also help with the restoration of surround land.

As an American History teacher in Arizona for 35 years, I wove my wilderness experiences (rowing the Grand Canyon, being a whitewater river guide and avid backpacker and adventures -- near death experiences in Alaska, etc) into all my teaching and story-telling combined with taking students on backpack trips into the Superstition and Chihuahu mountains plus some trips down the Upper Salt River. We studied units on early Native-American relationships to the land, the degradation of the environment, activism and forging a personal relationship to the wilds. At 79, I'm still in touch with perhaps 1,000 former students, their adventures and their lives. Along with the other excellent ideas presented here, the encouragement of individual educators to add their own expertise to creating a love and respect for nature would be an added touch in all the disciplines.

Discussion Question 1

(cont.)

I grew up in York, PA, approximately 22 miles east of Gettysburg, PA and I have visited the battlefield over 100 times. In addition, my great-great grandfather fought at the South Mountain and Antietam, Maryland battlefields. If he had died, I would not have been born. I cannot imagine what my life would be like now if these American Civil War Battlefields had not been preserved during the time of my youth. Learning and studying these battles helped to lead me to my current teaching job and involvement with the Civil War Preservation Trust. As Americans, we need to understand how lucky we are to be alive and out of respect for our ancestors, we need to do everything within our power to preserve the "Hallowed Ground" of America's Civil War Battlefields!

My Family goes OHVing about everyother weekend we enjoy being able to see all the wonderful things nature has to offer and we ALWAYS stay on the Trails.

Preserve our use of OHV's on public lands. Like other recreationists, we seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. OHV's allow my family to ride places that we would not be able to get to otherwise.

Railroad Trail Proposal. Active Union Pacific Railroad. Prohibitive Access Easement Right-of-Way Fee by railroad. Railtrail on active UP line, 1 train per day. 100 ft. easement. Included on county & city's Trail Plan. \$1million fee request by UP for 4 miles in our town alone. Proposed trail through downtown La Habra, CA is a missing regional link to connect Los Angeles National Forest to Cleveland National Forest by way of 39 mile San Gabriel River Trail, PioPico State Park, east to Chino Hills State Park, Santa Ana River Trail to Cleveland National forest or Newport Beach, CA completing a potential 100 mile loop.

Something for everyone to keep in mind when preserving the great outdoors, wilderness is fine and I don't have a problem with a few wilderness areas. The problem is who can realistically access wilderness? The young and fit or those who can afford to hire a packer. Our wild lands are for all of us to enjoy not just a select few. Therefore all future lands that are to be set aside for the public's use must be motor vehicle accessible, the old and handicap have just as much right to enjoy our wild lands as the rest of us.

The ability for families to play together is becoming harder. Having more recreation areas increases this ability. It also increases fitness for children, one of Michelle Obama's prime goals. There is thousands of acres that could be accessed and if worked together with authorities could be a win win situation for the environment

The President's Great Outdoor Initiative is a great idea. It's as American as apple pie. It's about the spiritual and therapeutic value of a weekend or better camped in the desert or a mountain meadow, family values and good times with family and friends, healthy physically fit activities, and the unfortunate diminishing opportunities due to development and bad land use policy. The Initiative should be as much about motorized off-highway vehicle users as any other user group. Off-highway vehicle travel is a sustainable and appropriate use of public lands and can be done in harmony with Mother Nature.

Discussion Question 1

(cont.)

There is nothing more important than the preservation of our battlefield sites for future generations as well as our own.

Those families that recreate together build far more responsible adults than those that don't. We have three great kids that have all grown into responsible, productive citizens, two of which are employed in to recreation industry that helps drive the economies of untold thousands of communities. Our grandkids will grow up in the ways that we taught our kids and I'll do everything possible to insure that they're given that opportunity.

Preserving civil war battlefield land and view sheds before urban sprawl or industrial use, such as strip mining, destroys historic land is an important priority in 2010 - 15. Land adjacent to battlefield parks provides important open space which is available to the general public for hiking, picnicking, and bicycling. The need to provide for historic intrepreataton employs local historians, and sees infrastructure such as signage, and restroom construction materials purchased from the local community. Construction services, such as maintenance, grading/paving of parking lots contribute further. Tourists visiting these points of interests purchase gasoline locally, and either dine at local establishments, or purchase drinks and picnic food. Charter bus companies and hotel benefit from larger groups. There is a huge positive and dignified impact on a community with open space historic site preservation. Beyond the dollars and cents impacts, these civil and revolutionary war battles shaped this nation and made us who we are today. Many of our neighbors, and ourselves, have relatives who fought in a given battle, and visiting that battlefield is the single most tangible way of touching their personal past, and passing on the tradition to the youngest generation. I urge President Obama to front load battlefield land acquisition into any 5 year budget plan, with more funds available sooner, to purchase land threatened by urban sprawl. This issue is important enough to deficit fund.

Elk is educating children on important environmental issues for their future and getting them outside where they need to be instead of inside on the computer or in front of the TV.

Discussion Question 1

(cont.)

I have been an 'Outdoor Enthusiast' for 43 years - my entire life. When I was 6 months old, my parents took me on the Rubicon 4x4 trail in California in their Jeep. When I was 8 years old, my dad used to take me for rides on his motorcycle in the hills around Palm Springs, CA. When I was eleven, I have a fond memory of Jeeping with my dad and coming upon a herd of Bighorn Sheep in the mountains above Cathedral City (near Palm Springs). The biggest male stood just 20 feet away from me while the rest of the herd moved slowly away up the hill. I was a Scout from age 8 to 18 and hiked the northern and southern sierras, all around Big Bear Lake, CA and Tahoe. I've ridden snowmobiles and cross country skied in the winter, water skied and fished mountain lakes and rivers in the summer, and used OHV's and my own two feet to see as much back country as I could. It does not matter what way you use to get into the outdoors - what matters is how you care for the environment and instill that desire to maintain it for future generations. Making public lands into designated 'Wilderness' will only prevent people from accessing them at all. We need to stop closing areas and reduce the impact by concentration of use in limited areas. Once land is closed - it is nearly impossible to get it open again. I've seen so many of the areas I visited as a youth closed to access now. Some areas should be designated for hikers, bird/nature watchers so they aren't impacted by noise. Other areas need to be accessible to those using OHV's as not everyone can physically hike into the outdoors. It's time to start working together to shape the future of land use for our current and future generations. Tread lightly - Pack it out - and be respectful to nature and each other!

Require that all new roads or road improvements that use federal funding include pedestrian and bicycle friendly facilities (bike lanes, side walks, or separated paths from streets). And to get federal highway funds, states/cities must have included pedestrian and cycling in their transportation plans. The benefits are multifold. Decreased air pollution from reduced car use. Better health of the population with increased walking and biking. People that are walking and biking are connecting to their community and to the outdoors in a different way than people driving in cars. Urban green belts are very popular and help to start the process of connecting to natural spaces. Some additional ideas: Currently many urban areas have sidewalks but don't provide sufficient space for bike use. There are too many bike-car fatalities and there is actual hostility on the part of motorists toward bicyclists. Many suburban and rural areas don't provide for either pedestrian or bicycle use. No sidewalks means walking and riding on the shoulder of busy roads. The Great Outdoors is not just the wilderness, the desert or the forest. It is also our neighborhood parks, and our county and regional parks. We need connections (physical and mental) to these local areas. These parks and paths are where we can provide for the first taste of enjoying the outdoors and improving our nation's health.

(As you mention, the NPS does this with VIP (Volunteers-In-Parks) program { <http://www.nps.gov/gettinginvolved/volunteer/opportunities.htm> } although housing is usually in a ranger station or platform tent, not a trailer. Many state parks follow this model, as do some USFS campgrounds.) Extending this to trailheads in USFS, BLM and other areas would be a vast, but worthy, undertaking! It's a lot to ask of one person, but perhaps local groups of volunteers could do this, on a one or two week rotation?

Discussion Question 1

(cont.)

Can Earth feed and clothe 10 billion people sustainably? We shall find out in this century. Part of the answer must lie with genetically modified crops. They hold the promise of substantially increased yields, reduced demand to convert natural areas to agricultural use, reduced pesticide use, and improved nutrition. Bt cotton naturally resists reduces pesticide use. Vitamin A enriched golden rice improves nutrition. The list will explode as China and India gain expertise in GM tech. As in other areas of technology, US may choose to either lead or become irrelevant, but this is scarcely an issue for this forum.

Many successful programs of precisely this type have existed for decades, and deserve our support: Yosemite Institute, Olympic Park Institute, Glacier Institute, Great Smoky Mountains Institute, the Desert Institute at Joshua Tree NP, Independence Park Institute, Grand Canyon Field Institute, Yellowstone Association Institute, Isle Royale Institute, North Cascades Institute, Outward Bound, Americorps... and some of the best and longest established aren't directly associated with national parks: the Adirondack Park Institute, Hawk Ridge in Duluth... .. to mention only a few. They are an excellent fit with the NPS mission, and with the renewed education and research initiatives called for by the Second Century Commission { [Link](http://www.npca.org/commission/) } Expanding these programs is a worthy idea. Two thoughts: I doubt that volunteers could supply most of the staffing needs (the successful institutes have professional environmental education staffs with deep expertise), and Park visitor fees are an inadequate funding base.

More domestic natural gas = less imported oil.

Perhaps the best idea offered in this entire forum! According to the GAO, the NPS deferred maintenance backlog is now \$9.6 billion { [Link](http://www.gao.gov/highrisk/agency/doi/reducing-interiors-deferred-maintenance-backlog.php) } (the NPS has an excellent system for ranking maintenance needs; for an overview, see the Facilities Maintenance section of the NPS Greenbook { [Link](http://home.nps.gov/applications/budget2/fy10toc.htm) })

The Nature Conservancy, a truly science-based conservation organization, has studied thinning in depth, and is putting it into practice on their own forest reserves: { [Link](http://www.nature.org/wherewework/northamerica/states/washington/misc/art31226.html) } }

This a complex set of topics. I will comment only on one. NEPA, despite its many compromises and flaws, is in balance a very helpful process which ties together dozens of Federal environmental laws and leads to complete, open and factual analyses. The key to making it work is the ability of agencies to train and retain NEPA expertise, at which it appears to me they are overall doing steadily better. NEPA appeals are (under 36CFR §215.14) limited to procedural issues. Courts have not always felt confined by that stricture, however. That is a flaw. NEPA can lead to "paralysis by analysis" if categorical exclusion is not appropriately utilized. NEPA is often used as a public comment mechanism, for which it is useful but not intended. Perhaps a less cumbersome, expensive and time-consuming procedure should be used for proposed actions having no significant environmental impact?

Historic preservation is not just about the designation and or nominating to the National Register of Historic Places. It is also about community revitalization. Properties listed on the National Register of Historic Places qualify for state and federal income tax credits after they are rehabilitated. The income tax credits programs for the rehabilitation of our irreplaceable cultural structural resources produce over a 3 to 1 expenditure to incentive, thereby generating revenues to state and local governments and increasing the property tax base for local governments. The full funding of the HPF will enable our understaffed SHPO offices in the states to add badly needed staff and survey documentation programs that will then result in more historic structures being identified and then made eligible for rehabilitation financial incentives. Most of our oldest parts of American communities are loaded with historic structures and their rehabilitation passes that legacy on to our children and theirs too.

I recently hiked the Tallgrass Prairie National Preserve on the Flint Hills of Kansas. Needs a lot of work (still mainly a working cattle ranch with a few bison) but suggests what a vastly larger national park might do for the Great Plains by way of conservation and tourism. Bring back the bison...and the elk and the wolves...

Overuse of recreational facilities can degrade water quality, but our overall outdoor policy should encourage increased outdoor recreation more than limiting it. On the one hand we need to outlaw the most damaging uses, such as off-road vehicle mudding and camping too close of our waters, but at the same time enhance low impact recreation. We need to act to minimize erosion by limiting riparian development and harmful logging practices, improving and stabilizing river road crossings and boating access points, and developing low-impact campsites back from but with access to our waters. Increasing the number of outdoor recreators increases the overall health of the nation and creates more champions of good waer quality and conversation. But we do need to make certain that the recreation we encourage has low negtive impact

Access to public lands for OHV and other recreation opportunities means a lot to myself as well as my family and friends. Please consider the following information when making decisions regarding access and closures. • OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units. • Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors. • OHVs, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities. • The overwhelming majority of OHVs are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren. • OHVs are volunteers. OHV clubs and organizations groom and maintain trails, trailheads and other facilities as well as adopt trails and provide the tools and experience needed for constructing and maintaining all sorts of recreational trails; not just OHV opportunities. • ATV and off-highway motorcycle riding encourages and promotes physical fitness • OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors.

Agree with Jean Fulton (comment #7) about the obvious tie-in with First Lady Michelle Obama's Let's Move campaign. The National Trails system could benefit from more accessible connections to urban population centers and state or local trails.

I agree that we should tax destructive activities as well. The Land and Water Conservation Fund, for example, is supposed to have been providing billions of dollars per year in offshore oil drilling royalties to pay for conservation. After a few wonderful years during the Carter administration, Reagan gutted the fund and it hasn't recovered since. There is a bill in congress now to reinstate the fund and make it permanently dedicated to its original purpose, so that congress can't divert the money each year to pay for other budget items like wars Those of us who like parks need to push for this bill very hard. That said, even the modest amount of money that could be raised through a gear tax could go a long way towards buying key parcels of land for wildlife and public recreation. In the end, enjoying nature is about the experience, not about the gear, and I would gladly make the trade-off to have 5% less camping toys and 20% more places to camp.

As a Texas Master Naturalist, I volunteer as a trail guide for 3-6 th grade youth at nature centers in North Texas. Our experience is that both teachers and kids are afraid of nature. We have found that printed information sent to the schools in advance about the trails, does little to help them feel more comfortable about nature. Amazingly, we found that many of the kids (even low income kids) had smart phones and were excited about using a new trail navigation system. They love to learn from technology they are comfortable with, in this case the Iphone. I have been working as a volunteer on the design of this application to let visitors to the great outdoors focus on the world around them and not the mobile device. The application uses GPS in the Iphone to show them where they are on the trail and automatically displays educational interpretive sign information (points of interest) as they approach. The key is a very low cost application (\$2.99) and no additional costs for the self-guided tour content that can be created by volunteers. An existing Iphone application called EasyTrails can create the trail with geo-coded photos that are exported in standard gpx format. Existing nature center content can also be added to the self-guided tour if desired. It was also important that no WiFi or cell service is needed since you are often far from wireless services. This self-guided tour is a new capability for the Great Outdoors. It allows cities, state parks, nature centers, and historic sites to offer extended hours with no additional staff or cost. We hope to attract tourists from around the world and local residents to enjoy the unique beauty around them. The "app" should be available in the Apple app store around the end of June. We are working hard to create iTours of our local trails, parks, and nature centers in North Texas. I hope that others will join us in this exciting opportunity to get everyone outdoors!

you haven't been reading much if you think that Reed Noss's long-term vision statement for restoring 50% of the country to natural habitat is one of the most anti-human manifestos in print. There are plenty of non-environmentalist wackos out there promoting actual violent destruction of society, whereas under Noss's scenario we would have civilization and plenty of clean drinking water, scenic beauty, and wildlife to boot. Plus I dare say the Pentagon has produced a few anti-human manifestos of their own when they write glossy reports about minimizing collateral damage from nuclear or biological warfare. Earth First Magazine, for all of its zealous spunk and anarchist energy, could never be deemed to have been influential on the recent course of human affairs over the last 20 years. (and I really don't think they have any helicopters!) . The pace of urban development since 1980 in the US is proof enough of that. If there are any similarities between the core-buffer systems the Wildlands Project proposed for North America, and what the UN Biosphere Reserve program envisioned for sites around the world, that because cores and multiple-use buffers are a textbook way of trying to protect biodiversity. Look it up in any book on the subject. the UN doesn't actually have any power to implement the land-use concepts of the biosphere reserve system. In the end all it amounts to is a recognition program - a pat on the back for doing something good to protect nature. The Wildlands Project, now the Wildlands Network, likewise does not have any land-use or regulatory authority to implement their scientifically-derived plans for large-scale conservation. (I agree completely that our elected officials don't always have our national interests at heart) . Which brings us back to the Coffman map, which seems quite familiar with but isn't willing to admit to the fact that Mr. Coffman apparently drew that map with the express intent of misleading people. Let's be clear about that - apparently the Wildlands Projects own maps weren't shocking enough, so Mr. Coffman drew a fake map "simulating" what he thought the group had in mind, and then spent a great deal of time and money over the last few years promoting his paranoid vision that the Wildlands Project and the UN are in cahoots to take your land and OHV trails. Many of the versions of the fake map I've seen in fact are titled "UN Wildlands Project", a label which would surprise both organizations since it has no basis in reality whatsoever. So Coffman and other "freedom advocates" have been whipping up a frenzy of opposition to proposed wildlife corridors and other conservation projects. The really interesting question is why? I suggest that their industrial sponsors stand to gain when OHV-drivers and property-rights advocates come out in droves to fight wilderness proposals and park acquisitions. That keeps the land open to drill for oil or mine for uranium or log for old-growth timber. That's big money in exchange for a few stump speeches and alarmist pdf's by pseudo-experts like Mr. Coffman. My advice if you've been brainwashed by one of these reactionary groups is to ask the freedom think tanks where they get their money. Also ask them for hard, concrete evidence that there is any truth to their conspiracy theories about the UN, sustainable development, black helicopters, etc, etc. If you need a really interesting conspiracy to sink your teeth into, try googling the connection between the Bush family and the Reverend Sun Myung Moon (e.g. the Moonies). Its scary stuff! Plus Ron Arnold, one of the leaders of the anti-environmental front, also was apparently employed by Moon. So there is a good chance if you've been out fighting against extremist environmental groups to save your freedom and liberate America, instead you've been unwittingly doing the bidding of a deranged international cult leader! And keep in mind that converting the last few major roadless areas to wilderness status does not have anywhere near the impact on the

availability of OHV trails as people seem to think. Even though the Wise-Use/Sage Brush rebellion leaders urge OHV drivers to illegally build new roads through proposed wilderness areas, the truth is that most of these areas are in fact officially roadless - that is what conservationists like about them! Instead of being paranoid and gullible at the same time, OHV drivers should work with conservation groups and national forest managers to iron out good plans for keeping official trails (not the ones that someone cut illegally with a chain saw) open for use via effective management of the well-known impacts of their sport. From what I've heard from some OHV users on this site, such plans are already in the works in numerous areas, and I applaud them.

Full, permanent funding of the the HPF would strengthen the relationship between conservation of natural and built resources. This will have major implications for reduction of energy use and decreasing negative impacts on the environment. Re-use of historic buildings captures their embodied energy while reducing landfill and construction-produced greenhouse gas emissions.

I also oppose the hunting of endangered animals, but clearly most of the game species in the US are not threatened (e.g. deer, mourning doves, gray squirrels). The exceptions are mostly large carnivores like wolves and bear. I agree that state DNR's and Wildlife Departments should diversify their funding streams so that they don't only focus on the needs of game animals. A federal tax on general outdoor gear could provide the needed money.

I am pro-hunting, pro-fishing, and pro-top predator, and I definitely appreciate the contributions hunters and fishermen have made to habitat conservation and wildlife restoration. I do think more hunters and fishermen should consider non-motorized transport to get to their favorite spots. If you enjoy the woods or the lake, why not spend more time out there by hiking, riding a horse, or canoeing in? I blame the big outdoor magazines and TV shows with their focus on gear and trophies at the expense of quality of experience. Turns out you really don't need an ATV to hunt whitetail deer, nor do you need a bass boat to catch bass.

I enjoy walking the battlefields. It sometimes gives me an eerie feeling to know I am standing where so many soldiers fought and died. The battelfields need to be preserved.

Interestingly those 52 open-minded individuals all logged on and voted in a two hour stretch! Someone must have sent out a call to arms to the OHV crowd. I am pro-wilderness and I don't want to box you up like a slave in the city, nor do I want to rip up your power grid or tear down your house. What I want is for there to be small parts of the country where people can go to relax in the peace and quiet and take in beautiful natural scenery without listening to noisy machines and breathing in smog and pollution. These same areas can also serve as safe havens for wildlife, where the animals don't face the constant threat of being run over (though I don't mind hunting in wilderness areas, just do it on foot or on horseback and eat the animals you shoot). I also want OHV users to stick to defined, well-maintained roads that are managed to prevent noise and water pollution from negatively impacting the resource base on our federal lands. This means quieter, cleaner machines, bridges over stream crossings, and drivers who are willing to listen to the rule of law. If all you know about wildlife corridors comes from some black-helicopter-private-property-rights-UN-conspiracy type web forum, you might want to check some of those "facts" before you make this kind of argument again. As for doing what you want on public lands, the odds of future generations being allowed that privilege are inversely proportional to the size and density of our human population. If you want freedom in the backcountry and room to roam around on your ATV, start fighting against national and global overpopulation.

Not sure if there is any connection, but the beautiful and spring-fed Metolius River in Oregon was given that name because it meant "stinking fish" in the local native dialect - as in, "stinking with fish", each year after the salmon did their thing. Let's remove more dams and restore natural flow regimes so that the Klamath and Metolius rivers can once again be full of migrating fish!

Only in a very marginal way - the tax could be 5% or less and still be effective. And the enhanced opportunities for outdoor recreation that would result from the conservation fund would tend to increase, not decrease, America's appetite for outdoor gear.

Reducing the amount of roads and OHV trails through the national forests will be a good thing, ecologically speaking. The things that appeal the most to OHV drivers, such as high speed, noise, splattering water, churning mud, unrestrained access, etc etc- these are the impacts that are least compatible with other uses of the national forests for recreation, water quality, and wildlife conservation. Would OHV users still like their hobby if there was a bridge at every creek crossing, the trails were closed after every rain, and their machines were retrofitted with noise and air pollution reducing technologies?

Saving our battlefields is essential for our history and makes good economic sense.

The idea is to get people out of the house and into nature. It is your personal tour guide. It is NOT a virtual tour. While it is possible to "preview" the trail and the "points of interest", this approach really comes to life when you venture out on the trail. * Viewing the trail map with your actual location on the trail is a FIRST. * The built-in compass shows direction and distance to any point. * A full screen picture and interpretive text about each point of interest displays automatically when you are within 100 feet. * It also offers full GPS navigation from where you are to the trailhead. Admittedly - This is a totally new approach. It is a new tool to attract adults and kids to nature. Please give it a chance.

The line between the natural and the cultural environment, and between the natural landscape and the cultural landscape, is often blurred. There are few places in the United States that have not felt the hand of man, that have not been explored, affected, settled, used, and exploited by people in some way, shape, or form. In many parts of the country native peoples have lived and worked for thousands of years, and later settlement goes back centuries. If one of the objectives of the America's Great Outdoors Initiative is to help people "reconnect with the great outdoors," one of the ways this can be done is by making these places more personal to more people. In helping people to find their own connection, explain to them other persons' connections by finding better ways to interpret the cultural history associated with special places and sharing and interpreting the compelling stories of these places in ways that all people can understand and appreciate. For example, it may be easier for some people to relate to a wild coastal region when there is a lighthouse accessible to the public--a destination at the end of the trail--and a story associated with that lighthouse of "the lonely keeper's life" that can be conveyed and that can become a cultural touchstone for people. Such a place may help convey the sense of people in the "wild natural coast" context and reinforce the sense of place and human scale in an otherwise pristine natural environment. There is similar value in conveying compelling information about significant events or prominent individuals of the past.

The median cigarette tax across US states is already over \$1/pack. I'm not a smoker, but I think that works out to close to a 25% tax rate, with some states closer to 50%. I agree that a hefty tax on a product that you have to buy a lot of every day can reduce sales, and in the case of cigarettes that's certainly a good thing. I don't think a nationwide 1-5% tax on outdoor products would drive anyone out of business. Are you really not going to buy a \$30 headlamp at REI if it suddenly costs \$31.50? Hunters are proud of the way their excise tax on guns and ammo goes to support wildlife conservation. This Pittman Robertson tax is charged at a rate of 11%, and it was enacted back in 1937, without driving hunters out of the woods or ammunition makers out of business. Other nature lovers need to step up and shoulder some of the burden too - and a 5% tax spread over a wide range of outdoor products would generate a huge amount of funds for buying new parkland, building trails, and rescuing endangered species. I applaud Patagonia's voluntary effort, but its too small to supply the amount of funds we need for conservation to keep up with the pace of urban development in recent decades. Those of us who drive pay a gas tax to build and maintain roads, and there is no reason why those of us who hit the trails shouldn't pay a gear tax to build and maintain new parks and nature preserves.
