The most powerful life-changing moments occurred in the wilderness- nothing is like the time you spend in land virtually unaffected by man.

Please its for the best not only for us but for our future generations our children and grandchildren my sons love the outdoors!!!!!! thank you.

I spend every summer with my children in National parks. Better outside seeing history instead of inside raising your health care bills by gaining a ton of weight. Spend the money where it belongs. Here in America

I live in the country I could not even imagine life without nature. I hunt fish hike and camp and as an outdoors-man I respect the wildlife out there. The people that don't hunt or fish misunderstand the sportsman we care for our wildlife we want them to be healthy and thrive in fact we are some of their greatest voices for their survival. We live in a diverse and beautiful country and I personally don't think I would survive without nature it's part of me

Discussion Question 1

(cont.)

I have camped and enjoyed the great outdoors since I was a kid and have taken my children as young as 2 weeks camping. Our family spends alot of time outdoors and wish to see it protected and expanded for generations to come. Expand and help fund safe biking for commuters for Cities more people would bike to work if they felt safe. Even small parks are better that buildings left empty for more than 5 years. Current parks need help in up keep DON'T let our parks fall apart.

Hunters and fishermen should not be excluded from these efforts either. Remember that they provide more than 2/3 of the funds used to preserve our lands now!!!

I have been a SportsMan my hole life. The sports in my house growing up where fishing, hunting, hikeing, sking and pretty much anything that has to do with the outdoors. Some of my best times growing up as a child was going out in to the Great American Outdoors with my father teaching me all the great things about our great outdoors. From how to hunt and fish and make fire to basic survival. Alot of those lessons tought me alot and i don't think i would be the man i am today and now that i am a new father i look forward to teaching my child all the same things and hope we can share the great outdoors with many young generations to come

President Obama, You and your Family, we share the same love for nature. When you vacationed w/ your family at Grand Canyon, I was also there that week. When you went to Acadia, I was also there about a week later. We don't need to convince you how wonderful our outdoors are, but we need YOU to convince all legislators (Congress) why it is so important to protect and expland these precious places...

Mr President, I have a young daughter, and I know you have two. My daughter and I get to spend the most quality time when we are outdoors sharing time together. It's critical to me that we continue to have the open, wild and wonderful spaces for families to bond and connect. I want the next generation to enjoy America's great outdoors too. Thankyou for your time and attention to this critical matter.

As an avid mountain biker I value the chances I have had to learn about myself and my limits on the trails and it is important to protect our current trails while also allowing more to be built. Please help stop the destruction of our trails and keep others open to mountain bikes.

I have seen so much destruction of all of these things in my life and my wife has as well. We are both outdoor enthusiasts, true nature lovers, and now that my wife is in her final years of life, the outdoors that she has loved all her life is what brings her the most happiness. Please don't let the environment and our natural resources go with her.

Mountain-biking in the forest leaves less impact on the environment than any type of trail use. It gives the youth of our rural communities a healthy activity where they can enjoy the forests.

I love being able to go out in the woods and being bymself to find peace within please protect them and the wildlife that resides within.

(cont.)

I live in Southwest Virginia surrounded by beautiful mountains, streams and wildlife. I would like to think that future generations would be able to enjoy and experience this majestic landscape.

I have been raised knowing the value of the nations nationalparks forest and wildeness areas.. Our parks and wilderness continue to provide an enriching and learning environment for everygeneraion from ttodays citizens all the way back to the grand ladies of the victorian era who used to walk the trails of places like pikes peak in their dresses and heeled shoes.

I am a physical education teacher and an outdoor enthusiast. I backpack, ski/snowboard, and my passion is whitewater kayaking. I try to find ways to incorporate outdoor education into my elementary curriculum which is hard. Its hard because our schools have only taught traditional sports throughout the years which are usually sports that are hardly ever played after highschool or college. This leaves students without any outlet for exercise after that. If we could get children more involved and educated about the many oportunities for fun, rewarding activities in the great outdoors, the next generation will place more value our great outdoors and better longterm conservation will come from that. I dont know if anyone actually reads these but that was my 2 cents.

I grew up with the outdoors to help me and This is for our children to have a better life. Without nature our will suffer.

I hike, fish, walk, sit, snowshoe, take pictures, read books, ride bikes, and generally any other activity you can think of outdoors. This country is beautiful and we need to keep it that way. I have been to countless national parks as well as state and local parks that are the most beautiful places on the planet. You need to do whatever is necessary to preserve our forests, lakes, rivers, oceans, mountains, streams, brooks, creeks, tributarys, wetlands, and hills.

Went camping at an Ohio State park and spent a good deal of time improving the fire ring and site that we were on. They just don't have the resources to take care of what they have.

Come to Harriman State Park, for example, in NY, sometime with your wife and kids and dog. You can hike 3 hours to a mountain lake and swim, or walk umpteen shorter trails without so much as a water bottle! My dog, Charlotte, and I would happily be your hike-guides for a day!!!! Thank you for all you do, Mr. President. You are greatly appreciated by ALOT of us!!!!

America's wild spaces have their own intrinsic value. Wilderness for the sake of wilderness. It has inspired American's throughout our history and deserves preservation. Wilderness also offers it's own environmental benefits such as acting as a carbon sink.

The United States of America has almost 3.8 million square miles to call its own. In this vast area are some of the most pristine and beautiful natural wonders. Our nation is blessed with large areas of open space. Space to hike, bike, kayak, or anything else that any citizen desires to do. We need to be proud of America's Great Outdoors.

Discussion Question 1

(cont.)

Aesthetic reasons aren't the only reasons why more outdoor areas should be protected. Think of it as an "active" tourism reason. People travel to go and play/ride/climb/hike/be outdoors. It stimulates the local economies and is generally healthy for us (mentally, physically, spiritually). If trees could run away from destruction, they would. One way of making sure they survive is to experience the beauty first hand.

Not only does protecting America's great outdoors ensure that our future generations will be able to enjoy them, it also ensures wildlife in those protected areas will have refuge from the ever growing human encroachment into their native habitats.

I want my children to be able to enjoy what I enjoy now. Please take the time to consider what it would be like if you don't take the steps needed to preserve America's landscape.

Having grown up in a rural community and with a natural love of the outdoors, I treasure the times I have to spend hiking, walking or running in the outdoors. Please help conserve our natural spaces. Thank you for your attention to my email. I appreciate all the hard work you are putting in as President and know your job is a tough one. Keep up the good work!

Nature is everything to me. I went to an environmental high school and I have never been more aware of our environmental issues than now. The more we protect our environment, the more we will protect ourselves! Please!

The Outdoors of this country are one of the few things that keep me tethered here.

We go camping and hiking, its the best experience to be in the beautiful outdoors with nature!!!

Mr. President, I live to walk outdoors each and everyday to breathe the fresh air of America, I love the landscape and the parks...nature makes up America the beautiful, and that is why we all need to contribute to preserve it.

My dad is a Fish Biologist that taught for 30 years at New Mexico State University and did his research on the Gila trout, a native trout in the Gila National Forest on the Arizona/New Mexico border, that was recently down-listed from endangered to threatened status, which would have not been possible without federal funding and protection of wilderness areas and endangered species. Without protection, the Gila trout and wilderness habitat, would not still be there for future generations to enjoy.

I am a fan of your administration and think you're doing a great job. As someone who works in a busy metropolitan office (Rockville, MD). It is a special treat to take weekends in the summer and 'check out' from the hustle-n-bustle by spending time camping outdoors. After a long hard day of hiking it is soothing for me to sit back and zone out to the rhythm of mother nature. It's an evasion of everyday life where e-mails and cell-phones are constantly interrupting our thoughts/actions. Thanks for your work so far we appreciate you and your efforts,

AS a former Park Ranger in Michigan, I know by experience that people look forward to using their job vacations to see our National Parks, State Parks, city Parks, Trails, esp. forests to camp, fish, hunt, etc. Our majestic scenic mountains and rivers and our National Monuments. If you don't take full responsibility now, you will be the start of natural disasters and what our forefathers wanted for the people of our Land of The Free!!! Please govern yourself, accordingly and with respect to all citizens. Thank You!!! ;)

And most of all, my wife and I love the outdoors and can't get enough of it. We are so proud to live in a country that cares deeply for our environment for future generations.

I was an Eagle Scout, so this really hits home. I want my children to experience the same outdoors that I got to growing up by being able to go camping and rap

To many people, having access to great outdoor spaces makes life worth living. Certainly it has played a large role in shaping the experiences of our urban population. The city can't survive in a vacuum...we need to preserve these places set aside for us by our great forefathers.

As a fellow Chicagoan, you surely appreciate the chance to get away from a vibrant city to a place where "skyline" takes on a new and wonderful meaning...where the mind and body are liberated to explore the unknown...where serenity and awe are just a breathe away.

I am 51 years old, and I spend the majority of my leisure time enjoying the out of doors. Climbing, hiking, scrambling, camping etc. God willing, and access willing there will be more years to come. I dream for the next generations, the same opportunity and the open spaces I have enjoyed. Please help protect the lands and access.

This country was started with outdoor explorers and hunters. The ability to hunt, fish, and explorer, is within us put there by God.

I ride a mountain bike and I volunteer hundreds of hours a year to benefit the forests. Thank you

I was very poor growing up. This was the only thing our family had to do for fun. Let unthier under privileged families still enjoy one thing americans can afford. Not everyone gets treated liek the President.

Hello Mr. President, I love hiking and camping

I want my children to have the opportunities to explore and enjoy the outdoors the same way I have. Please make sure this happens.

Discussion Question 1

(cont.)

Dear Beloved President Obama, I had the pleasure of knowing what it was like to go camping since I was a few months old in 1972 with my family to see 30 of the beautiful and unique 50 states! It's getting increasingly more difficult to see what was once open, free, after all, we are the land of the free but how much of that are we able to experience these days? These are some of my most precious memories not only of my family but also knowing what it is to appreciate my United States of America! Please be urgent about doing something to preserve the little we have left, to call our own Natural Wonders, because they still are! "If it's to be, it's up to me."- Mahatma Gandhi said that and I remind you of the power you have to be the change you wish to see not only here in the U.S. but in the WORLD!

Life is quite miserable for most people in this country, in this world actually. Hiking helps keep people sane.

Not only is it important for our future generations to come, but nature provides so much for us to live a well and balanced healthy lifestyle. We need you to help nature thrive! Thank you:)

This weekend I am hiking at one of my favorite locations along the Indiana Dunes National Lakeshore. During the end of summer and beginning of fall season, I try to get out to Cowles Bog at least once a week to watch the development of the season. Watching the trees transform into colorful blankets of leaves is one of the most profound moments in the human experience. Even if I am unable to visit all the national parks, monuments, forests, etc in America, I need to know they exist and are protected.

Dear Sirs I am E-mailing you concerning the Obama Administration's "America's Great Outdoors Initiative". Having spent many days of my life in the Northern prairies of our great country specifically North and South Dakota and Eastern Montana I passionately encourage you to include this national treasure better known as "America's Prairie Pothole Region" in your America's Great Outdoors Initiative. This region contains some of the last and best remaining natural waterfowl nesting habitat and is currently under severe degradation by continued pressures to convert virgin prairie lands and drainage of vital wetlands to croplands. In most cases these areas are of marginal value for agriculture purposes. On the other hand these same areas are necessary and vital for the continued wellbeing of our precarious continental waterfowl populations. As a member of Ducks Unlimited Delta Waterfowl and a number of other Conservation oriented organizations I ask for your support for including this treasured Northern American landscape in your America's Great Outdoors Initiative. I thank you in advance for your support of this request. sincerely

Discussion Question 1

Written & Online Comments

(cont.)

Please designate the prairie pothole region of North Dakota South Dakota and Montana as a "Treasured Landscape" as part of the Obama Administration's America's Great Outdoors Initiative. As a falconer birdwatcher and duck hunter I am one of the millions of Americans who finds huge recreational opportunities in the prairie pothole region. As a biologist I value the rich ecological diversity of this area and its importance as breeding and staging grounds for migratory birds and other wildlife. As a taxpayer and observer of state and national policies I recognize the importance of jobs and revenue created by outdoor enthusiasts in the prairie pothole region. I strongly support the Administration's efforts to preserve protect and enhance these productive wetlands and grasslands. Please formally recognize the Prairie Pothole Region as a Treasured Landscape.

PORT strongly believes that strategic investments in our nation's iconic landscapes; working farms and ranches; and open, natural spaces for our country's urban youth are critical and timely. However, we ask for caution and balance in achieving these laudable conservation goals.

By eliciting input from land conservation leaders, working family farmers and ranchers, outdoor enthusiasts and the public at large through the local listening sessions, we anticipate and sincerely hope the results will demonstrate the diversity and depth of opinions, land uses as well as stewardship across the country.

A "one-size-fits-all" methodology to land conservation is clearly not appropriate throughout the country.

We especially urge you to remain true to and prioritize the stated objective of the America's Great Outdoors initiative to preserve working farms and ranches.

On behalf of the western states in which we live and work, we submit that the conservation of private ranch and farm lands is the most effective and efficient use of federal funds for land conservation.

The cost of a permanent conservation easement is about a third of the cost of outright fee purchase and is often far less expensive, particularly when negotiated by a community-based, local land trust. These conservation easements are perpetual, so a federal investment for this purpose assures the protection of open spaces for future generations.

Assurance of landowner compliance with the terms oftbe conservation easement is overseen by - and at the expense of - qualified conservation organizations, avoiding added burden and expense to federal agencies. Local land trusts are comprised of professional staff and volunteer boards familiar with the customs and needs of their communities.

PORT respectfully requests that you enhance the programs under your control that are working successfully here in the west and to consider mechanisms to expand their efficiency and ability to leverage conservation gains. Such programs include the Land and Water Conservation Fund; the Farm and Ranchland Protection Program (FRPP); and the Grasslands Reserve Program (GRP).

Discussion Question 1

Written & Online Comments

(cont.)

Allowing Land and Water Conservation Fund dollars to be used for private land conservation of working agricultural lands through qualified conservation organizations would not only yield the best bang for the federal government's limited conservation bucks, but also generate greater public support to champion full funding for the Land and Water Conservation Fund, especially within agricultural and rural communities.

Agricultural land trusts are the fastest-growing sector of the land conservation movement because we are locally driven, locally managed, and overseen by local fiduciaries. We are proud to support the continued delivery of ecosystem services, natural resources and the protection of the working lands which produce food and fiber - and - the security of producing America's needs within our borders.

Most development before 1950 focused around centers, surrounded by expansive rural and natural landscapes. Forming a combined ecosystem, cities and smaller centers concentrated diversity and innovation in commerce and culture, while large areas of farms, woods, and wetlands generated a wide diversity of natural species. This interconnected pattern of central places and surrounding greenspaces, evolved over centuries and embedded in nature, has now segmented into suburban forms that mandate driving for every major movement. Commercial strips line most highways and residential sprawl spreads far into the countryside, fragmenting both communities and nature. Auto-dependency also fuels a basic contradiction: low-density sprawl creates high levels of traffic congestion.. Limited land, unlimited traffic aggravation, and escalating local taxes to service all those scattered subdivisions make the continued strip-and-sprawl conversion of outlying areas unsustainable. Global energy and climate concerns make policy changes even more urgent. A Greenway-inspired Centers and Greenspaces approach that re-centers most new development into walkable, mixed-use forms can protect our natural and agricultural heritage, end wasteful land, energy, and pollution practices, and provide a wider range of transportation choices, from walking, biking, and cars to transit alternatives

In January 2009, an Intermunicipal Task Force from the Town and Villages of Red Hook and Tivoli proposed zoning changes to save farms, protect rural character, reinforce traditional village centers, and promote economic development. The Centers and Greenspaces plan identified over 50 farms to be included in an Agricultural Business District, designed to replace the current mostly 3-acre suburban-scale zoning and permit greater business opportunities for farmers. The Town's existing purchase of development rights program would receive funds through incentive zoning for development located close to the Village. The zoning package included detailed Illustrative Plans and standards for walkable, mixed-use neighborhoods to ensure compatibility with existing centers and to provide design guidance for future development proposals. Instead of reacting to random development locations, the plan offers a positive vision for where growth is mutually beneficial, acting as an advertisement for new economic investment and streamlining the review process. A Fiscal Impact Study showed that the Centers and Greenspaces strategy could increase the commercial tax base and reduce the potential for town-wide residential development, limiting both sprawl and school tax impacts..

Discussion Question 1

Written & Online Comments

(cont.)

Reinforce existing centers and main streets with new infill buildings and redevelopment;

Mix uses to promote walking from housing to stores, jobs, parks, schools and civic uses;

Integrate major centers with transit services;

Locally identify priority growth areas for close-in expansion and conversion of strip districts or subdivisions into new centers.

Employ a range of protection measures for farmland and natural wildlife areas;

Adopt rural and agricultural zoning, not suburban residential standards;

- Plan for continuous greenspace systems, rather than just parcel-based solutions;

Locally identify priority greenspaces for future public or private conservation.

In recent years, the concept of growing food for local consumption has become iconic to a healthy lifestyle, especially in light of the endemic obesity, diabetes and other chronic disease rates that have swept the nation as a result of poor dietary options and a lack of consumer education. It is against this background that the Rockland Farm Alliance (RFA) was formed in 2007. What began as a modest group of concerned citizens in Rockland County, with the help of the local Soil & Water Conservation District (SWCD) and USDA's Resource Conservation & Development (RC&D) office, has grown into an impressive coalition, poised to create much needed change. The goal of the organization is to create local food production into our suburban community in a portable model that can be adapted to and successfully deployed anywhere.

Discussion Question 1

Written & Online Comments

(cont.)

According to US government sources, 81 % of the US population now lives in either cities or suburbs. There are many programs available to support rural agricultural development and under HUD, there are a few that are designed to address struggling urban populations, but there are no programs available to support agricultural development and food production in America's suburbs. For communities to truly reconnect to a local food source, it is critical that that food source be accessible. This means we must bring the farms to the suburbs and the small urban centers. The overall goal of the Rockland Farm Alliance is to develop replicable models for increasing local food production for these communities that house the majority of the population, through the creation of community agricultural models. We have already begun this process in suburban New York City, in Rockland County, New York, where we have created a nonpartisan community lead and government supported effort to reverse the exodus of local food production from our county.

There is no doubt that increasing public awareness of food quality and security issues have fueled a dramatic rise in efforts to develop and support local food production. The Know Your Farmer program has begun to empower citizens throughout the country to begin to take responsibility for their food. This flood of interest has spawned thousands of Community Supported Agriculture (CSA) programs, and they are growing exponentially. As participants in this effort, we founded the Rockland Farm Alliance so that we too can know our farmer. As leaders of this effort, we are developing a model based on the principles of sustainability; economic, social, and environmental. This model is being tested, documented and analyzed to support it's ultimate evolution into a program that can offer success to any community, with the participation and support of local leadership and the general public.

When a municipality purchases farm property, they are providing leadership to other communities around the country who want to preserve urban farmland as productive agricultural land. There are many established pro-farm efforts around the country, including active farmland protection programs and farmland trusts, along with many successful publicly-owned agricultural demonstration and education farms. The development of small acreage-publicly owned urban farms as thriving farming businesses with added social benefit is, however, cutting edge.

To keep farming viable, it is imperative that we build a strong agriCULTure-community connection which contributes to a vibrant local economy and stable local food system. Agriculture is a valuable local resource that preserves our open space, protects our heritage, increases local economic prosperity, and provides food security at the local and national level.

Additionally, we cannot stress enough that community coalition building at the outset is of paramount importance to the successful development and deployment of any such project. Demonstrated community support and involvement is another key success factor for the Farm. This includes an active and dedicated volunteer base to help with fundraising, assorted farm tasks, events planning and management and raising community awareness. The RFA is already well schooled in these tasks and prepared to leverage our membership base accordingly. Volunteer coordination is an important role that will likely demand a part-time employee to be truly successful.

Discussion Question 1

Written & Online Comments

(cont.)

Employing sustainable farming practices eliminates the need for chemical use and provides a safe environment for neighbors, visitors and farm employees, particularly for children. There are also other effective and highly-regarded sustainable farming practices that may be considered wise business choices for the farm in the future. Additionally, sustainable farming practices will attract beneficial insects and birds to the farm, helping with pest control and pollination.

Rockland County, NY consists of 174 square miles, 30% of which is parkland. There is also an abundance of open space not designated as parkland, much of it privately owned. Despite Rockland's modest size, there is ample agriculturally viable land in the County. As part of the Glynwood Center's Keep Farming© program, the RFA met with Rockland County Planning Department, who generated several useful maps, detailing soil quality, particularly prime agricultural soil zones and open space throughout the County. As a result of this research effort, and with input and support of RC&D and the County's SWCD, the RFA was able to begin identifying specific parcels of land in the County which would be well suited to implementation of a Small Acreage Community Farm. We are pleased to report that we are ready to begin development of the first of the identified parcels. The site is a retired farm in New City, NY (The Cropsey Farm) and the RFA will be developing a five acre parcel as Rockland County's first community farm. The project will be called, appropriately enough The Cropsey Community Farm. The Cropsey project is the first phase of an initiative that we hope to expand to every community in the County. The project focus is the agricultural development the 5 acre parcel of this former, now non-working farm. The Cropsey property is jointly owned by the County and the Town of Clarkstown, and is well situated in the heart of the County. ~ After reaching agreement with the County Executive and the Town Supervisor, the RFA began identifying objectives. These stated objectives are: • Working Sustainable Small Acreage Farm • Preserves green space in productive agriculture • Community-operated • Organic farming demonstrations • Educational opportunities developed by the SWCD/Cooperative Extension Service/ Local NGOs • Consensus-based management plan • Financially independent entity • Celebrates family farm heritage/community events highlighting local agriculture The RFA formally took possession of this land on June 27, 2010. The community has embraced this initiative with enormous enthusiasm, illustrating that the issue of food affects us all and transcends partisan politics.

Like any agricultural enterprise, launching the Cropsey Community Farm will entail significant initial capital investment. The Board of Directors have calculated that the start up costs for this project will be under \$100,000. We have instituted a membership drive, which we anticipate will raise \$25,000. We have also aggressively pursued grant funds for both the agricultural and educational initiatives planned for the Cropsey Farm. We anticipate that this two pronged fundraising campaign will cover the capital costs of creating the working farm. Future revenues to support the farm's long term overhead and maintenance will be generated by the CSA program and educational programs, which are targeted to both the local schools and general community.

Discussion Question 1

Written & Online Comments

(cont.)

Despite the novelty of this effort, we have already identified and are in discussion with municipal officials regarding two additional parcels in Rockland County, both of which are well suited to adoption of the Cropsey model. Reaching final agreement on these two properties will increase the acreage being farmed from 5 acres to 45, and there are many more potential sites available. There is little doubt that if our community is given the opportunity, we can continue to add local parcels of 4-20 acres, implementing this model, creating a sustainable community that both supports and is supported by their local farm.

With the guidance of a professional facilitator, each step in the development of the local community farm will be documented and analyzed, in order to continue to improve the model. This will ultimately result in an easily implemented program that almost any community can successfully develop and support.

Maintaining the environmental and economic integrity of the Maine Woods, the largest continuous expanse of largely undeveloped and unfragmented forest in the Eastern United States, a unique productive working forest with a vast array of nationally significant public values that private landowners have managed and the public, from near and far, has enjoyed for generations

Using Maine as a proving ground for collaborative on-the-ground conservation and stewardship strategies that apply federal programs to stretch tax dollars and conserve the nation's natural legacy far more effectively than ever before.

maintain a sustainably managed forest landscape, which continues to produce wood products and protects ecological and cultural values, while maintaining and improving recreational opportunities. It is an initiative that is not simply focused on sustaining a natural resource, but equally as important a way of life and an industry that has been the backbone of the state's economy for 150 years.

Maine can provide a new, cost-effective approach to landscape scale conservation that contrasts with some of the federal government's most noteworthy landscape conservation initiatives, such as the Chesapeake Bay, the Great Lakes and the Everglades. In those landscapes, the government faces the important, but costly, challenge of restoring degraded habitat and water resources.

Keeping Maine's Forests advocates for a different strategy that invests upfront and adds value.

We can act before the landscape is developed and fragmented.

We have the opportunity to invest in the long-term conservation and stewardship of a functioning ecosystem that supports nationally significant wildlife resources, a large timber resource that supplies globally competitive forest products industries, jobs essential to the rural economy, and world class outdoor recreation experiences.

Discussion Question 1

Written & Online Comments

(cont.)

It is time to look at Maine's forests through a new lens. Historically, we have relied upon forest landowners to shoulder the brunt of the responsibility for maintaining the many values of the forest which directly benefit the public such as wildlife, stored carbon, and recreational access. These are invaluable public values and should be treated accordingly - rather than as liabilities which burden landownership. Keeping Maine's Forests seeks to redefine that relationship by offering new options and reward landowners for maintaining and enhancing forest values.

The Keeping Maine's Forests Initiative seeks to create an innovative and robust partnership among private, federal, state, and tribal interests to conserve Maine's forests and enhance stewardship

Maintain a stable or increasing flow of wood fiber

Promote healthy forests - sustainably managed

Safeguard key natural resources, particularly water resources

Conserve and enhance key fish and wildlife habitats

Provide abundant recreational opportunities.

Sustain local economies.

establishment of one or more pilot projects to be pursued over the next three years.

With 18 million acres of forest covering some 90% of its land area, Maine is the most forested state in the country. While known as the Pine Tree State, Maine's forests actually include an unusually diverse range of native hardwood and conifer species that vary in composition based upon location and elevation. These forests are home to a great diversity of plant and animal life and the source of clean water for Maine's 32,000 miles of rivers and streams, 6,000 lakes and ponds, and aquifers

The Maine forest is truly a sustainable resource that supports almost twice as much standing volume of timber today than it did 50 years ago.

The forests are the very heart and identity of the state. Today, Maine's forest products industry employs tens of thousands of workers who efficiently produce paper, lumber, furniture, along with rapidly emerging opportunities in energy and chemicals.

Discussion Question 1

Written & Online Comments

(cont.)

The Maine Woods remain a fabled destination for anglers, hikers, hunters, paddlers, snowmobilers, campers and all who enjoy the outdoors. They provide an essential base for Tribal Nations to sustain cultural values and contribute to their livelihood.

With the emergence of climate change as today's greatest environmental challenge, Maine's vast forest resource takes on even greater importance to maintain the storage of carbon to combat the build-up of greenhouse gases in the atmosphere, to help replace the use of oil, and to maintain a contiguous forest landscape that will allow plants and animals to migrate and adapt to changing climate conditions

That a resource of such extraordinary value and national significance remains intact today is a testament to those who have owned and managed these lands through the generations. Unlike the vast expanses of public lands in the Western U.S., Maine's forests provide a wealth of public benefits, including recreational access, while largely remaining in private hands.

Landowners, loggers, mill owners, environmentalists, sportsmen and women, and recreationists have not always seen eye-to-eye on forest issues such as forest practices, motorized recreation, and land use regulations. However, these diverse interests joined together in Keeping Maine's Forests because they realize that they share a common goal to keep forests as forests.

Inspired by the enthusiasm for landscape conservation voiced by Interior Secretary Salazar and Agriculture Secretary Vilsack and their challenge to Maine to develop a broadly supported proposal involving diverse forest interests, the Steering Committee for Keeping Maine's Forests has worked intensely to develop the project proposal described in this document.

Cooperative endeavors over the past dozen years have led to the conservation of over two million acres of forest land in Maine - nearly 10% of the state's land area -- mostly through working forest conservation easements along with a lesser acreage of fee acquisitions. Key to this success has been the leadership of Maine's Congressional delegation and federal funding made available through programs such as Forest Legacy and the North American Wetlands Conservation Act. Keeping Maine's Forests seeks to build upon this success through an initiative that expands use of USDA and DOI conservation and stewardship programs which in turn can leverage additional state and private efforts.

For generations, the public has received a wealth of public benefits from Maine's forests, including access for recreation, with the costs largely being born by forest landowners. This was acceptable to the landowners at a time when many held land largely as a strategic timber reserve for their mills.

Keeping Maine's Forests seeks to reframe the relationship with forest landowners so that they are fairly compensated for the full suite of public values that their lands provide. This can involve purchasing development rights, providing incentives for good stewardship and developing markets for the purchase of ecosystem services. Creating a new partnership with forest landowners will bring predictability and stability back to Maine's forests in a way that will reward mill and woods workers, local residents, hunters, hikers, fishermen, investors, and the general public for many years to come.

Discussion Question 1

Written & Online Comments

(cont.)

While all Maine's forests are truly of great value, the expanse of contiguous forest that stretches from the White Mountains along the Maine-New Hampshire border, north to the Allagash Wilderness Waterway and east to the Downeast coast is truly unique. Known to most as the "Maine Woods," it is valued as the state's primary source of forest products, home to the state's most revered outdoor recreation destinations, and an expansive unfragmented landscape supporting an array of wildlife found nowhere else in the eastern U.S. It encompasses approximately 12 million acres including most of the 10.5 million acres of unorganized territories unique in this day and age with no local government and few public roads, as well as adjacent forest lands in surrounding towns. It is an area with strong traditions and a rich history.

Scientists from the Wildlife Conservation Society have used satellite imagery, census data, and computer mapping technology to create maps showing the impact that humans have had on the world's natural ecosystems -- the human footprint. When viewed in this manner, it becomes abundantly clear that the forest which stretches across the northern half of Maine is indeed unique from a national perspective. The human footprint map shows with great clarity that the Maine Woods is the largest continuous expanse of unfragmented forest in the Eastern United States

According to The Nature Conservancy, this unbroken expanse of forestland comprises the largest intact temperate broadleaf and mixed forest in the country and one of the best examples in the world. As such, it is an ecological resource of global significance providing habitat for a great diversity of plant and animal life.

To gain a better appreciation for the resource, one needs to step inside Moose River Lumber Company, Madison Paper Industries, Old Town Fuel & Fiber or any of the over 200 forest products facilities in Maine that produce paper, lumber, energy and many other products.

For two centuries, most of the Maine Woods has been actively managed for timber feeding an industry that has, and continues to, play a central role in the state's economy. Today, Maine's forest products industry generates \$4.3 billion per year, accounting for over 40% of Maine's manufacturing sales and employing over 18,000 people (and indirectly supporting over 55,000 jobs).

In northern Maine, the forest products industry represents the cornerstone of the local and regional economy. From mill workers to woods workers to truckers, jobs created by Maine's forest products industry provide an important source of income for Maine families, communities and tribes

While global competition and the current recession have impacted these industries like others across the country, there is strong evidence and a conviction that the forest products industry will continue to be a mainstay of the Maine economy for many years to come both for traditional forest products and for new uses of wood for energy and chemicals.

Discussion Question 1

Written & Online Comments

(cont.)

A recent study by the Maine State Planning Office found that Maine's forest products industry ranks first in the country in terms of its contribution to the state's economy and second in the nation in terms of its contribution to state jobs (based on available data). To ensure that the state's working forests remain productive long into the future, Maine's landowners have become national leaders in forest certification. Over 7.5 million acres of the state's forests have been certified by one of three programs that certify forest lands for sustainable forest management (Forest Stewardship Council, Sustainable Forestry Initiative and Tree Farm).

Another valued perspective of the Maine Woods is from a canoe while paddling down such iconic wild rivers as the Allagash, St. John, St. Croix or Machias; or from a mountain ridgeline on the Appalachian Trail in the "100-Mile Wilderness;" or from a snowmobile traveling along some 13,000 miles of maintained snowmobile trails.

Fly-fishing for wild brook trout on a remote pond, paddling for a week on a backcountry river, hunting moose or staying in a century-old sporting camp are experiences that are plentiful throughout the Maine Woods and virtually impossible to find anywhere else in the eastern United States. These extraordinary recreation opportunities support an important segment of Maine's tourism economy including outfitters and guides; inns, motels, restaurants and sporting camps; recreational vehicle and equipment stores, and many other enterprises that serve visitors to the Maine Woods.

The picture would not be complete without looking at the Maine Woods through a cultural lens, as the ancestral lands of Native American tribes including the Penobscot, Passamaquoddy, Maliseet and Micmac who sustainably manage their lands today in a manner that supports the cultural integrity and economic base of the tribes. The Maine Woods are also the backdrop for many Maine communities, like Jackman, Greenville, Fort Kent, Bethel, Rangeley, Millinocket and Grand Lake Stream whose heritage and economic vitality are intertwined with the surrounding woods. More broadly, the Maine Woods are indeed a part of the cultural fabric of Maine and the quality of life for its residents.

Maine Woods is over 95% privately owned and most is actively managed for timber production. The fact that these tremendous public benefits have been maintained across this entire area is a result of a stewardship ethic that historically runs deep in the private owners of these forests and Maine people who truly view the Maine Woods as a "treasured landscape."

The rich natural and cultural heritage of the Maine Woods make it an ideal location to create a new and transferable model for landscape conservation that reinforces traditional uses and, through a public-private partnership of remarkable scope and scale, ensures that they will carry forward into the future.

Severing of the direct ownership link between the mills and the timberlands means that the lands are treated independently as an investment whereas previously their primary purpose was to provide a secure source of raw material for a nearby mill.

Discussion Question 1

Written & Online Comments

(cont.)

Inherent in all of these perspectives is the reality that the public seeks assurances that the benefits provided by the forest -- healthy fish and wildlife habitat, wood supply, and public recreation - will be there in the future.

There is clear evidence that the new ownership regime is ready and willing to engage in conservation partnerships when sufficient resources are available.

Selling working forest conservation easements or high value recreational and ecological lands is proving to be attractive to many new owners enabling them to extract important revenue from their land base while meeting the public's desire for forest conservation.

Conservation organizations such as the Forest Society of Maine, The Nature Conservancy, Trust for Public Land, and the Downeast Lakes Land Trust have found that many new timberland owners are eager to take advantage of the opportunity to sell working forest easements as part of their overall business strategies, as it enables them to achieve their financial objectives while meeting public expectations.

Keeping Maine's Forests believes that a strategic investment in conservation and stewardship of the Maine Woods today will pay huge dividends to the public long into the future.

the steering committee required several months of intensive meetings to build trust among the parties and hammer out a set of objectives for the Keeping Maine's Forests initiative that were acceptable to all.

Operating at a landscape scale and Creating a partnership with private landowners to achieve the objectives outlined below through purchases (fee, easements, and potentially other creative mechanisms) from willing sellers, and incentives for sustainable forest management

Maintaining the most diverse, robust and economically beneficial forest products industry possible and the jobs that this industry provides. As well as supporting other related efforts to maintain and enhance Maine's forest products industry, this will require, but is not limited to, maintaining the supply of wood from Maine's forests; and, to the extent possible in a free market system, have wood supplies which are both reliable, stable in price, and verified as from sustainably managed forests.

Contributing to meeting Maine's energy needs by reducing our dependence on fossil fuels and high energy costs.

Protecting biodiversity (such as rare, threatened, and endangered species recognized at the federal, state, and tribal level, unique and exemplary natural areas, late successional forest features in working forests, and others similar, as well as maintaining, and where practicable, restoring viable populations of game and non-game wildlife).

Maintaining or enhancing existing public access for the full spectrum of existing recreational uses, and attracting an increased number of recreational users by selective investments in improved recreation facilities.

Discussion Question 1

Written & Online Comments

(cont.)

Preserving special places, e.g., old growth forests, areas with special recreational or cultural values, unique or exemplary natural features, and other similar features.

Maintaining and increasing carbon storage, thus contributing to reducing levels of atmospheric greenhouse gases.

Facilitating the adaptation of forest systems to a changing climate particularly by maintaining large contiguous and interconnected areas of forest.

Keeping Maine's Forests seeks a future that maintains both the environmental and economic integrity of the Maine Woods through a matrix of public land, private land permanently protected by conservation easement, land managed under long term agreements for habitat or ecosystem services and other private forest land. This matrix will help assure the vitality and competitiveness of the forest products industry, sustain a healthy and intact forest, protect valuable habitat and provide for public recreation.

This matrix, and its benefits to the industry and the people of Maine, can be achieved through thoughtful and creative design and use of a variety of financial incentives that reframe the public-private relationship - rewarding landowners for long-term assurances of public benefits provided by these forests, and through investments in acquiring conservation easements and fee conservation lands.

DOI's Climate Change Adaptation Initiative has established the North Atlantic Landscape Conservation Cooperative (along with other regional LCCs) to design plans for sustaining landscapes capable of maintaining healthy populations of fish, wildlife and plants in the face of climate change.

Through its WaterSMART initiative, DOI seeks to ensure stable, secure water supplies for future generations through a variety of strategies including protecting water resources from land uses that could impact the quality and quantity of fresh water supplies.

Keeping Maine's Forests' overarching goal - to maintain the forest resources and traditional uses across the Maine Woods - is ambitious. It will require the collaborative energies of the state, tribal and federal governments along with forest landowners, land trusts and many other private partners. While challenging, the goal is attainable.

The past dozen years have seen unprecedented levels of conservation investment in the Maine Woods increasing conservation ownership (both fee and conservation easement) from less than 8% of the Maine Woods in 1998 to around 23% today. The purpose of this proposal is to maintain this momentum by embarking upon a new initiative that offers a comprehensive array of conservation options and stewardship tools for forest landowners who wish to take advantage of them.

Discussion Question 1

Written & Online Comments

(cont.)

After the pilot project(s) has been established, the Keeping Maine's Forests Steering Committee will evaluate the project(s) and assess how well it has achieved the diverse objectives of Keeping Maine's Forests. Based upon that evaluation, the Steering Committee will decide whether to expand the initiative to other lands and how it should be modified to meet the needs of forest landowners and the public.

Maine landowners and conservation partners have demonstrated their ability to work together with state and federal agencies and accomplish forest conservation at a landscape level. The West Branch Project (329,000 acres), Katahdin Forest (Project (246,000 acres), and Downeast Forest Partnership (339,000 acres) are three of the most prominent examples of the extraordinary conservation partnerships that have occurred in recent years.

Keeping Maine's Forests seeks to build upon the foundation and momentum created by these efforts through one or more pilot projects that: Connect together and expand upon existing conservation ownerships;

Provide attractive alternatives for landowners who have elected not to sell conservation easements under the existing programs;

Offer forest stewardship opportunities that are attractive to landowners and sustain and enhance the public values of Maine forests; and

Utilize federal stewardship and conservation programs in creative and coordinated ways.

The 21,700-acre West Grand Lake Community Forest is the nationally top ranked Forest Legacy project currently being considered by Congress for FY '11 funding. By protecting 17 miles of lakeshore, it conserves the last large unprotected shores of West Grand Lake and Grand Lake Stream, a world-class angling destination that supports many nature-based tourism jobs.

Atlantic salmon restoration efforts, such as those led by Project SHARE (Salmon Habitat and River Enhancement), have received almost \$5 million of federal funds over the past decade from multiple federal agencies including the National Marine Fisheries Service, NRCS, USFS, USFWS, and National Fish & Wildlife Foundation, along with a tremendous amount of technical assistance from several of these agencies. Existing NRCS programs have been effectively used by Downeast forest landowners, such as the Passamaquoddy Tribe, Penobscot Nation, and the Downeast Lakes Land Trust, who are eligible under existing program criteria.

One of the region's largest forest landowners is interested in selling a working forest conservation easement over major portions of its extensive Downeast ownership (totaling several hundred thousand acres). An initial focus would be a large block of forest land which stretches from Sunhaze National Wildlife Refuge on the west to Moosehorn National Wildlife Refuge on the east. The landowner's forest lands benefit from a wood supply agreement for pulpwood assuring good silviculture and a continued timber flow for the foreseeable future.

Discussion Question 1

Written & Online Comments

(cont.)

These lands also encompass critical habitat for Atlantic salmon, exemplary natural communities, significant wading bird and waterfowl breeding and deer wintering areas, and many miles of established snowmobile and ATV trail networks. The proposed easement acquisition would connect many existing conservation areas and create a continuous corridor of permanently conserved forest land from the Penobscot River to the Bay of Fundy.

A proposed 12,000+-acre conservation initiative in the East Grand Lake watershed would conserve over 27 miles of pristine lakeshore on East Grand Lake and five other ponds along with an expansive wetlands complex along the international border in the Upper St. Croix River region. Preliminary plans call for a working forest conservation easement while assuring public recreation opportunities on East Grand Lake.

Several Downeast landowners, owning several hundred thousand acres of forest land, have expressed strong interest in participating in a pilot stewardship program that would provide fair compensation for management practices that address a range of ecological and recreational benefits derived across the forest landscape. New approaches to habitat management utilizing umbrella wildlife species would be tested while incorporating federal wildlife priorities such as Atlantic salmon restoration, migratory bird habitat and wetlands conservation.

The Manomet Center for Conservation Science has offered to help lead a pilot stewardship initiative in the Downeast region that would establish a payment for ecosystem services program. Manomet's efforts would be tied into national efforts being pursued by USDA's Office of Ecosystem Services and Markets and the North Atlantic Landscape Conservation Cooperative.

Recent conservation successes in the region using Forest Legacy funding are exemplary for striking an effective balance at maintaining the working forest, providing high-value recreational opportunities (motorized and non-motorized), and protecting water quality and critical habitats. Looking ahead, the region is well suited to meet new national conservation directions that recognize a landscape view of forest land conservation, both to maintain the forest economy and to provide a corridor of habitat across the landscape that will allow plants and animals to travel to suitable habitat in order to keep pace with climate change.

The recently completed 3,600-acre Stowe Mountain project in the Mahoosuc Mountains provides an excellent example of how strategic use of conservation funding can maintain a wide range of important public values. In an area where surrounding forest ownerships had been subdivided and developed, a working forest conservation easement was purchased that kept the property in active timber production, preserved critical links in regional hiking and snowmobile trails, and preserved high elevation ecological areas. The project was funded through a combination of Forest Legacy, state and private funds.

Nearby to Stowe Mountain in Riley Township, a timber investment company donated a working forest conservation easement on 6,700 acres surrounding Robinson Peak adjacent to state lands in 2008. This project demonstrates how the changing ownership patterns in the Maine Woods have created new conservation opportunities and how federal and state tax laws can encourage forest land stewardship (the owners received a tax benefit for their donation).

Discussion Question 1

Written & Online Comments

(cont.)

Heart of the High Peaks - The High Peaks region of Maine's Western Mountains (the mountainous area located between Carrabassett Valley and Rangeley) is one of three high mountain regions in Maine and the only one without significant conservation protection. It includes nine of Maine's 4000+ foot peaks, the largest contiguous block of land in Maine above 2,700 feet, and one of the largest roadless areas in the state. The high elevation of the headwaters to five river systems means this region has the clearest and coldest free-running waters in Maine, supporting the state's largest concentration of wild brook trout streams.

Landowners of nine parcels of land totaling over 50,000 acres in the High Peaks area (straddling Crocker Mountain, Mount Abram, and Saddleback Mountain), have expressed interest in conservation transactions. These lands include extensive high mountain terrain near the Appalachian Trail, documented habitat for Canada Lynx, Peregrine Falcons and the Bicknell's Thrush, Brook Trout, and successful spawning streams for sea-run Atlantic salmon.

Negotiations with some landowners have progressed further than others. A Forest Legacy application has recently been submitted for two candidate projects, a 12,000-acre ownership along Crocker Mountain, in Carrabassett Valley, and a nearly 6,000-acre parcel along Orbeton Stream.

Numerous Western Maine landowners, owning tens of thousands of acres, have responded positively to the potential opportunity to participate in a pilot stewardship program that would compensate them for the public benefits derived from their land. One area which would benefit from such a program is the Orbeton Stream valley (near Saddleback Mountain). Orbeton Stream, a headwater stream of the Kennebec River, is well known for brook trout fishing and is a traditional spawning ground for sea run Atlantic salmon. One of the major landowners in the valley has indicated a willingness to consider participation in stewardship programs that would both improve timber operations and enhance recreational opportunities along Orbeton Stream.

Looking more broadly at the region, Keeping Maine's Forests has identified four "Demonstration Landscapes" within the Maine Woods ranging in size from 925,000 acres to 2,600,000 acres to illustrate the potential outcomes that could be achieved through the Keeping Maine's Forests initiative.

In each of these areas, which are described on the following pages, there exists: An extraordinary array of conservation values of statewide, tribal and national significance; An existing base of conserved lands (23% - 35%); Forest landowners owning substantial acreages who have expressed interest in pursuing forest conservation and stewardship opportunities; and, Experienced non-profit conservation organizations prepared to take the lead on major conservation initiatives within the region.

As resources and landowner interest permit, Keeping Maine's Forests is prepared to pursue pilot projects in all of the Demonstration Landscapes and beyond, as there are a wealth of exceptional places and resources on lands outside of the identified demonstration landscapes that are essential to the overall integrity of the Maine Woods and fully deserving of conservation and stewardship efforts

Discussion Question 1

Written & Online Comments

(cont.)

Allagash & St. John Rivers Size: 2,100,000 acres Description: This demonstration landscape is defined by two great wild free-flowing rivers, including the longest free-flowing river in the eastern U.S., and the remote forest lands that surround them. The 92-mile Allagash Wilderness Waterway, the first state-managed "wild" river in the national Wild and Scenic River System, was created through a cooperative state-federal effort in the 1960's and conservation of the St. John River has become a top national priority for The Nature Conservancy over the past decade. These intact river systems and the unfragmented forest landscape provide critical habitat for the federally threatened Canada lynx, the endangered Furbish's Lousewort and other rare species. Stretches of the St. John River corridor contain some of the highest concentrations of rare plants in Maine, along with week-long backcountry paddling opportunities with exciting whitewater. These remote rivers and forests offer some of the finest backcountry recreational experiences anywhere and support the employment of many local guides. These forest lands have been harvested for many generations providing surrounding mills with a continual flow of raw material.

Conserved Lands: Approximately one-third of the Allagash & St. John Rivers Demonstration Landscape is currently conserved, mostly through working forest easements. The primary fee ownerships include the state's ownership within the Allagash Wilderness Waterway and The Nature Conservancy's ownership along the St. John River.

Moosehead to Katahdin Size: 925,000 acres Description: This demonstration landscape extends between two extraordinary places of national renown - from the eastern shore of Moosehead Lake, Maine's largest lake, to the boundary of Baxter State Park and Mount Katahdin. It encompasses the famed "100-Mile Wilderness" section of the Appalachian Trail (AT), the most remote section of the entire route between Georgia and Maine. It includes over 200 lakes and ponds, including the largest concentration of remote ponds in Maine many of which support wild native brook trout populations which are unique in the U.S. and which have spawned the establishment of many traditional Maine sporting camps over the past century that continue to flourish and attract clients from near and far. The area includes abundant critical habitat for the threatened Canada lynx. In addition to 100 miles of the AT, the Moosehead to Katahdin Demonstration Landscape is also a haven for motorized recreation interests with over 150 miles of maintained snowmobile trails, along with extensive opportunities for cross-country skiing and snowshoeing. This demonstration landscape is surrounded by diverse forest products facilities including hardwood and softwood saw mills, paper mills and wood energy plants.

Conserved Lands: The Moosehead to Katahdin Demonstration Landscape has been the focus of public and private conservation initiatives over the past decade led by The Nature Conservancy, the Appalachian Mountain Club, and The Trust for Public Land. They, along with other federal, state, and local partners, have facilitated strong federal investments through the Forest Legacy Program with both TNC and AMC becoming major conservation landowners in the region. To date, approximately one-third of the demonstration landscape is under conservation ownership or easements.

Discussion Question 1

Written & Online Comments

(cont.)

Western Mountains and Lakes Size: 1,200,000 acres Description: The Western Mountains and Lakes Demonstration Landscape encompasses a spectacular array of remarkably accessible natural features including the Rangeley Lakes, the Mahoosuc Mountains, the Upper Androscoggin River Headwaters and the High Peaks Region (10 of the 14 highest mountains in Maine). The region serves as the key conservation connection between the White Mountain National Forest in New Hampshire and the Maine Woods. The Appalachian Trail traverses the demonstration landscape encompassing some of the AT's most noteworthy features such as Saddleback Mountain and Mahoosuc Notch. The diverse landscape provides critical wildlife habitat ranging from expansive alpine ridges to the wetland complexes of the Umbagog National Wildlife Refuge. The area is a favorite destination of outdoor enthusiasts including angling on the Rangeley Lakes, Rapid River, and other pristine waters, hiking the region's many mountains, skiing and snowmobiling scenic trails, and sightseeing along the Rangeley Lakes National Scenic Byway. The counties encompassing this Demonstration Landscape have the highest percentage of jobs in the forest products industry of anywhere in Maine. The Penobscot Indian Nation has 42,000 acres of trust land in the area that it managed for forestry, wildlife, and other natural and cultural values.

Conserved Lands: About one-third of Western Mountains and Lakes Demonstration Landscape is under permanent conservation ownership or easement. Federal ownership includes the White Mountain National Forest, Umbagog National Wildlife Refuge, and the Appalachian National Scenic Trail. Other federal investments include several successful Forest Legacy Projects in the Grafton Notch and Rangeley region and over 110,000 acres of the Pingree forest conservation project.

Near term conservation opportunities: Ten different parcels totaling approximately 57,000 acres, approximately half easement projects and half fee projects, are in various stages of negotiations with a wide variety of landowners.

Downeast Size: 2,600,000 acres Description: This area is distinctive for its large lake and wetland systems and is renowned for its outstanding outdoor recreation destinations ranging from the world-class angling opportunities at Grand Lake Stream to the backcountry Machias River canoe route. It includes the Downeast coastal river watersheds, the U.S. portion of the St. Croix International Waterway, and eastern headwaters of the Penobscot River. Five federally designated free-flowing Atlantic salmon rivers occur here, along with significant brook trout and landlocked salmon fisheries. The area features Maine's greatest diversity of peatlands, which is unequalled in the nation, Globally Important Bird Areas designated by the American Bird Conservancy, and 17 extensive Beginning with Habitat Focus Areas, which are of statewide wildlife significance. The Downeast Priority Landscape serves as a primary wood basket for a diverse forest products economy including mills in Baileyville, Bucksport, Chester, and Old Town, as well as several biomass plants. The Penobscot Indian Nation and Passamaquoddy Tribe have 49,000 and 69,000 acres of trust lands respectively in the area that they manage for forestry, wildlife, and other natural and cultural resources.

Discussion Question 1

Written & Online Comments

(cont.)

Conserved Lands: Over one-half million acres of the Downeast Priority Landscape are currently conserved. Federal conservation lands include the Moosehorn and Sunkhaze National Wildlife Refuges as well as over 94,000 acres conserved through the Forest Legacy Program. The Downeast Lakes Forestry Partnership "Sunrise" easement is one of Maine's largest working forest easements permanently conserving over 300,000 acres of sustainably managed forest lands. The area includes two large community forests.

Near term conservation opportunities: Seven parcels totaling approximately 285,000 acres, primarily easement projects, are available for conservation.

North American Wetlands Conservation Act With wetlands so prevalent throughout the Maine Woods, NAWCA grants (typically for \$1 million) have been used extensively in Maine with great success both for fee and easement acquisitions.

NAWCA has recognized the value of landscape level conservation and has embraced working forest easements as an effective strategy for wetlands and wildlife habitat conservation.

Cooperative Endangered Species Conservation Fund - ESA Sect. VI RLAG grants have been used successfully to protect Atlantic salmon habitat both by fee and easements.

Healthy Forest Reserve Program HFRP, which is not subject to the same limitations as other NRCS programs, has played an important role helping a number of large landowners develop forest management plans that will sustain or improve Canada lynx habitat.

Cooperative Forestry Assistance Program The Cooperative Forestry Assistance Program has proven an effective tool in engaging family forest owners in active management of their woodlands, creating long-term relationships between family forest owners and private consulting forester, and enhancing access to the USDA conservation programs listed herein and/or forest certification programs.

Office of Ecosystem Markets Emerging markets for forest ecosystem services could create significant new income streams for forest landowners and communities. The proposed KMF pilot stewardship project offers a potential proving ground for an ecosystem services model.

North Atlantic Landscape Conservation Cooperative This stewardship model proposed by Keeping Maine's Forests fits in perfectly with the LCC. Keeping Maine's Forests would hope that its stewardship initiatives could become a demonstration area for the LCC's efforts.

Gulf of Maine Coastal Program The program has played an important technical assistance and advisory role for implementation of conservation projects in the Maine Woods beginning with the Pingree project in 2002 providing habitat information and assisting with grant funding through USFWS programs.

The Keeping Maine's Forests initiative will increase demand for the program's advisory and technical assistance services.

Discussion Question 1

Written & Online Comments

(cont.)

Tribal Wildlife Grants Maine's tribes have substantial forest land ownerships and have been integrally involved in major conservation initiatives such as the Penobscot River Restoration Project. TWG grants have enabled the tribes to take a leadership role in resource stewardship.

As active participants in the Keeping Maine's Forests initiative, Maine's tribes will look to expand stewardship activities on their forest lands.

Rivers, Trails Conservation Assistance Program RTCA has played an important supporting role in the development of numerous recreation projects in the Maine Woods such as the Northern Forest Canoe Trail.

Keeping Maine's Forests proposes a ground-breaking collaborative effort involving USFS, NRCS, USFWS, and NPS working together with their state and tribal counterparts, landowners and non-profits to create a new model for stewardship incentives that is: 1) based upon the latest and best science; 2) available and attractive to forest landowners; and 3) provides a cost-effective approach to maintaining and enhancing a wide range of ecosystem services found in the Maine Woods. Utilizing the latest science regarding the habitat requirements of certain umbrella species could serve as a foundation for the stewardship program.

Over the past months, the Keeping Maine's Forests Steering Committee has wrestled with developing a set of common principles and translating those principles into this proposal. It has not been an easy process, and the group is aware that many challenges lie ahead. Nonetheless, we have created a foundation for collaborative action on forest issues that is unprecedented in Maine. In these times of political polarization, this achievement is noteworthy.

As part of the process of developing this proposal, Maine landowners owning more than 10,000 acres within one of the four Demonstration Landscapes were surveyed to gauge their interest in pursuing conservation or stewardship opportunities that might become available through Keeping Maine's Forests. Of 42 landowners surveyed, approximately half expressed an active interest in pursuing either a conservation and/or stewardship project, another third wanted to see how the program evolves before pursuing a project, and less than 15% expressed no interest in Keeping Maine Forests opportunities.

Maine has one of the strongest land trust communities of any state in the nation including numerous groups whose mission and expertise focuses on conserving forest lands, such as the Forest Society of Maine and the Small Woodland Owners Association of Maine Land Trust. Additionally there are key land trusts whose geographic focus centers on the Maine Woods such as the Downeast Lakes Land Trust, Mahoosuc Land Trust and the Rangeley Lakes Heritage Trust. Regional and national organizations such as The Nature Conservancy, Trust for Public Land, Appalachian Mountain Club, The Conservation Fund and the New England Forestry Foundation have all taken on major forest conservation initiatives involving hundreds of thousands of acres in Maine over the past decade. There is no question that Maine has non-profit partners capable of taking on the challenges and opportunities contained within this proposal.

Discussion Question 1

Written & Online Comments

(cont.)

Landscape conservation, climate change adaptation, sustainable forestry and payments for ecosystem services are just a few of topics that are at the forefront of the environmental research agenda and of direct relevance to Keeping Maine's Forests. Maine's scientific community has taken a leading role in the inquiry of these issues, developing on-the-ground programs to apply their findings. The Maine Department of Inland Fisheries & Wildlife in collaboration with Maine Natural Areas Program, Maine Audubon and others initiated a statewide approach to landscape conservation in 2000 through their Beginning with Habitat initiative and the development of a State Wildlife Action Plan.

Since 1975, the Cooperative Forest Research Unit at the University of Maine, a landowner-university cooperative whose members own over 8 million acres of the Maine Woods, has been conducting on-the-ground research on sustainable forestry. The scientists at CFRU seek to answer real questions about real management challenges such as how to best sustain quality habitat for the Canada lynx.

The Climate Change Institute at the University of Maine is a national leader in researching the impacts of climate change on forest ecosystems and the Manomet Center for Conservation Science has focused its recent research initiatives on developing a science-based approach to payments for ecosystem services for forest landscapes. These and other highly regarded Maine institutions are prepared to assist in the implementation of the Keeping Maine Forest initiative.

The Keeping Maine's Forests initiative is a natural outgrowth of other endeavors of state government that have focused on the Maine Woods. For the past 40 years, Maine's Tree Growth Tax Program has helped Maine landowners maintain their property as productive woodlands and supported Maine's wood products industry by assessing property taxes on enrolled forest lands on the basis of forest productivity value, rather than market value.

The Maine Department of Conservation has worked with Maine landowners and the forest products industry to make Maine the national leader in certifying forest lands for sustainable management with over 7.5 million acres now certified by the Forest Stewardship Council, the Sustainable Forestry Initiative or the Tree Farm program. The Maine Bureau of Parks & Lands has dual certification of its public reserved lands and has managed those lands for multiple uses with a minimum of public controversy.

Since its creation in 1988, the Land for Maine's Future Program (LMF) has contributed \$130 million to land and easement acquisitions including many large projects in the Maine Woods, often providing the state-required match for federal land acquisition funding programs. Maine voters have demonstrated their strong conservation ethic by consistently passing land acquisition bonds with support typically topping 60% including strong support from the state's northern counties. Maine's senators and congressional representatives have been stalwart supporters of federal funding for Maine's forest conservation projects.

Discussion Question 1

Written & Online Comments

(cont.)

Over the past 35 years, the policies of Maine's Land Use Regulation Commission (LURC), which has responsibility for planning and regulation of the 10.5 million acres of unorganized territories, have sought to maintain a forest land base that will continue to support a forest products industry, wildlife and outdoor recreation including a unique transfer-of-development-rights program that allows large forest landowners to develop suitable portions of their ownership in exchange for permanent conservation of other lands.

Research needs: The plan will identify research tasks that need to be completed in order to effectively implement Keeping Maine Forests as more specifically presented below.

Outreach to forests interests, local communities and the general public: The plan will lay out a public information program designed to keep stakeholders and the public fully informed about the objectives and progress of Keeping Maine's Forests and solicit public input at key points in the process.

Collaboration with other efforts such as the North Atlantic Landscape Conservation Cooperative: The success of Keeping Maine's Forests will be, in part, dependent on how well its efforts are coordinated with other efforts around the region and country.

Management/Stewardship needs: The plan will address the substantial monitoring and stewardship responsibilities and costs that will result from the proposed easement and fee acquisitions and the proposed stewardship initiative.

Expected project outcomes: The plan will identify short-term and long-term project goals and expectations.

Evaluation mechanisms to strengthen the model: The plan will include specific methods and criteria by which to evaluate the effectiveness of the pilot projects and to revise strategies in order to strengthen the Keeping Maine's Forests initiative.

Keeping Maine's Forests believes that the core of the implementation plan can be developed within a six month timeframe because so much work has already been completed to date. At the same time that the Steering Committee is developing the implementation plan, forest landowners and their conservation partners can be working out details for the pilot project(s). Similarly, resource managers can be working with the scientific committee to construct the framework for a model forest stewardship program.

The pilot project phase of Keeping Maine's Forests is expected to last approximately three years. After the completion of the pilot projects, the Steering Committee will conduct a detailed evaluation of Keeping Maine's Forests, determine whether it should be expanded to new areas and recommend any changes that are needed to better achieve the established goals and vision.

Discussion Question 1

Written & Online Comments

(cont.)

Fundamental to the underlying principles of Keeping Maine's Forests is that landowner participation in stewardship and conservation efforts is purely voluntary. The purpose of the initiative is to create new opportunities for forest landowners that they can elect to pursue. No landowner will be required to take any action or penalized for not participating. Keeping Maine's Forests acknowledges and applauds the fact that many large forest landowners have proven to be stewards of their lands without any governmental involvement and may elect to continue in this manner.

We understand that a sustained effort will be required to meet the objectives of Keeping Maine's Forests. The initiative is structured to be scalable depending upon available funding with the expectation that the effort will begin with one or more pilot projects that prove their effectiveness in meeting the objectives of this effort before additional investments are made.

There is sufficient landowner interest and organizational capacity to work in several areas and on multiple land acquisition and stewardship efforts simultaneously should there be available project funding. Projects will be selected through a competitive process with funding to be provided only to projects that successfully achieve the goals of Keeping Maine's Forests and meet the requirements of the federal funding program.

The cost of working forest conservation easements in the Maine Woods has averaged less than \$150/acre easements in southern Maine have been more expensive);

Maine's forest products industry and forest-based recreation tourism in Maine together generate approximately \$6 billion annually in economic output.

Perhaps most revealing is the fact that since 1998, over \$280 million has been raised from public and private sources to acquire fee lands and conservation easements in the Maine Woods. Of that amount, over \$180 million came from private sources. These figures demonstrate the level of commitment that has already been made to the conservation of the Maine Woods and provides optimism that a true public-private funding partnership can be successful over the next decade and beyond.

Over the past months, the Keeping Maine's Forests Steering Committee has made tremendous progress in identifying common concerns and agreeing upon conservation and stewardship strategies to pursue as part of the proposed pilot projects. However, the Steering Committee members view this proposal and the Keeping Maine's Forests initiative as a dynamic effort that will evolve and improve based upon the experience with the pilot project(s), additional research and analysis, and ongoing discussion.

Discussion Question 1

(cont.)

"Why would you go west," asked Henry David Thoreau over 150 years ago, "when Maine has everything?" In his travels through Maine's lakes, rivers, mountains, and forests, Thoreau recognized that he was experiencing one of the country's greatest natural treasures comparable to the grand landscapes of the west. Remarkably, the forest landscape witnessed by Thoreau is still largely intact today. Since Penobscot guides led Thoreau through the Maine Woods, the forests have grown multiple stands of timber sustaining Maine's forest industry. With a few exceptions, the trees, plants and wildlife witnessed by Thoreau in his rambles still can still be found in abundance. The sense of awe that Thoreau experienced is still common today among those who recreate there.

Through this proposal, Keeping Maine's Forests seeks to initiate an unprecedented partnership - a partnership that will work to ensure that, in 150 years, the Maine Woods are still providing the wealth of public benefits, from wood to wildlife, that they do today. Keeping Maine's Forests would help to sustain the tradition of private ownership and stewardship that has characterized this region and fueled Maine's economy. To do so requires that we develop new approaches to share the responsibility for maintaining the valued resources and outstanding recreation opportunities that the Maine Woods provide.

The specifics of the Keeping Maine's Forests proposal are divided into two categories: Conserving the Forest Landscape and Enhancing Forest Stewardship. These are two of the three legs of the stool upon which the future of the Maine Woods depends. The remaining leg is sustaining rural economies through strategies that will maintain and expand forest based industries, including traditional forest products, energy and forest based tourism. These rural development strategies will be presented in a separate proposal that is currently under development.

Keeping Maine's Forests Long-term Objectives: The Keeping Maine's Forests Initiative seeks to support private ownership of actively managed forest lands utilizing a range of conservation tools that keep them as forest, protect significant ecological values, ensure sustainable forest management and guarantee public access. Where high value ecological, cultural, and recreational lands exist, fee acquisition from willing sellers will likely be the most appropriate strategy to protect the public's interest. These could include areas such as riparian corridors, old growth forests, wetland complexes and other unique natural communities, trail corridors, popular recreation destinations, critical wildlife habitat, and areas that include a high concentration of these resource values. In addition, where there is community interest, Keeping Maine's Forests would support the establishment of community forests.

It is a goal of Keeping Maine's Forests to maintain or increase the overall timber output from Maine. Acquisition of working forest easements in the Maine Woods will help prevent the loss of land from the timber base that would otherwise be subdivided or developed.

However, in addition to simply keeping forests as forests, the Keeping Maine's Forests initiative proposes to pursue measures that will help to ensure that, in accord with landowner objectives, the opportunity for timber production is maintained on these lands for the foreseeable future such as: Creating an easement template that does not diminish the ability of landowners to provide a sustainable flow of timber to Maine's forest products facilities;

Discussion Question 1

Written & Online Comments

(cont.)

When evaluating potential forest conservation projects, the highest priority projects will be those which protect exceptional ecological or recreational values, and/ or maintain active forest management consistent with sustainable forest management principles;

Assessing the feasibility and cost of other mechanisms such as incentives for stewardship that will help support an active forest products industry consistent with sustainable forest management principles.

Of the 2.1 million acres of forest land conserved in Maine since 1998, about 80% has been through conservation easements and the remainder in fee acquisitions. Of those lands acquired in fee by both the State and non-profit organizations, most have continued to be actively managed for timber production (though typically in a less intensive manner), a practice which Keeping Maine's Forests seeks to continue so as to minimize impact on timber supply. While it is anticipated that timber production may be reduced on some of the fee lands acquired, efforts can be made to offset this through enhanced productivity elsewhere. Over the past 50 years, Maine's landowners have doubled the harvest from their timberlands while, over the same period, almost doubling the standing volume of timber in the woods. With a concerted effort to increase productivity, this trend can, and should, continue into the future. In particular, smaller ownerships (mostly in the southern portion of Maine) are a seriously underutilized resource growing more than twice as much wood than is currently being harvested.

If the pilot project phase proves successful, the Keeping Maine's Forests initiative is intended to be a sustained effort over many years, learning and improving along the way, with the ultimate goal of a broader landscape of conserved forest lands that are privately owned and sustainably managed for timber production with selected fee conservation lands embedded within this landscape. The extent of the conserved landscape and the mix of conservation and stewardship tools utilized across that landscape will depend upon the results of the pilot project phase described earlier and the refinements made to the approach outlined here based on what is learned from the pilot project, as well as landowners' desire to participate (all transactions are on a willing seller basis) and availability of resources to implement the Keeping Maine's Forests initiative.

This landscape vision recognizes that there is an appropriate place and need for well-sited residential and tourism related development within the Maine Woods in and near established communities and resort facilities. Moreover, strategic siting of resource-dependent industrial facilities and alternative energy generation such as wind power should be provided for within the Maine Woods.

Legacy Forest Legacy has been used extensively in Maine with great success - providing some of the nation's highest scoring projects and those with the greatest conservation impact for the price.

Discussion Question 1

Written & Online Comments

(cont.)

The forests of what is now Maine had sustained the native tribes, and had been sustainably managed by the tribes, for 10,000 years. Tribes continue to practice culturally and traditionally appropriate natural resources management practices today on Indian Territories and Trust lands acquired under the terms of the 1980 Maine Indian Land Claims Settlement Act and 1991 Micmac Settlement Act. Income from the sale of timber provides much needed revenue for tribal government operations and the harvesting of raw materials for culturally relevant activities allows tribal people to continue practicing indigenous traditions. Many of the tribes' land management initiatives support the goals outlined in the Keeping Maine's Forests project.

The tribes manage their land holdings for long term sustainability while providing a range of beneficial uses. Indian Territory and Trust lands are managed to maintain and enhance ecological integrity, respectful of the diverse fish, wildlife, and plant populations that depend on these forests for their survival. The protection of riparian buffer zones, wetlands, and other environmentally sensitive areas are given special recognition in the development of tribal forest management plans.

The implementation plan for the pilot project phase will include: Budget based upon anticipated federal, state and private funding: The plan will establish a budget for the pilot project phase of Keeping Maine's Forests.

Solicitation and selection procedures for pilot projects: The plan will establish a set of project selection criteria that build upon the following Keeping Maine Forest project principles: Maintaining timber supply to support a diverse and robust forest products industry (priority to be given to projects that include mechanisms to ensure this outcome)

Promoting healthy forests - sustainably managed;

Reducing Maine's dependence on fossil fuels;

Protecting biodiversity;

Maintaining public access for diverse recreation opportunities;

Preserving special places;

Maintaining or increasing carbon storage; and

Facilitating adaptation of forest systems to climate change.

Discussion Question 1

Written & Online Comments

(cont.)

Modifications to federal programs required to achieve desired outcomes: The plan will propose any modifications needed to federal programs to effectively implement the Keeping Maine Forests agenda.

I'll keep it short. Our national parks are one of the last places that I can go to seek mental, physical, and spiritual renewal. They are the true temples of God's own making and not man-made heated and air-conditioned energy hogging boxes that we call a church. The last places to walk amongst, see, smell, hear, and touch the divine. Please do all you can to help others to experience them and to save them from our selfish ways that threaten their future.

I never recognized how unique and invaluable our National Parks are until I traveled to Europe. Europeans everywhere I went asked me if I had ever seen the Grand Canyon or been to Arches in Utah or Yosemite or Yellowstone. Although these places are underappreciated by many Americans, it is clear to me now that they bring prestige to the USA on a global scale. Every national park that I've been to has as many foreign visitors as Americans. This surprised me at first, but now I realize that foreigners travel to the USA specifically to see some of the most incredible natural landscapes in the world. Since we live in a country so abundant with natural beauty, Americans tend to take this for granted. However, the beauty that is protected by our National Park System transcends all boundaries of race, culture, and time. Everyone can find peace and overwhelming beauty by visiting these areas. Please take all measures necessary to strengthen the NPS and encourage all Americans to experience these wonderful places to the fullest with minimal impact to the natural world. This is truly a place for everyone to enjoy.

I love America's National Parks, Monuments, and Battlefields. They are something I cherish. Last week I was at the funeral of my father-in-law at Indian Gap National Cemetery. We had a 7-hour wait for our flight from Philadelphia back to Albuquerque and spent most of it at Valley Forge. As a child, my dad, who was a college professor, took us on vacations with National Parks at the center of each trip. I learned a great deal from ranger talks and hikes and the small learning centers at each park HQ. Some of my fondest memories are from times spent in National Parks. It is my wish that the National Park system be fully funded so every inch of each park is kept open for people to explore while protecting the land for future generations. The NPCA tells me that there are funds in the Land and Water Conservation Fund that are not spent for their intended purpose. Please remedy that problem. As a taxpayer and voter, I am in favor of setting aside new lands and monuments for the National Park System. I want the history of the USA and the rich beauty of the land preserved for myself and for the future. Thank you for your time.

Discussion Question 1

(cont.)

I am very fortunate to live near the Point Reyes National Park and it is my church. I have always found the outdoors to be a soothing magical place where whatever is weighing on me comes back in a more manageable perspective after I've been hiking or out somewhere in nature- open spaces open us up. Our national parks remind us all of what is truly important and beautiful and it keeps us small and wondering and in awe. Many of our parks exist solely because someone loved a tree or a stream and wanted it protected from private enterprise and development. Ken Burns' documentary on our national parks said it all so perfectly and clearly portrayed them as our greatest treasure and as a creation that makes us a truly great country. And yet our parks are still threatened daily- our only designated wilderness area here within the Point Reyes National Park is currently facing serious threats from private enterprise which could begin the slow encroachment of our parks throughout the country. I am turning sixty this year and so was fortunate to grow up when kids could bump around in the outdoors and explore the wonders of their local creek and forest. These are critical components of a child's education and our current generation has been denied these experiences unless they are lucky to have parents who have the time and money to make it happen. I believe we need to make these experiences available to all kids. I am also old enough to remember when the schools had money to include outdoor education weeks in their curriculum and as a teacher I see the yearning and excitement the kids have for any experience out in nature. Somehow as a country we have learned to value a sole quest for money and have lost the spiritual balance that an experience out in nature can provide. You can't love the environment unless you've been given the opportunity to be out in it. The parks feed our soul and also protect habitat for wildlife while many species are slowly disappearing from our planet. I support your initiative- and perhaps more government jobs within our parks could be created thereby helping the parks and helping with unemployment. Your initiative will support national parks and bring them the national attention they deserve and the continued protection they need. Thank you for all you have been attempting to do and for considering my comments.

I would like to urge you as President of our great country to fully support our National Parks for the benefit of our people and our visitors from abroad. I personally have learned so very much about our history by visiting National Parks throughout my 36 years on earth. When I think back on my childhood and early adult life my most vivid memories are always those spent with my family at places like Ninety Six SC Castillo De San Marcos FL Fort Frederica GA Gettysburg PA ...the list goes on and on I very much appreciate our national parks and know that many many others do as well. I can think of no better place that you can spend time outdoors spend time with family and/or friends learn about history and about nature all in the same location and all for what is usually a very reasonable fee or even free (paid by taxes) As do many other people these days I have a great many friends from around the world. I have close family in South Africa and in the UK Canada and Australia and many friends in these places and others. One statement almost without fail that they have to say about our country is how very much they appreciate America's willingness to preserve historic sites. Please next time you are visiting with someone from abroad ask them what they think about our national parks...then ask their kids. I hope you have a fantastic day and will consider continuing to support and promote our national treasures which are our national parks. With love from our home to yours...

Discussion Question 1

Written & Online Comments

(cont.)

I really care about our National parks and over the years our family has gone to many. I like that they preserve the natural world places of quiet and also give us opportunities to learn more about our history. I hope you will work to preserve them. National parks seem like a wonderful place to use lots of labor if you could get that funded. They are a wonderful asset to our country. People from all over the world travel there. We have seen many different groups. Thank you for the good work you do and have done.

We just returned from a month-long road trip which included stops at several National Park sites. Whether it's a well-known site such as Yellowstone or one of the lesser-known parks the National Parks are a special collection of America's beauty and history. They provide a wonderful way for families to connect to the outdoors and cannot be overlooked by your "America's Great Outdoors" initiative. Please ensure that our National Parks get the funding and tools they need to continue to preserve and protect these very special places and history both large and small. There's nothing like returning to a National Park with your children and knowing that someday they'll be able to return with their children. Thanks for reading.

The AHC also received a significant number of reports concerning access issues on state, county, and local public land. While the primary objective of the AHC is to document issues on federal land these reports are also of interest because they create a fuller picture of equestrian access issues throughout the country. Furthermore, they could be analyzed in-depth at a future date or be of use to state and local equestrian organizations such as State Horse Councils and trail riding clubs. These reports clearly demonstrate the need for recreational riders to be active within their local communities and for State Horse Councils to actively engage their state legislators and land managers on equestrian access issues.

It remains important that recreational riders continue to report their experiences to enable the AHC to create a complete picture of the access issues facing equestrians around the country. The AHC will use this information to work with both the land management agencies and Congress to address access issues facing equestrians.

Urban Programs and Operations - in partnership with National Parks, Recreation Areas, and Monuments and local government agencies and communities

Close to the major metropolitan areas of the state, urban Corps programs serve as a portal to the National Parks and Forest system for urban youth and young adults. Corps are an ideal segue experience as young people with little or no interest in the environment are attracted to the corps as a job and educational opportunity. Once introduced to the environment through the hands-on nature of corps work, many young people are "hooked" and excited about the possibility of a career related to the outdoors. In addition to working within their local communities, urban corps typically offer members the chance to leave home to work on projects for 5-10 days during which they camp out. Organizing these "spike" projects to the non-residential corps introduces young people to wilderness and parks they might not otherwise have seen.

Discussion Question 1

Written & Online Comments

(cont.)

Residential Centers - The CCC currently operates residential centers in a number of locations throughout the State. These centers offer housing, food, educational programs and provide a unique opportunity for young people who need housing or need (or desire) to move away from home. Many public land management agencies have housing that might be transformed into temporary or permanent residential corps operations, thereby offering a transformative experience to more young people.

Emergency Response

The Corps in California have developed the capacity to respond to fires, floods and emergencies. Corps members and supervisors are trained and the Corps programs have established partnerships with federal, state, local and nonprofit emergency response organizations. Through this system, Corps are able to dispatch crews of young people across the state.

"Days of Service" Corps organized local communities to engage other youth, young adults and community members in projects such as neighborhood tree planting, coastal clean-ups; school and community gardens. As part of a 21st Century Conservation Corps, these efforts can be significantly expanded in communities statewide with young adult corps members serving as role models, mentors, leaders and educators.

Use Cooperative Agreements - The success of a 21st Century Conservation Corps requires partnerships with federal agencies that are best defined through the use of cooperative agreements to explicitly acknowledge the multiple goals resulting through partnerships with corps accomplishing the needed work while developing the youth participants. This process needs to be streamlined to more quickly solidify partnerships. (This issue was well-covered at the listening sessions in California- and is a significant barrier if not addressed.)

The 21st Century Conservation Corps can tap into existing sources of funding for maintenance and capital improvement projects. The Corps experience is rooted in performance of work, therefore, identifying funding for the work that needs to be done e.g. fire fuel reduction; emergency response; restoration of wetlands or the removal of invasive species; or the installation of solar panels on federal parks facilities. However, bringing the Corps to scale will require additional funding Specific sources of funding include:

Funding the Public Land Corps Service Act

Designating a 21st Century Conservation Corps initiative within AmeriCorps

Employment and training funds from Department of Labor

Higher percentage of NPS entrance fee fund to youth programs

Designate earmarks or set asides specifically to Conservation Corps to work with DOE, DOI, USFS, DOI, and DOT

Discussion Question 1

Written & Online Comments

(cont.)

The mission of the 21st CCC is to "engage young people in full and part-time service to meet the critical environmental issues of our time through by building upon an existing infrastructure of proven corps programs."

Through partnerships between existing Corps programs and federal agencies tasked with implementation of the America's Great Outdoors, the 21st CCC would:

- Engage, educate and employ more young people in service to the environment

- Expand and replicate innovative Corps programs and projects

- Develop career pathways from Conservation Corps to federal employment in natural resource management

- Facilitate connections between corps programs and other youth partner programs to expose more young people to the outdoors.

The Conservation Corps in California stand ready to assist, support and assume leadership for this initiative that would bring this mission and set of goals to California, to:

- Connect people, especially urban youth and young adults with the outdoors and the environment

- Create a new pipeline to diversify and replace the aging federal work force

- Address the staggering rate of unemployment among young adults with significant negative long-term consequences

- Respond to the critical backlog of maintenance on public lands including severe fire threat to communities across the state

In California alone, the system of state and locally-run corps programs that have served as models for other states and locals includes: the California Conservation Corps (CCC), established as a state agency in 1976, with 27 field operations; and 13 locally-run independent non-profit corps located in the state's largest metropolitan areas. Through this network of corps programs and operations, at least 4000 young people are engaged in addressing California's critical environmental issues each year.

Corps Address Current Critical Environmental Issues

Corps programs respond to the changing environmental needs identified by land and natural resource management agencies. A 21st Century Conservation Corps can build on the current work project expertise and capacity to expand the scope and scale of any, or all, of the Corps work in areas including:

- Energy efficiency

- Fire fuel reduction

- Water conservation

- Climate change

- Habitat restoration

- Parkland Improvements

- Trail maintenance and construction

- Emergency response and mitigation

Discussion Question 1

Written & Online Comments

(cont.)

While the Corps in California have been continuously operating for more than a generation, the program model can respond to the current issues raised by the AGO initiative building on these essential program elements and best practices that have proven effective over time.

The Corps model can quickly adapt to a variety of conditions, needs and expectations including location, duration, and numbers of corps members. Projects can be done within the daily commute of existing corps facilities; or, temporary tent camps can be set up to house corps members temporarily assigned to a project. Longer-term tent camps can be established for larger scale projects that might run over a period of months.

Instead of federal agencies establishing and sustaining programs within federal operating units where there may not be enough work to support an effective program, Corps can stitch together projects from a variety of federal, state and local agencies thereby creating full-time corps experience - something that is difficult for any single federal agency to manage and sustain.

CCC's Backcountry Programs - in partnership with USFS, NPS and State Parks

This is a CCC Legacy program with over 2,000,000 hours of service over 30 years and 8,600 miles of trail built, repaired or maintained. Each year, young adults are recruited from within the ranks of the CCC, local corps programs, as well as through AmeriCorps national network for an extremely challenging six-month experience and assigned to work in some of most important national parks and forests in California. They live and work building and maintaining trails, restoring meadows and habitat and other similar work.

Coastal Fisheries Program - in partnership with US Fish and Wildlife, State Fish and Game and local environmental action groups

The Corps partners with USFWS, State Fish and Game officials and local environmental groups to restore salmon habitat in California's north coast. Corps programs remove invasive species along critical stream beds, restore spawning grounds, replant vegetation along stream banks stripped by logging practices and perform other tasks related to the restoration of wild salmon habitat along California's coast. These projects have received funding from a variety of state and federal sources and are performed in cooperation with native tribes and local nonprofit environmental groups.

In the memo that established the America's Great Outdoors initiative, President Obama painted a picture of a landscape in which significant places are protected through the work of robust public-private partnerships.

National parks are essential to completing that picture. The National Parks Second Century Commission envisions national parks as cornerstones of a network that protects the nation's biological, geological, and cultural diversity. This is a role that many parks already play, although the system is by no means complete.

The network would span the map, encompassing public lands, private lands, and connecting corridors beyond park boundaries. In this vision, existing parks would anchor regional and local protection strategies, and new parks would be established where preserved areas are lacking.

Discussion Question 1

Written & Online Comments

(cont.)

Fragments of protected landscape are often insufficient to support healthy fish and wildlife populations. Because parks often protect valuable habitat at the core of larger ecosystems, maintaining functioning natural environments across a larger region can depend on protecting key lands adjacent to parks, and conserving other habitat areas and connecting corridors. Degraded landscapes, waterways, and air quality in and around national parks, and large-scale threats such as invasive species and climate change, make it imperative to look beyond park boundaries and work in partnership to restore and protect whole landscapes.

In 2008, the U.S. Forest Service designated its first official wildlife migration corridor, protecting the path that pronghorn have traveled seasonally for 6,000 years.

Outside Forest Service lands, keeping intact the 150-mile roundtrip between Grand Teton National Park and the upper Green River valley is a collaborative effort involving the National Park Service, Bureau of Land Management, conservation groups, and private landowners. The effort uses tools such as wildlife-friendly fencing and conservation easements to ensure that the park's summer pronghorn herd can migrate to its winter range.

To the north, conservation groups, community members, park supporters, local landowners, and agency leaders are rolling up their sleeves to remove, realign, and sometimes replace fences. Their goal? To unblock migratory routes that Yellowstone National Park's northern pronghorn herd uses for its seasonal journey to and from wintering grounds outside the park. The project runs on volunteer effort and is privately funded.

Scratch the surface of any of the 392 National Park Service units, and you are likely to find a dynamic combination of committed staff, volunteers, and partner organizations. Their pursuit of the NPS mission—supported by national and regional offices—has established a base of programming, community engagement, and partnerships that make each park a natural platform for achieving multiple AGO goals at once. Making national parks a cornerstone of this initiative promises tremendous leverage to achieve many of AGO's aims, often by simply highlighting, providing additional resources for, or learning how to replicate park programs. The following seven examples illustrate the capacity of the National Park Service to realize AGO's goals.

Golden Gate National Recreation Area, California — Building community while building an urban park

Once an abandoned Army airstrip along San Francisco Bay, Crissy Field is now a gem in the Golden Gate National Recreation Area, which hosted more than 15 million visits in 2009. During restoration, more than 3,000 volunteers—including students from 120 local schools—worked 30,000 hours to re-create native dunes and marshes. They planted more than 100,000 native plants, some of which were tended by school classes at the park's nurseries. "I Grew Crissy Field" T-shirts became a common sight in neighborhoods near the park, and local buses emblazoned with the "Help Grow Crissy Field" message were the public face of a project spearheaded by the Golden Gate National Parks Conservancy.

Crissy Field Center, a collaborative venture that employs eleven Conservancy and three Park Service interpreters and educators, reaches more than 100,000 young people and adults each year. The Center's aim is to engage the multicultural communities surrounding the park

Discussion Question 1

(cont.)

Community campfires, programs en español, easy living history walks, and hands-on marsh explorations draw families to the park;

Day camps combine outdoor investigation, field outings, and fun projects for kids, who can then be youth leaders and mentors when they enter high school;

Inspiring Young Emerging Leaders (I-YEL), a yearlong internship program that prepares city high school students to be environmental and social leaders— and to go to college. I-YEL participants teach youth programs, do community outreach, attend conferences, and create their own service projects. More than three-quarters of the program’s alumni have graduated from college or are currently pursuing degrees. One, Mariajose Alcantara, just celebrated her second anniversary as a park ranger at Marin Headlands.

Over the course of three years, the Crissy Field restoration at Golden Gate National Recreation Area awarded nearly \$30 million to local contractors, engineering and design firms, and other businesses.

Crissy Field now hosts more than a million visits a year. Two out of five visitors are from outside San Francisco.

Seven previously abandoned buildings were rehabilitated following Crissy Field restoration, and now draw visitors and commerce to the west end of the field. Tenants include a large climbing gym and swim and gymnastics schools.

Glacier National Park, Montana — Regional collaborations in action

At the heart of the Crown of the Continent ecosystem—one of North America’s most ecologically diverse and jurisdictionally fragmented landscapes—Glacier is a national park that purposefully operates in a regional context. Threats to park wildlife and other resources originate from outside park boundaries, as do key support and collaborations that help the park protect those resources.

The Crown Managers Partnership, a collaboration of federal, state, and provincial land managers from the U.S. and Canada who share information and develop joint resource protection strategies. Among its achievements is a transboundary memorandum of understanding outlining joint management of the Flathead River system, which originates in Canada and forms much of Glacier Park’s boundary.

The Crown of the Continent geotourism initiative, a partnership of 50 regional business, community, governmental, conservation, and tribal groups that collaborated to produce a map celebrating the region’s natural and cultural heritage. The partnership now supports a user-generated travel information and social networking website that highlights the region’s rich recreational and cultural resources and how to protect them.

Discussion Question 1

Written & Online Comments

(cont.)

The Crown of the Continent Initiative, a coalition of nearly 20 scientific, academic, recreation, and conservation groups from the U.S. and Canada. In collaboration, the organizations have developed a ten-year action plan to protect the ecosystem during a time of climate change.

Great Smoky Mountains National Park, North Carolina and Tennessee — Reaching beyond park boundaries to educate and inform

Great Smoky Mountains, America's most-visited national park, hosted almost 9.5 million visits in 2009. It is a great example of a park that extends its reach well beyond park boundaries.

Podcasts, video overviews, and video blogs inform and educate visitors to the park's website and that of its nonprofit partner, the Great Smoky Mountains Association. Topics range from elk reintroduction to why there are so many dead trees in the park. One video gives kids an inside look at the park's Junior Ranger program, which is so much fun that the park had to start a "Not So Junior Ranger" program for interested parents and other adults.

Students visiting the Appalachian Highlands Science Center in the park learn about ground-level ozone pollution and identify ozone damage to plants in the park. Back at their schools, they plant "ozone gardens" that they monitor, adding their observations to a database from sites around the region.

Great Smoky Mountains is an active "Parks as Classrooms" site. In 2009, the park held an "electronic field trip" with staff from its Twin Creeks Science Center. The event was broadcast to more than three million students in the U.S. and abroad.

Business leaders, elected officials, and other interested community members don hip waders, ride in patrol cars, collect garbage, and get hands-on experience with other key aspects of park management. Five half-day sessions in the "Experience Your Smokies" program give community members a behind-the-scenes view of, and a greater appreciation for, park management.

Lowell National Historical Park, Massachusetts — Weaving new stories into a historical park

When rangers in this urban national park reflect on Lowell's early days as a booming textile town settled by Irish and French Canadians, they tell a broader story about the challenges of immigrating to a new country. Focusing on the continuing story of immigration invites Lowell's substantial immigrant communities to connect to the park.

The Mogan Cultural Center, operated in partnership with the University of Massachusetts Lowell, is one way the park is changing that. Side-by-side with the "Mill Girls and Immigrants" exhibit, the Center houses the Angkor Dance Troupe, a world-renowned group from Lowell's Cambodian Community. A community collaboration produced a Cambodian neighborhood walking tour presented in English and Khmer. The tour shows how Lowell's most recent immigrants have made the city home, participating in the long-standing immigrant tradition of adapting old sites to new needs and building new structures to serve cultural needs.

Discussion Question 1

Written & Online Comments

(cont.)

For a day, students visiting the Tsongas Industrial History Center are textile weavers, immigrants, assembly line workers, industrial engineers, and scientists.

The Center is a partnership between the park and the University of Massachusetts Lowell Graduate School of Education. Here, K-12 students and teachers learn about the Industrial Revolution, labor history, immigrations, economics, technology, and more while exploring historic cotton mills, canals, gatehouses, and worker housing.

Everglades National Park, Florida — Using science and community support to promote ecologically sensitive recreation

Between 2005 and 2008, assessments done by the National Parks Conservation Association and Everglades National Park identified boats that run aground as a major cause of seagrass damage in Florida Bay. In 2010, the park will begin pilot testing a new “Pole and Troll” zone, to slow down boats moving through shallow waters in the bay.

In the meantime, NPCA worked with 30 recreation groups, outfitter and guide associations, conservation organizations, and local governments to develop the Eco- Mariner online course. Eco-Mariner provides motor boaters with the knowledge they need to protect the Bay’s sensitive environment.

San Antonio Missions National Historical Park, Texas — Connecting a city with nature and culture

Located in a low-income, predominantly Latino area in the heart of San Antonio, San Antonio Missions National Historical Park relies on partnerships to engage youth and adults.

In 2009, the park hosted the first “Get Outdoors—It’s Yours” day in the country, collaborating with other federal and local agencies. The 2010 event drew 60 exhibitors and 5,000 young people to the park for a day of family activities, take-home projects, and learning about the local environment and outdoor recreation.

Through the National Park Foundation’s “First Bloom” project, the park partners with the Boys and Girls Club and the Sunshine Cottage for the Deaf to help children learn about weather, nature, and native plants. Children have planted native gardens along the trail from one of the missions to the San Antonio River, updated state databases on non-native plants, and planted native plant gardens at their program sites.

In conjunction with its partner group, Los Compadres, and the University of Texas San Antonio Center for Archaeological Research, the park hosts volunteer archaeology days, conducts teacher workshops, and runs field schools that have trained 60 university students in archaeological techniques.

Discussion Question 1

Written & Online Comments

(cont.)

Collaborations with the San Antonio River Authority and other partner organizations will result in upgrades to the riverfront hike and bike trails that bring tens of thousands of people past the missions each month. New “portals” will link the trails with each of the park’s four missions, welcoming more trail users to visit the park, and extending the park’s educational reach by locating panels about local history and ecology along each of the portals.

Calumet-Sag Trail, Illinois — NPS Rivers, Trails and Conservation Assistance program aids partnership to connect Chicago’s southern suburbs

RTCA staff helped organize the coalition that garnered the community support and governmental collaboration needed to move the 26-mile Calumet-Sag Trail from idea to reality. Now that trail engineering and planning are underway, as well as fundraising for trail construction, RTCA is turning its focus to sustaining community support over the long term. Recently it helped the fledgling Friends of the Calumet-Sag Trail establish itself as a nonprofit organization, and is helping the group position itself to raise matching funds for a federal grant.

The Calumet-Sag trail will run through 14 communities in Chicago’s south suburbs, creating new recreation opportunities, as well as a way for commuters to walk or bike to train stations along six rail lines that serve 200,000 residents. The trail will connect to four forest preserves and 500 miles of local, regional, and national trails. Ultimately, it will connect the I & M Canal National Heritage Corridor to the west with the Indiana Dunes National Lakeshore to the east.

For nearly 100 years, national parks have connected Americans with the great outdoors and our country’s rich heritage. Perhaps this explains why most Americans think first of national parks when they hear the phrase, “America’s Great Outdoors.”

Millions of us flock each year to our national parks to marvel at Yellowstone’s geysers, learn about our shared history at Philadelphia’s Independence Hall or Gettysburg’s Civil War battlefield, enjoy a swim along the shores of Cape Cod, or find a respite from the city in the bay breezes at San Francisco’s Golden Gate National Recreation Area. And National Park Service (NPS) programs help bring nature and recreation to Americans’ doorsteps, whether they live near a park or not. The Park Service offers educational programs that reach well beyond park boundaries, helps communities develop trails and greenways that connect youth and families to healthy outdoor activity, and assists in protecting historic buildings and cultural areas.

National parks are available for all to enjoy. Our national parks offer a range of recreational and educational possibilities unmatched by any other public lands in this country—from bike paths and scenic drives to backcountry hiking adventures, camping to canoeing, virtual field trips to hands-on service learning projects, and from ranger-led tours to unscripted explorations of historic and natural wonders.

Discussion Question 1

(cont.)

Yet, as the National Parks Second Century Commission found, our country is barely scratching the surface of our national parks' tremendous potential. Using the substantial contributions that parks already make as a springboard to achieving its aims, the America's Great Outdoors initiative (AGO) can foster a legacy that connects all Americans with the rich heritage that national parks represent.

53% Associate national parks with America's Great Outdoors, before learning anything about the initiative. 80% Believe national parks should be the centerpiece (43%) or an important focus (37%) of the initiative. 88% Say it is "extremely important" (69%) or "quite important" (19%) to protect and support major parks such as Yellowstone, Grand Canyon, Yosemite, and the Everglades—despite concerns about the current economic situation and the federal budget.

In the presidential memo that established the America's Great Outdoors initiative, President Obama laid out an ambitious slate of goals to create a 21st century strategy for reconnecting Americans with their rich natural heritage, and sustaining that heritage into the future. National parks have been charting a course along this heading for decades.

As Administration officials crossed the country listening to Americans' experiences and ideas, they saw firsthand how parks from Blue Ridge Parkway in the east to Santa Monica Mountains in the west are positioned to help advance the President's goals for the AGO initiative. Nearly 400 National Park Service (NPS) units and a core of National Park Service outreach programs offer a base of land and facilities, staff and volunteers, programming and expertise tailor-made to serve as a centerpiece of this effort to reconnect Americans with the outdoors.

NPS programs provide models that can be easily replicated by other agencies and in other places, as the federal government leverages its resources in support of community-driven efforts to protect landscapes and connect kids and adults with nature through education, recreation, work, and service.

In 2009, national parks hosted 285 million recreational visits, up four percent from 2008. A high proportion of Americans visit national parks, making parks a natural platform for reaching out broadly to achieve many AGO aims. 91% Have visited a national park or other NPS unit 62% Have visited in the past two years.

Recognizing the tremendous recreational value of national parks for the families it serves, YMCA works with the NPS Rivers, Trails, and Conservation Assistance program to create opportunities for healthy living and outdoor education. Connecting downtown trail networks to national trails and national parks creates urban gateways that encourage city dwellers to get out in nature. RTCA is a partner in YMCA-led healthy community programs across the country. More than 60 current RTCA projects highlight community wellness.

Discussion Question 1

Written & Online Comments

(cont.)

1) National parks connect people with healthy recreation and inspiring environments. From urban trails to backcountry wilderness, parks appeal to everyone from city schoolchildren learning about nature to families camping in an iconic landscape. Parks are widely accessible places for families, youth, and adults to enjoy and learn about the outdoors.

2) National parks and Park Service programs catalyze and support collaborative and community-based projects. The Park Service manages more than just parks. NPS manages programs that clean up rivers, promote hiking and biking trails, and bring hands-on science education to schools. These programs, which leverage federal resources in support of local priorities, are ready-made to replicate in other places.

3) National parks engage and educate Americans in hands-on, outdoor classrooms. Interpreters and educators bring treasured landscapes and historical collections to life for visitors of all ages. Volunteer and service learning programs offer practical education, and a way to give back. Hands-on investigations and collaborations with researchers spark interest in science and related jobs. Park-based initiatives and community collaborations offer proven, place-based education models and a foundation for expanded programming.

4) More national parks will expand public enjoyment of America's great outdoors. Expanding the National Park System could protect a greater diversity of ecological systems, better represent of our nation's evolving cultural heritage, and offer easier access in urban areas and parts of the country where national parks are few and far between. Park innovations in interpreting historical and cultural stories, and in linking recreation, learning, and service engage youth and social and cultural groups typically disconnected from nature.

5) National parks support jobs, service learning, and volunteer opportunities in conservation and outdoor recreation. Park programs and collaborations with community partners, youth service, and employment organizations establish pathways for careers in outdoor recreation, education, conservation, and management. Parks are treasured by locals and visitors alike. They are often key drivers of economic success in surrounding communities.

6) National parks connect and support efforts to conserve and restore larger landscapes. Important ecosystems and culturally significant landscapes often center on national parks. Many parks provide essential habitat in networks of protected areas and connecting corridors. Parks are resources for, and partners in, conservation of public and private lands outside their boundaries, and offer significant expertise in natural area restoration. Indispensable to restoring natural functions in large ecosystems such as the Everglades and Great Lakes, park projects also engage local contractors, scientists, and volunteers in revitalizing wetlands, fisheries, forests, and other close-to-home areas that then serve as outdoor classrooms, recreation areas, and vital habitat.

Discussion Question 1

Written & Online Comments

(cont.)

A group of Maui County (HI) teachers spearheaded a collaboration with Haleakala National Park, The Nature Conservancy (TNC), and local resource and cultural experts to produce the Ho'ike o Haleakala curriculum. Melding science with resource management, current issues, and Hawaiian culture, the curriculum brings the park into classrooms at a time when field trips are difficult to arrange. Interested teachers and students tap into volunteer projects restoring native landscapes in the park and adjoining TNC preserve. A local nonprofit runs teacher training, and in 2009 was awarded Centennial Challenge funds for a new invasive species learning module.

With the National Park Service 2016 centennial in mind, 85% of voters surveyed favor giving national parks enough funding so they are fully restored and ready to serve the public for the next 100 years.

At Indiana Dunes National Seashore (IN), restoration of the Great Marsh, which once stretched 12 miles along Lake Michigan's shores, is renewing native plant and bird habitat and allowing the marsh once again to filter runoff draining into the lake. Restoration efforts provide:

- Seasonal jobs for biotechnicians;
- Business for local companies supplying equipment, native plants, and labor;
- Community partnerships to restore adjacent wetlands;
- Improved bird watching, bringing more visitors to the park and surrounding communities; and
- A natural classroom for students and adults from nearby urban areas, including Chicago.

In the space of two years, during some of this nation's most challenging economic times, public commitment to supporting America's national parks has increased by 14 percent. In a June 2010 poll, 69 percent of voters said it is "extremely important" that the federal government protect and support major parks such as Yosemite, Everglades, and Yellowstone. Enthusiasm for national parks permeates public perceptions of the America's Great Outdoors initiative. The same poll found strong identification of national parks with the idea of "America's great outdoors." After learning about the initiative, four out of five voters polled believed national parks should play an important or central role.

Americans are already anticipating the 100th anniversary of the National Park Service in 2016, spurred on by national events such as Ken Burns' sweeping documentary, and preparations at parks around the country. A strong commitment to national parks strengthens the legacy this initiative seeks to achieve, both in public perception and by virtue of the great leverage that national parks offer in reactivating America's relationship with the outdoors and protecting its natural heritage for generations to come.

Recent Survey Finds Support for LWCF Want Land and Water Conservation Funds to be spent as originally promised—to support parks, seashores, forests, and waterways—rather than forego that spending because of concerns about budget deficits and other national challenges.

The Park Service has a long-standing commitment to partnerships that benefit communities, historic sites, and recreational opportunities outside park boundaries. But inadequate funding impairs the ability of the Park Service to support community initiatives.

Discussion Question 1

Written & Online Comments

(cont.)

The Rivers, Trails and Conservation Assistance program has enormous leveraging potential in helping communities expand access to healthy recreation by preserving open space and building more trails, yet it receives barebones funding. The National Underground Railroad Network to Freedom helps protect and connect local historical sites, museums, and interpretive programs associated with the Underground Railroad. It, too, is underfunded.

Another successful partnership program, the Centennial Challenge was begun in 2007 to foster projects and programs that protect parks, enhance visitor services, and foster hands-on learning. In 2008 and 2009, \$24.6 million dollars in federal funds were matched by \$32 million from partner organizations in 35 states and the District of Columbia. While the Centennial Challenge was successful in aligning resources to advance some local and park priorities, it suffered from a few key problems, including short fundraising timelines that made it difficult for smaller partners to participate.

Nationwide, national parks support more than \$13.3 billion of local private-sector economic activity and 267,000 private-sector jobs.

A recent study found that every federal dollar invested in national parks generates at least four dollars of economic value to the public.

Volunteers give 5 million hours of service each year at national parks, a \$100 million dollar contribution that connects people to their natural and cultural heritage.

Each year, the Student Conservation Association (SCA) enables 4,000 interns and volunteers to provide more than two million hours of service at cultural and natural sites across the country. One in ten NPS employees served in SCA, demonstrating its value as a career pipeline. According to SCA, 70 percent of its interns and volunteers remain active in conservation after their term of service.

During youth listening sessions across the country, Administration officials heard from young people eager for outdoor learning to be part of their school experience. Participants also underscored the need to provide experiential education opportunities relevant to students' daily lives, empower kids to translate what they learn into actions they can take in their homes and neighborhoods, and use new technologies to connect to the younger generation. The National Parks Second Century Commission identified this need as well. It pointed out that parks need to embrace technology to facilitate park-based learning anywhere, at any time, and to take advantage of social media and new media initiatives to augment park-based programming. Barriers include security policies for government-supported websites, legal concerns with service agreements, and challenges integrating the Park Service's traditional strength in place based education with tools such as the Internet and social media.

Discussion Question 1

Written & Online Comments

(cont.)

Many national parks are leaders in learning to speak the language of youth and different cultures and connecting them with outdoor opportunities. But national parks are able to meet only a fraction of the demand for youth and adult programming, often with severely outdated materials, exhibits, and technologies.

Whether it is the science of climate change at Glacier National Park, the technological breakthroughs of the Wright Brothers, the engineering advances at the St. Louis Arch, or the trajectory calculations of Civil War projectiles at Gettysburg, there are strong intersections with the Science, Technology, Engineering, and Math (STEM) disciplines in our national parks. Generous private sector contributions significantly support STEM learning, and national parks need to be better positioned to attract more of that funding to engage teachers and students in learning based on America's most compelling natural and engineered wonders.

The NPS Teacher to Ranger to Teacher (TRT) program got its start in Colorado in 2003 and went nationwide in 2007. TRT engages teachers from low-income, Title 1 school districts as uniformed park rangers for a summer. Back home, teachers bring parks into their classrooms, weaving into the curriculum new lesson plans based on their experiences as park rangers. In 2008, 84 teacher rangers augmented interpretive staff at 48 national parks. During the 2007-08 school year, teacher rangers taught more than 24,000 students about the ecology and history of the national parks in their classrooms.

New Parks Connect Broader Communities with America's Natural and Cultural Heritage

- Selma to Montgomery National Historic Trail, Alabama, (established 1996) commemorates the 1965 Voting Rights March in Alabama.
- Cane River Creole National Historical Park, Louisiana, (established 1994) preserves two plantations and promotes understanding of the traditional culture that supported them for generations.
- Manzanar National Historic Site (designated 1992) preserves the site of the Manzanar War Relocation Center, where Japanese-Americans and resident Japanese aliens were interned during World War II.
- Ice Age Floods National Geologic Trail—the first of its kind—connects federal, state, and local historic sites, parks, and other facilities in four states (ID, MT, OR, and WA) that tell the story of the geologic consequences of a series of mammoth floods from prehistoric Glacial Lake Missoula.

In all cases, the federal public land agencies should implement the 21st Century Conservation Corps by partnering with the national network of existing Conservation Corps/SCA and leveraging their experience, expertise and knowledge. There are currently operating Conservation Corps/SCA programs in all 50 states that annually engage more than 30,000 young people in service. Rather than trying to duplicate this infrastructure and expertise with new federally-operated programs, the federal land management agencies should use cooperative agreements to engage existing Conservation Corps/SCA under the "21st Century Conservation Corps" banner. Programs would operate under common branding and parameters but with local operating partners in each location.

Discussion Question 1

Written & Online Comments

(cont.)

Community. Programs have a connection to the local communities and are often based in these communities and target young people living in the shadows of the public lands where they will serve.

Diversity. Programs engage a diverse group of young people, often including 'at-risk/at-promise' youth and typically reflecting the local community. Nationally, 57% of current participants are people of color and 66% come from families with income below the federal poverty level.

High Quality Work. Corps provide high quality professional service work to public land managers, often meeting critical needs with unique service models that are unmatched in the private sector.

Paid Service. Young people receive a living allowance, stipend, education award and/or paycheck for their service.

Service. Developing an ethic of service and focusing on service projects are central features of all programs.

Sustained, Full-Time Service. Young people serve full-time for a defined term of service ranging from four weeks to one year.

Service-Learning. All program service activities follow the service-learning cycle of preparation, service and reflection.

Professional Development and Education. Professional development of the participants ranging from GED classes to GIS skill development is a key component of all programs.

Supportive Services. Corps professionals provide case management, counseling, career preparation and life skills development for all participants.

Youth Voice. Young people are an integral part of program operations through corps councils, promotional opportunities into crew leaders and other leadership positions, and alumni engagement.

Post-Program Services. The corps experience does not end with the conclusion of the term of service as corps staff support each participant in transitioning to additional education or career-oriented placements.

The National Park Service can significantly increase the allocation of NPS fee revenue from the national 20% fee account that is available to support youth programs engaged in the 21st Century Conservation Corps.

Both USDA and DOI can bolster their use of Corps/SCA under the 21st Century Conservation Corps as work force within the maintenance and capital improvement project budgets.

Discussion Question 1

Written & Online Comments

(cont.)

Update national park general management plans (ONP, NCNP, Mt Rainier NP) so that they include a climate change focus.

In an era of climate change, not only must we be thinking about managing our lands differently, we must think about protecting lands differently. The old model of drawing lines on a map and protecting an area is not sufficient for a warming world. Certain species of plants and wildlife have begun migrating further north and higher in elevation, numbers of caribou, moose, and bighorn sheep are dwindling in some areas, and fish kills resulting from rising water temperatures are becoming more common. It is the job of land, water and wildlife management agencies to anticipate and react to these changes and determine which areas will become vital habitat in the future. The agencies must then actively work to secure protections for these habitats to give fish and wildlife all the help they can adapting to a changing world.

Highly disruptive activities such as logging, mining and drilling multiply the stresses on wild lands and wildlife already struggling for survival due to climate change. An integral part of climate-smart management is to limit or eliminate non-climate stressors. A good example to build on is the decision earlier this year to ban off shore oil and gas drilling in Alaska's Bristol Bay, a pristine ecosystem and fishing ground. We hope that the America's Great Outdoors initiative will prompt action to deal with these stressors with climate change in mind.

The United States stands alone in the world for the breadth, diversity, and sheer magnitude of its public lands systems. The Department of the Interior manages more than 500 million acres, and the Forest Service manages another 193 million acres. Individual states manage their own networks of bountiful parks, forests, and refuges, giving the United States an unmatched mosaic of public lands.

One area of particular concern is the coastal plain of the Arctic National Wildlife Refuge. The Arctic Refuge is one of America's most spectacular natural treasures, and the area's coastal plain serves as its biological heart. The coastal plain is the calving grounds for the Porcupine caribou herd, a home or resting spot for more than 135 bird species, and the most important land-denning site for polar bears in the country. The coastal plain of the Arctic Refuge is also considered sacred ground by the Gwich'in, who have subsisted off of the Porcupine caribou herd for thousands of years

President Eisenhower established the Arctic National Wildlife Refuge – then referred to as the Arctic National Wildlife Range – on December 6, 1960. As we celebrate the 50th anniversary of this historic occasion, we should honor the region's natural and cultural values by working to ensure that future generations will be able to experience and enjoy them too. As a step towards more permanent protections, the coastal plain of the Arctic Refuge should be designated as a National Monument and the area should be permanently withdrawn from oil and gas leasing.

Discussion Question 1

(cont.)

Strategies to secure current carbon strongholds on public lands are consistent with efforts to responsibly manage and protect other natural values, including water quality, clean air, and wildlife habitat. In fact, safeguarding our carbon rich federal forests could help the Forest Service shift away from heavily subsidized logging of older forests and towards its goal of watershed and forest restoration. Focusing on science-based forest and watershed restoration would not only help natural systems adapt to climate change, it would also form the foundation for a robust restoration economy, creating new, long-term jobs for local communities.

America's private forests, farms and ranchlands - and the families who work them - are essential to the success of efforts to safeguard America's outdoor heritage. Providing people who work the land with the support and incentives necessary to manage for healthy fish and wildlife habitat, clean water, carbon sequestration and abundant recreation must be a priority of the America's Great Outdoors initiative.

Applying the right programs in the right places, and developing new conservation curriculums can simultaneously support more sustainable rural economies that create jobs producing the food and protecting the natural resources that America needs. These programs can also ensure that fish, wildlife and the recreation that depends on them can adjust and prosper in a warmer world.

A survey of state conservation agency administrators showed that 96 percent felt that programs that conserve natural resources and provide public access to private lands are important to achieving their organizational objectives⁴. This feedback should not be surprising.

Through the America's Great Outdoors listening sessions, young people across the country have had an incredible opportunity to inform the dialogue about reconnecting youth to the natural world. Sierra Club programs have helped engage young people in the public listening sessions where they have shared some of the reasons children, youth and families are not spending much time exploring and enjoying the great outdoors.¹⁷ Barriers include inadequate infrastructure, including insufficient access to safe and nearby parks and open spaces, lack of interest, fear among parents and youth alike, and alternatives luring kids indoors.

Solutions lie at all levels of government, across agencies and in the private and non-profit sectors. Coordination at the federal level is critical to address the societal trend that has moved an entire generation indoors. The America's Great Outdoors initiative is an important step towards developing a greater understanding of the problem and identifying cross-agency solutions to tackle the widespread cultural shift taking place today which has been best described in best-selling author Richard Louv's "Last Child in the Woods" as Nature Deficit Disorder (NDD).

Continue creating opportunities like America's Great Outdoors that give youth a voice in discussions about their future and their world and ensure that youth suggestions are given ample weight in the report. Establish a youth council to advise the administration on issues pertaining to youth and the outdoors to elicit ongoing participation.

Discussion Question 1

Written & Online Comments

(cont.)

The vast forestlands that stretch from the Adirondacks of New York, across the northern regions of Vermont and New Hampshire, into the 10 million acre Maine Woods and on to the Acadian forests of Maritime Canada, is the largest contiguous forest east of the Mississippi. It includes thousands of miles of rivers and streams and provides habitat for a rich diversity of wildlife. This eco-region represents the largest remaining temperate broad-leafed and mixed forest in the country and is home to the largest populations of black bears, loons, moose, native brook trout and threatened Canada lynx. In addition, the economies, well-being, traditions and values of the rural communities that dot the landscape depend on these forests.

As one of the most studied and visited wild places in the nation, the Greater Yellowstone Ecosystem (GYE) provides a wonderful opportunity for the Department of Interior to highlight their America's Great Outdoors Initiative. With over three million visitors in 2009, and higher numbers expected this year, the GYE offers an unprecedented opportunity to showcase how our public lands can be managed to mitigate the effects of climate change so that future generations will enjoy this treasure, and for the survival of some of America's iconic wildlife such as grizzly bears, trumpeter swans, elk, and wolverines- all species that will be effected adversely through climate change unless we adapt new public lands management policies the address our changing climate.

The Greater Yellowstone Ecosystem is an iconic set of two national parks and six national forests that anchor roughly 20 million acres in the Rocky Mountains. Unfortunately, this areas is under attack from the effects of global warming. Snowpack in these areas is being reduced dramatically, white bark pine beetle infestation is running rampant and threatening a prime food source for grizzly bears, and , increased threats of expanding oil, gas and coal mining developments are just a few examples of the pressures on this prized destination area. The effect of climate change on the greater Yellowstone region is widely recognized by both agencies and NGOs as a driving factor for future lands management. There is a great opportunity for DOI to help shape the direction of new policies both from a land protection and resource extraction/energy development perspective. The National Park Service has already directed both National Parks to develop Climate Change plans. Now through AGO Initiative, this visionary work can be enhanced through public awareness.

Work with DOI to provide more incentives to private landowners in the area to ensure their lands are also managed in a way that provides connectivity to neighboring critical habitat.

Park Prescriptions is a movement to create a healthier population by strengthening the connection between the healthcare system and public lands across the country. The goal is to increase the prescription of outdoor physical activity to prevent (or treat) health problems resulting from inactivity and poor diet.

Park Prescriptions will allow visitors to public lands to increase their time spent enjoying physical activity and will also provide physicians and other health care providers with a new set of tools to inspire patients to improve their health. Park Prescriptions programs also benefit public lands by promoting park stewardship and increasing potential funding sources.

Discussion Question 1

Written & Online Comments

(cont.)

Parks nationwide are making it easier for visitors to utilize trails by increasing trailhead visibility and establishing trail ratings. Because each program addresses barriers between citizens and public spaces in a unique way, creators of these programs can learn from each other.

By forming a cross-sector coalition, Park Prescriptions unites health care and public lands through mutually beneficial means that serve the health of all.

Parks and public lands are an underutilized healthcare resource. For example, just 20 percent of the 300 million visitors to America's national parks cite active recreation as the main reason for their visit.

At the same time, parks and public lands represent enormous acreage—nearly one in every five acres of the United States is federal land that is open for public use. Clearly, there is a great potential for increasing physical activity for the millions of Americans who have access to federal, state, and local public parks and open spaces.

Park Prescriptions, which links medical professionals to park resources, is by nature a collaborative concept. This report is an invitation to further this important work through continued communication, knowledge-sharing, and cross-sector collaboration.

Highlight successful examples of current programs that use physical activity in outdoor settings as part of a medical prescription or treatment

Demonstrate opportunities for growth within similar recreation programs, whether driven by the healthcare community or public land managers

Support healthcare professionals and public land managers in developing new programs, growing existing ones, and expanding their efforts

Programs that provide incentives seem to increase participation (Table 1). For example, children that return to hike additional trails on the Blue Ridge Parkway as part of the Kids in Parks program receive toys and games. Chicago residents that receive a prescription from their doctor to exercise receive a free gym membership valued at \$30 to \$70 depending upon their income.

The Children and Nature Initiative provides Continuing Education Units (CEUs) and a small stipend for participating doctors. Most insurance companies and government programs do not reimburse a physician for time spent counseling patients or for prescribing exercise.

Parks, public health agencies, healthcare providers, and other entities across the United States are working together to promote physical activity and nutrition and improve the health of patients and the general public. Some of these partnerships have developed strategies to leverage the doctor-patient relationship to achieve this goal.

Discussion Question 1

Written & Online Comments

(cont.)

These programs have begun to learn what works, what deserves more study, and the institutional realities that may challenge their success. Generally, two overarching needs must be met. Healthcare practitioners need more education on the value of physical activity in nature as a powerful resource for health and more training on how to counsel and prescribe it to their patients. At the same time, parks and community programs need to tailor their communications and programs to better serve patients with a variety of health conditions—as well as the doctors making the park prescriptions.

The programs highlighted in this report represent a small but shining portion of the landscape of rapidly emerging innovation. However, the existing efforts are fragmented. By establishing mechanisms for shared communication, learning, funding, and coordination, these local efforts can be leveraged into a more impactful, cross-sector movement that improves health and well-being on a national scale.

We have a moral if not legal obligation to preserve lands from over development

No community will pass up chance to get federal \$ for parks, land

Have to create good program

Suggest model like Buncombe County Conservation Easement program Goal- To protect, preserve farmland, mountain top, steep slope lands before developed Results: nearly 4,000 acres of land have been entered into program Costs: County has spent nearly \$5.3 million to leverage over \$25 million in private donation, grants, owner donation (Southern App Highlands conservancy a huge partner)- Require partnerships, but guarantee \$ once partnership matches are set

Consideration for smaller counties, cities with limited \$

Wonderful nonprofits in area that know how to prioritize and sort out best projects

Gauge real interest by extent of local participation, \$ contributions

Program will likely encourage conservancies to become active in areas where they aren't

Tax benefits increased for land or easement contributions

Discussion Question 1

(cont.)

Trout Unlimited's objective is to insure that we sustain, protect and connect the environment. If we do this we will have fish. This costs real money and we support the efforts of the Great Outdoors Initiative to provide the support.

The America's Great Outdoors initiative provides an opportunity for local partners in Tennessee and across the country to work with the federal government to implement a strong, forward-looking, 21st century conservation agenda that will protect our water, wild lands, trails, green spaces, wildlife, working farms, ranches, and forest lands, and reconnects families to nature and the outdoors.

To succeed, America's Great Outdoors must: Keep doing what America does better than any other nation in the world and provide new, expanded and better protected parks, wildlife refuges, monuments, rivers and trails that will benefit us all.

- o The Tennessee Wilderness Act of 2010 was introduced by Senators Alexander and Corker earlier this summer. It would permanently protect the headwaters of the Upper Bald River as federally designated Wilderness. It is these headwaters that eventually feed into the Tennessee River, providing hundreds of thousands of Tennesseans with clean drinking water.

- o Next year is the 75th anniversary of the Ocmulgee National Monument. The Ocmulgee River corridor south of Macon contains a wealth of natural and cultural resources. The opportunity now exists to provide landscape-level protection for this corridor through the innovative use of a dual National Park and Preserve designation. The Greater Macon Chamber of Commerce, in consultation with the National Park Service, is seeking to undertake a study of the potential for enlarging the boundary of the Ocmulgee National Monument.

- o National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning.

- o Blueways are a locally-driven, cost-effective way to get youth outside, protect our natural heritage, and boost local economies. The effort to create a blueway connecting the North Forked Deer River to the Mississippi River is a public/private partnership that will accomplish all of these goals.

- o The Cumberland Plateau of Tennessee should harness the quiet, underutilized assets of the small towns, old-fashioned historic districts, and abundant wildlife into economic drivers for the region via promotion of eco-tourism and heritage tourism, allowing residents and local businesses to benefit from new tourism revenues. This will diversify and therefore strengthen the economy of the region. It will also diversify and therefore strengthen the potential income sources for farmers and foresters. The Cumberland Plateau is Tennessee's greatest woodland treasure. Let's come together to ensure that this unique corridor of Tennessee's history and nature is preserved for future generations. Protection of the Cumberland Plateau is supported by public and private organizations who work to promote eco-heritage tourism in the region's 21 counties.

Discussion Question 1

(cont.)

o The Tennessee Civil War National Heritage Area is supported by a diverse partnership of conservation and preservation groups that have brought multiple benefits to many audiences in Tennessee in the past decade. Tennessee Century Farms has been an extremely valuable audience for both the Tennessee Civil War National Heritage Area, the state agritourism program, open space initiatives, and the work of the Land Trust for Tennessee.

The Rivers, Trails, and Conservation Assistance Program (RTCA)offers NPS staff assistance to community partners for planning, organizational development, project coordination, facilitation, and public involvement in achieving locally-defined goals for natural resource conservation and outdoor recreation. The Mississippi River Blueway Corridor in West Tennessee, is engaged in a RTCA blueway/water trail project that will connect the North Forked Deer River to the Mississippi River. The project partners anticipate expanding economic development opportunities and promoting needed conservation to the North Forked Deer and Mississippi River Area. The Blueway will promote new tourism based businesses and increase recreation and education opportunities along the river.

o The Natchez Trace Parkway is one local example where private landowners are conserving their lands around the Parkway, creating a mosaic of protected landholdings.

SUMMARY OF IDEA: Great Outdoors America™ A mechanism established to help keep the great outdoors healthy, open, accessible and relevant to the American people by providing a complete complement of management tools:

Restoration in support of sustainable outdoor recreation ?? Evaluation, Monitoring, and Research

Outdoor Ethics, Education and Stewardship Training ?? Communications and Information, including, but not limited to good maps and signage

Law Enforcement Support and Programs

FUNDING: Private Sector - Corporations, Individuals and Philanthropic Organizations

Given the issues surrounding outdoor recreation and America's outdoor resources, core funding for the foundation is anticipated to come from manufacturers of any recreational products and accessories currently not covered under legislative acts like Pittman-Robertson or Dingle-Johnson with the Wallop-Breaux amendment, which authorize an excise tax on some sporting goods used by anglers and hunters in support of conservation and wildlife protection across North America

With 75-80% of all giving from the private sector coming from individuals, and considering the number of outdoor enthusiasts not in the market for new equipment, the foundation would be remiss not to offer individual memberships.

Discussion Question 1

Written & Online Comments

(cont.)

Philanthropic organizations that support the intent and mission of this foundation should also be sought after.

Public Agencies (Federal, State and Local)

Industry (Recreational Products and Aftermarket Accessories Manufacturers, Retailers, Travel & Tourism, Health & Wellness, Insurance, Finance, Extraction Industries, etc.)

NPOs/NGOS (Outdoor Recreation, Conservation & Enthusiast Based Organizations)

I personally like the idea of educating children, young adults and adult citizens to the types of programs available like Tread Lightly, Stay the Trail, ATV Safety Institute. These are, the types of programs that I'm familiar with, they get people into the forests and into the sand dunes of the west and all across the country.

OHV recreation is maybe the most mis- understood of all. Most of those that ride with us are between the ages of 35 and 70. We have several of us that have cancer of one type or another. Several of us have heart problems, differing in degrees of seriousness. Several have MS and yet more of have knees, ankles, hips etc. that have been operated on and some have replacements. Yet we manage to give back by participating in trail clearing, trail maintenance, water damage mitigation. Most of us belong to NMOHVA, an OHV advocacy group that supports OHV education , Tread Lightly, and rider education programs across New Mexico.

OHV recreation supports itself with license and registration fees and grants that we receive from the state as well as companies like Yamaha, and Polaris.

I ask that anything proposed along this line , be subject to , public input , scoping by the public , comment periods, proposal of alternatives, EIS scrutiny and more public comment . This pretty much is what is done in the travel management process. It seems to work pretty well.

America has a long and successful conservation tradition and Americans still believe strongly in conservation of our natural and recreational resources. Today, however, our country's remarkable conservation legacy hangs in the balance. A new wave of threats could well undo what has been accomplished.

The Nature Conservancy's vision for the America's Great Outdoors Initiative is to create and sustain a network of large areas of restored and conserved land, water and coastlines around which Americans can build productive and healthy lives.

Large landscapes that can become focal points for conservation through strong private-public partnerships (Landscape Partnership Projects).

Discussion Question 1

(cont.)

Expansive aquatic systems that are already a national focus and in some phase of restoration Including: the Great Lakes, Mississippi River, Chesapeake Bay, Puget Sound, Gulf of Mexico/Louisiana Wetlands, the Greater Everglades, California Bay Delta, and the Colorado River Basin (Large Watershed Projects).

Metropolitan/urban greenspace corridors that may also include cultural and historical features (Metropolitan Greenspace Projects).

North America and the United States are blessed with a diversity and abundance of natural resources, natural systems and habitats that have been central to our growth and prosperity as a nation and a foundation for our way of life. Despite urbanization and the increasing use of technology, our health, welfare, economy, culture and identity still depend heavily on the quality and productivity of our land, water, oceans and coasts. While we rely on nature for our well being, no place in our country is immune from at least some human impacts. We depend on nature, and it now depends upon us for its survival.

The United States has long been a global leader in the creation of parks and in the conservation of natural resources. Beginning in the last half of the 19th century, conservation and care of our environment have been accepted by the American people as an essential role of government. In the past decade alone, voters have passed statewide and local open space ballot measures at an overall rate of 73 percent, showing their strong support for public investments in conservation.

More than three-quarters of voters believe we can continue to protect the environment while strengthening the economy.

A striking 86% of voters support using funds from oil and gas fees to help preserve our natural areas. That support goes across party lines: 89% of Democrats, 89% of Independents, and 83% of Republicans.

More than three-quarters of the electorate (76%) express support for maintaining at least the minimum funding level originally established for the Land and Water Conservation Fund in the 1960s: \$900 million a year.

The AGO listening sessions reveal an exciting new trend in American conservation that shows great promise in addressing the many threats to our land, water and coasts. Landowners, businesses, non-profit organizations, and local, state, tribal and federal agencies are working together to take responsibility for the restoration and conservation of large areas—watersheds, whole natural systems, and whole landscapes.

In place after place we have heard citizens talking not just about their backyards, but also about the Chesapeake Bay or the whole Crown of the Continent in western Montana. Increasingly, they see the connections between their well being and the health of these larger places.

Discussion Question 1

Written & Online Comments

(cont.)

While publicly owned parks and forests are often essential to large landscape conservation, almost all large landscapes include people and the working farms, forests and ranches that are vital to our economy and to the American way of life. Successful conservation will require finding ways to achieve both public and private stewardship of America's land and water.

The Nature Conservancy's vision for America's Great Outdoors Initiative is to create and sustain a network of large areas of restored and conserved land, water and coastal ecosystems around which Americans can build productive and healthy lives.

Protect and interpret the cultural resources that are part of our national heritage. In many places cultural resources are intertwined with natural resources.

Involve and engage all Americans, particularly young people and people of color, in the conservation and enjoyment of nature.

Operate at a watershed, ecosystem or metropolitan area scale

It is essential that our society provide opportunities for contact with nature and the outdoors for a new and more diverse generation of Americans. Citizens are willing and able to participate in shaping the future of the American landscape, if they come to know and enjoy parks, farmland and the recreation in the outdoors.

Urban areas depend upon the surrounding countryside not just for recreation, but for their water and food supplies. This provides the opportunity to build economic connections between cities and surrounding areas that can in turn help to finance regional conservation initiatives.

In addition, many important cultural and historic features are located near urban areas and can be incorporated into the metropolitan greenspace projects. Particularly important is the recognition and incorporation of the National Heritage Area Program in this aspect of the initiative.

The vast majority of Americans live in urban and suburban areas. And many of these areas depend on healthy rural areas to supply clean water and other environmental services. Cities and suburbs must be safe and enjoyable places to live to prevent urban areas from further spilling over into the surrounding countryside. Isolated parks, while important, cannot achieve these goals. Metropolitan scale park and greenspace systems can provide outdoor adventure close to home, protect wildlife habitat and water resources, and connect city and country in a positive way.

Implicit in working at a landscape scale is the need for close coordination across jurisdictions and collaboration with affected stakeholders.

Use the report of the agencies to develop and release a plan for an operational initiative. This plan should include specific five-year goals.

(cont.)

Our country faces many challenges and a good deal of uncertainty as we prepare to enter the second decade of the 21st Century. Americans are struggling, as well, to find the common ground required to solve those problems. For more than 100 years, however, most Americans have agreed on the importance of conserving our country's legacy of rich and productive land, water, and coastlines. While we have made substantial progress in protecting America's environment and conserving our natural and agricultural lands, there are, today, many threats to that progress.

The America's Great Outdoors listening sessions have revealed that people across America are ready to address those threats and to renew the substance and spirit of our conservation tradition. A striking new trend that has emerged from these meetings is the great interest of agencies, organizations and people working cooperatively at the regional, watershed and landscape levels to accomplish conservation at a large scale. From western Montana to the Hudson Valley of New York, diverse groups have shown the tangible progress that can be made by this partnership approach. The Nature Conservancy believes that these successes should set the direction for American conservation in the 21st Century, that the federal government acting in new, more collaborative and flexible ways can be the catalyst for lasting conservation accomplishment.

I have enjoyed and recreated in the great outdoors of Tennessee my whole life. In my younger days, I hiked and played in the creeks and woods surrounding my house. I hunted with my Dad and my older brother, and proudly brought home game for that night's supper. I have fished and swam in our creeks and lakes. I have kayaked down the steepest whitewater creeks in this part of the country. Now, at age 60, I have relaxed into a routine of enjoyment of the outdoors while staying fit, by riding my mountain bike. This is a sport that I have enjoyed for more than 25 years. I am here today to ask for support for more mountain bike trails, particularly in national parks and national forests.

Mountain biking is simply bicycling on trails in the woods. Those that try it, usually come away loving it. The sport requires specially designed and built trails that take a great deal of labor to create. Therefore, these trails are almost always built on public lands, where continued and long term access is guaranteed forever. The characteristics of a purpose-built mountain bike trail are unique to this sport. Mountain bikers want a narrow corridor with flowing turns, reasonable grades, and interesting elevation changes. A destination is not so important as the feel of the trail as it is ridden. Because mountain bikes travel much faster than a hiker, a greater length trail is desired. Mountain bikers routinely go out for a Saturday morning ride and cover 15 to 20 miles before calling it a day. To build trails with this kind of distance requires a reasonable amount of land. Many dedicated mountain bikers are riding three or more times per week. For them, it is both an exciting sport and an avenue to lifelong fitness.

Discussion Question 1

Written & Online Comments

(cont.)

In the Middle Tennessee area, our trails are quite limited. The trails that we have are heavily used. Metro Nashville Parks Department has one mountain bike trail. We also have one short beginner trail at a state park east of Nashville. 24 miles of trail was built by club volunteers at Montgomery Bell State Park, 30 miles west of Nashville. As a demonstration of the popularity of the sport, that mountain bike trail has routinely recorded more than 10,000 visits per year. Most of those users are driving more than 30 miles from Nashville to use this trail.

Middle Tennessee mountain bikers also appreciate the mountain bike trail opportunities that can be found on Federal lands within reasonable driving distance of Nashville. There is one or more mountain bike trails at Land Between the Lakes National Recreation Area, Big South Fork National River and Recreation Area, Mammoth Cave National Park and Cherokee National Forest. I have ridden at most of those locations and the mountain bike trails are my main reason for visiting when I go.

Another local project that deserves to be completed is the Rails to Trails trail that presently exists from Nashville to Ashland City. Corridor exists and that trail should be completed all the way to Clarksville. My neighbors are an older couple that continue to stay active. While mountain biking is more action than they want, they love to ride the Rails to Trails routes.

Other important points regarding the mountain bike trails in this area:

The Tanasi Trail System is an important recreational trail, having received Epic status by IMBA in 2004.

The Tanasi trail is responsible for a positive economic impact in the region, as it plays host to a number of outdoor events. Specifically, the Black Bear Rampage mountain bike race, the SERC Race #6 mountain bike race, and the Cohutta 100 race, routinely attract 200+ attendees and their families annually to each event.

The economic impact to the region would be adversely affected if the above events would lose a venue where they could continue to host these events. The economic benefit to the region not only positively affects the event promoters, but restaurants, campgrounds, hotels, gas stations, and other retail establishments.

SORBA Chattanooga has completed untold hours of trail maintenance on both the Tanasi Trails and the Chilhowee Trails. For of these efforts SORBA Chattanooga received a Certificate of Appreciation from the U.S. Department of Agriculture. Prior to that time SORBA received a letter of appreciation from the Ranger noting that chapter's and IMBA's efforts in rehabilitating the Thunder Rock Express trail in 2004.

I spent many years as a volunteer building trails at Montgomery Bell State Park. As much as I like to see my buddies enjoying the trail, nothing give me the same gratification as seeing a family drive up, loaded with all size bikes. The kids are always excited, and can't wait to get on the trail. I have escorted many such groups to show them around. The young riders give it all they've got, and wear themselves out every time. My hat is off to those parents for getting their children involved. We need to find ways to get more parents to take up this activity with their children.

Discussion Question 1

(cont.)

When I grew up in south Nashville, we rode our bikes every day. We played in the woods nearby my house. One thing that we did was to build trails in those woods so that we could ride our bikes. We loved the feel of the turns on the dirt trail, even with our old single speed Western Flyers. I wish that every neighborhood could have even a small patch of woods so that kids could enjoy that same experience. Where undeveloped lots exist, if the government could get an easement for a trail, I bet you could get volunteers to help build the trail. Youth that grow up enjoying these type experiences are going to gravitate to mountain biking as adults, and consequently an active lifestyle as well as a love for nature.

Mountain biking is an exciting sport for young people. And lets face it, it is going to take an exciting sport these days to lure our children out from behind the computer screen. We all need to do our part to make more and convenient trails available. We need to promote mountain biking to young people as the outdoor adventure that we know it to be.

I read an article in the newspaper recently that reported that Tennessee ranked last of all states for adults that are considered physically active. That report noted that the number of Tennesseans who met the definition of "physically active" ranked 13 percent less than the national average. The promotion of mountain biking and trails can help change that statistic. I find that mountain biking gives me an engaging sport that I always look forward to, and as a secondary benefit, provides my much needed exercise. The fact that I am enjoying this exercise in America's Great Outdoors, makes the sport that much more attractive.

New England's Great Outdoors is defined in large part by the northern hardwood and spruce fir forests that blanket the region. From the southern border of Connecticut to the tip of northern Maine, we are fortunate to live among 33 million acres of forest owned and stewarded by hundreds of thousands of private landowners. New England's forests work twenty-four hours a day to provide clean and ample water; store carbon to mitigate climate change; grow wood for products we all depend on; support a diverse array of wildlife; offer woodlands for hunting, fishing and other forms of enjoyment; and provide a renewable source of locally-produced energy. In economic terms, the annual contribution of forest-based manufacturing and forest-related recreation and tourism to the economy in Maine, New Hampshire, Vermont and New York is roughly \$20 billion (NEFA 2007). Forests are indeed the lifeblood of New England.

A Great Outdoors Initiative that emphasizes the permanent conservation of the private working woodlands and the wildlands that define New England and serve the nation would build on the region's rich conservation history. This is a history that dates back nearly 400 years and sets a high bar for conservation with the first public park in the English-speaking world (the Boston Common), the first regional land trust in America (The Trust for Public Lands), and the work of conservation luminaries such as Henry David Thoreau, George Perkins Marsh, and John D. Rockefeller.

(cont.)

The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. The more historic land that is preserved, the longer visitors stay in a community and the more time they spend patronizing local businesses. Most of the over 900 acres of battlefields preserved by CVBT are in Spotsylvania County. In an area rich in history, the biggest tourist draw is its Civil War heritage.

Battlefields are outdoor classrooms for this and future generations. They allow visitors to walk in the footsteps of the Civil War heroes and experience the landscape much as it was during the conflict. Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to preservation and conservation.

Preserved battlefields help protect water resources; sustain parks, working farms, forests and ranches; and provide open space for passive outdoor recreation.

Battlefield preservation in central Virginia, where many significant sites are located, is also vital for protecting the Chesapeake Bay. All of the properties protected by the CVBT lie in the Rappahannock River watershed, thus their preservation and proper management ensure no adverse impact on the tributaries to the Bay.

We are very judicious in what we identify for preservation, making sure that what we acquire relates to the National Park Service's (NPS) resources, thus working toward a cohesive whole.

If well designed, the multipurposes delivered by urban greenways favorably effect environmental [water & air quality], ecological, flood damage avoidance, public health, recreation, non-motorized transportation, environmental education, cultural resource preservation, economic enhancement, development pattern stabilization, quality of life, etc. For these attributes to be realized nationwide, the barriers of the status quo need to be removed, or at least lowered through the conduct of the PAGO Initiative.

As envisioned in Raleigh, greenway systems and networks primarily follow riparian corridors that are the interface of terrestrial and aquatic ecosystems. Conservation of optimum corridor widths and integration of core habitats can create a mosaic pattern that maintains ecological functions in an urban region. This [landscape ecology] systems scale approach could be advanced through required consideration during State Wildlife Action Plan updates, State Comprehensive Outdoor Recreation Plan updates, and local stormwater management plan updates.

Finally, I will be so bold as to suggest that NC State University (a Land Grant institution) in collaboration with the other colleges and universities within the Triangle region are uniquely suited to be considered for and serve as a center of excellence for green infrastructure.

TIGER II Discretionary Grants are available for multiple purposes including planning and bicycle/pedestrian networks.

Discussion Question 1

(cont.)

Urban and urbanizing areas are perhaps the most difficult place to pursue conservation, open space, and public use initiatives. They are the areas with the greatest total population and density, they are the most disrupted by development, with the highest fair market value on remaining lands, and the least available grant funding opportunities. In this difficult context, greenways offer a system scale conservation and land use pattern that provides multiple positive public functions. The Urban Park and Recreation Recovery Act provided some funding from 1978-2002, but has been unappropriated since. Currently, HR 3734 The Urban Revitalization and Livable Communities Act is proposed as an updated replacement. It better recognizes and responds to the complex multiple issues and needs of viable urban areas, and deserves widespread support. The proposed appropriation is greatly needed to fill part of the void in grant funds availability to address close to home conservations and public use where the vast majority of people live.

Greenways can and should be part of the solution. With more attention to the integration of existing and evolving natural systems data into required planning exercises, pertinent relationships will become obvious and more collaborative programming will be possible. Similarly, related health data and population statistics will further inform planning. Thus, progress can be made through better integrated interagency planning exercises to meet 21st century challenges. With this improved decision-making tool, funding needs can be better justified and funds can be better directed to fulfill their intended mission

America's woodlands play an essential role in a healthy outdoor strategy. The Great Outdoors of America includes more than 260 million acres of family-owned forest land, roughly one-third of the U.S Forestland. This private forest land provides multiple public benefits including clean air, water, forest products, wildlife habitat, and recreation opportunities. Family forest owners will continue to play an important role in America's Great Outdoors with a little support.

- The enthusiasm of the individuals that meet the public (generic comment);

- The understood need (of some federal & state agency individuals) to share outdoor activities with urban oriented/trained children (generic comment);

This outreach program is an honorable one (this assumes there are no self-serving and/or clandestine agendas).

The Sesquicentennial (2011-2015) of the American Civil War is fast approaching and the anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. Protection of America's remaining Civil War battlefields will leave a lasting legacy of national commitment to history, land preservation and conservation. Battlefields are outdoor classrooms that can teach history, geography, biology, and geology to this and future generations. They allow visitors to walk in the footsteps of Civil War heroes to learn what they did on that hallowed ground while also experiencing the landscape much as it was during the conflict.

Discussion Question 1

Written & Online Comments

(cont.)

Many Americans come to battlefields in order to study military tactics and leadership. But the real story these places tell is America's story. They provide patriotic inspiration and reflection on the Civil War, its causes, and its repercussions that continue to echo in the struggles of today. All Americans who visit these battlefields leave with a better understanding of the violence that forged our country and our form of government. They learn to appreciate the debt owed to the American men and women who fought and died on these battlefields and battlefields the world over. The Civil War set our nation on the road toward the multi-cultural society it is today. The values tested and clarified in that great conflict are what continue to bind the nation together today--a country of immigrants united by our shared history and ideals. That story makes these places unparalleled outdoor classrooms for illustrating our continuous struggle over differing visions for the future of this great nation

Saving battlefields is not only about telling the nation's story and recognizing the sacrifices of generations that came before, it also creates valuable open space for the American public. In the not-too-distant future, these preserved Civil War battlefields will be the "urban parks" of their communities, just like the Mall is to Washington DC. Some, such as Manassas, already are. They are multiuse spaces containing scenic and educational hiking trails for exercise and enjoyment. Their woodlands and wetlands provide habitats for birds and wild animals and their fields land for farmers to cultivate. The open space protected by these battlefields preserves vitally important watersheds and groundwater supplies. If not saved, development may ruin the environment and these historic oases which attract visitors, new residents, and businesses that grow and sustain the economy. Battlefields respect not only history but natural resources, as well.

South Dakota is home to some of the most unique and varied landscapes in the United States. These natural environments are among our state's greatest assets. Tourism is South Dakota's second largest industry. In addition to the National Parks and other landmarks that draw visitors, partnerships among landowners, governments and organizations have helped make South Dakota a popular destination for hunting, fishing and other outdoor recreation. For example, the federal Land and Water Conservation Fund has helped local organizations and landowners conserve the native tallgrass prairie habitat that supports some of the best pheasant hunting in the nation.

Wherever that's the case, lake dwellers need to pick up what is essentially a loose ball and run with it: i.e., launch a sustainability campaign of their own, lake by lake. It won't be easy and it will cost money, but with commitment and diligence it can become a reality. My model is Ten Mile Lake in Cass County, where I have spent most of each summer for the past 46 years. What began there as a modest preservation effort about thirty years ago has evolved into a full-blown program with enthusiastic support from most lake residents. More to the point, its effects so far are positive: water clarity has improved and nutrient levels have declined; quality indices are better than when we began our effort.

Large landscape conservation also provides significant economic and fiscal benefits to rural and urban communities.

Discussion Question 1

Written & Online Comments

(cont.)

There is general agreement that the promise of large landscape conservation is its focus on land and water problems at an appropriate geographic scale, regardless of political and jurisdictional boundaries. While it is hard to define precisely what constitutes a large landscape conservation effort, there is a growing consensus that such efforts are multijurisdictional, multipurpose, and multistakeholder, and they operate at various geographic scales using a variety of governance arrangements. The common currency in large landscape conservation is regional collaboration—the ability to work across boundaries with people and organizations that have diverse interests yet share a common place.

In response to these concerns, people from many walks of life are experimenting with a variety of approaches that are best captured by the term large landscape conservation. This new paradigm for conservation is provocative, but can be difficult to define. Based on research and a range of examples, the paradigm encompasses three criteria: (1) multijurisdictional—the issues being addressed cut across political and jurisdictional boundaries; (2) multipurpose—they address a mix of related issues, including but not limited to environment, economy, and community; and (3) multistakeholder—they include public, private, and nongovernmental actors.

Large landscape conservation provides significant benefits to rural and urban communities in areas near the conserved landscapes through increased income, employment, and economic prosperity, and improved fiscal balance (American Society of Landscape Architects 2009). These benefits to human communities flow directly or indirectly from services provided by the ecosystems present within the conserved lands. Ecosystem services can be categorized as general services that provide water, food, fiber, and energy; regulating services that purify water and air, sequester carbon, regulate climate, decompose waste, pollinate crops, and provide pest and disease control; supporting services such as nutrient cycling, soil formation, photosynthesis, and seed dispersal; and cultural services that provide spiritual and intellectual inspiration, recreational experiences, and aesthetic benefits (Millennium Ecosystem Assessment 2005).

Many people move to rural areas to live, work, and conduct business due to quality-of-life considerations associated with the environmental amenities provided by ecosystems, such as clean air and water, active outdoor recreation, and hunting and angling opportunities. Protected public lands, such as designated wilderness, national parks, and national conservation areas, are also an essential component of large landscape conservation. They provide valuable environmental amenities and protect lands that are significant economic assets for local and regional rural economic development. An extensive study of the role of protected public lands on economic prosperity in the West concluded that counties hosting or close to protected lands have the fastest economic growth (Rasker et al. 2004).

Discussion Question 1

Written & Online Comments

(cont.)

Economic activities associated with ecosystem services arising from conserved and protected lands, such as tourism, agriculture, hunting and angling, and outdoor recreation, directly contribute both dollars and jobs to local and regional economies. Other studies have documented the positive effect of protected open space on residential property values. The closer a property is to open space or park land, the higher the premium placed on its value (de Brun 2007). In addition to these economic benefits, large landscape conservation provides extensive fiscal benefits on both the revenue and cost sides of local government budgets. Nearly all of the economic activities noted above are taxed in some way, and increased property values resulting from conserved lands produce increased property tax revenues for local governments.

Conserving natural and working landscapes also improves the fiscal balance for communities by concentrating residential development in appropriate locations. Working lands and conserved natural landscapes generally generate less revenue than residential properties, but they require very little in the way of public infrastructure and services. Many fiscal analyses of the costs of providing community services indicate that working landscapes generate more public revenues than they receive in the form of public services (American Farmland Trust 2006). Ecosystem services maintained through conservation of natural landscapes can significantly improve the fiscal balance. Allowing ecosystems to do what would otherwise require engineered systems avoids the costs to construct and maintain man-made structures. Some examples are flood control by healthy riparian systems, water purification by forest landscapes, mitigation of tidal surges by coastal wetlands, and wastewater treatment by freshwater wetlands. A recent study of water suppliers found that the extent of forest cover in their watersheds affects the water treatment costs (Ernst, Gullick, and Nixon 2004). Data analyzed for 27 water suppliers indicated that for every 10 percent increase in forest cover in the watershed, the treatment and chemical costs decreased by approximately 20 percent. Due to these and other fiscal and economic benefits, an increasing number of communities are including land conservation as part of their strategy for providing safe water supplies.

Policy leaders at regional, state, and national levels, along with representatives of conservation organizations, have initiated a number of new policies and programs over the past several years to address land and water issues at a large landscape scale. These initiatives broaden the foundation for large landscape conservation within the context of other activities.

The National Parks Second Century Commission (2009, 16–17), an independent body convened by the National Parks Conservation Association, recently concluded, “Parks will be key elements in a network of connected ecological systems and historical sites, and public and private lands and waters that are linked together across the nation and the continent. Lived-in landscapes will be an integral part of these great corridors of conservation.”

To complement these government initiatives, a group of ten national nongovernmental conservation organizations released a proposal in February 2010 to support large landscape conservation through existing federal programs and authorities (American Rivers et al. 2010). These and other recent efforts build on a solid foundation of regional land use planning, ecosystem management, and interstate water management throughout the United States.

Discussion Question 1

Written & Online Comments

(cont.)

In response to the challenges and opportunities posed by the nation's most compelling land and water issues, people across the continent are experimenting with a variety of approaches to achieve large landscape conservation. In addition to being multijurisdictional, multipurpose, and multistakeholder, these initiatives operate with various governance arrangements and at diverse geographic scales. The goal of each project is to address issues at a scale that is big enough to surround the problem, but small enough to tailor the solution (Porter and Wallis 2002).

The process of achieving large landscape conservation requires regional collaboration, and people have invented a variety of approaches tailored to fit the scope and nature of their particular issues. Based on both practical experience and a study of hundreds of regional initiatives in North America, there appears to be a continuum of approaches—from informal networks, to more formal partnerships, to regional institutions

The Blackfoot Challenge is a landownerbased group that coordinates management of the Blackfoot River, its tributaries, and adjacent public and private lands, covering approximately 2,400 square miles in Montana. The Blackfoot Challenge has produced an impressive list of accomplishments over the years, including integrated weed management practices; land protection through conservation easements; restoration of streams, riparian areas, and native grasslands; removal of fish passage barriers; and educational outreach about the watershed. The organization clearly meets the criteria for large landscape conservation— multiple jurisdictions, multiple purposes, and multiple stakeholders—and illustrates one way to organize and govern such an initiative, in this case as a nonprofit organization. With respect to the issue of scale, it is large by eastern standards but small by western standards. The Blackfoot Challenge is also a good example of how landscape-scale efforts often nest within one another. The watershed lies within a region know as the Crown of the Continent (figure 7). During the past eight years, a number of independent and complementary initiatives have emerged to promote conservation and community stewardship in this remarkable landscape that covers 18,000 square miles (about twice the size of New Jersey). Numerous Crown-wide initiatives and subregional efforts address issues in southeast British Columbia, southwest Alberta, the Rocky Mountain Front, the Blackfoot-Clearwater watersheds, and the Flathead Valley.

Beginning in 2006, the Lincoln Institute of Land Policy and the Center for Natural Resources and Environmental Policy at The University of Montana convened a series of roundtables to facilitate communication and understanding among these initiatives, and to explore opportunities to work together. The roundtables created an informal, ad hoc network of networks, representing another promising model of large landscape conservation. The Crown meets the basic criteria of what we mean by a large-scale landscape, but operates at a much larger geographic scale than the Blackfoot Challenge and functions with a different model of organization and governance.

Discussion Question 1

Written & Online Comments

(cont.)

Scaling up to an even larger level is the Yellowstone to Yukon Conservation Initiative (Y2Y), an effort to protect core wildlife areas and corridors across 500,000 square miles (nearly three times the size of California) and spanning the U.S.–Canada border. Y2Y began as a network of biologists and conservationists who were concerned about the northward trend of declining wildlife populations and habitats. Today, Y2Y continues its networking function, but programmatically focuses on protecting key connectivity areas for wildlife— areas that both currently harbor endangered species such as the grizzly bear and face significant threats from habitat loss, invasive species, and climate change. While Y2Y focuses on wildlife corridors and connectivity, it works closely with private landowners, community leaders, and others to address a range of issues related to land use, community and economic prosperity, and wildlife management. In this respect, Y2Y meets the basic criteria of large landscape conservation, but operates at a much different scale than either the Crown or the Blackfoot Challenge. While it operates as a nonprofit organization, it relies heavily on partnerships with diverse stakeholders to achieve its objectives, thus embracing several ways to organize and govern a large landscape conservation initiative.

It seems likely that sustained movement toward landscape-scale conservation can only be achieved by bringing existing (national, state, tribal, and local) and emergent (regional, cross-jurisdictional) forms of governance together in place-specific, highly adaptive ways. This kind of collaboration seems to be emerging organically in response to a number of human and ecological problems. This suggests, further, that the focus on large landscape conservation might well result in a healing of not only ecosystems, but also related human systems. As traditionally adversarial conservation, community, and economic interests search for common ground, one arena of shared interest is a growing recognition that unscarred landscapes, clean water, fresh air, and a rich biodiversity based on healthy ecosystems are becoming the best economic engine available to many local communities. The potential of strengthening those economies while healing and preserving large ecosystems creates a significant new political context in which conservation and economic action converge. Perhaps even more appealing is the prospect that, in the course of working hard to discover and claim that common ground, the people who inhabit those ecosystems will have contributed to the strengthening of their civic culture, and to expanding their capacity to address the next set of challenges and realize the next set of opportunities they encounter. At the same time, the roles of federal, state, and local governments are being refined as they act more as a catalyst, partner, and resource to facilitate homegrown conservation of large landscapes.

The promise of large landscape conservation is that it seeks to address land and water problems at an appropriate geographic scale, regardless of political and jurisdictional boundaries. While it is difficult to define precisely what constitutes a large landscape conservation effort, there is a growing consensus that such efforts are multijurisdictional, multipurpose, and multistakeholder, and that they operate with various governance arrangements at diverse geographic scales. The common currency in large landscape conservation is regional collaboration—the ability to work across boundaries with people and organizations that have diverse interests yet share a common place and purpose.

Discussion Question 1

Written & Online Comments

(cont.)

During the past two years, participants in the national policy dialogues have identified nearly 200 cases that, depending on the criteria used, represent examples of large landscape conservation (Lincoln Institute 2010). Taken together they reflect the variations in governance and spatial scale, and include policy initiatives, plans, government programs, and nongovernment organizations that serve as either advocates or intermediaries. This preliminary inventory also reveals that such efforts are organized for multiple purposes, from informing and educating people to sharing data, planning, decision making, implementation, monitoring, and evaluating on-the-ground outcomes.

Freedom to Roam was instrumental in helping advance and pass the Western Governors' Association (WGA) policy framework for wildlife corridor conservation across the West and continues to be closely involved in WGA's wildlife corridor initiative. It has also developed a national campaign to promote and conserve wildlife corridors as a solution to habitat fragmentation and climate change impacts on species. One of Freedom to Roam's programs is Witness for Wildlife (W4W), which focuses on building grassroots awareness of the great wildlife corridors in North America. W4W combines citizen science with a Webbased community, wherein participants are encouraged to report, share stories, and upload data, images, and videos onto a W4W Web site.

Historic preservation plays a unique role in preserving Nebraska's great outdoors by: Contributing to smart growth and offsetting urban sprawl.

[Historic preservation plays a unique role in preserving Nebraska's great outdoors by:] Enriching natural areas.

[Historic preservation plays a unique role in preserving Nebraska's great outdoors by:] Preserving landscapes and open spaces associated with important historical themes.

[Historic preservation plays a unique role in preserving Nebraska's great outdoors by:] Preserving archeological sites and traditional cultural places in their natural environment.

[Historic preservation plays a unique role in preserving Nebraska's great outdoors by:] Collaborating with environmental groups in preserving lands of both natural land values and culture.

Modeled after its sister program, the Land and Water Conservation Fund (LWCF), the HPF provides dedicated funding to support state and tribal historic preservation programs, among others. Under the HPF, grants are provided to Nebraska, which implement federal, state and local preservation initiatives.

With full funding, historic preservation will succeed in: Saving open space.

[With full fundin, historic preservation will succeed in:] Promoting "green" initiatives. The best "green" projects retain existing buildings and utilize existing infrastructure.

Discussion Question 1

[With full fundin, historic preservation will succeed in:] Developing ways to promote "heritage tourism." Tourism to Nebraska's historic sites and museums generate over \$100 million annually. It encourages travel and rediscovery of our historic and natural treasures through state and national historic parks and sites.

[With full fundin, historic preservation will succeed in:] Expanding surveys of historic and archeological places. This includes identifying and recording Nebraska's cultural landscapes. This helps communities, local governments, tribal governments and the public to work to preserve important setting associated with historic events and the important geographical contexts of historic places.

[With full fundin, historic preservation will succeed in:] Assisting tribes in preserving places significant in traditional culture.

[With full fundin, historic preservation will succeed in:] Providing assistance to local governments to recognize the importance of historic preservation within their own growth management and comprehensive planning.

The America's Great Outdoors Initiative needs to benefit all Americans through parks, recreation, open space, and human habitat. Increased funding for existing federal programs will promote preservation and heritage tourism and encourage people to discover and explore America's Great Outdoors.

Thank you for the opportunity to comment on President Obama's Great Outdoors Initiative. We appreciated the opportunity to meet with you and your staff recently in Washington, DC, and greatly appreciate respresenatatives from Washington coming here to listen and participate in this ongoing conversation. This is an expression of respect that we sincerely hope will be further reflected in policies that emerge from our discussions.

The Confederated Salish andKootenait Tribes applaud the America's Great Outdoors Initiative goal of reconnecting Americans with the environment. We believe this effort can help create a new generation of Americans committed to the protectionand restoration of the lands and waters where Indian people have lived sustainably for thousands of years.

Indian people and Indian cultures--the caretakers of the continent for millennia--stand at the center f America's conservation heritage. For many generations, our leaders and elders have played a critical role in the development of the nation's growing sense of responsibility for this priceless national heritage.

The Outdoors Alliance for Kids (OAK) supports the Administration's America's Great Outdoors (AGO) initiative to engage the public in shaping a new conservation and recreation agenda that meets the needs of the 21st Century. OAK appreciates in particular the emphasis on engaging youth in the agenda-setting process. The members of OAK are brought together by the belief that the health and well-being of current and future generations, our planet, our communities and the economy depend on humans having a personal, direct and life-long relationship with nature and the outdoors. OAK is working to expand the number and quality of opportunities for children, youth and families to connect with the outdoors.

Emerging research suggests that time spent outdoors in nature results in health benefits for children and youth and that significant exposure to the natural world during childhood results in positive attitudes towards the environment in adulthood.

I grew up in Georgia near the Atlantic ocean and some of my happiest memories are related to the ocean.

There is something that is worth more than any words one can share when you are able to experience and enjoy the majesty of the outdoors.

As a registered landscape architect I have dedicated my professional life to studying, preserving and enhancing America's outdoor environment from the wilderness to the most urban of places.

I grew up playing, hiking and camping in nature. When my husband and I had our own kids, we continued the tradition with them. It's my hope that they do the same.

Protection of our environment for future generations should be our highest priority.

My partner and I travel in our 36 ft. trailer enjoying the beautiful natural wonders of our country. We would like future generations to be able to enjoy our public lands as much as we have. Please consider these priorities for America's Great Outdoors:

I want the next generation to continue to enjoy America's great outdoors too. (public transportation needed; rails, high speed transit) Please let me be able to

Thank you for your leadership in shaping a conservation strategy that is necessary for the 21st century. I feel it is vitally important to protect and preserve what we have, for all of us now and for our future generations.

I am the father of a 4-year-old and I want her to be able to enjoy America's great outdoors as I have done.

I am an avid backpacker and hiker.

Discussion Question 1

(cont.)

My daughter should be able to enjoy America's great outdoors too.

Educating the public is very important. Citizens are willing to work with you in so many areas, if they know what to do. Programs that include students everywhere will provide the caring citizens of tomorrow.

Hopefully your legacy will also be the legacy of my future children and grandchildren. The prospect gives me great hope!

America's first greatness has always been her land, and we cannot be a great country without preserving that heritage.

The time is now to protect our earth

I want the my sons and their children and their children's children to enjoy America's great outdoors too.

I love the out- of-doors and my grandchildren do too. I want them to be able to see all the wonders our country has. Please protect it. But we also need to protect the wildlife such as horses and wolves. What does this do in regards to them?

It is important save as much of the wilderness we can ,as there are wonderful creatures that live within ,and I would love to have children of the future to enjoy what I have ,and not have to look in a book and say ,"So that animal us to roam our woods and wetlands . " Please stop destroying these wonderful places and save them and the living things in them.

I'm a former Forest Service employee who was fortunate to have had a role in protecting some of the finest wilderness areas in America, including the John Muir Wilderness and the Ansel Adams Wilderness. Though I've returned to my native Philadelphia, those precious landscapes are still a part of me, as they will be for my children, thanks to their protected status. However, there are hundreds of places around the country that lack significant protection, and once they are lost to development, neglect, or other threats, they can not be replaced.

Let us work to save these wonders for our children and grandchildren and all future generations...When it is gone it can not be replaced.

As someone who spends a great deal of time in our public backcountry practicing primitive recreation, I care very deeply about how those lands are managed and treated. I am outside every single week, and often make my vacation plans around places where I can backpack, camp, and fish.

The outdoors, particularly development-free, unspoiled areas like wilderness, hold the resources for our future both spiritual and practical.

Discussion Question 1

Written & Online Comments

(cont.)

The issue of protecting the environment, natural spaces and growing our existing wild spaces is the issue most important to me.

Every year we take our children camping, hiking, whitewater rafting and when we travel, try to take them to natural areas to which they have never been. Nothing on Earth is better than its natural beauty, diversity of ecosystems and the complexity of geology, geography and living species.

As a New Yorker, I find it necessary to escape the city at least a few times a year and reconnect to nature and the great American outdoors. It is essential to my productivity in the workplace and overall well being to be able to recharge my batteries, by taking in the stars at night, hike down a mountain trail, explore a native forest, or swim in the waters of a pristine beach. I have been lucky enough this past year to see the sun rise at Cadillac Mountain in Acadia National Park in Maine and hike to the top of Bear Mountain at Bear Mountain State Park in New York. I treasure these experiences and they allow me to cope with city life and experience the beauty of nature in most extraordinary ways. I look forward to many new adventures in the years to come.

When push comes to shove Nature is what makes life worth living. A future with nothing but concrete sidewalks and structures is a very bleak one in my eyes.

We need to keep as many natural places as possible. For one reason, they are much more healthier.

I live in the Greater Yellowstone Ecosystem so I know the importance of protecting habitats and migration routes. I want my grandchildren to be able to experience the wilderness that I have been fortunate to enjoy.

I can't think of a better way of leaving a legacy than preserving our great outdoors.

The magnificence of our wilderness and protected lands has been a source of healing and inspiration like no other in my life

I am strongly in favor of the federal government protecting America's wild places and wild life. I am also strongly in favor of maintaining existing national wild places and expanding the number of federally protected wilderness areas.

These are important places in our lives. Each year we go to national parks as a sanctuary to renew our energy.

Some of my best memories of vacations were when I spent time with my family in American's national parks. I hope to see many more. My family and I spend alot of time outdoors, going to nature centers, taking walks in the woods, etc. I hope that America's beautiful lands will be preserved, for future generations and for the animals and plants that live on the lands.

Discussion Question 1

Written & Online Comments

(cont.)

I'm an outdoorsy type, as they might say. I grew up in the Boy Scout program and achieved Eagle Scout. I take my family and kids outdoors regularly along with the youth group of my church and serve other non-profit groups that work to help our treasured green spaces.

Along with thousands of other americans and visitors, I regularly enjoy the protected areas of the U.S. we need to protect our water, air an land and increase the protected areas now and in the future.

Now let's begin our struggle to save what we have left for our descendents!

As an instructor for the National Outdoor Leadership School leading college and high school students on month-long trips in Alaska, Wyoming, and Washington state, I have a deep understanding of the importance of a connection to nature and wilderness for American society. I strongly believe that time spent in forests, mountains, and oceans is a necessary part of human happiness and the right of all Americans, and that large scale wilderness preservation is one of America's great gifts to the world.

Camping was how my family enjoyed our vacations. I want my children to have the same fond memories.

Since I was a child I have been spending summers in Yellowstone and Grand Teton National Parks. This experience honestly created the person I am today. Taking week long trips in the backcountry taught me how to rely on myself and how to lead a group of people in a way that benefitted the entire group. Mr. President I urge you to do that now. Please consider the old Iroquois saying "In our every deliberation, we must consider the impact of our decisions on the next seven generations."

The future generations will thank us. A society with no regard to protecting and respecting the environment and other species is a doomed society. Thank you for taking these steps, they are the right and moral thing to do.

When I was growing up, I was able to enjoy the out-of-doors. I am thankful that my parents gave us many opportunities to learn from the natural world. I want young people to be able to do this in the future as well.

I am lucky to have open spaces near my home: the Allandale Woods and the Arnold Arboretum. My wife and I have personally seen mountaintop removal coalmining when visiting friends in West Virginia. We've been horrified by what it does to surrounding communities, their water supplies and their overall environment. It must be stopped. We must switch to a green economy and train those miners for green jobs.

Man NEEDS to preserve wilderness to save his sanity. Our minds and bodies were designed to be outdoors. Concrete and buildings only suppress our true nature and leads to depression and schizophrenia.

Discussion Question 1

Written & Online Comments

(cont.)

Respect/ Nature in all her forms

I am all about the wilderness areas being saved for people to recreate, not just for preservation. Some recreational activities do need to be curtailed at some of the more sensitive areas, but the areas should be available for the enjoyment of the population in some manner. Some areas might need restricted access due to flora and fauna endangerment; that is understandable and those protections need to be in place.

I know growing up I used to always seek out creeks and lakes to swim in and some of the fondest memories I have is at a lake with my family. I have since taught my children to love the outdoors. It would just be ashame if in the future you had to go for hundreds and hundreds of miles to see a tree or a forest or a lake or a creek or a wild animal. In Arkansas you have all of those things in your back yard and easy access to them. I would love for you and your administration to keep it that way for us here and all over the this great land of ours.

I am an outdoor educator in Florissant, Colorado, and I have seen firsthand what a profound impact even three short days interacting with the natural world can have on a sixth grader. In our program, students from Colorado Springs and Denver, who normally spend their days in front of televisions and computer screens, discover firsthand the healing benefits of time outdoors. They become more engaged, experience greater calmness, and establish a connection to something they identify as "greater" than themselves. They feel a part of something and become empowered. Children with behavioral problems find themselves more calm and able to pay attention for longer periods of time. Over-scheduled kids feel a profound sense of peace when sitting silently in an aspen grove listening to the leaves. One of the many problems with our plugged-in generation is that there is less and less access to wild lands. This is an issue that affects the physical and mental health of both children and adults. Public lands must be protected.

It is important to safeguard our great outdoors for the next generation to enjoy.

In North Carolina we added new state parks recently. But land is being developed quickly and we need to protect more of it before it is too late.

I was fortunate enough to spend many weekends and summers camping and hiking with my family and friends while I was growing up. I still enjoy camping, mountain biking and hiking as an adult. I have also gained a rich appreciation for our county's history and heritage by visiting our Battlefield National Parks. This exposure to the wonders of our nation's parks and wilderness areas has enriched my life.

Having a 6 year old and an 8 year old child as I do makes this matter all the more obvious and personal. The delight and wonder children feel in nature is infectious.

(cont.)

In 1933 FDR put a generation - including my daddy - to work restoring and preserving America's wilderness. The CCC also improved access for all Americans to National Parks, Forests, and other wilderness areas. Daddy's generation reaped the benefits of work and an improved economy. My generation got the physical health benefits of clean water and the psychological health benefits of wilderness. America's wilderness lands need restoring and protecting again. America's youth need jobs. And I want my grandsons to have the physical and psychological benefits my generation enjoyed

I just spent a day hiking the beautiful Pinnacles National Monument near Soledad, California. It was beautiful...and it needs to stay that way.

I grew up in the beautiful State of Maine, in a rural area where the elders taught me to recognize the native plants and trees. I knew them by name. I lost that connection to the land, which I took for granted, when I moved to the other side of the country. Whenever I return to Maine, I am shocked and saddened to see how many of the wild spaces I remember have been built up, cultivated, or "prettified" so that all you see is grass, rather than Queen Anne's Lace, daisies, milkweed, and joe-pye-weed. This is a huge loss--those who never knew those plants will not know what they are missing. I hope you will make the conservation of natural areas a top priority.

My wife and I frequent the Adirondack mountains in NY every year and are very grateful for the opportunity to have open access to this untarnished wilderness.

With all the beauty and recreation that nature provides through our national park system, there is the added benefit of counteracting CO2 emissions and global warming when we make new parks and preserve older natural monuments.

For people to care about something (anything?) they need a personal connection with it. I am a strong advocate of outdoor education as a means for connecting people with our environment, natural resources, biosphere, etc. I believe that an individual's attraction to a given activity, whether that be mountaineering, backcountry skiing, looking at wild flowers or (my daughter's current favorite) capturing grasshoppers can be utilized as a path toward a deeper understanding of ecology, resource management, and a land/water/planet ethic.

In the United States, we are blessed by having public lands that are set aside for the use and enjoyment of all the people. The federal role in the administration of these lands is invariably driven by the agenda of the administration in power. The current administration appears sensitive to the interests of the conservation community but there is no guarantee that the next administration will share this perspective. I believe that a more comprehensive understanding of the 'natural world' serves all people regardless of political affiliation. As a world population we are presented with many natural resource challenges (e.g. climate change, deteriorating air quality, limited access to potable water, loss of arable land, etc). I believe that the federal government could be of great assistance in promoting the education of people with respect to the natural resource challenges that we face.

Discussion Question 1

Written & Online Comments

(cont.)

As an outdoor educator, I have a strong connection to wild places. I believe that protecting wild places and sharing those places with people has a great deal of value for our society. In sharing such places with people, I believe that we can help with the development of an individual's land/water/planet ethic. I believe that the development of such an ethic is invaluable to addressing the natural resource challenges that I mention above. My goal is to help foster such a land/water/planet ethic.

As a native of Wyoming but a resident of Texas, I have always understood the importance of having (or lacking) a critical connection with the natural world.

I truly believe that if more people would go outside and reconnect with nature, that the world would be a better place. It always feels so good to be with the trees, breath fresh air and forget about one's problems. Nature is peaceful and replenishing, but the large corporations that run the world are exploiting it for profit. If something isn't done to protect the wilderness pretty soon, it will cease to exist and we'll only be left with cities and concrete - - how depressing!

I love our country! It is the most beautiful country in the world, hands down.

I grew up camping, fishing and doing many other outdoor activities. I want these opportunities to be available to the next generation. Without stronger protections for the beautiful wild spaces we have, and making additions of protected wild places, we will lose these beautiful places and have only concrete and polluted air and water to live in. I want fresh air, and tall trees to escape to, no concrete jungles and noisy traffic.

The only way to ensure that Americans will be invested in the protection of nature is if they are given an opportunity to appreciate it now. By creating new refuges and conserving current ecosystems, you will be protecting important ecological resources, beautiful vistas, and necessary habitats.

This is very important to me. The outdoors is how I survive in this world. It brings me peace, joy, sustenance for my soul. It keeps me grounded and inspires me with it's beauty. Protecting the outdoors and all that that means is important for me and I believe it is important to my family, friends, and others like me. As it is, too many are disconnected from their natural environments and I wish them to be preserved so others might be inspired and find their happiness as well.

I live in an area that is blessed with abundant natural beauty, and it is beginning to be eroded

Our country, businesses, and scientists need to work with and learn from the natural world with which we are inextricably linked. Providing opportunities for everyone, particularly children and the impoverished to enjoy nature is essential to create a just and sustainable world.

Discussion Question 1

Written & Online Comments

(cont.)

Saving America's remaining natural places is not only about recreation. It is about survival for many plant and animal species and their habitats. And ultimately, it's about preserving our nation's character and legacy from further development and encroachment. We have already lost more than we should have. The destruction of more forests, grasslands, archaeological sites and other heritage resources is unthinkable. Conservation of these priceless resources is the only way to save them from destruction. It will take courage and bold leadership to resist pressures from many corporate and other special interest groups. To ensure that our nation's wildlife, plus its natural and cultural resources are protected and always available for future generations, please consider these priorities for America's Great

Because I've grown up with fields, trees, parks, hikes, mountains and seas and shores, I want the next generations to be able to experience the beauty. Thanks for all this Democratic administration does to improve our lives.

The U.S. must implement 3 things to establish a democracy: publicly-funded campaigns, election reform (a la W. Europe) and end obscene corporate lobbies!

Wilderness areas and parks are engines of economic growth to adjacent communities while providing resiliency and buffering capabilities for ecosystems. We need more protected areas and a national program to encourage redevelopment of brownfields and protection of greenfield sites.

Both our survival and the Earth's survival is at stake. They are irrevocably tied together. As one goes, so goes the other. Does it not make sense to protect that which keeps us alive?

I do not feel our public lands should be used for business purposes, (ie timbering or mining) those ventures have their own capital to purchase lands and do not need the public lands, NO MATTER WHAT RESOURCES ARE THERE OR UNDER THERE. Timbering and fire burns for land management are necessary within reason, but not clear-cut thousand of acres in a swath.

Wildlife migration corridors and green space in developed areas are excellent ways to keep nature healthy and accessible in our modern world. , those who follow will appreciate what we do now.

Not only do these spaces conserve wilderness, offer pleasure to people and wildlife, but they also help buffer climate change, absorb air pollutants to some degree, and help to conserve water and absorb flood waters.

Discussion Question 1

(cont.)

I am amazed at how many petitions we have to sign and how many letters we have to write to try to secure some sort of legislation for what should be obvious; we need to respect and protect our natural resources! Isn't this apparent in the wake of these recent disasters? Isn't this a no brainer? What type of governing body would want to sacrifice our natural resources, which once destroyed, are nearly impossible to recover? And for what? Fuel, convenience, PROGRESS? How progressive will it be to future generations when they have no resources to fall back on? No land to cultivate or parks and forests to enjoy? What about the invaluable role these resources play in our fragile ecosystem? It is scientifically proven that when our forests and streams are irreperably altered, our country and the entire planet feels the effects and suffers for the mistakes we have made. The Forest Service is currently spending millions on road reclamation projects because of the now-realized damages that were done to the national forests when they built logging, lookout and recreational roads. While this is a step in the right direction, it will not restore the landscape to what it once was and it will not undo that damage that has already been done. It is so much more expensive to try to go back and fix mistakes that were made than it is to see the big picture and make decisions based on all the variable not just the current bottom dollar and instant gratification mentality the US has become infamous for.

WILDERNESS MATTERS

connect more people with nature - which has been shown to improve physical and mental health and increase creativity

Some of the most meaningful and restoring times my family has spent together have been in our parks and wildland areas, both when I was growing up and as I raised my family. Preservation of these areas so that my granddaughter can someday take her family to enjoy them, is to me of paramount importance.

About twenty years ago, my wife and I enjoyed the privilege of visiting Glacier National Park. I wish every American, every human being in fact, could experience that beauty. Unfortunately, the glacier is receding and in a few more years will disappear entirely. This is due to global warming, but can serve as an apt illustration for anyone who would like to know what it would be like to lose any of the natural beauty of our wilderness.

As a national park junkie (who travels to several national parks each year), I implore you to protect and fund additional monies for our national parks and wilderness areas. As a nation, we need to do more to protect and enhance our parks and wild lands. They provide sustenance for all creatures and give me a huge sense of pride in our country and our freedoms (to enjoy our parks and wildlands in many ways).
I implore you to create more wilderness areas and to continue to build - and fund - the national parks, monuments, and wilderness areas

(cont.)

These places hold a special piece in my heart. They are a natural resource, once they are gone, they will be gone forever. We have some of the most beautiful places on earth, it would be shameful if they were destroyed forever. American has always been a leader, let's show the rest of the world how to protect our lands natural beauty and preserve what so many passionate people have strive so hard to protect over the years.

protecting living beings, not corporate interests - for the other species who share this continent with us - , putting the needs of living beings above those of special interests and corporate greed - ; what affects one ultimately affects all, and we are not apart from the rest of the living beings on this earth, but interconnected. - for the quiet and nonimpacting enjoyment of our continent's natural places; do not develop and destroy them. We have enough roads, developed places, and recreational facilities already.

Teach eco-literacy in our schools. Make sure our children understand the biological networks in which we live, that we count on to survive.

I truly look forward to taking my children and grandchildren to visit the parks, monuments, trails, forests, and other such sites. They are pieces of this country for everyone to enjoy...rich or poor. Please protect our nation's natural beauty and animal habitats.

We have nothing else that offers people such inspiration; the wild is a wellspring that contributes to sanity and sound perspective.

I am a Christian and I think it very important for our country to realize we did not create the world and are to be guardians of it. We will all be held accountable to our waste and neglect. We are already seeing wild animals encroaching on our cities -- because we have invaded their habitat. Did you know that the animals were created the same day as humans. God does care about what we are doing. Please protect our planet!

It's not right or fair for us to destroy the beauty & gifts of Nature, as we are only borrowing them from the future. We must save & protect these places, & the animals & plants that call them home, FOR our children's future!!

Clean air and water are really the most important thing on Earth for all of us. By preserving wild areas and wildlife we preserve the life giving air and water that we cannot live without. We also preserve the peace of mind that comes from natural experiences and that is second in importance only to the essentials needs with which it is connected.

(cont.)

For years now my touchstone with spirituality has been the time I spend in the natural world. My trips into the mountains, particularly the Sierra Nevada have been one of the strongest connections with my family as well. I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand At a time when the corporations are taking over our government, buying up farm and timberlands for their own exploitation, the preservation of what remains untouched is of paramount importance. - - - This is of the greatest importance to me, my family and future generations.

Many of my most treasured childhood (and adult) memories center around being outdoors in this beautiful country of ours.

The wilderness belongs to no individual, but to all of us.

As I child, I was blessed to be surrounded and seduced by the joys of nature. I have also passed this on to my grown children, who are in touch with their indigenous selves. I want to ensure the same for all children.

EMPOWER THOSE WHO ARE THE RIGHTFUL HEIRS OF OUR BEAUTIFUL LAND!!!!!!!!!!

The following words are from a sermon entitled "Reverence For Nature" given by our oldest son, a Unitarian Universalist minister: "Both my parents were teachers and summers involved long camping trips to all of the great National Parks. These were learning experiences. The trips offered early introductions to natural history, geology, botany, taxonomy, ecosystems, forestry, and conservation." Our second son is a fire management specialist with the Nature Conservancy, spent three fire seasons on a hotshot wildfire crew in Alaska and is presently on a two week assignment with a fire crew at Lassen Volcanic National Park in California. This summer we had the pleasure of camping for the first time with our granddaughter along with our daughter and son-in-law.

- I had the opportunity to visit Mesa Verde this summer for the second time in my life. It is such a magical place with so much information about how people survived in the past. Our country had a vision that set up national parks to preserve the natural wonders, we need to continue to protect this heritage for the future generations. We have made such a strong effort so far we must continue to keep these places protected and cared for.

I want my grandchildren, and everyone else, to have the opportunity to enjoy the country I have been blessed to travel through over the years.

I just came back from a two week road trip out west to visit some six of the National Parks. They were amazing! I am considering volunteering next summer to help maintain and help out these parks. I

We have seen too many disasters in our generation that have spoiled the beauty that the US has to offer. Let's not keep making mistakes and let us have something to cherish now and for the future. I love all the wildlife and trails that the state of Washington has to offer, it wasn't until I was able to actually see the beauty firsthand that I started to discover and enjoy the diversity that we have in our nation.

Specifically, the National Conservation Lands:

- Should be managed to conserve, protect and restore the cultural, ecological, and scientific values for which these lands have been designated.

- Should be managed to provide visitors with the opportunity to experience natural and historic landscapes and enjoy a self-directed experience with minimal improved facilities.

- Should not contain new roads unless for emergency purposes.

- Should be managed to maintain biodiversity, promote ecological connectivity with surrounding landscapes, and resilience in the face of climate change.

- Should have their own budget line-item appropriation which will allow for transparent budget allocations for individual management units.

This year we celebrate the 10th anniversary of the National Conservation Lands. Even with much to celebrate, our National Conservation Lands still lack a unifying management vision as well as the necessary policies and procedures to ensure adequate protection of their outstanding resources. It is time for the Department of the Interior and the Bureau of Land Management to set the management directives that will protect the National Conservation Lands in a way that recognizes and protects their significant natural and cultural values and responds to this unique time in history.

Service-learning on public lands

There is a pressing need to provide service-learning opportunities on public lands to help restore the Nation's natural, cultural, historic, archaeological, recreational, and scenic resources, train a new generation of public land managers and enthusiasts, and promote the value of public service. Therefore, we urge the Department to include service and service-learning as innovative solutions to issues of how to build knowledge of, and appreciation for, our public lands and how to encourage a new generation of Americans to make working on public lands a career. Through the study of our parks, forests, and other lands we can connect young people with their natural environment and cultural heritage, creating a new generation of environmental stewards. Along the way, students can contribute to energy conservation, reduce the carbon footprint, and learn about the use of alternative sources of energy. For those who are so inclined, this experience can lead to a pathway to careers in federal land management agencies, which are in serious need of n

which Summer of Service programs exposed middle school students to public lands with promising results. Summer of Service (SOS) initiatives, included in the 2009 Kennedy Serve America Act, are examples of innovative service-learning opportunities for middle school youth over the summer months. SOS programs are designed to be intensive, structured, supervised, and designed to produce identifiable community improvements. In the summer of 2010, students engaged in community-based service-learning projects that addressed a variety of community needs and included exposure to national parks and other public lands. Expanding SOS opportunities to the Department of Interior, USDA, and other federal agencies will enable more young teens to participate in service as a "rite of passage" from middle to high school and provide opportunities for them to enter their teenage years with a positive experience that reinforces community connections, enlivens their education, and strengthens personal and civic values. At the same time, communities

I am writing in my capacity as Executive Director of Innovations in Civic Participation (ICP), a non-profit organization supporting the development of innovative high-quality youth civic engagement policies and programs in the United States and around the world. ICP embraces a positive view of young people that recognizes their potential to create beneficial and lasting social change in their communities through active participation in service opportunities. We believe that the America's Great Outdoors (AGO) initiative is one such opportunity and have submitted brief comments to the AGO online conversation (attached for reference).

We commend President Obama and Secretary Salazar for launching AGO, a long overdue national dialogue about conservation and reconnecting Americans with the outdoors. We are excited that this initiative includes the Departments of the Interior and Agriculture, the Environmental Protection Agency, and the Departments of Defense, Commerce, Housing and Urban Development, Health and Human Services, Labor, Transportation, and Education.

ICP believes there is a pressing need to provide service-learning opportunities on public lands to help restore the Nation's natural, cultural, historic, archaeological, recreational, and scenic resources, train a new generation of public land managers and enthusiasts, and promote the value of public service. Therefore, we urge you to include service and service-learning as innovative solutions to issues of how to build knowledge of, and appreciation for, our public lands and how to encourage a new generation of Americans to make working on public lands a career. ICP believes that service and service-learning offer answers to these challenges.

Service-learning on public lands

Service-learning is a teaching methodology and strategy that lends itself to the study of our public lands. Through the study of our parks, forests, and other lands we can connect young people with their natural environment and cultural heritage, creating a new generation of environmental stewards. The history of our public lands is the history of the United States. The study of what lies beneath those lands can introduce students to art, anthropology, history, science and countless other disciplines.

Service-learning is also a pathway to careers in public lands management, the green economy, and engaging students in the study of various sciences and the environment. The civic, historical, and scientific resources and learning opportunities that public lands offer have the potential to engage young people in a way that no textbook can. With proper planning, this unique experience could lead to careers in public lands management, academia, museum work, and other activities. Getting young people out to experience those lands will energize and invigorate their education as well as reduce the "nature deficit disorder." Along the way, students can contribute to energy conservation, reduce the carbon footprint, and learn about the use of alternative sources of energy. For those who are so inclined, this experience can lead to a pathway to careers in federal land management agencies, which are in serious need of new, younger, and more diverse employees.

Using service-learning to educate young Americans about their heritage is consistent with Secretary Salazar's vision of programs to educate, engage and employ young people. In announcing the creation of a Youth Office (April 28, 2009) the Secretary said "We can and must do more to use our great landscapes as classrooms and as pathways to opportunity for our children." Through service-learning we can connect the next generation to our natural environment and our cultural heritage, educate them about American history, deepen their commitment to American values, and help foster their becoming responsible, participatory adults. Additionally, service and service-learning will help maintain public lands, reduce the maintenance backlog, and help ensure that our parks, forests, and coastal lands will be available for future generations.

Discussion Question 1

Written & Online Comments

(cont.)

The most important reason to incorporate service-learning in youth programming at the Department is that it works. Research shows that service-learning programs positively affect young people in at least three ways: they do better in school because they better understand complex issues and have better problem-solving skills; their civic attitudes and behaviors improve as they develop connections to their community and reduce risk behaviors, and they develop social and personal skills.

By designing and planning service-learning projects, students learn valuable problem-solving skills and develop self-confidence and a sense of efficacy. When students engage in structured reflection in the classroom they develop higher order thinking skills, as well as increase their sense of responsibility and their connection to their community. Service activities that last at least one semester allow students the opportunity to see how their activities impact themselves and others, as well as to develop more meaningful relationships with adults and those from different backgrounds in their communities. Students benefit from an active learning method that increases their understanding and learning retention.

Therefore, we urge the Department to use AGO as an opportunity to infuse service-learning into Department initiatives on public lands.

Expand Summer of Service

We also strongly encourage the Department to build on efforts undertaken last summer in which Summer of Service programs exposed middle school students to public lands with promising results. ICP helped develop the Summer of Service (SOS) initiative included in the Kennedy Serve America Act, which reauthorized the Corporation for National and Community Service. SOS programs are examples of innovative service-learning opportunities for middle school youth. SOS programs are designed to be intensive, structured, supervised, and designed to produce identifiable community improvements. Students completing 100 hours of service through SOS programs are eligible to receive \$500 education awards.

In the summer of 2010, students engaged in community-based service-learning projects that addressed a variety of community needs and included exposure to national parks and other public lands. To take but one example: through an SOS program, some Seattle students visited Mt. Ranier National Park for the first time, even though on a clear day they can see the mountain from Seattle!

SOS is important because in the summer months, the lack of constructive activities and opportunities for young people often results in academic decline, risky behavior, and an increased likelihood of failing to make the transition to high school. Yet, when young people participate in service activities they are better able to control their own lives in a positive way, avoid risk behaviors, strengthen their community connections and become more engaged in their own education. Expanding SOS opportunities to the Department of Interior, USDA, and other federal agencies will enable more young people to participate in service as a “rite of passage” from middle to high school and provide opportunities for them to enter their teenage years with a positive experience that reinforces community connections, enlivens their education, and strengthens personal and civic values. At the same time, communities across the US might find an important new resource in their own backyards—young people who are ready to serve, if only they are asked and given the opportunity to do so.

Discussion Question 1

Written & Online Comments

(cont.)

Expand focus on Youth 9 to 16

Finally, it is important to target pre-teens and younger teens. Most programs engaging young people in public lands take the form of Youth Corps or Conservation Corps, which typically enroll young people between the ages of 17 and 25. While these programs are an excellent means for developing a relationship with young adults, they fail to reach elementary and middle school students. Considerable research indicates that habits like participating in outdoor activities are cemented in the years between 9 and 16 – long before young people are eligible to participate in a corps. As you develop the AGO initiative, we urge you to include such young people in your vision.

Integrating service-learning into the Department's programming can benefit communities adjacent to public lands by improving student achievement, graduation rates, and college attendance rates, as well as through the improvement and rehabilitation of public assets, including parks, forests, trails, rivers, estuaries, and coastal and marine areas.

While it may not be obvious, research shows that the great majority of adults who are active in the environmental science, engineering, and advocacy fields "had formative outdoor experiences during childhood or had role models who directed their attention to the environment." Those groups that are disconnected from the outdoors -- minority youth, low-income youth, and women -- are also disengaged from STEM-related learning.

Thus, connecting such youth with nature will not only contribute to their physical, social, and emotional development, and set them on pathways to employment, but it may also instill in them the enthusiasm to pursue a career in science or in another STEM field and thereby help to further another Administration priority.

Service-learning provides critical tools for a 21st century workforce by providing students with the skills to understand complex environmental issues so they may make informed decisions in their own lives and find solutions for real world challenges facing us as a nation.

We look forward to working with you to ensure that America's young people develop a greater appreciation for their history and natural environment through service and service-learning.

I am writing to express my strong support for full funding for the Land and Water Conservation Fund (L WCF). My position likely reflects a message you heard from communities across the country this summer, including Golden and Grand Junction, while conducting your "America's GTeat Outdoors" listening sessions.

Mr. Secretary, your leadership and support for L WCF are greatly appreciated. Please continue to champion L WCF as a tool for boosting the health of our economy, our communities, and our families by including it in the America's Great Outdoors report to the president. Additionally, I ask that you encourage your former colleagues in the U.S. Senate to fully fund the program before the end of this Congress.

Discussion Question 1

Written & Online Comments

(cont.)

The attached selection of opinion pieces and letters to the editor published in the Denver Post, the Grand Junction Sentinel and the Pueblo Chieftain demonstrate broad and diverse support for the program from Colorado anglers, outfitters, birders and youth organizations. LWCF helps fund many of Colorado's recreation areas, including the Platte River trail system, Castlewood Canyon State Park, and Garden of the Gods.

As Coloradans well know, protecting our public lands provides numerous benefits to our state. Protecting these open spaces helps create a vibrant recreation milieu that leads to economic activity and jobs, and helps Colorado attract new residents and businesses. In fact, outdoor recreation, including hunting, fishing, camping, climbing, hiking, paddling, backcountry skiing, mountain biking, wildlife viewing, and other activities contributes \$730 billion annually to the economy. Outdoor recreation is responsible for eight percent of all consumer spending nationwide according to the Outdoor Industry Foundation. Here in Colorado, spending on outdoor activities translates into nearly \$500 million in annual state tax revenue and supports 107,000 jobs across the state.

Additionally, in a recent national bipartisan poll conducted by Public Opinion Strategies and FM3, 85 percent of Americans view the LWCF as more important today in light of the British Petroleum oil spill.

Fully funding the Land and Water Conservation Fund also preserves our natural heritage and provides close-to-home recreational opportunities for every American.

I hope that the following media clips from media sources in Colorado demonstrate how the LWCF has provided a continuum of conservation that has touched us all.

Thank you for your leadership on behalf of our public lands, and our national heritage.

Denver Post, February 10, 2010 letter

Land Preservation

Sinjin Eberle, Vice President, Colorado Trout Unlimited, Denver

The Obama administration has proposed increasing the amount of funding available for the Land and Water Conservation Fund, a 45-year-old program that has protected wildlife habitat and provided recreational opportunities in national parks, national forests, and national wildlife refuges across the country.

Instead of using taxpayers' money, LWCF protects federal lands and provides grants to communities for local parks and trails using a small portion of royalties paid by companies conducting offshore drilling.

This common-sense approach to land conservation benefits anglers and hunters because conservation creates opportunity. The opportunity to hunt, fish, hike, bike and ski in these wild places is increasingly at risk from an array of land-use threats, and must be protected as a part of our national heritage.

It simply makes sense to use funds generated from natural resources extraction to invest back in America's natural places - protecting and promoting another kind of resource, open space and clean water, that benefits each of us.

Interior Secretary Ken Salazar, Sen. Mark Udall, and other advocates for LWCF in Congress and the administration are on the right track to see that we meet our responsibility to protect America's great outdoors for future generations.

Discussion Question 1

(cont.)

Grand Junction Sentinel February 26, 2010 letter

Land and Water funds are critical/or area wildlands

Tom Burke, past chairman, Colorado Wildlife Commission, Grand Junction

For 45 years, under both Republican and Democratic administrations, the Land and Water Conservation Fund has provided critical dollars for enhancing and protecting public lands, wildlife habitat and recreational opportunities. Since the LWCF has only once been funded to the full level authorized by Congress, and recent appropriations have been at record lows, a proposed increase in the fund, derived from royalties from offshore drilling, shouldn't go unnoticed or unappreciated.

The president's new budget asks that more than \$2.5 million be allocated for expansion of Canyon of the Ancients National Monument in southwest Colorado. In previous years, \$1.5 million in LWCF funds went to the McInnis Canyons National Conservation Area and another \$440,000 to the Colorado National Monument. More than \$9 million has been allocated to the White River National Forest and in excess of \$6 million has helped preserve critical habitat in Gunnison County and assisted programs in the Black Canyon National Park and Gunnison Gorge National Conservation Area.

All of western Colorado benefits from these expenditures, which not only improve our quality of life, but assist in attracting businesses and creating and retaining jobs in our outdoor, tourism and hospitality industries.

With leadership from the administration and our elected officials in Congress, we can ensure that this investment continues to produce economic and recreational benefits for our communities, and most importantly, for our children and grandchildren.

Pueblo Chieftain, Sunday May 9th letter

Visit National Parks

By Joe Greiner, President, Wilderness Aware Rafting, Buena Vista

National Parks Week was celebrated in April, reminding Coloradans to use places like our beloved Rocky Mountain, Mesa Verde and Black Canyon of the Gunnison national parks to teach our kids about our natural and cultural heritage.

Other public lands, such as the Arkansas Headwaters Recreation Area, the Colorado River and the proposed Dolores River Wilderness, also enable our kids to enjoy active, outdoor activities. Healthy lifestyles depend in part on access to parks, rivers, trails, and open spaces.

But these places also are economic engines for tourism-based economies, supporting thousands of jobs nationwide. For instance, my company, Wilderness Aware Rafting, brings 10,000 people per year to Colorado to raft our amazing rivers.

The support of Interior Secretary Ken Salazar and our elected officials in Congress for critical programs that protect our land and water, such as full and dedicated funding for the Land and Water Conservation Fund, is vital to the health of our families, communities, and tourism-based economies. A national conversation about the value of our public lands and waterways, such as that being proposed by the new America's Great Outdoors initiative, could help to sustain our outdoors heritage.

Denver Post, September 19, 2010 opinion editorial

Ensuring full funding for Land and Water Conservation Fund

By Andrew Currie, Ken Strom, and Erica Stock

If you live in Colorado, you know that we are privileged to enjoy countless breathtaking vistas, magical wilderness areas laced with free-flowing rivers, and highly-rated urban parks and trails every day for recreation, sports or just some peace and quiet.

What many of us might not know is that a large number of our most beloved lakes, streams, woodlands, local parks and playgrounds have been protected for us by the Land and Water Conservation Fund (LWCF). The LWCF is the principal source of federal dollars for protecting land in America's national parks, forests, and other public landscapes and ensuring recreational opportunities for Americans in every state in the nation. LWCF helps fund many of Colorado's recreation areas like the Platte River trail system, Castlewood Canyon State Park and Garden of the Gods, as well as national treasures like Yellowstone National Park, California's Big Sur Coast, Florida's Everglades, and historic Civil War battlefields.

The Land and Water Conservation Fund was created by Congress in 1965 and is authorized to receive \$900 million annually in federal revenues from offshore oil and gas leasing. Unfortunately, the LWCF program has received full funding only once in its history. In recent years, it has steadily declined to a low in appropriated funding of \$155 million in 2008, and in total has been shortchanged about \$17 billion since its inception. Despite this, the LWCF has worked in every state of the Union - indeed nearly every county in every district in America - to fund state and local park activities. These projects contribute not only to our natural environment, but also create jobs and draw visitors for recreation, sporting and other activities.

Colorado's treasure of mountains, rivers and great outdoors brings in hundreds of thousands of outdoor recreationists annually - participating in bicycling, camping, fishing, hunting, paddling, snow sports, hiking, climbing and wildlife viewing - who generate an estimated \$10 billion in state tax revenues and retail sales and services across the state while supporting over 100,000 jobs.

LWCF began as part of a simple deal: as America's oil and gas was extracted from federal lands and waters, a portion of the associated revenue was intended to be reinvested in conservation of the lands and waters Americans care about. But even though there's been more than enough revenue year after year from the oil and gas leasing to fully fund LWCF at no cost to the American taxpayer, Congress has diverted the funds and failed to use the money for its intended purpose.

Efforts are underway, supported by groups across Colorado and the nation, to insure the long overdue full funding for LWCF. Recently on July 30, the issue to fully fund LWCF passed in the U.S House of Representatives. We applaud our Colorado delegates heartily for their efforts and role in this success. Congresswoman Betsy Markey, 4th District Colorado, cast her affirmative vote that day joining Jared Polis and Diana DeGette, and Colorado U.S. Senators Mark Udall and Michael Bennet were instrumental by cosponsoring legislation in the Senate that would ensure a dedicated source for permanent full funding of LWCF.

Discussion Question 1

Written & Online Comments

(cont.)

But the fight to make things right is not over. Senate Majority Leader Harry Reid has tabled the Senate's discussion and vote on the L WCF until after the August recess, fearing he would not have enough votes to pass the issue. We must ensure that full and pennant funding for L WCF remains a priority in September.

Let's make this extraordinary value crystal "clear" for Congress. We greatly appreciate what Congresswoman Markey, Senator Udall, Senator Bennet and others have already accomplished, and we urge our Colorado Senators to keep up their strong leadership as the L WCF goes before the Senate, and to continue their robust support.

A victory here will finally and rightfully ensure full and dedicated funding for the Land and Water Conservation Fund, one of our best tools for conserving the Nation's great outdoors, increasing recreational access to our favorite parks and natural places, and supporting the tourist and recreation industry jobs and businesses that in large measure contribute to Colorado's economic health.

Andrew Currie is founder of Conservation Havens, LLC Ken Strom is the director of Audubon Colorado, the state program of the National Audubon Society. Erica Stock is the outreach director for Colorado Trout Unlimited

Denver Post, September 24, 2010 opinion editorial

Expanding opportunities for young people on public lands

By Harry Bruell and Stacie Gilmore

The outdoors are one of the West's most valuable assets. They provide sustenance, recreation, energy and income. But our wild places are also our best classrooms, and with strong national leadership, we can continue to offer Western kids and young adults unique service and educational opportunities in the outdoors.

Too many young Americans are exercising their thumbs playing video games these days, instead of exercising their bodies playing outside. Too many children grow up in families that have never visited public lands or fished in a river or hiked a trail. And, because the recession has been particularly hard on young workers, too many are facing closed doors instead of looking forward to bright futures.

We've seen firsthand how a personal and physical connection with nature can change that. We've seen young people awestruck by our natural landscape and inspired to get up off the couch, explore the outdoors, provide service on our public lands, and learn about Science.

We've seen how experiencing nature exercises the mind as well as the body - inspiring young people to ask questions about how our world works and how they can shape it. And we've seen how a first hike or climb can inspire pursuit of the knowledge and skills required for a career as a conservation professional or a scientist.

But that's not just our experience. A new National Wildlife Federation report confirms that spending time outdoors helps kids to become stronger students with fewer disciplinary problems and more enthusiasm for learning, who ultimately perform better on standardized tests.

For more than a decade, our organizations have engaged Western youth in education and conservation. The Southwest Conservation Corps has engaged thousands of young people in paid service - from middle school youth to Veterans returning from Iraq and Afghanistan - to build stewardship skills by working on conservation projects that benefit people throughout the Southwest.

These young people represent a huge - mostly untapped - resource for meeting public lands needs across the country such as building trails, maintaining wildlife habitat and protecting communities from wildfire. Environmental Learning for Kids (ELK) cultivates a passion for science, leadership, and service in a diverse community of learners.

Urban youth experience the outdoors, develop science skills, and explore the wide variety of natural resource careers available to them. Through multiple year programs, youth turn those experiences into not only high school, but college graduation. More than 80 percent of ELK's alumni study a science field in college, an amazing statistic for Latino and Black students.

But we can't do it alone. Continuing this success story and making these opportunities available to more American kids and young people requires federal leadership. That is why we were so pleased that the federal America's Great Outdoors Initiative held listening sessions in Golden and Grand Junction. These events gave everyday Americans - including children and young adults - a chance to talk firsthand with U.S. Interior

Discussion Question 1

Written & Online Comments

(cont.)

Secretary Ken Salazar and other federal leaders about conservation and its personal impact on their lives.

One of the most important messages they heard was about the essential connection between conservation and education, with local residents calling for passage and allocation of resources to tools and programs to engage young people in the preservation of our natural heritage such as the Public Lands Service Corps Act and full funding for the Land and Water Conservation Fund.

The Federal Government should use these resources to build upon the existing network of conservation corps and environmental education programs to engage thousands more young people in public lands service, expose thousands more to the outdoors through environmental education, and invest in the lands that make these experiences possible.

The meetings were just the beginning. Federal officials are now compiling the lessons they learned and preparing a report for delivery to President Obama in November. That report will shape the future of America's conservation policy, and by extension, the lives of so many Western kids and young people whose future depends upon having opportunities to explore the outdoors or do work on public lands.

We all have an interest in sending Washington a message. They need to hear that investing in the outdoors and programs that provide educational and service opportunities for young people is the best way to help more American kids to build productive lives as the next generation of scientists, conservation leaders, and informed voters.

Harry Bruell is CEO and president of the Southwest Conservation Corps, and Stacie Gilmore is executive director of Environmental Learning for Kids in Denver.

Group 2

- 1) BIE schools should allow fieldtrips and outdoor sports, bass fishing and archery competitions
- 2) Organizations and groups in school systems should have mentoring programs built into high schools to teach environment awareness, urban basketball leagues and give students 1 on 1 attention

As your agency prepares to draft and finalize the report to the President on the Great Outdoors Initiative, we write to congratulate you on the public enthusiasm that has been generated around the listening sessions and the initiative and to make recommendations for priorities in the work to come.

We and our members are excited by the commitment of this administration to conservation and we urge you to make enduring changes in levels of public investment in conservation and in the structures and strategies agencies adopt to make those investments.

Discussion Question 1

(cont.)

Fully Fund the Land and Water Conservation Fund

This fund created by Congress in 1966 is the single most important source of federal funding for the protection of new conservation lands and improvement of existing recreational areas to the benefit of all Americans. The program has added millions of acres to the nation's inventory of parks, wildlife refuges, forests and state recreational areas. The revenue stream, however, has been anything but reliable. Though the annual authorized spending level is \$900 million, Congress has usually appropriated far less (dipping below \$150 million during the mid-1990s). Now is the time to ensure that the Land and Water Conservation Fund becomes a true dedicated trust fund to protect these receipts from being diverted to other unrelated issues.

Cumberland Plateau and Southern Blue Ridge Mountains -- 10-15 million acres of land centered on Great Smoky Mountain National Park and portions of Kentucky, Tennessee, North Carolina, South Carolina, Georgia and Alabama that supports the highest wildlife diversity in America, and includes portions of the much-loved Appalachian Trail and draws millions of visitors to view the spectacular scenery.

Crown of the Continent -- This 10-18 million acre landscape stretches from Missoula, Montana, north through national forests and Glacier National Park to the Canadian border and to the edge of Great Plains prairies.

Sky Islands and Arizona Desert -- On the U.S.-Mexico border between the 'bootheel' of New Mexico and California and stretching north to the Grand Canyon ecosystem lies 30-40 million acres of some of the most diverse and unique habitats in North America and one of our richest landscapes of cultural and historic sites.

Chesapeake Bay -- The 41 million acres of land around the Chesapeake Bay and 2.9 million acres of water at the heart of the Bay itself, spans New York, Pennsylvania, Delaware, Maryland, Virginia and West Virginia.

Sierra Nevada -- Between 2-10 million acres of California land and rivers between Lassen National Park and Sequoia National Forests protect the water supply of California in the face of a warming planet as well as essential wildlife habitat and recreational opportunities for millions of Americans.

Everglades and South Florida Between 5-10 million acres of land, water and wetlands between Lake Okeechobee and Atlantic beaches in the north and Everglades National Park and the Florida Keys to the south supports the largest subtropical wilderness in America and is home to millions of Americans.

Great Lakes -- are some of our nation's most revered natural places, spanning eight states and representing 95 of the country's fresh surface water. The Great Lakes also provide drinking water for more than 33 million people and are home to 130 globally endangered or rare plant and animal species that inhabit the ecosystem.

Discussion Question 1

Written & Online Comments

(cont.)

Gulf of Maine -- Stretching from Cape Cod, Massachusetts to the Canadian border and beyond. The waters of the Gulf of Maine are one of the world's richest ocean ecosystems and the 44 million acres of watershed which feed into the Gulf are home to more than 10 million people.

We look forward to working with you and the rest of the administration to ensure that we leave a legacy of treasured landscapes and healthy ecosystems.

We thank you and members of your Administration for the hundreds of hours and thousands of miles traveled across the country listening and learning. Our members have been at all of these meetings, and we, too, have seen the enthusiasm for a 21st century conservation and recreation strategy. Across the nation the public has been energized by the opportunity to share their stories and their models of conservation and preservation success, just as they are excited to hear so many of their neighbors' creative new ideas.

The American People Strongly Support Conservation

Across all political affiliations, the American public overwhelmingly supports the potential of your America's Great Outdoors Initiative, with 84 percent of voters reacting favorably when they hear about it, according to a recent poll conducted by Hart Research Associates. Americans are deeply concerned that children are spending less time outside enjoying and learning about our natural environment, and they want to protect our most treasured outdoor places for future generations. This has been reinforced at the ballot box as in the past decade voters have approved 73% of all state and local ballot initiatives for conservation funding. The response to the AGO listening sessions is a reaffirmation of our country's one hundred year old bi-partisan conservation and outdoor recreation tradition.

A Bold America's Great Outdoors Initiative Is a Path to the Future

Fortunately, we are hearing ideas at the America's Great Outdoors listening sessions, and from our millions of members, that, if implemented boldly, will address these threats.

Protect natural system integrity and connectivity. Healthy lands safeguard our watersheds, providing clean drinking water for millions of people and habitat for the diversity of America's plant and animal species. Our protected lands and waters, however, are not always well-connected or large enough to maintain viable wildlife populations or sustain natural ecological processes.

Across the country, government officials, conservationists, forest land owners and ranchers, and rural and suburban community leaders are increasingly working together to create large-scale landscape restoration plans. If supported by an America's Great Outdoors Initiative, these cooperative efforts can create networks of critical ecosystems, natural resources, and recreation lands from the inner city to wildlands.

Discussion Question 1

Written & Online Comments

(cont.)

These places can include large areas of mostly undeveloped public and private land protected from unplanned growth with a variety of tools; important watersheds and rivers; and cultural landscapes that can sustain and interpret the natural, recreational, and cultural heritage of the American people. Such connected and continuous areas can also help natural systems and fish and wildlife to be more resilient to impacts of climate change.

While we leave detailed proposals and more specific recommendations on how to achieve these outcomes to the individual organizations and groups of organizations represented on this letter, we all believe that conservation of America's lands, waters, trails, and coastal areas is central to America's future and to the health, welfare, and happiness of the American people.

Saving America's lands and waters can bring us together as a people in passing on a legacy of healthy natural systems, recreation areas, preserved historic and cultural sites, and productive working lands to future generations of Americans.

Thank you for the opportunity to provide thoughts and feedback on the America's Great Outdoors Initiative. You have received many worthwhile comments from conservation groups across the nation. In this letter, the undersigned groups would like to reiterate the importance of wildlife corridors as one of the most important landscapes to protect in order to build resiliency in a changing world. Comments from Freedom to Roam, National Parks Conservation Association, The Wilderness Society, and Sierra Club have all highlighted the need to protect wildlife corridors and ecological connectivity, especially in light of climate change impacts.

We have written this additional letter to call out a recommendation to America's Great Outdoors that will protect wildlife corridors and the communities that rely on these landscapes for their economic health, recreation, and spiritual and cultural sustenance.

You have ample authority to support such a designation and the procedures for applying it are already built into your land management processes. Just a few of these authorities include: the duty to manage for biological diversity on the forest system; the duty to enhance the recovery of listed species, under Section 7(a)(1) of the Endangered Species Act (ESA); the sustained yield mandate of the Federal Land Policy and Management Act (FLPMA); and the Antiquities Act, which allows the President to designate and protect such areas.

In the box called out to the right, we have described what a new wildlife corridor land designation would accomplish. This is not the only example, as marine and freshwater species also rely on wildlife corridors and deserve a corresponding aquatic designation. However, we hope it articulates our recommendation more fully and shows the benefit of a new administrative land designation.

Discussion Question 1

Written & Online Comments

(cont.)

Southwest, Colorado is home to a 100-mile mule deer migration corridor between low elevation winter ranges on the Southern Ute Indian reservation and the HD Mountains, to high elevation summer ranges in the rugged Weminuche Wilderness of the San Juan Mountains. Primarily migratory animals, mule deer depend on connected landscapes to move seasonally between their summer and winter ranges, and are an important game species and resource for the Southern Ute Tribe.

An official wildlife corridor land designation would identify and protect this corridor through binding standards agreed upon by federal land management agencies and in cooperative agreements with Departments of Transportation, other state agencies, private landowners, and local governments.

The designation of the HD Mountains Mule Deer Migration Corridor would have the following effect: 1) a female and fawn start their migration in the ragged peaks of the Weminuche Wilderness and benefit from the protections that wilderness lands provide; 2) they approach US 160 and are led by a wildlife fence to an underpass that delivers them safely onto private land; 3) as they pass through private lands they find safe passage thanks to wildlife friendly fencing and a conservation easement; 4) they then enter into their winter range in the HD Mountains where natural gas drilling operations have been located to avoid important movement areas and activities have been reduced during migration periods; and 5) the Southern Ute Tribe, that has been tracking and studying mule deer for the past 7 years, has agreed not to develop gas resources in the southern HDs to allow the mule deer to survive and start their journey again to their summer range in the spring. All of this would be supported by a Memorandum of Understanding (MOU) between the Governors of New Mexico and Colorado thanks to the Western Governors' Wildlife Corridors Initiative.

Some of this scenario, such as the Tribe's data collection and concentration of energy development as well as the Governors' MOU, is currently a reality. The new land designation with binding land use standards across agencies and cooperative agreements are not yet a reality.

America's Great Outdoors (AGO) has a unique opportunity to be a leader by creating this new wildlife corridor land designation. AGO can utilize ongoing work, such as BLM's Ecoregional Assessments, to help identify corridors and then create and apply designations through land management plans and executive order. An important component will be inviting partners to join in wildlife corridor protection by providing funding and incentives through the Farm Bill, Land and Water Conservation Fund, Transportation Bill, Climate Bill, Energy Bill, and several internal DOI programs such as the Partners for Fish and Wildlife.

Currently, a policy paradigm shift is occurring in the U.S. toward supplementing natural resources conservation expenditure programs with incentives that allow private landowners to retain more of their income in exchange for undertaking conservation projects and practices on their land.

Discussion Question 1

Written & Online Comments

(cont.)

In May of 2008, Congress approved a two-year extension of expanded federal tax incentives for conservation easement donations. Specifically, the new law raised the deductions a landowner can take for donating a conservation easement from 30% of his or her income to 50%, and to 100% percent for qualifying ranchers and farmers. The law also extended the carry-forward period for the donor to take the deductions from 5 to 15 years.

Recent data indicates that the increased incentives have resulted in the protection of upwards of one million acres a year since they were first enacted in 2006. Despite this success, the incentives are set to expire at the end of this year.

In addition, extension of the expanded deductions will level the playing field for donors at all income levels, allowing landowners with moderate incomes to get the same deductions that donors with higher incomes already realize for the exact same donations; ensure on the ground conservation by requiring donors to meet existing Tax Code requirements for conservation related donations; and expand and increase opportunities for outdoor recreation.

There is a policy shift occurring in the U.S. toward enacting tax credits against income due for conservation related donations. Conservation experts agree that credits are a broader and more effective incentive than deductions. Two main factors are causing this shift. First, conservation tax incentives are a sound mechanism for creating certainty during times of inconsistent and unpredictable conservation funding trends. Second, growing concerns about uncontrolled exurban expansion (particularly relating to forest intrusions around metropolitan areas) continue to galvanize support for greater federal investment in private land conservation.

Historically, the primary federal tax incentives for private land conservation have enabled high-income property owners to realize income tax deductions for the charitable contribution of easements donated for conservation purposes. The donation of easements also results in a reduction of the taxable value of the property subject to an easement providing an additional incentive for the owner or their estate.

Although the federal tax code does not include conservation tax credits of any kind, a number of bipartisan proposals have emerged in recent years which have garnered a diverse cross section of support. For example, the 2008 Farm Bill included proposed tax credits for landowners who take voluntary measures to aid in the recovery of species that are listed as threatened or endangered under the Endangered Species Act (ESA) or deemed by the Secretary of Interior or Commerce to be warranted for protection under the ESA. The functional equivalent of a tax cut, the proposed credits sought to reduce a conservation donors taxes on a dollar for dollar basis, allowing more working farms, ranches, and private forests to remain in-tact while also protecting at risk wildlife species. While not freely transferable, the credits would have also been available to third party participants who participated in the voluntary measures undertaken by the donor.

Discussion Question 1

Written & Online Comments

(cont.)

The most powerful conservation tax credits ever enacted at the state level are transferable. Transferable credits can be sold freely at a discounted price to another entity with sufficient income to benefit from the credit. By establishing cash payments to lower income donors and creating a market for credits needed by higher income credit purchasers, integration of a transferability component makes credits a far greater incentive than deductions for the majority of potential conservation donors.

On behalf of America's 1,600 land trusts, we applaud President Obama for recognizing the potential of partnering with locally supported organizations to chart a new path for conservation in the 21st century. In communities across America, land trusts are working with private landowners to keep key farm, ranch and forest lands in productive use, create community parks and open space, protect important fish and wildlife habitat, and conserve our scenic and historic heritage. You have heard from many of them at the America's Great Outdoors listening sessions you held this summer.

The National Alliance of Forest Owners (NAFO) applauds the President's efforts to promote the public benefits of working landscapes through improved federal policies under the America's Great Outdoors Initiative (AGOI). NAFO's mission is to protect and enhance the economic and environmental values of private forests through targeted policy advocacy at the national level. At the time of this submission, NAFO's members represent 75 million acres of private forests in 47 states. NAFO is committed to sustaining the ecological, economic, and social values of forests and to assure an abundance of healthy and productive forest resources for present and future generations.

America's private forests make significant contributions to the outdoor values American's cherish – recreation, open space, wildlife habitat, clean air and water, and more – in addition to the renewable forest products we all need and enjoy. Private forests in the U.S. represent 57% of the forested landscape, so conserving them is critical.

The recent USDA Forest Service report, *Private Forests, Public Benefits*, underscores that one of the most effective means of conserving private forests is vibrant markets for the goods, services and other public benefits they provide. History has demonstrated this. Over the past century the U.S. population has increased by 3½ times, creating an unprecedented demand for forest products and services, particularly in the housing market. During this same period total forest acreage in the U.S. has remained constant, and the volume of trees has increased 50% over the past 50 years as forest owners sustainably manage their lands to meet market demand. In addition to the many conservation benefits, working forests sustain rural communities, where the forest products industry is often the only source of family-wage jobs. In the U.S., private forests support 2.5 million jobs, \$87 billion in annual payroll, and contribute \$115 to the national GDP.

Discussion Question 1

Written & Online Comments

(cont.)

NAFO's members recognize this and work to protect and enhance the economic and environmental values of privately-owned forests for the long term. That is why NAFO is a leader within the Working Forests Coalition, a diverse group of organizations united around keeping working forests working by ensuring forests are an economically viable land use. NAFO endorses the comments provided by the Coalition on this Initiative.

Biogenic carbon is part of a relatively rapid natural carbon cycle. Trees and other plants absorb carbon as they grow. Combustion of harvested biomass for energy releases previously stored carbon back into the atmosphere, which the growing biomass reabsorbs. Federal agencies, including EPA (in programs other than the PSD Tailoring Rule), the Department of Energy, and the Council on Environmental Quality, have long recognized this principle, as have international organization such as the Intergovernmental Panel on Climate Change and the European Union.

On behalf of the Appalachian Mountain Club (AMC), thank you for the opportunity to provide our recommendations to the America's Great Outdoors Initiative. AMC enthusiastically embraces the Administration's goals to develop a conservation and recreation agenda for the 21st Century.

Founded in 1876, the Appalachian Mountain Club is the nation's oldest conservation and recreation organization. It is today a national leader focused on the intersection of conservation, outdoor recreation, and environmental education, with activities across a 12-state region ranging from Washington, DC to Maine, AMC has over 100,000 active members, supporters, and advocates advancing a mission to promote the protection, enjoyment, and understanding of the mountains, forests, waters, and trails of our region.

AMC has decades of experience in providing hands-on outdoors programs for youth, in many cases providing young people with their first backcountry experiences. With programs and facilities in spectacular outdoor settings, AMC programs help kids and adults alike learn about the joys and rewards of outdoor exploration and adventure. In 2009, AMC served nearly 40,000 young people through both backcountry and close-to-home programs serving schools, families, teens, schools, and at-risk youth. Overall, we hosted 150,000 overnight guests and 500,000 day visitors at our front and backcountry destinations around the region.

AMC also has over a century of experience in identifying and protecting the many special places of our region as well as constructing and caring for trails. Today AMC maintains over 1,500 miles of trail on both public and private land with professional trail crews, Chapter volunteers, and teen trail stewardship programs. Our mountain-based research makes a unique contribution to land, air, and climate change science and policy. We have been involved in nearly every major land protection effort in thenortheast in the last one hundred years, frequently taking the lead in regional coalitions focused on protecting significant recreation, land, and water resources.

Discussion Question 1

Written & Online Comments

(cont.)

AMC staff and volunteers attended all of the AGO listening sessions in the Northeast and Mid-Atlantic and, in collaboration with the Outdoor Alliance and Outdoor Industry Association, we hosted two "homegrown" listening sessions in Freeport, ME and Boston, MA. The recommendations of the homegrown sessions are described in the August 27th OA/OIA report to the Administration. We offer the following specific recommendations based on AMC's long history and wide experience in conservation, recreation, and outdoor education.

The Northern Forest of Maine, New Hampshire, Vermont, and New York includes the most forested states in the nation and is also within a day's drive of 70 million people. This region includes the 12 million-acre "Maine Woods" of the Keeping Maine's Forests Initiative.

The "Quabbin to Cardigan" region from north-central Massachusetts to the White Mountain National Forest in New Hampshire includes approximately two million acres of intact, interconnected and ecologically significant forest spanning 100 miles from north-central Massachusetts to the White Mountain National Forest in New Hampshire.

The Appalachian Mountain Club and the recreationists of our region share a long history of outdoor exploration and partnering with the federal government to protect treasured landscapes. Our members' stories exemplify the rewards of rich connections with the natural world that are valued over generations. A sample of these stories and photos from the Northeast are available at <http://www.outdoors.org/conservation/ago-stories.cfm>.

We appreciate the attention this Administration is giving to revitalizing a national conservation and recreation agenda, and the time you have spent listening to stories and ideas from across the country. We look forward to working together to build the next era of America's outdoor culture and connections.

I write to support America's Great Outdoors Initiative. It's directly implemented by Hudson Valley non-profit organizations, such as the Sloop Clearwater.

Not so for all of our children. A new generation of dynamic and diverse youth is learning how to grow green cities and a green future. They are planting seeds of green ideas in those same playgrounds where only concrete once existed. It is these same youth that know this very simple truth: there is no separation from human health and that of the health of their environment. They know: public health is environmental health.

Let's support this Nation's youth to make the changes we need for a more sustainable future. If we do not empower these young people now-- this rainbow race-- when they are ready to act fearlessly, in the future we may lose them and lose our best hope for the Earth's future.

Discussion Question 1

Written & Online Comments

(cont.)

Clearwater has been a longtime catalyst in inspiring, educating and activating Hudson Valley residents and beyond. Clearwater's programs empower our youth to become active in their communities to create change. Over half a million school children have been educated via their sloop-based and on-land education programs; the impact of this was clear during the August 5th listening session in Hyde Park. The youth that participated in this session were passionate, determined, and committed to action for better access, green jobs and additional programming in the outdoors.

The overwhelming message was clear: the outdoors is the way to overcome many of the obstacles they face as a generation.

I enthusiastically support the ongoing efforts of Clearwater and the youth of the Hudson Valley as they seek to continue their effective efforts for the goals of President Obama's America's Great Outdoors Initiative.

I want to take this opportunity to write in support of the Hudson River Sloop Clearwater's (Clearwater) recommendations entitled "The Next Generation of Environmental Leaders: Local Solutions for National Challenges" submitted to the C.S. government, on behalf Youth in the Hudson Valley area. In the Hudson Valley, Clearwater has set the standard for engaging our youth in a direct experience and appreciation of both the scenic beauty and the complex environment and ecological balance that make up the Hudson Valley. Their recent initiative is a direct result of their response to the America's Great Outdoor Initiative. Their listening sessions in the Hudson Valley allowed them to hear the voice of the youth of the valley - our next generation of environmental leaders.

Named for the very river valley that it works furiously to save, Clearwater has been a longtime catalyst in inspiring, educating and activating Hudson Valley residents and beyond. Clearwater's programs are focused on empowering our youth to become active in their communities to create change needed to overcome our environmental challenges. They have reached over half a million school children with their direct experience education programs employing both sloop-based and on-land programs. That they are making a real difference as reflected an their listening sessions. Panicipating youth exhibited passion, determination, and commitment, action for better access, greenjobs and support for additional programming in the outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

The overwhelming message was clear: the outdoors is the way out of many of the obstacles they face as a generation. This is particularly true for the youth of the river cities of the Hudson Valley.

In conclusion, I fully support our sister organization, Clearwater and applaud their efforts to reach the youth of the Hudson Valley. Clearwater has clearly embraced the goals of President Obama's America's Great Outdoors Initiative. I believe the America's Great Outdoor Initiative has the opportunity to amplify this successful youth outreach program by enhancing them further federal support, and would urge serious consideration.

I write to you today in support of the Hudson River Sloop Clearwater's (Clearwater) recommendations entitled "The Next Generation of Environmental Leaders: Local Solutions for National Challenges."

As coordinator of the New York State Department of Environmental Conservation's Hudson River Estuary Program, I am well aware of how important youth involvement in the environment is to the future of the Hudson River and the greater Hudson Valley area. Clearwater has a long and enduring record of inspiring, educating and activating Hudson Valley residents, and especially the region's youth.

I fully support the ongoing efforts of Clearwater and the youth of the Hudson Valley in enacting the goals of President Obama's America's Great Outdoors Initiative.

On behalf of the youth of the Hudson Valley, the Hudson River Sloop Clearwater (Clearwater) is submitting the enclosed recommendations entitled 'The Next Generation of Environmental Leaders: Local Solutions for National Challenges' for your consideration.

It was with great pride that our youth attended the August 5th Listening Session in Hyde Park, NY. Representing the culturally, ethnically and economically diverse communities throughout the river valley, Clearwater is presenting their three key environmental concerns: No Child Left Inside - kids need to get outside to be strong and healthy; Next Generation of Environmental Leaders - the great outdoors builds leadership; and Green Urban Leaders and Green Cities - support for a sustainable future. Please also see the video submission, link below, these youth created in their great outdoors with Clearwater's help.

Discussion Question 1

Written & Online Comments

(cont.)

Like the America's Great Outdoors Initiative, Clearwater's goal is to engage and activate young people, especially those who live in our under-resourced and/or inner-cities communities, and to secure the means and ways to get them outdoors to experience our unique natural heritage.

We must ensure that our next generation of leaders can succeed and, with the AGO, we can solidify the groundwork for success for our children. Together we can inspire, educate and activate the next generation of environmental leaders!

'Yesterday there was a discussion among young people, which I think is an important element and an important voice we have here.'

– Thomas Vilsack, U.S. Secretary of Agriculture

'Our fore fathers set aside all this land, this public land, so we all could use it. It is really our land.'

– Harris Sherman, Under Secretary USDA

As 'the landscape that defined America' the Hudson River Valley stands ready to support our Nation's youth as they step up to lead the country. Hundreds of our Hudson Valley youth attended the August Listening Session in Hyde Park, NY representing the economically, culturally, ethnically diverse communities along the river. On behalf of these voices, the Hudson River Sloop Clearwater (Clearwater) is communicating their recommendations for access, outdoor spaces close to home, and green jobs.

- INSPIRING: SUPPORTING NO CHILD LEFT INSIDE
- EDUCATING: THE NEXT GENERATION OF ENVIRONMENTAL LEADERS
- ACTIVATING: URBAN LEADERS AND GREEN CITIES

The Hudson River Valley gave birth to many important figures in our country's history. In the 1960's, the Hudson River and its Valley was in dire straits—cars could be seen floating down the River and citizens dared not eat fish from its putrid waters, let alone swim in the largest body of water right in their backyard. It was in 1969 that local resident, civil rights and environmental activist, Pete Seeger and many others launched the sloop Clearwater to clean up the Hudson River and pass the Clean Water Act. In a birthplace of many of America's historic movements, these actions helped solidify the beginnings of the environmental movement. There is now a new pulse in the environmental movement in the United States—the next generation of leaders.

Discussion Question 1

Written & Online Comments

(cont.)

___ and hundreds of our Hudson Valley youth attended the August Youth Listening Session to have their voice heard and represent their communities. Building upon the youth's passion and concerns shared in the August 5th session, Clearwater has taken their messages and distilled them into three key issues found in this paper. These young leaders live, participate in, and in many cases operate youth environmental programs along the Hudson River. They are extremely connected to their backyard. We present this region as a microcosm of the country and that those living on this landscape can define the future with local solutions for national challenges.

Noted author Richard Louv (*Last Child in the Woods*, Algonquin Books of Chapel Hill, 2005) used the term "nature deficit disorder" to describe a host of issues including attention disorders, obesity and depression to a lack of experience with nature. Clearwater believes that No Child Left Behind's emphasis on testing must be balanced with getting kids actively engaged with nature. Our policy is No Child Left On-land: connect kids directly to an ecologically and historically important river: the Hudson.

According to the Chesapeake Bay Foundation, another leading provider of environmental education: The National Science Board of the National Science Foundation confirmed the importance of environmental education to student learning in their 2000 report, *Environmental Science and Engineering for the 21st Century*: "The twin goals of learning are to acquire knowledge and gain skills such as problem solving, consensus building, information management, communication, and critical and creative thinking. Environmental issues offer excellent vehicles for developing and exercising many of these skills using a systems approach...changes should be made in the formal educational system to help all students, educators, and educational administrators learn about the environment, the economy, and social equity as they relate to all academic disciplines and their daily lives." (www.cbf.org)

Pete Seeger started Clearwater to clean up the Hudson River. Over the last 40 years, our concerts, sloop and on-land education programs, and environmental advocacy programs have inspired, educated and activated millions of people. Pete knew that people needed to be inspired to care, educated to understand, and activated to create change. Clearwater has become a catalyst in a collaborative effort to create a new and sustainable future for river cities in the Hudson Valley.

The Hudson River connects all cities from NYC to Albany. These river cities are working to create unified communities and Clearwater is at the forefront of this effort. It is clear that putting the 'eco' in the economy is critical now for the future of our under resourced environmental justice river cities.

The Hudson River Sloop Clearwater is actively working with partners throughout the Hudson Valley to promote the Hudson River through public access, cultural opportunities, the green job industries, public transportation options, and park development. Utilizing the foundation of our organization, we have and will continue to use our floating classroom, the historic sloop Clearwater, to educate communities about the natural resources of the valley. Our goal is to both connect everyone to the river and river cities through our river and land-based environmental education programs.

Discussion Question 1

Written & Online Comments

(cont.)

Clearwater funds children and young adults from inner-city and under-resourced communities to participate in our comprehensive plan to create the next generation of environmental leaders. This project will establish a leadership pipeline for youth between the ages of 8-20, inclusive of all ethnicities and cultural backgrounds from New York City north to the Capital District. We plan to focus particular attention on youth from inner city and/or under-resourced communities within the Valley's environmental justice designated communities such as New York City, Harlem, Yonkers, Peekskill, Newburgh, Beacon, Poughkeepsie, Kingston, and Albany.

By providing our young people with interactive environmental education programs both on-board the sloop Clearwater and along the river's shores they will forge a strong connection with the Hudson River and the larger natural world. They will also be exposed to the wide range of green job opportunities available to them through hands-on experience and demonstration projects.

With the procurement of funding for Clearwater's environmental education and advocacy programs we will be able to continue and expand operating our programs in the abovementioned river cities, thereby further developing a virtual pipeline of inspiration, education and advocacy-- a pipeline which directly benefits the youth in our communities and the future health of our world. Clearwater's award-winning education programs provide students with first-hand experiences sailing on a traditional sloop, lessons in the ecology and history of the Hudson River and leadership development, teamwork and self-realization. Clearwater's methods of enabling children and young adults to transform from passive observers to active participants by including them in the lesson has proven to be an effective technique for combating apathy and fostering civic involvement. These methods provide powerful examples of real life applications for classroom learning through hands-on environmental science lessons combined with sailing and navigating a 106 foot traditional vessel: the sloop Clearwater.

Program participants will be more environmentally literate and have an increased appreciation of the Hudson Valley's heritage. Participants will have an increased enthusiasm for learning about the environment and desire for protecting it. They will gain knowledge of environmental careers and opportunities for internships. All participants will be more open to being environmental stewards and incorporate environmentally responsible behaviors into their lifestyles. Participants will learn how to become involved in protecting the environment and understand the connections between healthy rivers and healthy communities. This year, Clearwater, with the help of the Hudson River Foundation, NYSDEC, and Stevens Institute, installed realtime water quality monitoring equipment that includes the sloop in a river wide monitoring network, where key data on the river's health will be reported in real time to the web. Clearwater will use this equipment to continue to engage kids about investigating the Hudson after they have left the boat and returned to their classroom.

This pipeline consists of programs that represent the greatest and most effective leadership program in our forty-year history and will ensure a forever flowing continuum of lifelong learning for students in the Hudson Valley. These are lessons that they can apply to their future development as leaders in our communities and beyond.

Discussion Question 1

Written & Online Comments

(cont.)

Young adults have the opportunity to sail on the Clearwater on a single educational sail, or to challenge themselves with a youth internship, as a sailing apprentice or in an education internship. A Youth Internship consists of a week long, live aboard internship, in which a student will learn how to sail the sloop Clearwater, assist in teaching our prestigious education curriculum and to explore green opportunities for their future. A Sailing Apprentice lives aboard the sloop Clearwater and works along the professional crew for a month. Apprentices are trained to operate and care for a traditional sailing vessel and participate fully in the education program. Lastly, Education Internships allow young adults to teach hundreds of kids about the Hudson River. Interns live aboard the sloop for two to three months to assist in delivering Clearwater's celebrated education programs, while fulfilling shipboard duties from sailing to chores and maintenance.

Clearwater's Environmental Justice Associate is currently working on an Environmental Justice project in Peekskill and on Watershed Protection/Green Stormwater Management and Infrastructure in Poughkeepsie, Kingston and Beacon. In each of these projects, youth empowerment has been a significant component of this work. Each of these communities has requested additional program work from Clearwater in area schools, youth programs and in integrating youth directly into green cities and sustainability programs. The Peekskill Community-Based Environmental Justice Inventory and Angler Survey have provided training for youth to become active participants in the environmental and public health of their communities. Our work in the Fallkill Creek has involved hundreds of local youth in stream monitoring and cleanups and related art and community projects. By expanding our Environmental Justice Associate position from part-time to fulltime to focus on youth empowerment by receiving additional funding, Clearwater could provide more youth with information on green jobs, while providing greater assistance and insurance in formulating youth into the next generation of environmental leaders.

Clearwater's mission is to inspire, educate, and activate the next generation of environmental leaders. Clearwater lends support to the issues of the future that face our youth and fosters the idea that in a time of challenge American's reach to our heritage and to the spiritual renewal found in nature. The activation of these young leaders is a celebration of the coming to fruition of the first part of the Obama administration's initiative. Clearwater is proud to support our youth and to be a strong advocate for their voices now in hopes of the future they will create. Those same voices speak clearly: these youth recognize the outdoors as a way to overcome many of the obstacles they face as a generation.

Discussion Question 1

Written & Online Comments

(cont.)

Clearwater connects kids to the largest ecosystem in their immediate world, the Hudson River. The sloop is a living time machine and students are challenged to look not just to our history, but to reshape, re-identify and reassess how they want their future to be—to take the education they receive aboard the sloop Clearwater or during our on-land programs and assess the necessary decisions they will have to make as the next generation of leaders. Clearwater's education programs have been used around the world as the model for environmental education programming including: the Great Lakes (Inland Seas, Bay Sail), Puget Sound (Sound Experience), Chesapeake Bay (Living Classrooms), Long Island Sound (Soundwaters), The Netherlands (Greenpeace), and St. Petersburg, Russia (Neva River Clearwater).

For over 40 years, the Hudson River Valley has been a hub of environmental collaboration where, as a community, we helped clean up the river against all odds. This next generation has already begun to institute the lessons learned in these programs and willingly pass them on to their families, friends and schoolmates. It is through our next generation of environmental leaders, here in the Hudson Valley and beyond, that our nation will become a community of environmental progress and change.

On behalf of the millions of organized sportsmen and women and conservation professionals from across the country, thank you for recognizing the need to conserve America's Great Outdoors for future generations. From time spent hunting, fishing, and trapping, America's sportsmen know the value of America's outdoors. Collectively, hunting, fishing, and wildlife related recreation generate more than \$122 billion annually in economic activity at the state and local level, which equates to about 1% of the gross domestic product. But more than just economic value, the outdoors is part of our heritage as Americans and as hunters and anglers.

Engaging Hunters and Anglers in Conservation – Over the 20th Century, most conservation dollars came from hunters and anglers, through license fees and taxes on hunting and fishing equipment. Hunters and anglers have been a key part of every significant national conservation victory. We appreciate the efforts the Administration has made to get input from the sporting community, such as the Wildlife and Hunting Heritage Conservation Council, and encourage the Administration to continue to engage sportsmen in conservation decisions.

Protecting Clean Water – Clean water is important to fish, wildlife and people alike. From rivers and lakes to estuaries and coasts, America's waters are an integral part of America's Great Outdoors. The Administration should protect America's waters from pollution, development and loss of wetlands, and support the restoration of degraded waters.

We look forward to working with the Administration to ensure that our children and our grandchildren have the same or better access and opportunities we have had to hunt and fish in America's Great Outdoors.

Thank you for this opportunity to submit our official, written position on President Obama's America's Great Outdoors Initiative. As a 40-year National Park Service partner, we welcome this opportunity to continue our work with you toward our shared goal of inspiring generations of youth to lifelong stewardship.

Discussion Question 1

Written & Online Comments

(cont.)

Through better alignment with NPS long-term partners on programs and capital investments, the NPS can spur growth of public/private partnerships. We support the NPS taking the following steps:

Commit to longer term funding for key partner organizations with proven track records.

Dedicate funding for underserved schools to attend National Parks-based environmental education programs.

Fund longitudinal studies researching the benefits and impacts of environmental education.

Thank you for the opportunity to contribute to this important process. We look forward to 40 more years of growing our mutually successful partnership with the National Park Service.

As you work to develop the AGO final report, we stand ready to assist in telling the story of conservation and recreation in America—concrete examples, case studies and individuals, and recreation participation and economic data. As stated, outdoor recreation is the conduit through which many Americans can see themselves connected to the outdoors. The report should take full advantage of this deep connection to the great outdoors.

The Conservation Fund appreciates the opportunity to comment in support of the America's Great Outdoors Initiative established by President Obama on April 16th, 2010. We commend the leadership of Secretary Salazar, Secretary Vilsack and other Administration officials to engage the American public to promote innovative, community-level efforts to conserve outdoor spaces and reconnect Americans to the outdoors through this important initiative.

TCF builds diverse and leveraged partnerships between governments, communities, landowners, private investors, and foundations to conserve special lands and waters while enhancing local economies. Working in support of federal and state agency land acquisition priorities, we leverage public funding, private contributions, and program-related investments to purchase land from willing sellers and then transfer ownership to public and private entities, providing both a conservation outcome and a cost-savings to the agencies. We also believe conservation is as much about people as places. A thriving community has a healthy environment and a healthy economy. We work closely with our agency partners and private supporters to build both by forging partnerships that conserve land, train leaders, and invest in conservation at home.

As you work to seek comments from federal, state, and local entities, the non-profit conservation community, and the public at large, TCF wishes to submit recommendations for targeted funding increases and additional program authorities, as well as examples of successful tools and on-the-ground conservation success stories that are driving conservation forward and address the significant challenges facing our nation. As America's Partner in Conservation, TCF seeks your help to conserve key landscapes in partnership with our federal, state, and local agency partners.

Discussion Question 1

Written & Online Comments

(cont.)

Through federal land acquisition and grants to states, LWCF has had an impact in every state and in almost every county in America, creating and enhancing national parks, forests, wildlife refuges, and other federal public lands that provide public access to recreation in urban, suburban, and rural areas alike. LWCF also provides grants to states for projects like parks, sports fields, swimming pools, playgrounds, and trails. In addition, LWCF has funded the protection of over 1.5 million acres of working forests in over 30 states and has helped federal and state agencies conserve historic and cultural sites that are part of our nation's rich and diverse history.

TCF has used funding from LWCF to protect special places like Rocky Fork in Tennessee's Cherokee National Forest along the Appalachian National Scenic Trail, Big Thicket National Preserve in Texas, and the Rocky Mountain Front Conservation Area in Montana. This year, LWCF helped us conserve sensitive lands at Blackwater National Wildlife Refuge in Maryland, critical wintering habitat for manatees at Crystal River National Wildlife Refuge in Florida, and an important project within the Lesser Prairie Chicken Area of Critical Environmental Concern in New Mexico, among others.

The America's Great Outdoors Initiative recognizes, in addition to enhancing the nation's current conservation programs and leveraging federal funding many times over with regional, state, local, and private resources, that there are several landscapes in the country representative of the success of communities coming together to achieve common goals. TCF would like to highlight several areas as models of landscape-scale cooperative partnerships where we have first-hand experience with working with federal, state, and local partners to accomplish strategic on-the-ground conservation.

The Conservation Fund, in partnership with The Nature Conservancy, the U.S. Fish and Wildlife Service, private donors and the State of Montana, launched an unprecedented 5-year effort to protect 220,000 acres of wildlife habitat along the Rocky Mountain Front while maintaining the region's traditional ranching heritage. The Richard King Mellon Foundation has provided key support. In its first year, the Rocky Mountain Front Initiative moved forward with four projects, protecting 21,274 acres of critical migratory corridors for grizzly bears and a wide variety of other species that depend on the Front's rich ecosystem.

Along with our partners, we have completed another four projects during the FY2010 and moving into the FY2011 budget cycles. Federal LWCF funds as well as other funding sources such as the North American Wetlands Conservation Act, Neotropical Migratory Bird Grant Program, state, and local funding, have directly gone toward acquisition of conservation easements on working ranches in this rare and unique landscape along the eastern Front of Montana. In combination with the multi-agency efforts in the Crown of the Continent bioregion, the Rocky Mountain Front is one of the best examples of community-driven conservation in the country. The Conservation Fund is honored to be a part of the on-the-ground, landscape-scale conservation efforts in this region of Montana.

Discussion Question 1

Written & Online Comments

(cont.)

Since 1994, TCF has worked with the National Park Service (NPS) to protect in perpetuity 32,000 acres of bottomland hardwood forest, savannah, bogs, and freshwater marsh in the Big Thicket National Preserve. In 2003, as a direct result of a complementary acquisition effort on the Middle Neches Tract that established the Pineywood Mitigation Bank in cooperation with the U.S. Army Corps of Engineers, The Conservation Fund initiated a strategy to assemble and protect the highest-priority conservation lands and river corridors in East Texas that will not only provide ecosystem services to citizens and protect wildlife, but will form the foundation for a new forest-based economy.

Along with the U.S. Forest Service, FWS, NPS, and State of Texas, The Conservation Fund is working to conserve the watersheds and river corridors throughout East Texas that provide an interconnected link for fish and wildlife, water quality protection, and people, while also ensuring that the region's forest resources remain intact and healthy. The Neches River NWR, Longleaf Ridge Conservation Area (Forest Legacy Program), Trinity River NWR, Chenier Plain Refuge Complex, U.S. Forest Service lands (Davy Crockett, Angelina, Sabine and Sam Houston National Forests), and the U.S. Army Corps of Engineer's Steinhagen (Town Bluff) project are all critical and interconnected components leading to the longer-term protection and restoration of East Texas forests, rivers, and wetlands systems. We are working with our partners to secure funding from a variety of federal, state, local, and private sources for our collective conservation efforts in East Texas. We are also closely tracking opportunities for future funding provided under a revived Weeks Act, described above, whereby the USFS would have the resources necessary to acquire and restore cutover lands and important longleaf habitat for addition to the National Forest System.

Chesapeake Bay – Blackwater NWR, Harriet Tubman Historical Park & Virginia NWRs. Harriet Tubman is one of the most enduring figures in American History and a model for heroism all over the world. The story of her lifelong struggles for freedom, equality, justice, and self-determination are an inspirational element of our nation's historic fabric. Today, American interest in the life and lessons of Harriet Tubman – nearly 100 years following her death – is only growing.

Recognizing the extraordinary courage and patriotism of Harriet Tubman, the National Park Service (NPS) completed a Special Resource Study in January 2009 determining that lands associated with the life of Tubman in Dorchester, Caroline and Talbot Counties in Maryland and in Auburn, New York, meet the criteria for becoming part of the park system. Through the study, approximately 5,700 acres on Maryland's Eastern Shore have been identified as significant parts of Tubman's biography, including Harriet Tubman's birthplace near Blackwater National Wildlife Refuge (NWR) and Poplar Neck, the farm she originally fled in 1849 on her journey to freedom. Conservation of these lands and the establishment of a Harriet Tubman Underground Railroad National Historical Park is the best way to ensure that these parts of Harriet Tubman's historic legacy are both permanently protected and made available for Americans to experience.

Discussion Question 1

Written & Online Comments

(cont.)

The Blackwater NWR and Harriet Tubman proposal is a strong model of landscape-scale conservation in the eastern United States. Currently threatened by development, climate-induced and natural sea level rise, and invasive species, the Blackwater NWR and the associated Tubman areas represent a partnership in its infancy with tremendous potential moving forward for multiple federal, state, and local agencies to work together with the communities of Maryland's Eastern Shore to protect a way of life and a landscape that has remained relatively untouched since the days of Harriet Tubman's life.

The success of the Tubman Historical Park and Blackwater NWR landscape partnership will require a broad conservation vision and a focus toward building upon existing partnerships. Already, the current partners are focusing on a strong land protection effort for Dorchester County, Maryland, targeting properties that have been identified through the NPS study as key Tubman heritage locations. Within the Dorchester County landscape, partners are already directing Federal and state LWCF funding, along with other funding sources such as Migratory Bird "Duck Stamp" funding, NAWCA, and private funding, toward several key tracts within the Blackwater NWR acquisition boundary that have important Tubman resources or serve as buffer areas for Tubman tracts.

The Blackwater NWR and Tubman areas are only a representative slice of the tremendous work underway within the Chesapeake Bay. The Conservation Fund is also working with the FWS to protect critical landscape-scale projects at the Rappahannock River Valley and James River NWRs, as well as through the NPS and ongoing partner efforts to protect the Captain John Smith Chesapeake National Historical Water Trail, the first federally-recognized water trail in the country.

The Conservation Fund has partnered for more than a decade with the FWS and NPS in national, regional, and local workshops focusing on balancing nature and commerce and creating new, innovative "tools" for areas that border parks, refuges, and other natural or significant cultural landscapes.

In North Carolina, the Resourceful Communities Program of the Fund has worked with rural, impoverished communities across the state to help local leaders connect their needs to available resources. Working in partnerships with community-based groups throughout the state, the Fund's work has enabled rural communities to secure more than \$80 million for carrying out projects that directly improve the environment and economy. Seed grants made to community groups providing self-help in their communities and loans to small businesses have helped secure community forests, retain ownership of working farms, woodlots and pasture, and develop better environmental stewardship tied to the long-term health of these outdoor assets. Of special note is that many of these rural communities are persistently poor and minority, too often left out of the mainstream of public programs due to lingering prejudice and lack of cultural sensitivity.

Similarly, for more than five years, the National Endowment for the Arts and the Appalachian Regional Commission have partnered with the National Trust for Historic Preservation and the Fund to offer and provide, on a competitive grant basis, assessments of small Appalachian town assets and prescriptions for increasing eco- and heritage tourism and other forms of economic growth based on their natural and cultural assets.

Working with NiSource, fourteen states, and the FWS, The Conservation Fund is using the green infrastructure approach to identify the highest potential habitat needed to mitigate impacts on a number of federally listed threatened and endangered species over the next half century from the continued operation of a natural gas pipeline. The Fund is also working with the Land Trust of Tennessee, the City of Nashville, and the County of Davidson on an open space master plan for the Nashville region using the green infrastructure approach to site development out of the Cumberland River floodplain and protect watershed and economic values.

The Fund's mission of protecting America's land and water legacy includes conserving parks, trails, and recreational areas where families can enjoy the outdoors. We also have been a leader in bringing together corporate leaders, educators, community planners, government officials and others to join us in our efforts to get kids outside. In 2010, we helped sponsor the Outdoor Nation Youth Summit held in New York City. Outdoor Nation harnesses the passion, energy and ideas of young people, empowering them to reclaim, redefine and rediscover the outdoors. The goal is to increase and dramatically expand youth participation and engagement, especially among urban communities and communities of color. The Fund is contributing \$50,000 in scholarships for youth leaders to take the movement of reconnecting children with nature to the next level.

Outdoor Nation grew out of the National Forum on Children and Nature, a groundbreaking effort led by the Fund in collaboration with Rich Louv, author of *Last Child in the Woods* and head of the Children and Nature Network. The National Forum on Children and Nature was a 54- member Forum made up of a diverse group of public and private leaders dedicated to improving children's health and overall well-being, while encouraging them to rediscover America's outdoors. In 2008, the Forum endorsed 30 demonstration projects nationwide that creatively reconnected kids with nature. These projects shared relevance, impact and an ability to be replicated, among other features.

The Conservation Fund strongly supports the America's Great Outdoors emphasis on children and the younger generation, and instilling a connection to the outdoors within all Americans. We stand ready to assist the Administration in exploring new and innovative ideas for reconnecting children with nature and the beauty of the world around them, whether through urban parks, greenways and blueways, regional hiking trails, or with their families on further explorations into our nation's wildlife refuges, national forests, parks, monuments, and special resource areas.

Discussion Question 1

(cont.)

Our public land conservation heritage in this country is a great democratic legacy. Every American has equal access to this great land estate – an equal chance to test themselves, catch a trophy trout, stretch out on the grass of a city park, goof off, find solitude or carve out a living. These lands also sustain our physical needs, providing us with clean water and air, cultural legacies and wildlife habitat -- for many Americans they are nature's lifeblood.

The Wilderness Society is the leading public-lands conservation organization working to protect wilderness and inspire Americans to care for our wild places. Founded in 1935, and now with more than 500,000 members and supporters, The Wilderness Society has led the effort to permanently protect 110 million acres of wilderness and to ensure sound management of our shared national lands.

Americans cherish the Great Outdoors and have demonstrated that passion with a long conservation heritage. Our federal public lands have played a vital role in that conservation legacy, and have helped define our nation's character and shaped our culture, economy and natural environment.

Our public land conservation heritage is also a great expression of democracy, where every American has equal access to this great land estate, something that is unrivaled anywhere else in the world. While the federal lands provide unparalleled recreational opportunities and support livelihoods in many rural communities, they also are our nation's lifeblood, providing the coolest and cleanest water, key wildlife habitat and many of our wildest lands.

While we've made conservation history in the past, there is an opportunity to make conservation history again.

There is a great opportunity to create good-paying jobs in rural areas and involve people in nature through vibrant restoration programs. Restoration activities also generate much common ground between historic adversaries and help bring communities together.

The human experience of wild places is among the greatest benefits provided by our national parks, national forests, wildlife refuges and other public lands. Recreation is one of the primary ways people connect with nature. Americans celebrate the deep connections between people and place forged by recreation on public lands.

While our public lands represent great national assets for protecting nature, the network of land is not complete to ensure we can protect all the ecological, economic and recreational values into the future. In some cases, adding key lands for public access, key wildlife corridors, wildlife habitat and recreational pursuits represent great opportunities to add to the network. This is especially true as we address new threats such as climate change.

Discussion Question 1

(cont.)

During the last century, each generation has stood up and protected some of America's iconic landscapes, and worked to build a conservation legacy. While we have made great progress so far, growing and new threats call upon this generation to take bold action to help ensure future generations can enjoy the Great Outdoors as we do today. The recommendations found in these comments provide the America's Great Outdoors Initiative the opportunity to make historic contributions, which will protect the natural systems that provide us with clean air and water, sustain our economies, allow for spiritual and physical renewal, and provide educational and recreational opportunities.

Since Yellowstone National Park was created in 1872, each generation has made a contribution to America's conservation heritage by permanently protecting lands with designations including national parks, wilderness, national monuments, wild and scenic rivers and other designations. These designations free iconic landscapes from the threat of development, and help make them available for future generations to enjoy, much the way we enjoy them today.

Citizen and community led efforts to permanently protect our nation's wildest lands offer strong examples of collaboration, bringing diverse stakeholders together to reach compromise and community oriented solutions to conserve public lands. This approach produces more broadly supported wildlands designations that benefit from the long-term support and stewardship of local communities.

The Wilderness Act of 1964 created the framework for citizen involvement and broad community engagement in developing future wilderness proposals. The history of wildland designations over the last four and a half decades shows that the vast majority of the 756 wilderness areas that comprise the National Wilderness Preservation System today were designated as a result of robust citizen activism, bi-partisan collaboration, and diverse stakeholders and public land users reaching compromise on real, on the ground issues.

The National Landscape Conservation System (Conservation Lands)—the most innovative American land system created in the last 40 years—was established to protect the crown jewels of public lands managed by the Bureau of Land Management.

The success of the FLRA resulted from several factors. First, groups nominated themselves, but they also had clear criteria laid out beforehand for collaborative groups to follow. Furthermore, meaningful incentives were in place for successful groups.

The increases described above would advance forest and watershed restoration, meet the demand for FLRA funding, and—in the process—result in \$120 million in FLRA fund dollars PLUS the required \$120M Forest Service match being directed to restoration.

Implement the minimum road system by decommissioning unneeded or problematic roads, stormproofing necessary roads, and adequately maintaining the appropriate system into the future.

Discussion Question 1

(cont.)

During the 1930s, the Civilian Conservation Corps was created as a way to address the high unemployment of the time. Through the program, much of the infrastructure for our national parks and other public lands was built. But, the CCC also helped develop a generation of conservation-minded people who worked on our public lands. This political infrastructure helped support conservation-minded programs and designations.

Building on the model of the CCC and the existing network of Youth Conservation Corps, the Administration could create a Youth Restoration Corps to carry out many of the activities that would follow from the suggested changes outlined above. This would be cost-conscious, effective and would accomplish restoration goals, as well as get young people outdoors. This effort could and should be coordinated with educational institutions at all levels.

Some of the restoration work would include work such as trail building and maintenance that can be accomplished with CCC-type labor.

Forest restoration programs can only be successful if a robust monitoring system is in place. Youth from a conservation corps could conduct a lot of the monitoring that needs to occur on public lands. A strong monitoring program, connected to youth, would help make restoration an enduring part of Forest Service management.

The human experience of wild places is among the greatest benefits provided by our national parks, national forests, wildlife refuges, and other public lands. Plants and animals, mountains and meadows, caves and canyons, rivers and lakes, historic and cultural sites all beckon us to explore and learn, to grow and thrive, in ways both simple and profound. Wildness is essential to the human spirit.

For these reasons, Americans celebrate the deep connections between people and place forged by recreation on public lands. Americans, and others, can enjoy the wild parts of our national landscape in myriad ways while, at the same time, ensure their protection. Roads have long offered plentiful opportunities to explore national parks and other cherished places. Hiking, biking and pack trails lead to favorite picnic spots, fishing holes, hunting grounds, climbing areas and camp-sites. And at the wild heart of our nation, wilderness offers some of the most remote and profound of primitive recreational experiences.

Opportunities for these kinds of adventures have been a cherished American birthright since before the founding of the republic, and are among the most compelling reasons we work to protect public lands. The founders of the National Wilderness Preservation System were invoking this birthright when they defended public lands as sanctuaries not only for wild creatures and untrammelled ecosystems, but for human beings seeking beauty, inspiration, challenge and renewal.

Discussion Question 1

Written & Online Comments

(cont.)

Direct experience is what inspires people to care for wild places, and recreation is an important source of such inspiration. Recreation is one of the primary ways people connect with nature. This is why we seek to make common cause with all who visit and cherish our public lands. We envision deep, broad, and varied constituencies – traditional and new together – working to promote widespread and sustainable enjoyment of natural places. Only by doing so can we ensure in a democracy the public support for protecting America’s public lands for all time to come – and ensure at the same time that all future Americans will be able to enjoy these experiences we hold so dear.

Roads to Trails Program. Roads are the biggest threat to clean water in our National Forests. In 2001, the Forest Service estimated that between 75,000 – 115,000 miles of these roads were no longer needed. In addition, the Forest Service is about to kick off a nationwide effort to identify mile-by-mile every unneeded road. By converting even a small percentage of these roads to hiking and biking trails, we can turn an environmental liability into a treasured community asset. Roads-to-trails projects are already being accomplished on a limited scale (for example, on Mt. Hood National Forest in Oregon, where the recent wilderness bill authorized roads-to-trails conversions), but could be easily scaled to a national level.

The Washington Wildlife and Recreation Program provides a great example of what we can accomplish with a public-private partnership to fund public lands work. In 1990 Republican and Democrat politicians came together and formed the Washington Wildlife and Recreation Program to fund the protection of outdoor recreation lands and wildlife habitat across the state. It has thrived, and is now one of the two most important, and stable, funds for conservation in the West. Twenty years of success make WWRP a model state program, proving the power of providing incentives to local governments and simultaneously leveraging federal money – all working collaboratively in service of conservation. The WWRP is supported by the Washington Wildlife and Recreation Coalition, whose members include business, local, state and tribal government leaders, conservation groups, and many others. Providing \$620 million in state money for a thousand projects across Washington and paying to protect more than 350,000 acres, WWRP has made life better for people, animals and birds in 37 of the state's 39 counties. As well, the WWRP has leveraged more than \$405 million in local and private money. From skate parks to wildlife corridors, the WWRP is making Washington State a better place for families of all types.

Go Wild for Trails: Campaign to designate National Recreation Trails in Wilderness. Wilderness areas offer some of the most unique and outstanding recreation opportunities in the country. They are places where you can escape to experience nature in a way not available anywhere else, and yet many people don’t know this incredible opportunity exists. By designating National Recreation Trails in Wilderness Areas, we can highlight some of the best trail experiences in the nation and encourage people to get out there and experience Wilderness.

Ensure the recreation permitting process better serves all Americans. One of the Administration's top priorities is getting young people – especially disadvantaged youth – to experience the outdoors. Many groups are working to make this a reality, but have been stymied by the agency's recreation permitting process that stacks the game against them. A two step process is needed to even the playing field, and ensure all groups have equal opportunity to get kids out into the woods:

National Youth Water Monitoring Network. Our wildlife and waters are suffering because managers do not have the resources to conduct monitoring to track the health of our national lands and waters. Our children are reported to be suffering from a growing disconnection with the natural world. We can address both of these problems by creating a National Youth Monitoring Network. The NYMN will be a joint project between the Department of Interior (USGS, BLM, NPS), the Department of Agriculture (FS, NRCS), and the Department of Education, and spearheaded by a White House Executive Order. The Executive Order will direct the Departments to:

Develop a plan, including objectives, parameters, and protocols, for monitoring water quality and aquatic health that can be feasibly and accurately carried out by school children;

Develop a national online data base in which school children can enter monitoring data, and track trends over time;

Develop and distribute national curriculum for multiple grades that will teach school children, inter alia, about the life cycle of water, scientific concepts involved in monitoring, methods to protect water and rivers - and restore them when degraded - and the relationship of land use and water and river quality. Curriculum can integrate art, literature, science, physical education, etc.;

Funding to train teachers to teach the curricula, participate in the monitoring network, and to utilize the local environment as an extension of the classroom;

Funding available to schools who participate in the monitoring programs.

Incentives for states to integrate the environmental education concepts related to the monitoring program across core subject areas;

Discussion Question 1

(cont.)

LWCF is the premier federal program to conserve irreplaceable lands throughout the nation. It is a critical tool to acquire in-holdings, expansions of public lands, and new federal designations throughout the national parks, national wildlife refuges, national forests, wild and scenic river corridors, national scenic and historic trails, the Bureau of Land Management lands and other federal areas. The companion LWCF state grants program provides crucial support for state and local park acquisitions, recreational facilities, and trail corridors. The Stateside program is the government's primary investment tool for ensuring that children and families have access to close-to-home recreation. The LWCF stateside program has funded over 41,000 projects, including sports fields, outdoor recreation facilities and trails.

Our 682 million acres of federal land and waterways provide a critical opportunity to address the unprecedented challenges that climate change poses to our forests, fish and wildlife, and riparian resources. The strategic acquisition of key in-holdings, buffer areas and wildlife migration corridors within and adjacent to existing public lands enhances adaptation efforts and fosters intact landscapes. These natural areas also store carbon, buffer flooding, conserve water, and support healthy fisheries and wildlife populations. President Obama has indicated that LWCF should be fully funded by 2014, and we support his goal.

The Community Forest and Open Space Program provides 50-50 matching grants to acquire forest areas that are economically, culturally and environmentally important to that locality and threatened by conversion to non-forest uses. This program provides federal grants directly to local governments and non-profits exclusively for full fee acquisition - not conservation easements - and the program's criteria are built around evaluation of a project's community impact even above its natural resource value. As part of this community focus, the new program requires public access and active community engagement in forest planning for parcels. The program also emphasizes opportunities for vocational-technical education in forestry and other forest-based education programs, as well as active demonstration sites for model forest stewardship to educate private landowners about forest management. The Community Forest and Open Space Program should be funded at \$75 million annually and provided as a separate entity from the Forest Legacy Program.

The Bureau of Land Management's National Landscape Conservation System comprises some 27 million acres of congressionally and presidentially designated lands and waters, such as national monuments and national conservation areas. Stewardship of the System's many units provides jobs for thousands of Americans while supporting vibrant and sustainable economies in surrounding communities. The System provides immeasurable public values in return for modest investments: outstanding recreational opportunities, wildlife habitat, clean water, Wilderness, and open space near fast-growing cities. Recent changes have improved clarity in the System's budget, but the System still suffers from a lack of prominence in the Bureau's budget structure, and there is a real need for sub-accounts that reflect the diversity of the System's many units. Furthermore, despite the fact that the System comprises more than 10% of the BLM's land, it has historically received less than 5% of BLM's budget.

(cont.)

TWS is a strong proponent of transitioning our country to a sustainable energy economy by developing our renewable energy resources in a way that protects lands and wildlife. We believe renewable energy can be an appropriate use of public lands when sited in areas that do not include important wildlife habitat and other sensitive natural and cultural resources. We support increasing funding to improve the renewable energy permitting process at the Department of the Interior and allow BLM to develop a program to guide projects to the most appropriate locations. We endorse both protecting treasured public lands and using suitable public lands for renewable energy development as part of the transition to a clean energy economy.

Lets step back for a second. There is a major difference between the mandates of the Park Service and the forest service. The Park service is responsible for preserving areas of special significance from human alteration while creating a window into those special areas through the management of park infrastructure. As such there is no place for motorized recreation off park roads in the park system. The Forest service is responsible for conserving resources for public use. The conservation of public use should be more than a window. Those uses that have been traditionally used on those lands should be allowed as a means of integrating the people with the land. Motorized recreation is compatible with the Forest service mandate. I am the trail boss for a shared use trail club and I know from first hand experience that shared use is possible.

Does ___ realize how much he has polluted the planet by flying all over the world in a jet aircraft? This must be one of those cases where it is OK for him to participate in highly pollutive actions but it is taboo for the rest of us. I am offering tours myself ! I think we need to realize that we are most likely dealing with people that live in large urban areas on the east coast. They THINK they have seen the west but in reality they haven't, they could not have based on their comments. I can think of at least one excellent example right off hand. Drive I-70 west from Grand Junction Colorado, tell me just exactly how overrun and tainted that land is. You can drive for literally hundreds of miles and see exactly no human influence other than the road across the landscape. When I snowmobile to the top of a mountain, I can see for many, many miles in every direction, pristine open lands, most of it completely untouched by man without the need for federal government intervention, and still open to be enjoyed by all.

Your question "What good is land, while "pristine", that nobody will ever see?" has been answered effectively many times already in this forum. See, for example, the Idea: "We will always have more to learn from native species and their natural habitats -- don't sacrifice our teachers for a cheap thrill or a quick buck".

___ said "We need local solutions, not you clowns living thousands of miles from ground zero making choices for us." Umm. Federal land is owned by all of us. Not just a few locals.

Discussion Question 1

(cont.)

Clowns? When your argument doesn't hold water, you revert to name calling. It doesn't really help your cause. I hear a lot about environmentalists not wanting to compromise. Who is not wanting compromise now. In my posts, I have always said access is important and even offered suggestions to reach a compromise. Remember, I am a snowmobile enthusiast, also. I can also see the benefit of conservation and preserving wild areas. They benefit both wildlife and people. There should be areas that we manage and areas that we don't. I don't see how stating facts is manipulating numbers. Maybe you just don't like the facts. 50% of our national forest are open to development. Does that hit home at all when that is put in context? I think the amount of national forest that is wilderness designation is closer to 25%. These will be the largest areas of undeveloped land left as our population grows into the future. I guess because you can't bring your vehicle into wilderness areas you are locked out. This locked out argument is a funny one. I guess if I drove an 18 wheeler and wanted to take it into the woods, I would be locked out because most of the roads are not big enough, right? Oh ya, the federal government is in violation of the Constitution. I thought it was a government for the people, by the people. If the people want to preserve the land, that's what should happen. You're not one of those people that don't believe in paying taxes because it's not in the Constitution.

I also pay taxes and vote. Yes, wilderness is motorized access closure. They do not lock people out. Wilderness designation usually does not get through congress without support from the home state's representatives. The areas I advocate as wilderness have not been accessed already. So there is nothing to "keep open". Where they have already been accessed, I advocate leaving some of the existing uses when the area is made wilderness. The reason motorized access has lost areas is OHV use has grown tremendously. The more there are the more regulation there will be. That goes without saying. A lot of the issues we face now were not issues before. Also, the population continues to grow. I would say 50% of our national forests open to development is enough. Personally, I think the rest needs some sort of protection. If not wilderness, than something similar. In the future, these areas will be our largest wild areas left. People and wildlife depend on them now, and I believe it will be more so in the future. Compromise is when both parties meet in the middle. You really can't dictate what the compromise will be. I don't think most environmentalists want to close all the public land to motorized use, just like I don't think most people want motorized access in wilderness.

Discussion Question 1

Written & Online Comments

(cont.)

I believe some areas should remain roadless. Roads bring more development. Development is fine, there should be areas without it. Roadless areas provide clean air and water. They are also excellent habitat for big game animals and clean water for fish. These areas are important for people and wildlife. Access is important, but there should be areas without roads. Regarding forest fires, more forest fires are started near roads than any other reason. We have a huge amount of roads and logging in Michigan and we still struggle with a lot of the same problems with forest health. I don't think logging is bad and it is necessary in most areas. I don't think it's the total cure for every forest problem. Some of your statements about what is not allowed in wilderness is misinformed. If an area is roadless now, do we need to build a road in case someone wants to go there and they are not physically able. That argument doesn't really make sense when talking about areas that are roadless now. 2% is not misleading. That's the amount. It equals 25% of national forests. 50% have roads and are open to development. Some of the areas I have been to are little more than tree farms. There are enough roads in national forest to go around the Earth 17 times. How many areas do you think need roads? All of them? We are just talking about national forests. How about all the forested areas with a multitude of roads that are not in national forests. As we go into the future, these roadless national forest areas will be the largest tracts of undeveloped roadless areas we have left. Logging, mining, and other development are fine. Do we need to have these activities in every area we have left. Most of the country is available to development. How much do you think should be available to development, 100%. 2% wilderness sounds like a small amount to me. If we had 5% protected from development, I think that would be a small amount. People in the past who wanted to preserve wild land met criticism, also. Some of the areas that were preserved are some of our most treasured areas. T. Roosevelt even believed conservation was this country's most pressing issue. I believe these wild areas that we preserve today will be more important into the future than how much land is available for me to ride on today. I get tired of rehashing the same points. Access is important. Not all areas should have roads. That's my opinion. I don't think we will convince each other to change our point of view. Some of this we might have to agree to disagree.

There are more trees on the land today where I am than there were 100 years ago. There are plenty of pictures to prove it too. The gold and silver boom had a profound effect on the land where I live. They cut down the WHOLE forest to build with and to heat with. Looks much better today. More testimony to the fact that the land is extremely resilient. Why is it a radical idea to provide for ohv users at the same time you provide for those wanting land for no uses? Since we are also viable forest users, we require viable land to recreate on as well.

Discussion Question 1

Written & Online Comments

(cont.)

Oh golly, now you want the emotionalists to come up with facts? The notion that OHV users are bad stewards of the land is unfounded. There are just as many, if not more, bad eggs in the hiker/skier crowd. As motorized users we generally do not like to throw stones but, the fact is, I have cleaned up more non-motorized user messes in the forest than from my bretheren on motorized vehicles. I also happen to despise those who get on an ATV just to go tear up some trails, or worse yet, off trail areas. Funny thing is, I spend lots of time in the forest all year round. I would certainly turn in an ATv rider who was damaging the land intentionally. In the last 15 years though, I have never had to turn in a single person. These incidents are the exception, not the rule as the opposition would like people to believe.

Since you do not seem to approve of OHV companies making profits, I wonder how you feel about a company like General Electric? You know, the big corporation making hundreds of millions in profits, far more than all the OHV manufacturers put together, then taking massive amounts of our tax dollars in the form of stimulus money only to lay off ten of thousands of workers. Our system is very corrupt on many levels. Your "green" administration is also very guilty of corporate profiteering. Tracy, You need to understand that as individuals in this free country, we all have our own ideas about what getting away from it all means. You want us to get away from our vehicles. I happen to use my vehicle to get away from the people. The hiking trails in my area are VERY busy all summer long. Camping along them requires luck to find a spot, and taking the risk that you may be coming back down and starting over in another place. If I load the truck with the camping supplies, which in my case does not include tv or cell phone, I can access clean, quiet, pristine places you could not access on foot if you had a week to walk in. Most of us do not race to these places, just leisurely trips back into the forest to set up tents from where we may hike a trail, or just explore the area. The problem I see is that you want to change the way I live my life, they way I want to use the forest because somehow you think your way is better, more enlightened, less impactive, quieter, or whatever. What you need to know is that it isn't all about you. I live adjacent to the forest. I have made MAJOR lifestyle sacrifices to do so. I do not need someone hundreds or thousands of miles away from here dictating how I can use the forest. The USFS is charged by congress with maintaining the forest lands for multiple uses. One of those is motorized access. If you do not like this, I suggest you spend your time in the the 120 million acres of designated Wilderness. That is what it is for, and we definately do not need anymore of it.

I think it is downright hilarious to see someone actually type something akin to this "idea". "You can draw whatever boundaries you want and say "This is a National Park" or "This is a Designated Wilderness Area" but CO2 will still go there and destroy the environment, and do so a rate which is so fast and so expensive to US citizens that any other effort you take Except real CO2 reductions will amount to vacuaous "Greenwashing."" - It is scientific fact that plants utilize CO2 in photosynthesis. Trees, grasses, weeds, algae, etc etc all NEED CO2 to survive yet this is what you claim will destroy our forests. Interesting "idea"

Discussion Question 1

(cont.)

Daniel Boone National Forest, geeze that makes me laugh. Back when 4x4s roamed the Daniel, a person could hike that place without fear. But, after the 1/2 closure, and another 1/2 closure, and another 1/2 closure, they just closed all motorized in the Daniel. Then the pot growers moved in, and you don't dare walk the Daniel during the summer, unless you want to be killed execution style. Remember the 4 kids? Shared use does benefit everyone. Seen it in the Daniel, and have seen it out west. Usually, it's not realized until it's too late.

"pass a strong Global Warming law" Ooops, nobody told you yet? That was a hoax.

A few important advancements need to be noted, and if not in your area, maybe copied and applied. The Colorado Snowmobile Association supported a law that makes OHV noise standards easy to check in the field. There were standards but law enforcement had no viable way of determining those standards in the field. Now, with new standards, and the tools to enforce them, we have addressed the reasonable noise issue. To help with enforcement, all law enforcement now has jurisdiction over the laws in the forests. That means the local Sheriff can respond and issue citations. We are trying to police our own. We want a reasonably quiet forest as well. Rule breakers can expect to be punished. There are also new emissions standards that snowmobile manufacturers are required to meet now. This is to work towards making OHVs more palatable to the greenies. It is also a great idea to use technology to clean up the sport. As we work dilligently on the OHV side, do accept that those with strong "green values" will still oppose OHV use. The goal is to eliminate their use on public lands. I am all for working to improve the sport. Just realize that the opposition will not care, it will not ever be enough for them.

Some of the commenters are way, way too hard on BSA. There is room for organizations that have specific philosophical standards. I went to an all-male university. I support church-affiliated schools as well as public achools. I certainly wouldn't support an exclusively-BSA initiative here, but it is absolutely wrong to turn down the opportunity to work with millions of youth thourgh this good organization.

More fires are started near roads. Access is important, areas witout roads are also important. Roadless areas provide clean water to a large portion of our population. Part of the reason we have clean rivers now is because of environmentalists you find have no perspective. I snowmobile and sometimes I find other snowmobilers, OHVers, etc., have no perspective. We all DO own the national forests. Because there are areas you can't take a motorized vehicle doesn't mean they are off limits to you. You just can't take your vehicle. Talk about the king's forest, let's give it to big business so they can use it up and get rich while the middle class gains nothing.

AIANTA (American Indian Alaska Native Tourism Association) is a national nonprofit association of American Indian tribes, tribal tourism officials, and tribal businesses engaged in providing best practices and capacity building for Indian Country tourism since 1999. We are made up of member tribes, tribal individuals and industry professionals from six regions - Eastern, Plains, Midwest, Southwest, Pacific Northwest and Alaska. AIANTA's mission is to help define, introduce, grow and sustain American Indian and Alaska Native tourism that honors and sustains tribal traditions and values.

At one time, all of America's Great Outdoors was Indian Country. Indian people still consider those special places to be our homelands. Our proposal for the America's Great Outdoors Initiative is focused primarily on the public lands, including National Parks, National Landscape Conservation System, national monuments, forests, rivers and all other public and state lands.

Tribal partnership and participation in the recent Lewis & Clark Bicentennial (2003-2006) and Jamestown Colony Quadricentennial (2007) taught us many lessons that can directly apply to the goals of America's Great Outdoors. We learned that, locally and nationally, Americans are intensely interested in learning about American Indian lands, histories, cultures and tribal perspectives on America's public lands and our nation's history. They want to learn more about the histories of their own communities, national parks, forests, rivers and landscapes before European settlement. They want to know how Indians took care of the land before there were "public lands.": They are interested in learning from tribal members whose lands are now national parks, monuments, forests, byways and scenic rivers. They are interested in enjoying outdoors activities offered by tribal businesses, such as guided hiking, horseback riding, bird watching, river rafting, hunting and fishing trips. They're curious about sleeping in a tipi and hearing coyotes sing in the early morning darkness. They love the stories our elders tell. They call it the wilderness, and to us it is our home that creator provided with abundance and beauty.

When they leave our hospitality, these visitors often feel even closer to the public, park and tribal lands they have just visited, and to the coyotes. Hopefully, they will also learn that we are all part of one ecosystem and stewards of our mother, earth.

Statistics show that heritage and nature based tourism are the fastest growing sectors of the tourism industry. Heritage tourism relies on authenticity and conservation - the kind to be found in Indian communities and national park lands. Heritage and nature tourism are helping tribes to balance our need to protect tribal lands, traditions and values with our equally important need for economic growth and sustainable jobs.

Discussion Question 1

Written & Online Comments

(cont.)

AIANTA proposes a formal national partnership between American Indians and the National Park Service (NPS), Bureau of Land Management (BLM), and other federal land management agencies to ensure inclusion of tribal perspectives and concerns in the management of all public lands. We are particularly interested in perpetual inclusion of unfiltered tribal perspectives at all National Parks and in all upcoming National Park Service commemorations, such as the 150th anniversary of the Civil War (2011-2015), 100th anniversary of the NPS as an agency (2016), 50th anniversary of the National Trails System (2018), 150th anniversary of completion of the trans-continental railroad (2019), and beyond. This national partnership would enable broad scale public awareness and education efforts about such things as tribal soldiers who fought on both sides of the Civil War (both sides even had Native brigadier generals) and about national park lands before they were National Parks.

Former National Park Service Director Russell Dickenson once said that he did not know "of a single major National Park or Monument today in the Western part of the United States that doesn't have some sort of Indian sacred area." A national partnership would raise public consciousness on issues such as cultural resource protection and ancestral use of parks and other public lands. It would help tribal communities participate in the economic benefits to arise from increased tourism to the national parks and historical sites during commemorations like the Civil War 150th and the NPS 100th. It can provide a framework for improved federal agency/tribal relationships and collaborations to protect and conserve the parks and other public lands. And it can enthrall Americans of all ages to get outdoors and reconnect with our shared land, water, wildlife, culture and history. A partnership between tribes, the National Park Service and other federal land management agencies can offer outdoor recreation visitors fresh activities, authenticity, new discoveries and adventures, insight, solitude.

Conservation Northwest is a non-profit organization based out of Washington State that works to protect and connect wildlife and wildplaces in the Pacific northwest. Since our inception, we have engaged on issues surrounding the management of our federal lands. Federal lands on the US side of the border in the Pacific Northwest are vital to the maintenance and recovery of wildlife in this region.

In the northwest and more specifically Washington State, our federal agencies have engaged in efforts over the past year that we believe are in line with the goals of the AGO and worth highlighting as examples nationwide. Four activities with federal agency involvement that have begun or continued in 2010 that are worth special attention include:

Discussion Question 1

Written & Online Comments

(cont.)

Federal agency involvement in the Washington Wildlife Habitat Connectivity Working Group (www.waconnected.org). This public-private partnership is bringing together NGO's, tribes, federal and state agencies, universities, and private scientists to develop analyses that identify and prioritize important areas in Washington state and surrounding habitats in British Columbia, Idaho, and Oregon to maintain and restore wildlife connectivity. The US Forest Service has had representation in this working group since the inception, and in the past year the Bureau of Land Management has joined the leadership team. Not only will the outcomes of these analyses inform land management on federal lands, but the collaborative process in producing the analyses and co-owning the results provides partnerships in addressing connectivity priorities on and off of federal lands.

In 2010, the Okanogan-Wenatchee National Forest adopted the "The Okanogan- Wenatchee National Forest Restoration Strategy: adaptive management to restore landscape resiliency to climate change". This new strategy underwent scientific peer review, and important technical and social review with the Provincial Advisory Committee to this forest. The strategy sets a new vision for the forest to focus on restoring resilient landscapes that will be measured in acres treated, not board feet generated. This strategy is a strong step forward in having forestry, aquatics, and other disciplines integrated into decision making, while using the best available science to guide management. The plan includes an adaptative management approach and process to ensure that it is revised each year to include lessons learned from its implementation to date and integration of recent scientific findings.

The Colville National Forest has been a key partner in recent years continuing into 2010 with the Northeast Washington Forestry Coalition (<http://www.newforestrycoalition.org/>). This impressive collaborative effort has united diverse voices to demonstrate the full potential of restoration forestry to enhance forest health, public safety and community economic vitality. Through coordination and communication with the Colville National Forest, this collaborative effort has successfully worked through often controversial issues to find common ground on federal forestland projects before a decision is reached.

The US Fish and Wildlife Service (USFWS) and US Forest Service (USFS) through the Cle Elum Ranger District have been crucial partners in the successful design, monitoring, and mitigation of the I-90 Snoqualmie Pass East Project (<http://www.wsdot.wa.gov/projects/i90/snoqualmiepasseast/>) The Washington Department of Transportation (WSDOT) proposed to expand Interstate 90 from Snoqualmie Pass to Easton in Washington's Cascades mountains from 4 to 6 lanes to address safety concerns, avalanche closures, and increase capacity for growing traffic. WSDOT recognized that the highway bi-sected an area prioritized by biologists and heavily invested in by conservationists, and that the support and engagement of these partners would be critical to the project. USFWS and USFS joined the Mitigation Development Team that collaborated on the design for a series of wildlife overpasses and underpasses, and have played a key role in the success of this project that initiated construction this year.

Discussion Question 1

Written & Online Comments

(cont.)

These projects above show how federal agencies in Washington State have and can display the collaboration, ability to adapt to changing needs on the landscape, and utilization of science to guide management. We suggest that the AGO recognize examples of where federal agencies are already showing initiative in meeting the goals of the AGO to not only validate work underway, but provide examples for other geographies to learn from.

Sustaining the working farms, ranches and forests that are important for our economy and our environment. Private land owners hold 70 percent of all the land in America, and play an important role in the northwest. These areas provide wildlife habitat, are a foundation of the American economy, and are an integral part of our culture. They produce food and fiber for our citizens as well as open spaces, community forests and ecological connections across a sometimes fragmented landscape.

America has a long and successful conservation tradition and Americans still believe strongly in conservation of our natural and recreational resources.

The Nature Conservancy's vision for the America's Great Outdoors Initiative is to create and sustain a network of large areas of restored and conserved land, water and coastlines around which Americans can build productive and healthy lives. An operational America's Great Outdoors Initiative that is built on innovation and competition will provide the best return for the federal government's investment in conservation over the short and long term.

Large landscapes that can become focal points for conservation through strong private-public partnerships (Landscape Partnership Projects)

Expansive aquatic systems that are already a national focus and in some phase of restoration Including: the Great Lakes, Mississippi River, Chesapeake Bay, Puget Sound, Gulf of Mexico/Louisiana Wetlands, the Greater Everglades, California Bay Delta, and the Colorado River Basin (Large Watershed Projects)

Metropolitan/urban greenspace corridors that may also include cultural and historical features (Metropolitan Greenspace Projects)

The Conservancy proposes that within a year of establishing this program, initial projects could be up and running. Significant progress could be made within the first two years. By the 50th Anniversary of Earth Day in 2020, 25 Landscape Partnership Projects, all of the Large Watershed Projects, and 10 Metropolitan Greenspace Projects should be substantially completed.

Discussion Question 1

Written & Online Comments

(cont.)

It is difficult to imagine our children, the extended family of this great nation, ever being anything but eternally grateful for our acting now to create a durable America's Great Outdoors Initiative to provide the means for the American people to work together to save the land, the rivers and streams, the ocean coasts, and great marshes that they will need for their health and happiness in the years long after we are all gone.

Founded in 1951, The Nature Conservancy is a global non-profit conservation organization whose mission is "to preserve the plants, animals, and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive." The Conservancy relies heavily on science in our decision-making and is acutely conscious of the connections between human well being and natural systems. The Conservancy has a million members and programs and projects in all 50 U.S. states and more than 30 countries. Our state programs are advised by Boards of Trustees who represent conservation, science, business and philanthropic leadership in their communities. Through these citizens and through our more than 3,000 staff located across the United States, we are rooted in the importance of place. Over the course of our history, we have directly conserved almost 24 million acres in the United States.

Because of all of our years working in the American countryside, the Conservancy believes in the wisdom of the American people to guide the conservation and management of this country's natural resources. We applaud the participation of senior Administration officials in listening sessions to gather ideas about the future of conservation. Our staff and our members have participated in almost all of these sessions, and we, too, have learned much from them that we have incorporated in these recommendations.

North America and the United States are blessed with a diversity and abundance of natural resources, natural systems and habitats that have been central to our growth and prosperity as a nation and a foundation for our way of life. Despite urbanization and the increasing use of technology, our health, welfare, economy, culture and identity still depend heavily on the quality and productivity of our land, water, oceans and coasts. While we rely on nature for our well being, no place in our country is immune from at least some human impacts. We depend on nature, and it now depends upon us for its survival.

The United States has long been a global leader in the creation of parks and in the conservation of natural resources. Beginning in the last half of the 19th century, conservation and care of our environment have been accepted by the American people as an essential role of government. In the past decade alone, voters have passed statewide and local open space ballot measures at an overall rate of 73 percent, showing their strong support for public investments in conservation.

More than three-quarters of voters believe we can continue to protect the environment while strengthening the economy.

Discussion Question 1

Written & Online Comments

(cont.)

Support for investments in conservation stems from voters' strong personal connections to the environment. More than four in five (81%) say they have visited a state or local park in the past year and a majority of voters report having visited a national park in the past year.

A striking 86% of voters support using funds from oil and gas fees to help preserve our natural areas. That support goes across party lines: 89% of Democrats, 89% of Independents, and 83% of Republicans.

More than three-quarters of the electorate (76%) express support for maintaining at least the minimum funding level originally established for the Land and Water Conservation Fund in the 1960s: \$900 million a year.

The AGO listening sessions reveal an exciting new trend in American conservation that shows great promise in addressing the many threats to our land, water and coasts. Landowners, businesses, non-profit organizations, and local, state, tribal and federal agencies are working together to take responsibility for the restoration and conservation of large areas—watersheds, whole natural systems, and whole landscapes. In place after place we have heard citizens talking not just about their backyards, but also about the Chesapeake Bay or the whole Crown of the Continent in western Montana. Increasingly, they see the connections between their well being and the health of these larger places.

The Conservancy's science confirms the value of an ecosystem-based approach to meeting the many challenges America's great outdoors face over the next 50 years. It is our view that the only effective response to the combination of threats facing America's land and water today is to use multiple tools and techniques to conserve whole watersheds and natural areas that can then provide habitat for the range of native species, productive areas for the use of natural resources and the full range of benefits to human communities. While publicly owned parks and forests are often essential to large landscape conservation, almost all large landscapes include people and the working farms, forests and ranches that are vital to our economy and to the American way of life. Successful conservation will require finding ways to achieve both public and private stewardship of America's land and water.

The Nature Conservancy's vision for America's Great Outdoors Initiative is to create and sustain a network of large areas of restored and conserved land, water and coastal ecosystems around which Americans can build productive and healthy lives. An operational America's Great Outdoors Initiative that is built on innovation and competition will provide the best return for the federal government's investment in conservation over the short and long term.

Provide access to high quality outdoor recreation for all Americans. The health and fitness of children depends upon having safe places to play; we believe that family life is enhanced by access to outdoor relaxation and adventure in places both close to home and in remote natural areas across the country.

Discussion Question 1

Written & Online Comments

(cont.)

Assist fish, wildlife and other natural resources and human communities in adapting to climate change. The conservation and forward-thinking management of large, connected landscapes will be a key factor in helping people and the natural systems on which we depend to be resilient to a changing climate. For example, the protection of large watersheds and their wetlands is essential to mitigating the impacts of flood and drought that result from changing weather patterns.

Sustain the working farms, ranches and forests so important to our economy and our environment. Private owners hold 70% of land in America; these working lands provide important wildlife habitat, are a foundation of much of the American economy, and are integral to our culture.

Protect, maintain and restore the health and biological diversity of ocean, coastal, and Great Lakes ecosystems and resources. Nearly half of the country's population lives in coastal counties and millions of visitors enjoy our nation's seashores each year. The ocean, our coasts and estuaries, and the Great lakes are critical to the social, ecological and cultural fabric of our country.

Protect and interpret the cultural resources that are part of our national heritage. In many places cultural resources are intertwined with natural resources.

Enhance the economic and environmental viability and the quality of life of metropolitan areas and reinforce the connections of urban areas and the surrounding countryside. Federal, state, and local parks, greenways, trails and natural areas in or around urban metropolitan areas are essential to economic development, buffering cities from some of the impacts of global warming and fostering the health and well being of the American people.

While the creation of parks, the conservation of land and water and restoration are important and useful at every scale, to be successful in conserving the overall health of America's land and water, the America's Great Outdoors Initiative should focus its resources and apply the most cost effective conservation strategies and tools for achieving substantial measurable progress toward meeting the goals listed above in three distinct kinds of large scale conservation projects:

Taken together, and sustained in a healthy condition over time, these areas of land and water can create a natural resource framework for America's future. The Nature Conservancy proposes that by the 50th Anniversary of Earth Day in 2020, 25 Landscape Partnership Projects, all of the Large Watershed Projects and 10 Metropolitan Greenspace Projects will be substantially completed.

Operate at a watershed, ecosystem or metropolitan area scale

Take into account the needs of people and nature

Discussion Question 1

Written & Online Comments

(cont.)

Recognize the importance of diverse citizens participating in decisions that affect the places where they live and work whether in rural or urban areas

Achieve a new level of collaboration and cooperation among government and tribal agencies

Recognize that success requires a long term and consistent commitment of resources

Use competitive processes and pilot projects to get the best efforts up and running quickly

Employ rigorous priority setting and focus on high priority areas in the expenditure of limited resources

Build on the successes of the past and the use of existing government authorities wherever possible

Minimize new cycles of planning where plans already exist

Actively encourage young people to play an important role in creating their own future

The America's Great Outdoors Initiative should commit money, people, interagency coordination, and cooperative decision-making to priority sites. These sites should be selected through a from-the-bottomup,

competitive process that supports community coalitions that have come together around landscape scale conservation goals. (Community coalitions might include the local branches of federal agencies, state and local agencies, tribal governments, non-profit organizations, Resource Conservation Districts, business and landowner organizations and other citizens groups).

Federal agencies should support local, collaborative efforts rather than be the top-down driver of these efforts. Maintaining the delicate balance between Federal support and local and community initiative is important

to long term success. The program should be based on the use of existing authorities, but can be improved by legislative and policy changes discussed below. Federal land acquisition and designation would continue to be important tools within the framework of landscape coalitions, as would easements to prevent the fragmentation of working lands.

Discussion Question 1

Written & Online Comments

(cont.)

Landscape of national significance: Landscape and, where relevant, related coastal features, warrants federal investment given the presence of major federal protected areas or land holdings or previous investment in private conservation, threatened and endangered species, major wildlife corridors, important water resources, and conformance with existing federal and state conservation plans including State Comprehensive Wildlife Action Plans, Landscape Conservation Cooperative Plans and USFWS Endangered Species Recovery Plans.

Strong private-public partnership around a landscape vision: Local residents, multiple NGOs, state and federal agencies are actively collaborating around a landscape vision and are capable of delivering landscape scale results. Where multiple federal agencies exist in a landscape, they are actively working together (or have potential to) around shared conservation goals and objectives.

Leverage: Federal funds can be leveraged with multiple funding sources, including, but not limited to, state funds, private funds, and private landowner donations of conservation easements.

Local Support: Strong support of local community and elected officials. Community support and leadership around a conservation plan is central to the sustainability of conservation outcomes.

Feasibility: Tangible results on landscape level goals are achievable over five years.

Connectivity: The project contributes to the connection of existing protected areas, river and wetland systems, and migration corridors.

Adaptation to climate change: The conservation outcomes will enhance the resiliency of the landscape to the potential effects of climate change. The project has been identified in the planning of Landscape Conservation Cooperatives (LCCs) as important to the protection of habitat in the face of climate change.

Geographic distribution: Focal areas should be representative of America's diverse natural resources and special places.

Landscape coalitions (partnerships of government, tribal, and NGOs joining together to conserve Partnership Landscapes) selected through this process should then be eligible for the following benefits to advance their landscape plans and conservation work:

It is essential that our society provide opportunities for contact with nature and the outdoors for a new and more diverse generation of Americans. Citizens are willing and able to participate in shaping the future of the American landscape, if they come to know and enjoy parks, farmland and the recreation in the outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

Urban areas depend upon the surrounding countryside not just for recreation, but for their water and food supplies. This provides the opportunity to build economic connections between cities and surrounding areas that can in turn help to finance regional conservation initiatives.

In addition, many important cultural and historic features are located near urban areas and can be incorporated into the metropolitan greenspace projects. Particularly important is the recognition and incorporation of the National Heritage Area Program in this aspect of the initiative.

The vast majority of Americans live in urban and suburban areas. And many of these areas depend on healthy rural areas to supply clean water and other environmental services. Cities and suburbs must be safe and enjoyable places to live to prevent urban areas from further spilling over into the surrounding countryside. Isolated parks, while important, cannot achieve these goals. Metropolitan scale park and greenspace systems can provide outdoor adventure close to home, protect wildlife habitat and water resources, and connect city and country in a positive way. Such systems lend themselves to a similar approach to that which we have suggested for Partnership Landscapes:

An interagency council working with the Department of the Interior as the lead agency to develop and shape the program. In this case the Department of Housing and Urban Development, the Department of Transportation and the Environmental Protection Agency should also be members of the council. (The Department of Transportation can play an important role by encouraging state agencies and Metropolitan Planning Organizations to develop and incorporate ecosystem-based regional "green print" analyses of Regional Transportation Plans. These would identify critical natural resources, agriculture and working forest lands, and recreation spaces. Federal transportation funding could be provided for regional conservation planning).

Create long term strategies to support an employment "pipeline" for the next generation of conservationists, with special emphasis on initiatives that provide sustained contact with nature from adolescence to college/graduate school, through education and paid job opportunities in natural resource management, interpretation, outreach, etc.

Conduct research to understand and remove the barriers preventing youth from underserved communities from connecting with the great outdoors—provide both fiscal and programmatic opportunities for the implementation of solutions at all levels.

Climate-informed conservation and restoration projects can also help foster more resilient human communities such as through the protection of water supplies and the restoration of wetlands to mitigate storm damage. Thus how a landscape project affects and is affected by climate change should be a criteria for project selection and project design.

Discussion Question 1

Written & Online Comments

(cont.)

Implicit in working at a landscape scale is the need for close coordination across jurisdictions and collaboration with affected stakeholders. The challenge of climate change only underscores that imperative. Landscape Conservation Cooperatives (LCCs), focused in part on climate change, can facilitate this cross-jurisdictional engagement, operate within a broader climate context, can be utilized to evaluate AGO project selection and design, and can inform the ongoing management of project areas. Establishment of USGS Regional Climate Centers to synthesize climate change impact data, and to collaborate with the network of Landscape Conservation Cooperatives, can inform landscape level strategies for managing climate change impacts.

Should adaptation funding become available through climate legislation, it can be used, in part, to support AGO projects.

Our country faces many challenges and a good deal of uncertainty as we prepare to enter the second decade of the 21st Century. Americans are struggling, as well, to find the common ground required to solve those problems. For more than 100 years, however, most Americans have agreed on the importance of conserving our country's legacy of rich and productive land, water, and coastlines. While we have made substantial progress in protecting America's environment and conserving our natural and agricultural lands, there are, today, many threats to that progress.

The America's Great Outdoors listening sessions have revealed that people across America are ready to address those threats and to renew the substance and spirit of our conservation tradition. A striking new trend that has emerged from these meetings is the great interest of agencies, organizations and people working cooperatively at the regional, watershed and landscape levels to accomplish conservation at a large scale. From western Montana to the Hudson Valley of New York, diverse groups have shown the tangible progress that can be made by this partnership approach. The Nature Conservancy believes that these successes should set the direction for American conservation in the 21st Century, that the federal government acting in new, more collaborative and flexible ways can be the catalyst for lasting conservation accomplishment.

In a time of soaring federal deficits, this renewed commitment to conservation will require increased funding. But much can be done by more effectively targeting existing resources and by making conservation and restoration spending more reliable, predictable and responsive to on-the-ground needs. The additional investment in things like full and dedicated funding for the Land and Water Conservation Fund is extremely small in relation to other Federal expenditures and in comparison to the immense permanent benefits derived from that investment.

As a society we often wonder about whether the things our government has done are wise or unwise, prudent or expedient, but there is little second guessing about whether it made sense for Theodore Roosevelt and his successors of both parties to conserve the natural areas, the rich soils, the productive coastal areas, and headwaters of the nation's life-giving rivers.

Discussion Question 1

Written & Online Comments

(cont.)

Modify agency conservation grant and other funding programs to facilitate geographic targeting, interagency coordination, and partnership with non-federal entities.

Solution: Modify agency programs and OMB budget guidance to provide for multi-year and/or "no year" funding for federal conservation programs, particularly programs involving acquisition of interests in real estate.

Problem: Mutually beneficial partnerships with non-federal entities are often thwarted by overly restrictive rules and guidelines related to cooperative agreements.

I am looking forward to the November publication of your report on the America's Great Outdoors initiative.

I hope that this summer's efforts by the Administration to solicit public input on the potential goals and focus of this initiative have been instructive. As the Administration works to develop its report, I offer the following perspectives for your consideration.

As you know, I have long championed the management and protection of key public lands including national wildlife refuges, national forest and other lands administered by the Department of the Interior. Our public lands should be the centerpiece in any implementation of America's Great Outdoors.

Thank you for your consideration of these perspectives. I look forward to the launch of this initiative in November and working with you to implement it through the federal budget process.

SUPPORTING PRESERVATION OF THE HUDSON VALLEY'S MAGNIFICENT LANDSCAPES An Excellent Opportunity for Federal Partnership

Stretching from Manhattan to the Troy Dam, the expansive and astonishingly beautiful landscapes of the Hudson River Valley are unique. Fittingly, the valley's natural splendor inspired the birth of both America's first homegrown art genre--the Hudson River School of painting--and the modern grassroots environmental movement. Its rich panoply of Revolutionary War battlefields and historic homes (including those of Franklin D. Roosevelt, the Vanderbilts and painter Frederic Church) tell the story of our nation's birth and growth. And its extraordinary geologic and ecological features serve as the great, green backyard for 18 million Americans, many inner-city residents, who live within an hour's drive of the Hudson River's shores.

Large Landscapes, Natural Splendor Threatened

While great strides have been made in preserving the Hudson Valley's unsurpassed beauty and history--federally recognized through the region's congressional designation as one of America's first National Heritage Areas--many of its iconic landscapes and prime agricultural lands remain under severe threat from poorly planned development.

Discussion Question 1

Written & Online Comments

(cont.)

Through a partnership under the America's Great Outdoors Initiative, we can preserve and restore:

A scenic and cultural landscape that is the basis of a \$4.7-billion regional tourism economy;

Farmland that supplies fresh, local produce to 80 percent of New York's population and is essential for creating a sustainable foodshed for the New York metropolitan region;

Habitats that sustain 85 percent of New York's vertebrate species, including 180 rare and imperiled species;

Critical migratory pathways in danger of being inundated by sea-level rise and other projected impacts of global climate change.

Ready to partner

The framework is in place to stem this tidal wave of development. Called Saving the Land That Matters Most, it is the most ambitious land-conservation initiative in Hudson Valley history. It seeks to preserve 65,000 acres of the most significant scenic, agricultural and ecological landscapes throughout the Hudson Valley, permanently preserving these national treasures and providing opportunities for people in future generations to connect with them.

Saving the Land That Matters Most:

Targets lands for protection using cutting-edge GIS mapping and environmental and habitat data amassed by Scenic Hudson's ecological experts;

Identifies lands meeting New York State's highest standards for scenic and ecological resources. Most are visible from existing parkland, Scenic Areas of Statewide Significance or National Historic Landmark Districts, and/or are located within state-designated Biologically Important Areas;

Is a collaborative undertaking involving 17 local, regional and national land trusts.

In addition, the state Department of Environmental Conservation has signed an agreement pledging to jointly fund preservation of 11,000 acres of commonly identified estuarine lands along the Hudson River as funds are available.

Preserving Working Farms, Connecting People to Their Food

Farmland comprises 20 percent of the Hudson Valley landscape. Its farms are the basis of the region's \$530-million agribusiness industry and contribute to its vibrant tourism economy. In addition to being the prime source of fresh produce for New York City, representing 80 percent of the vendors at its GrowNYC greenmarkets, valley farms play a critical role in safeguarding local communities' water supplies and keeping a lid on municipal taxes.

Discussion Question 1

Written & Online Comments

(cont.)

Ready to partner

Saving the Land That Matters Most includes the protection of 25,000 acres of working farmland featuring Soils of Statewide Significance or USDA Prime Farmland. Land trusts engaged in this initiative--estimated to cost \$100 million--have a proven track record for preserving multigenerational family farms through conservation easements.

Protecting & Restoring Rivers & Watersheds

Stretching nearly half the length of the Hudson River--153 miles from New York City to the Troy Dam--the Hudson River estuary is one of America's great ecosystems. The only place along the Appalachian Range's 1,500-mile length where the mountains meet the sea, it is a spectacular biological mixing zone that hosts 85 percent of the state's vertebrate species in just 12 percent of its landmass.

Ready to partner

The Hudson River Estuary Action Agenda--a science-based plan developed with the collaboration of over 500 public and private stakeholders, including government, business, scientific and NGO partners--identifies outcomes and outlines strategies to address critical issues facing the estuary, including clean water, protecting and restoring wildlife, and providing recreation and river access. Land trusts and New York State also have forged a unique alliance in mapping and agreeing on the priority of protecting critical estuarine lands to protect extant biodiversity and plan for adaptation under rising sea levels.

Connecting Our Urban Parks, Providing New Recreational Opportunities

Valley residents and visitors are reconnecting with the region's natural treasures in record numbers. This thirst for the great outdoors is best exemplified by the popularity of Walkway Over the Hudson, which transformed an 1888 railroad bridge into a thrilling state park. (The bridge's adaptive reuse was spearheaded by a grassroots group and funded by the state, NGOs, businesses and individuals.) Since opening in October 2009, it has attracted nearly 800,000 visitors, far surpassing projected attendance figures. Restaurants and shops near the Walkway in downtown Poughkeepsie have experienced a surge in business.

Ready to partner

By creating waterfront parks in communities where none exist--a priority of Saving the Land That Matters Most--Scenic Hudson and other groups are helping many communities revitalize their downtowns. In addition, by partnering with the Hudson River Valley Greenway and local governments, they are developing waterfront trails linking parks and other cultural sites. But federal resources are needed to protect key destinations, develop public awareness about them and make them accessible.

Discussion Question 1

Written & Online Comments

(cont.)

Ready to partner

The state Hudson River Estuary Program as well as organizations such as Clearwater and Scenic Hudson have long been dedicated to introducing children to the Hudson Valley's natural wonders and educating them about the need to protect these treasures. In addition to creating future stewards for the river and its shores, these programs often ignite an interest in outdoor recreation that lasts a lifetime. Federal resources and legislation will provide a mandate to connect children with the outdoors, enabling the valley's environmental educators to broaden the reach of their place-based work into underserved communities and provide new places to engage schoolchildren with nature.

Traditional diets have been shown to improve tribal members' health. "[T]here is a relationship between use of traditional Ojibwe food and the health and wellbeing of Band members." The holistic physical and mental health benefits of traditional food use include: the improvement of diet and nutrient intake; the prevention of chronic diseases (such as obesity, diabetes, cardiovascular diseases and hypertension, gallbladder disease, and dental disease) associated with the consumption of non-traditional foods; the opportunities for physical fitness and outdoor recreation associated with harvesting traditional foods; the opportunity to experience, learn, and promote cultural activities; and the "opportunity to develop personal qualities desired in Ojibwe culture such as sharing, self-respect, pride, self-confidence, patience, humility and spirituality." Harriet V. Kuhnlein, Ph.D., *Ojibwe Health and Traditional Food Use*, Centre for Nutrition and the Environment of Indigenous Peoples (1995), at 39.

The Commission has undertaken a number of initiatives to reconnect young people to the outdoors, with an emphasis on educating youth about treaty rights exercise. For example, the Commission has organized numerous workshops that pair tribal youth and elders in traditional activities. Tribal youth have participated in workshops on hunter safety, spring spear fishing, ice spear fishing, fish decoy making, sugar bush (making maple syrup, sugar, and candy), wild rice gathering and processing, snowshoeing (including making snowshoes), and many other subjects.

The Commission has also developed and instructed outdoor skill workshops as part of the Intercultural Leadership Initiative, a program whose funding was recently eliminated despite the fact that it won a Harvard "Honoring Nations" award in 2008. These winter-based day camps bring together Indian and non-Indian fourth through eighth grade students before they are integrated in high school. Students from different cultural backgrounds participate in workshops such as snow-shoe making, fire-making and winter shelter building, exposing them to outdoor activities while at the same time encouraging exploration of issues related to self-image, conflict resolution, race, cultural diversity, and tolerance through experiential learning.

Discussion Question 1

(cont.)

GLIFWC has found that to effectively reconnect tribal youth to the outdoors, it is essential that any strategy include: 1) inter-generational teaching/sharing of traditional skills, allowing tribal members who possess traditional knowledge about harvesting activities to mentor tribal youth and build long-term relationships; 2) promotion and support for family structures by encouraging the participation of families, so that skills learned from elders and GLIFWC staff are reaffirmed and continued at home; 3) providing experiences for tribal youth at a variety of age levels beginning around age 10; and 4) providing funding for adequate supplies, materials, insurance and transportation. GLIFWC has invested in an inventory of equipment to have on hand to provide outdoor workshops.

Missouri is blessed with many opportunities to connect with the outdoors, but more needs to be done to make those opportunities accessible. We could do more to provide connections with our major river systems. The Columbia Bottoms Conservation Area is a good example of effort to provide access to the great confluence of the MO and MS rivers. But at the same time, that Conservation Area is under threat of a major casino development virtually next door and within the floodplain. More thorough analysis by FEMA and the Army Corps of Engineers of all “external” costs of such floodplain developments could help local and state governments to understand the true costs of such developments to taxpayers and society.

The topic of reconnecting should also include restoration. We cannot reconnect to what is no longer present. In Missouri many of our grassland, savannah and prairie habitats have been lost. Efforts to restore those habitats on public and private land should be supported.

Missouri has many public land ownership levels -- federal, state, county, municipal. All provide levels of access and types of high-quality outdoor experiences.

Reconnecting children with the outdoors is another important task. Sierra Club members in the Springfield MO area initiated a guidebook for families to enjoy the outdoors in that region of the state and worked with teachers to develop it and with local schools to distribute it. Efforts like this provide some guidance for getting kids started young to enjoy the outdoors. The Sierra Club in Missouri also has an Inner City Outings group which organizes and conducts outings for children who would otherwise be unlikely to enjoy a “true” outdoor experience, including overnight camping.

Local Sierra Club groups sponsor hikes for all ages, providing training for the hike leaders, insurance for all sponsored hikes, and publicity about them on our website and in our newsletters. Finally, the Sierra Club sponsors service trips throughout the country. Besides testing water quality in streams, we sponsor and fund outings to build and repair trails and other infrastructure in national, state and local parks, working with the approval of park staff.

ASA is the sportfishing industry’s trade association, committed to looking out for the interests of the entire sportfishing community. We seek to promote the enduring economic and conservation values of sportfishing in America. ASA represents the interests of America’s 60 million anglers, who generate over \$45 billion every year in retail sales with a \$125 billion annual impact on the nation’s economy, creating employment for over one million people.

Discussion Question 1

Written & Online Comments

(cont.)

While our ideas below do not focus on economic themes, we took note of the emphasis the President gave to the economic benefits that can come from the AGO initiative. President Obama said back in April, that this initiative is being launched not only because it is the "right thing to do" in a broad sense given the importance of our outdoor resources but also "because it's the right thing to do for our economy. It's how we're going to spur job creation in the tourism industry and the recreation industry. It's how we'll create jobs preserving and maintaining our forests, our rivers, our great outdoors." We agree wholeheartedly that the multi-billion dollar benefits that come with a healthy outdoor industry must be kept in mind as this initiative goes forward and we are happy to provide important economic information pertaining to the sportfishing sector in particular.

Our approach to conservation and management of our natural resources is focused on the resources on which the public depends for high quality, easily accessible recreational fishing opportunities. Over the last 30 years, significant strides have been taken to improve the health of America's aquatic resources, including water quality and fish habitat. We are faced with many fisheries resources challenges but by and large, state and federal agencies, backed by important pieces of legislation including the Clean Water Act and the Magnuson-Stevens Act, have succeeded in reversing a declining trend in many of our nation's rivers, streams, lakes and coastal areas.

Much of this success can be attributed to the tremendous infusion of funding for federal and state water and fisheries management in the form of excise taxes on fishing and boating related purchases and fishing license sales. Since 1950, recreational anglers and boaters have, through a unique user tax on motorboat fuel, fishing tackle, and other sportfishing equipment, generated more than \$5.7 billion in funding through the Sport Fish Restoration and Boating Trust Fund for fishery conservation and enhancement, habitat restoration, clean water programs and boating safety programs. In addition, fishing license sales generate nearly \$560 million in annual revenues for state conservation and education programs.

American sportsmen have played an important role in the stewardship of our natural resources for over 100 years. This, in conjunction with the financial reality of recreational fishing, makes it increasingly important to ASA's conservation goals that the sportsmen's community receives acknowledgement and assurance of its formal and defined roles in the management of fisheries resources. American anglers have demonstrated time and again that they are ready, willing and able to modify how, when and where they fish in the interest of maintaining healthy fisheries. Whether it is through changes in regulations by the government or through voluntary changes in behavior, such as using more fish-friendly equipment, recreational anglers put the resource first. The recreational fishing industry recognizes the need for abundant and sustainable fish populations first and foremost. However, actions taken by the federal government, in particular, to conserve and sustain fishery resources must be met with parallel actions that ensure easier access to those fisheries for the public, a point we'll touch on further below.

Discussion Question 1

Written & Online Comments

(cont.)

What has worked in the past to achieve timely and regular input from the recreational fishing community is to establish formal and well defined input opportunities. The country's recreational anglers are primarily casual, occasional users of the resource. To obtain their perspective, one must bring this constituency into very specific, structured stakeholder-input systems.

To see what works when it comes to this goal and its challenge, one need look no further than the management of our public lands. For over 100 years, we have managed our public land, for the most part, in a manner that balances public use with private commercial uses such as grazing and energy development. Our marine fishery resources should be managed more like our public land resources.

The National Fish Habitat Action Plan (NFHAP) is most comprehensive effort ever attempted to conserve, restore and enhance fish habitats throughout the United States. The goal NFHAP is to foster partnerships among conservation groups to achieve coordination of on-the-ground efforts for aquatic systems across the country. Combining the collective energy of state and federal agencies with local partners offers the best chance of success.

In monitoring the input the administration has received thus far through AGO, it is clear that this goal has emerged with a strong consensus of support. Without belaboring the benefits we have already seen from an LWCF funding that has received only a fraction of the funding it was meant to receive and the fact that full funding would dramatically benefit outdoor recreation throughout the country, we would simply state here that ASA and the recreational fishing community strongly support full funding of LWCF.

RBFF has established the "Take Me Fishing" Program which to date has given our community the most traction when it comes to reversing downward trends in fishing participation. ASA urges federal agencies to partner with and support RBFF's "Take Me Fishing" Program to increase participation in recreational fishing and boating on our nation's public lands and waters.

ASA very much appreciates the commitment the Obama administration has made to better conservation and management of America's natural resources and to getting more Americans out in the wonderful open spaces of this country. Fishing is one of the best ways to enjoy the outdoors in America and there is compelling data to show that the activity serves as a gateway experience for bringing young people into the outdoors and making them outdoorsmen and women for the rest of their lives. We look forward to working the administration to make important changes to federal natural resource management that will ensure a strong future for fishing in this country and get more people out to interact with natural places through sporting activities that have been at the heart of this country's cultural identity from its very inception.

(cont.)

In 2008 a new funding initiative, championed by Congressman Norm Dicks, emerged from the Interior Appropriations bill – the Legacy Roads and Trails Remediation Initiative. Funding was provided to protect American rivers, streams, endangered species, and community water systems by repairing the environmental damage caused by the vast legacy of Forest Service roads. The initiative specifically directs the funding "for urgently needed road decommissioning, road and trail repair and maintenance and associated activities, and removal of fish passage barriers, especially in areas where Forest Service roads may be contributing to water quality problems in streams and water bodies which support threatened, endangered or sensitive species or community water sources and for urgently needed road repairs required due to recent storm events." Legacy Roads and Trails (LRT) funding has been used to maintain needed roads; repair culverts, trails and bridges; and reclaim unneeded roads to meet these watershed protection and restoration objectives.

In the first three years of this program \$180 million has been dedicated to national forest watershed restoration. The first two years (\$90 million) of the program resulted in a host of specific accomplishments including:

- 1362 miles of road improved
- 3395 miles of road maintained
- 325 aquatic organism passages repaired
- 1460 miles of road decommissioned
- 38 bridges replaced or repaired
- 1061 miles of trails maintained or improved

National Parks in and around Urban Areas - Especially in the "Shrinking Cities" of the Rust Belt. Create more National Parks in and around urban cores. An excellent example is the Golden Gate National Recreation Area around San Francisco which offers exceptional and accessible outdoor recreational opportunities to many urban dwellers. It has also helped to prevent urban sprawl, and attracted national and international companies that understand that quality of life in and around a city is important to attracting high quality employees, especially in a knowledge economy. Applying this proven strategy to the shrinking cities of the struggling rust belt states could be pivotal to their long term economic recovery. For example there is lots of coastal and riverside land around the Great Lakes has been abandoned due to industry shut downs and foreclosures. With the help of federal dollars and local conservation initiatives, these lands could be restored to become some of tomorrow's proudest new National Parks/Recreation Areas/Monuments. Allow the struggling economy and abandonment in these states to be an opportunity for large scale outdoor urban recreation and habitat conservation corridors. For this idea there is no better time to act than now.

Explore "recreation easements" for private landowners to offer access.. On August 25, a homegrown listening session took place in Lander, WY, and was attended by over 100 people. Hosted by the National Outdoor Leadership School, Central Wyoming College, Teton Science Schools, Wyoming State Parks and Historic Sites & Trails, and TU, the productive conversation produced four main themes, and several presidential messages. A unique presidential message that surface during the discussion encouraged the exploration of a "recreation easement" concept to create financial/tax incentives for private landowners to offer access. It is already popular for ranching families to consider conservation easements, ensuring that their land will continue to be ranched in the years to come.

Thanks so much for all the conversation on this point. I am intentionally avoiding a discussion of the technicalities of what liability issues should be surmounted, how a recreation easement should be written into law, etc. I can't take credit for this "recreation easement" idea. It was a unique point, generated in the homegrown listening session that NOLS co-sponsored. We felt it deserved inclusion in this ideas space, as did all the themes and presidential messages that came out of our session. Access to private lands, or across private lands to public lands, has been a significant issue in Wyoming for many years. Your access to a favored recreation destination often depends on your personal relationship with a landowner who owns the private land between you and that destination. It is appropriate to consider many of these public lands with know public access as de-facto private lands. Conservation easements are gaining in popularity in our state, as traditional ranching families, who anticipate selling the family ranch, seek solutions to preserve the unique and diverse nature of their home place. The success of conservation easements spurred a discussion of recreation easements, where access rights could actually be sold, and maintained by a separate entity. This is one of many thoughts regarding access that came up in our America's Great Outdoors - Central Wyoming Forum.

My answer or idea is the wrong answer.. Our national parks, refuges, national forests, and public lands represent the best of America. They are home to our most treasured and historic places, and are vivid representations of American democracy and values. Protecting our public lands - from poorly planned development, inappropriate oil and gas and mining activity, pollution, and the impacts of climate change should be the number one conservation priority of the Obama Administration. With limited federal spending available, the Administration should be examining how decades old federal programs can be retooled to focus on protecting the key landscapes on our federal lands and to reestablish policies that prioritize the long term future of our wildlife, clean water and other natural resources.

Fully fund Land and Water Conservaton Fund (LWCF). Land and Water Conservation Funding (LWCF) helps states and communities make parks, trails and environmental education programs available. Friends of Baxter State Park in Maine has demonstrated the importance of such outreach programs and materials, for example our popular "Know Before You Go" brochure for first time visitors to Baxter State Park - Katahdin available at Maine Visitor Ctrs, L.L. Bean, etc. Demand is high. In two years we have gone through two printings of 5,000 each, and are working on an updated 2nd edition for 2011.

Discussion Question 1

(cont.)

Promoting a Conservation Ethic. Promoting a conservation ethic fosters action to preserve, support and enhance the wilderness character of special areas such as Baxter State Park, Maine's premier wilderness. The Friends of Baxter State Park, an organization that works to preserve, support, and enhance the wilderness character of the Park, has demonstrated the importance of promotion of the conservation ethic with its successful Maine Youth Wilderness Leadership Program. This program provides ten highly motivated high school students from ten different high schools selected in a competitive process to spend eight days immersed in a wilderness experience. Participants gain a deep appreciation of the outdoors, and wilderness in particular, through hiking, camping, photography, art, storytelling, writing, and history.

Wilderness recreation prevents heart disease and stroke by increasing the heart rate for a sustained period of time. Wilderness provides cheap, clean drinking water that can be bottled and sold. Wilderness provides habitat for trees and shrubs that clean the air providing health benefits that lower health care costs for all nearby communities. Wilderness whitewater provides jobs for river guides. Wilderness rivers provide fishing opportunities for a robust sport fishing industry. On and on... And the best things about wilderness areas: they cost the taxpayer nothing and they provide all their benefits to all future generations, forever.

_____ said "more pressing issues for me -- acid and toxic rainfall, climate change" It's all related, interwoven. The tic tac toe is the acid rain is the climate change. You can't fix one without fixing the other.

_____ said "the contrails are really beneficial in helping to reduce global warming and climate change." So _____, I take it that you would support enhancing jet contrails with chemicals, if that were possible, being as that would be a scientific fix for global warming and you believe in scientific fixes (as stated in your many other posts).

Jet contrails alter the weather on public lands. Where's the EIS?. From Wikipedia: "Vapour trails or contrails, by affecting the Earth's radiation balance, act as a radiative forcing. Studies have found that vapour trails or contrails trap outgoing longwave radiation emitted by the Earth and atmosphere (positive radiative forcing) at a greater rate than they reflect incoming solar radiation (negative radiative forcing). Therefore, the overall net effect of contrails is positive, i.e. a warming.[4] However, the effect varies daily and annually, and overall the magnitude of the forcing is not well known: globally (for 1992 air traffic conditions), values range from 3.5 mW/m² to 17 mW/m². Other studies have determined that night flights are mostly responsible for the warming effect: while accounting for only 25% of daily air traffic, they contribute 60 to 80% of contrail radiative forcing. Similarly, winter flights account for only 22% of annual air traffic, but contribute half of the annual mean radiative forcing.[5]" Contrails have a lasting effect on public lands. I know you folks have said over and over that you want to be able to go where you want when you want however you want to, but jets are having a large effect on wilderness and national parks and those affects are not necessarily readily apparent. Land management agencies should each do environmental studies and documents so we can get this topic properly dealt with.

Discussion Question 1

Written & Online Comments

(cont.)

_____ said, "if they are not sprayed how are they dispersed with the jet fuel?" They are gasoline additives to improve performance and lower the risk of explosion. These additives and the soot from burning fossil fuel make the nuclei that water vapor clings to in contrail formation. Eventually, these particulates fall to Earth via Newton's law of gravity. Pretty hard for you to understand, I see.

It's always OHVs who post this kind of "idea". This has been posted before. 95 percent of the USA is open to OHVs, especially if you have some land owner permission. Intolerance, by my definition, is someone who wants the last 5 percent to be for their use when there are perfectly good reasons why that 5 percent should not allow their use.

I am proposing to continue with the management strategy that is being done right now that allows rangers to close roads of little importance without going through an EIS process as suggested in a previous "idea" by _____.

_____ said, "these machines take away any sense of reward you get for working hard to get somewhere--everything, whether a sweet viewpoint, or an archeological site, is just another place to pass by on a machine." I think OHV's take away that sense of reward for hard work from their riders. Their ride into a place reduces the value of their own experience in getting there. It's something I don't think machine riders have a handle on. But their experience is a whole lot better than that of the guy who's watching it all on TV.

People who live close to public land have exactly the same ownership of that land as people who live across the country. Do people in Washington DC own the Whitehouse, or does it belong to all Americans?

I worked on a fire crew many years ago. Every time our crew passed the entrance to the national forest, someone would always misquote the sign saying "Land of Many Abuses". That is widespread public knowledge from people who know.

_____ said "let our children experience it like we did when we were young" I agree, let our children experience it like we did when we were young, and that means on foot and silent, like countless generations before us.

I'm always for more recreation funding, as long as it gets paid for by user fees. National forests don't cut as much timber anymore, so entrance, automated pay stations should be installed if people want high end services like visitor centers and trash pickup and signs.

Mining needs to happen at the dump, not in the federal forest. Recycle. When every bit of waste is reused, then we can talk about compromise.

"Conservationists already complain that current federally declared wilderness areas are underfunded and therefore are not being properly maintained" Please show me some proof. Wilderness costs taxpayers almost nothing and is the most cost effective way to "manage" marginal land.

Discussion Question 1

Written & Online Comments

(cont.)

National Parks need to be fully funded, the wild life and nature need to be preserved. We need to keep these things in our future for the next generations and to keep the earth healthy by preserving nature and help to make it better and grow. Groups in communities can help bring awareness to everyone in their community and help people to act now and get groups into schools more and show kids, young and teenagers, that not only National Parks need to be preserved, but the rest of nature and wild life as well.

The places within National Parks are protected for a reason- they are preserving our culture, history and ecology for the future. We've realized that these places are special and significant and without them around our world wouldn't be quite the same. We come to National Parks to gaze in awe at the natural beauty around us, to hike and backpack to amazing places, to spend time with family and friends, to get away from "the city" or "the office", and many, many other reasons. National Parks provide opportunities to see "nature as the classroom." As an environmental educator starting my first year teaching students and their parents and teachers about Yosemite National Park, I hope it will make a difference in their lives to have visited and learned more about this special place. The more opportunity someone has to connect with a place, the more they might feel ownership toward it and want to protect it for future generations- just as others have done in National Parks before us.

Eminent domain is often an effective method to preserve lands and to gain access to landlocked public lands. Often private landowners who control access to public lands charge a fee for the public to use the public lands, or only allow their friends to use them. Eminent domain to gain access to a public tract of land is a perfectly fair use of the power.

The land belongs to everyone, so everyone has an equal right to say how the land should be preserved. Why should wilderness boundaries stop at County lines, when land on both sides of the line should be preserved? Wilderness designation campaigns can originate from anywhere. That's our right as Americans.

It is disappointing to read the comments from ill informed and sometimes just ignorant people. Living in the Sierra Nevada for 20 years of my adult life and participating in all forms of outdoor activities including OHV's, hiking, fishing, photography has brought me a understanding that there is something for everyone. Those that see it one way or another have never taken the time to visit the areas they are so desperately trying to protect. Many lives depend on these areas and being open for all reasons. Hiking, Hunting, Fishing Photography and yes OHV's. This entire time I have yet to see any one of these segments of people try to willingly destroy the land they use. Just because you call yourself an environmentalist does not mean you live that life. I have seen hikers walk away from campsites (hike in/hike out) and burn thousands of acres of land. That was my livelihood as a young man. Putting out forest fires. So much for those trying to protect the land. The earth heals itself. I have seen meadows that have been trampled by OHV's Sheep and cows come back fuller the next season. Dont be so sure in your belief that that one side is worse then another. Keep all the land open and MANAGE IT. Thus the USDA has a job to do.

If the corridor keeps existing trails open, without the loss of any OHV trails, then this is an idea I could promote

What Works in Tribal Youth Programs. For the Great Lakes Indian Fish and Wildlife Commission's (Commission's) eleven member tribes, located in east-central Minnesota, northern Wisconsin, and the Upper Peninsula of Michigan (for more information on the Commission, see www.glifwc.org), connecting to the outdoors provides a vital connection to culture. The exercise of the Commission's member tribes' treaty-reserved, off-reservation hunting, fishing and gathering rights depends on an abundance of healthy ecosystems that support natural resources that the tribes depend upon for cultural, subsistence, economic, and medicinal purposes. Federal courts have held that these rights cannot be exercised on most private lands, making the quality and accessibility of public land extremely important. Traditional diets have been shown to improve tribal members' health. "[T]here is a relationship between use of traditional Ojibwe food and the health and wellbeing of Band members." The holistic physical and mental health benefits of traditional food use include: the improvement of diet and nutrient intake; the prevention of chronic diseases (such as obesity, diabetes, cardiovascular diseases and hypertension, gallbladder disease, and dental disease) associated with the consumption of non-traditional foods; the opportunities for physical fitness and outdoor recreation associated with harvesting traditional foods; the opportunity to experience, learn, and promote cultural activities; and the "opportunity to develop personal qualities desired in Ojibwe culture such as sharing, self-respect, pride, self-confidence, patience, humility and spirituality." Harriet V. Kuhnlein, Ph.D., Ojibwe Health and Traditional Food Use, Centre for Nutrition and the Environment of Indigenous Peoples (1995), at 39. Staff of the Commission offer the following in response to the topic What Works: Thoughts and ideas on effective strategies for conservation, recreation and reconnecting people to the outdoors. The Commission has undertaken a number of initiatives to reconnect young people to the outdoors, with an emphasis on educating youth about treaty rights exercise. For example, the Commission has organized numerous workshops that pair tribal youth and elders in traditional activities. Tribal youth have participated in workshops on hunter safety, spring spear fishing, ice spear fishing, fish decoy making, sugar bush (making maple syrup, sugar, and candy), wild rice gathering and processing, snowshoeing (including making snowshoes), and many other subjects. The Commission has also developed and instructed outdoor skill workshops as part of the Intercultural Leadership Initiative, a program whose funding was recently eliminated despite the fact that it won a Harvard "Honoring Nations" award in 2008. These winter-based day camps bring together Indian and non-Indian fourth through eighth grade students before they are integrated in high school. Students from different cultural backgrounds participate in workshops such as snow-shoe making, fire-making and winter shelter building, exposing them to outdoor activities while at the same time encouraging exploration of issues related to self-image, conflict resolution, race, cultural diversity, and tolerance through experiential learning. GLIFWC has found that to effectively reconnect tribal youth to the outdoors, it is essential that any strategy include: 1) inter-generational teaching/sharing of traditional skills, allowing tribal members who possess traditional knowledge about harvesting activities to mentor tribal youth and build long-term relationships; 2) promotion and support for family structures by encouraging the participation of families, so that skills learned from elders and GLIFWC staff are reaffirmed and continued at home; 3) providing experiences for tribal youth at a variety of age levels beginning around age 10; and 4) providing funding for adequate supplies, materials, insurance and transportation.

GLIFWC has invested in an inventory of equipment to have on hand to provide outdoor workshops.

Youth Outdoor Challenges for Tribes. For the Great Lakes Indian Fish and Wildlife Commission's (Commission's) eleven member tribes, located in east-central Minnesota, northern Wisconsin, and the Upper Peninsula of Michigan (for more information on the Commission, see www.glifwc.org), connecting to the outdoors provides a vital connection to culture. The exercise of the Commission's member tribes' treaty-reserved, off-reservation hunting, fishing and gathering rights depends on an abundance of healthy ecosystems that support natural resources that the tribes depend upon for cultural, subsistence, economic, and medicinal purposes. Federal courts have held that these rights cannot be exercised on most private lands, making the quality and accessibility of public land extremely important. Traditional diets have been shown to improve tribal members' health. "[T]here is a relationship between use of traditional Ojibwe food and the health and wellbeing of Band members." The holistic physical and mental health benefits of traditional food use include: the improvement of diet and nutrient intake; the prevention of chronic diseases (such as obesity, diabetes, cardiovascular diseases and hypertension, gallbladder disease, and dental disease) associated with the consumption of non-traditional foods; the opportunities for physical fitness and outdoor recreation associated with harvesting traditional foods; the opportunity to experience, learn, and promote cultural activities; and the "opportunity to develop personal qualities desired in Ojibwe culture such as sharing, self-respect, pride, self-confidence, patience, humility and spirituality." Harriet V. Kuhnlein, Ph.D., *Ojibwe Health and Traditional Food Use*, Centre for Nutrition and the Environment of Indigenous Peoples (1995), at 39. Staff of the Commission offer the following with respect to Challenges: What obstacles exist to achieving your goals for conservation, recreation, or reconnecting people to the outdoors? A number of challenges face tribes in reconnecting members, particularly youth, to the outdoors. Some of these challenges are shared by Americans of any race - the increased role of technology in our lives and the lure of cell phones, Facebook, chat rooms, video games, cable TV, and DVD movies, etc. Other challenges affect tribes disproportionately - 50% of American Indian children live in single-parent families. These parents often find themselves lacking either the skills, knowledge, financial resources, or time to participate in outdoor activities with their children. In addition, federal government policies of the 1940's, '50's and '60's relocated tribal members to urban areas. As a result, when tribal members return home to their reservations, they often do not have the outdoor skills developed by participating in traditional Ojibwe hunting, fishing, and gathering activities.

Discussion Question 1

Written & Online Comments

(cont.)

Some level of restriction is needed to maintain an area's status of wilderness. There is not much reason to expose future generations to this if it is not truly wilderness. There is no way to sincerely connect with the "great outdoors" if you are surrounded by people on a meticulously maintained trail. What is the point in which these areas become tourist attractions rather than wilderness, as they were intended? In saying this, I do not mean to dismiss this idea altogether. Future generations do need to be exposed to wilderness, but not necessarily by physically going there. Through the education of wilderness and what it really is, the desire to conserve it can still be achieved. People typically fall into two categories when faced with the issue of wilderness conservation; people who need to see it and connect with it in order to better understand what they are conserving, and people who are satisfied with the knowledge that wilderness exists and still advocate its conservation. People in these future generations who want to personally see these areas and connect with them on a deeper level will go to see them, but they will have a better understanding of what they are viewing and how their presence impacts it. For some people, hearing about it is enough. Knowing that wilderness exists somewhere and is not being intruded by humans is reason enough to preserve it. Both groups, if first educated about the meaning of wilderness, would have a better appreciation for it and have a stronger desire to see it preserved in its natural state. They would have an understanding that the restrictions on access to these lands is not put in place to deprive them of being able to see wilderness, but rather to preserve it and protect it from man's giant footprint. Taking children to designated wilderness areas will not help strengthen their desire to preserve wilderness unless they know the significance of wilderness. The restriction of access to designated wilderness areas only emphasizes the importance of keeping this land in its natural state.

As a long time environmental educator and classroom teacher, I believe immersion is the key to critical thinking and knowledge. How can we encourage ecological literacy in the absence of ecological exploration, inquiry and discovery? We need our parks as classrooms. In the spirit of the adage, "Our children will inherit Earth as we leave it for them," I think we need to make said Earth and it's wild places available to children so they may learn about it intimately and take future ownership for the decisions they will make that influence it. We need to keep making our parks our most relevant classrooms!

To quote a hero of yours, "YOU LIE!!" Your assertions and pseudo-facts are pale falsehoods that have clearly never seen the light of truth. While a large percentage of lands in the Western US are indeed public lands (even up to the 80% you claim, in a few particularly waterless states), they are not 'open space'. They are dominated by roads, agriculture, mining, oil and gas drilling, logging, ski areas, and general human development. Most of the open space in the US is west of the Mississippi, perhaps even the 80% of it. But it only constitutes about 5% of the whole landmass of our country. Hardly a substantial amount. Ask the animals: Here in Colorado, elk and deer populations and reproductive rates are down on the order of 50%-90% over the last fifty years, due to habitat loss and the increasing pressures of motorized recreation. These are verifiable facts that come from the Division of Wildlife. You did make me laugh though, so thanks for your "idea" -- keep 'em coming. As a grumpy conservationist who sees the truth of what's happening on our Western public lands every week, I need to laugh more often.

Discussion Question 1

Written & Online Comments

(cont.)

Restore grasslands and prairies. The Great Plains states are greatly lacking in public lands and even state conservation lands. Much more can be done to restore tallgrass prairies, and the wildlife that inhabit them. These lands can be bought up in the same way that National Forest and Grasslands were, from willing sellers in overgrazed, mismanaged areas. These lands can be mostly in the form of National Wildlife Refuges to appeal to hunters and birders, but more National Parks are needed in these states. Iowa for example has one of the lowest percentages of public lands. Many of these states end up as drive-thru states on the way to Colorado. More opportunities for camping, horseback riding, birding and witnessing large herds of bison or elk would help make these states destinations instead of drive-thrus. It would help diversify local economies and restore critically endangered ecosystems and wildlife.

As a youth cycling coach for the past 8 years, I can attest that many a youngster that I have worked with has grown to appreciate the outdoors as a result of their ability to legally ride their bikes in nearby parks. As such, I believe more multi-use trails should be built in order to provide more opportunities to get kids outside! By reconnecting with the outdoors, we have a chance of creating future environmental leaders.

I've been an avid hunter since I was a boy and I have to say I'd truly love to have a beautiful wolf pelt to tack to my wall. They are magnificent animals and deserve to be hunted. I'd pay a lot to get one.

This is exactly right! I grew up riding and working on dirt bikes and this definitely inspired my curiosity and love of complex mechanical systems. I went on to get BS and Masters degrees in Mechanical Engineering and I now manage an engineering research group at a Fortune 500 company. I owe all of this to my exposure to dirt bikes in my youth. I still ride dirt bikes, and I hope that future generations of kids have the opportunity to own and ride dirt bikes and that it inspires them to pursue a career in engineering, as it did me. We must keep some riding areas open and pursue sensible legislation that allows kids to experience this family oriented sport. As ____ said, we certainly need more talented engineers in the US!

The National Wildlife Refuge System is the only system of its kind to put wildlife first and foremost. No other system has the welfare of our nations wildlife as its mission. It is time that the NWRS gets fully funded and recognized as such. Wildlife has always been an important part of this countries significance. Perhaps the other people who took of their time to comment are right. It is time for the NWRS to become its own agency separate from the USFws. Both the NWRS and the USFWS would benefit from such a move. The NWRS contains more acres than the NPS but receives less per acre to manage - this makes no sense other than the NPS serves people and the NWRS serves the benefit of wildlife.

I can see what you're getting at. Sort of. I'm all for buying local, or at least USA, but in many parts of the country, particularly in the west, our national forests are federally funded and controlled. Many millions of acres. The land is managed more or less and that's psprt of what this voting is all about.

roads for wildlife. We need more funding wildlife crossings on our highways where there is a high incident ratio. This should be included in any new road building. It will save alot of people and animals lives. If you've had a loved one die cause of this you'd agree!

This is a wonderful program and has worked well for Washington state. The Washington Watershed Restoration Initiative was formed four years ago and now has over 15 environmental, recreation and Native American partners, as well as Washington Departments of Ecology and Fish and Wildlife. Money that Congress has contributed gets shared throughout national forests in this country, although the push for this program initiated in Washington is spreading positive energy in many other states. It deserves enthusiastic support.

14)(16 Sep 2010) I think God gave us feet for a reason. If you want to see all that remote territory hike it! I believe you are not only diturbing the wild life but other human life as well with ORV's. Your rights only go as far as not interfere with other's rights! My intent is not to trash you Carol, but only a recognition of your ignorance. Do you not recognize that not everyone has the ability to hike these areas. You are right, 'your rights only go as far as not interfere with other's rights!' Your view suggests that people who are unable to hike them do not exist or are not as important as you and those that share in your ignorance. State and Federal lands are there for ALL of us to enjoy regardless of our ability to hike or not. I am a Utah native and I can personally attest that many of the negative comments posted here are absolute lies. I honestly cannot remember any area that has been trashed by an OHV. I am not ignorant enough to say it doesn't happen as I'm sure it does. However, I take every opportunity to visit all parts of Utah and it's surrounding States and have not seen this. Additionally, there are few new trails being produced that I've witnessed. Of those I have seen, the Forest Service seems to manage efficiently by posting as closed or other means. To accompany this, I feel that the OHV training our youth get has been very effective for kids and parents alike. As one of those parents, I now go out of my way to protect our environment and would be the first to turn someone in for making new trails, littering, etc. By my example, my children have learned to pay attention to what others are doing and would do the same. I love the opportunities we all have to enjoy the varied environments of the Western States. Thanks to roads and trail systems that have been around for decades, I've seen and enjoyed scenery that I never could have otherwise. While I believe that some trails that duplicate another trail to the same destination should selectively be closed, I feel the continued efforts to close off large tracts of land to those who choose to access them by OHV are absolutely unacceptable, thoughtless, and self-serving.

All the OHV (dirt bike in my world) users I know respect the land and other users, including hikers (I like to hike and mountain bike too). If a rut and a puddle is destruction then your definition is silly? A rut and puddle is a "drop in the ocean" of our world. I'm sorry, but your argument is nonsense and just not based on common sense. Proper trail building and maintenance techniques actually prevent erosion and protect the landscape. In addition, nature is not as delicate as you think. It can handle a few ruts and puddles. But, forest fires is another matter. Talk about destruction. However, eco-nuts prevent harvesting the good wood after a fire to let "nature take it course" - meaning "let the bugs have the good wood." This too is nonsense.

Honestly, we have enough wildness in the West.

Trout Unlimited is pushing it's own agenda; one that I think is short-sighted and wrong. If we have no access to hunt and fish from (both of which I also take part in) we have no ability to hunt or fish. If I have to hike 10 miles into fish a spot I used to be able to drive to, I will no longer be fishing that spot. Hunters and fishermen spend money, but so do dirt bikers and ATV'ers. I am not advocating creating more roads, I am just saying leave the ones we got open. There are plenty of roadless areas already in this state. PLENTY. IF you need help finding 'em, let me know. As to cost to maintain them - the hundred or so miles of roads around my house have never been maintained, and have cost no money to the FS since the miners put 'em in 120 years ago. Crazy thing is the fish are still alive and the deer still frequent this area. The FS wants to waste money maintaining roads, that's all them... I say leave 'em as is.

One size does not fit all; nor does one goal. Closing roads in the UT desert will do little to improve water quality and fish habitat in the area (it may help those little pothole bugs, though...). I support mitigation efforts as opposed to road closures. Here in the West, I support only closing roads only when a known environmental degradation is taking place, and mitigation efforts can or will not work. Mitigation efforts can be accomplished by volunteer groups, as has been shown in numerous ranger districts across the West. Enough roads have already been closed; we need access as well as wilderness. I question how much impact roads have on wildlife and how far that impact is felt. The above "idea" references a 1 mi/mi² "threshold" for disturbance. At what level is this disturbance? Is it very, very small? Where was this study conducted? Does it effect all geographic areas the same, or are some more heavily impacted? Does the Forest Service even know the answers to these questions? I feel that this is yet another effort to close roads under some feel good disguise... I mean how can you say no to clean water and healthy fish (we already have both in 98% of our forest land in the west). I demote this idea; you can't close all the roads...

Every road and trail has economic benefit in some way, so that wouldn't be too bad I guess. Economic benefits: - Roads and trails attract tourists who want to spend money riding those roads and trails - Roads and trails offer access for timber removal - Roads and trails offer access for mineral exploration (including for minerals used in wind or solar projects) - Roads and trails offer access for fighting of wildland fires If economic benefit vs. environmental degradation were the deciding factor, almost no road in the US would be closed.

Well, you are wrong. The parking area itself at the end is a bit narrow, and will fit about 12 vehicles. It's the two campgrounds prior to that (where there is ample room to turn around horse trailers, and then park them on the road to the trailhead), the giant road map at the trailhead, the "host" shack with more maps, and the frequent use of signs and fencing past that point that I also take offense to. Google map it, you are wrong (I have only been up to this area, oh, 10 times maybe more... used to be real nice, 'bout 30 minutes from my house, great fishing on the creek) Another example: Sourdough Trailhead, Rainbow Lakes, Hesse, 4th of July, all of Moab, most of the area around Gunnison, most of the area N of St. Vrain....

Allow snow machines to access Wilderness in winter. As the Federal Government becomes more involved in our lives, from a great distance in most cases, my idea is intended to bring some sanity to the Wilderness designations. Snowmobiles do not adversely impact the lands they travel over. Snowmobiles tread more lightly than even snowshoe users or back country skiers. Snowmobiles also provide useful snow compaction for wintering large game easing stress on the population. In order to reduce overuse of the limited over snow motorized designations, I propose we open any new Wilderness designations to snowmobile use. In most cases I believe these areas of proposed Wilderness expansion already entertain snowmobile use which is being ignored during deliberations on the merit of the lands uses.

Contrails are one of my favorite things. I love being in the backcountry on my snowmobile in the winter and stopping to watch the jets fly over through the clear blue sky. Sightline pollution, you guys really are nuts aren't you.

Since you do not seem to approve of OHV companies making profits, I wonder how you feel about a company like General Electric? You know, the big corporation making hundreds of millions in profits, far more than all the OHV manufacturers put together, then taking massive amounts of our tax dollars in the form of stimulus money only to lay off ten of thousands of workers. Our system is very corrupt on many levels. Your "green" administration is also very guilty of corporate profiteering. You need to understand that as individuals in this free country, we all have our own ideas about what getting away from it all means. You want us to get away from our vehicles. I happen to use my vehicle to get away from the people. The hiking trails in my area are VERY busy all summer long. Camping along them requires luck to find a spot, and taking the risk that you may be coming back down and starting over in another place. If I load the truck with the camping supplies, which in my case does not include tv or cell phone, I can access clean, quiet, pristine places you could not access on foot if you had a week to walk in. Most of us do not race to these places, just leisurely trips back into the forest to set up tents from where we may hike a trail, or just explore the area. The problem I see is that you want to change the way I live my life, the way I want to use the forest because somehow you think your way is better, more enlightened, less impactful, quieter, or whatever. What you need to know is that it isn't all about you. I live adjacent to the forest. I have made MAJOR lifestyle sacrifices to do so. I do not need someone hundreds or thousands of miles away from here dictating how I can use the forest. The USFS is charged by congress with maintaining the forest lands for multiple uses. One of those is motorized access. If you do not like this, I suggest you spend your time in the the 120 million acres of designated Wilderness. That is what it is for, and we definitely do not need anymore of it.

(cont.)

Where I live there is a snowcover limit for snowmobiles. If someone is tearing up land, call the authorities and deal with the offender. This glaring generalization that snowmobile riders are all nitro crazed stump jumpers is pretty funny. Those parts are expensive. We never ride off a main trail with less than 5-6 feet of snowcover. That doesn't take long where I live, and we are 10 miles in, in minutes enjoying the splendor of the lands. Nobody else comes here, they never did, oh, except when the snowmobile club used to groom the road. Nobody is asking to be "excused from all accountability" Enforce the laws, that was something the state snowmobile club in Colorado supported. It was a bill giving all law enforcement jurisdiction on USFS and BLM lands. It became a law. CSA also supported measurable sound laws that work. It feels like we are trying to work towards a middle ground. Every time we try, we have lost ground consistently. You just can not operate under an "I want it all" and sound resonable to anyone.

Creating a national park in the Maine woods is a great idea. For people who are not from here, or do not have experience with the Maine woods, its very hard to know how to access these wonderful places that we hear about. In other states, there are national parks/national forests/national recreation areas that provide easy access and knowledge. I know that if I go to a national park I will have a place to camp, a place to hike, a place to fish, etc. When I look at a map of northern Maine, I don't know where those opportunities exist. A national park will make access easier and bring people and money to our state. It's a great idea.

Great idea, as long as consideration is given to other users, per _____'s comment. We are working on this in our county on a trails program I'm involved with.

I would add, given the success of the various state endowment programs, it may make sense to transfer ownership of some federal lands to the states. There is little reason for the federal government to own some 70% of the land in some western states (Idaho). The state has proven a responsible manager of public lands, in many cases more so than the forest service.

I'd have to support _____'s idea. There is no reason to waste the taxpayers to utilize government agents to "cull" the herd. Legal hunting, with the resulting positive cash flow can be used to do the same thing, provide food for families and provide recreation. Should this area be too urbanized for rifle hunting, archery is still an option.

I promoted. There is no reason this activity should not be allowed. It certainly doesn't do significant damage to the trails or environmenet, at least not to the extent that rock climbers or horse riders do.

Discussion Question 1

Written & Online Comments

(cont.)

I believe (but could be mistaken, please correct me if so) that business that utilize Wilderness areas for profit pay license or permit fees and are limited in number. Hunting guides are an example of this, I believe permits are sold that regulate the number of guides to a particular area. I'm pretty sure that this is true for whitewater rafting guides as well. I'd guess that horseback excursions would be comparable. I believe that even ski resorts that operate on public property pay a fee for the lease of the land, but I understand it's pretty negligible in relation to the damage done. I do know that private organizations that utilize National Forest lands for fund raising activities pay a fee. ATV clubs in my area run benefit rides for local charities and pay a daily fee for the permit. I'd guess that businesses would as well, but don't have any direct experience.

Federal highway funds are primarily collected from on-highway fuel tax. These funds should be devoted to maintaining and enhancing our highway infrastructure system. That makes these funds in effect a user fee on those utilizing this system. They should not be spent on recreation or mass-transit, which both should have their own source of funding via user's fees. If bikers, or hikers want more trails they need to come up with a way of paying for them without raiding funds collected from other users. Biking shouldn't be that hard, we could have an annual registration fee, like motor vehicles have, with the money collected for bicycle trails and lanes. Hiking would be more difficult to allocate. The Recreation Trails Program is funded by all off-highway gas tax. This comes from OHVs, boats, snowmobiles, lawn mowers, chain saws, etc. 30% of this funds motorized rec trails, 30% non-motorized only and 40% mixed use. So hiking and biking already raid fuel tax-based accounts paid by other users.

I want to thank the OP for proposing the expansion of ATV use into National Parks. I am unaware of any where it is currently permitted.

Idaho already has some 4 million acres of designated wilderness, the most of any state other than Alaska. There are other management themes within the roadless initiative that provides protection to this area without being as extreme as Wilderness designation. Among other issues, Wilderness designation bars the use of chain saws for clearing hiking trails. This area is also popular with snowmobilers, a major contributor to the local economy. They would be banned with Wilderness designation. Lets share the wealth. We can afford to allow some of the other states catch up with regard to Wilderness.

Discussion Question 1

(cont.)

Thank you for the education on wilderness acreage, you made me do some digging. In addition to CA and AZ, Washington actually has more designated wilderness than Idaho does, I stand corrected. As far as snowmobiling is concerned, the Scotchman Peak area is utilized by members in the local snowmobile club. It is adjacent to the trail system accessed by Trestle Creek and from Clark Fork. Wilderness designation would of course preclude their enjoyment of this wonderful area during winter months. And at what benefit? Is there significant utilization of this area by non-motorized users during the winter months, who would be disturbed by snowmobilers? It is my understanding that it is a several mile trek from the nearest trailhead accessible via car to even the edge of the proposed wilderness area. If so, I can't foresee significant non-motorized recreation going on there during the winter. I am an active proponent of ATV recreation and enhancement of the trail system. However, I agree that the core Scotchman Peak area is not a suitable place for this use, and agree that we need to keep some areas free of constructed trails. That has been carried to extremes in areas outside the Scotchman area, to the best of my knowledge there is ONE ATV trail (Porcupine Lake) off the entire Lightning Creek/Trestle Creek road. One area that we would like to explore is a bypass around the washed out Rattle Creek connector that ran from Lightning Creek road to Montana's road system. My understanding from a recent (2 week ago) conversation with people that have recently hiked the Scotchman trail system is that many trails are in poor shape due to deadfall. I can not base this on my own observations. I would like to hike this next year, and would plan on bringing my chainsaw to do some trail clearing. I believe that this is currently allowed under the existing management theme. I'm a firm believer in leaving an area better than I found it. Doing the same amount of work with hand tools is MUCH slower...and apparently has not been happening. Wilderness designation wouldn't help with this. While I support protection of this area, I readily question if Wilderness designation is the best way. Within the existing roadless management options there are means of protecting an area from logging, mining, road building and development, without the restrictions imposed by Wilderness. Can you explain what Wilderness would gain over these other methods? I'm willing to be educated.

I would prefer to see the area protected, not developed.

Discussion Question 1

(cont.)

I am requesting that everyone here who has posted opinions about how and why mountain bicyclists ride trails (speeding rudely going 30 mph not enjoying nature...) to please STOP. My cycling friends and I love the back country setting probably for the same reasons you do. Riding slowly in nature, seeking scenic vistas, getting exercise, taking photos, studying flora, listening to birds. After 20 years of cycling and hiking on High Sierra trails, and performing a hundreds of hours of volunteer trail work, I have practically no experience with bad behavior, except from an extremely small handful of hikers, equestrians or cyclist. Yes, every user group has faults. And there is existing science to show the user impacts; that cyclists do no more damage than hikers and less than equestrians. Why is this a war with all the finger pointing, when you full well know that any user can cause damage if he or she cuts switchbacks, tromps flowers when going off trail to take photos, or pisses in streams, etc? Why the ridiculous demand that any of the posters here disclose who they are? That is not a requirement of this forum. And the original poster wasn't being deceptive. Seems like he was simply posting his comments like everyone else in this country was invited to do. I don't understand the hostility at all. Gosh, I'm not looking forward to meeting any of some of you rude, angry people on my next hike. Yikes! In the meantime, on a more civilized, kind and generous note please remember that loads of trails are shared perfectly well by hikers, horses and bikes -- and the trails community does better when working as allies with land managers, than being bitter enemies. Stunning trails get built and maintained by all friends of trails. Time to take a deep breath and go on a hike or bike ride. America's Great Outdoors is a really wonderful place we should be enjoying and sharing.

More Mountain Bike Access to Promote Youth & Diversity. Natural surface trails in neighborhood parks will give inner city youth a way to get outdoors; bicycles on trails will be a neat hook for these kids. Once they experience it, they'll learn the finer points about the great outdoors.

Kids on trails.. Make sure children have outdoor space to play in after school and on weekends. A really fabulous way to get kids outdoors is to have trail "parks" where kids can learn to ride their mountain bicycles on trails, away from road traffic, with potential for lots of riding through their formative years. This opportunity would attract all those kids who got mountain bikes for their birthdays & Christmas to get outdoors! They'll grow up learning about trails and will learn to use bicycles for all sorts of trips, rather than driving everywhere in cars.

Discussion Question 1

(cont.)

As a person who grew up fishing, I agree with _____ in the sense that children deserve the right to learn about the outdoors and have designated areas to fish. However, this does not require a better access to rivers and streams in wilderness areas. In the continental United States, only two percent of the land is registered as wilderness areas. This leaves a great number of rivers and streams for children to have the opportunity to fish without changing the areas our government has set aside as wilderness. There are many rivers, streams, and other freshwater bodies that humans have access to without having to hike five miles into a wilderness area. Where I'm from, there are many public access fishing holes and other than size there really isn't much difference in the kind of fish one may catch. Fish are generally native to a region depending upon the season and the temperature of the water. Children will have the same opportunity to catch fish in a public access fishing hole and a river or stream that may be found in a wilderness area. I do not believe that fish have the knowledge to follow a river into a wilderness area because they know that it is impossible for humans to reach the river. Fish of a certain region are going to be found in many freshwater bodies of water around that same area. There is no need to create roads in order to reach rivers and streams when there are plenty of public places to fish in the same region. From the perspective of the child, I do not believe it matters where they fish. When I grew up going fishing with my father and uncle, I found plenty of enjoyment in just being outside and catching an occasionally bass or brim. Very rarely did I even know where we were fishing and the farther we had to go to reach the fishing hole, the more impatient I became. Ultimately, the opening of wilderness areas to fishing is not necessary. Children have plenty of places to learn of the outdoors and to learn all about fishing in places that are already designated fishing areas.

OHV recreation is extremely important to my family and is one the main reasons for living in Colorado.

Do you not care that many new wilderness areas were formerly OPEN to snowmobiles? I have participated in OHV recreation my entire life and I can say without reserve that a majority of wildlife are not bothered in the slightest by an OHV. We once had a bear cub almost run right through 6-8 of our parked machines and us sitting on the ground. I've watched deer casually observe me as I ride by.

I love the national parks. They need to be taken care of and preserved.

Discussion Question 1

(cont.)

I think you need to get outdoors. The US has more trees today than it did when the pilgrims landed. It is true that most of our forests were cut down in the 1800's to build homes, railroad tracks, support beams for mine shafts and to fuel steam locomotives. There is an excellent book that shows then and now pictures and in each case the areas that were in many cases totally denuded are now heavily forested. Most would say so heavily forested they cannot tolerate a natural wildfire. When John Muir roamed the forest he was able to stroll through the open forest landscape. When a fire came he climbed up a tree and waited it out. If one did that today you would be incinerated due to the overgrown forests. So there is plenty of forest, but it needs to be managed and thinned to be healthy. Our overgrown forests are also poor habitat for wildlife who cannot survive massive stand replacing wildfires. Wildlife also need wider spacing between trees to be able to travel in the forest.

Equal Use Rights for OHV. Please consider equal rights to all parties in the OHV use matter as this is the American way. Systematically off-road use is being taken away from OHV enthusiasts little bits at a time over decades. This is being accomplished by a non compromise policy by one party and a compromise policy by the other party. The other side has no intention of relenting until all trails are closed to motorcycles and ATVs. This is not a fair compromise this is a total block. I am a hiker and mountain biker as well and empathize and respect these concerns and desires within reason. Please be respectful of all rights of all taxpayers and I ask you to be considerate of the off road community. Most of us love our country and love to enjoy it's wilderness in our way so please always be sympathetic or empathetic of OHV rights.

As a biologist, I believe that the only way to promote conservation of multiple species is to protect large connected habitats, while it's still possible. Climate change is happening, whether politicians want to believe it or not and now is the time to act.

"A kid can spend his whole life in front of a computer and never know about a place like Yosemite". That's what my son, then 13, said to me after a week long back-packing trip in Yosemite National Park. Learning science in nature had a profound effect on his interests, his character and his confidence. He was inspired by his experience to challenge himself physically and academically. We need to make sure these opportunities continue to exist. Park partnerships with non-profit environmental education organizations make this connection possible for all youth.

Discussion Question 1

Written & Online Comments

(cont.)

I definitely agree that people should be more responsible regarding their use of public land. As someone who comes from a rural community, I'm well aware of the haphazard off-road vehicle use that occurs there. For me, it definitely detracts from the natural experience, and I cringe whenever I hear the sound of a motor while I'm enjoying my natural surroundings. However, the issue is not limited to rural areas, and the younger population in general should be more appreciative of nature. It is imperative, though, that they do appreciate it. Building on that point, I agree that people need to be educated about the importance of the natural world. However, I don't believe that this is the time to incorporate environmental education into our school curriculum. We have too many other problems in our schools as is, and if people aren't graduating from high school, I doubt that they will take that type of study seriously enough. If we cannot teach our children to do mathematics or use the English language effectively, how can we expect them to grasp such a lofty intellectual concept as nature conservation? For this reason, we must first fix the school system, and then we will be able to use them to explain the importance of our environment. I'm not trying to anger you, but I also believe that your point concerning guns in national parks was ineffective. Let me be clear, I'm not debating whether allowing them was a good idea or a bad one, but people do not "tend to shoot them" at just anything. Anyone who decided to murder another human in a national park probably would have made the same decision even if guns were not allowed there. Guns, by themselves, are not innately bad. When someone with bad intentions has one, that's where problems arise. Again, I'm not saying they should be allowed in national parks, I'm simply cautioning you from jumping to conclusions. Finally, your overall point that the future of the natural world lies in the hands of our youth is absolutely correct. The individual person can make a difference, and that's the concept behind this forum. That's why we all have to do our part. Until we can include environmental education in our curriculum, we should educate our sons and daughters ourselves about our environment. As Dave Brower says in John McPhee's book *Encounters with the Archdruid*, "Conservationists have to win again and again and again. The enemy only has to win once." If we don't convey the importance of nature effectively, it may be lost forever. It's up to us right now, and together we can make sure that it's always easy for the younger generation to see the value in nature.

(cont.)

Expand Summer of Service. We strongly encourage the Department to build on efforts undertaken last summer in which Summer of Service programs exposed middle school students to public lands with promising results. Summer of Service (SOS) initiatives, included in the 2009 Kennedy Serve America Act, are examples of innovative service-learning opportunities for middle school youth over the summer months. SOS programs are designed to be intensive, structured, supervised, and designed to produce identifiable community improvements. In the summer of 2010, students engaged in community-based service-learning projects that addressed a variety of community needs and included exposure to national parks and other public lands. Expanding SOS opportunities to the Department of Interior, USDA, and other federal agencies will enable more young teens to participate in service as a "rite of passage" from middle to high school and provide opportunities for them to enter their teenage years with a positive experience that reinforces community connections, enlivens their education, and strengthens personal and civic values. At the same time, communities across the US might find an important new resource in their own backyards-young people who are ready to serve, if only they are asked and given the opportunity to do so.

In a time of scarce public funding and great conservation needs, this kind of flexibility will better leverage federal dollars for expanded recreational access and other conservation benefits from the conservation of lands in partnership with private landowners.

An easement may not be necessary in all situations. In Washington state there is an open space property tax designation that requires public access to be eligible for the significant tax break. Also, designated timberland, which is trending toward closing off the public, enjoys a tax break for providing public benefits, including "scenic and recreational spaces." To a certain degree, public access should be maintained on this land if the landowner hopes to maintain the tax break. This taxbreak is huge. Land with a Fair market value of over \$10,000 per acre is only taxed at about \$200 acre. If the government had to purchase a Recreation Easement, where I live the timber industry would essentially be double-dipping with a tax break and an easement.

For over 100 years the Forest Service allowed firearms and (shudder) hunting on their lands. People carry firearms on trails, and in campgrounds all over the west. Nearly everyone who visited a western national park in the past had to pass through the Nat. Forest first. And tourists survived the blaze of gunfire all these years! This year I felt safe to visit several Nat. Parks with my family. We stayed in the campground next to the one with the Yellowstone bear attack. Glad we were ready.

Discussion Question 1

(cont.)

This is a naive world view. In reality, people are in charge of everything, everywhere. When we leave an area alone completely, is not really for "wildlife", but to make US feel good about ourselves. And it is impossible to remove people from the equation anyway (global warming, pollution, etc.) When animal populations get too high in the preserve, what happens?--animals migrate to backyards. These off-limits areas would need big fences to let the animals "take care of themselves". I believe we need the opposite approach, get more people INTO the woods. Get more folks to touch the land, feel, experience, understand. The more folks really experience the land, the more support conservation has in the future. Remember, people control everything. They vote, pay taxes, donate, volunteer, CARE. We need to create a new generation of People who Care.

This program has worked for hunting/fishing for years. It needs to be expanded for other outdoor recreation. It needs to be federal, since a state-by-state system will be too complicated, and put a disadvantage on states that don't enact it. Don't drown the income in overhead or steal it for other purposes. The Gov. tried to cheat the hunters/anglers fund, but the conservation groups, including the powerful NRA, cried foul. I'm sure the hiking/ORV/Bicycle groups would be good watchdogs of their funds, too.

Family forests and farms must stay in the family, and not be sold to pay estate taxes. This bill, requires the continuation of farming/forestry so it is almost like a conservation easement. The public is getting an extended benefit from this private land in open space, wildlife habitat, rural jobs, water quality, etc. If a multi-million dollar home is in an estate, there is no clear public benefit to deferring the tax. Yes, I agree all estate tax on property is unfair, but keeping forests and farms is critical to fix now to maintain that public benefit.

We have a choice; either force people into congested cities, or allow us to spread out. Will there be less habitat? Yes. Are animals more important than people? No. Do we have a responsibility to manage the land well? Of course we do. But the idea that we are in a situation where all wildlife is nearing extinction is hilarious. Next time you are on an airplane, look out the window. There is a whole lot more dirt and trees than asphalt and rooftops.

So many of these beautiful places are quite remote. If you are young and fit and have a lot of time on your hands, you can see them. But many people aren't up to a 4 day 60 mile backpacking event. Many of these people benefit from OHVs. Our government needs to think about them as well, and not just assume that a few paved roads and scenic overlooks is sufficient.

(cont.)

Most people would be wrong then. Go spend an entire day on a farm here in Minnesota. You will see AT MINIMUM one of the following (and I've seen EVERY one of the following 'on the farm'): Bear, Fisher, Martin, Fox, Ducks, Geese, Wolves, Squirrels, Chipmunks, Bald Eagles, Moose, Mink, Lynx, Bobcats, Coyotes, Migratory Birds, Hawks, Owls, Doves, Woodchucks, Garter Snakes, Bull Snakes, Rats, Moles, Mice, Pheasants, Porcupines, Skunks, Woodpeckers, All types of non-migratory birds, and of course, the Whitetail Deer. These animals use the resources that the farm provides for protection and forage. I would define that as an animal's habitat. They are free to roam in and out of the area with no restrictions. Go to a farm once and see how the people who make their living from the earth feel about being told that they are anti-animal habitat. After they finish their work for the day (usually long after most urbanites are done for the day... even after starting their days long before those same people have had their Lattes and Espressos) they will probably change your mind about their stewardship of the animals and the lands they call home.

Thanks, everyone, for the comments and questions on this idea. Yes, the land is preserved. A permanent conservation easement would be a required component of using this financing tool. Yes, a conservation easement and management plan are both required to qualify. Duane: the timber industry is supportive of the concept, as is the conservation community (the list of supporters includes Plum Creek, Weyerhaeuser, and the National Alliance of Forest Owners, as well as Trust for Public Land, The Nature Conservancy, Sierra Club, and Land Trust Alliance). The reason that the conservation community is supportive is that it will bring new, private money to conservation deals. There are several differences between the current Community Forestry Bonds proposal and what happened in Montana, but the most important is this: the Plum Creek Montana deal was essentially public dollars to expand public land ownership while the bill now in congress will enable private dollars to put a conservation easement on private lands and maintain those lands in sustainable working forestry. This bill would actually not use public funds - that's one of the cool parts about it. Instead, it would authorize the use of private, tax-exempt financing for acquiring forestland, in just the same way a non-profit hospital would access this capital to build a new facility. So, it can add to the overall conservation funding pie by bringing in new money from the private marketplace. Thanks again, everyone, for the great comments and questions. Feel free to contact me directly with other thoughts:

None of the commenters on this idea seem to have any real knowledge of what the environmental impacts of the Bristol Bay mine might be nor of the economic benefits of the mine. I would suggest that this is an issue to be resolved by the citizens of the State of Alaska who are more knowledgeable on the subject and are more directly impacted by the decision.

(cont.)

Do Not Reward Intolerance. Webster defines intolerance as "a quality of being unwilling to grant or share social, political or professional rights". There are many examples of intolerant attitudes and statements on this website. I really don't understand why we seem to be adopting this "culture of intolerance", but one thing is for sure: Rewarding intolerant behavior creates more intolerant behavior. Not only is the person being rewarded for his or her extreme behavior likely to continue to exhibit intolerance, others who might normally be more tolerant are likely to adopt inflexible positions as a means of achieving their goals. I must admit that when I'm hiking on a Forest trail I would prefer not to step in horse poo. It's slick and kinda stinky and tends to stick to ya. But I'm OK with sharing trails with stock users because I know that somewhere up ahead of me is a person on a horse who is having a great day doing what they enjoy doing, and their experience with nature is just as valuable to them as mine is to me. If you have ever run over a fresh cow pie on a motorcycle or ATV you know how messy that can be. But I'm willing to accept that inconvenience because I know the rancher who has the grazing permit is working hard to feed his family and needs that permit to survive. So I'm having trouble with all the claims of "user conflict" which are so abundant on this website. I fail to understand how the sound of a distant motor or a momentary encounter with a motorcycle "totally ruins the entire experience". Surely these temporary and minor inconveniences can be tolerated. Calling for the exclusion of tens of millions of motorized visitors so a few can realize their preferences seems a selfish, childish and intolerant request. Indeed, I don't think that "user conflict" actually exists - at least not in our western forests where I spend my time. I am fortunate to be able to spend hundreds of hours in National Forests every year, and I have never experienced a conflict with another visitor.

In re-reading my posting, I can see how someone might be left with the impression that I advocate allowing motorized uses on all Federal lands. Not so. I am a Wilderness visitor, and I enjoy my quiet time in the Forest as well. The real issue is how much Wilderness do we need, and what price are we willing to pay for more of it. In our Western Forests, huge areas are already Designated Wilderness -- yet virtually no one goes there. In the Flathead National Forest, for example, 46% of the Forest is Designated Wilderness (reserved for the exclusive benefit of quiet visitors), yet only 1% of all Flathead Forest visitors go there. I can't speak to the need for more Designated Wilderness in the east or mid-west, because I don't have experience there. I am content to let citizens in those areas determine their own needs. That's why "one-size-fits-all" top-down driven initiatives like the AGO don't work.

Clean Water State Revolving Funds. Preservation of land that filters water (or prevents further degradation of American waterways) is a cost-effective supplement or alternative to gray infrastructure of wastewater and stormwater treatment plants. Over the last 20 years, only 5% of the \$70 billion in EPA grant-funded Clean Water State Revolving Funds has been used for non-point source projects, much less land conservation projects specifically. State CWSRF administrators need to prioritize projects each year on cost-effectiveness (pounds of pollution reduced or avoided per dollar), and encourage municipal utilities to pass the savings from funding land conservation on to their ratepayers in the form of lower sewer and water bills.

One can certainly argue with the national policies of the Boy Scouts of America. But the discussion should be about the three million boys who connect with the great outdoors every months through their local boy scout troops, and the millions of additional boys who could benefit from this kind of program. It's great to think about new ways of getting kids outside and away from electronics, but scouting has proved over the past 100 years that it has a formula that works. America should celebrate and encourage these boys.

Another good example is the Mississippi National River and Recreation Area, which is part of the National Park Service. Goes right through the major metropolitan areas of Minneapolis and St Paul. The river was always there, and many people have a hand in it, and control over it there, but adding an overlay of the National Park Service has really made an impact, and it's exciting to have "National" status so close to home! Helps focus restoration efforts along the river, and raises awareness of this incredible natural resource right under our noses.

Went to our State Fair earlier this month - the University of MN has a whole department working on biodegradable plastic. Already have many "plastic" bags and packaging made out of corn!!! They're also working on open celled foam made out of soybeans. It's already there, it's just a matter of time...

What is the big problem with getting around on foot or horse in wild areas?!?!? I did so without any problem and obviously more cheaply than if motorized. The fun on a vacation starts when you begin putting one foot in front of the other. Escape from the din of civilization is something everyone should try!

_____, right on! I agree. Salmon are renewable, gold is not. Wild lands are a precious heritage. I used to live in Alaska and know how beautiful the place is!

Despite the clear conservation-focused management priorities set forth in the organic legislation and presidential proclamations for areas within the National Conservation Lands, the BLM is not consistently managing the units of the National Conservation Lands to protect the values that led to their creation. As a result the National Conservation Lands are a hodgepodge of inconsistent management regimes. The National Conservation Lands deserve strong policy guidance from the Department of the Interior that ensures their protection. We need to protect the National Conservation lands to protect their natural and cultural resources!!!!

Coming from a state where there are no legal OHV access areas, it is clear the impact to the local economies of a missed opportunity in comparison to neighboring states that do afford use....

Wilderness should be Wild. I think the Wilderness areas should be Wild. There should be no maintained trails. No trail heads. No trail head parking lots. No GPS, Cellphone, rescue beacons. If somebody tries to use an electronic device to summon help, it should be ignored. There should be no wilderness rescues provided by the government. Marked and maintained trails, and their associated trail heads and parking lots encourage concentrated use. This detracts from the wilderness experience. Of course there will still be a demand for more developed areas, with marked trails, and parking areas, and the possibility of rescue. These areas would have to be removed from Wilderness designation. Perhaps call them "backcountry" areas as a means of distinguishing them from areas that have paved roads. In the interest of fairness I think some of these areas should be designated multiple use. Not all the trails should be restricted to pedestrian use. Horses should be allowed on some. Bicycles, motorcycles, OHV, Jeeps, SUVs should all get areas their owners can use. The division of the available land could be based on the number of users in each group. This could perhaps be determined by trail registers at trail heads. Or perhaps each user would pay a fee based on which type of areas they intend to use.

Civilization/Ecology.... Thomas Berry published a book entitled "The Great Work....Our Way into the Future", Bell Tower, New York, 1999. Thomas Berry, who passed in 2009, believed we stand at a defining moment in history, one in which the earth itself calls out to us to embark upon a resacriization of nature...a new ecological beginning. My comment: The earth is calling.

This planning is already in place through the mandated state trail advisory boards under the Recreational Trails Program,, administered by FHWA, and through the MPO requirements of federal surface transportation funding.

While I support the economic values of Wilderness, the real issue is more attention to the economic value of recreation and wildlife on all public lands. For twenty years, studies have shown that the value of recreation in national forests exceeds substantially the value of commodity activities (fiber, food) -- even when the studies are constrained to measure only the economic activities within 50 miles of forests, and only counting those the expenditures of those who actually put "feet in the forest." Leafpeeper traffic through the White Mountain National Forest this fall, for example, is not being counted as a economic benefit of the forests. In fact, the latest research documents about 200 million recreation visits to forests and another 300 million visits on state and county roads prmpted by the forests and to forest inholdings, including the base of ski areas on private lands but with lift facilities on completely or mostly on national forests.

I strongly support the leadership of Jon Jarvis to demonstrate ways to minimize the carbon footprint of national parks and using park visits to educate us all about our options, and of increasing voluntary efforts by each of us to reduce energy use and more. But as far as AGO focusing on "black carbon soot melting the arctic ice cap" -- nope.

DOT Livability Focus is Great Opportunity -- But Action Needed. Livability is the new buzz-word for Congressional and Administrative leaders -- and there is great opportunity for those of us who care about conservation and recreation. Obviously we want transportation to focus on more than roads. Livability could mean expansion of programs like Transportation Enhancements (which has proven invaluable in converting abandoned railroads to trails and more) and to programs like scenic byways, the Recreational Trails Program and Safe Routes to Schools. But we need to be active participants in the definition of livability, and now have it stop at the edges of our metropolitan areas and be focused only on getting people out fo cars and to work, shop and school with alternative transportation. DOT leadership understands this and recent statements by DOT Assistant Secretary for Policy Polly Trottenberg are encouraging. The AGO report needs to highlight how much DOT has added to connecting Americans to the Great Outdoors in the past two decades -- and build on this as the parameters of livability are defined in the \$500 billion, 6 year surface transportation bill expected as a Congressional priority in 2011.

NPS Director Wins Quote of the Day: Parks and Health. From yesterday's Pittsburgh Tribune-Review, in an article about the "Let's Move Outside, Junior Rangers" program at Johnstown Flood National Memorial: "Young people inspire us; we want to help them be vigorous and curious for life. It starts with family fun. National parks are amazing places where exercise is disguised as adventure, and we sneak in some learning, too," National Park Service Director Jon Jarvis said. Way to go!

Understand your concern, but I'll give _____ the benefit of the doubt here and accept that his comment is about benign learning about history and park resources. And he is right that you can use fun as a vehicle to increase receptivity to learning!

(cont.)

Forest Service, Denver Water Board launch \$33 million 'Forests to Faucet' partnership to treat 38,000 acres of national forests in Colorado. Denver Water and the U.S. Forest Service will to treat about 38,000 acres of critical watersheds to reduce damage to key Colorado streams and reservoirs. The \$33 million "Forest to Faucet" partnership was announced in the context of the pine beetle epidemic that's wiped out about 3 million acres of lodgepole pine forests in the state. Part of the Forest Service share of the funding will come from money that's already been allocated to the Rocky Mountain region of the Forest Service but additional funds were "earned" when several national forests in Colorado competed favorably for a national forest health funds. Denver Water customers will pay for the other half of the work, seen as an effective way to prevent the huge back-end costs associated with cleaning up after a fire. The Denver Board of Water has already spent \$10.5 million dealing with impacts to a single reservoir after the Hayman fire. It could cost up to another \$30 million to complete the restoration, and more if there are significant rainfall events that lead to more erosion and sedimentation. The work will focus in thinning, fuel reduction, creating fire breaks, erosion control decommissioning roads, and, eventually, reforestation. The partnership could serve as a model for similar agreements across the West and with other industries, including the ski industry and power companies with infrastructure on forested lands. In total, about 110 million acres of national forest system lands are in need of some sort of treatment. Natural evolution, fire suppression and global warming are all factors contributing to the need for restoration. Before 2000, up to 5 million acres of forest per year were affected by wildfires; since then, the average has increased to about 5 to 10 million acres, and with longer and more intense droughts expected, that figure could go even higher. USDA Under Secretary Harris Sherman, a former Denver Water Board member and former Colorado DNR chief, is a leading proponent of these partnerships and has moved a key Forest Service official, into a new temporary assignment to find additional partnership opportunities to better manage and protect public lands. GREAT INITIATIVE!! BRAVO

Here is an example of how AGO can make a difference: by sharing ideas that represent core concepts, we can build a broad consensus and move together in a united way.

Whatever the President chooses to do with AGO, it is almost certainly going to involve Congressional hearings. This IdeaJam can be a useful resource for staffers on the Hill as those hearings develop -- and I will also tell you that I have appreciated the opportunity it is providing to share ideas and examples of success in connecting people to the outdoors and protecting our lands, waters and wildlife.

Conversation can yield to common goals, trust and progress. Bravo for the Friends of McInnis Canyon and the BLM officials involved here.

The FS fee program is largely legitimate and serves the public well. There are ways to curtail attempts to charge where no services are sought or provided. What some of the posters fail to admit is that federal courts and magistrates have upheld the fee program repeatedly.

Harvard Medical School Offers Prescription for Health: Get Outdoors. Today's Harvard Medical School "Healthbeat" -- 10-12-10 -- offers great advice: A Prescription for Better Health: GO ALFRESCO Most of us spend the vast majority of our time inside. According to one government estimate, the average American spends 90% of his or her life indoors, and as we get older we become even more inclined not to venture out. But is all this indoor time hurting our health? The study results are ticking up: spending time outdoors seems to have discernible benefits for physical and mental health. Granted, some are merely by association and can be achieved by other means, perhaps while indoors, but often only with a good deal more trouble and expense. Here are five potential benefits of spending more time outdoors: 1. Your vitamin D levels will go up Exposing your skin to sunshine -- actually, ultraviolet B (UVB) rays -- enables the body to make vitamin D, which is why it's also known as the "sunshine vitamin." Research suggests vitamin D may have protective effects against everything from osteoporosis to cancer to depression to heart attacks and stroke. Of course, it has to be sunny out, and there are some snags. Where you live, the season, and the time of day affect how much UVB reaches your skin. The farther you live from the equator, the less UVB radiation you receive. Vitamin D production is affected by age (people ages 65 and over generate about a fourth as much as people in their 20s) and skin color (African Americans have, on average, about half the levels of vitamin D in their blood as white Americans). Another problem: sunscreens are most effective at blocking UVB light, the part of the spectrum that causes sunburn, but UVB also happens to be the kind of light that kick-starts the generation of vitamin D in the skin. The either-or of sunscreen and sunshine vitamin has stirred up a lot of controversy and debate between pro-sunscreen dermatologists and the vitamin D camp. But there is plenty of middle ground here: some limited sun exposure on short walks and the like, supplemented with vitamin D pills if necessary, and liberal use of sunscreen when you are out for extended periods, particularly during the middle of the day. 2. You'll get more exercise (especially if you're a child) Being outside isn't a guarantee of being active. Still, there's no question that being outdoors is associated with activity and indoor living is associated with being sedentary, particularly for children. According to some surveys, American children spend an average of 6½ hours a day with electronic media (video games, television, and so on), time that is spent mainly indoors and sitting down. British researchers found that children are more than doubly active when they are outside. Adults can go to the gym. Many prefer the controlled environment there. But if you make getting outside a goal, that should mean less time in front of the television and computer and more time walking, biking, gardening, cleaning up the yard, and doing other things that put the body in motion. 3. You'll be happier (especially if your exercise is 'green') Light tends to elevate people's mood, and unless you live in a glass house or are using a light box to treat seasonal affective disorder, there's usually more light available outside than in. Physical activity has been shown to relax and cheer people up, so if being outside replaces inactive pursuits with active ones, it might also mean more smiles and laughter. Researchers at the University of Essex in England are advancing the notion that exercising in the presence of nature has added benefit, particularly for mental health. Their investigations into "green exercise," as they are calling it, dovetail with research showing benefits from living in proximity to green, open spaces. 4. Your concentration will improve A study published in 2008 found that children with ADHD scored higher on a test of concentration after a walk through a park than after a walk through a residential neighborhood or downtown area. Other ADHD

Discussion Question 1

Written & Online Comments

(cont.)

studies have also suggested that outdoor exercise could have positive effects on the condition. Truth be told, this research has been done in children, so it's a stretch to say it applies to adults, even those who have an ADHD diagnosis. But if you have trouble concentrating -- as many do -- you might see if some outdoor activity, the greener the better, helps. 5. You may heal faster University of Pittsburgh researchers reported in 2005 that spinal surgery patients experienced less pain and stress and took fewer pain medications during their recoveries if they were exposed to natural light. An older study showed that the view out the window (trees vs. a brick wall) had an effect on patient recovery. Of course, windows and views are different than actually being outside, but we're betting that adding a little fresh air to the equation couldn't hurt and might help. BRAVO to our friends in Massachusetts!

And any comments that fail to reflect on the content are unfortunate. The Collaborative Forest Landscape Restoration Program and the Cooperative Conservation Partnership Initiative are very important initiatives in harmony with the charge given to AGO by President Obama on April 16 -- and I see no reference to them in other postings. Bravo to the Rural Voices for Conservation Coalition for raising the ideas.

Coastal and Estuarine Land Conservation Program -- Real and Priority Conservation. The Coastal and Estuarine Land Conservation Program (CELCP) was established in 2002 and reauthorized in 2009 and provides matching grants to state and local governments to protect lands with significant conservation, recreation, ecological, historical and/or aesthetic values which are threatened by conversion. Priority is given to projects which can be effectively managed and protected and which use leveraged funds. Since 2002, NOAA, which administers the program, has awarded more than \$230 million for projects in 27 of the 34 eligible states, protecting more than 50,000 acres. More information on the project is at { Link } This program is noteworthy for several reasons. First, states need to nominate projects and relate them to state CZM and related plans. Second, each project needs to demonstrate need, secured matching funds and landowner willingness to sell. Third, the projects are reviewed and ranked by teams of public and private sector experts independent of NOAA's analysis. and finally, the prioritized list is presented to the Congress, which then appropriates money annually for the projects -- and the Congress determines how far down the prioritized list they will reach with its funding level. No pork-barrel or earmarking the projects are funded according to the reviewers' priorities. Good example of a strategic use of federal dollars to boost conservation!

Free Bus Access to and thru Delaware Water Gap NRA. If you live in or around East Stroudsburg, Pennsylvania, it's going to be easier to get to Delaware Water Gap National Recreation Area on Saturdays this fall. That's because the National Park Service and the Monroe County Transit Authority are teaming up to provide free "Pocono Pony" shuttle buses to the park, buses that will include a park ranger on board who can help suggest places to go in the NRA or simply answer your questions. "Enjoy the fall weather by taking a hike on one of our many trails, spend a day at the beach, pack a picnic or go fishing, visit Pocono Environmental Education Center and attend one of their many programs or bring your bike and take a ride on the McDade Trail," suggests NRA Superintendent John Donahue. Funding for the buses, which can tote bicycles, as well, comes from the Paul S. Sarbanes Transit in the Parks Program. The shuttles from East Stroudsburg will run to several locations within the park starting on September 25 and continuing each Saturday through October 30. Schedules and route information can be found at the Monroe County Transit Authority website at www.gomcta.com/schedules.htm. Information about Delaware Water Gap National Recreation Area upcoming events and programs is available on the park's website (www.nps.gov/dewa). Thanks to the DWGNRA park leadership and the Paul Sarbanes Transit in the Parks program for making this possible -- and to the National Parks Traveler (www.nationalparkstraveler.com/) for highlighting this news.

Would an infrastructure bank be a useful tool for federal recreation providers?. President Obama announced a plan for moving ahead on a 6-year surface transportation program which would embrace a concept he referenced in his Presidential campaign: an infrastructure bank which would raise private capital for transportation projects and guarantee the repayment of those funds with a relatively small federal deposit. This would be his way to "front load" the surface transportation program and create more employment without adding to the federal deficit. And the federal guarantee makes the private capital available at low rates. If the White House likes the idea of an infrastructure bank for roads and railroads, would they also like the idea of an infrastructure bank for parks and other federal recreation sites where entrance fees, user fees and other payments could be earmarked for repayment of the funding? Possible examples of projects: utilities; campgrounds; marinas; lodges and restaurant facilities.

Concessioners and guests team up to raise more than \$1 million for parks. Concessioners in about ten national parks offer guests a chance to make a \$1 per night contribution to help fund projects in those parks. The money is deposited with the National Park Foundation and then returned to be spent on park projects selected by the local park or the local park and a local friends group. Guests can choose to drop the contribution at check-out. Over the past five years, some \$1.1 million has been raised -- more than \$310,000 last year alone.

Sorry, but you have your facts wrong. FLREA's chief goal -- which has been achieved -- is to allow park entrance fees and campground fees for five federal areas to be retained at the collecting sites for operations and maintenance. Going for a walk on a national forest without use of specific services remains free. Enjoy!

Discussion Question 1

Written & Online Comments

(cont.)

It costs real money to maintain our nation's recreation infrastructure and, unfortunately perhaps, use of this infrastructure is actually used and enjoyed by a relatively small portion of the total US population. It is fair that those who derive the benefits pay a bit more toward the costs. The fees under FLREA are very reasonable, and in almost all cases there are alternatives -- including free access for those who volunteer.

I'll make one more attempt to bring some sensible exchange of ideas -- and ignore the ridiculous emotionalism of some of the commenters here. Neither I nor ARC have advocated recreation fees for use of public lands without significant public services. If you use a developed campsite, though, or a boat ramp, or a developed beach area, it certainly seems appropriate to have you pay a fee that is restricted by law to uses linked to that site and the services used. Interesting that none of the comments about the alleged unfairness of the fees has noted that fees can only be collected after approval by -- and only at the amounts approved by -- advisory committees established by the FS and BLM and which must meet in public and receive public comments.

National Parks, Medical Community and Shoe Co. Team Up for Kids' Freedom Run. Kids to get free shoes October 2, 2010 - By Jason Mansfield, Special to The Journal SHEPHERDSTOWN - Terra Plana has donated 200 pairs of shoes to the kids who will run in Freedom's Run event today. Shepherdstown's Two River Treads is distributing the shoes from Terra Plana's Vivobarefoot Kids line, which features shoes that offer protection and the benefits of being barefoot. The shoes will be distributed free of charge to the young runners expected to participate in the Kids Fun Run this afternoon. "We are thrilled to be included in this event, as it demonstrates not only the importance of child foot health, but gets kids engaged in the outdoors. A healthy lifestyle should be both fun and accessible to all kids," said Galahad Clark, owner of Terra Plana. "The race sends an important message while helping to fund the Wild and Wonderful Trails, which is making this a reality." The trails program aims to create walking trails, gardens and outdoor learning centers for schools in Jefferson County, like the recently completed project at Page Jackson Elementary. Two Rivers Treads is handing out the shoes on a first-come, first-served basis during today's children's event. There is a catch, however, as the kids are asked to wear the shoes during the Kids Run. The little recipients of said shoes also are encouraged to take their families along on a hike in each of the region's four national parks: Harpers Ferry National Historical Park, Antietam National Battlefield, C&O Canal National Historical Park and the Potomac Heritage National Scenic Trail. Harpers Ferry National Park will even provide the kids and their families free admittance for helping clean up the park when they come, according to _____, who works at Two River Treads. The Vivobarefoot Kids line of shoes is intended to allow the foot to function as it would barefoot. "We not only want to promote natural outdoor physical activity, but we want to instill in parents the importance of letting children's feet develop in their natural way. This of course is to spend as much time as possible barefoot, and when you need to wear shoes, to wear those that complement normal foot function," said Dr. Mark Cucuzzella, the race director and owner of Two River Treads. Last year, 200 children participated in the Fun Run, but this year that number is expected to double. The Fun Run, starting at 11:30 a.m., is free and non-competitive, allowing the children to "run, walk, or stroll" around the track at their own pace. The 1-mile run will circle downtown Shepherdstown, starting and ending at Sara Cree Hall and passing the historic "Little House."

Discussion Question 1

Written & Online Comments

(cont.)

Sorry to disagree, and disagree strongly. Enlisting the private sector, and especially small businesses, in conservation, recreation and wellness is the key to sustainability and success. If we can turn over the National Mall to the NFL and Pepsi for self-promotion, we certainly can and should encourage local and federal park agencies to partner with a running store, a doctor and an innovative shoe company!!!!

While I generally support this comment, I do not believe that management of our lands should be looked upon as a "majority vote" issue. Our federal land managers need to be trained and rewarded for developing consensus on land use decisions, as well as helping the public understand the science issues involved. And there needs to be consideration of the variations in public values within the one-third of the US managed by federal agencies. In short, national park system lands and wildlife refuges deserve more "national" consideration in use decisions than much of the multiple use lands systems.

You certainly bring a smile to my face when you cite the use of the Recreational Trails Program in Baxter -- a favorite program and a favorite place! As you may know, the RTP program has helped with more than 20,000 partnership projects like this across the nation since its creation in December 1991, and has a unified support base of all national recreation trails organizations.

Sorry, I don't have such a negative view on the impact of man on this planet. I'm pretty proud of our conservation tradition in the USA. First national park and the best national park system in the world. Ditto for national forests. And National Wildlife Refuges. And while those programs were the product of visionaries in the early 1900's, the National Wilderness Preservation System and Wild and Scenic Rivers and more were products of the 1960's -- and we are still adding new protective strategies including national scenic byways and the national landscape conservation system in the 21st Century.

Sorry you missed the revolution which took place in the early 1990's. 10% of all Surface Transportation Program dollars -- the bulk of federal road monies -- is now devoted to Transportation Enhancements (TE). TE is all about what you call for -- it has converted thousands of miles of abandoned railroads to trails, built countless thousands of miles of new bikeways and added bike/ped facilities to bridges and other traditional "choke points." This commitment of funding bike/ped activity has been repledged by the Congress several times since its establishment by ISTEA in 1991. And the TE program was just one of the great features of ISTEA. Also created in that legislation: scenic byways program, which can fund expanded shoulders for safe walking/biking along roads through corridors with special recreational/scenic/historic/cultural attributes; the Recreational Trails Program, which provides nearly \$100 million annually to state trail programs for all types of trails -- motorized activities and non-motorized -- even though funding is derived from use of motorized devices off-highways.

Wilderness Inquiry is marvelous, a national leader in helping the physically challenged access the Great Outdoors and now becoming a strong, creative force in connecting urban kids to fun in the outdoors. Bravo!

Discussion Question 1

Written & Online Comments

(cont.)

The issue here is that we have ignored the inholding issue too long. Once the Congress designates a park/refuge/other special area, we need to proceed to either buy private inholdings at a reasonable price or impose development restrictions -- and pay fair value for the restrictions imposed. I do agree that Tom Chapman is engaged largely in a gaming process that needs to be discouraged -- but not at the cost of legitimate private property rights.

Our national parks include an infrastructure which enhances public access and hardens a small portion of the parks to mitigate environmental impacts. This is a legitimate and desirable strategy, and the poster's message is sound advice.

This is a good example of how conservation, economic activity and physical activity can be combined. And did I mention that at least some of the needed funding for the trail development and operation is from the Recreational Trails Program!!!

It does puzzle me to have people demote an idea like this. Do they oppose more effective and less expensive cancer treatment? Do they oppose new sources of funding to improve recreation facilities at USACE recreation sites? To me, this seems to be a huge opportunity and a win in every possible way.

Why not suggest an alternative for the grazing/mining practices you outline? Higher fees, placed into a trust fund for conservation purposes, could help us circumvent PAYGO problems facing many of our legislative initiatives and allow us to give serious consideration to the multi-year public lands and conservation program budgeting we need!

I think we ALL agree that sustainable, alternative energy needs to be advanced, but that we need to be mindful of unintended consequences. Our highways of the '60's and urban redevelopment efforts of the '60's and '70's proved that good intentions don't deliver good results. I'm reminded of a favorite saying: "There is always a well-known solution to every human problem--neat, plausible, and wrong." H. L. Mencken Wind turbines are good -- but not in the wrong places. Geothermal is good -- but not if it "kills" Old Faithful. Solar is good -- but not if the water demand exacerbates problems with groundwater mining.

Hunters and anglers have helped fund conservation programs for decades. the fees and special federal taxes they pay generate funding used to acquire conservation lands and improve habitat for all species, hunted or not hunted. These revenues are prime underwriters of watchable wildlife programs -- which are free to participants in most instances. The fees and taxes paid by hunters and anglers also pay for law enforcement on public lands -- including enforcement of hunting and fishing laws. And to underscore what has been said above, threatened and endangered species cannot be hunted.

Parks are the vehicle for life-long learning -- and beginning the process early with both formalized learning and learning as an adjunct to mostly-fun visits for kids is a very high priority. NatureBridge is at the forefront of these efforts and can and should be encouraged to expand into more park units.

Those of you with NPS connections -- be on the look-out for Director Jon Jarvis' message next week about the importance of connecting parks with health efforts in a "flat hat chat." I'm counting on the Director to communicate better than I can why this is a "no-brainer!"

No funding strategy that depends primarily upon an annual, national, political allocation of resources will provide stable, sufficient funding for national parks and other federal recreation and conservation programs. We need to develop operating plans that generate revenues that can be retained, seek an earmarking from major revenue streams and look for non-profit and for-profit operations in parks which are compatible with agency goals and objectives.

It does not take a genius to understand that some forms of recreation are not appropriate for some locations.

The vast majority of Americans enjoy viewing wild animals interacting in their habitat ... not draped over the hood of a car.

You can stop beating the drum... Global Warming is over. We just got through one of the coldest summers in history. This winter promises to be the same. Al Gore made a 100 million dollars from a lie and scare tactics. Ha. Let's learn to share our Public Lands with ALL Americans.

First of all, I don't understand why so many people automatically assume that county specific land bills won't include wilderness and will result in the county exploiting the land to the highest bidder. This isn't even remotely true! And as an example, I'll point to the very successful Washington County land bill here in Utah-which included several hundred thousand acres of wilderness-and I'll also point to the "in the works" San Juan, Emery, and Piute county land bills-all of which will include wilderness and other protective designations...as they should. County specific land bills do not mean no protective designations! That is propaganda on the part of extreme environmentalists. Nothing more nothing less. I believe the opinion of a person who depends on public land for their livelihood and lifestyle should certainly have more say than a person from the other side of country who may or may not (likely not) ever set foot on the land. County specific land bills ensure that those Americans that have the most to gain-or lose-have the most say. All other Americans get a say via how their elected officials vote on the counties proposed bill. It's the right way!!!

I worked for refuge for 30 years on 6 different refuges/wetland management districts, a regional office, and Washington D.C. As former Secretary of the Interior once said: "Refuges are infinitely more important than our national parks" because they are close to more Americans and are catalysts for conservation across the broader American landscape. A system of lands encompassing all ecosystems in the U.S. and protecting a stunning array of species while providing hunting, fishing, and wildlife observation deserves the attention that separate agency status would present. A system of wildlife lands started by Theodore Roosevelt deserves no less.

Evidence? Hundreds of examples, such as the one below, happen throughout the country. Sponsored by off-road enthusiasts. cleaning up garbage from everyone who thinks our world is their garbage can. Where there are no off-road trails, there is garbage. The off-road community unites to help keep our areas clean and usable for all to enjoy. We are not the problem, we are a part of the solution. Organizations like Tread lightly, help promote the responsible use of land we love to explore. There are many off-road enthusiast, who belong to clubs that promote responsible land use. We, as a community want to do our part , so all can enjoy. { Link }

Horses and History. On the East coast National Parks use birth control (PZP) to manage wild horse herds on barrier islands as opposed to the roundups of the BLM. This idea needs to be extended to the west where wild horses also have a legitimate historic as well as prehistoric place. The National Park Service could lead the nation in treating these animals as the native species they are. Americans are fascinated by them. Think of the history, the Native American cultures, the movement West, the Spanish. Climate change - how have things changed since horses originated here? How do they fit into the ecology as opposed to causing environmental problems since horses had long been in most of the west before the westward movement began?

No matter your choice, this would be illogical to argue against. If you are a hiker, the great reasons to hike would match these. If you are a camper, the same. Mountain biker, equestrian, trail runner, angler, hunter, adventurer, explorer, bird watcher, naturalist. We share what we love. Who we love and what we love is a thread, or glue, that holds families friends and communities together. If we were talking about board games or video games, dinner together or picnics, we could argue what we think is best for our type of needs and wants, but we could not argue what suits others. Like all things, respect, honor, understanding, tolerance and collaboration is necessary for a balanced and sustainable existence.

Just to educate you slightly, rainbow trout and brook trout are, in fact, native to North America. Rainbow trout are native to the West coast or North America and brook trout are native to the Eastern part of North America. Brown trout are native to Europe and Scandinavia.

California Forestry Association: already has a professionally designed courses that cover grades K thru 12 Teaching aides provided. classes for school teachers are held during summer months. Expenses ,food an lodging are covered, all the teacher needs to do is sign up. cal forests can be contacted at, www.foresthealth.org or call 916 444 6592 for further info.

proclamation. I suggest a presidential proclamation to reaffirm that the federal government's role of protecting and maintaining the National Parks System as a national patrimony for the whole people, present and future. The National Park Service should encourage and welcome the cooperation of citizens and communities, but it should never fall under the sway of commercial interests or groups seeking to promote activities that are harmful to the environment.

(cont.)

Environmental education is absolutely critical if we intend to protect the planet. What better place to conduct this kind of essential work than in a national park setting? It is only when youth get to experience the outdoors for themselves that they truly begin to understand the importance of protecting the environment.

Bristol Bay: A gem on our planet. I was fortunate to grow up in Bristol Bay, Alaska. This gem in Southwest Alaska is home to a thriving culture, an incredibly rich and alive ecosystem, and the largest sockeye salmon runs on the planet. Those who do not learn from history are doomed to repeat it. In the past hundred years we have seen most of the world's salmon rivers destroyed. Ranging from Europe, to the Atlantic runs on the East, to more recently the salmon die off on the West coast, salmon habitat has been destroyed. Yet, still there is hope. Due to the harsh climates and low populations of the North, Alaska has maintained land incredibly rich with life. A large scale mine proposed by foreign mining interests threatens our headwaters. We are at a point where clean water on this planet is about to surpass gold in importance. I can't eat gold. I can't drink copper. But salmon, clean air, clean water, cultural identity, these are things that matter to my humanity. When I pass, as we all will, it's not the material things that'll matter to my life. What matters is the richness I have felt in our natural world. The peace and wonder that accompanies me when I can look out onto thousands of miles of life. Please, join me in telling the US Government that Bristol Bay is a National Treasure worth protecting!

Send a message that wildlife matters. The Federal Government can be a better partner for conservation by sending a message -- from the very top -- that wildlife and wilderness matter. Teddy Roosevelt lead the country and instilled values by insisting that national parks were treasures. We need similar leadership today to set an executive example. Whether it is protection of Alaska or Nevada against rampant energy exploration and development, protection of wild horses, polar bears or wolves, or preservation of habitat for birds and bees -- we need the men and women at the top to lead the way with vocal, visible statements.

This seems like the perfect example of a site that should be seriously considered for Obama's America's Great Outdoors conservation objective. Florida must be looking for ways to protect it's wildlife and it's water resources for the present as well as the future. To preserve this tract of land in it's current natural state will be a positive step toward achieving this goal. Anyone living in this area should see the value of preserving this fragile ecosystem in our midst and do what they can to keep it from development.

In the end we will conserve only What we love; We will love only what we understand; and we will understand only what we have been taught. -Baba Dioum I am passionate about my job as an environmental educator. Although an idealist, I cannot believe that I will transform every student into a conservationist. However I do believe it should be a constitutional right for every child to step off the asphalt and into the wilderness. To rob a child of that ability is to extinguish a part of them. Education is learning about the world. The world is the environment. Teach it.

(cont.)

We the People. The Constitution of United States reads " We the people". Off highway enthusiast are the People, we are the laborers the contractors the factory workers. We are the American families who love the great outdoors. We use it, we don't abuse it. Four wheel drive clubs do more to protect and care for the National Parks and Forest than any other group. We are there for the back breaking hard, down and dirty work. Maintaining trails taking care of water sheds and run offs. Other groups make a louder noise and can write bigger checks, OHV users do the real work. We need areas to play with our motorized vehicles and share family outing. Family is really what off roading is about. On the trails you will find husbands and wives with their children, Uncles and Nephews, Father and Sons, working together to accomplish the achievement and awards that come from traveling terrain that requires skill and perseverance. These times together builds better people. Responsible people who want their children and grand children to enjoy the same experience. You want a teenager whose active, healthy and respectful? Take him on a jeep trip. They will establish goals to protect, respect and care for Mother Nature as well as their own communities and the people around them. We the People of United States want and need access to our land, please do not make our land available to only a few who wish to control and dictate to the American people Mr. President I can make myself available if you wish to learn more.

Yes,thank You - There is so much room out there. What seems to work well is to provide user groups the opportunity to help care for the trails they love, skin in the game if you will. At least as long as the budgets are thin. The problem as I see it: historically infinite miles of logging roads were available, a fraction were enjoyed by OHV's or other user groups but there were no funds to care for them so when many were responsibly closed to re vegetate during the 50 years it takes to grow a new tree crop. It was perceived as a nefarious loss of access. The way forward involves local ranger districts understanding what folks enjoy and helping make it happen. When a logging road is built, ohvs, bikers, hikers, hunters, horses, and decommissioning should all be considered but we cannot afford, nor does it make sense to maintain them all.

One way to attain the promise of this idea is to form a cabinet level "Department of Conservation Lands". This department would include the US Forest Service, the Park Service, the Bureau of Land Management and the National Wildlife Refuge System. Each would retain their own charter and purposes; but be united under a single department and a single cabinet member. A single department would be able to provide a coherent vision for all PUBLIC LANDS. Those lands could be managed as an intertwined land system; each subject to its own mandates, but sharing solutions, ideas, information, and goals common to good, scientific stewardship. Another benefit--It would undoubtedly save money.

The National Wildlife Refuge System is an inspiration for wildlife advocates world wide. It is the only organization in the United States totally devoted to the preservation of our fantastic wildlife and its habitat.

(cont.)

A great source for funding would be the bicycling and pedestrian beneficiaries of such planning efforts. Why burden others with plans that only benefit a rank minority of citizens? Possibly bicycle license tags and a hiking footwear federal excise tax would be appropriate. That way these folks could contribute to good conservation the way hunters have contributed to wildlife conservation for decades.

Coming back to the OP, his idea is to have a sticker or sign with a characters large enough to allow identification of machines violating rules in that area. I'm not opposed to this, but I don't know that it has to be via a site-specific permit. Many states require snowmobilers to display registration numbers in some minimum size on their machine. This would accomplish what the OP stated he desired without creating another bureaucratic maze of permits. "A snowmobile does not automatically 'tread lightly' - operator discretion is crucial. The snowmobile will not keep itself out of unsuitable conditions, nor can it prevent its driver from pursuing clandestine bushwhack routes through breakable tree tops, etc. A snowmobile does not automatically 'tread lightly' - operator discretion is crucial. The snowmobile will not keep itself out of unsuitable conditions, nor can it prevent its driver from pursuing clandestine bushwhack routes through breakable tree tops, etc. Even though thoughtless pedestrians may adopt unsuitable routes on vulnerable terrain, they quickly tire of post-holing into brush, and soon turn around whereas a snowmobile just keeps going and going - even when it trenches foot-deep through unsupportive snow into underlying material. Like any remotely operated vehicle, a snowmobile must be driven with discretion to minimize its impact on the resource and on other forest visitors. Like any remotely operated vehicle, a snowmobile must be driven with discretion to minimize its impact on the resource and on other forest visitors." I agree with the first sentence. Responsible operation is important rather we're talking an over the snow vehicle, OHV or non-motorized recreation. And yes, there are irresponsible operators of all types. I do have to debate this statement: "Even though thoughtless pedestrians may adopt unsuitable routes on vulnerable terrain, they quickly tire of post-holing into brush, and soon turn around whereas a snowmobile just keeps going and going - even when it trenches foot-deep through unsupportive snow into underlying material." I believe what _____ is describing is a circumstance where a brush field, new growth seedlings or small trees exist, and are covered with a layer of snow. The vegetation creates air pockets where the snow is not fully supported, allowing the snowmobile or skier to break through into the void. In my experience, these are conditions that snowmobilers actively try to avoid. This unsupported snowpack may give way at any time, resulting in the machine getting stuck. "Unsticking" a 500 lb machine is far more unpleasant than it is for a skier to extricate himself from a "post hole" scenario (I believe by this _____ means where a skier sinks up to his knees or deeper when the snow gives way). This is a circumstance most riders try to avoid. In general, there are two types of snowmobile "configurations". The first are designed for operation on maintained trails or hard-packed snow conditions. These machines typically have (relatively) short tracks, and a wide ski stance for stability on twisty trails. Designated trails don't seem to be the issue the OP is discussing. Mountain sleds typically have much longer tracks to provide floatation and allow them to operate in many feet (10 or more) of snow. They typically are operated on deep snow off of groomed trails. They don't perform well on trails or hardpack conditions. The snowpack in preferred locations for these machines would tend to put seedlings and brush out of reach most of the time. That of course assumes that riding areas in higher elevations where these machines truly have no impact has not been closed to the snowmobiler. The specific conditions that these machines excel at are typically devoid of vegetation (above tree line and buried under snow) and have no wildlife during the winter season. This is not to say that there can't be issues at certain times of the season, and when operated in sensitive locations. Perhaps some snowmobile riders familiar with the area in

question will chime in.

I, and I believe most other OHV users, agree that there is a need and benefit to Designated Wilderness areas, off limits to motorized recreation and management. They should exist in as near an untouched condition as possible. I'd go so far as elimination of manmade hiking trails, but that's for another thread. We also are a country that needs natural resources, including mined materials, timber and energy products. We need to be able to utilize some portion of our public lands for these purposes as well. In between are what some are proposing for "backcountry" designation. These areas could be utilized for ORV use on designated trails, a limited road system to allow access for camping, hunters, fishermen, etc. In addition, some logging, when done in areas where thinning and fuels reduction promotes forest health and recovery, makes sense. This type of compromise is opposed by at least a portion of the environmental community. A great many people, and I believe this includes both of us, recognize that there is need to achieve a balance between these uses. However, the perception is that there are extremists on both sides. The perception is that some in the "environmental" community want to eliminate all resource extraction and motorize recreation on public lands, and would restrict nearly all areas without a paved highway as wilderness. The opposite perception is that some that ride an OHV or supports some logging wants to see every inch of public land developed and cares nothing about nature, wildlife or our scenic backcountry. Like most issues, the truth, at least among rational people, is somewhere in the middle.

"If the President cites this forum (as a *whole*), indicating that it will have significant influence on policy (perhaps recounting a few salient details reflecting the breadth of viewpoints expressed) in the next State of The Union Address (i.e. as formally and publicly as possible)...would that do it?" There are several things the president could do that would convince me that he truly wanted public input from all users. If the president were to discuss this forum, if he were to inform the public that 6 of the top 10 ideas heavily promoted continued or enhanced opportunities for recreation involving OHVs, and if he were to do so during the state of the union address as you suggest, yes that could convince me. If he were to quote those results and direct the various land management agencies to re-evaluate their policies and efforts with regards to trail closures, that would convince me. I'm easily convinced, all he has to do is "walk the walk". I hope he does so. If he fails to mention that multiple use was strongly supported in this forum, promotes expansion of Wilderness designation and National Monuments over the opposition particularly of those in areas affected by them, it will also lead me to conclusions about his character.

Which particular National Forest areas in the lower 48 can you recommend for this, that has a comparable concentration of ore and would not also run into opposition of environmental groups?

Close hiking trails of no proven economic use that are degrading environment. Close all federal public land hiking trails unless it can be proven through EIS process that those hiking trails are necessary for long term economic benefit and are not causing environmental degradation.

Discussion Question 1

Written & Online Comments

(cont.)

I'm assuming you're complaining because you were charged a fee to park at a developed trailhead and hike a maintained trail. If so, sorry, it's time hikers paid some small portion of the cost of maintaining trails.

Charging a fee for the use of parking lots at trail heads, and for the maintenance and construction of trails isn't "stealing". It sounds like we have a small handful of people in a user group that is opposed to paying their own way, and wants everyone else to do so. The RFDP program was a great way to raise funds for facilities from the specific users of these trail systems. Don't like to pay? Just stay off the trails, there are plenty of places to hike in the National Forests that are not developed trail. I know it's only a small, whiny minority, but threads like this make the hiking community look bad.

Someone on a snowmobile can get 50 miles from a parking area, climb several thousand feet, enjoy the view from the top of a mountain, have lunch and be back home that same day. Do you want to try that on snowshoes sometime? I doubt that most people on snowshoes or XC skis will cover more than 10 miles in a day. In my area, and most of the west, that barely puts you out off the plowed roads, let alone into the nicer parts of the backcountry where you are up in the mountains and enjoying the views. As such, I would say that this makes that area "unreachable" by any but a tiny portion of the population that are both willing to XC travel an extensive distance, but also to winter camp to do so. There is room for both groups. Designate some non-motorized areas near trailheads, and route motorized rec off into the deeper backcountry, where the related noise is less of an issue. Hopefully the non-motorized community is willing to meet half way here.

So sorry for not being clear... I meant it would be great for the younger ones to have something worthwhile AFTER school. Let's ask _____ to clarify.

I agree. Allowing students the opportunity to spend a night under the stars in a national park allows them to see themselves and the world they live in in a different light. I always found National parks to be a perfect canvas to exercise the art of teaching. Parks are a legacy that we have purchased for our children. ALL children should be able to experience those parks and learn to value the choices that were made by those who worked to make these parks a reality. To change minds, education must reach the heart. Students must be given reasons why they should choose to preserve open space. One who never experiences open space probably will not feel the passion to preserve it.

People do need to be able to go visit the wilderness to be able to fully appreciate it. However, it's not best to just let people freely roam into national parks and let them turn into tourist attractions. Then we will be defeating the idea of wilderness. American's should interact with the wilderness, but not destroy it. The staff in these national parks should be an small yet effective group of rangers that are proud of the wilderness and the nation that they serve. In his essay titled "Why Wilderness?" from 1938, Sigurd Olsen says, "...there are only two types of experience which can put their minds at peace, they way of wilderness or the way of war." Wouldn't we much rather prefer wilderness than war? We always talk about working toward world peace, so why don't we start sending people into the wilderness instead of war zones?

Discussion Question 1

Written & Online Comments

(cont.)

It is imperative that we protect our Civil War battlefields before they are gone. Once they have been developed, they will not come back. They will be lost forever. We owe it the brave men, North and South, who fought there to do this. We must preserve their legacy, both sides. The war made us who we are as a nation and as a people. We should not ignore that past, run from that past, or forget that past. We must embrace it. We must ensure that our children and their children will be able to walk those fields as we have and experience that special feeling and deep contemplativeness that comes from being at a place where "something lingers, something abides."

Amen to that. Habitat is everything! Other than zoos, of course.

OHV recreation is here to stay, I would like to see the Forest Service and other land mgt. agencies work a little harder at the creation of safe, legal, OHV riding opportunities. Thanks.

In NC, all veterans fish for free. Finding useless conflicts of interest at this microlevel of payment for a privilege is to argue that we the people, through our government, can do nothing if you are opposed. Payment for parking (your private vehicle) functions like all punitive taxes--to discourage certain destructive behaviors. Carpool if you have problems?

Creating a national park in the Maine woods is a great idea. For people who are not from there, or do not have experience with the Maine woods, its very hard to know how to access the wonderful places we hear about. In other states, there are national parks/national forests/national recreation areas that provide easy access and knowledge. I know that if I go to a national park I will have a place to camp, a place to hike, a place to fish, etc. When I look at a map of northern Maine, I don't know where those opportunities exist. A national park will make access easier and bring people and money to the state. It's a great idea.

We have similar problems with a trail here in my area. There is also a problem with homeless camps along the trail area. The answer to both is enforcement, but we all know law enforcement agencies are stretched to the max. There are numerous examples from all fields of recreation for using volunteer rangers to maintain order. That would fit right in with user fees.

Let's be sure we define "closure" properly. In my area BLM has spent more than ten years trying to develop a plan for off-road recreation. Their lands continue to be "open unless marked closed." Existing trails have not been created under any form of management, so they have no legal status. You could say they are closing trails, but those trails were user-created and never appropriately evaluated. What the Forest Service and BLM are doing is determining where trails are appropriate. So before you holler "trail closure," make sure you're talking about trails that legally existed in the first place. As for _____. calling me out, I say he's never caught me in a lie. What he has done is re-define my words to fit his own preconceived notions. It's a common tactic for the helmet visor vision crowd.

Discussion Question 1

Written & Online Comments

(cont.)

I must respectfully bring to your attention that motor vehicle use is heavily subsidized. Our roadways are paid for by everyone, whether they drive or not. How much of an impact on roadway maintenance does the average bicycle create versus the average car? On top of that, you can park 12 to 20 bikes in one typical vehicle parking space. Space for parking is not cheap and it eats up our urban landscape. Everyone you see on a bike is saving a parking space for you. _____ is absolutely correct in his additional costs, which just pile on the justification for better bike facilities. Incidentally, like the original proposer, I also live in San Diego and I own two cars, but only drive when I have to, which I have been doing for over 11 years.

Urban and suburban garden plots to help people achieve food security.. There are many federal, state, and local lands that could be converted into community garden plots to allow people to grow their own food and achieve food security. Many times, people who live in apartments, condos, or projects don't have usable space with which to plant a garden. Leadership in this area would help alleviate poverty, encourage outdoor activities, and would improve health of the users both through the exercise and the food produced. An initiative by the federal government could train the workers to administer the plots, and produce jobs for those with little training or skills. It would be a great employment opportunity for young people.

Outdoor activity/education as an alternative to "regular physical education" would bring youth into contact with the great outdoors and offer ways of staying fit and having fun at the same time. Children who may not do well in competitive and or difficult sports oft times excel in outdoor activities such as canoeing, kayaking, fishing, swimming, archery and wilderness survival or team building challenges. The results are more confidence and higher self esteem.

How about donating some of your Manhattan address lands to the Wilderness Preservation Project and leave ours alone. Has it occurred to all of you east coasters that you are the ones who have destroyed what were once beautiful lands in the East? We, out here, preserve our lands well on the state level in Utah. The lands that we always find are managed poorly are the ones you have taken from our state without our permission. In Utah we need less federal regulation and bad advice from people who already messed up all their lands. Demote.

Education. Teach kids every phase of conservation. Let them know the jobs of everyone in the field. From the Rangers to the office workers. What the importance it is for them, and their future generations benefit. What an interesting and rewarding career choice it can be for them.

I AGREE - CONSERVE!

Michigan has Sleeping Bear National Seashore, Pictured Rocks National Seashore, Isle Royale National Park, quantities of state forest lands and national forests. We are already a state with great outdoors trails and lands for all kinds of activities. A problem with state or federal land is that local governments have a funding problem, since those lands don't provide taxing revenue. I agree with _____ about the CCC -- their work is still a pleasure and inspiration that I wish our current politicians would replicate.

Discussion Question 1

Written & Online Comments

(cont.)

Being a profamily advocate, the multi use facet of the forests is important to those whom believe that responsible use of the mountains, forests, rivers and trails by all grows the value system we all need to share with each other.

I support the creation of a Maine Woods National Park. I have been fortunate to visit 37 of our 58 national parks. Each day spent there was a day of wonder and fun. I shared the experiences with my wife and friends who visited with me. On many of these occasions, I recall reflecting that at least our government got this one right. To preseve and protect vital national resources for all time for all the citizens of the USA was a brilliant movement that should not end today. We the people of America who built a nation and inspired its people to be free, fair, and just ask our government to do the right thing; preserve the North Woods of Maine and New Hampshire, its forests, lakes, pristine rivers and streams, wildlife, valleys, and majestic mountains for the people for all time. The congested noisy Northeast needs a presure relief valve to recreate, renew, and rejoice that we too have a enduring treasure to share with our children and grandchildren who also may inherit our legacies of conservation of the very ecosystem that provides out jobs, homes and food. Man cannot live without nature and nature cannot live as we know it without man.

Being from Michigan, I have seen first hand the kind of thing you are talking about. That is one reason I have always advocated roadless areas and wilderness areas.

Good point. Most hunting and fishing groups (among others), advocate unroaded areas for all the benefits they provide to big game animals and fish.

Access is important. Areas without roads are also important. Here is something I read recently that I agree with. While roads are important for providing sportsmen with access to the lands they use to hunt and fish, too many roads are associated with increased big-game vulnerability and fewer mature bucks and bulls. Too many roads also can decrease the quality of important spawning habitat for fish. Because you saw wildlife does not mean we should not preserve some areas for the good of people and animals. I think there is room for both, motorized access is some areas, and areas without roads, for all the benefits that provides. Some people in past generations saw the benefit of preserving wildlife and wild areas. I think most understand that if we want to ensure that enough habitat will be around for future generations, we must plan carefully today.

To have solitude, you need limited roads.

A couple good reasons to have national forests is to preserve wildlife and wild lands. The many different recreational opportunities are also good reasons. This doesn't mean you get to perform every activity your heart desires on every single piece of public land. There has to be laws and regulations.

Discussion Question 1

Written & Online Comments

(cont.)

To not preserve some of our wild areas and develop everything would be irresponsible. The overdevelopment of our public lands is what will lead to the destruction of them. There should be areas for development, there should also be areas without development.

Anywhere that is not a truly wild area. How about some place that already has roads and possibly other development. We need to start moving in the direction of more recycling and less land fills. There are plenty of places to mine in the lower 48 states. 50% of our national forests alone are open to things like mining. There is also BLM land, state land, and private property.

You know this is a Chinese company that wants to mine this area. The appetite the Chinese have for natural resources is insatiable. I believe what they want to mine for is gold and copper. They can go to Africa to mine for gold as far as I'm concerned. If your looking for an area in the lower 48, they have mined for copper in Michigan for years. The boom and bust industry of mining hasn't made the area they mine for copper here very prosperous. Some things are more important than the money to be made by developing every concentration of minerals they find. With 50% of our national forests open to mining, I'm sure there must be a better alternative. There will probably be opposition from environmental groups no matter where they mine. I don't think mining has a good environmental track record. I would rather see them find an area where they could buy and own the land to be mined, especially if there are already roads and development present. They can lay on the ground and f*ck the land then for all I care. Here's my question for you. In the past you have said you are against areas being designated as wilderness that are not truly wilderness. Here we have an area that is wilderness. Do we let this go, other areas go, like the Peel Watershed in the Yukon (not U.S.), and then every other wild area that people want to develop. What area should we save?

I agree, there is room for all types of recreation and room for things like wilderness as well. What I find ignorant and disappointing is people who fail to see the value of preserving things like wilderness and only see land for what they are able to get out of it. Land is more than that. Wildlife and people depend on wild areas, for numerous reasons. Living in the midwest, I have seen areas change from having a wild character to development. That is not what most want for all of our public land.

Discussion Question 1

Written & Online Comments

(cont.)

Most people understand that if we want wild areas to be available into the future, we have to plan carefully today. People of past generations who advocated preserving wild areas were also criticized. Now, it is apparent that they were forward thinkers and the areas they preserved are some of our most treasured areas. Development is important and there is room for it. We have used a lot of land for every need and recreation people enjoy. Wild areas are also important for both people and animals. I would have to disagree with some of the numbers I have read about the amount of "truly undeveloped land". There is some sort of development on almost every area of our country. Even our national forests, which most would think are there to preserve wildlife, are used for development (mining, logging, etc.). If we actually preserved the wild areas that are left, we would probably have a good amount available. The only problem is we are using more than we are preserving and that trend does not seem to be changing. Our population is growing and we are using more and more. You would think in today's modern society, more could see the benefit of preservation and living with nature.

I think it's strange that because some people do not see an issue that affects their own area, then everything must be fine. Even people years ago knew conservation was important. Theodore Roosevelt comes to mind. I don't see how some can argue that there is no issue in regard to wildlife habitat when our own country's population has probably more than doubled since T. Roosevelt. He knew, and was right, that conservation is one of the most important issues our country will face. Remember, critics have always found reasons to not preserve wildlife and wild lands. Some of our most valued areas are still here today because of forward thinking conservationists like Roosevelt.

Sounds good if the waterways aren't closed to existing motorboat visitors in the process. In reality all waters in America's Great Outdoors should be open to use by all Americans.

Sorry to have to disagree. I do not enjoy my ATV. To be candid it beats my 60+ old ass up. I use it because I can't walk the long distances to places I love to see anymore due to the aging process. I guess I am not quite the introvert I used to think I was since I do enjoy meeting other folks way back in the swamps I frequent whether they are on an ORV and I am on foot or in my canoe or vis versa. At this point in my life I feel I have learned the importance of having a sharing attitude from dealing over the last 14 years with many of the conflicting philosophies expressed in a mean spirited manner on this site. I don't consider the average 2-4 mph vehicle speed of myself or others at Big Cypress National Preserve (BCNP) (not Park) as buzzing around. Any faster invites injury and disaster. Nobody can afford that 20 miles deep in the swamp. I don't have to imagine what is suggested for me to imagine because 90 percent of those who enter the swamps down here at BCNP use ORV's already. The fact of the matter is that I rarely see someone else while on foot or an ORV during a day in BCNP. It is that huge of a place. I do know I am lucky to get to go there though and value the experiences in BCNP as much as life itself. Most Americans aren't up for our swamp on foot for more than a mile.

Many ideas have mentioned Wilderness. Many readers may be automatically assuming this word wherever it is used is referring to the Federal designation that many folks myself included disagree with due to the extreme restrictions associated with the designation. I am beginning to think some folks have possibly using the word to indicate places that are remote and wilderness like even though those places are not classified as Wilderness per Federal Law. This may have caused many of us to vote to demote ideas due to misinterpretation of what the idea author meant when the word wilderness was included in an idea. I will assume at my risk that this idea is not referring to wilderness as per U.S. Federal Law and vote to promote the new outlook presented here. _____ please comment here to let me know if I am right or wrong in my assumption.

Greater Flexibility for Forest Legacy and LWCF Grants. As many individuals and organizations have pointed out during the America's Great Outdoors listening sessions, the key to empowering communities that are struggling to protect their lands, their waters and their quality of life is fostering innovative public-private partnerships. Two programs that have been instrumental in such partnerships in the past, and that could have an even greater impact in the future, are the Forest Legacy Program and the Land and Water Conservation Fund. These are both highly successful federal programs that have conserved millions of acres of land in communities across the nation. However, to meet the challenges facing conservation in the 21st century both programs could be enhanced through greater flexibility. The groups listed below, including private landowners and conservation groups from across the country, recommend that the Forest Legacy Program and the Land and Water Conservation Fund be enhanced to allow direct support of community-based conservation by providing federal funds for projects where land trusts purchase and hold the land or the conservation easements protecting the land. This kind of new federal flexibility would strengthen both programs by allowing them to:

- Leverage federal funds by making it easier to secure greater co-investments from state and local governments and private sources.
- Foster the development of more ambitious public/private partnerships that work across multiple jurisdictions at landscape scale.
- Facilitate the development of large-landscape projects that require pooling funds from multiple funding sources and that combine the use of different land protection tools, like fee simple purchases, conservation easements, and tax incentives for donations.
- Minimize federal costs for monitoring and stewardship of conserved lands by partnering with community-based groups capable of generating the continuing long-term local support needed for successful completion.

Supporting groups include: The Pacific Forest Trust Amigos de los Rios California Council of Land Trusts California Rangeland Trust Cayukos Land Conservancy Conservation Forestry, LLC Conservation Northwest Conservation Partners Elkhorn Slough Foundation The Forest Guild Forest Society of Maine Grand Traverse Regional Land Conservancy Heart of the Lakes Center for Land Conservation Policy Land Trust of Santa Cruz County Lyme Timber Company, LLC Land Trust Alliance Land Trust of Arkansas Land Trust of Tennessee Lassen Land and Trails Trust Marin Agricultural Land Trust Massachusetts Audubon Society Meadowsend Timberlands Mendocino Land Trust Mountain Meadows Conservancy Muir Heritage Land Trust Northcoast Regional Land Trust Northland Forest Products, Inc. Peninsula Open Space Trust Pennsylvania Land Trust Association The Pinchot Institute Placer Land Trust Redlands Conservancy Redwood Coast Land Conservancy Roseburg Forest Products Company Sedgwick Land Company Sequoia Riverlands Trust Society for the Protection of New Hampshire Forests Solano Land Trust Tall Timbers Transition Habitat Conservancy

Thanks for your comment, but I would note that the idea you seem to oppose does not directly relate to the specific idea all these groups recommend. This recommendation would, in fact, foster an even greater role for private, community-based conservation -- including working lands conservation easements, where the land can remain in production, contributing to the local economy and stays on the local tax rolls. The list of groups supporting this recommendation includes private landowners and conservation groups -- groups from Florida on up to Michigan, and from Maine to California. I'm sure these groups disagree with each other on a number of other issues. But they came together to support this particular idea. It's an example of private landowners and conservation groups coming together and collaborating around a practical solution to conservation that works in the real world. That's a good thing.

Overall there are many aspects of your proposal that I agree with, but there are a few that I would like clarified, revised, or removed. I do think there should be some trails left natural for the more experienced and patient hiker, as well as areas that should be maintained for more accessible use. To an extent, I would even agree with distinguishing the two areas. I concur that the wilderness should be wild, left for man to fight through for himself, and that parking lots are a large distraction to the wilderness aesthetics. However, I have always been told that no more than ten people can be allowed in a group in a wilderness setting. So this concentrated use that you're speaking of cannot have an extreme impact, unless every trail and park that I have ever visited made up that rule coincidentally. I also prefer to hike in a more solitary state. That is why, when I know it is going to be a beautiful hiking day, I choose a trail less known and less accessible to all people. If I cannot find one of those, I enjoy the beauty around me and the comradeship of meeting new people on a trail, and maybe that is something that you could look into. As for technology goes, I agree that cell phones take away much of the experience and a GPS ruins the excitement of blundering through the wilderness alone, and yet I cannot agree that signals for rescue should be ignored. That is not only irresponsible to our fellow citizens, but also far too dangerous. I'm sure that the many people who have died in the wilderness would highly disagree with that idea. If help had been available, I have a feeling even the most rugged wilderness man would have accepted it. Since you disagree with GPS systems, do you also disagree with maps of the wilderness? Do you wish that we all had to make the deathly trek through the Sierra Nevada's for the first time, or even through the Appalachians? As much as I love the wilderness, I am appreciative of the work that volunteers do to keep up trails. Your last paragraph is very interesting to me. By "these areas" I'm assuming that you mean the designated areas that you were speaking of. I'm sure that you know that Section 4 C of the Wilderness Act of 1964 bans any permanent or temporary road systems and use of the vehicles you mentioned. "Except as specifically provided for in this Act, and subject to existing private rights, there shall be no commercial enterprise and no permanent road within any wilderness area designated by this Act and, except as necessary to meet minimum requirements for the administration of the area for the purpose of this Act (including measures required in emergencies involving the health and safety of persons within the area), there shall be no temporary road, no use of motor vehicles, motorized equipment or motorboats, no landing of aircraft, no other form of mechanical transport, and no structure or installation within any such area" (Wilderness Act of 1964). I am just slightly confused by the fact that you want wilderness to remain wild and that overcrowding is a problem, but you would be okay with OHV's going through the wild? Or with trails being cut down and maintained so that a jeep can fit through? Does this make your quest for absolute wilderness a selfish act, since it seems like you only want the areas you will be in to be kept as close to their natural state as possible?

Discussion Question 1

Written & Online Comments

(cont.)

I agree with your sentiment but don't know what solution you are suggesting. When I take my child to the park I leave it up to him if he wants me to play with him or if he would rather play with the other children at the park. Either way, I stay close by. The issue I see are the parents who sit in their vehicles, often with them running, while their children play unsupervised. It's no coincidence that these children are often the troublemakers. If your message is "Parents, spend some time outdoors with your kids, don't just dump them off and expect others to supervise them" then I wholeheartedly agree.

In 1976 Congress provided explicit criteria for roads on BLM lands to be considered for wilderness. If a route wasn't "improved and maintained by mechanical means to insure relative regular and continuous use," it can't disqualify the area from consideration for wilderness.

Like OHV trails, hiking trails have been closed in many places because of excessive impacts. This started with getting them out of mountain meadows in the high Sierra in the 1950s. Closures and relocations are still being done. My own trail club just opened a relocation several miles long, all done with volunteer labor. Any trail should be closed if it is degrading public lands and waters.

Good idea! During the Great Depression in the 1930s the government bought up tax-delinquent lands, many of them also depleted by farming or logging. They were restored by the work of the Civilian Conservation Corps. Some are now part of national forests. Others were turned over to the states and are now state parks, state forests, and wildlife management areas. They attract visitors who benefit local residents through the tourism industry.

Everyone has a right to use the federal lands, but nobody has a right to abuse them. For more than 50 years hiking trails have been closed or rerouted when they were found to hurt the lands, waters, or wildlife habitat. In the same manner, OHV trails need to be cut back to a system that can be sustained without impairing the lands and waters. National forests and BLM public lands now contain thousands of miles of unauthorized OHV routes that were never designed for sustainability. Most of those should be closed and rehabbed to stop erosion. I'm not for a total closure, but the abuse needs to be stopped.

This is an excellent idea. "Wilderness-quality public lands" include areas BLM has found to have wilderness character (now up to 6 million acres after BLM corrected its original 1980 inventory), and other areas Utah citizen conservationists studied using the BLM criteria and found to have wilderness character. There's room for disagreement because some of the BLM criteria are subjective, such as "outstanding opportunities for solitude or a primitive and unconfined type of recreation." Ultimately, Congress will have to decide which lands will be designated as wilderness. America's Red Rock Wilderness Act is one way to do that. County-by-county bills like the Washington County law would be another way. No matter which type of bill is used, protection is needed so the wilderness values of these lands won't be wrecked before Congress makes the decisions.

Discussion Question 1

(cont.)

I believe the question of compromise is best approached case by case, site by site. The potential for minerals and other resources can be analyzed. The area's values for wilderness purposes and the whole range of recreational uses can be considered. If a particular area is more valuable to the public for wilderness purposes, it should be designated as wilderness. If it's more valuable to the public for non-wilderness purposes such as mining, fossil fuels, offroad vehicle riding or mountain biking, it shouldn't be designated as wilderness. Boundaries can often be drawn to resolve some conflicts. That's how Congress has been handling the wilderness question for many years. It's an approach that considers everybody's concerns and viewpoints.

Some people would oppose anything with the name "conservation" or "environment," not to mention "nature" or "ecosystem." Environmental education has made great progress, but there is still work to do. I'm thankful that high school students today have a better understanding of ecology than many adults.

Well Said, I completely agree with you. Access to our public lands will continually grow future generations of Americans that will learn to love our natural environment. Restricting access only grows indifference to the future of the land, opening the door for future development and permanent destruction of our wild lands.

"Land of Many Uses" connects the American people, who are a "People of Many Interests", to the Great Outdoors.. The National Forest Service has a motto. You may have seen it on the welcome sign the last time you visited a National Forest; "The land of Many Uses". If anything needs conservation, it is the meaning of this motto. American's recreate and connect to our national lands in many different ways. We should embrace this diversity and welcome all to partake of the natural wonders that exist throughout this great country of ours. Locking up land and excluding people from recreating in our public lands only goes to hurt conservation. The best way to get people reconnected to the great outdoors is to get them out there in the great outdoors. The discovery channel just doesn't cut it. When people get connected to the land, then their desire to conserve it will be enhanced and so will support for conservation efforts. Let's all get out there and experience it for ourselves and bring our children along and get them connected at the same time. Please conserve our "Land of Many Uses"

Balance is what the motto, "Land of Many Uses" is all about. Balancing the needs and desires of all of our citizens, not just those of a few.

In this forum, we the people have been asked, by our representatives to give ideas of how we can be reconnected to the great outdoors. My idea is that we need to preserve access to the people and the legal activities that they pursue. If that requires funding to protect the resources and the safety of the visitors to our public lands, I am all for it. In fact there are many funding sources all ready in place. What may need to happen is that those funding sources are protected from the raids that the politicians constantly launch on these funding sources. So I am raising my voice to my representatives that I would like to see access preserved for all Americans to recreate in our National Forests. In so doing we will be reconnected to the great outdoors and fulfill the mission of this forum.

(cont.)

Recreation is far more than play, it is vital for a healthy body and mind. If you think it is expensive to provide recreational facilities and services, you might want to think about how expensive it would be with out those recreational activities made available to the general public. Crime and violence would rise, do to the fact that there would be more idle time and less mental healing from recreation. The costs to mediate said rise would far out way the cost of providing safe and secure recreation. So to answer your question "Do you think we have money to spend to expand opportunities for play when we are cutting food stamp benefits and refusing to support healthcare for our children, handicapped, and chronically ill?" I say yes, because without it we will have more of the bad that you are concerned about. Especially since, like I stated earlier, funding sources are already in place to address your issues, and these funding sources would disappear if the forest was closed to forest users.

My biggest problem with your last statement is that you are assuming that a "bushwaked trail" is going to cause harm to some critical habitat. It has been my experience that most of the "bushwaked trails" are much less intrusive on the environment than the actively "maintained trails" by the forest service. The forest service comes in with a trail dozer and widens the trails and cause unnatural surfaces like cuts and fills that are subject to increased erosion and sediment transportation. Natural trails that follow the landscape and are crisscrossed with roots and rocks hold the soil in place and cause minimal erosion. Your assumption that trails and roads in "less roaded areas" cause damage to critical habitat is just wrong. The mistake made in the past is to assume that every footprint that man makes is detrimental to life on this planet. In fact, the environment of these so called roadless areas have no bearing on their boundaries since a description of what kind of habitat is there or what species may live in them is irrelevant. They are only defined by whether they have roads in them or not, and then they don't even follow that definition. This is where my frustrations stem from.

No I wasn't suprised by the financial market collapse, because just like mother nature everything works in cycles. This whole concept that everything should stay stagnant because that is what we are use to or comfortable with is so childish. It is time to put our baby blankets down and grow up.

It seems to me that the Environmental communittee is very willing to share the public lands with all of us, as long as we do it their way: on foot. There are irresponsible OHV riders out there, but they are a minority, not a majority. It seems that you only see the bad and not the good we do. As a member of an OHV club we have done many projects to help protect our public lands. Public land whould remain public, available to ALL!

Conservation and Management of Fishery Resources. The American Sportfishing Association's approach to conservation and management of our natural resources is focused on the resources on which the public depends for high quality, easily accessible recreational fishing opportunities. Over the last 30 years, significant strides have been taken to improve the health of America's aquatic resources, including water quality and fish habitat. We are faced with many fisheries resources challenges but by and large, state and federal agencies, backed by important pieces of legislation including the Clean Water Act and the Magnuson-Stevens Act, have succeeded in reversing a declining trend in many of our nation's rivers, streams, lakes and coastal areas. Much of this success can be attributed to the tremendous infusion of funding for federal and state water and fisheries management in the form of excise taxes on fishing and boating related purchases and fishing license sales. Since 1950, recreational anglers and boaters have, through a unique user tax on motorboat fuel, fishing tackle, and other sportfishing equipment, generated more than \$5.7 billion in funding through the Sport Fish Restoration and Boating Trust Fund for fishery conservation and enhancement, habitat restoration, clean water programs and boating safety programs. In addition, fishing license sales generate nearly \$560 million in annual revenues for state conservation and education programs. American sportsmen have played an important role in the stewardship of our natural resources for over 100 years. This, in conjunction with the financial reality of recreational fishing, makes it increasingly important to ASA's conservation goals that the sportsmen's community receives acknowledgement and assurance of its formal and defined roles in the management of fisheries resources. American anglers have demonstrated time and again that they are ready, willing and able to modify how, when and where they fish in the interest of maintaining healthy fisheries. Whether it is through changes in regulations by the government or through voluntary changes in behavior, such as using more fish-friendly equipment, recreational anglers put the resource first. The recreational fishing industry recognizes the need for abundant and sustainable fish populations first and foremost. However, actions taken by the federal government, in particular, to conserve and sustain fishery resources must be met with parallel actions that ensure easier access to those fisheries for the public, a point we'll touch on further below. Recreational anglers will continue to act as good stewards of the waters they treasure, but progress must be made to maximize their buy-in when it comes to federal management actions. -Gordon Robertson, Vice President, American Sportfishing Association

Thanks, I'm not a typical anything; I'm unique, just like everyone else. And I enjoy a bit of satire, particularly when dealing with an obvious pseudonym. This idea, BTW, makes a great deal of sense. At one point in my elementary school years I recall we have a "school garden" and all the kids worked and learned.....and enjoyed a "harvest dinner" at the end of the school year.

Forty years of living in and studying northwest forests shows me something different than "overgrown forests that burn at the drop of a hat." I agree that the forests have been mis-managed. They have been overcut and the resulting unmanaged mix of saplings, brush and grasses are what fuel the fires. Our forests are overstocked, but not with mature timber. On federal lands and industrial lands the timber is too often cut and the landscape left untended. Fire management has created similar problems. If you want to see well-managed timberland, look to the private, non-industrial forestland owners.

Discussion Question 1

(cont.)

Even if some of the designated off-road vehicle trails are closed (and many miles would remain open), there still would be many ways to access these areas - hiking, horseback riding, paddling, etc. 80% of the lands that are proposed for wilderness would be within 2 miles of a road. Here is an example of the area near Moab (all of the routes in green would remain open to off-road vehicles if all proposed wilderness was designated): { Link }

The BLM has the authority under the Federal Land Policy and Management Act of 1976 to provide interim protection to lands it identifies as having wilderness quality. This is what Wilderness Study Areas (WSAs) are. DJ - This "idea" is not about America's Red Rock Wilderness Act; thus this comment board is not a forum to debate its merits.

DM makes an excellent point - well articulated and spot on. We need to allow some use and restrictions need to be based on common sense.

Yes! Charge fair-market prices for the lumber, and for the roads built to access it, and make sure it's harvested sustainably for the forest, not the corporation. Since we refuse to let forests burn, some cutting is needed, but let those who sell the wood pay for getting it.

People who think the wilderness is disappearing obviously dont get outdoors much.

I support this idea whole-heartedly. Two comments though. I find the staff in the USFS very hard working and dedicated. The problem that has occurred is with limited staff and resources they have to deal with more paperwork, more studies, and more litigation. They sometimes can't pursue worthwhile projects or provide on-the-ground support for what seems obvious improvements since they know they can't get all of the required pre-work done. So they start operating from a defensive custodial position not a proactive one. I can't say I blame them but I do wish the situation could improve. The Secure Rural Schools and Community Self-Determination Act is no longer funded at all after this year. Expansion isn't so much an issue right now as reauthorization. Some legislators are trying to make this happen. Please support their efforts.

This is a tremendous idea. In the northwest, private lands and working landscapes play a huge role in maintaining connectivity for wildlife. Incentives that can allow us to maintain our open and working landscapes in private hands, rather than see development as the only alternative, are needed. As an example, see work with ranchers in NE Washington to conserve lands that are key for wildlife: { Link }

As an environmental educator in Yosemite, I understand the need for our youth to connect with nature. For, it is with spending quality time getting to know and understand a wild place that people will care about it, and protect it for generations to come.

(cont.)

I love the idea of citizen science, such as the Christmas bird count and various other projects. However, the challenge is always recruiting a corps of dedicated, conscientious volunteers who will actually follow through and consistently, over the long term, collect usable data.

Where do you come up with this b.s.? Obviously you are just saying this without actually witnessing this happening. I have been riding my dirt bike since I was 8 years old. I respect the trail, others on it and pick up after the hikers. If there are horses on the trail, I shut my bike off until they pass. I think that you are self-centered to only want things your way and yes your comments are rubbish!

I am a member of 2 different local not for profit offroad clubs. our clubs do many community service events each year. We do lake shore cleanups and trail cleanups. We have 2 events each year where we go camping and trail riding. If you do not come to the trail cleanups you do not get to go to the camping events. We do this to preserve the trail for our future generations if they choose to ride the trails.

""As the world population increases, wildness decreases"" Not so We have more virgin forest now than we have had over 150 years ago. It seems most of the population has grown in small clusters (cities)

This is the peoples land. not all people are able to hike. Don't worry about me and my jeep I practice pack it in and pack it out, and tread lightly. Public lands should always be open to the public!

Since I work for a living there is now way I could see the amount the country i see when I travel the less travel road in my Jeep.(I only get a couple of weeks per year for my vacation.) Not all Enthusisist like to get in a mud hole and just sling mud. I absolutly hate mud, it eats up seals and bearings if it past the seals. I drive as gently as possible. Nothing is as american as a Jeep you have built with your own 2 hands climbing a 100 year old mountain road.

_____ is right that there are times and places where no motorized access should be permitted. There are places where motorized access is appropriate, but not ATVs and jeeps in roadless areas. The pro-ATV crowd makes a mistake in lumping all recreation and conservation progress to their agenda of personal motorized vehicles. where appropriate, it is possible to use public transportation to the backcountry, to then permit hiking and camping. For example, in Denali National Park in Alaska, you can take a bus (not a personal vehicle) to a hub, or be dropped off along the way, in the park's backcountry for personal, non-motorized recreation. That is a good model where promoting recreation is important and expanded access is appropriate to the character of the resource. But there are some places where all motorized access should be prevented, because of distinctive wilderness quality or sensitive species.

Far too many of our youth have never made contact with the natural world; without interaction, there is little to ignite a passion to protect the unknown and unfamiliar. We need to do whatever we can to encourage people to connect with our planet.

Discussion Question 1

My comment was in response to: "Locking up land and excluding people from recreating in our public lands only goes to hurt conservation. The best way to get people reconnected to the great outdoors is to get them out there in the great outdoors." Look at the wilder areas in your neighborhood -- if yours is like mine, you will find trash and criminal activity. When you invite children to play in your woods, you need to clean up after them and make sure they aren't exposed to unexpected hazards, which means you must patrol to see what is going on, moderate the parties, and clean up after your guests. That is the practical, dollars and cents reason why land is locked up and people are excluded from recreating.

Why not introduce grey wolves where there are too many horses?

Sorry for the slow return on your comment -- I was out enjoying the back country for a few days. Your comment -- "I take it that you would support enhancing jet contrails with chemicals..." As you so often do, you are trying to falsely read into my comments only to further your point. There is nothing in my comment about chemicals that you would lead you to your statement. I only pointed directly to the information on contrails, which you supplied, being overall beneficial! Thus, most likely, making your idea a bad one for the environment and nature. You do make a very valid point that this very well could be "...scientific fix for global warming...". This has apparently been studied and shows to help the environment. I would believe a study like this could be considered as geoengineering. WOW -- something as simple as water vapor, without chemicals coming from jets trails could help combat global warming. We possibly would never have known about it if some people post ideas on this forum got their way to prevent simple geoengineering scientific studies.

Jet fuel (and anything added to it) is sprayed into the combustor of the jet engine. If I remember there are usually 18-20 nozzles to spray fuel into the airstream. So it is sprayed! With only a quick search I failed to come up with anything that would indicate that the process is done by jet fuel additives - at all! I did find: "Streaks of chemicals created in the air by SPRAY systems on airplanes at any altitude" - Note the "SPRAY" part! "The most common chemicals used for cloud seeding include silver iodide and dry ice (frozen carbon dioxide)." I think even propane was mentioned! I doubt dry ice or propane is a popular choice to go with jet fuel. I do realize that not everyone knows how a jet engine works and there are spray applications needed to make that turbine spin and thus the need to spray fuel, additives and any chemicals used. But then again -- "Pretty hard for you to understand, I see."

Discussion Question 1

(cont.)

Your statement -- "I post an idea here it is for the people who initiated this list." So then the purpose of your post is to dish out rhetoric like Hitler, genocide, scandalous, downright evil and heinous crime to the people who initiated this list! Why! When your title of an Idea is "Control carbon at the source, GEOENGINEERING IS NOT AN OPTION" -- that pretty much says "NO" - no matter what, nothing would be allowed -- no matter if geoengineering is good or bad. White paint on the roofs or otherwise. If you really think that I would believe you on "You will be a part of an experiment without your permission..." with your lack of credibility and, as usual, no facts to back up your claims, then you are sadly mistaken. You have not displayed any facts about your statement of it being illegal and a rape either. Your statement of "They are talking about hundreds of billions of dollars of geoengineering." is directly disputed by the article you have linked -- it states "In fact, starting to investigate the feasibility of deliberately changing the climate won't require a massive allocation of federal dollars...". That's where this program is at -- the feasibility stage -- what will work -- what will not work. If ideas like yours were widely accepted we would never know what might have made the planet a better place, what might have been useful in turning global warming around. There is no "experiment without your permission", there is no "deadly consequences for you and your family", there is no "ruin the great outdoors so no one can ever enjoy it ever again.", there is no "slow death of millions of people" and there is no "extinction of species on a massive scale "going on -- AT ALL. Seems like there is just _____ over reacting for votes!

I am basing it solely on the information you have supplied with the links to articles. I have yet to see anything in the articles that you have made claims to! Sorry but what you are stating is just not backed up by facts. With the respect I have for the science field, and the EPA, I would hope they could come up with positive results, be able to recognize any results that could be detrimental and display the integrity not to use anything that would be harmful to man, nature or planet.

By definition Geoengineering : The modern concept of geoengineering (or climate engineering) is usually taken to mean proposals to deliberately manipulate the Earth's climate to counteract the effects of global warming from greenhouse gas emissions. That could mean proposals as simple as painting roof tops white, or that the facts of an article posted by you that jet contrails have a positive effect of combating global warming. Geoengineering is not doom and gloom. One article states --"To date, no large-scale geoengineering projects have been undertaken. Some limited tree planting and cool roof projects are already underway..." Yea! Tree planting and cool roof project will lead directly to your point of "...heinous crime against humanity and nature that will cause the slow death of millions of people and the extinction of species on a massive scale." Get a grip!

Another example of the same type of group that works with BLM - Mojave Desert Heritage & Cultural Association - { Link } The mission of the Mojave Desert Heritage & Cultural Association is to research and conserve the natural and cultural history of the Mojave Desert region for the purpose of preserving and sharing these resources in perpetuity.

Discussion Question 1

(cont.)

This is a hard call for me. On one hand I feel strongly that the Forest, parks and all belong to everyone and we subsidize them with our tax dollars. Yet I see the need for more localized funding to support the local effort with improvements and maintenance. I have paid for years the "Adventure Pass" that the Forest Service sell to access several areas in many of the Southern California Forest areas. This pass has also often been controversial. But it allows for those of us that use and access these areas, and the forest in general, more often the opportunity support what we use. I personally access the areas way more often than the average person and don't mind paying the additional fees -- but that does not make it correct for everyone or for that matter legal if it is not.

As usual you Sky Is Falling! 1) "the sky is becoming permanently brown throughout the northern hemisphere." That is, as usual, very inclusive and not correct. I am looking at perfect blue sky right now. Permanent its not! 2) "almost all of the land is being used by people" -- You are kidding right? Again to inclusive and not correct. 3) "the population density is increasing in all areas that are not owned by the government." Yup! too inclusive -- when was the last time you drove by a farm or a ranch? Density of zero is not increasing. 4) "most of the USA is deforested for farms, cities, roads." Then we have no forest at all is what you are saying? Think again. 5) "wilderness areas look remarkably beautiful even from 30,000 feet." -- Yes they do along with all of the non Designated Wilderness areas! Wait I thought you said the sky is PERMANENTLY brown -- so which is it -- brown is beautiful -- wilderness is beautiful and you can see it because it is not all brown?

Ah, there you go - just reading into what I say without even a clue as to what I said. Even in my last comment I stated - "It does not take a satellite photo to realize we have air pollution, the overcrowding of areas, high demands on our natural resources, etc. etc.". I am not a "doom and gloom" kind of a person. Your own little world must be very sad - try opening your eyes and realize that it is not all doom and gloom. Realize that there are A LOT of environmental, habitat, etc. etc problems out there that need to corrected. But some progress has been made and a lot more needs to be done. Be constructive and don't insult peoples intelligent by telling them things like THE SKY IS PERMANITLY BROWN. If you have facts that it is permanent that's one thing and if you don't - statements like that just reinforces Chicken Little - The Sky Is Falling. Your little "hunky-dory" story just displays your lack of facts and reality.

Not sure where you are hanging out, but I live at 5,000 feet and the air is clear, especially compared to down the hill. Even Los Angeles basin air, I believe, is better than it was back in the 60's. Still lots of room for improvement and its coming. As far as hang gliding goes - we had relatives that were in the forefront of hang gliding, innovators, set world records in the very early years of the sport. Several deaths in the family and I have never had the desire to participate for that reason.

Involving children with the outdoors at a young age teaches them about the fragile balance that we must take care of in order to ensure a beautiful & safe habitat for our beloved wildlife. It will also foster imagination and compassion, & these are necessary concepts to start promoting further so that our children will enjoy their childhoods and make the most of them!

(cont.)

Being productive does not include making accusations and being nasty to one another. While folks are speaking from their own experiences and or beliefs, it does no good in this forum to venture from the point. History has shown that NO ONE is supported and trails don't happen when the name calling and fighting are louder than the reality of each given situation. We all have our own perception of course but this forum did not ask you to attack one another. Here is what is has asked.

- Challenges - What obstacles exist to achieving your goals for conservation, recreation, or reconnecting people to the outdoors? Time, money and other resources are the biggest challenges. We have space and trails but getting access to most is costly in so many ways.
- What Works - Please share your thoughts and ideas on effective strategies for conservation, recreation and reconnecting people to the outdoors. Working together for the common goal and taking into consideration every appropriate user group for each area and trail.
- Federal Government Role - How can the federal government be a more effective partner in helping to achieve conservation, recreation or reconnecting people to the outdoors? Cut the chit and move on appropriate access.
- Tools - What additional tools and resources would help your efforts be even more successful? This is an ever work in progress! We'll never make progress unless we get to work and stop the fighting.

I think this is a very simple, yet solid idea. Education is one of the most powerful tools of understanding who we are, where we come from, and the importance of our interaction with our surroundings. In the Pedagogy Of The Oppressed, Paulo Freire explains that, "Education as the practice of freedom - rather than the practice of domination - denies that man is abstract, isolated, independent, and unattached to the world; it also denies that the world exists as a reality apart from people. Authentic reflection considers neither abstract man nor the world without people, but people in their relations with the world." Ecology unquestionably supports this notion, since it deals with the study of organisms and their interactions with the environment. Allowing students to be surrounding by nature is not only a healthy vacation from the classroom, but also instills in them a better understanding of both the positive and negative aspects of the natural environment of a place, and the impacts that man has on this environment. Perhaps this idea of understanding the world around should be expanded to all ages. Learning is continuous. Without understanding of the historical, natural, and communal environment of places, people cannot understand the place at all. In terms of preserving the great outdoors, I think it is extremely important to have knowledge on the issues and problems that conservationists so eagerly challenge. Otherwise, we would lack the ability to challenge the problems or the challengers.

If the land is private land, then the private use should not be removed. If it's public land, then the person should not have altered it.

Discussion Question 1

(cont.)

As a rancher using public lands instead of your own privately owned land, you need to take a complete back seat to all other species on the land, including mustangs and burros. You should not be allowed to graze any higher number of animals than that which would have NO impact on existing species and you should not be fencing off water from those native animals or fencing off available range. Many ranchers acknowledge their "guest" status and comply with these goal. Many don't. As a public land owner, your cattle are not my responsibility. The native species are. I have cattle myself and graze them on my privately owned land. Even there, I am subject to endangered species law. On public land, you should be even more so. My personal preference would be for all domestic animals to be removed from public land except for short term recreational use.

An urban park could be a pocket park, parkette, or even urban trails for biking, relaxing, nature watching, jogging and walking. 10' x 10' space to many, many acres. There are just not enough of these smaller natural spaces in most metroplexes, such as Los Angeles, New York, and Dallas. I applaud Parking Day (parkingday.org) where parks are quickly implemented and appreciated within an 8 hour timeframe. All are built inside a smaller space such as a parking space. Some renewed interest in rehabilitation of existing parks is also encouraging, such as the Great Mall. As it invites people back to these great public spaces making them much more inviting to move through them. Thank you for submitting your idea ASLA. Good luck.

I am a volunteer "C" certified buckner and faller with chainsaws and crosscut saws, and am welcomed in anyplace in California, park or forest. The sawyer is the final decision-maker in what is cut, and are trained to do so. The decision to cut is for safety, not for aesthetics. Too much work to bother with that! It should be said that all the agencies, just in the last year, have all agreed upon a single saw course and curriculum, taught across all agencies, for certification, employee or volunteer. This is now implemented, and should make things easier. In my experience, VERY few volunteers are experienced in working with saws IN THE FOREST ENVIRONMENT, which is markedly different than your backyard! The log you are working on is probably not the one that is going to kill you.

One other note: The concept of widespread use of volunteers using saws is relatively new in many areas, and there are grave concerns over the safety. So--there is a transition that is occurring. We are paving the way, demonstrating that we can work safely. Shortcuts that result in problems will retard the progress. Simpler re-certs (with documentation of experience) would be reasonable. Ours are 3 years, but I must say that I learn a lot every one I've taken. Wear your chaps, wear your glasses, wear your gloves, wear your helmet, wear your earplugs.....most "home" sawyers are not used to wearing any of this protective gear. ALL are clearly associated with reduction of injuries. The injury you get may not come from you, but the idiot standing next to you. JHA's....it's not so clear. (Job Hazard Analyses)

Schoolyard Ecology. Ecology is a powerful discipline to help student understand the world around them. Using the schoolyard for authentic ecology learning is an accessible way of bringing children outdoors. Ecology in and of the schoolyard does not require building elaborate gardens or outdoor classrooms. It only requires teachers who are supported in providing quality outdoor experiences to their students.

Schoolyard Ecology is a well known mechanism to help students learn about the environment in a safe, familiar place. Such experiences, over the course of many years in school, might help students learn about the environment and venture into "wilder" areas. Furthermore, regular use of an outdoor classroom to teach any number of subjects has proven to increase student achievement across the curriculum.

I am surprised that at my old age I am still surprised at all. What I mean is how narrow minded can people be? The conservationist community, the OHV community, the "XYZ" community can all have what they want if we all band together and build our requirements list of how we can all access OUR SOVERIGN RIGHT TO BE ON OUR COUNTRY'S LAND and preserve the interests of all. How hard is this? We can all have access and preserve the interests of the land, wildlife and the citizens. Anyone who feels there is only one absolute option is simply not using that space between the ears. Don't count on the Government people. If you like what you see with public housing, balanced budget, jet setting officials living in one state and commuting via private jet (on our nickel) to DC to work, then let's let the Gov. give more of what we already have.

There is no better way to learn to appreciate and discover our natural world than environmental education in our national park system. This will help get kids who so desperately need opportunities to reconnect with nature out into our last wild areas. There, they can learn scientific principles and start to understand how we humans are a part of nature and need ecosystem support to survive. Nonprofit partners can help get kids out into nature, using America's best classroom - our national parks.

Link this idea (getting young people outdoors) with using volunteers as teachers/docents/leaders, and giving the volunteers credits toward park and program use. There are a lot of older people with skills who like to work with young people. And it could work the other way, too. Young people could help older people who want to get outside but have trouble navigating on their own. Open up some park areas to habitat gardens, maintained by volunteers. Have community events at parks. We live near a state park which is used by people from all over our county, yet the Governator was ready to close it, rather than enlisting volunteers to keep it open - many of us were ready to work. People want to be involved!

Lack of access for hunters and fishermen. Provide better access for hunters and fishermen- there are places where groups buy up all the land that surrounds the forest service, or state forest, or BLM lands to prevent people from gaining access. Some states are working to solve this issue, but it needs to be done at the federal level in cases of forest service, or BLM lands where private property blocks access- due to group purchases of land. In W.Va. my relatives have some property that is surrounded by the Monongahela National forest- and they have to allow people to access the trails, and the National forest land, they can not block off access. There have never been any problems- it's a narrow trail on the edge of the property that we built so others could get through to the National forest lands, it is marked, and keeps people from wandering around the property. This costs the government no money, the forest service no money- it just allows people to get to the forest service land.

I agree 100% with the fact that the Bristol Bay area needs to be protected, and the Pebble Mine plan should be stopped. Several groups of people have been opposed to this plan for quite some time now, and more people need to get involved with the issue, or the mine may be allowed to proceed! This is one of, if not the most important spawning grounds for salmon in the entire world- the mine could destroy it forever. Off road vehicles are NOT allowed in National Parks. They are allowed on some BLM, and Forest Service lands, also on some state run recreation areas, No off road vehicles are permitted in the National Parks. I am voting your idea as promote, but please understand that off road vehicles, while not allowed in our National Parks, should continue to be allowed on BLM, Forest Service, and state recreation lands, the parks don't allow them, go there for quiet, otherwise, please respect the people who do use off road vehicles right to enjoy recreation as they see fit. Most Off road groups maintain their own trails, and help maintain BLM, and Forest Service trails too. They are not damaging the environment any more so than people who ride horses, or hike in backcountry areas that normally would get no foot traffic.

Good idea, as is the ED OUT idea, kids need up off the couch, away from the non-stop video games, and TV. Our children all went camping, hiking, fishing, rode dirt bikes, and 4-wheelers, there was not a lot of mountain bikes around when they were young, or I'm sure they would have done that too. They learned to ride horses, how to care for the horses, and other animals, they all learned archery, learned to shoot rifles and shotguns, and they still hunt to this day. All our children were girls, who now have their own families, and their kids all spend far more of their free time outdoors than they do inside. They learned to respect the land and the animals, to leave an area as good, or better than you found it, and how everything you do in the outdoors affects the animals and the land, and to not do anything that is bad for the ecosystem.

Having spent a lot of time hiking the AT, I agree, use the AT to get kids outdoors, and involved with the outdoors.

Citizen Engagement and Environmental Monitoring. A long distance trail such as the Appalachian Trail aligned as it is in a north-south orientation and spanning elevations from sea level to the peaks of nearly all the highest points on the east coast offers a rich and diverse laboratory for observing and measuring the effects of climate changes on a global scale.

(cont.)

National Strategy for Alternative Energy. A national strategy for passive energy generation and transmission is needed in order to manage landscape level conservation assets that begin to approach the magnitude, scale, and national significance of the Appalachian National Scenic Trail.

Volunteers for Active Management. Long term stewardship of public lands is critically important and worthy of consistent funding. Acquisition, heavily dependent upon full support for the Land and Water Conservation Fund, begins a critical process to conserve and protect lands; stewardship carries that process forward in perpetuity. Matters such as forest health, open space management, invasive species control, and vigilant monitoring of natural, cultural, and physical resources requires dedicated and consistent support. Landscape level conservation projects such as the Appalachian Trail have demonstrated that a volunteer corps can prove invaluable in accomplishing this, but even within a volunteer model, financial support is required to provide necessary support for projects.

Youth and National Scenic Trails. Trails offer excellent means for the public of all ages to access public lands. As demonstrated through the Trail to Every Classroom program, trails are an exciting destination for youth to get outside, to learn, to grow, and to enjoy the beauty of life. More specifically, the Appalachian National Scenic Trail provides access to over 250,000 acres of public lands with hundreds of entry points for people to spend a day, a week, or longer enjoying time outdoors. With data showing that day hiking is on the rise and the fact that the A.T. is within a days drive for nearly all who live in the eastern third of the United States, the A.T. is particularly relevant to any initiative that seeks to get Americans outdoors.

Community Engagement and National Scenic Trails. The Appalachian Trail connects numerous communities in rural America. Many of these communities could benefit from additional support for community-based land use planning within a green infrastructure context.

Increase Funding for Recreation in National Forests. National forests, like national parks, are vital sources of outdoor recreation, yet they do not receive sufficient funding to provide adequate visitor services, such as maintained hiking trails, effective visitor centers, proper signage, or even garbage cans. Support for these services could improve the quality of life for surrounding communities and create jobs by funding nonprofits and local businesses. This action would be a boon for the small towns that often are the gateways to national forests. National forest acreage far exceeds that of national parks, and as a consequence, they are often far closer and more accessible to communities in need of recreational space. Why not improve their ability to meet the demands of neighboring towns and cities? A very efficient way to improve these services would be to provide funding to NGOs and nonprofits to carry out the improvements. These organizations are far more efficient than national forests, and it would keep our bureaucracy from becoming even more top-heavy. Projects proposed by nonprofits and NGOs could be selected by vote from the national forest administration and even nearby communities. A current program that could be expanded is the Secure Rural Schools and Community Self-Determination Act.

Support Collaborative Efforts to Restore Habitat and Connect Communities. Thank you for holding an America's Great Outdoors Initiative Listening Session in Bangor, Maine. The America's Great Outdoors Initiative is providing a wonderful opportunity for your Administration to see partnerships that are achieving tremendous results for conservation. The Penobscot River Restoration Project represents an excellent model of collaboration that will lead to restoration of an entire suite of sea-run fish that are key to the health and resilience of the largest watershed in Maine. Full completion of this project, and the return of self-sustaining runs of American shad, endangered Atlantic salmon, river herring, endangered shortnose sturgeon, and other migratory fish will support a thriving ecological system while revitalizing recreation and economic opportunities that will benefit residents of Maine as well as many thousands of visitors to the state annually. The federal government should continue to deliver and develop programs that encourage landscape-scale collaboration between industry, tribes, non-profit conservation groups, communities, and state and federal government agencies. Funds to support habitat restoration and improve access to historic spawning and juvenile habitat for sea-run fish should be increased and sustained. Restoration at this large-scale ensures the rebuilding of resilient systems that sustain natural resource- and recreation-based economies such as what we find here in Maine. Allowing Federal agencies to implement and fund programs at the local scale will best meet the needs of Maine communities that are working toward long-term regional planning and in support of healthy natural systems as well as strong economies. Funding for initiatives that allows for flexibility in their application to adapt to changing circumstances is also key to project success. Investing in community-based conservation and restoration programs also encourages people to connect with their natural and cultural heritage, and provides opportunities for people of all ages to enjoy, learn from, and become good stewards of their local environment. Sincerely, Laura Rose Day Executive Director Penobscot River Restoration Trust

I remember being at an anniversary event celebrating the outdoor education center I was working for at the time. A thirty something woman of color stood before the room and tearfully talked about how her experience as a young girl going to outdoor school had powerfully impacted her. That overnight trip into the parks opened up possibilities she never dreamed of and set her course for her future. She decided to dedicate her career to science and education, eventually becoming a high school biology teacher. Now she changes the lives of students offering them the opportunity she had years ago. All American children should have an opportunity to learn about and how to steward the amazing gifts that are within the National Parks through residential, hands-on learning centers.

By leasing our Public Lands to the livestock industry we are subsidizing them. They are not Public Lands. They are SPLIT-ESTATE FEE LANDS. The Government does not own the land in its entirety. Ranchers own grazing and water rights on these lands. Yes, the public has access to them, BUT ranchers have property rights that they are not to be stripped of without abusing their Constitutional Rights.

Oh yes, and with NPS at least, the volunteer time you log does carry over to subsequent years. If the Forest Service does the same, Mr. Payen would need to volunteer just 100 more hours to get the special nationwide pass.

(cont.)

It is sad to impugn an entire large agency full of many talented and conscientious people based on the actions of a few administrators one disagrees with. "Out of control, rogue agency"? Hardly. The Forest Service is a multiple use agency and as such has a lot of balls to juggle. One of the benefits of having recreational user fees which are retained in the area they are collected, is that this counterbalances other economic interests, such as logging, mining, and, to a lesser extent, hunting, that are not always compatible with hiking and backpacking. I support the basic concept of Forest Service fee collection in high use areas, while recognizing that any organization, public or private, is subject to administrative errors made by fallible humans. If you think they have misinterpreted the law, by all means, challenge them. But judges are fallible, too, and other judges may or may not agree with what was decided in _____'s case. Meanwhile, hyperbole does not help your cause, _____. The fee program was meant to address the highly variable and usually inadequate congressional appropriations that were allocated for National Forests in the past. The only realistic alternative I see that would help keep them properly funded but which would place the greater revenue burden on the actual users, would be to have a special federal tax on recreational equipment. This could be even more problematic than the system of collecting fees on site, because of the difficulty of defining what constitutes recreational equipment. When is a shoe a trail boot, for example? What kind of backpack is primarily recreational, versus used to carry books to school? How would you readily define tents used for camping, versus those used only in a backyard to screen a picnic table from bugs?

Discussion Question 1

(cont.)

We park fee collectors are generally delighted to let seniors know about the America the Beautiful Senior Pass (which replaces the still valid Golden Age passes). It is an even better deal than you imagine from ___'s post: --It costs \$10.00 for the rest of your life (or unless you lose the card or leave it at home). --Any US citizen or permanent legal resident alien aged 62 or older can obtain one. --It covers entrance fees nationwide, at every unit of the National Park system, PLUS participating locations of the Forest Service, BLM, and National Wildlife Refuges. --In addition, you get half off the regular fee on camping in the above jurisdictions. --The card covers the cardholder and everyone else in the same non-commercial vehicle. --The senior need only be in the vehicle, s/he does not need to be the driver or owner. This is a good excuse to take grandpa or grandma with you to visit a park! --If you are riding a bicycle, walking in, or riding in a bus (if the bus has per person fees), it covers the cardholder and three other adults. --If you are riding a motorcycle, it covers the cardholder and any passenger on the same motorcycle. (There was an old rule that allowed a Senior pass to cover two motorcycles, but that has been changed.) The card cannot be purchased by mail, but you can buy it at any National Park Service entrance station, or at their visitor center if they don't collect fees at an entrance station; and also at most Forest Service, BLM, and Fish & Wildlife Service offices or visitor centers. The senior will need to be present and must show ID to prove permanent US residency (driver license or state-issued ID card are usually fine, or military ID if it is the older style that shows birthdate). No application is needed to apply. Just show your ID and pay the ten dollars. Restrictions: --The card can be signed by only one person. --It is not valid for a couple. If the person who signed the card is not present, the spouse would need to buy his or her own, if eligible. --The card signing senior must be present in the vehicle, usually each time you enter the park. If a member of your party other than the senior needs to drive the car out of the park and return, ask first. The staff may be able to accommodate you with a special re-entry pass. --The card is strictly federal and is not honored at state parks, which often have their own senior pass program. --If you lose it or leave it at home, the parks cannot (at present) look up the card, as there is no database to look it up in. But you can buy another one if you like, which is often cheaper than paying the regular entrance fee. --You should sign your card immediately upon purchase. That is what parks which check ID check against. --The senior should always have their photo ID with signature ready to show with the card. --Mis-used cards can be marked invalid. And yes, fee collection rangers usually love to issue these cards. I've personally had to talk people into saving money, saying, for example, "Sir, you have the choice of paying \$20.00 or getting a senior pass for only \$10.00. All you have to do is show your ID. Even if you never visit another park in your life, you've still saved \$10.00." That usually does the trick.

(cont.)

There already is a national pass for the disabled, called the America the Beautiful Access Pass (a replacement for the still valid Golden Access Pass). It works just like the Senior Pass (see my previous post), except: --There is no charge for the pass. So, if you are traveling with a permanently disabled person, in the same non-commercial vehicle, that person may be eligible for the pass, and everyone else in the vehicle gets in free. The disabled person must be a US citizen or permanent legal resident, and must be afflicted with a major disability affecting one or more life processes. (I forget the exact wording or the list of examples; but in general, if you are eligible to receive federal disability benefits, even if you are not receiving them, you are eligible.) You might think, this is a US government program, so you're going to have to fill out a stack of paperwork to prove disability. Wrong! For some obvious disabilities, like the person is missing a hand, is blind, is deaf, or has Down's syndrome, the only thing you need do is show that person's ID, or if a minor, the parent's ID, to show that s/he is a US citizen or permanent legal resident. Some applicants bring letters from their doctor or show a federal disability card of some kind, but all you really need to do is sign an affidavit attesting to the presence of the disability, along with showing the ID. This is all done at the entrance station and only takes a couple of minutes. If the disabled person is unable to sign the card, the parent or guardian can sign for them. (I would usually have them sign something like "Joe Smith for Sally Smith.") Like the Senior pass, the disabled person must be present; you can't leave them at home and use the card. Otherwise it is a life-time pass.

You asked about discounts for US military personnel; that is the most requested discount program that the federal parks don't have. Apparently, there has been a congressional proposal to add such a discount, but it hasn't gone through yet. It is necessary for Congress to create such a program, since the parks are not allowed to do so on their own. I've never come across anyone among my fellow fee-collection rangers who were not sympathetic to such an idea. Since people always ask about it, it would make our job easier, and make more visitors happy, which we also like.

The Anti-wolf folks don't have any scientific legs to stand on. There is simply no way that a species that has lived in a region for millions of years can harm the natural ecosystem. If wolves were a problem for deer or elk herds there would be no deer or elk herd on the continent. There were a lot more deer and elk throughout the united states back when wolves present. Hunting, development, and other forms of environmental degradation are the biggest dangers to all of our wild species. I understand that people suffer some economic losses from wolf reintroduction and that should be addressed, but the idea that wolves are a problem for deer and elk herds is beyond foolish.

This works. Nature'sBridge, with campuses in Yosemite, the Marin Headlands and Olympia, Washington, affords a week long outdoor education experience for school kids, during the school year, and has a dramatic impact on the students. My daughter was an instructor at the Headlands and then Yosemite and the letters she got from students reflected how meaningful the experience was. So dramatic was their experience, that after her death, contributions to Yosemite National Institute (since renamed Natures'Bridge) were massive and resulted in an endowment fund (that took a big hit with this recession, by the way) that gave birth to yet another outdoor experience for young women, some of who have returned as instructors in the program. I believe this is a program worth modeling after. I don't know how the public school program is funded, but it is more than worth it.

It is critical that this large parcel of land known as Edison Farms located within the DR/GR be preserved. From an ecological perspective, the DR/GR contains not only extensive intact wetland systems but also a mosaic of interconnected habitat for listed species. The DR/GR is also important for residents of Southwest Florida for its hydrologic features, primarily its role as providing approximately 70% of Lee County Utilities potable water supply. The DR/GR planning effort officially commenced with the release of the McLane Report in May 2007 and since that time has involved all stakeholders and interested parties, including environmental organizations, civic groups, landowners and mining interests. Over a two-year period, there were 23 official DR/GR advisory committee meetings and no less than 9 public hearings to solicit input on DR/GR planning. Countless technical reports and data sources were utilized in the creation of the DR/GR documents, resulting in a proposed overlay that is comprehensive, data-driven, equitable and defensible. Purchase and preservation of this large tract of land located within the DR/GR fits perfectly with the years of work that has already been done. Thanks to the Conservancy of Southwest Florida for spearheading this superlative idea.

Establishing wildlife corridors is essential at all levels. At the community level wildlife corridors that are agreed upon and established would provide important educational opportunities and clarify smart growth boundaries. The same would be true at the national level, particularly with respect to how these overlap with utility corridors, transportation routes and the infrastructure network of human settlements.

Mission 66 helped in a time of growth, now we need to help the National Parks during times when so many folks, young and old, are re-connecting with the natural world. It is imperative that we FULLY FUND the National Parks and the Centennial Initiatives.

I am sorry that you are so hateful. It must be difficult to live in such a state (I only glean this info by reading your angry comments all over this forum.) I was just speaking out of frustration. It seems as though this forum is getting so sidetracked by these OHV issues when there are so many other important and immediate issues to address. I have relatives that own OHV's and use them on their private property and they have a great time. I am all for that. Really, I am. But what I don't want is to have a solitary afternoon walk or a peaceful camp out with my kids disturbed by loud, and frankly, smelly OHV's encroaching on my peace and quiet. If you have private property to ride around in, God bless.

Happily promoted! I really hope Obama puts this plan into action. I would love to see the gov. fund some "WPA-type" idea like this. People have been asking and it's more than about time the gov. took notice.

That's a great idea. we just have to hope that local governments would put a park for the health of our children before the newest shopping mall. With obesity on the rise and our dependence on oil in this country this would be a wonderful solution, Start kids early on the ideas of personal fitness and alternative transportation.

Excellent idea! Camp is a great experience and really helps to foster better self-esteem. Girls (and boys) of all cultural backgrounds should be allowed to experience this. I think a multicultural camp experience is an idea that should be roundly promoted!

Conservation. I think the Endangered Species Act is a wonderful tool enabling the conservation of species. The problem is that it doesn't protect the ECOSYSTEMS that these individual animals live in. It is impossible to save a specific animal if it doesn't have it's particular ecosystem to survive in. Also, I think all government entities need to work in conjunction with the species on the list. For example, the government has spent millions of dollars raising Black-Footed ferrets in captivity, preconditioning them for release, and then releasing them in the few remaining prairie dog colonies. On the other hand, another government entity is paying millions of dollars to poison prairie dog colonies. In fact, even persons who own private land are forced to poison any prairie dogs living on their property. This just doesn't make sense. They contradict one another and once again, this brings up the whole ecosystem that prairie dogs create. Not only are Black-Footed ferrets on the Endangered Species list, but so are Swift Foxes and Burrowing owls, which both also depend on these prairie dog colonies. The obvious solution is to stop poisoning Prairie Dog colonies and the animals that depend on them will no longer need to be on the Endangered Species list saving the government and people millions of dollars. I think the governments needs to create a new bureau dedicated solely to animal and ecosystem conservation. They need to hire more biologists and environmentalists who understand these complex systems to help manage our wildlife and public lands.

Complete Park and Trail Maps. Maps and Trail system maps and databases are not updated, ie. USDA's National Forest and Park maps do not include all trails in their publications which are distributed to the public. In a publically distributed, Mount Rogers National Recreation Area Trail Location Map. 18 trails are listed, and an additional four trails illustrated. Four trails and an access road are omitted. Sawmill Trail (4556), Buzzard Den Trail (4582), Wright Hollow Trail (4548) Feathercamp Ridge Trail (4550) and Forest Service Road FS287. Recommended Edit: The insertion of SR 731 and SR 605 roads on the map and showing more four trails, the Income Generating Consumers realizes there is more national park located on the north side of Iron Mtn. I'm sure there are 100's of similar maps out there which direct the consuming public away from private businesses which have been encouraged to start with the many economic development programs across rural America.

core areas and wilderness. Conservation Principles/Land Management Securing sufficient recreation areas (for us) and core areas of habitat (for wildlife) in the Southern Appalachians will require protecting a variety of conservation lands. Fortunately, the region is rich in such lands. SAFC proposes that the areas identified in this section be protected and managed for their conservation value. This protection can take many forms, from wilderness designation to management by wise forest planning. Through protection plans, core areas of forest can be secured as habitat for our native species. Management that assures conservation protection also provides many human benefits, including clean water, quality recreation, and the knowledge that we are restoring and preserving the health of ecosystems on which human well-being ultimately depends. Our Public Lands It is therefore vitally important that we consider the wise management of large core areas, much of which is already in public ownership. The most critical of these lands are those that retain a high degree of their natural ecological function. These areas provide the healthy and stable sanctuaries from which recovery and restoration can proceed. They can also furnish the best reference data to guide the recovery of more-damaged ecosystems. Key conservation lands include forests with few or no roads, tracts of old-growth forest, biological hotspots, and critical watersheds, all of which must be wisely managed over the long term to protect and enhance their natural value. A successful approach, especially here in the Southern Appalachians (but across the nation), should concentrate its efforts on identifying conservation building blocks where national forest ownership offers opportunities for protection. Conservation building blocks include (1) currently protected natural areas, (2) unprotected natural areas, (3) old-growth areas, (4) biological hotspots, (5) aquatic watersheds, (6) high-priority areas for public acquisition, (7) conservation easement areas, and (8) cultural and heritage areas. Management of these components to achieve their highest conservation potential will help establish and restore landscape-scale conservation areas in much of the region. These comments focus on two priority areas of focus: 1.) wilderness protection, and 2.) watershed/water quality in our national forests. Wilderness Priority We need presidential leadership now more than ever to protect our wilderness quality lands so that future generations may also enjoy them. I'm asking the President to please make wilderness protection a central component of his policy emerging from the America's Great Outdoors Initiative. The President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Currently, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. Worse, the Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President, and I urge that this be done. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds, and recreational opportunities. Action: Direct land managing agencies (e.g. Forest Service) to conduct consistent and fair reviews of wilderness quality lands. Currently, there is no clear or consistent direction to federal agencies for recommending wilderness in their management of our nation's public lands. It is imperative that the land managing agencies maintain complete inventories of wilderness-suitable lands and provide inclusive recommendations for wilderness designation to Congress... and to achieve this we need to have strong Presidential leadership and direction from the Administration. Roadless Roadless areas in Southern Appalachian national forests are among the

(cont.)

last truly wild places in the Southeast. They harbor unbroken wildlife habitat, clear-running streams that feed our rivers and drinking water supplies, and backcountry places where we can experience the kind of solitude and spiritual renewal that only undisturbed forests can provide. Since these areas represent the last wild areas of the east, the goal should be to secure strong, long-term protection for the 723,000 acres in the Southern Appalachians. Nationally, roadless areas encompass nearly a third of all national forest land, but only 15 percent of the Southeast's national forests. The 2001 Roadless Area Conservation Rule Roadless areas are identified and "inventoried" by the U.S. Forest Service and should be kept free from logging and other harmful resource extraction. The standard of protection we seek to uphold is the 2001 Roadless Area Conservation Rule, a Forest Service regulation that places roadless areas off-limits to commercial timber cutting and road building. It was signed by the Secretary of Agriculture on January 12, 2001, following years of scientific study, 600 public hearings held around the country, support from eminent scientists and economists, and a record number of comments from the public.

Action: We urge the Obama administration to uphold the protections of the 2001 Roadless Area Conservation Rule.

Watershed/Water Quality Priority Our national forests may soon be the most important natural system capable of capturing, retaining and releasing water. According to the Forest Service, more than 60 million Americans get their drinking water from national forest headwaters. The role of the Forest Service in protecting and managing drinking water supplies affects approximately one-fifth of United States communities, yet few Americans know or understand the important links between forest management, watershed and fisheries health, climate and change and community drinking water supplies. We believe the management of watershed and fisheries resources should be an important priority for the agency. A New Future for the Forest Service - Secretary of Agriculture Vilsack's Restoration Vision: In August 2009, the Secretary' articulated a bold, new vision to conserve and restore our national forests. He outlined a complete commitment to restoration which he defined as "managing forest lands first and foremost to protect our water resources while making our forests far more resilient to climate change". To achieve the Secretary's 21st century vision, the Forest Service needs a 21st century structure. We suggest the agency would benefit from a major reorientation that prioritizes watershed and fisheries restoration and protection. Water is likely the most important ecological and economic resource that the Forest Service manages. Water derived from our national forests is estimated by the Forest Service to be valued at \$7.2 billion, while timber is valued at a mere fraction of that amount. Despite this, the agency is still operating under a structure focused primarily on silviculture and resource extraction. To make restoration as a priority for the agency, we believe a watershed and fisheries restoration program is necessary and restoration experts need to be moved into leadership positions to effectively achieve that goal. Action: Restore forest watersheds and fisheries, protect drinking water quality, enhance declining fisheries and provide connectivity for wildlife migration. In order for landscape conservation areas to function as a regional conservation network, there must be ecological connectivity between the areas. This requirement is difficult to fulfill in a region that has been roaded and developed as much as the Southern Appalachians. However, there currently remain many viable connections across the landscape, and in the long term the potential for connectivity is great -- if we as a culture understand its value and give it the high priority it deserves. Action: Fully Fund Land and Water Conservation Fund Honor the original intention of the LWCF Act -

(cont.)

ensuring a selection process that allows the Forest Service to acquire a significant portion (greater than 50%) of lands east of the Mississippi (where the population pressures exist and the opportunities for recreation are maximized). Roads The absence of roads is one of the primary prerequisites for landscape conservation areas. Past attempts by the Forest Service's roadless inventory have failed to identify many unroaded areas relevant to ecological functioning. The Forest Service inventory, while identifying many important areas, omits important areas of the national forest that are unroaded. In addition, the agency's inventory of roadless areas was confined to public lands. In fact, many unroaded areas that do not satisfy official size, configuration, and ownership constraints still provide significant habitat and ecological connectivity. Even the smallest such areas can serve as vital "stepping stones" that provide connections between larger areas.

A Picture Says a Thousand Words. As Michael P. Nelson illustrated in his "An Amalgamation of Wilderness Preservation Arguments" there are many ways in which to defend the wilderness and demand the conservation of the wilderness. And as many arguments as there are for the preservation of the wilderness there are an equal number of motives that prompt those arguments. Some are clearly more valid than others. This same sentiment can easily be applied to the arguments of those who do not support the conservation of our wilderness areas. Some clearly are more valid than others. However, the photographer Ansel Adams and the Sierra Club developed one of the best methods for arguing in favor of wilderness conservation and educating the American public about the American wilderness: photography. Through photography and beautifully crafted coffee table texts, the Sierra Club introduced many people to the beauty of the American wilderness. Many of the people who joined the Sierra Club in the sixties did so, in part, because they had been exposed to the many faces of the American wilderness through the books produced by the Sierra Club and its executive director at the time, David Brower. Through these photos many Americans were able to reconnect with an inherent and sacred part of American culture: the wilderness. Although there is a technical definition of "wilderness" in The 1964 Wilderness Act (i.e. "Wilderness is an area where... man himself is a visitor who does not remain") still the concept of wilderness is an abstract one. For many Americans this is why they are detached from the wilderness and are indifferent to the state or presence of wilderness areas. If images of our forests and mountains and rivers were reintroduced into the public scene then the public might once again realize the importance of wilderness. Although the aesthetic side of wilderness is probably not enough for most to make them wish to save it, still it would provide such people with a grounded sense of "what wilderness is." And this is the vital first step in reconnecting the American people with the American wilderness and revitalizing the conservation movement. After all, pictures do what words cannot. And pictures describe and incite emotions that words cannot express, and that is why they are so powerful.

(cont.)

The Wilderness Act of 1964 defines wilderness as "an area where... man is a visitor and does not remain." Your idea concerning Wildlife Refuges and National Parks therefore goes hand in hand with the government's legal definition of what constitutes "wilderness." Many pass through the states that you and Mr. Harris mention, but do not pause to take in the land around them. A National Park with a well maintained camp ground would then afford visitors a place to appreciate the natural beauty of those states. And as you noted this would also stimulate the economy of those states. Most of these states' economies are solely based in agriculture (whether corn, potatoes, or otherwise) and many of the residents are living loan to loan. Since most of these states also have low population densities it would then not be hard to find areas that could be transformed into either Wildlife Refuges or National Parks. History has shown us time and again that the overgrazing of grass lands can lead to devastating consequences. The most extreme being the dust bowl of course, but that had a number of factors only one of which was the excessive grazing by sheep. Although it is unlikely that we will have a repetition of this tragic natural disaster, there are many other valid reasons for conserving, preserving, and revitalizing the lands in question. Sigurd Olson, writer of the essay "Why Wilderness," would argue that such parks and wilderness areas provide a necessary relief for many people from their everyday lives. But there are more persuasive arguments than that. For those who argue against wilderness conservation due to what geologist ___ might term "the cost" of "(a decreased) the quality of life" (Encounters with the Arch druid by John McPhee) for "present generations," simply look at the benefits hard working men and women of the Midwest would receive: greater tourism, greater economical diversity, and healthier land to name a few. One of the above alone would be enough to make it worthwhile for the government to look into the Great Plains States as locations for National Parks, Reserves, or Wildlife Refuges.

As a teacher of elementary students, I think this is an excellent idea. It will benefit both the students and their families to become more involved in the outdoor world. I think it might be beneficial and more practical in teaching to have students be involved on a regular basis, like once a month, to see how many opportunities there are, rather than full immersion for a week. And maybe more feasible and affordable as well.

ATV's are allowed in Glacier NP. They must be street legal and stay on paved roads, though.

Let me guess, you live in California and you want to protect EVERYTHING from ANYTHING. This is the most ignorant set of statements I've seen regarding mineral resource regulation. Clearly, you have no understanding of the rigorous processes involved and the hundreds of permits necessary to operate such an endeavor as a mine. Simple compliance with the CWA, CAA, RCRA/CERCLA, NEPA, etc. are so complex that an average citizen grossly underestimates the existing framework of regulations that such a NECESSARY activity entails. Where should we move the mineral deposits, so that you would be happy???

preserving natural heritage. we need to work harder at developing sources of energy that do not deface our landscape, or destroy our air, water and soil. When I get a chance to visit Alaska, I don't want to see destruction of the landscape so please do not pursue the Pebble Mine project. This is our last chance to preserve our Nation's beauty, where ever it is. And if the local people don't see it as beneficial or harmless activity, their decision should be honored.

As an environmental educator in Yosemite National Park for the last 9 years, I have become intimately aware of the transformational power National Parks possess. Part playground and part classroom, these wild places provide precious opportunity to connect youth to the world around them, their friends and families, and ultimately themselves. With skilled educators facilitating these connections, these lessons can be learned deeply and transferred back to a student's home community. Every child in this country deserves the opportunity to discover their potential to steward their relationships, communities, and planet.

The Hudson Valley is definitely qualified for designation as a part of the National Park System. This is an area of not only national, but global importance. A new park should not only include federal-state-local cooperative efforts, but it should also include federal acquisition of key lands that are in danger of development or degradation. This should include traditional full-fee acquisition as well as conservation easements on farmlands and other lands where some resource use will continue.

(per Comment #1): "Thank you, Judge Donald W. Molloy of Missoula, Montana for ordering the re-listing of the Gray Wolf in Montana and Idaho as an endangered species!"

Comments #2 and #3 notwithstanding, it's unclear what a "Promote" or "Demote" on this Idea would really mean. The last paragraph seems to call for the abolition of all user/access fees for all people visiting all public lands in which some volunteers contribute some of their time. With his Idea Title, is _____ singing: "R-E-S-P-E-C-T, find out what it means to me..." and waiting for us to ask him? ;-)

Although they do not currently pay fees to compensate for their degradation of the views at National Parks, jet airplanes already pay a number of taxes and fees for various reasons -- please provide your expert opinion on each of those types of payments so that we can evaluate your Comment #8 in proper context (i.e. "insane" compared to what?).

A modest proposal for you: try conservation first.

Thank you for your patience in explaining the serious need for legible permits to be mounted on snowmobiles, particularly as reflected in your polite yet firm responses to questions and your clear explication of additional facts and logic. This is perhaps the best discussion of this topic I've seen here in the last couple of months. For those who have not voted to "Promote" this Idea, what serious objection(s) do you have at this point?

Conservation.

If the Pebble Mine were to extract every ounce of recoverable gold according to the most optimistic estimates of its proponents, then by the end of this century it would add slightly more than 1% to the world's gold supply. This is far, far less gold than we could recover by reducing, reusing, and recycling it and at an astronomically higher environmental price. The Pebble mine is all about privatizing profit for a few and externalizing costs for the rest of us. King Midas tried eating gold and it didn't work out so well. I prefer wild Alaska salmon.

For more info on the Friends of McInnis Canyons, see: { Link }

(per Comment #3): Thanks for the "haystack" of legal briefs. The "needle" can be found in the Conclusion (pp.32-33) of the "Order Granting Motion to Dismiss" in U.S. vs. Smith ({ Link }), which finds the Defendant (Mr. Smith) "not guilty" of parking too close to the "area" of public amenities (e.g. toilets) without buying a permit (mainly for technical reasons having to do with the definition of "areas") -- it does not find the Plaintiff (U.S.) "guilty" as described in the original Idea above. Indeed, the court went out of the way to state: "However, dismissing this citation is not the death knell of the Red Rock Pass program. The record before the Court reveals numerous recreation sites and locations within the Red Rock HIRA which qualify as "areas" and where charging a recreational amenity fee would not violate the other provisions of the FLREA. Assuming an individual's recreational activities were not exempted from the uses for which no fee may be charged, requiring a Red Rock Pass for use of those areas would be appropriate." Perhaps we can continue this discussion on a factual basis.

I've already started to "get it done" per your challenge above -- see my Idea "public native plant gardens" and my Comment #1 under the Idea "Make Your Property A Wildlife Preserve!" Perhaps others could comment on how they've started to "get it done" rather than concerning themselves overly much with your writing style, etc. ;-)

Thank you for presenting this important Program here -- so apropos of the mission of this website and a *profound* tribute to your daughter. For those interested in learning more, the link is: { Link } The text there begins: "NatureBridge: Connecting Youth to the Natural World We are NatureBridge, formerly Yosemite National Institutes. Our mission is to inspire personal connections to the natural world and responsible actions to sustain it. Serving over 40,000 participants annually, NatureBridge is the largest nonprofit residential environmental education partner of the National Park Service. Since 1971 we have introduced almost one million students to national parks through field science education programs for schools and youth leadership programs."

Discussion Question 1

(cont.)

(per Comment #13): The permit model you outline, including limiting the number of permits issued to what is locally sustainable, seems like it could apply effectively to Priscilla Burton's original Idea -- thanks -- I'm looking forward to changing my vote from "No Opinion" as soon as she weighs in on the significant matters discussed above....

Implicit in the last two sentences of your Comment #1 is the argument that a few animals must sacrifice their freedom for the sake of others. This is one of the many sad results of human destruction of their native habitats, but we can make it much less sad by holding zoos to the highest standards in how they house and treat their animal guests while they are there (e.g. providing ample room in naturalistic enclosures) and by helping zoos "to restore endangered and threatened species back into the wild" as you say.

Naturalize our new citizens amidst our natural wonders. Welcoming our new citizens by holding their naturalization ceremonies in our National Parks/Monuments would show two great things about our country at once. Credit: This originated as my Comment #1 on (part of) an Idea posted by ___ on Sept. 10th.

We need to encourage our new citizens to connect with the great outdoors, too. If a government function happens on public lands, it usually has to do with public lands policy. What are you imagining being more expensive about this? (Note that I didn't say "all" new citizens would have this privilege/pleasure and remember that they all have to get to their swearing-in ceremony on their own, wherever it's held.) The federal government wouldn't even need to "rent the hall" because it/we already own the National Parks/Monuments! Naturalization ceremonies are shown on national television most every year around the 4th of July and this would remind all of us that the national treasures of our National Parks/Monuments *and* of our Citizenship are part of what we love about our land and our values.

Discussion Question 1

Written & Online Comments

(cont.)

(per Comment #18): Thank you for helping to "unpack" your original Idea further. While I agree that human access to the natural world is essential for our spiritual and material well-being, I would also argue that it is in our HIGHEST INTEREST to preserve *some* undisturbed natural areas (particularly with critical habitat for endangered species) from *any* human intrusion that is ecologically unsustainable. I suspect that you would agree with this and that we are only debating the location/extent of such natural areas and the intensity/type of human incursions that should be permitted (i.e. *what* activities are environmentally sustainable *where* and *when*). To put a very fine point on the argument, I would be content if research scientists and documentarians had sole access to the *most* vulnerable ecosystems (but only if they could enter and leave without undue disturbance) -- sharing their findings with us on something like the "Discovery Channel" (to borrow a term of mockery from anti-environmentalists) -- while I had personal access to similar but less pristine examples of those ecosystems which would not be irreparably harmed by my visits. While I prefer to hike, if your OHV riding was according to similar precepts (in separate areas from my hiking trails, by the way) then I'd have no problem with it whatsoever. So, I will agree with the motto "Land of Many Uses" if and only if it some day becomes commonly understood that one of the most important of those "Uses" -- paradoxically -- is not to "Use" the most ecologically-significant land for any human purpose that alters its natural state.

If you've never seen photos of this place, check out "Adobe Town" Wyoming on Google Images -- WOW!!!

Per Comment #1, here are some specifics: The Sportsman's Alliance for Alaska ({ Link }) states that: "no where in Alaska, do so many salmon return as to the Bristol Bay watershed. Just a few of the superlatives in this region include: The Kvichak River is home to the world's largest sockeye salmon run and is also within Alaska's designated trophy wild rainbow trout area. Other species found in the Kvichak include Chinook (king), Coho (silver), pink and chum salmon, Arctic Char, Arctic Grayling, Dolly Varden, northern pike, and whitefish. The Nushagak and Mulchatna Rivers support the largest Chinook (king) salmon runs in Alaska, and perhaps the world. Other species found in these drainages include Sockeye, Coho (silver), pink and chum salmon, Arctic Char, Arctic Grayling, Rainbow Trout, Lake Trout, Dolly Varden, northern pike, and whitefish. Lake Iliamna is Alaska's largest lake and America's last undeveloped "great lake" as it is the same size as Lake Erie. It is home to one of only two freshwater seal populations in the world, as well as all five species of Pacific salmon, Arctic Char, Arctic Grayling, Dolly Varden, Rainbow Trout, northern pike, and whitefish."

We need to make the commitment to educate ALL children, at least through the age of eighteen (from the "three R's" to outdoor science), so that they can be good citizens -- good jobs will follow.

Discussion Question 1

Written & Online Comments

(cont.)

As the terms of and parties to conservation easements vary greatly, the type, extent, and frequency of environmental reviews vary greatly. Where a non-governmental organization (e.g. The Nature Conservancy) or government entity (e.g. an individual state's Department of Natural Resources) has granted a conservation easement specifically to protect a habitat type and/or particular species, environmental reviews may be more rigorous (e.g. involving qualified biologists). A good overview of conservation easements can be found at: { Link } Addressing your particular question, that document states: "The grantee organization or agency is responsible for enforcing the restrictions that the easement document spells out. To do this, the grantee monitors the property on a regular basis, typically once a year. Grantee representatives visit the restricted property, usually accompanied by the owner. They determine whether the property remains in the condition prescribed by the easement and documented at the time of the grant.... If a monitoring visit reveals that the easement has been violated, the grantee has the legal right to require the owner to correct the violation and restore the property to its condition prior to the violation."

Thank you for this "explainer" -- it persuaded me to revisit your Idea "Reduce tax break on closed industrial timberland" and change my vote from "No Opinion" to "Promote."

Thank you for your beautiful and concise presentation of this powerful Idea. I have witnessed on many occasions the special connections that many students have with various aspects of nature, whether it's spotting a hummingbird visiting its nest in branches overhanging a stream or planting a native plant in a school garden that will attract butterflies the next spring. Some of these students exhibited little or no intellectual curiosity sitting at their desks in the classroom -- staring at a book, board, or screen -- but once they went outside, they looked, listened, and asked lots of (really good) questions. So, in addition to its many other virtues, teaching ecology is a very effective way to engage the intellectual curiosity of some students who would otherwise be hard to reach.

Community gardens -- appropriately sited and managed -- are beautiful in so many ways: they teach our children where their food really comes from (i.e. it does not grow in plastic wrap at 'superstores'), the fruits & vegetables are wonderful to look at, people form new "outdoor" friendships based on a common interest in sustaining the environment and eating good food, etc., etc., etc. For a complementary idea (and to attract pollinators), search "public native plant gardens" on this website.

Discussion Question 1

Written & Online Comments

(cont.)

It is not part of the Wilderness Act that any and all people have the right to enter any part of any Wilderness Area by any means of transport necessary to get them there. More generally, while access is important, it doesn't trump environmental protection -- we must ensure that there is sufficient natural habitat for people to enjoy when they get there *and* for wildlife to enjoy when and where humans give them some space of their own. There is no scientific justification for setting the miles of trails of each type in a particular ratio -- which trails of which types in which areas are sustainable has to be evaluated on a case-by-case basis. To be clear, wherever the environmental impact is minimal and no rare species are imperiled, I'm inclined to favor legally-permissible access trails so that as many people as possible can gain a greater appreciation for the natural wonders that we have succeeded in protecting from 'development.' Finally, if you take the time to read my Ideas and Comments on this website (including the one referenced in Comment #3, above) you will see that I am *not* "upset because the ORV Supporters as showing their numbers here" as you assert -- subjecting their opinions to the light of day is a good thing (on this specific point, please see the Idea description for "Participants: Please use this website to learn something and to teach something.").

It is encouraging to see the USFS working on multi use trails and bringing many users groups together for the benefit of the many rather than the few. I agree that more access is important rather than less as our lands are a treasure to be shared responsibly rather than restricted arbitrarily. Mountain biking is a responsible non-motorized use appropriate for many of the areas currently restricted to it's use. I feel reconsideration of current designations needs to be considered in all of our lands. I agree that many Wilderness areas need to be set aside to hiking only, but many of the previous and upcoming designations are over reaching and excluding Americans and visitors from the outback experience.

It is nice to know that many high schools have adopted mountain bike teams as an addition to conventional ball sports. I'd like to see more trails made available to America's youth as well as the public in general. I see this as a nice gateway to encourage people to get outdoors and enjoy the open spaces that are too often taken for granted.

According to you, AZ should look like an utter wasteland. Yet if you want a chance at a trophy elk, AZ is the place to be. I can drive down the road and see Bighorn Sheep on a daily basis. I often see mountain lions and have even seen the rare Mexican Jaguar on multiple occasions. Wolves are thriving in the Northeastern part of the state, and coyotes roam freely. Hell, I damn near hit a group of javelina at least twice a week within a mile of my house. I could go on for quite some time about how good things are here. Yet we have an open use policy on OHV's here in AZ. We can go anywhere we want and have open range grazing, yet the wildlife here is thriving. Care to explain that one?

(cont.)

If you are going to quote something then make sure you know what you are doing. Failure to do so makes it look like you are grasping at straws to prove your point. Section 509 [43 U.S.C.1769] (a) Nothing in this title shall have the effect of terminating any right-of-way or right-of-use heretofore issued, granted, or permitted. However, with the consent of the holder thereof, the Secretary concerned may cancel such a right-of-way or right-of-use and in its stead issue a right-of-way pursuant to the provisions of this title. So in other words, this law only applies to rights-of-way created after 1976 because of one word: heretofore, (legal definition), until now, before this time.

Whether you realize it or not, there has been a shift in the thinking of a lot of OHVers. We have been trying to and succeeding in rerouting some of the more sensitive sections of trails. Many areas have been "hardened" to protect areas that have a problem with standing water. This was done to keep these areas from turning into giant mud bogs. There where bypasses closed recently at both the Rubicon Trail and at Fordyce in the Tahoe National Forest. The main problem with us getting some of the more environmentally sensitive areas either rerouted or having work done to protect them is the USFS, the BLM, and the whole process with the gov't. The OHVers have been doing a lot of work on our trails. There is a massive amount of work currently being done on the Rubicon to meet water quality standards. Some of it needs done and some of it is just plain silly. I have no doubt over the next two years that this will be the model for the rest of the country.

Sounds to me like hikers do not want to pay their way. Looks like a developed trailhead with a paved area. It's about time this come around to bite the hikers in the butt. It was ok when we had to pay fees, now it is their turn. What happened to hikers and backpackers, along with the eco's putting their money where their mouth is and helping out? Guess it was all talk as usual.

As I alluded to earlier, another and I have been working on something for the last 12 years. We are very close to finally realizing what we wanted to do. This has been kept very quiet until recently. There have been two 10kW Tesla turbines running for almost two years without problems. And recently a 50kW was built and is currently running. Now 50kW is the equivalent of 200 amps at 240 volts. Enough to power the average home. There is also a 50kW turbine currently being adapted to a vehicle. A Tesla works through laminar flow, fluid dynamics, and gaseous expansion. I currently hold the equivalent of a Ph.D. in mechanical engineering through 15 years of hard won experience and the other one working on this holds a Master's in electrical engineering. Now before anyone here starts screaming that a Tesla Turbine doesn't work, then you had better do A LOT of research. One of the first powerplants was built at Niagara Falls with a Tesla Turbine to power NYC. And a version of a Tesla is used in every steam powered power plant in the world. We just found a way to do it very effectively on a smaller scale. We should be doing a full release in the next year, depending on how the whole OHV thing goes. Both of us have agreed that if we cannot have equal and equivalent access then we will keep this for ourselves.

Whether you or anyone else likes it, this actually works. Just take a look at the Rubicon Trail. Enough people on both sides finally realized what needed to be done and it is being done.

So are you going to be the one to decide if I get to have kids or not? How about we do like China and practice infanticide. Maybe we could just line people up and use firing squads. Maybe if you would stand up and be a man and push for immigration enforcement, then we wouldn't have a problem. Some 30 million live here by alot of estimates. They are here illegally. They broke the law. Round them up and send them home.

Ther is a deep division in this country based on lies and deciet on both sides. We have the extreme left and right here, and also those who want to find reasonable solutions. There needs to be those who can be bigger men and wmen to stand up and find a reasonable compromise. Who is willing to stand up with me?

_____#107: I hear you! While I try to walk that middle line, I will certinaly revert back to my right-lean when folks post the Anti-OHV lean in a vague and unsubstantated manner

_____#108, "Since we discovered OHV riding we finally have found something we both enjoy and can do together." As my kids grow older, this i exactly what I am counting on. My In-Laws started taking OHV trips 20 years ago. The OHV activity was the draw for the kids. On most every one of their trips now, all their kids (now grown) are camping with them. Now that my In-Laws have grown older, they don't attend as many OHV trips. For them, the grandchildren is the draw. "A family that plays together, statys together."

I'm not sure if I know what you mean, but are you threatening OHV users with your last statement? I certainly hope not. And no, I won't SHUT UP either! Guess what dude, your Jeep.... it's a OHV as soon as you drive it off the highway. I'm glad that at 64 you're content to ride a Horse in the forest. (Good luck with that over the next 10 years.) But that doesn't give you any rights to take away mine! _____#110, who wrote: "No longer can you see wildlife close up from the trails, no longer can you dispersed camp without the loud buzzing of motor vehicles screaming across the desert nearby, or doing "donuts" in the fire roads of the forest. Riding up the sides of the banks of the creeks, and screaming across the forest duff making narrow tracks for natural rain to cause erosion and foul the watershed. " Another page of unsubstantiated, generalizations from the Anti-OHV Book! Last Month, I was in the Sierra Nevada Mountains, driving OHV down the trail. I saw wild cattle, Deer and a coyote all within 20 feet of the trail. This summer, I was in the California Desert for a week. I saw snakes, lizzards, Hawks, Fox and Kangaroo Rats. So, I have no idea what you mean that you can no longer see wildlife close up from the trails. As for the rest of your generalizations, It's nothing short of unfortunate that OHV users around you are acting irresponsibly. Some of what you post about calls for existing laws to be enforced while others can probably be addressed with some education by your local governmental agencies. Regardless, you have no right to use the examples of a select few to smear and condemn the rest of us for it!

Not sure about your title, but everything else seems accurate. I have two electric quads at my house (but they are for my kids). I'm holding out on a new quad. Waiting for a good Adult Size electric quad to come out. Or, atleast that's what I'll say on this forum :) The technology is developing, and it's pretty exciting! At this { Link }, you can see that China is on board with the idea.

Man, I wish I could see the votes! Other than protecting their own agenda, I can't think of a single reason in this wide world why anyone would demote the idea of Kids on Trails! Perhaps they think sitting on the couch playing DS would be better?

Fair enough, just say what I said, granted you agree with what I said. "Can you show me in public law where habitat preservation is designated the only reason to be considered in closure decisions? I don't believe that explicitly exists in any past legislation." Jon, you are correct in that such legislation does not exist. In fact, there are Areas Designated by the USFWS as "Critical Habitat" where BLM permits OHV Access.... and it's legal!

Folks, also check out a similar Idea here. Support and Defend the Endangered Species Act { Link } Promote Vote here would be a Demote Vote there.

My son and I have had a hard time finding something in common to enjoy together. Since we discovered OHV riding we finally have found something we both enjoy and can do together. We enjoy riding and taking in scenery we would not have seen otherwise. We are both responsible riders and care about the environment and make sure we leave in better condition than we found it.

Being a Utah native (born and raised in south eastern Utah) I have to agree with Brad mower, I live in Moab and yes during Easter week it gets crazy here but a big part of the economy here is built around OHV use as well as other outdoor activity's so its just something that I deal with. There will always be those who break the rules no matter what they are but banning something doesn't fix the problem ie: people rob banks so lets just close all the banks, doesn't work. Were all going to have to share and help educate others.

I am a member of an org in Vt and I have to admit that they are very concerned about how the org is percieved. Reputaion is a huge part of being recognized by the community. Look at the VAST Trail System for snow mobiles, if that was not marked and regulated would there be any such thing? Why cant something like this be done for a 4WD Trail System? I promote what the UFWDA is trying to do!

In certain areas, vital wildlife habitat for endangered or threatened species and wilderness areas, yes. As you said yourself people on foot can cause wildlife stress as well. Now before you use the standard idiot logic here let me say that in case of emergencies like wildfires and plane crashes or any other form of extreme peril you can come up with exceptions will be made.

I think there is a lot more than cloud seeding and weather modification going on up there. Lets not forget the grip pharmaceutical companies have on the country. Either way though I agree that it needs to stop.

How about people cut back on the over consumption of natural resources? It is amazing how little responsibility humans want to accept over what is happening.

(cont.)

Get youth outdoors and "getting to know" local wild spaces through creative arts.. Taking responsibility for the global environment can be overwhelming to youth - but caring about a local greenspace (park, garden, school yard, etc.) is not. Tangible, heart-based connections with nature can be created if children and youth just spend more time in a local greenspace. Even better, they can use creative arts like photography, art, writing, video, etc. to enhance their understanding of local nature. Canadian artist Robert Bateman's Get to Know Program (www.gettoknow.ca) is based on this concept. The program's signature initiative is the Get to Know Contest, which invites youth age 5-18 to submit art, writing, photography and videos based on first-hand experiences in nature. Its "Virtual Hikes", "Natural Treasure" and "Best Practices" resources introduce youth to local wildspaces and help teachers incorporate nature into the curriculum. Some resources are location-specific, but more locations are being added over time. With partners like the U.S. Forest Service, the U.S. Fish & Wildlife Service, the National Wildlife Federation, the program is popular due to its simple philosophy: Something as simple as allowing youth to just be outdoors and connect with local animals and plants, even just for a few minutes a day, through arts or simple observation, can serve as a foundation to them becoming healthy, active adults and engaged citizens who will passionately care about the environment.

Public/Private partnerships. The group I belong to, Friends of McInnis Canyons NCA (non-partisan, 501 (c)(3) has been in existence for over 5 years now and has developed a great relationship with the BLM. The Grand Junction field office has emphasized the "conserve, protect and restore" philosophy embodied in the organic legislation which created this NCA. Our group wishes to see the kind of collaboration present in our relationship with the BLM encouraged by a well defined policy statement from the BLM which would help other units in the NLCS work toward the kind of success we have enjoyed. Many lands are now protected and a healthy Friends/BLM relationship is the beginning of the answer to "now what ?".

Migration Highways through the Madison Valley, Montana. Delineate the centuries old migration highways that animals use to migrate/disperse in and out of Yellowstone National Park through the Madison Valley, MT Hwy 87 and US Hwy 287. Erect effective wildlife crossing signs, reduce speed limits, paint the road with wildlife crossing messaging, erect point of interest signs for travelers to see where these corridors are and what animals use them and where they are going and coming from, create an educational component where school children study these corridors and the wildlife in their area and they develop ways to protect them while crossing the roads, they make suggestions on how to reduce the astronomical number of vertebrates killed on US highways every day (one million).

Idaho County, as declared a state of Emergency in their County due to unmanaged wolf populations! People have risen against tyranny! Great day!!!!

I hear there are two other counties with wolf plans, that's not including Shoshone and Clearwater who I think is going to be next. I also think we need to hold those accountable that brought the wolf in to use as a tool to ruin rural economies.

Restore the Full Jurisdiction of the Clean Water Act. Make a national commitment to clean water by restoring the full jurisdiction of the Clean Water Act. Pass Congressman James Oberstar's House Bill 5088, the "America's Commitment to Clean Water Act," and restore protections for the streams and wetlands that are the source of drinking water for more than half of America's citizens. Director of Stewardship and Public Policy American Canoe Association
www.americancanoe.org

Provide Incentives for Conservation. We need to provide incentives to farmers and others to reduce nutrient discharges and help eliminate the dead zones in the rivers, lakes, bays and coastal areas of the U.S. Paul Sanford Director of Stewardship and Public Policy American Canoe Association
www.americancanoe.org

When I was in Alaska (1970 - 1975), Denali National Park was considered a very wild place. However, with increasing tourism, they implemented a plan to keep tourism down - albeit somewhat - by limiting travel past the 12 mile point on the park's only highway to those who had camping permits in any of the campgrounds past the 12 mile point. If you wanted to see the park past the 12 mile point, you rode the bus! It's my understanding several other national parks have or are implementing something similar. This is a good way to allow tourism, but keep the numbers manageable.

Both California and Arizona have more acres of wilderness than Idaho. If acres "fairness" is an issue, then consider that there are zero acres of designated wilderness in the northern five counties of Idaho. The Scotchmans are not "popular with snowmobilers" although nearby areas that are popular with snowmobilers would remain unaffected. Trail maintenance can be done with hand tools and is done so quite effectively by volunteer groups in many places. There are no other "management themes" that provide the certainty of protection provided for by congressional designation. Wilderness designation would change nothing as the area is currently managed that way, so there really is no need to fear the impact of such designation.

I meant to write that there are 12,000 miles of FS maintained roads. "Trails" was a slip of the "tongue" as that was also on my mind. Most all of the FS roads provide access for all users. I don't have at my finger tips the total number of trail miles in the district (Sandpoint Ranger district) but seem to recall it's only a bit over 100 miles for all types of trails. A significant portion are open to ATV use, I seem to recall looking at it in detail 5 or 6 years ago, but do not recall the exact mileage. All, or almost all are out and back - due to the nature of our topography. I understand the desire, and usefulness of "loop" trails, particularly for the ATV users and think that this can facilitate reductions in user conflict by establishing some directional usage. I believe there is an effort to create such an experience in the Talache area and south of there through construction and linkage. There are probably other opportunities for adding to this system, both motorized and non-motorized, a need that can be addressed in forest planning, travel planning and perhaps in the Bonner County Trails Advisory group. I have participated in the former two, but not the latter, although I follow the BC Trails group's work. I think all three allow different user groups to come to a better understanding of needs and limits and help reduce conflict over land management decisions. Glad to hear you are involved.

Economic Advantages of Wilderness. Public lands designated as wilderness bring value to communities and enrich our lives. These values include clean air, protected watersheds, serene viewsheds, wildlife habitat and opportunities for recreation. The economics of wilderness are described in the 2005 book, "The Multiple Values of Wilderness," published by Venture Publishing. Stake-holders involved in the public lands debates are keenly aware of the value that mineral extraction brings to local communities, but rarely value the benefits to a community that wilderness brings. In my community, wilderness is often thought of as a "taking" from the American people, rather than "giving" to ourselves and future generations. The federal government could be helpful by providing a discussion of the economic benefits of wilderness areas on the DOI webpage and in other media.

I promote this idea. But, OHV use is just one of many user groups. Its my observation that the OHV users are the most vocal and therefore, OHV users are not in danger of losing their rights to existing, designated trails on public lands. OHV riders' appetite for new trails appears insatiable. There should be some land preserved as wilderness for its intrinsic value. Future generations of families will be thankful for that, just as we are thankful to our predecessors for preserving our national parks.

That sounds like a great idea. I recommend corrals at trail heads to help in staging rides. Folks would come from far away to ride the trail. It would be a good way for Tennessee to tourist dollars to the region.

In the west, communities are surrounded by public land. Trails could be constructed to allow travel between communities on foot, horseback, bicycle, motorcycle or and ATV. This would provide recreation and an alternative means of commuting.

Science learning suffers if it's only done out of a book. Children need to connect to nature and learn about it to truly be full citizens of the world. What better place to do this than in our national parks?

The Boundary Waters Canoe Area Wilderness (BWCAW) in NE MN is a beautiful, peaceful, place - but at over 1 million acres, very few people are able to enjoy it. If you are elderly, too young, too busy, or too poor to make the trip, you can't enjoy the "wilderness." You can enjoy the lands surrounding it - the also beautiful Superior National Forest and the MN State Forests - if you have clear skies overhead, beautiful lakes, wildlife around you, you should be content. This restrictive designation of "wilderness" is divisive - it pits motorized vs. non-motorized forest users against one another. And it should not. Only extremists are one or the other. Most people, like my friends and family, enjoy the forest in many ways -- snow-shoeing, snowmobiling; paddling, motorboating, or tubing; hiking, biking, riding horses, or ATVing. We are not one dimensional earth-destroying motorheads. We love being outdoors - we just use a motorboat or an ATV to get where we're going sometimes. We are ALL motorized users. We just stop at different points. I love the BWCA wilderness - but it's big enough!

Public Lands are States responsibility and benefit, Not the Nanny Feral Government

I use to hunt, fish, boat, mushroom hunt, bike, hike and motorcycle on public lands. All have been ruined by Government, and I no longer wish to put up with the ridiculous cost and regulations involved with any of it. Liberals have completely ruined the Outdoors for most real people, and turned it over to green toads to save it for whoever takes over when we go bankrupt. What we need is Cap and Tax payable to the Harris's and Habib's of the world.

I love this idea! I've followed this advice for my yards or lots on properties in CA, WI, and UT. In CA, I converted much of a conventional back yard to natural vegetation and put in a pond. In WI, I converted most of a large lot to restored native prairie, and put in some ponds. In UT, where I now live, most of a large lot remains natural habitat, and I put in a pond. My UT lot is in a very arid area, so the pond has attracted many species that I would not otherwise see, including toads, tiger salamanders, and dragonflies. And during the winter months when the deer come down out of the mountains, I've had up to 20 deer in my yard waiting their turn for a drink. More Americans need to lose their apparent obsession with green, well-manicured lawns. They could save money, time, fuel for lawn mowers, and fertilizers if they restore their yards to natural vegetation. And they will attract much more diverse and abundant "watchable wildlife" to their yards.

I voted to demote this idea because I think that most zoos provide good conservation and public education benefits. For example, some crippled wildlife that could not survive in the wild are sustained in zoos, where the public can gain an appreciation for wildlife conservation. In addition, many zoos have important captive breeding programs that help to restore endangered and threatened species back into the wild. Such zoo programs are largely responsible for the successful reintroductions of California condors in California, Arizona, and Baja California. And the San Diego Zoo is running a project for abandoned urban pet Mojave desert tortoises that may help with that species' eventual recovery in the wild . Perhaps most importantly, zoos allow millions of urban children to see wildlife up close. This is imperative if we want those children to grow up to be adults who care about wildlife conservation.

I strongly support and applaud this idea. Developing and maintaining constructive partnerships that include federal participation is often essential to achieving important conservation successes.

When properly located, designed, and constructed, wildlife over or under passes on highways have been shown to successfully reduce road kills in specific wildlife crossing areas with a pattern of past road kills. Unfortunately, these wildlife over or under passes can be expensive, and most transportation funding goes into building and maintaining highways, not to mitigating wildlife mortality. Arizona had a wonderfully innovative state program to address highway wildlife crossing issues, but sadly when Republican Governor Brewer came into power it was largely abolished.

We all must stand together to protect and serve our planet anyway we can.

There are several things that Gateway NRA can immediately do to improve its short-term performance while developing a long-term vision... 1.) Partner with local communities and organizations that can help Gateway fulfill it's mission with extra manpower and money. 2.) Increase transparency when dealing with the public and act on all proposals within 90 days of receipt. 3.) Strike a balance between preserving the environment and site history while providing educational and recreational opportunities to visitors. 4.) Improve access to Jamaica Bay for human powered watercraft and access to bicycles for getting around the park.

Whether one is hunter/fisher or not, the fundamental concern is to work together to insure the health and sustainability of the eco-SYSTEM. A dying or dead one does little for you regardless of your preferred pursuit. In that regard, it is good to understand what you realistically are or are not contributing in that regard. For example, some "hunters" are no more than irresponsible killers. Yet, a true hunter maintains a deep understanding of and connection with the environment. So the issue is more about where we all together end up taking the environment and our national heritage.

Having large visible permits on snowmobiles will probably not reduce the incursions in to wilderness by the willing participants. I find that much of our boundaries are poorly marked and would help in reducing those incursions. Simply putting a sticker on a sled that will likely be covered with snow or hard to see anyway is not the answer. Education and enforcement of the boundaries will do more for the stopping of the suggested violations than creating another government cost with this additional label. I just hiked and signed a local wilderness boundary that has common encroachment and the damage I seen to any of the land was from the hikers. Trash and trail issues had made more of an impact than any snowmobile from winter use. Find a way to increase education and enforcement of existing area and you'll get the support.

(cont.)

I have to chime in again for the benefit of _____ and others: "currently 96% of the undeveloped land in America is developed and no longer functions as habitat." Sorry, but you contradict yourself. Of all of America, only about 10-15% is "developed". Another 25% or so is agricultural. This leaves about 60% as truly undeveloped. Much of the ag land, and some of the suburban development functions as some sort of wildlife habitat, as has been pointed out by other writers. Some of that undeveloped land is commercial timber land, which also functions as wildlife habitat, even though some of you would call that "developed". Easier than looking out a plane window is cruising google earth. Vast areas, hundreds of millions of acres, are relatively undeveloped and are great wildlife habitat. Managed forests, with controlled logging, actually provide better habitat with more habitat diversity than unmanaged. I work in the northeast, and the Adirondack park is an excellent bad example. This is 2 million acres of "forever wild", and has not been logged in over 100 years. The forests are unhealthy, lacking diversity. Oh, yes, there are plenty of large trees, but fewer tree species, and a lack of the young forest habitat needed by a large majority of wildlife species at some stage in their life. Western forests are in worse shape with high risk of conflagration in overcrowded, overmature forests. This is from lack of management, lack of harvesting, and lack of smaller scale, lighter intensity fires. By leaving it alone and putting out fires for 100 years, now the fires are too hot and too large to be beneficial. Take a google earth tour of Yellowstone Park. After 23 years, much of it is still gray ash. Million acre fires are not "nature's groovy way of rejuvenating the forest". As others have said, rural folks love wildlife, and understand that balance better than urban folks. The fact that we make a living close to the land gives us an appreciation. What we do as foresters (myself), loggers, farmers and other rural workers does have an effect but it is not always negative. Just to make another correction, we probably have more trees than 200 years ago, but not 400 years ago. Much of the east was cleared for farming, and a lot of that has regrown to trees. Most of the regrowth is natural forest, but some replanted. Much of the west is more stocked with trees than 200 or 400 years ago, due to the lack of fire over the last 100 years. Perhaps that makes up for the cleared land in the east, I'm not sure. But that is besides the point. We aren't going back in time to "pre-Mayflower" unless we all want to move back to Europe or wherever. And you don't because you could have but didn't. So lets make the best of it here. The air and water are a lot cleaner than 40 years ago, we have done a lot to clean up "the environment". But we did it by moving our dirty manufacturing to places like China and Romania, so worldwide, there are places getting worse. By providing more of our raw materials: food, fiber and energy, here, where we frankly will do a better job of it, we are helping the worldwide environment. And we have to maintain a strong economy to be able to afford a clean environment. Go ask someone in Romania if they really care about air pollution from smelting. They care about having food for another day.

GETTING ALONG IS A BIG STEP IN THE WHOLE PROCESS. . . First of all, we are all Americans . Second - this is our land . Third - it is agreed that wildlife is number one . Fourth - wildlife has the majority of the land to start with . Fifth - We should all get along here . Sixth - The forest has many opportunities for many of us to enjoy in many ways . Seventh - Shared trails can be a good thing if the groups would unite . No.....this is Not the Commandments nor are they rules. It is my opinion. Sure....keep fighting over who gets what and who uses where and how it is used. All of you are just giving USDA/USFS/BLM and Yes.....Fish and Game..... more "ammo" and reason to make sure they write the policies and rules to keep out ALL AMERICANS. I am sure that many groups are okay with this, I AM NOT. My nephew is 16 and after I took him for a ride on legal roads in my truck to show him the forest and he was able to see wildlife from the truck window, for which was Not Scared of the truck at all, my nephew asked when he could ride the ATV in the forest to be deep in it to see many more animals. When many of you finally get a message across to our government that YOU want ALL AMERICANS to stay out of the forest, except for YOU, and the government implements it for you, I will tell my nephew that it is YOUR fault that our young AMERICANS can No Longer Have The Same Chances at Nature and Our Forest As We did Growing Up. That he must rely on books and magazines in order to even get an idea as to what it may have been like to enjoy Our Forest as we once did. Come on, grow up yourselves! It really can't be that hard for all of us to play on the same play ground can it?

Blue Ribbon Coalition - ARRA - NOHVCC - oAAC - Tread Lightly Trainer - and so many others. People need to realize that memberships is what supports causes and helps save our recreational activities. Volunteering builds a unity of recreationist for the areas they use and maintain. Donations help support larger groups that spend too many hours advocating, lobbying, and legal funds to STOP closures of our land. Our future is at stake of our forest recreation..... help support all you can by any means. Don't be afraid to give up a weekend from couch time, get out and Volunteer to help save our forest for recreation. It may even improve YOUR Health. (You will have a good excuse to call in sick to work Monday morning if that helps!)

Discussion Question 1

(cont.)

Public Lands are just that....."PUBLIC". The Lands that are called Forest are the property of The People of this great nation, not that of the government. If YOU have any knowledge of history than you would know our very own President Roosevelt made a pledge about our forest for The People should use it for recreation and enjoy all it's beauty. By means of motorized transportation in order to be deep in the forest to be a part of nature and the wonders of it. That is why Pres. Roosevelt spent so much time himself in the forest he had replenished for all of us to enjoy. Today there are more causes and levels of importance than there are of results of any actions brought up. Recreation is the fastest growth of American use today. Many activities are taking place in our forest like, bird watchers, hikers, plant enthusiasts, All Terrain Vehicle, Off Highway Vehicles, bikers, campers, water activity, and so much more. If one person thinks they can be an Advocate for every activity and have a inch of success than so much more power to them. But.....there is no such person. Most users of trails rarely come across campers. Those that YOU say YOU experienced were fellow campers most likely. I am sure you did NOT confront them to ask them to be considerate of YOUR FAMILY time as well? This info in this blog type is not to promote or to use it for gain to a club or entity for OHV's. It IS for the government to read our concerns and what we believe in for our recreation as to the type of ways the OHV Community is involved in caring as well as taking care of our forest while also using it for recreation. . So I ask YOU, what do YOU do to help OUR Forest? Please say what clubs or associations YOU may belong to for which YOU support OUR Forest. Don't be shy!

#6 _____.....stated "In my experience, VERY few volunteers are experienced in working with saws IN THE FOREST ENVIRONMENT, which is markedly different than your backyard! The log you are working on is probably not the one that is going to kill you." Volunteers are just that....Volunteers. This does not mean they have No experience or knowledge in the correct operation of Chainsaw or the application as to when to use it. The course provided by USFS, for which I have taken and I am certified, provides much information as to many aspects of "cutting trees down" and when this should be done safely. It is not the idea to run out to the forest and just start cutting trees down! The _____ needs to evaluate the conditions of the trail he is working on, the trees surrounding the areas to be worked, the Safety involved, and if he will be going home after he is done because he has a really good "bucker - faller" as you say with him. As you know Ken, taking the course just does not say you can do what you want in the forest. An educated decision must be made prior to any action even before starting a chainsaw. Approval from the presiding Ranger must be given before one even heads out to an area. Sometimes mother nature will put a little twist in the trees - per say - and then trails may be impassable due to fallen or leaning trees. As with an Ice Storm, Tornado, or just high winds. The presiding Ranger will know if the Volunteer who will be going out to clear the problem trail areas is able to handle any possible situation that may come about. With this input as We have made here I am sure those who read this may start to find that just because a person OWNS a Chainsaw does not make them a professional or experienced Sawyer when the best even come across a situation that Volunteers may not and find themselves in a very bad spot. They are sure to do what is needed to get out of it safely when able too. In Most cases, but there are the odds.

(cont.)

We have lived here for 20 years and we have seen nothing but good things come out of here we protect it and take care of it.

If you have ever been to the Redrock country in Utah, you know that most of this beautiful area is only accessible by trails. If the trails are eliminated it will only serve to put another star on the no access board of the so called environmental groups. The 15% that they propose eliminating are probably the most scenic and beautiful. From what I have witnessed first hand by traveling these trails with my jeep, it appears that the state of Utah along with many off road groups, takes great pride in providing scenic access to these remote areas of natural beauty. Too bad the BLM doesn't take the same pride.

Great idea and badly needed. Riding bikes in national parks is hazardous to your health. Sharing the pavement with the Winnebagos and Harleys; what kind of national park experience is that? Riding in Yellowstone was one of the worst bike experiences of my life. More MTB trails in national parks will promote healthy, active families and youth who will enjoy a life-long love and appreciation of wild places that only comes from visiting them under your own power.

I am an environmental educator in Yosemite National Park, and have seen students undergo profound change through our program. Being in a place so beautiful and awe-striking, they cannot help but want to learn about how formed; they can't help but muster the courage to hike 3000 feet up waterfalls or go through a pitch-black dark cave. They connect with this place, and want to take care of not only the park itself but the entire planet to which it is so intimately connected. I recently received a letter from a girl who says that every Sunday, she and her family and a couple other families get together and go to the park where they pick up trash for an hour and then play camouflage (a hide-and-go-seek-type game in the woods), two activities she was introduced to on her trip to Yosemite. This is not uncommon. I have heard countless adults say, decades later, that their experience here has changed the course of their lives. Keep supporting these programs--they are invaluable tool for connecting people with not only the parks, but the natural world that they are a part of.

I think we need to re-initiate the idea of spending time in the natural world with our family as a way to trump wastless spending on mindless gadgets that inevitably end up in landfills. It not only would promote wholesome family and community unity, it would be better for the environment as a whole if we spend more funds on protecting our native lands. To cut down on individual driving vehicles, each park should have a shuttle service that takes families and individuals to different areas of the park while the cars stay parked at a parking lot at the entrance or a designated campground. We need to get out of the car, stop being armchair tourists, and get moving (in conjunction with the first ladies "Let's Move" campaign. The U.S. is one of the most beautiful countries in the world. Let's preserve and enhance what we have, and most of all, appreciate it. This can work in conjunction with school programs and lower income groups that might not have the opportunity to visit some of our most amazing parks. O.K., all this said at 6:30a.m. in the morning with little editing. I hope my 2 cents is worth something.

Rockhounds should practice environmentalism, follow the American Federation of Mineralogical Societies Code of Ethics and the Bureau of Land Management Rock Collecting Limits. Collecting reasonable amounts of rocks and minerals without causing environmental damage should be allowed on almost All Public Lands. Some sites may be too fragile or endangered to allow collecting.

All the power in the Northwest US comes from a renewable resource i.e. hydroelectricity. I guess this is not a popular form of renewable power though. I would like a little competition in the electric supply though perhaps this would help keep power costs down and prevent the regional monopolies we have now.

Natural born US citizens are not increasing the population. Immigrants both legal and illegal account for the majority of our population increases. Solution: end all immigration legal and illegal from all countries until our population stabilizes. This would also be good for the economy too, wages would increase, we could even send some US citizens to US colleges instead of subsidizing the rest of the worlds college students at our academic facilities.

Rather than the government or parents paying for this wonderful idea, why don't the companies in each local distract who have done or are doing damage to the environment fund these field trips???

Promote. PLT is an excellent environmental education program. Students who are involved in gardens and other outdoor projects develop a discipline that can help them in other areas.

For those who are interested, here are a couple of links to videos about the proposed Maine Woods National Park... { Link } { Link } It's a special place, worth preserving for future generations.

To the Obama Administration and interested citizens, My name is _____r and I am the Executive Director of an organization engaged in public land issues for the past twenty years. Since 1997, we have focused attention upon the efforts of certain commercial recreation interests to transform America's Great Outdoors into venues where access is offered for sale to those willing to pay to play. In this forum, has made various statements about recreation fees and claims that we Americans are still free to experience the outdoors as we did before "Pay-to-Play" replaced traditional birthrights. In the paragraphs which follow, I offer some unvarnished history. As _____ has pointed out, _____ stated in Congressional Testimony: "Recreation fees on public lands were one of the issues which prompted the creation of the American Recreation Coalition in 1979." In 1996, Crandall got what he was seeking when the Recreation Fee Demonstration Program became law. In 1997, the Wild Wilderness website was created, in part, as an effort to provide factual information regarding the still nascent issue of recreation user fees. In that same year, Chief of the US Forest Service _____, speaking before a recreation industry gathering announced: "It baffles me that the Department of Agriculture tracks the value of soybeans, corn, or wheat to the penny by the day, yet, rarely is recreation and tourism on federal lands understood as a revenue generator. Instead it has been perceived as an amenity - something extra that we are privileged to enjoy. Fortunately, that's beginning to change." With those momentous words, something very important began to change and I feel strongly that that change should be the over-arching topic of discussion for the entire "America's Great Outdoors Initiative" forum. Quoted below are excerpts of a speech given the following year by _____'s boss, the Undersecretary of Agriculture. The speaking venue was the American Recreation Coalition's "Great Outdoors Week." The message was heard loudly and clearly by _____'s associates. I suspect it was barely heard by the American Public. I trust the outcry of the American Public on this topic is now being heard by the Obama Administration. More importantly, I pray they are listening. _____, Wild Wilderness --- begin quoted --- Outdoor Recreation on the National Forests Remarks of the Hon. James R. Lyons, Under Secretary for Natural Resources and Environment, U.S. Department of Agriculture June 8, 1998 Welcome to USDA and Outdoor Recreation Week.... During my tenure with the Department, we've not only tried to highlight our recreation program, but we've also tried to take a more business-like approach to its management and promotion. We developed a marketing strategy and an icon that we hope will become to outdoor recreation what the Nike swoosh is to sporting goods and that famous Mercedes Benz hood ornament is to automobiles - a sign that connotes high quality outdoor experiences and customer satisfaction... We're working to obtain more resources - through a proposed increase in the recreation budget, through fees collected through the demo program, and, perhaps, through an expanded role for concessions. What about a profit sharing arrangement with concessionaires where the taxpayer and the business benefit from the venue - in cold, hard cash - and the customer benefits from improved recreation opportunities. We're looking toward the private sector to provide more support for national forest recreation - for an expanded partnership with those who realize an economic benefit from recreation on the public lands. In this way, you can help us help you (as Jerry McGuire said) expand your business opportunities while helping us expand recreation opportunities on the national forests. Finally, to accomplish this and more, we need to develop stronger brand and name recognition for national forest recreation. Our challenge, in short, is to help

the public realize that when they're hiking the Pacific Crest Trail, or biking the Hiawatha rail-trail, or running the south fork of the Salmon River, or relaxing at Timberline Lodge, they're not on a national park - they're on a national forest. And we hope to achieve this through better marketing, through better information, and through improved development of our brand of outdoor recreation.... Can you think of any other entity - private or public - that has the breadth and diversity of outdoor recreation experiences that you can find on the national forests? I doubt it! We've got a great product to sell. And, with your help, we can make it even better! The national forests are truly America's Great Outdoors. Thanks for your continued support and partnership. We'll look forward to seeing you at Great Outdoors Week.

In California, open spaces are very plentiful once you get out of the Los Angeles Basin and other large metro areas. Next time you visit California drive from Los Angeles (in the south) to Susanville (in the North) via State Route 99 or 395 The only other metro areas you will run through will be Sacramento and the greater Reno NV areas. The other 9+ hours of your drive will be in the wide open rural farm, desert, mountain areas.

(cont.)

Several people have been curious about what brings hunters to our Place. We have mostly elk, mule deer, antelope, coyote, and sage grouse hunters. Occasionally big horn sheep, sharptail grouse, pheasant, mountain lion, or bobcat hunters show up. People also hunt whitetail deer here. Our area is not whitetail habitat, but they are being forced into this area by overpopulation in their natural ranges. They cross with the indigenous mule deer, threatening to wipe out the species. We always encourage hunters to concentrate on removing any whitetail or crossbreds that they encounter and tell them how to recognize the crosses. Predation is of utmost importance to the survival and health of a species. If you had a pet cat, and she had four kittens twice a year and those kittens matured in 12 months and began to mate and also produce kittens (the averages for cats, according to the veterinary text I consulted), you would have 9 cats the first year, 25 cats the second year, and 73 cats by the end of the third year. At some point, you would no longer be able to provide each cat with fresh water, abundant food, and clean, healthy space. This danger also threatens wild animals if they reproduce faster than members of their population die. If they overpopulate, they must die slowly of hunger and thirst. Some will resort to cannibalism. The mothers will have to watch the weakest members of the population, their young, die of hunger. If one species overpopulates, it can damage the plants so much that many species will suffer. The only ways to protect species from overpopulation is by predation or birth control. Providing birth control to wild populations is complicated, and chemical birth control poisons water sources and kills aquatic life. Predation protects herbivores from overpopulation. However, predators can also overpopulate. Just as herbivores can stress and destroy the plant populations they depend upon, too much predation can destroy a population of birds or animals. If a wild animal predator is overpredating and harming the prey base, it can be very challenging to do anything about it. Human predators are much easier to control. If you have skilled state biologists, who can accurately gauge the number of animals that need to leave the population to keep it healthy, and honest hunters, who will obey the game laws, the well-being of your wildlife is assured. Of course, some people are not honest. In that case, you have ranchers, on the ground every day, who can watch for suspicious activity and abuses and report them to the wardens. No one hunts prairie dogs on this Place. There are none. Mother Nature wiped out four active towns with a disease epidemic. Some studies have shown that shooting encourages healthier prairie dog towns. Maybe if someone had taken the time to hunt a few of them, they would not have fallen prey to a disease that devastated the entire population.

What better way to apply what is presented in a traditional classroom setting, than move a significant portion of the learning experience outdoors. Learning without Limits - Classrooms without boundaries! There is very little that can't be taught in a park or wilderness setting. These experiential learning opportunities provide a deeper understanding of educational concepts in context; create lifelong memories and a love of the outdoors. And we all know that what you love you protect.

(cont.)

Create master website for US national parks, BLM national parks, US national cemeteries, and World Heritage sites with in the US. This list should be sortable by state, category, size, recreation, campsites, etc. so potential visitors can schedule vacations. My wife and I vacation by zigzagging through states trying to visit as many of these sites as possible. We journal all our travels and very much like the current NPS brochures on each park.. Super sized website listing all NPS, BLM, National Cemeteries, and World Heritage Sites in the US. This website would be sortable by state, category, facilities, recreation, etc. so potential visitors can schedule travel and vacations. My wife and I currently vacation by zigzagging through states to see as many of these sites as possible. That list is about 600 sites long. We've seen about 175 so far.

I fully support the funding of parks and National areas. With out the parks and wilderness areas, the quality of life is lost to the average resident. Case in point, just look at our festering cities, with trash and filth being the norm. What kind of people do you think grow up to productive and good citizens. If those people would be exposed to the wonder and beauty of natural areas, taken for horse back rides into the parks, with young people running around, and smiling at the birds, flowers, and trees they see. Without the parks, we are nothing but a nation of takers and abusers, with no appreciation for what god and country have given us and protected for future generations. Instead we have children growing up thinking that filth, drugs, trash, ECT. is the normal life. Of course they need to be educated in the proper use and stewardship of our treasures as well. Taught that throwing trash around, marking trees, picking flowers, and killing wild birds, just won't cut the measure. Yeah, I use the forests, beaches, and deserts a lot, but hold them equally valuable.

The most recent thing I read concerning roads on national forests stated because of the extremely large amount of roads now on national forest land, as we move into the future, there will be less roads just because of the huge expense the government has in maintenance of all the roads.

I'm not against OHVs and I think there should be places for their use. It seems, though, some think their activity should be allowed everywhere. There are benefits to wilderness for people and animals. It seems there are narrow minded people in all groups that only want their way and don't care about anyone or anything else.

Access is important, no doubt. There should be places where OHVs are allowed and places they are not allowed. To allow OHV access to every last area of our public lands would be a mistake. Like any other activity, balance is the key. Having natural areas without roads, trails, and development all over is what promotes good stewardship for some.

Emphasis should always be on wildlife and recreation on public land. Resource extraction should be given less weight and only in specific areas. When corporations use public land for resource extraction, a few make money over the short term and the majority of the population gain nothing. Don't forget, corporations have the option of using private land as well. It must be more costly and subtract from the "bottom line" when private land is involved.

Discussion Question 1

Written & Online Comments

(cont.)

Access is important, no doubt. Some areas should have roads, some should not. There are also plenty of economic benefits to unroaded areas as well. A lot of hunting and fishing groups advocate unroaded areas because of the benefits to wildlife. This in turn brings money from hunting and fishing. These are two groups that contribute significantly to the economy.

Most areas in my state are open to OHVs. The only area I am aware of that closed any OHV access happened to be the area we used for hunting, camping, and riding three wheelers (several years ago). The area is located in a state forest. The DNR wanted to preserve the wild nature of the area and closed roads and restricted OHV use. The area retains its wild nature to this day and I am very glad for this. I have no problem finding a different area for any recreation that has been regulated in this area. My children will be able to enjoy this area in virtually the same condition as when I was young and visited with my parents and grandparents.

Regarding Florida, with the large population growth in that state, I would think anyone could see the benefit of preserving some wilderness. If nothing is saved, I would say the OHV community would end up losing trails through population growth and development.

Looking into the Idaho Roadless Rule, 10 million acres may fall into the roadless rule. Only 8 million restrict roads in some way. 4 million of those are already designated wilderness. That leaves about 12 million acres in Idaho open to road construction and re-construction. With our population growing and more pressure for development, the roadless rule may turn out to be one of your best allies.

I fish and support fishing, but I don't think I have ever seen "unimpeachable scientific information". Access is important, no doubt, but if it is determined that a reduction in access to a particular area would improve aquatic resources, then that should be the rule.

Some wilderness areas have a road that designates a boundary of the area. This seems like a good idea in some instances.

My experience with road closures in my state happened when the DNR closed several roads and restricted OHV use in an area to preserve the wild character. The wild character remains to this day and I am grateful I can still enjoy the area which has remained relatively unchanged. This is important with all the increasing development that there is today. I don't think anyone wants a checkerboard of roads and trails over all our public land.

Access is important. Roadless areas are equally important.

There is room for all activities. There should be places where things like OHVs are allowed and places they are not allowed. With the huge increase in the amount of OHV use over the last decade, there should be more regulation.

Discussion Question 1

Written & Online Comments

(cont.)

I hunt, fish, snowmobile, etc. and I agree with you. With the lions share of our country open to development, it only makes sense to me to preserve some more of what wild areas are left. I have always been an advocate of having enough habitat preserved so predators and animals that don't interact well with people will have a place.

I also think we are mostly in agreement. Access and reasonable resource extraction is important. I would say a vast majority of our public land is open to development. My estimate is over 98% of the land in the lower 48 states allows resource extraction. I also agree that well managed logging is ok, especially if they can log and then remove the road used to access the lumber. Drilling is done all over our public land. If they only drilled on 1% of public land, I don't think anyone would have an issue. The percent of public land open to drilling is much higher. There are very few areas access is denied for development. I think wildlife/wild land preservation and recreation should be the focus on more of our public land. Balance is the key. I think if we could reach a balance and protect (or preserve) more of our wild land, alot of these issues would go away.

I think this is an area that no one could argue is true wilderness. I think it is important to have areas that are void of development, for the good of people and wildlife.

I agree that land needs to be protected. There is room for all recreation and wilderness. Both are important.

Balance should also mean a focus on preserving wildlife/wild lands, not only resource extraction. 50% of our national forests are open to development. When do we start to balance development with preservaion. Don't forget, development is allowed on all private land and most state land. These federal lands are the last best way to preserve some of our wild land. I don't think most people want all our public land offered up to business. Balance means to preserve some and allow resource extraction on some. I think if we were to reach a balance concerning wildlife/wild land preservation, alot of these issues would go away on their own. I would argue over 98% of the land in the lower 48 states is open to resource extraction. Where is the balance? I'm not sure I know who you are refering to with the statement "not just the chosen few". That could apply to almost any group and I would welcome the debate.

In that case, I agree, there is room for all types of recreation and wildlife/wild lands preservation. There is room for both, wilderness and non wilderness. I think the government should focus on wildlife and recreation before natural resource extraction on public lands.

I agree with most of the author's idea, also. In the modern world, with pressure for development in almost every corner, I think the Wilderness Act is important and is one of the only designations that preserves wild areas from development.

Preserving wild lands for people and wildlife is co-existing. Usually people keep their property rights, even after an area is protected.

Discussion Question 1

Written & Online Comments

(cont.)

I also believe access is important. I have ridden OHVs, snowmobiles, etc. I don't hike or ride a horse. I also believe wilderness is important. Some areas need to be preserved from development for future generations and for wildlife. There is a generational inequality when future generations won't have the same wild areas available to them that our generations had because of development. Some other areas should definitely be available for access by OHVs, etc. There should be balance.

Compromise?. The argument over wilderness preservation is one that contains a vast amount of different viewpoints and opinions on whether or not efforts should be made to maintain the wild, whether or not human interference should be allowed to continue, etc. It is impossible to reach a definite answer as to whether or not the wilderness should be preserved, as no two people contain the same emotions and connections with the wilderness, and there are far too many amenities of life that are possible currently because of human interference in the wilderness. It seems to me that there should be a middle ground where both extremists can compromise and be realistic about the fact that the entirety of what they want to happen in regards to the wilderness is not going to come into effect. A possible compromise to which I am referring would be the idea of mining. Obviously, the process of mining is not a benefit to the idea and beauty of wilderness, which is why preservationists wish for its termination. The other side of the argument is that mining is essential to obtain the materials and elements that we have come so accustomed to having in this era, and to do without would mean a drastic decline in the standard of living; much to the disapproval of a good majority of Americans. If mining were to occur in one place and all the resources possible were extracted from that one area, then the necessity for excessive amounts of mining sites damaging the wilderness would not be there. If we are more efficient with the way in which we interfere with the wilderness, then there will be less of a need to continue to interfere in more and more locations. I believe this idea would represent a compromise for both sides, in that the necessary process of mining for elements included in our daily lives can be accomplished without entirely damaging and destroying more area of the wilderness than necessary.

I am not an official member of any club or group, but I have attended meetings of several and I provide volunteer time for the Washington Department of Natural Resources, primarily at the Reiter Foothills area in Snohomish County, Washington.

On the Land Trust Alliance's website, you can find a long list of organizations that are working to protect Michigan's natural areas. There are many ways you can get yourself involved with these land trusts, and they would appreciate your enthusiasm.

This is a very good idea, well-expressed and representing a need that should be explored almost everywhere that large scale migrations occur. Thanks.

It's called the Wildlands Network now, Frank. It's nothing more than mainstream conservation biology on a scale large enough to allow for migrations and ecologically-significant carnivore populations in wild areas. There's nothing subversive about it and nothing about "lands off limit to humans" in it. This ought to be something that appeals to a guy like you. Someday I'll buy you a beer and we can talk about.

Discussion Question 1

Written & Online Comments

(cont.)

I don't think you're paranoid, but the "SOBs" aren't after you or anyone else. I've been a Wildlands supporter since 1994 when I heard Noss speak at a conference. I suppose we may share a dream of landscapes where nature is wild and free; but we're realistic enough to know that this is a human-dominated world. Anything we get done on the ground through organizations like land trusts, for instance, will be modest in nature. Most of the emphasis these days is on identifying and developing corridors to keep animal populations from being isolated. This is very tame stuff and something that could benefit sportsmen in the long run.

It's in the public's interest to conserve biodiversity. Did you not want grey whales and bald eagles to survive? The ESA is a visionary piece of legislation. Its shortfall is in the poor way that implementation has been handled.

Decisions should also be driven by the needs of nature, wildlife, and ecological processes. The world doesn't exist only for human uses.

Following up on _____'s insightful comment, please also tell them that predators, like alligators, helped us evolve to be smart and quick on our feet. We should value and respect these species.

Excellent idea. Because of their past conversion to agriculture, native prairies are our most under-represented ecosystems. You could add western Kansas, Nebraska and eastern Montana to your list of places where major prairie restorations should take place.

There are privately-owned ranch lands and publically-owned (BLM) lands that are often leased to neighboring ranchers. That still makes these publically-owned lands just that: Public Lands. "Split-estate" refers to the subsurface (oil & mineral) rights that were withheld by the government back in the homesteading days. This is a separate issue, one that is troubling to both conservationists and ranchers.

We need to teach our children about equal justice instead of social justice. Teach them to do age appropriate, private sector jobs such as lawn mowing, babysitting, corn detasseling, volunteer with day camps, do odd jobs for seniors, etc. This will instill good values and principles. Do not teach them to live off of government provided jobs.

Man, beautiful words of Truth! As a visitor to Alaska in 1994, hiking from the southeast (Klondike Trail) to Fairbanks, to Anchorage, then the majestic Kenai Peninsula and Kodiak, I can attest to the natural wonders you point-out in the state, and I would imagine, especially the Bristol-Bay area, which is a road "much less traveled" than my excursions! You said what I wish to impart here, that there is nothing that can replace the "majesty and beauty of what took millions of years to create"! There's a peace, a beauty, almost in-describable of the natural wonders of a salmon run in full health, or the crystal-clear flow of a mountain stream, un-spoilt by man's conquest! In today's world, this type of habitat is worth more than any substance I can name, b/c of the rarity of this type of un-spoilt beauty! At some point, we must say that "enough's enough"; The greatest resource we can offer for the future is this!

Discussion Question 1

Written & Online Comments

(cont.)

I agree completely with this statement. As our nation gets larger and larger, we become more and more detached from the wilderness. People no longer go to the parks to get away from society for picnics, instead they go to the mall. If people had areas like national parks and wilderness areas, they would be more inclined to go. Convenience is the key to winning over the hearts of America's future generations. The positives of increasing the areas of open space are truly endless. It creates habitats for the organisms that need protection. There are endangered species all over America, each of these animals need to live in a special type of environment. What is more conducive to retaining wildlife, than area where the animals are protected? With new areas to go to the younger citizens may take a special pride for these new parks. As a younger citizen, I feel like I would be more inclined to take of these parks, and to use these parks. The parks would be something that my generation could call their own. It would also be a great way for many of the out of touch Americans to get back in touch. America is not known for our love of the outdoors, nor any exercise in general. So places like this would create that spark of interest to go see what the new park would be about. If the parks are done well enough then the attention of the goers can be captured and maintained for a long time. There is no doubt in my mind that new parks would be a positive for everyone.

National Parks and recreation areas need to be a vital part of the educational program of every child, but school funding is often scarce, and priorities of administrators are often stretched way to thin. If the Federal government can increase partnerships with non-profits and other organizations, and perhaps provide seed funding for the most under-served communities, it would greatly leverage and enhance the educational process, and better allow parks to fulfill their mission. For example, the greater Los Angeles area has tremendous National and State Parks, and National Recreation Areas. But, studies have shown that vast parts of the student population do not have access to the parks because they may be several miles away, and not easily reachable via mass transit. NatureBridge, a San Francisco non-profit, is running a pilot program in the Santa Monica Mountains National Recreation Area to bring in groups of school students, and run hands-on science based educational programs. It is a hugely transformational experience for many students who have never had the opportunity to experience the treasures that are our National Parks.

we can all benefit by having garden spots set aside in our cities. Think of all the senergy we would save if we didn't ship all our food from California every day. And we could at last have a sense of "community"!

OHV access to our public lands. OHV recreational access to our public lands helps promote and educate on the beauty of the great outdoors. This in turn promotes conservation and good stewardship of our public land. Much more so than those who try to restrict access. Allowing family and friends to ride dirt bikes together on our public lands and you improve the long term conservation movement. Restrict access and you remove this opportunity to grow good stewards of the land and encourage abuse.

Discussion Question 1

Written & Online Comments

(cont.)

There will be good landowners and bad ones, just like anywhere. I do agree with the central premise of this idea, but it's often used as a shield by the far-right "property rights at the expense of everyone else" mindset. Private lands offer the greatest opportunity to maintain, restore and enhance our natural resources. The trick is to get public support for projects that provide public benefit, but not necessarily access. I'm currently restoring two beatdown properties in Idaho, and the help I've received from the federal agencies (lots of them) has been great. It wouldn't be possible without the existing programs.

Increase funds for federal conservation programs. Support funding levels of conservation programs for Federal land management agencies to enable them purchase from willing sellers State school trust lands (or easements) with high conservation values for conservation purposes. These programs include the Interior's and Forest Service's Land and Water Conservation Fund, NOAA's Coastal and Estuarine Land Conservation Program, USDA-Forest Service's Forest Legacy Program and the Defense Department's Readiness and Environment and Protection Initiative (REPI).

Make Your Property A Wildlife Preserve!. Welcome wildlife to your land by growing native plants, providing nesting sites, building a pond, and, if you must have them, by keeping domestic dogs and cats at bay, and strictly controlling livestock grazing. You need not be a large acreage landowner - even an acre or two dedicated to nature can provide great opportunities for local and migrating wildlife. Encourage your neighbors and friends to do likewise (all too often folks have some land and, at a loss as to what to do, literally beat up or remove wildlife habitat, having no clue as to the alternative, namely to enhance nature). This works! With a blessing of wild creatures around you, you'll immensely enjoy your nature preserve!

Just google "US Population Growth" and find and crunch the numbers. You can also readily find population estimates for all the States. The US growth rate has varied from about .87% and 1.15% since 2000. I used the 2008 figure of .915% and applied it to our current population of 310 million to come up with a yearly growth rate of over 2.75 million per year. The US Census Bureau seems to be saying the US growth rate is slowing, but I don't see any hard evidence for that. Ours continues to be well ahead of China's. S.Collins -- Yes, the liberal immigrant policies of the U.S. are a huge factor in our rapid population growth. Glen -- Build it (i.e. roads), and more will come. I personally have not found any restrictions to public lands, except for some state lands for which I need a hunting license to access, and some military restricted areas. Thank you all for your comments.

It'd be great for families to "get away from it all," INCLUDING in that all vehicles and their noise and polluting emissions. Popular to contrary belief in this country, "these feet were made for walking." It's a truly healthy means for families to vacation and explore the great outdoors together.

Giving kids opprutunites. This is were i want to give the idea to give kids the ages 12-15 the Opportunity to be able to get a job so it can keep them off the streets that away the are able to make there own money not half to steal, lie, and get into trouble. It is a great idea and i think that we should at least give it a try; i have Interviewed alot of kids and teenagers and the said that would love to have a job so they won't be out on the streets. i think we should give them a try.

This is were i want to give the idea to give kids the ages 12-15 the Opportunity to be able to get a job so it can keep them off the streets that away the are able to make there own money not half to steal, lie, and get into trouble. It is a great idea and i think that we should at least give it a try; i have Interviewed alot of kids and teenagers and the said that would love to have a job so they won't be out on the streets. i think we should give them a try.

Global warming is a hoax. Leave decisions about wilderness and designated lands up to residents of the counties and states where those lands are located. It's everyone's responsibility to take care of the the land. Education is key, not designated land.

I belong to several OHV organizations here in CA. I am a lifetime board member of CORVA. I belong to CA Assn. of 4WD Clubs, Stewards of the Sequoia, ASA, and Blue Ribbon Coalition. All of these are good organizations and work very hard to educate OHV'ers and the general public about responsible OHV recreation.

Add Outdoor activity to education curriculum. In this country, we do not incorporate outdoor experiences into our elementary and/or high school curriculum. I propose that the US government require all elementary schools to include an outdoor experience into their school year. This outdoor experience is defined as: 1. One week in length of full immersion. 2. Must incorporate an activity that utilizes the local natural environment, e.g., near a big lake then teach boating or swimming; near a mountain, then take kids skiing, etc. 3. Should begin in elementary schools; this helps build a life long interest in the sport, outdoor experience, etc.

A friend of mine who grew up in a small village in France told me that in elementary school the kids are taken up into the mountains to ski for two weeks each year. This is a part of the school curriculum, as much as, learning math and English. My first reaction is that we (the US) could never do this sort of thing. But why not? I have read that aerobic exercise makes kids smarter. Read this article in the NYT blog: { Link } Perhaps exercise can help raise our kids national test scores.

Mile-for-mile is not the way to go for this idea. However as a hiker who disapproves of rampant and aggressive OHV use, I decided a few years ago that if I want OHV cherry stems (dead ends) closed off, or if I want OHV to stick to trails, I must be willing to do the same on foot. Such a rule MUST be for the sake of the lands and air around us. I support revegetating a minimally used OHV trail because where I live in the Four Corners, it is for the good of the community air quality and wildlife. If someone did their research and decided that keeping humans out of a certain area (as they do for Peregrine Falcons) was beneficial, including humans on foot (arguably the smallest impact of the types of recreation, at the very least because foot-travelers can cover the smallest terrain in the same amount of time), I would support this even if it closed off an area for me. There are SO many places to explore, we should be willing to "mother" earth and care for it if that is the most responsible approach for ourselves and our posterity.

Discussion Question 1

(cont.)

While the Original Poster that created this discussion thread makes some interesting points, the O.P. and the subsequent discussion overlook an extremely important issue, that issue being Volunteer Management. I am a recreational trails volunteer on the 513,000-acre Allegheny National Forest, Pennsylvania's only national forest. For many years, my fellow volunteers and I have done extensive work on the A.N.F., building and maintaining trails and bridges, as well as keeping watch over the condition of said trails. During the 2008 Recreation Facilities Analysis (R.F.A.) on the A.N.F., U.S.D.A. Forest Service personnel proposed decommissioning many developed recreation sites on the A.N.F. Planning reports also revealed proposals to rely more heavily on volunteer work to maintain recreation facilities. I attended R.F.A. events held by the agency. During an R.F.A. workshop on 28 June 2008 at the Bradford Ranger Station, I asked about this proposal to rely more heavily on volunteers. Ranger Scardina told me the proposal was indeed being considered and this was the public's chance to give input and ask questions. I asked Ranger Scardina what the Forest Service's Volunteer Management Policy (V.M.P.), the policy (or policies) that governed how agency personnel recruit, retain, and recognize volunteers, was and if I could see the agency's V.M.P. documentation. Indeed, I made it very clear to Ranger Scardina that V.M.P.'s would require a fourth "R", for "recording", to account for a properly kept record of volunteer donations of time, equipment and material to benefit public recreation facilities. If a volunteer offers to use his chainsaw to clear storm debris out of a trail, and the agency requires a chainsaw-operating trails volunteer to take chainsaw safety and other training in order to work on trail maintenance, and the agency also requires that volunteers keep the agency personnel informed of trail work bees, then it would logically follow that said agency personnel would also be responsible for keeping a record of these donations to the agency as prescribed by the agency V.M.P. Correct? (Also of note: the Forest Service requires volunteers and volunteer-organizations to keep a current, signed volunteer agreement on file with the agency.) Whatever incentives (be they perks, a free "pass", or any other form of benefit) would (or would not) be offered to volunteers for their donations to the public good, one would think the proper procedures would be spelled out in the agency's V.M.P. So, one would think that with the Forest Service's doors open for their "open house" workshop in June of '08, and with the invitation for the public to ask questions about such an obvious issue as volunteer management, that the agency administrators would be right there with the obvious answer to an obvious question. At the very least, one would expect that it would not be hard to get the answer in a timely fashion. It's been over two years. To this day, my V.M.P. question remains unanswered. Nobody ever acknowledged my question. The point I took home: the Forest Service personnel don't want to answer the question. If they do have a V.M.P., they aren't sharing it with the volunteers. If anyone in Washington is watching this discussion, and you want feedback from the volunteers on public lands, here it is: It's time for all United States public land management agencies involved with public recreation facilities and volunteer-donations to review their V.M.P.'s, if they have any. Volunteers who donate so much to our nation's public lands are entitled to know that their donations are being applied properly, and that agency administrators are required to handle volunteer management responsibly. Without accountability and agency transparency, responsible volunteer management will not happen. Without responsible volunteer management, there is no logical reason to expect that any agency will be serious about recruiting, retaining and recognizing volunteers, let alone recording their good deeds.

(cont.)

The Original Poster suggested that this discussion forum would be ignored and buried. Well, I don't know why someone would allow something like this to be created in the first place if the powers-that-be have no intention of taking it seriously. I also have no idea how an agenda on wilderness and public access would fit the Obama White House. The O.P. seems to suggest an agenda, but does not explain why the Obama White House would support such an agenda. Do the politicians in Washington have ulterior motives for creating this forum? I don't know, but as long as it is here and we are participating, we all have computers and can keep a record of what is being said and done. If you're concerned, then put your machine to work, start capturing these discussions as web archives or as PDFs, get connected with other participants and get organized.

My family uses our public lands for multiple uses. We hike, we bike, we ride off hwy motorcycles, and we maintain all trails in our forest, working together with our local forest service on all trails. Our local OHV club maintains equestrian trails, the mountain bike trails, and the motorcycle trails. We all work together to keep all trails open. Most of these are not multiple use trails, but we have trails in our forest that we all want to keep. When a mountain bike trail, or an equestrian trail needs repair from winter erosion, or even a weekend equestrian or mountain bike event, the Forest Service calls our OHV club to get a work party together to fix the trails. At a work party last year to relocate, and build a new mountain bike trail, 60 motorcyclist showed up and only 4 mountain bikers. This was a trail that was not to be used for motorized recreation, and still it was the motorized users that came to build the trail. We can do amazing things when we all work together. If you want to know how it is done, contact the Tahoe National Forest in Nevada City. All Forest Departments can learn to use ALL lands publicly. I hope my kids and my grandkids all have the right to use their public lands to enjoy, just the way we have (until recently).

The Mountain Bikers want access to our Pacific Crest Trail in order to gain further access to our National Trails. The protections from bicycles were put in place for a reason. Foot traffic and Hoof traffic just do not mix with a power vehicle of any kind. These trails were meant to be used in the tradition of yesteryear. It is one of the few ways left to experience what our forefathers did. Mine walked from the East to the West. The best experience I have had was riding my horse "down the trail" knowing that my ancestors had also. If we allow the Mountain Bikers access to these trails I believe that we will lose a great deal of the serenity of our National Systems.

"What happens to the people that live in the Y2Y areas? Will they be forced to leave their homes, quit their way of life (farming/ranching/logging)? Will hunting/fishing still be allowed? Who will manage this vast area? Perhaps the UN?" People have always been and always will be part of the Y2Y vision. Anyone who visits the Y2Y web site will see that sustainable human communities, opportunities for recreation and enjoyment of natural areas, hunting, fishing, and many other ways for people to experience the Y2Y region are inherent in the Y2Y agenda. Opponents of Y2Y spread lies about forcing people to leave. It is not true. The land will still be managed by state and provincial governments, private landowners, industrial land managers, and First Nations/Native Americans, as it is now. It is the use of the land that, in some cases, needs to adapt so that wildlife can continue to use and move through the land. The ownership of the land is not what the Y2Y Initiative seeks to change.

Our Idea of Wilderness. What obstacles exist to achieving your goals for conservation, recreation, or reconnecting people to the outdoors? In order to answer this question, it is first relevant to discuss my goals for conservation, since that is what I am choosing to write about. My goal is for people to understand the importance of the outdoors (wilderness). This is a major obstacle that must be overcome if we are to preserve the wilderness of our nation. In attempting to achieve my goal of teaching people of the importance of the outdoors, it is necessary to identify and eliminate several obstacles. The first obstacle I will discuss is the issue of wilderness being viewed as something disconnected with humanity. In order to fully grasp the importance of wilderness, one must understand that it is not something to be set aside. Wilderness is something that should exist everywhere and be compromised as little as possible by people. Contrary to the Wilderness Act, I do not believe that a place has to be devoid of human life to be classified as wilderness. People are capable of living in harmony with wilderness. This is exemplified by many groups of people native to places such as Africa and Venezuela who live deep within the wilderness of those areas. They do not have an extreme impact on their ecosystem, yet they live happily and successfully nowhere near civilization. Another significant issue that must be addressed is that of how we define wilderness. _____ suggested in her essay, "Wilderness" that we do away with our concept of wilderness entirely. I can't say that I disagree with her. It might be better for us to forget about preserving parts of the world and begin concerning ourselves with the earth as a whole. We should not simply designate a fraction of the planet as wilderness and agree not to interfere with its natural processes. As Robinson put it, "Wilderness is not a single region, but a condition of being of the natural world." This is important to the idea of making people understand the importance of wilderness. In order for us to successfully achieve equilibrium with nature, which we surely need, we must first realize that we are not above nature. Ultimately, these are only a couple of the many obstacles that stand in the way of making everyone realize the importance of wilderness; however, they are extremely important obstacles. First, we must accept that we are all part of nature and thus are affected by everything that goes on in the world. Likewise, everything we do affects the world in some way. Second, we must redefine what wilderness is. We can no longer afford to view wilderness as something that only exists under certain circumstances; it must be a constant that is with us everywhere at all times.

Wow, guys. I'm amazed that this was received so well. I was expecting lots of negative comments. I will rarely ever refer to wilderness as per the U.S. Government's definition of it, unless I'm arguing about how much I dislike the definition itself. I am of the strong opinion that our definition of wilderness is seriously misguided. The Wilderness Act is something of a step in the right direction, but it's not even close to where we need to be. Wilderness in and of itself is not something that occurs in some places and not in others. Wilderness exists, to varying degrees, everywhere. You cannot be anywhere that does not have aspects of wilderness. Even New York City is like that. My argument is primarily geared toward changing how we define wilderness. Only when we have an adequate idea of what wilderness is can we hope to achieve and truly meaningful reform.

A Review of Successful and Promising Nonfederal Conservation Approaches: Rural communities are leading the charge to address the myriad challenges that face their communities and the conservation challenges of the Nation. There are literally hundreds of examples of projects, programs, and organizations involved in this new era of restoration and stewardship. We know that in the communities where we live and work, our efforts and innovative solutions are beginning to have an effect. Rather than list each group, we have chosen to highlight what we believe to be the most significant characteristics shared by these nonfederal approaches. Although there is no set formula for success, there are a number of general commonalities. Beneficial aspects and components of successful non-federal groups and programs include:

- Collaborative process: A commitment to the use of collaborative processes that are open, transparent, and inclusive to define, implement, and monitor conservation and sustainability goals and activities on the landscape. Collaboration and partnership among unusual allies, such as the involvement of landowners, forest workers, businesses, conservation organizations, civic groups, tribal entities and governments, and federal and state agencies leads to solutions that are durable and address the public interest. Collaborative efforts have helped to break gridlock in federal lands management, and have resulted in the development and implementation of projects that employ local people and restore our forests and watersheds. Collaboration is the foundation for economic prosperity in the West, yet it lacks financial and programmatic support from federal agencies and most federal programs.
- Power sharing: Shared decision-making power is vital to a healthy and democratic system of management and stewardship. Decision-making processes that recognize social, economic, and political inequity and strive to balance and improve these disparities bring communities together, rather than pit them against themselves and each other.
- Triple bottom line commitment: Use of integrated approaches that address ecological conservation and restoration, local natural resource-based economic development, and healthy communities and strong social fabric.
- Business and market strategies: A business and markets orientation - driven by local expertise - that finds a role for federal conservation investments as a complement to broader business models or economic development plans that combine public and private capital and "sweat equity" for lowest cost, highest value outcomes and long-term, sustainable revenue streams.
- An "all-lands" approach: Developing solutions that work across landscapes, from public land forests, to higher elevation private forests, to the ranges and valley bottomlands managed (whether on public or private land) by ranchers and farmers. Effective management and policy recognizes and addresses the social, economic, and ecological connections between private and public lands that share ecological process and span the forest, range, farm, and aquatic systems that characterize the West.

Target Institutions for Transformational Change The role of non-federal entities in conservation and stewardship in the American West cannot be overstated. There are many types of entities that are filling important intermediary roles that neither government nor the private sector can fulfill on their own. The movement of community-based conservation and stewardship that is redefining the West is being built largely by the will and capacity of community, or place-based organizations, and by regional organizations. These intermediary institutions complement one another and ensure that our conservation strategies can go deep into the communities and landscapes we care about, but also spread, aggregate, and regionalize the practices and approaches that emerge from local efforts.

1. Community, or place-based organizations: In the past 15 years, we have seen the

Discussion Question 1

Written & Online Comments

(cont.)

success of locally-based groups that occupy the space between diverse stakeholders, civic groups, businesses, private landowners, rural citizens, and government agencies. We refer to these groups as community-based organizations (CBOs). They have been essential to the successful implementation of both private land conservation efforts by landowners and the collaborative management of federal lands, and have also excelled at harmonizing conservation objectives with local economic needs. CBOs play social, ecological, and technical/financial roles, including:

- providing critical support to collaborative structures and institutions that assemble diverse interests and viewpoints, and facilitate toward common ground;
- serving as a buffer and conduit between landowners and federal and state agencies (as well as other outside resources) - in many areas there is significant mistrust of government agencies and CBOs can serve as a trusted go between;
- serving to "re-aggregate" the landscape by coordinating and aligning multiple landowners (including government agencies) to achieve landscape scale impacts, particularly in fragmented landscapes;
- providing skilled resources and staffing to help local landowners, businesses, and contractors understand and work with state and federal conservation programs, and successfully meet the requirements (proposals, bids, contracts, etc.) necessary to capture and utilize funding;
- adding value to federal program delivery by integrating federal programs into a broader economic and environmental strategies supported by local communities; and,
- reaching ecologically and economically significant scales and impacts by intergrating public and private lands at a whole watershed scale that effectively bridges the "silos" imposed by agency missions.

2. Regional "scaling" organizations: To support and leverage the work of CBOs and rural small businesses, we must also promote the regional organizations and networks that convene multiple local efforts, help to disseminate lessons learned, and accelerate innovation diffusion. These networks are integral to scaling-up place-based efforts. Regional organizations can be based in urban or rural areas and work across multiple sectors, communities, counties or states. Regional organizations play many roles at different times in the process of implementing community-based conservation and economic development strategies. Regional organizations provide improved access to technical expertise, tools, and philanthropic communities. They build and bring political clout to promote solutions, and connect rural non-profits and entrepreneurs to wider networks, markets, and opportunities. Roles include:

- helping to catalyze and build local organizations in places lacking this capacity, as well as strengthening existing groups;
- providing bridge staffing, facilitation, and technical support in communities that are rebuilding institutional and social capacity;
- serving as liaison between local efforts and federal officials by providing the venues and forums to initiate and build relationships when they are absent and/or frayed;
- reaching out to distant stakeholder groups and interests that have traditionally been at odds with local efforts and assisting with reframing and building common ground;
- documenting and communicating trends and issues that affect multiple communities to improve policies and procedures, including providing vital data collection, mapping, and analysis;
- organizing multiple communities to work together to promote shared vision and solutions; and
- promoting peer-to-peer learning and adoption of best practices.

3. Small rural businesses in natural resource management: Natural resource management functions, renewable energy development, conservation-oriented forestry or agriculture and other businesses can provide high quality, living wage employment protecting, restoring, and stewarding the environment. They include jobs that restore and maintain

Discussion Question 1

Written & Online Comments

(cont.)

ecosystem functions and services, such as clean air, clean water, and forest and rangeland health and biodiversity, as well as those that reduce energy, material, and water consumption, and move us toward a low carbon economy. The promotion of rural green businesses can help local economies recover by expanding value-added businesses and industries, and creating living-wage jobs that have positive multiplier effects in rural communities (economic activities that maintain and enhance essential local businesses, such as hardware stores, sawmills, feed stores, and by extension, schools and hospitals). For-profit enterprises play the vital role of providing: • service and stewardship work on public and private lands; • entrepreneurial skills, training and employment opportunities; • capital assets needed for conservation work; • equipment necessary to perform land management objectives; • processing and manufacturing facilities to create wood and agricultural products to provide building materials, food, and energy; • ability to take demonstration projects to scale and profitability; and, • market-driven revenue streams that reduce long-term dependence on public funds.

VII. Federal Programs That Complement Community-Based Conservation & Economic Development: RVCC Proposals for the America's Great Outdoors Initiative

The case for federal investment: Restoring and stewarding our nation's natural resources offers significant workforce and small business development opportunities worthy of federal investment. Investment in rural development from philanthropic organizations can never be enough. Federal policy and programs have the potential to build on the success of community-based efforts, bringing them to a scale that will begin to address the magnitude of our economic and ecologic challenges. The country's long term resource, food, and energy security is dependent on this investment.

RVCC criteria for effective federal programs:

- Recognize the interdependence between ecological, economic, and social sustainability. The health of our rural communities and landscapes are interdependent - federal policies must not sacrifice one to advance the other.
- Support and invest in collaborative processes and partnerships with diverse interests.
- Invest in building the capacity of rural citizens, businesses, local government, and community-based and regional organizations to provide employment, sustainable natural resources, ecosystem services, and quality and land-based experiences.
- Promote the creation and retention of long-term family wage jobs tied to public and private land management through contract procurement and grant selection and award criteria. (Not all job creation is equal; scarce government investment should focus on high quality jobs and businesses that can offer sustained local employment and provide the best social and ecological value.)
- Promote and accommodate best practices, allowing for adaptive management and flexibility as long as effective accountability and multi-party monitoring of management actions are in place.
- Ensure the transparency and accessibility of programs and contracts to operators, land owners and managers, contractors, community-based organizations, and small rural businesses.
- Provide clear and achievable financial matching criteria.
- Include performance measures and promote and fund monitoring and evaluation.
- Are as flexible as possible (outcomes vs. outputs driven), and are relatively simple to apply for and administer.

Four federal programs that illustrate elements of the above criteria:

1. The USDA Forest Service Economic Action Program (EAP) (not funded since 2002) helped rural communities and businesses dependent on natural resources become sustainable and self-sufficient. It provided technical and financial assistance to communities throughout the rural West to retain and build the capacity of small, rural businesses to implement restoration and stewardship activities and utilize material that is removed as a

Discussion Question 1

Written & Online Comments

(cont.)

result of sustainable land management activities. The Economic Action Program is the only Forest Service program authorized to provide this type of business assistance. 2. Community Forest Restoration Program-New Mexico (USDA Forest Service-State and Private Forestry). In 2001, with the passage of the Community Forest Restoration Act of 2000 (Title VI, Public Law 106-393) the U.S. Forest Service created the Collaborative Forest Restoration Program (CFRP) in New Mexico to provide up to \$5 million annually towards cost-share grants to stakeholders for experimental forest restoration projects on public land designed through a collaborative process. These projects may be entirely on one, or any combination of, Federal, Tribal, State, County or municipal forest lands, and must include a diverse and balanced group of stakeholders in their design and implementation. Each project must also address specific restoration objectives, including: wildfire threat reduction, reestablishment of historic fire regimes, reforestation, preservation of old and large trees, and increased utilization of small diameter trees. 3. Community Forest Landscape Restoration Program (USDA Forest Service-National Forest System). Congress, under Title IV of Omnibus Public Land Management Act of 2009 (PDF, 40 KB), established the Collaborative Forest Landscape Restoration Program (CFLRP). The purpose of the CFLR Program is to encourage the collaborative, science-based ecosystem restoration of priority forest landscapes. This legislation requires a broad coalition of interests to assess the landscape together, identify priorities, and sketch out a collaborative plan of action. CFLRP promotes benefits to local rural economies and forest health and should be a model for other programs. The CFLRP is not a grant making program, but rather creates the CFLR Fund, which must be appropriated annually and supports implementation activities associated with a collaboratively developed landscape scale strategy that aims to: • encourage ecological, economic, and social sustainability; • leverage local resources with national and private resources; • facilitate the reduction of wildfire management costs, including reestablishing natural fire regimes and reducing the risk of uncharacteristic wildfire; • demonstrate the degree to which various ecological restoration techniques achieve ecological and watershed health objectives; and • encourage utilization of forest restoration by-products to offset treatment costs, benefit local rural economies, and improve forest health. National Forests compete to be selected as one of 10 projects per year, with no more than two from each Forest Service region per year, and each Region must contribute 50% of the cost of carrying out and monitoring ecological restoration treatments on National Forest System (NFS) land. The CFLRP is authorized to be funded at \$40 million annually. 4. The USDA NRCS Cooperative Conservation Partnership Initiative (CCPI) in the 2008 Farm Bill is an innovative program that encourages landowners to work together to implement and maintain conservation practices that affect multiple landowners at a landscape scale. Instead of piecemeal delivery of programs ranch by ranch or program by program, this initiative supports projects that involve partnership among groups of landowners to address conservation priorities, regulatory requirements, and innovative cross-boundary resource management. This program invites community-based organizations to partner with NRCS for the delivery of specific Farm Bill conservation programs to landowners in ways that meet and respond to local needs, opportunities, and customs. While federal programs like CCPI recognize the value that community-based organizations provide, they fail to provide financial assistance to these partner organizations for their contributions in engaging and mobilizing local populations.

Discussion Question 1

Written & Online Comments

(cont.)

America's forestlands, nearly sixty percent of which is privately owned, are an essential part of our national green infrastructure. These forests provide Americans with clean air to breathe and clean water to drink. Good stewardship sustains and enhances the value of these forests and helps meet some of America's most pressing needs such as renewable energy, greenhouse gas emission capture and storage, products for everyday life and job creation in rural communities.

To strengthen good stewardship, the forestry community - consisting of the following forest owners, conservation and wildlife groups, resource professionals and environmental organizations - has come together as the Working Forests Coalition (WFC):

- * American Forest Foundation
- * The Nature Conservancy
- * The Conservation Fund
- * Pacific Forest Trust
- * Environmental Defense Fund
- * Society of American Foresters
- * Forest Landowners Association
- * Theodore Roosevelt Conservation Partnership
- * National Alliance of Forest Owners
- * The Trust for Public Land
- * National Association of State Foresters
- * U.S. Endowment for Forestry and Communities, Inc
- * National Wildlife Federation

Maintaining and increasing the public benefits of working forests ultimately requires that forest ownership be financially rewarding. To do this, we recommend changes in government policies to make it easier for landowners to continue to maintain their forests as forests in the face of growing competing economic pressures. Tax policies, conservation programs that offer funding and assistance to landowners in managing their lands and strong markets for forest goods and services, can help create an environment that makes it easier for landowners to afford the investments necessary to keep forests as forests.

The August 9, 2010 America's Great Outdoors listening session in Manchester, New Hampshire provided an excellent venue for a discussion focused exclusively on privately-owned forests. Other venues, including the event held in South Carolina, also fostered meaningful discussion about private forest issues. Many of the forest owners attending spoke about the challenges they face and their desire to manage their lands in a sustainable way.

In the breakout sessions, forest owners stressed the importance of diverse markets for their goods and services as a critical tool to help keep their forest as forests. Healthy forests are founded on healthy markets; as income generating forests provide the resources for better and more consistent stewardship.

Discussion Question 1

Written & Online Comments

(cont.)

Traditional wood products markets continue to provide the economic means for forest landowners to retain their lands as forests. One important traditional market is building products - such as dimensional lumber, plywood and other sustainable renewables that provide the basic building blocks for millions of American homes and commercial buildings. Another is pulp markets - which produce the paper products that every American uses daily. There was strong interest in particular at the session in promoting the use of wood as a sustainable and environmentally preferred building material based on its renewability, carbon benefits and other important values that can be managed for on a sustainable basis.

There was wide-spread recognition at the listening session that traditional markets alone will be insufficient and that the development of new and emerging markets is of critical importance to maintaining private forest land.

Initiating market systems to enable payments for ecosystem services. This includes services like clean water, clean air, carbon storage and abundant wildlife - services that benefit all Americans.

Utilizing woody biomass as a sustainable, viable and renewable energy source - on par in priority with wind and solar - and in ways that will benefit both landowners and forest health.

Expand Green Wood Products Markets. Sustainably produced wood is the green choice. Compared to other building materials, wood is more energy efficient and produces less pollution in its manufacturing and stores more carbon than any comparable product. Encouraging the use of wood also builds market incentives for forest landowners to manage and maintain their forests as forests. To achieve this, we recommend that the Administration:

Expand Environmental Markets. Environmental services markets may be among the most complex and promising emerging markets that will keep landowners on the land and their forests as forests. While not fully mature, they may hold great promise for providing additional capital to help landowners make their land tenure more profitable and more beneficial for them, the environment and all of us that depend on the multiple benefits forests provide.

We recommend that the federal government -- and the Secretary of Agriculture specifically -- direct USDA's Office of Environmental Markets to analyze the supply/demand drivers of environmental markets and encourage use of the results by policymakers to determine the best approaches to stimulate the growth of environmental services markets. This effort will build on and learn from other working ecosystem market models including those underway through the Department of Defense's efforts to work with private landowners to conserve habitat around important national security infrastructure.

Discussion Question 1

Written & Online Comments

(cont.)

Utilize Woody Biomass as a Renewable Energy Source. Woody biomass offers an important market for private forest owners - especially for low value wood. As part of the listening session, landowners asked the federal government to create incentives for using woody biomass as a sustainable, viable and renewable energy source - on par in priority with wind and solar - and in ways that will benefit both landowners and forest health. Presently there is uncertainty in federal policy about how to measure net carbon benefits of biomass energy. Protocols for carbon accounting in biomass energy should be addressed on a priority basis to ensure that biomass energy development can proceed in a timely manner and at appropriate scales that provide both energy and climate benefits.

Most of America's forests and woodlands are privately owned, with roughly three-fifths of private forest land owned by families. To ensure these forests continue to provide a myriad of benefits - clean water, carbon sequestration, renewable energy supplies, rural jobs, recreation and wildlife habitat - the estate tax burden must be addressed.

Private forests in America are an integral part of America's landscape and account for more land than public forests. The American Great Outdoors Listening sessions offered an important vehicle to hear from citizens about what is vital to their well-being and quality of life. These sessions reconfirmed that healthy and abundant forests are a fundamental part of the fabric of America and a vital infrastructure foundational to a healthy outdoor strategy.

Given that most of America's forest land is privately-held, our obligation to help private landowners keep their forests as forests, will benefit all Americans. Our nation's forests are a fundamental component for maintaining America's conservation ethic and for helping reconnect people to nature. As we implement a new vision for conservation in the 21st century, we need to ensure that protecting private forests is a fundamental part of the equation.

Off-highway vehicle (OHV) recreation, including all-terrain vehicles (ATVs), offhighway motorcycles (OHMs), snowmobiles, 4-wheel-drive vehicles (4X4s) and other off-highway vehicles (OHVs), as well as personal watercraft helps get children (and adults) outdoors, provides much-needed economic development to distressed, and often rural, areas and provides financial support for all forms of recreation.

OHV recreation is a family activity and many children have been enticed outdoors by the promise of riding an age-appropriate vehicle. Often these kids develop a life-long passion for the outdoors that mirrors that of their parents. The Motorcycle Industry Council's (MIC) 2008 Motorcycle/ATV Owner Survey found that 55% of OHM riders are from Generation Y (born 1980 and after) and that 39% of ATV riders are from Gen Y. The survey also found a 138% increase in women ATV riders since 2000. This increase is indicative of more people looking for family-friendly activity. Further, 70% of female ATV riders rank "Family Activity" in the top three reasons they ride. It is clear that any effort to get youth off of the couch away from video games and computers and into the outdoors, including the America's Great Outdoors Initiative, should include motorized recreation.

Discussion Question 1

Written & Online Comments

(cont.)

It is also worth noting that OHVers do not limit themselves to motorized recreation. Like any other visitor to public lands, OHVers enjoy many forms of recreation, including hiking, camping, fishing, hunting or other outdoor activities including simply enjoying scenery, having a picnic or experiencing the solitude and serenity that comes with being in the great outdoors. In fact, MIC's survey found that 57% of ATVers listed fishing as an "other recreational hobby," 51% listed hunting and 50% listed hiking/camping, the three most popular "other" activities. Like adults, once youths have experienced the outdoors they want to come back and have many different kinds of experiences.

Motorized recreation, especially for youth on appropriately sized ATVs, OHMs and snowmobiles, is physically demanding and can improve the overall health of American children. While it may seem to non-riders that the machine is doing all the work, these vehicles are rider active and require a great deal of physical exertion to ride. A recent study by the York University Physical Activity and Chronic Disease Unit bore this out. It should also be noted that riders stop and engage in other forms of physical activity while on trail rides.

California State Parks, Off-Highway Motor Vehicle Recreation (OHMVR) Division, coordinates a youth program that draws on the attraction of off-highway vehicle (OHV) recreation to forge positive relationships between youth, law enforcement, and public lands. Off-Highway PAL (OHPAL) is a fun and physical "cop to kid" program that provides youth the opportunity to be involved in OHV recreation when they otherwise may not be able. Incentive-based, OHPAL is available to youth ten to seventeen years-of-age who engage academically and behave responsibly in the community in which they live.

In fifteen years, OHPAL has grown from one program site and twelve ATVs and dirt bikes to nine program sites and well over one-hundred OHVs, including the addition of snowmobiles in 2005. The ATV and/or dirt bike programs are offered at seven State Vehicular Recreation Areas and one State Recreation Area; the snowmobile program is offered at a contracted site near Lake Tahoe, California. The program areas range from coastal dunes, beautiful deserts, and majestic oak woodlands, to the breathtaking scenery of the Sierra Nevada. The different bioregions offer unique riding terrain and the opportunity to promote a relevant environmental ethic in each youth participant.

OHPAL started as a "cop to kid" mentoring program, but has developed into much more. Now with the capacity to reach thousands of youth, OHPAL is entering a new era with increased program availability and accessibility, as well as new formats such as an overnight camping experience and an introduction to OHV management practices. OHPAL is coordinated and facilitated, in part, by California State Parks staff; it uses local police officers to conduct most riding instruction for the program. OHPAL emphasizes safety, responsibility, and respect for each other and the environment. After successful completion of the ATV program, youth are also eligible to receive an ATV Safety Certificate.

Discussion Question 1

Written & Online Comments

(cont.)

100 seventh and eighth graders from East Middle School in Great Falls, Montana participated in an "Off-Highway Vehicle (OHV) Educational Exploratory," that trained 100 kids over two days to safely and responsibly operate age-appropriate ATVs and offhighway motorcycles. As part of the Exploratory each child had the opportunity to participate in a trail ride and experience the natural wonders abundant in Montana. East Middle School teacher, Brenda Vehrs said, "There is truly an incredible demand for these types of programs, in Great Falls and, I suspect, all across the country. I know first-hand, if you want to get children into the outdoors give them an opportunity to ride an ATV or OHM, and they will turn out in big numbers."

Vehrs also lauded the exploratory for teaching a conservation ethic. "A Forest Ranger had an opportunity to talk to the kids about the rules of riding on U.S. Forest Service land, and other partners provided educational materials on where to ride, how to interact with other trail users and how to be good stewards of the environment. These are lessons that I feel confident the students will take with them as they visit public lands on their own."

She concluded, "Many of our students are impoverished and never get to know what awaits them when the paved streets end and the trails begin. Our OHV exploratory changed that for a few of the kids. I hope as you develop recommendations as part of the America's Great Outdoors Initiative that you remember that motorized recreation can be a valuable tool to introduce children to the outdoors."

Off-road vehicle riding was found to require "a true physiological demand that would be expected to have a beneficial effect on health and fitness according to Canada's current physical activity recommendations."

Off-road vehicle riding was determined to be a recreational activity associated with moderate-intensity cardiovascular demand and fatigue-inducing muscular strength challenges, similar to other self-paced recreational sports such as golf, rock-climbing and alpine skiing.

Oxygen consumption, which is an indicator of physical work, increased by 3.5 and 6 times the resting values for ATV and ORM riding respectively - which falls within moderate intensity activity according to the American College of Sports Medicine guidelines and is in line with Canadian physical activity recommendations.

OHV areas support rural economies. Many economic impact studies from across the country bear this out. A recent study found that in Colorado alone, OHV recreation accounts for a total economic value of more than \$1 billion annually and more than 12,000 jobs. Given the state of the economy, particularly in the west which includes 19 of the 20 most economically challenged counties and the majority of public lands, careful, consideration should be given before limiting recreational access. Many rural areas are dependant on the dollars that motorized recreationists bring to the local economy. Any recommendations resulting from the America's Great Outdoors Initiative should recognize the positive economic impact that OHV areas can have on rural economies and avoid unnecessarily limiting sustainable motorized recreation.

Discussion Question 1

Written & Online Comments

(cont.)

One successful example of OHV recreation supporting rural economies is the Paiute ATV trail in Utah. A 2003 economic study found that the average rider using the trail spent \$110 per day, resulting in a \$7 million economic impact to local economies. Since 2003 the Paiute ATV trail has only gotten bigger and can accommodate all sorts of recreation with 10% of users now visiting the Paiute for horseback, mountain bike or 4X4 opportunities, and another 10% riding off-highway motorcycles. Rural towns and cities along the trail have had economies revitalized by the success of the trail.

In 2006 the Center for Business and Economic Research at Marshall University, commissioned by the Hatfield-McCoy Regional Recreation Authority, prepared a comprehensive economic impact study of the Hatfield-McCoy Trail System examining data collected in 2005. The overall conclusion was that the Hatfield-McCoy Trail System is and will continue to be an important component of the economic development of West Virginia and of the southern part of the State and it will be a catalyst for further development and expansion.

Specifically, the study found that total retail sales grew in the area by 12 percent and sales per establishment by 25 percent. Payroll increased by \$104 million or 9.5 percent. These gains in sales and payroll were seen in all related sectors including gasoline stations, accommodations, food service and real estate sales and rentals. This latter sector experienced the greatest growth due to the improving property values adjacent to the study area.

Further, the study found that between 2000 and 2005, user visitation increased by six-fold to more than 24,000 visitors. The State of West Virginia provided some economic support for the development of the Hatfield-McCoy Trail System and the Marshall University found that in 2005, the State realized a 125% return on its investment due to taxes collected from OHV recreation-related activities.

For the State of West Virginia the total economic impact of the Hatfield-McCoy Trail System was an increase in output of \$7,776,116, an increase in income of \$2,789,036 and the generation of 146 new jobs.

OHV use supports other forms of recreation through the Recreational Trails Program (RTP). The RTP was created in 1991 as part of the Intermodal Surface Transportation Efficiency Act, and plays an essential role in funding state trail programs and projects all across the country. Funding for the RTP, which is administered by the Federal Highway Administration, comes from the federal taxes paid on gasoline used in OHV's and other non-highway recreation and is distributed to the states based on a formula that recognizes the user-pay/user-benefit character of the program. RTP funds are distributed through the state transportation departments and natural resource agencies in cooperation with citizen advisory committees and a network of organizations and communities. These partners leverage available funding with cash and in-kind support. The RTP has funded more than 13,000 projects in its nearly 20-year history.

Discussion Question 1

Written & Online Comments

(cont.)

States must use 30 percent of their RTP funds for motorized trail uses, 30 percent for non-motorized trail uses, and 40 percent for diverse trail uses. Diverse motorized projects (such as snowmobile and motorcycle) or diverse non-motorized projects (such as pedestrian and equestrian) may satisfy two of these categories at the same time. States are encouraged to consider projects that benefit both motorized and non-motorized users, such as common trailhead facilities. Many states give extra credit in their selection criteria to projects that benefit multiple trail uses.

Nestled in the shadow of Mount Katahdin, just south of Maine's Baxter State Park, The Nature Conservancy's Debsconeag Lakes Wilderness Area (DLWA) is a 46,271-acre ecological reserve that welcomes multiple recreational uses. The Nature Conservancy purchased the DLWA in 2002 as part of the nationally recognized Katahdin Forest Project. It provides a vital link in nearly 500,000 acres of contiguous conservation land (connecting Baxter State Park, the Allagash Wilderness Waterway, Maine's Nahmakanta Reserve, and the Conservancy's Trout Mountain Preserve). The land encompasses a 15-mile portion of the "Hundred Mile Wilderness" section of the Appalachian Trail adjacent to Baxter State Park. It holds thousands of acres of mature forests, some of which have not been harvested in 70 to 100 years, or even more. These lands have a long history and great variety of recreational uses and today hiking, camping, canoeing, hunting, fishing, and snowmobiling on authorized trails are all welcome on this preserve.

Prior to the Conservancy's ownership, the DLWA included dozens of miles of established traditional foot trails that were etched in place decades or even centuries ago. These trails were often made by the feet of thousands of individuals - but with little benefit of modern trail planning and construction techniques. As a result, trails tended to proceed in a straight line to the destination of interest (often straight up steep slopes or through wet ground) with little accommodation for environmental protection or the comfort of the hiker.

Rocky Mountain Field Institute utilized an RTP award to restore and protect popular hiking and climbing routes in the Sangre de Cristo Wilderness Area in the San Isabel and Rio Grande National Forests, while providing access to the high country. This project addressed the most difficult sections of the routes with some of the areas over 14,000 feet high.

The peaks that were restored had suffered route degradation due to increased use, extremely steep terrain, severe weather, fragile vegetation, poor drainage, and difficulty of maintenance. All trail work in Wilderness Areas must be done by hand since any form of mechanized equipment is not allowed. Mitigation of the peaks included identification and construction of a single hiking and climbing trail, the closure of unwanted and unnecessary trails, and the restoration of damaged sites through slope stabilization and revegetation.

Due to the steepness of the terrain, and the damage to the tundra, much of the trail included natural rock steps with many water structures. Re-vegetation often included backfilling with native materials, hauled in by human power, and transplants of fragile tundra plants from other damaged areas.

Discussion Question 1

Written & Online Comments

(cont.)

I had the opportunity to be involved in an effort to introduce seventh and eighth graders from East Middle School in Great Falls to the outdoors through motorized recreation. We offered our students an "Off-Highway Vehicle (OHV) Educational Exploratory," that trained 100 kids over two days to safely and responsibly operate age-appropriate all-terrain vehicles (A TV) and offhighway motorcycles (OHM). As part of the Exploratory each child had the opportunity to participate in a trail ride and experience the natural wonders abundant in Montana.

I knew my students had a profound interest in motorized recreation, as every day kids would ask about a picture of my son riding a dirt bike; however, I did not expect the overwhelming amount of excitement from the students and support from the community for the OHV Educational Exploratory. There is truly an incredible demand for these types of programs, in Great Falls and, I suspect, all across the country. I know first-hand, if you want to get children into the outdoors give them an opportunity to ride an A TV or OHM, and they will turn out in big numbers.

This exploratory provided us not just an opportunity to get these children outdoors, but also to educate them on environmental responsibility. A Forest Ranger had an opportunity to talk to the kids about the rules of riding on U.S. Forest Service land, and other partners provided educational materials on where to ride, how to interact with other trail users and how to be good stewards of the environment. These are lessons that I feel confident the students will take with them as they visit public lands on their own.

While there are innumerable opportunities to enjoy the great outdoors in Montana and our state is rich in natural wonders and public lands, many children simply do not take the opportunity to explore beyond the city limits. Many of our students are impoverished and never get to know what awaits them when the paved streets end and the trails begin. Our OHV exploratory changed that for a few of the kids. I hope as you develop recommendations as part of the America's Great Outdoors Initiative that you remember that motorized recreation can be a valuable tool to introduce children to the outdoors.

Off-road vehicle riding was found to require "a true physiological demand that would be expected to have a beneficial effect on health and fitness according to Canada's current physical activity recommendations"

Off-road vehicle riding was determined to be a recreational activity associated with moderate-intensity cardiovascular demand and fatigue-inducing muscular strength challenges, similar to other self-paced recreational sports such as golf, rock-climbing and alpine skiing

The duration of a typical ride (2-3 hours for ATV, 1-2 hours for ORM) and the frequency of the rides (1-2 times a week) create sufficient opportunity to stimulate changes in aerobic fitness which falls within the physical activity guidelines (American College of Sports Medicine recommends between 450 - 720 MET minutes per week)

"More health and fitness benefits could likely be realized if the frequency of riding were increased to a level compatible with the recommended Canadian guideline for physical activity"

Discussion Question 1

Written & Online Comments

(cont.)

Using heart rate measurements alone, the demands of riding belong to the category of "hard" exercise - this increase of intensity may be linked to heightened psycho emotional responses (i.e. adrenalin), an effect of heat stress while riding, or a response to repeated isometric squeezing of the handlebars.

When considering muscular force and power involvement, study results indicate a greater impact on muscular endurance as opposed to an increase in strength (NB: this is in reference to hand grip specifically)

"Off-road vehicle riders perform considerable physical work using their arms and upper body." This upper body strength requirement "could lead to beneficial training increases in musculoskeletal fitness"

Study findings also picked up on the psycho-social effects of riding - the "enhanced quality of life and stress reduction effects of off-road riding"

Findings also reflect the "importance of alternative physical activity such as off-road riding to promote physical activity in a group who might otherwise forego exercise altogether" (habitual ATV riders in the study were not avid exercisers) and all physical activity is beneficial.

The Recreational Trails Program (RTP), which was created In 1991 as part of the Intermodal Surface Transportation Efficiency Act, plays an absolutely essential role in funding state trail programs and projects all across the country. As national, regional and local organizations that support recreational trails, we urge you to support the reauthorization of the RTP as a discrete program in the upcoming multi-year surface transportation legislation and to support funding for this important program in the amount of \$690 million (over a six-year period),

Funding for the RTP, which is administered by the Federal Highway Administration, comes from the federal taxes paid on gasoline used in nonhighway recreation and is distributed to the states based on a formula that recognizes the user-pay/user-benefit character of the program. RTP funds are distributed through the state transportation departments and natural resource agencies in cooperation with citizen advisory committees and a network of organizations and communities. These partners leverage available funding with cash and in-kind support. Work for these projects is primarily done by youth corps, volunteers, and small businesses .

By providing convenient, enjoyable opportunities for people to spend more time outdoors, trails encourage healthier living. Trails are an investment In the future of our communities and our public lands, while connecting people of all ages and backgrounds to the environment - which is good for them and good for the world that surrounds them.

Discussion Question 1

Written & Online Comments

(cont.)

We have seen firsthand the power of these projects to transform communities and transform people. Indeed RTP-funded projects represent investments in vital infrastructure that promote healthy communities and more importantly, healthy people. In addition, the economic impact of these projects is magnified because they improve access to public lands and waters and support both local tourism and recreation businesses, as well as healthy lifestyles.

Our thousands of members and allies believe that reauthorizing the Recreational Trails Program will achieve both important economic stimulation and strategic investments that will help transform American communities and lifestyles for long-term success.

We also emphasize our strong support for continuation of the Recreational Trails Program as a discrete program. We understand that efficiencies can be achieved by integrating some programs. However, in the case of the RTP, which has come to serve as the foundation for every state's "trail" program, we think that the damage to the program would far outweigh any potential administrative benefits. The RTP has an identified funding source directly related to trail-based recreation, an exceptional record of using those funds to leverage additional funding for trails, and a proven, transparent, responsive state-based system for distributing funds for a wide variety of trail-related uses. All of those exceptional benefits would be lost if the RTP lost its discrete identity.

My family has always enjoyed the outdoors and have spent much time in America's parks and wilderness areas.

We are quiet observers of the Earth's ability to care for itself if left alone by its creatures of all types.

Nature is the most beautiful gift that the world can grant us. Us Americans need to protect our pristine wildlife and make the world a better place.

When I think of how my children and I enjoy nature today, and how much I want their children and their children's children to have the same experiences, I feel compelled to write when this kind of opportunity comes along.

We just returned from a weekend in Rocky Mountain National Park. I watched my children learning about such a vast array of things in such a short period. They come back from the mountains with a balanced and enriched sense of being. This experience is essential for a well rounded development.

Because I live in the wonderful Adirondack Park, I'm aware that outdoor spaces are very important to our national's wealth, personal peace, and the future generations. Please work to protect America's outdoors. Thank you.

This action will save jobs and also create jobs in small communities across America.

Discussion Question 1

Written & Online Comments

(cont.)

The educational value of having young people view historic sites is hard to overstate. Yesterday, while showing a Junior High Class through the kitchen of our National Register CN&W railroad depot, I was asked where the microwave was put. It is easy to forget that for we who are middle-aged or older already have had experiences which are very much historical to today's youth.

On the subway coming home from work recently, I talked with some tourists from Europe who had come to the U.S. for vacation. They were very excited about our national parks and historic sites. They visit the United States repeatedly because there are so many of these spectacular attractions that it is impossible to visit them in two or three trips. This Initiative will support economic growth in the tourism sector in our country and help our economy.

MAYBE AUTOMATED EMAIL MESSAGES WON'T CUT THE MUSTARD, BUT JUST IN CASE SOMEONE READS THIS: The health and welfare of human beings is, or should be, the #1 priority. After decent housing and food, I believe conserving natural sites, historic and cultural sites, is next in line. Without access to nature, beauty and a sense of history, (as well as the arts, which I also advocate) our lives would be missing a vital source of inspiration and hope. IF WE DO NOT PRESERVE HISTORIC AMERICA, IT WILL BE LOST. IF WE FAIL TO PROTECT OUR WOODLANDS AND PARKS, THEY WILL DISAPPEAR. I want my grandchildren and all children to experience the majesty that is our home.

Patrick Henry once said that he knew of no other way of judging the future than by the lamp of experience. In this "me" culture world of MySpace and FaceBook and MTV, many Americans know little of their history and even less of their responsibilities as citizens. The lessons of American history are great, indeed: perseverance, entrepreneurship, the struggle for liberty and natural rights, the belief in government of the people, by the people and for the people. When more Americans can identify contestants on shows like American Idol than they can name Presidents or elements of the Bill of Rights, we are in trouble as a nation. This is why preserving--and supporting--historic and cultural sites is paramount to America's future. It is this next generation who must learn the great lessons of America to help keep it a strong nation, one dedicated to fundamental natural rights and liberties. James Madison voiced this so eloquently when he stated "Knowledge will forever govern ignorance; and a people who mean to be their own governors must arm themselves with the power which knowledge gives." Help historic sites around the country continue to provide Americans the knowledge of this great land's unique history so that future generations will be armed with the power to govern themselves and be responsible citizens and champions of American principles.

Wilderness is transformative. I would not be the person I am if I had not had access and the chance to be in wilderness and appreciate the world as it once was when humanity arose.

These spectacular area have great wilderness qualities and hold untold artifacts and remnants of ancient societies of the Four Corners area. Please ensure these lands can be protected from inappropriate use.

Just got back from a camping trip into Utah's red rock country. It had been too long - 3 years. What an uplifting experience! I wish everyone could see stars like that. I'm rejuvenated. Thanks for helping us protect such places. Go see those stars!

My wife and son and daughter have spent many vacations with me in this wonderful psychically restorative part of our country. We all come back to work feeling renewed and optimistic about our future. Please preserve this treasure for all our citizens, present and future.

Your efforts to provide a resource that has long lasting effects for the good of our people is sincerely needed. Just knowing that there are wilderness areas and outdoor spaces that are protected from pollution, degradation and the uncaring attitude of the greedy is a tremendous benefit to the mental health and well being of a society.

I will never forget that Clinton designated the Escalante Grand Staircase National Monument and what Carter did for Alaska. This is an action and legacy which will stand forever, for all future generations, human and animal. This is exactly the hope and change from the Bush Administration which those of us who voted for you are hoping to see.

Such incredibly beautiful landscape deserves the best protection available. I hope you and your family can manage a vacation in the area someday so that you may see and know what a treasure is in your grasp to hold for the future. I hope my grandchildren and children will also have the opportunity to enjoy these beautiful lands as my 99 year old father and I did just before his death.

I encourage you to take a personal vacation to hike in the magnificent redrocks of southern Utah so you can appreciate what we hikers are screaming about. I am now 70 years old and on crutches so no longer can visit the quiet beauty of the redrock country. I have hiked in Nepal, Africa, Pakistan, Australia, Alaska, Colorado, Arkansas and Florida but no place comes close to Utah.

I live on the Navajo Nation, just south of some of the stunning lands being considered for wilderness act. I can tell you from experience that Southern Utah is home to some of the most achingly beautiful landscapes in the nation. There is nothing like them anywhere else in America, and our children and grandchildren deserve to enjoy them in their wild glory as we have done.

Mr. President, I know you value the American landscape. Let me share with you my great love for wild Utah and all of America's natural wilderness. I have had the irreplaceable pleasure of camping under the Utah stars in that wilderness. I want my grandchildren and theirs and theirs to have the same opportunity. We must act now to save these lands for their future. Do what you know is right, Mr. President. We will stand behind you.

(cont.)

I have personally spent time in these areas and money in the surrounding towns while visiting them and can tell you firsthand that these are special, one-of-a-kind spots that need immediate protection and that the likelihood of my spending time and money in the towns near them is minimal without protection. Please don't all prey to the old theory that you cannot support economic growth and jobs while still protecting public lands, especially in this day and age. Thank you!

Department of the Interior... When I was teaching in Oregon, one of the students' favorite authors was Farley Mowat. In the book *Owls in the Family* he talked about his family's trip from the US to western Canada and the abundance of potholes filled with migratory ducks, geese, and all sorts of birds. Anyone who is aware of the area knows how very special it is.

I treasure these areas and enjoy their pristine, untouched beauty.

In Oregon, my native state, they enjoy some of the most beautiful and awe-inspiring public lands in the nation.

Oregon's economic future depends on Wilderness: clean water, wild rivers, and wild lands.

As an Oregonian and an avid outdoor enthusiast, I encourage you to protect as much of the nation's valuable Wilderness and other recreational areas as you can!

In every state, there must be an emphasis on wildlife corridors, so animals can move safely between the tiny bits of habitat we have left for them and so they can move to higher elevations and more northerly latitudes as the climate warms.

My husband and I live far from a city in the high desert with mountains and lakes nearby. The sage country needs to be saved too. We are on the Pacific Flyway and thousands of birds are dependent on the wetlands of this area. The wetlands are at great risk with ranchers wanting much of the water control. There needs to be designated money for the wetlands and other wild and semi-wild areas.

We can help keep America special by protecting more Wilderness and quiet recreation opportunities, preserving more habitat and connectivity for wildlife & humans and permanently protecting remaining old-growth forests. For the wildlife that call our public lands homes and for the millions who enjoy these places for quiet recreation, it is time to correct this Wilderness imbalance for us & all our future visitors. _____ Portland, Oregon Original Obama Voter, VA citizen 45yrs, Oregonian 10+ yrs, All around Nature Boy. The Outdoors is "Everyone's Church". Pls act towards More Wildlands, it has never B4 been Regretted..., It Will be part of Your Great Legacy, so Please think long term, Long term is why you got my vote in the 1st place. { :-) All My Best,

(cont.)

I hope you will seize the opportunity presented by the America's Great Outdoors Initiative to permanently protect some of our nation's most cherished places, such as Owyhee Canyonlands in southeastern Oregon.

. We are in our 80s & in the poverty class. we have introduced our children & grandchildren to the outdoors & we still enjoy the parks with camper & canoe. we are blessed to be americans. thanks for all you do

. I grew up as a " city girl" but my husband introduced me to the wonders of the great outdoors. We cherish our time vacationing in places such as the Adirondacks & have passed our love of the sacred outdoors to our children.

As a young scientist, our National parks and wilderness areas have provided me with amazing places to study. The wilderness is one of our greatest treasures, something that other countries cannot boast. We should work to protect and conserve these places.

I want my children to enjoy America's great outdoors as much as I have. I live just outside the boundary of America's largest National Park - Wrangell-St. Elias and I hope that future generations can enjoy it, as well as the rest of our public lands, as much as I have.

. I travel extensively overseas for business and i can testify that our national parks and recreation areas are what adds to this country's desirability. I even have friends from overseas that visit here just for our outdoor spaces. They are truly a national treasure....thank

Every generation of Americans should be able to see and enjoy the stunning natural beauty that surrounds us. Far too few of us live in rural areas and every child should be able to learn about and visit wild, natural areas with ease. Family vacations should not only consist of amusement parks. For the sake of our national sanity,

. We need to stop and take a look at the big picture of what we are creating. Respect for ourselves, others and our Earth is something we need to regain. Once our wildlife is gone and our land raped, the picture is very ugly. Will you trade the life of our land for a brief time of monetary gain. There are plenty of other ways to make money.

I grew up learning to have an immense appreciation for the outdoors from the teachings of my elders and the beauty around us that has empowered me throughout my life. Weather it is hiking, kayaking, camping, scrambling, etc... its right there for us and we should all do our part to help preserve things. For our generation and the ones yet to come. Thanks so much! Best,

. The difference between humans and the natural world is that, when not interfered with, nature maintains perfect balance. The intelligence in nature is a perfect system of balance; however, we as humans have a great capacity to create imbalance. There is a purpose that brings us together as humanity to live in harmony and balance with each other and with nature.

Discussion Question 1

Written & Online Comments

(cont.)

. Many years ago, when our children were young , we took a cross-country trip that included Mount Rushmore, Yosemite, Yellowstone, Crater Lake, the Grand Canyon and other sites. They still talk about that trip and have imparted a love of the outdoors to their children. We want those same beautiful places to be available to our great-grandchildren. Please help to make that happen.

Throughout my youth and into my adult years I have enjoyed many outdoor excursions that have really helped me appreciate the freedom we have as Americans. We have the freedom to travel throughout our vast landscape and enjoy the creation all around us without fear of war or endangerment while traveling. . This will allow the future generations of this great country to enjoy what I have enjoyed.

Doing so may prove to be an important step in the fight against obesity by giving children an alternative to TV and video games at home. The outdoors is also personally important to me; on many trips with family and friends each year, we visit national parks. Being outside and in nature is one of the great joys in my life, especially in this fast-paced modern world. Please work to maintain the land we all share.

What really matters is the natural world we live in. Without it we are nothing. All of our fancy cars, flashy clothes, fine dining, glorious cities, and entertainment are nothing if we cannot breath the air and drink the water. The more we set aside for nature to proceed as undisturbed as possible, the more time we will have on this planet to enjoy our human luxuries. And then, we need parks and other outdoor spaces to get away from the rat race and take a moment to clear our heads and understand that. That we are part of, and not the masters of nature and the natural world. We need to take care of ourselves.

. Expanding land preservation on a large scale is in my opinion the only effective way to protect and restore quality wildlife habitat, especially in a state like mine- Illinois. However, I also believe that acquiring the needed lands for such large scale projects should be done with only those who are from "willing sellers" AND with the use of incentive-based conservation easements. A great example of this is Nachusa Grassland, a truly awesome project the Nature Conservancy has been working on in my own state for over 20 years. This has been just one man's opinion. Thank you for your time

I want the next generation to be able to enjoy America's great outdoors too. including parks, wildlife refuges, beaches, oceans, lakes, wilderness, mountains, trails, rivers, endangered species habitat and the corridors needed for survival, and to conserve our monuments, farms, open spaces and forests. Too many of these precious resources have vanished in my lifetime through pollution, urban expansion, senseless greed, and the harvesting of natural resources (flora, fauna, minerals, gas and oil, etc.) without consideration of the impacts down the road. Please do everything you can to see that we do not lose even more of what makes our country great, and allow everyone the chance to experience nature in all of its pristine glory. Thank you,

Discussion Question 1

(cont.)

My age is 86 and I have three children (two in 50's and one 62), six grandchildren (22-33), and 2 great grandchildren (3 and 7). Our range in age is therefore, 3 to 86. Four generations. My wife of 63 years died in January this year. We have many balances to maintain in this wonderful country of ours, the USA. One of these balances is quality living conditions and space in which to enjoy life, our relationships and our pursuits. The other is to retain plenty of natural space (land and water) that will provide us humans with life-fulfilling opportunities to witness and enjoy God's natural beauty and all of nature's pleasures and recreational opportunities that accue from such woders.

Please save the parks for us!

Our wilderness is a national treasure and the key to a sane future.

As a liberal citizen of faith who strongly believes in protecting all of the environment.

Thank you Mr.President for recognizing the importance of protecting our wilderness areas.

I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors.

I welcome the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative.

I was recently in Alaska, and realized EVEN MORE, how we need wilderness and all it's "purple mountains majesty" for future generations to see!!!

Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds, and recreational opportunities.

This is important to the future of the people, the wildlife that inhabit the wild regions of our country which are still intact and the overall integrity of our planetary environment.

My Personal Comments: Some of the biggest tourist areas are around National Parks. The public does enjoy National Parks & Museums, and are better ways to generate money than gambling.

It is exciting to see the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. I find it to be inspiring and indicative of his vision to make conservation of America's treasured outdoor places a national priority.

Discussion Question 1

(cont.)

I encourage the President to be bold in his efforts to continue to protect our, America's, heritage of beautiful, often breathtaking, natural wilderness. This is something that is important beyond words, and will have a positive impact on many, many generations to come.

Again, I thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to the president using this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

I appreciate the recognition of the importance of our natural places. The conservation leadership embodied in the America's Great Outdoors Initiative is very much needed.. It is important to make conservation of America's treasured outdoor places a national priority. Our natural resources are threatened by pressures like expanding population, exploitation, unguided development and climate change. The BLM manages many areas suitable for wilderness designation. I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors.

As my wife and I drove across this country to Colorado in 1969, to begin our graduate school experience, we were awestruck with the beauty of this great land! When we stopped at the Badlands and Mt. Rushmore in SD, and, later, visited Rocky Mt. National Park and Yellowstone Park, we were enthralled with the grandeur of this nation's geographical diversity and the flora and fauna that thrive in these areas! Even though we long ago returned to our native Pennsylvania to seek employment, we have never forgotten the splendor of passing through the MidWest and the Rocky Mountain States. We've also had occasion over the decades to visit other areas of this country and are always impressed by what there to see and experience through a stop at a National Park. Therefore, we applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. In light of all of the wonderful experiences my wife and I have enjoyed through our visits to a variety of national parks,

Like you I'm from Illinois - and I didn't know the true wonders of our country until I moved away at 24. I'm now 30 and I've been in Oregon in Graduate School for a few years. In my time in Eugene, Oregon I've found some of the most amazing wilderness, wildlife, and areas for quiet, mindful recreation. These wilderness areas need to be preserved, for us, for our children, and for the non-human denizens. Our national policies impact the Northwest heavily, and as we turn our sources of revenue from destructive forest and ranching practices, to healthy recreation, tourism, and non-destructive extractive processes, so must the legislature follow suit. We need you to be leading the campaign for a healthy natural world - please do so! With highest regards,

Some of my best family memories are from spending time outdoors, visiting the national parks, and exploring city parks and wildlife areas. I am starting to make the same memories with my children, and hope that they can do the same with their children. Please protect the Great Outdoors!

(cont.)

The most important moments in any persons life are the moments spent outdoors. Everyone can remember a feeling of complete awe upon their first views of a mountain, or a grassland, or a rainforest, or a desert. These moments connect us with the land. We must protect every American's right to share in these moments.

. We need to reforest where mining, logging and urban sprawl have claimed 90 % of our original forests. We need to remove dams on rivers where they serve as a detriment to a healthy ecosystem. We need to use renewable energy to power our cities and autos and hemp instead of plastic (ban aluminum and plastic), take fluoride out of our drinking water which is only a by product of aluminum manufacturing and not a dental aid, not try to kill everything by genetically modification or eradication by poisons, bring back family farms, grow hemp which has no illegal drug available and could revolutionize our manufacturing and farming industries. Thank you for your consideration and attention.

As a life long user of the Angeles National forest I want to state my support for a San Gabriel Mountains Recreation area.

I have been visiting Angeles National Forest all my life and those visits have shaped the person that I am now. I hope that it can be preserved and enjoyed by many future generations. We are committed here in Southern California to make that happen! Please lend your support to this very important initiative!

Various federal measures including Forest Legacy have helped land trusts conserve millions of acres.

Thanks for launching America's Great Outdoors. America's land trusts keep agricultural lands in productive use and protect important wildlife habitat.

As a board member of the San Isabel Land Protection Trust in Colorado, I know first hand the difference conservation easements have made in our community.

I personally appreciate this program since my area is dotted with beautiful small farms and woods. Sincerely yours,

This ia an industry which can provide real, needed food while helping dramatically to turn our economy around and help us transition to green energy, and a new economy.

Our land and resources and their beauty are some of our nation's greatest assets. Thanks for your concern, your efforts, and your attention to this important matter.

I am a long time backpacker, fisherman, birder, and general lover of the outdoors. I've served on a number of environmental boards and commissions, most recently that of Audubon Pennsylvania, six years as Chair.

I grew up on a farm and learned the value of both arable land and land left alone for recreational purposes and wildlife support. Both private and public land must be a part of any complete conservation effort. Thank you,

Thank you for launching America's Great Outdoors! This is an important program that will benefit the entire public. It is appreciated. Your support is a big step in educating the US public on steps towards a healthier society. Thank you.

Thank you for recognizing land trusts in your Great Outdoors initiative. We are a growing force in keeping land open for the valuable services of agriculture, forestry, recreation, and wildlife habitat. Our work is helped by federal programs--tax incentives, farm bill easement programs, LWCF and Forest Legacy--effectively conserving millions of acres.

We are considering initiating a conservation easement through our land trust on 900 acres of forest land that we own in Montgomery & Richmond Counties in North Carolina. One of the factors in our consideration is the tax benefits proposed in the House of Representatives and awaiting action in the Senate. Adoption of these incentives will be a major influence on our decision. Thank you for supporting protection of all of our great outdoors.

The Green Lake Conservancy is a Land Trust that "Preserves Special Places" in the greater Green Lake area. With the assistance of grant dollars & tax incentives, we have been able to preserve over 15 properties in perpetuity. The long range plan for Green Lake County, as required by state law, calls for the county to retain open spaces and its rural character. In order to play a role in that goal, we need continued access to such tools as grants & tax incentives. All land that we are able to preserve & protect is done so in the public interest, so the benefits accrue to present and future residents and visitors. Your support is appreciated.

Dear President Obama, Thank you for launching America's Great Outdoors and recognizing the work of America's 1,600 land trusts to keep agricultural lands in productive use and protect important wildlife habitat.

Tax incentives, farm bill easement programs, LWCF and Forest Legacy have helped land trusts conserve millions of acres. Please make the conservation of private farms, ranches and forests a centerpiece of your initiative.

Our public lands belong to all Americans and provide us with clean supplies of drinking water, healthy air, and an opportunity to experience wildlife and nature. America's Great Outdoors is an opportunity to transform conservation for the 21st century, and leave a legacy that future generations can enjoy. Protecting, connecting and restoring our public lands should be a critical component of a successful America's Great Outdoors.

Our shared public lands -- from the Grand Canyon and Yosemite to our forests in Maine and North Carolina -- provide health, economic and recreation benefits that sustain our communities.

America's great outdoors are special to us all and we have a great responsibility to protect them for future generations.

(cont.)

Here in Oregon, we enjoy some of the most beautiful and awe-inspiring public lands in the nation.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative.

It is inspiring to see the President make conservation of America's treasured outdoor places a national priority.

Again, I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors.

I support the Obama Administration's America's Great Outdoors Initiative.

Protecting Yellowstone means Protecting the wildlife migration corridors and watersheds that surround the park and make up the Greater Yellowstone Ecosystem.

As we face global climate change, protecting these connections will only become more important.

Communities throughout Greater Yellowstone value their access and connection to the great outdoors and have a history of working hard to conserve special places.

The San Gabriel Mountains in the Angeles National Forest provide us with natural habitat, wilderness, scenic rivers and a host of healthy recreational activities such as hiking, camping and water play. The Angeles NF is one of the most heavily visited recreational forests in the country and accounts for 70 percent of the open space in Los Angeles County.

___ said Wilderness designations are not cost effective" The trails maintenance programs for wilderness areas cost almost nothing when compared to road maintenance costs for the non wilderness designated government land. Wilderness designation is the most cost effective management designation. We get clean water and clean air and it costs taxpayers nothing."

I like this idea because it an important but neglected component of habitat conservation. Sound travels and decreasing the sonic pollution in an area only widens the effective habitat space.

I whole heartedly agree with this idea. Why is it we protect our forests and parks from specific types of vehicles, domestic animal traffic and etc. and yet allow the fly over of commercial/private airlines? Sound is just as much a part of the habitat as any animal or plant. It's like having an orchestra without any instruments. I will never forget the days following 9/11. The quiet was simply amazing, even in suburban Chicago. Please promote this idea and lets move it to being law.

Discussion Question 1

Some of the best examples I have seen of connecting youth with national parks are the educational trips to the Apostle Islands. Not only do the students who are able to make trips during the school year learn about the animals and plants and habitat on the islands, but also the Native American influences and aspects. It's important to incorporate as much of our history, ecology, preservation and culture into displays, educational information and programs as well as in schools. What better way to do so than by introducing more of our youth to National Parks? .

Thank you for considering my comments because I and my family have visited many of our national parks and truly believe that they are the "crown jewels of America" and "America's best idea"..

When I think of the great outdoors in the USA, I think primarily of the national parks. National parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of the nation, and contributing to the health of people and the planet. National parks provide some of the finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. --Heed the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect people to them in the next century. --Seize the opportunity that the upcoming Park Service centennial provides to renew the national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare the parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting the parks for the next generation. --Do more to use national parks to inspire and educate young people. The national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite children with hands-on learning experiences. --We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of the diversifying nation. I urge you to evaluate and consider new sites to bring into the system that better represent the changing country, and protect remaining natural areas before they are all used up. --Provide wildlife corridors to ensure that the wildlife in the parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on the pocketbooks of USA residents, national park visitation increased on average by nearly four percent, demonstrating the enhanced value of the national parks to people in difficult economic times. USA residents care about the future of these incredible places, so they will be there for future generations to enjoy. Remember the importance of protecting national parks and the many programs managed by the National Park Service that improve communities. National parks are good investments for the future.

National Parks have played a major role in influencing my own connection to Earth since I was a child of three. Seventy years later, I still consider the greatest beauty in the world is to be outdoors, and our National Parks have so much to offer and teach to everyone. It is only in the stillness and beauty of our mountains, forests, prairies, and oceans that we put our lives in perspective.

Discussion Question 1

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Some of my family's favorite vacations, memories, and history lessons came from visiting national parks. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

I have just returned from Shenandoah National Park and I can't tell you how much I enjoyed it. I would love to see many other National Parks and hope I get the chance. I have just emailed my family and friends with pictures attached and they can't believe how beautiful it is there. I voted for you and I think you are doing your best. I know it's a very difficult job, especially after the previous eight years. I want you to know I appreciate everything you are trying to do. I'm sorry you had so much opposition when you were trying to give us a new healthcare system. I'm glad you were able to put some of it through.

If you believe they are good investments why are you killing wolves and other animals? Why are you letting all kinds of destructive vehicles run amok in our parks? If you really want to save money, then cut your salary and cut congress and senates salaries that will save a lot more. Time you give as well, and stop smoking and trying to kill yourself.

I am 83 years old and many of those 83 summers were spent in our National Parks. In fact my children and grandchildren, with a friend, hiked in Lassen National Park last weekend. We have climbed Lassen Peak several times and skied down the ski trails that used to be there. My son and grandson will visit Yellowstone National Park this week as my grandson returns home from his tours in Afghanistan. Please don't let this wonderful experience diminish in anyway and do everything possible to save these places for my greatgrandchildren. Please heed the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans two them in the next century. Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

My most memorable vacations have been in U.S. National Parks. I spent two seasons working as a concession employee in Yellowstone National Park. U.S. National Parks include some of the most spectacular scenery on earth. Enjoying that scenery and watching the protected wildlife renew my spirit as I am awed by the wonders of Creation. Special attention must be given to National Parks in any program emphasizing the outdoors

As a parent of two young children, an scholar in the field of education, a community college administrator, and a lover of the outdoors, I urge you to place priority focus on our National Parks System. Our parks offer something of value to everyone no matter age, ethnicity, or socio-economic background. In direct support of "Race to the Top" and "No Child Left Indoors," National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions each year. Let's also create jobs through the Park System - WPA style. This will increase our understanding of American History, Conservation, and support active, healthy lifestyles. --Heed the advice of the National Parks Second Century Commission. --Provide permanent, mandatory funding for the Land and Water Conservation Fund- spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. --Do more to use national parks to inspire and educate young people. Experiential learning is well known to be the BEST method for learning in all subject areas but particularly in math and science. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

My husband and I have a 14 month old son and we can't wait to introduce him to all the National Parks. Our best vacations have been to Rocky Mountain, Glacier, Mr. Rainier, The Badlands, Mt. Rushmore, and the list goes on. I come from a small farm community in Iowa where money was scarce and vacations were nonexistent. I only knew the small community around me and had never been further than Wisconsin. I had the opportunity in high school to go on a trip to Rocky Mountain National Park. That experience opened my eyes to what America has to offer and gave me a sense of patriotism, peace and respect for all living creatures that I could never explain in words. The National parks are such a huge part of our American Heritage and can change a person's outlook in life in just one visit. I know it did for me!

I was always a part of the activities. My daughter and her family often camp and hike in local and national parks. Our 5 year old grandson called just Sunday to tell us the adventure he and his family had over the weekend as they camped and hiked for two days at Mahoney State Park in Nebraska. Let's protect the lands and the health of the people.

Every year for the past 15 years, I have spent a week in the spring camping and hiking in our national parks, national monuments, and even BLM lands with my childhood friend. Our lives have taken different paths, we live far apart now, and it is this yearly ritual that enables us to reconnect and reconfirm our 60-year friendship. The dramatic beauty, grounding serenity, and calming simplicity of these nationally held lands are integral to our shared experiences.

(cont.)

My family and I take a vacation in one our National Parks every year: seeing you wioth your family in Arcadia in Maine reminded me of our trip there two years ago. So you know first hand what a treasure our national parks are. Visiting all of them is on our bucket list (we're in our sixties). National parks get Americans off the coach, away from the TV and provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year.

To get a great feel for what our National Parks do, I highly recommend that you and your family watch the Ken Burns DVD's (especially in Blu-Ray) of "The National Parks - America's Best Idea". They total over 12.5 hours, but are well worth it, as are the extra "Special Features" on each DVD. I have been fortunate enough to have been to many these locations and felt these DVD's really express what I feel. I especially like the Musical number "Teddy Bear's Picnic", in the Special Features on Disc 3. It shows Brooks Falls in Katmai National Park in Alaska. I took my son there a few years ago, and it really is like shown when a salmon run is going up the falls!

Thank you for setting an example with your family of visiting the natural beauty of our country! The local, state, and especially the National Parks are a treasure I visit whenever I can.

My daughter and I spent 10 days hiking on Isle Royale Natl Park for her Highschool graduation trip. It is something we will remember together forever.

When we think of America's Great Outdoors, we think of our national parks.
Thank you for considering our comments.

Thank

When I was young, my parents took "driving" vacations to various states. National Parks were always one of the places we stopped and explored. I still remember those vacations and those parks and would like to see them preserved and kept available to the generations to follow. As an adult, I still take many of my vacations touring our national parks, but I'm saddened by the closing and shortened visiting seasons for many of them, and the cutback on many of the services offered.

My husband, our two daughters (and now our grandchildren) and I love to spend vacation time at our National Parks. Since we live in Arizona, we go to the Grand Canyon at least once a year. Helping to preserve the parks from pollution and industrial development is also important. I was shocked that a company started building a uranium mine within a mile of the Grand Canyon and was so relieved when federal action stopped the mine.

I love visiting our National Parks and I hope they will always b e kept as wonderful places for learning about nature away from the noise. A place where you can hear the birds, the waterfalls an escape into the beautiful that God created without noise.

This year, to save money, my family and I went down the Oregon and California coast on Highway 1. Along the way, we stopped at several of the national parks, exposing our boys (17, 15, and 11) to beautiful landscapes and wildlife that they would otherwise never have seen. To keep this adventure alive for other Americans, please consider taking the following steps:

(cont.)

The last bits of pure and undisturbed nature are where we turn to rejuvenate our lives and understand the deep wealth of nature's gifts.

"The National Parks: America's Best Idea "

America the Beautiful! When I ponder those words, the great outdoors comes to mind. I especially think of our National Parks in America. Our parks are a symbol of who we were, who we are, and who we hope to be. It saddens me when I see the condition of our National Parks system. Visitors to our great country may wrongly think that we as a nation do not care about our national symbols. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up.

I personally think that this is an excellent area to use to promote and make more jobs for the American people. Back in the days of the WPA many people were put to works making , restoring and expanding our parks. By providing jobs more people would have money to take and expose children to our wonderful land.

I am so heartened by your initiative. I cannot think of any issue more important than salvaging what is left of our wondrous environment and her many awe-inspiring species. Now is the time to re-awaken our citizens to our inherent oneness with the land and waters upon which we rely for nearly all of our needs.

National parks were one of the most important ways I connected with nature and my family as I was growing up. Yosemite was a five hour drive and every year, both summer and winter, my parents packed us six kids in the station wagon so we could spend time there - camping, hiking, skiing, learning about nature in its diverse manifestations. National parks continue to play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

A national well-developed curriculum highlighting our national park system should be a part of every school with a short unit highlighting ONE park every year and then a longer unit in tenth grade. What an exciting topic to motivate our children. .

Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. --Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders.

Discussion Question 1

Written & Online Comments

(cont.)

National parks play a tremendous role in sustaining wildlife and nature, connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

Do more to use national parks to inspire and educate people, young and old alike. Our national parks are classrooms for discovery and learning for students, parents and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. Protect the parks' wildlife from unnecessary hunting. It's especially important to save the wolves of Yellowstone from extinction. Return to a strong wildlife management plan scientifically based as was developed for the Park system in the 1950s (of course updating it with current scientific knowledge).

Visiting national parks with my family was a formative part of my own love of nature and conservation.

I appreciate all you are doing to address the issues of today and prepare our structures for our children and the next generations. I imagine the weight of responsibility is incredibly heavy and I thank you. I am writing in support of the points listed below. When I think of America's Great Outdoors, I think of my mom and dad loading their four girls into the station wagon to head to a State Park to camp out on weekends. From Memorial Day straight through to Labor Day, if my folks had time off together we were in a tent in a National Park. As a singly Mom I carried out the tradition - often to the chagrin of my children, who now consider those adventures some of the high points of their formative years. They now continue the tradition, and when I have a weekend off - my preference is to go visit the preserved spots of this beautiful land. National parks play a tremendous role in connecting people, young and old, to their individual spirit, to each other and to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Their Rangers are role models. YPlease Mr Obama, take the following steps:

I grew up in the upper peninsula of Michigan. Nature surrounded me and gave all the reinforcement of being one with what was around me. It was like a safe haven for me mentally, physically, spiritually and emotionally. How fortunate I was. Many persons have not had the experience of being with nature. To keep our outdoors open for others is vital in my opinion Thans for reading Claire Mautner the words below saying it in another way are important too. i

I have had the privilege of living and working in three of our most beautiful national parks and have visited countless others, many more than once. Also, national parks play an increasingly important ecological and climate role.

With the crisis in the Gulf we need to protect Americas Parks.

Discussion Question 1

(cont.)

Please consider the following action items: Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. I want others to have the great experiences I have had in national parks, both when I was growing up and still today. National parks are good investments in our future.

I think the writers already said it all, but I'd like to add that I'm working in Lagos, Nigeria and when I come home to Kingwood, TX, my wife and I frequently go to National Parks in the good ole' USA, such as the Smokey Mountains or Zion or Arches... so please keep the pristine areas of USA pristine. Thanks.

An employment program for the parks would serve both the public's use of the parks and the need for jobs. Just look at any national park today, to see what the CCC did during the Depression. The work still stands in testament to the value of such valuable programs.

As a youngster I dreamed of visiting the National Parks - As an adult that dream came true. Thank God they were still there waiting for me and mine. Your administration needs to make certain they continue to not only be there but to be protected and enhanced as this world of ours gets smaller and warmer.

Our National Park system is a real treasure. The diverse environments often brings awe to their visitors. This system needs absolutely protected, maintained and assured it's continued progressive improvement. And most importantly, the system need protected from privatization and free from corporate influence of any kind.

Protect undeveloped places from development or exploitation of any kind. NOT for americans, NOT for people, and MOST CERTAINLY NOT for tourism or the economy, but for the animals, trees, and other creatures of the earth who live there. Let them be the priority for once. -- Heed the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks in the next century. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. --We need more parks. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that protect remaining natural areas before we use them all up.

Discussion Question 1

(cont.)

As a former teacher who has traveled to a number of National Parks, I can truly say there is nothing more inspiring than the grand vistas or the amazing natural peace that infuses body and soul than connecting with these fantastic landscapes and their wildlife. It is so very important that we, as a nation, give a balance of nature with the overwhelming technology to which our children are exposed. Getting involved in national, state and county parks is one way to encourage a healthier population. The outdoors stimulates all types of physical activities to enhance a more active citizenry as well as creating a more mindful, heedful connection to ecology. Supporting our country's incredible natural resources connects us to our past and strengthens our future. Please.

Americans care about the future of these incredible places, so they will be there for our seniors, children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

Please also consider expanding the acreage of our National Parks....to keep lands in their "natural settings" undisturbed by human suffering.

HIRE A NEW INTERIOR SECRETARY. WE DO NOT NEED BUSH POLITICS ANYMORE. PLEASE HIRE SOMEONE WHO REALLY CARES ABOUT THIS COUNTRY AND THE ENVIRONMENT!!!!!!!!!!!!!! Ms.

BUT only do minimal in order NOT to add to the nation's deficit and NOT to cause extra costs for the parks. Too, increase fees if necessary in order to NOT add to the deficit, obtain bigger revenue for the country and decrease the profit of the vendors who provide services inside the parks, and possibly limit users and activities in order NOT to add to the deterioration of the parks.

Our whole family has a greater appreciation of and interest in our national parks since our younger daughter Kelly has spent the past two years as a Student Conservation Association intern. She worked in the Great Smokey Mountains NP and the Lake Mead National Recreation Area. Not only has Kelly received wonderful work experience, but all of us also have learned so much about these wonderful locations.

We've been to many national parks around America--they are always terrific!

(cont.)

I have been an avid tent-camper since the Spring of 1976, when my sons, (3 and 6 years old at the time), first agreed to accompany my wife and I on our first camping trip with borrowed equipment. Ten years later, they were taking us camping. Our family car was always a small, compact station wagon and they could pack in all the camping gear we would need on their own. So, often on a Friday, when we arrived home from work, they would announce where they wanted to go camping that weekend and have the maps ready to show us the way. Most of our destinations were state and national parks. We attend church in inner-city Oakland, California and now that our sons have grown up and left town, I take our Sunday school group camping one each summer. I also teach physical geography at local community colleges and work into the course assignment a field trip each semester. Both class and Sunday school students marvel at the impact that the outdoors have on them. Many have never been out on a hiking trail before their first field trip or church camp-out. The inner city children I have exposed to outdoor experiences have been impressed, even inspired by the exposure. I remember children trying to hide their fear of being out of the city for the first time, (terrified by images from horror movies) and voicing regret to leave when it was time to go back home. One teenage boy once said to me: "It is so quiet here I almost don't want to speak and disturb the silence!" Our parks are such a powerful healing balm for children in the inner city, who have been exposed to too much violence and too inhuman an atmosphere that is their daily experience, that I feel we need to have more programs designed to expose them to the parks in their vicinity. My church is working with local neighborhood groups to provide summer activities for the children. But, alas, the need is far greater than what we can afford to do. It seems so much easier to find prisons and youth detention homes to catch them, when they join the programs that are so much more available to them. Please help us! The parks are so much less expensive than the prisons! Maybe your administration would consider some of the following steps:

Our National parks play a formative role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

I love and make use of national parks. They help me connect to the outdoors, preserve the natural and cultural diversity of our nation, and contribute to our health and well being.

(cont.)

Two years ago my son got an opportunity to work a seasonal job at Yellowstone National Park during his college summer break. It was a life-changing experience. He fell in love with nature and all that comes with it. He returned to Yellowstone the following year after he graduated from college. This year he is working at Grand Teton National Park. Every spare minute he has, he hikes. It has become his passion. Right before my son started college he was diagnosed with type 1 diabetes. He struggled with it for most of his college years. That first year at Yellowstone he found something that made him happier than I had seen him in a very long time. It did still take him some time to figure some things out for himself, but this year when I accompanied him on a 10-day journey (with stops at other national parks, of course) to Grand Teton National Park he told me that he had decided that he wants to work for the park service. The national parks have become so important to him, he wants to be part of preserving them. Considering that he has a degree in English and his previous goal was to be a writer, one can see what an impact this spur-of-the-moment decision of working at a park for the summer has had. But hiking the parks has done so much more than simply change his career goals; it has taught him survival skills, it has given him his self-confidence back, and most importantly it has made him feel like a man; something he had never quite felt since he was barely twenty when he was diagnosed, which had always made him feel handicapped. He still writes, of course, but now he fills his journals with his hiking and spotting wildlife experiences in the parks. His passion has rubbed off on me. I recently joined the NPCA, and we both have our NP passports, which we hope to completely fill with cancellations (ink stamps) from all the parks before long. As you can see, national parks play a tremendous role in not only connecting people, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people, it also nurtures their hearts and souls. They also provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. Therefore I suggest for your administration to take the following steps:

Some of my favorite times were bringing my children to National Parks. I'd like them to have the same pleasure.

As a child, every summer vacation to one of our great National Parks are the most wonderful memories with my family. The lifetime experiences of 'America the Beautiful' carry with me to this day...please keep our parks intact.

My wife and I have been making an annual trip to one of our National Parks every year for the past 20 years. We enjoy hiking and photography and can't think of any better places to pursue these two hobbies. The beauty and serenity of our National Parks is unmatched. Right here in Morristown we have Washington's Headquarters and Fort Nonsense, maintained by the NPS, that we love to visit.

What is a better way to move then the outdoors! And where is a top notch place to stay in shape -or get in shape- than a national park! Not only our muscles but also our brains can benefit. We all need to have optimal blood pressure and the serenity of a national park is just what the doctor ordered. Vitamin D has been almost touted as a cure all and national parks have enough for everyone with side effects of pure enjoyment.

We humans still need recreation to stay healthy.

They truly are our greatest natural resources and a gift for future generations!

When I was growing up, we always went camping in the mountains for family vacations. It meant the world to me. As a single parent, I really never got to do that much with my children in the area of traveling and camping. They did get to go some with my parents on their trips. I just wanted to share this with you. If you ever have a chance to visit a national park, you automatically gain a respect for our great outdoors. My experiences made me appreciate them and want to take care of them.

The happiest moments in my long life were spent in national parks. I can't imagine life without the great outdoors. Please support our national parks to the fullest. If you have ever been to one, then you know how I and millions of other people feel about these wonderful, peaceful sanctuaries.

We should not have to send this message to you as you should know what a treasure the National Parks are.

I have worked in many of the parks with the continental divide trail association, so I have up close and personal experience with many of them and have visited all but 3.

When I think of America's Great Outdoors, I think of our national parks, at least one of which I visit every year.

When I think of America's Great Outdoors, I think of our national and State parks. I visited Mammoth cave and Acadia parks this summer and found the trips to be very enjoyable.

Your initiative "America's Great Outdoors" is a good one, and I thank you for the concept. We need to recreate and consider one of the things that makes us so great is the respect we have for our great outdoor places.

When my wife and I think of America's Great Outdoors, we think of our national parks. Thank you for considering our comments

National parks play a tremendous role in connecting people, parents, grandparents and children, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

Our national parks ARE America's Great Outdoors!
comments.

Thank you for considering our

We are so fortunate as a nation that we had forefathers who set aside national parks to preserve for conservation. If they hadn't they would have been squandered to development.

Please President Obama, you are the last, best, chance we have to save our wildspaces.

My family and I have visited over 50 National Parks, Shorelines, Historical Sites, Monuments, etc in over 15 states. These were the best educational experiences for my children, and myself. All families should be encouraged to take advantage of these great pieces of America.

Our National Parks are America's National Treasures. I am so eager and happy that the America's Great Outdoors Initiative is on the table right now. I delight in knowing that your administration is choosing to focus its time and focus on such a fantastic part of America. Helping to build a greater connection and a greater accessibility between Americans and nature is so life enhancing and important. Especially in the context of this time. I think we are hungry for a greater connection to the world around us. So, Bravo, for this initiative. I trust that America's National Parks will be a pivotal part of this next step forward. Hopefully our National parks will receive greater care and expansion. America is beautiful, and it is such a treasure that so much of that beauty has been preserved, let's keep it up! Better yet, let's expand on it. The dominant presence of nature heightens the level of happiness and the quality of life for the people around it. Great thinkers, who are the forefathers of America like Transcendentalists Thoreau and Emerson would agree: nature sparks appreciation in mankind.

As a Natural Resource major from Colorado State University, I have been lucky enough to have had the opportunity to experience first hand the importance of our environment and recognize just how meaningful it will be for future generations. Whether I was out hiking, biking or camping near Ft. Collins' Red Feather Lakes, snowboarding in the Aspen Mountains, or simply just relaxing with the family in our cabin out by the Spanish Peaks, I have always felt a close connection with nature. What follows are recommendations put forth by the NPCA which I truly believe in. I would like to take just a minute more of your time to address the growing concern of the U.S. government and the attacks being made from many members of our society. It is extremely outrageous that your administration has received so many complaints making it seem like you and your administration are the cause of so much of the political and socio-economical problems we currently face. It is clear that no matter whom had taken over from the previous administration would more likely than not be taking on some of the biggest challenges we have ever come across. And though there are times when I have a crisis of faith in our government (because it is hard to say who is right and who is wrong), I still feel very strongly that those in power at this moment in time really do have the best in mind for all of us living in the United States. Though it might not be worth much, I would like you and all of your staff to know that I have never been more willing to pledge my allegiance to the flag of the United States and will continue to stand by so long as you continue to point this country back in the right direction. In closing, Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are by far one of the best investments in our future. Thank you for your consideration. Mr.

As an American, nothing gives me more pride than our National Parks. I visit many of them each year.

Thank you for spending your family vacation at Acadia. It shows your Family's values. However, not much of the trip made the news. Gibbs has some work to do.

America's Great Outdoors is a major part of my life, and I emphasize that I have enjoyed our national parks often as part of that. National parks are critically important in connecting people, young and old, able-bodied and (like me) disabled, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. National parks belong to all of us, and provide some of America's finest outdoor learning places. These fantastic parks also serve as a basis for conservation, history, and civics education for millions of people each year. Please keep this up. Our parks have been badly underfunded for a long time, and need some support in keeping themselves in decent shape, though.

Our national parks are America's Great Outdoors.

Thank you for your consideration

Please remember the words of our greatest conservationist Teddy Roosevelt, "There can be no greater issue than that of conservation in this country."

National parks have played a very important role in my life. When I was a child my family visited Mt. Ranier, Yosemite, Yellowstone, and Glacier National Parks, and I so loved being in these glorious settings! My husband and I followed this pattern and spent much of our vacations taking our children to many different national parks, where we often camped and hiked. But this was not just for our children; this was where we adults wanted to spend our time. The parks offered us inspiration and renewal. So I would agree that These parks must be preserved. I was shocked to learn how much of national park land is being lost each year. These areas are a sacred trust. We must not lose any more of our wilderness! Instead, we should be preserving more areas as national parks. We should also provide enough funding for enough interpretive rangers in each park. They help these parks become outdoor classrooms. In addition, --Do more to use national parks to inspire and educate young people. For instance, the following program sounds like such a great idea: Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --THIS IS SO IMPORTANT AND CLOSE TO MY HEART: Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

National parks also provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. They were established to protect important wilderness areas from destructive ideas and destructive corporate executives. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative toward developing a new public-private partnership that will prepare our vitally-needed parks for their next century. We need a new national campaign, one that will capture individuals' imaginations and that will involve people in communities throughout the country in protecting our parks for the next generation. --Provide permanent, and mandatory, funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, as yet unspent for its intended purpose. This money should be spent as originally promised, exclusively to support parks, seashores, forests, and important waterways across the country, rather than just representing yet another neocon broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is for responsible Americans--Democrats and Republicans-- keep that promise. --Do more to use national parks in their role of inspiring and educating young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs such as Teacher to Ranger to Teacher (TRT) allows teachers from low-income school districts to spend the summer working as park rangers helping to develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --Build upon programs that already work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under- resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. A vastly overpopulated country drowning in pollutants emitted by supply-side economic madmen foisting off unneeded products onto brainwashed overconsuming victims is not capitalism, not Americanism and not even sane conduct. Study the loss of caribou alone; the lesson is clear. This is our most vital asset--people caring about perpetual upkeep of our living heritage, our air, our water and our wildlife. Real Americans, not pseudo-religious neocon reality bashers do in fact care very deeply about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Only the BLM and EPA and the corporate business lobby apparently hate reality so much they're willing to destroy it in the name of short-term stolen "profiteering". Please remember the importance of protecting state and especially our national parks and the many programs managed by the National Park Service; these are extremely central and vital programs that improve our communities, and generate jobs, income and tourism dollars as well as educating citizens about priorities in realism. National parks are good investments in our future--perhaps the best investment we have.

I had the privilege of growing up in a family that inspired my love of the outdoors. We spent many summers in our family's RV, camping and hiking. Much of that time was spent in our national parks. As I have become an adult, I still enjoy the outdoors and especially the national parks. I hope that my children will be able to have the same experiences in the national parks that I did. We need to do alot as a country to promote better stewardship of our public lands, keeping our parks in top shape and restoring a healthier environment that protects our national resources, especially improving air quality, preserving our waterways, and protecting endagered species. We need to encourage our children to get outside and learn to enjoy the beauty of the world around them , especially instilling in them the values of conserving these resources for future generations. The national parks can play an enormous role in this endeavor. I realize that this will all take a lot of money that is particularly scarce in the present economy. However, I believe this in a much needed investment in our public lands that will pay off in the long and short term.

Our National Parks are National Treasures.

Our national parks are important to the country in that they provide great oppotunities for exercise and for an appreciation of the natural world. Many of them are vital to the understanding of our history and culture.

The visits to the national parks that I and my family have had the privilege to make have been some of the most meaningful times in our lives. We highly value our national parks and consider them an essential element of our national heritage.

Finally, there is a ned to preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage.

Our National Parks are the greatest thing we have ever done for ourselves. Remember the Civilian Conservation Corps? We have lots of unemployed people and our parks need a lot of help. Please, lets do it right again.

My husband and I along with our son and Grandson plus occasionally Grandsons friends have camped in the Beautiful National Parks across America.My Husband is deceased now. I have Happy Memories in Tapes and Slides of those times.Don't allow the Enviroment to be altered.

One of the important area of the United States is the National Parks. National parks play a tremendous role in attracting people to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Your administration must take the following steps to preserve these important areas: --Take the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. --Use this opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

I am a lifelong hiker and camper, a more recent rock climber, and, more recently, became a sailor, too. I love all unblemished landscapes: mountains, lakes, rivers, seashores, caves, glaciers, you-name-it. I am an avid lover of all the National Parks I've visited, from the Badlands to the Hawaiian volcanoes. I am eager to see them preserved for future generations. Thank you for considering my comments, and I wish you and yours health and peace.

We have just completed a round-trip cross-country drive on which we visited many of our national parks and saw firsthand how very many people enjoy the the parks. Protection of and investment in our national park system is a wise and prudent investment indeed.

America's Great Outdoors, our national parks. play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. My first experience with National Parks was when I took my children on a cross-country trip when they were aged 4, 6 and 8. Our family lived in Massachusetts which has many outdoor sites that are beautiful and informative. However, our visit to Yellow Stone taught us all about the beautiful diversity of our country. Zion National Park and its dramatic beauty was breathtaking. The Grand Canyon was unbelievable. Each site we visited on this trip provided an educational experience that the children and their parents shared. There is nothing educationally and emotionally comparable. As I can testify, Americans care about the future of these incredible places, so they will be there for their children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

I was employed by the Dept. of Natural Resources with a wife and two small children and had more vacation time off than we had money so we bought a tent and camping supplies and visited National parks and Historic Sites throughout the country. When we were near a State Capitol, we always spent time in their museum. Our son, who was 8 yrs old when we started these travels, had lost his hearing at the age of 3. The on-site education he received each summer made him an outstanding student in public schools. We know all about the fine outdoor classrooms provided in our country. We never failed to attend Ranger programs at night, wherever we were. How blessed we are. He is now in CO., loves the nearness of those wonderful Nat'l Parks and has raised the next generation to be outdoors folks also. -Now nearing 80, we still tent camp, hike, and canoe. There are many new things to see and more to learn. We are all wildflower enthusiasts and birders. -We're counting on you. You and your family seem to appreciate the beauty and educational opportunities our National Parks offer.

Dear Mr. President Our National Parks are a miracle of politics and nature. Set aside through great efforts, maintained by passion and shared with joy with generations of families, both American and from abroad. PLEASE don't let these gems fade away! You can take the following steps: --Seize the opportunity that the upcoming Park Service centennial provides to renew America's commitment to our national parks, perhaps through a new public-private partnership. --We need a new national campaign that will involve young people, especially, in communities throughout the country in protecting our parks for their future. --Got extra billions? Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. --Let national parks to inspire and educate young people. . Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This wonderful program should be expanded! --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. For instance the Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. --Consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up.

In reviewing my life, every National Park that I have visited has left an indelible, good memory. National Parks need to be a big part of the equation for outdoor experience. All parks benefit the communities that they are located in. How about encouraging schools to offer summer learning programs in parks?

As a volunteer in Great Smoky Mountains NP and a visitor to many parks across the country, I strongly believe that I hope that your administration will take the following steps: --Heed the advice of the National Parks Second Century Commission, who spent more than a year developing a vision for how to protect the parks and connect Americans to them for the next century. Americans like me care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

America's National Parks are a special heritage and a wonderful asset. We must do all we can to ensure they are adequately funded and available--for all of us! I urge you to advocate the following steps: We all deeply care about the future of these incredible places, so they will be there for all of our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

Thank you for taking the time to consider these great outdoor palces for better protection and self sustainability.. i would like to see some of these open areas, such as state parks and national areas, that are having a difficult time having enough money to sustain themselves work closely with garden clubs and botanlcal gardens to preserve and protect these areas.. for example our non profit here in the Mississippi Delta would love the opportunity to work closely with a state park or national park and build a public gardens area that would benefit eveyone within the local and state community plus take the financial burden off the state or national budget... we have programs for everyone and would be self sustaining along with being able to provide fresh fruits and veggies to all the low income needy within the local and state community..if just given the chance we really can change the little corner of our world.. with your help we can..

I have worked with Dr. Michael J. Cohen of Project Nature Connect and groups of his students since 1994. We are Eco-psychologists who believe that it has been our disconnection from Nature during the past centuries that has led us to the particular environmental predicament we now find ourselves in. Our reconnection activities have led us to the great outdoors but also to our pets and household plants. Wherever there is the tiniest bit of Nature, there is a lesson for mankind in how Nature works. On a daily basis there is an opportunity for most to be outside, enjoying our Nature birthright. www.ecopsych.com Still, I wish everybody could have the ultimate adventure of being in a national park.

America's Great Outdoors, are inseperable with our national parks.

I grew up with forests, rivers and ocean. Now I go to the mountains as well as the ocean. Everyone depends on national parks to conserve and preserve the wonderful and wild places. We must not take these experiences away from our children and the generations to come.

My wife and I are now retired. By maintaining a modest lifestyle, we are now able to travel, once each year, to visit National Parks all across our country. Not only is there incredible beauty in these parks, but, by preserving them, they act as a forecaster for climate change. The disappearing glaciers in Glacier National Park are a prime example

Our country's parks are our heritage. They must be preserved and protected.

Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

The administration has the opportunity to provide jobs to Americans and to spruce up our parks. Instead of so many people on unemployment for extended periods, give them a job making paths, fixing buildings and observation platforms and any number of other things that need to be done for our National Parks. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

(cont.)

An important part of my childhood was traveling to national parks around the country, but especially in the West. We camped, hiked, swam in the rivers, and had a wonderful family time. Those are some of my fondest memories. As a mother, I shared the national parks with my children, and now they are enjoying them with my grandchildren. During my 30 years as an elementary school teacher, I used my experiences in the national parks to inspire my students in science, history, and other subjects. I was often appalled that their idea of a great family vacation was to visit Las Vegas or Disneyland. John Muir is one of my heroes. And it is in his spirit I implore you to do your utmost to preserve and expand these national treasures, which are truly an important facet of our American heritage.

My family for many years has considered time in our National Parks to be highlights of our time together in the busy life that we lead. They are "holy ground" and should take first priority in any planning in a great outdoors initiative. They teach us history, geography, biology, ecology, and provide so many other educational, inspirational and exciting adventures. In fact, both of my children have made care of the environment central in their lives: one is director of education at the Mendocino Woodlands (CA) and the other is the volunteer coordinator of a non-profit, Mendocino Land Trust. We need to inspire parents to lure their children away from TV screens and computers and get them outdoors especially to our national parks to experience and learn to care for creation.

Please do everything you can to preserve and Protect Our National Parks and Wilderness:

This summer our family had the chance to visit Yellowstone National Park to visit our daughter/sister, who is currently employed there. It was a truly wondrous trip and not one that we shall soon forget. We were so impressed with the beauty of the park and how well it was run by the National Park Service. This and our other national parks are evidence of the true natural heritage of our country. Thank you for taking the time to preserve these national treasures. We sincerely appreciate it.

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Our national parks are America's crown jewels. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

I am forwarding a canned letter to you, all of which I support. However, mainly, I just want you to know how extremely important vacations in national parks have been for our family- hands down our happiest memories. Recently, watching on television the histories of the parks, I was struck anew by the tremendous foresight Teddy Roosevelt and others showed in keeping these national treasures for all of us. I hope that you will follow in their footsteps. Also, just want you to know that our family prays for you every day and appreciate how overwhelming your job must be.

I visit more than one National Park per year, and they enable me to feel renewed to continue trying to do a good job at my job, with my family and friends, and they also give me an inner peace. The peace and solitude of the parks are of primary importance to me.

(cont.)

National Parks have been a vacation mainstay for my family for years. Please do what you can to preserve the National Parks for future generations.

When I think of America's Great Outdoors, I think of our national parks; many of which I have visited with my family. I personally have enjoyed hiking, birding, kayaking and photography in multiple national parks.

When I think of America's Great Outdoors, I think of our national parks and wilderness areas. Both play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. National parks and wilderness areas provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. --We need more parks for people to enjoy and to better protect diminishing wilderness. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up.

Outlaw all off-road vehicles and activities. Period. --Create programs to educate volunteers from the public (from any vocation, not just teachers) to preserve and maintain our parks. Public citizens have a SOVEREIGN birthright to act when and where necessary to protect and maintain public land private lands without unnecessary federal (or state) laws that prohibit them from such actions, as long as they are educated properly. Groups comprised of interested and caring citizens who could volunteer to assist in clearing areas that pose fire hazards should be formed, which would decrease the need for extra government funding for such projects, thereby diminishing the devastating effects of wildfires.

There is nothing more important than saving our natural heritage.

Before you get to the preordained message, I want to tell you why our National parks are so important to me. I am from NH and am very connected to the great outdoors. We have a national forest and I love hiking and camping in it whenever I get the time. I am 45 and still go camping (not RV'ing but real tent camping). It is the only thing that keeps me sane in these trying times. Our environment is so precious and we need to care and cherish it. So I support our national parks and forests and hope that you will too. We need comprehensive climate legislation and we need green jobs and alternative energy to get off the coal and oil once and for all. If we don't, we will not have beautiful forests and clean air and water. All of these actions must take place to ensure beautiful lakes, rivers, etc. for future generations. Please do what you campaigned to do and get our economy going and protect our environment by creating the Green Deal now!!!!!! Thank you, you may now read the preordained message if you want.

The national parks have been an important part of our lives over the years, as our children were growing up and now as our grandchildren are growing up. I hope they will always be available for folks like us to enjoy.

(cont.)

I will be in Yosemite backpacking in September appreciating that beautiful place and how it has been preserved for us and future generations forever as a National Park.

Pres. Obama, The outdoors connects us to ourselves, and what is best about ourselves. It helps to reduce stress in a stress filled world. The national forests clean our air and are homes for millions of creatures. An important saying is: As go the animals, so shall go mankind. We must preserve our world to preserve ourselves. The national parks are one of the very few areas left where land cannot be raped or pillaged. Please do all you can to promote wilderness, for in the preservation of wilderness lies the preservation of the world. Thanks for all you do!

IT WAS MY PRIVILEGE TO TOUR THE GARDEN OF THE GODS, THE BAD LANDS OF S. DAKOTA, YELLOWSTONE NAT. PARK AT THE AGE OF 8. IT WAS A WONDERFUL EXPERIENCE

I was unemployed for 13 months - being able to enjoy the outdoors, especially in Redwood National Forest, was one of the few things I could afford. It gave me a refuge from the trials and tribulations of job hunting in this terrible economy.

I personally love being surrounded by what nature has to offer and I do not want the destruction of our wildlife to occur. If Americans were more connected and surrounded by nature, then people would be more educated about nature and preserve and protect it as much as possible. Please create more national parks for the future before all wildlife disappears.

The awe inspiring experiences of the great outdoors in my youth are directly responsible for my spiritual growth. This has little to do with religion or church membership but it is an experience that deserves to be part of the life of every child, particularly those in urban areas.

(cont.)

Thank you, Mr. President, for emphasizing the need for our people to make use of "the great outdoors." I think of our national parks. National parks play a tremendous role in connecting people, young and old, to America's Great Outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. With America's finest outdoor classrooms National parks can serve as a basis for conservation, history, and civics education for millions of people each year. --> Listen to the advice of the National Parks Second Century Commission, a group who spent more than a year developing a vision for ways to protect the parks and connect Americans to them in the next century. --> Grasp the opportunity that the upcoming Park Service centennial provides to renew our national parks. I think you should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national program that will involve people throughout the country in protecting our parks for the next generation. --> Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, not yet spent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. --> Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they can bring back to the classroom. This program should be expanded. Could the Department of Education work with the Park Service to excite kids with hands-on learning experiences? I think so, don't you? --> Build on programs that work, like the Park Service's Rivers and Trails Conservation Assistance program. It has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working across the country. --> We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. --> Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We should have cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. Thank you, Mr. President, for considering my comments.

National parks are what makes vacations great, even legendary!

Discussion Question 1

(cont.)

Our Nat'l Parks are one of the best things about America. I agree with the below message. I vote!

Our national parks are America's best idea. I have taken my grandchildren to over 50 national parks including several in Alaska. We enjoy the safety, cleanliness, and the unspoiled terrain. The animals depend on us as well since their habitable areas are dwindling.

Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. --The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts among federal, state and local agencies and private landowners.

Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. The parks are sorely in need of upgrades, renovations, and repairs. People throughout the US need reliable permanent jobs. This is the time to add thousands of new jobs that will benefit the parks and the surrounding communities.

Mr. President, As evidenced by your trips to our wonderful National Parks, I know that you are of like mind as myself. They are treasures that need to be a big part of the America's Great Outdoors Initiative. My husband and I have driven across this great country to visit many of the Parks and hope to volunteer at a different park each year after we retire. I will leave the rest of this message as the NPCA has written it. You know what it says! If as a generation I can help with leaving anything behind in this country that would be of great value to all, it would be the National Parks. I so wish all people could get out into nature, hike and just breath in the air. It would go a long way to helping us all get along. Thank you for taking the time to read this. I think you are doing an outstanding job for our country even though I haven't totally agreed with everything you've done. But you are a breath of "intelligence" that we have needed for so long. Thank you for sacrificing this portion of your life for our country.

Have National Parks provide a summer camp program for urban youth so that they get a chance to experience the outdoors for maybe the first time. It could be a source of revenue for the Parks system. Mr.

(cont.)

National Parks are our country's greatest resource. They are part of our essential infrastructure that support your green efforts, education goals, and support the public health. Follow the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans two them in the next century. Use the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

To me, our National Parks are the jewels in our Lady Liberty's crown. They are the essence of our way of life and they should be treasured. From Hawaii to Florida, from Alaska to Maine our National Parks allow people to see wildlife, learn about history and culture and enjoy the outdoors. And as of now, it's still affordable. Please keep it that way. Place our parks as a priority. National parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

Discussion Question 1

(cont.)

Most of my access to America's Great Outdoors is via the national parks. The grandeur of the big ones, the serendipity of the smaller places -- they all renew my spirit and fill me with a sense of awe! It's amazing to see the diversity of people who make it to the parks. They come from all over the country as well as being a focal point for international visitors. Thanks to the foresight of previous administrations, they are accessible to all regardless of income. The national parks also inspire a responsibility to treat nature with respect, to foster the amazing gift of these parks for generations centuries to come. Nothing can ever replace this legacy!

It is extremely important that we do everything to preserve our national parks and plan for the future. Please know that my family, and extended family believe that in this ever crowded world, we NEED to keep wild places pristine and safe from any commercial development. Thank you for allowing concerned citizens to have a voice!

Our country's national parks are truly unique and wondrous. They are a tribute to the foresight of our ancestors and the continued good sense of the people of this country. They are one of the best examples of the virtues that characterize us as a nation. They set the example that many states have followed to save special lands and landmarks from uncontrolled development for current and future generations. They provide classrooms to teach the wonder and importance of pristine outdoors as well as lessons of history. Their continuing maintenance even expansion should be a high priority to all in a position to ensure their viability. Obviously, funding to support the parks can be an issue but sufficient monies should be available if current revenue streams like the Land and Water Conservation Fund are used as intended. Creative ways to provide further funding should be pursued, Consider a savings bond dedicated to environmental concerns like the national parks, for instance.

We need to preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage.

Please remember the joy that our national parks bring to so many!

I'M RATHER DUBIOUS ABOUT THE 'PUBLIC-PRIVATE' IDEA; AS IT'S TAKEN A LOT OF JUSTIFIED HEAT FROM RESPECTABLE PEOPLE/ORGS. - BUT IT WOULD BE A GREAT IDEA TO COMBINE THE "TRT" PROGRAM WITH SOME KIND OF A "NEW CCC"; A PROGRAM IN WHICH INNER CITY KIDS NOT ONLY LEARN ABOUT NATURE, ETC., BUT WOULD ALSO HAVE AN OPPORTUNITY TO MAKE A FEW BUCKS, WHICH THEY WOULD THEN PLOUGH BACK INTO THE ECONOMY (I'M NO "TEA PARTY" IDIOT!), DOING WHAT THE ORIGINAL CCC DID; CUTTING TRAILS, ESTABLISHING NEW CAMPSITES & LODGES/CABINS, RESTORING STREAMS/RIVERS/LAKES, AND ETC.. THIS WOULD BE A USE OF STIMULUS FUNDS THAT WOULD BE REPAID IN TRUMPS!

Having been a visitor at many, many of our National Parks I can honestly say that I write to you with first-hand knowledge of the great job the park employees do with such a small amount of money. Just think what they could do if they knew that funding would be available for their current needs as well as future needs.

And keep the funds collected at parks for that park and rebuild park lands, water and air.

Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage.

Sir, I would be most honored to except a position with the National Park Service to serve our Country, our Citizens and our most precious resource, our enviroment. I hope our administration take's the following steps: I would like to request that we more actively heed the advice of our Native Amercan Citizens.

Discussion Question 1

(cont.)

National parks play a tremendous role in connecting people to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. 1. Take the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. 2. Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. 3. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund and have remained unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. 4. Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded and the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. 5. Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. 6. We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. 7. Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009 as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times.

My wife and I just returned from visiting Glacier and Yellowstone National Parks. They are treasures which should be preserved so they can be enjoyed by all.

Discussion Question 1

(cont.)

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to better protect America's shared outdoors spaces, including parks, forests, (and especially all the wildlife refuges, wilderness, trails, wild and scenic rivers) and historic sites, monuments and especially forrests. National parks play a tremendous role in connecting people, young and old, to the outdoors. I think the wild life must be preserved AND PROTECTED FROM THE POLITICCS AND SO CALLED "DEPARTMENT OF INTERIOR". - The participation of ranchers and other private individuals should be MINIMIZED regarding the managing of federal lands: the federal government has absolute control of all federal lands and should NOT be influenced by anybody else."The Conservation of Wild Life" as mentioned throughout this discussson of National Parks, etc., has no meaning, since the Department of Interior, the so-called Protector of Wildlife endorses the killing of wolves in federal lands...

For our children and our children's children unto the 7th generation ... for the health and well-being of all who live on this one earth ... please seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, rangelands and forests. When they are gone, they are gone forever...we cannot allow this to happen. I urge

My two children, now adults, loved camping, swimming at Ginny Springs State Park, walks and canoeing at Myakka River State Park. When my daughter was born, my husband was a Park Ranger at Myakka River State Park here in Florida. We even moved to Idaho where he was also a Park Ranger at Heyburn State Park. Please preserve all State and Federal lands for my granddaughters and grandson to enjoy as their mom and Grammy Jay have. I know you are a man of great compassion for all animals and their habitats. Show the world that America is the forefront in keeping our environment as is for future generations. This could be your legacy.

America's national parks are our legacy and are part of what makes this country unique. How many people have the memory of visiting a park and experiencing nature at its finest? It is something that stays with one for a lifetime, and if our park system is improved and expanded, more will have the opportunity to let their minds wander, explore, learn, share, and create.

I am a loyal Democrat and hope that you continue to push Congress for what must be protected now because we will lose these lands and parks if we wait. Please consider hiring veterans and other unemployed people to assist the overly stretched park employees.

We either save our parks now for future generations to enjoy or we forever regret that we didn't.

Each and every one of these issues deserves your attention and support. We have spent many a trip visiting our national parks with our two children. Now that they are adults (who vote) they too have gone back on their own and with friends.

Discussion Question 1

Written & Online Comments

(cont.)

Mr. President, I voted for you because I felt strongly that you could see through the complicity that runs rampant in Washington politics. The big-money-backed-projects win over issues that are important to 'We The People'. I am not naive to the tight-rope you must walk and the obstacles that are thrown in your path. This is why I feel that your advising team and Department heads' loyalties to what you stand for must be validated regularly. Our National Parks and the wildlife in this land have no lobbyists other than 'We The People' and what is important to us matters less and less with each passing year. These hallowed places must be strongly protected from their enemies. I worry that your head of the Department of the Interior and the US Department of Agriculture and Wildlife are too much influenced by "the good old boys" aspect of the complicity problem in their realm of control. Please assure yourself that your team is true to who you serve: 'We The People'. I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Our National Parks are indeed special and allow all visitors to enjoy the outdoors like no where else and, also, to enable wild animals to live peacefully. Our Parks are most important for the future of our country and life itself!!!!

Much of the writing that follows is not in my own words. However, it does very well express my strong sentiments about the importance of protecting and enlarging our National Parks. The earth is our most special treasure and as time goes on more and more people are going to recognize the great value of preserving as much natural habitat and environment as absolutely possible. My family made the effort to put our farm into a conservation easement. I believe it is the most important gift we could leave for future generations. You are in a position to lead the way for similar protection for much land nationally. I encourage you to do so for all of the following reasons. Thank-you.

Heed the advice of the National Parks Second Century Commission --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. --Do more to use national parks to inspire and educate young people. Programs like Teacher to Ranger to Teacher (TRT) should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --Build on programs that work. There's no need to reinvent the wheel. . --We need more parks for people to enjoy. Protect remaining natural areas before we use them all up. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

We would like the next generation to enjoy America's great outdoors too. That's why we are asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. One way is to end the incursion by utility companies' power towers. Building-integrated solar and wind energy on every rooftop would make these odious Power Links unnecessary. And stop the dump from Los Angeles from destroying Joshua Tree and the desert aquifer. The desert is not a dump. Keep it unblighted by bird killing, fire-hazard ineffeicient wind farms and Power Links. When we think of America's Great Outdoors, Peace and Quiet, we think of our national parks. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. The growing danger of mass destruction happening in the Gulf of Mexico reminds us how important it is to keep that promise. Keep fouling fossil fuels out of our parks, and collect the understory for fire safety and biofuels! No Offshore drilling, - specially deepwater drilling that taps the Abiotic Oil that regulates the Tectonic Plates of the planet, and threatening mass extinction! --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. NO fences on the border with Mexico to protect endangered American jaguar, and other migratory animals and birds. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. It's worth it. Thank you for considering our comments.

I want all generations to enjoy America's great outdoors. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

(cont.)

I don't know if you appreciate the National Parks and natural commons in our nation as much as we do, but our Parks are our national pride. No other country has parks set up the way we do. Lands, commons, that are more protected than other exploited lands and laws help to keep them this way. No other countries leaders were so far sighted and gifted with understanding the value of natureal lands as our early leaders were. Our Parks need money and work. The facilities, infrastructure and ecological management programs need much. And in areas where we live, nearby a National Park, the local jobforce is crying out for work. Funding to put many back to work could rebuild the sagging part of our parks, revieve the economy in these lacking areas and invest in the future. Disregard the naysayers and give us billions for these purposes.

Our national parks really are our best idea. Before the Burns series, I heard this from a German friend. My husband and go to national parks every year. They are our most beautiful and historic places so they are the most interesting. We always meet and talk with Europeans, who visit the national parks specifically as their USA vacation. What an economic plus! We love the ranger programs and seeing junior rangers hiking around to complete their booklets.

As a child I grew up in the Sleeping Bear Dunes National Lakeshore. It shaped my life and cultivated my deep love of nature. As a result I got a degree in Environmental Studies and have been doing things to improve our eco system. Without National Parks none of this would have happened. Think of the countless lives that are touched by standing on God's Land, uninterrupted by mankind, including the wilderness that is found in our National Parks.

I am a frequent visitor to the many National Parks, so is my family. My children love to visit and partake in activities they offer, wild life viewing and protection, including water born creatures. The only way to protect this is for you to help in clean water, conservation of our parks and animals. Expecially the endangered species such as the Gray Wolf, Grizzley Bear. Stop the killing of Wolves in Alaska by airplane. Let's save all the animals and parks for our children and grandchildren.

Discussion Question 1

Written & Online Comments

(cont.)

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National and state parks are good investments in our future. In SE Tennessee, we need our natural historic landscape and roadways preserved in the area around The Red Clay State Historic park/area. We do not need off ramps of the interstate placed in nearby areas, or other roads, train tracks, franchises, developments, strip malls, or other commercialization businesses, etc., placed in or around these areas. This area also had significant civil war and other war history happened, as well as being part of where DeSoto's route is. Sacred areas should be respected. The mega substation in SW Bradley Co Tn is very close to the sacred council grounds of Red Clay and should be removed, (by a conservation corps) and the land it is on, used instead as a natural conservation energy farm for biodiesel and /or a wildlife or bird refuge or sanctuary more compatible for this area. Formal housing, subdivisions, etc., developments should have to have many fewer homes and "blend in" respective to the environment. Many that still live here on family farms, etc., have Cherokee Indian ancestry (nontribal) or are descendents of the first European settlers that migrated into this area. We need our roads and railroads preserved also as they were used in the civil war, and in our Native American history also, such as Tunnel Hill RD, Blue Springs RD, Apison, etc. We need many more Christian Democrat, naturalist, farming and natural/history tourism oriented elected and appointed officials in all areas on all levels possible to help the natural/Native tourism businesses of our area. We need help in our congressional 3rd district to prevent being "drawn in" to voting for a nonnaturalist conservative and to have a good and fair chance to vote in a Democrat in this next and other elections. We also need at least one of our Senators to always be a naturalist Democrat to help preserve our Tennessee history.

The times I've spent in our National Parks were (and will be) all the more precious to me, because I'm confined to a wheelchair and access to beauty and nature is not something I can have as easily as my able bodied neighbors. Many of our parks have accessible restrooms, a few campsites and disabled parking in the lots. Some also have a few trails leading away from the tourist shops and visitor center areas. BUT WITH AN EVER INCREASING POPULATION OF PERSONS W/ SEVERE PHYSICAL DISABILITIES IT IS SO IMPORTANT TO 1) HIRE AND DEPEND ON DISABLED ACCESS CONSULTANTS TO WORK WITH AND EDUCATE CONTRACTORS 2) CREATE MORE TRAILS THAT LET SENIORS AND OTHERS W/ PROBLEMS WALKING, REALLY GET INSIDE THE PARKS AND 3) HAVE A RANGER ON STAFF WHO IS A PERSON W/ A DISABILITY. As a long time access consultant and designer, I can tell you that much of the access I encounter in public parks and bldgs. has not been designed or tried out by someone who actually needs the modification. But our parks are so precious and healing for all Americans and

In my 85 years I've been blessed to visit many of our national parks! They are a credit to our nation and must be financed and maintained! We must think of the future!

I was born in Brooklyn, N.Y. and every Sunday my family went to the park and Botanical gardens. We loved being in the park and away from all the traffic and noise of the city. I want the next generation to enjoy America's great outdoors as much as I did. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

My most memorable vacations have been visiting national parks. They are so different from the environment I live in, they gave me excitement, joy, peace and a stronger spiritual connection, which gave me hope! Without them I would have nothing to strive to see or care to vacation to. They make me feel connected to our country, the earth, and the heavens. Please don't take away our connections to these important basics! Even my children feel more alive there.

I want my children to enjoy America's great outdoors. That's why I am asking you to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. I think of our --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in protecting our parks for the next generation. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. Thank you for considering my comments

Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise.

I love and enjoy our country's great outdoors. I want my kids to have this treasure so they can experience it with their kids ! I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

"To cherish what remains of the earth and to foster its renewal is our only legitimate hope for survival." ___Wendell Berry

There should be no question regarding the future protection of what is left of natural environments and habitats in this country, there is so little left of anything wild. Of course it must be protected and expanded.

The parks are part of our culture, as millions of people make it a point to vacation in the parks every year. That's what we did when I was growing up. I can't imagine not having these places, but I heard a park nearby is closing due to lack of funding. Please don't allow our parks to shrink and close. We need to protect our lands and wildlife, and nurture them, and give people places they can go that is outside and apart from the concrete jungles we know so well. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. --Do more to use national parks to inspire and educate young people. --Build on programs that work. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. --We need more parks for people to enjoy. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up.

(cont.)

When I raised my children, we took many cross-country trips to the various National Parks. Due to this experience my children, who are all adults, have a true love and respect for nature. They are all driven to protect the environment in their daily lives through conservation, recycling, and composting. My grandson is now learning at an early age to respect nature as well. That is why it is so important to preserve the National Parks for future generations as President Theodore Roosevelt intended.

President Obama remember our national parks . My family and I have been traveling to the parks and I am always overwhelmed by the beauty and spiritual presence in the parks. We are so blessed to have these parks to remind us that there is so much more to life than then excessive material items we seem to think we need. We have so much hatred and violence now our parks can give us hope for peace in the future.

I enjoyed our National Parks as a little girl in the 1940s, and now I want my great grandchildren and their children to continue to enjoy them. They are enjoyable and accessible to millions, unlike overseas trips and fancy resorts. Thank you for all you have done and are trying to accomplish, and for considering my comments.

IN NATURE IS THE PRESERVATION OF THE WORLD...this is a quote by a famous outdoor photographer...Ansel Adams. After 9/11 one so many sought out nature for comfort and healing. If we save what is left of the wild places, we save ourselves.

I want all people to enjoy America's great outdoors. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests. National parks play a tremendous role in connecting people to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Additionally, visitors from other countries come here and admire our wonderful ability to protect what we have to share it with all who would appreciate it. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and green ways. We already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country.

LOOK WHAT JIMMY CARTER DID - HE DOUBLED THE NATIONAL PARKS ACREAGE WE NEED SOME VERY LARGE GULF MARINE SANCTUARIES OFF-LIMITS TO DRILLING, AND SOME MORE MOUNTAINS OFF LIMITS TO MOUNTAIN TOP MINING. FEEDING PERCEIVED SHORT TERM GREED AND NEED IS NOT SMART POLICY WE ALSO NEED THESE TO ESTABLISH HEALTHY BASELINE AREAS REQUIRED TO FAIRLY EVALUATE AND PUT A COST AND TAX ON THE HUGE NEGATIVE IMPACTS OF DRILLING, COASTAL DEGRADATION, AND MISSISSIPPI RUNOFF

(cont.)

Don't be afraid to raise the park fees to allow for the protection...many can afford much more to see and use these treasures and discounts can be available for those who can not afford them. Even seniors can afford more and should not always be getting a lower price because of age. Some seniors are the wealthiest in the nation. I am a senior on a fixed pension although I love the discount I can afford what I want by choosing what is most important to me.

We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before they are destroyed or polluted beyond saving. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food they need and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

I want to thank you, Mr. President, for contacting American Back Country Horsemen in your efforts to gather information regarding care and conservation of America's public lands. That organization has quietly and voluntarily made enormous contributions to the maintenance of public lands. It is deeply appreciative of your acknowledging them and of your including them in your collaborations.

It's a "no-brainer" to save the outdoors... save parts of the planet from development which ruins the beauty and wonder of nature. Everyone needs the peace that being in the great outdoors offers.

Heed the advice of the National Parks Second Century Commission -- Renew our national parks and establish new parks and refuges that will preserve land for future generations. --Ensure that private companies and interests do not get on the land and exploit it or its natural resources for monetary gain. There is no point of having a wilderness area that is open to logging or a preserve that allows hunting. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Use the money in the Land and Water Conservation Fund; this money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. --Do more to use national parks to inspire and educate young people. If they are shown the importance of conservation, they will be more likely to care about conservation as adults. --Build on programs that work. If you'd just fund the programs that exist think of the changes you can make. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife don't understand boundaries on a map.

We just returned from a week in RMNP. It was great, but the crowds were greater than even--more visitors would decrease the pleasure of visitors, and put serious stress on areas and facilities. There are other wild areas in the country which could be carefully prepared to make great new national parks. Please support efforts to find and develop these new areas.

We want the next generation to enjoy America's great outdoors too. That's why we are asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. When Iwe think of America's Great Outdoors, we think of our national parks. Thank you for considering our comments.

The wildlife, beautiful rivers and waterfalls, the stately towering trees have no lobbyists in Washington to pay for their continued protection; to keep snowmobiles out of these pristine lands; to keep up our many national parks. Please ensure that we safeguard what previous generations have enjoyed to that future generations will not have to read about how these great parks once looked and thrived.

I have a daughter who has been a National Parker Ranger and a Interpretative Ranger for the Fish & Wildlife Service for several years. It is through her that I have learned the wonders of our National Parks!. What wonderful treasures our country has!! I can only hope that our country realizes the importance of what we have and will do everything we can to preserve what has taken nature millions of years to create. Thank you for considering my comments,

As a lover of the outdoors, I want the next generation to enjoy the splendor of America's great places, because our landscapes inspire the human soul, and to face the challenges that lie ahead our children and grandchildren will need that inspiration. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are essential investments in our future.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

WILDERNESS IS CRITICAL FOR OUR HEALTH - FOR CLEAN AIR AND WATER. TREES HELP WITH OXYGEN AND LAND HELPS WITH WATER. IT IS NOT THE MATTER OF JUST "being pretty" it is the *** critical *** matter of SURVIVAL. FOR YOU AND ME EQUALLY. YOU ARE SUBJECT TO IT TOO. AND YOUR CHILDREN. WHERE WILL THEY LIVE? if the Earth gets messed up, where will your children live? I want the next generationS to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Since childhood I have loved the outdoors, and have had many, many excursions into the woods, to parks and waters with my family and friends. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. I've enjoyed many of them, and hope they will still be available and in good condition for the next generations.. . --Pay attention to the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. -The coming Parks Centennial will provide a fine opportunity to renew the Parks. Your administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

National parks play a tremendous role in our American identity, connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

Based on the study from the National Parks Conservation Association we need your help NOW to protect our national parks. People from all over the world come to America to visit our nation's natural treasures. And

Our National Parks define us in a way that nothing else does.
forget the significance of these symbols to what America stands for.

Never must we

Forty-five years ago my parents drove me and my siblings across the country, from California to New York, stopping along the way at various National Parks and other historical sites. It was during this trip that I first became intrigued at all the wonderful natural areas in the U.S. Many family vacations followed in later years, visting other National Parks, like Bryce, Zion, and Yosemite. One year we met relatives from Chicago "in the middle" at the Grand Tetons. I've made other trips to National Parks with Girl Scout groups and the Sierra Club. And some of those sites include my own family's history, such as the singing of the Declaration of Independence by my ancestor

--Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. My sibling was a park ranger, so I know how much people can learn from the interaction of human guides, as opposed to pre-taped recordings. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. Invest in a model that is working in communities across the country.

My 2 cents: I am a 60 year old new grandmother. I drive across this amazing country every few years to see my children and grandchildren. Each trip I am more amazed with the national park system and what it offers and teaches us. It is a true insight to the great leader who started it and those after him who maintain the importance of these parks. Please do not let pressures and greed eat away at any of any of these treasured lands and support them in any way you can. You have a huge set of resources with the boomers. Take advantage of our love of these parks and use us to help maintain, manage and manifest the importance of them for future generations. Thank you!

I realize that you have many issues competing for your support. National Parks are something for all Americans to enjoy, yet they are always coming up short when people look for causes to support. Please stop all your divisive activities and support something that all Americans can support. Just a thought, but what about authorizing drilling in ARNWR (which would be controversial) and using funds generate on the leases solely for support of our National Parks(in addition to, not in lieu of, current funding)

As someone who spend most of his time in the outdoors, I spend my vacations primarily in the National Parks and forests, so

America must lead the global biodiversity conservation effort. Before it is too late, a bold, visionary expansion and completion of the biodiversity conservation system here in America is needed. This is not a "special interest", but is advocated by leading scientists in the fields, such as, Edward O. Wilson (In his recent book, *The Future of Life*). Long-term biodiversity conservation is the goal. Preserving viable, diverse ecosystems of the Earth obviously benefits all for the long-term. Three or four new National Parks should be declared in most states...save the last greatest places before it is too late! The West, the Southwest, the Prairies, Coasts, Great Lakes, Appalachians, Southern Swamps & Tropical Forests and the Northeast Forest all need our attention. Examples include: the Maine woods between Allagash Waterway and the Quebec border, several new park in the Upper Peninsula of Michigan (not to mention Wisconsin & Minnesota), expansion of Appalachian Mountain Parks, Sabine Swamp/River in Texas-Louisiana, Oregon's Willowa-Eagle Cap-Hell's Canyon & the Siskiyou-Klamath, as well as the Cascade Crest of Oregon, and places in the Southwest like the Gila Wilderness as well as the best places in Arizona and Texas. The effort must be visionary and comprehensive in order to preserve the greatest biodiversity for the great time. The established national parks, forests, wildlife refuges, grasslands, coastal freshwater and marine reserves are gifts from the foresight of the previous generations. We now must have even a greater foresight and pass our gifts to the future generations. This is a vital responsibility. Sustain America's spirit, ties to the land and history. Please work on the completion of the Biodiversity Conservation System here in America, be a role model for global efforts and assist global efforts. Thanks so much!

As a fan of the National Parks. We should keep them as is. There are no room for Casino and Super Stores. I want you to help keep the National Parks as a place that All can go to Enjoy.

We need to take care of our outdoor environment with great care. Perhaps, now with the withdrawal of our troops from warring countries, we can use that money to help ourselves. Our infrastructure has suffered much for over 12 years now and we need to take care of what we have with care. If we could spend billions, to kill people, maybe now we can use that money to maintain our environment safe. We have neglected this issue long enough!!!

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Most of us refer to the "simpler times" where we could walk outside, keep our doors unlocked and enjoy our "freedoms" from our own backyards without the tainted worries of pollution, man-made dangers and disrespect. Over the years, our country has struggled intensely to keep the beauty alive within this great country and to watch it go south on a daily basis leaves us with no wonder why our attitudes go south as well. Remembering who gave us these things is crucial as well. God is kind and He provides. We also need industry of educational support as we piece back together the beauty we have destroyed, save the ecosystems and convince the world around us to do the same. Realizing that our needs can be met in other creative ways (food, shelter, clothing) other than robbing our earth's non-renewables or taking simply because we are too lazy to come up with better solutions is robbing our entire world and its heart and existence. Please, President Obama and First Lady Obama, we reach out to you to take care of your own first so that we may build a strong community against all odds. Additionally,

Please leave a lasting legacy for future generations!!!

I love my State and Federal Parks - they are wonderful places for adventure and health... Please give them the funds they need to endure...

This especially important. Everyone believes there project should have top priority but we only have one earth,

I am a former USDA US Forest Service employee. Under the Bush Administration the timber management personnel had free reign. They were not cognizant of the reality that all of the life forms are interconnected in our parks. Their mission was to process as many board feet as possible. As a nation. We must protect the integrity of our parklands and wildlife ecosystems. Otherwise our children will not know and see what these precious places contain. I particularly member one beautiful area that, historically, was an old ranch in the Sierra Nevada Mountains, My job was to find and protect sensitive plant and animal species. I marked areas where the plants were. However, the loggers removed the trees surrounding those plants, totally changing the area for years to come. I was appalled that this exquisite area, which originally looked like a scene out off Bonanza, was so decimated. - -Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite children with hands-on learning experiences.

I personally visit a National Park on vacation each year. This can be a outdoor park, or a historic site, The NPS helps reinforce what children learn in school when they visit - what a terrific way to better educate our children than a fist hand look at history!!! If you take this away - you are hurting our future and their future. Think about what yu are doing!!!

As a farm owner, human being and an American, I want future generations to enjoy America's great outdoors too. That's why I am asking you to take this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. When I think of America's Great Outdoors, I think of my husband and my farm, the New River Trail, which adjoins our property, and our national parks. Without national parks, many Americans would not have an opportunity to venture the outdoors and the many advantages it offers. I implore you to not push this aside and consider the importance of protecting our country's health and well being, within the national parks, farms, trails, wildlife refuges, historic sites, and forests.

The children are this planets future. Do not let them down. I have three myself.

Please consider your children and the nation's children and do what you can to save and protect our outdoor spaces. I sincerely hope all of our children have an opporunity to experiance and enjoy the great outdoors of our country.

Please save our precious resources!

The economy is on everyone's mind these days, what better way to help unemployment than to do some FDR style program employing people to repair, cleanup and improve facilities in America's beautiful National Parks. As someone who's been to many, many of our National Parks, I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity and to find new ways to support conservation of our farms, ranchlands and forests. It is important to me that you preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. --Heed the advice of the National Parks Second Century Commission. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

I hope you will create, expand, and better protect America's shared outdoor spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers, and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands, and forests. I hope your administration will take the following steps: --Follow the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century.

Your daughters have the right to enjoy a preserved and protected system of national parks, wildlife refuges and wetlands to explore and enjoy as they mature, and they have the right to trust and believe those national treasures will exist when they have children.

Please ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. Please fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Please preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. Please strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives.

We want the next generation to enjoy America's great outdoors too. That's why we are asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. When we think of America's Great Outdoors, we think of our national parks. Thank you for considering our comments.

America is great because we have amazing natural resources, I believe that preserving and enhancing those resources is our number one longterm national security issue is we hope to create a sustainable future and provide a decent quality of life for all Americans. In an increasingly urbanized and computerized world, we need places where we can retreat to rejuvenate our minds and souls; rich farm land for sustaining our citizens of the future; forests to clean our air and buffer the affects of climate change, oceans and waterways to supply us clean drinking water, recreation and food. In addition, our natural resources supply ecological services such as erosion and flood control, pollution filtration, and carbon sinks that are worth many billions of dollars each year. I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. My son's last year hikes the John Muir trail in California and my oldest son is now working in WA Youth Conservation Corp and is serving two years to help preserve and restore our natural land. Natural areas and National Parks are personal and national priorities for our family and are one of my families greatest joys. The National Parks are national treasures like no other and they have provided my family with some of its greatest pleasures and learning experiences over the years. --Do more to use national parks to inspire and educate young people. Increase service opportunities such as Americorps and conservation corps to give our youth job opportunities and build ownership of the parks. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. Americans, even those who rarely visit, care about the future of these incredible places, they are part of our national heritage and must be there for our children and grandchildren to enjoy. The importance of protecting national parks and the many programs managed by the National Park Service cannot be overstated. National parks are good investments in our future and are the heart and soul of our nation.

We need to take action now so the next generation can enjoy America's great outdoors. I'm asking you to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

There are so many reasons to protect our parks and natural wonders in this beautiful country. One big reason is that

Our beautiful natural areas must be protected from over development and other irresponsible uses that will destroy them forever.

(cont.)

I listen to the news while driving to work and I think, well here I am going to earn tax money for a system that I have no control over. Just a cog in the wheel. Well, you know what? I have bushes for birds in my backyard, I have flowers for the butterflies, I'm teaching my granddaughter to love the outdoors, I serve on the city parks commission, I'm trying to get together a group to start a community garden, I work at the gardens at the fairground so others can enjoy their beauty, I pick up trash along the road. I do this. An individual. It seems to me that somebody in a position of power should do a little something for the environment too. So give the parks a fair shake. Because there's only one world and it's all got to end somewhere.

We really must conserve our national parks and protect the wildlife and natural beauty that is there. Many children growing up today live in a city environment which doesn't make it easy for them to enjoy this beautiful land. It is our responsibility to be just and good stewards of our National Parks. Our Ecco Systems depend on us.

I am asking you to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

I want the next generation, my two daughters and two grandsons, to enjoy America's great outdoors too. That's why I am asking you to take this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. --Heed the advice of the National Parks Second Century Commission. --Take the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced.

(cont.)

All our future generations should enjoy America's great outdoors . So please create, expand and better protect America's shared outdoors spaces; parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers, historic sites and monuments, and find new ways to support conservation of our farms, rangelands and forests. National parks connect people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people every year. --Follow the advice of the National Parks Second Century Commission, a group of well respected individuals who spent over a year developing a plan to protect the parks and connect Americans to them in the next century. The Park Service centennial provides an ideal opportunity to renew our national parks. The administration should apply the lessons learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. Instead of breaking another Federal promise this money should be spent to support parks, seashores, forests, and waterways across the country. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise.

I had the wonderful opportunity in the past 2 months to visit and experience four western National Parks far from my home in Maine. The beauty of each Park was so uplifting and intense as to take my breath away. Every few minutes I would think how grateful I was that these lands had been preserved for all Americans and visitors from othe countries to see and enjoy for all time. The preservation and enhancement of these wonderful places takes thoughtfulness and effort, both of which I urge you to actively support.

We need to protect the wildlife that inhabitat these areas

When we think of America's Great Outdoors, we think of our national parks.as do our forests, wildlife refuges, wild and scenic rivers and historic sites and monuments. We want the next generation to enjoy America's great outdoors too. We strongly feel that Thank you for considering our comments.

The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Please initiate a population control, prevention plan including free clinics, free condoms, free tubal ligations/vasectomies to those who qualify financially, to reduce burgeoning teen pregnancies, impoverished populations, and unwanted overpopulation incringing on water, land, food, and housing, and public dependency resources.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

Nature and outdoor spaces have been special to me all my 70 years. Some of my most precious memories and moments of growth and insight have been nestled in Nature's arms. I want my grandchildren and the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. When I think of America's Great Outdoors, one of items that certainly comes to mind are our national parks. Our family's few vacations were centered around our National Parks. They provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. (Our communities need some common ground issues to come back together on in this pathetically divisive era.)

I suggest that you read the bestseller, THEODORE ROOSEVELT- WILDERNESS WARRIOR, to find a mentor for such action. His political party was not happy, but he had the courage to stand by his convictions and knowledge. He refused to give in and to give up!

The goals laid out by "America's Great Outdoors Initiative are exciting and very timely. There are more threats than ever to our precious public lands and we have an opportunity to fund management and protect these lands for all generations into perpetuity. With our busy lifestyles and congested urban living situations, it is important to have opportunities for people to visit the outdoors for mental and physical health, and to simply reconnect with the natural world and wildlife we share this world with. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In tough economic times, Americans visit our national parks in increasing numbers. To that end, I would like to suggest that --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. We need a national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, and remains unspent. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. --Do more to use national parks to inspire and educate young people. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. --We need more parks for people to enjoy. Please evaluate and consider new sites to bring into the system and protect remaining natural areas before we use them all up. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In tough economic times, Americans visit our national parks in increasing numbers.

I was lucky to have parents who took me to many of our national parks while I was growing up. Our parks are treasures which need to be protected. Also, it is important that children and people of all ages are able to enjoy our parks to help foster an appreciation of unspoiled nature, history, and culture.

(cont.)

I grew up with the loveliest and best managed National Parks in the world. My parents took me through the redwoods in California and I saw Old Faithful in Yellowstone National Park, among many throughout the nation. I learned about different trees, how to plant trees in a park as a Campfire girl, learned about water conservation and pollution in a part as a college student etc. I am concerned about the lack of funding that is being considered for our National Park system. I want my granddaughters and their grandchildren to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. Our shared outdoor spaces are getting eaten up by big business and money mongers. If we do not protect the planet, we won't have one upon which to live.

I had an opportunity as a child and a young adult to visit many of our national parks and other wild areas, and I think it is important for others to have the same opportunity. It is perhaps the only way to build a foundation for appreciation of and respect for nature. Further, it is the most effective way of understanding and perpetuating the sense of optimism and limitless possibility that inspired our country's founders. Also, and particularly important to me, is the protection of animal habitats, whether they be in parks or in meadows and wooded areas dotting our towns. So I am asking you to create, expand, and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers, and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands, and forests.

Please save and protect our parks! Your administration needs to please take the following steps:

I am a lucky individual as I have seen a number of our wonderful national parks, Glacier, Yellowstone, Yosemite, Everglades in the past. Wonderful memories of those visits. That is why

Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. -- Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. --Build on programs that work. --We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests. It is America's best and cheapest investment. Please help preserve it for future generations. My husband and I live 10 miles from Mammoth Cave National Park and spend many wonderful hours touring, and just driving in the beauty of the park. We feel very blessed to have such a beautiful National Park in our backyard. When friends come to visit the first place we take them is Mammoth Cave. They always tell us how lucky we are to have such a beautiful park so near us. We know! My husband and I have visited many of our country's National Parks and Monuments. Help us to preserve our Mammoth Cave and all the other beautiful National Parks and Historic Sites we have in our wonderful country. PLEASE

Along with the consensus opinion that follows please put the issue of restricting or prohibiting roads in wilderness areas at the top of your priorities concerning environmental protection. Thank you. I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

It is crucial to protect our national parks and wilderness areas from development, especially by oil and coal companies, and from lumber industries that employ clear-cutting. I want the future generations to enjoy America's great outdoors, too. That's why I am asking you to seize this opportunity to create, expand, and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands, and forests. When I think of America's Great Outdoors, I think of our national parks and the wildlife that lives there. --Heed the advice of the National Parks Second Century Commission, a group of well-respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks and preserve them for future generations. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the future. Leasing to gas and oil companies needs to be cut back as newer, cleaner energy sources are developed. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries, without fear of being hunted and killed. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

I have visited several of Americas National Parks and hope that my grandchildren and great grandchildren will have the same opportunity. Please do what you can to protect these national treasures.

I have always traveled abroad for work and thus took most of my vacations outside the US - until about 5 years ago. In the last two years we have been visiting all of our National Parks, and it truly is, as Ken Burns noted, "America's Best Idea" and an incredible treasure to preserve.

Please fund our National Parks, which are the jewels of our country.

Instead of doling out taxpayers money to those who are not working or those who are capable of working but won't and you know fullwell who they are, why not reinstate the tried and true organization the CIVILIAN CONSERVATION CORPS aka CCC used so successfully in the 30's. At least this way the taxpayers can get a return for their money. Our national parks and infrastructures certainly need the help.

According to a recent study commissioned by the National Parks Conservation Association, every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times.

I recently visited Glacier and Yellowstone National Parks, and they are indeed national treasures to protect for future generations. We need to adequately fund for maintenance, staffing and programs. --Do more to use national parks to inspire and educate young people. On a recent visit to Yellowstone National Park, I joined a fun, interesting "show and tell" by the ranger for kids and parents to learn about habitat and animals. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

I am a mother of 3, a grand-mother of 6 and a great-grand-mother of 8. All of my "children" have had the wonderful experience of enjoying the great outdoors here in America.

I am excited about the America's Great Outdoors initiative and I absolutely want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. As brilliantly shown in Ken Burn's documentary series, national parks are such an important part of our country. My wife and I love learning about the history of this land and we have spent the past few years traveling to as many National Park units as possible. National historic sites and parks serve as a basis for conservation, history, and civics education for millions of people each year. --Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. The obesity epidemic continues to threaten future generations and we must strive to change our sedentary lifestyles. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) should be expanded. This great program allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. We need to further increase awareness about the essential role played by these protected lands. At the same time, we must also work to increase the parks currently in the National Park Service. I'm specifically thinking about the threat to auction land surrounding Grand Teton National Park due to deadlock between the state of Wyoming and the Department of the Interior.

We have no time to waste. We are the caretakers of this planet.

(cont.)

There is an old Amish saying, "We grow to soon old and too late smart". A very appropriate saying for our greedy 2 legged world, the only ones who think they know better and are better than everyone else. Unfortunately as you get older you learn what IS MORE IMPORTANT and it is NOT THE LIFE OF LUXURY but a simpler life one all should learn before it is too late. Please help with that by preserving not destroying.

There is nothing else on this planet that gives me more hope and joy than watching nature's beauty. Whether it's in the wonder that a child experiences or my own experience, I find great pleasure and peace as I experience the outdoors. I am all too often saddened by how I see our landscape changing. I have been to places in this world where the land was not a priority on the agenda of governments and the consequences are too many to count. The destruction and disease that is a result of not thinking about how our planet survives and functions WILL affect us. My memories of trips to the National Parks are precious and I don't ever want to say "I visited this area of the country when it was pristine and beautiful" while looking out at a marred or developed landscape. It would crush me.

I want the next seven (or more) generations to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next seven generations. There is an enormous amount of deferred maintenance to address as well as additional protective acquisitions needed to preserve the integrity of our parks and wild spaces. --We need a serious effort to finally protect wolves and other endangered species throughout our park system and beyond the parks' borders.

As the pressures of modern life continually increase, so does the need to unplug and reconnect with Nature. I want the next generation to realize that they are an integral part of this planet, not just a stop on the internet. I want Americans to be able to climb this country's incredible mountains, marvel at its waterfalls, wander through its canyons and forests, and enjoy the solitude of wilderness. Humans are but one small portion of life on this planet, but we have the power to protect or destroy the other lifeforms. Which will we do? I ask you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. Our national parks are truly the gems in our country's crown. The United States is unique in preserving so much of our beautiful wilderness in this way.

I want the my grandchildren to enjoy America's great outdoors too. That's why I am asking you to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. When I think of America's Great Outdoors, like you I think of our national parks. I know you vacationed briefly this summer in Acadia. National parks play a tremendous role in connecting people, young and old to the outdoors. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. --Do more to use national parks to inspire and educate young people. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Thank you for caring.

The legacy you leave will be remembered forever. Will it be a legacy of destruction of the wild places or one of thankfulness for helping the wild places?

I am lucky. I get to enjoy GTNP anytime I want, but I want YOUR CHILDREN to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

It has been the role of the President of the United States to create and preserve the National Parks. This legacy has passed on to you to preserve these parks for future generations. And part of that is to preserve the environment so that the Parks and National Preserves will still be intact. My brothers and sisters and I have a love and appreciation for the National Parks and Preserves. Mrs.

In addition, I think now is a good time to introduce a new work program, similar to the New Deal's WPA, to hire unemployed folks to work in the parks doing revitalization, clean up, and needed maintenance and improvements. I realize there would be great Republican opposition, but they oppose everything anyway.

I want the next generation to enjoy America's great outdoors too. That's why I'm asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. National parks play a tremendous role in connecting people, young and old, to the outdoors, protecting wildlife, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. I ask that your administration take the following steps:

Our family remembers with awe and satisfaction the trip we made across America. We visited the Rockies, Yellowstone, Zion, Bryce, the Great Sand Dunes and many more of our nation's great public forests and parks. We need to keep those areas protected and available for the enjoyment of the generations to come after us.

I have always enjoyed hiking and camping in our national parks, forests and recreation areas. My children and I go on vacation to our National Parks every year. We go camping and canoeing in the Delaware Water Gap National Recreational Area near our home, on many weekends throughout the year. We also camp for 2 weeks every summer on Cape Cod National Seashore in Truro. I have plans to take them west to camp in the Grand Canyon and the Rocky mountains next year. I am also a boy scout leader and take boys of all ages into our national and state parks and recreation areas every month. . I want my future grandchildren and the next generation to enjoy America's great outdoors also. So I am asking you to please make it a priority of yours to create, expand and better protect America's commons, our outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. I have spent many weeks camping, hiking, learning and appreciating nature in our national parks and forests. National parks play an important role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. I cant think of anything more important than that to teach our children. I believe that our national parks have suffered from neglect and understaffing for the past 20 years. I would love to see your administration do more to make our National parks, forests, wilderness areas and recreation areas a higher priority on your agenda for the benefit of all Americans. Please consider taking the following actions to support and build our national parks.

: I believe that the vast majority of Americans care about the future of our incredible natural places. Everyone shares the goal of preserving and protecting as much of our natural heritage as possible, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future. Thank you for all of your efforts on behalf of America and it's people. Thank you also for considering my comments.

I absolutely adore America's National Parks. They are breathtakingly beautiful, and definitely worth traveling to see. I have been too many, and they are my favorite places in all of the United States. Any time I have a visitor, I suggest that we go to a National Park. It would be a great tragedy to lose these beautiful places, especially since they are some of the last great natural areas in the country.

I am an ardent backpacker and supporter of our wilderness area and national parks. They are a gem my grandchildren are now enjoying.

(cont.)

Good Afternoon, I hope this letter finds you well. As an editor for a state wildlife magazine, I understand the value- economic, aesthetic, and social- of the natural environment. Not only does our food and fuel come from our environment (more and more so now that we are working to reduce dependence on foreign oil), but our quality of life is directly related to and dependent on the natural environment of our country. More and more young people are spending time in front of the television and video games where there are no repercussions for their decisions and actions. A child who spends time in the natural world experiences true responsivity (if you shoot a bird with a BB gun, you then experience the injured or dying bird firsthand- an experience that a child would not soon forget). Beyond the teaching of values that comes from the natural world, in S.C. alone, natural resources are said to contribute over 300 million dollars to the state economy. While I work as an editor, I am also a poet, and I am inspired most by the natural world. The gentle beauty and the power of nature found there is without compare in the man-made environments of the city. It is in the natural world where the creator, whomever or whatever you believe the creator to be, comes nearest to us and we are able to take time to contemplate what it means to be human and what we want to do to create value in our short lives- for ourselves, our families, our friends, and even strangers. Protecting our National Parks is an integral part of giving ourselves and future generations the chance to live a good, full life. There is nothing that is more important. Thank you very much,

Mr. President, as I ponder your "America's Great Outdoors" initiative I am moved to appeal to you for your positive consideration of the process defined herein by the National Parks Conservation Association (NPCA). My family and I have enjoyed our numerous visits to Parks throughout the USA over our many years. We must continue to support fully the conservation of this truly unique heritage developed so many years ago.

America's Great Outdoors equals OUR national parks. We are permanent lovers of OUR national parks - and enjoyed learning about their history from the Burn's special.

Thousands of youngsters get their first real understanding of an ecosystem or their first glimpse of the setting of an event they studied in history in a national park. These places make those lessons come alive. They are treasures we can't afford to lose.

My favorite childhood memories are from our trips to visit Mt. Rainier and other state and national parks and conservation areas.

Having had the great pleasure to visit the wonderful state of Alaska and Denali National Park, we need to preserve more land in the contiguous 48 states. Please make this a necessary task.

I think it is very important that we preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage.

I also think our forests are good for our air quality and green house cover. It is not just the Amazon which help our earth.

I want the my kids and grandkids to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests. One of the things I think of,

I hope you'll agree with me that the next generation of Americans should be able to enjoy America's great outdoors. Please take this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. Our

Please expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. National parks play a tremendous role in connecting people to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Thank you.

Will the next generation to enjoy America's great outdoors too? That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

Our family has spent most of our vacations enjoying our country's magnificent National Parks. Many of our friends have done the same. Some of our most enjoyable discussions with family and friends revolve around the amazing and wonderful experiences we've had at our National Parks. --Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. --Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are vital investments in our future.

IT IS ESSENTIAL THAT FUNDING NECESSARY TO PROTECT PARK WILDLIFE AND TO DO WHAT IS NEEDED TO UPGRADE VISITOR SAFETY AND TO ENHANCE THE EXPERIENCE OF VISITING OUR NATIONAL PARKS. A GOOD TARGET FOR COMPLETING THIS IMPORTANT WORK IS THE CENTENIAL OF THE NATIONAL PARK SERVICE IN 2016.

(cont.)

In 1972 our family of four took a six week road trip in our new VW camper and toured America's National Parks and Forests from New Jersey to California and back. This exceptional trip has given us and our children lasting memories of the beauty and diversity of our country. In order for others to enjoy our National Parks in the future we hope the administration will take the following steps:

I have personally visited many over the years. They are our National treasure.

My husband and I are trying to visit all of our National Parks. We have enjoyed 39 of them so far.

But that is not all. For many, national parks are too far away to be the only source of natural land. Greater efforts must be made to retain wooded areas, swamps, and grasslands throughout our towns. This is the most effective way to educate our children about the great outdoors, and to teach them appreciation for nature. The local level is the only way to do this on a day-to-day basis. Wildlife cannot fully thrive in a cityscape, and must have real forests and other habitat to escape to. Native plant life varies greatly from region to region, and the loss of any part of this diversity is a great loss indeed. Additionally, damage to any piece of the environment only further disrupts the delicate ecosystems. The natural areas dotted throughout the American landscape are often forgotten because individually they are so comparatively small. Yet added up, their land mass is at least equal to that of our national parks. While large nature preserves are undoubtedly important, smaller reserves must also be given legal protection. Please commit to the care of the nation's national parks, but do not forget the smaller parks and woods that are such a significant resource.

My husband and I just returned from 4 days at the Great Sand Dunes National Park. It was one of the most fun and also relaxing vacations I've ever had in my 64 years. One thing you and Mrs. Obama should know: The kids have an absolute ball running through the sand! Talk about exercise and getting kids to lose weight!

Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives.

National parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, acting as havens for some of our most iconic wildlife, and contributing to the health of our people.

In my recent return from a vacation in the "Last Frontier", I now ask that you continue to focus on the preservation of national parks and the precious land surrounding these areas. Seeing all forms of nature's wonderful gift to mankind, whether it was the Bald Eagle flying overhead, the Humpback Whale swimming along side the boat or a Lynx walking by on the road in Denali, this precious land needs to be preserved for generations to come.

When I think of America's Great Outdoors, I think of our national parks, and the wild mustangs on our public lands.

I was fortunate enough to grow up in the West, near some of our most wonderful national parks.

Nothing has made such an impact in my life as my early years being exposed to the national parks of this country. We have so many extraordinary, irreplaceable treasures.

Please preserve our national parks and open spaces. Add to that, set aside national parks under water in the oceans. Set up your legacy for generations to come. As an example, Italy has done this off the coast of the Cinque Terra. Please protect the water and ocean. Add to that protected areas in the oceans and Gulf of Mexico.

Heed the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the new century. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and water resources across the country, rather than just another broken federal promise. What's been happening in the Gulf of Mexico reminds us how important it is to keep that promise. --Build on programs that work. The National Park Service has tremendous technical expertise that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. We already have a great program, but it's under-resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. --We need more parks for our growing population to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we lose them to neglect or destructive uses. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within, park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

PROTECT OUR NATIONAL PARKS AND LANDS NOW BEFORE THEY ARE DEVELOPED, DRILLED, DESTROYED, ETC. SO FUTURE GENERATIONS WILL HAVE PROTECTED ALL THE LANDS PRESERVED BY PAST PRESIDENTS AND PRIVATE CITIZENS!!!!

Discussion Question 1

(cont.)

As I grew up, our family vacations were frequently camping trips to different National Parks. As my own children grew up we continued this tradition. My children have since commented about the tremendous variety of experiences these vacations provided them and how they feel privileged to have seen so much more of our beautiful country than many of their friends have. One of the goals my husband and I are still working towards is to visit & experience all of our great Parks. I only pray that we have the opportunity to do so before funding or environmental issues cause them to deteriorate! National parks also provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year.....From personal experience I have seen how education can interact with Parks to excite kids with hands-on learning experiences. My parents were teachers in the Cincinnati OH area and one of the best & favorite field trips they tried to schedule annually was to take their students to the Cinti Nature Center where they had the opportunity for exactly this type of experience! We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. I believe --Heed the advice of the National Parks Second Century Commission. --Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. --Provide permanent, mandatory funding for the Land and Water Conservation Fund. The seventeen billion dollars in revenues accumulated during the past several decades in the Land and Water Conservation, unspent for its intended purpose, should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) should be expanded. The Department of Education should work with the Park Service to excite kids with hands-on learning experiences. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries.

All the reasons below are true. But the most important reason keeping our parks viable for the long term is that our citizens will forget what something close to pristine nature ever existed and will no place to rediscover that. We are already losing the race to save the climate, must we also lose any contact with a world in which humans hadn't yet denatured everything?

Protect the parks and connect Americans to them in the next century. -- We need to involve people in communities throughout the country in protecting our parks for the next generation. -- Provide permanent, mandatory funding for the Land and Water Conservation Fund. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. --We need to protect remaining natural areas before we use them all up. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks.

Although I am not a teacher I have worked in Education for the past 28 years. I have worked elementary, middle and high schools, mostly in poor neighborhoods with minority and special needs students. I have had first hand experience taking students on trips to parks and "wild" places and I have seen the power of those natural experiences on the lives of the students I work with. Whether it was a backpacking trip, a weekend in Yosemite or a day trip to a natural area in San Francisco, I have seen students who were not too interested in school or nature change their attitudes about learning and the world outside their front door. Nature is powerful, it reaches right inside and grabs you. We never have enough money for education and so we never have enough money to fund field trips. We need to act to fully fund education and to ensure that an important component is time in natural settings. Children need to know that the world around them is important and that they play an important role in protecting and nurturing the world around them. We need to find ways for all children to experience the outdoors. There are not words to describe the look on a child's face after they have made it to the top of "mountain" or waterfall or have watched a family of deer feed in a meadow. All children need these experiences. They will become better adults for having had these experiences.

By traveling to other countries I came to realize what a great asset our National Parks are. They offer educational and recreational opportunities. They support whole communities and offer jobs to millions of americans. They are and could be even more a major financial asset to our country if we invested in them the way we should by supporting their health and welfare. People from other countries are fascinated with the history, ecosystems and animals found in the United States and immortalized by many books and movies. It all began with President Roosevelt and the purpose of the National Park system is even more important today than it was in Teddy Roosevelt's day. Our park system is a way to preserve our heritage for generations to come. Our National Parks were set aside for all Americans for generations to come, to help preserve what made this country great and to ensure there would always be "wild places" to reconnect with our heritage. The park system was not set up to ensure gas, oil and other corporations would have easy access to our resources. They were not set up so ATV, ORV and snowmobiles could have unlimited spaces to be driven. Our parks were set aside for Americans to enjoy nature, learn from it and learn from our past. Please help boost the health of our park system. Our national parks are so important to the animals who live there, they are so important to the people whose livelihoods depend upon them and they are so important to all Americans who go to enjoy their history to allow them to go to the wayside. Please, invest in their future and listen to the experts who have the parks and the American people's best interests at heart. Thank you for your time.

You and your family enjoy vacations and seeing all the beauty of america, we must keep it that way!

I have just returned from vacation to Yellowstone and Glacier National Parks. The first time I visited a National Park was in 1961 when I toured Yellowstone. It is truly wonderful to rub shoulders with fellow US citizens and citizens of so many foreign countries in these awesome places. Our parks speak highly of our values. May they last forever.

re: National Parks Are America's Great Outdoors Dear Barack Obama, I am a teacher who every year for the last 10 years has taken my students to various national and state parks as has every teacher in our school. The children learned about the interconnectedness of all life and about what all life needs to survive on this planet. They learned how different species adapt. They learned the cultures of the early peoples of our land. They learned how we are all dependent on nature to live. And most of all they learned to love, appreciate and take care of the wonderful and beautiful natural gifts we have been given. Sincerely,

When I was in college, I worked in Yellowstone National Park for 4 summers. As our children were growing up we went camping in several National Parks. Now that we are retired, we plan our fall camping trips around visits to National Parks. I cannot imagine not being able to spend time in National Parks.

I live in Port Angeles, WA "where the mountains meet the sea". Olympic National Park and the Pacific Coast Marine Sanctuary offer incredible opportunities for all people to experience the beauty and wonder of the natural world. They also offer us to challenge ourselves (with our children and grandchildren) on our physical and mental abilities as we explore wilderness. It builds confidence and reminds us of our duty to protect and preserve these treasures for all future generations. I would love to host you and your family to visit these places with my family (I have granddaughters who are nine and eleven who are outdoor enthusiasts!) We have much the same feel in places as Hawaii, just chillier!!! Our parks are our heritage and future-we must use them to keep Americans both energized and rejuvenated. Thank you

Our national parks may be the most significant, altruistic action the government has taken for its citizens. Please continue to protect, support and enhance these great American legacies so that all future generations may enjoy their splendor.

I grew up in one of our OLDEST national parks, a beautiful spot that still calls me back to revisit this magical place, Hot Springs National Park, in Arkansas. People from all over the world would come to visit the 'SPA', take the mineral baths, and drink the incredible water (I still have the water delivered to my residence, no matter the address in all the lower 48). This National Park, within the city, is so beautiful and contributes to much to the history of Arkansas, the Louisiana Purchase, as well as the history of the 'crime' in the 20th century - let me mention Al Capone and others from Chicago - and today serves as the site of the claim to fame of the hometown of our 43rd President, Bill Clinton (he was 5 years ahead of me in school).

My personal experience with Outdoor Schools, family camping, and hiking and backpacking in beautiful natural areas has been the highlight of my life. National Parks, by their very awe-inspiring nature, are the perfect place to instill a wonder of the natural world in children especially. Once they connect, they will fight to save what's left.

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy and remember those that protected and preserved them. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

I think of my father, who was so proud of his Golden Age Passport to the National Parks; he had earned it not just because he was 'over 60' but because of many years of taking the family to visit national parks from California to Wisconsin, and many states in-between! I grew-up loving the outdoors because our family enjoyed every summer weekend and every vacation in one of our National Parks!

Please remember how fondly Teddy Roosevelt is remembered for his role in helping to create our parks. They are valued and loved by Americans!

National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. Ideas: steps your administration could take:: The First Lady is doing an excellent job of promoting exercise and getting out of doors. the key is getting PARENTS to do the same thing and set the example.

This country's national parks are truly wonders of the world. They sustain and embody what we all know we cannot live without, the earth. For me, America's Great Outdoors, is synonymous with freedom. Thank you for listening to my words today.

I have shared a great gift with my children camping with them and visiting parks. These visits make them better children, students and protectors of the parks.

When I think of America's Great Outdoors, I think of our national parks, as the Original representation by its Founders Intent to provide each Citizens equal Opportunity to experience this Great Nation Land Marks ."This Land is Your Land this Land is My Land ".

As you know from your recent visit to Acadia National Park, preservation of our open spaces is crucial allowing generations of Americans to enjoy our unique natural resources.

Our National Parks are the BEST of America.

My family has visited several of the NPS sites, and we think that they are terrific--beautiful with knowledgeable tour guides. We hope to keep visiting new NPS sites for many year to come.

In addition to all the above, the National Parks will be essential for protecting America's biodiversity, not only the big obvious trees, birds & mammals, but also many of the smaller wildlife

When I think of America's Great Outdoors, I think of our national parks, especially the Smokies where I spent my childhood vacation and visit every year now.

When I think of America's Great Outdoors, I think of our national parks and our state parks. These parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. They provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year.

Every vacation we have taken in the 10 years has included a National Park...they are truly the wonders of our world!

National Parks are part of my family's life style. We enjoy camping in Yellowstone, Badlands, Smoky Mountain and other National Parks. I use these experiences to educate my children about the importance of preserving these natural areas and the life within them.

(cont.)

Growing up in the 1950-60's with 4 younger siblings, our family budget was always tight on my Father's salary as a school teacher. There were never many "extras". Our first-ever family vacation was a cross-country trip in 1965 to visit relatives and National Parks. It was wonderful. Since that trip, all of us have enjoyed MANY visits to MANY of the National Parks (as well as to relatives). The sights, the social interactions, and all the things we've learned - geology, botany, history of cultures, etc. - are priceless. As I write this, we are packing for a week at Maine's Acadia National Park, one of our favorites for family walks & hikes.

I feel they are one of the best things our government has ever instituted, and am grateful for Pres. T. Roosevelt's foresight in establishing National Parks. It is important to insure their future.

As a retired couple we use the parks often. This is one place everyone can see a return on their taxes.

Some of my favorite places on this earth are national parks.

I live very near to Redwood National Park. What would we do without their protection? They would be open to guns, hunting, deterioration and would deprive so many of the experience of our national heritage.

Mr President, I hope you and your family enjoyed your vacation in Acadia National Park. Thank you for your efforts in supporting clean energy, on behalf of our planet.

This is why my small home business of photography services has donated all our fine art nature photography from all of our State and National Parks to the following organizations: Smokey Mountain National Park Service, The Nature Conservancy, and to West Virginia National Parks district and to State Parks. com to raise awareness of our current situation in the National and State Parks, and to show everyone the beauty, nature and the importance of our parks in the US. Thank you for considering my comments and views on this matter. Much appreciated.

I'm really glad your family visited a national park for your recent vacation. If we spent 1/32nd of what we've spent on the wars in Asia on our parks, I think all Americans would be able to take their families to a Park. I've left in the stuff that comes with the letter, but I wanted you to know that I think you're doing a fantastic job, and to hang in there.

America's places of natural beauty are precious.

Thank you for considering my comments, and working to keep our national parks a valued resource that all citizens can enjoy.

(cont.)

As an avid traveler, camper and hiker in our national parks, monuments, historic sites and recreation areas, I implore you to increase funding to the National Park Service. We must not only protect those units we now have but need to acquire new potential sites for the National Parks system. I am now in my mid-70s and cannot travel or hike as much as I used to, but these treasures must not be lost or degraded. Our children, grandchildren and future generations deserve better. As a resident of Los Angeles, I hope your administration will seriously consider the establishment of a National Recreation area in our San Gabriel Mountains--an underfunded part of the national forest system. These mountains are heavily used but the visitors experience is limited by lack of access, lack of rangers, undeveloped areas for parking, lack of information about the geological and biological significance of the area. The area is now being surveyed for consideration as a national recreation area. In order to connect wildlife corridors in the region, including the San Gabriel River, Rio Hondo and the Puente-Chino Hills in a NRA is important to allow free access of wildlife from the San Gabriel Mountains down the rivers to the Puente-Chino Hills in to the San Ana Mountains. And if financially possible, allow visitors to stay without current fees for parking. This discourages those with limited income from visiting the area. On a broader scale,

Mr. President, I strongly believe that everything that has been stated above enriches or will enrich what the "American Experience" is all about. That is part of the legacy of our country and what is uniquely termed the American landscape. Please heed this humble perspective on what we need to do to protect this heritage.

Some of my most cherished experiences with my family are trips we took in which we visited Zion, Rocky Mountain Park, and North Cascades Park. These places challenge, inspire, re-energize, and nourish those who visit them.

I visit state and national parks on a regular basis. I love the serenity I get from being with nature. It feeds my soul in a way nothing else can.

Pursuant to the America's Great Outdoors initiative, --Swt up a program for priority purchase of conservation easements from rural landowners threatened with foreclosure, provided such landowners use the funds for paying down their mortgages. and paying arrearages. --Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. --Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders.

I just rode up on the Blue Ridge Parkway last week, and sat by a little stream. It really renewed my spirit.

(cont.)

Please seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. The Department of Education should work with the Park Service to nourish kids with hands-on learning experiences.

I hope we can count on you to save this valuable resource for future generations.

National parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you please to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. Thank you so much for considering my comments.

I will be traveling to the Great Basin National Park the first of next month. I have wanted to see it since moving to Nevada 19 years ago. I am so happy that it is available to me. I want the next generation of Americans to be able to enjoy our great National Parks America's for years to come, but we need to expand this dream. Our great outdoors is a treasure that we must guard carefully. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests. Here are my suggestions.

I want the next generation to enjoy America's great outdoors too, and to breathe the good air it makes for us, and I want the other living things that share these spaces with us to stay alive. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our family farms (industrial farms are the nation's worst polluters), ranchlands and forests. National parks provide America's finest outdoor classrooms and serve as a basis for conservation, history, civics and ethics education for millions of people each year. Who knows, a little more green, a little more contact with the wild, a littler more space that isn't "owned" (and exploited) and people might be weaned from their current and politically destructive addiction to anger and indignation! A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy; and the animals and plants in these places care even more. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

I would like my son and his children to have the opportunity to enjoy America's great outdoors as I have. So please seize this opportunity to create, expand and better protect America's shared outdoors spaces, including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranchlands and forests.

It's time to do what you said--conservation. In every way, the National parks need our help.

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future, and with 6 children and 4 grandchildren, I most definitely have a vested interest in the future.

When I think of America's Great Outdoors, I think of our national parks (especially the Everglades).

Save the outdoors.

Discussion Question 1

Written & Online Comments

(cont.)

While we are aggressively trying to protect the Gulf Coastline, let's not forget America's hard earned treasures collected in our National Parks system. Recently the Ken Burns tribute called it America's greatest idea and the treasures are in dire need of protection as they are "loved to death." Ironically it's both a testament to the drawing power of the parks and the need for maintenance to preserve areas that are heavily utilized that make protection of the national parks a high priority. I support the initiatives recommended by various committees and the National Parks and Conservation Association: I believe it is more cost-effective in the long run to make expenditures now for preservation than to try to recover precious resources that might be beyond recovery in the future. These gems are the nation's true legacy whether in urban settings or remote wilderness.

As a person who loves the beauty of nature and finds peace, renewal, wonder and inspiration in the great outdoors, I am concerned for the future of our National Parks. These parks were established to preserve a small portion of our rich natural, national treasures for the enjoyment and use by all young and old, rich and poor. They provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. Neglect and urban sprawl are threatening many of these parks. To halt further deterioration of our National Parks System, I urge your administration to take the following steps:

Preservation and increasing our National Parks is crucial to the survival of our planet.

I hope your administration will take the following steps: I know you have enjoyed the National Parks also. I have fond memories of many good times spent in the National Parks. Blackwater Falls in West Virginia was a place of unspoiled beauty and I hope it still is, since I haven't been there in a while. Rocky Mountain National Park was also a place I have fond memories of. Please help give these opportunities to enjoy the outdoors to everybody.

Somehow include funds to help states that are currently closing parks (Arizona) to deal with budget issues.

And protecting national parks means protecting ecosystems, which in return helps us live in a healthier environment.

Last year and this we visited Grand Canyon, Yosemite, Bryce Canyon, and Zion National Parks. We live right next to the Cape Cod National Seashore. Thus we are very much aware that our Dr.

The New Jersey Pinelands is one of the greatest accomplishments of the Byrne Administration and remains a success story in large-scale landscape conservation. As participants in the creation of the Pinelands, and former governors of New Jersey, we have seen this success first-hand. The Pine lands represents a model of effective landscape conservation that should be highlighted in the report you are preparing for the America's Great Outdoors initiative.

Discussion Question 1

Written & Online Comments

(cont.)

Thirty-two years ago, Congress created the Pinelands National Reserve as the country's first "national reserve." The resulting partnership and ongoing collaboration between the state of New Jersey and the federal government has been enormously successful in protecting this million-acre working landscape. The Pinelands now preserves the largest surviving open space on the eastern seaboard between Maine and the Everglades - and it is located in the nation's most densely populated state. More than 20 million people live within an hour's drive of the Pinelands.

Given its record of success, the Pinelands is one approach that can serve as a positive example of landscape conservation through regional land use planning. The Pinelands, along with other approaches, should be presented as an option which other regions may consider in creating their own solutions to the challenge of sustaining beautiful, culturally rich and prosperous landscapes.

Having just hiked Mount Marcy, the tallest mountain in New York State and one of the Adirondacks' 46 High Peaks this weekend, the exhilaration that comes from leaving one's comfort zone and entering the natural space we have preserved is unmatched in any video game or YouTube video out there. Future generations of Americans cannot respect what they do not know - maintain our wilderness!

There is hope on the horizon! In response to several abuses committed against citizens of the great state of Idaho, our very own legislators are responding, and in a POSITIVE way! Earlier one of the recipients on this email list suggested a BOLD yet SIMPLE solution to dealing with abusive, criminal, arrogant groups of people operating unlawfully within our borders. Unlawful, unconstitutional criminal organizations otherwise known as the BLM and USFS. The proposed solution was simple. Turn control of forests and lands within the borders of the state of Idaho over to Idaho control. Now Idaho has written a proposal, passed by the state legislature, to challenge the right of the USFS and BLM to manage lands within the state:

<http://www.legislature.idaho.gov/legislation/2010/HCR058Bookmark.htm> It is obvious no one could destroy the forests and lands within the state any more than the USFS and BLM have already. Top honors for most public land destroyed goes to Suzanne Rainville of the Payette National Forest. In the Payette and Boise national forests, where 800,000 acres of timber was immorally and irresponsibly allowed to burn to the ground. Along with THOUSANDS of critically endangered species forced to die a horrible death along with their habitat! An estimated \$4 billion in standing dead timber was allowed to rot, go to waste or clog Idaho rivers and destroy tens of millions of dollars worth of bridges and roads, and the devastated forest is the "gift that keeps on giving" with every new mudslide and flood, more than three years after the forest' incineration. View photos, FOIA documents and read more here:

<http://usfspayettenationalforest.blogspot.com/p/9-million-wasted-by-payette-national.html>

The federal government is allowed by the US constitution to own up to 10 square miles for any one building or purpose. Therefore the USFS and BLM are unconstitutional entities. It came with great surprise as I glanced upon a bill in the State of Idaho legislature proposing to challenge the constitutionality of the USFS and BLM!!! It is in it's preliminary stages. However, it needs all the support it can get. Read the entire bill online here:

<http://www.legislature.idaho.gov/legislation/2010/HCR058.htm> and here:

<http://www.legislature.idaho.gov/legislation/2010/HCR058Bookmark.htm>

(cont.)

I live in Bear Country and hope and expect that this fabulous place will be protected so I, my kids and my grandkids, etc. can continue to enjoy ALL the amazing amenities nature and America's Great Outdoors has to offer. Please protect our public lands, water, air and natural resources.

As an employee in the outdoor industry, my job and my weekend pursuits are directly tied to America's great outdoors. Getting Americans active and outdoors - and ensuring they have affordable, accessible places to play - is good for us, our communities, and our economy. Preserving special places and creating new places to recreate are important to me and future generations; that is why I am asking you to seize this opportunity to protect America's open spaces, parks, forests and wildlife habitats, and to engage Americans in a conservation agenda that recognizes Americans' ties to our lands.

Thanks for coming to Asheville, NC for the listening session. I'm a cyclist and would love more green space in our town. Also more support for protecting land and water - like full dedicated funding for the Land and Water Conservation Fund - so we can keep our natural world from being torn apart by development. We are nothing without nature, water, healthy land.

We are in a fight to preserve the last remnants of the great american west that have not been settled and roaded. This is not once is not a once in a lifetime opportunity its a once in a civilization opportunity to leave our roadless unprotected wilderness alone for all future generations by protecting them now. These areas are so vital to leaving the western landscape intact as near as it was that it should be the top priority for the administrations conservation efforts. I am a hunter and I value these lands, as do the other hunters. Leaving areas roadless is the best way to protect clean water, preserve habitat, and give all Americans a chance to step back in time to what the pioneers felt and saw. Thank you for considering my comments.

I am a hillbilly of southwest Virginia and I will never see Bristol Bay or any of the beautiful landscape and animals that live in the area of the proposed pebble mine. I will probably not live to see the next decade for I am a survivor of a brain injury and on disability social security. I give what I can to the folks who are trying to save Bristol Bay and the environment and still make ends meet to pay for my medication and the house hold bills. It is not easy to make ends meet but I think that it is important to make sure that there is a wild scenic area still in existence for my children and nieces and nephews and their children for the the children I will never know to experience and for the world to experience in the coming centuries. God gave us this land to be stewards of and he said to us the fields and plants and animals wisely. He never said to exterminate them and to destroy his world for our own selfish greed and well being. In point of fact the most amazing and beneficial drugs and scientific breakthroughs are coming from studying the way nature has found to solve problems and if we destroy nature we will most likely destroy the one thing that may save us in the future. It may be a cure to a disease or a computer design or a osmosis or electrical energy design that is made from biomimicry that we have found but that discovery may never happen if we continue along the path of destruction and selfish greed that we are currently on. I urge you to stop and think for a minute of the lost future we are making for ourselves and change the way we live and think to correct our actions so that tat future will be saved. It is not to late and you are the one who can make that change and that difference. I pray you will be the one with the courage and the foresight to do what is right not what is easy or complacent and follow the pack but to do the correct thing the one that a statesman does and think of the future of the country and the world and stop the destruction before it begins., Please may God grant you the strength to fight the dragging tide of corporate greed and do the right thing for the earth and the future of the earth and mankind. Stop this destructive course before it starts. Change our ways and put us on the path of environmental stability. Sincerely Yours,

The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation.

President Obama: Please save nature for us and our children. For so many children, their only contact with nature is a park. Let's expand our local, state and national parks as well as preserve our vast wilderness areas. When I voted for you, I was voting for environment. Thank you for your attention to this very important matter.

I'd like to help protect americas wilderness and creativeness of a country, for the natural beauty and freedom. I'd like to share my gardening Ideas by giving gardens to public parks and having every one come together to learn and love the beauty the world gave us.

Discussion Question 1

(cont.)

I recently did a river clean up in the Hackensack River in New Jersey. We spent four hours at the clean up site, each of us with a specific task at hand. Some worked along the shore line, others deep in the marshes and a few were out in canoes cleaning up the water itself. At the end of the day, we filled a 40yd truck bed with everything from plastic bottles and styrofoam to such crazy things as toilets and car parts. The lack of concern this country\'s citizens has for its parks, rivers, and land is a disgrace and needs to be challenged with more heavily fined penalties, educating, and organized clean ups.

As a nature enthusiast, I want the next generation to be able to enjoy America's great outdoors too. That is why I am asking you to seize this opportunity to create, expand, and better protect America's shared outdoors spaces including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers, and historic sites and monuments, as well as to find new ways to support conservation of our farms, ranchlands, and forests. Thank you.

Gentlemen: Bristol Bay, in Western Alaska, has incredible wildlife, fisheries, beauty, and offers native Americans a traditional subsistence way of life. The harvesting of wild salmon provides thousands of jobs, millions of dollars to the economy, and offers a truly healthy food to Americans who struggle with obesity and diabetes. The fishery in Bristol Bay has been commercially viable for over 100 years. Unfortunately, there is a huge gold mine proposed in the watershed of Bristol Bay, Pebble Mine, which is Canadian owned. This mine threatens clean waters, habitat, subsistence and recreation. There should be strong oversight of the permitting process and careful analysis of the cumulative impacts to the Bristol Bay watersheds. Thank you for consideration of this valuable resource for America. Most Michael and Diane McBride --

deserves to be saved and sacred. nourishes the planet. thank you,

Thank you for RECOGNIZING THE INCREDIBLE WORK BEING DONE BY America's 1,600 land trusts - Land Trusts are helping this country in so many ways, for both current and future generations. They help keep agricultural lands in productive use, keep working forests working, and protect important wildlife habitat. Tax incentives, farm bill easement programs, LWCF and Forest Legacy have helped landowners and land trusts conserve millions of acres - permanently. Please make the conservation of private farms, ranches, forests and other wildlife habitat a centerpiece of your initiative.

America's wild places are special to us all and we have a great responsibility to protect them for the wild animals who live there. They were there long, long before humans began to dominate the landscape. We can help keep America special by protecting more Wilderness and quiet recreation opportunities, preserving more habitat and connectivity for wildlife, and permanent protecting remaining old-growth forests. Here in Oregon, we enjoy some of the most beautiful and awe-inspiring public lands in the nation. But places like the Wild Rogue River, the wildlands surrounding Crater Lake National Park, and the Siskiyou Wild Rivers are at risk from logging, mining, and other harmful development. Oregon has protected only 4% of our land as Wilderness, lagging far behind our neighbors. For the wildlife that call our public lands homes and for the millions who enjoy these places for quiet recreation, it is time to correct this Wilderness imbalance. Thank you for considering my comments.

I am writing this because I think it is important that the generation that comes after me be able to enjoy America's great outdoors too. Please seize this opportunity to create, expand and better protect America's shared outdoors spaces including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, farms and forests.

I'm an ardent Oregonian and Pacific Northwesterner, and what I really want is to: 1. keep the untouched, wild and free areas untouched, wild and free!!! Preserve more wildlife habitat and old-growth forest! 2. keep logging, mining, and development OUT of natural places. However, I want these things the responsible way. That is, not an increase in federal laws or top-down regulations. I want people in this country to be encouraged to rediscover how wonderful these places are and to choose, at the state and local levels, to preserve what's right around them. Its more difficult to make a difference this way, but its the right thing to do, instead of imposing more and more control on people externally. Please help me in this goal!! Thanks.

I can't seem to log in and voice my comments. LEAP - the Lindbergh Education Acceleration Prize Our mission is to investigate, showcase, and leverage innovation for a resilient future. LEAP accomplishes its mission by: • Creating project-based educational programs that motivate high school students to investigate, showcase and leverage creative solutions to problems. • Using prize philanthropy and media to promote individuals and organizations that are creating extraordinary solutions to social, technical and environmental problems.
www.LindberghPrize.org ~Powering Imagination~

Dear President Obama and Secretary of the Interior -- On behalf of our small foundation, which supports the work of land trusts in the northeast to protect wild places, I want to thank you for your support of a fully funded Land and Water Conservation Fund and for your America's Great Outdoors Initiative. These are the most lasting investments the federal government can make in the country's future.

Dear America's Great Outdoors: The Vermont Traditions Coalition (VTC) is a coalition of over 20 organizations from the forest product, maple syrup, agriculture, sporting, snowmobiling, outdoor guide, and lake association sectors. We have a daily presence in the Vermont Legislature and play a prominent role in all major public lands issues in Vermont due to the depth and breadth of our statewide network and our knowledge of issues involving Vermont's predominantly rural landscape. VTC believes that a healthy economy, healthy communities and a healthy environment are inextricably linked. VTC works with local and state organizations, state agencies and leaders to protect Vermont's rural traditions, identity and ways of life. Below you will find the March 31, 2010 Vermont Traditions Coalition Public Comment on the New England-New York Forest Initiative Concept Paper. This Concept Paper proposed a massive federal and preservationist group land purchase throughout New England and New York. This proposed regional land purchase stood in stark opposition to everything VTC and a huge groundswell of grass roots Vermonters has stood steadfastly against during the Vermont Land Wars of the last 12 years. Rather than reiterate those March 31, 2010 Comments for you in the context of the Great Outdoors Initiative, VTC will simply include them here. VTC strongly suspects that the Great Outdoors Initiative is headed toward the same policy that's advocated by the Concept Paper. VTC therefore asks that you simply extrapolate the comments from the March 31 VTC submission to the Great Outdoors Initiative. If the Great Outdoors Initiative is headed in the direction of restrictions on recreation, timber management, and road access to federal lands or federal lands to be acquired, VTC's opposition and the rationale for it are clear. Based on the experiences of the last 12 years, both in Vermont and nationally, VTC does not trust the federal government as a landowner and strongly opposes land ownership interests being conveyed to private preservationists groups with restriction agendas. The White House Conference on America's Great Outdoors on Friday, April 16, 2010 stated that: "America's outdoors are part of our national identity. They are the farms, ranches and forests that we take great pride in, and the neighborhood parks, trails and fields where we spend memorable time with our families and friends," said Nancy Sutley, Chair of the White House Council on Environmental Quality. "Too many of these places are disappearing. In launching this conversation, we strive to learn about the smart, creative community efforts underway throughout the country to conserve our outdoor spaces, and hear how we can support these efforts." VTC understands the importance of the great outdoors and the need to reconnect the people with nature. More importantly we understand the importance of protecting Vermont's rural identity and traditional land use practices which make Vermont as unique as it is. As more and more lands are being conserved in the name of the public good, the rigid, broad-based federal land restrictions that come with these purchases are taking away our way of life, piece by piece, year by year and in essence disconnecting people from the "great outdoors". These federal land restrictions have worked to displace hunting camps, shut down snowmobile trails, outlaw all motorized use, ban horseback riding and mountain biking, close off road networks, shut down timber harvesting, end fish stocking, and on and on. These federal restrictions and ever changing land plans cater to, in many cases, unnecessarily to only a small user group. VTC believes all forms of recreation are important. Not only to the people who visit, but to those who live there and depend on recreation to fuel the economy. These broad-based restrictions that are filtered down from federal agencies working in conjunction with wealthy, national,

I have been an active and willing land owner with a multitude of public land agencies and conservation groups over the last five years working to provide real solutions to mitigate for the effects of oil and gas development impacts in Wyoming . Our ranch manages an area over 100 square miles in the Upper Green River Valley. Working with a 35 million dollar fund from Encana and BP to mitigate for development impacts is a drop in the bucket. We have been successful and expedient in placing conservation easements on thousands of acres of land on our ranch. This recognizes the need for conservation agricultural practices for the mitigation of not only of oil and gas development but of the development of our nation into a new era. From my cattle grazing operation, my habitat and conservation work, my truth from here on the land, I can tell you that it is possible to conserve our lands while increasing production of our rangelands to produce the protein needed for ever increasing demands. This is the new conservation agricultural model for the rangelands of the world; the rangelands that not only cover 45% of our country but over 45% of our planet's land mass. Mitigation of global impacts can be accomplished with conservation agricultural practices. Grazing and farming practices, when financial rewarded, can sequester not only carbon, but water, soil erosion, wildlife habitat, and more all while increasing food output. This is not only possible but also quantifiable for a measured effect. Cottonwood Ranch and our operation are a very current example of the success of what I consider Conservation Agricultural Mitigation here in the US. I would like to see this administration recognize the need for conserving our ranches in the west for this reason. Recreational impacts on our public lands in the west is just as damaging in places as any development. Agricultural impacts are and can be restorative and productive for entire ecosystems. Thank you for your time

_____ is correct and I wholly endorse his sentiments. Please conserve our natural environment when possible and especially in this instance. Many thanks,

Thank you for launching America's Great Outdoors and recognizing the work of America's 1,600 land trusts to protect important wildlife habitat. The LWCF in particular has helped us protect thousands of acres of South Carolina's most significant lands. Please make the conservation of irreplaceable lands and special places a centerpiece of your initiative.

Thank you for launching America's Great Outdoors. We are especially concerned about land that is being explored for NATURAL GAS. In fact, we own such land. We desperately want our federal clean water, air and other environmental laws that were set up to protect our environment to be fully re-instated for this industry. The Bush administration's exemption of this for-profit industry has already done great damage to our precious natural resources in many areas of this country. However, most importantly, we want you to know that we are enormously grateful to have you as our President. Thank you sincerely for all of the energy you lavish on the many wounds our dear country suffers. With great admiration and respect.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. Our natural resources are threatened by exploding population, unguided overdevelopment & climate change. Make wilderness protection a central component of policy emerging from the America's Great Outdoors Initiative. The President has the authority to facilitate cooperation among federal public land agencies & Congress to identify eligible landscapes for protection as wilderness. The US Forest Service now uses restrictive criteria in determining their recommendations for lands that should be designated wilderness; BLM remains bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President; as an emeritus member of the American Institute of Biological Sciences (AIBS), I ask that this be done.

Thank you for initiating this dialogue. One of us attended the session on the lawn of Lewis & Clark Community College on August 20, but was one of those for whom there was not time to speak publicly. The other was unable to attend because the session occurred during the work week. So we are submitting our joint comments by email. Challenges Reconnecting to our rivers: Missouri is blessed with many opportunities to connect with the outdoors, but more needs to be done to make those opportunities accessible. We could do more to provide connections with our major river systems. The Columbia Bottoms Conservation Area is a good example of effort to provide access to the great confluence of the MO and MS rivers. But at the same time, that Conservation Area is under threat of a major casino development virtually next door and within the floodplain. More thorough analysis by FEMA and the Army Corps of Engineers of all "external" costs of such floodplain developments could help local and state governments to understand the true costs of such developments to taxpayers and society. The MO River from Kansas City to St Louis is highly channelized. That results in a narrow and swift flowing river which limits safe opportunities for visitor enjoyment. Programs such as the Big Muddy Wildlife refuge will provide more varied habitat along the river which will be good for fish and wildlife as well as recreation. More funds and emphasis should be placed on that and similar projects. The topic of reconnecting should also include restoration. We cannot reconnect to what is no longer present. In Missouri many of our grassland, savannah and prairie habitats have been lost. Efforts to restore those habitats on public and private land should be supported. Private Lands: Most of Missouri's grasslands and forests are in private lands. A significant portion of the state is managed for agricultural production. Supporting good conservation practices on private lands is essential for protection of the great outdoors. Initiatives for conservation easements, for example, are a good tool. However, such conservation easements need to be enforced. In Missouri conservation easements have been granted along the Ozark National Scenic Riverway, but not always fully enforced by the National Park Service. Crop Reserve Programs are another way to encourage stewardship on agricultural lands. Our growing population and suburban sprawl constantly put pressure on family farms and forests. We should encourage tax and other policies that enable families to keep their land undeveloped without incurring unnecessary hardship and expense. Public lands: Missouri has many public land ownership levels -- federal, state, county, municipal. All provide levels of access and types of high-quality outdoor experiences. Missouri's outdoors are perhaps best known for our Ozark rivers and streams. We are blessed with the Ozark National Scenic Riverways, which include stretches of the Current and Jacks Fork rivers and is managed by the National Park Service. That linear park is currently undergoing a revision of its management plan. The process has highlighted some glaring management problems which have been a growing concern for years. The NPS has failed to follow the mission of the Scenic and Recreational Riverways designation and has allowed numerous illegal river access points, unauthorized ATV traffic and excessive equestrian use to mar and pollute the rivers. Due to agency analysis and public input, a goal of the management review now is to focus on improving water quality and river habitat and to provide for appropriate, but not destructive, recreation. Carrying through will be a difficult task. The background message to this experience is that proper manage

Living in Germany for many years as an American, there are many alternate ways that can be implemented to negate the need to use the "potential" energy from Bristol Bay and we need to "bite the bullet" and get on with saving instead of consuming energy. For example: -Slight "for Americans" increases in the price of energy to reduce consumption. Too many pickup trucks driving around with one person in them. Why? Jobs in Detroit? Not hardly as many are Japanese. - Credits for investment in proven technology for personal homes in solar, heat pumps, and photovoltaic technology to make homes energy independent. -Payments for proven insulation technologies to assist the above in homes and companies aimed at the little guy. -Reduction of energy usage through required upgrades in use of LED and other technology for home and industrial lighting. Too include commercial street lighting. The items above are just a few ideas that if we were in a real war like WWII would have been implemented to focus our resources to win the battle. We are competing with the world for resources have a smaller population than the upcoming nations like China, Brazil, India, etc. so we have to think smart with our current small lead in technology to be able to let our grandchildren have at least an equal life style to ours in the future. Jobs and money are finite and either we suffer a bit now and develop new ways to reduce our consumption or the world market will take care of it and leave our grandchildren poor

America's great outdoors shaped my youth and life path, I want the same for all that follow, human and all living creatures. Leaders in Washington need to expand and protect our shared outdoor spaces including parks, wildlife refuges, wilderness, trails, rivers and monuments and to conserve our farms and forests. Benefits will not only include beauty but also clean air, clean water, and long term sustainability. provide for the basi

To whom it may concern, I am greatly concerned about the proposal to pollute and despoil Bristol Bay with the Pebble Mine site. I urge you to impose and enforce the strongest possible protections for our natural, national heritage, to strengthen ties with local indigenous governments, and to put the strictest restrictions on mineral development operations, in order to ensure the protection of delicate wetlands and all of the species which rely on them. Thank you for your time and consideration. -----

As an American citizen I ask that you make keeping Bristol Bay clean a top priority when considering the possibilities of Pebble Mine.

Please, seize this opportunity to create, expand and better protect America's \parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monumentt; also, please find new ways to support conservation of our farms, ranchlands and forests. Americans now and for future generations will be beholden to you, much as Teddy Roosevelt is now revered for his conservation efforts. This is an opportunity for you to place a major, positive stamp on your first term as President of the United States of America. I pray for you and our country daily.

I love the America's Great Outdoors Initiative; please use this exciting new opportunity to protect pristine areas like the redwood forests of the northwest coast and Bristol Bay's clean water and salmon. Our way forward MUST be through renewable materials and energy, so that strip mining, clear-cut logging and other industries that rely on the destruction of our beautiful national heritage can be replaced with alternatives that are sustainable and economically viable as well.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. Please make wilderness protection a central component of his policy emerging from the America's Great Outdoors Initiative. The BLM is currently bound by a directive from the previous administration to cease all wilderness assessments. I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

Republicans for Environmental Protection (www.rep.org) believes that we have a moral duty to ensure that future generations can enjoy America's great natural heritage. Specifically, we urge the administration to support and advocate the following: Designation of the Arctic National Wildlife Refuge coastal plain as wilderness. Permanent protection of roadless areas in our national forests. Expansion of North Cascades National Park in Washington State to include lands in the American Alps (www.americanalps.org) proposal. Presidential veto of any legislation that would weaken the Antiquities Act. Thank you.

Dear Secretary Ken Salazar, America's "Great Outdoors" are not vanishing by some spontaneous black hole. They are being actively destroyed by for-profit interests, and their protection requires the Administration to confront and stop these interests. You may start by desisting from further permits for the blasting of the Appalachian Mountains by coal companies, one of the Greatest Outdoors our nation enjoys. You can also stop issuing permits for the filling and destruction of wetlands by developers, and stop issuing timber sales and oil leases in our remaining wilderness landscapes. To make a contribution to America's Great Outdoors, the Obama Administration can simply stop doing harm.

Virginia and I applaud America's Great Outdoors Initiative by the Obama Administration. We are grateful to see the President making conservation of America's treasured outdoor places a national priority. Indeed, we see America's natural resources being threatened by expanding population, unguided development and climate change. We desperately need presidential leadership now more than ever to protect our wilderness quality lands so that everyone, now and in the future, may enjoy them. Virginia and I are asking the President: Please make wilderness protection a central component of your policy emerging from the America's Great Outdoors Initiative. We do so because the President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Currently, and unfortunately, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. And the Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both of these constraints can be lifted by direction of the President, and Virginia and I urge that this be done. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds and recreational opportunities. In closing, we want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. We look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

Our National Heritage includes the wildlands and the wild creatures. We are fortunate to have such a beautiful country with some of the most unusual and unique locations on earth. We are stewards of our home and it is our responsibility to ensure we conserve these wild places for ourselves and future generations. Each decision we make must take into consideration the seventh generation.

Especially with climate change upon us and likely intensifying immensely over the next 100 years, we need presidential leadership now more than ever to protect our wilderness quality lands so that they will be available as crops fail and there are massive population movements to escape devastating changes in regional ecosystems in the South and Southwest. Having places and pathways will be critically important not only for humans whose livelihoods fail, but also for the migration and protection of animal and plant populations in places they can fit ecologically. I'm asking the President to please make wilderness protection a central component of his policy emerging from the America's Great Outdoors Initiative. The President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Currently, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. Worst: The Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President, and I urge that this be done.

As a former resident of Alaska, I would like to express my opposition to the Pebble Mine in Alaska. The mine threatens Bristol Bay's clean waters, salmon, wildlife and tradition subsistence ways of life. The federal government should provide strong oversight of the Pebble Mine permitting process and analysis of cumulative impacts to the Bristol Bay watershed. The standards for mineral development in wetlands should be tighter and the Clean Water Act standards for large-scale metallic sulfide mining should be more stringent. I believe public lands in the Bristol Bay watershed should be closed to large scale mining. Protecting habitat, subsistence and recreation resources should be the top priority. Additionally relationships between federal and tribal governments should be strengthened. Best Regards

Open spaces and preserved farmland are important public amenities. It is totally appropriate for tax incentives, farm bill easement programs, LWCF and Forest Legacy to fund this work. Along with fully funding these programs, new and innovative strategies must be thought of and planned for so that this important work can continue

As part of President Obama's America's Great Outdoors Initiative, I suggest the following areas of New Mexico as being worthy of being included in the program designed to transform conservation and land management for the 21st century and leave a public lands legacy for future generations to enjoy. PRESERVE NEW MEXICO'S OTERO MESA Ranging across more than a million acres, Otero Mesa contains one of the last desert grasslands in North America. This Chihuahuan desert grassland is rich in native wildlife, cultural resources and potential wilderness. Additionally, the Mesa sits atop a large freshwater aquifer. The area, treasured by hunters and other backcountry recreationists, is near the growing populations of El Paso, TX and Alamogordo, NM offer outstanding opportunities for reconnecting Americans to our great outdoors. National Monument designation for Otero Mesa would permanently safeguard this national treasure, and would provide a huge boost for the local economy. We owe it to future generations to protect the untamed spirit of this wonderful place. For more information, please visit www.oteromesa.org . AN OMNIBUS PUBLIC LANDS BILL New Mexico needs an Omnibus Bill passed in this Congress, to include the following key pieces of legislation: Organ Mountains-Desert Peaks Wilderness Act This bill was designed by the community and is supported thousands of citizens, four local elected governments, two local Chambers of Commerce, half a dozen local sportsmen organizations, community groups and conservation organizations. The bill would permanently protect over 300,000 acres as Wilderness and National Conservation Areas, including Broad Canyon, the Aden Lava Flow, and the incomparable Organ Mountains. For more information, please visit www.donaanawild.org El Rio Grande Del Norte National Conservation Area On May 18, 2010, Congressman Ben Ray Luján introduced a bill in the House (HR 5334) to protect 235,980 acres in northern New Mexico. The El Rio Grande del Norte National Conservation Area Establishment Act is a companion measure to legislation introduced last year by Senators Jeff Bingaman and Tom Udall. HR 5334 was introduced to protect a huge area in north central New Mexico that encompasses the Rio Grande Gorge, Cerro del Yuta Mountain (Ute Mountain: proposed Wilderness?13,415 Acres), and the Rio San Antonio Wilderness Study Area (proposed Wilderness?7,992 acres). Representative Luján and his staff have met extensively with local ranchers, conservationists, and other constituents from traditional communities to ensure that the land and its traditional uses are honored and preserved for future generations. The legislation will protect tribal and traditional economic rights, including New Mexicans' access to the land for grazing and wood and plant harvesting.

Good Afternoon Dept of Interior, The proposed Pebble Mine in the Bristol Bay watershed should be stopped. Bristol Bays clean waters, wild salmon, wildlife and public lands should be protected from the destructive abuses that would certainly occur if the Pebble Mine became a reality. The federal government should do all in it's power to protect and save this valuable resource. There should be stronger relationships between the federal and tribal governments in the area to protect traditional tribal lifestyles. Standards for mineral mining in wetlands and Clean Water Act standards for large scale mining should be more stringent. Please stop the proposed Pebble Mine, prevent the gradual destruction of the diverse and productive Bristol Bay watershed.

To: President Obama, On the Preservation of America's Natural Wonders "If you ignore beauty, you will soon find yourself without it...But if you invest in beauty, it will remain with you all the days of your life." ~Frank Lloyd Wright I LOVE Beauty – beauty in all its intricate and splendid forms – be it, a spectacular sunset descending into the pink hue sky, a school of dolphins charming us with their spins and flips, a tiny hummingbird hovering before our very eyes, a beaver building a dam, horses running in freedom and ecstasy through a meadow of lilies and daffodils, a rugged mountain challenging us to climb, or simply a quiet walk through a dense forest – the list is endless. As you have admired works of art in the finest of museums, I invite you to imagine this magnificent planet as a canvas upon which a higher power has created and manifested the most stunning, staggering and breathtaking beauty of all. One need only be conscious of this remarkable beauty – the rugged mountains, pristine lakes, roaring seas, remarkable wildlife and rich forests – to understand the magnitude and critical level of importance in its preservation. "In all things of nature there is something marvelous."~Aristotle The great outdoors is "Free" medicine for the mind, body and soul. · The great outdoors "connects the spirit to nature" – it nourishes and feeds the soul with its intoxicating beauty. The oxygen we inhale in the great outdoors has reviving qualities, is healthy and pure, and keeps our spirits youthful. · The great outdoors clears the mind of everyday stresses, while giving us the ability to view life in its true perspective. · The great outdoors strengthens and tones the physical body, helping to keep disease at bay. · The great outdoors brings families closer together as they rally in joy at the prospect of hiking together, with pets in tow, on a glorious Saturday afternoon. · The great outdoors offers the outdoor participant the rare opportunity to be an observer of our precious wildlife in their natural habitat and hopefully instilling a newfound understanding and appreciation. · The great outdoors may even save a marriage or two as the couple reconnects through laughter or admiring the beauty of nature as it unfolds before them. · The great outdoors may help to instill values and respect in children, and get them off the computers every now and then. "Our task must be to free ourselves...by widening our circle of compassion to embrace all living creatures and the whole of nature and its beauty."~Albert Einstein Now, it is up to us, to live up to the task as responsible stewards of the earth to protect our natural treasures, our natural heritage, and magnificent wildlife. Our public lands are continually challenged and stressed with increasing development and pollution pressures, and climate change posing the gravest risk of all. It is time to take bold and urgent action to protect our land, water and history for generations to come. As scientist estimate that 20-30% of species could become extinct by 2050 as a result of climate change, it is time to take the critical steps needed to protect habitat and help species in peril by making this a top priority. Dedicating long-term funding for natural resources adaptation strategies is one important step the Administration can take and the development of a national adaptation strategy that clearly delineates how natural resource agencies should practice climate-smart conservation. Seize the opportunity for a stronger and more united America by creating, expanding and better protecting America's shared outdoor spaces – protect wildlife habitat, clean up our rivers, expand our parks, conserve working farms and forests, create more trails and places for kids and adults alike to simply enjoy the great outdoors in this great country. As well as our wildlife, our prec

As a retired employee of the State of Michigan for 27 years and former President of the Natural Areas Association, though not speaking for either, please know I fully support the provision for more resources to conserve, survey, manage and monitor our shared outdoor spaces: parks, wildlife refuges, wilderness, trails, rivers, monuments and forests and biodiversity & to work with states & land trusts to do so.

Land conservation ranks among my top two or three concerns for the future of our country and our planet. Thank you for launching America's Great Outdoors and recognizing the work of America's 1,600 land trusts. Keep up the good work, by the way!

Dear President Obama and staff: The AGO initiative has brought long overdue attention to the importance that our natural lands bring to the quality of our lives. Please keep and increase the tax incentives and grant programs that have helped land trusts conserve the farms, forests and waters that we so love.

I was honored to attend the roll out of Great Outdoors America in April. Getting to hear you speak in person was one of the great moments of my life. Thank you for mentioning land trusts in your speech. From those inspiring words I know you realize how important it is to keep agricultural lands in productive use and protect important wildlife habitat. I am the Executive Director of a small local land trust that is doing big things in Colorado's San Luis Valley, the Rio Grande Headwaters Land Trust. We work in the landscape that Secretary Salazar and Representative Salazar call home. As you know from knowing them, the landscape the people here personify the west. With that, they are often land rich and cash poor. Therefore tax incentives, farm bill easement programs, LWCF and Forest Legacy has helped us our other partners who work in the San Luis Valley conserve more than 300,000 acres in the Valley alone. Please continue to make the conservation of private farms, ranches and forests a centerpiece of your initiative.

I want the next generation, including my newborn son, to enjoy America's great outdoors too. I want to thank the President and Secretary Salazar for their efforts to expand and protect our shared outdoor spaces including parks, wildlife refuges, wilderness, trails, rivers and monuments and to conserve our farms and forests. I hope that Congress will get beyond the bickering and ensure these programs are funded!

Hello, My sister and brother in law make their living fishing off Bristol Bay in the village of Eruk. My wife and I went to visit them at their fish site and help fish for 6 tides. The experience was eye-opening, and fantastic. We met Alaskans of all stripes, natives, old-timers, and newcomers. All benefited from the bounty of the Bristol Bay fishery. The fish are phenomenal. It is beyond comprehension that anyone would consider placing this priceless fishery at risk, but clearly those who shortsightedly favor developing the Pebble Mine are doing just that. Once an ecosystem like Bristol Bay is compromised it can never return to its pristine, bountiful state. Please tighten wetlands protections in the regulation of mineral development. Please ensure that oversight of the Pebble Mine licensing process takes into account cumulative impacts on the Bristol Bay watershed. Please strengthen the Clean Water Act for large-scale metallic sulfide mining. Please stop the Pebble Mine and preserve the Bristol Bay fishery for generations to come.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. It is inspiring to see the President make conservation of America's treasured outdoor places a national priority. Our natural resources are threatened by pressures like expanding population, unguided development and climate change. We need presidential leadership now more than ever to protect our wilderness quality lands so that future generations may also enjoy them. I'm asking the President to please make wilderness protection a central component of his policy emerging from the America's Great Outdoors Initiative. The President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Currently, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. Worse, the Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President, and I urge that this be done. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds and recreational opportunities. Again, I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

what ever happened to the saying "this land is your land, this land is our land" ?? we are losing public land at an alarming rate. i wish for my children to be able to enjoy the outdoors i grew up in or atleast close, because lots have changed already, if we keep going we're going to be stuck in overpopulated cities. There will be a band of outlaw outdoors ORV riders for surely. please let me use what little land is left for me and my children to use. we hike, fish, camp, ride ORV's so we pretty much fill the realm of all around outdoor people. its public land and should remain as so. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation. The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less.

It is inspiring to see the President make America's Great Outdoors Initiative a national priority. We need presidential leadership now more than ever to protect our wilderness quality lands so that future generations may also enjoy them. The President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds and recreational opportunities. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

I love our nation's deserts--from the Joshua Trees of the Mojave to the great Sauros of the Sonoran Desert to the beautiful pinyon and junifer forests of the Colorado Plateau. I want the next generation to enjoy America's public lands too--especially the fantastic wild areas managed by the BLM . I urge leaders in Washington to protect our public lands--especially those managed by the BLM that have been neglected for so long. Our deserts and arid lands will be profoundly affected by climate change. We need to save the best of what is left and manage the rest to sustain us all. Thanks.

No mine

America's Great Outdoors, I have been visiting Alaska since 1983. In my view, it is one of the most beautiful places on earth, deserving of our protection for future generations. The Pebble Mine at Bristol Bay is a really bad idea. I went to college with a gold miner who is now notorious for poisoning Canadian wilderness with toxic mining practices. Once pristine lands like these are contaminated, their legacy lives on in misery and blight. Let's stop this disaster before it happens, and keep Bristol Bay clean and safe for wild salmon, wildlife, and traditional subsistence ways of life. Say no to the pebble mine.

I believe we have a responsibility to protect this nation's treasured places for future generations of Americans. That is why I would like to see the promise of full, dedicated funding for the Land and Water Conservation Fund (LWCF) fulfilled in order to achieve the Obama Administration's conservation vision for the 21st century. LWCF is a simple idea that remains as important today as it was 45 years ago when President John F. Kennedy enacted it into law. Please support full, dedicated funding of LWCF to protect clean drinking water, support jobs in local economies, and conserve our common heritage and natural areas for wildlife, recreation, and for our children and grandchildren to enjoy.ago when President John F. Kennedy enacted it into law. Please support full, dedicated funding of LWCF to protect clean drinking water, support jobs in local economies, and conserve our common heritage and natural areas for wildlife, recreation, and for our children and grandchildren to! enjoy.

(cont.)

Dear Oversight Chairperson, The pending operation of Pebble Mine negatively impacts the Bristol Bay area. The Bristol Bay environs support wild salmon and wildlife in traditional ecological-cycle ways and the introduction of Pebble Mine activity threatens the inter-dependent subsistence chain and will have a long-term detrimental effect on the entire region. Public lands should be protected for the public in the most fundamental and generic ways. Large-scale metallic sulfide mining should not be allowed. Furthermore, protecting habitat and recreational resources should be a top priority. Thank you.

Dear ago, Pebble mine must be stopped! In June of 2004, I had the amazing experience of salmon fishing in the very waters that would drain the runoff from the Pebble mine. This would be an environmental disaster of biblical proportions, similar to the tar sands in Alberta. I simply cannot imagine a such a pristine environment being takeover by a large-scale metallic sulfide mine for which the Clean Water Act standards are woefully inadequate. This project must be stopped now!

I spent my childhood in the midst of strip mines in Virginia. I moved to Idaho and then Washington only to discover clear cuts. Because we can do something doesn't mean we should, certainly not for the financial gain of a few. The environment belongs to us all. Messing with one part of the environment messes with the whole of it. Leave Bristol Bay alone.

Folks, I am writing this email in response to the disastrous possibility of the Pebble Creek Mine in Alaska's Bristol Bay region. I visit this area each year in search of the monster rainbows this area sports. Yes, I am a consumptive user of the outdoors and wish to voice my opinion on this proposal. I think there are places to mine, and this is not one of them. This mine will affect so much of our national heritage, that is has to be stopped, right now! I am not normal against this sort of thing, but I think this is a bad idea all the way around. Thanks for your time,

Hi can't log in or register. Any help would be awesome Want to save the enviroment

Let's learn from our mistakes for a change; at mines similar to the one proposed at Pebble Bay, 85% have polluted the nearby water. Leave Pebble Bay untouched and safe for the people and animals that live there. Who wants 9 million tons of waste, a 2 mile long waste pit, disrupted salmon migration. This is public land, regardless of President Bush's management plan to 'open' it up to mining.

Hello, It disturbs me every time I hear of another assault on what is left of our wildlands and wildlife, as with the attempts to begin Pebble Mining in the Bristol Bay area. Other than the profits to the few who will benefit from it, it can only hurt a great deal more wildlife habitat, salmon runs, local residents, and whatever other "collateral damage" will inevitably happen. Please take the side of preserving the best of what we have left instead of allowing the continued exploitation of our as yet unspoiled outdoor spaces! Thank you.

(cont.)

Why is it that you folks WE THE STUPID PEOPLE elect do things most of us think is just plain stupid? This Pebble Mine business for instance. Here we have a perfectly clean environs,net, Bristol Bay, and big business is going to run you dunderheads in another big chase and circle, all for the sake of of risking metallic sulfides if and when this mine operation goes into effect. Oh, don't get me wrong. I know how you're going to vote on this matter, just like you folks always vote - weak, though with a diluted compromise. So, why not grow a pair and do the right thing for a change: close down that operation and open up your minds for a change. Otherwise, you know damn well you're going to create another environ,entail hazard and shrug your shoulders saying words to the effect, "Gee, never thought that would happen. Those mine officials even told me everything would work out just fine." Come on people in power - wake up and listen to the wisdom that says "What harm do to this planet, its environment, you also end up doing to yourself."

Dear Sirs: I have major concerns with the proposed Pebble Mine project. Let me start by saying that I am generally for a cooperative private enterprise/public interest policy. In most cases I would prefer that the federal government stay out of the private sector, unless there is a compelling public interest at stake. For example, I generally support most oil drilling project unless it can be clearly shown that there is likely damage to the environment. I greatly appreciate the natural environment and have enjoyed outdoor recreation most of my life - I believe we must be good steward of the creation with which we have been entrusted. The Pebble Mine project appears to be a clear and imminent catastrophe just waiting to happen. The rare treasure of western Alaska is a jewel to be protected. There appears to be so little benefit from this project compared to the great peril it presents to the environment and the economic welfare of the whole region. I would encourage the federal government to do all that it can to halt the project. Thank you.

Ladies and Gentlemen of the Obama Administration and relevant agencies: Alaska's Bristol Bay is another spectacular example of treasured wilderness that should be protected from large scale degradation. The natural beauty and teeming wildlife of this great region would be forever impacted by the destruction brought by a project such as the Pebble Mine. The traditional fishing patterns of Alaskan native peoples in this area would also be severely affected. Doubtlessly, the area also contains non-renewable archaeological and other historical sites. While impacts to these resources might be somewhat mitigated through careful pre-construction measures, the loss of timeless landscape, old growth forests, and marine environments are not. These effects will last for generations, as they are likely to in the Gulf of Mexico and elsewhere. The need for another ugly and massively destructive project such as the Pebble Mine is difficult to understand. The beauty of the Bristol Bay ecosystem is far more valuable, and the entire watershed should be closed to metallic sulfide mining. We need to protect Bristol Bay and other places like it by prohibiting permits for needless, destructive developments of all types. We also need to strengthen the standards represented in the Clean Water Act, and to enhance the relationship between the federal government and native councils, particularly in matters as damaging to the environment as the proposed Pebble Mine. Please keep the Pebble Mine out of treasured wilderness such as Bristol Bay, and direct them instead to areas that have already been irrevocably marred.

Discussion Question 1

Written & Online Comments

(cont.)

Hi! I am writing to express my concern that allowing large-scale metallic sulfide mining at Pebble Mine will threaten Bristol Bay's clean water, wildlife, salmon, and tribal subsistence ways of life. I would like to see the federal government provide strong oversight of the Pebble Mine permitting process, with tighter standards for mineral development in wetlands, and more stringent Clean Water Act standards for large-scale metallic sulfide mining. Otherwise, the cumulative impact of the proposed mining on the Bristol Bay watershed will be devastating. I also think it would be really productive for the federal government to work more closely with the tribal governments in the area to protect Bristol Bay. Thank you for considering my opinion.

I want future generations to enjoy America's great outdoors too. I urge leaders in Washington to expand and protect our shared outdoor spaces including forests, national parks, wildlife refuges, wilderness, trails, and rivers. We need to find "best practices" to ensure sustainable environments, e.g., forests need to be managed, not just protected. Trees sometimes need to be cut down!

Mr. President and Mr. Secretary, After reading hundreds of the comments on America's Great Outdoors, it is clear that there is great diversity of opinion and high emotion on both sides of the environment issue. It is also clear to me that if the health of our public lands and wildlife habitat is up to credulous and ill-informed public opinion, there is no hope for our once great natural endowment. As a prime example... who, in possession of his mental faculties, authorized the open pit Pebble Gold Mine in Bristol Bay, Alaska?! The Guns and OHV Crowd is fired up at the "threat of Left Wing radical Environmentalists taking over their country." They are furious at the notion of introducing Environmental Sustainability studies into public education, asserting that it is THEIR job to teach their children environmental values, as if Sustainability were a Belief. And they have been conditioned to accept as gospel that America's greatness is synonymous with our aggressive ethnocentrism, and our unregulated freedom to exploit natural resources, whether on U.S. soil or that of other nations, regardless of the harmful cost to living species and their habitat. The Responsibility to Preserve and Protect the Commonwealth is delegated by The People to elected and appointed government officials, who have taken an oath to do so. Their mandate is to sustainably manage the Commonwealth for the benefit of All Americans, not to give equal weight to the demands of All Claimants, nor to Average the results of public polls, such as America's Great Outdoors, and let that Average dictate public policy. No, to Preserve and Protect the Resources held in Common by the People of this country will necessarily require moderating and regulating those uses that devalue and contravene the quality of the Commonwealth, or restrict responsible and respectful access to it by The People. This responsibility is the mandate of the Secretary of the Interior. And he and the President, and the Congress will be held accountable, at the Polls and in the Courts, for proper implementation of wholesome, sustainable regulatory policies.

(cont.)

You are well aware of the plan to turn the breathtakingly pristine area of the Bristol Bay in Alaska into a very large and wildlife-threatening Pebble Mine. Although it is a fact that some development and mining must happen, to sustain our society, I strongly believe that we must also keep well in mind that we must sustain our most beautiful landscapes as well. Therefore, as someone who deeply cares about the spectacular wilderness areas in our world, I request that this mining plan be heavily reconsidered. The Pebble Mine would pose as a huge threat to the precious waters of the Bay, not to mention the incredible varieties of life within it. These wonderful fish and other fauna could experience a sever drop in population, something not at all desirable to anybody. In addition, the amazing land wildlife living around the area would soon have their homes and lifestyle destroyed, a tragedy all too common in our modern, industrial world. Standards for this type of mineral development in wetlands and other wilderness areas should be more stringent anyway, for the sake of the cleanliness and wondrous beauty of the earth. Limiting or even stopping the Pebble Mine plan would set a huge precedent for wild land conservation, something which is very difficult to disapprove of. This is a great opportunity to begin to make the world a place that balances successful industry with successful conservation. Thank you for taking the time to read these comments, and I hope that you will agree that the time has come to save special places such as these. Ronen Schatsky

Bristol Bay and also other Alaskan wilderness area, including the arctic ocean, are far too important for the environment, climate and as habitat for endangered species and should not be destroyed by any mining and drilling activities. Besides that, mining activities will destroy livelihood of native Alaskans who depend on salmon fishing. please do what is right for us now and later!

Hello!! I would like to be able to take a moment to express my concern on the possibility of a mining adventure to take place near the Bristol Bay in our beautiful state of Alaska. Today with the changing needs of the world. We must start to see that we can preserve the unspoiled areas of nature in the raw (the way it was designed to be forever). We can but all safe guards in place to protect it, but we have seen lately and in the past, that safe guards can fail, with the loss of the area that was to be protected. Once lost it can never be replaced or brought back to the way it was meant to be. Therefore I'am asking that this mining project be omitted in the sake of unspoiled nature. Thanking you for your time.

Thank you for the opportunity to express my opinions about protecting our treasured natural wildlife and wilderness areas. I am particularly concerned about Bristol Bay and the prospect of the Pebble Mine operation ruining that irreplaceable watershed that is essential to the overall health of a huge area. The mining operatiion would be massive, destructive and would generate tons of waste. The fact that foreign businesses want to build the mine is also upsetting. What do we get from it? Money?? I think that whatever money we might get in leases, etc. would be eaten up with efforts to reduce the massive pollution and devastation of the other resources in that priceless area. It is imperative that there be a thorough analysis of the impacts of large-scale sulfide mining, and I believe that the conclusion will be that no such operation is acceptable. . Finally, the standards of the Clean Water Act must be applied and should be made even more stringent. Again, thank you for accepting my comments.

(cont.)

Please protect Bristol Bay from destruction and degradation from mining. Once it is destroyed or polluted it is too late. We, as represented by our government, have a responsibility to protect habitat, wild lands and beautiful outdoor spaces for subsistence and recreation and for future generations to enjoy. I ask for tighter standards and strong federal oversight of the mining permitting process and impact analysis within the Bristol Bay watershed and for mineral development in wetlands generally. And also for the federal government to work more closely with the tribal governments in this area and in these situations. Thank you.

Thank you for launching America's Great Outdoors Initiative and having the federal officials visit Maine to listen to us. You wanted to know what works. Tax incentives, farm bill easement programs, especially LWCF and Forest Legacy programs work. The Woodwise Program was very successful and should be reinstated. Please make the conservation of private farms, ranches and forests a priority.

Please protect Bristol Bay. The Pebble Mine threatens Bristol Bay's clean waters, wild salmon, wildlife and threatens subsistence ways of life. Public lands in Bristol Bay watershed should be closed to large scale metallic sulfide mining. We should protect habitat. Subsistence and recreational resources should be the top priority. The Federal Government should provide strong oversight of the Pebble Mine permitting process and analysis of cumulative impacts to the Bristol Bay watershed. Relations between federal and tribal governments should be strengthened and standards for mineral development in wetland should be tighter. I believe that the Clean Water Act standards for large scale metallic sulfide mining should be more stringent as well. If we don't act on behalf of our precious environment, then who will? Yours truly,

On behalf of Tennessee Citizens for Wilderness Planning, a statewide environmental advocacy organization, here are important points to consider in formulating a 21st century agenda to connect Americans with our public lands. Our treasured national parks are a key element of our great outdoors, highlighting our natural and cultural heritage. It is imperative that our parks be maintained adequately, which is not now the case, and that our incomplete parks be made whole. Of particular concern to Tennessee Citizens for Wilderness Planning is the Obed Wild and Scenic River (OWSR). This unique pristine river gorge is lacking about 1/5 of the land in the authorized boundary. As with most special places, the development community sees opportunity for growth. These unacquired lands should be conserved by immediate purchase. The Land and Water Conservation Fund (LWCF), which has been chronically, shortsightedly underfunded, must be fully funded. Every year, \$900 million from federal Outer Continental Shelf (OCS) drilling lease proceeds are supposed to be dedicated to the LWCF. There are critical opportunities to improve resource security and recreational opportunities. A fully funded LWCF would enable successful use of these opportunities. Land managing agencies should be directed to revise policies that hamper or prevent wilderness review. This positive step could be handled by Executive Order. The growing disconnect between America's youth and our natural world cries out for direct, engaging educational materials for agencies and schools. Early familiarity with the importance of our natural world and how it connects with America's quality of life and prosperity would greatly increase public appreciation and use of our public lands for recreation. We urge the administration to apply creative ideas to the issue of dwindling staff resources, including internships, summer work programs, and work/study type programs in our education systems. Finally, our public lands should be widely recognized for and advertised as national treasures that protect our water supply, foster biodiversity, and offer opportunities for physical, mental, and spiritual health.

I run a small, field-based science program for kids, the main objective of which is to get kids outdoors, observing and learning from their natural surroundings. In my area, off-road motorized use has had huge impact on public lands. I believe that in addition to education, enforcement of existing laws that protect riparian areas, tundra and wilderness is key to the future health of our lands. Thank you for your consideration.

I'm with the California Office of Historic Preservation and we're currently working on an update of our Statewide Historic Preservation Plan. Our State Historic Preservation Officer recently attended two of the AGO listening sessions and was very impressed with them. As a result, we're looking to incorporate a few listening sessions into our public outreach efforts. We would like to be able to tap into any experiences your folks had with conducting the AGO listening sessions in terms of what worked well, and what didn't work so well. I'm not sure who might be the best person to talk to about this, so I thought an email to this general address would be the best approach. Thank you in advance for seeing that this email makes its way to the appropriate people. We would love to arrange a conference call with one or more people on your end who can spend a few minutes talking about their experiences in pulling together and hosting the listening sessions. Thank you again, and I look forward to hearing from you.

To Will Shafroth and the rest of the America's Great Outdoors team: Attached please find a brief letter from the Land Trust Alliance reaffirming our enthusiastic support for the America's Great Outdoors Initiative and summarizing our most important aspirations for the report. We realize this official submission comes rather late, but hope it will be helpful in summing up the themes you've heard time and again in conversations with land trusts over the past six months. We are deeply appreciative of your commitment to an open process, which has allowed our diverse membership to talk about the conservation tools that will do the most to support conservation in their communities. As always, please feel free to contact me (or our senior leadership directly) if you have any questions. Thanks again.

This summer we had the honor to finally be able to visit and travel in Alaska. We have been waiting for this for 14 years. My husband and I met when we were in college and both grew up in the outdoors hiking, biking, and camping. We went to college and post-graduate schools and worked until we got to the point we felt we had earned the right to go. We spent 2 weeks in Alaska hiking and visiting all these wonderful places. Alaska is the greatest and most awesome place I have ever seen and unlike anything we have down here in the lower 48. As we drove along the scenic byways, it was unbelievable to see mountains rising right out of the sea. It made me proud to be an American and to know that there are still some places in this country we haven't ruined yet. Please keep not only this area of Bristol Bay protected and clean but all of our National Treasures so my family and my future generations can stand in wonder and awe at this beautiful and inspiring country.

Focus on education, individual computers in classrooms, code teaching widely distributed, inclusive.

Treat the earth well: it was not given to you by your parents, it was loaned to you by your children.-Ancient Indian Proverb. I was always taught to make sure anything I borrowed was given back in as good of shape as I received it in or better...If we continue on our current path our children will have little. It seems like a no-brainer to me...short term gain by one of our corporate handlers and long term devastation VS the wonder and beauty forever of an intact ecosystem. The rampant destruction of our planet for our convenience orientation and corporate bottom lines is mind boggling. Please leave Bristol Bays magic for generations to come.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative BUT STOP exploiting OUR PUBLIC LANDS and WILDLIFE. STOP THE HORSE AND BURRO ROUNDUPS. You are destroying herds and it is all totally unnecessary and a burden on tax payers. Your policy in this regard is disgusting and needs to be investigated and challenged. WHERE IS THE TRANSPARENCY. We want answers as to the WHY???? We absolutely KNOW it is not for overpopulation, lack of food or water in MOST cases. These are America's Horses and Burros. These animals walked and worked right beside men and women building this Country. It is on their backs and with their ancestors blood that we have an AMERICA. They deserve to be cared for and PROTECTED UNDER THE LAW. This is just one issue concerning our public lands and while it may not always be easy to find alternate solutions to annihilation of species it is imperative for this Nation that viable solutions are found that enhance our wildlife and OUR PUBLIC LANDS. The special interest have had their way for far too long and it's time that the American citizens have their say.

I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

When I think of America's Great Outdoors, I think of our National Parks. The message you will receive in most of your emails regarding the parks is articulate and professional. I want to send a personal message of how the parks impacted my life. I am a 67 y.o. child of a deceased veteran. My mother was left a single parent when my father was killed in the Battle of the Bulge. She remarried a veteran who had been in a prisoner of war camp. We weren't fortunate enough to have much to live on but we did have the outdoors and I remember many family vacations in National Parks in Washington State. Summer time was a time for family vacations and family vacations meant time outdoors. My husband, a retired teacher, and I raised three children with the same love of nature and the outdoors. Again, we weren't blessed with funds for fancy vacations but summers were long and the National Parks called us to wonderful family vacations. I am saddened when I think of all of the families are not able to avail themselves of the National Parks and hopeful that we will find ways to sustain these treasures for generations to come. Thank you

The National Parks and all their programs and facilities are amazing . They need to be maintained to be the site of many restorative,fun and educational visits by us all. I didn't go to the listening session held in Albuquerque,but I thought it was a very responsive meeting to have organized. I hope that such meetings encourage young and old to work at maintaining the important link between people,land and wildlife. The Great Outdoors initiative is inspiring.

You should put the unemployed to work in the parks and provide a stipend to lower income seniors who wish to help.

(cont.)

Dear President Obama - I wanted to write to express my support for the objectives of your America's Great Outdoors initiative. I'm sure you'll receive plenty of messages that include text prepared by the NCPA. While I agree with what they write, I wanted to add my personal perspective. My family just returned to the Chicago area last night from a two week driving vacation across the plains and to the Rocky Mountains. Along the way, we visited four National Parks, four National Monuments and a number of other wonderful outdoor places. We thoroughly enjoyed the opportunity to be in the outdoors and experience such vast open spaces of diverse geography, geology and wildlife. Seeing animals such as bison and eagles in their native habitat was especially thrilling for us city folk. We even had the opportunity to "rock hound" for agates at a National Grassland. While Yellowstone and the Tetons are certainly special places, we also benefited from the other types of places in the National Park System. Our visit to Pompey's Pillar National Monument in Montana connected directly to my ten-year-old daughter's study of Lewis and Clark's expedition in school this past year. It added a great dimension to her knowledge of that part of our history. One of the last stops on our trip was at Pipestone National Monument in Minnesota. While this is probably among the lesser known sites in the Park system, it provided my whole family a fantastic insight into an important element of Native American history and culture. I doubt we would have learned about this anywhere else. During the trip, our daughters participated in some of the Junior Ranger programs available at the various sites. This was a fun way to enhance their learning. I am a strong supporter of the National Park System and all that it offers us and visitors to the US. Thank you for your continued support of making these great outdoor experiences available to all!

America's national park system is a model other countries aspire to. Our parks are a national treasure and truly belong to everyone. Please support them by protecting their integrity (e.g. limit use of ATV's on park land) and by providing appropriate funding.

When I was in my 20s, I worked for 1 year for the Wisconsin Conservation Corps, and earned a scholarship, which got me into college. It was a great experience, and I think the country should reinstate the Civilian Conservation Corps that it had in the years of the Great Depression.

(cont.)

I applaud your Great Outdoors initiative! Every day, but especially in difficult times, we desperately need the great natural world to be accessible to allow us to de-stress, recharge, and find spiritual renewal. Of course the greatest of the great outdoors is our unparalleled system of national parks. Having just returned from Badlands NP (my 16th National Park!), I can give unqualified testimony to the great joy and much needed perspective that comes from spending time in these miracles of nature. As a top priority of your initiative, I urge you to follow the advice of the National Parks Second Century Commission, who have spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. Also, provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. Please don't let this become another broken federal promise. --Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. --Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people; e.g., the Park Service's Rivers and Trails Conservation Assistance program. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country and protect remaining natural areas before we use them all up. --Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times. Thank you for considering my comments.

When I think of my country, I think of our national park system! Whenever I host visitors from other countries, our national parks are one of the first things I mention. National parks play a tremendous role in our great nation's history, and is one of the top reasons why people from around the world come to visit the United States. They are a preservation of our cultural identity, and contribute to our health and education. They also serve as a basis for conservation and recreation for millions of citizens each year. I would like to see the the Obama administration support the following: --Listen to the advise and findings of the National Parks Second Century Commission, as well as those individuals who work within the NPS from rangers to adminitrators. --Forter collborative relationships between the NPS and private institutions to prepare our parks for the 21st century. Individual Americans need to be mobilized with a sense of ownership of these amazing natural resources! --Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise!!!!!!!! --Use modern social media and communications to develop innovative programs that inspire and educate young people about conservation, environmentalism, renewable resources and technology. The Department of Education should work with the Park Service to develop these programs which would protect our National Parks, and at the same time allow them to participate in America's energy revolution. --Use the NPS's experience and knowledge, like the Rivers and Trails Conservation Assistance program, to help cities with green space, community environmental rehabilitation, and to develop urban trails and greenways. --The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future. Thank you for considering my comments.

(cont.)

First of all I would like to thank you and the government for providing funds from the stimulus package to help improve my neighborhood. That happens to be the Great Smoky Mountain National Park. You may not know it but we do not receive any funding from the public sector. The people of Tennessee and North Carolina stipulated when they gave the land to the government that the public never be charged to enter the Smoky Mountains and it is still a free park. The funds we have received have made some much needed repairs to the roads and public areas of the park. So We appreciate the work being done. However, we need more work to be done here and in all of our parks. So please continue to invest in the great American outdoors. And by the way, we would love for you to come and visit us one of these days. The Smokies are a beautiful and glorious place to see. Thanks for all your hard work. I appreciate it and many of us do. Even though I live in a Republican strong hold, (we moved here from the Chicago area) I still keep my Democratic ideals. God Bless you and your family.

When my children were growing up, we spent many vacations in our National Parks, driving and flying from our home in New York to Yellowstone, Grand Tetons, Glacier, and many others. Now that we have grandchildren, we take them on National Park vacations. Our National Parks are priceless and deserve your full support and funding.

Discussion Question 1

Written & Online Comments

(cont.)

Our National Parks are our heritage. So many are in disrepair from lack of funds spent on them. These are wonderful places for families and outdoor education. Your administration has the ability to put parks back on track. The parks offer a chance to hire young folks to learn skills to repair them, much like the CCC of the Roosevelt administration. Use funds already set aside to pay for this work. So many college grads too are out of work. Many talented young folks could work and learn as well. College academic skills should not be all that is important. Listen to the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. The upcoming Park Service centennial is a perfect start to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. Provide permanent, mandatory funding for the Land and Water Conservation Fund. SEVENTEEN BILLION DOLLARS in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. Use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences. Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country. -We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollar

Written & Online Comments

(cont.)

I hope you and your family enjoyed your recent vacation, and I was very pleased that you chose to spend part of it in one of our country's fabulous National Parks. The stories and pictures of you and your family enjoying our great outdoors and participating in physical activities such as bike riding and hiking, is worth more than just telling people to engage in those activities themselves. Growing up, my family took many road trips and visited several National Parks, including Carlsbad Caverns, the Grand Canyon, and Big Bend. Now with children of our own, my husband and I make it a priority to visit as many National Parks or Monuments or Historic sites as we possibly can on our travels. Living in the beautiful Pacific Northwest, we are so lucky to have several such places nearby, and we in fact visit Olympic National Park, North Cascades National Park, and Mount Ranier National Park every year. One of our favorite vacations was a few years ago when we visited Washington D.C. and all of the monuments there, as well as several historic sites such as Antitem Battlefield and Monticello. We have the National Park Passports and collect stamps for all of the places we visit. As you know and understand, these places are filled with wild, grand beauty that cannot be experienced without going out of the cities and into these back lands. Our emotions of these experiences are difficult to explain, and even pictures don't do them justice. One has to get out and be there, with nature, to feel the awe that this great country holds in its heart. I urge you to help other people have these experiences. With our youth today spending so much time indoors, inactive, it is imperative that you support AND promote legislation that protects these vital national resources and finds ways to introduce these treasures to our youth. Thank you for listening and doing your part.

I have had the privilege to spend time once again in our first National Park, Yellowstone. This profoundly rewarding time means many things to me. It reminds me of the beauty that surrounds us in this world and its fragility. It tells me of all the efforts necessarily spent by others to secure the preservation of this wondrous park and all the others. In telling that story of preservation, I also must consider all those interests which sought to exploit places like Yellowstone and, though often unintentional, to alter them forever. Our nation's best idea is surely the idea that preserved. We must always rededicate ourselves to that commitment, for commercial exploitation, part of our genuine economic needs, will always threaten to forever change what's been saved to this point. I need only point to the Gulf of Mexico to suggest what that looks like.

(cont.)

My family and I consider National Parks to be a vital part of our country's legacy. When you are making big decisions about the support the national government will provide to these vital parks, I hope you will consider the following points: 1. Time spent in the wilderness is healing, inspiring, and educational. 2. Vacations in a National park are affordable, and therefore especially valuable for families. 3. These parks are one way Americans can connect not just with the wilderness, but with each other. If you visit a campground, you will know this is true, as license plates from all over the country are visible in the parking lots, and people meet and speak with each other with an ease lost to many in modern life. This connection is what keeps us patient with each other's differences, and determined to understand one another's choices. 4. It is Yosemite, the Badlands, Gettysburg and Yellowstone that is our unique gift to tourists. New York City, San Fransisco, Disney World are all fine and good, but when a German or French or Japanese Tourist stand at the Grand Canyon, they learn something about the American spirit no city can embody. 5. Dollar per dollar, the money spent to protect our wilderness, hire and train our Rangers, maintain our parks and campgrounds benefit us individually and collectively in a most cost effective manner. 6. Ours is a family with a great love for the outdoors. When our son returned from a year in Iraq, fighting door to door with his infantry unit, he was wound up pretty tight. My husband and I suggested a camping trip. We headed to upstate New York....in the day time we visited historical battlefield sites such as Saratoga, and camped in parks at night. The combination of days of vigorous walking, as my son and husband shared stories about battles they had studied or experienced, and quiet nights under the stars, with a small campfire crackling allowed my son to decompress and start the healing. Please keep such images in mind as you proceed with "America's Great Outdoors" Initiative.

I am so pleased to learn of the "America's Great Outdoors" Initiative that was announced in April. Being in the outdoors is such a significant aspect of a healthy and vigorous lifestyle. The breath-taking beauty of the natural environment throughout the United States has an awe-inspiring and spiritual component that every individual should be able to experience and appreciate. I encourage and support the effort to ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. I also support fully and permanently funding the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Equally as important is to strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to not only protect our national parks, but to also protect the wildlife, plants, and rivers beyond park borders. Many of our wildlife species cannot survive simply in isolated pockets of our national parks. Species, particularly the mega-fauna, must be able to migrate and to disperse across regions so that a viable gene pool is maintained. A good example is the Yellowstone to Yukon (Y2Y) initiative to preserve wildlife corridors on both public and private lands. Most importantly it is necessary to improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. If our children are not exposed to "America's Great Outdoors" and learn to value the outdoors, there is a real danger that the natural resources, wildlife and natural wonders of the United Sates will not have a voice of support for the future.

(cont.)

I'm responding to the Obama Administration's request for comments on his America's Great Outdoors initiative, One key aspect, I think, relates to our national parks. National parks help connect people to the outdoors, preserving the natural and cultural diversity of our nation and contributing to the health of our people. We love to visit the parks to enjoy their beauty, stimulate our energy and to learn about our ecology, conservation and history. We urge the administration to heed the advice of the National Parks Second Century Commission, a group of respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. It also is important to provide permanent, mandatory funding for the Land and Water Conservation Fund. This money should be spent to support our parks, seashores, forests and waterways, Please evaluate and consider new sites to allow the national park system to protect remaining natural areas. A recent study by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased by nearly 4 percent, demonstrating the enhanced value of our national parks to our people even in difficult economic times. We Americans care about the future of these wonderful places, hoping they will be there for our children and grandchildren. National parks are good investments in our future.

It distresses me to think that, in a year of the so-called "America's Great Outdoors" Initiative, AmeriCorps funding has been withdrawn from the spectacular programs of the Northwest Service Academy in Washington and Oregon. NWSA volunteers donate months of their lives that often lead to years of service in conservation, natural preservation, and community education. For myself and other alumni, NWSA experience teaches that serving others by working in the beautiful setting of America's national parks is a viable option. Most people are lucky to have time off on weekends to appreciate our unique national gifts. Federal funding for young Americans to help improve and maintain those parks, particularly when funding is in short supply for full-time park staff, is essential to ensuring that others will continue to be able to enjoy those resources. Thank you for considering my comments.

(cont.)

My recent trip to Denali National Park in Alaska,, with two preteen grandsons, greatly reaffirmed my belief in the importance of a strong National Park system. I learned how President Carter enlarged the park to its present size (over 5 million acres) and strengthened its ability to protect wildlife ecosystems and to educate people of all ages and backgrounds about the wonder and importance of our remaining wilderness areas. I had not realized how much President Carter did for our park system and for wilderness protection; I believe his legacy will last to enhance the lives of many, many generations of Americans. I urge you to support the suggestions of the National Parks Second Century Commission, and to ensure that the seventeen billion dollars in funds already accumulated in the Land and Water Conservation Fund are actually USED as they were designated to be used. Of all the daunting problems before us, I see maintaining the health of our land and our waters, as the most important of all. Strong support for our national parks and forests, with an emphasis on the education of our young people in the wise stewardship of these national treasures and in the science and practice of maintaining their health is ultimately one of the greatest legacies today's leaders can provide for the future well-being of our nation. I think of the incredible success of FDR's Civil Conservation Corps; of the huge economic benefit it provided to the country, and of the lasting improvements made to our public lands that so many American still enjoy today, not to mention the huge boost that the CCC program gave to the mood and faith of the American people. A recent study has found that the same economic benefits would be realized today by federal spending in improving our National Park system....and I am sure it would provide the same uplift to our spirits. I believe it would be incredibly effective especially if combined with a national sustainable energy production program Thank you for considering my comments.

Discussion Question 1

(cont.)

The National Parks were not a big part of my formative years in Michigan. My family did not have a lot of financial resources for travel and the idea of accessing National Parks was not a priority for my parents. Nor was it a topic of intense focus in my school program. As an adult, I have come to embrace the historically and culturally informative experiences of our National Parks as well as the breathtaking beauty, peace, solitude and deep spiritual connection to our planet that occurs each time I spend a day or a two in our National Parks. It is awe-inspiring and life changing each and every time. I have set my own goals to visit as many National Parks as I can in my remaining lifetime (which should be a lot of park visits!) Going forward, I feel passionate that we must protect the existing spaces and identify key strategic historical, cultural and ecologically sensitive lands that would augment our current National Park system. We owe it to ourselves and the animals we have displaced in our urbanization across our country to set aside green spaces for our health and future. To succeed in this endeavor, the Federal Government must: Initiate outreach to all school-age children about the legacy of the National Parks that has been developed through our Federal Tax program and their rights to access and enjoy the benefits of these great lands. This could be DVDs available to schools for nominal to no-cost for classroom education or a Ranger Visitation program that brings the Ranger to the school (since most schools can't afford bringing kids to a National Park en masse). Initiate outreach to the American public through public service campaigns, government web links and sponsorship days ("fee free admissions by Corporate sponsors") to engage all Americans in this significant recession to enjoy the benefits of our National Parks. Increase promotion of the Passport Program to motivate families to visit multiple National Parks - spending vacation dollars in our own country. Incentivize airlines, rental car companies and tour companies to offer travel packages that include activities within the National Park system. Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. I honestly believe that the rangers and concessionaires at the national parks are doing a great job in maintaining a safe, educational and natural environment for the American people to enjoy. We have many choices in travel, both locally and internationally. We need to focus back on homeland activities that promote economic recovery and ecological responsibility for the American people. Thank you for considering my comments.

(cont.)

The America's Great Outdoors Initiative has been truly a great idea. Having attended one listening session, it was not difficult to hear the pleas for full funding of the Land and Water Conservation fund, and support for cleaning up the Chesapeake Bay. I would like to say a word about the role the National Park Service, especially the Cheapeake Bay Office, is playing in working toward protecting and restoring the Bay by crafting innovative but thrifty plans for the conservation of culturally and ecologically important lands. This work deserves the full support of Congress. Let's save lands that protect this national treasure by forging partnerships between the federal agencies, states (especially state parks), non-governmental organizations such as The Nature Conservancy and water trail associations and the indigenous tribes and descendent communities whose ancestors loved the Bay long before it was visited by John Smith. Thank you for considering my comments.

I love our national parks. National parks are a great investment for our people and the plant. Please take care of them to the very best of your ability. Thank you for considering my comments.

I think a good way to connect the youth of today with nature is to more fun attractions to our parks. Such as swimming, skateboard and bicycle riding, rope climbing- even simply by designating and painting lines on a paved road in a park to be used for inline skates would be an attractant for youths.

There is no greater national park at any season than Yellowstone. It has been a treasure to me and to my family. I strongly support the your Administration's America's Great Outdoors Initiative. It is critical that representatives from the Departments of Interior and Agriculture make the Greater Yellowstone Ecosystem a top priority within the initiative. Protecting Yellowstone means protecting the wildlife migration corridors and watersheds that surround the park and make up the Greater Yellowstone Ecosystem. As we face global climate change, protecting these connections will only become more important. For America's Great Outdoors to be successful, the Administration must put meaningful funding behind important conservation programs like the Land and Water Conservation Fund.

Discussion Question 1

Written & Online Comments

(cont.)

I am writing to you to voice my support for America's Great Outdoors Initiative. For the initiative to be successful, it is vital that your Administration put meaningful funding behind important conservation programs like the Land and Water Conservation Fund. I urge you to make the Greater Yellowstone Ecosystem a top priority within the initiative. Communities throughout Greater Yellowstone value their access and connection to the great outdoors and have a history of working hard to conserve special places. I am a strong supporter of the Greater Yellowstone Coalition because of their science-based approach to conservation in the lands surrounding our nation's first national park. One of the organization's main missions is to educate the public about the importance of protecting entire ecosystems, as well as migration routes between ecosystems, and not just arbitrary plots of land. As we face global climate change, and as our population continues to grow, taking such a strategic and comprehensive approach to conservation around Yellowstone and ensuring the connectivity with other viable ecosystems will only become more important. I urge you to look to the work of science-based conservation groups such as the Greater Yellowstone Coalition to guide funding decisions within the America's Great Outdoors Initiative, and to help make the Greater Yellowstone Ecosystem a shining example, in our country and beyond, of conservation done right. As always, dear Mr. President, thank you for thoughtful leadership and your outstanding service to our country.

I wholeheartedly support the Obama Administration's America's Great Outdoors Initiative! Our family has been fortunate to have been able to tent-camp in many of our nation's greatest treasures--our national parks. I am grateful every day to know that they exist and am so thankful that citizens who preceded us had the foresight to establish them. But great treasures require safeguarding! Our government has a solemn duty to care for, maintain, and protect each park, and its surrounding ecosystem, from those who would exploit it and jeopardize its future. Two of the most visited, and therefore the most needy, parks are Yellowstone and Great Smoky Mountain. I believe that representatives from the Departments of Interior and Agriculture should make these two ecosystems a top priority within this initiative. For America's Great Outdoors to be successful, the Administration must put meaningful funding behind important conservation programs like the Land and Water Conservation Fund. Care and maintenance requires consistent funding. I strongly encourage you to pursue this initiative to the fullest! The future of our national treasures depends on it.

We human beings use only 2% of our brains at this stage of our evolution. Yet we think that we are brilliant, correct, and informed enough to make decisions about how the Earth's systems actually work. Since all of us pay for the miscalculations of the experts, I'd like to suggest that the least damage that you do at this time, is the best for all concerned.

As a National Park Ranger I know a thing or two about the outdoors, how they are protected and the role that the government plays in that protection. Please step up and save a little bit of this country for our children. Our wilderness cannot be replaced.

Discussion Question 1

(cont.)

Thank you for launching America's Great Outdoors and recognizing the work of America's 1,600 land trusts protecting natural areas, forests, important wildlife habitat and other special places, and keeping agricultural lands in use growing local food. Tax incentives, farm bill easement programs, the federal LWCF and Forest Legacy programs have helped land trusts conserve millions of acres. Please make the conservation of private forestland, natural areas, wildlife habitat, farms and ranches a centerpiece of your initiative.

As representatives of Western organizations committed to engaging our youth as resources for the outdoors, we are writing to ask that you highlight your support in the America's Great Outdoors report for programs that benefit the next generation, and our public lands and rivers.

We were thrilled by the remarkable effort that the Administration made to engage and include young people in the America's Great Outdoors listening sessions this summer. Getting our kids outdoors:

- provides important health and educational benefits,
- offers employment, career opportunities, and leadership skills,
- builds natural resource management capacity in public lands communities,
- and inspires the next generation of scientists, conservation leaders, and informed voters.

Importantly, our work with young people in the West over the years has also ensured that our public lands and rivers have had the needed helping hands to address critical issues like riparian restoration and management of invasive species. We believe that one of the most effective ways to reconnect youth with the outdoors is to engage them in efforts to protect, improve, and restore our public lands and rivers.

Our nonprofits have expertise in program operations and youth development, deep community connections, and the ability to deliver cost-effective results. But we can't do it alone. As you know, strong partnerships are essential to protect our public lands and rivers in perpetuity. Making these opportunities available to more young people requires federal leadership and expanded support for the existing organizations engaged as partners in these efforts.

This report will shape America's conservation agenda for the 21st century and by extension, the lives of so many Western kids and young people whose future depends upon having opportunities to explore the outdoors or conduct riparian restoration activities.

We hope that you will build upon the existing network of conservation corps and environmental education programs to engage thousands more young people in public lands service; expose thousands more to the outdoors through environmental education, job training, and employment; and invest in the protection of the Western lands and rivers that make these experiences possible.

Discussion Question 1

(cont.)

As the release of the Administration's final report on the America's Great Outdoors (AGO) Initiative nears, I am writing as chairman of the Sport Fishing and Boating Partnership Council (SFBPC) to call your attention to key areas that SFBPC members feel warrant emphasis by you and the rest of the Administration as you move forward with implementation: make access a policy priority, work through existing successful programs, maintain or increase funding for access programs, work with other federal agencies on cross-programmatic opportunities and emphasize the fun aspects of nature-based recreation.

Given the close link between access and participation, the SFBPC recommends that you and other agencies pay particular attention when making policy decisions that may unduly restrict or limit access to public resources. As noted in the April 16, 2010, memorandum from President Obama, AGO is premised on getting more Americans outside and increasing outdoor recreation. Participation in outdoor recreation is closely linked to access to resources, lands and waters that support recreational activities; this is particularly the case for boaters and anglers. The Council fully supports access limitations to public resources where scientific evidence calls for restrictions. However, we feel that nature-based recreation is unique amongst other uses of public resources due to its relationship to conservation funding in the United States, and its function as a positive tool in managing and conserving sustainable fish and wildlife populations. Given this uniqueness, access to public resources for nature-based recreation should be a policy priority where sustainable resources allow.

Finally, we believe that efforts to reconnect families and children to nature will be most successful if there is a strong emphasis on programs that highlight the "fun" of interacting with nature by actively participating in an outdoor activity, such as recreational angling or boating. The focus on increasing conservation as a vocation or volunteer opportunity in the AGO is laudable, but it is our feeling that in the long-term people are first inclined to undertake activities which are fun and exciting. Nature-based recreation, including recreational angling and boating, is inherently fun and provides a strong incentive for people to continue to participate. Continued participation in nature-based recreation opens the door for participants to understand and appreciate the successes wrought through more than a century of our National efforts to conserve our natural bounty.

These talking points make perfect sense! Do what you can, Please.. I've been to Alaska and understand the importance of keeping it pristine.

I as a voter and a U.S. citizen expect you to demonstrate leadership in sustaining the environment.

. I understand a decision is being made soon on the Bristol Bay area of Alaska. Please don't let short term gains outweigh the long term impact for this area. Your decision will affect our children, grand children and all of our future generations. Please decline the Pebble Mine's request.

We all are empowered to do right action or wrong. It is wrong action when we do things, due to greed, which cause harm to others sharing our planet, which have no voice and no power to stop us. In typical fashion, what we do to harm and kill fish, wildlife and animals we share the planet with, eventually ends up hurting us as well. We have a great opportunity in front of us, to do right action and If we do not stop it, this mine will endanger Bristol Bay's spectacular wild lands, world-class salmon runs and other outstanding wildlife . Let us be moved by what is good for the future generations of all living things sharing the planet and not by dollars gained today at their expense.

Wetlands are a natural treasure with a very practical purpose. They should be carefully guarded.

Good Morning... I am writing to you to let you know how important our wildlands, parks and outdoor spaces are to our family. There are many areas in the US that are under attack by development, mining and drilling. I am hoping that by letting you know how essential these areas are for families in the US you might reconsider the short sided need to ruin these areas and instead give them the protection and care they need. Families love to go camping and explore the beauty of the US, teaching our kids about our heritage and ways to be kind stewards to the earth. One specific area under attack right now is Bristol Bay. Please ensure our generation and the generations of kids to come that we have pristine wildlands and parks for them to explore and be stewards of. It's the right thing to do!

, We've all experienced, all too recently - with the reach of devastation in the Gulf, how devastating it can be to our natural environment when we place money over Mother Nature. Our resources are extremely limited here on Planet Earth and the areas that we have that are considered "pristine" are even less so. We must do everything we can within our power to protect the most sacred natural habitats that we have for future generations, and not allow them to be pillaged in the name of profits. As we begin to find our way out of this recession, it allows us to make a break from the old way of business. It provides us an opportunity for us to claim that we will no longer allow our children and our children's children to receive a Planet that "used to be" so beautiful but now is nothing more than toxic. The true impact on our ecosystem will be much more calamitous than can be expected if Pebble Mine is allowed to move forward. History has proved time and again that when left to self regulation and oversight companies fail to do so properly. When profit margins are the key success metric for a company all else becomes "risk management" I implore you to truly understand the impact that allowing this project forward will mean for our country. It is within your ability to make sure that we create a future that is full of life and beauty not metallic sulfide.

People, I am writing you out of a deeply felt and profound concern for the integrity of Pebble Bay's clean waters, wild salmon, wildlife and traditional subsistence ways of life.

Discussion Question 1

Written & Online Comments

(cont.)

I am writing regarding the threat to Bristol Bay's clean waters, wild salmon, wildlife and traditional sustenance ways of life if the Pebble Mine is allowed. I have visited the great state of Alaska twice now and it truly is a beautiful place and America's last frontier. I have not had the opportunity to visit Bristol Bay but I bet it's as beautiful as the Glacier Bay, Denali, and the Brooks Range areas. Strong federal government oversight of the Pebble Mine permitting process and analysis of cumulative impacts to this watershed must be provided and To impact this natural wonder will not only affect wildlife but the First Nation people who depend on its pure waters for their way of life. Alaska's tourist industry will also be impacted and for all of the above reasons, I request that the permit for the Pebble Mine not be allowed.

We support the Obama Administration's America's Great Outdoors Initiative. We believe that representatives from the Departments of Interior and Agriculture should make the Greater Yellowstone Ecosystem a top priority within the initiative.

We visit the Park twice a year and sometimes 3 trips a year. We value the wildlife, so dependent on watersheds and open spaces, and the very special nature of Yellowstone. Please do all that you can to protect and provide financially for this very special place/space. Thank you

I raised my son in the Greater Yellowstone Ecosystem. Luckily that molded his values and now at age 22 he still has a passion for the great outdoors, enjoying fly fishing, hiking, camping, mountain biking, and skiing. Protecting our special "natural" places is important not only for us, but future generations. Thank you for taking interest in protecting America's Great Outdoors. M

Please consider the following points as the Administration works to conserve your country's special places: - As the world's first national park, Yellowstone should be a priority area as the Administration develops strategies to reconnect people to nature and conserve your treasured landscapes.

As someone who has visited Yellowstone and the Grand Canyon National Parks and has the Bear Mountain State Park in my county in New York I am telling President Obama, that America must do more to protect our national parks, wildlife refuges, forests, and rivers. As you know, the Yellowstone National Park, the world's first national park, is a focal area for protection of our public lands. The Greater Yellowstone Ecosystem, with Yellowstone at its core, is one of the last, largely intact ecosystems left on earth. As Americans, we must ensure it's long-term protection today, tomorrow, and for future generations.

Native people have always known that we must live in harmony with our surroundings. they are not there for our abuse and destruction please stop this action now

(cont.)

Why Bristol Bay Must Be Protected Our nation has been blessed with a place of such rare and unimaginable beauty – a paradise rich beyond measure with its spectacular wild lands, world-class salmon runs and an array of magnificent wildlife, such as grizzlies, sockeye salmon, chinook salmon, wolves, eagles, beluga whales, killer whales and harbor seals. This American natural wonder is truly a bit of “heaven-on-earth” – an unspoiled Eden with natural treasures of vast tundra, crystal clear streams and pristine lakes. This is Bristol Bay watershed and it is one of America’s last and most important wild places resting peacefully in Southwestern Alaska, United States. Tens of millions of salmon not only support the abundance of wildlife, but also sustains the indigenous Native communities that have thrived here for thousands of years. Bristol Bay’s pristine wetlands, lagoons and the upper reaches of its watershed support millions of migratory waterfowl and terrestrial birds, including bald eagles, Steller’s eiders, rock ptarmigans, Arctic terns, sandhill cranes, swans and emperor geese. Take a trip there now and you ‘d be bound to have the pleasure of observing grizzlies, wolves, seals and whales roaming this nearly untouched ecosystem. It is imperative that the investment in Bristol Bay be to safeguard the beauty of this astounding and remarkable natural wonder. If the mining giants get their way, a man-made environmental and humanity crisis will be in the making. Pebble Mine is a catastrophe waiting to happen. If Pebble Mine is allowed to go forward, it will inflict irreversible damage on Bristol Bay, including the permanent destruction of 60 miles of salmon habitat. In short, Pebble Mine is a filthy project with irrevocable consequences as it will likely destroy clean waters, wild salmon, whales and other wildlife in this largely untouched wilderness and destroy the traditional subsistence ways of life. Bristol Bay’s commercial fisheries generate \$300 million in revenue each year – that’s one-third of Alaska’s commercial fishing revenue. More than 75 percent of summer-time jobs are based on the area’s fish and wildlife. A study of mines similar to the proposed Pebble mine showed that 85 percent of them polluted nearby waters. At Pebble, a proposed open-pit mine would be 2 miles wide (enough to line up the world’s longest cruise ships end-to-end) and 2,000 feet deep (enough to engulf the Empire State Building). As proposed, the mine would generate more than 9 billion tons of waste held behind a series of massive earthen dams – all of them taller than China’s Three Gorges Dam and located just 20 miles from an active fault line! A single accident here would be disastrous, but even the construction and operation of the mine could disrupt salmon migration and jeopardize the larger ecosystem. In no way should the remarkable and beautiful Bristol Bay fall prey and be sacrificed for the senseless greed of foreign mining company profiteers, including Mitsubishi, Rio Tinto and Anglo American. Say NO to the Pebble Mine! STOP the Disastrous Pebble Mine!

It is my belief that the Pebble Mine will contaminate Bristol Bay's clean waters thereby threatening wild salmon, wildlife and traditional subsistence ways of life. Large-scale metallic sulfide mining should not be allowed on public lands, particularly in the Bristol Bay watershed where it can destroy habitat and resources used for recreation or subsistence living.

This is really a no-brainer as a final effort to give Americans the little that is left in America that they can possibly still call their own. For America's Great Outdoors to be successful, the Administration must put meaningful funding behind important conservation programs like the Land and Water Conservation Fund.

Discussion Question 1

Written & Online Comments

(cont.)

Throughout my life I and family members have spent much vacation time in National Parks. It was our favorite kind of vacation. So I whole heartedly support the Obama Administration's America's Great Outdoors Initiative.

I also believe that all stakeholders must have input to the programs, regulations and legislation affecting the National Parks and the areas surrounding the Parks. Environmentalists, hunters, fishermen, ranchers, miners, farmers, and tourists must have their opinions sought out and their opinions heard, but sound technical knowledge should guide the effort to preserve our national heritages.

Yellowstone was our first national park and remains today one of the most beautiful and unique areas in the world. My husband and I have gone to Yellowstone in April or May, every year since 1999. I have hundreds of treasured pictures of wildlife, especially bears and wolves, I've taken in Yellowstone's Lamar Valley. We love and appreciate all our National Parks and want the animals and plants within them to flourish for all our citizens, both now and in the future.

It is not only the beauty of these treasures of our great United States but the wilderness/wildness does something to enrich ones spirit. Our first visit to YNP was 1973, we were unable to return until 1986 with our youngest son, who was 10 years old) on that trip he announced he was going to become a Park Ranger. He is now 34 and after 10 years of vagabonding is finally a permanent Environmental Interpreter for Carlsbad Caverns, N.M. You have never heard nor seen one so happy even after a lot of heart ache getting there. He is hoping his next home will be the Grand Tetons. If more young people were given a chance to visit these wonderful places they will learn what it means to be free and wild just like the first immigrants when they first landed here. We have only missed one year visiting a National Park/Monument since 1986; Hearing a wolf howl or a elk bugle is indescribable. Watching a grizzly bear walk beside a wolf is even more overwhelming.....the hike up Mount Washburn in the spring smelling the wildflowers is a God's wonder. More and more Americans are visiting our nations wonders every year, I must say that it changes many things and in a way is sad because of that but is greedy on my part. Many changes have occurred since 1973 but most have been for the good. Please help keep ALL of these wonders for our childrens future even if for only one visit in their life time. It will be something that will never be forgotten. Remember, our problems with wildlife is because we are taking more and more of their habitat away. We almost killed off the Bison because of our greed, lets do not make the same mistakes again.

Discussion Question 1

(cont.)

Preserving the natural environment gives us spiritual and physical health, and it provides a reason for living and working to make our nation the best that it can be. Please consider the following four points as the Administration works to conserve our country's special places: (1) Yellowstone, as the world's first national park, should be a priority area as the Administration develops strategies to reconnect people to nature and conserve our treasured landscapes. (2) Protecting Yellowstone means protecting the wildlife migration corridors and watersheds that surround the park and make up the Greater Yellowstone Ecosystem. As we face global climate change, protecting these connections will become increasingly important. (3) Communities throughout Greater Yellowstone value their access and connection to the great outdoors, and have a history of working hard to conserve special places. (4) If America's Great Outdoors is to be successful, the Administration must put meaningful funding behind important conservation programs like the Land and Water Conservation Fund. Please preserve more of our nation's natural resources. We are so close to losing them forever.

I strongly support and applaud the Obama Administration's America's Great Outdoors Initiative. Thank you very much for considering my comments.

Howdy President Obama, I would like to begin by saying Thank You for all you're administration has done for the natural places in this country. I was born and raised in Bar Harbor, Maine and can not express the myriad of ways that living in such an area in an around Acadia National Park has molded my life. Beyond that, and most definitely a result of my living in such a beautiful and protected region, I have traveled to and gladly immersed myself in many other natural areas including national, state and local parks, natural and conservation areas, wildlife preserves and wildlife management areas. These areas are the green backbone of our country and with the development continuing in this country, most specifically urban sprawl and the use of non-renewable resources, I personally am begging you to put in place related legislation and support all natural areas. Not because it is a popular decision or what your advisors say will garner you votes, but because this is our country, and the natural areas we have at the moment are here only because of continued support throughout the last century and are without a doubt a source of envy from many other countries. You have a young family and I will soon be starting mine, and I hope that I will be able to take my children to places like Yellowstone and Acadia and not have to say things like "well, a few years ago you could see buffalo walking around and even crossing the road!" Thank you very much for your time, and I sincerely hope you and your family enjoyed your trip to Acadia.

I understand that someone from an urban environment may find it difficult to appreciate the value in preserving our natural environments. Having grown up in the Yellowstone Valley, I have first hand knowledge of that value.

It is a place close to my heart as I've often been in that area. The land and all its creatures need spaces in which to just BE, and that helps us humans to just BE as well. As we face global climate change, protecting these connections will only become vitally important. They allow us to breathe!

Discussion Question 1

Written & Online Comments

(cont.)

One of the greatest gifts you and your administration can give to the future is the preservation of our wild, natural, and outdoor places. I strongly support the Obama Administration's America's Great Outdoors Initiative.

Yellowstone Park was first, and it continues to be the richest example of a temperate-forest ecosystem. Enlarging the area for animal migration, and protecting these corridors from pollution and hunting are the highest priority. After a dozen visits to Yellowstone in all seasons I still find it the nation's most remarkable place to see wildlife. I vote, I happily pay my taxes because of benefits like Yellowstone, I spend good money visiting Yellowstone, and I am not alone. I support leaving our children a legacy besides a huge national debt. To maintain the Yellowstone legacy the Administration must put meaningful funding into programs like the Land and Water Conservation Fund.

I have been taking my family to our National parks for 35 years and now my children are doing the same with their children. Just this past summer we visited Yellowstone with all of our grandkids for 10 days. The fascination we seen on their faces was worth every penny we spent. There is very few things left in this world that excites me more. I have been all over the world and it amazes me to see the amount of visitors from other countries. We had lunch with a family from China one day and they stated how wonderful our National Parks are. They were in awe over how well they are maintained and the number of them we have. They were in the US mainly to visit our parks and had so far been to 3 and were working their way east. We have something that we need to treasure and save for the future generations to come. Not allowing mining and drilling in our parks is one of the most important things we need to protect them from. With all the oil that we have in North Dakota I just have a hard time finding any reason to soil the beauty of our National Parks. Recently, we heard that they are seeking permission to drill in Theodore Roosevelt National Park in North Dakota. If that happens anywhere in the park it will be a tragedy. There are so few things in this country that we can guarantee will be there for future generations and our untouched National Parks should be safe by law.

I support the America's Great Outdoors Initiative proposed by your administration.

As a university ecology professor, I have taken classes to Yellowstone for extended 2-week field trips. The kids from the city (Chicago) were amazed at both the wilderness and the biological diversity. They had never hiked a trail, ridden a horse, watched for wolves at dawn, or seen the amazing bacteria in the hot springs before. It was a life-changing trip for them, and for so many other people who visit the park every year.

You, President Obama have seen the National Park series by Ken Burns and know how essential preserved places like that are for our country and really for every individual in the country. They offer inspiration, beauty and a chance to see wild life that inspire us. Please 1, bring them up to par and 2, protect them forever.

Discussion Question 1

(cont.)

I am a supporter of the Greater Yellowstone Coalition and a regular visitor to the park, (as well as others of our wonderful National Parks). Yellowstone Park is my favorite, however, I have been visiting it since my youth and am planning another visit this November near my 70th birthday. I especially support the concept of protecting the entire ecosystem around the park, not just the park itself within a certain arbitrary political boundary. Wouldn't it be great if this concept could be applied to many more of our National Parks?

Protecting wildlife, forests, streams, rivers and lakes, and everything else together preserves human life and the plants as if they are one. Which, by the way, they are! We must be vigilant, wise, and purposeful in our protection.

As a proud environmentalist and a true believer that our national parks were "America's Best Idea." I urge you to do what ever possible to support these amazing places. We travel to Yellowstone twice a year and find beauty, peace, and the most wonderful people who love this place as we do.

In addition to the above comments, I would like to stress how important our national parks are in our lives.

I SUPPORT THE OBAMA ADMINISTRATION'S AMERICA'S GREAT OUTDOORS INITIATIVE!!! - COMMUNITIES THROUGHOUT Greater Yellowstone VALUE THEIR ACCESS & CONNECTION TO THE GREAT OUTDOORS and have a history of working hard to conserve special places.

I voted for you Mr. President because I believed you would do the right thing. Beyond the November midterms I will continue to support you because I believe you to be a man of integrity. Preserving our pristine lands from unregulated mining and drilling is essential to our sense of pride as Americans. Thank you.

I fully support President Obama and his decisions as leader of the United States!!!!

My wife and I have visited Yellowstone National Park during winter about 8 times in the past 20 years. We wish to see it and the whole ecosystem protected. The greater Yellowstone ecosystem is one of the few relatively intact ecosystems in the lower 48 states. We live in Colorado - a fantastic place - but the ecosystem is sliced and diced. Please do not let this happen to the Yellowstone ecosystem Therefore,

It's a unique spot, none other like it in the world.

I personally consider Yellowstone National Park to be one of America's truly great treasures.

I support the Obama Administration's America's Great Outdoors Initiative, Yellowstone symbolizes what is best in our national parks.

Discussion Question 1

Written & Online Comments

(cont.)

I support the Obama Administration's America's Great Outdoors Initiative, making preservation of land, open water and its accompanying wildlife a facet of this country that is available for all to see and appreciate for generations to come. Many areas are valued, but I am writing to day about just one.

Your initiative to conserve our parks and special natural lands and fauna and flora is altogether commendable,. It will be most important for the country's most notable and well visited park and its surrounding lands, the beloved and popular Yellowstone Park. Added funding is the deserved means to accomplish that long term goal.

We support the Obama Administration's America's Great Outdoors Initiative.

I just spent 2 weeks visiting National Parks in California and Oregon, and the spectacular lands I saw rejuvenated my hope in our country and our future. We need these spaces to preserve the best and most inspiring parts of our country from misuse and exploitation.

We recently spent several days in Yellowstone. It is an extraordinary place and we must do all we can to assure the future of the park and its wildlife. Please consider the following points as the Administration works to conserve that part of the west: - As the world's first national park, Yellowstone must be a priority area as the Administration develops strategies to reconnect people to nature and conserve our treasured landscapes. - Protecting Yellowstone means protecting the wildlife migration corridors and watersheds that surround the park which make up the Greater Yellowstone Ecosystem.-

I work in the Greater Yellowstone area as an interpreter of the landscape for visitors to Yellowstone National Park and as a ski instructor. In both of my jobs clients comment over and over again about the wild landscape we have here in Montana. As you know from visiting here, it is a special place that can not be replaced. Including a protective designation of the Gallatin River. Reduce, or eliminate the trucking through this scenic corridor. Note how many people visited YNP this year alone.

I attended the first meeting in Bozeman and gave the representative our document The Migration Highways. A follow up call and email from The President's office was made to us regarding our plan to make Mt. Hwy 87 and US Hwy 287 a Migration Highway for animals going into and out of YNP. We in the Madison Valley want to stop the unnecessary slaughter of these animals on our highways. We would greatly appreciate your help in making this happen. The document is with Jim Lynch, Director of Mt. Dept. of Transportation right now. Please email or call us with an update on the status of our suggestion.

Our National Parks should be one of the most precious legacies that I leave to my grandchildren and great grandchildren.

As a volunteer in one of our national parks, I continually see what they and our other public lands mean to our nation's citizens.

Discussion Question 1

Written & Online Comments

(cont.)

We lived in the area for four years and have become enthusiastic protectors of this national treasure. I've retired from teaching and know that this is a vital national objective. - Park borders are only visible to humans. Protecting Yellowstone means protecting the wildlife migration corridors and watersheds that surround the park and make up the Greater Yellowstone Ecosystem. We know this first hand from living in Jackson, WY.

We love our national park system.

I bring groups of people to Yellowstone every winter see attached for the latest trip.

I believe that the Greater Yellowstone Ecosystem should be managed for the good of the ecosystem and not driven by commercial interests. - For America's Great Outdoors to be successful, the Administration must put meaningful enforcement if the Clean Air Act and Clean Water Act and promote clean and renewable energy usage. There are those of us how enjoy the beauty of the outdoors, who have volunteered for the betterment of the outdoors, and who see the need to get all Americans to understand and respect the outdoors. Please continue to use us to promote true change in this area.

As a sportsman with a family that hunts, fishes, camps and simply enjoys the outdoors and all it offers I agree completely with the goals set forth below and ask that you work towards implementing them to help protect the Yellowstone ecosystem. One Last point. I ALSO VOTE!

I support your administration's America's Great Outdoors Initiative and believe that representatives from the Departments of Interior and Agriculture should make the Greater Yellowstone Ecosystem a top priority within the initiative. Thank you for your consideration. I look forward to your response.

I have been an active outdoors enthusiast all my life and always enjoy time spent in the mountains and wilderness areas. There I firmly support the Obama Administration's America's Great Outdoors Initiative.

Roadless Area classification still allows for fire/emergency roads. I'm all for it if you still allow mountain bikes.

Mountain biking is a great way to experience the outdoors and access should be expanded.

Discussion Question 1

Written & Online Comments

(cont.)

The idea posted is based on the false premise that use and conservation are mutually exclusive. The truth is, effective conservation requires some amount of use. For forest managers to actively manage lands some access is necessary. There are only roads on half or one percent of the lands. I think we are already doing an excellent job of conservation. We already have 120 million plus acres dedicated to Wilderness protections. We are doing a very good job of conservation already. It is painfully clear to me that the "less informed" are actually the environmentalists. Comments supporting climate change—a false science recently completely debunked—is one example. The notion that OHV users' sole purpose in life is to destroy the lands they recreate on is another example. The idea that OHVs are polluting the lands and chasing the wildlife is yet another unsubstantiated "feel good" claim. If you environmentalists would just be honest about the problems you would find that your selfish desires are the driving force behind this conflict."

In Colorado the OHV community supported a new law that allows any law enforcement officer to respond to land use issues. This was done to increase the amount of enforcement with little extra funding. It was sponsored by OHV groups because we do want the bad apples plucked. Is that honest enough?

Yea I agree with the idea Families and Friends actively together in the Great Outdoors. I think that sounds awesome heavy industry and farming causes far more harm to our country. Also people that think all genetically modified foods are bad are crazy! Almost all the food Americans have been eating since like 20 years ago or so is genetically modified it saves far more lives than most people realize. It also helps to slow down the farming of new land growth overall in developed countries.

It is imperative that this initiative highlight the importance of collaborative partnerships that include land owners in the decision making process and inter-agency communication. We believe our partnership is a good illustration of how ranchers, environmentalists, and agencies can establish common ground and work together to address mutual priorities. To date over 100 organizations have signed the California Rangeland Resolution to express their support for the work of the California Rangeland Conservation Coalition.

The Rangeland Coalition has come a long way because of the dedication of nongovernmental organizations and support of agency partners. Therefore, the Initiative should support the participation of agency staff and financial support of collaborative conservation efforts that pull together landowners, agencies and interested stakeholders.

Discussion Question 1

Written & Online Comments

(cont.)

Conservation easements, placed voluntarily on private working ranches have proven over the past decade to be a successful means to keep large tracts of working ranches as wide open spaces. Permanent conservation easements on working ranches forever restrict the use of the land to agricultural purposes, while keeping ranchers managing their own ranches. This method preserves the present state of both the land and the ranching operation for future generations. Through the use of conservation easements as a preservation tool, the privately-owned ranches remain on property tax rolls, providing tax income to the local community. Land preserved with a conservation easement with government dollars is also less expensive than fee title acquisition, both initially and over time, because the landowner is responsible for management and maintenance.

Another area of potential improvement is enhancement of the Land and Water Conservation Fund to allow for funding of conservation easements to be purchased and held by third parties in order to achieve national conservation goals in priority landscapes. Ranches and other working lands play a vital role in maintaining ecological processes and connectivity across large areas. Preventing the fragmentation or conversion of large working lands to other uses can be essential to the long-term ecological health of federal conservation lands and the survival of the plants and animals that depend on them.

Partnerships between federal land management agencies and the private sector can be the most effective and efficient way to maintain the public benefits that private working lands can provide. Existing models for such partnership include the Department of Defense's Readiness and Environmental Protection Initiative (REPI). This program achieves federal goals through grants to non-federal entities with a clear purpose of protecting habitat for federally-listed species, and maintaining the ability of the military to test and train.

The clear purpose of the new program would be to maintain ecological processes and habitat connectivity between and around federal conservation lands in strategic landscapes. Federal and state partnerships with non-governmental entities and landowners can be the most cost-effective way to achieve this goal. Strategic targeting of Farm Bill easement and stewardship funding to priority landscapes can be part of the solution. However, the demand for such programs already far exceeds the available resources. Federal land management agencies also need enhanced ability to advance national conservation goals in priority landscapes through strategic grants to nonfederal partners.

Specifically, I wish to reiterate the Colville Tribes' recommendations and respond and respond to Mr. Shafroth's request for examples where co-management between Indian tribes and the federal government has been successful.

Encourage Co-Management Opportunities for Indian Tribes on Federal Lands within Tribes' Aboriginal or Reserved Rights Areas: As noted during the AGO consultation, Indian tribes have demonstrated that they can manage natural resources as good as, or in many cases better than, federal land managers. Tribes also have a particular incentive to manage lands on which the tribes possess reserved rights or share some other historical connection. The Colville Tribes strongly recommends that the AGO report to President Obama specifically mention this issue.

Discussion Question 1

Written & Online Comments

(cont.)

Provide a Set Aside in the Land and Water Conservation Fund for Acquisitions or Management Activities Involving Indian Tribes: Without some source of funding, it seems unlikely that Indian tribes will be able to meaningfully participate in the AGO, especially where acquisition of land is contemplated. The Colville Tribes, therefore, supports a set aside from the Land and Water Conservation Fund for activities under the AGO involving Indian tribes,

Streamline and Make Uniform Agencies' ProRelty Disposal and Acquisition Authority: As noted during the AGO consultation, the authority of the various land management agencies to donate, sell, lease, or otherwise convey real property varies wildly from agency to agency. Some agencies have broad authority while others, like the U.S. Forest Service, have very limited authority to convey interests in federal land. Existing conveyance authority in most cases does not contemplate transfers to Indian tribes. Federal land managers have consequently been reluctant to use what authority they do possess for transactions involving Indian tribes.

Prohibit the Use of the Forest Service Facility Realignment and Enhancement Act ("FSFREA") in Areas of Historical Interest to Tribes: Several commentators have noted that the FSFREA, which allows forest supervisors to sell Forest Service real property at public auction and keep the proceeds of the sales, should not be used in areas where Indian tribes have reserved rights or other cultural or historic connections to the land. In the 2008, the Colville Tribes unsuccessfully sued the Forest Service to prevent the Okanogan National Forest from auctioning a property under the FSFREA within the Colville Tribes' traditional territories. Instead, the AGO should provide a mechanism for these unneeded Forest Service properties to be transferred to Indian tribes without cost to the tribes.

The LRMA has enabled both the Colville Tribes and the Spokane Tribe to employ law enforcement officers to patrol Lake Roosevelt and its shoreline to enforce federal laws (through cross-deputization arrangements) and tribal health and safety laws. Lake Roosevelt is the 151-mile reservoir of the Grand Coulee Dam, the largest hydroelectric power plant in the United States and the third largest in the world.

The 2008 Fish Accords create a 10 year partnership between the Colville Tribes and the federal government for the recovery of endangered Upper Columbia River salmon and steel head and the fulfillment of the Colville Tribes' fishing rights.

The 2008 Fish Accords provide the Colville Tribes with a stable, long-term funding source for fish and wildlife enhancement projects, programs, and activities.

It is universally recognized by those concerned with the preservation and restoration of the Chesapeake Bay that widespread public buy-in can be best achieved by appealing to the citizens' appreciation of the Bay. The immediate corollary is that to appreciate the Bay watershed, one needs to have access to the Bay or its tributaries, or the lands adjacent. Those lands will be best appreciated if they are already preserved and protected from some of the encroachments of modern life, and especially if those lands and access points have scenic, historical, or cultural significance.

Discussion Question 1

Written & Online Comments

(cont.)

The concept of the indigenous cultural landscape as useful in land conservation programs arose from considering what an indigenous person's perspective of the Chesapeake Bay region might have been when John Smith first explored the Bay and its tributaries. This construct recognizes and respects that Indian cultures lived within the context of their environment, although not in the stereotypical sense of "living in harmony with the environment". American Indian peoples lived around the Chesapeake Bay and its rivers within large varied landscapes, with which they were intimately familiar. They used different parts of those landscapes in different ways: for food, medicine, and clothing procurement, for making tools and objects related to transportation and the household, for agriculture, and for settlements.

The construct of the indigenous cultural landscape is particularly pertinent to land conservation in the Chesapeake today for several reasons. First of all, it embraces an aspect of America's cultural heritage that has widespread appeal for the geotourist. People of all ages and backgrounds are intrigued by Native history and culture and eager to learn more about what life was like for Indians before the advent of Europeans into the Chesapeake changed their world. This fact is acknowledged by one of the major themes of the Captain John Smith Chesapeake National Historic Trail, which embraces respect for, inclusion of, and education about the Indian communities of the Chesapeake.

But the use of such a construct does more than capitalize on the public's great interest about American Indians and their cultures, and the emotional ties such interest brings to the conservation of natural resources. It also recognizes that these indigenous communities still exist, and that respecting them and their cultures is a valid and central goal of any land/water conservation effort. Furthermore the construct re-emphasizes the values that American Indians have toward natural resources, including an attachment to place, and thereby encourages that attachment to place which will further efforts to help the Chesapeake Bay and its watershed.

In the past, opportunity related to American Indian cultural conservation and curiosity has focused primarily on archeological sites, not on the full landscapes in which these cultures existed prior, and for some decades after, European contact. Conservation and preservation of Native archaeological sites is indeed critical, but our efforts should not be limited to such sites. Instead, they should be expanded whenever possible to embrace known archaeological sites - or areas of high potential for pre-Colonial archaeology - and their surrounds, in units of land large and natural enough to accurately reflect the cultural life-ways of the communities that lived within them. Such an approach strengthens the arguments for preserving and conserving and/or restoring larger cohesive landscape units, which may include uplands, forests, natural openings and meadows, as well as riverine, estuarine, and marine waters, in collected blocks and corridors.

This approach also brings equality to the descendants of the indigenous cultures who inhabited these lands historically. If we conserve for both indigenous cultural and ecological reasons, along with scenic and aesthetic reasons, we build a greater meaning for these landscapes, and for the people who were ... and still are ... attached to them culturally. We build opportunities for the public to interact with and learn about these communities which furthers attachment to the Bay.

Discussion Question 1

Written & Online Comments

(cont.)

The descendent indigenous groups of the Chesapeake Bay region should participate in the process of selecting and prioritizing culturally significant indigenous landscapes, which are currently underrepresented in our federal, state, and regional databases.

We appreciate the tremendous work done by you and members of your administration to solicit input from thousands of citizens on the best ways to strengthen our connection to nature and our shared history, bolster the health of our communities and economies, and protect our natural heritage and clean water supplies.

In particular, we commend your administration for underscoring the value of urban parks, greenspaces, and rivers to families across America, and for ensuring that these vital, "close-to-home" components of our Great Outdoors are an integral part of your Initiative. Many of our cities had the honor of hosting AGO listening sessions this past summer, and we heard first-hand from kids, parents, educators, and others how much open space matters to them - and alternately, how a shortage of parks, recreational opportunities, and access to shared greenspaces harms the health of our residents and our communities.

As you and the First Lady have noted, skyrocketing rates of childhood obesity and associated health problems are directly linked to this shortage of places to run and play. Too many American cities and towns lack adequate outdoor spaces to serve their populations, rendering many communities "exercise deserts." Similarly, several of our towns have world-class public lands, rivers, and outdoor recreation opportunities nearby, but are missing the infrastructure necessary to help citizens reach and enjoy these remarkable places. These same public lands are also often home to watersheds that provide our cities with clean drinking water, a resource increasingly at risk from threats to forests and wildlands.

Further, we know that natural amenities like parks, greenspaces, and rivers contribute to a higher quality of life and are critical to attracting and retaining the workforce necessary to encourage economic investment and make our metropolitan regions more vibrant and globally competitive. We also know that these shared outdoors spaces enhance surrounding property values, contributing to higher tax revenues. They are a smart investment of public funds, yet cities around the nation continue to experience a deficit of parks and protected open space.

Increasing opportunities to connect Americans - especially our children - to the Great Outdoors through innovative outdoor education programs, such as the Junior Rangers Program of the First Lady's Let's Move Outside campaign.

Providing full and dedicated funding for the Land and Water Conservation Fund. This crucial source of support can help to conserve open space and water resources, while also funding new parks, trails, and recreational facilities.

Investing in land and water protection that supports local economies. Safeguarding our nearby public lands and rivers, and the scenic and recreational amenities they provide, bolsters many of our cities' economies by generating billions in revenue and providing thousands of good jobs.

Discussion Question 1

Written & Online Comments

(cont.)

It also protects critical drinking water supplies through watershed, forest, and wetland conservation.

Including parks in urban redevelopment strategies. Abandoned land, vacant lots, and distressed properties can be an opportunity for redevelopment - not just for housing and transit, but also for the multiplicative value of parkland and open space creation.

Encouraging the kinds of public-private partnerships that have proven so effective around the country. Communities like ours have developed homegrown, collaborative solutions to conservation and outdoor recreation challenges that can serve as national models. These innovative, locally-driven approaches help to protect and restore natural areas while connecting our citizens to special landscapes, and they need the federal government as a partner to leverage local financial support - both public and private - and ensure their longterm success.

By working together to protect our natural heritage and leveraging resources to provide children and families with access and opportunities to enjoy the outdoors, we know we can make our cities and towns healthier, more sustainable, and more economically competitive.

Hello, Thank you for your interest in America's Great Outdoors. While I appreciate your comment and would welcome it elsewhere on the AGO site, it's not germane to the Terms of Participation. Please feel free to re-post to a more appropriate place. -----Original Message----- Sent: Thursday, February 17, 2011 11:19 AM I would like to see more affordable foods in the park. Visitors can purchase lunch, sneaks, etc while enjoying the trip.

To the Obama Administration, Thank you. On the heels of the devastating proposals in the Republicans continuing resolution we hear this clear and concrete call to protect what has made this country strong. I support the America's Great Outdoors initiative and commend President Obama and his Administration for recognizing that we need to protect our natural world to ensure our health and that of future generations. I hope the Administration will immediately implement the recommendations outlined in its Great Outdoors report. This initiative is important to the people of Vermont because: * It can help ensure clean water supplies, support jobs in tourism and recreation, save working farms and ranches, and preserve the special places where our community goes hunting, fishing or just to enjoy nature. * It is driven by communities and encourages local people to recommend the best ways to save their lands, waters and coastlines. * It is aimed at preserving whole natural places, including entire forests, mountain ranges, migratory corridors and rivers. I urge the Administration to take action now on this initiative. Key first steps would be full funding of the Land <<http://www.nature.org/initiatives/protectedareas/support/art30842.html>> and Water Conservation Fund, a permanent extension of conservation easement tax incentives, and support for other government programs that protect our local lands and waters including State Wildlife Action Grants, LIP, Section 6 and Forest Legacy I also invite the Obama Administration to visit Vermont, ranked 5th most desirable destination in the World by National Geographic (yes the entire State!) to learn more about the work of the Vermont Chapter of The Nature Conservancy, the Vermont Land Trust, the Green Mountain Club, the Catamount Trail, the Cross-Vermont Trail and more than a dozen local land trusts.

To Whom It May Concern: It is so important for me to thank the Obama administration for supporting the America's Great Outdoors initiative. Living in Maui, Hawaii it is so easy for me to see the countless benefits of protecting and preserving our land and waters. Many of our livelihoods depend on tourism and the ability to provide a gorgeous environment for the people who visit this special place. It extends far beyond our community, however. Clean drinking water, land, and air are not just beautiful, they are essential to life. This amazing country has an abundance of superb places to visit and keeping them clean and undeveloped will set in motion awareness that could pave the way for humankind's long-term survival locally and globally. Let us blaze new frontiers in green technology, sustainable renovation and agriculture techniques so we can provide new jobs and a road map for developing countries. Please help by funding the Land and Water Conservation Fund, a permanent extension of conservation easement tax incentives, and support for other government programs that protect our local lands and waters. Thank you so much for helping! Your children and grandchildren will thank you too!!

My comment: Bird Watching Is this effort including the outdoor opportunities afforded by Bird watching which provides for education, stewardship, exercise and environmental awareness?

I support this initiative whole heartedly! I hike 3 miles at a nearby state park every day, but this gets very challenging to fit in before dark in the winter. It would help immeasurably to get kids & adults moving if DaylightSavingsTime was year round. By the time most people get home from work/school in North America in the winter, it's too dark to go outside!!

My idea is to restore the parks under a federal grant to provide jobs for those who are unemployed. A lot of work similar to this was done during the Great Depression of the 1930s. This keep this one at the recession stage. If it was a good idea to bail the banks out, it is also a good idea to sustain the unemployed in this country. We are the only country of our status in the world that makes such a "big deal" about supporting our unemployed. Many of the unemployed could also benefit from job training just so they can maintain themselves and be ready for employment.

Discussion Question 1

Written & Online Comments

(cont.)

The Earth is all we have in common, and that is why we need to protect it. In the words of John Muir, "Few are altogether deaf to the preaching of pine trees. Their sermons on the mountains go to our hearts; and if people in general could be got into the woods, even for once, to hear the trees speak for themselves, all difficulties in the way of forest preservation would vanish." If we can protect these woods and set them aside for the people, and entice them to go inside, the trees themselves could do the talking in the way of preservation. It is next to impossible not to appreciate the wildness as a part of the human spirit. When the national parks were first gaining their popularity, John Muir also said, "Thousands of tired, nerve-shaken, over-civilized people are beginning to find out going to the mountains is going home; that wilderness is a necessity..." which holds true to this day. In our downturn economy, many people are staying within the country's borders for vacations, and finding the necessity of the national park service and preserved lands in their lives... I believe most Americans would love to have more protected land and better protected land. So ?"Let us do something to make the mountains glad" and focus our energies on protecting our finite wilderness, which is rapidly disappearing as expansion continues in the United States to every nook and cranny. Let us pass any legislation that will protect nature, so that our country can always boast these natural wonders, and remember that "None of God's landscapes are ugly so long as they are wild"(John Muir).

The only way to truly protect our shared outdoor spaces is to get kids out there and to help them make that emotional connection to the forests and the animals.

I support the America's Great Outdoors initiative and commend President Obama and his administration for recognizing that we need to protect our natural world to ensure our health and that of future generations. I hope the Administration will immediately implement the recommendations outlined in its Great Outdoors report. This initiative is important to the people of New York because: *It can help ensure clean water supplies, support jobs in tourism and recreation, save working farms and ranches, and preserve the special places where our community goes hunting, fishing or just to enjoy nature. It is driven by communities and encourages local people to recommend the best ways to save their lands, waters and coastlines. It is aimed at preserving whole natural places, including entire forests, mountain ranges, migratory corridors and rivers. I urge the Administration to take action now on this initiative. Key first steps would be full funding of the Land and Water Conservation Fund <<http://www.nature.org/initiatives/protectedareas/support/art30842.html>> , a permanent extension of conservation easement tax incentives, and support for other government programs that protect our local lands and waters.

One of the principal barriers to effective and efficient conservation of fish and wild life species is the lack of dedicated funding for the full array of fish and wildlife. For nearly three century, the Pittman-Robertson Act and later the Dingell Johnson Act have provided critical quarters of a funding for states to conserve game species. These Acts have successfully brought back wild turkeys, striped bass, elk and many other species . However, they do not directly address the needs of over 90% of the nation 's fish and wildlife that are not hunted or fished.

Discussion Question 1

Written & Online Comments

(cont.)

For nearly a quarter century, conservationists have been advocating for dedicated funding for all species, particularly those that are at-risk. Five years ago, each state and territorial fish and wildlife agency in collaboration with their partners and the public developed a State Wildlife Action Plan that identified thousands of conservation actions that are needed to prevent future endangered species listings and keep common species common. Although the plans are being implemented nationwide, current federal funding, averaging "bout \$1.2 million per state/territory, is insufficient to meet the needs of the 12,000 species that state's determined to be at-risk.

People come from great distances to snowmobile, white water raft, sky dive, hunt, fish, camp, and hike. They also come to see wildlife and the beautiful scenery. We are currently trying to develop an all-terrain vehicle component through the construction of multi-use trails that will bring a huge increase in outdoor tourism and boost our economy. The success we are having in these areas is due primarily to one major factor: our major private landowners. What works for Maine? Its working forests.

But today, we find the great forests of Maine and our way of life being challenged by those who would take both away from us. The forests of Maine have been privately owned working forests for almost 400 years. These forests provide owners their livelihood as well as the livelihoods of thousands of Maine families. This private ownership has provided the public wide-ranging recreational opportunities, chances for appropriate economic development, and many other benefits. These have occurred without intrusion by the federal government and without the interference of environmental groups who now seek to use funds from America's Great Outdoor Initiative to make drastic, negative changes to our forest industry through expensive, restrictive, and unneeded conservation easements and other options. Please respect the people of Maine by rejecting the use of these federal funds to support the environmentalist schemes over the history, tradition, and needs of Maine's working forests and working people.

The federal programs and public-private partnerships established to carry out the National Historic Preservation Act, offer many building blocks that could support the goals of America's Great Outdoors. As policy recommendations are presented to the President and action plans are developed to implement such proposals, the ACHP offers its active and continuing involvement to the Administration to ensure better integration of the following to meet AGO goals

Existing stewardship programs for significant historic and cultural resources that form an integral part of many special places on private as well as public and trust lands

Historic preservation, heritage education, and heritage tourism assistance like Save America's Treasures, Preserve America, and the National Main Street program that help reconnect people with their heritage as well as the outdoors

Partnership programs that support community-led conservation and involvement, and encourage healthy outdoor activity, such as local walking tours, many of the biking, boating, and other active programs in National Heritage Areas, and discovery hikes along National Scenic and Historic Trails

Discussion Question 1

Written & Online Comments

(cont.)

Recognition programs aimed at education and engagement like the Preserve America Presidential Awards that could readily be adapted to AGO goals

Approaches for engaging youth in hands-on preservation programs, such as service-learning programs with local schools and federal agencies and their partnership groups, that relate to authentic experience and volunteer activities in places of natural and cultural heritage

Programs that engage volunteers in numerous cultural stewardship activities, reach out to diverse audiences, and celebrate ethnic and cultural diversity in ways that support a broader appreciation for both the outdoors and a preservation ethic

Integration of community and regional sustainability initiatives, "greening" historic buildings, preserving and improving established transportation infrastructure, reinvigoration of deteriorating urban areas

Balanced support for complementary natural resource conservation, outdoor recreation, and cultural preservation through full funding of both the Land and Water Conservation Fund and the Historic Preservation Fund.

All landscapes have a historical and a cultural context, and our appreciation for the outdoors is rooted in both the natural environment and the history, stories, and traditions associated with special places. Indian tribes, Native Hawaiians, and Alaska Natives have always been quite clear about this interrelationship. If we wish to reinforce the connection between people and the outdoors, it makes sense to make the most of this potential.

America's system of parks - a network of local, state and federal parks that provide access to nature and outdoor recreation critical to the health and well being of a thriving nation are not often recognized for the remarkable contributions they make to our mental, physical and spiritual health. These same parks create economy boosting jobs when they are built and represent a ten-fold annual return on investment as they stimulate outdoor recreation and tourism spending.

We all agree, there is an urgent need for the nation to reignite and reenergize efforts to protect these special places and provide the contact with nature and the out of doors needed to combat obesity, attention disorders and other maladies that are plaguing the nation - especially our youngest citizens.

I have attended several of the AGO listening sessions and followed the news coming out of all of them. One of the things I'm proud to say is the nation - all 50 governors, all 50 of our state park directors and the many thousands of citizen volunteers who support them, the leadership of the nations local and national parks and millions of citizens who are regular park users support full funding of the Land and Water Conservation Fund (LWCF) and want their states to receive back in the form of Stateside Assistance grants an equal share of the funding. The public understands the beauty of having a small position of off shore drilling royalties supporting the nation's investment in outdoor recreation and conservation. As we take something out of the environment, we put something back into it for the citizens who are the rightful owners of these national assets.

Discussion Question 1

Written & Online Comments

(cont.)

Across the Western states, human land use and development can impact wildlife habitat unless carefully planned. Land use and development projects can affect the movement of wildlife and the functioning of ecosystems. One of the most effective strategies to abate the threats posed by any changes to habitat is to design development in a manner that protects those crucial habitats and maintains the ecological permeability of the intervening landscape so that wildlife can move between those areas. Strategies are also invaluable if they direct scarce funds towards helping to conserve key private land holdings that serve as important wildlife habitat. These strategies will become fully realized, only if there is publically available information on the status of wildlife habitat in the state.

Western state wild life agency DSSs will utilize landscape-level mapping to visually depict crucial wildlife habitat and wildlife corridors. DSSs will be developed to promote the conservation objectives of each state wild life agency and will give the public access to important wildlife information for use in proactive planning and decision-making processes. The development of these systems will include on-going monitoring and updating of data to maintain the irrelevancy. Conservation efforts will receive an invaluable new tool once state DSSs are completed.

We have reviewed with interest the recommendations on the America's Great Outdoors website and are heartened that many of the most popular recommendations – creating wildlife corridors, protecting species from changing habitats and accomplishing conservation at a landscape level – are already FWS and NWRS core functions. For instance, the FWS and NWRS have a variety of programs that engage private landowners such as the Partners for Fish and Wildlife. These programs are responsible for large-landscape conservation successes like the Rocky Mountain Front and Blackfoot Challenge in Montana, and a new endeavor in Florida with ranchers and the U.S. Department of Agriculture to create a new Northern Everglades National Wildlife Refuge. Such initiatives protect water quality, provide ecosystem services, create corridors for wildlife while simultaneously keeping family ranchers in business and providing opportunities for sportsmen and other wildlife enthusiasts.

Like most participants at the AGO listening sessions, I applaud the administration's efforts to engage the American public in this initiative with the goal of promoting collaborative, community-based dialogue on these difficult conservation challenges. In deed, there are several examples of progressive and effective collaborations that have resolved tough issues with meaningful conservation agreements. In Utah, the Washington County Land bill is one such instance; the Nine Mile Canyon oil and gas drilling agreement between Bill Barrett Company and SUWA et al. is another instance. Similar examples can be found elsewhere: the Blackfoot Challenge initiative in Montana; the recent Lincoln County legislation in Nevada; the Owyhee legislation in Idaho; the Wyoming Range legislation in Wyoming; and the list goes on. When people of good faith and a willingness to engage with each other on tough conservation issues can be brought together, sometimes in the face of a crisis like a pending Endangered Species Act listing, workable and acceptable resolutions can often be achieved. I fully endorse such efforts and urge you to include meaningful collaborative conservation provisions in the final AGO report. .

Discussion Question 1

Written & Online Comments

(cont.)

Naturally, one regional program that particularly meets the definition and goals of AGO was highlighted during the session - the Urban Wilderness Canoe Adventure (UWCA) in the Mississippi National River Park and Recreation Area. This is a great example of how federal resources and technical assistance can be brought to bear to help facilitate and foster the use and enjoyment of our public spaces by people from all walks of life. The UWCA is an outdoor canoe program focused on getting youth from the Twin Cities on the Mississippi River as a part of the National River Park, a unique federal, state and local National Park partnership. In June of this year, this program was chosen as one of twenty pilot parks to initiate the First Lady's "Let's Move Outside" Junior Ranger Program campaign to give parents and their kids the tools to get outside. In addition to this program, session participants pointed to the rather extensive network of blueways already in place throughout Minnesota and urged further federal involvement and support.

Another great example of people working together is the Missouri River Stream Team, a partnership of citizens concerned about the Missouri River who participate in hands-on projects such as litter control, streambank stabilization, streamside tree planting, water quality monitoring, and storm drain stenciling. Since its inception, the Stream Team has trained hundreds of volunteer specialists, removed over 1,000 tons of trash from rivers and planted tens of thousands of trees along the river. As a result of media coverage and heightened community awareness and interest in stream problems and opportunities, the program continues to grow.

The Penobscot River Restoration Project is one of the largest river restoration projects ever proposed and provides a great example of how public and private conservation partnerships can succeed. The increased interest in restoration helped to focus discussion at the Maine listening session towards rivers. The listening session in Maine highlighted the effort to remove the Penobscot's outdated dams to restore access to 1,000 miles of fish habitat while simultaneously maintaining the same level of hydropower production in the basin. This project has the potential to be a model for rivers around the country: improved health, restored fish and wildlife, balanced energy production, and revitalized communities through increased recreation and economic opportunities. The continuation of restoration is crucial for the Penobscot River, as well as other rivers throughout Maine and the United States.

Beset by both water pollution from sewage and channelization, the region's rivers face hurdles before they can be fully enjoyed. Yet session attendees see progress with the Wolf River Greenway and Blueway, which flows through the region before joining the Mississippi. The Wolf River was central to the discussion, with excitement over the progress with trails at Shelby Farms, and the hope of building educational and launching facilities near the rivers of the region's six counties and transforming 30 to 40 miles of upriver wildlands into a Blueway. Attendees noted the Shelby Bottoms Trail and Greenway along the Cumberland River in Nashville as an inspiring example of success. Others raised the successful recreation economies built around the Buffalo and Spring Rivers, believing the clear waters, strong logistics and transportation, and marketing ensured residents would visit and enjoy those rivers.

(cont.)

Wildlife Refuges - Designation of Wildlife Refuges can also be an effective means of protecting some of our most treasured river landscapes. One model worthy of close examination and replication is the Silvio O. Conte National Fish and Wildlife Refuge running along the Connecticut River. One of only three refuges with “fish” in the title, the refuge is unique for its broad scope and incorporation of private lands in the four states that comprise the Connecticut River basin. The refuge works in partnership with a wide variety of individuals and organizations to provide environmental education, to encourage and support appropriate habitat conservation and management on public and private lands, and to protect habitat. Several interstate waterways, like the Connecticut, are wonderful candidates for such a grassroots generated designation.

Having public access close to where people live is the key for getting people active in the outdoors. People are more inclined to use a trail if it is within one-mile of their homes.

Inter-connected trail systems that enable people to commute safely to work, school, shopping, and to natural areas and rivers. This allows people to make getting outdoors for active recreation part of their daily lives and makes them more inclined to travel to destination trails and parks.

Technical assistance programs and financial incentives for community and inter-municipal planning, building and maintenance of trails and parks.

Funding/grant programs for acquiring lands with important conservation values.

Tax benefits for qualified conservation contributions.

Mr. Secretary, your leadership and support for LWCF are greatly appreciated. Please continue to champion LWCF as a tool for boosting the health of our economy, our communities, and our families by including it in the America's Great Outdoors report to the president. Additionally, I ask that you encourage your former colleagues in the U.S. Senate to fully fund the program before the end of this Congress.

Other public lands, such as the Arkansas Headwaters Recreations Area, the Colorado River and the proposed Dolores River Wilderness, also enable our kids to enjoy active, outdoor activities. Healthy lifestyles depend in part on access to parks, rivers, trails, and open spaces. But these places also are economic engines for tourism-based economies, supporting thousands of jobs nationwide. For instance, my company, Wilderness Aware Rafting, brings 10,000 people per year to Colorado to raft our amazing rivers.

Discussion Question 1

Written & Online Comments

(cont.)

What many of us might not know is that a large number of our most beloved lakes, streams, woodlands, local parks and playgrounds have been protected for us by the Land and Water Conservation Fund (LWCF). The LWCF is the principal source of federal dollars for protecting land in America's national parks, forests, and other public landscapes and ensuring recreational opportunities for Americans in every state in the nation. LWCF helps fund many of Colorado's recreation areas like the Platte River trail system, Castlewood Canyon State Park and Garden of the Gods, as well as national treasures like Yellowstone National Park, California's Big Sur Coast, Florida's Everglades, and historic Civil War battlefields.

Urban youth experience the outdoors, develop science skills, and explore the wide variety of natural resource careers available to them. Through multiple year programs, youth turn those experiences into not only high school, but college graduation. More than 80 percent of ELK's alumni study a science field in college, an amazing statistic for Latino and Black students.

But we can't do it alone. Continuing this success story and making these opportunities available to more American kids and young people requires federal leadership. That is why we were so pleased that the federal America's Great Outdoors Initiative held listening sessions in Golden and Grand Junction. These events gave everyday Americans - including children and young adults - a chance to talk firsthand with U.S. Interior Secretary Ken Salazar and other federal leaders about conservation and its personal impact on their lives.

One of the most important messages they heard was about the essential connection between conservation and education, with local residents calling for passage and allocation of resources to tools and programs to engage young people in the preservation of our natural heritage such as the Public Lands Service Corps Act and full funding for the Land and Water Conservation Fund

The Working Landscape: While select additions to our nation's wildernesses, parks, and monument systems may be warranted, the real opportunity ahead is focused on the working landscape. The vast majority of western landscapes must transition from the old economies of extraction to new economies of stewardship. As we have seen in dozens of exemplary communities and watersheds, when endowed with the appropriate resources, communities can create land management regimes that protect and enhance valuable wildlife and ecological systems, while creating a more resilient base for the economy.

Discussion Question 1

(cont.)

To support and leverage the work of CBOs and rural small businesses, we must also promote the regional organizations and networks that convene multiple local efforts, help to disseminate lessons learned, and accelerate innovation diffusion. These networks are integral to scaling-up place-based efforts. Regional organizations can be based in urban or rural areas and work across multiple sectors, communities, counties or states. Regional organizations play many roles at different times in the process of implementing community-based conservation and economic development strategies. Regional organizations provide improved access to technical expertise, tools, and philanthropic communities. They build and bring political clout to promote solutions, and connect rural non-profits and entrepreneurs to wider networks, markets, and opportunities. Roles include: helping to catalyze and build local organizations in places lacking this capacity, as well as strengthening existing groups; providing bridge staffing, facilitation, and technical support in communities that are rebuilding institutional and social capacity; serving as liaison between local efforts and federal officials by providing the venues and forums to initiate and build relationships when they are absent and/or frayed; reaching out to distant stakeholder groups and interests that have traditionally been at odds with local efforts and assisting with reframing and building common ground; documenting and communicating trends and issues that affect multiple communities to improve policies and procedures, including providing vital data collection, mapping, and analysis; organizing multiple communities to work together to promote shared vision and solutions; and promoting peer-to-peer learning and adoption of best practices.

Natural resource management functions, renewable energy development, conservation-oriented forestry or agriculture and other businesses can provide high quality, living wage employment protecting, restoring, and stewarding the environment. They include jobs that restore and maintain ecosystem functions and services, such as clean air, clean water, and forest and rangeland health and biodiversity, as well as those that reduce energy, material, and water consumption, and move us toward a low carbon economy. The promotion of rural green businesses can help local economies recover by expanding value-added businesses and industries, and creating living-wage jobs that have positive multiplier effects in rural communities (economic activities that maintain and enhance essential local businesses, such as hardware stores, sawmills, feed stores, and by extension, schools and hospitals). For-profit enterprises play the vital role of providing: service and stewardship work on public and private lands; entrepreneurial skills, training and employment opportunities; capital assets needed for conservation work; equipment necessary to perform land management objectives; processing and manufacturing facilities to create wood and agricultural products to provide building materials, food, and energy; ability to take demonstration projects to scale and profitability; and, market-driven revenue streams that reduce long-term dependence on public funds.

The USDA Forest Service Economic Action Program (EAP) (not funded since 2002) helped rural communities and businesses dependent on natural resources become sustainable and self-sufficient. It provided technical and financial assistance to communities throughout the rural West to retain and build the capacity of small, rural businesses to implement restoration and stewardship activities and utilize material that is removed as a result of sustainable land management activities. The Economic Action Program is the only Forest Service program authorized to provide this type of business assistance.

Community Forest Restoration Program-New Mexico (USDA Forest Service-State and Private Forestry) In 2001, with the passage of the Community Forest Restoration Act of 2000 (Title VI, Public Law 106-393) the U.S. Forest Service created the Collaborative Forest Restoration Program (CFRP) in New Mexico to provide up to \$5 million annually towards cost-share grants to stakeholders for experimental forest restoration projects on public land designed through a collaborative process. These projects may be entirely on one, or any combination of, Federal, Tribal, State, County or municipal forest lands, and must include a diverse and balanced group of stakeholders in their design and implementation. Each project must also address specific restoration objectives, including: wildfire threat reduction, reestablishment of historic fire regimes, reforestation, preservation of old and large trees, and increased utilization of small diameter trees.

Community Forest Landscape Restoration Program (USDA Forest Service-National Forest System) Congress, under Title IV of Omnibus Public Land Management Act of 2009 (PDF, 40 KB), established the Collaborative Forest Landscape Restoration Program (CFLRP). The purpose of the CFLR Program is to encourage the collaborative, science-based ecosystem restoration of priority forest landscapes. This legislation requires a broad coalition of interests to assess the landscape together, identify priorities, and sketch out a collaborative plan of action. CFLRP promotes benefits to local rural economies and forest health and should be a model for other programs. The CFLRP is not a grant making program, but rather creates the CFLR Fund, which must be appropriated annually and supports implementation activities associated with a collaboratively developed landscape scale strategy that aims to: encourage ecological, economic, and social sustainability; leverage local resources with national and private resources; facilitate the reduction of wildfire management costs, including reestablishing natural fire regimes and reducing the risk of uncharacteristic wildfire; demonstrate the degree to which various ecological restoration techniques achieve ecological and watershed health objectives; and encourage utilization of forest restoration by-products to offset treatment costs, benefit local rural economies, and improve forest health.

The USDA NRCS Cooperative Conservation Partnership Initiative (CCPI) in the 2008 Farm Bill is an innovative program that encourages landowners to work together to implement and maintain conservation practices that affect multiple landowners at a landscape scale. Instead of piecemeal delivery of programs ranch by ranch or program by program, this initiative supports projects that involve partnership among groups of landowners to address conservation priorities, regulatory requirements, and innovative cross-boundary resource management. This program invites community-based organizations to partner with NRCS for the delivery of specific Farm Bill conservation programs to landowners in ways that meet and respond to local needs, opportunities, and customs. While federal programs like CCPI recognize the value that community-based organizations provide, they fail to provide financial assistance to these partner organizations for their contributions in engaging and mobilizing local populations.

The San Gabriels have a unique relationship to nearby urban Los Angeles providing it with over 70% of its open space and hosting over three million visitors a year, rivaling the visitation level at major national parks.

Discussion Question 1

Written & Online Comments

(cont.)

Currently, the National Park Service is conducting a special resources study of the San Gabriel Mountains and watershed that could help improve recreational opportunities for families and children and address the major recreational deficiencies of the mountain range through the creation of a San Gabriel Mountains National Recreation Area. The Santa Monica Mountains National Recreation Area In LA County's Westside serves as a shining example of what is possible. We believe that LA County's eastside – the San Gabriel Valley – deserves the same. The creation of a San Gabriel Mountains National Recreation Area should be part of our national public lands agenda and this would be facilitated by the San Gabriel Valley location of the listening session.

The work we are doing is representative of the challenges and opportunities we all face in metro areas across the country in creating healthy recreation opportunities on our public lands. We would like to share our best practices and aspirations with you to create a world class urban forest that meets the challenges of limited open space in a community that suffers from high rates of asthma, diabetes and obesity.

As partners, we know that only by working together can we implement large-scale, positive change for the people and environment within the San Gabriel region. Our partnerships bring together a diversity of knowledge, expertise and constituencies, and therefore are uniquely positioned to help large numbers of stakeholders make collaborative, informed decisions about the best use of resources to achieve shared goals. We welcome the opportunity to host you.

As a member of American Fly Fishing Trade Association Board of Directors and directly involved in the fly-fishing and outdoor recreation industry, I know how important recreational opportunities are for business. Without places to enjoy the great outdoors fly-fishing and outdoor recreation business would suffer. In addition, other small businesses across the country that rely on people who enjoy the great outdoors would also suffer.

Outdoor recreation businesses like fly-fishing shops, guides, outfitters and manufacturers are small businesses that all rely on our public lands so our customers have places to enjoy the sport. America's 60 million anglers generate over \$45 billion in retail sales with a \$125 billion impact on the nation's economy, creating employment for over one million people.

Conserving public lands, adding to our national forests, parks, refuges and monuments, and protecting our shared outdoor spaces helps small businesses open up, hire and expand for a growing outdoor recreation industry and leverages that economic activity to help other local small businesses.

As your Administration heard repeatedly at public listening sessions this summer, full and dedicated funding for the Land and Water Conservation Fund at the authorized level of \$900 million a year is critical to preserving parks, forests, oceans, refuges, and local recreation areas so Americans can access and enjoy the many benefits of our great outdoors. I am confident that your Administration's America's Great Outdoors report this November will highlight the importance of the Land and Water Conservation Fund as well.

Discussion Question 1

Written & Online Comments

(cont.)

Our nation faces great challenges in sustaining traditions of conservation of our lands and waters and in combating lifestyles which have caused skyrocketing rates of obesity and stress. Happily, the America's Great Outdoors Initiative provides a forum for discussing creative means to combine energies and resources to combat all of these challenges in a sustainable way, connecting more people to the Great Outdoors, making them both healthier and more committed to safeguarding this treasured legacy.

I am writing on behalf of the National Fish Habitat Board (Board) and the National Fish Habitat Action Plan (Action Plan) to make you aware of the Action Plan's strong connection to the America's Great Outdoors Initiative (AGO). The Action Plan is a partnership-based initiative that uses best science practices to protect, rehabilitate and improve fish habitat that is implemented through 17 Fish Habitat Partnerships under the Action Plan's and Board's guidance. These 17 partnerships span all 50 states and bring a broad coalition of partners together, including Federal, State and Tribal Agencies, NGO's, Private Industry and recreational angling groups. One key example of the participation of our federal agencies is the U.S. Fish and Wildlife Service (Service) which has become an instrumental leader in its implementation as soon as the Action Plan was formulated in 2005, as well through its deep ties to the states through on-the-ground fish habitat conservation practices and funding.

The accomplishments of the Action Plan have already produced significant improvements in a number of our nation's waters. These efforts have created increased opportunities for recreational anglers to get outdoors for better fishing opportunities, making their communities better places to live. As our partnerships continue to grow, we expect to make much larger contributions to the health of our nation's waters and their fisheries, providing unique opportunities for collaboration and synergy between the Action Plan and the AGO initiative.

Implementing the Action Plan is a key emphasis of several Federal Agencies, with many other federal agencies actively engaged through a federal caucus, and continues to be a priority of State and Tribal Agencies as well as private industry, making it a potentially key player that stands in place and ready to help move the AGO initiative forward. While it is certainly recognized that these are financially difficult times across the country, the Action Plan is an already existing plan and framework working for the betterment of our Nation's Aquatic Habitats, which are the life blood of our natural world.

Just as the buildings at CC are important to our history, so too are buildings all across the United States. It takes dedicated hard work and funding to maintain such meaningful places, and in these difficult economic times many of them are in danger of being lost.

I urge you to ensure that America's historical and cultural sites, our tangible landmarks that connect us to our past, be included in America's Great Outdoors Initiative. Please support funding for historic preservation and heritage programs.

Discussion Question 1

(cont.)

Maine has a unique history for providing recreational opportunities in the outdoors. Vast tracts of privately owned lands which provide the natural resources to support the forest products industry have been shared with the people of Maine and the country. Being a fourth generation landowner, forester and employee of the forest products industry in the State of Maine, "I've been able to work within the industry that also provides many of the outdoor recreational activities I've come to appreciate. Many other Mainers have traditionally shared the same relationship between their work and recreation opportunities. There must be a continued support of Maine's working forests, private land ownership and the unique relationship to recreation in Maine.

Establish new recreational units in the watershed, including a Chesapeake Bay National Park, and new National Forests, National Marine Sanctuaries, BLM and Army Corps of Engineers' recreational facilities. These new units must also be provided with adequate resources for needed land acquisition and construction and management of visitor facilities and services.

Amend the surface transportation law and transportation policies to encourage states to give due consideration to waterway access in the transportation planning process and in conjunction with new construction, reconstruction or repair of road and bridge transportation facilities, except where such use is unsafe, not permitted or appropriate. Promoting waterway access along existing transportation public rights-of-way is one of the easiest ways to enhance public access to the Bay's rivers and streams.

America's Great Outdoors should build on innovative efforts to save our land and water and should help more Americans connect to and benefit from important natural areas. We also can revitalize local economies and create American jobs on American lands by protecting water resources; sustaining parks, working farms, forests and ranches; providing places for outdoor recreation and tourism; and safeguarding people and nature from climate change.

Protection for our public lands creates jobs and economic activity. Public lands help places like our hometown of Bend, Oregon attract new residents and businesses. In fact, outdoor recreation, including hunting, fishing, camping, climbing, hiking, paddling, backcountry skiing, mountain biking, wildlife viewing, and other activities contributes \$730 billion annually to the economy, supporting 6.5 million jobs (1 of every 20 jobs in the U.S.) and stimulating 8 percent of all consumer spending according to the Outdoor Industry Foundation.

(cont.)

While the agrarian tradition and the natural world define a huge part of this country's legacy, we believe our gardens -- private and public -- are an essential aspect of how we first come to appreciate the natural world around us and provide important educational territory for young people learning about the environment, botany, and our ability to influence the world we live in. For many of our children, reconnecting with the land begins in their own backyard or neighborhood. From Mount Vernon, Monticello and New York City's Central Park to the gardens at Alcatraz (which we are currently restoring with the National Parks Service), gardens are an integral part of the American identity. Each of these environments demonstrates that no matter what one's circumstances -- free or imprisoned, urban or rural, rich or poor - this desire to improve the world around us is at the center of human experience. And as many of these gardens are geographically accessible to urban and suburban Americans, who make up a majority of our population, they are also critical to the goals that you aspire to in your program.

We strongly endorse the importance of the national parks and the farms that we all cherish and see as a part of our national identity. We ask that we approach the preservation and conservation of gardens and planned landscapes with the same urgency. With sixteen project gardens from Connecticut and Washington State to South Carolina and Texas and dozens of others which we have supported, the Garden Conservancy sees the stories of these exceptional gardens and their creators as a valued resource in inspiring the next generation to have a strong relationship to the land. The story of Peard Fryar, the son of a North Carolina sharecropper, who turned his neighborhood into a world of fantastic evergreen topiary sculptures is as much a part of our history as the expeditions of Lewis and Clark and the Homestead Act. Such gardens and landscapes are living monuments to the essential role that plants, nature, human perseverance, and the bounty of the land have played in shaping the American identity.

Land management decisions should not be made without broad local support. Public land should be protected for the public, not from the public. Multiple-use management uses an adaptive style that allows managers to respond to the dynamic nature of the land using input from all local interest groups.

Motorized and mechanized recreation is the fastest growing segment of outdoor recreation on public lands. We believe that education, cooperation and volunteerism among interest groups and land managers is the key to a successful recreational future for outdoor recreation on our public lands.

Discussion Question 1

Written & Online Comments

(cont.)

For more than 12,000 years, people have inhabited what is now the United States, leaving physical traces of their activities, altering natural resources and landscapes, and passing down stories about special places. As a result, natural and cultural landscapes have become inextricably linked. Thus, by conserving our country's natural heritage, we also conserve our cultural heritage, and allow Americans to learn about history in place, to experience the connection between culture and nature, and to celebrate our shared earth and heritage. The National Trust for Historic Preservation commends the Obama Administration for recognizing the important connection between nature and culture, historic preservation and livable communities, and for including historic and cultural resources as elements of the America's Great Outdoors Initiative.

The federal, state and private lands that provide Americans with opportunities to connect with the outdoors and promote conservation and recreation contain many of our most treasured historic and cultural sites and landscapes. For instance, each year, while visiting pueblo ruins in the American Southwest, millions of Americans admire the breathtaking views of surrounding landscapes and come to better understand the common human challenge of adapting to arid environments and unpredictable weather. Emigrant and pioneer trails also allow many Americans to experience the oftentimes arduous journeys undertaken by their ancestors, while providing diverse recreational opportunities and protected corridors for species migration. Similarly, national battlefields allow modern people to remember the armed conflicts that were fought on American soil and shaped the growth and development of our nation. Many historic places in and near our urban areas also connect people with the outdoors by providing large lawns for picnics and hands-on classrooms for learning about traditional gardening and animal husbandry. Through the preservation of these and many other kinds of historic and cultural sites, people can experience history firsthand, while also taking part in America's great outdoors.

Our country has developed a number of effective programs that encourage public and private partnerships, provide funding to preserve and promote important historic and cultural places and offer opportunities for engaging people of all ages in enjoying and experiencing these places. However, historic preservation programs are increasingly challenged by the attrition of federal funding. Historic preservation has many benefits beyond the important focus of preserving cultural sites. Rehabilitation creates local good jobs, it encourages community reinvestment and, through the reuse of historic buildings and reinvestment in older infrastructure, it helps to create more sustainable communities and provides an alternative to sprawling development. Continued federal investment in historic preservation programs and cultural resources is vital if we, as a nation, are to fulfill our responsibility to protect our shared national heritage for future generations.

Discussion Question 1

Written & Online Comments

(cont.)

Both the national parks and the cultural resources programs within the NPS are seriously underfunded. National parks such as Yellowstone, Yosemite and the Grand Canyon are probably best known for their sweeping natural landscapes, towering mountains and deep canyons, yet these parks also contain many significant historic sites, structures and cultural landscapes. In fact, two-thirds of America's national parks were established primarily to recognize and protect historic and cultural places. Many of these parks, such as Gettysburg, Independence Hall and Chaco Canyon, are well known. More than 27,000 National Register properties are located in parks, ranging from famous landmarks such as Ellis Island and the Old Faithful Inn to remote back country cabins and vernacular farmsteads.

Volunteer programs such as the Youth Conservation Corps, Student Conservation Association, HistoriCorps, the USFS' PIT program and BLM's Project Archaeology provide excellent opportunities for youth to become directly involved in field projects that enhance and preserve historic and cultural resources within their natural environments. For example, by helping to restore a historic cabin for recreational use in a national forest, youth can gain skills in carpentry, roofing, renewable energy retrofitting, and historic window repair—all skills that they can apply to a future career path and that get young people actively engaged in saving historic places. Expand these proven volunteer programs at a national level and create paid internship positions with the public lands management agencies for a full range of career opportunities from interpretation to maintenance to security.

Rivers provide recreation for all ages, they connect us to the natural world, they give us clean drinking water, and they deliver economic benefits to our communities -- but only if our rivers are healthy.

A blueway is a dedicated stretch of river that enjoys special clean water safeguards and is a destination for fishing, boating and other recreation. Just as hiking trails are designed to help people explore the land, blueways help people discover rivers. Blueways provide a fun, exciting way to get kids outdoors, link communities to treasured landscapes like parks and wildlife refuges, and are economic drivers benefiting local businesses and quality of life.

WHEREAS, the Prairie Pothole Region (PPR) of the United States contains the last great confluence of wetlands and grasslands in North America and has been documented to be an area of international significance for migratory waterfowl and many other wildlife; and that within this area the largest remaining contiguous tracts of grasslands are located within the Missouri Coteau region

Discussion Question 1

Written & Online Comments

(cont.)

BE IT FURTHER RESOLVED that the Administration work with state and local partners to develop and implement a plan that utilizes a comprehensive suite of Department of the Interior and Department of Agriculture programs to conserve the valuable PPR landscape, including:

- U.S. Fish and Wildlife Service grassland and wetland easements to address the current substantial backlog of landowner demand;
- U.S. Fish and Wildlife Service-led North American Wetlands Conservation Act projects;
- U.S. Fish and Wildlife Service National Wildlife Refuge System and Waterfowl Production Area programs;
- USDA Conservation Reserve Program lands including enrollment in general signup CRP, as well as targeted continuous CRP practices such as CP-33 for upland game birds, CP-37 targeted at waterfowl production, and CP-38 targeted at various game birds including prairie chickens and ring-necked pheasants;
- USDA Voluntary Public Access-Habitat Improvement Program, encouraging public access for hunters and providing economic support to rural landowners and communities; and
- USDA Wetlands Reserve Program; and
- Newly developed programs supporting youth involvement with wildlife habitat conservation and hunting opportunities.

The State Wildlife Grants and the State Wildlife Action Plans that they fund is an existing program that supports the objectives of the AGO. Full implementation of those Plans would allow us to address common federal, state, and NGO goals to keep wildlife from becoming endangered.

As AGO strives to engage and empower the public, particularly through State, local, private and tribal entities Birds could serve as the cornerstone of this effort for two reasons. First, birds are well established indicators of the health of our environment. As outlined in the 2009 and 2010 State of the Birds reports (www.stateofthebirds.org), birds can tell us a story. They are literally the canaries in the coal mine. American citizens also feed, watch, photograph, and hunt birds in increasing numbers every year (http://www.wc.adfg.state.ak.us/viewing/pdfs/birding_natsurvey06.pdf). We can use birds to reconnect Americans to our great outdoors.

Programs to reach the public should also focus on accessible and familiar places and create connections with natural resources at the local level. Additionally, environmental education in school curricula and teacher training regimes is critical. Research continues to show, however, that children learn more effectively when regularly engaged in outdoor learning. To support environmental education in our schools, states and school districts must be provided with funding for teacher training, innovative program development, and student transportation.

Discussion Question 1

Written & Online Comments

(cont.)

A large percentage of birds and to a lesser extent other taxa, migrate out of the United States at some point during the year. Thus, conservation actions taken within the US may not be adequate for the

long-term conservation of some species. There are already programs in place that help address this critical need that include but are not limited to the following—the North American Wetland Conservation Act, Neotropical Migratory Bird Conservation Act, USDA Forest Service International Programs. Implementing these programs will allow us to continue to address the needs of US priority species.

If we take into account our population distribution, it becomes apparent that most of it is located within urban areas. Access to outlying areas is beyond the reach of many. Certainly weekend or week long "camps" provide an extraordinary experience for many children. The reality, however, is that this type of program provides exposure to the outdoors for only limited numbers and for limited time periods. Opportunities which provide multiple exposures to a substantial part of the population are a critical complement to special experiences.

AGO presents an opportunity to develop a cross-cutting federal initiative to leverage greater protection of recognized national priorities – estuaries of national significance –by focusing and funding existing federal programs, such as the Land & Water Conservation Fund, and newly proposed programs such as the National Endowment for the Oceans.

As members of the bipartisan House Land Conservation Caucus and other concerned members of Congress, we write today to thank you for your commitment to community driven open space preservation embodied by the America's Great Outdoors (AGO) Initiative. Here in Congress, we've worked with members on both sides of the aisle to promote and enact common sense policies that allow landowners and state and local governments to conserve and protect threatened farms, forestland, and other treasured natural landscapes. We appreciate your efforts to solicit input from a broad array of stakeholders, and we would like to offer several proposals for inclusion in your final report to the President.

We urge you to prioritize long-term - and permanent, where appropriate - renewals of tax deductions and credits that incentivize land conservation. For example, we have labored mightily to secure periodic renewals of the qualified conservation easement income tax deduction (26 U.S.C. 170e), which expired in calendar year 2010. The federal estate tax, also lapsed, increasingly drives the development of open space by making it more difficult to preserve working lands from one generation to the next. The uncertainty and unpredictability of continually-lapsing tax incentives severely limits their utility, as conservation often requires complex, multi-year transactions that rely on a stable tax environment to work

Along with many of our colleagues, we have long been proponents of full and dedicated funding for the Land and Water Conservation Fund (LWCF). In addition to the work done by the LWCF on federally-owned and protected lands, the LWCF stateside program provides crucial funding that allows states to provide expanded access to parks and recreational spaces.

Discussion Question 1

Written & Online Comments

(cont.)

Recreational hunters also provide an important constituency when it comes to land conservation; sportsmen have long been some of our nation's strongest suppliers of land conservation. In recent decades, encroaching development and competing public land uses have limited access to high quality hunting and fishing areas. As you develop your final recommendations, we urge you to protect and expand access to public lands for hunters and anglers.

As we work to rejuvenate America's urban centers, drive sustainable development, and promote healthier lifestyles, we would strongly urge the creation of more urban parks and other protected areas at the local, state, and national levels. Put simply, increasing green space improves health. Studies show that residents exercise more frequently where there are neighborhood parks and trails in close proximity. Conversely, the same studies show that where there are no parks, residents often go without exercise. Developing and expanding recreational opportunities and conserving more public lands will improve and increase access to the outdoors, now and for generations to come.

Although we strongly support enhanced and streamlined federal programs, we also believe it's important to stress that many of the best open space preservation solutions are emerging across the nation in a "bottom-up," locally-driven fashion. Our communities are generating home-grown, collaborative solutions to conservation challenges that deserve a willing and nimble federal partner with the resources and wherewithal to leverage and implement them. For example, resources like the National Park Service's River, Trails and Conservation Assistance (RTCA) program -- which provides technical assistance and guidance for recreation and park projects -- allow the federal government to supplement and enhance the innovative work done by local communities.

We are writing in support of the America's Great Outdoors (AGO) initiative and its potential to protect and enhance our local national estuaries and their watersheds lands::

Thriving cities and suburbs that are home to millions of Americans are located along the shores of some of this nation's most important estuaries, including the Long Island Sound, Peconic Bay, New York, New Jersey Harbor, and the Hudson River. Protecting and restoring their health should be an environmental imperative. Yet, federal funding has too often been - allocated disproportionately toward less expensive and more expansive places

in our area alone, the Long Island Sound and its watershed have sustained New York communities for hundreds of years. An estimated eight million people live within the Long Island Sound watershed; roughly twenty million people live within fifty miles of the Sound, and businesses dependent on the health and viability of the Sound account for an estimated \$5.5 billion in economic activity annually.

Your leadership can improve the way federal agencies work with each other as well as with state and local governments when it comes to protecting watersheds and the waters of the nation's harbors, bays and rivers. We ask that you use the AGO process to elevate and prioritize all national estuaries.

Discussion Question 1

Written & Online Comments

(cont.)

This process presents an opportunity to develop a cross-cutting federal initiative to leverage greater protection of recognized national priorities - estuaries of national significance by focusing and funding existing federal programs, such as the Land & Water Conservation Fund (LWCF) and Coastal & Estuarine Land Conservation Program (CELCP); allowing federal agencies to work together on strategies regardless of agency jurisdiction or designation; and giving national estuaries the same status as national rivers and making them eligible for federal side LWCF funds

We also urge you to give our contiguous national estuaries - Long Island Sound, Peconic Bay, and NYINJ Harbor - the Treasured Landscape status they deserve. Granting this status will go a long way in preserving and restoring our nationally important estuaries and watershed lands while supporting local tourism and outdoor recreation, as well as businesses such as fishing, lobster and clamming industries.

For nearly a decade, I have advocated protection for this wild Chihuahuan desert grassland ecosystem, which is a vast expanse of federal public lands that not only supports an amazing array of birds and game species, but also safeguards a vital fresh water aquifer. Now is the time to formally recognize the value of this rare but unprotected landscape and protect it for future generations, an important and necessary step that I highlighted in my remarks at the commencement of your America's Great Outdoors initiative and in my letter to Secretary of the Interior Ken Salazar, which is attached. I, personally, and the State of New Mexico look forward to supporting your establishment of the Otero Mesa National Monument.

The SMMNRA represents an ideal recipient of these monies. It serves the largest urban area on the West Coast with 12 million people living within less than an hour drive from the SMMNRA. Through our park acquisitions we offer far more than outdoor recreation. We offer living laboratories and classrooms where thousands of students and teachers from grade school through graduate school can study and work every year. Thousands more learn valuable job skills through innovative land management, stewardship, and interpretive programs in our mountains. Many of these programs serve inner city youth.

As residents of the magnificent Puget Sound region, We can easily recognize the importance of the great outdoors and how critical its preservation is to both our culture and economic livelihood. I applaud the Obama Administration's search for solutions to conserving and increasing access to our public lands, improving outdoor recreational opportunities, and celebrating the role that the environment has played in our rich cultural heritage.

On my previous role as Chairman of the Interior and Environment Appropriations T. (11). i Subcommittee, I was proud to work with President Obama to reverse the downward funding S' trend that our land and environmental agencies suffered during the previous administration, In fact, last year we worked together and increased funding for the Land and Water Conservation Fund by nearly \$200 million to \$450 million. The Legacy Road and Trail Remediation program created three years ago has enjoyed increased funding - \$90 million for 2010 - with the strong support of the Administration. And I am particularly pleased that we were able to obtain \$50 million for the Puget Sound recovery in 2010, up from \$20 million the year before.

Discussion Question 1

Written & Online Comments

(cont.)

Both the Northern Forest and the Connecticut River watershed are well positioned to help achieve the goals of the AGO initiative. The Northern Forest has been the focus of an interagency conservation effort, first initiated by the Northern Forest Lands Council, which has helped double protected lands in the region since 1995. The Silvio O. Conte National Fish and Wildlife Refuge was established by Congress in 1997 as a unique new model designed to foster conservation across the entire Connecticut River watershed. The refuge has a project boundary that covers the entire four-state watershed and offers a range of tools to support collaborative conservation with other federal agencies, state and local government, and private entities.

At this time when jobs and economic development are at a premium, we need the natural resource-based jobs that these landscapes support. For example, the Northern Forest's private working forests are the backbone of a forest products industry that supports 148,500 jobs across the four states. The Connecticut River watershed has 221,000 acres of prime soils under active cultivation-it is known as the "breadbasket" of New England.

These landscapes also provide ecosystem services like clean water and carbon sequestration. The Northern Forest contains the headwaters of the Northeast's major rivers, including the Hudson, Connecticut, Androscoggin, Saco, Kennebec, and Penobscot. The Connecticut River watershed provides drinking water for 4.6 million Americans, and provides 70 percent of the freshwater inputs to Long Island Sound. Both landscapes support forests that sequester on average 120 tons of carbon per acre at maturity.

We also believe that AGO will help draw Americans outdoors to enjoy these special places. As you have recognized, outdoor recreation is essential to improve public health and reconnect Americans with the land. The Northern Forest and Connecticut River watershed are both premier recreation outlets within a day's drive of 70 million Americans. Federal lands in the region include the White Mountain and GreenMountain National Forests, numerous national wildlife refuges, and the iconic Appalachian National Scenic Trail. Outdoor recreation across these landscapes helps reconnect Americans to our natural heritage and creates jobs-including 136,000 jobs and \$658 million in tax revenue for Maine, New Hampshire, and Vermont alone.

There are immediate opportunities in FY12 to conserve the Northern Forest and Connecticut River 1-1 S watershed through the Land and Water Conservation Fund (LWCF) and the Forest Legacy Program. Beyond land conservation, there are important new efforts emerging in the Northern Forest to enhance private lands stewardship and restoration, bolster the working lands economy, and leverage greater tourism and economic development from the region's natural and recreation assets. The President's Budget should also provide resources to support these activities as part of a holistic approach to landscape-scale conservation

We hope that you will select the Northern Forest and Connecticut River watershed as focus areas for LWCF and other resources in the FY12 President's Budget. We would enjoy the opportunity to provide you with more details on the specific programs and related funding needs for FY12 that would make this effort a success.

Open outdoor space, be it a vacant city lot that has been transformed into a community garden or an essential biological corridor connecting critical habitat for endangered species, is a valued public resource.

As you know, I have a particular interest in restoring the Chesapeake Bay and greatly appreciate this administration's aggressive commitment to save this important estuary. Great estuaries like the Chesapeake, other watersheds, and landscapes like the Northern Rockies can be powerful themes around which to organize conservation efforts, channel support and create innovative public and private financial commitments. The bay restoration program can serve as a model for how the federal government can promote, protect, and sustain the great outdoors initiative. Federal resources are used to facilitate cooperation among the bay states, conduct research and, at times, compel compliance where other environmental laws come into play. Its substantial financial contribution is but a fraction of what it leverages from the state and local governments, nonprofit organizations and private individuals.

The AGO initiative should find ways to encourage more cooperative arrangements with other landscapes and themes, utilizing a full array of public and private partners. The modest federal investment to create the Rappahannock National Wildlife Refuge, for example, leveraged commitments by local governments and nonprofits to protect more than 30 miles of sensitive wetlands and valued riverscapes within the refuge's proposed management area. In many instances, these protections are in the form of easements held by private land trusts.

It should promote public access and encourage sustainable recreation opportunities. Allowing multiple forms of public use will build demand and create future generations of conservationists.

It must also develop a greater presence in and around urban areas where more than 80 percent of the U.S. population resides: These residents need access to open space that is within a short travelling distance from their homes.

During these difficult economic times, communities around the country are facing job losses and severe economic challenges. Amidst these many challenges, our private working forests could provide an important source of jobs and income, especially in our rural communities. Private forests are responsible for an average of 8 jobs per 1,000 acres. In addition, across 29 states, working forests contribute a sizable \$115 billion to the gross domestic product.

The role of this legislation in saving jobs and also our nation's working forests cannot be underestimated. U.S. Forest Service researchers estimate that by 2050, 23 million acres of forest lands may be lost. Without these critical private working forests, communities could lose jobs, income benefits and natural resource-related services that are crucial for their well-being. Community Forestry Bonds encourage sustainable management of private forests, while deterring the devastating effects of fragmentation, conversion and habitat loss.

The City of Los Angeles is honored to have been a listening session location for President Obama's America's Great Outdoors (AGO-LA) initiative. We appreciate your visit to our community and the Obama administration's attention to the importance of open space, nature and the Los Angeles River in our urban environment. To assist in preparations for AGO-LA, my office convened a planning group of interested parties, elected officials, environmental groups, conservancies, federal agency staff, local government staff and youth groups to share ideas for greater access to the outdoors. The City intends to continue this local dialogue and welcomes the participation of the United States Environmental Protection Agency (USEPA) and other federal agencies.

During AGO-LA, you and other members of the administration asked participants for solutions and ideas to encourage Americans to spend time in the outdoors. Local government, environmental organizations, community leaders, and other stakeholders shared meaningful input into the national discussion, some for the very first time.

On the local level, we will convene the task force created to plan for AGO-LA as a single entity to work with the federal interagency task force on the development of policies and initiatives that can be replicated in urban regions throughout the Country. Our local task force includes participants working throughout Los Angeles County to improve our urban watersheds.

We hope to be a catalyst, through our hard work and a positive experience, for closer coordination of the multiple federal agencies whose separate missions relate to urban watersheds, and who are beginning to work together on efforts such as AGO-LA. What we envision is an interagency task force with all agencies involved with the America's Great Outdoors, as well as the Department of Transportation (for the implementation of the California High Speed Rail project and the conversion of unused rail tracks and yards into regular and linear parks and open space), and the Office of the First Lady for the "Let's Move" program among others.

The magnitude of urban watershed revitalization in the Los Angeles region and its potential to impact millions of people warrants this kind of special federal attention.

We in Los Angeles, partnering with our watershed, environmental, environmental justice (EJ) and conservation communities are ready to lead. The historic AGO-LA listening session and follow-up actions continue to be a convening vehicle for all of us involved in the planning. We are hopeful that our collective advocacy and hard work will transform our urban environment into a more healthy and sustainable one.

Please Help me and my family rediscover our land and restore are love of our Great Nation Thank you for your time!

. Save our wilderness!!

. Please do not forget the important impact wild spaces have on young people. They inspire, teach, and build self esteem and confidence.

I want the next generation to enjoy America's great outdoors as much as I do... because they are our legacy, our truth, and our beauty. It would be a shame not to.

. The preservation matrix of natural resources is integral in protecting our native ecosystems and biodiversity, which are some of our greatest national treasure.

. Our wild lands are in fact the last remnants of the world were intended to occupy. I feel it's urgently important for us to hold onto these wonderful places as though our lives depend on it.

. Being an upcoming geologist, I see that people need to understand the world around them and respect the power that it has over us. We need to preserve the integrity of these outdoor habitats and become one with nature once more.

. Nature is essential to the American heritage. A large portion of my childhood was spent in the outdoors. Access to protected open spaces allows the imagination to run free and provides sanctuary beyond the limits of cities. An America in which natural lands were not protect, sidelined for economic interests, is unacceptable.

. I strongly encourage everyone to step back from your desks and take the time to visit the outdoors. Perhaps you are not interested in biking, climbing, rafting, or any other extreme sports, but you can surely appreciate the clean crisp air found away from the city. Please consider what you can conserve for generations to come. The time to act is now!

Hello to America's leaders! I consider my personal experiences outdoors—from family picnics, to hikes, to Rio Grande raft trips, to bicycle races and tours, to music festivals, and to innumerable backpacking and cliff-diving trips—the most valuable and memorable ones. They nourish my well-being. Outdoor spaces are important to me, not just because I work for an adventure publication but also because I urge leaders in Washington to protect our shared outdoor spaces .

The responsibility for good stewardship lies with our generation. It is important that we be proud of the world we will hand over to our children.

It is a breath of fresh air! We know people, children foremost, need exposure to wild places. They need nature...we are a part of it. Read Richard Louv's, *Last Child in the Woods*, or *The Future of Life*, by E.O. Wilson. Read any number of fine books by nature writers over the years. As a species, we would be much diminished by not having access to places like Yellowstone or one the smaller scale, any local sanctuary or plot of woods. I hope every effort will be put forth on this initiative.

Cycling should be allowed in National Parks.

As a DC resident I love this city and I love the outdoors.

Dear Folks, i thank you for the opportunity to engage in conversation regarding the great outdoors initiative. when i visited the "discussion" site, i was unable to access the discussion portion. i also noticed, that according to the little topic icons on the right margin, the largest voiced opinions on this issue were from folks who want to use offroad vehicles and keep the mountains or other natural areas from being protected. i had the opportunity to visit the listening session held at occidental college in los angeles in the spring. the greatest number of people at that meeting seemed to have a great variety of interests. my prejudice is toward protection of the environment and encouragement of understanding of and participation in nature. as a docent at my local county natural area, i see people hungry for open natural space. on weekends we have people of all stripe, age, income, background come and visit.

What Works: Let there be something along the lines of the civilian conservation corps. we have the california conservation corps, where young folks can work on park and natural areas, gathering work experience in gainful, useful employment. We have the forest service, the los angeles county department of parks and recreation, other good public and private agencies such as el nido, which guides young families. We can have partnerships between local, state, federal, private agencies in the public interest, such as environmental protection agency, department of human resources, other agencies related to the environment and worker support.

what federal government can do : same as above to employ folks to rebuild destroyed structures, access roads and or trails, remediation as needed for the forest, challenge: we have limited access to the national forest. we have a transportation system which needs to be available more hours to more people to more places. we have manufacturers out of work what works: let our stimulus package help folks to make buses or trains (running clean?)and train operators to run longer hours here. let appropriate local state and federal agencies partner with local manufacturers to improve public transportation. let same as above agencies partner with local private public interest agencies to help train folks to run improved public transport system to open space.

what works: the Santa Monica Mountains National Recreation Area has a successful Transit to Trails program. A San Gabriel Mountains National Recreation Area should include robust transit to trails program that would enable people from park-poor communities to have improved access to San Gabriel Mountains recreational opportunities. There should be a bus service along Angeles Crest Highway and Hiway 39 at least on weekends.

Less traffic. More outdoor recreational opportunities.

We have a family of four, my wife and two daughters. I, personally, cannot image our lives of the last 12 years if we didn't ride together, with friends and family. Our daughters are good kids, no drugs, pregnancies or even bad grades. Their lives have been filled with sport, camping and riding dirt bikes. more than half of our weekends annually are spent outside. We have created an environment where there are no "idle hands". I'm honestly amazed that providing access to this type of activity is such an emotional issue for detractors. No one is forced to take part in the activity, but for those that do and for those that dip their toes in the OHV world, they are changed forever.

I understand that you are looking for what kind of relationship hikers and outdoor enthusiasts have with their federal public lands in the 21st century. I am a long time user of federal public lands--hiking, hunting, fishing, skiing and camping. In the summer months, I am typically using the lands about two weeks of every summer in addition to skiing in the winter. I would encourage you to remember that a lot of us in America are getting older now (I'm over 50). As such, it is more difficult to use public lands in those cases where a heavy backpack might be needed (think of all those people with back problems). We need access--the more the better. This means open Jeep roads to the beginning of Wilderness boundaries for hiking, areas where we can get to high mountain lakes by driving, and continued free use of BLM and forest service lands (we already pay taxes). In general, I support multi-use.

I have been offroading for over 50 years. I raised my family (2 girls, 2 boys) on motorcycles riding in the mountains, desert, and MX tracks. My family and I love the outdoors. We enjoy it by camping, hiking, mountain biking, motocross, and off-roading. The kids have turned out to enjoy the outdoors as much as I do. I believe that most responsible people enjoy and care for our great outdoor areas. As with most things, it only takes a few misfits to completely mess up the opportunities of others. Too bad we (the people) can't get honest people in our government to run this country, as it was ment to be run, by the people!

Good stuff. Add Puget Sound to this mix of inland seas and major watersheds. These systems are the life support systems of the nation.

Right on put down the video games and get out the OHV's go enjoy all the public lands GOD has given us to explore not just parts of them! Cant understand why this idea is losing to badly Promotes: 44 Demotes: 108

I'm a Disabled American Veteran; if it were not for my OHV I would not be able to enjoy a lot of America I served to protect.
