Discussion Question 3

Federal government role: How can the federal government be a more effective partner in helping to achieve conservation, recreation or reconnecting people to the outdoors?

Albuquerque, NM

Who is going to pay for this? Federal Government should go back to the state and they should start getting money from the states. They have the money from oil and gas, gambling, military etc. Organizations should legislate through the state.

Political issue and how do we support the political environment. Federal Government role is to work locally to create these coalitions. He feels that what is needed is a partnership at the state level.

Collaborative effort help to keep them moving. Teach them young and recruit locally. If you plant the seeds in youth there is ownership. Give the youth jobs and training so they can go to college and get educated in the environment and have the opportunities. Federal Government is not marketing these tools.

His group is trying to get together with the youth conservation groups and bring grants into the Las Cruces Communities and get kids out into the dessert in Dona Ana County. It helps to reconnect the rest of the community. The Federal Government should pass the Omnibus Bill. The Land Bill will be helpful for the West. BLM should look for more wilderness or NCA lands. He would like to see Otero Mesa become a national monument. NLSC is now helping him put together a friends group to get grants. He would like to see the Federal Government provide more funds to organizations that support what the group does.

One of the biggest challenges they face is that there is not enough funding for trails to fix those in existence or to create new trails. Just over the 4th of July weekend 14 members from his group cleared 80 miles of backcountry trails in the Pecos Wilderness. The Forest Service is under continuous pressure and without these kinds of groups they have no choice but to close the trails.

As an alternative, I support the R.O.A.M. Act, which would open up public lands to wild horses - The National Parks and some wilderness areas for example.

(This individual was very aggressive and uncooperative.) The government is just trying to take and control land. They don't want us to mine anymore. Miners are conservationists. With this effort the government is pretending they want to protect the environment but they are trying to take and control your land and keep you off of it.

A lot of federal agencies already have restoration programs in place. We need to use these existing programs instead of always creating new programs initiatives. Farmers/ranchers need to be supported because they care for land and provide wildlife habitat. Simplify regulations that they have to follow. Conservation/restoration programs already in place can be used to support farmers/ranchers. Give programs time to get established and work.

Discussion Question 3

Albuquerque, NM

(cont.)

Bills/laws are tools. Federal government needs to pass omnibus wilderness bill to protect wilderness. Encourage president to make Otero Mesa a ntnl monument.

Communication problems exist between conservationists and resource consumers. We can bridge the gap. Not all uses are appropriate for all places. The government needs to make regulation simpler, get rid of the layers of government. Don't make regulations weaker but make them simpler and easier to understand. One size doesn't fit all, tailor regulations to the place. Need consistency, can't keep changing regulations/processes all the time.

He does Open Space education. Government considers Open Space education/recreation. Government should quit cutting budgets for these programs (education/recreation). If we kept or increased budget, we could do more education and marketing. Need stringent rules to list out what can't/can be done with funding. Having clear idea of what we should/could do makes programs more effective

Implement changes within parks and recreation. There should be community gardens in every city park. We water city parks, why can't we grow food there? This would do more than cure hunger; it would teach people how to grow food. Need to have programs that encourage farm/ranch lifestyle, not everyone wants to/can go to college. Food grown in parks could supplement government WIC/welfare programs. Federal public lands could be provided for these types of programs too. Stop exporting food grown here, stop importing food grown elsewhere.

Need to find a way to support sustainable local economy. Need to make conservation work economically viable. Government needs to implement policies that do this. Community supported agriculture works. Tax incentives work.

Resilient ecosystems are beneficial. Federal government could streamline federal grant proposal process. It takes enormous amounts of energy to balance/match funding and administer federal grants. EPA money should be able to match NRCS money etc. There are so many restrictions on interagency money even though they all support the same programs. Sometimes federal funding is available but the state can't provide funding needed for match. Having resources to manage federal grant is difficult because of reporting requirements etc.

Thanks to federal government for opening arms to traditional communities and cultures. Working harder to bring traditional communities to the table. More of this needs to happen, especially for grass-roots efforts. Many traditional communities are reluctant to work with federal government based on their perception that we are closed. Government can be better partners in local efforts.

This ranch brings in thousands of campers from across the country. Now the federal government is making them do their own NEPA studies for projects on federal lands. Government could let public do some of the work on public lands. Federal government should help with liability issues for recreation opportunities on private land.

Discussion Question 3

Albuquerque, NM

(cont.)

Use money from tax dollars to create jobs. Educate people on green techniques. Banks need to give money to people.

We need to recognize that animals are part of the ecosystem. Prairie dogs are part of the ecosystem. Prairie dogs need to go on endangered species list.

Worked on Navajo Reservation. She saw firsthand that nuclear energy isn't clean energy because uranium can't be cleanly mined. The government shouldn't allow uranium mining.

Fed government should model cooperative behavior. Infighting been going on for years. Would help a LOT if you'd stop.

Protect private property rights. Better communication – we don't know about projects, stuff has to be done online, we don't have that. We don't know about the records that have to be kept. We face a lot of barriers and lack of knowledge.

Education initiatives need to not be limited to school system. Educate people – all the people, not just school systems. US Forest Service adopted a school. Have Government agencies partner with school district. Land and Conservation funds diverted. Congress needs to get full funding for it. Can Federal government create a central clearing house for small group funding. National Endowment for Conservation. We have got to look at the bigger picture – put it as a priority to protect water, air, land so we can get out and enjoy the outdoors in a sustainable way. We cannot afford to wait – Bingaman's supported legislation needs to be passed now.

Otero Mesa. Vast amount of water under it. We are threatened all the time with drilling...if it is made a national monument, will protect the water. We can't count on Gov. Richardson, we need the Feds.

What is the process of getting Sec Salazar's ear to get Otero Mesa declared as a national monument? Make it easier for people to figure out what to do. Don't forget communities that don't have websites, can't host webinars. Fed needs to remember and find ways to connect with people who don't have access to those tools, capture their input

Fed needs to be facilitator to make things happen. We bring groups along as collaborators, we decide as community. Fed and state agencies help make that happen. We couldn't do what we do without them

The Federal government seems to be primarily partnered with powerful private industry. Corporate interests – oil and gas industry – get away with things that destroy our environment. We need more followup on meetings like this. Meeting happens, nothing happens after that. Update website, keep people posted on what's actually happening

Fed government provides huge support to corporate agriculture, there is no support for smaller farm efforts. Completion of the travel management program for the Manzanos that Forest Service worked on with us.

Discussion Question 3

Albuquerque, NM

(cont.)

During mandatory testing, students who were not testing could have environmental and conservation education and curriculum. Get environmental curriculum built. Service/learning program. Love to see Fed government support this – funding is wonderful, but a school that aims towards environmental focus would be eligible for federal monies. Will build a body of committed students and educators. BLM's "Restore NM" program is great, but limited. Get them to where they can ID new projects. Get a clear vision on the top – five to ten years out

Involve Dept of Education. Have online national conference.

Take the President, Arnie Dunkin, First Lady, and the kids out in to the National lands. Get the high level officials out into the lands they've impacting with their actions.

Outreach in Spanish, at least in NM. Problematic that there isn't a true recognition that if we don't protect the land, the air, the water, we won't survive. Where tax money goes to destroy an ecosystem that will never recover. We do it over and over and over. As far as communication, most of it we don't really hear. If you don't have water in New Mexico, you don't have anything else

We want President Obama to start a 21st century Civilian Conservation Corps.

Create opportunities on Federal land for groups to help out. Have Fed gov take a page out of Bingaman's book, and come back to the table with patience and diligence, until we move close to commonly held value. Bingaman and Udall are great. We can no longer afford black/white point of view.

Grass roots very important. We're used to having clear vision from top, people find strength and empowerment in grass roots.

"Our area encompasses Santa Fe, Taos, and Rio Arriba counties. Much of the enchantment that the state markets, that is found in northern New Mexico, are the remnants of things that went along before and during the Spanish Colonial period. Our goals is to help communities in Northern New Mexico so that they will not have to open its doors to a Wal-Mart or whatever in order to find jobs for their youth. This part of the state is primarily agricultural with deep historic ties that go back for centuries. Part of your initiative is focused on trying to get people meaningfully engaged in the outdoors. Speaking from that point of view, we are one of 49 National Heritage Areas in the country, one of only 5 west of the Mississippi. They range widely in orientation and function. The entire state of Tennessee is one, for example, because of Civil War Battlefields. My recommendation is for this commission to look at increased funding for National Heritage Areas."

Discussion Question 3

Albuquerque, NM

(cont.)

"I would love to see permanent protection for Otero Mesa by whatever method is available. What works? Wilderness works. If you look out at the Sandia wilderness or the Pecos wilderness around Santa Fe, then you realize that lays the groundwork for everything we are talking about, giving people of all ages the chance to get out and interact with nature. Lasting change. Of course I realize that some of this is due to the legislative process. We'd like to see some of the places talked about get protected by the agencies, and we'd like to see existing laws be enforced. For example, off road use. The Forest Service needs to be aware that there are a lot of illegally created roads and they need to be closed. Defragment land ownership, preferably between the State and Federal ownership. Rationally manage."

Discussion Question 3

Annapolis, MD

One effective tool is EPA Smart Growth office which provides education for local governments and empowers them. Need to do more peer to peer work. Key partners would be National Association of Counties, Municipal League, AASHTO.

We need to encourage parents and teachers since kids listen to their teachers a lot and they need to emphasize environmentalism. That's how I got into the movement.

Yeah, how do you attract people

Also you can compost stuff from your own house for the garden

It's not just bringing people into the parks, it's also raising awareness. Need to know why it should be protected

Farms, DC environmental education consortium. Forest communities, people only concerned w/ survival. Childhood obesity is real problem. Growing own food- impress on young people how important. Low cost, low carbon imprint food. Expose kids to natural world, draw kids in, meet kids where they are and teach them. Teach teamwork, teach about parks. Edible gardens, people sitting around not doing work, put them to work in gardens. Agricultural runoff is #1 source of pollution. Wants DOI and EPA to work on this. Agreed that community gardens for disadvantaged youth good, radishes grow the easiest, growing stuff has to be fun

Federal teeth are lacking to guide county actions. Supports Senator Cardin legislation to give EPA more authority to enforce Clean Water Act. Need to have DOI help develop ecosystem services markets to develop parameters and to engage people.

Get out and experience areas. Limited accessibility

we have set aside many places for the public – in the 1970s in a recreation in urban areas initiative we created these areas but there is no access for an urban population – exception is Golden Gate where the Muni bus came out to the beach every Sunday – paid for by the city as a deal for making it a park – we don't have a lot of access via buses, public transport and school groups don't always have buses to get places – a dedicated item in the transportation budget to get people to parks and schools could compete for that

Connected open space network and what values can be portrayed.

Farming looks similar everywhere, but isn't. Farm Bill should be administered differently on different landscapes.

Discussion Question 3

Annapolis, MD

(cont.)

We need to find a way to teach the parents too because they don't really know either. Need to bring them in more to a school structure where you have to learn this stuff. We know these things but we don't understand them and it would be helpful to really learn about them

It always seems to be like a one time thing and then the garden falls apart. It would be helpful to have a weekly program... the garden needs to be kept going

We have to get to where the kids are... they see all this stuff, it's not just in their schools. Every kid has an iPod, we have to let them pull us in to pull them back in. All these iPhones and apps and cell phones. We have to get cool for them to like us.

And those tests or quizzes.... People love those. I've taken thousands of those.

It depends on the event and the person

Event planning too

And adapt to the kid's interests

Government and mismanagement of funds

Need to embrace technology

I know that Obama has already increased funding, but expanding organizations like SCA which engage youth would be good, since it starts at a young age and builds from there. We need to get youth involved in these programs and internships. But it doesn't just have to be SCA, it can be other conservation associations. If we could have 10,000 interns per year it would allow more youth to work on public lands.

Go recruiting - talk to people

need funding for wildlife mgmt and conservation to insure that future generations have access to National Wildlife Refuges, which is severely underfunded. Need funding for State wildlife grants pgm and Teaming with wildlife pgm. Clean Water Act needs to be expanded to cover isolated wetlands and intermittent streams. Need national invasive species mgmt pgm (a lot more needs to be done on invasive species – good efforts underway in Florida).

Discussion Question 3

Annapolis, MD

(cont.)

We need to have the Administration do something huge – “put every kid in a park.” Ken Salazar said many good things today; at one point he said “I want a meeting between me, Bill Saxton and Lisa Jackson and Education.” One thing we can do is get rid of the Standards of Learning. The Obama Administration should champion a re-alignment around education and the outdoors - it is unacceptable to perpetuate this broken system. Such a re-alignment would support Michelle Obama’s “Kids Outdoors Program.”

Community gardens: like that idea at the Department of Agriculture. It is a great way to bring a community together and learn about environment. Think about how you can work with Dept of AG, and non-profits, ...excited to work with it. Know your farm, know your food. Farms hooking up with urban areas to provide local crops, local communities visit the farms.

Jobs...there are opportunities to get involved. USDA FS and NRCS have tremendous opportunities for young people...examples. So many exciting jobs...job corps (6000 young people learning about green jobs – green related skills).

Look to the states –they already have information and programs in place. Give them the support they need; increase their capacity.

Would also like to see Historic Preservation Fund fully funded. Provides funding to State Historic Preservation Offices. Would like to see more funding made available to develop local ordinances (ie Anne Arundel County has county ordinances requiring that cultural resources be considered when development is proposed).

The Federal government can help to nurture small organizations through the technical assistance they provide. Beyond the know how they bring, the personal assistance that Federal staff provide can be critical to the growth and development of organizations such ours. The staff of the Chesapeake Bay Gateways Network has been enormously helpful to the development of the Annapolis Maritime Museum. The individuals in the federal government have been helpful.

More funding for organic and green agriculture. Incentives too for local food systems, supporting green, organic, and local foods.

And it's important to keep that up throughout middle school and high school, because it becomes uncool in a few years. Need to keep that message with th

A community garden initiative using eminent domain instead of just letting extra land go to waste

More community gardens allows more kids to garden and give them more understanding of the process that goes into growing food.

That's why elementary school gardens are so important... because it lets the kids know where their food came from

Discussion Question 3

Annapolis, MD

(cont.)

Along the same lines with the gardens, having people at a young age go out to see how to preserve a park... show what is done to help erosion, removal of invasive species, things like that. Anything to help people get down and dirty and understand the work that goes into preserving land

Social networking sites are a great example. You can post conservation events and opportunities to get involved with the NPS and create sites so you can become friends of a national park

Or you can post events on there

Community gardens are great ways of increasing the access to superlocal food. It helps establish a better food system and give people a better understanding

Promote wider involvement in public and community gardens and make community gardens more abundant and more available

Supports full funding for LWCF. Likes Go Colorado program as a model. Need to bring private capital to initiative. Need to activate Chesapeake Treasured Landscape Initiative federal leadership committee.

There need to be programs in public schools to encourage them to go outside. Educate the kids when they're small.

Grassroots organizations in addition to government are important and need funding

Q #4 – land conservation – where has federal government made a big difference? From federal government need scale and plan component, really took state wildlife agencies forward. That was a federal requirement. States took money and invested in plan know that there will be little money to focus on their mission. Stateside land water conservation fund, has been consistent for states to do outdoor plan and that got states in open space planning business. How about we take that to local government level? How do we get local communities to do local open space planning?

Has encountered many local successful projects. Each time there have been a couple of people that are catalytic, a primary reason community has connected with project. Need new army of conservationists. Could be helped along by investing in future leadership – are many programs like this now (ie. National Conservation Leadership Institute) that could be supported nationally. This is not mainstream program – it gets corporate support, is attended by federal and state agencies. Could be a national model.

I think we depend too much on schools. Schools have lots of priorities, but very limited time. This is recreation, not just school stuff

Discussion Question 3

Annapolis, MD

(cont.)

citizen conservation. He provides pro bono legal help to protect National Parks. He has found that the best strategy is to tap into the love that the American people have for National Parks. He has worked on protecting Valley Forge NP, is now working on trying to protect Wilderness Battlefield in VA. He sees that historic parks also provide recreation for local residents. He feels that we should use National Parks as a core for landscape preservation. Economics are offsetting factor. He sees that communities don't understand economic value of having parks. County granting authorities take short term view on supporting land uses that offer jobs. NPS could do better job on selling itself to local communities on the economic value they bring to local communities. NPS could be more assertive in protecting its lands. During the Bush Admin, the "cooperative conservation" initiative was taken by NPS to "roll-over" and had an adverse effect. Need to provide guidance to National Parks on how to be more assertive without being combative.

Congratulations on the recent actions of the EPA – good marks! Look at all of these things from a reasonable viewpoint – the federal government must lead.

Chesapeake Bay Foundation/No Child Left Inside Coalition. Need additional tools to support the No Child Left Inside Act. Amendment of Elementary Education Act could provide funds. Maryland's Children in Nature plan is developed. Seeking to embed the ideas of No Child Left Inside within the Elementary Education Act to get outdoor and environmental education integrated as part of core curriculum. Small amount of money to these educational plans could open window. Consider how to leverage funds that are already being spent to connect kids to the outdoors. Try to get environmental education into the core curriculum of public schools. Doesn't always have to be reliant on transportation; it can be on-grounds garden or changing operation of school building and grounds.

Encourage parents to bring the kids outside, so that they can show them where to go, what to do, and how to do it safely.

I know of this program which brings in local food to schools because most of the cafeteria food is really all processed food. So they would slowly bring in locally grown foods from nearby farms and inform the students about where the food came from.

But how can you make them want to go?

What do kids do on the weekends? They go to the movies, get ice cream... Bu the park service has events. Need to make the kids want to go... it doesn't cost money, which is a start

The parents are important

We have to make it as cool as superman

Discussion Question 3

Annapolis, MD

(cont.)

What Diamond said was poignant. We are plugged in and need to find a way to connect the two. When I have my iPod in listening to music, I can use it to help connect me to the outdoors. The GPS in the phone already has the outline of the area, so it can show me where the parks are.

I see these gardens popping up more and more often just in the most humble places you can think of around the city.

Get more people interested in growing their own food, it would cut down on gas and other things. So you don't have to go to California to get oranges in DC. It's logical because you get more for your money and you waste less

I would suggest being a little more unconventional about the approach. You have the Boys and Girls Club, Parks and Rec, Boy Scouts and Girl Scouts. There are lots of different organizations.... You can incorporate something into this. It doesn't have to just be schools... you can have promotional things on the bus or the train. All of these groups have mentors since the kids are being coached or taught.

The carbon footprint goes down tremendously since you don't have to drive the food 2000 miles

Giving the kids stuff like reusable water bottles, things that they could use and put to work makes a long lasting impression

Even just like a food drive where you bring a plant to put in the new garden that's been set up

Government support in school systems. Educate children

Youth need to have interim programs to do land service projects, not just "get a job" because they need the money. Green ROTC program, bolster Americorps.

NPS stewardships - if an easement is violated and no regulatory action is taken, the easement is lost and few people will follow suit with more easements. FCC force broadband into other areas so that these areas can compete especially with GIS

DOI jobs in agencies all over the country in parks, refuges, lots of lands. Encourage to talk about job opportunities

Discussion Question 3

Annapolis, MD

(cont.)

Great to be here. Impressed with consistent themes. Been in DC 3 ½ years. Promote partnerships...biggest partnership with next generation. Introduced the "No Child Left Inside (NCLI)" initiative. Studies show youth spend about 7 ½ hrs day on electronics and only 4 minutes on outdoor recreation. There is a need to be tech savvy but something is out whack with those numbers. Support real resources to get youth outdoors. Primarily into school. Incorporate outdoor education. 1700 orgs across country pushing to get NCLI legislation passed. Hope to get included in education authorization. Gov has to perceive when people are pushing for new framework...new energy framework. Build new framework, the next generation, most aware of the environment, take over this issue, make it your issue, using social media you can become the leading edge in Environmental Awareness in this country. Most exciting thing in decades. Every high school should have an Environmental Club. Own it! Exciting prospect what you can do with this issue on the environment. Pledge to be a partner.

Prepare model legislation relating to the problem. Urban planners want everything to be concrete. Worried that no conservation. Model zoning code related to conservation of resources. Same way transportation built highway. Model curriculum for colleges that teach urban planning. Have rural planning and suburban planning. Model program that says incorporate these things in program. Master program for landscape master---green infrastructure.

Increase access: partnering and helping support outdoor nonprofit organizations, and increasing access through public transportation

Lower rates to go to outdoor places; more sidewalks; free buses on code red days

Role of land trust should not be forgotten.

We have all these great ideas, but message coming from top, but involving public in message and having simple, NPS has amazing resources but get stuck in hole when on web site. It is hard for general public to extract meaningful info to public. We need to get fed government to simplify message for general public, it is as simple as get outdoors. That is message we need to embrace. Need simple and short message.

Ask for a mileage buffer around battlefield parks.

Prepare model legislation related to a problem of urban planners with everything concrete – maximized tax return, highest and best use – model zoning code related to conservation of resources – tie acceptance of model code to grant – like you have to accept transportation standards with federal funding – model curriculum for colleges that teach urban planners and teach them suburban and rural planning – we have a mix – to incorporate the totality of an area

Discussion Question 3

Annapolis, MD

(cont.)

Outreach: to youth and parents. Parents teach kids through communication and bond. BBQ – national BBQ free to all (gov pd) bring everyone together. Everyone likes to eat-this is a common affinity across different ethnicities and cultures.

NPS stewardships - if an easement is violated and no regulatory action is taken, the easement is lost and few people will follow suit with more easements. FCC force broadband into other areas so that these areas can compete especially with GIS.

Analysis paralysis - “we need better GIS”. There’s a lack of communication between local and state / federal levels. They need to share this information so that they aren’t repeating themselves. More time needs to be spent on the ground doing the work - local organizations aren’t getting the information to the federal levels. GIS is hampering movement forward because we’re always looking to improve GIS systems. If we can make all of the GIS information available, Federal, State and Local organizations won’t be repeating the same data collection, waiting to make decision

Can encourage teenagers to teach younger kids. City of Annapolis interns work on green jobs programs. We need to look at this as stewardship, taking care of something that doesn’t belong to us. Think about demographics; think about the opportunity to increase diversity in the environmental community. As government officials, look at multi-family housing when it comes in for approval. Encourage connections between trails, environmentally safe areas, storage for recreational equipment, environmental design. Give people ownership through small backyards.

CB Gateways concept is good. Tell stories. Should be fully funded and staffed and permanently authorized. Do education with conservation. Look at transportation funding for connections.

Clean Air Act and Clean Water Act. Tree canopy is in the MS4 permit. Need to encourage/incentivize jurisdictions to submit the preservation and enhancement of parks in their Clean Water Act and Clean Air Act processes. There is an opportunity to connect with green infrastructure initiatives within EPA.

Commonwealth of Pennsylvania. State Department of Health partnership—CDC grants to build health awareness. Great opportunities if the programs can speak the same language. Physical exercise relates to the outdoors. There could be connections with No Child Left Inside Act & the FLOTUS goals.

Concerned about access.. the government has set apart many places for people to go. There are many public lands. Typical urban population doesn’t know these lands are available. Bus from SFO goes every Sunday to beach and every Sunday the beach gets more visitors as a result from a population that doesn’t regularly visit beach. NPS doesn’t have access to dept of transportation to plan with them. School groups don’t have access, NPS can’t send buses out, dept of transportation could.

Discussion Question 3

Annapolis, MD

(cont.)

concerned citizen who likes the outdoors and grew up in Yonkers – as Boy Scouts we had urban overnights and overnight camps that I still remember and the biggest obstacle today is the prevalence of the computer and the indoors – change obstacle into a tool – a website by the NPS or others and TV spots and ads to direct people to an enjoyable summer

connecting to grown-ups – that group doesn't know how to do this stuff – NPS has tools such as Junior Ranger and Climate tools and education tools and resources at HFC, parks to help – the tool is the places to connect them

Enhanced tax incentives very important. Need additional incentives and continuation. State funding for land conservation is in jeopardy.

Estate tax expired in 2009 - some tax will be put back in place. HR3050 to be introduced into the senate - estate tax to be partially exempt from easements with a cap. Expand the exclusion and the cap, they are old and outdated with inflation!

Excise taxes on fishing and hunting equipment - make a similar tax for other equipment that would be given to conservation organizations and trusts.

Farms, DC environmental education consortium. Forest communities, people only concerned w/ survival. Childhood obesity is real problem. Growing own food- impress on young people how important. Low cost, low carbon imprint food Expose kids to natural world, draw kids in, meet kids where they are and teach them. Teach teamwork, teach about parks Edible gardens, people sitting around not doing work, put them to work in gardens Agricultural runoff is #1 source of pollution. Wants DOI and EPA to work on this

Feels Chesapeake Bay is a national asset. Federal and state governments have stewardship responsibility for the bay on behalf of the entire country. Same principle applies nationwide to public lands. For example, the Red Rock Lands in Utah are a federal responsibility, want multiple use strategy. During the Bush Administration BLM did not recommend wilderness designation for this area; he feels they can't unilaterally rule in this way.

Forests are 60% of the Bay. They are the lungs of the Bay. Best is to save both land types (forests and farms). Need to do more to recognize forest land owners as producers. Especially through Farm Bill delivery.

Fully fund historic fund. Fed should take care of cultural resources, sustainable community innovation. Culture is so important

Discussion Question 3

Annapolis, MD

(cont.)

Her group has been fighting a lot of battles on the Mattawoman Creek, one of best tributaries to the Chesapeake Bay. There is a new highway proposal threatening the watershed. Need to work on educating local planners and politicians on the value of local land use planning. Need a national toolbox for communities for areas that need to be protected. Need to protect best tributaries to the Ches Bay. Need national blueprint for green and blue infrastructure that syncs up with transportation planning that makes these types of projects ineligible for fed funds. There are opportunities through the new livability initiative and reauthorization of federal transportation act. Should also prioritize providing transit access to national parks.

His organization raises matching funds to match federal and state funding to acquire battlefield lands. Was created 20 years ago by Congress. Key tools are American Battlefield Protection Program (ABPP), Farm and Ranch Land Program, and Transportation grants, which provide funding for conservation easements to help preserve lands and keep as working lands. Want to maintain viewsheds in productive agricultural lands, don't want to pay for maintenance. What works – having matching grants in order to ensure local folks have a stake in projects and are engaged in public private efforts. Recomm: keep funding for ABPP; make permanent conservation easement tax credits. Ensure that LWCF funds can be used to acquire inholdings (the issue is the lack of funding, not policy towards acquisition of inholdings). If NPS had funding to buy out partners (like CWPT) would allow partners to reinvest their funds in other projects. Ask for a mileage buffer around battlefield parks.

How can we work with you (federal programs) to make these things work? The key is to work together

Is asking for feds to work on landscape level efforts. And increase full funding for LWCF. 150th anniversary of Civil War is an opportunity to promote LWCF and battlefields preservation. Need also to focus more on cities – provide better help for smart growth planning, and having parks in cities to provide opportunities.

Mattawoman creek - more public education about the ecological services that aren't being documented. Laws aren't being enforced. The federal government is essential subsidizing the loss of the ecological habitat and citizens are forced to pay for restoration. Stop the problem before it happens, enforce the laws.

Mattawoman Creek and bass fishery threatened by local government effort but is one of the most pristine watersheds in the state – the federal government should use the bully pulpit

money is tight in this economy and parks on hold or get shut down or projects cancelled – we spend time now applying for grants to supplement our funding – we could not apply for some grants based on our narrow geographic scope – our trail was not long enough – a solution could be to reconfigure criteria or have dedicated funding sources for smaller-scale projects

More money for budgets? The budgets continue to be cut - agencies are already underfunded and under staffed - what is the federal government going to do to counter the cuts in funding?

Discussion Question 3

Annapolis, MD

(cont.)

National Trails Day. Introduces people to the outside to engage. During 2008-2010 there were 1900 events. Theater hike, Bronco football player hike, geocaches, giving the kids temporary tattoos. Get edgy. The obstacle, national trails funding. It's all about the funding. There are many requests for trail head signs, maps, etc. Need the money.

National Wildlife Refuges have programs that are not well-advertised to universities and the public.

Need additional tools to support the No Child Left Inside Act. Amendment of Elementary Education Act could provide funds. Maryland's Children in Nature plan is developed. Seeking to embed the ideas of No Child Left Inside within the Elementary Education Act to get outdoor and environmental education integrated as part of core curriculum. Small amount of money to these educational plans could open window. Consider how to leverage funds that are already being spent to connect kids to the outdoors. Try to get environmental education into the core curriculum of public schools. Doesn't always have to be reliant on transportation; it can be on-grounds garden or changing operation of school building and grounds.

Need to look at green infrastructure more comprehensively in permits.

Need to promote jobs that connect the youth to the outdoors. USAJOBS is not easy to navigate; and many nonprofits don't have great websites. Need better advertising of internships and job opportunities in the environmental and outdoor recreational fields.

need to reinforce value of conservation and place

not enough places to go, especially in the Mid-Atlantic – financial means to make more places happen – federal funding through matching funding such as LWCF or other and working with delegation should make that happen and working

Notes that a big issue in the last two comments is that they will cost money. He feel strongly that need to fully fund LWCF. Is how federal agencies pay for land acquisition. He support efforts in Congress to require OCS revenues to be spent on LWCF.

of interest among kids especially of color –getting the First Family out more often with media so people can see them – we need role models – climate change – need to establish a more robust youth corps and give them jobs to prepare lands for climate change

oil spill in Gulf shows how fragile our public lands are – this should be a focus in the AGO

Parks need public awareness campaigns (PSA) to increase stewardship, usage, ownership

Discussion Question 3

Annapolis, MD

(cont.)

physical access to the water and Bay – not a lot of places people can go – even less people who can get on the water and to the shore – obstacles in Bay Network with adequate number – 2nd point: many successful programs are institutional and they are wonderful but many connections are personal through use that is special to them – person self-directed, but institutional context doesn't allow that extension of a connection to happen

Programs need more direct purpose - i.e. Latino Youth Conservation Corps

Public access is very important. We have a dedicated funding source for Program Open Space in Maryland. We have an excise tax for water access. Those special funds are raided on a regular basis! If you are concerned about this you should contact your local elected officials and let them know. There is no mechanism to restore the funds to these programs once they've been removed. Carrying capacity is also an important issue. The call for more public access is drowning out the need for a study regarding carrying capacity for these sites. There's a reason there are only two parking spaces in particular areas – those sites can't handle 25 cars, and the nearby communities cannot handle 25 cars. Look at the sensitive areas – are we balancing their protection with appropriate amounts of public access? From state side, everyone is so interested in these efforts – we're seeing a federal effort that's "pushing down" on the states. The state's efforts need to be respected and looked at before the federal programs override them. We have many studies and programs already in place. The feds are forgetting that the states have already done a lot of work – they truly need to work with the states.

Public housing right next to St. John College. Writing a proposal for neighbors to learn about rain barrels. Q: Math and Science curriculum is very restrictive. How do we include Environmental education? Can there be electives? How can we get the freedom to do what needs to be done?

Remember that poor kids can't purchase technology; and poor kids don't have yards and safe places to go. We need to work with over strapped underfunded school systems that aren't focusing on the outdoor experience. We need more funding in school systems for outdoor educational programs. And we need to target young children to help them to become comfortable outdoors; children can be molded to think anything is cool if they're young enough.

See more historic sites with natural resources get funding. Support the expansion of national parks and monuments including USDA monuments and the Antiquities Act. People are reluctant in the field because of public interest with locals and site managers.

Some of the funding is tied to matching grants. Change some of the grant administration policies because many of us don't have matching funds. Maryland has a fantastic program for forest conservation and we're starting to see efforts regarding agricultural conservation. There is no widespread tax break for the forest conservation program. Some of the land is on private lots – the people on those lots don't respect the intent of the easement because they do not directly benefit from it (as the overall landowner does). Provide a tax incentive for each individual participant.

Discussion Question 3

Annapolis, MD

(cont.)

started grassroots lobby for historic preservation and there is a caucus in the House and we would really like to be working closely with partners and conservation because LWCF and HPF have the same interests and ability to get things done

Stewardship grants issued by the federal government should be expanded and tied to kayaking and boating; and go hand-in-hand with stewardship messages. Regarding boating: clean water makes for good boating. Contrary to the popular misconception, boaters are “first in line” for cleaner water. Make a renewed commitment to the Clean Water Act – bring water trades, industry, etc. into the conversation.

Takes teachers from Title 1 schools who go to national parks during busy season, providing volunteer staff. Take this environment back to the classroom. Stats: 84 teacher rangers resulting in contact with 230,000 people, taught 24,000 students. Intermountain region unable to hire as many as they needed.

tax dollars for agriculture are a subsidy that benefits recipients and not taxpayers – same goes for cover crops – a corporate socialist system – ban our representatives from receiving contributions so representatives can better represent the people –

The federal government could be a clearinghouse for environmental jobs for young adults.

The lack of funding - properties in federal parks are intended to be intended but are still in private hands. There are developments in areas where there shouldn't be. Create a competitive program for easements on private land that promotes the historical aspect. Provide more tools for neighbors of refuges to do great things. When other federal organizations don't respect federal conservation - Highways going through wetlands undermining the protection from environmental organizations. The park culture is outwardly focused is great - it used to be inwardly focused on themselves rather than rallying with other federal organizations - support this culture.

wants a buffer around every National Park and National Military Park. Need to act within next 7 months in order to have an impact on GETT battlefield casino threat.

We need matching funds for stewardship - invasive species removal projects

We need more funding allocated for baseline environmental monitoring for the state of Maryland coldwater resources and fishing in general. We don't have recreational catch data.

working lands and recognizing value of preserving pristine landscapes and keeping land productive and economical – financing and funding for conservation we need to rethink how we fund it – organizations base their work on donations and industries that do poorly in a weak economy – needed financial security will secure a long-term future

Discussion Question 3

Annapolis, MD

(cont.)

The media are highlighting dangers of being outside. The federal government could try to present positive side of being outside.

They have 1500 members that hike, canoe, bike, Stewardship is key. Partnering is what helps them. Partnerships supply labor. One example, they partner with federal government on National Public Lands Day. On Assateague, members spend hours per day, cleaning up trails, providing free labor. The park provides free campsites. Gives people ownership of that park since they worked on it. One weekend in National parks – free camping – work.

To retain private working lands they have to be profitable. Credits are a huge source of income. The USDA rural developments have to be provided as grants rather than loans. Equity investment for beginning farmers & emerging businesses.

Valuation to private landowners who hold easements. Appraisals need to be done better. Funding needed for all land trusts—not just accredited ones.

Discussion Question 3

Asheville, NC

Ref Ken Burns' movie- momentum for a push for more land set aside- esp needed in middle GA- allowing hunting on NPS lands would increase support for NPS lands with local communities

AGO is a right step--full funding of LWCF would make a big difference- equalize federal and state funding- LWCF is biased toward federal

AT would not exist w/out LWCF-need funding for continued stewardship of the land after acquisition- volunteer model works when it is supported by a diverse base

Agree- collaborating with USFS as well as a community revitalization group-example: Jackrabbit mt. bike trails (Tusquitee RD, Nantahala NF) – collaboration on grant writing is esp. important

A lot of expertise in agencies- share expertise and make available to smaller governments and non-profits- share your tools

Fund no child left inside act

A lot of fed lands in the west- fewer in the east- need more focus on recreation where people live-

Federal Government Role that is a real challenge. Big South Fork River and National Recreation Area. Five federal agencies with involvement with this watershed and four state agencies with involvement in this watershed. The federal agencies do not have a basis for interacting with each other. Interagency cooperation is a big issue. Agencies need to be directed, from the office of the president, to manage their resources so that no action taken would not prevent another agency from reaching their mission.

Leadership. Assuming this process produces a report and eliminates some issues. Reports are on the shelf and we have a dysfunctional congress. Unless there is leadership and a public support, the report will just sit on the shelf. We, as an American public, will have to generate great support for the change to come about. There needs to be real leadership across the administration has to make this into a campaign not just a report.

Making the recreation opportunities that parks/forest provide accessible and known to the public. Need to do more publicity/marketing of these opportunities.

There isn't clear alternative energy development. Need clarity regarding energy policy development. Speaking to example of tradeoffs between preserving viewsheds and supporting alternative energy – windpower.

Need more emphasis on how to use MOUs and volunteer groups. In the face of climate change and invasive species, it will require a bigger base of federal employees.

Discussion Question 3

Asheville, NC

(cont.)

Only major country where climate change skepticism is still a majority. We have a lot to overcome regarding climate change. Need strong public support from the federal gov't. Fed. Gov't has an obligation to educate the public regarding the validity and consequences of climate change. Would like to see more public education.

Look at signage in parks/forests. Many people unfamiliar with outdoors are scared by signage in parks warning of hazards. Signage should be encouraging, not discouraging visitors.

Put more money into river health and purchasing conservation easements to buffer river, buying land in the flood plain. Pointsource pollution issues need to be taking into consideration to protect water National blueways initiatives. Establish some sort of funds with national initiative to protect lands near water. Specifically in floodplains.

Is there a way that agencies or the office of the President can provide more follow-up on the following of the executive orders. More collaboration and thus more commitments.

Showcase the solutions of competing and conflicting agencies.

Challenge we're faced with - food security in the face of global climate change. Federal gov't needs to coordinate how we are going to change how we produce food in the face of this climate change. 15-20 we may see real food shortage problems.

Facilitative role taken to ensure that executive order are followed, collaboration happens and the government is effective.

Looking for ways that the government can be a little flexible. Have rewards and incentives to have more flexibility.

Value of USFS to recreation is very high- the NVUM results report high satisfaction with USFS recreation- has not had the status with the agency mission it should

Moving FS to USDI would be a bad move for recreation- recreation is not a mandate for the NPS- USFS is more recreation oriented- FS and BLM need to document benefits of recreation better than they have, incl. health benefits- private advocates often don't have the info they need to be effective- should have NVUM surveys for NPS and BLM.

There is a disconnect between states and feds in recreation planning—no mechanism to connect fed and community planning efforts- exception is the Overmountain Victory Trail- NC and SC are working on connecting two state parks---another example is the Guilford Natl Battlefield in Greenville SC, tied in with a community greenway

Feds need to be able to take corporate funding to support local efforts- losing millions of \$\$ by not being able to accept these funds

Discussion Question 3

Asheville, NC

(cont.)

Agency has had a positive move towards ecosystem management. Bringing prescribed fire to the landscape (through Wyden amendment- providing ability to manage across public/private lands.

make sure the money gets where it needs to!

People who normally pollute are uneducated specifically on being outdoors. Inter-city people need to be taught!

Servant leadership. What are the values that have been embraced and how can the government serve the people.

No landscape vision for what these lands should be, should contribute to. Need a landscape-level vision for the Appalachian corridor, especially given climate change issues. State purview stops at state lines. States need a federal entity to bring together a landscape vision. USFW Landscape Collaborative is a new effort in this regard.

USDI needs to link more closely with EPA re: pollution and land management. Need for prescribed fire for ecosystems, need to work on ozone and particulate prescriptions that will allow for prescribed fire.

LWCF is the economic engine that will make America's Great Outdoors a reality. 2014 is not soon enough. House Act passed today. Now is the time to move forward.

One role that the federal role can fulfill is coordinating state initiatives. One example of this is an initiative is to place the Appalachian Trail on the federal registry of historic places.

Education to inspire volunteers. Get kids to take ownership of parks and forests.

Challenge of how do we wrestle with the roles of government? Gov' t should set a tone for conservation and recreation.

Role of gov't is to educate and empower people to do the right thing. Local gov'ts getting to determine where funding goes.

Grant funding is a huge negative – it sustains a project for a small time and then fall apart as funding runs out. Instead, create project funding to sustain a project.

Funds allocated to the agencies for specific work is not used as intended.

encourage Forest Service have strong science-based policy on biomass

Discussion Question 3

Asheville, NC

(cont.)

Train transit needs to be expanded

PSA's – find good examples of what works well elsewhere

Federal government can change the tone of dialogue on the questions of subsidies; sometimes current tone is skewed; inconsistency in funds for extractive subsidies vs. subsidies for conservation

As Muddy Sneakers evolves, children may be charged a fee because of funding concerns. Can the federal government (Forest Service) waive the usage fee if they start charging a fee?

also natural gas explorations

need to improve the accessibility of federal personal to communities; need to connect and speak out; help reinvigorate US Man and the Biosphere program; a paradigm for the rest of the world; let's don't just take care of our own house

Needs to be areas set aside for children to play and 'disturb' the land. Perhaps a role for FS.

Pilot school funded by government!

NC parks have a program for kids K-5 for kids to come to state parks and learn that the outdoors is a good place to spend time. State should expand the program and the federal government should look at this program.

A new CCC.

More stringent environmental protection laws and increased enforcement in concerns of pollution. The idea of production outside the country should be rethought as well.

Get beyond the EOG and connect the students by other means, music etc.

More fed encouragement of recreation

Discussion Question 3

Asheville, NC

(cont.)

Rural areas have to have infrastructure; local Rural Development groups support rural businesses, etc. Could assist with some community niches; could help find partners and help; e.g.: Community Facilities program, low interest loan program; funding for schools; eco-tourism and relating small towns with parks – can help with revitalization (sidewalks, benches); can finance businesses in rural areas; Mountain BizWorks program receives loans at 1% and then provides low interest loans to small businesses

Conservation Easement; initiative for conservation easements need to become permanent

Decreased funding to National Parks and Forests. Maintenance a problem. Need an incentive program to help out. Needs to start from the top. Makes it difficult to partner when things take so long.

ENFORCEMENT! Need to be more enforcement of rules and regulations-needs to be more transparency when things are being funded, and there needs to be more accountability-more enforcement of already listed regulations

Wanted to know how involved the Department of Education is with this effort. One of the challenges is the state standards of learning/education standards/teaching to the test. Teachers are too afraid to break from the testing curriculum and take the kids outdoors.

Sustainability across administrations—how do we keep this moving with administration change.

Government should be willing partner on these programs. Need to decrease the amount of red tape involved in partnering with federal agency.

Biggest federal government role often is knowing all resources available.

Richtop development and wind power--- fear of developing wind power mixes with conservation mandate. Needs to be changes in attitudes. Influence of fed government to show us an “equilibrium with nature” there needs to be marketing of the importance of everything the outdoors has to offer as well as how we should continue to practice conservational efforts to better maintain such valuable recreations Tougher and tighter regulation of what goes into the rivers. (ex: pigeon river) make private industry sectors more accountable, they should be using their profits from dumping to also clean up the waters, etc.

Effectiveness of volunteers: kids exposed to volunteerism are more likely to be adult volunteers; need federal programs

Great Smoky Mountains National Park needs to charge a fee, and the majority of the fee should stay in the park.

Discussion Question 3

Asheville, NC

(cont.)

Administration should take advantage of the economic downturn and publicize how inexpensive use of public lands can be. Show that money is not a barrier to camping in or visiting public lands.

White water paddling on the Chatuga River is not allowed on the upper portions. Lots of money is being spent to fight this. Waste. Battle could be simply solved – only river managed by FS like this in the forest. River managed to the needs of fisherman as opposed.

Rivers Trail Conservation Assistance Program is less than 1% of park's budget. Need more of an effort and support for this program.

Fed Govt needs to recognize that reducing the size of agencies is not fixing the efficiency issues; staff shortages for those that help maintain federal/park land is really affecting visitor experiences; less supervisors is a problem; #2 from rural Jackson Co – eastern border with Blue Ridge Parkway and very close to EBCI and GRSM; those federal agencies have funding problems; but use this challenge to think of creative solutions – see oil drilled in the western US and fees/taxes related to that helping fund public lands?; Current environment is prime for land conservation due to prices, etc.; NC is growing at rapid rate and these lands are threatened – biggest tool to help is the sale of public resources;

as NC expands lands programs, it would be a lot better to have more access to federal and state agencies – find out what lands are strategically important to all of us; work through acquisition process with federal land managers – historically hasn't always been what it could be

Getting kids and families back into the outdoors. NPS could teach families how to use their time at parks. Supply recreational opportunities (eg. rent kayaks, bikes). Need system of teaching unfamiliar outdoor families how to connect with outdoors.

Go straight to the teachers. Bureaucracy gets in the way higher up than that. GSMNP pays half a salary to a school teacher.

Fed govt needs to play a coordination role. Very little coordination between federal agencies particularly with regard to bureaucracy. Need coordinated efforts to set priorities collectively. States also have role, states need to get involved. Needs to be ongoing coordination. Who is the best agency to handle a certain issue or priority.

Fed government should take leadership role in river way development-often an interstate issues- too often it is just the local govt that drives it—important not only for recreation but provide conduits for wildlife

Have to give people a reason to care. Need educational component in schools.

Transportation. Need good public transportation system. Need to look long-term as to how we move goods and services, and how to get urban population to outdoor settings. Long term transportation plan that takes into account our economic and recreational needs.

Discussion Question 3

Asheville, NC

(cont.)

(500 mountaintops have been mined in the Southern Appalachians); natural scientists in all the agencies only talk to each other; can't speak outside their own field; need to have authority to speak to individuals; spoke to Southern Appalachian Man in the Biosphere (SAMAB) conference – no federal scientists have spoken to the outside world on climate change –

Loss of farmland. Models need to be developed. Need to make it affordable for new farmers. Need to recruit more farmers. Think creatively. Incentives for keeping farmlands farmlands

Preserving federal tax incentives for private citizens.

Money follows programs; mandates create programs – i.e. incorporating environmental ed must be mandated for money to be available.

Buncombe county advisory board is focal point of conservancy groups; can work across counties; cross-section of public and agencies; Federal and states could reward local jurisdictions with money to fund land conservancy programs

Get DOT involved; fed government needs to increase funding to federal natural resource agencies

Need to get DOT to the table – they need to be educated on natural resource management;

Wants to underscore the connection between resources and dollars. NC state parks had highest year of visitation ever last year. Not all states are that fortunate. Neighboring states have not been so lucky and Fed needs to help

GRSM has similar issues of air pollution. Continue to designate wilderness areas within National Forests. Important for enjoyment and preservation of species.

Advertising/campaigning not allowed and it's not taught in schools, so the message needs to get out there somehow, someday!

have more directional information, easily navigable user database with an inventory of recreational opportunities, and advertise it nationally (ex: great American outdoors online) have an index of all these activities

Tax credits are highly effective and need to be expanded.

NC Ecosystem Enhancement Program. \$ to preservation vs restoration has shown preservation is better way to spend the money. Feds could have similar program that provides \$\$ incentives for preservation.

Discussion Question 3

Asheville, NC

(cont.)

Need stricter zoning around NPS sites to prevent encroachment. Would be cheaper than buying adjacent lands.

Full funding for preservation; easements are great working tool and funding is being reduced; federal government needs to recognize full value of easements and provide incentives; Section 106: largely misunderstood at a local level; feds could help explain initiative

Encourage federal development and participation in "Historicorps," emerging CCC, HABS/HAER

Not enough support in the right areas – schools, camps, educating the youth.

agency relinquish control – allow local entities to be empowered; engage at a local level to enable local initiatives

Unfortunate that some public schools only get small opportunities to engage in outdoor education.

Continue to have the tax credits for conservation. NC has a state credit for conservation. On a national basis, encourage states to provide tax credits for conservation. Collaboration needed with Land trusts. State/Federal need to be open to re-purchasing the land acquired by Land Trusts.

Wants EPA to stop air pollution in western NC. Mountains are at top of watershed. Wants stronger regulations on air pollution. Brook trout are challenged, black bears don't recognize state lines nor private property. Migratory birds need a good stopping place in their migrations.

NPS has gateway community planning, National Heritage Area has started the process of connecting communities to their nearby public lands as well. Fund that planning process, facilitate it, and follow through with it. It doesn't just happen. NPS has developed this process well. Use the same process for all public lands, state, local, federal. You don't need to own a cabin, just get a tent and enjoy western NC.

Need a strong, 30- year strategy of funding in order to make a difference. The feds need to step up with a similar dedicated stream of revenue that can be depended on in order to develop a long term vision.

Use local farms as part of the process. Use federal involvement.

Need to do a better job of interpreting and preserving the Rutherford Campaign, the southern frontier in the American Revolution. It's a national story and should be done by the NPS in concert with the Blue Ridge NHA.

Discussion Question 3

Asheville, NC

(cont.)

Federal agencies need to be talking with each other. Interior and Commerce need to work together. What are we doing at the national level to build sustainability? Need to break down agency barriers to working together. Need to see it more broadly...find some balance and work together for noble and worthy goals.

Using the wrong criteria to measure success. Should the increasing number of cars on the Parkway be a measure of success or should we be looking at trams? Agencies need to be working together better...EPA, TVA, NPS. Agencies need to get out of their 'silos'.

Develop books for children, books that parents can use to better connect with outdoors, get children outdoors. Federal govt needs to be involved in getting kids outdoors.

School requirements (ex: EOG)... have some of the classes taught outdoors-outdoor classrooms

Need more planners at the local level who can go out into the communities around the parks/or forests to communicate plans and work collaboratively with towns and cities.

Benefit to feds is that with a dedicated federal funding stream, federal agencies can improve on their track record.

Federal role could be increase in communication. Michele Obama could tie her obesity initiative to getting kids outdoors.

NC needs to see that the Feds will indeed match state programs. It's an incentive for the states to step up to the plate.

purpose to cross-reference for agency contradictory regulations – Comprehensive review of Federal Programs with conflict rules – ie EA for one dept might be diff for another agency. Env Planning Process needs to be same cross agency rather than the barrier now.

Well funded marketing campaign would be helpful.

More focus on greenways, hiking trails, bike trails, etc. Connect the cities with the outer lying natural areas. How could the federal government be a better partner for implementing these types of plans?

Expand parks and wilderness.

Provide educational enrichment for teachers. Teachers then develop natural history curriculum. Need to encourage educational involvement.

Discussion Question 3

Asheville, NC

(cont.)

Need national energy planning so that long-term conservation efforts can be improved.

Political battle – how much government should protrude in everyday lives and these programs? We do not have very many well financed powerful friends. Need to fight on broader political front. Campaigning would be helpful but is limited by government agencies.

Stay positive – campaigns against cigarettes and littering have taken years to implement. We don't have an exact path, but a lot of persistent people have done a lot and affected a lot. It takes time to get where we are going, but if we stay dedicated and optimistic, positive changes will begin showing.

Incentivizing local communities to contribute to Federal monies; NC has great track record in being leader in conservation; nice if Federal Government would recognize and weigh this into how funds are dispersed – in local programs, incentives are in place to match federal funds

look toward required community service for youths, like the AmeriCorps program

Volunteerism is the key. Volunteers can advertise, campaign, create support.

Get folks involved at federal level.

federal govt can help with staff to turn around approvals quicker – number of projects waiting approval is backlogged/massive and costs money; example – taking 3 years for one small access area...; currently not an effective system or use of resources

federal govt can play bigger role in marketing; reinforce youth session idea of finding celebrities to be spokespeople and engaged in these messages

uses state and national parks for experiences and sees inconsistencies in permitting/application fees/etc – need more consistency across agencies

develop a “rec easement” for private landowners that would allow them to provide for public use without worrying about liability issues, and give tax advantages for doing it

Lead the way on climate change.

Would like to see fed government be a leader in landscape level conservation. Longleaf pine restoration is a good example how it has been done.

Discussion Question 3

Asheville, NC

(cont.)

Feds should partner with states to develop civilian conservation corps. This would educate and provide benefit.

All have been energized by Louv's Last Child in the Woods. Can the government help us with collecting data and convince school districts with this data. Inventorying the programs that work.

Hard to get corporate partners. Need to involve corporate partners in GAO Listening Sessions.

Need government to provide incentives to businesses to play more active role in these programs or to fund these programs. Eg. Provide incentives to businesses to support outdoor/environmental programs.

Support the No Child Left Inside and Elementary and Secondary Education Act --would encourage supplemental education for teachers. EPA puts out environmental education grants for states each year and this funding is very limited—need to provide more funding and more grant opportunities. Also, create funds/grants for connecting people to the outdoors. Lack of funding needs to be improved and provide incentives for teachers to get additional training.

Sea level rises will result in additional land needs. Wildlife corridors will increase in importance.

Emphasis on Education – Green Issues/Industries – Push toward that in Education, esp cities – NC is no longer a Rural state. Bring back the music..? Endowment for Arts, so why not Endowment for the Green umbrella.

Publicity for National Trails Day is very good. They use website to make all the opportunities known. Can the federal government create website where trails groups and other organizations can upload information about recreational events/opportunities for the public. Would be one-stop shop for finding rec. opportunities. American Hiking Society's National Trail Day website. Make it easier to find opportunities.

Federal partners need to bring partners in as part of the "family". Organizations do not want to be controlled by grant requirements, reporting requirements etc. Simplify grant process.

Fund the YCC more in all communities (embracing future generations)-provide man power for the national forest-develop conversationalists

federal government should fund a PSA (public service announcement) or campaigns to encourage retirees and other citizens to volunteer at their nature centers (botanical gardens, arboretums, etc), specifically locally.

Discussion Question 3

Asheville, NC

(cont.)

Ask federal government to retain its promise of LWCF. Great program, with dedicated revenue stream. But almost from day one it has gone downhill. Have LWCF fully funded and fully dedicated is something desperately needed in NC and across the nation. Funds must be dedicated so that they do not have to go through the appropriation process every year. Gives people an opportunity to plan, not just speculate, on what they can do each year.

Thanks to NPS and USFS for doing a lot with a little.

Blue Ribbon commission produced report for NPS that provides importance of education of youth. Lots of good recommendations in report.

Need to identify partners. DoE should be involved in these discussions. Own lots of land.

Need national level backing for this initiative. Need Department of Education involved as well as other agencies—not just DOI, USDA.

Dept. of Education needs to put emphasis on outdoors and natural history. Give schools incentives

If we cut on taxes we cut jobs, maintenance and sections of every service the government provides. Need to do better job at letting know and educating public on what taxes contribute to.

By investing in green technology, energy resources specifically, a huge difference can be made. Not only in helpful in our surroundings and environment, but with peoples' attitudes. Online technology magazines have proved to be useful.

Need to have more hiring programs for youth like SCA or provide ways for more agencies to use SCA programs.

Present use value program – allows farmers to pay less taxes. Farmers want land to remain in present use value as they age. Extend this program

Re: Youth in the Outdoors; what about the youth desiring to be in proactive positions? Government should push internships and help emerging youth develop their career paths

children are wired and stay in their houses and parents encourage this – need to get people out and interacting in nature; need PSA's to get people unwired, medical community needs to understand the importance of nature, as well as educator's

SCA – one thing Fed could do – get more kids involved by new energy/recognition to youth corps.

Discussion Question 3

Asheville, NC

(cont.)

decision makers need to get outdoors to see it first hand; inform developers of “sense of place”; fund staff time to do community education

Depts of Transportation at fed and state levels need more emphasis on trails- want higher \$\$ spent on trails as means of transportation

Use broader initiatives to work with scouts and other organizations to market outdoor opportunities.

SCA students make good ambassadors for outdoor jobs and recreation. Have returning SCA students engage scouts and other organizations to promote careers.

A great thing about our state parks is the ability to step up from easy camping to hardcore. Need to get the message out that there is something for everyone.

Make the outdoors more multi-media friendly.

We updated science standards recently, why not nature education. What is the federal responsibility?

I think the perception is that the parks are in a bubble, this is not the reality to how water flows, where animals live. Park service needs to lend expertise to smaller units on water conservation, green initiatives.

You have to put nature and outdoors into the curriculum in the schools. Today’s technology has worked against getting children outdoors. Need federal funding.

Stability in relationship with turnover of personnel. Multi-year projects hard to start over. AMEN

matching funds to where people are i.e., Great Smoky Mtn NP or Blue Ridge Parkway (have highest visitation in system)

Consistency in message to American People

Partner with McDonalds to support the parks and conservation measures. National park trading cards.

Remember that the arts are a vital link to the parks.

Discussion Question 3

Asheville, NC

(cont.)

protect buffers around military bases – need increased DOD funding for farms and forests around bases

keep entrance funds local! Look at park units individually

get children outdoors; FHWA has huge impact on state's budget; FHWA – get back into thinking about alternative transportation; need money to staff educational programs; public needs to get on to their public officials; has to start at the grassroots level with local officials; FHWA needs to be involved at the beginning

funding – tax incentives, project funding, etc.; land agencies need to be talking to the commerce agencies; rural economic development - need to promote REAL rural development such as tourism

National parks should promote their tourism benefits, sales tax dollars raised and how local recreation promotes quality of life.

drop in staff, 50% Drop, shut down parks—teachers losing job- PE first to go—why are trying to get people out there but they have no Play/PE time at young ages.

National wildlife refuges generally only day use- opening them for more camping-would generate more local income if people stayed longer

Need more advertising. Use more celebrities to hype parks.

There is bad propaganda, no showers, cell phones, etc... Camping doesn't have to be extreme. Doesn't have to be roughing it. Can be luxury.

We need to teach teachers to go outside and teach nature.

Dept of Ag needs to pay attention to Small Farms as much as it does to Large corporate - Subsidy rules, Health and Safety food act

chickens in Urban settings, Protect that right. Ermaculture

Need to promote mountain sports in schools, thrill seeking sports (extreme).

We need to bridge the gap between youth and outdoors. Using social media take away from each other. Using facebook to convince people not to be on facebook and go outdoors...

Discussion Question 3

Asheville, NC

(cont.)

I have no idea how to apply for a NPS job.

responsibility to make good on promises – inventoried roadless areas, wilderness study areas, etc

Private lands need to get access to adjacent fed land for uses such as riding stables/trails- will generate jobs in small towns- pvt lands need to utilize nearby forest lands better-

Short term politics and long term projects are a big disconnect. Programs started by one administration cut by next administration.

Need a grass roots campaign to convince congress to put initiatives into the schools.

Adjacent PVT to FS – calls and complaints – need to rethink the good neighbor policy – ROW etc addressing.

Getting \$\$ to the NGO's and work collaboratively with them- provide tech transfer- use NGO's to get federal information out

Last Child in the Woods –book should be required reading!

Air pollution----ozone alerts discourage outdoor recreation-need legislation on climate change

D o NOT tear up lands already preserved-energy policy should encourage biking, etc

Be as inclusive as possible when planning recreation- don't go straight to wilderness- preserve hunting opportunities

Emphasize pack-in-pack-out---- campsite 70 in GSMNP a mess- attracted feral hogs during a recent trip

USFS contracts out timbering- be sure they supervise these guys- I live near the AT near Mill Ridge-need to move USFS to USDI to prevent timbering

Agencies have multiple jurisdictions --don't communicate with each other- volunteers have a hard time getting agencies to talk to each other- when they do, great things happen-volunteers are the mortar between the bricks- initiatives don't come together unless the volunteers do it

Discussion Question 3

Asheville, NC

(cont.)

Need a natl office of environmental education- agencies need a cooperative, unified plan

Trout streams are being filled in by mountaintop mining; need better controls to prevent damages from this resource extraction

Federal incentives for conservation easements need to be made permanent; people are shying away due to the uncertainty

decision makers into the field – can make conservation advocates out of them; what is land trust communities role in climate change? – federal government needs to provide leadership on this, incentivize conservation; target NRCS programs towards conservation programs

Local schools are getting backyard habitat. Fed provide incentives.

Identify highest and best use of National Forests. In TN and NC this use is recreation. Need more money for trail maintenance. Need to ask for more.

-Include part of the educational curriculum to be taught outside, or have more recreational education, environmentally hands on education

-keep up to date !!

Initiatives towards institutionalized “fitness” campaigns, as well as recycling campaigns and Go Green type pitches. Get kids outdoors, childhood obesity and benefiting the land.

have the gov simplify things to the public

Incorporated a city in order to protect resources – many grants available, but it's hard to comply with the rules – need to break down barriers and not just base of household income – should “beta test” some innovative projects and programs beyond current ideas – clustered development and use plans, env-based charter schools – green incubators – also to share info on what already being done

many local inhabitants have never experienced locally available sports (like rafting) – high-speed internet infrastructure a necessity for growth of rural areas – WNC a great incubator for this (Bryson City, for instance)

need a comprehensive national database of local recreation economic impact studies – would help those trying to convince local managers of rec's values – need to make electric grid corridors available for recreation use, where needed for trail connectivity

Discussion Question 3

Asheville, NC

(cont.)

change FS mission to emphasize natural ecosystems (ID this economic value), and other uses subordinate to this, including recreation uses – how to fund? - Make Pisgah RD a National Recreation Area – would increase this economic value, move away from dependence on fire & timber \$

May need to limit use of rec areas to protect them – more rec use isn't always better

major role - stop frivolous lawsuits brought against agencies on environmental grounds

multi-use greenways should be a priority for funding – to connect resources and people – both in urban and in rural environments – a major federal role to fund these, help w/permitting and design

Greenways important – make them a required part of DOT development plans – and make FS trails sustainable

great to see agencies working together on this initiative – a good process – to be successful, much be collaborative between fed/state agencies, NGO's and local govt's

Confusing to know the rules in each NF unit – “can I have a beer here?” - not communicated well – need to get the info out better for the public

In GA, had the same problem with family services, made a small sub-agency from representative of the larger agencies to help public navigate the bureaucracy

Accountability. Are funded programs including the underrepresented population? That is key. Rate or grade the programs.

Manage to “protect” the natural resources. Federal government needs to stand behind conservation and laws as opposed to bending to the will of business/corporation.

Federal government should make parks more accessible.

Local governments give tax incentives for development, federal government should provide incentives for ‘green space’ in developments.

Most of the Pisgah forest is used for education, hiking, fishing, recreation. Is there any value in designating forest or portion of the forest as recreational area?

Young people see role models in National Park Service employees. Mentoring is important. Young people emulate parents and other adults.

Discussion Question 3

Asheville, NC

(cont.)

Federal government senior positions – many are eligible for retirement. Losing institutional knowledge.

Cooperation is key. Federal government has the opportunity to encourage collaboration and cooperation with other agencies and private sector. Sustainable communities is a great idea that puts multiple objectives into one basket.

Lack of funding to take care of the lands we have. See that with the EPA, statewide only 7 people to do erosion control. Things fall through the cracks when you don't have capacity.

Disconnect between where the funding is needed and

A challenge in education is that we haven't reached the educational policy makers. There is a fear that kids won't meet appropriate mandated national education standards.

There is a challenge in reaching the staff – educating the teachers.

Funding. Upgrading and maintaining our parks.

Facilities that are historic and cultural resources.

Greenway development. Referred to British government as a model for preserving green spaces.

Old SCS (NRCS) is an excellent example for ecosystem protection. Need a regional look within the federal perspective to align investments. Focusing cost share money where it can make a difference. Ultimately the private land needs a stronger focus.

Issue of fear of engaging in nature.

Federal agency emphasis on consequences of climate change.

Advocacy is not generally seen as part of a federal employee's job. It is difficult for public agencies to be advocates.

Agencies who want partners are not the ones who are writing regulations. Too much red tape just to do anything on forests ericve land. Need to streamline means to work with partnerships.

Discussion Question 3

Asheville, NC

(cont.)

Need way of funding the programs that can demonstrate that they have made a difference.

This listening session is an example of good governance—to come and ask for public's input and use a bottom-up approach versus a top-down approach.

Green Opportunities should focus on smaller issues that everyone can participate in, such as keeping hometown clean. It's a trickle effect. Reach people in areas that they care about and

Recruit volunteers and make sure they have a good working experience and they will spread the word.

Harvesting wind energy

Farm initiatives in Atlanta schools - outreach to kids

Turning dammed rivers into natural rivers

Easier access

Increase awareness of outdoor opportunities like SCA

Increase state and local funding and info

gov could sponsor a summer camp for kids who would normally spend summer indoors, family doesn't have money

gov could take inner city kids outside - discussed outward bound trip to show people how to live in the outdoors

more visitor centers/education to the public on parks

challenge the American public to go a day "unplugged"

proviging information of activities to do in parks based on age and family structure

Discussion Question 3

Asheville, NC

(cont.)

continue funding at all levels of local, state and federal levels

1. federal government working with schools to do more class trips and getting classrooms to hold class outdoors (especially to target urban schools, historically black college [HBCU's], no child left outside); emphasize parks in biology and environmental

1. emphasize funding for low-income communities

1. media partnership: team up with television stations to hold "black-out day" allowing kids to get away from technology and get outdoors

1. new advertising campaign (ie. Smokey the Bear)

1. make all parts "cool" through advertising (direct and indirect) and holding outdoors events/concerts/etc. in parts to get folks interested

1. education for parents: often with multiple jobs, busy schedules it's tough, but sharing information with parents about parks and programs

a. safety in the outdoors, but without confining with cameras, security, police, etc.

i. community run program with local volunteers

1. programs (like day-care) where working parents can bring kids to enjoy outdoors for the day

1. volunteer programs (like anti-litter) in parks and local communities to get kids interested and involved in enjoying and protecting outdoors

lots of parks have limitless programs, but not enough public outreach to increase awareness of programs

can be integrated into local school districts, teaching (teaching teachers how to teach in the outdoors)

1. Emphasize No Child Left Inside in urban schools and historically black college's with greater emphasis on parks, landscapes, and outdoor fields trips

Discussion Question 3

Asheville, NC

(cont.)

1. Create after-school programs and outing clubs that are led by youth

1. Media and government partnership to spark public outreach in classrooms and with parents; with the classrooms, emphasize teaching teachers HOW to teach in the outdoors; for parents, educating them on how to be safe and create safe havens in the outdoo

Discussion Question 3

Bangor, ME

Feds educate people about the natural resources, gov consider a feasibility study of Maine North Woods NP

Websites need to be easier to use Easier to find information. Currently information is buried too deep in the site to find. Websites should be more interactive and information readily accessible.

Delphi Forecast Techniques to develop who will own forests in ME in the future. It is anonymous. This technique the Federal Government ought to use. It identifies inherent polarization.

Key to Project SHARE is that the federal government is a peer to other partners. It is a partnership of large landowners and agencies. It is not us against them.

Maine has 7000 farmers with 800 million dollars in products and they own 1.34 million acres which is 7% of the total land in Maine. Most of this land is open, but farmers do not receive one penny for keeping their land open. Farmers and landowners need incentives, such as paying landowners to keep their land open. Federal grants through Farm Bill Cost Share programs should do this.

Forest landowners produce the wildlife habitat which is the basis for wildlife economy. In ME farmers can't charge for hunters to hunt on their land. Landowners do not benefit like the guides, etc. do. The NRCS programs can provide compensation such as keeping trees on their land that provide deer habitat. NRCS programs can give some compensation for this if programs are configured properly. Maine Dept. of Inland Fisheries & Wildlife are mapping the knowledge of what we have for natural resources. This will give people info as to what we have and is the key to get people outdoors. Need more of this. Could the feds combine this info in one spot.

If we trained our replacements, we can double ourselves. Need mentors to double youth interest. Knowledge is lost because we haven't educated the youth in what we know about the natural resources. Youth leave Maine, make money then come back when they retire. [a deep concern for building constituency in conservation.]

Incorporate into curriculum at all grade levels experiential conservation education and environmental awareness.

The entity that wants to do conservation has the same permitting process as a developer. Feds should come up with a permitting process that is different for putting a dam in and taking a dam out. Good conservation and returning [the land] back to natural should be easier. Feds got together 4 or 5 years ago. Has anything been done?

Nationally there are lots of special projects in the America's Great Outdoors web site. Getting here you should have noticed the sheer scale of forests and waterways in Maine. If one thing would help us move ahead, let the Maine woods be an example at the national level. Maine forests need to rise to the top of the list at the fed level.

Discussion Question 3

Bangor, ME

(cont.)

Keep federal designation as part of the mix. For example, Umbagog National Wild Refuge [a federal designation] assisted the local partnership in obtaining an expansion of the area in conservation.

Organization-North Maine Woods- who collaborate with landowners to develop maps and public access signage. But..underfunded. There are some fees for access to support the information that is available, but if the federal gov't could fund it somewhat, the effect would be much better.

Envirothon is very helpful for students to increase their awareness of natural resources and career opportunities related to natural resources. Envirothon brings kids outside and specialists into schools. Also, Nordic skiing is a big sport in Maine that is often overlooked.

His wife is a teacher and the problem is that everyone wants the schools to be the sources of environmental education. More education, hands on education, is needed, but schools seem to be the dumping ground for all the extracurricular stuff. Working extra things into the regular curriculum can be challenging. Funding outdoor education during the summer is an alternative if day camps can be funded partly by the federal government.

Need for large scale funding is there, but small scale funding is also a big need. EX: \$4000 grant helped make a festival possible to bring a community together around a fisheries project focus. It shouldn't be a cumbersome process to request small amounts.

As we look to some of the federal stewardship programs, it strikes me that there are quite a few with different details. Maybe it would be good to combine these programs make it broader and make it more flexible. Conservation easements allow the working forest or working agricultural to meet economic needs as well as provide non-economic benefits. We have two large conservation easements. A 200,000 easement that eliminates all commercial development and allows the public access for all traditional uses. The other easement is a 400 foot strip along both sides of the Penobscot River. Conservation easements provide the opportunity for the best of both worlds.

Money is always the problem. This is an industry that relies on volunteers. Grooming 14,000 miles of trails is not easy, and the expectation to have well groomed trails exists. If the legislature would allow us to govern ourselves then we would have more money in the system.

Encourage the fed. Gov't to support innovation. The projects happening here are innovative projects. I think some of this innovation is out ahead of the fed. Gov't. Some of our innovation is ahead of the federal curve. We require cross-agency involvement and that is sometimes difficult.

Take a risk and thank _____ for support. Keeping Maine Forests as Forest - all the grants have real specific requirements and the programs should be carried over across administrations

Discussion Question 3

Bangor, ME

(cont.)

Feds can watch what's happening in Maine. Please help us financially to compensate the landowners. 14,000 miles of groomed trail across the state - the highest number in the northeast. But the entire system is built on the backs of volunteers and the volunteers are getting older and not enough young people are interested in grooming and riding. We need to increase registration fees.

Create the Maine North Woods National Park and a feasibility study

Greatest way to maintain the forest land is eliminate estate

Mythology of what a NP would be, some parks allow hunting, different access, showcase some models of different models to diffuse some to the mythology. Possibly create a new model for a National Park.

Farming example, Fed owns lots of land in the west farmer graze cattle in the west pay a fee to GOV, in Maine how about State pays farmers a grazing fee for the "State owned" Wild life (Eco Serve)

Extend CE tax benefits, fund more CE programs.

enhancing the partners program and reinstating landowners incentive program

No more programs, but more funding for the existing successful programs.

Make NLCS lands a priority, fund a symposium to science BLM decision

American Heritage Rivers, River navigator, deals with the beauracracy and may be beneficial to model on other programs.

Landowners understress to maintain public access, all levels of Govt to help landowners to keep land open instead of purchasing

Science - I am concerned about the effects of windmills on our viewshed. We have to use the science to camouflauge the turbines. We need to do that with noise as well - use science in everything we do. The government needs to provide these science.

We need support for federal legislation to address NNIS. Also we need support for the National Invasive Species Council. It insures that fedearl agencies work cooperatively. The Council started well, but it has suffered from lack of support

Discussion Question 3

Bangor, ME

(cont.)

We need expertise from engineers, environmental engineers, fish passage engineers, etc. In Maine we do not have a large engineering staff and we need this help.

Lack of qualified and competent project managers. The Federal government is key to funding, but we need these funds to be somewhat flexible. It is difficult to weed through all the funding opportunities to find the right fit.

Fully fund the National Park System. We have 340,000 members in our Association. PLEASE fully fund the LWCF. There are many programs that are working - please fund them.

Some type of partnership between the Maine Woods and the National Park Service. There has to be a way to set aside a part of the Maine Woods to establish a National Park.

Fully fund LWCF. The state should get a portion of the LWCF. The Forest Legacy Program is working well. We are limited by the funding we can get even though we have far more forest than any other state.

We need a New England Forest Management Plan - we need to start thinking large scale

There are unique roles of the federal government. Making and enforcing rules and owning land is a unique function of the federal government. Existing Parks, Wildlife Refuges, and Forests need to be funded.

We need the Maine Woods National Park. Only 6% of ME is in federal ownership. Only .09% is protected in Wilderness. These are some of the lowest percentages in the country. The ME woods is under huge stress - biofuel, wind power, biomass are putting particular pressure on the ME woods.

The ME Woods National Park would be an economic engine, connect people to the land, and protect the north woods. The key is feasibility study that would look at the options and have an open public conversation and give a hard look at this possibility.

We'd like the portion of the WMNF back. Auction it off and give us the proceeds to build roads and trails.

Available federal funds to incentivize private owners to protect certain areas with particular resource values. For example, deer wintering yards.

We provide landowners with conservation alternatives. We have conserved over 800,000 acres of easements. ME has the largest contiguous forest land east of the Mississippi.

Allow the Sec of Interior and Agriculture to take risk and fund the most important projects first. Invest and learn.

Discussion Question 3

Bangor, ME

(cont.)

Bought land for conservation. Worked with paper company to get the land but there were no incentives to keep land in conservation. Interest rate for land is 8% (high). A low interest rate program for people who want to buy land for conservation would be great. Private landowners don't get tax credits large corporations get so they have to think about changing how they manage their land (conservation vs. economic). Everyone needs to look at KMF website

Education comments need to be taken with a field based components and work with schools to incorporate into their instruction. Schools need the resources to take students to the field to work with environmental experts (Field days)

Government education programs are available, but there's a need to promote them and use as a resource.

School administrator's need to be educated always.

SWCD, RC&Ds, School Districts, source of volunteers but funding is just too hard to come by. Can't federal government provide funds to support these type of groups' efforts for education and public access. Small amount would go a long way. Need to get be able to get to resources easily.

As you witnessed, we are enormously proud of the Penobscot Project and the continuing commitment to its successful completion. The project includes several federal agencies, the Penobscot Indian Nation, the State of Maine, hydropower owners PPL Corporation and Black Bear Hydro LLC and several conservation groups and many other partners. The project is the result of exemplary collaborative federal leadership, from the negotiation of the agreement to technical assistance to funding. For instance, the Department of the Interior (U .S. Fish and Wildlife Service, National Park Service and Bureau of Indian Affairs); Department of Commerce (National Oceanic and Atmospheric Administration) and U.S. Environmental Protection Agency all play key roles; partn ership with the Department of Agriculture is also promising. This vital collaboration remains critical.

We are actively seeking both private and public support to ensure completion of the project. Support from the President in FY12 would move the Penobscot Project quickly toward our goal of completing the core elements of project implementation over the next 4 years.

We welcome your thoughts and leadership on how to ensure the Penobscot Project's success. We hope this model is the very type of project to be highlighted in the AGO report and the President's FY12 budget.

Discussion Question 3

Berkeley, CA

Easier to get a group of wilderness permits: streamline process/bureaucracy

Pay for internship programs = complicated: Hard to hire local youth (VIP program); Formalize internship programs (MPS and partners? / D of A / D of I?); Better/easier access/pay for undocumented youth

NPS--new "series"--youth development/stewardship/internship

Prevailing wage issue: Make youth priority/youth friendly, don't lump with unemployed adults; mechanisms to provide "classification" for youth and people who work with youth

Money for transportation

Streamline /simply partnership agreements and expectations

Bring "park to youth"--i.e. CA state parks working in central LA to create new park : focus on urban areas and urban fringes

Use cultural resources in addition to natural resources

Money/policy -- energy dept. -- to refocus on bikes -- connect to open spaces

More partnership/volunteer coordinators: Forest Service, NPS , BLM (all agencies)

Access to jobs for young people : preferential hiring authority for young people who serve in Cons. Corps, etc. -- healthy forests public lands corps act

Better systems for seasonal employees (health insurance, etc.) or better "pipeline" to permanent positions (so we can keep youth once we get them)

Bring "living stories" to communities

Use of cultural resources to engage youth (emphasize interconnections between cultural and natural resources) -- holistic approach

Discussion Question 3

Berkeley, CA

(cont.)

Creating youth-friendly environments where young people can feel safe -- train staff

Replication of successful models that better integrate NPS interpretation and education with park partner education and stewardship

Tribal interface

Support connection with youth from every age; promote potential future employment opportunities...train youth to go back to their communities as promoters of programs

Recognize gaps between "silos" of engagement: Provide support to bridge those gaps (i.e. youth participate in program, then don't know what to do with their transformation)

Streamlining partnership agreements and expectations (internal and external)

Simplify and create access to paid internships, long-term careers

More positions--youth program coordinators and partnership coordinators

Looking at cultural/natural resources holistically, in terms of outreach, partnerships, and programs

Emphasize creation of youth-friendly environments with youth leadership

Building in family components to all youth programs

Better integration among and between agencies and partners in development of youth programming

Encourage funding of "Learn + Serve" CNCS -- funnel money to get kids into park

Liaisons for NPS resources/ heard to connect with resources /get bounced from one place/person to another

Using cultural resources as "bait" -- build bridge to natural resources

Discussion Question 3

Berkeley, CA

(cont.)

Support programs that engage families (i.e. passes for future events, directions for returning, etc.)

Programs that provide repeat experiences

We need "youth development coordinators" who can facilitate connection between orgs and parks

Importance of providing emotional/physical safety (know "quiet history" of sites -- why some populations won't recreate there)

Early Age--utilize a variety of community-based organizations (e.g. youth, religious, cultural, schools, etc.) to expose youth to outdoors

Pre-teen/Adolescents -- foster a sense of environmental stewardship/responsibility through more intense experience; maximize peer to peer communication and connection (e.g. outdoor camp operated and maintained by Boys and Girls Club)

Young Adults -- provide skill building opportunities in the outdoors (e.g. Corps) as part of a career pathway; provide challenging and transformative experiences

Provide a national framework within which public-private partnerships (cross-sector collaboration) can work instead of disparate efforts

Facilitate conversation between different funders (currently there are few linkages between corporate funders and foundations grantmaking in the same area)

Land management agency should consider multiple benefits when allocating funding for projects or maintenance and include youth development goals

Explore ways to leverage non-traditional sources of funding, such as Department of Labor (WIA) or safe schools/healthy start/crime prevention

Start with activities in the city, build up to going to the camp, then coming back to help maintain the camp facilities

Start with community-based organizations: schools, religious groups, athletic programs, youth groups, etc.

No Child Left Inside; Outdoor education; Connect art and nature

Discussion Question 3

Berkeley, CA

(cont.)

Make school funding more secure to make room for innovative programs

Federal legislation; fully fund Public Lands Service Corps Act; pass Youth Corps Act

National framework to organize efforts - Ex. AmeriCorps. Have a database?

Encourage funders to collaborate

Connect private foundations with corporate funders in same grant making area. Right now we have separate conversations - corporate funders talk to each other and private foundations talk to each other

Make Workforce Investment Act (WIA) dollars more accessible for this type of work

Local, state, and federal maintenance dollars could go to youth programs if allocated according to multiple benefits, include youth development goals

Tap into more non-traditional sources of funding; Public safety community – officers /workers/funding are untapped resources

Discussion Question 3

Bozeman, MT

Take the environmental evidence, map out the corridors and dispersal areas, protect these areas so that the wildlife can move as freely as possible. Limiting our rerouting commercial semi truck traffic in ecologically sensitive areas is critical in this effort. The Western Gainers Resolution must be followed. Use environmental reports to determine corridors and disturbance areas. Educational corridors for schools to teach to the next generation. The government should support our efforts to support wildlife corridors in the entire state of Montana, especially the Madison Valley as well as Idaho and Gallatin Valley, Hwy 191.

Organize communities to develop local strategies to protect waterways. Educate and train children on water clean and free. Employ state and federal guidelines for oversight and regulations.

Make our parks and forests a priority in the federal budget. Think long-term when we decide what we want to use our land and resources for.

Reduce traffic speed and eliminate long-haul trucks from the Madison Valley. Implement setbacks on riders and eliminate dumping and pollution. Corridor development and get more land into conservation easements.

It is critical that outdoors activities and the facilities to provide them are able at all levels. Local governments and states have increasing use, aging infrastructure and limited staff and operations to provide these types of opportunities close to populations and with easy access.

Fully fund the LWCF with equal funding to the stateside to provide operate and maintain local recreational opportunities

Support grassroots efforts with federal and state money. Tough legislation to face individuals and cooperation to take appropriate action.

We are not creating any more lands, but we are supporting more people. We must preserve our diverse and unique public lands and landscapes, watersheds, wildlife, fish and bird habitats for future generations and engage young people in their protection. Uses must be appropriate not destructing public lands belonging to all Americans- whether or not they even visit them- they are out national heritage. Local people must avoid seeing these lands as theirs not ours. Politics, money and climate change.

Engaging all stakeholders in a collaborative approach resulting in solution on issues of public lands for the common good. Uses must be sustainable. Bring people together to solve problems- leave divisive rhetoric behind.

How do share access to wilderness and out doors without people feeling left out- There should be NO snowmobiles in National Parks- but there should be places for them - some with atv's on some trails ect. Balancing is the key!

To create buy in for balance- by insisting on more dialogue and more education

Discussion Question 3

Bozeman, MT

(cont.)

Climate change and building resilience into our ecosystems so they can adapt to this change. Connecting people to natural landscapes and fostering future conservation leadership. Protecting our remaining core habitats on public and private lands that do not currently have permanent protection

Local partnerships informed by the best available science. Fed govt providing funding and technical assistance to inform collaborative partnerships. Support for legislative efforts that grow from local collaborations such as SB 1470- The Forest Jobs and Recreation Act.

1. Carbon initiative- pricing 2. development guidelines 3. use less/ guidelines

Manage our resources for future generations not for short term profits

Fractal landscapes from development sprawl, great demands in fewer resources - (water, air) as well as transportation routes. Threat of "no net gain" of public lands is strong in Montana, but is very shortsided and destructive. Please protect against "no net gain" policies.

Protective laws for watersheds and lands including cluster developments and enforced air and water quality standards

Maintain large intact national areas that are interconnected to allow movement of animals and plants as the climate changes

Reconciling agenda 21 goals and maintaining private property rights. Agenda 21 specifically eliminates private property rights as well as most agricultural freedom. We cannot destroy these freedoms without destroying our way of life.

Revise our game flow to promote not destroy private property rights. Most of the best managed lands in American are privately owned and the worst are federally owned

Fundamentally, recognized that current populations density and levels of resource consumption create pressure on ecosystems and wildlife that did not operate as strongly in the past. Consequently stronger policies for preservation of ecosystem function and species conservation are necessary.

1. strong federal policy for the preservation and expansion of protected areas and endangered species! 2. strong federal policy to internalize the environmental cost of economic activity for extractive/ pollution activities. (as with ozone, so2). 3. Strong federal promotion of the development of carbon-neutral energy.

Fully fund WCF. Plus more and into working lands conservation programs like FRPP, GRP, FLP, WRP

Discussion Question 3

Bozeman, MT

(cont.)

Adequate funding of NPS, LWCF to protect the core and critical landscapes. Work across boundaries to protect large landscapes. National parks are the key to the AGO initiative, start there. Fund what worlds, RCTS programs, youth deer program.

Conservation issues in Montana are most successfully addressed by bottom-up, grass roots efforts that are based on collaboration. These are inclusive of multiple issues (forestry, weeds, wildlife, water) and the local privatization of the issues

the best strategy to address the challenge that these groups face is support through programs such as funding. The cooperative watershed management act, land and water conservation fund and others

Most land managers recognize the impact of invasive but lack of resources and energy commitment. 1. reenergizes NISC give it the same emphasis as the Clinton administration did. 2. include basic funding for invasive in agencies and field units.

Lack of understanding that all the natural world is connected and we are part of this web. Showing how a philosophy of what is the common good is important not just "what's in it for me"? Implementation use of education in schools about connectedness. Get children off electronic games. understanding how to show people to understand what each does and what one state does affects all of us. (environment is not a bad word)

1. NPS get back to its most basic, oldest mission 2. revise update the 1972 Mining Act 3. Fully fund LWCA 4. Strategic land trades and purchases to enhance public benefits of public lands.

Climate change, all land management units within DOI must have explicit mandates to manage their lands for both present and future climate impacts. Decisions should be sound science. climate smart management should focus on 3 main tactics 1. protect adequate core areas, buffer areas and connecting corridors 2. limit non-climate stressors (logging, ORV use, etc) 3. Interagency coordination with state and local counterparts to develop and implement ecosystems-wide climate-smart management programs

Regulations- 1. mandates and guidelines 2. collaboration between federal, state, local agencies and non profits 3. Involve local citizens and organizations

Pryer Mountains of south central Montana needs better protection of anchor his tried sites and better protection of the land with control over 4 or 2 vehicles

Coordinating diverse state/ federal/ local programs for common goals. Time- people are maxed with work and school responsibilities. Finding common ground between groups/ stakeholders that have antagonistic relationships.

Support financial and with policy local watershed/ conservation groups. Support flexibility with work and school programs to encourage people to get outside. Start educating kids about restoration early -middle school, continue through college, Support these programs. Support financiers for salaries for people working on these efforts.

Discussion Question 3

Bozeman, MT

(cont.)

1. wild land being locked up to all/ any activity other than walking/ back packing 2, good farm/ranch being subdivided 3. oil dependence

1, keeping lands open to motorized access, youth and the age will be better able to access these places, house specific trails/ paths for motorized access., Have specific trails for non motorized activity. 2. raise the estate taxes or eliminate it. Better/ easier easements. Incentives for youth farmers/ ranchers 3. developed new oil strategies on land not 50 miles out in the ocean.

keeping very large ecosystems in trust forever.

conservation alliances between public and private sector

Combined CRP and WRP programs, conservation easements on Private land that consider reasonable public access.

amend the act and grant more credibility (i.e., less vulnerability to frivolous lawsuits) to the environmental assessment process.

Engaging urban populations minority and youth populations in active outdoor lifestyles.

1. complete streets 2. connectivity of alternative trails and recreation networks in urban areas 3. recreation services and infrastructure

The Federal government can't lock up millions of acres each administration and then fret about the lack of participation in the "great outdoors" providing more access to and through public lands. "wilderness" legislation are putting too many recreational areas off-limits to all but a few able-bodied long-distance hikers. we need to be more creative and inclusive in how we define uses for these areas.

More trails and existing roads open to motorized vehicles. We can take turns like what was done in the 70's in the Gallatin National Forest for snowmobilers and cross country skiers. They each has designated days of the week and or weeks of the month to be on the trails and roads, and it worked.

Grant support to community based NGO's that represent sustainable projects and show more betting acumen.

Discussion Question 3

Bozeman, MT

(cont.)

Enforceable standards to maintain core needs and values. Financial and other assistance for coordination , communication and collaboration. Applied to a comprehensive national strategy to ensure wildlife and ecosystems can adjust to a changing climate and a national network of conservation lands sufficient to ensure all our wildlife and ecosystems will be available in abundance for future generations. Key strategies- maintain core areas such as public lands. Through short, clear, understandable and enforceable standards and through full funding for the land and water conservation fund. -Maintain wildlife and ecological connectivity including across private lands, through: strategies and programs that promote coexistence with wildlife and ecologically improved land management, including more funding for existing programs such as Forest Legacy Program, WDF- Livestock assistance program as applied to wildlife conflicts.

Managing and conserving our watersheds for clear water and habitat. Restore our degraded habitats. Promote thoughtful human development patterns. Connect conservation and local, sustainable food initiatives. Focus conservation efforts on large, reground linkages for biodiversity.

Promote public-private partnerships and financially support them through programs and funds. Adjust government programs to fit current needs and conditions (i.e. WREP pilot for NRCS) . Expands contracts or cooperative agreements between federal and state government and conservation NGO's and watershed groups.

Redefining corporations business entities without political rights. Rights are the domain of human beings and their fully voluntary associations.

Protection and connecting large wild landscapes. Protecting and connecting habitats for fish and wildlife (examples: bison, bighorn sheep, grizzly bears).

Protect habitat and promote regulated public hunting and fishing, fully fund land and waters conservation fund, Eliminate wasteful government intervention. Abandon ARS Domestic Sheep Experiment Station in Centennial Mountains. Abandon domestic sheep grazing on public land Bighorn sheep's habitat. Abandon Bison capture facilities at Stephens CrkiN Yellowstone National Park. Abandon bison capture facilities at Horse BVTTE on VSFS land.

Incentivizing water conservation and quality improvement Projects. Encouraging local communities to develop comprehensive water management plans, include all stakeholders (youth, feds, local government, private landowners ect.) if those plans are in place communities can receive federal financial incentives for water conservation and quality improvement projects

The control of our public and private lands. Federal level putting our state land into wildlife reserves. Treasured landscapes and grasslands. I also find it odd that the biggest place of the proposed wildlife refuge in eastern MT. is over a very large oil and gas deposit.

Let each state control there own land , put the people choice first. Let us vote at a state level.

Discussion Question 3

Bozeman, MT

(cont.)

Funding for land and water conservation. Protecting resources while including all recreation users- balancing - maintain tools for working forest and ranchers.

Full funding for land and water conservation fund

Passage of global climate change legislation, better and less political management by our federal agencies.

1. Do not lock up public land (national monuments) to eliminate timber, mineral, oil extraction. Especially in the Baitken Shall Area 2. Do increase access to public lands. Even through mandatory easements. 3. man made climate change is bull shit.

Anticipate and adapt- don't keep on business as usual, head in the sand. Don't spend money to keep/ replace status quo

1. Agriculture education in curriculums nationwide. Public outreach and education. 2. Manage wildlife rather than putting responsibility on ranchers. Be accountable

Leave the lands to the locals. The Federal government cannot manage all the lands of this nation. The federal lands are owned by locals.

Broad involvement coordinated leadership and education

Kids are out future conservationist, and they are spending, less time outdoors and more time on the couch. We need to find ways to re-connect children with the outdoors, whether on a large scale (trails, national parks) or small scale (urban parks)

Rather than reducing school budgets for physical education (and art, music) our government needs to ensure adequate funding or even increasing it. Public school curriculum should include field trips to local parks for in depth exploration of the local landscapes, whether it is examining a square of soil, the diversity of wetlands and kids get engaged in their environment on a small, local scale they are more inclined to maintain an interest and get involved on a larger scale.

. estate tax relief for working farmers and ranchers . Continued livestock grazing on public lands. Federal conservation programs that are incentive-based that reward people for doing the right things. Use land and water conservation funds to fund projects of local working groups, not just federal land acquisition. Include term easements as well as perpetual easements in federal programs

Discussion Question 3

Bozeman, MT

(cont.)

Include youth in more outdoors oriented activities that teach them about the connection that exists between ecosystem health and human health. Michelle Obama works "Let's Move Outside" is very important-- Try to integrate this with science education. Public health crises like the obesity epidemic, asthma prevalence and even autoimmune dysfunction all have connections with sedentary lifestyle. Academic performance is boosted by exercise. Integrate movement by health and science subjects in k-12 education.

Change the subsidy system/ Introducing and ecologically understanding at the highest levels to counterbalance the misguided intimate relations between government regulators and administrators and technological/ corporate AG.

Education! At a very young age. Mandatory service projects in our public and private schools with a conservation based program. Reduce the development and prioritize these defense funds for conservation of open space for both our public and private lands. Utilize existing organizations, timber, conservation, recreation, bring them together and dialog as a group to work in concerted effort for restoration and protection. There are plenty of groups in existence with their own expertise already established. The great outdoors initiative would best serve this country by bringing these various groups together.

Preservation of wildlands. Enforcement of existing laws, eliminate motor vehicles from 50% of public lands

Health habitat education- how to be in wild lands. Access to public lands to much public lands is locked up for example NLCS- upper Missouri River Breaks MN only 22% of the monuments is open to the public without land owner permission.

Mandate the forest service to conduct winter travel planning

The best science possible, widely shared, collaboratively acted upon, communication to the public- engagement. Large scale restoration and conservation of landscapes, ecosystems, key resources- water, wildlife reg. communications. Leadership building engagement of people, groups to address conservation- changes accruing on the landscape

Assisting non-profit and private organizations

Protect public lands with protective designations- National monuments, conservation allows on Wilderness Area of Concern is the Pryor Mountains which needs of protective designation so that the three land management (BLS, FS, Park Service) will have a common set of values for managing the Pryors

Tax incentives for personal conservation- ex. Water educate for water conservation

Discussion Question 3

Bozeman, MT

(cont.)

Local input and management. Making funds available to local organization so they can do their important work

Provide greater financial incentives for private landowners to seek conservation easements or dedicate their lands to the public. Promulgate the benefits to the nation when children can walk and ride bicycles to school and around their neighborhoods. Incentivize the construction of community trails that serve all ages and not just drivers sixteen years and older.

Repeal the no more wilderness settlement in Utah. Right now, millions of acres of wilderness quality lands in Utah are hanging in limbo. Many of those acres hold vast archaeological and cultural resources and would benefit from the additional protection that wilderness designation would provide. Fund the BLM, to protect the cultural resources. Archeological sites in Utah are being looted and destroyed at an alarming rate. Last year federal investment and subsequent legal action against looters in Blanding is not a start. Just field officers in the Monticello BLM is not enough to manage 1.8 million acres!!

The Greater Yellowstone Ecosystem should be a priority landscape for the administration in developing and implementing strategies to reconnect people to nature. And conserve treasured landscapes. With Yellowstone national park at it heart, protecting the GYE also means protecting, restoring the wildlife migration corridors and watershed that surround the parl. The administration should use all the tools available to further our nation's conservation legacy including: working with local groups to designate new areas and expand existing protecting areas (from wilderness degradation to new national monuments ect). Launching broad scale restoration efforts to improve degraded fragmented fish and wildlife habitats

Prioritize GYE as a key area that connects the biodiversity of Yellowstone to wilderness areas in ID, crown of the continent and rocky mountain front. Existing programs need to match needs and conditions currently on the landscape- adjust these. Make cooperative agreements lasion and plentiful so local NGO's can add capacity and technical expertise to state and federal government programs. Promotes success stories- use media and social marketing promote multi-model transportation to trail systems,

The top federal priorities that will benefit the outdoors in my opinion: Strong federal policy for expansion and preservation of wilderness and other ecologically functioning areas. And endangered species. Strong federal policy that causes extractive/ polluting activities to bear the environmental cost of those activities. Strong promotion of development of carbon-neutral energy. Full funding of land and water conservation act, ASAP.

Reconnecting children to the outdoors will only be accomplished by giving them repeated exposure to outdoor recreation. This required mentorship type programs that insure kids got an experience that is reinforced until child is both comfortable in the outdoors and capable of recreating on their own. This requires robust funding for salaries to coordinate and conduct mentorship programs.

Discussion Question 3

Bozeman, MT

(cont.)

I appreciate "Washington" coming to Montana. I appreciate that the issue are complicated facing the Administration regarding putting a value on nature. I am worried about what is happening in the worlds oceans- over fishing, pollution. I thank the administration's for cancelling the Bush administrations last second oil and gas lease sale and instituting needed reforms for onshore drilling. End the BLM's "No New Wilderness" policy It's wrong to have surface and subsurface rights separate surface owner should own subsurface. Ranchers should not bar canoes, boaters, fishermen from access at bridges. RS2477 is being abused BLM and Forest service are asked to protect and sell off for lease land- allowing land abuse is this the fax guarding the hen house? No more natural world is being made, It's vital to our health- mentally, physically and spiritually.

Many good comments and feds need to listen to them

We have our agencies in place use them and stop appeals in could. Help us use or land practically with out governing. Money which this our hands, If we could count our timber and open our mills it would bring dollars back to our schools put our people back to work. We don't need more govern closures on our lands, NO MORE WILDERNESS land of no use. If people want more trails and parks raise money privately and use volunteers. My main concern is loosing my ranch three government control by zoning and not allowing me to do raise on my land. I wont our water rights lift in Montana not sold to out of state.

This is a great opportunity for you to hear local concerns. We appreciate it. Please don't try to make a one-size-fits-all type of program at the Federal Level. Local communities must like with energy decisions. Please let us implement you rprograms at our level.

Montana Black Management Program, which allows hunters to access private lands for a fee needs expansion and more funding. Both recreationalist and hunters and landowners want this but the program is limited by funding which only comes from out of state hunting fees. America needs a mandatory service year followin high school to give urban and rural kids experience in the outdoors that otherwise are unattainable.

Tree fight addresses many of the issues and challenges addressed today. We are a volunteer force, pledged to prevent forest destruction through on-the-ground in-the-forest public participation. I'd offer, families, schools and recreationalists the opportunity to hike into and do the most famous forest in the world and help protect some of the most beautiful, ancient, productive trees in the U.S from continued beetle predation, and also provide them a means to share these experincies with the world. We would very mich appreciate the governments support of this ground breaking programs.

Thanks for brinding such a diverse group together to talk about conservation and getting people outdoors. This is a great start and I hope these conversations are heard. Some of the topics felt were compelling: - working groups and non-porfits are the way to get things done. The government should look more toward this model and use top-down management. - move focus on outdoor education/ stewardship in schools. -Eliminate estate tax to encourage farmers/ ranchers to stay on their land.

Discussion Question 3

Bozeman, MT

(cont.)

The new century needs a new model for conservation. Large scale land acquisition and designation of new monuments, parks, and wilderness is the old model. The future is public/private partnerships driven by local working groups. Hundreds of local working groups are working throughout the west. Funding needs to be available for these groups to accomplish on-the-ground conservation. The future is incentive-based conservation that rewards people for doing the right things and nurturing locally-led, volunteering efforts, verses the old model of top-down regulations.

Please use the output of this process as a foundation for a more inclusive visioning process that would become the conservation component of a national development plan. Do the same thing (simultaneously with the same people) for an industrial development component. Development and conservation are always antagonists and people need a national process to sort these out in their own heads.

Please issue a Secretarial Order to give specific directives to managers of the National Landscape System. Specifically it should include clear support for the conservation mission of the System, budget transparency line authority for the Director of the Conservation System, increased budget for conservation measures and staffing with the system.

I'd like to see transitional research and programs that bridge biomedical NIH and form the basis of CDC initiatives including K-12 health science education. For example, research by Dr. John Ratey Spark (book) on the effect of exercise on brain function then boosting academic performance. These could be integrated into subject areas (health, science, math) and also play a role in how daily school schedules are structured. Universities and community-based organization could be instrumented in helping implement these programs. Channel these to inner city as well as underserved, rural areas. Provide support to school districts so that burden doesn't fall solely on teachers' shoulders. Involve conservation corps and local health departments.

Keep logging in place, we need logging to continue on federal lands for jobs, fire prevention and to keep trees healthy. By thinning out forest it will keep the beetle kill down and keep wild jues from getting out of hand. We need to keep federal lands open for ranching. Ranchers need the land for their cattle's. It would be detrimental to ranchers and loggers. We do not need to lose more jobs. keep federal lands open to everyone.

Wild lands are important to Montanans for the services they provide, such as recreational opportunities that fund our economy. I'd like the administration to use all tools at its disposal to protect our public lands

Discussion Question 3

Bozeman, MT

(cont.)

Generally, balance of natural and cultural resources is important. Regarding cultural and historic landscapes. What works: SAT programs. Historic Preservation. The T.B. Syoy Mansion. One of 3 full-block mansions in the state, built in 1910: Future Threatened and a SAT grand (layest ever awarded) limp-stated local preservation efforts-matched by City of Bozeman, prompted the founding of a non-profit to support city ownership. Without the SAT grands, i believe the property would have been ruled to a private owner, subdivided ad it's historic charcter lost, SAT established a value to preservation Historic Preservation stimulate economy promotes histoic education and tourism. Please fund and expand and continue Save America'sTreasure program.

Encourage the development of clocally driven, comprehensive water management plans at a community / watershed scale. With the development of these plans (stakeholders that much be involved include youth , local government, federal agencies, pivate landowners ect.) communities can recieve federal or state financial incentives to institute/ implement water conservation, water quality restoration projects. Potential funding sources could include recreational equipment/ extractive industry tax... similar to hunting logger fees.

Regarding bruceccsis in wildlife in the Greater Yellowstone Area: bruceccsis eradication is not a reasonable goal. Reuse animal and plant health inspection service bruceccsis regulations. Clarify that bison are values native reublic trust wildlife just like eck and other wildlife. Promote systems that manage livestoke reasonably and wildlife ecologically. Phase out USFWS feedgrounds in Wyoming and promote habitat preservation work on better livestoke vaccines-not wildlife

allowing recreation in our public lands is going to be a dying mission. The agendas of groups to allow their type of recreation is going to limit all recreation from happening. Trail maintenance and trail; building is going to be the future of forests. Do not allow public lands to become wilderness areas. allow all to use out lands

Reauthorize secure rural schools, but tie the payments to the condition of the land. Tie the payments to collaborative partnerships ripariam restoration, catrbon sequestration ect. Fpr specifics, please contact me.

Wants to repeal Federal Lands Enhancement Act. Referred to Gulf oil spill. Felt corporations have expanded there power too far and can influence environmental policy. Need clear separation of business from political policy setting. Citizens should have that power.

Youth conservation corp. is working well. Needs more funding. Work with existing groups - don't need new ones.

Protecting and connecting habitat is important including large wild landscapes. Challenges bighorn sheep, bison, grizzly bears. Need to eliminate wasteful government intervention. Example domestic sheep vs. bighorns in the Beaverhead/Deerlodge forest. Remove bison capture facilities in YNP and on the forest. APHIS regulations are worse than the disease (brucellosis) to livestock producers. Fully fund Land and Water Conservation fund.

Discussion Question 3

Bozeman, MT

(cont.)

Water is important. Tool - some type of federal financial incentive for water planning at the local level. Then provide dollars for implementing completed plans.

Indian trust lands have only received 25% of the conservation dollars that private lands have. Need parity. Tribal irrigation projects haven't been funded for the past 20 years so they haven't been done - yet EQIP requires that to be eligible land must have been irrigated for 2 of the last 5 years. Needs a policy change on irrigation history requirements for EQIP. Wants USDA and DOI to work together as a package deal. Wants to get schools involved through outdoor classrooms and community gardens. USDA/DOI should set up a committee to work together on natural resources on tribal lands.

Concerned with wildlife corridors in the Madison Valley. Problem with animals crossing the highways. A lot of commercial vehicles are using the roads. Have been working with the MT DOT. Need to protect the wildlife corridor and educate children why it's important. Needs federal support for their efforts and funding.

Kudos to the administration for reversing Bush era initiatives on oil and gas lease sales and BLM for implementing Back Country Byway and initiating designated route systems for ORVs. Wants to repeal the No More Wilderness settlement in Utah with BLM. Wants more wilderness and BLM area of special interest. Such as in the Monticello BLM in Utah to protect cultural resource sites. More rangers are needed.

Concerned that Forest Service Region 1 has a policy to treat recommended wilderness as de-facto wilderness, eliminating mountain bikes. Suggest change in forest planning rule and provide guidelines for how mountain bikes are treated and allow them unless there is a compelling reason not to. Need options other than wilderness designation, such as national recreation areas, conservation areas, etc.

Wants to see a public referendum before any lands are put into the "Treasured Lands" initiative

Has outdoor TV show about hunting/camping. Access to public lands is important. Fully fund Land and Water Conservation Fund. Funding will always be an issue. Hunters and fisherman already pay - now time for other user groups to pay. Private land incentives are important. Must have local buy in. Political process may be unduly influencing federal agencies in carrying out their public trust responsibilities. Feds need to be more adaptable. Gave example of inflexibility of APHIS on brucellosis issue. Need more flexibility in management to get easement. Also need flexibility in land exchanges to be able to deal with small local parcels.

Supports maintaining back country air strips. Blanket federal programs won't work - need local control

Discussion Question 3

Bozeman, MT

(cont.)

Is 74 years old. Has given up backpacking. Depends on ATVs, horses and snowmobiles. Concerned about lack of opportunities. Wants accommodation for senior citizens who can no longer hike or backpack. Local knowledge is important to help agencies identify best options. Federal role is to back off and leave decision in hands of local people.

Motorized recreationist. Small farmer. Can't make a living on farm due to wolves, brucellosis, dead timber. Too many lawsuits. Solution is to remove all pending lawsuits. Go with the local agencies existing plans. Logging roads could be used for ATVs and snowmobiles etc. if managed right.

Frustration over perceived federal incompetence led to place based legislation that controls forest planning. Wants a congressional oversight group to review national forest administration and priorities. Has plans for reorganizing the Forest Service in the Greater Yellowstone Ecosystems into a single forest or region. He has provided extensive written comments.

Great to see passion for this place. Most important thing is to protect what's left. Sees the area through the eyes of her grandma. Administration should step up incentives to recycle, protect land and water. Ag/wildlife conflicts tend to favor agricultural at the expense of wildlife. Number one cause for concern is climate change.

Encourage, partnership state and local govt. with Feds. Fed \$'s sustained state side funding down. Written testimony, meager budgets, can meet 50% grant share, support full, Higher level decisions hurt local communities & local demands are not being met- Communities are not able to find 50% of funding Bring equity to the program so everyone can enjoy the benefits

Can do? Find a way to let land managers & foresters do their work on the ground Taxes? Not so high have to sell & take land out production Grow trees on property instead of subdividing, manage fed. Ground, challenges – FS – hands tied, litigation, safety – millions acres dead trees in MT, rec. on ground, huge issue with hazard trees, need to address, FEDS – Find way to let land managers do their work on the ground. Tax issue – too high forced to sell

Wildlife corridor & traffic, don't mix, Feds restrict long haul trucks causing issues, identify and sign wildlife crossings

Federal government has important role-Legislature- financial decisions not long-term-role needed for long-term

Climate change- largest threat to environment, DOI needs directives for current and future impacts, protect core areas buffer areas, limit all non-climate stressors, interagency coordination, ecosystem wide climate mgmt programs

Discussion Question 3

Bozeman, MT

(cont.)

Invasive species, affect ecology and economy of the US, hydro power invasive species, impact us all not recognized as a #1 priority, clean angling program, inspect clean and dry gear when done, private sector deliver this, Fed role is commitment to national invasive species council, fully fund state aquatic nuisance program, encourage partnerships, simplify grant programs, need social marketing tools to change behavior, youth education, successful programs are long term, keep them outdoors on a frequent basis, Need \$'s for teachers not products,

NPS return to old mission leave as is, bison of YNP, LWCF need full funding, access is needed; revision of the 1872 mining law, degrading public lands, repeal now, balance public uses of air water and land, uses have been skewed to private uses vs. public uses, need to find balance for today's conditions and populations

failing way behind on demand, not suitable for existing uses, propose initiative to get trail construction project going to get folks to work like in the CCC days – Feds need to do. FS no \$'s, woefully lacking \$

Cultural sites-all federal agencies lack-not protecting cultural sites Some sites carbon dated-1000 years old!! As a Crow Indian-can tell Crow story by looking at paintings-Pryor Mountains - Need protection! Under 3 federal agencies, NPR, BLM, FS,-NONE WORK TOGETHER!! All agencies should work as one unit-all federal agencies- Work against each other-programs do not work together- Biggest complaint-FED AGENCIES DO NOT WORK TOGETHER!!

Won national wetlands award, wetland & riparian program working a partnership to protect large landscapes, partnerships based upon trust are the best. Find common ground, hat am I willing to compromise on? Diversification of assets, 10 bird species to over 100 species, key players could go on, obstacles – trust, willingness to work with others, what's in it for them, cleaner air, water, biodiversity, common elements to all. Fed. Role - \$, expensive work to do. Need \$'s LWCF, All part of the problem all need to be part of the solution, energy, water, power, demand energy orgs help preserve what's left. Feds – flexibility is needed to constrained by regulations & manuals. Each situation is different, CREP – 400 acres enrolled in MT, 375 acres on his property. Critical point, \$\$'s there but \$'s are being sent back to Washington, Modify programs to make it work.

Recreation, education, & Stewardship - Water is important, Feds – help strengthen clean water act, reconsider private land ownership and split estate ownership for subsurface rights. Put surface and subsurface rights back together

1. When roads used by the public are threatened for closure that provide access to public land or water, the federal or state agency with management responsibilities should claim a **PERSCRPTIVE EASEMENT** on those road in the name of the agency and the **PUBLIC**.

2. When access to public land is blocked by private landowners the agency with blocked land should not permit any commercial outfitting on that land. In addition, existing permits should be terminated. (The present permitting system rewards landowners for blocking access by issuing permits so that they can profit from outfitting on the very public land they have blocked.)

Discussion Question 3

Bozeman, MT

(cont.)

3. Make Pittman Robertson, LWCF or other funds available to allow agencies to construct short segments of road on public land that would bypass private land presently blocking access to important parcels of public land and water.

4. When acquiring access, add to the appraised value of the travel route, an additional monetary factor that represent the value of the access the route will provide.

5. Fully fund the Land and Water Conservation Program and Direct Federal Land Management Agencies to aggressively pursue better access to public land and water.

6. Continue to restrict Off Road Vehicles from traveling cross country. Make them stay on roads and trails designated by the management agencies. Increased law enforcement.

Discussion Question 3

Charleston, SC

State Park Service – state and national parks; outdoor wildlife recreation areas that bring in kids – introduce them to nature and history working together; through programs that fit the curriculum.

loss of capacity in state government to take advantage of federal dollars – reduced state budgets.

Washington is getting in the way – can't figure out what they're going to do about taxes. It's got to be multiple tools, though we're all working to address the same need. Land is cheaper now so it's the time to do acquisitions.

tax incentives for keeping your land like it is – not develop it – people who keep a farmhouse, or other land as open space; developers get incentives all the time to keep building buildings . Can we switch it? So we protect the outdoors instead of building more buildings. She's referring to property taxes. Property taxes are the reason the gullahgetchees end up losing their land.

a great idea would be a program for small landowners – 1 to 20 acres – especially if you're trying to maintain a rural community. A program specific to do that.

Remove cropping history requirement from CRP.

bring forestry industry to public's attention – what it does not only for renewable wood products, but for air and water, etc. Education is critical – maybe public service announcements to elevate forestry to where it belongs.

Quality of life big part of conservation in communities. It would be helpful for gov't agencies to capture the things that are important to the people in the area. Land should have easy access for use for nature trails, cross country track teams, etc. Give the people access to use the land. Get the non-locals and bring them into conservation education via the recreational avenue. Introduce them to the goals of FWL refuge.

growing loblolly, redhead woodpecker loves the long leaf pines. The matured long leaf pines in the nesting ground for the redhead woodpecker. So when there is a presence of the woodpecker, then regulations are in place that say a land owner can't cut the trees because of the endangered species presence. Coordination from the agencies to eliminate this regulation is necessary to encourage the planting of long leaf pines.. This has the appearance of a being a penalty for planting long leaf pines.

upgrade forest resources and recognize what the forestry provides. Education is critical, starting with school age children.

Discussion Question 3

Charleston, SC

(cont.)

Gov't role – If CRP is to plant long leaf pines then expand the program. Make the program attractive to the landowner for selecting the long leaf pine instead of Loblolly. Enhance the program to include incentives for thinning and burning properly. Ecosystems in SC need fire. Habitats need fire to allow native ground cover and wildlife to come to the forest and keep hardwoods under control. Help the landowner out on the extra seedling costs, site-prep costs and help them to offset the income loss for selecting long leaf pines. Another incentive would be to provide would be for harvesting pine straw.

CRP targets current farmland.

Tax incentives work. Federal government can restore tax incentive. CRP programs work. Need to establish reenrollment for continuous CRP when CRP contracts expire to allow landowners to sign up for new contracts which will require the landowner to thin, burn and plant native grasses. Programs need to place a value on forestry land to mirror the row crop programs without a limit on it.

remove cropping history from the CRP program.

DC is in the way – no one knows what the regulations are going to be. The landowner needs as much time as possible to implement the regulations to protection as much as possible and to carry the practice before the end of the year. Need to know law before the first of Dec. It is impossible to implement practices during the last 4 weeks of the year.

Major challenge – do not apply to landowner of 1 acre. These owners would not qualify. At death, now 14 people own the property. Thinks you can't have group of people apply for a program like CRP. Challenge is financing. Tax credit would benefit when the timber was used for building on land.

tax incentives to landowners to not sale and not build buildings. Property taxes incentives not to sale.

Government needs. Good educational program. Need to pay instructors to educate the public. Funds are needed to staff visitor centers at county/state/national parks by individuals who can education the public. Must spend the \$ to educate the public. Conflicts exist between county and forest service. There is a clause that states the land must always be used a certain way. The agency can't get past the law to say the land has to be used the same forever. \$ is being turned away because of the future use clause – Charleston County Greenbelt has a program but lawyers will not accept the language in the grant because of this 'future use clause'. Take lesson as to where things work and mirror this in the law

LWCR is one of the best tools, but need to stabilize the funding. Have the manpower but they need funding for managing the land. Permanent funds are needed, not something that changes each year.

Discussion Question 3

Charleston, SC

(cont.)

incentive to the small land owner to cultural/historical communities.

prescribed Burning education for the public. Federal recognition that prescribed burning in conjunction with forest management is needed to provide endangered species habitat, propagate plant species native to the lands, prevent wildfires using burning, prevent non-native species from encroaching, and improve sustainable wildlife habitat. Stop mandatory hoops to jump through to receive federal funding. Forest management plans are worthless because landowners do not understand the information. Keep programs simple. Add more funding for long leaf reforestation after clear-cutting. Implement a mid rotation pine release program for offsite hardwoods and non-native invasive species. Promote burning in all southern states through cost share programs. Campaign nationally that prescribed fire is good. Federal agencies are not utilizing prescribe burning practice because there is a liability issue.

Lack of communication from government agencies and there programs

Federal government has too much red tape to put practices on the ground

Payments from the federal government have to be financially advantageous to the landowner

working w/ military to establish buffers. Landowners waiting to see if federal incentives going to come through. Back log funds in jeopardy. Get people outside. GET KIDS OUTSIDE. The kids ARE THE FUTURE.

Army Ft. Bragg – partnerships. Military, too. Funding sources. REPI – funds. DOD – WHIP and EQIP \$\$\$ Partnerships best way to get conservation work done. Focus funding where good partnerships working

The extra level of protection. Military. Lands protected that link to other public lands

youth events. Depends on USFS, USFWS. Costs involved with events – grants such as more kids in the woods. Keep competing for that grant \$\$\$ for MKIW.

Agencies that have contradicting policies – USFS was giving Awendaw permits for waterlines which would lead to development on private lands. Strict zoning of private property is key. Fend off development in sensitive environments.

Developing public lands – minerals, for example. Destroying/conquering environment is a mentality that needs to be overcome through federal leadership.

Discussion Question 3

Charleston, SC

(cont.)

Active management of public lands – threats of lawsuits, ecoterrorism are huge obstacle. Manage public lands with a wildlife objective and a forest products objectives. That we are importing timber from S. America and Russia is wrong when we have so much forest. Good sensible management on public lands that promote wildlife objectives.

2008 Farm Bill – REPI can not match w/ FRPP. Statutory change “killed some deals” with the military. USFS – Community Forest Initiative.

Centennial of NPS – 2016.

USDA National Ag Statistics Service include the delivered value of timber in its annual report issued by state Dept of Ag. FIA – need to be able to quantify recreation values. Federal govt should be able to provide this data. Affects rural development programs. Carbon connection.

USFS needs to reauthorizing stewardship contracting.

need to build relationships in order to develop partnerships

needs increased consistency with how federal agencies deal with partnerships; policies don't change and partnerships affected as individuals change (as an example changing priorities associated with change in National Forest Supervisor); inconsistencies between agencies regarding federal funding/matching requirements

need for a good plan and set of goals; re-iterates continuity of effort, long term commitment, not affected by personnel turnover; and federal government needs to solicit community input; communications back and forth between federal agencies and local communities, stakeholders and partners

hands on events initially get kids and others involved; but once exposed it is important that follow up activities take place to retain interest; access to such opportunities may be lacking; how are they going recreate, reconnect with nature and cultivate that interest if there is no place locally available for them to do so; access, both public (Making Public Lands Public) and private (Voluntary Public Access) initiatives need to be encouraged and expanded to enhance ongoing outreach and incentives, especially to private landowners, to make more lands accessible; spoke to each affiliation must first support the mission of their own organization, but that there are many commonalities that we can all work together on, making reference to longleaf pine restoration and the newly signed agreement between USDA, USDI, and DOD; expressed concern over the continued loss of rural lands to development

Discussion Question 3

Charleston, SC

(cont.)

need to look at common areas of interest; set policy such as no net loss of wetlands; coordinate across programs for conservation and infrastructure development; provide guidance; and make available financial resources to leverage with non-federal funds and other considerations; expressed local concerns about ability to partner with landowners with federal easements, especially those based on dollars earned and cost share; if a piece of property has an NRCS easement on it, the lawyer for the landowner will not recommend purchase

mutual interest among federal agencies has got to be there for partnerships to succeed; you can't start from scratch with an incentive, the interest must already be there, incentives just make it easier to pursue the interest; federal and non-federal partners in the ACE Basin are all "landowners"; and some landowners won't deal with federal funds because they are too much of a hassle

foster coordination and collaboration; serve as a catalyst; and support grassroots organizations and local efforts

fully fund Land and Water Conservation Fund; need enhanced tax incentives for landowners who hold land for conservation purposes and enhanced programs for private donation of land and resources; mitigate conflicting government policies especially between natural resource conservation and rural development; exercise due diligence help to eliminate conflicts over different agencies policies and programs and what activities are being supported within the same areas; difficulty for federal government to accept non-federal funds; local county has one-half cent tax initiative that lead to \$65 million to benefit land acquisition for the Francis Marion National Forest; federal government needs to resolve this issue because of the great potential for use of the funds raised

limited federal involvement but find the right people; get local and national political support; retain flexibility and ability to move quickly on emerging opportunities; needs to figure out better ways to incentivize conservation; facilitate leveraging of federal state and private sector funds; programs and funds are tools to be used to accomplish greater good

Saltwater paddling program along the coastline – extending up the coast from Hatteras to Virginia; need more funding and resources to maximize recreation uses – most programs about staffing

½ cent sales tax for green space

Driving power or jobs; economic incentives; cash flow needed to do good things

Federal gov't "Blue Trails Initiative" -- connecting people to the water; need similar program for connecting people to the land

Discussion Question 3

Charleston, SC

(cont.)

Pollution is a challenge; hard to encourage use when air and waters are polluted; aging sewer systems, storm water runoff, sedimentation issues; mercury contamination of waterways. EPA enforcement of 208 plans

Used to be that you got perpetual tax benefits for gift of 30 years conservation easement – but no more. When the gov't took that away, they deterred a lot of people.

Paperwork that accompanies some of the Fed. programs is a deterrent; landowners are basically afraid of making errors for fear of what gov't might do.

Money given to counties by the Fed. gov't to help with infrastructure placement – no one living there but have added infrastructure – now the development follows – not most efficient use of funds. When you continue to give the money to the counties for i

Access to funding and technical assistance

Grants are needed that are easier to obtain, smaller, maybe 10-50,000 make reporting easier

Leveraging funds, preservation

Consistency agencies---no one half plus to restore other foster sprawl Clean Air Act EPA, missions of different agencies might conflict

Provide transportation

Don't need more programs, have them Provide incentives, Kids in the Woods—spend money on what is needed Fund it all until you run out of money, ideas will come in from outside

Feds can't solve all problems, leverage Private funds, incentive to spend them All need to help solve

Economic incentives--needed Public policy—healthy markets Biomass feedstocks Renewable portfolio standards—green power standards Carbon neutrality—define

Forest Inventory and Analysis plots, need new current information, to make good decisions Research products ecology, holes in research

Next generation of tech experts, we need to recruit so that people can be trained Don't cut this, bring in interns Student Career Experience (SCEP) Program, etc. Corporate world does this better

Discussion Question 3

Charleston, SC

(cont.)

Flexibility in entry level positions needed, training not do same exact thing to actually get the job (Needs a job)

PhD programs needed in Federal government, especially ecology

Inter, intra government communication, camping ok on some islands, high water line other no camping, too many disparities in rules Decide on goals and be consistent

Not enough opportunities, "young person's opinion", dirt bike racing, sponsor teams

Rent materials equipment to do backbacking, etc. Also produce revenue,

Federal Funding and Incentives—Land and Water Conservation Fund, Historic Preservation Funding Tools already there—fund them

National Forest System balance out managers that are having a forestry background---ecology background needed Others say that need they will need more foresters

Feds need to be more like The Nature Conservancy—they understand capitalism

National Forests should participate in planning and zoning actions so that developers know what the impacts are may be disincentive to develop

The challenge is consistency on part of gov't/. They don't have education to be able to develop a vision. The elected gov't officials want to be leaders, but they don't develop a vision, b/c they have particular expertise, and they drive that, and forget overall good for the community, and that's a problem. They have a vision, and they don't prioritize, they don't get funding

I don't know what their role should be. WE need more \$, but we have to recognize the fed. Gov't has their own financial issues. No more deep pockets. Is there someone they could play a role through tax system, or facilitate more private partnership/more collaboration. I sense there are lots of people in my perspective, lots of people think partnerships work

Outdoor ed. In public schools. It doesn't exist now. Private schools has huge wonderful programs and classes, but not public schools. Fed gov't could initiate an education piece into the classroom

Pass full funding for land water conservation fund. Great opp for feds to include a national water trail initiative b/c they are proven, cost effective, and get kids out on the river, and build support for recreation and conser. b/c rivers are a public resource. e Buldin in a national bluesways through ago. Outdoor

Discussion Question 3

Charleston, SC

(cont.)

Pass conservation incentive act. Also experiential education..getting them outside, hands on. Not necessarily kayaking, hiking, but just more hands on. It's in public schools for the first time, but they will hopefully have this in public schools. Southeast is a great climate for this, but I feel kids are trapped in schools. Would like to have promotion of Greenbelts, and greenways/ corridors, and have states incentivize them and get towns and communities to institute them. When they do that, (1/2 cent sales tax) cities can learn from models like Charleston

No more funding cuts. No more staff cuts. Don't use national park cuts as a way to save money

Feds can't run everything from top down. Give us here locally tools/fund incentives/all conservation is local. You can't do easements or protect acres from Washington, but they think money has to be directed, and programs/bills, you can't do it in Washington. Funding. Local communities have to protect their own land, but incentive programs from federal level, tax programs are good, but the idea that all things come from Washington (alphabet soup) they don't understand complex programs and drive local people away. And we are here, these people are our neighbors, we know how to talk to them. Grassroots

Feds get their act together. Get coordinated. IRS is picking on little things. But when you have conservation targeted by IRS, they should be more coordinated.

Be consistent. Humans think they need to change things. We have some great programs. We need to fund things we can. I am worried that we are so much in national debt and that money pot needs to be used more effectively

Strings attached to Washington things. It is hard to work with different incentive programs. FSA has done a great job, NRCS great help locally, Forest service, but when it comes to applying for different incentive monies, you look at the strings attached, and the grant application. It is complex. Easement cannot allow forestry management, and some grants are just useless (KELP?). Folks aren't going to give up their forestry re-use. Manage. Rights. It is a problem because what you are trying to do can't be accomplished. I heard at the podium today about agencies coming together to mesh visions and goals and I hope this carries down to programs/ priorities and see how they fit together

I was taught if you can't afford it don't buy it. The government needs to focus money on proven projects that work. See what works and focus on that. Some tax code have their own people that do nothing but try to stay up with tax laws. It's amazing the complexities

People in federal. Agencies hold jobs to slow things down. The more I work with feds the more mind boggling it is. I think it is going to change. There is going to be some cleaning house. Appraisal department. makes you wonder if they even want the money to go on the ground. In some places there are 3 people doing one person's job

Discussion Question 3

Charleston, SC

(cont.)

Summary of Fed. Gov't Roles: Simplify tax system; encourage collaboration; bring outdoor education to the school systems; create National Blueways initiative; pass tax bill; feds must stop funding things top-down—don't forget the foot soldier; need tools to facilitate work and initiatives from the ground up—on the local level; be consistent; fewer strings attached to funding; agencies should match visions and goals; feds trying to buy too many things; families want to carry on traditions, but tax system is getting too complex

Provide multiple opportunities and provide landowners with options. Create markets and retain and grow industry. Open international markets and prevent loss.

Need to get more forests certified.

Need to fix certification

Need cost share to level the economic table for longleaf.

Forest industry land has turned over to REITs and TIMOs. We need to account for their role and encourage longer ownership tenure and sustainability.

Promote the value of outdoor recreation. It has quality of life, economic, direct \$ impact, and indirect \$ impact to the community and the nation.

Closing Comments: Listening Session was valuable. It shouldn't be conservation vs. industry. Great that all agencies are working together. We have the tools we must work cooperatively. Fix capital gains tax.

Incentivize economically NIPL's and other private land owners to establish LL and other forests.

Encourage public policy that gives landowners incentives to grow LL - healthy markets, carbon neutrality, biomass, bioenergy feedstocks, etc.

Discussion Question 3

Chicago, IL

Fully funding the administration and management of National Scenic and Historic Trails by the National Park Service, Bureau of Land Management, and US Forest Service,

Fully funding the Land and Water Conservation Fund (LWCF) at the authorized \$900 million per year to increase outdoor recreation opportunities for all Americans, and consistently providing money for National Scenic and Historic Trails and land acquisition, and

Fully funding the Historic Preservation Fund to improve national capacity to preserve the sites and resources that culturally define the United States, including National Scenic and Historic Trails.

President Johnson envisioned in 1968 that the National Trails System would crisscross the land, north-to-south, east-to-west, connecting the entire nation. The 30 congressionally authorized National Scenic and Historic Trails, if completed, would span more than 50,000 miles through 49 states.

Altogether, 9,700 miles of the National Scenic Trails are currently open for use. But their total authorized length is 16,400 miles. That leaves some 6,500 miles of gaps in our National Scenic Trails to be filled mostly on private land that will need to be purchased from willing sellers.

For 16 of the 19 National Historic Trails, about 1,000 key natural and cultural resource sites still need to be preserved, according to the National Trails System FY09 Annual Report.

Without adequate agency operations, LWCF, and Historic Preservation funding, the necessary efforts of Federal agency and non-profit partners to complete the Trails land acquisition, trail construction, and trail interpretation will not be possible.

Full funding of the LWCF and Historic Preservation Funds will help National Historic Trail partners protect critical cultural, historical, and natural resources along their Trails. Full funding of the LWCF will enable National Scenic Trail partners to purchase land from willing sellers to close the many gaps in these Trails and protect their ecosystems and scenic quality.

The Supreme Court of the United States in the landmark case of *Tennessee Valley Authority v. Hill*, 437 U.S. 153 (1978), relying on the legislative history, observed that the ESA as it was finally passed, represented the most comprehensive legislation for the preservation of endangered species ever enacted by any nation. The Court stated that one would be hard pressed to find a statutory provision whose terms were any plainer.... Its very words affirmatively command all federal agencies 'to insure that actions authorized, funded, or carried out by them do not jeopardize the continued existence' of an endangered species or result in the destruction or modification of habitat of such species.... Thus, the Court stated, examination of the language, history, and structure of the [ESA] indicated beyond doubt that Congress intended endangered species to be afforded the highest of priorities.

Discussion Question 3

Chicago, IL

(cont.)

Returning to your original question for this hearing - How can the federal government be a more effective partner in helping to achieve conservation....? - the answer is that President Obama must take charge of his environmental policy. He must make clear that the goal without exception, consistent with his yes, we can campaign rhetoric, is to preserve and protect the environment, including wildlife, public lands, water and air. He must ask any and all officials in the Interior and Agriculture Departments and EPA who do not understand, or want to implement, that mandate to depart immediately and replace them with more enlightened officials.

Historic parks must be put under land trusts in order to insure protection against privatization and building construction.

Create public announcements to encourage urban dwellers to enjoy the great outdoors.

Develop an agriculture education career recruiting program with area universities for high school students.

Urban residents need affordable access to quiet and healthy natural areas for passive recreation. To do this, it is essential for all people to have better active transportation options –bike trails, running paths, water trails, etc.”

The America's Great Outdoors Initiative should build on successful federal programs that and integrate innovative local programs into a new, smarter conservation and recreation plan that protects, connects and restores our land and waters, and the natural legacy we leave our children and future generations.

Creation of a National Wildlife Refuge, Hackmatack, now under study by FWS, would establish the first NWR in this urban metropolitan area. No NWR currently exists within 140 miles of the Chicago Metro region. Establishment of the Mackmatack NWR would help fulfill the Fish and Wildlife Service's directive to establish Urban Refuges near population centers, helping to connect city and suburban residents with nature.

Provide full and dedicated funding for the Land and Water Conservation Fund (LWCF) at the promised and appropriated level of \$900 million a year. This fund paid for by revenues from offshore oil drilling is used to protect parks, forests, oceans, refuges and local recreation areas. But it has only been fully funded once since it was created 45 years ago.

Realizing the impacts of rapidly unmanaged growth, local residents in the Chicago metropolitan region have passed \$1.3 Billion in Open Space referenda since 1995. Fully funded LWCF would provide an additional source for land preservation in urbanizing areas of significant biodiversity. In addition, Wisconsin and Indiana lack the statutory authority to conduct locally driven referenda, and would benefit from this federal source.

Discussion Question 3

Chicago, IL

(cont.)

The Fishin' Buddies! Program serves the urban Chicago area connection children to the outdoors through fishing and conservation programs. Its mission is to instill an immutable concern for the air, land and waters of our planet, and a desire to nurture the soul through communion with the outdoors. Fishin' Buddies! Believes in the emotional and psychological restorative powers of the outdoors and that it is important to expose this philosophy to children who's ideal of the Great Outdoors as being grassless, glass strewn, debris filled, concrete and steel playgrounds of urban America. Fishin' Buddies Youth Conservation Corps partners have included US Fish and Wildlife Service, Chicago State University, The Field Museum, and the Chicago Park District, and the Forest Preserve of Cook County. The Fishin' Buddies Youth Conservation Corps is funded by a grant from the Gaylord and Dorothy Donnelley Foundation as part of the Chicago Wilderness Leave No Child Left Inside.

Encourage the kinds of public/private partnerships that have proven to be so effective in the Chicago Wilderness region, Illinois, and across the country. Communities are developing homegrown, collaborative solutions to conservation challenges and the federal government should support them.

-Beginning of comment cut off in PDF- ...Federal collaboration with CW, through the initiatives of Landscape Conservation Cooperatives (LCC) and Strategic Habitat Conservation (SHC), will be extremely important in the coming years.

Thanks for having this; suggestions include 1. Continue education and awareness at local level, support not-for-profits and make funds available 2. Marketing this is what's hot; use media and promote being outdoors and holistic benefits; youth are addict

Make it easier to hire people in the federal government to get new people in the work force.

Have something to offer job skills and training what can we give you in return

Made a request within FNS to improve physical activities in adults; response was can extend lunch break but cannot be paid for it start inside agencies to encourage people to go outdoors & endorse it; allow people to go outside during day

Using tech to get people outdoors; mobile tech can be used outside; use incentives to encourage kids to go outside; link amount of screen time to amount of outdoors time

Feds could make it easier to hire people. Very hard to hire kids into the federal government; so easy in private sector. Need to do this to get new people into the work force.

When I think back to when I was a kid I would take off all day- now I need to know where my kids are all day due to dangers. Kids are programmed to be handed off to a trusted person or stay with a parent. More opportunities for parent/child activities a

Discussion Question 3

Chicago, IL

(cont.)

Recommendations to the President- Everything really starts at home and parents can help out by saying "honey why are you sitting around playing the Wii or looking on facebook, you should be outside." Also about safety and security because you have to be

1) Education: continue education and awareness at the local level. Funding is important and make accessible to community groups. Allow community groups to access this money so they can conduct education. 2) Marketing: In this country, we can market a

We have heard a lot about creative things that are being done in Chicago and IL and what they talk about is the a result of the funding they have available. However, in many states the first services to be cut are the parks and recreation programs. I wo

Replicate what they are doing at Eden's place.

Would like to see: Drill team, dance competition, large screen video competition

More money for movies in the parks.

National program run by the youth in the neighborhood to take them out of the neighborhood to areas where able to experience the outdoors and be safe. Funded by the government.

Get kids excited about the outdoors, opportunities close to home

Market scheme- can sell the outdoors (to youth)

Support organizations that run youth programs

I loved working in the woods this summer. Clubs that get parents and kids involved into the outdoors and nature would be good. Basically getting the parents involved in getting the kids out of the house to have fun and see how fun the forest preserve is

Obesity, kids eating lots of candy; if they knew more about getting out and getting healthy. IF they knew about the forest preserves, they wouldn't be getting unhealthy

Physical education both indoors and outdoors should be a requirement during the school day. If the Federal Government is really serious to the notion that then they need to start in the schools

Discussion Question 3

Chicago, IL

(cont.)

Sierra club previously dictated how they should get kids outdoors, but then changed their tactics so that they incubate ideas at a local level. This was more beneficial to both parties. He is curious how federal government ideas will be rolled out? How wi

Encouraging citizen stewardship is very important. Their organization is working well within national trail system.

Baby boomers have an opportunity – retirees have a lot of time and energy to devote to outdoors projects.

Many of the high schools in Wisc

Need to bring additional federal agencies corporation for community services. It is not a priority on paper to some agencies. We are trying to work with DOL, DOJ. DOI is working well.

Concerned that staff of those agencies are not interested in developi

Meet once a month, collaborate and brainstorm on ideas. Focus on helping land management and volunteers form an easier relationship.

Could be better implemented if you had agencies around the country who can roll up their sleeves.

Partnerships at local level with after school programs provide outdoor experience for many people. Changing family structures with two working parents there is a need for trusted caretakers (YMCA, after school)

Supports Moving Outdoors and Nature Act legi

The land in Chicago (77,000 vacant lots plus vacant industrial land) comes with baggage (contamination). We need federal funds to clean up this problem, cuased by businesses, carelessness, and it's making people sick.

There is so much to be accomplished to protect our environment in so little time that everyone needs to work together on it. I think that if we spread our knowledge and told people of the problems, they will want to help too. In my mind, more kids should be targeted because they are the ones growing up with these problems, and they are the ones best able to change the course of the future. If they are targeted for environmental education, then their knowledge gets spread throughout the family. Everyone wants to make a difference and if we all work together that difference will happen.

I think we need to put more money into acquiring parks in urban areas where there are no parks and increase access to nature in backyards in the form of gardens and native restoration by offering education programs and incentives.

We need to provide more public transportation to natural areas and resources such as a map with bus and train routes to natural areas and a list of activities.

We need more youth programs to get people outside and exposed to natral areas at a young age and at a high frequency.

Discussion Question 3

Chicago, IL

(cont.)

We need help with authorizing local schools to program in and/or develop course guidelines to allow students access to open spaces outdoors at least twice a week. To authorize hands-on activities in elementary school settings via gardening, nature outings, trails and waterways

Finding funding for projects; Army Corps permitting takes too long

Funding -- not just monetary but un-used equipment, etc.

But the Forest Preserve District is also tasked with finding resources and creative ways to develop new recreational and research facilities that can encourage residents of all ages to enjoy the outdoors as they learn about wildlife, habitat restoration and the wise use of natural resources. Of paramount importance is discovering ways to give young people formative educational experiences that will foster the awareness and civic responsibility needed for them to develop into well-rounded, healthy individuals who care about their own well-being and the protection of the natural and cultural resources that make DuPage County a great place to raise a family, work and play.

Local and regional alliances can serve as federal agencies' local implementers (regranting, outreach, non-regulatory)

Federal agencies can fund urban outreach and engagement projects (e.g. camping, fishing, etc.)

Increased support for urban waterways as community and redevelopment tool

Continued and enhanced support for urban ecology research (e.g. LTER, ULTRA)

Explore options for excise tax on non-traditional sporting goods - i.e., tents, bicycles, other - direct funds to urban populations.

Implementation of urban refuge policy that provides opportunities for people from urban populations to experience, value and protect natural areas in their region for projects such as the proposed Hackmatack National Wildlife Refuge. Land protection efforts near urban areas are significant opportunities for federal assistance.

The Urban Park and Recreation Recovery (UPARR) program should be revived. UPARR was originally established in 1978 to provide matching grants and technical assistance to economically distressed urban areas for rehabilitation of critically needed recreation facilities.

Discussion Question 3

Chicago, IL

(cont.)

Support (continue to support) local effort to establish an urban National Wildlife Refuge (the proposed Hackmatack NWR), which would fulfill U.S. FWS directive to connect NWRs with urban populations.

Continue EPA 319 funding--encourage/require watershed and green infrastructure planning through these funds

Implement Green Reserve funding of state revolving loan and grant programs to support implementation of innovative green infrastructure practices to protect water quality and quantity

Assure that states spend the federal funds dedicated for wildlife protection appropriately. Provide oversight to prevent state legislators from using dedicated federal land protection and wildlife conservation funds for other purposes.

Continue support for Great Lakes Restoration Initiative to provide for healthy ecosystems that provide the full range of ecological services

Direct/supply granting funds to states and regions with comprehensive green infrastructure plans

Multi-use greenways should be a priority for federal funding--to connect resources and people--both in urban and rural environments

Provide protection of wetlands along riparian corridors and support federal legislation to protect isolated that alleviate flooding, clean and infiltrate storm water, and provide habitat for wildlife.

Create a federal standard for liability protection for landowners who open their land to the public for recreation. This increases land for recreation without additional cost to the states of the federal government.

Fully fund Land and Water Conservation Fund (LWCF)

Federal LCC and SHC initiatives

Expand U.S. EPA green infrastructure work and integrate across all agencies

Continued support for Great Lakes Restoration Initiative to provide for healthy ecosystems that provide the full range of ecological services

Direct federal resources to urban areas, particularly those areas which are resources rich

Discussion Question 3

Chicago, IL

(cont.)

Provide leadership in carbon sequestration; help facilitate development of capital-driven market. Define the opportunities for carbon markets for natural areas, trees, native prairie plants

Federal agencies, through their local offices, can work with Chicago Wilderness to implement ecosystem-based approaches to climate change.

National climate action plans should include ecosystem-based approaches.

Federal agencies and Congress can support natural areas that preserve our green infrastructure at a large scale. Midewin National Tallgrass Prairie, located about an hour southwest of Chicago, and the Calumet Open Space Reserve, which spans the southeast side of the City of Chicago, and the Calumet Open Space Reserve, which spans the southeast side of the City of Chicago and continues into northwestern Indiana, are examples of how large sites and networks of natural areas can exist within an urbanized area. There is currently also a proposed refuge Hackmatack, which would link existing protected natural areas to form a large preserve of natural lands in Southeastern Wisconsin and Northeastern Illinois. This proposed refuge and other like it create a resilient network of ecosystems that benefit people and nature, and help mitigate climate change.

Coordinate federal-level campaigns aimed at getting children and families outside (like the Forest Service's "Discover the Forest") with local and regional campaigns.

Provide a leadership role model to other organizations that want to leverage the resources of an alliance working toward the common goals of getting children outside and increasing the amount of time they spend there.

Provide safe places for generations of Americans to explore and discover their outdoor heritage.

Support the critical roles of federal employees--such as environmental educators and social scientists--in identifying and overcoming barriers to connecting families with the outdoors.

Direct federal resources toward collaborative programs that effectively reach new and diverse audiences.

Re-establish the designation of Biosphere Reserve and allow application to urban conservation reserves like Chicago Wilderness. The public doesn't recognize the global significance of our natural resources, and having an international designation would go a long way toward building a culture of conservation and encourage people to get outside and enjoy their natural assets.

Federal mandates and legislation should include policies that mandate that green infrastructure is contracted with demolition, deconstruction. Also brownfield and Superfund clean up projects.

Discussion Question 3

Chicago, IL

(cont.)

I would like to see Chicago region conservation advocates get involved in engaging the participation of developers, architects, city planners, environmentalists, educators, and physicians, institutions, organizations, and community members to have one voice in "open land use" policy. Barriers to use vacant land for conservation programs and gardening is too often due to local politics. Have you every tried to purchase a vacant lot in Chicago?

Trout Unlimited suggests additional funding for the NOAA CRP to expand its coverage of the regions eligible and to increase the number of projects which remove culverts and small obsolete dams and improve fish passage, in coastal areas around the nation.

Having still extant natural systems with which Americans may recreate and reconnect demands that the administrators of agencies operating hydropower generation facilities require proper mitigation, appropriate adaption to changed conditions and fully adequate stream flows for these projects. Particularly because of the new realities of climate change, some better and more comprehensive assessment is also required--which argues strongly for the need to implement such programs as the SECURE Water Act. However, in other cases federal decision makers must prioritize conservation and actually assure the open and unimpeded use of already adequate scientific information to inform fish and other aquatic wildlife friendly flow decisions. Trout Unlimited urges the President and the Congress to do just that, namely, in planning and in operating federal water facilities, to ensure that flows are adequate to meet the needs of the biota present.

Restore--restore aquatic habitats

For this Reason, Trout Unlimited and this Trout Unlimited Council urge the President, his Administration and the Congress to support passage of the National Fish Habitat Conservation Act, as well as to sustain the existing programs--prinicipally that of the United State Fish and Wildlife Service--that support the landscape scale fish habitat restoration partnerships of the National Fish Habitat Action Plan

The continued success of landscape scale fish habitat restoration in this country, as well as the succes of conservation efforts on the nation's farmland as a whole, rests on the maintenance of authorized levels of conservation program funding in the current Farm Bill, on attention to NRCS staffing need, and on more significant conservation programs in future Farm Bills.

Trout Unlimited believes that a tightly focused "Good Samaritan" bill, on the order of Senate Bill 1777, the Good Samaritan Cleanup of Abandoned Hardrock Mines Act of 2009, can successfully crafted to avoid weakening current environmental protections and is long overdue. It, therefore, encourages the Administration to provide support for Good Sam legislation, to enable additional abandoned mine clean ups in the west and east.

Federal funding for urban parks through the Urban Parks and Recreation Recovery Program, the Land and Water Conservation Program and the Liveable Communities Program.

Discussion Question 3

Chicago, IL

(cont.)

Federal "Get Active" campaign adopted by the U.S. Surgeon General's office similar to the "Stop Smoking" campaign. This should be a national strategy to increase individual's participation in exercise programs.

Federal guidelines and programs that reduce our sedentary lifestyle behaviors by eliminating the barriers to physical activity.

Federal policy or guidelines with incentives that reward and support the use of local and state agency land for parks and greenways and trails (via transfer, intergovernmental agreements, permitting programs).

Environmental policies to incentivize urban municipalities to provide new neighborhood parks, recreation facilities and walking and biking trails. Neighborhood parks and greenways also serve to reduce our carbon footprint, clean the air and water and assist with climate change.

Additional incentives for federal programs directed toward the restoration and improvement of Great lakes (Lake Michigan) coastal ecosystem to include public beaches and parks. Lakefront parks and beaches not only provide open space for recreation but also have important environmental benefits: erosion protection, contribution to clean air and water, creation of habitat.

Development of new parks in the 55 of 77 community areas that do not meet a basic two-acre park standard.

Renovation of 400 outdated children's playgrounds in Chicago.

Completion of the city's lakefront park system. Twenty-six miles of Chicago's 30-mile Lake Michigan shoreline have been developed as public parks. Public parks on two miles on the city's south side have not been completed. The completion of the Last Four Miles would provide a park greenway system along Lake Michigan to connect with the suburbs to the north and to Calumet area & Indiana to the south.

"Following the model of New York, San Francisco, Seattle, "green" unused Port District land for recreation and conservation purposes. Specific projects should include: : 100 acres at Iroquois Landing & shoreline of Lake Calumet

Development of the ERA Trail, a 2-mile abandoned rail line as a public park in the Englewood community.

Development of the Bloomingdale Trail as a 2-mile public park in the Logan Square community.

Acquisition of 6,000 acres of forest preserves to achieve the statutory land limit.

Discussion Question 3

Chicago, IL

(cont.)

Funding for additional quality recreation staff for innovative recreation and fitness programs primarily for Chicago's youth.

Make contact connections visible/linkable: one of our frequent frustrations relates to finding ways through bureaucracies to connect with the sections/personnel that are relevant to our work.

Names of sections often mislead regarding functions, projects, and personnel who are often not findable on organization web sites. We don't have time to play "National Treasure" in making connections, so connections do not get made.

Where multiple government agencies are involved, provide an umbrella site like CSI's Member Organizations page that will make searching more convenient and efficient

Provide contact information that is useful e.g. staff members' email addresses, phone numbers, or some such direct link to the real people we need to connect with. 15-layer trees are not user-friendly. Cryptic departmental designations are not helpful.

Make sure that the site and especially its contact information, is up to date. 5 year old data and dead links are a major obstacle to making useful alliances.

Make certain that your agency works as it is supposed to work for the benefit of the public. Recently when we attempted to find a way to connect Illinois veterans --especially victims of Post-Traumatic Stress Syndrome -- to environmental projects, a process that research has shown to be productive for such cases -- we encountered an indifferent bureaucracy (1) in which it was difficult to identify key decision makers in the responsible agency and (2) when we finally made contact, led to the indifferent, essentially dead-end response "Contact your local veteran's organizations." Someone in the government should be monitoring such agencies to ensure that ordinary mortals can gain the services that are promised. We hoped, of course, that that was not how the agency was "supposed to work."

Abolish the requirement of prevailing wages. It is wasteful for local/county/state governments that are strapped for cash to pay people in excess of \$30.00/hour to spray herbicides on plants.

Keep programs funded, GLRI, ACOE, LAWCON, USEPA, USGS

Keep up the collaboration with federal agencies working with Chicago Wilderness. The Chicago Metro office of the USFWS has been crucial to the success of Chicago Wilderness, other agencies like USFS, USACOE, USGS, NRCS, USEPA, NPS all play a critical role in this region and provide important hands on technical assistance

Help us document what and how we are doing. Ecological assessment and progress measures are crucial to show our success.

Discussion Question 3

Chicago, IL

(cont.)

Keep these things going and bring more opportunities to the metropolitan areas where people and biodiversity meet.

Consistency across states. Subsidize fees, maintenance and building of facilities. The state should own more tort immunity prevents lawsuits.

If the federal government could explicitly and intentionally support the implementation of State Wildlife Action Plans, both in direct investment and in partnerships. From the Landscape Conservation Cooperatives to individual programs under the farm bill, to policy decisions made by FEMA and the USACE, the federal government could be a strong partner to embark local and state level conservation.

It would also be helpful for federal agencies to be thoughtful about non-funding ways to support local and state conservation efforts by serving as a convener, lending staff expertise, mapping and technical assistance, etc.

Build on existing initiatives like our Adopt-a-Beach program, which offer stewardship opportunities tied to real work issues.

The federal government can help by supporting local wildlife restoration site and also by hiring more park rangers and on staff specialists. The city can help by creating all new buildings out of green material and supporting local farmers markets and green self-owned businesses. Supporting green movements can help stimulate the economy, and hopefully improve it.

Provide funding to small citizen groups and provide grant-writing and management workshops so they feel apt at grants management

Minimum cost grant workshops for members of the public--more smaller grant awards to fund small community projects provided projects benefit the community.

Engaging K-12 education institutions to take advantage of outdoor in the field learning experiences that promote science and outdoor careers. Environmental education in public schools especially should be promoted.

Provide resources to create regional infrastructure mapping tools that highlights green infrastructure, collects data on the issues, opportunities, etc. that these green infrastructure units provide to the public and have that data accesible.

Full funding of the Land and Water Conservation Fund is critical to doing the land protection we need for this region. Leveraged funds with federal support makes a huge difference.

More federal funding for green jobs both in the forest preserve restoration and true green technologies like wind and solar to prevent the worst aspects of the climate crisis. If we don't move now and fast our natural areas will be degraded severely.

Discussion Question 3

Chicago, IL

(cont.)

Maintain support for and expand the Great Lakes Restoration Initiative

Support programs and education that engage our youth and provide career paths

Export a success story--volunteer stewards and citizen scientists that have supported stewardship in the CW region. These volunteers provide and donate their most valuable commodity--their time. This is a success story that engages our citizens and should be exported as a model throughout the nation.

To fund the development of new trails like New Era and Bloomington trails. The federal agencies must fund its program to expand recreational sports and nature areas. Chicago communities are discovering corridors where new waterways, trails, parks, and rail road sectors that deserve new land uses. These corridors are scheduled to bring improved quality of life to a variety of income communities. From the Cal-Sag Recreational zone along 127th to the new ERA trail along West 59th Street. Let's get moving to expand parks and nature sites in urban zones while connecting youth to conservation efforts.

Bring funding back to federal groups like USFWS and ACE and DNR and EPA. Re-hire passionate environmental people. Have staff for enforcement of EPA laws like Section 404 of Clean Water Act.

Most programs are successfully carried out because of champions at the grassroots level. As _____ pointed out, leveraging federal funding has allowed \$13 million dollars to grow to millions more and to accomplish preservation efforts at the level that most people care deeply about. Matching federal funds with volunteers and local funding is good business and reinforces a deep connection and commitment to these projects. Funding not just for large scale projects or sexy sell projects but funding for neighborhood and community projects that engage residents tie them closer to their communities and create a sense of place that carries on to the next generation.

Federal grants directed to cities to support community food gardens would accomplish many of the goals to get children and families outdoors and also promote good nutrition.

The federal government could be more effective as a partner by promoting federal leaders that understand partnerships. Too many people are promoted because of 2 years in DC. For example, the USFWS Chicago Field Office was started by a great leader, Ben Tuggle, followed by John Rogner. Unfortunately, the FWS has decided to put someone in their vital position that does not respect or appreciate what the FWS partnerships have achieved.

Historic parks must be put under land trusts in order to ensure protection against privatization and building construction.

Discussion Question 3

Chicago, IL

(cont.)

Create public announcements to encourage urban dwellers to enjoy the great outdoors.

Develop an agriculture education career recruiting program with area universities for high school students.

Provide job training in conservation for the unemployed and rehabilitated.

Urban residents need affordable access to quiet and healthy natural areas for passive recreation. To do this, it is essential for all people to have better active transportation options--bik trails, running paths, water trails, etc.

Land and Water Conservation state side grant funding; federal tax incentives such as conservation easements; incentives for bicycle and pedestrian trails and walkable communities.

One of the most effective ways of connecting people to nature in our community is to provide bicycle and walking trails. Trails always rise to the top in resident surveys as the most desired recreation facilities. People are willing to get out o trails to reach a destination or to get exercise and then they experience nature as a side benefit. They fall in love with the outdoors accidentally! Trails are expensive to build, yet free to use. Federal government grants are an excellent tool to support local partnerships in building trails.

Money yes -- but research, education, and technology that would celebrate sustainable open space

Support the green field with a wide spectrum of educational and networking opportunities (to inform/prepare people for green jobs)

Sponsor more programs like this to inspire specific projects and programs to connect people to the outdoors

Federal laws for preservation of open space

Environmental program to plant and preserve plants and trees

Educational help from the federal government for continuing education for architects, engineers, and othe professionals in green solutions for gardens, re-design of parks, improving air quality, reducing waste, and healthier urban environments

The federal government could help the INDU National Lakeshore and us by helping fund efforts to clean up and open water trails, fund public access sites and continue to collaborate with our grassroots organization that has accomplished a great deal in a short time.

Discussion Question 3

Chicago, IL

(cont.)

Use their authorities to protect areas identified on the Illinois Nature Areas Inventory and state endangered and threatened species

Better project wetlands--work to require the USACE to implement a protection consistent section 404 program across the country and work with Congress to restore protection to isolated wetlands

Use existing programs (CRP, CREP, etc.) to help build sustainable natural areas. This may require modifying these existing programs but does not require an entire new set of programs and incentives

Identify incentives for private landowners to maintain high quality natural resources in situ. The paradigm now in place is to provide an incentive to restore land to minimal standards after it has been destroyed. Let incentives be pro-active--not reactive

Find ways to engage municipal and county governments in adopting plans and ordinances to protect natural resources and encourage sustainable development. This will allow private lands to be a part of the solutions

Continue the new direction by USEPA on green infrastructure and ensure that state EPAs adopt and implement these programs

Restore federal funding for Chicago Wilderness and export this model to other regions. US Forest Service funded Chicago Wilderness for many years.

Please help make the enhanced tax incentive for conservation easement donations permanent.

Help us get the word out about what we are doing locally and nationally.

Support financially and technical guidance

I would like to propose a project which addresses all of these challenges effectively promoting strategies of collaboration and partnerships to connect people to the outdoors. Currently a number of local citizens, regional conservation groups, government agencies, and state and local governments along the Illinois and Wisconsin border are embracing the opportunity to create landscape scale conservation through the creation of a National Wildlife Refuge, called Hackmatack. As US Fish and Wildlife Service begins their study of the proposed area for a possible designation, I would like to draw your attention to how the role of the federal government and its support can make this project a reality.

Discussion Question 3

Chicago, IL

(cont.)

First, the proposed Hackmatack refuge would fulfill the Fish and Wildlife Services directive to promote urban refuges. The study area is within 70 miles of downtown Chicago. The refuge would be easily accessible to the urban populations of Chicago, Milwaukee, Rockford and Madison (over 12 million people) and allow residents to connect to the beautiful and rare savanna and tall grass prairie landscapes of this glacially sculpted region and to experience wildlife such as herons, egrets and sandhill cranes which are drawn to the area's wetlands. The refuge study area lies in the flyway of the migratory flock of the endangered Whooping crane.

By connecting conservation lands already protected by the McHenry County Conservation District and the DNRs in both Illinois and Wisconsin, refuge lands would provide strategic landscape linkages necessary to provide wildlife migration corridors. Recognizing the agricultural heritage of the area, integrating federal programs and policies to protect agricultural land which promote local food production and implement the Federal Farm and Ranchlands protection program will be an asset to this proposal.

The Hackmatack refuge will provide educational experiences to children from underserved populations from the urban core as well as Latino populations that represent 30 to 50% of the school districts in Harvard and Woodstock. Unique collaborations with social service agencies, recreation organizations and outdoor businesses are already in place to facilitate development of curriculum, outdoor classroom resources and field trips.

Secondly, people connect with natural areas and open space through recreation. The refuge area sits at a cross roads of an expansive trail network in both states. Recreation such as hunting and fishing and wildlife viewing contributes billions of dollars in expenditures benefitting local economies. Canoeing, kayaking, bicycling, horseback riding, snowmobiling, hiking and picnicking all take place currently on protected land within the refuge study area. Raising the stature of the area to national significance through a refuge designation will increase these recreation activities benefitting the health and wellness of the participants.

Third, the potential refuge can be an economic driver to gateway communities. These communities can create a new vision to grow that integrates natural resource protection and treats it as an amenity. The refuge will help these communities to attract business and economic development while maintaining their unique environment, heritage, culture and identity.

Overall the potential Hackmatack National Wildlife Refuge is "the opportunity many of us have been waiting for" to protect important biodiversity and habitat while providing a significant protected landscape to truly address connecting people from urban, and suburban areas to nature, within an hours drive.(Hopefully also eventually by train.) The federal government can make a significant statement in support of health, education, habitat protection and helping people value and understand the importance of nature by moving forward with a designation and funding appropriation to establish the Hackmatack National Wildlife Refuge.

Discussion Question 3

Chicago, IL

(cont.)

Engage in collaborative conservation action at scale: The federal government should fashion its program to achieve more effective conservation of whole ecosystems and watersheds. Actions to facilitate this goal include facilitating integrated planning among all levels of government and private partners; focusing federal funding and programs on the protection of entire landscapes and natural systems of national significance; providing modest amounts of funding to act as a catalyst and designating targeted places for focusing federal investment. Protecting large landscapes/systems have the best change for achieving resiliency in a climate change context given their scale and connectivity for plants, fish, and wildlife (need to focus on functional ecological systems).

Increase and target federal funding: The most crucial and timely opportunity the federal government has now to protect the great outdoors is to support full, dedicated funding for the Land and Water Conservation Fund (LWCF) at \$900 million a year. Funds for key federal conservation programs, such as the LWCF and those in the Farm Bill, should be increased and targeted for the purchase of conservation easements and for public acquisition of sites of high biological value. This expansion of funding programs for public land acquisition and acquiring conservation easements on private lands will help connect entire landscapes that are intermixed with private and public lands. Now is the opportunity for Congress to restore its original promise to fully fund LWCF at \$900 million per year--through new legislation that makes it permanent, dedicated funding. More tax incentives for conservation easements are also needed as well as other tools that sustain private conservation land stewardship.

Increase flexibility of federal programs: Encourage and allow federal agencies to collaborate across agency lines, connect and focus existing federal programs within project areas and make the spending of those funds more flexible to meet local needs. This includes giving the local branches of federal agencies more ability to implement grants and programs, collaborate, in ways that fit a particular place.

Recognize the critical role private landowners play in conservation: Private landowners provide buffers and connect conservation areas within a landscape context and should be involved throughout planning and implementation of the federal conservation approach. Conservation easements funding in target areas that is available to eligible non-governmental organizations will incentivize conservation among ranching and agricultural constituencies.

Support existing homegrown conservation efforts that are poised for greater success with more focused support by private and public partners. The landowners and agency partners are already in place, providing additional funding will help these opportunities become larger, more successful, and be reproduced in neighboring and other landscapes.

The USDA Forest Service needs more funding to implement Urban and Community Forestry Programs to support job creation programs for urban forestry work. Healthy urban forests provide valuable ecosystem benefits by combating urban heat islands, reducing erosion and storm water runoff, and mitigating heating and cooling bills. Workers are needed to care for these landscapes and control and eradicate the Asian Long Horn Beetle and Emerald Ash Borer, nonnative insects that are devastating forests in cities throughout the Midwest.

Discussion Question 3

Chicago, IL

(cont.)

Funding should be increased for programs that train young people to build and enhance the region's green infrastructure.

Federal support through partnerships with regional conservation alliances is incredibly effective because the federal investment is leveraged by multiple organizations working at the local level

It is critical that the federal government continue to support large-scale land conservation, especially in metropolitan areas where networks of natural areas are fragmented and natural systems threatened

Continued support for the Great Lakes Restoration Initiatives to provide for healthy ecosystems that provide the full range of ecological services

Support land protection through working directly with U.S. FWS, USDA Forest Service (Midewin), National Park Service, that works in partnership with local and state land protection agencies and non-profit organizations.

Different agencies at the federal and state levels need to align their goals, performance criteria, funding, and where appropriate, streamline grant requirements to address protection of green infrastructure

Advance LCC and SHC planning

Identify opportunities for large scale land conservation (refuge opportunities) and regional networks of green infrastructure.

Expand USEPA GI work and integrate across all agencies

Engage Federal Transportation agency in alternative transportation options--hiking/biking/mass transit, etc, to connect people to outdoors.

Expand federal programs to control invasive species.

Provide full funding for the Land and Water Conservation Fund (LWCF) which supports corridors for wildlife, climate change adaptation and species migration. Discontinue efforts to divert these funds for other purposes.

Protect high value aquatic systems

Discussion Question 3

Chicago, IL

(cont.)

Since enactment in 1965, it has been fully funded only twice. Trout Unlimited and its Illinois Council urge the Congress and the President to provide full and permanent funding for LWCF to acquire special aquatic habitats in coming years.

Trout Unlimited believes that special, protective designation will be an essential component of the conservation of high value aquatic systems in this century. Therefore, Trout Unlimited urges Congress and the President to accelerate the pace of the use of this tool by capitalizing on all occasions to designate those special places where communities, states, and stakeholders support Wilderness designation.

Healing the scars of obsolete, water quality destructive roads and properly maintaining still useful national forest infrastructure through such initiatives as the legacy Roads and Trails Remediation Initiative is also critical.

Trout Unlimited urges Administration and the Congress to maintain strong protection for roadless areas and to continue to reduce the negative impacts of legacy roads in national forests

Reconnect -- reconnect headwaters to mainstem rivers to enhance landscape scale conservation

Trout Unlimited suggests that the budget of a conservation agenda worthy of the 21st century must provide additional funding to the FWS to increase the number of projects which remove culverts and small obsolete dams, and improve fish passage around the nation.

Federal land management agencies, notable the United State Forest Service and the United States Bureau of Land Management, are the traditional stewards of American public land holdings. Trout Unlimited urges that their capacity to perform their fundamental stewardship roles not be slighted in the conservation agenda worthy of the 21st century and that it provide additional funding for the Forest Service and BLM to accomplish necessary aquatic habitat restoration projects.

Focus on restoration of the nation's major aquatic ecosystems through targeted federal legislative initiatives has a value that is most evident in this region because of the Great Lakes Restoration Initiative. It permits focus of highly significant amount of federal dollars on the backlog of long anguishing conservation problems degrading those systems. Trout Unlimited and this Council of Trout Unlimited urge the sustained funding of existing Great Waters initiatives, continued agency efforts to carefully prioritize and monitor spending on them and their expansion to other of the nation's major aquatic systems.

Sustain -- improve citizen participation in outdoor recreation opportunities, and increase educational efforts to connect youth with nature.

Discussion Question 3

Chicago, IL

(cont.)

Access to outdoor recreational opportunity is, for many Americans, largely a function of access to public lands. Just as it is a primary federal vehicle for protecting high value habitat, so, too is the Land and Water Conservation Fund a primary federal vehicle for securing public ownership of land for all levels of government. Trout Unlimited again urges support of full funding of the Land and Water Conservation Fund to increase the amount and proximity to all US residents of recreational access to America's Great Outdoors.

This Council, therefore, is especially eager to note the importance of the 2008 Farm Bill support for voluntary, state-run programs that provide incentives to private landowners who allow public hunting and fishing access on their land and to espouse Trout Unlimited's suggestion that America's Great Outdoor Initiative prioritize funding for and support of such "Open Fields" program in future Farm Bills to increase angler and hunter use of private lands.

Incentivizing federal natural resource agency employees to volunteer one day per year with some non-government organization's youth education programs would significantly upgrade the overall national effort of those groups. Well considered grant programs to enable non-government organizations to put more conservation-related teaching tools in classrooms would certainly expand those organization's efforts. A well-publicized national clearing house connecting 13-17 year olds to existing non-commercial conservation education opportunities would help organizations with such opportunities reach a particularly difficult age group with which to effectively communicate.

The federal government can be instrumental in helping the Forest Preserve District of DuPage County advance these efforts by providing the leadership and support needed to orchestrate additional waterway and greenway acquisitions and by establishing initiatives that teach the public the value of nature and the outdoors and that create incentives for healthy lifestyles.

Use light pollution data in studies of nature and wildlife

Protect and preserve the right to starlight

Limit the use of lighting that contributes to light pollution

Protect the night sky over national parks

Increase public awareness of light pollution issues

Government and public-owned properties should not contribute to skyglow

Discussion Question 3

Chicago, IL

(cont.)

Every community should register Star Parks with the Global Star Park Network

Place-based education, or the use of local community and environment as the starting point for teaching and learning give students opportunities to get engaged in problem solving in their own backyards through both formal and non-formal education, fund trips (via schools) to natural areas, integrate effective curricula and create meaningful experiences. Repeat it all again kids need multiple opportunities to conduct stewardship in order to develop a sense of ownership for a place.

I would like to challenge you to focus on a broader landscape level, and transition your efforts on protecting ecosystems and the processes and functions that occur within them. This strategy will help develop resiliency and make the places we care about better able to withstand climate change and other pressures we place upon them.

Speaks out in favor of the DOI document on land management which suggests connecting the ecosystem at a landscape system and protecting national forests and parks to maintain ecological health and the health of Americans. No more wilderness policy-prevents further protection of land as research spaces.

The same challenges exist in obesity today that existed years ago. More funding is needed to establish collaborative, cost-effective, sustainable solutions to eliminate obesity. Stop making people aware of obesity (because they already are) and focus on solutions. Use people who are innovators, problem solvers, etc to solve the problem as opposed to organizations.

Supports no child left inside act – input environmental education in pre k-12 curriculum
Connect youth to nature – continue obama’s initiative
Educate the children on the benefits of outside resources to aid in their development.
Represents 70 million Americans.

Thank President, First Lady, and administration
Federal gov’t needs to play a role in local community – cant be in silos and need to work together

Utilize community service assignments & projects at parks/forests; Agencies need to find a way to incorporate partnerships into Position Descriptions for all employees to foster volunteerism and partnerships to accomplish goals of parks & forests

Encourage to come up with solutions to focus on relationship with Land Mgt agencies, meet regularly. Suggest using retirees to adopt forest/campground, trail to care for, and then use "older" generation volunteer to mentor a young person or kids group to care for resource.

Resources, many programs around the country are replicable and it boils down to resources. Feds can provide resources. State, local and community programs and NGOs have good programs, based on science and have the ability to be replicated.

Discussion Question 3

Chicago, IL

(cont.)

Their mission is to prevent lung disease and are very interested in air quality; wants federal government to focus on creating strong air quality standards, based on real science, and federal government is only way we can get these standards set. EPA n

Fed Government can be involved in taxes, and putting the money in the right place. Need to be getting enough resources for schools to provide recess, and healthier food, instead of subsidizing air pollution. Cap and dividend make a lot of sense, but are

I am Director of the Illinois River Road National Scenic Byway, Designated by the Federal Highway Administration as one of seven in Illinois and one in a collection of 150 of America's Byways throughout the US. These treasured roadways, deserve...We tend to think of Byways as the offspring of the 20th century conservation effort to manage and protect National Forests and Grasslands, National Parks, National Wildlife Refuges, and BLM lands. Byways are the "doorways" to experiences, connecting people...Byways remarkably combine recreation, tourism and quality of life with an emphasis on experiencing each place for its unique intrinsic qualities. While Byways work to attract and educate visitors, Byways also strive to reach those who live in the region... We recommend: 1. A greater emphasis needs to be placed on experience than on place. Outstanding outdoor experiences can be found anywhere if the intrinsic qualities, including history and culture, are well-protected and these stories are well told. 2. Include America's Byways in the federal resource that connect Americans to the outdoorsy. These are local grassroots public and non-profit organizations that rare deeply connected to the people, local, state, and federal governmental agencies. 3. Place the emphasis on "America's Great outdoors" that not only include the treasured outdoor assets that are in federal and state ownership but also those that are in the communities where American's live and receive the most frequent daily use. 4. Much of any outdoor experience is in the journey to and from the destination. Involve the transportation, tourism and attractions sectors in the project. Encourage the road less traveled and remember= the journey is part of the destination. 5. Please keep us involved. Contact us at www.Nsbfoundation.com

Federal government could be more flexible with their funding pots. Reestablish the biosphere reserve designation, which is an international designation. We have a globally rare biodiversity juxtaposed to thousands of people in this area but its not recognized because we are in an urban area. Lets increase this profile.

Get the local schools to use our native ecosystems as part of their curriculum. Rather than kids learning about the rain forest, learn about the local prairie which can be reflected back in the classroom and then they go home and teach their families.

Unused blacktops could be converted into green spaces so that children can play things like soccer. Educate children on safety and provide a safe corridor so that children can walk to a green space.

Create a nationally recognized cross curriculum that emphasizes environment and the usual, reading, writing, and math.

Discussion Question 3

Chicago, IL

(cont.)

National Park service could collaborate with the school system so that people in the parks give presentations about national park service resources that are available.

When students are going to medical school, the curriculum should teach how can their patients enjoy the outdoors to improve their health. If there were some standardization of this information in medical school curriculum this would be very beneficial.

Fed money went to Cook County, but not yet distributed to the local groups. Make the county accountable in how they use the money, make sure it gets to the community/ local groups.

Need full funding for urban park partnership. Support Nat'l wildlife refuge in Hackmatack, will increase open space, and provide wildlands close to large urban area.

Support Hackmatack. Support restoration activities, they can be a job creator. Involve the faith community to be engaged in restoration.

Focus on quality of experience, build it well and they will come. Fully fund Land and Water Conservation Fund, and enhanced tax incentives for land easements. The tax incentives were a crucial factor for land owner participation in conservation easement

Need to help foster the interaction between land managers and the healthcare community. Need an entry point to health community for the ecological community.

With obesity rising and disposable resources shrinking, is there any consideration of financial incentives to improve health through promotion of active lifestyles? We have successfully encouraged home ownership, retirement savings, and education via incentives.

The America's Great Outdoors Campaign should include the following: Federal funding for urban parks through the Urban Parks and Recreation Recovery Program, the Land and Water Conservation Program and the Livable Communities Program.

Federal "Get Active" campaign adopted by the U.S. Surgeon General's office similar to the "Stop Smoking" campaign. This should be a national strategy to increase individual's participation in exercise programs.

Federal guidelines and programs that reduce our sedentary lifestyle behaviors by eliminating the barriers to physical activity.

Federal policy or guidelines with incentives that reward and support the use of local and state agency land for parks and greenways and trails (via transfer, intergovernmental agreements, permitting programs).

Federal incentives for transfer of abandoned rail lines to municipalities for greenways.

Discussion Question 3

Chicago, IL

(cont.)

Environmental policies to incentivize urban municipalities to provide new neighborhood parks, recreation facilities and walking and biking trails. Neighborhood parks and greenways also serve to reduce our carbon footprint, clean the air and water and assist with climate change.

Additional incentives for federal programs directed toward the restoration and improvement of Great Lakes (Lake Michigan) coastal ecosystem to include public beaches and parks. Lakefront parks and beaches not only provide open space for recreation but also have important environmental benefits: erosion protection, contribution to clean air and water, creation of habitat.

Discussion Question 3

Concord, NH

Maple syrup producer. Local eating movement is growing, how about establishing a local building movement. Establish a movement to buy local wood from local wood producers.

EPA requirements discourage biomass plants. (Air scrubbers) In the Southeast US, there is a great supply of biomass material and great interest in developing biomass energy, but ever-increasing EPA regulations dissuade biomass development. USDA can provide leadership in sustainable forestry by working with EPA to have realistic regulations. Also, the USDA has to send a message about its support for biomass as a sustainable resource!

Ad valorem property tax has been terrible discouraging for forest owners. The World Bank conducted a study on the ad valorem tax and set up 12 (?) guidelines for an effective tax. Vermont violates 6 or 7 of the 12 guidelines.

Regarding energy. NH has a good system of independent power producers. We are aware of the inefficiencies of producing energy from wood chips. We are trying to encourage smaller scale heat only systems. Obstacles are that there are not economic incentives for thermal projects as there are for electrical projects.

NH has a native lumber law. Most local mills are not even aware of this law. Local sawmills may not be aware that they can sell structural lumber directly to the retail market. BUT building codes prevent the use of non-graded lumber. USDA can help by getting building codes to accept non-graded lumber for structural purposes.

Wood product manufacturers will locate in communities that are economically viable. Traditional financing for forestry and agriculture is not currently available. Wood product manufacturing is an "orphan child" for economic development efforts. USDA needs to increase emphasis on Forestry and Agriculture industries to help provide support (financing opportunities) for these businesses to grow.

The market will provide incentives for efficiency. There is a threshold question. Is our country really ready to embrace and support renewable energy. Congress and EPA are both calling into question if we really want renewable energy. What Congress is NOT saying is as telling as what it IS saying. USDA should state that WE WANT BIOMASS as part of our energy future.

USDA could take a strong leadership role in procurement regulations. If the federal government states clearly that wood is a highly desirable building product, that message will resonate throughout government and the private sector. If the government is promoting the use of foreign wood products, that will also send a clear message and damage our domestic market.

LEED does not state a preference for wood over other building materials. LEED should identify wood as an environmentally preferable building material. All studies shown that for a lifecycle, wood is better than steel, concrete, etc. The other industries may not like this, but wood should be supported as the preferred, sustainable material.

Discussion Question 3

Concord, NH

(cont.)

We need to see leadership and partnership from USDA. Recently, Lincoln Pulp and Paper went bankrupt. If the mill was left unheated over the winter, the equipment would be damaged and the mill would be sold as scrap. The government heated the mill over the winter, found a buyer for the mill, and it now employs 400 people and it operates at a profit. This is the type of support and intervention we need.

Where is the organized support for the woods products industry? We need organized support for wood products policy, economic development strategies, etc

Four states and political boundaries pose challenges for long term management of forests. Our council has to sometimes make four separate applications for one project - one for each state. USDA needs to standardize forms and regulations so that we can manage across boundaries.

Green Building. USDA needs to draw a hard line - BUY AMERICAN WOOD.

Market access and market development funding is essential. Can we sell wood at the highest possible price

Recently received a USFS grant to build on our agriculture "buy local" program. MA is in constant warfare between the wood products industry and the environmental movement. USDA needs to show the environmental movement that cutting a tree is not on par with murdering someone. USDA can help provide information and examples of good forest management.

With regard to policy - USDA needs to send a CLEAR SIGNAL about the importance of working forests to the economic and environmental future of this country. This should include clear policy direction. This will change management across the country. This clear message will be the most important result of these listening sessions. Not all agencies are as far along on this topic as the USDA. (EPA is an example of an agency who is NOT doing what it should be doing to promote sound forest management.)

I am also afraid of federal involvement. I have used federal cost share programs and think I can do a better job by doing the projects myself. Conservation Easements are not the answer. Markets are important, but you must get the costs down. Between taxes, access costs, inheritance taxes, etc, I have not made a profit on my forest lands. We need long term policies that favor landowners.

USDA must advocate for forest landowners. USDA must stand up for landowners by providing information and policy to EPA regarding the carbon benefits of biomass as energy. This reflects what the Sec of Ag has released in his recent press release.

The USFS must change its climate change plan. Advocate for green building NOT advocate for LEED certification. (LEED is a "brand" and the government shouldn't endorse a brand.) USDA should advocate WOOD>

Discussion Question 3

Concord, NH

(cont.)

Incentivize landowners by making permanent the repeal of the state lands sale tax. At least raise the deductible or lower the tax percentage. USDA should encourage Congress.

USDA needs to regionalize programs and policies.

Average parcel size is getting smaller. Who owns these small parcels? New owners. What is the message they receive about forest ownership? The County Forester is the most important messenger to provide educational outreach to new land owners. Our service foresters and cooperative extension foresters are critical for continued forest management on the parcels owned by these new owners.

USDA must help citizens make a more clear connection between their lives and lifestyles and forest management. The wood we use comes from trees that we cut!

Working on a commission formed by the New England governors to develop a resolution (www.negc.org) regarding to managing forests across political boundaries. A listening session like this in the state of MA would really assist MA in its conservation efforts.

Land conservation must also include the economic effects of management decisions. Keep farms as farms. Keep forests as forests. Protect coastal areas. Connect people to the land.

We have worked with seven state foresters, managers of LWCF, and agricultural staff and have designed five national demonstration projects and on July 12, all five governors have endorsed these projects. These projects recognize the relationship between the welfare of the environment in small communities directly effects the welfare of the small communities that depend on them.

Important: Parents taking kids to the White Mountains, enjoys taking his kids and wants them to want to go back. Should be no barriers no barriers. AMC has huts so minimum of equipment is needed. Federal program not necessary; anything that would facilitate opportunities for kids.

Board made up of fed, private, non-profit. Work with teachers to get kids outside and learning about the outdoors. Lot of great pgms (Project Learning Tree). Teachers frustrated with No Child Left Behind – teaching to the tests for fed requirements that don't fit. Would love to see federal mandates that cater to outdoor pursuits addressed.

Speaking for private landowners, I've heard overwhelming requests to raise money for education (I support this). Another is to buy developments. Wouldn't it be easier to educate landowners? Tax reduction for allowing recreational use on private land is 20 percent (amounts to about \$35 a year). I can post my land, still get current use, and only have to forfeit \$35. If I enhance rec benefits, pay me for it. Shouldn't be either or situation.

Discussion Question 3

Concord, NH

(cont.)

Oldest interstate hiking trail in Northeast, older than AMC. The 21 mile trail crosses 34 privately owned properties. Two problems with our northern trail terminus: land is designated forever wild, so no cutting or improving trails. Also, MOU with USDA prohibits dogs on trail. A private land owner whose property trail crosses trains dogs and was told that's illegal. Another regulation prohibits jogging. For many years a race on the trail has been allowed once per year. But no parking available at northern terminus. Would like a half-acre for parking there. For first time, a landowner refused to let trail cross property. Had to reroute. Later comment: A unique program is Municipal Trails Act: we fund easement for existing trails and turn over to municipality.

We are model of grassroots conservation groups. Help six towns talk to each other on shared issues like drinking water protection. Land trust with strong educational component. Ranch and Farmland protection program, along with 600 donors that protect farmland south of the Sandwich range. Hire grad student every summer doing research. Takes us months to get a stipend for them. Need a federal program that would allow us to pay the stipend and ensure we continue the program.

NH strength: collaborating well; only way to get things done. Challenge is what's happening in school system. Passage of No Child Left Inside act would greatly impact what states can do. Supports teacher professional development, also connecting schools to outdoors and supports field trips. Funding must be appropriate, and more than \$100K/state. We know the benefits of getting kids outdoors – they do better on standardized tests, problem solving, become more holistic citizens. I'm also watchful wildlife coordinator. In 2000 we had funding but those dollars have dried up, and we need a dedicated fund. Look at extension of existing programs. People need to thank their hunters and anglers because they are paying the bill. Later comment: Some places should be left wild, with no human influence. Education is critical; holistic approach needed.

Govt role should be providing consistent funding for various funds and grants. Also community assistance facilitation. Private landowners under pressure to host trails. Govt should do more than just hand out money.

NH's inclusive nature makes it special, has promoted more harmonious relationships. Work with private landowners to include motorized recreation, often maintaining roads at own expense in exchange for access. Offer donations to landowners for privilege of using land. Often there are restrictions such as prohibiting summer motorized use. Federal government can help by extending RTP (Recreational Trails Program – dollars from gas tax). The greater the amount of motorized trails, the more money received.

Discussion Question 3

Concord, NH

(cont.)

In NH a number of state-specific programs to encourage recreation use on private lands. State has hold-harmless law which encourages landowners because it reduces their liability. If you receive payment, though, this doesn't hold true. Another encouragement of public use of private land is incentives from local property tax – more land, more money. Network of trail clubs (e.g. snowmobile clubs), self policing, helps out. Maybe a model at national level. Challenges: simple economics: if I can't afford to own land, it becomes a liability. Government should support local markets for lumber/timber over imported projects, should also support alternative energy (windmills). Expenses: vandalism, management costs, taxes. Sunsetting of estate tax break will hammer private landowners. Federal government should be an example in the management of their own lands, showing public how active management works.

A unique thing we do is stretch federal and state dollars, as well as funding a lot of volunteer programs (Fish & Game and others do this, too). Volunteer programs get the word out beyond what we can do as staff members. Challenge is how do we fund them /support them (e.g., conservation ed, Urban Forestry). Federal funding should be made available for these efforts.

Diversity is the key -- diversity of forest product markets. The federal government's role should be to support lion's share of activity, which is private markets. We can offer incentives to help people, but underlying problem is stronger markets. What can USDA do? Agencies show by leadership by using local products. Don't discourage use of sustainable wood and paper products. Promote rather than put disincentives in place.

Greatest NH success was establishment of the White Mountain National Forest a hundred yrs ago. It brought more people outdoors than any other single thing. New England is unique and WMNF unique, and forest need to be managed as a NE national forest, not a western forest. Federal government needs to recognize this. Multiple use sets an example (I'm also a tree farmer). Fed should continue and promote WMNF as multiple use, enhancing all aspects including recreation and economic development.

Focus is changing from management to stewardship, resulting in less timber harvest. In northern Maine, clearcuts are no longer allowed. Federal government should educate people in importance of harvest, provide incentives to wood products industry (e.g., mills facing closing). Message should be the importance of forest products to overall economy.

Need to build appreciation of nature and connect general public. Experience is exponential – will last a lifetime. Federal government should offer events to encourage this, to promote "ecotourism" and public awareness of pollution (such as Give a Hoot). The Ken Burns series on national parks is a good example of education.

No Child Left Behind focused attention on testing, not experience nature/outdoors. Money is a barrier to nature-based field trips. No Child Left Inside will go a long way to help. Target should be on the family unit: they come back and bring friends. Forest Service could help with conservation education funds. There is gap in awareness of connecting with nature and understanding working forests. Can't approach this piecemeal.

Discussion Question 3

Concord, NH

(cont.)

ATC is a critical greenway connecting 8 states - much of it protected by private landowners and farms. The Fed Gov and American people get the benefit, and making it possible for this thru land conservation is critical... so these incentives and partnerships are key to the success of the AT and other like-minded conservation and outdoor rec. programs. Public lands are critical as is the public/private land interface (relationship)

The value of these lands, acquired through enormous energy and conservation effort, includes taking on a huge effort dealing with government bureaucracy and incentive programs. The government should rather allow for normal market fluxuations (supply and demand) and tax conditions to provide for land conservation, rather than government intervention.

Towns in ME have fallen on hard times, and deforestation in all NE states has doubled - like a second wave - in the recent decade. The need for conservation that can aggregate cons. Lands , and we need a climate and carbon initiative where small landowners can take advantage of these incentives (normally fir 1000 acre lots +) and 3rd. Private landowners and landowner outreach - is not technically up to speed - a method that would connect these landowners is needed. and finally - facilitating landowners as part of a solution to energy issues and policy.

The federal government can establish new programs or adapt existing programs to aid in the development of wood product energy uses and market place incentives to provide for private forest land management and the continuing development of these alternate energy sources and uses. Wood energy programs need federal funding to develop.

Community Forests - play the same role of providing resources like non-industrial landowners provide where stewardship is a large part of their goal but they do not have the same access to Federal incentive programs. Doing good conservation - resulting in public good - would be more likely if they could tap into some of this federal funding.

Fed Govt separate programs needs to work together to provide efficient successes at these goals.

Mud season is longer now and therefore the timber operating season is shorter. They have helped operators convert from old-style harvesting equipment to balloon-tire equipment, which can operate for a longer season and leave less residual stand damage to a forest. There should be incentives for contractors to convert to this type of equipment, which also uses 50% less fuel than old-style equipment.

Their area became an Americorps site for land conservation, protecting 24,000 acres. 7 regional land trusts came together (240 towns) with 20 staff to do conservation and stewardship. There is more of an economy of scale with a larger organization of partners. They want to incorporate strategies in selecting projects to help mitigate/adapt to climate change, but are having difficulty finding direction. There should be more connections between local/regional land trusts and the feds, partnering at the federal level to implement policies. We should also be talking more to the public about how what we do in our daily lives affects climate change.

Discussion Question 3

Concord, NH

(cont.)

They partnered with Trout Unlimited for climate change and protection of a valued resource--the eastern brook trout. TU figured out where conservation priority areas for the trout are--TPL works to protect the lands and TU works to protect/restore the habitat. They involve other organizations, too, all brought together by the desire to protect this species. Another idea--protect carbon values and create economic incentives for private landowners. For example--the Forest Carbon Incentives Act--Senators Shaheen (NH) and Snowe (ME)--this is an opportunity to create these incentives.

Public utilities are encouraged to have a certain amount of their power generated sustainably--using biomass, for example. A recent study (Manomet) says that biomass is not necessarily sustainable unless there is cogeneration. The government should more carefully evaluate what is "sustainable" when power companies are working toward these incentives/laws, because they may not actually be sustainable. Power companies should not be allowed to do these things if they aren't really sustainable. We don't want to dig ourselves into a bigger hole. People may be trying to "do the right thing" but may not know what that actually is regarding sustainable energy production. As a private citizen, she would like the federal government to step in with scientific knowledge and provide guidance.

Studies in NH show that there are enough NH forests to sustain a certain number of biomass plants, but there is not enough information available to know if this is actually the case. Concern: we are having a difficult time sustaining our state parks. NH is the only state in the country that doesn't provide any general funds for state parks, which are at risk and have millions of \$\$ of infrastructure needs. These parks are a great education tool for climate change and natural resources and they are at great risk. Is there a way in this initiative to help improving state parks.

With climate change our ecosystems are under greater stress and it is important that government and private folks look at protecting areas and creating corridors for habitat from ME to northern NY. One way would be federal encouragement for towns to buy and maintain town forest. If there were federal tax incentives for managed town forests or federal grants for key corridor purchases, it might help offset the fact that towns will lose tax dollars if they have more town lands.

Haven't heard about what the monetary value of carbon is? We don't know where to get information on the value of carbon. This conversation should begin with discussion of the global carbon market. This will affect the value of land in "current use" because if carbon has a monetary value, the value of land will increase if you let trees grow. The government should do something about this.

Discussion Question 3

Concord, NH

(cont.)

Challenge 1: We need to better understand forest genetics in order to help forests transition in light of climate change. What species should we be planting? We need help. How are we going to help forests adapt? Challenge 2: Lots of landowners are driven by economics, therefore economic incentives are necessary to keep these forests. Low-grade markets, including biomass, will help and result in more carbon sequestration. The MA study about biomass does not say that it is not sustainable if you look at it from a lifecycle analysis. Another important component is green building—no better building material than wood from a green/carbon standpoint. How can the feds encourage green building? Federal policy to say “American wood first” as opposed to other building materials. More thought needs to go into the green building certification process.

Concern that there is confusion with the American public about biomass energy and whether it makes sense. There is a public education need. There is a way to do biomass responsibly and well, the government should think strategically about how it is incentivized.

There is a fear factor when people talk about climate. We need to build trust and acknowledge that a lack of trust will hold us back. Another challenge: resources. There was a grant program created in 2008 Farm Bill, but haven’t been able to get money in it. Biomass: created program in 2008 to provide \$\$ for communities to buy biomass facilities, and heat schools, etc. Haven’t got any \$\$ into program yet. Tools are there but not the resources/money.

Most American forests are owned privately. Families need healthy markets to keep healthy forests. They need lots of tools in their toolkits—easements and markets for green building. FSC is not the only certified sustainable market—American Tree Farm system as well, people should not have to go out of state to buy FSC green-certified wood when ATF wood is available. Families need incentive programs to protect their forests and store carbon. At the end of the day, healthy markets equal healthy forests.

Parks are such a doorway for getting people to learn about the great outdoors, continuing funding these programs is so important in showing the value of forests.

During White Mountain NF plan revision in 2004/5, he asked if anyone was considering the effects of climate change on forest composition projections in 100 years? The answer was: well, we don’t think that is important. He is happy that we are now recognizing that it is a problem and thanks for thinking about it.

SPNHF believes that sustainable forestry is responsible forest management. A lot of good things have been done in NH in the last 100 years. Our forests take up 50% of the man-made emissions that we generate. You can have healthy forests, healthy economy, and have a net gain on the carbon front. Wood is not a silver bullet, but it fills a role. It may not fill the same role in 100 years as it does today, but it plays a role. Government policies need to pay more attention to what is the most efficient/appropriate use for wood, because there is evidence that what we’re doing now is not the most efficient.

Discussion Question 3

Concord, NH

(cont.)

FS shows real desire to put all the pieces of the puzzle together—"all lands" model is mission critical for success, especially in New England. Updating to federal grant criteria is taking climate change into account, including LWCF. Any program that isn't already updating their program should be doing so. Forest Legacy program, etc. If it still feels like there is a missing tool it would be that we need forest and agriculture carbon incentives programs. This would maximize carbon benefits on the landscape.

The federal government should not encourage wasteful practices such as using biomass harvesting and then burning wood quickly in a wet condition. Burning (and transporting) wood that has not dried is inefficient and wasteful. Focus should be on wood that is harvested close to where it is burned, and is burned in a dry state.

Idea: There is a proposal in Congress to allow community municipal bonds for purchase of forests. Sustainable forest management on these lands would pay the debt and there would not be a huge hit to the federal government because the purchase eventually pays for itself.

I would hope that the federal government would increase the diversity of our forests—working and non-working and support multi-use. Give carbon incentives to help people do this. There could be a huge diversity of uses with that land, which equates to huge habitat diversity—very important in NH and the northeast. The effects of climate change will alter New England like we've never seen. We want to be prepared for that change. A diversity of incentives for people is a really important piece that covers a lot of different bases.

Urges simplification of application process for landowners (such as NRCS's Conservation Stewardship Program) so more folks could participate. Their land trust is discouraged that they cannot promote to the public these programs because they're so cumbersome. We need more tools that will work for the "average" landowner.

The government should identify more lands that are already a part of the northern corridor and purchase these lands. Key linkages between core areas have already been identified—they should help to get info out to landowners so they realize that their land may be in one of these key areas and give them incentives to conserve. Need to keep corridors open to allow species to move across habitats and not isolate them to an 'island' of habitat.

Feels that state and private forestry is an important role that the Forest Service has filled—encourage this program. Within that program, Forest Stewardship Program helps landowners understand their forest, develop objectives and sustainably manage it. This is an appropriate role for the federal government and encourages continuation of that role.

Would like the federal government to play more role in sustaining small farms. 80% of farm revenue goes into transportation—government should support small, local farms, CSA, organic...these may be more productive than big monoculture farms. The more small scale, the less we have to rely on big lands for production. More clusters of small farms can allow for more larger areas of forested land. People can be reconnected to the outdoors by being involved in small scale farming or by purchasing from local farmers.

Discussion Question 3

Concord, NH

(cont.)

We are looking at the perfect storm—intergenerational transfer of private forest lands over the next 10-15 years combined with the repeal of the estate tax—this is very serious for family forest owners. Have to look at value of different forest properties—not a one size fits all solution. Working forests have less of a tax burden. Also--the federal government should play a significant role in helping get kids outside--federal resources for environmental education should not be an afterthought, but a core part of the education curriculum.

In light of climate change and forest management, there should be a mechanism for the recognition of microclimates-cold pockets, for example-favorable to native species. These microclimates are important habitat for species migration and success and should be conserved. This could be addressed in best management practices or in some other way to get the message out to citizens and land managers.

We have small populations and low unemployment comparatively and so sometimes we don't get as much in way of resources. Often the rural areas don't get what they need and that is really important.

Youth Promise Act-being able to engage kids that are in the juvenile justice system in environmental service projects. We are seeing juveniles charged for minor infractions. There are issues with lack of parenting, etc. In many cases these kids are just bored. They have programs called diversion, and are required to do community service. Perhaps build off the SCA programs and develop some opportunities for these kids to spark their interest and engagement.

There is diversity of opinion; there are multiple ideas of the best use of a particular parcel of land. Encourage the President and Fed. initiatives to include the word "sustainability." E.g., don't just talk about growth and jobs for the sake of jobs; need to incorporate "sustainability."

Federal government and states need to agree to a broad principle to allow flexibility on the details for programs.

Biggest fear is that we will get more programs on top of other programs that we don't have the resources to fully implement. Emphasis on building on what is working and incorporate the new ideas with what is already working.

To president: don't forget that you have reached out to the youth and need to get back to them.

Support volunteerism!

Need to make volunteering cool! Volunteers also do that because they are passionate about it. They get paid by the change they make in the world.

Not just about being cool, but also about being practical. It is important to value AmeriCorps, SCA and other programs. They get money for college for this program and that also makes it valuable for them.

Discussion Question 3

Concord, NH

(cont.)

Make the SCA and other programs more accessible and do even more recruiting across all communities!

The Fed. Gov. needs to lead by example. E.g., Obama needs to go out and get dirty on a environmental service project!

Not necessarily adding more, but giving a boost to what we already have.

In our society we live on instant gratification, so need to get across the idea that working forests are for the future.

Thanks for this initial step; the dialog on America's Great Outdoors!

We have a financial system that is about to collapse and anything involving agriculture and the environment should be long term if it is going to be sustainable. Would like to see strategic banks, instead of NRCS being bureaucratically focused, would like to see the funds spent correctly as a representation of trust. Strategic banks need to be built to fund those starting out.

These experiences and place-based education is critical, but is important to not have it be a single time in their school career. It would be better for it to be integrated throughout the students education. E.g., extend through the High School years (from Elementary up throughout H.S.).

It is important to take the kids out and do different conservation projects and that it doesn't stop at the elementary level. One of the biggest things we can do is encourage propagating this type of program and get the word out.

Environmental literacy is development and sequential. We often let the bottom numbers dictate what is taught because the teachers may not have passion or education to teach science. "No Child Left Behind" has been detrimental-it has squeezed out science and made it difficult to get kids out for hands on experiences. How do we scale the Manchester SCA program out to other school districts? That works when there is a really interested teacher or an administrator that really understands the importance. We can do huge things to change the experience for kids.

There is a partnership in NH between the state, USFS (WMNF and S&PF), and others that provides a teacher's institute focused on environmental education. They do intensive professional development with teachers and follow-up over with additional workshops. The Federal Government role is to pass the "no child left inside act." If we are serious about this, we need to pony up the funds to support this.

We need resources and time in support of the environmental literacy plans (no child left inside act). That effort also supports the US F&WS. That legislation has been taking a bit of a back seat; she really supports making this a priority.

Discussion Question 3

Concord, NH

(cont.)

Would like to increase the ability to work across the Fed. government. It is really hard to work across agencies and if that could be streamlined it would be easier for programs like SCA and others.

Idea of modeling in addition to mentoring. E.g., tremendous example is Michelle Obama's Move It initiative and organic garden. Those are key models that can go back and be replicated in our communities. When kids have experiences with hunting, hiking, fishing, etc., they build strong environmental ethics.

Challenge the Fed. Gov. could help address is access on a number of levels. For ex., find places that are interesting, engaging and alive that are close by.

Need to also provide access on a socio-economic level. Having parents that are available to take kids outside is really difficult for some, e.g., single mother working and struggling to make ends meet.

Public Land Service Core is in congress right now-he encourages increasing opportunities such as SCA and others.

Idea of Conservation Leaders is important. For example, how could they take the Environmental Teacher's Institute model they are using in NH to other places to help increase the collaboration.

Challenge: every region needs something different and there are different ideas that will work in each place. The Federal role is to stay out of that to allow flexibility. Provide funding from programs, but allow flexibility in the solution. If we can "infect" the youth and future leaders that will make the difference. The Fed. gov. role is to understand the individuality and that it is by the people and for the people and stand back so the good programs can succeed.

Idea for an insurance product on a nationwide gov. level that could be created to cover liability for school env. education programs. To allow school programs to take the kids out into nature. Liability is often the reason used for not being able to get kids outside. If the school system is accepting fed. funding--would there be an opportunity to do this nationwide--and utilized nationwide?

Long term leases on NF ski area need to be more restrictive - require recycling and more sustainable practices

State agencies are respectful of tribe as a government – no federally recognized tribes. Some agencies aren't informed on role.

People care about the land - preservation not getting the press or being recognized

Farms, woodlots and scenic vistas important nationally. Preserving barns and other buildings, unique vernacular architecture preserves the area culture.

Discussion Question 3

Concord, NH

(cont.)

Preservation through reuse - sustainable programs to manage historic architecture, land and vistas

Praise EPA work with schools – keeping schools in community centers. Green schools in Ireland good example.

Help share programs and expertise - how to get the message out.

Support Boy Scouts/Girl Scouts programs with funding - it teaches children outdoor skills, preparedness, raising vegetables.

Support Cooperative Extension - they provide instruction and out reach

Improve conditions of trails - more maintenance. WVAIA – volunteer hiking group, would like to see Level I maintenance from SCA group. Hard for groups to keep up with the maintenance.

Bring back the CCC to rebuild infrastructure and employ people out of work

Support partnering with groups (Audubon, Squam Lakes), WMNF campground programs.

NH Coop Extension needs more funding and support. It is a much loved and respected in all program areas. They have a great service delivery.

Bring back the CCC program to provide jobs.

Support and expand YCC program

Wilderness should be a "no-fly" zone for military aircraft

Does not support multi-use trails (Nordic skiing, mountain biking & hiking on same trail). It is bad for the experience and a safety issue

Acid rain is a problem in our high county ponds. Need more resources for scientific data collection.

Unstated assumption is that everyone's outdoor experience happens in the day. Less than 10% of Americans can see the sky. Parks etc have too much light. Supports a better night experience.

Discussion Question 3

Concord, NH

(cont.)

We more support for multi-discipline programs and collaboration.

Federal Government role:

Invest in the successes of others and try not to duplicate efforts. Provide more federal funds to successful programs. More Kids in the Woods - Add DOI and DOD to these programs.

Federal Actions Needed:

these thoughts come to mind that might strengthen on-going activities that are working across the urban/ rural/ wild-land continuum:

Reposition the Land and Water Conservation Fund to better address local and state concerns: reduce competition. and improve collaboration among partners and the federal managing agencies. A national recreational resource conservation strategic plan might also be useful to public agencies. private businesses. communities and other stakeholders.

Reframe the role and relevancy of State wide Comprehensive Planning. as it needs to be more inclusive, inter-agency in nature, and expanded to include local. state and federal agencies, communities. private sector entities, and other stakeholders.

Work to make Stewardship authorities for the Forest Service and BLM permanent. The authority to trade goods for services through contracting and agreements has proven to be a successful tool in every region. The ability of a Forest or District to use these tools has resulted in getting more work done on the ground. putting local contractors to work in areas they care about. and the agreement authority allows groups and organizations to raise additional funding to leverage against scarce federal dollars.

Expand the delivery of NWTF programs that have demonstrated they can have landscape impacts, get more people outdoors. particularly kids and help local economics.

To be a better partner, the federal government needs to be more responsive. Forest Service and Bureau of Land Management have been slow to react to stewardship contracting authorities. Some of this is no doubt due to organizational culture and structure; leadership perceptions; lack of initiative; fiscal constraints, limited funding and inadequate knowledge of or availability of personnel.

Even with the slow response to embrace this new tool. there have been some notable successes.

Discussion Question 3

Fort Pierre, SD

I was on the staff of the presidential commission 25 years ago, under Ronald Reagan's program on Americans Outdoors. 25 years ago, Lawrence Rockwell created LWCF fund. I was editor of the report, and the #1 recommendation from all the data input was for full dedication to fund 1 billion dollars per year; which is still in the same place. We need full funding. The #2 recommendation was on the comprehensive climate change and energy legislature. We still address these issues today as a nation. Federal incentive funding for state and national plans to connect families to nature was the 3rd recommendation. The #4 recommendation was on regulation reform of the Corp of Engineers for river management, placing greater weight plans for wildlife and natural system benefits.

I'm wondering if we can keep LWCF funds from being raided for whoever needs it, and if there's a way for protected lands to stay protected forever?

There's a huge issue in some areas, over 50% of royalties have been used to fund other things. LWCF should get full allocations. We need to make it clear that there is full support to fund 900 million. I am a strong advocate to make permanent appropriations to go into LWCF. There is a good chance of fixing that.

The federal government can access and buy more land to accomplish goals. As a people affected by recession, we can't manage what we've got. If the government can't manage what they have why buy more? There are lots of things going on like the Mountain Pine Beetle, wild fires, etc., all those need to be taken care off. It will take money out of recreation and other areas that are low in priority. The government needs to take care of what it's got before it expands. The private sector is the most important sector. It should be upheld and supported by the government and not stifled by it.

I too, share concern about additional acquisition of property. These local areas can't lose more families, and when the fed government buys a ranch you lose the family and the livestock and these small areas can't handle that. It appears as though in many federal management plans, there is no management. This is a concern of mine that the management is not consistent. Right now we're in build fuel and burn mod. The real concern and need is to manage the land we own before acquire additional lands. Just because funding is there, does not mean there is reason to add more.

One way the federal government can be effective is to make it simple. Both the field (staff) and producers struggle with the paperwork and the bureaucracy. Simple is nice, simple is preferred. There are a lot of struggles in all the agencies with cultural resources. There are crazy things to accomplish; too much paperwork. The web is nice, but in agriculture, it is not a web based community. Most farmers have no access to internet. The process is too complicated.

Discussion Question 3

Fort Pierre, SD

(cont.)

From a non-profit point of view from the YMCA, the Y enjoys working with outdoor education, but we don't have the resources to expose kids and families to what is out there. It's different teaching them in a classroom and a city park. We need to take them out in nature. We took a child who lived in the city to the badlands, and wow, what an impact on that child. Too many times because of economics and legal/liability issues, nonprofits and schools can't do that. We need to look down the road and start with kids and families, plant the seeds and expose kids to what's out there. The education process is the step being left out. It has one of the biggest impacts.

Offer stability – need increase funding, sod saver reinstated. So many of the programs that do work need to be permanently funded.

No child left inside – taxing non consumptive users.

Historical grants, they work with tribal historical preservations funds. They need to fully fund historical grants.

Equally share the land conservation fund. It can be used local, state and tribal.

Emraps program – can help do their job like Missouri river. Continued support.

Be aware of what it has going in here. Northern great plains – grassland areas. Historical grazing. Put to large areas plants animals. Fed gov can do good just in getting all agencies together to manage to protect this resource. Deal with tribal people – partnership. Pl owners, grassland easements, prairie potholes – this leg is all critical and effects pr – mindful of that and increase funding. Spending money sensibly.

Bring LWCF back to the original concept. Design to the health of the people. Back to the state and local gov. Should be fully funded.

Reprioritize where the money is spent. Their tribe has a biological grants only ____ acres with 2 biologists. Reinstated those funds and look back to our tribes – don't have access like the states have. They are limited (2 grants re-funded).

Land and Water Conservation Fund, SDGFP supports the funding that fund, when originally started in the 60's, money was split 40/60. That ratio mandate was removed at some point. Federal agencies now keep more of the share. Currently, 16% funding goes to the states and 84% to federal agencies. SD has great use of that money. Need to get that split to 50/50. Last year had a request for \$1.5 million from cities and counties and SD could only fund \$300K. Need more to be more equitable between the federal and state governments. All these federal programs need a local match. If we want children in the outdoors, federal money is important to accomplish these goals.

Discussion Question 3

Fort Pierre, SD

(cont.)

State do not have control of how to spend the funding that comes from the federal government. States don't have access to royalties from off shore drilling. Local control or a higher role, local input of how funding is spent on local efforts. Locals know where the ducks are and going and what habitats to protect. Locals know the issues of the land. Need to let local participants determine how funding is spent. Local decision making process is important. Level of equity between federal and local organizations needs to increase.

Federal funding is essential for Historical sites. Access to these historical sites are critical to people (children) federal funding is critical. Try to purchase private land. Then state agencies will be able to protect archeological sites.

Land water conservation fund, it has to be a partnership. 600,000+ dollars since project started in the 1960's. Not enough funding because it sectioned so many ways. 16% is not enough funding for sustaining this program. Local governments have directed staff to find matching funds. Need to protect that funding. fear that funding is going to land acquisition. Tennis facilities are wearing out. Swimming pools wearing out need maintenance. Schools and other local partners put funding together to improve tennis facilities.

Federal trail program from transportation budget for off-road vehicles gets a percentage of the fuel taxes. That funding is important as 40% goes to non-motorized and 40% to motorized trails, while the other 20% to other activities. This funding source is critical to recreation. It is a matching fund grant program. Mitchell Lakes Trail in South Dakota is just one example. Local communities match the funds. Lake Poinsett trail and Lake Oahe trail are more examples. These trails get people outdoors. Its in the Transportation Bill, portion of that bill funds these local trails. Trail projects are on both private and public lands.

Highway Transportation Bill - budget looks like it won't have funding for trails. That program is in question right now. It has been in place for nearly 15 years. Now with so much infrastructure that needs maintenance, there is considerable competition for that funding. But the funding from this bill is essential for trails and connection to outdoors. Folks are willing to work together for these trail projects. Need that funding in the transportation bills.

Discussion Question 3

Fort Pierre, SD

(cont.)

As we move ahead on the 4 questions, is this the way we should be going? A lot of the assets that we have on public lands (National Forests, National Grasslands, Wildlife Refuges, state parks) are under used. I don't believe the government needs to spend more money on new projects or land acquisition. There is currently a backlog of maintenance on federal lands now. Ross invites young people to hunt. There is a problem now with people not getting out of the vehicles to hike or hunt. The Issac Walton league is a successful group. 4-H is also successful. Local managers and biologists from the National Forest Service has local programs that are good for the youth. I strongly disagree that the AGO is needed. The EQIP program is tailored to the best use of the land and livestock. The program ooks at soil and drainages and what is the most appropriate for conservation. National Grasslands are mismanaged because of top down management from Washington D.C. and other regional offices. There is a need to listen to the land and local people. The land needs to be managed at the local level. The federal government needs to deal with the property that they already own. Parents need to take responsibility to take kids outside themselves. The AGO appears to be a top down organization. Maximize the federal and state lands that we already have and maintain and enhance them.

We need to utilize what is already in the hands of the federal government. Federal government agencies are not taking care of what they already have. Before expand or control more private lands, we need to enhance the federal lands that already exist. What are the impacts to private lands? We are expected to feed the world through agriculture. Agriculture can't pay the price of conservation. We need to pull Nintendo game boys and Ipods from kids. Parents are willing to spend dollars on technology. Parents need to change their attitude. If we went to 3 channels on TV, more kids would go outside. We need to know that food produced and that is in grocery stores are safe. For people that come from urban areas, the outdoors are a foreign place. Outdoor information maybe overload because people are not accustomed to being outdoors. However, South Dakota people already know the importance of outdoors. Conservation has to come from the local level. Agriculture plays important role in conservation, but at the same time agriculture needs to put food on the table.

Local should have more input on conservation. Don't need somebody from Washington D.C. to tell us how to do conservation. Local control over programs. More weight should be given to local conservation groups.

National Park Service is unique in that they have a division that comes out to communities. Need to build partnerships and help start the process if they do not know how to get an easement on private property. If other agencies also did the same then a lot more locals would find an avenue to get involved.

Discussion Question 3

Fort Pierre, SD

(cont.)

One of the things that are very frustrating is the whole NEPA process. It's very cumbersome, it takes forever, and you don't see results for years. You're not sure what you're going to get. We need your vote to actually count, which the Forest Service is working on. The process needs to be upgraded to keep public interest. We need to streamline the process to fit the faster moving society. It's very frustrating for the lay person. Another issue is the struggle with the many different land agency boundaries. When off-roading, you need to pass different land agency boundaries. Do these agencies talk to each other? The meetings must be in secret, because I don't know about any such meetings. I would like to see and know about the different agencies talking to each other; need to at least witness what they are doing.

There are a couple of challenges to point out. There is a nature deficit disorder. The last report stated that the average American child spends 7.45 minutes less than 1 hour outdoors, and less than 5 minutes in a non-structured play environment. If kids are not outdoors where does our conservation leadership come from? I live on the Missouri River. The way it is managed there is no natural system to form. Regulation reform with the Corps is giving higher weight to wildlife. I've worked in conservation for 40 years and believe there is a strong need to get a hold of climate change, carbon emission caps, and we need funding to help address adaptability for wildlife. Addressing climate change is the biggest environmental issue that our generation faces today.

Input the people from the local basis – been a disconnect there. There is only so much the congress can do. Having these sessions on a regular bases would help and relate that the congressional staff. Structure where there would be a possibility would be great. Real opportunities.

Government! Big supporter of Gov't and needed in this country and have a great gov system. Survey the people – too many rules and regs not enough talking between agencies, restrictions on conservation. Need communication and need to say we the people – fairness into restrictions and reasons why it is.

Schools, grade school – looks like prisons – fences (no nature there). Nice if the fed gov (multi agency) get together with high school math/science create a nature environmental center. Staff could be mentors to help get a science group going. Bringing science and math into school get rid of concrete put ponds, grass, trees. If they are not on grass how can they relate to the environment. If we don't educate them about the outdoors - later they might not have any concern in the future to fund the programs. Mentor programs in schools!!

How do we get a realistic result to the president?

Keep working landscapes intact for the next generation of land stewards- with biological, social and economic indicators of success.

Discussion Question 3

Fort Pierre, SD

(cont.)

Promote public and private partnerships through building trust and relationships between private landowners and managers, public agencies, non-profit conservation groups, foundations, corporations, policymakers, and academic institutions for the benefit of working landscapes across the country.

Communicate, educate and share on-the-ground challenges and success experienced by private landowners with congressional and agency decision-makers. As part of this strategy, advocate for stronger, more accessible relationships with representatives in Washington, D.C.

Support voluntary, incentive-based programs that are flexible, predictable, emphasize the value of people and partnership, and have measurable outcomes.

Transfer experiences, expertise and lessons learned about cooperative conservation and holistic land management tools, funding, and technical resources.

Increase and leverage funding for efforts that promote cooperative conservation.

Support local, watershed and/or place-based conservation efforts by providing an umbrella group to effect change at the regional and national conservation scale.

Promote the 80-20 rule for conservation: Work on the 80% held in common, instead of the 20% that divides.

The easement program has seen great success because of the partnership between the U.S. Fish and Wildlife Service, non-profit conservation organizations like Ducks Unlimited, the South Dakota Game, Fish and Parks and private landowners.

The primary role that the federal government can serve is to ensure continuation of the commitment of the U.S. Fish and Wildlife Service to administer the program and to provide additional funding to meet the demand by landowners and conservationists to protect these important areas for their many benefits.

The PPR project would be implemented over 10 years at a total estimated cost of \$1.38 billion. It's anticipated that various partners and existing sources of revenue will finance \$427 million, with the balance of \$956 million coming from a "Treasured Landscape" initiative currently being discussed by the Administration and several Federal Departments.

The U.S. Fish and Wildlife Service is the primary federal wildlife landownership agency in the PPR proposal area with the following ownership classifications and acreages: Waterfowl Production Areas and National Wildlife Refuges: 608,000 acres Grassland easements 713,000 acres Wetland easements 1,088,000 acres FHA easements / managed by the USFWS 11,414 acres

Discussion Question 3

Fort Pierre, SD

(cont.)

The South Dakota Game Fish and Parks and North Dakota Game and Fish Department are the primary state landownership agencies in the proposal area with the following fee title acres: South Dakota Game Fish and Parks 81,873 acres North Dakota Game and Fish Department 156,833 acres

The following conservation organizations are also owners in fee title of the acres listed in the proposed project area: Ducks Unlimited 19,300 acres National Audobon Society 2,250 acres Nature Conservancy 17,000 acres

Over the course of ten years, it's anticipated that the following sources of funds could be used to help accomplish project objectives: Migratory Bird Conservation Funds ("Duck Stamp") \$160 M North American Wetlands Conservation Act \$95 M Ducks Unlimited, Inc. \$50 M Other state, NGO, and corporate partners \$15 M USDA Wetlands Reserve Program ("WRP") \$97 M USDA Grasslands Reserve Program ("GRP") \$10 M

During 2005-09, expenditures on grassland and wetland easements in the project areas were as follows: Migratory Bird Conservation Funds ("Duck Stamp") \$48.2 M North American Wetlands Conservation Act \$9.4 M Ducks Unlimited and other partners \$11.3 M USDA Wetlands Reserve Program ("WRP") \$48.4 M USDA Grasslands Reserve Program ("GRP") \$5.3 M Land and Water Conservation Fund ("WWCF") \$2.1 M

Easements are popular among many landowners, particularly ranchers. Currently, 805 landowners are on a waiting list to be considered for a grassland or wetland easement in the Dakotas. This represents approximately 364,000 acres of habitat that could be secured in perpetuity if funding was available. Since the inception of the easement program, landowners have enrolled 1.8 million acres in the easement program. All easements are secured on a willing seller basis and the land remains in agriculture productions with the basic provision that, under Wetland Easement, they cannot drain, burn, level, or fill in wetlands that are designated within the easement contract. Conservation also provisions apply to lands enrolled in Grassland Easements which pays to keep land permanently in grass.

A 2006 survey conducted by the University of North Dakota found that 89.1% of North Dakota residents thought that landowners should be able to choose whether or not they wish to sell or donate perpetual easements. In that same survey, 75.7% of residents agreed or strongly agreed with the statement "we have an obligation to preserve some natural areas for future generations and perpetual easements are a good way to do that."

Discussion Question 3

Fort Pierre, SD

(cont.)

In South Dakota, because of the current high water and sheet water flooding in the central and northeastern counties, landowners have stepped up their interest in the Wetlands Reserve and Grasslands Reserve Programs offered by the U.S. Department of Agriculture (Farm Bill) and have continued to contact US Fish and Wildlife regarding the selling of USFWS Easements to protect wetlands and Grasslands. In addition to the basic programs mentioned above to improve habitat, both North Dakota and South Dakota Wildlife Agencies have hunting access "Walk-In" programs in which the landowners can earn extra annual payments if his/her private land habitat qualifies for the Walk-In program. These hunting access programs have proven to be very popular with landowners and it adds directly to the economic benefits of having bird and big game populations. Pheasant hunting provides an estimated \$200 million per year to South Dakota's income base.

Discussion Question 3

Godfrey, IL

Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors. In addition, sport hunting and fishing generate billions of dollars of revenue across the nation and support hundreds of thousands of jobs in related industries. State, federal and private conservation organizations need to do all they can to promote and support hunting and fishing and other outdoor recreation opportunities on lands that they control and manage.

Our work would have never been accomplished without the assistance of numerous state, federal and private partners. Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife (PFW), and the Land and Water Conservation Fund and conservation programs of the Farm Bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations.

These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

North American Wetlands Conservation Act (NAWCA). This federal program administered by the U.S. Fish and Wildlife Service provides competitive matching grants to federal, state and non-profit conservation organizations for local wetland protection and restoration. DU and its partners have utilized the NAWCA program to conserve thousands of acres of habitat in Illinois and Missouri. Typically, non-federal sponsors provide up to \$2 for every \$1 they receive from NAWCA for local habitat projects. Lands acquired with NAWCA funds are generally open to the public for compatible recreational uses such as hunting, fishing and birdwatching. Federal appropriations for NAWCA are critical to the success of this program. Funding should be maintained or expanded in order to leverage federal funds to the greatest conservation good.

Conservation Reserve Program (CRP). This federal program administered by the Farm Service Agency of the U.S. Department of Agriculture pays farmers to convert environmental sensitive cropland to wildlife habitat and to maintain it as a privately owned conservation area for a period of 10 to 15 years. Populations of grassland nesting birds, including ducks, bobwhite quail, and native songbirds such as the dickcissel, have rebounded thanks to CRP. The program also conserves soil and improves water quality by reducing nutrient run-off. Often, CRP lands are open to sportsmen for hunting with permission from the landowner. CRP caps limit the amount of lands that can be enrolled in this successful and popular program. Acreage levels should be maintained, especially in geographic regions like the Prairie Pothole Region where CRP is providing critical habitat for waterfowl and other wildlife.

Discussion Question 3

Godfrey, IL

(cont.)

Wetlands Reserve Program (WRP). This program administered by the Natural Resources Conservation Service under the U.S. Department of Agriculture is used to restore and protect wetland habitat on private lands. Typically, this involves the acquisition of permanent conservation easements by the federal government on lands that are voluntarily enrolled by private property owners. Such lands are restored to wetlands or planted to trees at no cost to the landowner. In addition to establishing vital habitat for wildlife, WRP lands provide recreational opportunities for landowners and their guests. Authority and funding for WRP is due to expire. This program should be re-authorized in the next Farm Bill with more opportunities to target enrollment and to encourage conservation partnerships.

Land and Water Conservation Fund (LWCF). This federal program provides funding to federal agencies like the U.S. Fish and Wildlife Service and U.S. Forest Service to purchase new lands for public stewardship and public access. State conservation organizations also can use LWCF to supplement state funds available for land acquisition and recreational development. Increased appropriations from LWCF are needed for federal agencies to acquire critical lands within existing boundaries of national wildlife refuges and national forests along the Mississippi, Missouri, and Illinois Rivers. To the extent practical, LWCF should provide incentives for states to increase their investment in land acquisition as part of a comprehensive program to expand outdoor recreational opportunities for their citizens.

Navigational and Environmental Sustainability Program (NESP). This program administered by the U.S. Army Corps of Engineers is authorized to provide federal cost-share funding for navigation and ecological restoration projects on the Upper Mississippi River, including the Illinois River. Appropriations are needed to implement ecological restoration projects designed to enhance habitat for fish and wildlife species along these important river corridors. Most lands subject to NESP restoration are either owned by a public agency or are considered to be public waters open to public access. Federal funding for NESP project should encourage partnerships with state conservation organizations and with private organizations like DU.

Maintain existing natural habitats by avoiding and minimizing impacts associated with federal projects or activities, and by removing federal incentives and subsidies for activities that work counter to conservation or that encourage the conversion of natural habitats such as wetlands to other land uses.

Improve targeting of federal resources by considering conservation priorities at various geographical scales, by channeling investments into programs and projects that achieve the greatest results, and by utilizing the best available science to make allocation decisions.

Encourage the integration of federal programs and activities by having agencies work together to address natural resource challenges and to establish networks of natural habitats capable of sustaining fish and wildlife resources into perpetuity.

Promote partnerships with non-federal interests and particularly with non-profit organizations by implementing policies that engage local partners in cost effective implementation of federal programs to achieve targeted outcomes.

Discussion Question 3

Godfrey, IL

(cont.)

Expand public participation in conservation and in outdoor activities by increasing opportunities for volunteering, by improving marketing, education and outreach, and by making existing public lands more accessible.

Re-introduce school age children to America's Great Outdoors by providing outdoor sites and programs which allow them to experience nature, and ideally create lasting family bonds centered upon those shared outdoor experiences.

Supporting MOU by and between NPS, USFWS and Mississippi River Trail, Inc. to connect Federal, State, and local public lands, parks and refuges via the Mississippi River Trail System

River revitalization and restoration should be prioritized as well as the establishment of national water trails (blue ways). They connect people to outdoors; they are cost effective because they are already there.

Worried about a constituency being involved in the future. Need to motivate kids. Need something "Cooler" than Ken Burns National parks documentary to get kids interested. Need shows that are geared towards the youth and talk about fun activities like rafting. Need to ensure that kids learn about the outdoors. Would like to see mandatory national service of some kind for kids coming out of high school, other than the military.

80K site on the historic places register in Illinois. Fund the preservation fund. Historic preservation is a form of sustainability. Historic preservation is sustainable by encouraging reuse of buildings. It's a different way to look at historic preservation.

The watershed covers 10% of IL and has multiple partner types. They are concerned about rapid erosion runoff. Erodes banks and the sediment clogs rivers. WRDA 2007 and grants are being used to help with this. We have language to study it, but it needs funding. 3 years have gone by since authorization, but it still has received no funding. Kaskaskia can be a model for similar rivers in the U.S. IDNR is willing to be a cost sharing partner.

Need better trails for kids to learn and love horses. Paving trails isn't good for horses. National Forests have horse amenities but there are no local areas for horses. Need to convince people that horses are a lifestyle, part of economy. Greenways that are good for horses are good for people too. Need local help.

150 million dollars invested in reconnecting people to rivers. 11,000 acres of open space in the area and hundred miles of trails. Museums and visitor centers in bunches. Cahokia Mounds, Mary Meacham Freedom Crossing, Habitat Restoration with AmeriCorps on North Riverfront. These efforts are great for reconnecting people to rivers. We need sustained or increased funding for these types of activities.

Discussion Question 3

Godfrey, IL

(cont.)

What happens next for the children? Community colleges are important. 700K people graduating in IL every year from community colleges. 1 in 10 people have gone to a Community College. Profound convening platforms, which is perfect for getting students into the outdoors. Community College presidents are collaborating together. We need more collaboration between federal agencies. We can talk to agencies separately, but it would be more beneficial to talk to them together and look at the whole system. Community colleges can have an enormous impact with federal collaboration.

Floodplain management. Terracing steps, walking paths, etc. have been built to work on reconnecting people with the river. The path has been covered (flooded) 4 times this year alone. We need bigger marketing efforts. Mississippi River is very important to us and we would like everyone to know about all of the trails, community cleanups, and services that are available on and around the river. USACE is helping the community greatly; please help USACE and other agencies, to be able to work with us.

Citizens voted for a tax to create trails in the bi-state area. River Ring of 600 miles of trails is the goal. We are trying to collaborate with different greenways, federal, state and local for the education of parks and trails. Also to educate the youth in a more efficient and effective way, so those individuals get engaged in the preservation and stay engaged. We need to look at how we can do more education efforts, especially in economically depressed areas. Make these people realize they are part of the system too.

grew up on the river. The river is cool. Very passionate about the river. Need to get people connected. One take away should be that the region is at a tipping point. Typically we have historically ignored the river. This has changed and we are really trying to move the opposite direction. There are numerous great efforts that you need to be aware of. These things happen because people get engaged. Help work with current landowners around the confluence from development. Casinos and developments aren't the only way to create jobs. Eco-tourism is an option. When planning roads and other developments, keep in mind space for cyclists, horses, people, etc.

Winfield to the Gulf of Mexico, 15K river miles canoed. Kids need physical interaction with the river to learn about it. Surprised to see that the Secretary of Education isn't more involved. Kids need more than video games. Need federal recognition of the Mississippi River as a water trail. It starts with stopping the building of casino in the only 11 non-navigable miles on the Mississippi River. Need to get more people here. I clean the river with kids. These cleanups help kids to learn how to change their everyday activities like recycling because they are aware of what happens when you do.

Owens a family farm that has been around for 188 years. Farmers have done a tremendous job of providing conservation measures. Still have a lot of problems private landowners can help with. USDA programs can help do this. Work conserving private lands will never be done. Good information can help. Need more staff, technical experts and incentive programs (keep them funded and increase).

Discussion Question 3

Godfrey, IL

(cont.)

Current River. Citizens were able to stop a dam on the Current River, NPS helped enormously. Love/hate relationship with locals and NPS has always existed. Disagreements occur, but respect still existed between the groups. Recent managers haven't been as great as they were in the past. Need help getting attention for Ozark River ways. We feel it is being neglected unlike in the past. The park has fallen into disrepair. Turned into a party river instead of family vacation destination.

80K acre national park. It has been managed under ad hoc policies for decades. These contradict NPS policies. ATV vehicles cause damage to the land and a plethora of inappropriate park uses that degrade its natural resources. Need strict adherence to NPS management policies.

We are lucky to live in such a resource rich area. It is a very unique place. We are working in partnerships in this area. Gives a glimpse of the bigger picture of what could happen. Public land up and down the river with private structures (cabins). USACE has been working on removing many of these. Is there a timeline to finish this work?

Echo's previous comments of the Ozark National Scenic River ways. Concerned citizens have signed postcards to make the Ozarks more of a priority. Postcards were given Secretary of the Interior after the Session

Losing IL River to sediment. Need appropriations from WRDA to fix this. Planning on how to fix the problem is done. We just need funding to put it into action. This is the most important thing for IL River

Want to safeguard communities from climate change. Need to protect large buffer areas like Ozark National Scenic River ways. Want to increase the involvement of parents and kids thinking it is cool to be outdoors. Need to make an emphasis on urban rivers because not everyone can get to rural areas.

Over 1200 mayors have signed onto this program. It is an in depth assessment of carbon footprint of a city. Alton and Edwardsville have signed this. Hope other area cities in the area sign this. Promote this program.

Confluence area in Spanish Lake of the MS and Missouri rivers. Spanish Lake has the only Lewis Clark site in St. Louis City/County. Columbia Bottoms is in the Spanish Lake area too. Took her 30 years to get to the confluence because it was a private hunting lodge. It is now in public ownership. A casino is proposed for 500 ft south of Columbia Bottoms. Want the federal government to take a hard look at the land from I-270 North to preserve this land

350k kids were out fishing this year. My front yard is the Ozark Scenic River ways. Our program gets kids out cleaning, learning and loving the river. The kids feel there is no respect for the park. Can USACE speed up the AKERS Ferry permit? Kids must get up earlier to get to school because of the inoperable ferry. Vehicles are using the gravel bar to cross and it is ruining the river. Need the gravel bar removed so that the ferry can operate.

Discussion Question 3

Godfrey, IL

(cont.)

Filed petition to apply to Clean Water Act for all water bodies in the state. Federal government, urban and rural non-source water pollution must be better addressed. Opposed to the casino and we need help.

Make a note for all of the special areas and programs in the area. Take this to the next level. Protect ecosystems. MRAPS study is going on. USDA Mississippi River Basin Initiative too. Midwest Natural Resources group are looking for projects. General Walsh is promoting a 200 year vision. Gulf wetlands. All of these issues are connected and bring together many diverse groups.

Need to actually monitor the river. Need better info and make it more accessible, understandable. Farm subsidy programs are an issue. There is little about conservation easements in the farm bill, which could filter nutrients and improve erosion. Clean Water Act needs to be implemented throughout Missouri. Stop the Casinos. We need fewer levees too.

Want to get kids outdoors. Make sure we have another generation ready to be stewards and ambassadors to the outdoors. Need upgraded version of things like Smokey the Bear and Ranger Rick. We need more media attention. What happened to outreach the public like this?

We need full funding of land and water conservation fund. Need for state money from this fund. 85% is diverted to non- conservation uses. Half to federal and half to state agencies are needed.

Another focal point for our conservation efforts is the Ozark National Scenic Riverways, Missouri's largest national park, which has come to be threatened by ever more aggressive private development, illegal motorized/off road vehicle access, abuse of scenic easement land, and a lack of enforcement by park management for laws that would have prevented the degeneration of this important resource. More attention should be focused on making this park and the area a park worthy of the National Park System. The Big Spring Area should be designated as a wilderness area, as "wilderness is a resource that can shrink, but not grow" as Aldo Leopold wrote.

Horse owners in Illinois represent a large segment of the economy, but unfortunately, not nearly as vocal as some other groups. There is a significant need for additional equine access to federal and state lands.

I would appreciate an opportunity to speak about the 375 acre casino complex being proposed just 500' from the southern boundary of Columbia Bottom Conservation Area which is located at the confluence of the Mississippi and Missouri Rivers in Spanish Lake.

Many of us believe that this important area along these great rivers should be preserved in perpetuity as a national park.

Discussion Question 3

Godfrey, IL

(cont.)

I would like to speak at this session and provide testimony about the importance of the National Park Service's program for historic preservation and historic sites.

In Illinois, there is only one National Park, the Lincoln Home National Historic Site in Springfield. The site speaks directly to the importance of historic places in the national collection of America's great outdoors and indoors.

The NPS has a special role in assuring that historic places are accounted for in the collection of America's "great places" through several key programs and policies. Foremost among these is the Historic Preservation Fund, which established and sustains the State Historic Preservation Offices (SHPO) across the country. This is a shared federal and state responsibility that stems from the National Preservation Act of 1966. The NPS has been a leader in creating and supporting this partnership. The continued funding and even the potential full authorized funding of the HPF grant to SHPOs should be an NPS priority.

Interested in role of floodplains & levees in protecting environmentally-sensitive areas used for recreation, farmland & parks, e.g. Howard Bend district in Maryland Heights. Also interested in providing community access to MO River, wetlands and international flyways for bird migration.

Supporting Memorandum of Understanding by and between the National Park Service (2 regions), the U.S. Fish and Wildlife Service (2 regions) and Mississippi River Trail, Inc. (10 states) to connect federal, state, and local public lands, parks and refuges via the Mississippi River Trail system.

The Ozark Regional Land Trust (ORLT) encourages the administration to support the work of land trusts. There are several ways in which this can be done. First, federal tax policy can be used to encourage landowners to conserve important farmland, forests, and wildlife habitats. ORLT urges the renewal of the enhanced tax incentive for donated conservation easements as well as a renewed estate tax exclusion for land subject to a conservation easement. These policies represent a modest investment for the leveraged conservation gains that are obtained through private landowner generosity. Second, ORLT encourages federal agencies to work with land trusts to further their statutory mandates. For example, much can be done in a cooperative fashion with private landowners to protect endangered species habitats by supporting conservation easement projects. ORLT has a current project in Missouri that is acquiring conservation easements on habitat essential for recovery of the federally threatened Ozark cavefish. This also represents a modest investment with significant long term gains should it continue to be supported. Federal land management agencies can also further their missions in cooperation with land trusts by protecting critical buffers around wildlife refuges, Wilderness areas, or national parks. ORLT thanks the administration for its commitment to conservation and for your consideration of these comments. I look forward to attending the listening session.

Discussion Question 3

Golden, CO

Making outdoors part of the curriculum, instead of optional.

Awareness factor is a big start to bringing people together

Have schools to give more trips outdoors, and less involved with electronics.

Making more time for going to the parks as a family or just with friends. Maybe more groups focused on outdoors.

Make Environmental Learning for Kids (ELK) a noational "figure". I never did anything outdoors, and didn't really care bout all that before I joined the group. Gets kids to go out who never really did before the group

Educate more on social networking. How it takes up most of out time. (Myspace, Facebook, etc.) Educate kids to take time for other things other htan social networking. Talking face to face rather than over the computer. The traditional way. You can play a

Take money from things we don't need and give and support the organizations that can help our environment. Many times money is spent on things that are thrown away and end up in a wildlife reserve. Help prevent pollution. Not so many crowded areas

Less crowded areas. Communicate the oppourtunities to the people so they know what is out there.

Focus on local Communities. Educate and showing kids where their food comes from, and what is outdoors that we don't always see. Transprtation. Go out where there is not a lot of peopl eto really enjoy the outdoors.

Go out away from technology and see what else is out there. Improve maintenance in the National Parks.

Work on transportation that does not pollute. Convince people that they shouldn't use lawsuits as an excuse to not get out and enjoy the outdoors.

Make lands more accessible to the public. Many are taught that government lands are government lands and we can't do anything on them. Let people know what is out there that they do have access to.

Colleges take their Masters programs out to see and view the lands. Make ethis a possibility for smaller groups of kids as well.

Discussion Question 3

Golden, CO

(cont.)

Transportation, Programs, Education, Funding.

We need to education people from a very young age.

More exposure programs and more programs.

educate people to conserve and protect what they have, staying on trails because off trail can damage sensitive areas, more recycling

leave public lands public, BLM owns much land in CO for animal grazing, gas/oil projects, need to leave some for public

more funding for current programs, funding for schools for more programs within the schools, making people aware that outdoor programs exist

Start early with kids, must have a lot of opportunities, take care of smaller local city parks, not always the large state parks

more community based organizations, helping more diverse groups, the census shows that the population growth in diverse areas are growing and nothing has anything about diversity in their programs

fund projects that have ended, no need for new programs fund programs that already exist, so they can grow to other communities,

Find individuals who can make a difference, empower individuals to mentor, add volunteering/mentoring to gov employees along with mandatory training such as paid days off

start young to develop appreciation early, there is an awareness issue, people don't know what's out there, make programs accessible and post at schools, such as sign ups, like for sports, make information easy to find, so not spending a whole lot of time

Give teachers more freedom with curriculum to allow for more field trips, recess, unstructured play time, integrate outdoors activities in daily curriculum in schools

Buses are over committed, plus can't take school buses off city property need coach buses for that, that costs money, more access to transportation

nature classrooms, field trips

Discussion Question 3

Golden, CO

(cont.)

more commercials on television

convince kids that the outdoors is a lot of fun

Tell kids that being outdoors will change their lives

improve basketball, tennis, volleyball courts, keep clean and nets on, maintain local parks

make camping sound fun, word of mouth is important

Availability and access to knowledgeable mentors who can get kids outside. Have people who are willing to dedicate the time to share their knowledge with kids.

It can't be boring, it has to be new. The new approach should be kid-friendly and exciting. Fun.

Instead of creating more organizations, we should get more funding for existing organizations in order to make them stronger.

Make it easier for younger generations to get federal jobs in order for them to make a difference.

Funding. Specifically social media that youth are engaged in. Use it to promote getting youth outside.

Get more classes in science for kids, to learn about the outdoors. More after-school programs

Show kids how fun it is to be outside!

Educate kids and their families about fishing and camping, in order to show them how fun it is.

Create more opportunities for kids, advertised through facebook

Use twitter and facebook to educate kids about the outdoors

Discussion Question 3

Golden, CO

(cont.)

If the President takes his kids outdoors, maybe it would influence the country to get outside.

If kids were able to get their friends involved, the perception would be that getting outdoors is cool.

emphasize educating girls on outdoors because they will have the most impact on their children/household as moms, have more influence than men

use educational system to coordinate/encourage outdoor exploration, bring educational groups together by actually getting kids from schools to take advantage of the programs that are already established

emphasize outdoor appreciation in schools/educational system

advertise outdoor activity more towards parents so parents will get their kids involved... teach them why its important for their kids

affordable fees for national parks, ditto on educating women (women helped establish sand dunes and other outdoor activities). Get more women active in government

parks need more options (ie hockey)

proximity of parks to vast majority of population

Recommendation: Utilize outdoor public transportation to get the word out

recommendation: Wyoming extreme

Recommendation: education and exposure, once you are out there you will have ownership in the outdoors

Recommendation: exposure, get them excited they will want to go more.

Recommendation: national kid outdoor day, now just one day. Can expand with different activities as a start. Change the peridime, shift perceptions about how accessible the outdoors are

Discussion Question 3

Golden, CO

(cont.)

Recommendation: more investment into the youth corps. Kids can work, get exposure and have more to do.

Recommendation: government funding, need the money

Recommendation: preserve more parks, don't build over them.

Recommendation: start locally in the community first. Continue to actually use them, take care of them and add new ones close to the user.

Recommendation: In the cities many of the parks are very polluted, we need to clean up the outdoors before we encourage outdoor use. Do not want to expose our kids to toxins

Recommendation: increasing access in the local communities.

Recommendation: make the parks free to open access to the public. Maybe just one free day to give more access.

Recommendation: Street fairs, events in the local area just get people outdoors

Recommendations: kids that are in the programs are 14-18 we need to start younger to build the experience and comfort level. Example take them to the zoo. Limitations (rules) on programs is inhibiting the access to the outdoors.

Recommendations: get the word out better on the local events. Having the information easily accessible on what is available.

Recommendation: Utube, is there a website that is easy to access for local information. Utilize the current media that kids are use to.

Recommendation: develop a website that kids can use to find out cool stuff.

Recommendation: currently there is a National web site to link to local area codes on outdoors (planetexplorer.org) find a way to get the word out to face book or twitter.

Recommendation: use social networking to get the word out. MySpace, twitter, Utube, etc.....

Discussion Question 3

Golden, CO

(cont.)

Recommendation: Post environmental opportunities on your personal face book

Recommendation: How can federal government help. The federal government is always trying to create new initiatives, instead the feds should be supporting what is already out there and help getting the word out and use and support the current programs.

1. Recommendation: Use popular Media-getting the word out, advertise on local buses,

2. Recommendation: Keeping the outdoors clean

3. Recommendation: Support the existing organizations and providing more access.

4. Recommendation: Start people younger.

More urban parks and gardens. Boost Americore.

Community based outreach, planned "walk to river," "walk to garden" trips to connect people.

Transportation. "Build Your Own Bike Program" If people can see fruits of their labor, more apt to act and help.

Channel funding to groups such as Americore, people want to serve but need an outlet to do so.

Starting children's interest at a young age in the environment. 1st impression is everything.

Public transportation to state parks and wilderness.

Give schools enviromental tasks to serve community, incorporate into curriculum. Not just picking up trash, but something you could actually learn from.

Gov. Programs, working to gether on local and regional level. Mentorship programs,collaboration.

Discussion Question 3

Golden, CO

(cont.)

Get families involved in outdoor activities.

Positive peer pressure to go outside and enjoy outdoors.

The Senator is very committed to environmental issues and does whatever he can to help out at state and federal levels.

I never had way to get around until I found out a way to build my own bike. Biking is free, now I can get around.

Obama can channel funding to organizations like Youth Corps, AmeriCorps Vista. Grow these programs and spread them out into communities.

Connectivity. The federal government can think of how to get from the White House to neighborhoods. There's a lot of emphasis on storm water, link to Green Infrastructure Movement; need more neighborhood parks, gardens, places for people to get to.

Peer mentorship.

Get people involved (siblings, family, classmates). First impressions are a big thing, make sure first trip is a fun time.

Transportation - encourage trains, buses, etc. to get up into mountains, hike into local towns, etc. - people need to be able to get out where they want to go.

If people started using solar and other powered things, it would be easier to get around and wouldn't use up earth's resources.

Obama: put environmental task force (monitored) into school so kids can go hiking, fishing, pick up trash - make it part of the curriculum. Take kids on trips sometimes during school hours, camping, hiking; inside that program, teach them about animals,

On a community level, reach out with trickle-up effect; all these great programs have their own challenges, need to find ways to work together in local, regional levels and move up to federal; mentorship idea is a way we can possibly break through 20th-ce

Get more families involved. People will go, feel comfortable, start telling other people about it, get more involved; have a class just about what kids want to learn about; not just regular courses, what about wildlife? How the environment works?

When just a couple of people encourage others to do outdoorsy stuff, people won't want do. Need get more people, groups, involved to encourage others.

Discussion Question 3

Golden, CO

(cont.)

Walk to stores, garden, river - need a more inclusive view of how we connect people so we can walk, bike, get outside without it being such an effort or having to take a long trip. Make communities more accessible to just get outside.

If people saw outcome of what they can do, they would be more likely to get out there (example: for me, cleaning sand dunes was hard, but I didn't know I would be able to see the sunset afterward!

The problem with Fed grants, the process is too difficult for agencies/interested applicants that don't have the staff and resources devoted to applying for them. The forms are hard to fill out- Feds should streamline that process; make it less of a pain. CO Open Space has a user-friendly process.

1. Federal funds should be targeted and 2. Flexible and used across boundaries and agencies 3. Full funding for LWCF. It's not accessible to non-profits. There is fear of fed government by land owners who would work with a land trust and third party easements.

Storm water management is important. Make sure that development in urban-metro areas is accountable for the quality of our water. EPA needs to be a better steward, with more power and inspectors. They should work collaboratively with private sector and with developers to stress their impact on water quality. Also, federal forest, fed lands, there is lack of funding. There are plans-fund them. The plans were well thought out, implementation plans not being implemented.

Focus on the Conservation Act. The fed role is research, more innovative research leading to more scholarship for students who want to pursue careers in natural resources. Government can stimulate interest by funding environmental science students. Larger environmental policing force, recreation has degradation of parks, so there needs to be more agent personnel and strict legislation that would force corporations in certain industries to make positive environmental regulations.

Feds have opportunity for landscape conservation and partnerships; we need a White House coordinator to provide top-down direction toward conservation, in the form of executive order, firm direction, in light of global warming.

Federal government is capable and would do the public information campaign. Need it to be saturated, to talk about the health benefits of outdoor recreation that benefits every group in the room, not playing favorites-it makes everyone healthier, smarter, better-looking... Gov could do the campaign.

One thing the federal government can do is put a hold on anything different to our wilderness areas to keep wild in our wilderness. We need to think about what we are doing now so we don't ruin the areas for future use. There are great wilderness areas that are threatened.

Government needs to be courageous in the establishment of national monuments. This program needs to be strengthened and maintained as a national program that is in the executive branch and not in the states.

Discussion Question 3

Golden, CO

(cont.)

Federal government needs to do something to help its agencies talk/communicate better. Right now we reinvent the wheel too much. We need to have more of the same programs throughout each agency rather than individual initiatives special to one or maybe two agencies.

The NPS, USFS, and BLM have been losing representation on the ground (e.g. Law Enforcement and Interpretation). We need to reprioritize budgets to get more money and folks at the field level so we can better work with our public.

We need to have an effective delivery system to our youth where they are educated. Thus not after or outside of school programs, but in school programs is critical. This is where the rubber really meets the road. We have skipped a generation in terms of outdoor education. However, teaching the teachers is a key piece to this (above statement) and something the federal government should be more involved with.

1. Expand tax benefits for selling developmental rights 2. Expand ease of acquiring easements

1. Estate taxes--keep reasonable

1. More interaction between public and the feds 2. Schedule meetings when public can attend

1. Research--field research 2. Federal influence on integration of experiential learning

1. No Child Left Indoors Act

1. Decisions should be transparent 2. Government should do for people what they cannot do for themselves

Boy Scouts and Girl Scouts have a strong service and leave no trace ethic. Exposure as children is important. These organizations get challenged by bureaucracy. Schools used to sponsor these groups. The Federal government should support these organizations.

Invasive species, bark beetle epidemic in Colorado. Dead forests aren't places where people want to recreate. Federal government can help with this.

Outreach through nature centers has really decreased. Used to be State Parks, National Parks, etc. would visit schools. This increases interest in participation. State and Federal programs could help with this.

Douglas County also has a nature based education school. Federal government could encourage this model. Communicate these successes. Develop common messages.

Discussion Question 3

Golden, CO

(cont.)

Federal government to standardize data and research, tracking results. SCORPs are good.

Controversy over global warming. Federal government should have scientists working on monitoring and addressing global warming.

Federal government guidance and endorsement that instructional time outdoors is a valid educational strategy as well as promoting health.

Indemnification for public purposes to expand participation by youth.

Youth Corps funding increase.

Program in colleges teaching outdoor skills. This is paid as part of tuition (CSU and ten other universities). FW111, Outdoor Field Skills. Work with partners (outfitters, state and Federal agencies). Excise tax on outdoor equipment (backpacks, hiking gear) -- could be a minimal tax.

Better use of federal funding for NGOs to help carry out some of their programs. The more they can involve NGOs the more they can help bring in young people, teach realization of the importance of these landscapes.

If there was some program or some money from the fed gov, matching funds, would help get them out in the outdoors but it's getting harder and harder. Have to get money somehow. Get funding so don't have to charge so much – keeping some people out. Maybe we need more national parks.

Most of us live in urban environments, so I feel the government should focus more on urban landscapes. Have an office about landscapes where people live. Provide funding source for urban projects. Full funding for Land and Water Conservation Fund over a period of time. Think there's a need for seeing how city connects to the country and vice versa. CCC Effort in Depression – in this environment, maybe 20 and early 30-year-olds could get involved with their kids, provided with an employment opportunity.

Encourage federal government to expand partnerships with organizations that get young people working on land, eliminate fiscal barriers to relationships, increase funding for organizations like ours that get kids outdoors. Consider whose assets can help solve problems. Youth unemployment is huge. People in 20s needs to work and go to school – Youth Conservation Corps.

Encourage funding for wilderness management. Get people out there – whether volunteers or professionals, need more funding. Facilitate communication between society and wilderness groups - education, guides and outfitters, conservation groups, land managers, etc. Use wilderness as key outdoor touchstone. Place volunteers in field to assist wildlife agencies.

Discussion Question 3

Golden, CO

(cont.)

Get kids out there, get them active. Find ways to bring local groups and government together to make that happen. Federal government role may be limited – must be ground up. Get kids started early.

Partnerships need to focus on environmental education. Funding opportunities for this education, programs. Remove the gray, replace the green. Bark beetle kill – need to take a look at. Will just take away opportunity we're looking for, connected to climate change. Connect dots – recreation with preventative healthcare, obesity crisis. Next crisis will be emotional (when troops return). Insurance companies need to play a role in helping the government care.

Bring disparate groups together under one umbrella. Federal government needs to consider flexibility in how they direct land and water conservation fund dollars and other grand funds to consider states that are getting it right so can implement great ideas to overcome challenges. Lack of awareness of benefits and how to access outdoor activities. Government should help say what opportunities and how to get involved – gap analysis. Benefits – education and media campaign similar to “This is your brain on drugs” – get outdoors, America – inundate Americans. UPAR funds that help inner-city parks that are failing, rescue fund. Bring back UPAR!

Using landscapes to teach across American West – easy in east, only way to learn about landscape is to be on it, landscapes are ultimate classroom, history, culture, biology, geology, powerful tool build respect for culture, need new landscapes set aside, NLCS provides vehicle for teaching about lands as entire ecosystem. Improved access to lands through government funding that provides classrooms. Provide competent and diverse teachers, need standards for outdoor education from Department of Education – crucial role. HHS needs to be eminently involved in obesity awareness, Department of Agriculture needs to undertake education for relationship food and natural systems, Interior. Outdoor-based curricula, comprehensive inventory of lands, public and private, which can function as classrooms, inventory teaching resources that are available, competent teachers, and link. Do away with public attitude of fear toward access to difficult places. People need to be encouraged to swim rivers, climb mountains, without having every piece of equipment from REI to do it. Teach how land forms and water shape human history. National Trust for Historical Preservation involved in campaign to do what wilderness society did with creation of NLCS, set aside cultural landscapes. Know and be able to teach how people at Sand Creek used landscape to save selves, grasslands shaped hist of Santa Fe Trail, etc. Teach about landscapes from landscapes – will get people out, make them healthier, engender tremendous appreciation for entire planet.

"At a time when our natural resources are disappearing at an astonishing rate, the government has an obligation to promote sustainability, biodiversity, and conservation in any way possible: education, regulation, provision for quiet recreation (hiking, biking, fishing, enjoying animals and birds, etc.), discouragement of destructive practices such as off road vehicle use and destructive extraction processes.

Federal Gov't role. Nature close to home and first experiences must begin at a younger age. Large minimally inhabited areas and control and balance of the management of offroad vehicles and RV's.

Discussion Question 3

Golden, CO

(cont.)

As simple as getting kids out fishing. It's huge. Federal government shouldn't forget about the tribes. They get little money, but the eco tourism for the public. Many are intimidated, and the government is a huge part. Transportation to these reservations is a big part.

Federal gov't to create a database about the outstanding attributes of the land and wildlife.

Public transportation is there but can improve greatly. Federal involvement in transportation to get people places more safely.

Federal gov't has a role to give guidance on water, and help communities create water trails, etc.

Challenges: IRS fraudulent accusations, encourage outdoor use, increases the impacts and waste disposal on the land. Group size damage, impacts to the environment. Need to educate about what the outdoors are about and preservation. Concerns from San Isabel involve the IRS; Crystal Mountains and problems with massive trash, etc. from people who use and damage the area because some people being allowed to do whatever they want when there while others' accessibility is limited. Educating youth on preserving the area. LEGACY FUND.

Tie Federal initiatives to the local levels.

Challenges: How important it is to have the dollars for landscapes - farm and landscape protection. LWCF is important. Tapping into the energy of land trusts. Relationships between the Federal, Local and State Governments. More flexibility with the Federal Government to have roles that are more coherent. Federal programs that aid preserving landscaping are vital. Ways to tap into the energy of land trust and private citizens, goes a long way. Overlap - more flexibility on the Federal government working to have rules that work across such overlaps. That the Federal government recognize there may be a legitimate need for more protective rules in metro areas than are necessary in rural areas and not trying to have a one size fits all mentality.

Federal government focuses on the land we manage, need to place more investment on stepwise progression from urban areas to lands. Need places where families can take them first, then to state parks and federal lands.

Education - fed dept of education needs to get involved and partner with them/outside agencies.

Fed Govt has standards for highway; need to expand for pedestrian and bicycles that is realistic.

Exclusions

Discussion Question 3

Golden, CO

(cont.)

Getting the word out - making it cool to be outside. Have govt to help w/ public sv announcement in theatres, schools, etc... Assistance in funding the marketing aspect

Let public know why ELK does what they do - wildlife belongs to the people and our future children.

Conservation CRP - whats protecting our native grasslands. Allocate about 2MM acres - land that farmers get to farm - encourage on a Farm Bill; 60% sits East 2nd largest area. Wind Energy is the doom of our prairie crops ; not the answer unless its put in the right place. No regulation on wind energy except for State of WY.

Reaffirm that BLM establish acreage - BLM wilderness has been leased to oil n gas. Impact of going after oil shell (land, water)

Leadership role in helping wildlife survive. Praise for Natl Park Sv - staff people/partner liasons wkng together and need more of. Funding for these types of volunteers or planning.

Renewable Energy on Public Lands - getting help fm Fed. - incentives when energy plan passes. Royalties that we get fm oil n gas

Fed Govt partnering with Lands Trusts - 2008-2009 leveisl would be nice to get back to - tax deductions would be nice. Natl Inst of Health - get people encouraged to exercise due to them using our parks, natl forests, etc..

Let's Move Outside - First Lady. Congress allocations for conservation budget. Enable Congress and Fed agencies for more funding on Conservation, etc..

More fed state dialogue. With the local govt's wkng the best way.

Fossil fuel - renewable issue; Americans waste energy - the wasting makes it a either/or. If you get standards for retro fitting - homes i.e. carbon negative it is a powerplant then we don't have to worry about windmills /renewable energy. Govt needs to push for new homes, deep weatherization. Standards for new homes/ have glass that overhangs. We can do all this and not use the windmills.

Under the guise of what works, with motorized recreation, the money is allocated formally, but partnerships with land management agencies - they don't have the capabilities to deal with us and our monies

Discussion Question 3

Golden, CO

(cont.)

I have lots of ski experience and outdoor experience. Our Denver area Founders understood the relationship between front range and mountain uses. Winter Park endeavors to get kids out. We approached Denver, but this outreach is stalled. No growth in getting kids to ski areas. Cost of winter sports has created minimal participation efforts. We need to look at President Obama's own upbringing and fostering of value to him for parks and the outdoors. Need to work with families to help them understand these values. Funding is finite, so you need to motivate families and kids. Work with emerging populations to get them to feel more welcome and getting outdoor use. Legacy of public lands is needed.

Vignettes of education are needed. We need to mentor young people in the outdoors.

Support leaders of outdoors in kids and others being in even just their backyards. Support initiatives - getting people out, revitalizing cities. North of Denver are working farms - I love to see these. Important to see areas outdoors is not exclusive, and you don't have to travel far. You can even just plant flowers on your doorstep, or you can just stay close to home sitting under a tree. All this is really getting outdoors, too.

I've raised two kids in school systems - public and private. Unfortunately, neither have any more physical education nor outdoor programs. We need to bring these back in our schools to get kids outside.

Federal agency coordination, low hanging fruit, empower employees to think beyond their agencies, need to drop barriers to agency employees working outside their own silos

Forest Service Planning rule, asking for public feed back on the new rule, use data FS is accumulating can be used as part of the AGO effort, conserving water sheds etc will help preserve land and wildlife for more than just people

Question for you. On Public Lands Day I've seen agencies work very well together. How is it one day a year the agencies can work very well together and, yet we hear they can't the rest of the year. We have to take care of what we have. CCC's long time ago. Those of us who like to hike will just hike further from the developed areas.

There should be full-funding for the Land and Water Conservation fund. We think there is a need for projects that concern the big picture, and will be beneficial for years to come. The CCC effort in the depression has been a great help for many people. Let's get more young adults involved in helping children get outdoors by creating jobs for these 20-30 year olds.

Is there an opportunity to model after the "This is your brain on drugs" program? The urban parks and recreation recovery programs are failing, because of no funding. They haven't had funding for years

Many GoCo trails are full of signs that recognize who takes care of them. It is important for agencies to also participate in education programs when structures are built.

Discussion Question 3

Golden, CO

(cont.)

Set aside cultural landscapes, in order to teach people about how our land has shaped our history. This will help connect children to the great outdoors, which will create greater health and appreciation. How about getting entertainment (bands, actors) that peaks youth interest out into nature and talking about it?

There needs to be a rationalization for all various government funding programs in order for this money to be spent as wisely as possible. It is important to acknowledge that government programs do not always produce results. This idea needs to be planned out thoroughly, and all the best ideas need to be gathered. Let's create competition of ideas in order to have a well thought out program. There are many problems with the forest, other than the bark pine beetle, that need to be addressed. I think Colorado is a candidate for another national park! The landscapes here need more protection.

Conservation- Wise use, not just protection; conservation is key, conservation is the new protection, good responsible wise use of land. Getting more ppl outdoors, when you develop a partnership, all voices are at the table (voices from one end of spectrum to the other). Opposing ideas get pushed to side, must work best for everybody. Forest Health Issues, giant fences around our land may mean less protection, President to reach out to broad community.

bring disparate groups together under one umbrella, and let's start working together. We made many recommendations, but there is no way to get those recommendations going because of funding and other challenges. There is a lack of awareness about the benefits of getting outside. The government should provide answers to questions: What is there to do? Where will I find it? And how do I do it?

There is a link with getting outside + preventative health care! Our insurance companies are facing obesity and mental stresses (war trauma), so they should also get together with the government

There is a lack of awareness about the benefits of getting outside. The government should provide answers to questions: What is there to do? Where will I find it? And how do I do it?

In this area, we actually work on a one-to-one basis with BLM and forest service; work around federal government because their rules don't work. Allow more control locally

Push down and empower local agencies with decision making

opposite point of view, federal lands belong to every American, putting them in local hands lends itself to manipulation, fears endangerment of lands, nations treasures, federal policies there for a reason

Not saying to ignore national monuments.. just how we work with federal service

Discussion Question 3

Golden, CO

(cont.)

Some county commissioners would love to control their lands, bad idea

Takes different perspective as well.. good opportunity for agencies; Opportunities for more guidance from Federal Gov. help with navigability, help with rivers

Administration needs to come back to center again.. some leeway.. need to find a balance between Federal and local levels

I agree, no one cares most about local areas than natives.

Discussion Question 3

Grand Island, NE

Tri-Basin NRD and Phelps County Weed Control Association, works. CCPI Nebraska being one of the few states where the cooperative landowner owns the land up to the rivers edge. Nebraska was been hit with influx of invasive vegetation. CCPI put into last farm bill and funds were set aside to encourage landowners to utilize those funds to cost share management of this vegetation..Concerns about CCPI program because it is not continually funded because we know even though Nebraska was granted \$4.5 million, it may not continue to come. We need to see that because there is a learning curve, that landowners don't jump into things until they see what their neighbor does. We need to see this continue because we know that those that don't sign up now will sign-up in a couple of years. They put in money of their own. There is over \$86,000 committed to CCPI. Landowners do understand it and it helps control these invasive plants. This is somewhat limited in Nebraska because it is only for fully appropriated land areas. Over half of state doesn't fall into this area. We need latitude to get it used in other areas in the state in the next farm bill.

Something we talk about as outdoor education . Once they're educated they need access. They need opportunity. When alone they won't have access. They need local opportunities. One thing to help with this stems federal government land and water conservation fund. There is movement to get this to full funding \$9.5 million. One key element left out now is that most money will wind up going to federal programs and parks. We need at least half to go to smaller towns so they can provide to local families. Lots of families won't have opportunity to get to national parks. Needs to go to smaller or any town in Nebraska so once the kids are educated they can get access to do. What kids learn in school, if there is not an opportunity to do it, it is gone.

Saw the tour this morning, there's an incredible partnership between landowners. 3600 miles, 700 landowners. Missouri River has Wetland Reserve Innovation Program. First state in the nation to have this. Common resources can be targeted to land scale initiatives. Common landscape scale objectives is hugely important. We are lucky in Nebraska to have Steve Chick. He is a good listener. He's open minded enough to listen to ideas from the field. Then he sets that tone with his staff to also be good listeners and try new things. We need that kind of leadership. With 97% of land privately owned you have got to have cooperation. Forcing realization, working partnerships and targeted collaborations that have been very successful.

Every year around budget time local offices spend time and energy trying to defend their existence/budget. What isn't working: STOP trying to remove funding from RC&D's.

Discussion Question 3

Grand Island, NE

(cont.)

Funding for RC&D needs to be funded. It works. You don't get something for nothing. I've been in this a long time. We are in red zone for level of funding for NRCS technicians. As talk about incentives and education, you're right. Have to have both. Who does education with landowners? The local technicians that work with NRCS. Dollars and workload and amount of time and then still be accountable to taxpayers. Absolute foolishness. Cannot keep increasing the work load and expect the techs to continue the work load. Something has to give somewhere. We are clearly in the red zone. Yet will put more cost share dollars and land into programs but cuts the technicians. We are at the point. We are doing disservice to all other tax payer dollars that has been spent and invested. Because they're not getting done. The point has to be underlined that we can't continue to rob from the local technicians there and still get the job done. Made enormous progress in conservation. Need both – adequate staff and adequate incentives. This is an investment and it's part of protecting water and soil resources for future generations. I'm sure Steve Chick will take me to task for that.

Been around about 20 years. We've worked on several projects of as part of effort to develop literacy plan. It is on the NACEE.org web site. Would welcome any last comments. Will present to Board of Education this August. Funding as part of education act to get kids and families outside. Funding goes thru Department of Education to provide more training to teachers to incorporate this in their course work. Many ways that the environment can be incorporated in all subject areas - math, social studies, reading, and the arts. Also health issue too. Increased youth obesity. Challenges: Comes down to money. No child left behind act has forced teachers to teach to test. Forced to cut physical education, recess time. No money for field trips. Unless kids can raise money to subsidize. Kids don't know what nature entails. Used to mowed lawns and game boys. No one likes taxes but maybe increase taxes on game boys type games and put money into education. What works is starting young. Teach teachers how to teach these things in their curriculum. Hands on aspect is what hooks kids. Can't teach nature by showing videos. Develop outdoor classrooms. Field trips. Funding for school to nature type areas. Liability aspect mentioned earlier. Private and public, We grew up with 10' tall slides and monkey bars but now all the regulations governs the types of playgrounds. First place that is cut is parks and rec funding. Funding for educators, person pursuing teaching degrees. All states have funding for literacy place they have to have one of these in place to qualify for funding. All states are working on this so Dept .of Ed at national needs to do more to emphasize outdoor education and opportunities. Archery, fishing programs. A lot of programs out there but need dollars to support these programs/activities. Off-shore drilling leases. Congress needs to get guts to increase, my understanding we're still charging companies what we charge back in 1800's to mine on public lands. Those fees need to be increased.

Land owners and owner operators, you know how fiercely independent those people are. You won't get anything done until you get those people on board – conservative conservation minded people. We burn 4-5000 acres of cedar invested acres every year. Until you get the farmer/rancher on board with same agenda you have, you won't get what anything done. You're not talking to the right people.

Discussion Question 3

Grand Island, NE

(cont.)

I was on team of people to resurrect this nature center. It went under and lost all of its money. There were lot of federal agencies that talked about getting kids feet into the water. But when I went to them they did not commit to following thru to get the kids into the wilderness. A lot of lip service. Each raised the flag about the issue but they didn't walk the talk. If you have these portals that have a mission to get this done then fund them. If you cut a tree down in Nebraska in the name of conservation you about get lynched. You have to cut trees down in wetlands or you don't have a wetland. Planting trees is conservation but only in the right place. The Arbor Day Foundation might have a public education campaign about "get your feet in the wilderness". The Arbor Day Foundation campaign is very effective.

Challenge—land and water conservation. Offshore drilling royalties. We have developed golf courses, pools, and parks, using land/water conservation funds. Most are matched 75-25. There used to be tremendous monies allocated across the country. Now I feel guilty for even applying for some of those funds as a larger community because smaller communities struggle to get the funds. This has been a huge process that matched dollars that is no longer available that allowed us to do a lot of these projects. The recent history with different highway bills, the trails programs have become 80/20 matching and are very popular. This year the state is not accepting any applications for trails because there has been a free-for-all between federal highway and Department of Roads when it comes to administering these programs. Struggling and making Nebraska jump thru hoops with charges to apply for these grants. Someone's feet got stepped on at national level that have caused a responsible charge. Need to have an engineering background. Must pass many tests, many hours of study. As Parks and Recreation Director, I can no longer manage this program because, for example, of a program that struck a chord with local people. Senator Nelson has been contacted to try and get past the roadblock. More of state/federal issue in Nebraska.

We have the largest reservoir in Nebraska. Lake McConaughy in Keith County, series of 29 lakes and reservoir. Stated purpose is irrigation and hydro-electric generation. The problem I have in working with the farmers and it needs to be stated here on a base level. Ag is Nebraska's base economy. If farmer's get more efficient there is more water for the river, and wetlands. They need to be more efficient at moving from pipe irrigation to center pivots and subsurface irrigation . In a large way they are priced out of the market. Pivots have gone from \$25,000 to \$50,000 in over 10 years. Need NRCS cost share. About 60 percent gated pipe in our system. Would like to be 100% for pivots or subsurface. Ag Water Enhancement Program (AWEP) proposal where we can group our producers together and affect the entire system. Fully funded in 2009 and partially funded in 2010. We would like to see that put in Farm Bill and be fully funded and increased so that we have some water to work with in Nebraska. I appreciated _____'s comments earlier about large water bodies. If we have large water body, people will come. We have visitor days where people will come. What I hear that you don't know we would love to have school kids and instructors come to our lakes. Anything we can do to provide free public access, probably need a park permit. Anything is possible at the big lakes. Would love to partner with anyone that has a bunch of kids come with an instructor. Maybe that's something that might work for all of us.

Discussion Question 3

Grand Island, NE

(cont.)

The funding availability to do education whether it is to build a web page or to put techs on the ground is just not out there. I know money is tight everywhere but I have personally been surprised to find out how few dollars are out there. This has to start with the next generation.

Access issue that was raised .Game and parks does have a long standing program of paying farmers for access but that funding has plummeted and that has suffered. We're more immigrants and more urban dwellers now so fewer and fewer people in state have ties to land. #2 in the country for lowest public lands.. Huge lack of public lands for people to get onto the land. Needs to reinvigorate programs to get public lands for access for people. Need to address fundamental issue.

Back to some education things. There's some great education Project Learning Tree, Project Wet, Project Wild, H2O, etc. They stand alone. They haven't been correlated to national teaching standards. The Department of Education should create a curriculum that addresses environmental education themes across the entire curriculum. Math lessons could have environmental conservation themes.

As a parent, I know a lot of parents of young children. We keep our kids so busy so they'll stay out of trouble mainly. Between home work, athletics, playing with friends. Only time to get into nature are those close to home. Let's take care of green spaces in neighborhood. Come up with an 8 week long nature type thing or something for kids to do something beside soccer, tee ball.

College students are doing far more volunteer service then they used to because there is not enough money. How can we organize college students, high school students, and senior citizens to volunteer?

The UNL Extension Office uses a facility in Hastings at the old Regional Center. This center for outdoor and agricultural learning, Prairie Loft, is using grant monies and private donations to operate. Most of the work is done by volunteers and privately funded. I want all these agencies to work with schools more.

My family has been here 140 years. We are involved with center pivots. We have water running out of our ears. We cannot put down another well. The government needs to leave us alone. The farmer is the dog that keeps getting whipped.

What does a hike and bike trail have to do with water quality. Is this an area the government can fund? There are various states where you cannot hunt and trap anymore. Beavers are overpopulated. We need to revisit some of these laws. Hike & bike trail are a real bonus.

The Platte River Recovery is being forced on the state. The US Fish and Wildlife Service needs more water in the rivers for the piping plover, etc. Farmer should not be required to quit irrigating. Why don't we try to replicate some of the dry years when the rivers were dry, then the invasive species can die out. We are creating designer habitats on the river. Enhance habitats on the river by getting rid of trees ... not increasing the water level. A hundred years ago before developed irrigation in the state there was large blue stem grass, so basically years ago we were fully appropriated. Some of these changes make no sense.

Discussion Question 3

Grand Island, NE

(cont.)

The federal government could fund more Game and Parks activities? More and more pivots are being used statewide utilizing less water. From Grand Island to Omaha you can get by without irrigating, but if you go west the farmers need to irrigate. The Platte River Recovery Implementation Program requires we go back to water usage of 1977.

We need more tax incentives. Give people tax incentives if they volunteer. NRCS does need more money. They are understaffed.

Nebraska NRD's own and operate facilities that are free to the public. It would be nice if we could have access to more federal dollars to promote NE. The gov cannot be everything to everyone. We can be a resource to a volunteer organizations and public schools. I am a farmer, not at it actively. We started a program with Gothenburg High School and worked with FFA/biology/science for outdoor education. We obtained materials from NRCS and NRD. My family ran this program for 20 plus years. We passed the program on to our neighbor and it is still running today. It is a lot easier to run a program like this in a small town. We targeted 4th & 5th grade students and showed them how to husk corn in the fall, milk cows, etc., and exposed them to the environment. It is up to us to take the initiative to expose them locally. Another project one of the NRDs is working on is an educational trail. We are working with the local ag organization to promote the trail and place signs with points of interest, i.e., who it was settled by, heritage, history, culture, etc.

Has been interested in the conservation taking place. He has had school children to his place and taught them to identify different plants, roots, shown them corn, earth worms, bugs, etc. We need to pay farmers not to irrigate. Farmers are using way to much water. Use the water appropriately; they need education on this issue. How do we get the kids to the farm? We need to make the parents be there. We fed the kids by roasting hotdogs on a stick. The kids had never done this before.

We need to prioritize. Five acres in the middle of Omaha does not cost as much as land in Los Angeles. We do not have the Congressional support that larger states may have. We would like the money allocated more fairly. Our cities may not be considered urban.

I disagree with this comment about getting parents involved. When I was a kid we built a tree house high up in a tree and wandered a creek nearby. In cities, how do you get kids in an unstructured area? A playground with plastic slides is not what I am taking about.

Agencies could get a list out to the schools of what services they have.

We need to get NRCS out in the field instead of shuffling paper. People have gotten away from getting into the field. They are filling the reports out to get money to farmers.

American Heritage River. The federal government was here to take over the river. Fortunately there were enough farmers to take this back. What rights do you want to take away from us?

Discussion Question 3

Grand Island, NE

(cont.)

Landowners reluctant to get involved because of bureaucratic nightmare. Private landowners are reluctant to get involved. Stewardship program was so simple - the land owner appreciated that. In comparison, EQIP is very complicated and confusing. Bureaucracy is a negative for people. KISS methods.

Spend too much time planning and not getting any more done. Value of woodlands/ environmental services. Future will be in conservation. Biased likes CRP need for Ag cropland, woodlands and the service they provide. Need to have Forest Reserve Program.

Questions cap and trade issue – implications. How to keep balance - carbon sequestration.

Need to teach children about outdoors – just have to go outside. Frustrating to say Federal Government has no role in schools. Teachers say federal regulation don't allow them to do that. Suppose to be educated in school, but they aren't learning anything and then we try to do it with afterschool programs. Kindergarteners get 15 minutes of recess because it is a Federal regulation. Federal government can help us.

There are more and more layers of bureaucracy; Need to reduce this. How can we do what works. More flexibility.

Continue partnerships - Pheasants Forever, Quail Forever..., etc. More freedom with Pittman-Robertson money (federal excise money given to state through Dept of Interior, that comes from individuals buying guns, ammo). There should be some avenue for passing money to partners. No child left inside - connect to literacy program. Kudos to put biologists out in the field. PF QF help with the Federal programs. Access to office and resources and help you get through the red tape. Need to get rid of OMB. Hunters and anglers would be supportive of excise tax to be used for other things. Pass it through to other programs if they (Feds) would be allowed.

Hire teachers for the summer. Invite teachers to work with your organization and use resources from your agency and they can then take back to the schools. Teachers can be hired non-competitively to be part ranger. They work on teaching plans but have to involve the program. Let them do their own lesson plan and use your resources.

Incorporate more community volunteerism and outreach. Relationship-building. Must give relationship time and energy. Relationship has to grow. Allow for employees to do more volunteering/outreach on company time.

Be more effective with existing funding. Look at streamlining - how to get current funding. Level playing field with the rural area. Village of 300 shouldn't have the same rules/paperwork (to receive a few thousand) as Omaha (does for a quarter million project). Recreation lawsuits. One size fits all for federal projects is not the best approach.

Eliminate the office of OMB. Federal employees, i.e., NRCS, etc need to get out in the field and see where their money is being used. We do more on administration and paperwork than we do on the program. (OMB) needs to get out in field and see what the money is going for.

Discussion Question 3

Grand Island, NE

(cont.)

Need to have more groups discussing these problems and issues and conduct programs like we are doing today. "There is no wheel that has not been invented". Need to collaborate rather than butt heads. Need action to go with talk. Look at a lot of programs, initiatives and studies - reduces ADD, Obesity and seeing better. What works with you and your barriers. Don't need to reinvent the wheel. The bureaucracy gets in the way.

Recognize that government has a role but cannot solve all the problems – use where most effective. Concept of supporting conservation - getting back to nature. School curriculum is avoid litigation. States created statutes. Feds can't solve all the problems. Focus on effective role. Positive on things Feds can do.

Need to coordinate messages that come out of the government. Food pyramid - exercise by going outside. See how it all fits together.

Needs to be some type of movement - society needs to see issue as important and value it. But...do not need more regulations. Needs to be seen, movement within organizations before there will be real change. If Federal Government could back without regulations.

I hope McKenzie Barry's suggestion to form a Got Nature campaign didn't fly over everyone's head.

It's not only with grants, but with budgets for the federal government. There is a functional part of this that has been broken. The responsibility lies at the feet of the administration and the feet of congress.

The importance of farm bill conservation dollars are really critical, it is the biggest pot of money. It is the right decision to rethink how much program dollars can be used for technical assistance.

The No Child Left Behind Act is a good place for government to get involved if change is to take place in the schools.

Discussion Question 3

Grand Junction, CO

FUNDING - we get GOCO, USFWS, NRCS, etc to purchase easements. Another way we operate is by providing tax deductions - federal government should facilitate those deductions

federal government can recognize state's rights in terms of fishing and hunting mgmt;

encourage states to utilize state DOWs - project wild/wet; federal gov't should put in place a federal conservation stamp

limit lawsuits to federal government - to reduce time that land management agencies spend on dealing with lawsuits

streamline federal permitting processes

feds can help facilitate process of developing partnerships

revisit the way feds deal with split estate

federal government should play a greater role in partnering at a landscape level for conservation

federal role- ensure connectivity on federal lands and establish energy policy on public lands which creates incentives for renewables

put money into education foundations at the grade school level

work with land trusts/ranchers to prevent development in open areas

more funding for state parks/federal land mgmt agencies; game wardens are way understaffed; government needs to get out of bed with energy companies and enforce current laws

throw more money at parks - most kids have first experience in parks

tools - quit cutting money for land management , tools for advancing interagency agreements, restore clean water act

eliminate Mining act of 1872; should not be giving away public land for low price for energy development

Discussion Question 3

Grand Junction, CO

(cont.)

Disconnect between the agency messages and the local kitchen table conversation. The feds can work within their own means (no new programs or money) to bridge between existing programs and the kitchen table. Feds need to expand the existing information

Federal government is very inefficient at getting money to local organizations or businesses. The best way to get money on the ground is through local contracts, independent businesses.

different agencies often have competing (or at least different) values that make it a significant challenge to pursue multiple grants for a local initiative. Land owners stay away from federal programs for these reasons.

what works is connecting children with nature and giving them opportunities to go places, would like to see a national program that mirrors local efforts to take kids outdoors

Feds should support and promote land trust organizations. Feds should recognize that private sector is capable of policing itself and should remove some of the restrictions/requirements that are too invasive on the private interests.

Need an evaluation of grant programs to assess their effectiveness.

Ask “how complicated is the grant application process compared to the benefit and return”. Feds also have control of tax incentives to local land owners. Promote state tax, conservation credits, etc. Feds can help promote a directed and guided tax poli

agencies can ensure that partnerships don't lose key partners or key expertise (such as a fisheries biologist). Money and people always seem to be the limiting factors – particularly younger staff. Agencies continue to be the lasting partner

emphasized the benefits of Vista program. Feds could provide more money to allow small community organizations to take advantage of the Vistas

can the feds proclaim they support these type of partnerships by doing away with “matching grants” and promote “Donations in kind”

Federal gov could help with their programs – help protect what we have and minimize fragmentation, help reconnect to what we have

the federal government can look to existing partnerships and programs at the local level to serve as an “interface” or a facilitator. For example: CFLRP program through USDA – focused on large-scale forest health partnerships

feds should focus on preservation of a “great outdoors” above all else. There needs to be an intact, healthy “outdoors” to connect with

Discussion Question 3

Grand Junction, CO

(cont.)

feds can ensure adequate instream flows

would like to see greater spending at the federal level on environmental/outdoor education.

II. Land Use Planning is a local responsibility. Need more input from the community in land use hearings. During campaigns, ask local officials where they stand and what you want them to do.

IV. Retain and improv

Land mgmt entities need to use motorized users to educate folks when they see things going wrong. Land managers need to educate users so they give out right messages.

A lot of change has occurred over last 5 years. Federal agencies are working much closer with local constituencies in the last 5 years and they should continue to do that. Build on 3 C's from previous administration. We have a lot of infrastructure in t

Oil and gas standards need to be outcome-based and quantitative for reclamation, similar to the standards required of coal mining.

Challenge is that this administration needs to replace some political people in high-level positions with science- minded people. The public thinks high-level employees are secientists, so there is no oversight. We need scientist not politicians.

Sportsman's education: The Colorado Division of Wildlife is the only agency getting kids involved in the outdoors through sportsman's education. Need to get federal agencies involved in similar efforts. Hunting and fishing will foster interest in outdo

Discussion Question 3

Grand Junction, CO

(cont.)

Turn over is not a bad thing in agencies. New employees not afraid of change and are supportive of collaboration.

Change NLCS to "national conservation lands". This will reduce confusion with public and BLM.

Compliment to BLM, USFS. BLM and FS working with focus groups, providing meeting places and assistance, etc., works well.

One of the best tools is NEPA. Agencies do not apply the same NEPA standards for themselves as they do for industry. Agencies are stringent in applying rules to extraction activities, but agencies don't apply the rules to themselves. That detracts from

Encourage congress to listen to what the people said today. Communicate a thanks for organizing the meetings. They should listen and act. They need to think long-term. Think of the tremendous resource they can take advantage of. Agencies need to work

Strengthen management of BLMs wilderness study areas and USFS wilderness. Outside impacts identified in NEPA but are not being addressed on the ground level.

NEPA identifies offsite impacts but they are not realistically addressed on the ground. Agencies need to mitigate them instead of having local communities deal with them. Fire policies will become a growing concern. Fire management education programs

Discussion Question 3

Helena, MT

Missed opportunities for fed, state, and local government agencies to work together across boundaries to create comprehensive heritage and recreation areas. Further support and promotion of NPS- National Heritage Areas.

Contract with NPS- turnover 3500 acers free and clear to Little Big Horn National Mon.

Move as swiftly as possible away from oil and coal use, encourage thoughtful development of renewable energy. Encourage individuals home use do solar and or wind energy. Avoid transporting electricity long distances- use and generate it locally. Focus on healthy wildlife population and distributions- "A healthy environment for man is a a livable environment for wildlife" Keep as much wild land WILD as possible- even reclaim areas back to wild state (good wildlife, habitats) truly road less areas don't contribute to water quality problems or habitat fragmentation, or attribute wildlife species or noxious spray. Apply presidential executive orders to maintain and protect soils and vegetation set up to the plate and apply protective measures to assure that we have functional and healthy ecosystems- they must not be compromised for the sake of pushing people into the outdoors. Introducing people to the outdoors must be orderly and educational so the landscape we are introducing people to are not ultimately sacrificed though our use or abuse. Stop "out" sourcing efforts that should be taken cared by dedicating knowledge, federal scientist/ employees. Take pride in the agencies, encourage them to take action to restore watershed and landscapes. Listen to people and communities but when even more importantly, please listen to the earth and its needs.

Clean Alternative Energies Now- Not 50 years in the future. We have the technology but not the political will!

Use the good will, motivation and concern for the environment and our public lands on the part of American citizens, especially youth/ children, to overcome some of the work that they long to do and that needs to be done to protect these resources. National Parks Forest Rangers can help facilitate this by partnering with local, non-profit and other groups to get Americans out in the land. Imagine that you could go to a National Park or forest or state park and on any given ay find a program, sanction by the par, where you and your family could help preserve the park (e.g. paint a picnic shelter, pick up trash, pull weeds, build a trail, ect). Our parks are underfunded and in need of repair. if we can budget the money to get the work done then ask citizens to help. This will get people involved, give them a since of ownership and accomplishment and ensure that future generations grow up learning how to care for our national treasures.

Thank you for your commitment to conserving open and working lands, wild and agricultural lands. I appreciate your seekng local and fresh ideas. I would encourage you to also recommit to programs and policies that are already proven effective. Voluntary conservation on a local level relies on LWCF funding ass an engine to spur local investment like the bond funds in this county. It spurs other private and state funding. Please consider making this permanent. Tax incentives are an essential piece and the third-leg strong partnerships with private conservation groups.

Discussion Question 3

Helena, MT

(cont.)

Get programs in the schools, more funding for conservation programs, Government working with grassroots organizations, listening

1) Keep good agency partners in rural communities to facilitate conservation practices and transactions. 2) make conservation funding consistent/dependable/permanent (land& water conservation fund, farm bill programs- GRP, FRPP, WRP, WREP, etc.)

This comment is from me as an educated, concerned, owing citizen of this great nation, and of Madison County, Montana. Our environment and our health. Put money into researching all of those points. There is potential for jobs, food, fuel. For clothing, tools, nourishment and it medical properties are proven. Changing this antiqued, racially driven law would allow ranchers to add diversity to their crops for industrial use and would create a cooperatively beneficial situation in so many ways/ Please consider this solution to many problems in our nation.

We must address the education of our resources professionals. We must include: conservation history, public trust, responsibility and ethics.

Modify the budget process. Resource utilization (example logging) and site reclamation (road removal) must be in a single appropriation process.

Provide the regulators and custodians insulation form political interference and the dogmatic beliefs held by transient office holders.

The mission statement of the Ruby Valley Conservation District is "protect the land and preserve our heritage"- I believe this is the role of the federal government as well. A tool to make this initiative work is to remove funding from things that are nor working- like the war on drugs, the wars in the middle east, and subsidies for wall street. Put that money into funding the agencies, people and programs that scientists employed. Replace retirees with apprentices rather than "saving money" by not hiring another biologist for a period of time, for instance.

Work more at watershed level

Fund senators Tester's watershed assistance project

MT. has enough wilderness area- also against federal ownership. Need our forest "open" and mud "closed" Leave historical buildings and cabins standing on Pouhand. Important to have access to forest service roads and trails- a hiking b. snowmobiling c. 4 wheel divers d. ATV use e. horses f. hunting g. lakes. Recently joined an ATV club and have enjoyed seeing clean up of the trails- keeping the trails open and working with the forest service on hand, it works

The U.S. Government needs to be a leader! A leader nourishes everyone and everything.

Discussion Question 3

Helena, MT

(cont.)

Reinstate the tax legislation which benefits use of conservation easements, expired 6 years ago.
•Fully fund the Land and Water Conservation Fund (LWCF), it allows for MT working ranches to be compensated, keeps open space, USDA should change restrictions on Rocky Mountain Front, not all private owners want to partner with the feds (USFWS) so make changes where conservation easement holders could be non-governmental [private land trusts]

Use collaborative efforts in travel management planning, bring all parties to the table to work out compromises, variety of users: walk, horse ,ATV, fly, wheelchairs

Red trees not due to mismanagement, due to climate change – winters are not cold enough to kill the beetles, global warming is impacting our environment. •Consider climate change as the number one issue, it impacts people, wildlife, watersheds, native vegetation is dying. •Local control in the abstract is good and is also the “Tragedy of the Commons” from overuse, exploitation by locals, an example is Haiti deforestation. •Get local scientists into the environments for best ways to make functional, on-the-ground, enlightened decisions. •Public lands are owned by all Americans, not just locals. •Protect Montana for all generations, help ecosystems to survive

Wants recreational opportunities for his 5 year old daughter, she is recycling in preschool, interested in conservation, wants programs for a 5 year old to do: help build trail, pull weeds, nail one nail on a bridge, something with a conservation flavor. •Too few park rangers any more.
•Hard to find the opportunities at national and state parks, national forests. •Too expensive for a family to stay at Yellowstone NP at \$200/night there is something wrong with that, camping not for all families with babies or grandparents

Partners with USFWS in weed management, wildlife habitat, establishing trust •Grassland reserve is chronically underfunded, the demand is great but only able to work in 3 counties

Need an Act of Congress to transfer privately acquired lands to NPS, Congress must extend the boundaries of the Monument [Custer National Battlefield near Harding, Montana, ?Little Bighorn Battlefield NM] •Threatened lands have been purchased using \$6 million from 3000 donors, 3500 acres purchased, and have been trying to donate to NPS for 10 years, also \$1million in the bank that can only be used to conserve the area

Suggested night/after work listening sessions. •Pollution in the Gulf of Mexico, make the responsible parties responsible, clean up, understands balancing the economy and the environment, the little shrimping operations are no more. •Pursue renewable energy here in MT, collaborate . •Climate change. •Social norm change, move into the future. •Government agencies are accountable to the public, commends the Obama Administration for going beyond rhetoric

Advocates full funding of the state-side Land and Water Conservation Fund (LWCF) appropriations; current funding for communities and schools is down to \$150,000-200,000/yr, funding has dropped to almost nothing; recent projects included Lewis & Clark Caverns, Pictograph Cave, Billings School District; desires equitable funding of LWCF

Discussion Question 3

Helena, MT

(cont.)

Fund the maintenance/taking care of the national forests, parks, and refuges; need help politically with the Administration and Congress; campgrounds; tremendous issue that it costs \$1000/visit to Yellowstone NP, everyone to have the opportunity. •As a rancher he is “sitting with the enemy” at this session; representatives from oil, gas, coal, and minerals need to be here; need to find how to discourse. •looks forward to the report, thank you

Preserve native grassland. Grassland sodbusting is occurring because of incentive programs that are mis-incentives in the Farm Bill, allowing 10,000 year old soils to be plowed

Local folks are ignored in energy policy and public lands. •Energy corridors on private lands break up ranches and local communities, what are you doing about it, why can't transmission lines go on public lands, it's easier to squash the little people, bury the lines if concerned about the viewscape; put pressure on the President and Governor, conserve and bury. •Local access issues, local management won't let us on the lands say impact land too much - mountain bikes are too much impact; Gallatin trails are closed; not everyone can hike, older people want to be able to use the public lands; think of everyone - of the “little people”

The funding source is threatened for making multipurpose transportation corridors (SAFETEALU) we need multimodal transportation corridors....bikes, walking, etc. The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A legacy For Users – provided funding for multimodal transportation corridors – this legislation has expired though it is being renewed on a year by year basis.

We have a lot of intellectual capital....need a survey of the intellectual capital in natural resources work....to see what the thinking is....need federal money to design a survey. No academic program in MT for historic preservation matters...has to go out of state for academic training in this field – expand natural resources studies to include historic preservation matters too

Wants small farmers recognized for their conservation efforts,thinks we should have more wilderness in Montana...especially in Rocky Mountain Front... Need to have more conservation education and also need to maintain virtues...honesty, integrity and passion for what we believe....government is not the enemy...need to make government more effective

Need to preserve native grassland...why is so much sod busting going on relative to native prairie? Gov't needs to stop offering incentives to do such things

Embrace the challenge to connect young people to the land

Wants three proposals considered: We have Statewide Comprehensive Outdoor Recreation Plans...but they have not been synthesized into a national outdoor rec plan; 2) create a pilot program for best practices for outdoor rec planning; 3) needs more Fed assistance and staff to help with outdoor rec planning

Discussion Question 3

Helena, MT

(cont.)

Reconnect families to outdoors...insurance, permits parents need to get more involved...to create more users and empathy for outdoor causes....wants to help state parks create programs to reconnect families to outdoors and make it affordable

Discussion Question 3

Hyde Park, NY

What are you doing to prevent hydrofracking in NYS because of the potential for it to do equal damage as the oil spill? Answer: There's a jurisdictional issue with hydrofracking. The federal role is unclear here. There's a potential EPA role with drinking water but it doesn't feel very satisfying. We're trying to figure out what we can do. Because there's some hydrofracking on public lands out west they may be able to lead the way in how to do this properly. I was just discussing this issue at White House. I worry about it.

At travel shows she attends, NPS promotes big parks out west. How much are you promoting parks here in East? We have a lot of great sites and great railroads. There's a lack of transportation to these sites. There are millions of international visitors in NYC, but not many coming to the Hudson Valley. It would be great for NPS to come to the table with additional marketing and promotion; remember parks in the east; look at partnerships (cross market with state parks and national parks); and make it interesting and interactive for youth. Answer: This is where we need you – for marketing and advertising. Our funding has been challenged. We have to put every dollar we can into operations and maintenance and it's a real struggle. NPS has done a great job at being a brand. A lot of what parks rely on is partnerships with local communities and business partners. Congress doesn't like to see us advertise. Transportation – same category. It's been a struggle to get funding for special transportation in parks themselves let alone transportation to the parks. How can we help bring people to the park? If they're not accessible to youth, then they won't come. NPS is trying to put resources into bus systems in a number of urban areas to get people to parks – need partnerships and need to get creative and get outside our comfort zones.

Comments concern green jobs and sustainable economic development. With all the attention on green jobs in the energy sector there's a whole other area of green conservation and landscape conservation. We need to see how this provides business opportunities. Are there any efforts from the feds on this kind of job training? Parks could potentially be a laboratory for training and pilot projects. We have to change from doing things the old fashioned way. Answer: We don't do a lot of that at Dept of Interior, but we should partner with Dept of Labor. Green jobs has been a focus of the Administration, but it's been more green/renewable energy. But this is important point. Climate change is the elephant in the room in many issues. Conservation is complicated greatly by climate change – all being affected by cc. One important lesson of cc is that natural landscapes have a hugely important role in cc. Land resources are critically important carbon sinks. At DOI we are close to having a scientific approach to calculating carbon storage. Some day we'll have a cap on carbon and an economic value to that.

We've been very successful at protecting rural landscapes, but we realized we weren't serving urban communities so we established community gardens and they needed funding. We had to cobble together funding from many partners and grants and state agencies and many stepped up to fund this. It was encouraging how many people supported this, but this process could be streamlined. We shouldn't have had to reinvent the wheel finding funding sources for this kind of project. At the federal level could there be ways to streamline this? Answer: Department of Agriculture would be a logical source. It's a great idea. Land Trust is great example of how to share resources and partner.

Discussion Question 3

Kissimmee, FL

have employment opportunities for young people in the outdoors, like the old CCC....easily accessible areas....connected recreation opportunities....more play grounds and parks

need requirements that with each new development builders must leave open space, build parks, pools....schools should provide pools, recreation opportunities

have the President walk the walk, he should go camping

find a way to break the computer connection

give class credits for working or volunteering in the outdoors....physical education classes that require kids be outdoors.... engage kids at a younger age....show parents that the outdoors is OK (they won't be eaten by a bear)....

Biggest challenge for achieving conservation goals is trying to balance the built environment with conservation. State buys lands for conservation and as the economy tanked, there became a huge opportunity for governments to buy lands. But what happened was that Florida cut out the Florida Forever land buying program to balance the state budget. Obstacle is making state legislators understand that conservation is important and now is the time to buy land. Second obstacle is when we buy conservation land and human recreation is the first thing that is allowed on the refuge/park. Before allowing recreation, need to study carrying capacity for animals, etc, before deciding to open to recreation. Need to do scientific study to determine if the animals will be impacted by the human use, especially consumptive use of wildlife/fish resources. Not getting answers from the agencies about impacts. Let flora and fauna survive first, and then consider if recreation is compatible. Need to keep ORV and Jeeps out of conservation land. There are Jeep people that stay on trail, but once someone goes off, then you have everyone else follows. When managing conservation lands, government needs to consider recreation vs protection.

A hotline for the public to report apparent counter-productive efforts by the federal government. We restore part of the watershed with federal money, while spending money to develop land in the watershed. The developers claim that overlays are not a Development of Regional Impact (DRI), but create a sustainable community.

We have an economic model in Florida where construction fuels our economy. Need to change this model or else we will over develop the state. Highest foreclosure rate in the US, yet we are still proposing to build ten of thousands of unneeded houses. We need more aggressive oversight from Federals for land use planning in the earliest stages of planning at the local level.

Discussion Question 3

Kissimmee, FL

(cont.)

Heartland Expressway is proposed with all the ranchers impacted supporting this massive project through the central part of the state. Federal government gave these ranchers 93 million dollars to protect 26,000 acres (WRP), yet the Heartland Expressway is proposed in the same area. Ranchers are planning to make money from development and make money from the conservation easements

But development will still occur in this area where the WRP easements (26,000 acres) are going. Ten individuals (large private landowners) will make a decision for millions of people (with regard to developing a large undeveloped and environmentally sensitive area). Government biologists from Dept of Environmental Protection and FL Fish and Wildlife Commission are forced to back down on decisions by their bosses. Federal govt needs to come in with outside, objective view and take a look at all sides of the issue, and then make a decision. We can't fight it ourselves all the time. No way for private people to easily conserve their land. Need a government to come in and offer economic reason to conserve land through easements for private property. This will protect it into the future

Need to have federal government help the various public groups/individuals to get involved with local planning of developments

Do not need additional development in areas where there is a high level of approved/permitted development already on the books. Federal government needs to lead this mandate to develop a new economic model where construction and development do not fuel the economy. This is one of the most important ideas to get to the president.

Tools: partnerships work very well. Migratory species – we need tools that work for these species. Prairie potholes is where many of our migratory birds come from. This area is facing a lot of change, especially the changes caused by ethanol use. Ducks Unlimited would like to see more tools like the Federal Duck Stamp to put more land under protection. Since 1932 duck stamps have protected 5.2 million acres. Buy more duck stamps to save more lands. This tool helps this area because it protects the area where ducks breed in the prairie pothole area, consequently, more ducks are protected and return to Florida.

Keep the promise to fully fund the Land and Water Conservation Fund. This program has the ability to allow all Americans access to public lands for outdoor recreation for many years to come. Help landowners, farmers, and ranchers use their land for conservation purposes, by funding already existing conservation programs in the Interior Dept and U.S.D.A. through the Farm Bill programs. Increase not only land acquisition for federal and state lands (national parks, refuges, state forests, etc.) but also adequately fund the operations and maintenance of these lands.

mandate Environmental Education in schools!

Discussion Question 3

Kissimmee, FL

(cont.)

Fed. State/ LE seizure costs – usually invested in equipment after crime has been committed. How about 50% be set aside for more education and engagement in the environment. Thought processes have been in place so long. Does Pres. Obama change this? Not a grassroots effort yet. But could be. Thank you, drug lords.

not only full funding of LWCF, but maintaining full funding for state program for land acquisition.

Take incarcerated folks and put them to work - have Federal Gov. use this program.

We could not do it without partnerships - need more incentives for private landowners - tax credits.

it all goes back to funding. IF you build it, they will come. FWCC already has the 6 youth centers, so just need funding to get them up and running.

President put \$40 million towards AGO this in April 2010.

There are a lot of good models out there for partnerships for providing trails, for example. Look at these with private partnerships with Fed Gov. that involve the public to be stewards of their public lands. More than just trails. Agencies – look to further existing partnerships and develop new ones to get the kids out. Need to come out with their families and organized groups.

that is the strength of the Federal government – providing great materials.

maybe Fed. Gov. doesn't need to create new youth program. Maybe Federal government should support existing state and local programs.

The Florida Trail partners with the agencies. IF there were resources so we could more effectively partner, those are the types of opportunities that the Federal agencies could get involved in overseeing the funding at some level. Federal agencies are not in delivery system. Local agencies are in the delivery system. Fund what works. Way too few Federal agencies to get it done.

For example, you (USFWS) could fund Environmental Education center at the refuge, we could bring the Boy Scouts down there if there was funding to lead activities and coordinate projects.

\$900 million for LWCF was real money then – it's not now.

want this is the FY 12 budget to support America's Great Outdoors and the President needs to make it an agency budget priority. We all know where the rubber meets the road.

Discussion Question 3

Kissimmee, FL

(cont.)

Manley Fuller – several years ago, Gov. Crist established “Serve to Preserve” and the idea was to link retired people with volunteer opportunities outdoors. Not sure where this is today. Texas similar program. Look and see what different states have done, what would be compatible for this activity.

we really want the LWCF to get full funding for: 1) significant acquisition of land for the St. Marks NWR – we have willing sellers and anxious to sell and will help Gulf ecosystem ; 2) great opportunities for the Florida Panther NWR – willing sellers and expansion in existing conservation corridors; 3) connect corridors for Florida Trail, as well as bears and panthers – all provide great recreational opportunities. Florida has made advances in building conservation linkages. Kissimmee Valley opportunities with TNC are out there .

where there is state and local government. Willing to help, should be incentive to get Federal \$. Should be favored over those who do not have local support.

same applies to National Forests, campgrounds. Bring back the CCC or YCC and restore these places.

– there is a tendency to put \$ for an impressive facility and it’s a big too-do. But follow-up maintenance funds don’t seem to be there. Big deal 20 years ago, but now Fed. Gov. can’t support. Need to figure out what you need for the public, and maintain it.

an example that this work force (inmates) would be good for – we have tremendous exotic/invasive problems and inmates could be doing this work.

– USFS earn some income from direct harvesting and should we look at whether they sell these leases too cheaply. Alaska – cutting down magnificent sitka spruce and shipping them to Japan.

would be good to hear from ranchers that don’t want lands split up, so should have tax breaks for large landowners. Sen . Baucus has had tax legislation for permanent conservation for a long time. Rationale is conservation easements will provide other public services – groundwater recharge, etc.

got to get points on the board. I’ve been impressed with the level of what I believe is increased Fed. Gov. activity on Everglades restoration. Million of problems to deal with, but action has begun. Did the Tamiami Bridge – that’s a start, but it’s an example. This stuff needs to be totally non-partisan. Shouldn’t matter if you’re are a Republican or Democrat, should be non-partisan.

met with (name deleted) in FWS/WO in July and others and was talking about 600,000 acres coastal conservation areas, which should help save \$. Sell this as an investment. President needs to look at existing programs and look for duplication and not just saying, we need this much more money. Consolidate programs. This should not be partisan. More efficient. Cooked the program down and will partner more with the states, who will partner more with local communities.

Discussion Question 3

Kissimmee, FL

(cont.)

part of the theme from DVD was to get kids involved. Best thing would be for kids to sell kids about the outdoors. Need kids to be more vocal. Show some pride and knowledge that all snakes are not poisonous – kids – all ages, involved. Need them to be ambassadors for conservation and recreation. We can lecture them forever, but get one of those kids (like our speaker) and you get our next generation.

several years ago, heard this comment about teachers and their load. The teachers at Circle B Bar have designed a curriculum to fulfill FCAT as well as support outdoor exposure. If people take the time to work this out correctly, should improve. Federal Government maybe needs to help field trip funding.

Federal Government needs to help with field trip funding.

Fed. Gov. has tremendous responsibility to take care of NPs. Everglades NP – first thing that strikes you is damage from hurricanes that has never been repaired. We are not taking care of physical plant of one of our “crown jewels.” Foreign visitors ask locals what is going on? Not a state responsibility.

We will all try to work better together and make recommendations to President. A budget section will come out of this and will help prioritize resources. Need full funding for land and conservation and the President needs to get behind it. Maybe some new things may come out of this.

Make all teachers take/know/use environmental education curriculum. Require environment education and take kids outside.

Provide monetary incentive to schools that provide viable EE outside programs.

Money incentives to schools with environmental education programs. Not millions of dollars, but some to pay for their outdoor science programs.

Mandatory from federal govt to have environmental education programs in schools.

Great example of program: Pelican Elem School kids raised money for Florida Scrub Jay habitat and the govt matched. Grant programs to match schools help buy habitat near schools add trails etc.

Use/promote volunteers groups give grants to share outdoors with youth.

Look to organizations to help get kids into outdoors; like 4h program. Go back look at org that prove help make change, provide more funds.

Discussion Question 3

Kissimmee, FL

(cont.)

Pay more rangers to conduct environmental education lesson and get kids outdoors.

Government owns manages 1/3 land in FL is public for conservation. Group conservation and recreational activities together and get funding from private sources.

Expand the Panther NWR expand recreation.

Buy lands now when prices are good.

Fund Panther refuge coordinator make sure we complete what we start. Panther is a listed species and we need to connect corridors.

Buy more land for conservation get kids out, building inside cities so accessible inside city.

When was the last time Federal government created new refuges? Do new refuges throughout state put more out, this will create more jobs, more sites around for people to go. Keep doing it

Buy lands along Wayka river basin and make more accessible to schools in Orlando area

Need to provide field trips in schools, but not enough money. There is a fear of nature, media puts out all negative news.

Achieve funding, this is the key. Get lands that complete connections of green lands. Cut through bureaucracy. Mini-grants for schools to transport kids to nature and feel safe.

Land has private liability issues, help private provide with liability issues.

Mini-grants needed to go to schools and local orgs to fund projects. This will help to make it (projects) happen quickly.

Fund YCC and Americorps programs. This is key to connecting youth into nature.

Must fund Gulf of Mexico Be Wet programs. Can reach more kids quickly.

Not enough young generation in agencies. Need college students more opportunities to speak and give feedback within agency.

Discussion Question 3

Kissimmee, FL

(cont.)

generation see x-games on tv. Can government embrace extreme sports and bridge what they see on tv? Embrace and market outdoors on tv. Embrace and promote together.

Manadate local No Child Left Inside Act with (Dept Of Education) to get kids outside more.

Mandate Environment Education in schools, make requirement in schools. Make EE programs in school REQUIREMENT.

Need more federal funds.

An example of what not to do with money, Core Of Engineers (COE) Cornel needs to be in the position for more than two years, they move faster than we can educate them. Lengthen the tenure of the Coronel at the COE.

Feds need to start prioritizing the regulatory program.

Fully fund the LWCF, Provide leveraging for the states.

Create additional incentives to create private corporations.

Need more grants for land acquisition, conservation and the management, an example the land acquisition of Collier County panther refuge plus 20,000 in Henry County. Re-Introduce pond apple and other restoration efforts, better control invasive, and publ

Environmental Education cut backs will cause us to lose youth, need to mandate environment education K-12

Prioritize policy objectives, initiatives, could use some legislative work on clean water and threatened endangers species act.

NCRS requires state conservation agencies to set aside equip dollars which provides cost share money for water management service to retain water management, that requirement was not favorably implemented and may or may not see the funding, second issue w

Federal Government needs to be more flexible and adaptable to deal with the unique Florida ecosystem.

State and Local government lack of common sense, act faster to spend the money, act faster rather than letting the legal morass inhibit conservation and restoration efforts.

Discussion Question 3

Kissimmee, FL

(cont.)

Let the local government manage programs, not looking for federal government to take over.

construction of the skyway to maintain the water trail through the Taimiami Trail.

funding and more realistic priorities. If US Govt is going to restore Everglades that includes US Sugar.

government is not good steward of the land. Conservation easements were a better partnership. Instead of buying land-like wetlands mitigation bank. Kept in panther habitat and gave private land owner benefits. More creative opportunities. Involve not spending so much tax dollars, cared for by someone else.

many situations where we need to purchase the land, not just conservation easement. Federal government can manage the land. Both are necessary. More federal funding might be needed.

rescind expansion of off shore oil drilling within 30 miles of Dry Tortogas. USFWS critical habitat for the florida panther

The most critical need is a ban on drilling. Wipe out fishing, tourism, industry. Sooner we excelerate moving to alternative energy. Wipe out security problems, million other ways to produce energy. Cheaper to give money to USDA to give incentivizes to farmers to grow energy cane or switch grass and build plants. Infrastructure is not there and the market will not put it there are long as we are still drilling for oil.

Federal government action on fertilizers and pesticides on my yard. Need to teach Florida heritage, land conservation, ecosystems, make it required to be better educated about Florida.

Fully fund Land and Water Conservation Fund

general management plans –climate change should be addressed as how it effects those areas of land.

cutting funding on these outdoor activities-need to have them to have PE. Federal government needs to chime in. Put a school next to a park so they partner and combine the two to work together.

Up the standard of education

Administration needs to step in where necessary especially Everglades Restoration-stop bad projects that the Army Corp builds. EPA had opportunity to step in Miami Dade County and they didn't.

Discussion Question 3

Kissimmee, FL

(cont.)

believe the experts and take action. Lot of people damage the environment-need to slow it down at every opportunity. President can tell everyone to go outside-more promotion.

Use the Florida Forever program as a model for an America Forever Program.

Continue the Youth Initiative initiated in 2010 by the Bureau of Land Management.

A cohesive program that all Americans can buy into, fully funded, working with non-profits and other organizations to leverage funds. A national volunteer program with incentives.

Television commercials can have a national template plus local information to air at the local level.

Department of Education assist with funding field trips to outdoor classroom areas.

Use the Disney "Volunteer for a Day" model on the national level. Free/reduced admission to national parks, tax incentives, etc.

Renew the Civilian Conservation Corps.

Enact numeric nutrient loading criteria for all water bodies.

Financial assistance programs to private landowners that operate recreation businesses and properties. Assistance with liability coverage for landowners that provide outdoor recreational opportunities.

Allow publicly owned to participate in easement and restoration programs such as WRP.

Revamp the inheritance tax so people don't have to sell land due to pay taxes. Debt for Nature. Liaison positions to assist landowners navigate the variety of programs and paperwork.

The federal government needs to work with other agencies and build on the work private ranchers are doing, they need to see the full picture.

I signed up for wetland preserve program earlier and I was assure it would not pan out that way, I felt that I could not trust the government and didn't want a perpetual easement because I did not trust the government, that is a challenge. A big challenge government has is that they need to be a trusted partnership to work with ranchers.

Discussion Question 3

Kissimmee, FL

(cont.)

What works are grants that help coastal communities so people can bring their kids out. Federal government can help fund some of these type programs

The government should live by example, rebuild urban area, so people can stay there and not start building in suburban areas. A lot of public lands are fragmented; they may need to build wildlife underpasses, bike trails, etc.

The idea of best practices is a great idea to have a central place where people can find things. If the feds could work on that across the board there would be better sharing of info.

When we were kids, there was the President's Physical Fitness program. The president needs to come up with a national conservation agenda.

All schools must be concerned with conservation and the president needs to talk about it on a regular basis. If he does not talk about it, the county will forget.

The federal could provide great maps to schools. Kids love maps, they would be a great tool.

The federal government could provide support in talking to the Dept of Education. The FCAT stops kids from doing anything but preparing FCAT. Other organizations are having to help out. Fishing funds go to help school kids and I would like federal funds to match so we could get more money for education.

No one wants to go anywhere that they can't wash hands, go to bathroom, or get water, people are afraid of nature.

FWC does pretty hard core work with its volunteers. An issue that we come up with is incomplete acquisitions with property still in private ownership. It makes it very difficult to manage the property and the bigger problem is they can't do prescribed burns. Agencies and non profits need to complete their acquisition projects. When you're out there working, you can't tell what is publically owned and what's not

Federal funding to implement what we know what works – 1) expansion of FL Panther NWR, 2) protect water programs of the Kissimmee Valley and work with cattle ranchers to conserve water. There exists fear on behalf of landowners that by making their property attractive to endangered species that they would be hampering their ranching management. Need to have working partnerships with ranchers and government to conserve wildlife and habitat and restore water for Everglades habitat.

Intergovernmental regulations on manatees. Local USFWS staff make their own regulations and create inconsistencies. There needs to be an understanding of realities of microenvironment vs government making broad regulations.

Discussion Question 3

Kissimmee, FL

(cont.)

Lead by example. If the President would do things outside he could help get others involved because people emulate our leaders. Most people who go outdoors are hunters and fishers and white which equates to 20%. President Obama could help make minorities more comfortable with the outdoors if he spends time outdoors.

Be more cooperative with state and local agencies. Trail issues exist. Not enough deer and hogs in Everglades and we are losing food sources for panthers.

Land conservation is important. Regulations come down. Reality creates impediments to access. For example, they are closing roads in national forests. We have a car based society and road closures are creating barriers to access. Takes many miles to get there and there are safety issues to deal with. We are good at conserving, but at the same time, we are impeding access. Road closures are bad for wildlife too. Roads provide good habitat for wildlife.

Youth Conservation Corps. Federal government should have more of a role in bringing back the YCC and getting people back out into the resource.

There is a lack of role models for minority groups. TV role models are mainly Anglo Saxon American. Latino population and women are minorities. Use social science to connect with minority groups. What do they expect from us in conservation? Find baseline data on where we are and make decisions based on science to understand the demographic.

Need more funding, but instead there is reduced access.

We need a New Deal with the Economic Recovery Effort. Recreate a National Conservation Corp by the Obama Administration. Make it a \$100 billion dollar national conservation work program building visitor centers, maintaining facilities. This should be part of the economic recovery plan.

Create business partnerships. Business partners help support the program. Get partners involved that are going to have direct benefit. Increase budgets but do creative funding with tax credits and other incentives. Expand Pittman-Robertson Act, in which sporting goods, and hunting and fishing license fees go back to states.

Environmental Protection Agency should stop all lead based ammunition. They did it for duck hunting but stopped there.

AGO Listening Sessions need to be publicized more to get more people behind it.

Recommend more access and availability - that could make the difference.

instead of one 10,000 acre place make 10 - 1,000 acre places.

Discussion Question 3

Kissimmee, FL

(cont.)

how about making the outdoors an educational priority?

After elementary school, don't hear much about environment, etc. Might have a recycling club. Not stressed.

environmental ethics – tie it together with all connections. What are consequences.

Using recycling bins is first step. But needs to be followed up.

steps to regulate exotic species

Discussion Question 3

Lawrence, KS

Respect nation to nation talks- each nation has own respect for the land and interests for sustainable land and state laws often diminish the rights of people so government needs to respect native treaties and acts- land is often striped from underneath the natives feet and it is slowly going away.

Executive order to protect the wetlands next to the University

Discussion Question 3

Los Angeles, CA

We need a national resourced Area designated to include the San Gabriel Mountains URBAN River Corridors. To achieve this, I strongly believe that the Emerald Necklace will be able to transform the densely gray and urbanized San Gabriel Valley Region into a vibrant green landscape. The Interconnectivity of parks and trails have the ability to improve communities and will give residents greater accessibility to local and regional resources. Here are the many benefits the Emerald Necklace can bring to the San Gabriel Valley: it will bring green infrastructure jobs to local communities (water resource protection, urban forestry, sustainable landscaping careers) Emerald Necklace can be a valuable public asset it serves as a public park space and many youth adolescents in the San Gabriel Valley, It will help expand and preserve natural habitats and wildlife, It will also establish a more efficient transportation corridor for humans and native animals. Connecting with the San Gabriel Mtns. to the beach via natural and urbanized waterways. We have the following support: 25 cities, 3 HOAs, 3 school districts, 1 environmental group, 1 trail group, 1 state conservancy group and 1 county board of supervisors

Bicycles: Green transportation: Benefits of cycling are enormous. Healthy, less consumption of oil. Reallocate space for bikes in LA. Not taking away but sharing roads with Bikes. Increase 3% for Transportation bill to extend bike trails. Provisions to include bikes, give space, National complete Street Policy.

Allow the USACE to use credit and funding from different funding sources to be used on the same projects ei: Flood control vs. ecosystem restoration. The USACE prioritizes projects in part on a \$ per acre criteria. Due to the cost of urban development this puts urban projects at a disadvantage compared to projects in areas where land is less available. The USACE typically requires a 35% total match which does not allow the match to be met from another federal funding sources. This local match requirement should be modified to facilitate collaboration between federal agencies. Funding for land acquisition should be available. Increase funding for the Land Water Conservation Fund for urban projects.

Please allow more funding for outdoor education for children. Currently grant have been hard to come by in California. I know first lady Michelle Obama has made it her goal to decrease childhood obesity. In Santa Clarita, CA our local Community Hiking Club has included inner-city children who have never seen some of our local parks. We could solve obesity nationwide & also address the lack of our youth deciding to focus on science & math academics. Encourage the youth to be excited about nature & treasure the landscape, wildlife, and surrounding beauties. Also, I know we need to all come together. I personally would love to be a park ranger with CA State Parks, however the money has been funding projects of OHV use. Please allocate funding to interpretive programs with all parks. There are many parks you visit where there is no soul in sight to answer visitor questions. Please allow people to have an opportunity to share our knowledge to the next generation and families. Thank you for your support.

Discussion Question 3

Los Angeles, CA

(cont.)

Challenges: Getting all of every groups ideas and efforts coordinated (shen possible) and eomminicated well. The sharing of information is a key! If we can work with toher groups that we didn't know about before, we may help each other solve some of our own challenges. Get the kids outside!!! if they are in school all day, they think (are taught) that it is normal existance. What works? Get kids outside!!! Not only will they enjoy it but they will want to retun outside. Getting thme out and involved also will create a new generation of concerned activie citizens. 3) Federal Government Role: Require cooperations that have land leases on public land, to give bakc in a way that benefits the public (in the long term). Repair the damage caused, not take us out for a Latte! 4) Tools: Funding of course!! But getting the funding to each groups pet project isn't feasible so get into the schools to get the kids involved, have them go on field trips and camp outs and "day projects" to work on some of these grass roots organizations. They want to get their hands dirty.

Scale of Parks: Redefine Park system. Fund Non Point Source for Urban Park system. Developers should incorporate Parks, maintenance of parks is an issue. Maintanance for parks.

Landscape Architect: JPA-Joint Power Authority, we have in CA. A way to facilitate Government. JPA can't access funding, compromise the mission. Don put transportation in the open bill spaces- Empowerment zone % of land used for kind of open space. Need to expand, bike pads, bike paths, usage of combining trails not a good idea.

Public trail use has fallen off. Please preserve the historic hiking/equestrian trails without any vehicular users. "Multi-use" concept of stuffing all users on the same trail has had a negative effect on trail use. When wheeled vehicles are added to trails, traditional uses abandon the trails due to safety and guilty life issues. Bikes and ORVs need their own separate areas. Moutain Biking is an extreme sport and does not belon on trails with slower moving traditional users.

Engage the individual: sustainalbe landscape@home/local activities neighborhood parks 2) Redirect current funding away from "old" thinking projects like expanding mass transit, rail systems. Will work to alleviate port traffic our of the LA urban area. Rail the cargo-expand the metro rail for commuters. Look to other urban areas for creative solutions to urban sprawl and pubic transportation.

Create funding sources for multi-benefit projects and funding sources for urban parks in low-income urban areas.

Increase and fund urban park programs in the National Park Service. Funding showed prioritize low-income urban areas.

Discussion Question 3

Los Angeles, CA

(cont.)

"No Child Left Behind" in taking away opportunities for children to learn in their classrooms about environmental issues. There needs to be a federal mandate that would require students to have environment/conservation training including hands on, field trips, community service, to visit wild spaces, mountains, beaches, deserts, parks. Environmental Science camps should be a regular part of curriculum, once in elementary once in middle school, once in high school. Working on an environmental project and reporting on it should be requirement for graduation. Children need to be educated because they are going to carry on our passion. 2) Federal Government needs to fully fund the land and water conservation fund. Have a common sense, methodical plan for renewable energy that involves a variety of stakeholders. Plan renewable energy closer to urban centers where it is needed most. Get developers to NOT BUILD or develop - give them incentives to develop urban areas already built-rehab houses empty or up for rent. Fund community gardens, school gardens-kids need to know where their food comes from. More collaboration between grass roots agencies to work together-user friendly websites, kids' sites, that they will want to go to learn about environmental issues. More youth involvement.

Citizenship Classes and Civic Education: The values of nature, not polluting & being a prudent user of resources are not universal values shared by all. Therefore I suggest that in addition to school curricula, adult immigrants should also be educated instead of memorizing the pledge of allegiance, immigrants seeking citizenship should know conservation principles, and more useful and important aspects of citizenship and stewardship

I would like to see public lands remain open for multi use: Mt. Biking, Hiking, Off Highway Vehicle Use, Legal use of vehicle access to back country. Much of the land is being closed at a high rate. I would like to see that what is available today to remain open for future generations. Also that the federal government would not recognize ignore those who enjoy using motorized travel to explore the public lands...

NPS Service: Fund Urban Park Program, Prioritize low-income areas, land water conservation fund and increase funding for urban projects, school gardens and community gardens. NEPA/CEQA are required allow CEQA to suffice for 2 reports, as CEQA is the more stringent and includes NEPA requirements. Interagency Strategy Coordinate EPA, HUD, USDA, Task Force in LA

For future listening sessions, I think it would be very important to spend less time on introductions and the move and more time on dialogue. It was very frustrating to me that most of the time was spent on repeating comments that had nothing to do with discussing concrete problem solutions. I would like to see greater emphasis on attention to and incentive for not only community parks but also community gardens. I feel like gardens really address the intersection of environmental and racial concerns. Community garden not only help support cleaner air, soil, and water in Urban Areas, they also support food security and community security. In general an education and policy it truly needs to be a greater emphasis on the interconnectedness of racial concerns and environmental conservations.

Discussion Question 3

Los Angeles, CA

(cont.)

Hunters and Anglers have historically passed on their love of the outdoors to their children and others-However today they find more and more restrictions on the areas where they may hunt and fish. We need to make public lands public-Open them up to multiple use. Lack of access is primary reason hunters and anglers stop participating in these traditional sports. We need to provide grea or access to public land. Hunting and Angling grounds have many programs to connect peopel to the Great Outdoors. The San Diego Chapter of the Safari club hosts youth hunts interested youth hunt for the fun time each year. Continue to fund numerous conservation programs through one of our fundraising.

Trash in Our Parks is a huge issue. We need more Park Rangers and Volunteers

As secretary of the Interior Ken Salazar mentioned early this afternoon, "Historic Preservation" is part of telling America's story and getting people into the great outdoors". We need to embrace our national as well as our historic and cultural resources as part of this initiative. A big challenge to conserving our historic and cultural resources is the lack of full funding of the national historic preservation fund, which is the sister fund to the land and water conservation fund this gentleman in the audience just mentioned. The Federal govt can more effective by fully funding the historic preservation fund and increasing the capacity of local agencies to preserve and protect our historic sties through technical assistance and federal incentives

Work with NGOs, Land Water Conservation Plan we are very interested in what Mr. Salazar is proposing on funding programs. How do we improve effectiveness of fund program. How do we increase ceiling of program fund. Message to Fed Reps: Failure to look at local success stories, Humbolt County resident, phone call to BLM-CA Office to know about successful stories OHV Community, Road decommissioning-not exclude OHV Community.

Challenge: Involving DOT and local transit agencies in increasingly the amount of bikeways and their safety in urban areas. The Federal Government could be ore effective by changing some of their procurement processes to allow organizations to work with the Federal Government to implement programs (rather than implementing it themselves)

Please help students and families reach us (nature preserves). As an environmental educator in 20 years I have noticed a steady loss of both environmental literacy outdoor skills. Schools do not have the funds for transportation and often they cannot take the time to participate in field study programs due to testing and other educational mandates. I encourage a Govt. emphasis on the funds for environmental education and funds for field trips.

Discussion Question 3

Los Angeles, CA

(cont.)

Challenges-support for responsive renewable energy development in the CA desert. It needs to happen on private disturbed lands closer to urban load centers, NOT in the treasured, pristine, untouched public lands in the core of the Mojave Desert. 2) The Federal Gov't needs to take the pressure off the BLM public lands in the CA Desert for renewable energy development by looking at ways to make it easy for cities and counties to have solar/wind development on private disturbed lands&solar panels on commercial buildings. 3) Fully fund LWCF and AB811 program funding 4) Whats working: Private, local, non-profit land trusts. We are able to purchase & protect & then manage large landscape level chunks of land that the federal gov't doesn't have the tools/resources to save. We (TWC) through private donations and grants are able to save critical habitat "islands" between already protected lands National Parks to protect ecological corridors so we dont end with islands of biodiversity and unhealthy ecosystems. Help us to get funding so we can continue our jobs & mission. (ie: UCF stakeholders in federal process,

Global Action Research-Pro: Huge grant awarded to address water pollution to UCSD. We must look at watersheds. I am coordinating a bike ride from Vancouver, Canada to Tijuana to promote sustainability ideas and connections. Watershed Urban Research! Go with it!

Federal Govt: Needs to support new technologies to sustain communities and therefore result in less impacts to nearby open space and water courses. Example: Drinking water from sewer water, potable reclaimed water for local communities means less water drained from sensitive ecosystems. Fed education: policy mandating environmental awareness and literacy for school age students and training for teachers. Federal Govt: needs to continue to seek respect from multicultural leadership groups that may have different perspective of outdoor space and used them as ambassadors use them to open space to their constituents

High Desert multiple use-Drove to be part of this licensing session process. Others have not forgotten, should not be forgotten -OHV/Wilderness/Equestrian users. Motorized sports, local astronomy club need access. Land Management-over 25 years. Now they want a Solar Plant for Ridge Crest? Don't Want It!!! Will use too much water to provide energy for LA! When does it stop!!

Solar Desert issue: Build Coalition, wilderness, recreational groups-S2921 provides to stakeholders. Heritage of story telling, use websites to disburse.

Discussion Question 3

Los Angeles, CA

(cont.)

In order to ensure that the connections we help people make to the outdoors are lifelong and life-changing education must be a core component of how we make that connection. Getting youth out to our National Parks as part of residential environmental education programs, such as nature bridge field science programs will build a generation of environmental stewards who will make responsible decisions and take actions to protect and preserve our environment. The connections to nature young people make through residential environmental education programs such as NatureBridge Field Science Programs often light a spark in students that turns into a lasting love of the outdoors and lifelong stewardship. The Federal Government should work to spur growth of NatureBridge and similar programs to increase the scale of these programs and number of youth that they reach. Invest dollars and resources. The Federal Government could be more effective partner by having more flexibility in the kinds of partners it works with and should work to remove obstacles to partnership or growth or partnership for nonprofit organizations. Provide resources to nonprofit partners to allow them to house and educate students in national parks.

1) Stop closing land to people who wish to use the trails and roads 2) Less Federal involvement 3) Cutting the Fed. Gov't 4) Tools-Chain Gangs use to work Fed trails and lands.

Need assistance from federal gov't integrating curriculum and physical education standards so teachers can justify getting children outdoors in parks and exposed to nature. Need outdoor education programs

People are interested in recreation. Laws focus more on conservation. Regulatory focus should include motorized vehicle access. People need off pavement access – fishermen, off road vehicle enthusiasts. These type of people are often stigmatized. Many are willing to volunteer. These folks are a large untapped resource. They feel that some gov't employees are hostile. The federal gov't should allow more back country access to unpaved road systems and existing systems should be allowed to continue. Such roads can also be used by bicyclists and pedestrians.

Trash in public areas is horrendous. Hopes teachers and others taking children outdoors will teach them not to leave trash. Fires – wants to know who is responsible for fires. How many millions of dollars does the USFS spend on predator control? Feels that predator control only benefits ranchers. The money could be better used, especially when we are talking about getting children outdoors.

National parks are a tremendous success. They have a great program for hiring college interns. She has been involved in examining a renewable energy initiative in the Mojave Desert. The desert is a tremendous biodiversity hotspot. Renewable energy could ruin it. Build renewable energy projects in brownfields. Federal gov't intervention is needed.

The room for listening session does not reflect the Los Angeles population. Get more inner city people.

Discussion Question 3

Los Angeles, CA

(cont.)

Transitioning now. Wants to know if there is place to call to learn how to partner with others in the future. Suggested a hotline to answer questions like where to get money, who to partner with. It would be a very good tool.

The Station Fire consumed forest and funds. Parts of the forest are closed for an indefinite time. They have an office in lower Azusa. Their office helps guide visitors – more than a million per year. The forest is severely underfunded. More visitors per year than Yosemite.

Would like to see more federal funds reallocated to recreation.

Works with LA Mayor's million tree program. Link kids to nature by turning concrete in front of their homes into trees. She talked about urban forests. She related a story about a young man who didn't conform to neighborhood mores. Neighbors worked together to plant trees. They included the nonconforming young man who became part of neighborhood. The experience changed the dynamic of the neighborhood. Tree planting helps connect and reconnect people. It is good for kids that can't get to parks. They need money for the maintenance of trees. Could employ kids if there is money – from federal gov't? Urban forestry is too expendable in public budgets.

Challenges/what works. Provide money for internships for college students to do more stream restoration and outdoor work.

Long Beach, working with the feds to bring back waves to the beach. Working with ACOE will take ten years. Need feds to get more streamlined and get projects done quickly.

Feds have money and we need them to help with preserving land (such as in Idaho, Alaska, etc).

Feds good at counting and collecting data on air and water quality. Difficult to access this info. Feds need to share info more, be more open and transparent. How can the federal government work with the private sector to make this info available.

"One size fits all" Regulations do not work. Trail management on trails not working. Litigation doesn't work.

Feds need to do better at coordinating . Bureau of Health Statistics = National Parks.

LA Basin has poor public transportation- Federal government has a role to play in helping solve the transportation issue. In LA National Heritage River under Clinton should be restored.

Use Clean Air Act as a tool. Air is not cleaner just because visibility is better. Deal with shipping industrials (bunker fuel, rail roads using diesel fuels) Government can address these not locals.

Discussion Question 3

Los Angeles, CA

(cont.)

LA transportation center: Largest piece of real-estate in the central city. Piggy back yard study. Huge opportunity for looking at parkland for flood control. • Missing piece of conversation is role of railroads. How can we work with railroads? How can the Dept. of Transpo. work as a park agency? • Example: The 6th st Bridge replacement. Dept. of Transpo gave LA \$200M to rebuild the iconic bridge. Should have a design competition to have an iconic new bridge for aesthetics. Dept. of Transpo is not geared toward dealing with aesthetics. EPA and Dept. of Transpo need to work more closely.

Lack of integration in agencies for offstream amenities. Risk management vs. recreation needs. Recreation and access opportunities are not recognized by federal partners as a mission because of risk issues. Need to provide a method to allow for outdoor experience and accept risk at the same time. ACOE does not have money to provide for recreation near the flood control projects. Federal agencies need to look at watershed management approaches. ACOE does not have granting authority or the authority to enter into agreements with local jurisdictions for maintenance agreements/joint powers of agreement to allow their projects to provide access and recreation beyond flood control.

Whitewater Preserve/Palm Springs Public cannot access lower portion of the Whitewater River ½ of the year because of fire closure. • Federal Role: No staffing is available by the BLM, so no public access. Upper part is staffed by the Wildlands Conservancy. Lower part should be staffed by BLM. • Challenge: Spent > \$40M to partner with Feds to purchase 650K acres in the Mojave and gave it back to the Feds for preservation. The same land is now under threat of development. CA Desert Protection Act is supported by the WC. We need to protect lands first before we can restore them. • Tools: Push for solar energy in the desert. Legislation brought different stakeholders together for protecting the Mojave Desert. CDPA 2010.

Tools/Fed Role: Need more maps and kiosks for responsible OHV operators to see where to go.

Federal Role: Need to give a higher tax break for personal use vehicles for volunteers rather than the current. \$0.14/mile!

better safety standards and regulation

make EE part of the curriculum

advertise parks and make them accessible (media)

more information about parks

Discussion Question 3

Los Angeles, CA

(cont.)

Park

Shuttles should go to schools, shuttles shut down due to lack of use

Handicap accessibility

Stated permitting process is a challenge, gave Yosemite as an example.

give states tax breaks to donate land, funding is a challenge.

Natl Parks work in system contracts; and that brings legal issues and potential for partnerships to solve the issue.

rivers, for planning purposes, need to be expanded to watersheds. Our nation's shoreline dialogue needs to be expanded to protect our environments.

move funding support to the colleges. They'll put it to good use.

we need an accurate grant program.

interagency cooperation - should include science with physiological impacts.

Angeles National Forest should be made into a National Park.

bird species in LA County can be better protected with a urban wildlife refuge system.

the Army Corps of Engineers role in river navigation (LA River) needs help, especially integration (reform the Corps movement).

national monument status can bring added protection.

Trail loss is eminent, improve trail maintenance program.

Discussion Question 3

Los Angeles, CA

(cont.)

the federal role should be to help other outdoor agencies tackle issues (partner for solutions).

the federal role should be to speed up the NEPA/CEQA environmental compliance process

LA National Park is a good idea, protect the Santa Monica Mountains, and added: river trails powers the people.

river project, enforcement of clean water act, and our focus should be on maintain, restore, and enforce to protect open space for future generations.

Discussion Question 3

Minneapolis, MN

I would encourage president Obama to lead the example of his wife who has encouraged gardening, healthy eating, getting outdoors. If the president invited people out with him that would encourage people to go out too. They need a role model and he could be that role model.

What if we encouraged each elected official to go out to a park?

I am an environmental educator, schooled a few years after Earth Day. Today my alma mater, Cornell University, no longer offers an environmental education major. Even as we as a society face global warming and the destruction of the Gulf ecosystem, there is no environmental education program offered at one of America's top schools. I believe the major problem in connecting people to the outdoors is education of citizens. It will be crucial to affirm universities in offering environmental education majors. Because this field crosses academic disciplines in an effort to problem solve, it does not attract research money which continues to fund academic institutions. Yet this field is vital to the 21st century. Funding from the Federal Government is imperative to support this academic discipline.

Last fall, I accompanied a flotilla of canoes filled with urban junior high students down the Mississippi River with the non-profit organization Wilderness Inquiry. This was part of their UWCA (Urban Wilderness Canoe Adventures) program. Most of the students had never been on a boat on any river, let alone the Mississippi River in their backyards. Creating and supporting programs such as these which create an outdoor comfort level for students is a role of the Federal Government.

I believe that environmental education needs to be the focus for this nation immediately. The environment lies waiting; we need people to encourage others to come out to enjoy these free treasures. At the same time, the traditional environmental education profession needs to be upgraded. It needs to be infused not only with today's electronics, but bolstered with excited young people eager to bring the next generation into the outdoors. To do this, funding has to be available at the college level for training future environmental educators. In this recession especially, a program created by the Federal government and modeled after the Peace Corps could help supply the teachers necessary to connect people to the outdoors by training current graduates.

Federal funding needs to support nature centers to augment funding provided by city, county or state. A grant program could be set up to allow for conservation/nature non-profit organizations to apply for support of their existing local environmental education programs. This would create a large ripple effect, as one teacher multiplies the experiences of many students.

The Federal government could simultaneously begin an advertisement program on TV and through YouTube videos showing the fun of being outside. We need to make it cool to be outdoors. Reaching young people through their electronics may be successful. At the same time, we need to fund the people who will provide the bridge to the environment for people.

Discussion Question 3

Missoula, MT

With the extreme beetle kill in our forests we need to allow logging and cleanup before the fires. Montanans need to be employed -- keep jobs available for us.

We need land management -- don't close off the forests -- they won't be here for future generations -- they will die out. There needs to be a balance -- all things in moderations. Thanks!

Beetle kill in our forests. Allow logging and cleanup. Keep jobs available for Montana workers.

Manage the land: don't just forget them. Make use of local resources and small groups available in each community.

I'll be curious to see what this actually accomplishes -- No new Nat'l Monuments

The National Debt -- the Federal Government can not afford to do this.

Turn Federal lands in Montana over to State control.

I would like to comment that any change on public lands will need to involve Congress traditionally Congressional representatives from Western States have been challenged to advance meaningful conservation legislation. Because Congress hold (sic) the purse strings for Federal land management agencies it is imperative that they act for the public interest. The other reason Congress is necessary is that agency bureaucrats are not directly accountable to the public as they are appointed not elected. If we as a nation are to take meaningful step towards conservation we must make our agencies more accountable to the people and that must be done through (?) Congress. Public land laws need to reflect the public's views and that means Congress must be involved. I hope we can conserve America's public lands for future generations.

1) I believe the Federal governments (sic) need to consider local, rural Americans before developing National Monuments. These individuals are some of the most connected to the landscape and are already working to manage the land. Instead of supporting programs that would take control away from these individuals, promote programs that provide incentives to them for conservation. In my experience, locals are conservation minded but also need to provide for themselves and their community. 2) Expand programs such as NRCS's Conservation Innovation Grants program and make them more accessible to ranchers and landowners.

This is the first time I've attended such a meeting, but it surely got me thinking about these challenges, so thank you for the opportunity. I felt it all went well.

The need to engage all children (K-12) in an understanding and appreciation of their natural environment. Schools can be designed with environmental school yards for use by the students.

Discussion Question 3

Missoula, MT

(cont.)

The federal withdrawal of natural resources that are vitally necessary to sustain the basic quality of life in the U.S.A.

Enact legislation that holds those who challenge industry in court to pay their own legal fees and to pay all costs when they lose in court. Loser, pay.

I am elated with the "know your farmer, know your food" -- type initiatives springing up all over the nation. I would like to see programs as well that promote local natural resources. I am active with a group called "Local Wood is Good" which is trying to promote use of locally harvested and processed wood products. It would be neat if we could replicate efforts like this, modeled after Know Your Farmer Know Your Food, around the country.

There must be a way to reduce use of fossil fuels that add greenhouse gases to the atmosphere -- best way is a carbon tax.

Climate change. Voluntary private land conservation incentives, such as making permanent the enhanced federal tax benefits associated with conservation easements. Farm Bill, specifically the Farm Ranch Protection Program.

Water quality is critical for healthy landscapes. Water quality is compromised by the 30,000+ miles of USFS roads in MT, about 1/3 of which are unmaintained, unneeded (sic), and unwanted. The legacy road and trails initiative has been funded by Congress at 40, 50 and \$90 million in the past 3 years. Yet over \$10 billion in uSFS road work is needed. Continue to fund the legacy road and trail initiative and increase annual funding to \$100 million.

What can Feds do: facilitate communities to make connections with conservation-based organizations, provide opportunities to collaborate and work together and coordinate efforts aimed at long-term sustainability.

America Highway Program: The signs of the adopted sections of the highway that are supposed to be kept clean. I find that they are majorly neglected and wonder who is in charge of any sort of accountability to those groups who have adopted these sections because if they are not held accountable the sections should be given to someone else. Recycling: It should be made one of the easiest processes available in every city/town. In most places the search for a recycling center is long and when found, they tend to have so many restrictions. And although we are making movements to conserve, there is a lot that has been wanted and recycling is the chance to make up for that. Please help make it easier .

Encourage environmental and conservation cooperation between agencies and citizens -- FUND restoration.

Provide or guide funding resources into stream restoration and watershed conservation, including support for citizen involvement in watershed groups...

Discussion Question 3

Missoula, MT

(cont.)

To connect kids and people in general to nature adequate access must be present that is easy, marketed, and accessible to diverse groups. This means both urban and rural opportunities. Full funding of the land and water conservation fund will provide both rural and urban opportunities through large scale land conservation, fishing access sites and urban parks. In addition, our first lady has the "bully pulpit" to make getting kids outside a part of our national education curriculum. If we don't connect kids to conservation at a young age, they are less likely to have an affinity (sic) to keep pass along out country either better or the same that they experienced it. Lastly, private land provides some of the best wildlife habitat in this country. Particularly between federal and state governments for access promote opportunities that are win/win for landowners and recreation. MT has the block management (bm) program the (sic) voluntarily enrolls eight million access of private land for hunting. Landowners are paid for impacts to their land. The last farm bill provided additional funds for state programs like (18 million) a larger commitment would gore this program (sic).

Please consider policy changes that incentivize, regulate, and educate toward goals of preservation, sustainability, healthy built community, education curriculum supportive of the great outdoors, human powered transportation, work programs such as conservation corps for all ages. *Please stop the polarization and negative discourse of recreation is bad. Example -- no stimulus fund for park, recreation facilities.

It is fine to hold listening sessions, but where and how will this information be utilized to encourage a grassroots movement to encourage and motivate the public and agencies to focus on the "Great Outdoors"?

Private land incentives so that developers can contribute to providing/maintaining open space/parks and trail that connect with other public lands. Protect and enhance LWCF program for local use. Fund and support federal land agency conservation education programs. Re-organize the Forest Service to provide more organizational focus on recreation.

Great idea bringing this to Montana first - we appreciate and support the President's commitment to conserve working lands in a way that preserves the environment and protects local communities. Collaborative approaches work - support Senator Tester and Senator Baucus in their efforts to this idea. Can be win-win situation using existing infrastructure.

Thank you for this opportunity to share our comments/thoughts. This is an amazing venue to get citizen input. What I want to comment on is education. America's children are disconnected from nature and our own government. We need to empower our youth to want to help, by not giving a handout, but a hand up. Giving us opportunity to work or volunteer or serve nationally allows us a connection to something bigger. And allows youth to see our work truly makes a difference. Whether its in the woods or in the city the youth is in desperate need of a call to action. National service programs can be a vector to bridge the youth into the American heritage.

Discussion Question 3

Missoula, MT

(cont.)

1) A misperception based on political rather than scientific basis that "global warming" (changed to "climate change" because of the natural cyclic change in temperature due to natural effects is now tending to global cooling) is driving political decisions and has the potential to further drive political decisions that will adversely affect our society.

1) Open the debate and scientific study independent of politics and liberal (or conservative) agenda!

Funded projects to get families into public lands with interpreters

1) protect intact habitats and restore degraded habitats on both public and private lands, 2) make the outdoors a more integral part of school curriculum, i.e. No Child Left Inside; Ways Federal Government can help: 1) Foster more cooperative efforts like the Forest Jobs & Recreation Act that bring together diverse interests based on shared common ground, 2) Mining Law Reform that provides opportunity to restore degraded habitats, 3) Fully fund the Land and Water Conservation Fund, 4) Provide better stewardship of public lands; Secretary Salazar's oil and gas leasing reforms are a good start for BLM lands, need something similar for the Forest Service. It is easier not to degrade important habitats than to have to try and restore them after they are degraded.

I suppose a multi-pronged approach with federal agencies, educational systems, non-profits, religious organizations, philanthropists, everyone promoting knowledge and stewardship; My state (Montana) is known for its Great Outdoors. As a young adult, I made a conscious decision to live here, next to nature. Native or transplant, I think a lot of people here appreciate nature, although their ideas of stewardship may vary. In recent years, people with different points of view have gotten together, recognizing their similarities; Good starts are Michelle Obama's war against obesity and White House garden. Promoting the national parks even more (?). Education is huge (the oil spill is one heckuva educational experience.) Encouraging gardening and eating fresh food; Promote local sustainability!! garden plots, small farms who sell locally. Make this a part of every new development. How about walking clubs or routes, with places to stay at night-- a day's walk between them. Thank you!

1) pass laws that encourage and not inhibit cooperation, 2) Provide incentives that reward developers for conservation practices

Collaboration is key but the most important thing is creating public awareness of conservation

increased education/information/access/advocacy for conservation; contribute to increased collaboration fed-local; restructure fed agencies; limit (mal)development

construct a natural sciences curriculum that lasts through education; incentivize voluntary public service for higher education financial assistance; mandate a minimum standard of community service

Discussion Question 3

Missoula, MT

(cont.)

Define the legal parameters and stick with them. Too many people are afraid to make decisions/move because of the legal unknowns.

Citizen Science Monitoring; User group involvement in monitoring/restoration

Education; "Made in America" sustainable wood products given priority in government projects; Biomass from sustainable family-owned forests

1. Educational programs funded; 2. Fund trails (alternate transportation); 3. Subsidize volunteer programs; 4. Support awareness; 5. Provide successful samples (&workshops) for public/private interactions; 6. Continue similar meeting & require political reps to attend!

1. Develop & teach the concept of stewardship & responsible active management; 2. Look to Private landowners for examples of successful multiple use stewardship

1. Increase awareness through heavy advertising online and on T.V. Let people know conservation jobs exist and you can help w/things like global climate change. 2. Cut down on car usage in parks by offering shuttle services for tours and transport bicycle rentals. You can charge for them as well to help raise money for parks. For example, a \$2,000 mountain bike rented out at \$25 a day would only take 80 rentals to pay off. Maintenance would run at roughly \$10 per rental, so after the bike is paid off, the parks would make \$15 profit per rental day. This may not be ideal for smaller parks, but Glacier Park and Yellowstone could make lots of money which could help relieve their funding from the Federal gov't and that money could be distributed elsewhere.; 3. The federal government is already doing a good job through AmeriCorps by offering the education award which can be used to pay for part of school or pay off school loans. By offering this to high schoolers, it may entice them to study environmental concepts in post-secondary education.

Gov communication with people - miscommunication has cost money

When the federal gov't acquires new lands, keep them open for hunting, fishing, & management. Utilize LWCF to purchase land including access. Access to public lands that are land locked by private land.

Funding for non-profit organizations that focus on youth development environmental stewardship and civic engagements. Winter works. The seasonal labor is conducive to relying on Federal Handouts (I.E. unemployment)

Offer or increase education awards for service. Establish a relationship with land owners and agencies to ensure you land labor

Discussion Question 3

Missoula, MT

(cont.)

Support the NCLI Act - HR 2054 & S866 to bring funding into the field of environmental education to bring more programs into the schools. Funding for programs that seek to reconnect kids with their environment with an emphasis on direct action on experience.

Stop zoning or taking by subdivision regulations. Crown point case citizens must be paid for taking if hurt by an environmental law.

More education and access. In schools, trails and parks funding for internships and outdoor programs in the wilderness

Actively managing our federal forest lands at the landscapes level.

Large long term goods for Services Stewardship Contracts available to both BLM and FS which are allowed to be up to 10 years. Streamline NEPA process

Change the tax structure concerning agriculture grounds (ranchers and farmers) In times of drought face reality, use the streams and rivers less.

Let us please encourage/support more education that is place based & experiential to support our future generations

Let's have a national educational campaign to take care of - take pride in - this great heritage. And also educate about wilderness and its keep it wild management.

Prioritize educating youth about value of nature to their mental well being

Fundamentally change our education system & the focus of our agency

Good way to focus education is start a garden at every school. Everyone has to eat. It's a good way to get everyone involved on many different levels.

Increased funding for FRPP, Land & Water Conservation Program. Maintain/extend laws which provide tax incentives for donation of conservation easements.

Providing federal funding/initiatives to public schools!

Integrate outdoor classrooms/science in our schools K-12.

Discussion Question 3

Missoula, MT

(cont.)

Utilize what's been done and building on it through partnership.

Farm to school!! (Thanks to Mrs. Obama efforts) Creating local growth policies that work collaboratively and house growing population and facilitate working farms.

Collaborate efforts at the local level. More thoughtful and strict rural planning measures that protect communities from the negative impacts of amenity migration.

Need permanent extension of Conservation Easement tax incentives to assist in private land conservation. Need full funding for the LWC Fund including a portion dedicated to obtaining access (linear) to land-locked public lands

Finally a collaboration of ideas from multiple agencies. What you need now is more site visits: People on the ground offer realistic solutions that people in offices tend to overlook. People on the ground prescribe better than people in offices. People in offices describe better than people on the ground. too often we play the role of opposite.

One of our largest obstacles to getting kids outside and into their local natural areas (National Forest) is the outfitters permit process, as an educational non profit we are placed into a category with other for profit outfitter groups. However our goal is to connects kids and people with nature, teach stewardship ethics and explore the natural world. the permit process limits our ability to use national forest. Honoraries have to be specific, planned a full year in advance are inflexible (regardless of weather or condition) and limit what we can do. We'd accomplish so much more if we had more specific permit process or new designation.

Programs that work- Teachers are the key to increasing kids interest and comfort with the forest - Existing Natural Programs- USFS kids in the forest, Project Learning Tree sponsored by American Forest Foundation. Mt. Natural Resources Youth Camp at U of M school forest can be replicated across the country for 1 week lands exposure to all natural resources discipline, discovery days in Missoula for 5th graders sponsored by Chamber of Commerce.

we need to make it as easy for people to get outdoors as it is to turn on the TV. Access and communication is an obstacle. There are several non-profits out there organizing and doing great things, but they have limited funds for adverting or new media communication to get volunteers involved or youth active we need a told for communication and funds to get our message out. Partnerships with the state, local and federal governments could help communication efforts. also partnering with private sectors would be beneficial. How do we connect parents as well? we cant rely on education to do it all.

I suggest facilitating the break out session little differently. Allow everyone at each table to address the 4 questions at their table with a note taker at each table, in order to get everyone's voice heard while managing time limits.

Discussion Question 3

Missoula, MT

(cont.)

Equipment loan programs with checks and balances. Equipment I necessary. Equipment is expensive. You are targeting, largely, middle and upper class- This is bad. Try to target lower class.

Addressing all questions; restoration where it's at. Trout conservancy working w/ many landowners and partners at long term restoration; applying science (how streams work). We have plenty of biologists, need people that can put it to use on the ground. Knowledge has increased, but problems are same – collapse of habitat and land relationships. Best strategy is volunteer work – planting native plants, hands on projects; satisfaction of long term benefits; Obstacles – Restoration is where it's at. List of work goes on and on – mines, roads maintenance, culvert replacement, roads put to bed; agricultural impacts. People want to know what they can do to help – need projects & money to be ready (e.g. Clark Fork project). Need more of these types of projects. Interest will wain w/o restoration activities. Need more than one-shot stimulus – need longer term commitment of resources. Make sure environment will be there through stewardship.

Working on oil and gas issues. Friend has son that was affected by air pollution. Their group has had conversations with over 7500 people across the country. Oil drilling affecting many parks in the NPS; public needs to know this, and we need to pass strong legislation to protect these areas.

Resources for action – there are many foundations and grant sources for available to the community for projects at local to national level. Also at federal level – need more incentives: how to give tax benefits to landowners for supporting this work; also land use planning (e.g. setbacks) important to coordinate federal & State land use management.

Real opportunity for international cooperation to complete Waterton Glacier NP expansion.

Need parents and families to be involved – They have a pilot program reconnecting children w/ nature (Park Service) to get adults comfortable in nature. Federal govt can be involved in getting parents connected and over their fear of the outdoors, and enabling them to pass on to children.

We all have similar messages. We all like the same things, but we have different ways to recreate and use the outdoors on private and public lands. I've found if I'm working with opposing viewpoints to keep in mind that we are all out to enjoy the forests and being outdoors. This is the common theme to start from: the Federal Gov't needs to recognize that common value. Starting from there we can work from there. The USFS and the gov't need to be flexible to develop rules to allow people from diff. User groups to use to they don't damage land or ecosystem. Having a flexible federal gov't is important and having people in the gov't who understand that common value.

Discussion Question 3

Missoula, MT

(cont.)

On topic of how federal government can be better partners – one of things is to use appeals process more effectively. Don't let the process go until we force them to go to court. Instead force stake holders to come together before go to court. Other idea – FS needs to create forums that feel safe for public discourse – lots of polarity on issue. In this polarizing climate it's intimidating for average citizen to come in and speak. So atmosphere needs to be better controlled so everyone feels comfortable to come to microphone. People should not feel intimidated in democratic setting. As to strategies for conservation that worked and enhances conservation and makes feel connected, road and dam removal is working. Some of collaborative models work well – but encourage to be cautious because collaboration is at local level – but lands are owned by all folks across nation not just local folks – people care as much about Big Bend NP as Glacier NP even though he or others don't live there – so caution to local collaboration.

DNRC and Blackfoot challenge – successful because it is led from the ground. And then the fed and state have been there to support the efforts. If the agencies had come in and led it – it wouldn't have worked. It's the partnership with locals and fed and state agencies that makes it work.

He's 29 and he finds it weird to be called a youth. Since not a govt agency can move quickly and give youth opportunity to make decision and be empowered. They can make decisions that make a difference on the landscape. Changes lifes a lot – getting emotional. Give young people an opportunity a chance to have responsibility. Young folks dug a trail on Mt Sentinal and every day they can look up there and say – wow I did that – and everyone uses it and likes it.

Success – Travelers Rest State Park. Mt Conservation Fund initiated the beginning of the park. Needed someone to take on ownership of the park to use the Conservation Funds. They formed a non-profit organization to run a State park and the non-profit manages the park. Have grown from 15 to 50 acres. Challenges – needed to acquire additional parcels. Were able to use the stateside LCF funds but they have run out. The Non-profit is continuously challenged with getting operational money – how to continually fund the site. Have successfully used stimulus money but they don't know how they will manage with the stimulus funds go away.

I have a thought on how the federal government can help. We need some kind of censorship on advertisement. The aesthetics of location: there is almost nothing uglier than a highway billboard. They go against every notion of nature. Nature provides beauty at every single angle. People are inspired by nature – the trees are just right, the clouds are just so. Once they discover a sentiment for nature, they don't regress; it's probably a lifelong sentiment. He is big on aesthetics

Groups working to protect NLCS. Bringing kids at risk out to natural areas. BLM Restoration projects. Contributing thousands of hours. Because NLCS is so new; inconsistencies in partnerships. NLCS has not been solidified. Salazar needs to better define what NLCS is & build in accountability with the managers of NLCS units.

Discussion Question 3

Missoula, MT

(cont.)

Mountain biking is growing in numbers nationally. A gateway sport for kids-encourages them to get outside - 494 miles have been closed to mountain bikes, potential to close 2000 more miles; single track trails that have been in place for decades. At the federal level, bikes are considered "mechanized"... Defined- powered by non-human source. Mountain bikes should NOT be considered mechanized. At the national level, would be good to consider mountain bikes as non-mechanized. There should be distinction between bicycles and motorized bikes.

LWCF is an investment to conservation & landscapes. Headwaters Economic group in Bozeman-work on environmental economics. Current model does not value clean air and water. Commission on Environmental Economics needs to be commissioned to tie this all together- President should commission this.

Chair of Park Conservation District. We need to expedite process with ACOE. 310 permitting is done but ACOE permitting takes a very long time. If we could expedite that it would help. Pine Beetle-would like to see funding for biomass plants – would thin out dead timber & minimize fire danger & would help high schools/ public buildings go to good use. Bad when forest burns

There are regions within the state but have oversight in Montana. At FVCC we have a volunteer garden for the community and picking up trash along rivers. Use a local location like a fairground with booths where people could learn more about programs like Montana Conservation Corp. or you can maintain a local trail as a family. Need a bigger media splash about opportunities to do work on public lands.

Don't forget outfitters. We provide the skills to help people get access to places to Bob Marshall.

Role of the Federal Govt- Effects of global warming- Glacier National Park- climate change. Fed Govt- EPA regulates greenhouse gases, but there is no legislation. Proposal by Dr. Hansen- free end dividend- carbon tax- taxed at point of entry but revenue neutral. Urge carbon tax. British Columbia is using this system.

Key to making all of this work is top down leadership/ effective policy/ . Huge development pressure/ increased population. Need strategic planning to knit all of this together. Would like to see Administration develop a National Strategic Plan for Development and Conservation. Need to address what we are actually intending to do with development so we can make decisions. Resurrect old 701 Planning Grant for councils of government. The greatest challenge we face. Federal Gov't used to have a program for planning for area wide systems in the 1970's. Then there was grant money. We should go back to the Federal Government encouraging joint planning

Discussion Question 3

Missoula, MT

(cont.)

Local working groups are the future-the model for the future. The Federal Government needs to get behind this & provide federal funds to support. Help preserve & sustain what we have now. Genuine working landscapes- sustain these-buffers & supports rural working communities. Conservation stewardship program –NRCS- voluntary incentives needs to be expanded. Term easements need to be considered (versus perpetual). These may be more palatable than perpetual. Sustaining genuine working landscapes- need tax relief. Administration needs to get behind this

The public is suspicious of lands being removed from the local economy. There isn't good input from those areas who are also interested in conservation as well as resource development. The Feds need to consider involvement at local level. Resident of Philips County. New national monument. But no meetings like this have been scheduled in that area. It has happened before with Upper Missouri river Breaks. Need meetings in Miles City, Glasgow, and Billings. 2/3 of the state doesn't have the population but they have the land mass.

Encourages Federal & State Agencies to tap into network of non-profits- conservation corps- MOSS-. Find ways to develop more partnerships rather than reinvent the wheel. Tap into those organizations that already exist and can engage local youth. Authorities for partnerships- DOI agencies has issues- when is it a contract vs when can we use a cooperative agreement. Much benefit from tapping into these organizations. They are supporting the Public Land Service Corps- has been introduced in the House. Would like to see this pass. Americor engages young people as volunteers. RecreationalTrails program- leverages federal dollars. RTCA program is great resource-needs more dollars. MCC is involved with all of these.

I agree, we need to have as many as possible. Comment on the website that you want a local meeting.

There is no agenda or conspiracy. There are places where we need gas, more energy etc...These have to go hand in hand with conservation.

Org helps create trails & do conservation projects on private land. Enhanced tax incentives for conservation easements doubles the work they can do. Without the tax incentives, it won't work. These tax incentives expired in 2009 and she would like to see these incentives made permanent. GVLTP preserves working ranches/ wildlife habitat. Keeps ranchers doing the good work.

There is a role for Federal government to plan in Environmental Education. Her kids are not interested in Yellowstone/ visitation is dropping. Need to connect kids. MOSS- gets kids outside. Government can play a role in the schools in E Ed. National Park should promote technology/ learning/ merge new technology

Discussion Question 3

Missoula, MT

(cont.)

Northern Great Plains. We have overlooked the grasslands, as evidence by decline in grassland birds & species. We are focusing on North Central area of Montana. CCPI program with farm bill is effective; working with ranchers on conservation measures to protect grassland birds. Need regional NRCS people to deliver these programs on the ground. Meet with ranchers and discuss opportunities. Science based organization that works with BLM/ FWP on research related to grassland birds. Leveraging of public/private dollars is effective. CMR-largest grassland reservation. Better integration between DOI agencies needs to occur. CMR managing for ferret. Not effective. BLM trying to find incentives for landowners to allow ferrets. DOI agencies need to do better at working multi-jurisdictionally.

Would like to see local solutions to big problems with the federal government incentivizing. In Montana what's important is our own autonomy. In Montana it's important the Federal Government using a light hand. Use incentives (we're creative people) and get local people together to make choices. For instance with energy: small diameter trees/biomass – utilize them to solve local energy problems. Do on a smaller scale so we can get our hands on it. It creates local jobs too.

I just retired as Forest Archeologist on Lolo National Forest here in Montana. There is a little known program called Passport in Time that allows public to participate on archeology projects throughout the National Forest system. However, there is no incentive for Forests to participate, no specific funding available, and the Forest doesn't get any recognition or points for doing this. Very positive program for cultural resource preservation but more importantly is what it does for education of the public on cultural resources as well as other resource issues such as wildlife, wolf reintroduction, fire and role of fire. It is a very successful program, but very small and not well known. But the payoff is tremendous for support for conservation and public education. I had couple from Manhattan New York who came to Montana to work in this program. On their first trip they took a bus all the way from the east coast to participate. They come back every year, but now they fly. The pay off for such a program is tremendous for conservation and education.

Stewardship ethic. Connecting kids to outdoors-Fed Gov't can continue with fee free days including in winter. Make the park more accessible by increasing fee free days & public outreach related to those days. Bring the parks to the local communities; bring the resources to the kids to encourage visitation. Resume matching program (like the Centennial Challenge) to incentivize donors. Although the Centennial Challenge was cumbersome, encourage it to resume.

Congress does have role to play through the appropriations process. Congress has an accountability to focus on public lands. Need greater Congressional accountability.

We do have sprawl & no mechanisms to deal with. No land use planning mechanism in Gallatin County. Climate change will affect all public lands, until congress acts. Poor public policies from previous administration- no new wilderness- can be overturned by new administration. Don't be afraid to use Antiques Act.

Discussion Question 3

Missoula, MT

(cont.)

Feds need to support small farmers. Need a comprehensive strategy to support small farmers.

Balance. We need to find the balance between working landscapes and protected landscapes. We need to develop collaborative efforts that find a balance between the two.

Appreciates everyone protecting land. Interested in protecting water. Primary concern is with global warming. Unless we get a handle on this issue, all our efforts at land protection will be in vain; get warmer/ forests burn up/ biodiversity down the tubes...if we don't change our ways. Federal government should not do cap & trade; we need to focus on cap & dividend or carbon tax- return the profit to the public.

Federal govt. needs to lead in interagency teams to provide outreach into community working circles. These feds could work together on planning how to do outreach to communities. Bitterroot constitutionals are saying all govt. is bad. We can't let this defeat a good democratic trust. It takes guts to be a good progressive government official. Need good interagency cooperation and integrate the best of the citizens and the good bureaucracy. Need to support the Superintendent in Glacier NP in his efforts to establish wilderness in Glacier and Yellowstone.

Flood plain & wetland conservation. Work in Madison river valley on floodplain restoration. USDA- Conservation Reserve Program & NRCS- wetland program are working. WRP programs in Montana. 2008 Farm bill allow grazing pilot programs. Challenge in conserving these areas with various funding sources –once protected by conservation easements, the wetlands are not restored. Legacy we leave should be the ability of the lands to store water. Restoration projects we need to fund, we have money for easements but not conservation work. No money appropriated. Need funding through agencies to do cooperative restoration projects. Greatest hedge against climate change

I grew up outside DC and am here as an MCC crew leader. I grew up going to museums and not to parks. We need to tie the service learning approach and focus it on doing outdoor service learning, rather than in the urban population centers. Montana is doing a good job of getting local school kids outside and connecting them with local landscapes. We need to convince schools that we need to take time from teaching for state/fed standardized tests and get kids outdoors. Time spent studying for these tests are keeping kids inside. Need to apply scholastic tests to knowledge of outdoors and conservation as well. The administration should pass the No Child Left Inside Act. This bill would provide funding to get kids outside and teach them about the outdoors. We have a fantastic Children in Nature Network that involves many partners and has been very successful in getting kids outdoors. The Federal government should have a bigger role in coordinating more children and nature programs. Land agencies should have staff committed to these programs.

Where do we stand in having environments that have hurt the economy of Montana? A new monument proposal has hurt the economy.

Discussion Question 3

Missoula, MT

(cont.)

There are so many people in this nation that don't know what agencies do. The Forest Service is a huge agency. Posters for this session listed the "Forestry Service." This would be a good civics lesson for schools. Have agency people go to schools and give civics lessons about the work that land conservation agencies perform.

Working aspect of Forests, many people make a lively hood. In the video at the start of this session there were only a couple clips of people working in woods. Livelihoods made by working in the woods is important to recognize.

Public land should continue to be multi-use managed but energy development needs to be better scrutinized. Montana is a very energy intensive state. She doesn't want to see things similar to the Gulf spill happen or the mining deaths in West Virginia. The administration should look into what kind of energy development can be done here as well as alternative energy. We need a solid energy plan. Public lands will be looked at for solar, wind, coal, and natural gas. Look at the pros and cons of each. We need a 20-year plan along with multi-use planning.

Mentioned youth who live in Los Angeles who have never been to the ocean even though it's just a few miles away. He grew up in Boston and there are kids there who haven't been to the woods there, even though they aren't far away. There was a Sierra club program that tried to help with this. His 'in to' working with the Forest Service and was working for the YCC. He really hopes the Obama Administration will establish a national service framework to bring back the CCC – the New Deal. We could reach out to new student high school graduates. Could make parents realize this is a great experience before college – to do work for the government and perhaps get education awards like having tuition waived. This is a huge opportunity in our country.

Regarding the Bob Marshall Wilderness Foundation and other associations who outreach to young people and have partnerships with the Forest Service: I hope agencies will fund these associations more. These are ways to connect youth to ground.

2 things that keep people from coming to the outdoors. Facade (not Disneyworld) or fear. Govt needs to provide a mentoring program to conservation groups to reach out to publics and get them interested in the outdoors. Teach them that risk is ok, and could actually be fun. Yes, there is risk in going to the outdoors, but it's worth the experience.

2 things that keep people from coming to the outdoors. Facade (not Disneyworld) or fear. Govt needs to provide a mentoring program to conservation groups to reach out to publics and get them interested in the outdoors. Teach them that risk is ok, and could actually be fun. Yes, there is risk in going to the outdoors, but it's worth the experience.

I have a wish list, 1. better planning strategies across the board, 2. Incentive to save conservation areas, 3. More information and advocacy, 4. Increased collaboration between local and federal agencies. More gets done by the locals than the feds.

Discussion Question 3

Missoula, MT

(cont.)

Forest Service having native grass around buildings. Where I work now, I'm told to water the lawn. It uses tons of water to water grass around buildings. There is prairie all around. If you use the right grass you don't need to water. Nobody would care that it was prairie instead. I stopped at a FS rest stop yesterday. It was so warm in bathroom and it was at night. Why are the heaters on in these facilities? Practice sustainable ways. Fund advertising use of green practices and local land. Put word out so people get interested.

Agencies should adopt things like when the health craze health started and agencies funded people to take walks at lunch to get healthy. Agencies can adopt outdoor activities so white collar can see blue collar people work like farms, trails, and farm communities.

Create more federal incentives and funds to public schools to implement outdoor learning programs. We do it with reading and math. Like "Project Wild" on a more regular basis. More than bring the trunk to school once or twice a year.

I get to work with all four land management agencies. There is a lack of internal communication between agencies. Facebook and you-tube are blocked from agency computers, so agency people can't communicate with young people. Need to look at that before you can reach out to young people.

Looking at conservation strategies. 80% of open lands are private. Conservation easements are used to conserve private lands. People donate the conservation easement. The incentive is tax breaks. From personal experience, I entered an easement 13 years ago. I talked to my neighbor about it. When congress passed an increased incentive for easement, spreading tax break over 15 years, then my neighbor also did an easement. Encourage congress to do the incentive again. For some it takes the added incentive. On other hand, there are those who want the land that they lived on and their parents lived on protected for their kids, but they don't make enough money to take advantage of a tax break. A purchased easement would help. Need a federal program to meet this. The video said that private land should be looked at for protection. The Farm and Ranch Protection Program has a minimum size. Congress should look at that to include larger and smaller acreages in the program. But that program needs matching funds, which are hard to come by. One thing that works well is the passage of a law like the Missoula open space law. Bozeman passed a second open space law. The local program provides the local funds to match the federal matching requirement for the easement program.

FED AS BETTER PARTNER

Discussion Question 3

Missoula, MT

(cont.)

In previous comments someone asked the feds to continue to provide incentive for easements. Land and water conservation funds needs to be fully funded. If funds were available more conservation projects could be funded. The Community Food and Ag Coalition in Missoula has been requested to examine subdivision requests and assess possible impact on agriculture by subdivisions. Even when the planning board is convinced that agriculture values are so important, more important than the subdivision the planning board will override the recommendation because of the emphasis on individual property rights. How do we instill responsibility for common good and common value of agriculture and forest lands? Missoula is creating the "Place Project" where cornerstone properties will stand out. How do we implement protection for these "Place Project" lands?

Getting people connected and kids outdoors is important. Federal agencies were created under a different paradigm. A paradigm where congress allocated funds and agency went and did work. With people being more involved there needs to be a change in the federal agency organization. We won't be the doers anymore. We need to be reinvented.

The agencies are good at inventory and monitoring on public lands. Extend inventory and monitoring onto private lands in the large scale conservation model. With that in mind we need public access. Access is based on consumptive uses. Focus on non consumptive uses. Would be more palatable to public.

Climate change— there is no greater environmental effect. Land management agencies can effect not just on ground but can influence others. DOI can have an impact on others.

The 3 predominate means for conserving private lands has been: • Acquisition by public land manager or Conservation organization (e.g. USFS, NPS, BLM purchase of private in-holdings, County or City purchase for open space or park with bond funds and LWCF funds), a private land trust purchase for wildlife habitat using combo of private donations and federal, state, and/or local funds etc). • Conservation easements (again, a mixture of private, state, local & federal funds are often used to purchase easements) • Land use regulations (some states have been much more successful than others with this approach)

Fully fund LWCF – This program has been so under-funded for so long. It is one of the main sources of federal funding that can be used on such a wide variety of land acquisition – from a much needed inner-city park to protection of critical wildlife habitat. Full funding of \$900,000,000/yr would significantly increase land preservation all across the US. Passage of the Land and Water Conservation Authorization and Funding Act of 2009 (S. 2747) would achieve this goal.

Continue Tax Incentives & Increase federal conservation funding – Restore permanently the tax incentives for landowners who grant a conservation easement and increase funding of federal programs that help fund the purchase of C.E. (e.g. The Forest Legacy Program, The Farm & Ranch Land Protection Program)

Discussion Question 3

Missoula, MT

(cont.)

Assist Local Govt with Land Use Planning – Many rural cities and counties do not have the money or expertise to plan for growth in a more sustainable way. Many of these local govts are located in areas with large amounts of public land that is impacted by the rural growth. The USDA publication "Cooperating Across Boundaries" (FS-861 August 2006) began by stating that USFS Chief Bosworth identified the loss of open space as one of the 4 threats facing our Nation's forests and grasslands.

Pass the Livable Communities Act (S.1619), which would help communities develop comprehensive regional plans that incorporate transportation, housing, community and economic development, and environmental needs.

Set up offices in each Regional Office of the FS that assist local govts with planning for conservation of sensitive lands (e.g. lands w/in Wildland Urban Interface, critical habitat, wildlife corridors). Provide funding and expertise to this FS staff to implement the FS Open Space Conservation Strategy published in Nov. 2007 (FS-889), including the identified Priority Actions of "convening partners to identify and protect priority open space" and "participating in community growth planning to reduce ecological impacts and wildfire risks." (FS-889 page 5)

Assist with expanding efforts like Collier County Florida's Stewardship Credits program (explained on page 23 of FS-861 publication mentioned above)

Re-authorization of the Federal Transportation Bill – Groups such as Transportation for American and the Smart Growth America have been working hard to reform the next T-Bill to increase public and active transportation funding so that citizens have more choices for getting to work, school, shopping etc. Their strategies include many ways to reduce the need to further expand the already millions of acres devoted to roads. • Land Use Planning – Again, there are many opportunities for the Federal govts to assist local govts to reduce sprawl from continuing to consume our rural farm and ranches.

Discussion Question 3

Missoula, MT

(cont.)

Getting more Children Outdoors – This is one of the biggest and most important challenges for this generation of children who have the highest rates of obesity and health problems related to being over-weight, such as diabetes. - Pass the No Child Left Inside Act (HR 2054 & S. 866) – This Act would provide funding for expanding environmental education in schools in order to get kids outdoors to learn and care about their environment and have the opportunity to be active and enjoy the outdoors. - Children in Nature – Many local, state and federal agencies are working separately and together to develop programs to get kids outdoors to connect with nature and be physically active after school or on weekends. Greater coordination and funding from the Federal govt could substantially increase these efforts. - Increase funding for the Recreational Trails Program – The majority of this funding goes to construct trails that connect city residents with parks and open space, providing more opportunities for children to be active and enjoy the outdoors. - Increase funding for Safe Routes to School – This is one of the best ways to reduce children being driven to school each day – provide a safe route so that they can walk or ride their bikes instead. - Help create more opportunities for both volunteer programs and paid work – 1000's of young folks are connected to the outdoors by volunteering for local, state and public parks, but many local govts don't have the resources to either create or expand upon volunteer programs. Assistance from NPS or the USFS could make a big difference. Also, help increase programs that assist college students with paid internships or paying back college loans in exchange for working outdoors.

Getting more Adults Outdoors - Support Social Marketing and Social Norming – This is one of the best ways to inform leaders, parents and children that getting outdoors is healthy and positive. Social marketing has changed the way we think about litter, forest fires, seatbelts, recycling and more. - Increase CTEP Funding – This is one of the major funding sources for constructing bike/ped trails that are used for commuting and recreation by adults of all ages and abilities and children. Such funding is often used to build bike/ped trails that are completely separate from roads in beautiful greenways, which encourages more adults to ride and exercise when they feel safely separated from auto traffic.

EFFECTIVE FEDERAL PARTNERSHIP WITH LOCAL PUBLIC & PRIVATE RECREATION ADVOCATES a. Interagency Planning as areas relate to watersheds, urban areas, and planning zones. Planning should involve various public and private parties and emphasize overall goals of healthy built communities and supporting children (and adults) connecting with the outdoors. b. Funding based on partnerships and ability to impact the overall goals.

He's from Illinois where we don't have prairies any longer. It is now urbanized land – farms that have fertilizers and pesticides. In an ideal world the Federal government would introduce more of the native land that used to be there. Not every place is like Montana with native lands.

It would have a huge impact to move the Forest Service out from under Department of Agriculture because when you view trees as a crop it makes a big difference in how they are managed. The way to set policies should be based on watershed health as the basis for all management because, for example, drinking water will be one of the primary problems of the next century.

Discussion Question 3

Missoula, MT

(cont.)

Has been an environmentalist for years; he's never seen an effort like this listening session. He's asked the government agencies to follow up by creating an interagency working group combined with local participants to work together on local issues. There are a lot of people who don't want to do anything different than the way they do things now – coal, oil, etc – and when you are making a lot of money you don't want anyone to break up your game. The state legislature follows the money so it's hard to get things done through that route. But here there are progressive agency people. Let's bring them together with the local citizens to get out from under the money game. Get all outfits to the table and work together to solve the local problems. He asks the top government agencies heads to leave in place a process for the locals to have follow-up to this session. He's very appreciative of our Agency heads coming here and taking this leadership and listening to all of these great ideas. He's inspired by all the great ideas he's heard here and very invigorated by it.

The government can be a better partner by stop hiding the grant opportunities – web sites to find this information. Need to have simpler application processes.

Discussion Question 3

Nashville, TN

We are writing to request that the State of Tennessee be host to a listening and learning session as part of the America's Great Outdoors Initiative.

Tennessee Parks and Greenway Foundation success using property transfer funds, used in 4 ways, 16 Million dollars goes back to TN, however those funds can be taken by legislature to balance the budget, it is a fight they will have to fight every year, even though it is dedicated fund, never fully funded, there should be more federal incentive to states to have this type of forward thinking approach to take money when developed and preserve the land, this would be good incentive to state legislatures if the feds would match the money they might set aside. Match all money set aside for conservation.

1. government to government consultation requirements with tribes could help feds hear things from tribes they need to hear. 2. support legislative fix for Carcieri decision which keeps tribes from having lands put into trust for them. 3. encourage Salazar to consider the precedent set for the role of stakeholders by his decision in Cape Wind projects 4. support extension service through land grant universities (especially in Indian country). 5. through Rural Development, look at unintended consequences of SUTA and the problem is that it is only trust areas (fee simple doesn't qualify).

Poor areas is a problem. Suggest Urban hubs through public transportation. Driving is getting very expensive. Camping equipment is now considered a luxury. Develop a tax incentive for people to donate their camping equipment or canoe to find homes for people that will use them.

Challenges: TN # 8 in tourism. Preserving America Program: no \$\$ in budget for this program in 2011. Sustainable tourism will suffer if this stands

Challenges: State Mandate for State Wildlife conservation plan, federal agency use same tools to set up consistency btw states. EX no net loss policy for wildlife conservation

Challenges: Consistent and full funding for the USDA's Resource Conservation and D... Fund (RC&D)

challenges: recreation in forested areas is threatened by insects and diseases (trees) Threats to forest health on public and private lands. Land use change loss of forested lands. Work with our policy makers to make them aware of the importance of our forested areas.

Challenges: Trouble for private sector to meet matches for federally funded programs. Prioritize or coordinate the funding programs.

No child left indoors program needs to be implemented similar to no child left behind

More monuments to designate areas. To show people what is special or set aside so they can appreciate it more.

Discussion Question 3

Nashville, TN

(cont.)

Pass No child left inside act, Budget that has been cut. Provide more funding. Federal Children's Bill of Right all kids should have the right to do these 12 things. Govt could communicate this to everyone

Land HOH conservation funds. State side components federal hwy admin. State self funding gas tax. Continue this program.

Protecting large landscapes only Federal govt can do this

Legislature for large businesses will have to put out lots of money for clean air and water act etc. . If this is not achievable or realistic could this \$\$ be used for conservation and recreation.

Let the government communication folks have more freedom to spread the message of the benefits of getting people outdoors.

Create a comprehensive plan that last longer than one presidential/congressional term.

Have the President create an America's Great Outdoors day in which all NGOs, state parks, nat. parks, battlefields could concentrate on to make a large public event.

Fully fund the LWC Fund, approve and fund the TN Wilderness Act., Administration to draft a National Heritage Organic Act.

Use the current Antiquities Act to protect cultural sites

Public service announcement for AGO message. People do not know about the program.

Amendment to fund and encourage field trips

Need more marketing dollars to advertise greenways and trails initiatives. Promote people getting outdoors.

Funding to market natural/wild areas and parks.

Fully fund the Federal historic conservation act. Preserve America save america's treasures. Fund school field trips somewhere else other than the school room.

Discussion Question 3

Nashville, TN

(cont.)

Mandate schools to create programs that requires kids to get outside, ie. 100 hrs. of volunteer services before the child can advance to the next grade.

All states developed SWAP TN has 700 species rank as greatest conservation need. Documents are done but not widespread throughout other agencies and groups to use proactive approach. These documents provide that help. Need to utilize more. Marketing needs to be expanded.

promoting small sustainable farms to protect private lands. 2007 Organic Bill provided more funds for this type of farming. Small sustainable farms are helped by this funding. EQUIP opened up funds for farmers to get started.

Young and minorities, connect them to the parks. Working with DOI is a nightmare, very difficult to get suggestions thru. No access to authority people, better corr with programs with the youth.

take children and work into jobs, projects. Wpa format to give everyone a boost to do.

harder to get out doors. Make a challenge, to stop schools mow the grass, gov to have native gardens in schools, Stop using pesticides.

con easements 06 07, easement enhanced. Extended 08 + 09, 2yrs success, want perm tax code(revisions). Chattn cons farm land Farm to school program good benefits, child nutrition act hard to serve food, had more funding and buy from the local farmer.

Climate change- wildlife corridors for animals. Bring people together and provide wildlife viewing, someone to step up to make it work.

young people reconnection minorities. Working with Dept. of Interior is a nightmare vs NOAA. NPS superintendant are too hands off, better coordination of youth programs.

challenge in relation to climate change developing wildlife N/S corridors need coordination with feds and state to create wildlife corridors which could provide obvious needs. Need lead on leading all partners to solution.

Grant criteria need to be looked at Small parking lots need to be built to federal standards huge waste of \$

Works with organizations that volunteers to maintain trails, such as Back Country Horse of America, Leave No Trace program. Want access and open relationship with park rangers, superintendents, etc.—government agencies assist local organizations.

Need Federal money to help buy land before developers buy it up.

Discussion Question 3

Nashville, TN

(cont.)

Special use permit process is dependent on whoever is in that job. When it takes one year to be heard, isn't there something wrong with process?

Can Americorp be of assistance to some of these staffing issues discussed earlier?

Government should provide central/interstate level of information. Not asking for funds or regulation, but who do I go to for this?

Needs to be strong Federal effort to reach all communities minorities?

Government needs to advertise programs (Smoky Bear, pollution) to children

Government should take on issue of public transportation, finding ways to increase long distance mass transportation.

Continue support for National Heritage Areas.

Issue executive order to revise policies on wilderness review.

Collaboration of Dept. of Education. Add Water Quality Act, Pollution, Ecosystem, etc. into curriculum.

Take advantage of university systems. Reduce student loans for involvement in civic activities?

Tort reform to relieve liability issues.

Discussion Question 3

Nashville, TN

(cont.)

Tennessee Department of Tourist Development—approach to sustainable tourism has been a holistic approach inclusive of business development and communities—sustainable tourism summit was successful because it was designed for those who realize the importance of protecting our destinations while maintaining economic growth through tourism—sustainable tourism sustains the environment, culture and heritage of a region while at the same time sustaining the economic growth through tourism—the tourism industry has the potential of increasing public awareness and appreciation of environmental and sustainability issues—the implementation of sustainable tourism practices can preserve and protect a region’s sense of place for future generations—the states initiative was not a top down program, but a grassroots initiative which has grown from community to community (Must be a regional local based program, i.e., Gatlinburg green, Ripley From Red to Green, Ruby Falls, Chattanooga Green Lodging)—Make sure there is a WIN in the program for all stakeholders including businesses, community leaders, developers, preservationists, and environmentalists—The very same resources you are developing allow citizens, visitors, and children to be involved in sporting events, nature and outdoors, preservation of land, agritourism, development of sustainable cities, and will ultimately lower the state’s obesity rates—to get kids involved it has to be fun!—create sustainable strategies recreational stories that allow kids to learn while experiencing nature, i.e., geocaching which utilizes the latest technology while experiencing the states national parks, battlefields, and recreation areas—Tennessee’s greatest outdoor classrooms, such as the partnership between the Great Smoky Mountains National Park and the Tremont School, provide our children and visitors with opportunities for life-long, place-based sustainable tourism experiences—the economic piece is Key to the success of the program as it will bring additional resources to the table, and for businesses the program has to positively impact their bottom line—create recreation resources at the state and local level to move citizens and visitors to the rural areas of the state—These new tourism based businesses will increase recreation and education opportunities across the state—important to remember and recognize that the groundwork has been laid by many others before us Land Trust of TN, TN Civil War National Heritage Area—These partnerships work because the focus is on conservation, preservation, and education creating a WIN for all stakeholders involved—State and federal agencies can provide resources and best practices, however program must not be top down but local driven in order for stakeholders to embrace all facets of the program (business, schools, churches, communities, environmentalists, preservationists)—Remember the best ideas come from the local communities and businesses—The implementation of sustainable tourism practices allows communities to develop their economic, cultural, and natural resources while at the same time enabling them to keep their natural resources beautiful—sustainable funding opportunities for land conservation—historic hermitage hotel in Nashville encourages visitors to donate \$1.00 per day—They partner with Land Trust of TN and will create \$1 million for land conservation—What would happen if all historic hotels in U.S. did this

Discussion Question 3

Nashville, TN

(cont.)

Conserve at least 5% of TN farms and greenways to set aside—add prime farm lines and working corridors to set aside to protect trees, air quality, etc.—connectivity is key—NEED cash incentives from federal government to support management and maintenance so efforts can continue—the job program produces pay and a good quality of life—support and incentive is crucial to adding more land

Funding for federal agencies with a line item budget dedicated to conservation and recreation—Park flow program in state of TN is needed for land trust foundation to establish additional area for bridge sites—no water trail system—scenic river program can protect the scenic quality and recreational qualities need to be in another category—no sustainable way to protect those rivers and trails

Can we help private sector/retail groups? Get tax cuts, breaks, incentives to help private sector? Family Adventure Journal—passport program that has been successful to get kids engaged in outdoors. Could engage more people if there weren't so many liability issues with transportation. There are regulations that are not being enforced (hunting/fishing).

collaboration with local clubs and organization along with national because people are willing to work hand in hand and need to partner with off road groups—local groups are willing to do the work but they need the guidance of the national groups

Identify particular land resources in TN that need to be protected—working to protect the largest known waterfall—have private organizations identify key resources—need access to sustainable funding to ensure targeted acquisitions are funded—benefit of the knowledge that can identify some of things that federal organization

areas are closing down due to not having sufficient money to keep the areas trimmed and open—farmers were willing to go in and maintain the park—Need better cooperation from the federal agencies to allow public to help maintain areas—people are willing to follow the law and build necessary items, but federal restrictions on using local people to work on federal land—need some easing up on locals—need more understanding to allow the local community to assist with projects on federal lands—Need more people involved in volunteerism

partnerships work—enjoy relationships with local parks—DOES NOT WORK—federal partners and federal managers do not work well together—All agencies are not on the same board—more communication between federal agencies

Discussion Question 3

Nashville, TN

(cont.)

Conservation district and conservation district movements—sole conservation district by state law in TN—works of improvement on privately owned agriculture land—local people or volunteers that are elected to their conservation district that work with the federal entity or state entity to help make the decision on how that money can be spent—involve locals WORKS—lagging support though—increasing the amount of available funds but fewer employees—struggling to get the work done and help from federal agencies lacks—look at better ways for cost share programs—shift some of those cost share funds to the other side—conservation is a conversation—it takes private conversation for the conservation to be preserved—look at rededication to provide assistance to the public in natural resource—farmland protection—how to figure out how we make agriculture profitable?—how do we look at things?—regulations impeded people staying on the lands—the age of farming is becoming a thing of the past—no local mentoring programs—need to look at the inheritance tax so the farmers can pass down to youngsters so they can continue to farm—need farmland protection programs—what are the hindrances to people staying on the land—person cannot bake biscuit in their home and sell it—hurts helping people stay—younger people are not farming—how can federal help older couples find a younger helper to farm

Department of defense is one of the largest federal land owners in the country and we need to adopt the green movement—bring DOD into the system such as taking a look at Fort Carson who utilizes the solar panels and utilize the veterans because A. they are returning service men B. they are knowledgeable C. make military bases more user friendly to the community—land is well preserved

partnership in TN with federal agencies enjoy—find ourselves that each federal agency has its own specific reason for being there—public doesn't know how to comply with management schemes or regulations—put together multi jurisdictional agencies to take the lead and figure out problems—federal agencies need to not have conflicting interests

DOI embraced landscape conservation cooperative—USDA needs to look into it

There is not a lot of incentives to combine different funding mechanisms—combine those programs to make big projects happen

NPS needs to spend as much on programming and interpretation as LE—need outdoor recreation specialists but need people to show how to camp and go on hikes without putting themselves in danger—have community coordinators to work with federal and locals—built environment getting planners and local ordinance to have that need more openspace knowledge—need more programs

TN Tourism development like the holistic approach. Asking local communities how they can help with conservation of the landscapes that are privately managed. What are the best practices from private side. Letting the grass roots make the impact with government support. How do we make sure people know where trails (rec) areas are?

Discussion Question 3

Nashville, TN

(cont.)

Partner with economic development to help conserve the landscapes that attract tourism. Not realistic to tell rural communities to stay rural with no development. Provide the incentives and work together. There are so many government agencies, TN department tourism works to designate byways, then TDOT puts rip rap along the road...not working together, government needs to be pulled together. Need balancing of environmental and economic. Hierarchy of gov't. Need economic purposes for recreation to make rural communities more viable.

Real estate land broker. Couldn't find anyone to tell him how to get land donated to public. Realtors are not at the table when conservation groups get together or when opportunities present themselves. Success would increase if real estate persons were at the table. Could government help identify the key lands that are needed for conservation? So when a farmer is ready to sell, conservation advocates are ready and responsive.

Battle of Franklin Trust We've been declined for any park service status. How do restart a process for affiliation with the parks? Need the affiliation of National Parks to get recognition to grow visitation and appreciation.

Public school access and connectivity is being lost because housing developments don't allow through traffic. Fences are going up and keeping kids out. There could be regulations that tell people to allow access and open for use. Federal government should buy key parcels to secure public access. Federal regulations on mortgages have changed in the last few years; these regs could incorporate land use to accompany better connectivity in neighborhoods (not allowing fences so kids can cut through yards). Can't use utility corridors either.

Tennessee has great species diversity and should have a higher priority for conservation. It's always California.

stop treating property as a border. Federal government should become partners with gateway communities. Work with the communities.

Obesity rates. School field trips are going away. Need to be supported at a national level through education. It is of great value. The costs are making field trips prohibited.

NGO comberland region tomorrow works with developments of lands in constructive ways and with community development. The current policy works against land conservation. We are set for sprawl in the current policy. What the Fed. Govt can do is to connect their efforts sustainable communities partnership initiative that will help communities with better development of their communities and infrastructure. The other thing you can do is work with natural resource partnerships with state agencies and provide them with ways to partner with NGO's. Fund communities to help provide comprehensive plans for these community development.

Blueways program Challenge on access points to trails. She would like that state and federal can help in getting private landowners to give access to these trails. For them to work to help educate these private landowners in their views on this. She wanted to thank (name deleted) for his wilderness program.

Discussion Question 3

Nashville, TN

(cont.)

CEO of TN Wildlife Federation from Federal standpoint, incentive based programs, but these programs are typically resource limited, even small cuts have huge effects, get on the ground working with landowners on a daily basis, ie, NRCS, FSA, PFFW, need to make the performance standards employees are graded on at a county level to give it the attention it needs to get or give money to non-profits who can do work cheaper and faster, crossing political boundaries.

Discussion Question 3

Philadelphia, PA

jobs are created through heritage tourism, goal of AGO ties to heritage tourism- What is missing is Commerce Department should be included in initiative, one item that they could is how do take the federal role and promote heritage tourism

federal government should support service learning; service learning is a real opportunity to connect education to the resources

Get funding from gov't to improve. Research & identify where the resources are -- federal role very important.

West has different problems, so few people and lots of acres, federal role is there is not enough of presence, staffing, and communication

fighting a gaming commission on Casino development in Gettysburg, inconsistent message from federal government

challenge on helping protect the battlefield - Neither NPS nor Elected Officials will take a position to stop Casino Development proposed directly adjacent to Gettysburg National Military Park

Need to have comprehensive and consistent goals at all levels of government and across initiatives –For example: Preservation is unnecessarily taking a back seat, in the name of conservation and job creation, to unthoughtful development of Solar Power Infrastructure being developed in inappropriate locations that impact cultural resources.

cultural landscapes, when federal government takes over historic structures there is not enough money to restore them, funding is always a critical item and administration has cut out historic preservation funding. Need to emphasize how Historic preservation = economic stimulus. NPS publications are invaluable.

the historic preservation message needs to come from top down to emphasize its importance at the highest levels - Administration must be about historic preservation- challenging for African American Commemorate Endeavors – If Monuments in our Nation's Capitol don't reflect the diversity of our country , then where? Efforts of non-profit organization have been under siege for years so that L'Enfant Corridor can be open to for-profit developers. Need support of government at all levels (to stave off development pressure).

Acid-Mine Drainage and Art, effort was to communicate importance of restoring river resources and do so in a compelling visual way, it was a creative and inventive way to bring an otherwise complicated (and unsexy) message to a community. Unfortunately program did not get off the ground. Administration needs to speed up path driving development of green infrastructure – Reuse first, Green First. Engage (NPS?) gateway communities

Discussion Question 3

Philadelphia, PA

(cont.)

Stimulus \$ Concept - federal government should support community college training programs on craftsmanship trades (not enough skilled craftsman who understand historic building trades), how to repair historic structures. Learn from Tribal Cultures, all things are connected - consider big gestalt landscape. Use a "National Landscape Initiative" - natural and cultural are the same thing, should pull those two together, not separate them.

NPS at the upper level doesn't seem to take a position (on Land Development happening adjacent to parkland)

federal role needs to encourage partnerships (and coordination) and multiple objectives

Seed money would help us raise more money.

Existing federal legislation such as Section 106 must be followed by all the agencies that are affected by that legislation. Department of Energy, for example, doesn't follow.

Where in the administration is the 1930s conversation (similar recessionary period) about gov't jobs programs? Create employment for architects, historians, etc., people who want to work for the NPS. Missing an opportunity to invent programs focusing on preserving cities and national parks. Entire generation of young people knocking on the door & there is no work for them. Our heritage is as profound in urban areas as in remote parks. Opportunities all over the country but administration is not looking at how to use this crisis to deal with these issues.

Jewish community started in Pinelands in 1880s. Pinelands Commission trying to put sewer projects on this land. State says it can't help because it's federal. State laws don't cover national preserves. Create partnership between state and federal. There is more protection outside the Pinelands than in.

In Pinelands, Underground Railroad Network to Freedom was economic engine – uncovered lots more history in southern NJ. We need cross-pollination, talking between botanists, archaeologists, cross discipline. We become myopic. Federal agencies can help connect the dots, develop the connections.

put money in NPS budget to help reduce the backlog of archival & museum collections.

use Youth Conservation Corps, bring back the Civilian Conservation Corps.

Small grants leveraged big increases in participation.

Discussion Question 3

Philadelphia, PA

(cont.)

job and volunteer opportunities, federal government role to recognize heritage tourism, professional opportunities with historic preservation. As The Conservation and Recreation Agenda moves forward we must keep historic preservation on the agenda - as most people will not equate cultural resources with America's Great Outdoors, but they are integral and inextricable.

need a consistent message, NPS has said that historic preservation is not a core mission, inconsistency with federal governments message, actions have to follow words. Tribes want to do more historic preservation and there should be more federal money to help them.

grant structure might have to be different. Rural headwaters need to get grants, not only downstream at urban centers. Professional grantwriting staff differs. Issues at headwaters greatly impact everything downstream

Some communities are more sophisticated than others – smaller communities don't know what's there and available.

looking for national recreation designation. The designation could bring local organizations together and have more clout, bring more people to the sites, and would be a great thing for the people in the region.

reinstate incentives for performance and innovation in HPF. Make revisions to tax credit program more attractive to smaller projects- lower adjusted basis requirements

E Grants – I'm a sophisticated user for grants found it hard to use and understand. Many friends group found it very difficult to use. It's hard to find a grant or to find anything on E Grants – make E Grants more user friendly. People don't have time to search for this information. It's a waste to make it so difficult and people aren't applying because it's so difficult.

make funding available for projects through RTCA, education- create connection to outdoors for children and adults

move forward through cooperation and collaboration.

Tiger program of DOT is implementing the sust community agenda. Tiger II is more \$ for reinvestment and going into established areas ICE-TEA was successful

need legislation for national heritage area designation and program legislation.

Need financial involvement or help to preserve farmland – especially farmland around historic battlefields.

Discussion Question 3

Philadelphia, PA

(cont.)

If have a NP that is tied to its rural context – to help farmers sell products, if we don't do this we are going to lose something dear to this country and loose heritage tourism economy. The help the federal gov't can do would be helpful Agriculture is almost equal to our heritage tourism in the Delaware Valley and so much the public can benefit from. All of us recognize the value of preserving our heritage and recognizing there is another generation to preserve our heritage and that they share

EPA public comment process closes this wk. no information on environmental education. Submit comments to include environ educ in strategic plan

Dedicated funding for wildlife protection

rainwater recharge sharing information for urban gardening

interior & agriculture are not the problem. Places like HUD are. Need more comprehensive policies to direct federal resources back into communities and disincentives for development outside of existing infrastructure. GSA is a good example of an agency reevaluating their resources and reusing, restoring and maximizing.

tax credit projects, part 1,2,3 to different offices. Whole process needs to be online.

lean, mean program in NPS RTCA. Lots of technical assistance but gets lost in NPS. Continue to support technical assistance like RTCA and do it better. Communicate information on technical assistance including RTCA and other assistance.

need public transportation in the suburbs. Public transit lines to suburban centers.

3 Civil war protection program, range land protection program transportation enhancement program, fully funding these programs would be a big help.

battlefield preservation – having funding for battlefield preservation so more localities know that funding is available.

Suggested strengthening federal legal services available for protecting cultural resources, noting that developers often buy the best legal services in a community as the cost of doing business. Suggested more regional planning efforts so fewer preservation battles occur on a case-by-case basis.

Federal Role helped with infrastructure. It's a wonderful tool.

Discussion Question 3

Philadelphia, PA

(cont.)

Need to put money into areas that are already developed. Need to emphasize urban and suburban redevelopment

Some communities in NJ don't trust USACE so they won't use their funds, but will use EPA funds and have had some successful projects with them.

Critical tool – designation. Urban sprawl – if there is some agricultural policy to keep people from selling land to developers to make money. Need national agriculture policy that preserves prime farmland so individuals can take action, not a political body. From a natural resource standpoint – the feds need to look at resources that cross state and governmental boundaries so we don't have these bars that hinder us from protecting areas. – i.e. Appalachian Trail

competitive factors for states if HPF over \$50M

Battle lost against casino (sugarhouse site) had more Native American artifacts than other sites in PA are now sitting in archives. At Fed. Gov't level tools like NEPA and USACE could be deployed at these sites would be helpful. Legal structure – there is a weakness in public interest law. Casino bought out law firms and no public interest firms got involved. Citizens groups had trouble finding law firms that were not being paid off by the casino developers. Campaign finance abuse – casino developers were contributors to campaign funds of the governor.

Rochambeau trail will be an incredible tool to organize heritage tourism along the trail.

Yes, there is knowledge and use of the grant programs. On the positive side of USACE, USACE provided \$ for projects that have been very successful in Philadelphia. Grants.gov is very difficult to use. It's a challenge to find the information to apply for a grant.

ULI partnered with EPA for conference on Smart growth

president's partnership for sustainable communities is different than AGO. 50 yrs of transportation funding has made numerous historic resources obsolete. Need funding for local historic preservation.

gardening and farming on empty lots in depressed urban areas like Detroit. Where is the protection against developers who might want to crowd in?

NPS and Interior is sitting on a potential showcase passive green structures. Siting, vegetation, creative systems for natural ventilation, etc.

Use the resources we have in the government to reach Native Americans and engaging tribal leaders.

Discussion Question 3

Philadelphia, PA

(cont.)

NPS administers LWCF, Historic Preservation Fund, National Heritage Area program and NPS can show leadership in getting partners to work together on state and local side (getting everyone to the table to collaborate). Important that NPS and NHA communities get together so that NHAs can be brought into the NPS family. NHAs don't live up to its potential – great at bringing recreation, history etc together. Unity of thought between NHAs and NPS is needed. NPS should come up with a draft idea and have NHAs respond. NPS should take the first step.

AGO should look at how to make sure these underprivileged communities and historic places are connecting. These kids need to have experiences with outside and historic places.

Keep the FRAC act within the CLEAR act. Regulate the gas industry. Advocacy. Funding.

You need everyone at the table (public and private). Having the NPS as a partner is important. Providing seed money.

Use urban parks to bring a diverse audience to understand our heritage through our historic sites.

Fully fund HPF. Support the CLEAR Act.

SHPO needs capacity to work more locally in the field b/c PA is so locally minded. Capacity is federal and state and local responsibility.

Full funding of LWCF. Extend the special provisions for tax deductions on easements.

NPS should embrace idea of making preservation important to kids. Kids need to experience history – actually be immersed in a park setting and in history. More programs like Valley Forge campfire experience.

Assisting w/ current programs that work, Technical Assistance

easy ways to approach children in school – mail NPS brochures to schools – get them involved in Webangers – send maps of parks and maps of what is in the area – some are right around the block! – materials exist that can be spread out and help people to know what is in their area and outside of it.

Use marketing to increase awareness of historic sites. Fund the UGRR Network to Freedom program.

The HPF and LWCF are funded by the oil industry – the administration should be out in front to get both fully funded.

Discussion Question 3

Philadelphia, PA

(cont.)

There are so many education programs at many levels – we need to have a way of inventorying them...before we launch something new, we should build on what is there. Cutting Save America's Treasures, Preserve America, and NHA funding – what does this say about the administration's commitment to preservation. These programs should have a place in the future. The Marcellus Shale in PA is a disturbing development and there are powerful forces here. The federal government needs to take a look at this.

What drives historic preservation and economic renewal through historic preservation is more active commitment at federal state and local levels to restore the economies. Education – terrific if stimulus money was used to inspire young people coming out of HS, or folks laid off in mid-career – if funds could be used to train them to perform historic preservation/construction work. Federal role could be to promote cultural resources more – greatest effect NPS can have is not to acquire more natural park land, but promoting cultural resources – cultural resources needs to be addressed w/ every publication, video (example – AGO video).

Use marketing, not just for tourism, but for other programs, too, such as adult literacy, to make connections. Get people who have no access to these places that we are preserving.

Communication - Get the word out including in mainstream media where people who are not already interested will see and perhaps become inspired. How do you get movie makers to put national parks and historic sites into movies? As a setting. Government sponsor an environmental movie or a substantial documentary in theaters. More casual, constant placement of national parks rather than one big ad campaign. Send mailings to communicate with park information on special events. Look at past successful ad campaigns.

Fund school community service programs and provide incentives for youth.

Government sponsor documentaries to be in theaters.

More funding for parks

Discussion Question 3

Poughkeepsie, NY

FARMERS ARE ENTREPRENEURS GOING DIRECTLY TO THE CONSUMER. CREATING FOOD SOURCES FOR PEOPLE. URGE FEDERAL GOVT TO INCREASE FUNDS FOR FRPP. RENEW COMMITMENT. THERE IS LIGHT AT THE END OF THE TUNNEL. LOOK AT REGIONAL PROCESSING FOR LOCAL FOOD SOURCES.

I'm a Hudson River navigator and through American Heritage Rivers Initiative. Also works here at Marist and represents local community groups. Bringing people out are surely things promoted by the grass roots, local community. Opportunities to partner with federal government. Every local community has different needs and it could be recreation or natural resource conservation. But we need to stress connecting people through the rich sites that we have, cultural, historical and environmental. Additional resources that would help our efforts? Coming from the American Heritage Rivers Initiative – 14 rivers that work together. Tools we need from federal government is for federal government to be engaged, but not just through one agency, but inter-agency task forces. It's not one size fits all. We worked with an interagency task force. Can be such a tremendous tool, because if I go to USDA and I'm not talking about farm, it's not a part of the USDA priority of projects, if we could crossover and USDA is partnering with the American Council of Historic Preservation or NPS is involved, then they will recognize needs of local communities are not one size fits all. We need to work across agencies. We also need to re-engage what the federal government has already invested. We constantly struggle with where we belong, because the American Heritage Rivers is not part of an overarching organization. Where do we evolve? Maybe what we do is partner with some of those local initiatives to reengage them and make them part of the project. The challenges are, of course, money. We need to see the federal investment across all agencies. The role can be great. We've seen across our history much investment and it is a golden opportunity.

What works to engage people are community gardens, school gardens, theme farms, fresh air farms, things to get kids out and experience their environment and to understand the food system. Community gardens are a fabulous way to get people even in small spaces in urban environments to connect with the outdoors, to preserve that land. Tools/resources – public land trusts, protection of land rights for community gardens, assistance of soil remediation in brownfields and urban areas, sites that exist and are neglected, mini-grants, funding to get school gardens going, efforts to bring fresh food to children. Challenges – state and local regulations that are seen as barriers right now. Lack of incentives, short term goals for development that fragments the land and takes land out of production as a green space. Green spaces or community gardens being sold. Maybe if they are sold could have some percentage of the fund be put into a coffer – when public land is sold, to put some of that money into a coffer to use for other public lands, soil remediation, etc. Food modernization act is an opportunity to amend that in certain ways not to overburden small producers. Can't be one size fits all, right now it's five hundred dollar blanket fee for every farmer that participates. We need to mitigate that and make it more flexible for small farmers or a variety of farmers.

Discussion Question 3

Poughkeepsie, NY

(cont.)

I'm here as a private citizen. However, I'm involved in a number of businesses and activities related to the subject. Regarding the two other areas I'm involved in, I'm the designated developer of a project called Longdock Beacon, a collaborative project in Beacon with Scenic Hudson, constructing riverfront land there in the city of Beacon into a tourist destination, a facility that will be developed according to sustainable practices. Connecting to outdoors requires a place to spend the night. That dramatically increases the chances of people spending more time there, because they have the chance to spend a second day and can take advantage of more resources. This gets into the private sector and development. I'm also on the Board of Directors of Hudson Valley Fresh and also interested in economic development to the dairy cooperative. What struck me in my various roles is that I believe that it's a mistake that the U.S Department of Housing and Urban Development is not involved in this initiative. In each of these projects I've been involved in, HUD has been involved as well. Most recently, Hudson Valley Fresh has been a recipient of HUD funding for job retention at one of the oldest family-owned dairies in the state. HUD plays a very important role and since money is constantly being mentioned as a challenge, those are potential deep sources of financing. HUD loan programs can help finance many projects and any tourist association can be financed in part by HUD 108 loans, do not need congressional appropriation for the full amount of the loan. It's a wide open source of capital.

Discussion Question 3

Poughkeepsie, NY

(cont.)

attorney and involved in Walkway over the Hudson. Most people thought I was nuts to try to turn a railroad bridge into a walkway. It's become the 3rd biggest tourist attraction in NY State. We've had 600,000 visitors. I think it's popular because it's very simple – it's a way to get people outdoors without cars. Shared for bicycles, skaters, runners, walkers, small scooters. It takes about half hour to walk across it. Until you get out there, you can't understand the beauty of it. It's quiet, it's peaceful and people just love it. It's going to connect with 25 miles of traffic-free trails on both sides. I've been pushing for a number of years with the Dept of Transportation not just to concentrate on providing motor vehicles access, but on bikes and pedestrians. Not enough attention to sidewalks and traffic-free lanes. There's no shoulders, sidewalks, traffic free lanes. I think that's the reason for the obesity problem because there isn't a safe way to get out and walk around. We've concentrated on motor vehicles for too long. Dept of Transportation needs to take into account and consideration the impact on bicycling and pedestrian traffic. Maybe some incentives that every project they do, they take into account the impact on biking, walking, take that into consideration. Even with the project we did, we had transportation funding and it took us 3 or 4 years to use that. We had to get most of the money through other means. In the Hudson Valley in general, we are the original great outdoors. It's the most beautiful area in the world and I think the federal government should concentrate on this area by making it accessible to people not just in motor vehicles. Railroad transport—one of the problems we had, csx a new freight line, not really cooperating in helping us use old rail trails. Trying to get commercial interests to buy them, but the federal government could help. The feds could take a role in providing incentives or leaning on CSX. Senator Schumer helped with the walkway. We are working on other things. CSX owns a key piece that we need for the trails. It is all coming into fruition except for the one piece we are trying to buy from CSX. We're within close proximity of 10-15 million people in New York City. Local people can't get out West, but by protecting the Hudson Valley we helping people get outdoors in an area that's close to a concentrated population. We were overwhelmed with the success. By word of mouth we're getting people from all over the world. You just have to go talk to people to see they're coming from everywhere. We're still working on parking issues, an elevator, benches, but it's been a remarkable success. Until you get up there, you can't understand the beauty of it. With those trail connections, we could make a trail from here to NYC, but there is a lot of resistance to it. But if we could get the federal government to help us lean on the railroads.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Small grass roots group working in Putnam County. Being an advanced senior, I will read my comments. (Written comments were submitted.) The great swamp of eastern Putnam and Dutchess County is a different type of river system – 20 mile length encompasses two major river systems. The Housatonic and the Hudson. The East branch of the Croton River also is part of the NYC water system. The great swamp is known to supply about 20% of water to the Croton system. The great swamp is the 2nd largest fresh water wetland and the largest red maple swamp in the state. Many thousands of acres are included in this area, fresh water swamp habitat and critical resources that provide areas where children and adults can get out and engage in science in the field by tracking turtles or simply enjoying the joys of being outdoors. Hunting, fishing, kayaking and canoeing are possible. Many species live here, many species of birds, major breeding population of turtles, amphibians, reptiles, etc. Over 25 species of mammals, rare plants are numerous. Eight natural communities support rare plants. Success – the answer is a coalition of partners led by an entirely volunteer organization. Friends of the Great Swamp (FROG) that has been able to obtain Recovery Act funds, with 11 partners as well as local land owners have all come together to preserve over 600 acres in the swamp and more acres in conservation easement. Major challenge – funding. Potential for new homes and development in the great swamp watershed. Demand for open space has driven prices beyond which feds are willing to pay. We need more open space lands in the Hudson Valley. Land prices and taxes are exorbitant here. There are few other grants for open space preservation. What can the federal government do? Now is the time before it's gone to create unique and valuable open space. We support that creation of the Hudson Valley as a National Park. FROG would like to propose that the federal government acquire additional acreage in the Great swamp to create a national wildlife refuge to protect the habitat of the wildlife in the great swamp to protect habitat of waterfowl and songbirds and rare reptiles, amphibians, mammals, and butterflies. This refuge could also act as a biological research station as well as preserving water quality and provide public education. The addition of a north woods element is a thought. The northeast would then have a national refuge and a national forest similar to what is out west. People cannot connect to the wild world, if there is no wild world out there. Preserving the great swamp is an important first step. We look forward to partnering with the federal government.

zoning commission for town of Taughkonic, town is rewriting its zoning code and an area that the federal government could connect with. I'm reaching out to find resources to help the town's feel empowered and to understand the importance. We are the front line of conservancy with a 36-year old code where the word conservancy doesn't even appear. And of course there is funding. We have \$10,000 to get us through a three year process. Feds could reach out about these issues. We need funding for planners and helping organize. We are the front line to educating our townspeople and we are losing our population. We've had dairy farmers taking their own lives because they can't face the debt they are acquiring.

Discussion Question 3

Poughkeepsie, NY

(cont.)

The Hudson Valley is the birthplace of the modern environmental movement. We have partnerships and incredible collaboration through the government, organizations to help provide food to our incredible farm stands, tourism. Great opportunity to build on what we have here as a great resource and collaboration. One aspect of that collaboration is "Saving the Land that Matters Most" 17 land trusts are working together. 65,000 acres that we estimated cost about \$500 million dollars to implement. There are other estuaries around the country, but the idea that in 5 years we could preserve that green corridor of the Hudson Valley is within our grasp. We think it can be done through a number of exiting funding sources with a collaboration with USDA, DEC, etc. If we all work together to fight for full funding of existing initiatives is what we need. We have the Land Conservation Fund, the Highlands Conservation Act authorized for \$100 million, the National Estuary Program – full funding is essential for these. We've asked Governor Patterson and Mayor Bloomberg for funding. USDA farm and ranch protection program is miniscule amount of funding. I would love to work with the Dept of Ag to identify other funding sources because we have land trusts on the ground, working in our communities with the farmers and land owners. We need a federal partner here. Working with NRCS, USDA, land trust community to protect what is a great source of food for the valley and for NYC. Many of our farmers are trucking their food to NYC. If the land is lost at the rate, Hudson Valley agricultural sector is one of the 10 most threatened nationally. This is a time of real urgency and a great opportunity for collaboration.

Captain of the Clearwater. I believe in conservation. The sloop Clearwater is a large sailing vessel and part of the mission is protecting the waters of the Hudson. We do on the water education. Our standard sail is three hours, a field trip for students. The boat is a replica of the cargo vessels that would have been on the Hudson. So the kids are getting an all-encompassing experience on the Hudson – learning about the history and the environment. But these kids are 9-22 years old. Everything we're talking about in terms of conservation, recreation is going to happen in the future. If we short change a serious understanding of how to work the outdoors into the education system, especially for the kids in urban areas or in isolated rural areas, it might be the first time they've slept outdoors or been on a boat. It's a very intensive program to give these kids a place to put their enthusiasm and we must get them while they are young. We heard from the youth yesterday – one girl said that we don't think it's good to mandate what we have to learn. But I do think it makes a difference in the attitude that you have from the top. Value outdoor education, but not necessarily mandate it. Some resources that would be good would be to streamline the grant process. Many small organizations need help applying for funding. Giving those small organizations the opportunity to get money – it doesn't need to be millions of dollars. (Beczak in Yonkers, Rocking the Boat for example). It can be a local place that can't fill out 150-page grants but can handle smaller grants. Facilitating that grant process is important. And setting the example of early education is something that needs to be done.

If funds from Land and water conservation fund could be made available directly to local trusts and nonprofits rather than going through the state.

Discussion Question 3

Poughkeepsie, NY

(cont.)

I am a Local Farmer in Dutchess County. I just wanted to be able to bring to your attention some of my concerns as a livestock farmer in New York. I currently operate under a USDA exemption with a USDA inspected plant.

This limits me to 20,000 birds per year. I think that our numbers should be doubled. The reason being -

these numbers were arbitrarily established decades ago. All farming expenses have more than doubled since these regulations were first implemented. Even with the doubling of numbers to 40,000 it would still just be a part-time operation. You couldn't successfully operate a slaughterhouse 5 days a week with 4 employees and justify paying a full-time inspector.

Catalyze Partnerships – by supporting initiative such as the Shawangunk Ridge Biodiversity Partnership and the Shawangunk Mountains Scenic Byway

National Awareness – raise awareness of open space and preservation efforts and opportunities for support.

Capital Investment – provide grant funding for planning and capital projects that will deliver long term return on investment in terms of increased organizational effectiveness, efficiency, and capacity for responding to a fast changing world.

Transportation Enhancements – Federal support for transportation initiatives that link destinations with each other and major transportation hubs are needed while ensuring access for all ages and abilities including trail connections, transportation programs, rail trail development and improved highway design

Development of the "Smart Park" – In a world of new communications technologies, alternative energies, and integrated systems, many nature preserves lack the capital for investment in planning and design that will make them more efficient, effective, and sustainable in serving their missions. Assistance upfront can leverage investment by donors in the implementation of strategies that will reduce the bottom line while enabling organizations to provide better service to more people

Yet, while much has been accomplished, the need is still very great. As an example, in the last six years we have received more than 100 applications from communities seeking assistance with trail development through our Healthy Trails, Healthy People program that could only select less than a third of the applicants.

The federal government must provide even greater financial assistance to help New York and its communities build the parks and alternative transportation infrastructure that will make it easy for citizens of all ages and abilities, especially in underserved rural and urban environments, to access the outdoors and enjoy a park or trail or substitute trails for a car to undertake activities as part of daily life, and, as a result, improve their health. This means:

Discussion Question 3

Poughkeepsie, NY

(cont.)

Assistance with operational funding for our state parks to ensure they can remain open, properly operate and fully serve the public.

Support for capital investments in our state parks - more than \$650 million is needed to erase a backlog of essential infrastructure improvements in New York's state parks

Funds for conservation agencies to seize opportunities to acquire land to develop new parks in underserved areas and establish buffers and eliminate in-holdings in existing parks

Creation of bicycle and pedestrian trails that provide inter and intra community links

Complete Streets improvements that result in environments that encourage walking and biking that is attractive and safe

Establishment and promotion of Safe Routes to School programs and supporting infrastructure improvements that encourage children to walk or bike to school

Assessment of trails for accessibility and the development of signage needed to convey accessibility information at trailheads to make it easier for persons of all ages and abilities to decide which parks and trails meet their needs

Fully funding the Land and Water Conservation Fund and equalizing the federal and stateside allocations to put more dollars in the hands of state and local governments to undertake local conservation and park and trail projects, especially in underserved areas

Directing greater dollars to alternative transportation and bicycle and pedestrian facilities in the new transportation bill, including monies for construction of new resources as well as capital improvements to existing trails and paths

Increasing funding for the National Park Service Rivers, Trails and Conservation Assistance (RTCA) Program - Parks and Trails New York has enjoyed a long and fruitful relationship with the RTCA program staff and have worked with them directly on several New York trail projects. We know first-hand how highly the RTCA program is regarded and how effectively it has helped communities, large and small, urban and rural, build trails all across the state. For many New York cities, towns and villages it is the only contact they ever have with the Department of the Interior. Some examples of New York trails that the RTCA staff have helped launch include the 350-mile Erie Canalway Trail, 58-mile Champlain Canalway Trail, 90-mile Genesee Valley Greenway, and the Walkway over the Hudson.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Continuing and increasing support for the National Heritage Corridor program. The grants, promotional materials, and technical assistance that the Hudson River Valley and Erie Canalway National Heritage Corridors offer to communities have made a huge impact in stimulating regional cooperation and partnerships around a common purpose. With Heritage Corridor assistance, communities are empowered to more fully interpret and promote their history and uniqueness, attract additional visitors, and improve the economy and overall quality of life for their residents.

Establishing additional local assistance programs in other federal agencies or in a completely new America's Great Outdoors Initiative that combines multi-agency efforts

In the enclosed package we have offered you brief descriptions of what is happening here in the Hudson Valley followed by proposals for action by the federal government that can boost our efforts to new heights. Here in the Hudson Valley, we have created inventories of the top priority lands that must be preserved, and we have a cadre of 17 land trusts working together with limited private and state funds to save them during this period of low real estate prices. We have an action agenda for restoring the health of our Hudson River National Estuary and connecting people with the river, reflecting broad consensus among key governmental and NGO stakeholders. To be blunt, the missing ingredient in most cases is money. We would urge you to work within existing authorizations and programs to bring funds to bear to implement these conservation initiatives.

Hudson Valley farms are the primary source of fresh produce for New York City, representing 80 percent of the vendors at its GreenMarkets. They contribute \$530 million in direct economic benefit while supporting a \$4.7-billion tourism economy. Land trusts are leading efforts to ensure permanent protection of the valley's agricultural lands - 20 percent of the region's overall landscape. Farms protect our forests, wetlands, and watersheds; they also provide scenic backdrops for many cultural and historic treasures. Despite this, the American Farmland Trust has designated the valley one of the country's 10 most threatened agricultural regions. The state loses 10 times more farmland to development than it protects annually. State support for purchasing development rights has been slashed to \$5 million a year - 16 percent of 2009's level - despite a \$70-million backlog of approved transactions. Federal funding for New York through the Farm and Ranchland Protection Program (FRPP) averages \$2 million to \$4 million per year, just 3.2 percent of funding over the program's history.

A major federal initiative should be launched to preserve Hudson Valley farmland as a critical food source for New York City and the metropolitan region. Modeled on the historic New York City Watershed agreement, a federal-state-NYC-NGO partnership should be established to fully characterize the food supply and fund protection of its land base within 10 years.

Dramatically increase Farm and Ranchland Protection Program (FRPP) funding. The need to protect farmland in key valley agricultural communities exceeds \$100 million. Allow land trusts to receive FRPP funds for easement and non-easement costs. Reduce the requirement for a 50-percent local funding match.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Create "Debt for Nature" - like programs that allow farmers debt relief for conserving land or opening farms to passive recreation

Offer interest-free loans to young farmers to buy farmland in return for conservation easements.

Enact new tax tools, including the enhanced federal conservation easement tax incentive, to help farmers and private landowners conserve family lands. Allow landowners to deduct a larger portion of their income over a longer time period. Permanent expansion would be a tremendous boon to conservation by landowners not wealthy enough to take advantage of current reduced incentives.

Expand the Know Your Farmer, Know Your Food initiative. Implement a public awareness campaign about the links between public health (including obesity and nutrition), farmland protection and the economic viability of the Northeast's agricultural community.

A strong federal financial partnership with the NGO community could achieve the goal of protecting 65,000 priority acres along this American Heritage River. The federal government should commit to a one-third share of this initiative's cost - projected at \$500 million before the real estate market's collapse - over a 10-year period.

Coastal and Estuarine Land Conservation Program. In FY 2010, \$82 million in projects were determined as CECLP-eligible, yet only \$20 million was disbursed. Increase funding to \$50 million nationwide to address this shortfall.

National Estuary Program. Create a regional allocation for the Hudson Valley consistent with Gov. Paterson and NYC Mayor Bloomberg's request for \$52 million for the NY/NJ Harbor Estuary Program and Hudson River Estuary Program. Invest 20 percent in strategic land conservation along the Hudson River corridor.

Expedite DOI completion of the Hudson River Valley Special Resources Study. Ensure it references protecting scenic lands visible from the National Historic Sites and calls for federal funds to meet this need.

Conserving and restoring the Hudson River estuary in the 21st century requires a big-picture approach focused on measurable results and long-range planning. An enhanced partnership between federal and state agencies and the private sector can have an ecosystem-wide impact.

Expedite completion of the Hudson River Valley Special Resources Study Act. Ensure it includes plans for conserving important natural areas that buffer historic sites, contain habitat for key species and provide recreation

Enhance technical capacity available through NOAA, USGS, and FEMA. Prioritize technical support in areas where sea-level rise threatens critical habitats, recreational access and key public infrastructure.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Much more can be done to link rail stops and urban centers with the valley's magnificent but remote outdoor destinations, primarily accessible by car. Expanded rail-trail links and broader system of clean-vehicle mass transit to outdoor and cultural sites would dramatically expand tourism and recreational opportunities while enhancing public health and economic benefits.

Provide funds to support clean-fueled vans connecting mass-transit stations with outdoor recreation opportunities.

Expand "National Recreational Trail" designation beyond Walkway Over the Hudson to include other trails; accompany with funding to enhance the trail system and related recreation in trailside communities.

Federal resources and legislation will provide a mandate to connect children to the great outdoors, enabling the valley's environmental educators to broaden the reach of their place-based work into underserved communities and provide new places to engage schoolchildren with nature.

Provide funding (through the National Estuary Program) for the NYS Hudson River Estuary Action Agenda, a key player in the valley's environmental education community.

Include environmental education as a goal in the draft strategic plan for the EPA; align work on this goal with the National Environmental Education Act

The DOI should expedite completion of the Hudson River Valley Special Resources Study (Rep. Hinchey, Sen. Gillibrand sponsors). Ensure it identifies roles for agencies to support valley educators connecting youth to nationally significant natural landscapes.

Support Conservation mentoring programs and "green job" training initiatives targeting middle and high school-aged youth.

People are hungry to get outdoors in the Hudson Valley, but federal resources are needed to protect key destinations, develop public awareness of its special sites and make them accessible.

Fully fund the Land and Water Conservation Fund (LWCF) and Highlands Conservation Act (HCA). Private land trusts should be eligible to directly receive funds to conserve recreational and working landscapes and scenic lands surrounding heritage destinations.

Jumpstart the newly created National Tourism Office; fund regional events in the Hudson Valley. Federal funds will be leveraged by state investments via the Hudson River Valley Greenway and I Love NY campaign.

Retool transportation programs to support pedestrian and bicycle links to mass transit and recreational, cultural, and historic designations.

Fund professional organizers to implement recreation outings; network with the valley's recreational outfitters.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Support initiative that link destinations with each other and major transportation hubs. Fund ferries and other mass-transit to connect people to waterfront, kayaking opportunities and water trails.

Support physical trail connections that link urban areas with nearby open spaces and waterfronts; ensure access for all ages and abilities where feasible.

Federal funding for communities/municipalities to sample and report on water quality. Improving water quality must be a priority in any valley/river-wide initiative, because it implicates so many other issues - recreation, ecosystem health, public health, tourism (economic benefits). Federal funding for local governments to sample and report on water quality in their part of the river is fundamental way to engage the public on creating solutions and augment existing environmental education programs.

Protecting and restoring key Hudson River fish populations and habitats that support them. Preserving and restoring historic Hudson River fisheries, such as American shad and striped bass, depends on collaborative action to restore critical river and shoreline habitat and improving regulation of offshore commercial fisheries. On the habitat side, increased collaboration and participation from the Army Corps of Engineers, DEC and NOAA in restoring fish spawning habitat such as tidal and freshwater wetlands and Upper Hudson tributaries will reap long-term rewards. On the fisheries side, improving the capacity of the Atlantic States Marine Fisheries Commission and DEC fisheries to work together on monitoring and enforcement can stem the tide of destructive overfishing, and lead to sustainable fish stock that can support recreational and possibly commercial fisheries in the future. In addition, National Park Service designations have been successful at making the link to the public between aesthetic/recreational enjoyment of the "outdoors" and the value of a healthy ecosystem.

Restore the Hudson Estuary and its shore lands. The NYS Hudson River Estuary Program has engaged more than 500 partners to restore and manage critical habitats and systems in our watershed, yet federal funding for our nationally significant estuary is virtually non-existent. Governor Paterson and NYC Mayor Bloomberg have issued a request for \$52 million in funds for the NY/NJ Harbor Estuary Program and NYS Hudson River Estuary Program from the National Estuary Program to save way may be the last eastern river to have viable spawning stocks of ocean-going fish. This investment will sustain the Hudson River as a vital natural resources that is appreciated by the 1 in 12 Americans who live within an hour's drive of its shores.

We'd also like to work with our transit agencies so that more bikes are allowed on buses and trains so that those, for example, who want to go biking at Minnewaska, don't have to take a car to get their bike there.

Discussion Question 3

Poughkeepsie, NY

(cont.)

We ask that the Administration move forward with Complete Streets legislation, which will assure that our roads are designed to be safer for all users, not just cars. This is a safety issue- New York State has the 3rd highest fatality rate in the nation for pedestrians- but it is also an economic development issue. If tourist who come to the Hudson Valley to connect to nature don't feel safe walking in our hamlets or biking on our roads, they won't get out of their cars or spend money in our communities.

Currently, the Secretary of the US Department of Transportation is not listed as a leader in this initiative. While it is clear that there will be interagency coordination, we'd like to emphasize the vital role that national, state and local DOT's must fill.

The federal government can provide greater funding opportunities for recreational type projects. One of the largest federal sources currently is the Transportation Enhancement program, but projects must have a transportation function to be eligible.

The federal government can work more aggressively to ensure that the Hudson River remediation is more comprehensive by including navigational dredging in the cleanup which would dramatically improve the public's access to the River and its resources.

In our experience, the most effective strategy for promoting conservation, recreation and connecting the public to the outdoor experiences is building partnerships. We need strong federal support for collaborative efforts between public and private agencies, as well as local, state and federal agencies. This needs to be coupled with consistent, sustainable funding for conservation programs that improve our economy while restoring our environment.

With funding from the U.S Department of Labor, our department -- working with partner agencies - could develop a youth employment program which trains workers in green job skills in conservation and stewardship, energy conservation and green construction technology. Unemployed young adults could be placed at various department facilities, such as fish hatcheries and education centers, to work on natural resource conservation projects and to assist with education, outreach and environmental studies. Participants would gain not only a greater awareness and appreciation for the environment but, as important, on-the-job experience as team members with DEC staff working trail maintenance, campground upgrades, invasive species removal, tree plantings and disability access enhancements. This program would serve as both an investment in meeting current environmental challenges and in creating a skilled workforce for the emerging green economy.

You have asked us today, as a part of this process, to tell you what works and what can be improved. One answer, to these questions, is accountability for Federal capital grants. This past spring, in the midst of a budget crisis here in New York State, state parks were placed on the chopping block. Over 50 state parks, including Schodack Island State Park, were slated to close. Many of these parks contain facilities: buildings, roads, boat launches, swimming pools, and other capital improvements that were paid for, in part, with Federal funding. There was, as you have likely heard, an outcry. Never before, even in the depths of the Great Depression, had a New York State Park been closed.

Discussion Question 3

Poughkeepsie, NY

(cont.)

As you move forward with the America's Great Outdoors agenda, please do your best to see that a strong capital grant compliance process is set forth in statute and regulation. Establish clear time frames for the useful life of capital improvements. Provide for detailed annual self-certifications, to be completed by capital grant recipients, verifying that facilities constructed under the grant program remain open to the public, continue to be used for the intended grant purpose, and meet other grant requirements during the useful life of the capital improvements.

Supplement annual self-certifications with periodic compliance monitoring visits and audits by representatives of the granting agency. Where grant recipients present a justifiable reason to close or cease use of a facility within the grant period, provide for a review process and require that the recipient either substitute a new and equal facility elsewhere or return a prorated portion of the grant to the U.S. Treasury. In cases of unresolved non-compliance, provide for referral to the United States Attorney for appropriate legal action.

The time has come to step up federal commitment to our estuaries as ecosystems, recreational areas, and working waters, and include national estuaries in the next big conservation initiative, America's Great Outdoors, and making NEPs and NERRs eligible for funding through LWCF.

AmeriCorps (U.S. Corporation for National and Community Service)

For the past four decades, conservation and service corps have demonstrated that young adults engaged in stewardship projects make significant contributions to their local communities and develop crucial skills and attitudes needed to become productive citizens. As pressures on our nation's land and natural resources grows and youth unemployment soars, an enhanced AmeriCorps program provides a holistic approach to addressing challenges faced by communities, natural resource agencies and families alike. Expanded funding of the AmeriCorps program will not only ensure completion of a backlog of needed conservation projects; it will help train and support the next generation of environmental leaders.

AmeriCorps support has also been provided for crews to complete much needed stewardship projects at DEC environmental education centers and on state lands. Western New York AmeriCorps crews removed invasive species and made trail safety improvements at Reinstein Woods Nature Preserve near Buffalo. The Headwaters Youth Conservation Corps provides trail maintenance and habitat improvement services to Rogers Environmental Education Center and state forests in central New York.

The state's fiscal situation has eliminated funding for these two important partners recently; federal waivers for reduction or elimination of partner matches would help restore these important stewardship collaborations on state lands.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Conservation Corps and Green Jobs (U.S. Department of Labor)

New York faces environmental a range of problems that will require a greatly expanded and diversified workforce to manage: stewardship of 4.4 million acres of state conservation land; dilapidated state and municipal parks; homes that need weatherization to conserve energy; a growing list of invasive species and damaged ecosystems. With funding from the U.S Department of Labor, NYSDEC and our sister agencies could initiate a summer youth employment program focused natural resource conservation and stewardship projects. We would envision placing unemployed young adults at as forty regional facilities such as field headquarters, fish hatcheries and education centers to where participants would work as part of existing DEC crews on projects such as trail maintenance, campground upgrades, invasive species removal, tree plantings, and ADA enhancements.

Participants would also gain jobs skills training in key construction trades such as carpentry, plumbing, electric, masonry and painting, with an emphasis on developing skills in weatherization and energy efficiency. The training would include both classroom-based and on-the-job skills development,

Forest Legacy Program

The Forest Legacy Program (USFS), while currently underfunded, has proven to be an effective tool when resources are available. The Department of Environmental Conservation has used Legacy funding to acquire key working forest conservation easements that have worked extremely well to keep forest land in private ownership with sustainable management requirements and strategic public recreation rights. While New York has developed highly effective conservation easement programs for forest and farm land protection, the current fiscal crisis has diminished the ability of New York's Environmental Protection Fund, to sustain these efforts. Absent scarce state resources there is a great need for federal funding to support these critical state programs.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Land and Water Conservation Fund

In 1963, President John F. Kennedy made a pledge to the nation that, as this country exploited offshore oil and gas resources, the proceeds would be invested through the Land and Water Conservation Fund (LWCF) into the outdoor recreation needs of the states and local communities. It worked, and worked well to re-connect people to the outdoors in their own communities. The state side of the LWCF has been used in the past by virtually every community in New York State to acquire and build local parks and preserves. We are encouraged that legislation is pending in Congress to fully fund the state side of the LWCF; this would address an immediate and pressing need that can quickly help the AGO meet many of its goals to reconnect Americans to nature and promote community based recreation and conservation. In New York, the Office of Parks, Recreation and Historic Preservation administers this program in conjunction with funding from the State Environmental Protection Fund. The infusion of new federal funding could re-invigorate this program and stimulate extensive local conservation and recreation projects.

Other Department of Interior programs that need additional funding, as well as a temporary reduction in the state match requirement in light of states' dire fiscal situations, include the North American Wetlands Conservation Act (NAWCA) and the Coastal and Estuarine Land Conservation Program (CELCP). Both programs have been instrumental in conserving valuable wetland and coastal habitats and leveraging private investments and support from not-for-profit partners.

New York Conservation Partnership Program, a partnership with land trusts

New York is proud of its work with and investment in the state's land trust community. The Conservation Partnership Program (www.dec.ny.gov/lands/48901.html), a partnership between the state and the Land Trust Alliance, is a model not-for-profit capacity building grant program for the country. Development of a nationwide grant program to provide capacity building assistance to local, regional and statewide land trusts and other conservation not-for-profit organizations could leverage substantial private conservation funding and build even more effective networks in communities across the nation. Pairing this concept with the ability of land trusts to access LWCF, NAWCA and CELCP land acquisition funds, similar to the Great Outdoors Colorado model, would yield even greater results and leverage of private conservation dollars. In addition, we support the recommendation to DOI Deputy Secretary David Hayes from Karen Roux of the Orange County Land Trust regarding federal support for establishment of urban community gardens. There is currently no central source of information free of charge to the general public that offers consistent, practical and valuable guidance on establishing and maintaining community gardens in an urban landscape. A federal program which provides technical assistance through regionally based agents specializing in community garden design and implementation would offer valuable assistance for urban communities.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Tax Incentives for Land Conservation

In 2006, New York passed and implemented a state Conservation Easement Tax Credit (CETC), which offers landowners a refundable tax credit up to \$5,000 per year to offset the property tax burden on lands for which a conservation easement was donated to a qualified conservation organization. The CETC has proved to be a benefit to both the public and landowners. Similarly, the federal conservation easement tax incentive enhancements, first enacted in 2006, have increased the rate of land conservation benefiting landowners and the public. The enhancements raise the deduction a donor can take for donating a conservation easement from 30% of their adjusted gross income in any year to 50%; allows qualifying farmers and ranchers to deduct up to 100% of their income; and extends the carry-forward period for a donor to take tax deductions for voluntary conservation agreements from 5 to 15 years. While initially enacted for the period of one year and extended each year, the enhancements expired at the end of the 2009 calendar year. New York enthusiastically supports the renewal of these enhancements and making them permanent.

Sustainable Food Sources and Agricultural Education

It is or should be axiomatic that the best way to learn about the environment is to experience it directly. A unique program in New York, Operation Explore, offers New York City public school students in grades four through six the opportunity to link classroom science activities with the outdoors. Three distinct but interrelated environments—aquatic, farm, and forest—are explored through hands-on day and overnight experiences. At Stony Kill Farm, a 1,000 acre environmental education center operated by NYSDEC in Dutchess County, students learn how their food is produced and discover the interdependence of urban and agricultural communities. Everyone gets to see and do things they may have never experienced before: a chance to grind corn, feed cows and chickens, and use their senses to explore plants in the greenhouse, and run or walk around the perimeter of an acre to get a sense of its dimensions. Funding from NPS and partners to continue and expand Operation Explore would enhance our opportunities to inform urban youth about the importance of agriculture and natural resource protection.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Implementation of the HREP Action Agenda relies on partnerships with federal and state agencies, as well as local municipalities, non-profits, academic and scientific institutions, businesses, trade organizations, landowners and dedicated volunteers. The Hudson River Estuary Management Advisory Committee provides guidance to the program, helps the state define goals and evaluate progress, and provides a communication bridge to a wider group of partners and stakeholders.

DEC would like to replicate this successful model in other key state watersheds, including the Mohawk Valley and the Upper Hudson River, Long Island Sound, the ocean on the south shore of Long Island, and the watersheds of the Great Lakes. Cooperation and financial support from several federal programs including the National Heritage Program, National Estuarine Research Reserve program, and support for water quality monitoring and geographic mapping has made it possible for the HREP to be effective in its mission. Similar partnerships will be integral to the successful replication of the HREP in other areas of the state.

This year, Governor Paterson and Mayor Bloomberg requested a necessary and appropriate increase in federal funds for HREP through the EPA National Estuary Program that would address issues in the Raritan River in New Jersey, the New York/New Jersey Harbor Estuary and the Hudson River Estuary. The request for \$52 million for FFY 2011 (copy of letter attached) would implement the existing, consensus-based plans for the restoration of these estuaries: the Hudson-Raritan Estuary Comprehensive Restoration Plan (prepared by the Port Authority of New York and New Jersey and the Army Corp of Engineers in partnership with the New York-New Jersey HEP) and the related Hudson River Estuary Action Agenda (developed by New York State in conjunction with federal, local, and not-for-profit partners).

The Hudson River Estuary Program is an excellent model that could be replicated in watersheds with additional federal funding.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Wastewater infrastructure investment and green infrastructure incentives

New York's wastewater infrastructure is in decline and needs at least \$36.2 billion in funding over the next 20 years to address the needs of aging, failing and new facilities. [See DEC's report: "A Gathering Storm" <http://www.dec.ny.gov/chemical/42383.html>] An enhanced, consistent commitment of federal funding is absolutely essential to protect this vast and essential infrastructure whose failure will result in irreparable harm to our waters, imperil the health of our citizens and ecosystems and cause havoc to our economy. And as we work to upgrade these critical facilities, we also need to think of new approaches to protect our waters. New York has been working closely with the EPA to (1) make our state revolving fund (i.e. Clean Water SRF and/or Drinking Water SRF) more sustainable by examining how it could better support smart growth, energy efficiency, and asset management, and (2) support better wet weather controls and the need to adapt to a changing climate by encouraging the wider use of so-called "green infrastructure" projects to protect natural resources.

On the first point, DEC and the state's water financing Environmental Facilities Corporation have been working to ensure that projects funded through the SRF do not promote sprawling, unsustainable growth, setting priorities instead on repairs and enhancements of existing infrastructure and support for downtowns and historic town centers. The SRF can be an effective tool for promoting wise local land use planning, and to the extent feasible, finance projects that are consistent with existing land use plans. It also can and should promote wastewater treatment facilities that maximize energy efficiency.

New York State has encouraged the wider use of the Clean Water State Revolving Loan Fund provide financial support to local governments to implement comprehensive green infrastructure programs. NYSDEC's vision of an enhanced green infrastructure program includes assistance to local governments and NGO's to identify and incorporate green approaches into plans to address water infrastructure needs and to develop local programs to protect resources through landowner incentive programs, sensible land use regulations, conservation easements and best management practices. The requirement in ARRA and Federal Fiscal Year 2010 appropriation that 20% of the Clean Water State Revolving Loan Fund appropriations be used for the green project should become the norm in future SRF funding determinations.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Environmental Education Grants

The Environmental Education Grants Program provides seed money to support environmental education projects that increase the public's awareness about environmental issues and provides them with the skills to pursue responsible courses of actions. Smaller grants to local schools and communities have supported hands-on education programs on ecological topics and provided teacher trainings to enhance environmental literacy within schools and neighborhoods. Larger grants have fostered the development of programs with wider focus, such as online teacher trainings in environmental education. With additional funding, standards-based national environmental education curriculums such as Project WILD, Project WET (Water Education for Teachers) and Project Learning Tree could be offered to a wider range of audiences, providing educators with both skills and knowledge to infuse environmental education into the broad spectrum of their topics. Continued and enhanced support for these grants would allow states to expand existing partnerships, establish environmental literacy plans and a database of resources for educators and community members.

The Trust for Public Land (TPL) applauds the administration's leadership in convening a diverse constituency to develop a sound approach to 21st-century land conservation that will protect our natural resources and keep Americans connected to the land. Community-driven conservation is most successful when it engages a wide range of interests, but it needs federal leadership to bring together stakeholders and federal resources to leverage state, local, and private dollars.

This is a critical moment for land conservation in America: projected population growth will put additional pressure on existing parks and reduce remaining open space, an entire generation's health is at risk from a sedentary lifestyle, and climate change threatens to alter many of our important natural systems. Investing now in the continuum of conservation--from the urban core to wilderness areas--will ensure a healthier and greener future for America and leave an important legacy for our children and grandchildren.

Greater investment in close-to-home parks and open space across America. Better openspace planning; creating of trails, waterfronts, and anchor parks; and protection of natural lands will help transform our urban areas, where the majority of Americans live, and address park equity issues. These investments will enhance connections to the natural world, foster a healthier lifestyle for children and adults alike, create liveable and prosperous communities, and support improved energy efficiency in transportation, land-use patterns, climate regulation, and water management. Moving forward in this direction will require multi-agency coordination and focused funding.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Increased and consistent funding to support federal, state, and local conservation, including full funding for the Land and Water Conservation Fund (LWCF). LWCF investments ensure continued protection of America's public lands and enhance public access to recreation through grants to states, counties and cities. Federal funds like the LWCF that leverage state and local investment in outdoor recreation lands are critical to a successful conservation outcome and require active partnerships among federal, state, and local governments. Increased funding for LWCF should include a competitive matching grant component to incentivize state and local investments in conservation.

Without full, dedicated funding to LWCF, critical land and water conservation needs and opportunities in New York may be lost forever.

Focused federal coordination and investment to support landscape conservation. Integrated landscape conservation that addresses both public and private working lands is the most effective strategy to achieve water security for people and fisheries; protect forest systems that provide carbon sequestration, recreational use, and filter pollutants; and establish connective corridors to ensure adaptive distribution of habitat for wildlife species most vulnerable to climate change. New public-private partnerships that leverage existing federal conservation programs and new federal resources in combination with state, local, and private funding to achieve landscape conservation objectives are integral to these efforts.

2. Renewal of the extended federal tax incentive for conservation is critical to increasing the pace of land conservation. Congress should make permanent the 2006 extended federal tax incentive for land conservation. When in effect from 2006 through 2009 the pace of land conservation by private landowners increased enormously.

3. Federal funding for the NY Conservation Partnership Program, (for capacity building, conservation programs, and transaction costs), is needed. New York's Hudson Valley land trusts and LTA's NY Conservation Partnership Program have created a very successful growth environment for New York State land trusts.

Overdevelopment in the Hudson Valley is a serious threat to: Food security in the NY Metro Area; New York State's agricultural economy; Wildlife migration corridors; Clean water; Tourism economy, both to historic and rural areas.

Please fund: NYDEC's Hudson River Estuary Program, NY Conservation Partnership Program

Habitat Restoration funding.

Education on Food Security, Climate Change, and the Eco-Function of Wetlands.

Big picture leadership and coordination of agencies, NGOs, etc. in landscape level effort.

Discussion Question 3

Poughkeepsie, NY

(cont.)

What can the federal Government do? The Federal Government's open space system in the northeast does not include National forests and only one major National Park, Acadia in Maine. Now is the time before it's gone for unique and valuable Open Space to be created in the Northeast. My colleagues argue for the Hudson river Valley to become a National Park. We support the creation of a National Park that would be accessible to the millions of Tri-State. With the only one large National Park in the Northeast and that so distant as to be inaccessible to the millions that live in the Tri-State area.

Friends of the Great Swamp would like to propose that the Federal Government working with local conservation groups, acquire additional acreage in the Great Swamp through expanded NAWCA funding, the Land and Water Conservation Fund and other funding sources and create a National Wildlife Refuge to protect the habitat for all the wildlife within the Great Swamp. Such a National Wildlife Refuge would create a unique area protecting not only the songbird habitat but also habitat for water fowl, rare reptiles and amphibians, mammals like the bobcat, otter and mink as well as the shy Fisher and butterflies like the Northern Metalmark. This refuge could also act as a biological research station for potential species movement northward due to climate change as well as preserving water quality and provide public education.

The addition of a "Northwoods" element through the addition of a National Forest in the Adirondacks, across Vermont and New Hampshire is a thought. The Northeast would have a national Refuge/National Forest area similar to the West. People cannot connect to the "wild" world out there if there is no "wild" to access. They need to get out "there", kayak a river, find salamanders and listen to the frogs.

Preserving the Great Swamp and its pristine two-river system is an essential first step. Friends of the Great Swamp supports additional funding to create such a National system in the Northeast. We look forward to partnering with the Federal Government and conservation organizations in achieving our mutual goals. Thank you.

Zero access to Hudson River in Town of Newburgh. The City of Newburgh has 400 ft of access. Feds bought riverfront years ago and sold it to private business. EPA bought a large parcel recently. Would like to see access to river for community, not condos or restaurants. People and kids don't get out on river and don't know about it. EPA has control of property. Make it into a park. Don't sell it to developers. Don't understand why that happens. What works. State has member items to get money to small groups that get things done.

NY/NJ Trail Conference has dealt with hiking trails for 90 years. Hiking is a low cost part of a healthy lifestyle. Walkway over the Hudson and areas in New Paltz are good examples of access to hiking areas. Public Officials should be seen outside on the trails as examples. Many afraid to go out-doors and parents can't educate when they are afraid or haven't done it. People new to hiking in nature ask us questions like "what do you do about mosquitoes"? Need Education. Urban Parks are a backyard for children. Partnerships are important. Me and my husband are working with bike riders to create trails in our town. We hope the Town will work with this.

Discussion Question 3

Poughkeepsie, NY

(cont.)

35000 acres of Parkland n NYC. It is the backyard to many children. Urban areas need to be included. Problem in urban areas is alienation of parkland. It is too easy for land uses to change and it is not preserved as open space. Urban areas have natural areas too. Our cities and council people are selling our historic and natural areas. Oldest part of Poughkeepsie settled by the Dutch. As mayor I acquired the property to access walkway over the Hudson. Can't make these types of areas inaccessible to people. Friends of the Upper Landing with partners hope to build a bridge (taken from Dutch technology) and help restore old buildings. Need to pursue global projects to boost tourism.

Parks and Trails and Greenways need to be treated as the "main dish" not the side as far as infrastructure. Fully fund the land trusts and heritage area programs. Communities are changing in a tourism economy. NY has a lot of history in the Hudson Valley. Heritage areas need to be connected. Create programs to allow all grass root organizations to have access to funding. River and Trails program thru NPS is only access for tech assistance for many. Needs to have continued funding. The River and Trails program is the only place to preserve, expand and continue the program.

Worked with many different groups to restore watersheds and natural areas. National Estuaries is an organization already in place to restore areas. Incentivize local action such as issuing local bonds for others to match. Many communities are raising their own money. Missing a partner in the Federal government. Federal tax credits are a great option.

Historic Preservation When your restore areas of historic sites you keep open spaces open. Funded from Fossil Fuel Resources. Need full funding for historic preservation as well. Conservation and preservation should work hand in hand.

Many grass roots agencies already work together. Need feds to join. We will have a US travel office thanks to the President. We need Federal partner help with having tourists come up river from city to see the Hudson Valley. We just got a grant but the pre-approval application alone was 115 pages. No public transportation to get from train station to farms and parks and trails. Tourism in HV is \$4.7 billion dollar business.

Have seen good and bad of conservation actions over years. NY has over 14000 public/private recreation areas. Each State has unique goals. Local needs are different than out west. National goals not only goals. They may not fit every state. Need to look at needs over the country. NE has more open space than bi areas out west. Needs across NY are all similar. Groups need to communicate across the state and the country. A lot of innovative ideas are out there. Don't re-invent the wheel.

Land and water conservation fund funded most of the parks in the 60's and 70's . It has been a long time since it had an impact. Asking Feds to fully fund this fund. Need it off budget. Need to keep it in the parks. This money gets lost or taken up in federal budget.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Making first whisky in NY since prohibition. We are a farm. The biggest disconnect between people and farms is that they don't get there. Tourism helps bring some people to the farms, but we need an education program to get more people to the farm. Farming in NY is a difficult and dangerous job. Feds need to help the state understand the importance of connection.

Purpose is to connect people to natural resources and history and culture. Please include Americas Byways as equal partners with the park service and others in this initiative. Make sure funding programs are not for just bricks and mortar. Have some for grass root organizations that bring people together. Volunteering is an American activity. These people in these groups can spend funds wisely.

Residential program that get kids to forests and farms is important. Need at least fed funding.

374 acre learning center for arts and nature. Connecting kids to nature by bringing underserved kids into the environment to give them hands on learning. We get kids there for 3-5 days. It is enlightening for them. Kids learn about history and importance of conservation and perform better on testing when outdoors. Need a stronger educational component.

Working on statewide agenda. Pass not child left inside. Make sure every kid gets outdoor education for every year they are in school. I work with little kids and see the benefit. Test scores go up, illnesses go down. Teachers aren't trained to take kids out. Transportation is a huge issue. Encourage outdoor jobs for youth.

Signs off for environmental education aid for state. Disconnect for administrators at schools. They need to be educated on value of outside hands on training. New teachers are trained on pass tests. The teachers who are retiring are the ones that had the hands on experience.

Too much emphasis on testing. College campuses are great resources for local organizations. College kids and help reach out to youth and non-profits.

All levels of government need to break-down walls and see the big picture.

We just celebrated 400 years of history in NY. We celebrated by making everything sustainable and built 3 big projects. Walkway over Hudson, Crown Point Lighthouse and Governor's Island. We have seen thousands of tourists. We had several events including River Day. We brought together every single constituent. This initiative can build on momentum of this celebration.

We discovered a revolutionary war monument. Had kids who had gotten in trouble with the law restore it and they didn't go away. They kept coming back. Convenience is needed to get people out. As a physician we need to get people out. This is a public health emergency. 40% of sophomore girls were overweight who were going out for sports 5 years ago. We need to work on this.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Land grants are recommending the wrong type of feed/chemical for cows.

Environmental movement is future to our society. Yesterday was a great event. We need to pull the youth in. Good diversity in youth. We want to become a model in the nation as we have been in the past. Include young at the table and young people with solutions. Create a CCC but on the level with kids involved.

Federal and State need to collaborate and have information and discussion forums. We need to solve problems so our volunteers can solve problems.

70 acres of historical property was going to be developed near a soldiers grave yard. His project would hopefully protect the value of a battlefield. The Hudson Valley grassroot effort is made. funding is needed

Trails, bridges need to be connected. Transportation needs fundng. Highway design should incorporate walking, biking trails for Cities and Parks. A better way to transport.

Beacon - make transportation an important part. The Hudson River is America's River. Funding needed for transportation costs and being connected to the River.

The Nature Conservancy in New York has three recommendations which can be used to achieve the program's goals, while taking advantage of existing public-private partnerships that have local government and community support and in some cases available matching funding. These programs protect habitat, create and protect jobs and enhance quality of life for millions of people.

1. Elevating our national estuaries to the same status as national rivers in this program. Here in New York they include the Hudson River, Long Island Sound, the New York/New Jersey Harbor and the Peconic Bays.

2. Maintaining the Northern Forest as a designated Treasured Landscape.

These recommendations can be best accomplished by better partnering with local governments and residents, and by investing in protected areas (waters and lands) that provide the public access to natural areas and allow communities to benefit from the value of natural areas, including clean drinking water.

Preserving and restoring nationally important habitats in our estuaries and their watershed lands and the 30 million-acre Northern Forest which stretches across new England;

Discussion Question 3

Poughkeepsie, NY

(cont.)

Recommendation 1: Elevating our national estuaries to the same status as national rivers to protect New York's waters and connect people with nature. Waterways in urban and suburban areas are treasured by millions of residents and tourists who use our clean and healthy estuaries. Here in New York they are the Hudson River, Long Island Sound, Peconic Bays, and New York/New Jersey Harbor. These estuaries are used for boating, swimming, fishing, shellfishing, and wildlife viewing. Their economic contribution to our state is significant. Yet, protection and restoration plans are not being implemented due to lack of funding. We urge you to give New York's contiguous national estuaries- the Long Island Sound, Peconic Bay, New York/New Jersey Harbor- the Treasured Landscape status they deserve.

We also recommend you use the AGO initiative to improve existing federal programs to prioritize national estuaries. AGO presents an opportunity to develop a cross-cutting federal initiative to leverage greater protection of recognized national priorities- estuaries of national significance- by focusing and funding existing federal programs.

Preservation of unprotected lands: Expand EPA State Revolving Fund's local land protection loan pool, with low or 0% financing.

Preservation of unprotected lands: Create "Better America Bonds" for land protection and habitat restoration where local and state governments can issue bonds whose interest is paid by a federal tax credit. Local governments only repay the principal to the bondholder. This would highly incentivize local investment in these measures.

Maximizing existing federal LWCF program: Expand federal-side LWCF's eligible project areas to include the watersheds of nationally recognized estuaries, such as those designated by the National Estuary Program and National Estuarine Research Reserves. This would give National Estuaries the same status as National Rivers, and enable accessing federal-side LWCF.

Ensuring flexibility for federal programs to allow cross-cutting work and funding for common goals: Encourage and allow federal agencies to collaborate across agency lines, connect and focus existing federal programs within project areas and make the spending of those funds more flexible to meet local needs. Several programs (EPA's NRP, NPS's LWCF, NOAA's NERR, FWS's numerous habitat programs) have common goals of estuary protection, but the programs exist in silos, with little or no ability to fund or work together to meet local needs. A National Estuary Program should have access to NPS's LWCF for watershed land protection and FWS's staff for habitat protection. Local branches of Federal agencies should have more ability to implement grants and programs, collaboratively, in ways that fit a particular place.

We urge the Administration to continue the Northern Forest's designation as a Treasured Landscape. This will help assure that the Northern Forest receives the federal resources necessary for the region's people, their economy, and the magnificent ecosystem of which they are stewards, and on which they rely, remain truly resilient and sustainable.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Recommendation 3: Investing in public and private efforts to create jobs and connect young people with nature. In today's increasingly urban and digital world, many young people are growing up disconnected from nature. This trend poses a serious threat to the future of conservation, the environmental sciences and environment-based jobs. The more disconnected today's youth are from natural areas, the less likely they are to care about nature later in life. If left unchecked, these trends could rob the conservation movement of its future leaders, and rob our future generations of experiences of our natural world.

Unlike remote parklands in the country's interior, our national estuaries--the Long Island Sound, Peconic Bay, NY/NJ Harbor--have thriving cities and suburbs of millions of people, along their shores and in their watersheds. Protecting and restoring the health of these estuaries directly benefits millions of Americans. Yet, significant federal funding has too often passed by these places for less expensive and more expansive places!

We ask you to partner with local governments and residents to correct this oversight now, since the waters we cherish are under threat, and millions of people's quality of life and businesses will be impacted by their loss. It's time for the federal government to invest in our waterways, too!

We urge you to give our contiguous national estuaries--the Long Island Sound, Peconic Bay, NY/NJ Harbor, Hudson River--the Treasured Landscape status they deserve.

We also recommend you use the AGO process to elevate and prioritize all national estuaries. AGO presents an opportunity to develop a cross-cutting federal initiative to leverage greater protection of recognized national priorities--estuaries of national significance--

focusing and funding existing federal programs, such as the Land & Water Conservation Fund (LWCF) and Coastal & Estuarine Land Conservation Program (CELCP);

allowing federal agencies to work together on cross-cutting strategies regardless of agency jurisdiction or designation;

giving national estuaries the same status as national rivers and making them eligible for federal-side LWCF money.

We urge you to step-up federal commitment to our estuaries as important habitats, recreational areas, and working waters, by including national estuaries in the next big conservation initiative, America's Great Outdoors.

We are writing in support of the America's Great Outdoors (AGO) Initiative, and its potential to protect and enhance our local national estuaries and their watershed lands.

Preservation and restoration of nationally important estuaries and watershed lands

Discussion Question 3

Poughkeepsie, NY

(cont.)

Connecting millions of urban and suburban people to nature with new blueways and greenways

Working waters which support local tourism and outdoor recreation, as well as businesses such as fishing and clamming industries

Ensuring that nationally important waters remain clean, healthy and thriving.

The Hudson Valley offers unique opportunities to showcase collaborative conservation initiatives poised for higher orbit, if government-NGO-business partnerships can be strengthened. The region's scenic beauty and natural resources, historic and cultural assets, and pivotal role in American history have led to numerous federal accolades. Congress has designated the Hudson Valley a National Heritage Area, while the President has named the Hudson an American Heritage River. NOAA has designated four coastal areas as National Estuarine Research Reserves. The region contains working landscapes with prime agricultural soils, whose farmers represent 80 percent of the vendors selling produce at New York City's GreenMarkets. The region's rich history and natural resources have led the U.S. House of Representatives to approve a bill to study designating the Hudson Valley a unit of the National Park service. The region's role as an incubator for cutting edge conservation continues today as a consortium of land trusts implements an ambitious, science-based land and farm preservation initiative known as Saving the Land That Matters Most. We look forward to working with you to shape a broad national initiative, but also in demonstrating early action in a region with a long history that is primed to demonstrate tangible successes under your enlightened leadership.

Dramatically increase Farm and Ranchland Protection Program (FRPP) funding. The need to protect farmland in key valley agricultural communities exceeds 100 Million. Allow land trusts to receive FRPP funds for easement and non-easement costs. Reduce the requirement for a 50-percent local funding match.

Create "Debt for Nature" - like programs that allow farmers debt relief for conservation easements.

Enact new tax tools, including the enhanced federal conservation easement tax incentive to help farmers and private land owners conserve family lands. Allow landowners to deduct a larger portion of their income over a longer time period. Permanent expansion would be a tremendous boon to conservation by landowners not wealthy enough to take advantage of current reduced incentives.

Offer transferable tax credits for keeping land in agriculture through easements.

Provide new farmers access to underutilized federal and state lands at affordable rates for agricultural purposes.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Expand the Know Your Farmer, Know Your Food initiative. Implement a public awareness campaign about the links between public health (including obesity and nutrition), farmland protection and the economic viability of the Northeast's agricultural community.

Expedite the DOI's completion of the Hudson River Valley Special Resources Study and ensure it references the nexus between farmland easements and protecting scenic views from National Historic Sites, including Home of Franklin D. Roosevelt, Vanderbilt Mansion and Saratoga Battlefield.

Land and Water Conservation Fund. New York has received just \$228 million of the \$3.7 billion allocated to states; the Hudson Valley, adjacent to New York City, got less than 2 percent of New York's share. Ensure equity among states receiving funds; establish criteria supporting conservation near major population centers.

Farm and Ranchland Protection Program. New York has three times the farmland acreage to protect compared to some neighboring states, yet receives half the funding. Broaden the FRPP to include support for small and mid-sized farms (typical in the Northeast) and reduce the 50-percent matching fund requirement.

Highlands Conservation Act. Authorized for a \$100-million appropriation, the fund has received only \$5.2 million since 2004. Fully funding the program would empower the four states in the Highlands region to conserve this critical urban water resource, recreational outlet and habitat.

Coastal and Estuarine Land Conservation Program. In FY2010, \$82 million in projects were determined as CECLP-eligible, yet only \$20 million was disbursed. Increase funding to \$50 million nationwide to address this shortfall.

National Estuary Program. Create a regional allocation for the Hudson Valley consistent with Gov. Paterson and NYC Mayor Bloomberg's request for \$52 million for the NY/NJ Harbor Estuary Program and Hudson River Estuary Program. Invest 20 percent in strategic land conservation along the Hudson River corridor.

Make land trusts eligible to receive federal land conservation funds.

Increase flexibility in highway design to better accommodate bicyclists and pedestrians.

Provide funds to support clean-fueled vans connecting mass-transit stations with outdoor recreation opportunities.

Pass No Child Left Inside legislation. Dedicate funding for states to incorporate environmental learning from pre-K to 12th grade, as well as teacher development.

Support inclusion of environmental literacy language in the Elementary and Secondary Education Act (ESEA).

Discussion Question 3

Poughkeepsie, NY

(cont.)

Provide funding (through the National Estuary Program) for the NYS Hudson River Estuary Action Agenda, a key player in the valley's environmental education community.

Support funding for the Hudson River Valley National Heritage Area, which offers critical support for Teaching the Hudson Valley.

Include environmental education as a goal in the draft strategic plan for the EPS; align work on this goal with the National Environmental Education Act.

Increase funding and make land trusts eligible recipients of funds through the Land and Water Conservation Fund (LWCF). Give special consideration to land trusts actively working to facilitate public use of protected landscapes, especially for hands-on education programs that partner with school districts and youth service providers.

Support programs such as the Student Conservation Association and AmeriCorps.

Support conservation mentoring programs and "green job" training initiatives targeting middle and high school-aged youth.

Fully fund the Land and Water Conservation Fund (LWCF) and Highlands Conservation Act (HCA). Private land trusts should be eligible to directly receive funds to conserve recreational and working landscapes and scenic lands surrounding heritage designations.

Fully fund the Historic Preservation Fund.

Jumpstart the newly created National Tourism Office; fund regional events in the Hudson Valley. Federal funds will be leveraged by state investments via the Hudson River Valley Greenway and I Love NY campaign.

Sustain funding for the National Heritage Area program, which provides important support to the Hudson River Valley Greenway to interpret the region's natural and heritage tourism destinations.

Reduce liability for large-scale public events that introduce many people to the outdoors.

Retool transportation programs to support pedestrian and bicycle links to mass transit and recreational, cultural and historic destinations.

Fund professional organizers to implement recreational outings; network with the valley's recreational outfitters.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Support initiatives that link destinations with each other and major transportation hubs. Fund ferries and other mass-transit to connect people to waterfronts, kayaking opportunities and water trails.

Support physical trail connections that link urban areas with nearby open spaces and waterfronts; ensure access for all ages and abilities where feasible.

Require that rail lines receiving federal subsidies open access to federal waterways.

If we want to be able to enjoy the Hudson, protect our wildlife and keep our drinking water safe, we've got to keep pollution out of the river and away from our water supplies. That means enforcing our environmental laws and investing in infrastructure. If we do these two things, people will be healthier, recreational opportunities will improve and communities will become more vibrant. If we don't make the investment now, it will end up costing more and achieving less as time goes on.

Protecting and restoring key Hudson River fish populations and the habitats that support them. Preserving and restoring historic Hudson River fisheries, such as American shad and striped bass, depends on collaborative action to restore critical river and shoreline habitat and improving regulation of offshore commercial fisheries. On the habitat side, increased collaboration and participation from the Army Corps of Engineers, DEC and NOAA in restoring fish spawning habitat such as tidal and freshwater wetlands and Upper Hudson tributaries will reap long-term rewards. On the fisheries side, improving the capacity of the Atlantic States Marine Fisheries Commission and DEC fisheries to work together on monitoring and enforcement can stem the tide of destructive overfishing, and lead to sustainable fish stocks that can support recreational and possibly commercial fisheries in the future. In addition, National Park Service designations have been successful at making the link to the public between aesthetic/recreational enjoyment of the "outdoors" and the value of a healthy ecosystem.

Fed gov role in terms of private lands conservation and importance of tax cuts. Enhanced fed tax incentives expired this yr and effort to bring these back, conserve easement donations is cheapest way toenhancement of having allowing landowners to keep their land. Increase private lands conserve by private landowners.

Modest exception to _____ comment with regard to availability of deductions for conserve easements – major pieces of lands in Hudson valley are farmland. This is land that is not being protected by tax deductions, because help the rich, but not really farmers who don't have enough income. Feds to should support efforts to sustain farmer – even greater as you go throughout state of NY because most of upstate NY is farmland or forest land. Deductibility of land conserve should be continued and strengthened, but major fed effort should be to keep farms in production.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Looks to farms as different type of open space. It's an industry and we have to provide availability of lands and create markets. NY has tried an Interstate commerce challenge which failed to do what it needs. It required organizations in state to purchase a certain quantity of local produce. 50% of NY produced items (apple, milk, etc) have failed those attempts and limit to allow farmers to grow more who can't because there isn't a market to support them. Competition is from other states. Feds could get states together to support and encourage local buying. Can have procurement policies to buy NY food, sell it, etc.

Forests and farms on east coast being turned to sprawl. Cities and downtown villages are dying. Even though we see new developments on old farmland. Still need to address sprawl. At beginnings of downtown revitalization movement worked well in many areas large and small – taking built environment and revitalize instead of building new. This effort should be led by feds because they have national perspective and can look back in time at success; more so than state or local governments. Past results are still there. This effort was program of DOI with National Trust for Historic Preservation.

One tool that helps work of conserving landscapes is additional planning money from feds and state, but think that fed interest could provide incentives for smart growth. New EPA initiative is “sustainable communities” – would like to see that tracked and success of that understood and expanded to other fed agencies that could be more involved in smart growth. Currently Hudson River Valley doesn't qualify as region because program is based on small urban areas, but please look into allowing National Heritage Corridors to apply. Heritage areas might be good to manage mega-regions on behalf of numerous small communities. National Heritage Areas always struggle for funding each year and would like NPS to fund always.

Waterways are open working space too. Maritime Law means feds should get more involved in addressing sustainability in maritime areas especially moving goods from farms to markets.

Hudson estuary program needs to be supported because it brings people together. Immigration reform is needed in the county because lack of labor is challenge for farmers. Food justice – where is local food going and who has access. There needs to be rural to rural connection – food to people that live around farms. Understand ecological role of farms and farmlands – is landscape functioning ecologically? Hudson Valley agriculture is different than other parts of country – understand how USDA regulations affect small farmers (regs seem to be written for large farms). Relationship to ag development rights go to large farms out west because Hudson Valley farms are considered small and not high production.

A challenge is that climate change will change face of ag and climates. We are not ready at local or fed level to start to address these issues now. We need to have tools in place to address this. Haven't seen changes in NRCS field office tech guide (FOTG) to upgrade conservation practices. Not costly for feds to start this. Through Long Island RC&D and NRCS should soon be putting in field mobile pelletizer program to assist farmers and homeowners to get away from fossil fuels. These types of projects need to be looked at to get project on ground and provides new means of income to farmers.

Discussion Question 3

Poughkeepsie, NY

(cont.)

We hear that maybe people at local level can do things better than feds, but one problem is that identifying needs that could be addressed by fed funds, its difficult to get fed funds to state, local gov and NGO's. Not enough attention on how to get money from Washington, DC to local areas. When money does come in, there is a filter where an agency takes half to support staff and the money doesn't get to where it is going. Existing plans don't need to have funds for more staff or to create another plan; just money. No single agency, org, individual is going to solve complexity of problems. There is overlap and gaps among fed agencies so there should be some flexibility for agencies to move resources around to help resolve these issues. Sharing costs, better Memorandums of Understanding (MOU) to move resources around, etc.

Local people know what they need and difficulty of funneling the funds down. It shouldn't be as hard for a small farmer to access money as it is to run their farm; but it is. We can't function without the local land conservancies. The fact is that the land conservancies, whose goals are a little divergent, have allowed us to establish the partnership. They have the connection with communities and individuals. The feds need to trust the people are going to spend the funds. If there were a way to streamline programs so funds aren't taken out for agency staffing and instead go to the local areas. It's a complicated business to spend federal funds, but to give some of the money to land trusts is good- they are nimble and have staff. They also have information. Money needs to get to the people who need it.

_____ agrees with other commentators, especially regarding the lack of funding for DEC. She is concerned with the impact of untreated sewage on streams (combined sewer overflows). There needs to be more funding for infrastructure. NYS has within its jurisdiction ways for fine money to go back into the community and that should be done. Municipalities need to be fined if there is water quality violations and have that money go back into the community.

_____ grew up in the Bronx 30 years ago and had lots of outdoor recreational opportunities. Indian Point used to be a park. There are less areas for recreation in cities currently. We have to change the political discourse so that the public language has to be more inclusive. Everyone needs to pull together with people working together regardless of political affiliation. Sea level rise is a national security issue. He would like to see an increase in EPA and NOAA budgets.

Need more real time monitoring (Beacon Institution is doing some of that). Would like to see a model of what is happening on the river. More funding is needed for real time monitoring. Science education is needed and training for teachers on how to teach kids to learn science hands on.

_____ wants to commend the federal groups for holding this session. Kids need to know how to swim. 69% of African American teens can't swim. 42% of white teens can't swim. We need to do a lot more to teach young people to swim. The CCC provided infrastructure in the 1930s that is still used today. NYS closed parks and the Feds stepped in requiring state to keep open fed. funded parks. Please build in accountability in federal grants. Write in assurance that parks using fed money require that they remain open. Build in enforcement that money is spent in compliance.

Discussion Question 3

Poughkeepsie, NY

(cont.)

Lack of funding for DEC prevents DEC from investigating violations. Local planning boards don't take into consideration cumulative impacts which affects the Hudson River. SEQRA has no enforcement arm.

AGO is also in our back yards and ecosystem services should be a top priority. Funding and research on new education initiatives, and infrastructure.

_____ wants view shed protection for the Hudson Valley. When federal and state parks are involved there should be a way to protect viewsheds. Things that are done on a local level affects people in a region.

Would like to get federal money to improve outdoor access. Dairy farms need to be able to make more money. Implement tax credits or raise milk prices so dairy farms can stay in business.

All river and estuary programs-make all of them one program and give them elevated status. Combine federal designations to work better together. Make them all eligible for federal money. Better coordination and resources among federal agencies. If you want to connect people with nature put nature where people are. It has to be accessible to people in urban population centers. Federal money needs to go to urban center parks. Concentrate and prioritize on national estuaries.

Reconnect people with landscapes and connect landscapes with each other from headwaters and tributies to main stem. Provide additional funding to remove dams. Support legislation to increase F&W service programs. Find ways to provide federal incentives so farmers don't have to sign natural gas drilling leases.

The Hudson River estuarine research reserve is part of a little known partnership program. They have something to contribute. Use science based management practices. Get people to connect with the resources from youth to policy makers and how to plug for the program. Please fund and connect to other initiatives. We have to keep climate change and sea level rise front and center. Relates to public access, wonderful array of public access site, a lot of those will be under water with sea level rise. Keen interest in seeing energy conservation.

Wildlife Conservation Society educates Kids about the river in the Bronx, has had success. Don't forget the urban population! Need to have outdoor experiences in urban centers. So important to inner city youth. CSOs are the biggest threat to the Bronx River and stormwater runoff.

Would like people to have access to water quality information. Infrastructure investment is desperately needed. We need a water quality (sewage system) infrastructure! Needs enforcement of laws. EPA has a role. Waste-water treatment budget has plummeted in EPA. Need to have a robust presence so permits are more strict. Wants fed government to invest in infrastructure and enforcement. Hydrofracing what is EPA's jurisdiction? Leaves drinking water supplies contaminated. EPA needs to get involved otherwise the states will have conflict. EPA needs to make sure NYDEP works on infrastructure investment and economic opportunity. Send more EPA staff to more public meetings.

Discussion Question 3

Poughkeepsie, NY

(cont.)

It is worth reminding ourselves that we have globally rare freshwater wetlands in the Hudson Valley, we need to conserve the ecosystem, need big picture plan of attack (this is work here-Greenway program). This would be a great test case. We have the resources, plan and people. We are all invested in this plan and would love a federal partner. Expand NY & NJ harbor Estuary program should expand up the river. \$52 million dollars requested to President to expand funding for EPA. Combine 2 programs to combine the harbor program with the DEC program. Sea level rise will travel up the Hudson. A green ribbon of protected space along rivers is a great idea. Federal government needs to provide more science on sea level rise and more interpretation and outreach about that data.

I remember playing with my son and the water was terrible. Children need to have clean water where they are playing. Concerned about too many services because taxes go up.

Discussion Question 3

Prior Lake, MN

Greetings from Secretary Salazar who is in Houston today. There is a special role and opportunity for Interior on this initiative. Fish & Wildlife has a great connection in this area and region. This is a great opportunity to work with tribes in this region. Secretary Salazar has deep interest in America's stories being told.

Stated that he understands issues and challenges and is here to represent the department of Agriculture. He oversees US Forest Service, NRCS, Natural Resource Conservation Service, (is familiar with NCAI) Chippewa National & Superior National, (Chequamegon Nicolet Forests). Trying to extend themselves to provide input and listen in this new chapter to improve our environment. The real focus is on what can work in the future, to capture bottom up ideas and put them to use, and record these issues/ideas and take them to Washington. He will outline the recommendations and make changes to local, federal, tribal and business communities. The President expects a report in November to implement new levels of change.

The issue in 1969 was the tribe only had 260 (?) acres and not much Natural Resources. Tribal members were jammed into the reservation/community. Now we have about 2000 acres, plenty of walking trails, restored wetlands, recreated meadows and preserves. We have a watershed district, a wind generation plant and utilize recycled water for irrigation of the golf course. We will continue to improve and work on opportunities like these. (name delted), SMSC Land Manager, works with EPA to obtain grants for these opportunities. We would like to have funding maintained for these purposes. Cooperate with Prior Lake on trails policy and roads. Concern is not to cut current funding.

Role the agencies play is all hinged on funding. Likes the initiative. He feels that a kindergarten program in Europe where the classes are held outside". He referred to it as "No child left inside" Build on green space, kids outside 365 (no child left inside). Help with language and education component, creating and managing green spaces all play a role. With that comes land management. Ho-Chunk is unique in that they are spread out to 14 counties. This makes it difficult for them to put a management plan together. Joint management, working with department of WI Natural Resources, environmental water management has worked for them. Cooperative Management in (our dispersed land base) (Kickapoo is open to all). How do we protect cultural heritage in those coop areas without funding? How can tribes help? When we create these initiatives, what kinds of impact will that have on the mounds? Yet our laws are not favorable to the tribes. They impact funding, polices are not strong enough to enforce. Ho-Chunk is trying to do organic gardening and composting. He noted the climate change and a story his uncle told of a medicinal plant in Illinois. They were shocked to find this plant was (growing so close) (global warming) to where they reside. How are we enforcing the initiative?

Discussion Question 3

Prior Lake, MN

(cont.)

Thanks for coming to listen. "Long over do." When Washington policies affect his tribe he listens. Sacred teachings are important. The wish for president's initiative on the Great Outdoors is a blessing. We are losing our sacred things. We are losing our wild rice. What the heck are Asian Carp? We need to protect our natural resources. We need to do this as a group. (A 30 million \$\$ fish farming project failed due to (regulation delay), took 5 years to do and they are still waiting for return on investment.) We are the sacrificial goat. We need input on development and policy. He sees this in WI and on fed level. Need consultation with Indian tribes. Tribally driven policies versus Washington developed. Natural Resources shouldn't be regulated in DC. Lack of input from tribes is a concern. Tribes need to step up and do something in addition.

She talked about reservation boundary issues. By act of congress they were given tribal boundaries. Need long term planning. Projects don't work. They don't have infrastructure to implement. She highlighted the issue of identifying cultural resources and then the difficulty in protecting that same information. Working on IRMP, Integrated Resource Management Planning, identifying resources and defining cultural/historical resources. Need to beef up management and get business/management plan, get water resources, trying to give back to the youth. There is a concern of losing cultural and language. The goal is to start with the young, teach the language and then they gain connection to natural resources. There are water issues with the (use) (of the Aquifer) and (River) water rights. Why do they need the water, except for irrigation? They are working on zoning. Don't want their resources just taken. There is a need to identify important resources to be preserved. They have issues regarding agricultural/range leases. We need to improve our management plans with NRCS for land use.

In regards to resources, he was an electrician and was forced to leave the reservation. He knows the problems on the reservation. We all have the same problems. Talked about BP oil spill, needles washing up on shore /international dumping in our waters, preserving our Cultural Resources, and losing the language. He mentioned smog at the Grand Canyon. He highlighted that a white guy is teaching their language at UNL. Lincoln. The language is his mission. He also mentioned a museum that is in the works and that the Smithsonian is (holding some of their cultural heritage/sacred pole.)

What works? They have a New Director in Natural Resources that is working, a Green Thumb program, elders beautifying the community and they are stocking lakes with fish, they are acquiring GSA surplus equipment and work cooperatively with State and Fish and Game. They are a small reservation with a small land base. They have buildings on dumping grounds. (A Middle school and a former housing unit that was torn down 18 months ago, which is not cleaned up yet.) Since it is not cleaned up people are getting hurt, there is vandalism, and it poses a hazard to the members. There is not enough law enforcement on these sites. They must protect the aquifer on their land. They also have Chippewa Tribal Industries, which is performing home inspections and energy audits. They have Community gardens. Another challenge is they are losing the willows for basket making. Would like to see more tribal, state, governmental teamwork on these issues.

Discussion Question 3

Prior Lake, MN

(cont.)

What works? What fits this is CCC. Civilian Conservation Core with youth doing natural resources. (Rails to Trails program, projects such as trails from WI to MI., campsites and deer surveys) This got the young into the outdoors. This all ended when (name deleted) became Governor. They only receive funds to build, not to operate & maintain these parks, ball fields and trails. Doesn't want other programs to be fleeced in the process. Wants them to be 638 so tribes run the program. (MI mine to be destroyed) Get young away from crime and into traditional sites/values. Doesn't want sites open to the public. (Mention of Monuments /site where they collect pipestone where there was graffiti. He wants no graffiti on rocks.) He cited GLIFWC as an example of off reservation cooperation to protect resources. Can we purchase off reservation and close it to the public?

What works? Culture is Paramount. 1st tribal historic preservation office (THPO) program for inventory of cultural sites, prevented desecration, development. (Brian was previously a tribal preservation officer) Highlighted issue that money for THPO is cut or stays the same as participation increases. Their tribe can't subsidize/fund programs. They lobby for more funding.

Commended other tribes with the management of their lands and does not know how it happens but believes that positive management comes from the heart. Their tribe has the best second-growth forest. A sense of community may have helped. Land into trust is important. Law Enforcement, how do we keep game wardens? There are interaction difficulties with external law enforcement in a PL 280 state. In today's world could kids tell what time of day it was if they were dropped in the woods? We don't cut trees with holes in them; they are homes to small animals. Congratulations to those tribal leaders who have realized success. He felt tribes weren't always invited to the table. Tribal resource management comes "second-nature". Others need to work at it. He applauds having the listening session early in the process. Thinks the government should use the tribes as a role model for management of land resources.

Al is head of Natural Resources. Red Lake sent letter to Secretary Salazar and he won't go into that now. This initiative needs to be funded with new money. They are looking at 7% (BIA/tribe) reduction. The cut doesn't leave room for this. How can we support this? What works? They work with USDA, EPA, MN DNR and the young. They have a Water Fest every year. "They" took it away, the grant for the water Fest? Soil and water shed district, they will have to find the money somewhere else. Tree plantings with the kids/young help give back to mother earth. They are a closed reservation so it is easier for them to do things since all their land is in trust/closed. They have the sixth largest fresh water lake in the United States. Their reservation is like it was way back and people come there to take pictures. They have been bombarded by government on land issues and giving back the Angle. They have diminished land all the way to Canada. Many don't know that Red Lake owns the Northwest Angle in Canada. Red Lake has pre-settlement resources.

Discussion Question 3

Prior Lake, MN

(cont.)

Thanks to Obama for this initiative. Our economy and culture was destroyed by this government. The agencies have helped. We, as tribes, do not have the infrastructure to help with funding. He had an issue with OSHA winning administrative jurisdiction on the reservation. Issue with Unions. Many tribes are poor to begin with. Pow Wow winning are now on the 1099. The IRS and taxation/1099 take too much. IRS is a disservice to the tribes. Tribes win little money. Land into trust. Menominee feels they were ripped off. Connection to congress resulted in MIT ripped of (Legend lake) acres. Legend Lake landowners have a covenant to stop land into trust. The youth is in crisis. New law enforcement (funding) will help. Drug problems are a big issue. We need to utilize the resources available to us and the Agencies. Need assistance with infrastructure so that they can utilize the funds that they receive.

They rely on their own tribal capacity to work on natural resource issues. They have good technical advisors on their staff who works on sustainable energy. Work well with EPA in Region 5. "Thank you". They focus on protecting high quality resources instead of saving compromised natural resources. Polymet project was wholly inadequate and the tribe's input into the environmental process was reduced. Environmental Impact Statement (EIS) is a Federal trust responsibility and the hat stays on through the entire process. (GLIFWC helped in this effort.) Their natural resources are integrated with tribal initiatives. Iron range problems result in damage to the Great Lakes. We can't survive cuts. Keep us even. More money would be great. This is a great new initiative. She wants to know "how do tribes initiatives match what the feds are trying to do?" Let us tell you how our priorities match what you are doing.

The youth focus of America's Great outdoors is great! Our assesets are our children. The greatest gift is a world where they can sustain themselves. We are losing our moose population, seeing raccoons and wood tics, which they have not seen before. Their ceded territory saw their first Turkey hunting season last year. No one knows how to hunt turkeys. Concern: Treaty rights as they relate to subsistence which is important to the tribe. Mining is a big issue for them. Asian Carp & VHS (fish disease) is big problem for them too. Don't do enough implementing; instead they do too much studying. We did the same thing with the lamprey. Now they are managing them. We need quicker action on invasives. Partnerships are important; both sides must have total honesty. Need every one to come to the table with no hidden issues/agenda. We need more direct tribal contracts. Hopes this initiative doesn't stop.

Thank you. How do (we) keep tribes input happening? He directed everyone to the web site for continuing to make the issues known. <http://www.doi.gov/americasgreatoutdoors/> He asked, what does the forest of the future look like? Should we be looking to new ways? Liked the second generation forest mentioned by the Stockbridge Munsee tribe. The CCP program and youth can become the new natural resources care giver. Community gardens and USDA can be of help. The Forest Service has learned how to manage forests from studying Native American practices. They are struggling on how to manage forests to anticipate climate change.

Discussion Question 3

Prior Lake, MN

(cont.)

She would like to see the 6th largest lake in the US at Red Lake and would like to travel here again. EPA is working on strengthening tribal leaderships and relationships. They have priorities, so everyone knows what is important. Let us know what we can be doing better. Please submit suggestions on how to improve consultation. One of the agencies 7 priorities was to improve/maintain tribal partnerships.

The Cultural Resources issues were heard loud and clear. Message received to support THPO offices, Historical Preservation, assistance, partnership and the role that tribes have in overall management of parks and natural resources is the theme they are hearing around the country. Landscape scale management (needed) (park service, us agencies and Canada). Thank you and sorry they couldn't have set aside more time.

Thanked the tribes for their stewardship over all these years. This is a direct pipeline to the president with the cabinet leaders here today.

You need to listen to the children and Indian country. Appreciates the effort in them being here. He stated that they must spend a day or two here, not just a few hours. Tribe's resources are "they need the money". Tribes expect the government to live up to treaty rights, funds, and provide technical support. He noted that the president said that Indian Country has always been underfunded. We/tribes need to maintain what we have and find other financial resources. The treaties don't say "subject to budgets".

Discussion Question 3

Seattle, WA

need a better spokesperson for the environment who can connect with broader range of rural and other people

government needs to have more bite in law to prosecute people who violate rules accessing wilderness with motorized vehicles. Also fund staffing needs to enforce law.

Fed Govt role is to make sure we have places outdoors to recreate. Needs to add [Wilderness and park lands. Should protect ranges of lands to allow wildlife to migrate, especially as global warming changes migration routes, and times.

Problem with English ivy...sale should be prohibited...

Recreation needs to be recognized as important component in the landscape. Agencies to put pressure on legislatures on funding programs

Need for shared vision – Feds can advocate shared vision that comes out of this sort of conversation but follow through. Understand the science that can preserve habitat. Include in K-12 national curriculum

Feds needs strong bold leadership at the top to look out for needs of the individual, bring people together, increase protection of other lands not otherwise protected that belong to everyone. St. Helens should be designated National Park.

Puget Sound and Hood Canal should be more effectively used. In Brent's past, created report on early uses of SF Bay. Chinese sent 100 tons of dried seaweed to China. Late 60s and 70's attempts to turn bay back to harvest resources of the bay. EPA stopped Bay Area counties from restoring resource harvest in Bay. Bay conditions would be much better condition had this been allowed to occur. Fed. Govt. is biggest barrier to improved use and economic conditions of Hood Canal and Puget Sound. Fed. Govt. Forest Plans prevent local and state oversight of management of public lands. Give back to state and local govt.

Do we want Fed to manage Mt. St. Helens. If Fed takes over, people will be restricted in ability to use areas around Mount St. Helens. Currently there is access. If Fed takes over, local pop will lose this.

Historic urban parks are important. Need funding for historic preservation. Historic American Landscape Survey., National Association for Olmsted Parks, Cultural Landscape Foundation. Use social media as a means of sharing info.

Friends of Seattle Olmsted Parks, works hard to get urban people out to parks. Coming up with GIS mapping tools in social media and smart phone applications for attraction youth to urban parks. Local group is Trying to get youth involved with this effort, which would eventually connect them with other outdoor areas. Current clientele middle age-need to attract younger age group.

Discussion Question 3

Seattle, WA

(cont.)

areas managed as wilderness limit access and uses/use; counterproductive to having recreation opportunities; don't need more wilderness in the Northwest;

be more involved with the clubs...they all have organizations, have resources, and can bring ideas and good input to planning, and then a commitment to volunteer labor to actually implement;

federal government can support organizations like peace corps to get younger people out to help other countries, other cultures and people; Earth Corps (nonprofit in Seattle with national and international programs); service learning programs and sending volunteers to other countries

Access to federal lands is too restricted. An audit is needed to reevaluate those rules for access

highlight the economic value of conservation efforts – need to do a better job with this; eg cleaning up Puget Sound will have enormous economic impacts (good) for the region; healthy forests, salmon are economically important; federal government can do a better job with this and why it is economically advantageous to spend money on conservation – better than state/local efforts;

example of dams on Snake River; grossly missing from fed govt: 1: communicating a true vision of development that is consistent with environmental health; need to undo some of past actions (e.g. dams) that aren't now the right thing for this time; can't keep doing what we're doing; people understand issues with water quality; need firm legislative proposals that are consistent with that vision and then drive it; 2: western forests are in terrible shape with beetles; west is awfully dry and fire will be immense; need to break the paradigm of putting out all the fires; need to undo the way we look at these problems and come up with solutions that are closer to nature (e.g. fire management); 3. this administration wanted to adhere to good science and haven't seen it yet; need to look at science and do the right thing

Funding for NPS needs to be increased for NPS centennial in 2016; NPS and federal government can also provide matching grants and similar programs should be out there (similar to the one created for Japanese internment sites)

federal govt could make much more effective use of the clubs

Use available dollars wisely. Programs that partner (e.g., NRTP) if money is cut they can't use that money to leverage partnership with WTA to do work on their lands.

Access is an issue. Specific to schools – mass transit possibilities to get people into the outdoors. Trips to trail heads. Tie into science programs and science studies. Make trips available to parents and kids both via mass transit

Reduce hurdles or simplify process to accomplish goals.

Discussion Question 3

Seattle, WA

(cont.)

Climate change needs to be recognized and emphasized. Adaptation needs of wildlife should be incorporated in planning process.

seems to be a disjoint and agencies aren't using their friends groups; MORA has lots of education programs but friends groups could help engage more people; encourage agencies to work with Friends Groups

reactivate youth conservation corps in parks, similar to Vista program, peace corps; need job corps services for youth – encourage youth; need to advertise these programs

regulate. Initiate regulations that will protect environment and natural resources from large business and greed

Problem with Wilderness Act was that it prevented all logging in these areas. Selective logging took out some trees but not all. Logging put roads (access) into areas, and allowed for fighting fires. Promoted healthy growth of tree population.

partners are sometimes treated as contractors because of the organizational structure of fed agencies. Partners should truly be treated as partners.

alignment problem. Businesses have fleet of vans that are unused on weekends...could be used to get kids out to parks, public lands.

USFS could do a better job of planning and funding recreational opportunities; focused more on closing existing trails. Campgrounds and roads.

Role of Fed Govt is to be unifying force for conservation nationwide. The environmental ethic in Seattle Metro area or Washington state is not necessarily shared nationwide.

need to make it easier to find out about jobs; army and navy have tv commercials and lots of marketing, need more information for the park service – they have lots of opportunities that a lot of people would like to be involved with but don't know about it; streamline the process so people aren't overwhelmed by the paperwork

have had success incorporating projects within projects within the Seattle area; restoring habitat in open spaces; King Co. and REI grants used, with volunteer labor. Can do things on a small scale that make a difference locally

Uses The Maze area, Utah: very large area, with only 5 campsites, that could have accommodated many more people...there is a great deal of opportunity to provide much more use, without impacting resources; people get turned away; will lose support over time without use and access; population is growing...need to accommodate them. Enforce LNT, but let more people in....enforce the rules. Good trail design minimizes trail impacts. Many trails

Discussion Question 3

Seattle, WA

(cont.)

If entire USFWS budget were eliminated, it would not make a dent in the Fed. Deficit. Fed needs to take a look at where budget money is going and reconsider priorities.

Feds should strike a balance. With wilderness it is "all or nothing". We have a lot of public land. We get focused on management rules. Recreate in a way that makes sense to everyone

San Fran Bay has a huge map to show all transit connections to trailheads. Feds can help coordinate this effort. Transit to Trails is a good example

Have allowed commercial interests and leasing to damage federal conservation lands too much. We need to hold accountable anyone causing damage due to the United States through commercial development, bioengineering, mining, or any other capacity. They need to be held responsible financially and should have to restore it. Any time land is leased through a federal agency, this should be part of any contract

Work together to rid Pacific Ocean of plastics gyre (huge area of plastics circulating in ocean)

Improve communication w/in agencies and w/other agencies and publics.

Full funding of Land and Water Conservation Fund

funding requests for extension service to make connections and create opportunities for young people to learn about ag; funding for extension programs

Lost forests in Rockies, temps increasing, forest fires increasing, sea level rise occurring quickly. No drilling for gas or oil; stop burning fossil fuels. Increased energy efficiency is needed. Stop subsidizing gas and coal (fossil fuels)

looking for opportunities, resources, curriculum to engage youth in outdoor areas. Teacher-Ranger-Teacher is an NPS effort to connect teachers with parks.

State run Elbe Hills attracts large numbers of users. People are able to share users. Paradise Valley (USFS) is difficult to use because lack of roads or unmaintained roads. Should study State run areas as an effective way to manage lands.

comprehensive planning for trails to connect people to parks and protected areas.

could be more focus on the environment in high schools; schools could integrate more focus on environment in the education system; never heard about national parks in the public education system; importance of the national parks and many people can miss out

Discussion Question 3

Seattle, WA

(cont.)

Some land use decisions seem to have slant one way or the other, but reluctant to state that reason. Favors transparency. If there's a reason for a decision it should be stated.

what gets measured in the government gets done. we do not have measures of goals for kids in these programs. CDC – what measure do we have for kids getting into the woods? What measure can we put into place to get kids on the ground. (in short: The Feds need concrete measures and targets to get kids into the woods). Set a target and a measure for getting kids into the woods

create a pipeline or means for young people to join the NPS; formal from seasonal ranger, volunteer, etc.; need to professionalize the pipeline to careers in NPS; need a clearer roadmap for young people to take; similar to an Americorps program to be a ranger for a year and bring those values to their lives; think about a ranger academy

More money and funding would be great, but we also need to be realistic. May be pressure building to sell assets including fed lands. Need to resist selling America's birthright.

there is a need to educate people how to lessen their impacts; don't like the design of the NPS campgrounds...too dense; need more dispersed opportunities.

want to see federal govt focus and respond faster to natural disasters; they affect the environment (eg. BP drilling); seems like media highlights how slow the responses are; crews seem small; assessment and response seems slow; need to ask hard questions; think about how much of money spent on BP disaster could have been redirected to parks and other issues

If you don't have access, the land becomes useless. We do need to preserve lands for everybody. People on the East Coast don't know what's best for people in Northwest

Have federal agencies work more cooperatively with small non-profits to help them with their programs. Have agencies create consortium or forum where smaller non-profits can work together to accomplish goals.

govt programs that encourage protection and support at young age. Kids need to care about it first. Consumption and population need to be addressed. Many coop agreements are 5 yr terms – difficult to sustain programs/projects.

Sustainability approach from the federal government from big picture perspective. Make the case for need, future and quality of life we all want. Encourage incentives over regulation. Incentives raise the bar for everyone. Regulations lower the bar to lowest common denominator.

Bring home the troops and provide more support to fight invasives

Subsidize from large agricultural businesses to local farms

Discussion Question 3

Seattle, WA

(cont.)

Army Corps of Engineers. Corps is largest water borne provider of recreation, but isn't fully engaged in the process. Need to incorporate the Corps more in the process. Promotion and visibility for Corps activities. All the federal agencies need to work together in collaborative process.

a lack of information on how to mitigate impacts of use; need to study problems to find the appropriate solutions; federal agencies need to work together and get better alignment of policies, regulations...to lesson issues. Need more attention and federal support for urban parks and open spaces. Engaging youth needs to start in their backyards....in the cities, where 80% of people live.

Fully fund LWCF. Urban parks are very important to connecting kids to nature.

Use what we already have in workforce development programs such as CCC. Focus on reintroducing CCC within both urban and rural areas to provide employment opportunities

Protected public land areas- needs to create more of these areas- Nat Monuments

Create new National Monuments. Historic Preservation Fund needs priority funding. National Heritage Areas – lets local communities connect with heritage, nat. resource, helps develop business models/economics

Think on entire region scale – rural landscapes, open spaces, urban spaces.

Science Education needs to be priority in this country. Look at what other countries are doing for obesity, and getting people out in nature.

Transportation barrier for urban kids to get to natural places and parks.

Enviro is under assault by powerful voices; pres should take q from Michele and get outdoors.

Partnership grants – diff groups working together on common goals. NOAA grants lack funding. Pres needs to understand to lack of funding in these grant programs. Urban space is island w/open space around. Fund micro parks, community gardens. Local funding is limited so need to get funding from govt. Funds schools get should be tied to getting kids outside and exercising. OSHA could build in outdoor time into employee equirements/rules.

Consistency in managing parks, public lands, forests.

Discussion Question 3

Seattle, WA

(cont.)

Desire for small private forest owners. Provide incentives to small private landowners for conservation.

Retain funding for Save America's Treasures, Preserve America and National Heritage Areas. Historical preservation is not separate from protecting natural environment.

Fees collected for a particular reason. When funds are collected for specific use then sometimes get used for something else its very discouraging. Collect fees and use them where they are supposed to be used.

Look at sustainability from ecosystems standpoint. Mount Rainier and Yellowstone are islands. Actions to look at large scale ecosystems. Role for park service to expand these areas.

How to work best with private landowners. Establish tools and programs for federal agencies to engage with local landowners (conservation easements, forest legacy, ranch conservation, etc).

Outreach is really valuable. Schools, teachers, and other organizations working with youth. Review permitting language to see if rules prohibit people access that should be provided.

More collaboration with Tribes. Seems inadequately represented in the system

- are we afraid to copy the CCC model? It was effective and could be replicated
- Conservation needs to occur with full spectrum of local, state, and federal agencies
- Marketing – content on WA State Ferries is pathetic. Park Service could partner with State Ferries for interpretive and education programs.
- Include private landowners in the AGO process

highschool students volunteer, this is a requirement from the school. Must participate. Most come out as volunteers afterwards. Service requirement

Figuring out how to pool resources, and coordinating funding cycles. Using grant programs in targeted areas for landscape level work.

Woodland Park Zoo-Washington State Parks- Richard Louv has

Discussion Question 3

Seattle, WA

(cont.)

Fed needs to do a better job of enforcing existing laws, ie 30 ft. barrier along rivers needs to remain forested—however this is not consistently enforced. Rules in place haven't been adequately enforced.

More collaboration amongst Federal agencies is needed. Public confused by Natl Forest vs. National Parks, Websites are not coordinated, Would help to provide common face to Fed protected lands. Example: New Zealand has a common face (and contact) for protected lands.

When you bring in Fed oversight of lands, you shut off land to majority of uses. Local management is important to prevent closing off large areas of land to masses.

Cooperative land management is key to having diff user groups working together to satisfy larger numbers of users.

- need to present young people with unique things in their own area that are more than just forest; initiative to expand MORA by about 400 acres with an unprotected rainforest; if more people knew about the special resource out there, and knew it was in their state would be great

Government could educate adults about the responsibilities of different agencies and responsible parties; think about the learning opportunities

Ranger academy idea – NIH, think about a National Conservation Academy to carry out research and a place all agencies could turn to for research (economy, biological, etc). there is a national academy of science; think about extension

Expansion of thinking about impacts on watersheds, not just rivers; can just conserve one small part of a river, need to think about watersheds, migratory patterns

Protection of national/federal waterways should not be delegated by federal govt to other nations, entities, or the United Nations. The lease of federal Park lands to other nations, entities, or the United Nations should not be allowed

Government should commit to programs for a long enough period so they become sustainable

A special effort is needed to reach a more diverse audience on the subject of outdoors and conservation

Support land trusts to help them do their work

Limit number of roads in federal lands, and motorized vehicle

Discussion Question 3

Seattle, WA

(cont.)

A more comprehensive evaluation is needed on designation of federal lands so they are not too restrictive; wilderness is needed but open lands are too. Scrutinize land use restrictions and be more clear of what is allowed on various lands

Programs like Natural Heritage Areas need more federal support; fully support Historic Preservation Fund

Fund RecreationTrails program, fully fund

Common sense review of policies and regulations that makes it easier to get things done

Support quiet restrictions to reduce noise in parks and other natural areas

Stop oil drilling of Alaska

Change the Wilderness Act of 1964 to allow recreational access and diverse activities

Need to provide improved access to marine areas, this is a gap

Federal agencies to engage with state and local entities to better coordinate roles and improve collective effectiveness in recreation and access

Invite president to camp in a National Park

Bring the troops home and use the funds to reduce invasives

Preserve urban and suburban areas before they are gone

Put USFS out of Ag and put under Interior so all in one Department

Create an international data clearinghouse for all research and economic data and information. To improve exchange and accessibility of information

Discussion Question 3

Seattle, WA

(cont.)

Encourage adaptive, responsible reuse of buildings, rather than tearing down and building to achieve LEED certifications. More sustainable to reuse than replace and rebuild

Federal recognition of the Duwamish Tribe

Federal recognition of the Chinook Tribe

Please support legislation to allow non-profit organizations to sell tax free bonds on forest lands which are being sustainably logged. Community Forest Bond

Through interagency relations – level the playing field for landowners - for small landowners (carbon credits, water credits, ecological services) allowing small landowners to compete

More work between agencies to think on an ecosystem level rather than within bounds of parks/forests units – holistic – migration patterns, wildlife movement, etc

Solid waste management – recycling – develop markets and increase facilities for smaller communities – federal to help state and county to improve climate change through waste management

Take into account that the environment is not state/nation specific – work outside borders with Canada & Mexico

Different agencies to look at what they have in common – publicize it & promote collaboration to make the public aware

Include social sciences in the approach – support & fund social science research as it relates to the AGO initiative

More science-based research vs. money/partisan based research

Promote conservation by jacking up prices of mineral extraction, etc. on their large amounts of public land that is leased out

Stewardship of the bigger problems – take oversight responsibilities more seriously (Gulf spill, etc.

Focus on enabling, streamlining services to state & local landowners

Discussion Question 3

Seattle, WA

(cont.)

More funding to schools and universities to lower costs to students who are the future – embrace technologies

Need new technologies and more R&D for environmental cleanup (oil spill - using same technology for BP as it did for Valdez)

Feds can bring stakeholders together in a “less charged” environment to figure things out, provide a forum for open and clear communication. Tough decisions must be made but get people to talk in an environment where they are not afraid or competition for public perception

There is a lot of tension when groups come together and especially if they are competing for funding. Bring them together and find money that could benefit all of them. Build coalition

Too often in modern political processes, they are... have more opportunities like this one – face to face – figure out answers rather than competing for budget

Apply science to ecosystems. Ecosystems know no boundaries. So often managed by jurisdiction rather than by ecosystems. Feds are in the best position to recognize the underlying science. People must understand ecosystems and the science behind them, share the information and have it shape policy to manage those lands

WPA and CCC

Inclusion of no child left inside in omnibus

Streamline bureaucracy at every level

Reduce NEPA hurdles for trails and recreation projects

LWCF – reduction of incumbrance that are placed on land owners

Include conservation in land use policies, must be federally regulated

Streamline process of permitting to allow schools into the outdoors. Teachers are not outfitters and the process should be applied differently for teachers. Make process consistent and predictable

Rehabilitation and modernization of rail system

Discussion Question 3

Seattle, WA

(cont.)

Trains are often empty. Put students into empty trains to Glacier NP

WPA, CCC, new transit system are all good models

More organizations that take kids out

More teenage clubs (e.g. an outdoor club for socializing)

Find funding for activities

Make jobs or internships (summer jobs

Greater awareness of organized activities to teach skills and get kids out in nature

Outreach to expand information

Outdoor field trips'

More programs for younger kids (start earlier)

Opportunities in your own neighborhood

Make outdoor activities accessible (more roads, more ways to get places)

Outdoor activity classes

Incentives to recycle

Funding for the parks

Discussion Question 3

Seattle, WA

(cont.)

Outdoor swimming pools

Promote/encourage/support/sustain/love more outdoor programs

Build more outdoor playgrounds

Increase volunteer opportunities

Environmental policy

Cleaning up polluted areas/ground spaces/urban areas

Preserve national parks

Preserve natural areas/zoning laws

PR events at National Parks

Continue LWCF

Make better use of NEPA. Some documents should be elevated in analysis. Adhere to NEPA regulations.

Community Forestry Legislation. Need for improving employment in conservation

Priorities of Government. Identify overarching priorities for several budget cycles provided strategic vision. Cabinet level process to set land management priorities over 15 to 20 budget cycles.

Fed Govt could follow work of WA State when it passed No Child Left Inside Act. Encouraged access through matching grant funded programs.

Discussion Question 3

Seattle, WA

(cont.)

CCC achieved tremendous work, specifically in changing individual lives.

AmeriCorps program gets ppl outdoors with a conservation focus

Leveraging smart growth initiatives across the country

Bringing conservation education to younger classes

Leverage funds such as Legacy, Section 6, LWCF, with fed govt coordination to achieve landscape level work. Fed Govt needs to play role in seeing that education systems include conservation

Reappropriate funds towards programs to assist at risk youth.

Focus on 4-H style programs in schools to encourage enjoyment in outdoor activities.

Federal agencies can be a convener and facilitator. Bring people together and encourage cooperation.

Maintain the wilderness that exists. Keep federal agencies working together like they are doing today.

New federal education law includes Environmental Education.

protect and add additional new special places (NRA's, Park expansions, Wilderness, Wild & Scenic etc...)

Ensure federal funding of land trusts. Allow direct application for funding.

Government needs to stop paying lip service to issues but act. Infrastructure is good example. "fund the talk" so you can walk it. Fund programs to capacity.

Better advertise what is going on in the parks. New trails, activities, roads converted to trails. People don't know what is available.

Address on a more proactive level for species conservation

Discussion Question 3

Seattle, WA

(cont.)

Underfunded on ESA

WA state has some healthy salmon runs that can be better-protected with preventative

Work with landowners to protect places to be resilient

21st century in conservation: looking ahead to progressive actions

Have things done in a bi-partisan manner with a spectrum of ideas

Inner-city people don't have access to outdoors

Support public transportation, especially across state lines

Amtrak, ? Is there something federal government can do to support transcontinental, interstate transportation system? ? Getting people out of their cars to more efficient transportation

Insure that dealings with the public are transparent and in good faith - done positively

Create more access to National Parks. Need more roads and opportunities for people to use the resource.

need to figure out ways to finalize the planning process. Make it more workable.

work people in charge in agencies, fund enforcement so groups know they can't get way with pollution. Support to enforcement agencies.

Stewardship, o Use of information through electronic media about trail resources in state, o Parks, national monuments, trails

What used to be a paper newsletter mailed is now a robust online database with information on trails all over state

Huge success of trail maintenance program to do volunteer maintenance is important tool to get people and youth outdoors

Discussion Question 3

Seattle, WA

(cont.)

Collaborative model, ? Mountains to Sound Greenway Trust—bipartisan collaboration of government entities, non profits, private corporations, industries;

Collaborative model, ? Along I-90 corridor from Seattle to east side of Cascades, • Joins urban-rural dynamic, • Political differences on the two sides of the Cascades, • Brings divergent views together successfully for 20 years now through grants, funding, access from urban to federal lands, • Multi-agency trail coordinator paid by combination of fed-local governments

We want this to be successful

Don't see a lot coming out of this administration on environmental issues

Invest in our volunteer organizations that conserve and develop trails. Keep the opportunities available to leverage volunteer organizations' resources (time, money, networking) to do work on public lands.

Federal gov't needs to look out after our interests. Closures occur without public input, shouldn't close trails just because nobody comments.

Urban vs. Rural values with regard to the management and use of federal lands. The gov't needs to ensure that the values of those living close to public lands are considered. Shutting down of public lands to commercial uses is hitting local communities.

The role is to represent us. That's not happening. They are fighting us. The way we use public lands is being dictated to us. The gov't is not working with us but against us.

Processes are very cumbersome – language is difficult to understand.

Eliminate the ethanol mandate. It damages many engines and boat fuel tanks.

Remove No Child Left Behind and implement No Child Left Inside.

Create more access near transportation corridors and urban centers. When has a new trail been created in the local area on federal land?

We need working farms and working forests. Agriculture and conservation districts play an important role.

Insist on an agency culture that emphasizes public private partnerships. It is often an up hill battle to convince federal staff that there is a private role.

Discussion Question 3

Seattle, WA

(cont.)

All the agencies need to work together in a coordinated way. Right now they are each trying to do the same thing in many ways, separately.

Be an active participant in the successful groups/endeavors mentioned above

Establish national monument status for coastal plains of ANWR

In areas where local conservation is successful, federal agencies should support, help, fund those efforts

Collect information on economic benefits of protecting watersheds, recreation businesses

Emphasize User-based fees, e.g. Duck Stamp that funded the federal refuge system, e.g. Pittman-Robertson Act, hunting and fishing licenses

Collaboration with conservation and user groups to improve funding for resources

More rigorous compliance with Sec 106 of NHPA

More and earlier consultation with affected stakeholders for protection of cultural resources

Federal government energy policy for DOI, avoid development in Arctic: no offshore drilling

Consistent funding for parks, lands – all user fees should go directly to the park or resource, NOT to the general fund

Establish youth volunteer/work program

Account for federal tax dollars – where does all the money go?

ORV tag fee increased, but WA state did not fund the ORV trails

Feds should have limited or no role in recreation, this should be local

Discussion Question 3

Seattle, WA

(cont.)

To be more effective partner with the agriculture community, Listening Sessions should be in the winter after harvest (farmers are busy in the summer)

Do a better job educating the public. Second Century Commission Report, NPS should focus on education role

National Forest Plans – revisions should look at climate change impacts, adaptation and resiliency of ecosystems, holistic view

Concessionaires contracts – should include requirements to include youth opportunities

Energy Policy should be Climate Control Policy

Common-sense remedies to impacts of climate change, e.g. capturing flood water from excess storms, regulations not set up for this now (FEMA)

Keep it simple, bypass the red tape and administrative overhead waste

Discussion Question 3

Spokane, WA

Access and Consolidation: The United States should seek to secure and restore access for Indian tribes, and their members, to areas with important cultural and natural resources. Federal protection in this area is paramount where Indian tribes have reserved such resources under a treaty with the United States.

Where practicable, federal agencies should aid tribes in the acquisition of cultural resources and culturally significant sites, as well as the consolidation of existing tribal land-bases. This principle is consistent with the overriding principle of tribal self-determination.

Management: Where tribal acquisition of such resources is not feasible or practicable, agencies should seek to ensure that relevant tribal agencies and intertribal organizations have an opportunity to participate in the management of such resources.

1. Consolidation of tribal land holdings

To facilitate comprehensive tribal land management, the United States will work toward the elimination of "checkerboard" land holding patterns on existing Indian reservations by: working to transfer to tribal trust status other tribally-owned and, where appropriate, federal lands within, and contiguous to, Indian reservations.

Indian Affairs proposes to consolidate its tribal trust land holdings as a primary objective of the America's Great Outdoors Initiative. Consolidation of tribal land bases will lead to a number of benefits for both tribal nations and the United States:

Checkerboard and fractionated tribal lands are problems that have vexed the United States and Indian tribes for decades. This objective will require agencies, particularly the Department of the Interior, to work closely with Congress to ensure adequate funds are appropriated for land consolidation. The Department of the Interior will also work closely with tribes to expedite the process of acquiring tribally-owned fee lands within existing reservations in trust for the benefit of tribes.

2. Preservation of cultural resources

Federal agencies should collaborate with tribal leaders on management and conservation practices relating to culturally significant resources, where those resources are located on federal lands. Where those resources are located on tribal lands, federal agencies should work to equip tribal governments and organizations with the resources they need to continue to protect and conserve these resources.

The precise location and description of culturally significant sites is a sensitive issue for tribal nations and their citizens, making it difficult to include many such sites in a public initiative. Moreover, many of these sites may be located outside of tribal lands. Federal agencies should work in consultation and collaboration with tribal leaders to ensure tribal access to, and preservation of, these sites to the greatest extent possible.

Discussion Question 3

Spokane, WA

(cont.)

As part of the Initiative, federal agencies should work with tribes to collaborate on long-term management plans, identify instances where tribes can co-manage federal lands, and support tribal efforts to build land management capacity. These efforts are consistent with the President's November 5, 2009 Executive Memorandum, tribal reserved treaty rights, and the federal trust responsibility.

The Land and Water Conservation Fund (LWCF) was established in 1965 to secure access to outdoor recreation and to strengthen the health and vitality of U.S. citizens. Since then, LWCF has been the principal fund that federal agencies use to acquire land for outdoor recreation, and to date it has protected millions of acres for future Americans. The Secretary of the Interior has discretionary authority over a large portion of the LWCF, and could potentially allocate funding to tribal governments to acquire land for outdoor recreation in and near tribal communities.

The Department of the Interior Fee-to-Trust Initiative involves the use of existing authority, under which the Department is seeking to expedite tribal applications for the United States to acquire land in trust on behalf of tribes. Secretary of the Interior Ken Salazar issued an internal directive on June 18, 2010 that the Department should "diligently and expeditiously exercise its responsibility and move forward with land into trust decisions." This initiative would complement the America's Great Outdoors Initiative by facilitating the consolidation of tribal landholdings, and easing tribal land management efforts.

Allow tribes to participate in recreation and conservation acquisitions under the Land and Water Conservation Fund. This will allow tribes to access funds to acquire lands for public parks, and to set aside lands for conservation purposes.

Initiate a Governmental Accountability Office (GAO) audit of the equitable distribution of tax dollars to federally recognized Indian Tribes from the Federal Aid in Sport Wildlife Restoration Act and the Federal Aid in Sport Fish Restoration Act, also referred to as the Federal Aid Program. This country's Indian Reservations contain over 56 million acres of land, which comprises 2% of United States land base, with vast amounts of fish and wildlife resources. Although the various Tribes oversee and are responsible for management of these resources and the Federal Aid Program funding formulas count tribal lands, waters, populations for returning the tax dollars to the people being taxed and the landscape being utilized, the Indian Tribes of the United States are not receiving these very important funds. One of the primary purposes of this audit would be to determine how Indian reservation residents and visitors pursuing outdoor recreation and subsistence activities can realize their tax dollars are being returned to the fish and wildlife resources, landscape, and tribal government where they hunt, fish and recreate. Access to this funding is critical to help develop tribal fish and wildlife management programs and for the continuation of providing Indian lands for recreational pursuits for all Americans.

Support increased funding for the Indian Land Consolidation Program. This program will assist Tribes in their consolidation of individual fractional land interests resulting in the ultimate protection and management of trust lands for future generations.

Discussion Question 3

Spokane, WA

(cont.)

Dedicate adequate funding to tribes to build and maintain capacity to manage cultural and natural resources on tribal lands. This should also include funding for tribes to participate in existing programs that are designed to encourage youth participation in conservation and recreation efforts. In addition, dedicate adequate funding to tribes to build and maintain capacity to manage treaty-protected natural resources outside of tribal lands -- especially where tribes have a responsibility to manage such resources pursuant to court order or court-approved agreements.

Encourage federal agencies to enter into cooperative management agreements with tribal governments under existing authority, where appropriate, to allow for tribal co-management or management of federal lands within, or near, tribal lands. This is consistent with the collaborative process established by the President's Executive Memorandum on tribal consultation, and will foster creative management of cultural and natural resources. In addition, federal agencies should consult with tribes on identifying areas in which such agreements would be appropriate, and work with congressional leaders to expand authority to facilitate such agreements.

Federal agencies should work with tribes to enter into agreements to protect sensitive sacred sites. Where appropriate, federal agencies should work with tribes to consider appropriate federal designations that would preserve and protect such sites, or to allow tribes to place such sites in tribal trust status.

The United States should make available resources to tribes, and schools in and near tribal communities, to preserve and promote tribal languages. As many tribal commenters noted during the America's Great Outdoors listening process, tribal languages are important to identifying and establishing a connection with culturally significant sites and natural resources. Federal agencies should also consider working with tribes to establish creative means to incorporate tribal languages into conservation and recreation efforts, including the use of tribal languages on maps.

Discussion Question 3

Written & Online Comments

Communities to work with all federal agencies at once, one stop shopping

Fund not just infrastructure, but demonstration projects/programs

Wants to see federal government as better partner

Make public lands public through land access

Work towards efficiency maximization by making all land management plans available online so that agencies, state, local, and federal governments, and private sector entities can view ongoing projects and coordinate efforts. Currently too much unnecessary

Make state governments equal to federal government in planning process. Agencies have to train together if they're working on the same projects; current system has all agencies training separately, which doesn't make any sense

Working at the right scale is critical in order to create a sense of community and solidarity as people are more likely to feel an emotional connection to projects that directly impact their own communities; larger scale projects can seem impersonal and I

Link youth with conservation

LWCF -- fully fund it and use it strategically

Support private lands conservation efforts -- some of the most important conservation of land is by the private land owners

When working on a conservation issue or project, government should facilitate dialogue, don't talk to groups individually, collaborate with groups collectively

Youth: make connecting with nature and the outdoors a priority when they're young

Get the private sector involved in these initiatives; coordinate agencies and groups on different projects to increase efficient use of time and resources

Restoration: Tribal/NRCS joint effort, successful stream restoration, BOR;BPA, youth engagement

Discussion Question 3

Written & Online Comments

(cont.)

Landscape conservation: 1976 Chattahoochee Recreation Area, small land access points to H2O, engaged public in forming conservation vision, develop "grand plans", engage communities in planning proves -- deeper "outside the box", find new sources of partn

Communities of color: veer from traditional vols., long term mentoring -- start young, grade school, recruit teens as teachers/mentors, conservation big brothers/big sisters, encourage higher education -- getting children of color into sciences, not a sho

Transportation: NPS/other agencies could provide buses, require states to create envt. Literacy campaign/curricula; nature bridge -- public/private partnership, 40,000 children/year, continuum of care to involve children in the outdoors, keep listening --

Reinvigorate partnerships with urban parks and local conservation systems -- need fully integrated systems at all levels of government

Make principals of conservation less esoteric -- connect all principals

Dedicated reliable funds outside of appropriated \$ to support partnerships

Need consultation process/infrastructure with DOI.FS for concerns to be aired before decisions are made

Portion fo land and conservation fund needs to go to urban parks

Federal government to help natural resource agencies engage/develop structure for youth to bring youth to the woodlands (need partnerships in conservation education curriculum -- don't need money)

Ducks Unlimited web site -- youth activities/education. High school sponsored events -- run by kids. College chapters -- raise funds for conservation efforts

Challenge to protect larger landscapes -- need federal agencies to work better together and pooling funds successfully

American Outdoors Commission -- local governments will maintain -- city/counties will make it happen

Partnerships-policies/agreements becoming very complex -- agencies cannot process them -- nonprofits work in similar ways/simplified ways with various federal agencies

Need to protect wildlife corridors legislation (ex: National Trail Act) -- need national restoration policy -- restore landscapes

Discussion Question 3

Written & Online Comments

(cont.)

Out of work, out of school young people need to be a part of this initiative ages 18-24, and people of color should be at the forefront

We first need to build up urban recreation in cities, where people can have a safe outdoors environment close to home

If we are going to have open spaces we also need places to live and work and conserving old homes and buildings as National Historic preservation is key

Long distance scenic trails require interagency cooperation and many partners but they are also great ways to connect communities, habitats, and people

Make sure all USDA programs are accessible to all users -- how can different groups work together to produce community food and conservation plans including rural gardens

Federal government put money out there and have organizations compete for the money, giving them incentive to follow AGO initiatives on the ground level and they receive more funding for programs that align with AGO goals

Federal government has lack of real relationships -- system is hierarchical and transient, fed government is everywhere but nowhere, federal structures need to engage local groups and people more steadily

Leverage market place; get grant money faster; web pages and transparency

"Prioritization" - work on water issues

Private working lands protection in face of increasing competition for land and increasing demands to promote food.

Re-Create the CCC and vastly broaden youth, unemployed and senior engagement in Outdoor projects, both wilderness and urban. Expand the urban greenway on trail program with "Grants for Greenways" (over and above and separate from Tea program*. Fed. Incentives to engage All school students in eco-education + outdoor projects. *Streamline grants program. Tea grants way too bureaucratic!!

Enjoyed the conference! What is follow-up mechanism to keep this assembly engaged in implementing the steps President Obama outlined? Please distribute the roster of attendees with contact info. Assemble group every 2 years to mark progress, and assign tasks to achieve goals.

Work through established community organizations, conservation organizations, park and public land support groups. Outreach, awareness and marketing campaigns. Internships within agencies and partner groups.

Discussion Question 3

Written & Online Comments

(cont.)

Working partnerships the land manager and user group education. Youth involvement.

Crate a list of conservation projects and build a website with national, regional and local organizations to adopt a project with follow up as in outcome. Make it a true collaboration with federal, state, and city govt.

Boys and Girls Club of America would officer its clubs and members across the country for focus groups/town hall meetings to discuss issues introduced at the White House Conference on America's Great Outdoors

Thank you for this invitation! It was inspiring and impressive to see the coordination and passion of the Agency secretaries, EPA, CEQ and others. Private land conservation is becoming more cost effective and successfully than ever. We strongly encourage funding and support for more of this landscape protection.

Funding for private land conservation. Estate taxes. Generational succession of landowners.

More land protection initiatives in Congress and from the administration and more partnerships with the private sector, local, and state governments, etc. We also need more funding and volunteers for these lands.

Thank you. The president's remark renewed my hope that we can conserve our cherished lands.

Engaging our underserved, minority populations in environmental stewardship.

providing robust and stable federal funding for landscape conservation. Engaging citizens, and particularly our youth, on environmental stewardship and outdoor activities to reconnect them to the outdoors. Enhancing public access to our great outdoors

1) create a treasured landscapes fund, setting aside a portion of funding for strategic land acquisitions-particularly in the Chesapeake Bay watershed-where population density is high. 2) Enact the No Child Left Inside Act to ensure that every student is environmentally literate and has the opportunity to learn in the outdoors before they graduate from high school. 3) create a new national park in Chesapeake Bay- a 21st century "string of pearls" park with strategic acquisitions of landscapes to promote public aces and conservation of the Bay's remarkable natural resources. 4) enact legislation to promote public access to rivers along Federal Aid highways and bridges. these are public rights of way which, over time, public access has been first by construction of roads and bridges. 5) create a new national forest in Maryland and Delaware which are 2 states that don't have national forests. 6) create a safe route to parks program's similar to the safe routes to schools initiative. This would link schools of our national public lands.

Discussion Question 3

Written & Online Comments

(cont.)

High level call to action (the president) bringing together nonprofits/private sector for the "Greatest Good" . Same as above

Use creative marketing and advertising strategies nationwide to attract attention to the many challenges we face...think, "Got Milk?" campaign.

Invest in programs that engage youth in the outdoors and teaches them about careers in Natural resources and agriculture - start kids young. Take kids fishing.

Full funding LWCF, new funding strategies in accordance with the Secretary's Treasured Landscapes vision

Educating the American people about the relevance of land conservation to their daily lives. Dramatically increasing federal and state funds and tax incentives for voluntary land conservation.

Administration should take this show on the road, frequently and long-term. Fully fund LWCF, make expanded tax incentives for donated easements permanent and find new dedicated revenue sources to purchase land and easements.

In North Carolina (and other states) the Dept of Defense has been an excellent conservation partner. They've worked with land trusts and the state to purchase lands to increase the buffer between bases and encroaching development, and to protect endangered species. Please involve DOD in the AGO initiative (they have a big budget).

1) "burrow in" long term, many administration leaders with stable funding 2) fully fund the land and water conservation fund 3) closely study the mono like program and program of tree people in LA 4) permanent protection for the article national wildlife refuge

Focus/partner with interested NGOs to put important coverage under conservation easement.

Invest in science to guide decisions, invest more in private land conservation (easements), promote nature-based tourism

Can the government help the effort with some marketing/human dimension surveys/focus groups to better understand what will "move" people (and youth as a sub-group) to view conservation the way we'd like?

The public is uninformed about the existence of our public lands system and therefore are not enjoying benefits of recreation or stewardship. Enjoying benefits of recreation or stewardship. In 2008, African American and Latinos said "lack of information" is the top reason they don't visit!!

Pass 5.2747 into Law which would provide permanent funding at \$900 million

Discussion Question 3

Written & Online Comments

(cont.)

To connect communities of color, especially youth to the outdoors and science careers. This must be LONG-TERM, FUNDED, and reach more than just youth employment. Education must be included for youth 5-24 - EDUCATION is the priority!

Fund programs that have a proven track record, like ELK. Allow us the resources to duplicate this successful model nationally.

Must engage younger children! Not just for employment or the corps. We must engage younger children and their families. Many corps members don't even know why they are removing trees, doing the work or care. Engage kids younger!!! So when they get their first job it is with a natural resource agency or conservation.

There is a fundamental need for a conservation bank, a system, to fund everything from easements to facilitating trades of environmental services. The distribution of NRCS \$'s for conservation easements should be targeted to need. In Wyoming, for example, FRIP is in need of funds, WRP funds are not utilized. fish and Wildlife Partners program should significantly increase both in funding and mission. They are the logical delivery system based on 20 years of trust building with private land owners. In a world where endangered species issues have so polarized rural America the Partners philosophy of solving problems is uniquely successful. Reclamation of lands impacted by energy development is wastefully inadequate. An EIS cannot say, "after development there will be no wildlife or livestock" Conservation must be balanced by a thorough understanding of national and international food production needs.

1) develop and deploy programs and hubs for connecting communities with outdoor recreation and conservation. Bridge the gaps and rebuild community networks of support. Build Youth Conservation Centers. 2) reach kids and patterns, reach schools, engage private landowners. 3) build programs that will influence large numbers of people

Change from top down to bottom up approach! Hammer - turn loose - incredible potential of land trusts and local communities.

habitat loss + the need for more \$ for habitat conservation. Misaligned federal incentives that fuel, rather than.....habitat loss + Federal.....,etc.

Shared understanding of need, shared commitment, shared priority in face of other demands/emergencies. Time-pace of climate change, development, extinction of species. Cultural beliefs/values - free market dictating abysmal land use for financial purposes, e.g.

Consistent and pervasive messaging and conversation. Listen, and share. Commitment to engage communities, states, regions, individuals in conservation. Flexible partnerships with committed funding, leveraging philanthropic participation. Good science - excellent story telling. Thanks, again, to this administration's openness to discussion and commitment to protecting our environment and Great Outdoors.

Discussion Question 3

Written & Online Comments

(cont.)

1) conserving watersheds and water resources. Water sustains life. 2) disconnect of Americans to natural resources

1) developing new stewards of conservation for future generations 2) the country needs to be more inclusive of who is at the table when setting policy and agenda for our diverse communities

The United States needs to increase the scientific capacity of the Nation's natural science agencies including the U.S. Geological Survey and NOAA. Science and science education should be key components of policies and strategies regarding the environment public lands, and conservation, including the "21st Century Strategy for America's Great Outdoors".

how to protect the largest intact watersheds, acres of wildlife habitat, recreation sites, carbon sites, and other places that keep the ecosystem functioning in the face of climate change and population growth

Grass roots partnerships that are inclusive constantly reaching out and finding common ground to tackle issues big and small. These local efforts need to be supported at the Federal Level. Trust, communication and flexibility are the keys. The fundamental question that needs to be answered is what are all parties willing to compromise. Energy policy is also important as conservation and energy are on a collision course.

As the Executive Director of Greening Youth Foundation, a cooperative agreement holder with National Park Service, one thing that I see that is needed is access to fellowship opportunities with the various agencies within the DOI. A fellowship program would be the next logical step for grassroots conservation organizations to connect underserved young adults to conservation careers.

Please continue to have active forums in which we can engage and collaborate with one another. We need to be a support system for each other. Please include Gullah/Leeches as "tribal leaders" and a resource for traditional knowledge. We are willing to work on interpretive pieces that will help "bring to life" the areas we are here to protect and conserve.

Balancing rural traditional cultural continuation with modernization. Inclusion of knowledge from Gullah/Geechees and Native Americans into conservation education. Passing on conservation & land stewardship knowledge to our youth. Keeping traditional fishing practices alive.

Please continue to have active forums in which we can engage and collaborate with one another. We need to be a support system for each other. Please include Gullah/Geechees as "tribal leaders" and a resource for traditional knowledge. We are willing to work on interpretive pieces that will help "bring to life" the areas we are here to protect and conserve.

There needs to be more focus on input sessions in rural environments that are conducted by those that have lived the traditions in those areas. Also, funding needs to be available for traditional intergenerational exchange and education projects. Policy changes to allow for traditional fishing.

Discussion Question 3

Written & Online Comments

(cont.)

Thank you! Depts of Ag & Interior working together with help of Commerce, CDC, CEQ, & others - great!

Not everyone is educated about these issues. People in cities get busier and busier with little opportunity to connect with the outdoors.

Make the federal tax incentives for conservation easements a permanent part of the tax code. Expand funding for conservation especially on private land. Move NRCS Funding to permanent easements.

Private lands conservation for fish & wildlife habitat at a landscape (functional) scale.

Federal laws on climate change; create use of regulatory programs that calls for interest to collaborate or developing solutions; increased flexibility in federal programs and coordinate and focus on specific landscapes

I am honored to be included in this important conversation about land conservation and appreciate the opportunity to address the challenges with the 500+ leaders in attendance! Thank you for organizing this event! I look forward to learning about the results and follow up field events. I commend the administration for bringing this issue to the forefront. We need strong leadership to ensure funding for local land trusts to help protect open space and working lands.

Fund and strengthen land trusts and local conservation organizations. Promote voluntary conservation easements so that landowners can then protect their land for future generations. "Help make conservation a shared value"

1) elevating the economic importance of our green infrastructure to a value level equal or greater than the level of infrastructure. We are losing out and falling behind 2) Given growing urbanization/suburbanization of country need demographic changes 3) failure to target all conservation organizations that represent the best of all conservation leaders. Continue to compartmentalize fed parks, with working lands 4) the continued march of sprawl development

1) continuing the protection, restoration and enhancement of private lands for conservation purposes 2) targeting public and private lands conservation dollars

1) extensive use of the tax code (i.e. tax credits and estate tax) to further private lands conservation 2) extensive use of land exchanges to increase the amount of high environmental value lands and reduce the amount of low environmental lands with high economic value

Protecting private lands that serve as watersheds, particularly for unbanned areas. Water, all too soon, will be a limiting resource. Tap into the local food shed enthusiasm to forge policies, incentives for local agriculture, like CSAs.

Discussion Question 3

Written & Online Comments

(cont.)

Traceable tax deductions with cap, which will protect land if landowners who can't use deductive. Competitive LWCF allocations. Farmland easements for farmers, again on exemption basis, that offer watershed protection, public access, or CSAs.

local empowerment through the providing of information, tools and regulatory flexibility to reach creative solution. Focus on watershed level planning that cuts across agencies

Environmental literacy and respect; moving from a disparate national collection of outdoor resources to a coordinate efficient national system

in your outreach efforts, I would encourage you to use technology tools like Face book and Twitter. Education of federal employee of federal resources in this area. Incentive-based programs for changes needed on working, private lands. Involve private foundations, family or regional foundations too.

Excise Tax Receipts from Hunting license sales and the sales of firearms and ammunition make up the lion's share of conservation dollars which go to the states. These funds are used to benefit all species, game + non-game alike. Regardless of one's views about hunting + the shooting sports, they need to be encouraged and expanded, both as the source of these funds and, equally, importantly, as a wholesome + traditional way for families + friends to responsibly + safely enjoy the great outdoors.

We must remove barriers to access public lands for these recreational purposes to encourage youth to get outside + go hunting under the guidance of responsible adult mentors, and to ease barriers to entry to hunting + shooting sports for our youth, the NSSF's "Families afield" is one such program.

Immediate action to drastically reduce carbon pollution, and a dedicated funding stream for natural resource restoration and adaptation is critical to the future of our lands, waters and wildlife. This will also create American jobs on American lands.

2 Fold: 1) must react out to diverse constituencies when they are young to appreciate nature, wildlife, food sources (farms, riches) b/c in 50 yrs our nation will look completely different-including our congress. 2) must have a cohesive national conservation strategy that lays a clear plan on what lands + waters should be protected in priority order-should focus on climate change, ecosystem services + ability to deliver to underserved communities.

Until now, I have never heard any discussion around a national conservation vision and without one, I believe that people will struggle to figure out where they can best play in/contribute/engage.

Before any more monument designations are made insure they will work with the ranchers who have liven on and loved the land they steward for generations. Do a cost analysis of the 18 monuments we currently have.

Discussion Question 3

Written & Online Comments

(cont.)

Keeping family farms and ranches viable. Sustainable agriculture is key to good conservation.

Eliminate the Estate Tax for family farms and ranches so they can pass their places on to their kids. Insure that BLM and Forest Grazing permits remain intact

The Eastern landscape is the most densely developed, subject to increasing fragmentation and conversion, and divided by political boundaries and jurisdiction

Providing CC type jobs to put people to work, buying rural and public spaces which can in turn support these communities. Level the playing field

Funding, Focus, Vision. The problems are many but having 1 funding, focus and vision for the administration across all agencies will ensure success.

the administration would be smart to combine programs to gain efficiency and to then take those funds and focus. Get away from random acts. Make the priorities across agencies.

Funding for local govts and acquisition of park and green space before they become brown spaces- how to have a bipartisan approach

Fund permanently land and water conservation fund- be bipartisan- recruit Teddy Roosevelt Republican - bring in Mayors- promote clean water.

Public/private partnerships to define + catalog+ promote the multiple benefits of protected place, open spaces, + human connections to nature + the outdoors. OIA is willing to work with DOI/DOA to catalog + promote America's recreation economy.

The conference brings hope for a renewal and re-energizing of the conservation and outdoors movement, with a new focus on people and urban communities. The best way to bring the many elements of this movement, and the many agency programs together is around place - i.e. treasured landscapes. As each agency and partner bring their resources together around a set of aligned interests and goals.

1)make sure we have another generation ready for waiting to take over as stewards of our lands
2) making sure we have them natural resources worth inheriting

1) get ht next generation involved-listen to them- recruit them and let them lead and be ambassadors. 2) support grassroots efforts and conservation volunteers

Local city parks are the first place and least expensive place to connect civilian kids to nature. Stop neglect of urban parks. Great conference.

Discussion Question 3

Written & Online Comments

(cont.)

the creation of parks, tracks and open space in proximity to urban areas. Too many children don't have access to safe places to play to ride their bike or just goof around

Bipartisan efforts that recognize conservation is conservative. Alternative energy/pricing carbon. Full funding for LWCF. Expanded federal agency law enforcement to protect public lands from abuse by OHVs and other illegal activities. New mining technologies and regulations that reduce mining's environmental impact. Particularly important due to demand for rare earth metals for alt. energy. We need to address maintenance costs concerns by increasing wilderness designations, and thus having less infrastructure to maintain. Develop a land acquisition vision that prioritizes areas in greatest need of additional public lands/open space-- with an eye towards keeping development in check

Funding, trusting one another, capacity

Build trust, prioritize treasured landscapes, collaborate

To conserve large "working" landscapes that allow for the traditional productive use of the land while maintaining or restoring its conservation value of plant and animal biodiversity.

The use of public/private partnerships and conservation easements, not fee title acquisition. Funded by LWCF dollars. Offer a term easement, similar to the USDA-GRP program. Fund from CRP funds or those contracts expire.

Maintenance of forest health and protection of private forest lands; forest adaptation to climate change; reduction in catastrophic wildfire; private lands staying forested; production of forest products to mitigate climate change and create jobs

Comprehensive strategy: tax policy, partnerships to enhance forest health, reduction of administrative barriers to managing forests, creating incentives to keep private forest land forested

I heard the word "youth" spoken so many times during this conference. It is obvious that there is consensus among the leaders here about the necessity to engage youth in the great outdoor movement. Children and youth will truly value this great American land when they have opportunities to see, touch, smell, and be in environments where they can appreciate the "green" around them. Schools and community organizations need to take responsibility for the teaching of powerful values by teaching and doing. Next we need to train youth to be ready to take jobs in this field. We need to have them become part of the creative problem solving discussion. Engage immigrants who did farming and planting in their counties so that we will be using a "natural resource."

Discussion Question 3

Written & Online Comments

(cont.)

1. Allow multi-federal agency grant programs to match each other. For example, why couldn't CELP money (NOAA) be used to match FLP grants to state agencies. 2. Expand the allocation of New Markets Tax Credits for economically distressed rural communities. These tax credits can become a huge incentive for directing private investment to help with landscape scale conservation endeavors. Get the US Treasury into Obama's Green Team.

How do human communities grow and have less impact on our natural and cultural resources? Need to find the political calculus to expand LWCF, FLP, CELP, Sect. 6 of ESA, and NAWCA!

More federal/state/local government agency partnerships with nonprofit land trust and the private investment community

Hello. Thank you for putting on this important conference. Here are a few observations you might find helpful. 1) maps given to us were helpful 2) preregistration was not very professional 3) my name was on one list, not for the reception 4) event falls very nice, cordial 5) not sufficient bathrooms/no exact time schedule 6) excellent speakers/ topics but 7) where were Republicans? Talk of bipartisanship, he should have invited a few prominent ones 8) great video - but where was call to action? 9) can pres. speech be sent to us to put on our websites? Just a thought. Excellent gathering -- thank you for all you did to plan it. As an event planner by trade, I know how hard it is!

To expand the connection between all that conserved lands have to offer and all segments of the population, so there is support for the conservation to addressing climate change.

Engage Canadian federal agencies and decision makers on joint efforts to enhance connectivity and landscape conservation in the region. Provide incentives to states to work across borders, states and provinces. Develop policy guidelines on connectivity for states and federal agencies and incentives. Embed connectivity values in the Department of Transportation.

Large landscape conservation that extends from wild core areas, through sustainably managed natural resource lands, to environmental balanced private lands. To do: names some as pilots, work collaboratively across agencies and with communities

1. Expand NRA's urban communities programs such as the NPS River, Trails and Conservation Ass't program. 2. Undertake an extensive assessment and plan to identify critical lands necessary to protect our ecosystems. 3. Establish and enhance programs in our schools, communities re: stewardship

While there are significant budget pressures, it is important to continue to build on this administration's support for key land conservation programs.

Address holdings upfront as part of the designation process by using selections for states, exchanges, buyouts, conservation easements, leases.

Discussion Question 3

Written & Online Comments

(cont.)

Conservation education will determine the future of our outdoor heritage. We must start young to make the connection to nature. By sparking the natural wonder of the outdoors in our youth we will develop stewardship. We have tools (field guides, lesson plans, etc.) as do others. Inventory and select best tools based on results. Share knowledge. Let the work begin...

Devote by land a % of revenues outside the annual appropriations process for energy development/transmission corridors on public lands, onshore and offshore, with equal shares to federal law agencies all to states with a portion set aside for a discretionary fund to spur innovation, partnerships, and special projects.

Ensuring a reliable, predictable funding stream for land/water conservation year to year to encourage better planning, public-private partnerships, multi-year projects, and the like. Overcoming the turf battles/fragmentation in Congress, among federal agencies, among state-led jurisdictions that make coordinated planning, priority setting investments on management needs impossible.

Have never seen this kind of support such a high level for sensible conservation. I appreciate what you have done so far. If there is any way I can help - please let me know.

create awareness of incentives and what's needed for better land use provide access and opportunity to correct people to the land and water resources.

We need to protect large intact ecosystems through the Wilderness Act -- perhaps a large wilderness omnibus bill -- that includes the Interior. We need to pass America's Redrock Wilderness Act in Utah... This is a strategy for survival in the wake of habitat fragmentation, biodiversity -- with the threat of climate change

Strategies: have wilderness protection and wildlife corridors -- be part of Great Outdoors Initiative. We cannot be bullied by the radical right. The majority of Americans find their own sense of democracy tied to the land. We need to honor the vision: like Stewart Udall as a great visionary and Secretary of Interior who honored conservation as a bipartisan concern.

Technical assistance, financial incentives; research & development support for ARS to address cause & effect, and develop treatment technologies

1) funding for public lands that can restore staff, construction, and maintenance budgets 2) look at policy changes that could make people feel more welcome! (work with private sector)

Omnibus bill for Public Lands and this process which is so overdue. I am very excited about the commitment of this administration.

Thanks for supporting wolf delisting and making sure USFWS supports wolf mgmt efforts by western state game and fish agencies.

Discussion Question 3

Written & Online Comments

(cont.)

1) Partner with NGO's and others to convene the listening sessions to maximize trust, constructive dialogue, and the modeling of collaborative work at national level. 2) make your grant and technical assistance programs more flexible, but improve to performance measures targets you use to evaluate how to reach your conservation or restoration objectives. 3) support more cross agency positions like creating rural Community Conservation Coordinator that is 50% economic development (rural development) and 50% restoration conservation 4) Remember the FS is the largest "business" entity in the west. Change your business practices to support rural enterprises involved in conservation activities.

Currently working on water systems in regards to Eurasian mussels. Water infestation in lake meade and lake havisu. Must address more containment on invasive species. Will help habitat by federal govt taking a more proactive role in containment.

Want more advanced mitigation planning by infrastructure agencies – environmental review to access impacts on projects. To buy larger offsets (land acquisition) with more federal support.

We maintain 65 regional parks. We are working with DOI and NPS on joint venture on concord naval warfare station to be an open public space. Support public access and want more access in the future. We also support more easements throughout CA.

More easements. Klamath cascade region – we are trying to encourage retention for water production and wood production. Working with forest service, blm and need more collaboration. Forest legacy and land and water conservation fund must allow nonprofits funding.

National wildlife refuges need to be less isolated. From the sacramento river to the coast range the refuges need to be more accessible.

F-Prioritize and fund outdoor service learning opportunities in schools followed by opportunities for youth training programs after graduation that offer EQUAL scholarship opportunities similar to the military GI bill.

E-Advocate and influence politicians for sustainable job training for green jobs. Use current groups or create a new one to lobby.

B-Create and promote free family outdoor events where they can get active outdoors and obtain free local outdoor experiences.

E-Creating a political platform that focuses on outdoor experiential education curriculum requirements for schools.

C-Pass legislation for environmental education (this is a current bill in congress) pass environmental literacy plans to implement environmental education nation-wide.

Discussion Question 3

Written & Online Comments

(cont.)

H-During the great depression the federal government created jobs by employing those in need by building trails and conserving wildlife. Create a federal employment program that is environmentally focused.

P-An internship with a federal agency supporting or doing this kind of job.

Pass legislation for environmental education (this is a current bill in congress) pass environmental literacy plans to implement environmental education nation-wide.

During the great depression the federal government created jobs by employing those in need by building trails and conserving wildlife. Create a federal employment program that is environmentally focused.

Advocate for access to public lands

Federal and State lands should be available and usable to public except for special cultural and environmental resources

Suggest private lands conservation must be a priority

Partnership opportunity with fed govt

Land trusts are working on important envr issues, can do more with state and fed funding

Remove prohibition against direct grants

Small investment in kids in outdoors is big investment in future

National landscape conservation system- BLM

Balance agriculture and property rights

Sustainable economy

Discussion Question 3

Written & Online Comments

(cont.)

Non-profits should be able to hold easements

Fed govt needs to address and contain invasive mussels that threaten CA water distribution

CA's ability to convey water for ag, cities, wildlife is threatened

Federal grant programs help sustain education programs

USDA-creating economic opportunities

Opportunities around climate change - money for conservation can contribute to carbon sequestration

School based programs

Urban parks cost more -- no federal funding for decades. Need partnerships with federal agencies to break down agency barriers

Takes more than talk or messages -- need action, collaboration between PUT landowners and local, state, and federal governments, PUT landowners essential to stewardship

Old days fed would provide technical staff to assist locals

Expand opportunities on federal lands, more than just sportsmen, make opportunities to do other things

Federal agencies duplicating work, structure -- work with companies that have volunteer days

Govt needs to strike a balance among conflicting uses in sensitive areas

-- local governments will maintain -- city/counties will make it happen

Need to bring stakeholders to the table

Discussion Question 3

Written & Online Comments

(cont.)

Federal support for youth initiatives such as youth stream monitoring

Create vibrant open spaces that people can use

Multi-federal approach for support is more effective--getting many agencies together for supporting a local initiative

more funding needed for conservation initiatives from multiple sources--Federal, private, lotteries, tax credits

Best practices for developing metrics about conservation initiatives -- improves chances for knowing audience and developing relevant responses and programs

Get kids connected with the land, with being outdoors, with nature at an early age. Teach kids how important conservation is, make it real and doable to kids, make connections between local, small scale activity and the wider good.

Being outdoors is not a priority, get DOE and local school systems involved

LWCF criteria should recognize projects that have partnership components

Need to expand the AGO conversation and replicate on a regular basis

Be more imaginative and flexible, unclear regulations and non-green regulations, offer access to federal employees by youth groups and partners

need federal agencies to treat states as equals

Federal government needs to facilitate these types of gatherings/discussions 3-4 times per year throughout the country

Partnerships with local governments; organization and planning should occur at a regionalized level with federal support

Discussion Question 3

Written & Online Comments

(cont.)

Private lands conservation: NRCS = assistance only/land owner does conservatio, half the land in ag., could use more employees/range conservationists to work with farmers, one place where additional public employees would be welcome, landscape conservation/private lands -- flexibility in funding and programs, need creativity/loosen reg's that stand in the way, success -- FERC and state examples of creative interp. and use of regs., need message from agency that applicants need to work together to develop a creative solution

Rural legacy program -- block grant model -- administered by nonprofits in an area

Don't compete with programs that are already doing good things -- just because federal government doesn't know bout it, doesn't mean it's not a good program

Conflict among agencies-need integrated regional vision

HUD should be present - need to provide housing before we discuss conservation

New "partnership mode" - need training and funding

Conservation and stewardship hampered by partisanship - tax credits needed

Dedicated funding for this purpose, whether LWCF or otherwise, is critical for states to conserve land and continue connecting growing populations to the outdoors. Stateside LWCF funding has been substantially reduced over the past 5-10 years and general taxpayer funding has been reduced substantially for the Colorado Division of Parks and Outdoor Recreation, which has reduced our capacities to meet needs in these areas. Conservation and recreation can be odd at times. However, outdoor recreation is the conduit by which we connect current and future generations connect to the outdoors, and quality natural settings are necessary if we are to conduct these activities. Conservation and outdoor recreation partners need to continue to work together to further shared goals. We need more coordination and collaboration between federal & state agencies, and local governments and other outdoor recreation and conservation stakeholders. Institutional barriers need to be broken down so all parties can be on the same page. Additional outdoor recreation planning expertise integrated within all levels of land use planning will also ensure that more connections to the outdoors are available for the public to enjoy and benefit from.

Discussion Question 3

Written & Online Comments

(cont.)

Dedicate Funding. Fully fund the LWCF program with a 50-50 apportionment b/w the federal and stateside funding. Additional sources of funding may need to be dedicated to conservation, outdoor recreation, and connecting people to the outdoors. **SCORP Planning.** SCORP planning should be strongly supported, with federal agencies playing a meaningful role in each plan's development. States need to be provided with additional resources and support for plan implementation. **Partnerships.** Continuing and expanding partnerships with private industry groups, non-profit organizations, state agencies and local governments to leverage support for outdoor recreation initiatives and programs. **Standardized Data and Defensible Research.** By providing standardized, high quality data (GIS or otherwise) pertaining to land conservation and outdoor recreation (i.e., acres conserved trail mapping, etc), progress in specific areas can be meaningfully measured and contrasted over time and between states. This may be helpful in identifying regional needs as well. In addition, defensible research on the benefits of outdoor recreation and connecting people to the outdoors is critical. **Connect the Dots.** Land conservation, paired with outdoor recreation, play an integral role in building healthier and more sustainable communities. Continue to expand dialogue and the connection between outdoor recreation, conservation, public health, and overall quality of life.

The continuing loss of farmland, at a time when the importance of fresh locally produced food is becoming increasingly apparent as a matter of public health and food security, indicates the need to take action on every level to support the economic viability of the region's farmers.

Farmers in the Hudson Valley often feel that government agencies at all level, including the federal, do not respect their importance to the local economy or the potential they hold to strengthen the food system in the metropolitan area. Yet it is hard to make the case for their importance because the best data we have is from the Ag Census. And while it is extremely useful - as evidenced above, we use it to the fullest extent possible - it does not adequately capture detailed information about the kind of farming we have in this region: small and mid-size farmers with mixed production. So we don't have enough clarity in the data as it applies to our smaller, diversified farmers who are making a living at farming.

Allow for term environmental market agreements to be broadly implemented and accepted for resource management objectives. This will secure intergenerational landowner participation and security.

Allow direct access to federal funding initiatives such as Farm Bil-based programs and the Land and Water Conservation Fund for any permanent or term tools that achieves defined conservation objectives.

Additional Secretarial leadership and guidance is necessary for the development of SCORPs (i.e., both process and content). It is important that the federal agencies are directed to meaningfully participate in the SCORP planning process and duly consider the resulting plan in subsequent federal planning. (Note: SCORP is not and should never be a federal planning effort, but our federal agencies will significantly benefit from meaningful collaboration in terms of assembling data, research, public values, trends, gaps, niches, vision, and partnerships; and thus make subsequent individual federal planning efforts more effective and efficient).

Discussion Question 3

Written & Online Comments

(cont.)

1. Fund a nationally comprehensive analysis of the availability of and safe access to natural play spaces and parks and access to organized exploration and educational programs. Focus new infrastructure developments (including outdoor infrastructure such as play spaces and safe routes to parks, bike paths, etc.) and new education programming within rural and urban areas of greatest need. Analyze not only geographic barriers but also cultural and social barriers to accessing natural spaces, parks, and educational opportunities.

2. Engage Youth in the Outdoors through the School Day by collaborating with the department of education and local school leadership to engage school children in outdoor learning and opportunities that will develop active responsible citizens who are prepared to make decisions about our public lands and future environmental challenges.

a. Leverage programs that help develop future stewards and connect school children to our public lands before, during and after the school day.

b. Support the establishment of schoolyard learning environments, habitats and gardens and provide classroom teachers with training in using outdoor environments to meet learning goals. Focus school engagement in communities lacking safe access to natural play areas and environmental education programs.

c. Support environmental education legislation including the No Child Left Inside Act (H.R. 2054 / S.866) that would provide funding for outdoor and field-based learning and train teachers to provide quality environmental education to students.

d. Promote pre-service teaching requirements that includes outdoor and environmental education training for educators.

3. Focus on strategies that are inclusive of all communities and cultures. Identify ways that our natural species and educational programming is unintentionally exclusive. Develop strategies that serve diverse audiences, and reflect the changing demographics of our country, by building partnerships with organizations that serve communities of color and increasing the diversity of those employed as educators or on public lands, especially in leadership positions.

4. Support Passage of the Moving Outdoors in Nature section of the Healthy CHOICES Act (H.R. 5209) and request funding in the fiscal year 2012 budget to pilot the initiatives outlined in the bill. Moving Outdoors in Nature supports development and implementation of state strategies that connect children with the great outdoors through multi-sector policies (recreation and conservation, transportation and build environment, health and wellness, and education) Including those that: 1) support outdoor recreation programs, 2) promote public health initiatives, 3) create community based natural play areas, 4) develop trails and greenways to connect parks and outdoor recreation areas with places where children live, learn and play, 5) create outdoor learning environments, and 6) other efforts to connect children, youth and families with nature.

Discussion Question 3

Written & Online Comments

(cont.)

5. Create Smarter Federal Coordination on Behalf of Children and the Outdoors by establishing a multi-agency coordinating council to foster collaboration at the federal level to educate and reconnect Americans, especially children and youth, with the natural world and create a national strategic plan to implement the findings of the council.

a. Multiple federal departments, agencies and offices play a role reconnecting Americans with nature and have the capacity to leverage existing programs and funding streams to meet this goal.

b. A multi-agency coordinating council should include participation from the White House Council on Environmental Quality, the White House Office on Women and Girls, the Department of the Interior, the Department of the Surgeon General, the Environmental Protection Agency, the Department of Transportation, the Department of Education, the Department of Labor, the Department of Commerce, the Corporation for National and Community Service, the Army Corps of Engineers, and others.

c. The Coordinating Council should recruit organizations working in conservation, recreation and health in an advisory board and engage youth leaders in the decision making process.

Our ideas for this initiative specific to Colorado's public lands are: 1. The Obama administration should protect large landscapes, including our healthy wildlands and rivers, connecting them with working forest and ranch lands, private lands and the connections across these large areas. Protect large natural areas such as:

- San Miguel River corridor - This river corridor not only provides stunning natural scenery, it also supports a healthy and diverse ecosystem that provides treasured open space and valuable wildlife habitat.
- Western Colorado's Gateway area - This stunning redrock valley draws diverse recreational use and creates an ecological bridge between river canyons and tributaries and verdant forests, and includes the towering cliffs of the Palisade.
- Wildlands of the Arkansas River Watershed - These ecologically rich, lower elevation lands provide essential habitat, protect major water supplies, and provide quiet recreation opportunities for two million people living nearby. Protecting these public lands and rivers will provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while conserving the wildlife and lands we enjoy today. This will give us the opportunity to actively reconnect our children to their incredible natural heritage.

2. Reaffirm and implement BLM's authority to establish Wilderness Study Areas. This effort should include giving the BLM the authority to establish new wilderness Study Areas and to protect the wilderness characteristics of those areas. Hundreds of thousands of acres of land across the West that were identified by citizens and BLM as worthy of wilderness designation have been leased, and they deserve both a commitment and an approach to real protection before they are lost forever.

Discussion Question 3

Written & Online Comments

(cont.)

3. Create a comprehensive 'Quiet Recreation Strategy' for federal lands in Colorado. This strategy should variously provide for non-motorized activities such as hiking, mountain biking, fishing, family camping, wildlife photography, and more. A formalized acknowledgement should create more sustainable use of our lands while encouraging things like stewardship, trail maintenance, volunteerism, and getting youth outdoors. Using Colorado as a pilot project for a Quiet Recreation Strategy will also provide a sustainable use model for the rest of the country to follow.

4. Support and implement more science-based management of our resources in Colorado. This science based management needs to provide a better understanding of the impacts of conflicting land uses on other resources across the landscape. Colorado is fortunate enough to have many important native species, such as sage grouse, which would benefit from the incorporation of a more science-based management plan for their protection.

5. Support opportunities for sportsmen to continue enjoying healthy and challenging hunting and fishing on federal public lands and rivers. Preserve the values and access that make backcountry hunting a wholly unique endeavor. This can be done through a variety of measures, including through the designation of backcountry hunting Special Recreation Management Areas, as has been proposed by the Jarbridge, Idaho and Little Snake Colorado BLM Field Offices in their respective Resource Management Plan revisions.

Protecting, connecting, and restoring our public lands should be a critical component of a successful America's Great Outdoors. Thank you for taking this important first step and beginning the conversation for conserving our natural heritage and reconnecting Americans to nature.

Direct federal conservation funding to landscapes in which existing collaboratives like the Rio Grande Legacy Project in the San Luis Valley and the Peak to Prairie Project on the eastern plains to provide the strategy, experience and coordination for watershed wide success.

Focus federal programs on landscape scale priority areas; Place a high priority on protecting, reconnecting, and restoring aquatic systems. Coordinate efforts of federal agencies and existing programs to accomplish this.

Provide for federal funds to be used for 3rd party easements. Easements held by local land trusts are a cost effective tool to achieve conservation outcomes.

Increase funding for Farm Bill conservation programs (e.g., GRP, FRPP) and allocate funds based on conservation outcomes in priority areas Increase coordination between DOI and NRCS on priorities so Farm Bill programs achieve conservation goals in addition to landowner goals.

Permanently allocate full funding for LWCF and establish a competitive grant program emphasizing private landowners, easements, working lands and riparian wildlife corridors. Build on the successful efforts of on the ground collaborative groups like the Rio Grande Legacy Project, the Peak to Prairie Partnership, etc.

Maintain and expand federal tax incentives for conservaiton easements.

Discussion Question 3

Written & Online Comments

(cont.)

Landowners are decades ahead of the majority of conservation initiatives through their own resource stewardship practices. Offer to understand and learn about these initiatives and find ways to be part of the solution.

The 1965 Land and Water Conservation Fund Act requires the preparation of a statewide comprehensive outdoor recreation plan (SCORP) in order for states to receive SWCF funds. Every five years, all 50 states and territories develop and submit a SCORP to the NPS. Each federal resource agency has its own planning legislation and regulations, promulgated by NEPA. Our federal agencies develop plans for their own jurisdiction. That is, federal agencies are not authorized or responsible for statewide comprehensive planning. The LWCF SCORP program was administered by the Bureau of Outdoor Recreation for a decade, then shifted to the Heritage Conservation and Recreation Service until HRS was disbanded in 1981, and is administered today by 1.5 FTE within the NPW WO. The nature of administering the SCORP program has gone from a proactive, collaborative, interagency resource/support program to simply a LWCF stateside grants program (i.e., a check the box program). Along with the 30-year shift in program administration from a federal Bureau to 1.5 FTE, LWCF funding during this time has been erratic and declining. The relatively few dollars on the stateside has influenced the quality, integrity and utility of SCORPs. That is, today SCORPs are largely viewed as simply an administrative requirement necessary to secure stateside LWCF funding.

It is commonly recognized by the NPS and the National Association of Recreation Resource Planners that the number of "good" SCORP plans in the nation is few. The SCORPs recently prepared by Colorado, Wisconsin, Oregon, Georgia, and dVirginia are commendable. The declining respect and utility of SCORPs over the years is recognized by others, and thus involvement and collaboration in the planning process by our federal agencies has waned. The LWCF Act provides minimal guidance for what a SCORP should contain, but does allow the Secretary of the Interior to add additional requirements as deemed appropriate, both in process and context.

When one views a "state's landscape", there are hundreds of agencies and organizations involved in resource conservation, recreation and reconnecting people to the outdoors (i.e., public, private, ngo, districts, communities, trusts, counties, state and federal). The problem is not the number of players, programs, resources, personnel, competency, energy, or other assets. The problem is our human nature to confine ourselves and operate within our "institutional walls" --- we have hundreds of disconnected agencies and organizations spread across the landscape of any state, akin to farm silos and oil derricks across the Colorado landscape. We need a bridge and conduit that will connect the hundreds of agencies and organizations within a state or region within. We need a forum and state to build a shared local and community-centered vision. We need a process that will facilitate communication, coordination and collaboration, and one that will build partnerships. We need a statewide plan that will help to build a system of resources from a desperate collection of resources, that will identify the voids and gaps within, and one that will enhance effective and efficiency at all levels of government. Ironically, we have had the mechanism in place to do just this for almost 50 years.

Discussion Question 3

Written & Online Comments

(cont.)

Each of the five initiatives was designed by a working group assembled by our Chief State Officers with appropriate leadership, six-state membership, and senior officials from your own federal agencies. The working groups responded energetically to this opportunity in the belief that effective regional action will add value to their own state's related agenda and goals, especially in a time of severe state budget stringency. At the same time, they believe this a most auspicious time to undertake these initiatives in light of the Obama Administration's express interest in addressing the nation's resource management issues at landscape and regional scales, especially through demonstration projects that link the public, private and philanthropic sectors, and honor the nation's heritage of private land ownership.

A 2009 series of forums with concerned citizens across New England convinced the Commission that New England must once again lead the nation, this time through a new and collaborative partnership among the public, private and non-governmental actors necessary to successful land conservation in the 21st Century. From this process the Commission developed a set of core principles to guide its work and the actions of its partners, including: • New England enjoys one of the most privately-owned and stewarded landscapes in the nation, and the Commission seeks to honor and strengthen this tradition in all its work; • It is today insufficient to view land conservation as a "good" solely for its natural benefits; it must today be linked directly with economic and social benefits, as well. • Multi-state collaboration toward New England land conservation, to protect and preserve this important natural heritage at a regional scale, is a matter of national interest, particularly in light of climate change and its impacts; and is, therefore, deserving of federal support.

The five national demonstration projects proposed by the Commission and endorsed by the Governors are organized around the shared themes of: • Making the regions's working lands more financially viable, and convertine their public benefits from liabilities to assets;

Enhancing economic, environmental, and social resilience across the region, to create more prosperous and sustainable resource-based industries and communities; Educating the general public to the many public benefits of the landscape and its wise use, and cultivating a conservation ethic as an active duty of citizenship;

Assuring full and effective coordination among the five initiatives, to realize the full complement of benefits that will be realized at a cost of some \$200 million over three years for the five demonstration projects.

We now ask the Obama Administration to create a working group of senior officials from your departments to work with us to flesh out fully the five national demonstration projects, and to establish the collaborative relationships needed to realize their full benefits to New England and the nation. This would include the U.S. Forest Service and USDA Rural Development and Natural Resource Conservation Service; the National Park Service and U.S. Fish & Wildlife Service; and NOAA Office of Coastal Resource Management. The CLC will meet next here in mid-September, and it would be wonderful to have these collaborators in place in time for this meeting.

Discussion Question 3

Written & Online Comments

(cont.)

1. Local incentives - We have several very effective sources of funding here in Colorado, including Great Outdoors Colorado, but they alone are not enough to meet the demand for conservation from landowners. CCALT has an immediate backlog of more the \$100 million in high quality projects. Federal investments, particularly in those areas that are not wealthy enough to develop local funding sources are a critical part to being able to protect key ranchlands that buffer National Forests, BLM canyon country, National Wildlife Refuges, and even State and National Parks.

2. Federal Programs - There are a number of important federal programs such as the Natural Resource Conservation Services, Farm and Ranchland Protection Program and the Grasslands Reserve Program which are very effective in protecting private lands. Full funding of these programs is critical. Small changes such as removing cash matching fund requirements and allowing for the programs to pay for transaction costs associated with conservation easements will only increase their effectiveness.

3. We urge you to make important changes to the Land and Water Conservation Fund that would allow qualified non-profit conservation organizations to compete for and effectively use those funds for conservation. There are literally hundreds of places in Colorado alone where key private lands adjacent to iconic federal lands are threatened with conversion. LWCF funding, leveraged with our state resources, could protect those landscapes at a fraction of the cost of outright acquisition, which is also often opposed by local communities in the West. Colorado would be please to be a pilot program for such an effort, and show just how effective this approach can be.

4. Contrary to what some may say, there are thousands of family farms and ranches across the West that are threatened with the possibility that the land may be lost to pay the estate tax after a death in the family. There are several proposals being suggested to address this, including one by our Congressman John Salazar. We urge you to take this point into consideration in your recommendations.

5. Finally, we urge you to make the conservation easement income tax incentive permanent. Nationally, this single incentive nearly doubled the pace of land conservation since it was instituted in 1996. In closing, we have the opportunity to protect the West's iconic working ranch landscapes, but only if we work with private agricultural landowners. Based on our success and the backlog of conservation projects waiting for funding, the landowners are ready and we have the appropriate tools to accomplish this work. We simply lack the funding to allow all of us to accomplish our conservation goals. Thank you again for coming to Colorado to listen to our vision for conservation.

Of the overwhelming majority of Congressmen and Senators who vote on issues such as Wilderness, National Monuments, Conservation Areas, and other such designation, how many of them even KNOW what true Wilderness even is? How many have personally experienced designated Wilderness to know the real difference between Wilderness and non-Wilderness? Do they really take into account of all the many resources they make inaccessible when putting these designations onto an area? Not just the physical resources. The Historical resources. The Scenic resources. The Hunting and Fishing resources. Even just the Access resources.

Discussion Question 3

Written & Online Comments

(cont.)

The first thing the federal government can do to become much more effective is to balance the staffs of land management agencies with people who are "Pro-Motorized Use". Presently, the overwhelming numbers of "preservationist" leaning personnel can and do intimidate those with "Pro-Motorized Use" thinking to the point of having them transferred or fired. Some of the most knowledgeable members of a land management agency office are often the ones who spend much of their time "in the field". They know the physical land well and are seeing the changes needed in "real time".

Another way the federal government can be a more effective partner in helping to achieve conservation, recreation or reconnecting people to the outdoors is to promote Universities and Colleges with Forestry, Geology, land use policy, and related studies with a more balanced curriculum. Currently the overwhelming number of Professors teach the "Preservationist" view only. A more balanced approach to education is necessary for the correct management of "public lands".

Forests are being decimated by bug infestations which lead to wildfires because present policies have precluded logging and other uses of the renewable resources. Proper land management would include select logging in areas with mature trees. Newer technologies and machinery can and should be used to "manage" these resources. It can and will help make the forests more:

- Healthy
- protect them from huge wildfires and insects
- promote local economies with jobs
- promote income from resource sales to the federal government
- protect watersheds
- promote recreation opportunities

In other words, everybody wins... except the "Preservationists" who will not be satisfied no matter what you do.

I manage three tracts of land, and two of these tracts are close to the Uwharrie National forest. My largest tract of 534 acres shares a boundary with the national forest. Along a shared road, the Uwharrie National forest goes beyond this tract, and the U.S. Forest Service has used my fire roads in the past to access wildfires. Many family forest owners across the country are similarly positioned near national parks or forests. I share this to emphasize the role that America's family-owned forests play in the conservation of America's Great Outdoors. Our privately held forestland is not "an island unto itself", what we do on our property and our ability to continue to manage our land well, impacts the neighboring federal lands. Many who recreate in national forests go there for the solitude or the scenic beauty my neighboring land is a key part of this experience, even if they never step foot on my property. Additionally, if I'm not able to manage my land well my federal neighbors are impacted, just as I'm impacted if the federal land is not managed well. An "all lands" approach, focusing on conservation and management of both public and private forests is essential to conserving America's Great Outdoor.

Discussion Question 3

Written & Online Comments

(cont.)

Second, I am gravely concerned about the effects of the estate tax on the ability of family forest owners to keep their land in the family. Often, the high costs due to the state tax to transfer land to the next generation result in fragmentation. MY first two tracts are in a family LLC. There are many restrictions included to protect the land from member sales and tax burdens that often causes fragmentation of our privately held land. However, this was a very expensive and burdensome legal process. Many family forest owners cannot afford to put their land in an LLC. Congress needs to find a fix to the estate tax that removes some of the tax burden of generational transfer and will encourage continued management and conservation of family forest lands. H.R. 5475, The Family Farm Estate Tax Relief Act of 2010, introduced by Rep. Mike Thompson (R-CA) is a good start to finding a solution.

In addition to the specific thoughts below, I would like to add my support for increasing federal programs and incentives that support the conservation of our working forestland -- specifically funding of the Land and Water Conservation Fund, the Forest Legacy Program, increased funding in the Farm Bill and extension of conservation tax incentives. Consideration also should be given to new federal programs with regional applicability.

Increasing and targeting federal funding: The most crucial and timely opportunity the federal government has now to protect the great outdoors is to support full, dedicated funding for the Land and Water Conservation Fund at \$900 million a year. Funds for key federal conservation programs, such as the Land and Water Conservation Fund and those in the Farm Bill, should be increased and targeted for the purchase of conservation easements and for public acquisition of sites of high biological value. This expansion of funding programs for public land acquisition and acquiring conservation easements on private lands will help connect entire landscapes that are intermixed with private and public lands. Now is the opportunity for Congress to restore its original promise to fully fund LWCF at 900M per year - through new legislation that makes it permanent, dedicated funding. More tax incentives for conservation easements are also needed as well as other tools that sustain private conservation land stewardship.

Flexibility for federal programs: Encourage and allow federal agencies to collaborate across agency lines, connect and focus existing federal programs within project areas and make the spending of those funds more flexible to meet local needs. This includes giving the local branches of Federal agencies more ability to implement grants and programs, collaboratively, in ways that fit a particular place.

Private landowners have a critical role to play: in buffering and connecting conservation areas within a landscape context and should be involved throughout planning and implementation of the federal conservation approach. Conservation easement funding in target areas that is available to eligible non-governmental organizations will incentivize conservation among ranching and agricultural constituencies.

Support existing homegrown conservation efforts that are poised for greater success with more focused support by private and public partners. The landowners and agency partners are already in place, providing additional funding will help these opportunities become larger, more successful, and be reproduced in neighboring and other landscapes.

Discussion Question 3

Written & Online Comments

(cont.)

As you may know, Ducks Unlimited has proposed that the portion of the U.S. Prairie Pothole Region with significant expanses of native prairie and abundant wetlands - the eastern Dakotas - be designated for inclusion in the Administration's Great Outdoors conservation initiative. The goal of this project is to secure in perpetuity 2.5 million acres of grasslands and associated grasslands through the purchase of conservation easements and the expansion of the National Wildlife Refuge System lands in the Dakotas.

- Include America's Byways as equal partners with National Parks, National Forests and Grasslands, National wildlife Refuges and BLM lands in the Federal resources that reconnect Americans to the outdoors.
- Place the emphasis on "America's Great Outdoors" that not only includes the treasured outdoor assets that are in Federal and State ownership, but also those that are in the neighborhoods where Americans live, and receive the most frequent daily use. These sites utilize the intrinsic natural, historic and cultural resources that build pride in the places we live and visit.
- Provide a place at the America's Great Outdoors table for national not-for-profit partners that serve as advocates for National Parks, National Forests and America's Byways to collaborate with education, agriculture and economic development interests.
- Provide funding for capacity building of the organizations that will provide the programs and resources to implement recreation and conservation programs in addition to "bricks and mortar" projects.
- Remember that the road to conservation and developing a passion for the outdoors is when an experience strikes an emotional chord. This happens when people connect with people.

There are growing and exciting efforts here to restore New York - New Jersey Harbor Estuary. It is a partnership that brings together the Army Corps of Engineers, National Park Service, Environmental Protection Agency, and numerous state, local, and civic partners. Its epicenter is Jamaica Bay, approximately 25,000 acres of wetlands that are part of Gateway National Recreation Area and Jamaica Bay Wildlife Refuge. Several related efforts in and around the Bay provide a model for how local-state-federal cooperation can restore damaged ecosystems, improve public access and quality of life, manage growing flood hazards, and create jobs and economic opportunities. These are key opportunities in engaging young people in outdoor recreation and stewardship of our natural resources.

I believe these efforts, taken as a package, could provide a new model for the management of natural resources in an urban setting. This model brings together federal agencies, specifically NPS, ACOE, and EPA, around a common set of objectives. Implementation by federal agencies and local partners creates jobs for local residents and lasting economic value in urban communities. The end result is federal land providing outdoor recreation and educational opportunities for young people and increased resilience to sea level rise and coastal storms.

Discussion Question 3

Written & Online Comments

(cont.)

The President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors. That would be Off Highway Vehicle recreation and Mountain Biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors.

Changing the access rights to this much land is unacceptable to any and all avid outdoors people.

Protect large landscapes: Opportunities for park expansion

The federal government needs to increase funding for conservation easements that protect private lands on the borders of our national parks. The Federal government also should promote efforts at regional consultation between the National Park Service, other federal agencies, and state and local governments

Once again, the stewardship of these lands requires a fully and permanently funded Land and Water Conservation Fund, able to finance acquisitions and easements that protect the trail's scenic corridor.

The Ocmulgee River corridor south of Macon contains a wealth of natural and cultural resources. The opportunity now exists to provide landscape-level protection for this corridor through the innovative use of a dual National Park and Preserve designation.

The Greater Macon Chamber of commerce, in consultation with the National Park Service, is seeking to undertake a study of the potential for enlarging the boundary of the Ocmulgee National Monument. The Monument embodies the vestiges of over 12,000 years of Native American culture. It is viewed by the Muscogee (Creek) people as "the place we first sat down," meaning the place where ancestral Muscogean peoples stopped their nomadic wanderings and first became a settled agricultural civilization. It is also viewed by contemporary Native Americans as the "Cradle of the Creek Confederacy", which played such a critical and tragic role in the early history of the United States. Thus, an expansion of the National Monument would provide the medium for communicating a superior telling of the ancestral Muscogean story and its intersection with American history. Ideally, a boundary adjustment for the Monument would extend to the northern border of the Bond Swamp National Wildlife Refuge. It would include the full extent of the Ocmulgee Old Fields and as much of the Muscogee Traditional Cultural Property as possible.

In addition to the boundary expansion, local Macon-area citizens, along with the Georgia Wildlife Federation and the National Parks Conservation Association are requesting that congress designate a National Preserve to safeguard in perpetuity wildlife habitat and natural areas along the Ocmulgee River, from Bond Swamp south, incorporating the Oaky Woods and Ocmulgee state Wildlife Management Areas (see Appendix A).

Discussion Question 3

Written & Online Comments

(cont.)

The importance of this broader river corridor south of Macon is widely acknowledged. In 2004 a resolution passed both the House (HR 1256) and Senate (SR755) of the Georgia General Assembly.... "Urging the Congress of the United States to consider creating a national preserve or other similar federal property to protect land and other natural resources and promote hunting and fishing in a continuous corridor of the Ocmulgee and Altamaha Rivers in central and south Georgia: and for other purposes" (see Appendix B).

The Federal government has a critical role to play in supporting and completing these efforts, if potentially nationally significant resources are to be protected for future generations.

One potential solution to protecting this corridor would be to designate the Altamaha as a National River. Congress should strongly consider this possibility, as was requested by the Georgia General Assembly in 2004.

Next year, 2011 , marks the 75th anniversary of the creation of the Monument. It would be a fitting gift to the citizens of Georgia and to the American people to see the original vision of Congress finally fulfilled. Ideally, a boundary adjustment for the monument would extend to the northern border of the Bond Swamp National Wildlife Refuge. It would include the full extent of the Ocmulgee Old Fields and as much of the Muscogee Traditional Cultural Property as possible. It should also include the Brown's Mount archaeological site and , possibly, Fort Hawkins.

The continuing loss of public hunting lands and hunting opportunities in middle Georgia, especially as regards units of the state Wildlife Management Area system that are under lease, rather than being owned by the state. There re many such units throughout the state and their long-term security and public accessibility are in question and under threat. The "poster-child" for this quandary is the Oaky Woods WMA.

The long-term conservation and management of the unique and isolated Central Georgia black bear population that also occupies and is largely confined to the Oaky Woods and Ocmulgee WMAs and adjacent properties. This population has been cut off from Georgia's two other larger and healthier bear populations (those in the Chattahoochee National Forest area in the north and the Akefenokee National Wildlife Refuge in the south) and it may be genetically distinct. The Central Georgia bear population is greatly in need of further study and enhanced habitat protection and management.

Pressures on the river corridor continue to build. Due to the fact that this is an election year, we are writing to urge you to sponsor legislation to authorize a Special Resource Study and to shepherd it through the hearing process before the Congressional recess begins in August. In the absence of such both to Georgians and to other conservation minded citizens.

Discussion Question 3

Written & Online Comments

(cont.)

Timber Reserve. The management orientation of the U.S. Forest Service should be changed. Its role as a commodity producer of forest products should be terminated. In the forest products area, its role should be returned to its original one of holding a forest reserve. Its timber resource should be held as a reserve against catastrophic events. Rather than providing a stream of subsidized products to the market, it should develop and maintain a reserve of old growth forest to be used only in emergencies when no other source is available.

North Shore Road Settlement. By a contract finalized on 6 February 2010 the Department of the Interior, TV A, the State of North Carolina and Swain County, North Carolina agreed to a monetary settlement of the North Shore Road Controversy. The agreement calls for the Department of the Interior to pay Swain County \$52 million in lieu of building a road in the Great Smoky Mountains National Park. Of the promised amount, \$12.8 million has been paid. The contract contemplates payment of the balance in installments. Care much be taken to make sure this agreement is not forgotten, or the payments stretched out interminably. The Department of the Interior should have its budget preparation process programmed to provide appropriation of an annual installment on this debt.

We urge you to consider locating the LA area Great Outdoors America listening session in the San Gabriel Valley, a major population center in Los Angeles County adjacent to the San Gabriel Mountains. We would especially recommend consideration of major Valley cities such as El Monte or Pasadena. The San Gabriel Valley has a unique relationship to nearby urban Los Angeles providing it with over 70% of its open space and hosting over three million visitors a year, rivaling the visitation level at major national parks.

Currently, the National Park Service is conducting a special resources study of the San Gabriel Mountains and watershed that could help improve recreation opportunities for families and address the major recreation deficiencies of the San Gabriel Valley through the creation of a San Gabriel Mountains National Recreation Area. The Santa Monica Mountains National Recreation Area in LA County's Westside serves as a shining example of what is possible. We believe that LA County's Eastside - the San Gabriel Valley - deserves the same. The creation of a San Gabriel Mountains National Recreation Area should be part of our national public lands agenda, and this would be facilitated by the San Gabriel Valley location of the listening session.

If the goal of America's great outdoors is to reconnect people to the outdoors and activities please encourage scientifically based, as opposed to ideologically based management of the population of all species of animals inhabiting the National Grassland. Further, encourage use of the grasslands by maintaining access for all people no matter what their limitations are. Restrictive designations, reservations and/or areas will not achieve the goal of reconnecting all people with the outdoors.

Discussion Question 3

Written & Online Comments

(cont.)

I would like to invite you to hold one of these sessions out in the Pacific Northwest, specifically in the Puget Sound Region. I believe that the Puget Sound area and its surrounding watersheds and forests present an ideal representation of the kind of area that has tremendous natural resource values, significant an growing public use, and the need for a more comprehensive and coordinated level of protection and management. The people of the region are starting to take a look at landscape scale planning from the mountains to the Sound.

Washington State and local county and city governments are making major commitments to protect and restore Puget Sound - creating a working plan and strategy under the direction of the Puget Sound Partnership. However, these efforts to protect the upper watersheds and increase coordination and funding of management plans in the lower watersheds, forests, and Puget Sound would benefit from a greater level of integration and attention. I believe the mountains, watersheds, forests, and Puget Sound - from the snowcaps to the whitecaps - provide an ideal place for realizing the full potential of the America's Great Outdoors Initiative.

The focus needs to be on preserving every inch of space as wilderness. Keep everyone - including gentle users - out. For the rest of the forest, parks, etc. have signs of no litter, and enforce whatever weak laws there might be. A ranger visiting the East Fork on a weekend could give lots of citations if time is taken to watch people.

We appreciate that President Obama has made the future of the United State's land resources a high priority. We look forward to a continuing discussion with you and the Federal agencies that are partnered on this initiative. We are particularly encouraged that the President seeks to recognize the importance of conservation on private lands and the hard work that local communities have undertaken to establish land conservation priorities. All of these are worthy of expanded funding in recognition that they are investments in the natural infrastructure of the nation, supporting many basic services and economies.

We ask for your support of several specific Federal programs that are particularly valuable to land conservation in the Chesapeake Bay watershed and on most lands in the Eastern United States, where conservation of private property has to be part of national, state and regional conservation strategies. These polices enable us to cement the many thousands of parcels of land, each individually beautiful and valuable, into a landscape mosaic which is more than just the sum of its parts.

Make permanent the expanded Federal income tax incentives for land placed into conservation easement. These incentives, coupled with state and local tax incentives, have resulted in millions of acres of land conservation across the United States since 2001

Support an expansion of the Estate Tax exemption for land under conservation easement.

Increase funding for the American Battlefield program in recognition of the tremendous public awareness of Civil War resources during the 150th anniversary.

Discussion Question 3

Written & Online Comments

(cont.)

Increase funding for the Farm and Ranch Protection Program, which enables entire farms to be conserved with conservation easements.

Going forward, Federal land conservation initiatives need to recognize, celebrate and enable solutions that match these interrelated values. Tools that are flexible and not limited to one objective are more likely to benefit the conservation opportunities in this region. A typical property in the Mid-Atlantic, and particularly in Virginia, includes land which is visible from a state designated Scenic Byway, soils which can produce food for the region, streams which supply water for both local drinking water systems as well as the Chesapeake Bay, and forests which help clean our air and water. All of these interrelated resources are valued by the community which sees the property on a daily basis, drinks the water which flows through the streams and is cleaned by the forests, and eats the food which comes from the property's farmland. Moving into the future, it is critical for federal programs to acknowledge and celebrate these multiple layers of conservation benefit.

In closing, I strongly urge to include this project in the Great Outdoors America initiative, and pledge to work closely with you and other partner organizations to make it a successful and historic conservation achievement.

Government Rule - Natural Disasters and commercial off shore -- drilling

Protection from Chemicals what about genetic hormones seeds?

We need to be sure that each of the 3 branches of this restoration receive equal representation and that the economies and industry do not overpower more nonprofit environmental groups. Need to expand the picture to NJ as this is the NY/NJ Harbor.

New York Harbor needs an integrated plan for mitigation banking that will facilitate large-scale restoration projects.

To turn the CRP into reality: need programmatic authorities and apropos. For the family of federal agencies participating in CRP. This makes us steady and predictably reliable partners to our state, local, civic area, and NGO partners.

Expedited, prioritization of projects: the list is done. Now is the time for action. Fund restoration directly to local sponsor.

Work to develop broad-based grassroots understanding of the need to restore the estuary - to build political will among elected officials.

Discussion Question 3

Written & Online Comments

(cont.)

From the perspective of a scientist: integrate geographic unites that are connected by moving water and a related ecosystem. Focus on restoration of "ecosystem engineers," species that provide the matrix for ecosystem function: e.g., marshes, oysters, eel grass, etc. Avoid any organizational structure that defeats pts 1 & 2

DOI needs to unleash the private sector to reach its goals. Work hard on reviewing and revising regulations to achieve above; this requires great critical thinking.

Need to accommodate the vetors of change in coastal systems

Identify, preserve, and protect the remaining natural areas surrounding Jamaica Bay. Promote the significance of the national resources on a national level - not something local. National significance = national decisions.

A plan to restore and conserve waterways which will be institutionalized and mimic throughout administrations. Consulting with the communities ensuring they are involved.

Capitalize on the CESU mechanism to support science-based management of natural areas. Advance the seamless network of protected areas to foster working partnerships on behalf of natural areas.

For public involvement - find the "big idea" that links all experience - water's role in NY/NJ history. Coordinate partners' efforts consistently.

Need "administration" culture change - that the best investment in environmental restoration and urban park improvement are in a city like NY where we have 400 years of urbanization and deterioration. NYC has lost >75% of its wetlands and struggles in contaminated sites. 26m people need these quality of life improvements. Need to maintain robust federal, state, and local funding in restoration projects.

School children have few opportunities for outdoor experience beyond their local parks. Recommend expanding outdoor overnight camping in Gateway and other parks and environmental education programs.

Encourage collaborative programs with elementary children to learn about conservation first-hand and to foster conservation especially in urban areas. (Education at any level is great!) Pick local restoration projects that can be managed in conjunction with local NGO groups and government to promote conservation ethics and commitment.

Everyone in this room is old enough to be my parent or grandparent. There should be more youth involved. Go out to the schools and pass index cards there. Show them who runs the NPS and the thousands of opportunities they have. In 20 or 40 years they will be sitting here running the parks, show them the National Parks you represent.

Discussion Question 3

Written & Online Comments

(cont.)

Build upon "ken burns mentality" and rebrand NPS website, educational opportunities, and expectation of Americans to play a role in conserving and celebrating national park sites. Do this as part of 2016 centennial.

We need to get the National Park Service into the educational system. Having park rangers take trips to NYC schools will enforce schools to take trips to our national parks in the NY harbor and beyond.

Maximize the use of waterborne transport to connect people to the resources and the resources to one another. Focus on environmental education.

The key to access is affordable water transportation that links all major U.S. state and city parks. We need regional management systems - one harbor, another for Hudson River Valley. The key to mgt success is enduring partnerships with civic and enviro groups.

Make our parks accessible by water as well as by land. To the greatest extent possible ensure continuous waterfront access across all parks. More access into the water for people and human powered boats.

Coordinating task force for region, too many agencies. Pay attention to developments in conservation biology, especially landscape ecology, also endangered species. Look for solutions that help people and nature, like coastal preservation.

Federal commission should be established to spearhead restoration efforts in and around Jamaica Bay. All restoration efforts should be coupled with access and recreation programs; perhaps driven by private sector.

Improve the flow of federal dollars to the NGO community to improve science and implementation of ecosystem restoration. Promote a more coordinated and singular voice from the federal govt.

Create areas to be conserved for the future. Create areas to be utilized for recreation by the people for now and the future.

Human resources - Staff with authority to marshal resources that must be put together across agencies, tasked with particular projects and result.

NPS needs to expand its commitment to partnerships. Legacy containment sites in NY Harbor must be cleaned up.

Fully recognize the importance of the government's private partners, and be willing to empower those partners so they can get their jobs done efficiently.

Leadership - empower a core team to distill information and implement i.e. make decisions.

Discussion Question 3

Written & Online Comments

(cont.)

Create a new partnership directly with county and local govt to partner cost share and help finance land protection in important watersheds. Help finance cost share and partner with habitat restoration of Long Is Sound.

Establish avenues for public/private partnerships to implement projects. Enlist congressional champions to for restoration.

Do more oyster restoration. We need NJ sites for recreation.

Improve access to J-Bay via Bennet Field. Enable energy and environmental projects via ppp's. Raise standards. Create new transportation links/modes to ??

Need consortium of partners which will then be funded by the administration and congress to implement the comprehensive restoration plan. Programmatic authorization needed (like Everglades or Great Lakes). Need Champions and steadfast commitment to fund and construct restoration projects and enhance policies to enable, improve and overcome regulations hurdles.

We need to create contingency plans for how we keep a system of waterfront parks in the face of rising water levels. How do we build an infrastructure in the Fed Govt to ensure attention is paid to urban national (and muni) parks as administrations change/

Purchase all available coastal property for the public.

1. Fair share funding for NY/NJ Harbor via advocacy coalition to prioritize money to this region. 2. Strengthen the grass roots network and NGO's to bring everyone to the water, teach kids to swim; subsidize a free ferry system; provide access to water, views and transportation.

Democratic ideas of most outdoors for most people - no better place than NY and Hudson. New Yorkers hunger for direct physical contact with the natural world. Great need for access - especially small docks everywhere.

Transform Floyd Bennett Field into the centerpiece of the Gateway National Park by creating areas for public access and recreation. Appropriate funding for wetlands restoration projects in J-Bay.

MMS/BOEM Reorg- Ensure offshore will is not lost in MMS/BOEM restructure. New Harbor clean energy jobs. Use NY/NJ Harbor as staging port for offshore wind, to create new clean tech manufacturing and construction jobs.

Establish a NGO type outfit that can receive and disburse govt funds w/out all of the spending/contracting restrictions. This would be costs and time to implement. Enhance WRCA funding for the HRE and develop a more predictable federal funding stream going forward.

Discussion Question 3

Written & Online Comments

(cont.)

Need funding for restoration projects. Gov and Mayor have requested \$52 million in the EPA budget for NY Harbor and j-Bay Restoration.

Federal funding for conservation in Metro areas, including NY/NJ Harbor

Admin - funds work needed to finish CRP and feasibility studies of Harbor Restoration effort. DOI and NPS review and reinvigorate their approach to Gateway. Open its doors; connect it to the city; redesign the Floyd Bennett Field.

Authorize restoration, federally on a programmatic, not individual site, level. Use HRE's master plan to guide restoration and fund agencies w/ authorization is in accordance from one general fund.

NPS Must set objectives and policies with consensus of many partners. Strong Supts must direct effort. Vision must be translated/communicated via professional promotion and marketing using available resources beyond NPS, such as concessions, NPPC and others. Implement will require funds, using fund raising talents of friends groups and concessioners as partners. Engage students at schools at all levels.

Bring together Fed, City and State agencies to collaborate on 4 pilot projects on the east river upper harbor SW, Brooklyn waterfront inspired by the exchange with Rotterdam. Create a research and development and manufacturing center in Brooklyn to marry education, workforce development and innovation to address climate change, etc. make the Spunge Park on the Gowonos Canal at Red Hook a NP!

Push Congress to establish an Urban Park Caucus to examine the feasibility of informing park legislators that specifically benefit when metro areas. Free up Mickey Fearn to implement an urban best practices plan - immediately. He gets it.

Allow federal dollars to be managed by state governments.

Can the federal government be more of a central resource for all different organizations and people to access and share? Coordinate management and outreach.

We want to see heavy hitters in government actually using public lands, fishing, taking international visitors to public areas. Seeing them use the places rather than just talking about them will speak loudly.

Federal land policies are hard to understand. Simplify land management policy so ordinary folks can use the lands. E.g., we need a better permitting system. There are a lot of hoops that don't support getting people outside.

Discussion Question 3

Written & Online Comments

(cont.)

Federal agencies should stop pushing more Wilderness and closure of areas and focus on the big picture problems, such as Mountain Pine Beetle. Too much Wilderness makes it harder for people to gain access in the time they have.

We chase federal dollars for conservation programs. But if we only receive a per capita portion of those funds, it's not enough. The conservation values in Wyoming are more than competitive for the federal dollars. Private land conservation has to be a major part of that. Use Land and Water Conservation dollars to preserve those private lands. It preserves our state's cultural identity as well.

Poor maps and confusing characterizations/land classification by the federal government, like class I viewsheds or "special recreation areas," pose a challenge.

Use the internet to make information more available – how to make camps, self-print maps, including attractive images that will interest users and young people.

Make it cheaper to access parks. Waive fees. Have a locals day.

Include citizens more in land management meetings and planning.

Wyoming should have more say in local issues and local enforcement– not the blanket that feds might try to lay over the whole country.

Stop pushing more wilderness and closure of areas. Mountain pine beetle and other resource issues still need to be addressed and can't be with imbalance of too much wilderness. Minerals industry pays the taxes, so there needs to be a balance.

Federal agencies need to be careful and thoughtful when encouraging uses that preclude other users.

Help keep kids' programs going. We need to reinvent the educational wheel. The outdoors is a great way to integrate what the kids are learning.

Organize "6th Grade week in Sinks Canyon"? In my old school in Flagstaff, we did that with everyone in the school district and added that component to their education. It impacts their families too.

Our government agencies need more funding for trail maintenance. In order to enjoy the outdoors, the infrastructure needs to be there.

The Conservation Corps could do more.

Discussion Question 3

Written & Online Comments

(cont.)

Agencies should coordinate management and outreach.

We chase federal dollars for conservation programs. But if we only receive a per capita portion of those funds, it's not enough. The conservation values in this state are more than competitive for federal dollars, and private land conservation has to be a major part of that. Use Land and Water Conservation dollars to preserve those private lands. It preserves our state's cultural identity as well.

Keep working landscapes productive, in both agriculture and minerals

Federal dollars should be managed by state governments.

Don't crowd out animals and plants. Make sure there's enough room for our wildlife and enough water.

The federal government should have mandatory conservation and environmental education in schools.

Fully fund LWCF. Wyoming gets less of that funding than Puerto Rico. And make sure that there are mechanisms in place that allow us to make that work in Wyoming.

Government regulation is a double-edged sword. If you look at list of things you can/can't do and where you can/can't go, it's government interference basically.

Get groups together (motorized, equine, hikers), and cross-educate on how they can use the same area in harmony.

A national push or campaign to connect people.

Provide more education on the various users of the outdoors and how they can live together

Require that schools integrate outdoor-related curriculum into schools.

Provide on-the-ground funding. Consistency in funding and earmarks ensure that it goes back

Money and the organization of outreach programs make things happen, but it won't happen unless people are behind the concept.

Discussion Question 3

Written & Online Comments

(cont.)

The economy makes it harder to buy and use ATVs, limiting parents' ability to take kids out

Monies available for building trails could be put toward 50-inch trails, which kids could ride ATVs on when they're too young to drive on roads.

Inconsistencies between agencies on adjacent public lands confuse travelers. Tying up a horse differs across agencies, for example. The complex permitting system is a deterrent, as well, and the hoops you have to jump through don't encourage people to get outside.

Federal bureaucracy should make an effort to understand the constraints of businesses

Federal agencies need to communicate better. BIA in particular is disconnected from other federal agencies.

Federal agencies need to encourage more local involvement, and harness more local ideas. Agency personnel often are unaware of what's happening on lands under their jurisdiction

Educate and provide resources to educate children and adults

Increase funding – obtaining federal grants is nightmarishly hard

Improve public access to all federal agencies, be progressive

Reform school testing benchmarks, relieving pressure on schools from hitting benchmarks

Present all sides of an issue. Students are told that there are fewer moose in Yellowstone because of fires, but wolves and bears are never mentioned.

Support ATV use in promotional materials, including the America's Great Outdoors video.

The USFS could provide internships for interested youth. Federal agencies need to advertise that they are willing to sponsor internships, and let high school counselors know about opportunities.

The federal government should provide more fed money and grants to high schools going to see more fed money and grants? Federal funds could buy outdoor gear for schools to start outdoor clubs.

Discussion Question 3

Written & Online Comments

(cont.)

The outdoor industry should create outdoor programs for kids in the community to grow their customer base for tomorrow.

Game and fish should provide outreach education to schools with science teachers, and to take students to go bird watching, for example.

The USFS has biologists, archeologists, etc that could do outreach programs.

More community forums like this one encourage community involvement, which is good because Wyoming doesn't respond well to federal involvement.

Encourage grade-level-specific curriculum, like hiking to the falls at one grade level, overnight camping at another grade level, bicycling, cross country skiing, etc. the educational system should provide these opportunities.

Do more nature-related activities at school.

The government should help fund an outdoor club.

The government should give block grants. For example, get at least 10 kids to participate and then find things in which they have common interest.

The USFS needs more human resources. They need to hire someone to coordinate outreach activities, not unlike the current military structure.

Every agency should have a local youth coordinator.

There should be a proposal about these ideas that can be presented to the school board.

This information is not just for the federal government but also the local government and school boards.

Federal agencies should get together with the local state agencies and the school districts to get together to talk about how to facilitate an outreach program.

There is political polarity on sustainable use, with two extremes as the only possibilities. No middle ground blocks sustainable management.

Discussion Question 3

Written & Online Comments

(cont.)

The government should give public lands back to the public at a management level. The government should stay out of it. People's land should have no restrictions.

There is inconsistent leadership at the federal level. Though it's great that the current administration is advocating for outdoors, there's no follow through. In two years there might be a new focus.

The government could support trail associations, at the local level, and train to trail-build.

The federal government should assist the public with its recreational needs, but stay out and leave the local people in charge.

The federal government should support local groups that manage local lands.

Public lands belong to the state, but the state asks the feds to manage it. The federal government should discuss land management with locals, and communicate at a local level.

The government should support education and teachers who utilize the outdoors.

The federal government should keep environmental terrorists out of the forests.

Demonstrate sustainable management of our natural resources

Recognize and support the organizations that are using the outdoors for education such as rock clubs, geological societies, natural history groups,

Simplify land management policies so ordinary folks can use the lands. Current policy is too confusing.

Wilderness classification is bad, and the Wilderness act is outdated. It's designed to keep folks out of the wilderness. It's protecting disease. The federal government should aid local communities to restore forest health.

Partner with non-profits.

Learn how to manage lands and rid the land of disease.

Discussion Question 3

Written & Online Comments

(cont.)

We can't have a timber harvest to combat beetle kill, so there might be no solution. This might be something we may not be able to stop. We are looking too much at right now and not 100 years from now, when there could be benefits to what is going on right here right now. We can't prevent everything.

There's no real focused, multi-agency effort, on providing educational opportunities that teaches kids about and in the outdoors. Agencies have different foci.

A lot of groups don't want to be educated. The federal government should look for right ways to manage lands, and recognize individuals that are experts.

The government should build a network of local expertise, not manage an agency without local experts.

The government needs to provide sustainable funding for wildlife management, including non-game species and their habitats. This should be dedicated funding, not grants we reapply for each year. The state has a wildlife trust fund.

No land management agency should set fires to forests. No prescribed burns!

There should be an emphasis in inner-city youth education on the outdoors.

Manage for ecosystem health, not just isolated protected islands.

Make sure people can get access - issues that diminish access might be private landowners, might be wilderness. Compensation or a tax break might incentivize private owners to provide more access.

Prioritize access, subsidies, etc. in public land areas close to urban centers to get that big group connected.

Increased signage helps people access and understand where to go.

The Federal Department of Education should add an outdoor component to different curricula and school levels/grades.

Maybe an incentive, rather than requirement, to support teachers building outdoor elements into their classes. Provide finances to encourage outdoor connections.

Road easements from private and tribal landowners to allow access to public lands

Discussion Question 3

Written & Online Comments

(cont.)

Make Physical Education a requirement in all schools again

Fully fund land and water conservation programs

Develop better communication and coordination between the agencies and departments

Have more days where fees are waived to enter National Parks

Eliminate the recreation access tax (i.e. fee demo programs)

National leaders should role model the lifestyles and values (a la Teddy Roosevelt) that would inspire the population to want to be more connected to the outdoors.

The education system should emphasize high-stakes testing less and encourage outdoor activities and experiential learning more.

USFS needs adequate funding/personnel to support partnerships to the fullest extent possible. Volunteers are turned away because there is not enough staff to train and assist them.

The government should advertise and promote outdoor activities.

There should be more collaboration between USFS and local planning committees to prevent homes from being built in high-risk fire areas. This would mean that less of the USFS budget would have to go towards fighting fires and more could go to recreation.

Fund land management agencies so they do not have to implement user fees, which are an obstacle to some people.

Support recreation more as one of the “many uses;” it is a sustainable use that does not go through the boom-bust cycles like the extractive uses do.

Federal agencies need to build a constituency in the younger generations; they are the recreational users of the future.

Create incentives for schools to increase outdoor education curricula at all grade levels; make conservation/environmental education mandatory.

Discussion Question 3

Written & Online Comments

(cont.)

Too much federal government interference in local issues.

Inconsistent leadership at the federal level. It is great that current administration is advocating outdoors, but there is no follow through. In two years there might be a new focus.

My hometown is in Michigan, one of the most beautiful and safe states to hike in, due to the lack of larger predatory animals, poisonous snakes and insects. Home to the Great Lakes, our water shed suffers dramatically from the illegal dumping of chemicals by big money, such as Dow. While I recognize the need for companies like Dow, they use their "weight" to dismiss the damage they cause and do not accept responsibility. They must be held responsible; they owe something to the people who allowed them to prosper, while they dumped Dioxin into our rivers. Thousands of people's land is now worthless and the health problems are numerous. If you, Sir President, can tax sodas and other things considered unhealthy to the general population, then you must stand for our land and waters. It must be protected and the people who damage it, must be held accountable to the strongest extent. Thank you for your time.

Perhaps you (we) could conduct clean-up campaigns on some or all of our state and national lands.

Please help Upstate New York in allowing mountain bikers to use the shared use trails, Hikers are trying to put an end to mountain bikers in the area.

Please support conservation projects and those that use our resources wisely and conserve them for future generations. Open more hunting land and buy land for future generations (now the land is cheaper than the future prices).

Better advertising. When programs to get people outdoors are already in place, sometimes their success relies on getting the word out.

Include outdoor education in schools. One option would be implementing outdoor education at the grade school level, by making environmental coursework compulsory.

Property fund recreation programs within government agencies. Land managers need proper equipment and management to do their jobs.

Update outdated systems and eliminate antiquated rules. Eliminate federal mechanisms or regulations that prohibit proactive partnerships. Work to remove onerous regulations on active recreation I. For example, you can pull a yacht behind a semi truck and drop it in Jackson Lake, but you cannot go on a guided kayak trip.

Reduce unnecessary bureaucracy.

Discussion Question 3

Written & Online Comments

(cont.)

Partner with land managers, find out roles and objectives by being more forceful and organized.

We have to capture the power behind grassroots groups and those groups have to be involved at the ground level.

Continue federal programs like AmeriCorps, leadership foundations, Student Conservation Corps, Hard skills are being lost and money is needed to increase training programs.

Introducing kids to the outdoors, this doesn't happen because of lack of access and leadership.

People want signs and maps.

Incentives (tax credits, loans, etc.) for mentoring.

Public School funding that incorporates P.E./activity/REC.

Educate, inspire, enable, and train.

National recreation/conservation corps (e.g. CCC; DARE).

Community-level engagement is a must.

Partner with the American Ad Council

Fund research and make ALL information readily accessible and easy to get.

Zion NP shuttle is a good example of what works well outside.

Fully fund LWCF.

Discussion Question 3

Written & Online Comments

(cont.)

Funding. Regional coordinators should be placed country-wide to support existing programs, coordinate grants and funding for progressive programs (e.g., those geared toward kids and longevity), evaluate how best to wed the business and non-profit worlds, and identify and provide incentives for educators, business, and non-profits promoting the tenets of AGO. More money is also needed for the creation, protection, and maintenance of existing outdoor spaces.

Land creation. Land agencies need to work to create more public lands and better access to existing lands. This entails a review of permitting and restrictions on public lands, and ensuring that designations are commensurate with users and surrounding communities.

Lead by example. The government needs to respond to AGO--i.e., show the public they are listening with legislative/other tangible results.

Work with youth. The administration needs to create more incentives for schools to hire facilitators specific to outdoor recreation/outdoor field trips. There is need and room to support, update, and create more programs that are early-childhood specific (e.g., cub- and boy-scout model). Technology must play a large part in such programs in order to communicate effectively with kids.

Campaigns and exposure. There is a need to communicate with all Americans about the benefits of outdoor recreation. This education to all agents and demographics needs to address the health benefits, safety, and ease of getting outside.

Local initiatives.

More land.

Lead by example.

Provide more incentives and revenue.

Better funding of existing programs (e.g. matching funds from corporate interests, tax breaks, etc.).

Better leadership and top-down examples.

Listening to public input and following up with discussions like these.

Discussion Question 3

Written & Online Comments

(cont.)

Permitting.

When you got more users, make sure there is money to maintain spaces.

Review the restrictions on public lands.

Review and provide better and more access to spaces.

Make sure spaces have appropriate designated uses--e.g. human vs. motorized (be more intelligent about uses for various spaces).

Incentives for schools to have field trips outside.

Put people in schools to facilitate kids getting outside.

Find progressive programs--introduce kids to the outdoors, but you MUST follow up and take them back.

Boy Scout model is dated. Start something to give it an edge (young kids aren't drawn to uniforms and patches anymore).

Encourage "free range kids"--perception is that it's not safe to let kids run around all day.

Create more afterschool programs within schools.

Instill within parents that outdoor spaces are as safe as sitting in front of the T.V. in their own homes.

Not necessarily a socioeconomic problem; it's a societal issue--people need to see that getting outside is easy.

Change perception that the outdoors is unsafe.

RE-education--all ages: youth, university-age, parents, etc.

Discussion Question 3

Written & Online Comments

(cont.)

Develop education standards for the outdoors. Work with Department of Education to integrate outdoor education into schools beginning with elementary school programs. Promoting an active healthy lifestyle at an early age is just as important as education in math and science.

Streamline rules and regulations. Different agencies with different mandates and different rules and guidelines can be confusing for the public. One group suggested major changes should be considered such as managing federal public land under a single department-Department of Interior.

Get young people out working in the outdoors. In light of the tremendous maintenance backlog on federal lands and the current unemployment rate, there is a tremendous opportunity for 21st century version of the Civilian Conservation Corps. This could get young people out repairing and updating decades-old infrastructure, provide much needed job opportunities, and instill a passion for the outdoors by building a new generation of ambassadors for public lands.

Get agency staff out in the field and improve communication. Too often agency staff are stuck behind desks planning or writing reports and not interacting with the public. Those who do interact with the public are often just the enforcement staff. Get staff out in the field, hiking, skiing, climbing, mountain biking or paddling with public land visitors. More interpretive staff are needed to create a more welcoming environment for the public. Encourage staff to engage with the public in settings outside of agency headquarters--e.g. farmers' markets, church groups, etc. It needs to be someone's job to make the outdoors accessible and culturally relevant to a wider spectrum of the public. A roll exists for great era use of technology and social media that should be enhanced beyond what agencies are currently doing but this can not take the place of human contact.

Play a more proactive role in conflict resolution. Don't just respond to lawsuits but take the initiative and recognize issues before they get to that state. Often non-profit organizations are out convening diverse stakeholder groups that seek solutions for land management issues. Federal agencies should take on more of this role.

Utilize partners better. Place greater value on recreation-based economies and experiences and work more effectively with those who want to provide these. Outfitter and guide permits are prohibitively expensive and cumbersome for those, particularly in gateway communities, who wish to help provide experiences for the public on federal lands. Policies on allocation need to be reviewed on a more regular basis and in light of changing trends in recreation. Currently these policies discriminate against young business owners--those who may be most energetic and enthusiastic about attracting the next generation to the outdoors through new and innovative programs. Provide greater support for volunteer groups who wish to work with agencies in providing experiences on public lands. Putting on a river festival or bringing a group of urban youth out for an outing on federal lands involves complicated permitting requirements that can be overwhelming and cumbersome for volunteer groups.

Discussion Question 3

Written & Online Comments

(cont.)

Fully fund Land and Water Conservation Fund. The federal program is important for opportunities on public lands and the stateside program provides critical resources for close-to-home needs particularly in providing access to quality recreational opportunities.

Promote connections between getting outdoors and improving public health. Think beyond the federal land managers to agencies like Health and Human Services or Centers for Disease Control and Prevention who can actively support and promote local activities in the outdoors and close-to-home recreation that encourage healthy lifestyles. Employee health plans can play a role through lifestyle balance that encourage activities in the outdoors (tax incentives or other federal incentives could be provided to employers who promote a healthy lifestyle that engages their employees in outdoor activities).

Invest in research and translate products of that research into interpretive information for the public. Land management agencies have an important role in supporting research both directly and through partnerships with universities and other research institutions. Providing information on this research that is accessible to the public is important in enhancing the quality of the visitor experience.

Consolidate BLM and Forest Service

Move all public land management to Department of Interior

Examine outdated laws

Utilize partners better - empower partners

Eliminate appointed positions that are politically sensitive

Implement national policies to protect land

Funding outdoor and science education

Make sure federal agencies reflect the times

Use technology to inventory roadless areas

Discussion Question 3

Written & Online Comments

(cont.)

Use technology for many purposes

Effectively communicate with a variety of communities and constituencies

Streamline the process of rules and regulations

Communicate what the federal government wants to do in clear, simple language (and not always in English)

Reduce barriers - make them less confusing

Professional people and agencies are stuck behind desks - get them outside to connect to constituents. Don't just write reports all the time.

Create more community stewards

Targeted outreach to real people

Remember that all Americans own public lands - these are their clients (and not just those with property adjoining the public lands)

Make decisions - don't just study issue. Reach conclusions and take actions.

More interpretive staff - at all kinds of federal facilities and not just NPS units, etc.

Can the federal government help prioritize the education of girls because girls become women and generally have a greater sphere of influence?

More PSAs - use the media to convey the importance and use of public lands

Market public lands to kids

Cool interactive websites that are fun for kids - positive but not dorky or preachy. Should be fun and creative.

Discussion Question 3

Written & Online Comments

(cont.)

More education about what people can do to better enjoy their public lands

Agency law enforcement - not supposed to intimidate people

More diversity recruitment in career paths related to natural resource management

Move funding to home-grown and culturally specific entities so that outreach and engagement is relevant and effective

Making connections between entities and government, private companies, and community organizations. Get the gear and expertise to get people comfortable and successful.

Promote Outdoor School <<http://www.mesd.k12.or.us/os/OutdoorSchool/Welcome.html>>, a 21st Century version of Civilian Conservation Corps

Minimum standards for outdoor education and conservation skills as a minimum education standard

Children's Bill of Rights for the Outdoors

Funding for parks and recreation

Make the connection between health and the outdoors - have the CDC and/or HHS fund or otherwise actively support local activities in the outdoors and close-to-home recreation to promote healthy lifestyles

Employee health plans can play a role through life balance incentives (tax or other federal incentives for employers who promote a healthy lifestyle that engages employees in outdoor activities)

Promote a model like menu labeling for physical activities

Internships with federal agencies to learn natural resource management - investing in related career paths

Play a more proactive role in negotiating and mediating conflict - not just respond to lawsuits. Many non-profit organizations are convening diverse stakeholder groups to seek solutions for land management issues - agencies should take on some of this role.

Discussion Question 3

Written & Online Comments

(cont.)

The government needs to realize what our public lands represent (what we have) and communicate it

Protect more wilderness

Congress goes for a walk day - leadership

Funding to keep state parks open

Allow logging (measured, limited) with requirement that they pay back in terms of campground maintenance

Leadership: bridging gaps of policy an implementation

Take advantage of unemployment: New Deal style trail maintenance program

Pro small business recreation support

Asking for local expertise

Placing value on recreation-based economies - outfitter and guide permits not being prohibitively expensive for small business owners who can introduce people to the outdoors. A more regular review of these policies (e.g. permitting requirements)

Leading public roundtables and dialogues (bringing stakeholders the table)

Streamline with local communities - connect with businesses in the community

Issue with local communities and trying to do events/activities is that the permitting process on federal lands is very difficult and challenging for volunteers

Everything is polarized but public land should be a place for common ground removed from politics

Discussion Question 3

Written & Online Comments

(cont.)

Constant struggle with budgets

Challenge with PSAs - people don't listen to them if they come from the government - inefficient and costly. Issue of credibility to deliver the message

Government very compromised around recreational use of public lands - competes with extraction that generates revenue

Make it more accessible

Building on PSA discussion - more effective use of earned media

Fund businesses and non-profit organizations to do the PSAs - from those with local ownership and involvement with conservation issues

Enforce the rules on the books - agencies have obligations for stewardship of the land/water and need to follow through on those obligations

There were two strong messages relating to the role of the Federal Government which are supported by a series of good ideas. First, the Federal Government ought to provide funding for things like public transportation to recreational opportunities, staff in public lands, land protection, and creation of new recreational opportunities. In addition, participants felt that the Federal Government needs to step up its role in raising awareness about the importance of getting outdoors. Mandatory, appropriately funded environmental education programs in schools as well as better advertising of the opportunities and access to public lands were two key recommendations. Participants believe that the federal government has more of a role to play in bringing the great outdoors to the national stage.

funding

Funding to create programs, protect local recreational opportunities and areas

Mandatory programs in Environmental Science, Conservation, Environmental History

Place based learning requirements for education o Mandates o Programs to school o Programs from school o Support with funding (not an unfunded mandate)

Discussion Question 3

Written & Online Comments

(cont.)

National requirement in every year of elementary school for outdoor studies activity

advertising; o tell people where to go o knowledge of what's out there

weeding out people who are obstacles in the federal government

Federal funding for public transportation

Jobs in parks - fully staffed

Should be role models and act on it by funding

Relevant - make the outdoors relevant to people/families

Take a stand for the outdoors as an important issue

Talk it up! Push it!

Education programs, experiences, and opportunities

Federal Highway Program funding to support creation of bike trails

Streamline government departments and agencies

Better access for cyclists on National Park Service

National Wildlife Refuges and Wilderness

Park Prescription as a part of healthcare bills

Discussion Question 3

Written & Online Comments

(cont.)

National recognition of successful programs

Tax code benefits to for profit companies to support outdoor initiatives.

Tax on outdoor gear to fund outdoor programming

Land Preservation - site preservation

Set requirements o for maintaining close to home parks o requirements for funding

a. Fully fund LWCF - 28%, 383

b. Federal funding for land conservation - 24%, 332

c. Federal funding for recreation opportunities - 24%, 332

d. Implement environmental education - 23%, 309

a. Fund existing programs and lands at federal and state levels - 27%, 368

b. Engage youth and families in the outdoors - 26%, 357

c. Link conservation an recreation with health and education - 24%, 330

d. Focus on accessibility to the outdoors for all - 24%, 326

a. Encourage partnerships, philanthropy, advocacy - 18%, 310

b. Fully fund LWCF - 18%, 304

Discussion Question 3

Written & Online Comments

(cont.)

c. Adapt policies and agencies to current obstacles - 18%, 302

d. Be more vocal advocates for conservation and promote recreation - 18%, 299

e. Promote sense of urgency with health and economic benefits - 16%, 278

f. Landowner liability - 12%, 198

1.) Fully fund LWCF. Use federal dollars to leverage conservation and recreation.

2.) Fully fund LWCF. Stay with the program - will AGO be around in 2 years?

3.) Federal government should encourage more public partnerships, philanthropy, and advocacy. Dedicated funding. Flexibility - depends on the project, sometimes the lead, sometimes the limited partner (different parts of the state are different). Give incentives for private landowners to open land for recreational use. National parks should not obstruct different initiatives. Contribute \$1 on tax form for conservation. Wild and scenic rivers - do more to help protect.

4.) Federal landowner liability (not an issue in Maine, but consistency is needed). Assessment of federal funding programs for flexibility to support efforts of local lands trusts and private landowners.

5.) Through education and PR, promote a sense of urgency about connecting to the outdoors - act now based on the leadership, health, and economic benefits. Pass the No Child Left Inside Act, which includes environmental education. Fund regional strategies (think Heritage areas, all interested parties come together to focus on the region). Better funding for all state and federal conservation, including LWCF.

6.) Adapt policies/agencies to address current challenges. More RTCA. Sustain and share programs that work. Communication - share best practices from elsewhere.

7.) Be more vocal advocated for conservation and promoting more recreation. Understand the value of recreation and time spent in the outdoors. Better infrastructure. Need multiple conservation projects with multiple organizations an the correct coordination. Promote philanthropy. Support for private landowners. Federal highway money - connect transportation with recreation. Implement conservation in all agencies.

a. Maine has incredible natural resource - consider and fund it at national level - 27%, 347

Discussion Question 3

Written & Online Comments

(cont.)

b. The important role that Maine's recreational and natural heritage play in Maine's economy - 26%, 328

c. Fully fund LWCF - 24%, 306

d. Broad benefits of connecting people with the outdoors - 23%, 289

Make access cheaper (fee free days, locals' days).

Consider a "recreation easement" akin to the conservation easement that would provide tax breaks for providing recreation access.

Fully fund LWCF. Wyoming gets less funding than Puerto Rico. Make sure that there are mechanisms in place that allow us to make that work in Wyoming.

The Secretary of Transportation could emphasize United States Bicycle Route System to identify routes that are ride able/bike friendly in all states that are connected (e.g., Adventure Cycling model)

Use the internet to make information more available – how to make camps, self-print maps, including attractive images that will interest users and young people.

Make it cheaper to access parks. Waive fees. Have a locals day.

Include citizens more in land management meetings and planning.

Wyoming should have more say in local issues and local enforcement– not the blanket that feds might try to lay over the whole country.

Recent local flood challenges brought many federal workers to our locale, which built connections and potential partnerships.

Stop pushing more wilderness and closure of areas. Mountain pine beetle and other resource issues still need to be addressed and can't be with imbalance of too much wilderness. Minerals industry pays the taxes, so there needs to be a balance.

Allow enough access to let families access wild places. Too much wilderness makes it hard for people access wilderness in the time real people have. One example is the proliferation of wilderness study areas in the Red Desert that severely restrict travel.

Discussion Question 3

Written & Online Comments

(cont.)

Federal agencies need to be careful and thoughtful when encouraging uses that preclude other users.

Manage for ecosystem health, not just isolated protected islands.

Create clear, sensible rules and regulations, and the people to understand and enforce them.

Give tax breaks for recreation access too, not just conservation easements. How about a "recreation easement"?

Make sure people can get access - issues that diminish access might be private landowners, might be wilderness. Compensation or a tax break might incentivize private owners to provide more access.

Prioritize access, subsidies, etc. in public land areas close to urban centers to get that big group connected.

Increased signage helps people access and understand where to go.

The Federal Department of Education should add an outdoor component to different curricula and school levels/grades.

Maybe an incentive, rather than requirement, to support teachers building outdoor elements into their classes. Provide finances to encourage outdoor connections.

Help keep kids' programs going. We need to reinvent the educational wheel. The outdoors is a great way to integrate what the kids are learning.

Organize "6th Grade week in Sinks Canyon"? In my old school in Flagstaff, we did that with everyone in the school district and added that component to their education. It impacts their families too.

Our government agencies need more funding for trail maintenance. In order to enjoy the outdoors, the infrastructure needs to be there.

The Conservation Corps could do more.

The government should be more of a central resource for all different organizations and for people to access and share.

Discussion Question 3

Written & Online Comments

(cont.)

Agencies should coordinate management and outreach.

We chase federal dollars for conservation programs. But if we only receive a per capita portion of those funds, it's not enough. The conservation values in this state are more than competitive for federal dollars, and private land conservation has to be a major part of that. Use Land and Water Conservation dollars to preserve those private lands. It preserves our state's cultural identity as well.

Consider keeping viable ranches without a conservation easement. Keeping ranches working is as simple as not making everything they do feel incredibly difficult. Make it easier for those ranchers to get their jobs done. Permitting, litigation, etc., make it hard to get things done.

People not acting because they think they need to ask for the Government's help and funding. Individuals can do an incredible amount on their own. Keep the funding local to begin with.

Keep working landscapes productive, in both agriculture and minerals.

We should promote more wilderness areas in our public lands.

Federal dollars should be managed by state governments.

Don't crowd out animals and plants. Make sure there's enough room for our wildlife and enough water.

The federal government should have mandatory conservation and environmental education in schools. Fully fund LWCF. Wyoming gets less of that funding than Puerto Rico. And make sure that there are mechanisms in place that allow us to make that work in Wyoming.

A big push towards Conservation Corps.

Get groups together (motorized, equine, hikers), and cross-educate on how they can use the same area in harmony.

Some sort of regulation to even the playing field on media coverage, which tends to sensationalize the dangers of the outdoors and generate fear.

A national push or campaign to connect people.

Discussion Question 3

Written & Online Comments

(cont.)

Provide more education on the various users of the outdoors and how they can live together

Require that schools integrate outdoor-related curriculum into schools.

Provide on-the-ground funding. Consistency in funding and earmarks ensure that it goes back

Money and the organization of outreach programs make things happen, but it won't happen unless people are behind the concept.

Don't approach an outreach program in a regulatory fashion, which cuts out half the American population that doesn't want government interference. It has to be grassroots and from the people. Similar to the UID project in India, which is a movement to establish unique identifiers for Indian citizens. The movement is grassroots and a coalition: not just the government.

We would like to see the Secretary of Transportation emphasize a United States Bicycle Route System to identify routes that are rideable/bike friendly in all states that are connected, along the lines of what Adventure Cycling has done.

Monies available for building trails could be put toward 50-inch trails, which kids could ride ATVs on when they're too young to drive on roads.

Inconsistencies between agencies on adjacent public lands confuse travelers. Tying up a horse differs across agencies, for example. The complex permitting system is a deterrent, as well, and the hoops you have to jump through don't encourage people to get outside.

Federal bureaucracy should make an effort to understand the constraints of businesses

Federal agencies need to communicate better. BIA in particular is disconnected from other federal agencies.

Federal agencies need to encourage more local involvement, and harness more local ideas. Agency personnel often are unaware of what's happening on lands under their jurisdiction

Educate and provide resources to educate children and adults

Increase funding - obtaining federal grants is nightmarishly hard

Improve public access to all federal agencies, be progressive.

Discussion Question 3

Written & Online Comments

(cont.)

Facilitate putting tools in the hands of would be service-project-workers

Reform school testing benchmarks, relieving pressure on schools from hitting benchmarks

Present all sides of an issue. Students are told that there are fewer moose in Yellowstone because of fires, but wolves and bears are never mentioned.

Support ATV use in promotional materials, including the America's Great Outdoors video.

Opportunities need to be available to everyone despite cost.

Focus primarily on conservation of private land , but also on general management of Forest service and BLM lands.

Incorporate open spaces into the education system, educate kids in wild spaces and teach about ecosystems in schools.

Someone still need to be in charge so make it more local.

Emailing information to everybody, and better communication in general, help agencies involve the public in lands decisions.

Connecting youth to local parks .

The government should give public lands back to the public at a management level. The government should stay out of it. People's land should have no restrictions.

The federal government should keep environmental terrorists out of the forests.

Demonstrate sustainable management of our natural resources

Recognize and support the organizations that are using the outdoors for education such as rock clubs, geological societies, natural history groups,

The government can be a more effective partner in recreational organizations

Discussion Question 3

Written & Online Comments

(cont.)

Simplify land management policies so ordinary folks can use the lands. Current policy is too confusing.

Partner with non-profits.

Learn how to manage lands and rid the land of disease.

The government should build a network of local expertise, not manage an agency without local experts.

No land management agency should set fires to forests. No prescribed burns!

There should be an emphasis in inner-city youth education on the outdoors.

Road easements from private and tribal landowners to allow access to public lands

Get kids involved through working in agriculture, or 4H. More chores=less plugged-in device dependency.

Use electronic media (Facebook, Twitter) to advertise outdoor recreation opportunities

National leaders should role model the lifestyles and values (a la Teddy Roosevelt) that would inspire the population to want to be more connected to the outdoors.

The government should advertise and promote outdoor activities.

There should be more collaboration between USFS and local planning committees to prevent homes from being built in high-risk fire areas. This would mean that less of the USFS budget would have to go towards fighting fires and more could go to recreation.

Support recreation more as one of the many uses; it is a sustainable use that does not go through the boom-bust cycles like the extractive uses do.

Federal agencies need to build a constituency in the younger generations; they are the recreational users of the future.

Discussion Question 3

Written & Online Comments

(cont.)

Can the federal government be more of a central resource for all different organizations and people to access and share? Coordinate management and outreach

Push back on/counter the media-induced fear factor

Federal agencies should stay out and allow local people to be in charge.

Federal land management agencies don't work, the DEQ and EPA don't function well because there is no one there with the know-how. Public lands need to be returned to the public, and the public should own and manage public lands, few folk left that know how to run the lands.

It is hard to balance our need for industrial development of these lands with my love for these lands. I drive a car. It has an impact. To best address this, we need to be smart with our impact. And balance development with protecting lands.

Getting kids outdoors! You need to get them there. Children age 8-10 open to the strongest impact. It's a problem that they can't get enough kids to go to the park.

No child left behind is forcing teachers to find the most objective parts of education, and forcing them to teach to the test. Funding is tied to whether students know facts. It needs to change. Students love to learn outside.

Go back to the basics. The state should allow people to access public land, not shut down public lands to the public.

Communicate well with people to let them know what is available, make it "less scary" for adults

We need to focus on cultures in big cities. Amazing at the boy scout level, few scout masters knew the animals in Wyoming. Takes dedication. We can figure out ways to manage land for the best uses; we live in a small population, and there's no need to have every use on every acre of public lands.

Public lands belong to the state, but the state asks the feds to manage it. The federal government should discuss land management with locals, and communicate at a local level.

A lot of groups don't want to be educated. The federal government should look for right ways to manage lands, and recognize individuals that are experts.

Kids don't show up, and don't have outdoor activities as a priority. Can we create an incentive for kids to volunteer to build trails, etc.?

Discussion Question 3

Written & Online Comments

(cont.)

Wilderness classification is bad, and the Wilderness act is outdated. It's designed to keep folks out of the wilderness. It's protecting disease. The federal government should aid local communities to restore forest health.

The USFS could provide internships for interested youth. Federal agencies need to advertise that they are willing to sponsor internships, and let high school counselors know about opportunities.

The federal government should provide more fed money and grants to high schools going to see more fed money and grants? Federal funds could buy outdoor gear for schools to start outdoor clubs.

The outdoor industry should create outdoor programs for kids in the community to grow their customer base for tomorrow.

Game and fish should provide outreach education to schools with science teachers, and to take students to go bird watching, for example.

The USFS has biologists, archeologists, etc that could do outreach programs.

More community forums like this one encourage community involvement, which is good because Wyoming doesn't respond well to federal involvement.

Encourage grade-level-specific curriculum like hiking to the falls at one grade level, overnight camping at another grade level, bicycling, cross country skiing, etc. the educational system should provide these opportunities.

Do more nature-related activities at school.

The government should help fund an outdoor club.

The government should give block grants. For example, get at least 10 kids to participate and then find things in which they have common interest.

The USFS needs more human resources. They need to hire someone to coordinate outreach activities, not unlike the current military structure.

There should be a proposal about these ideas that can be presented to the school board.

This information is not just for the federal government but also the local government and school boards.

Discussion Question 3

Written & Online Comments

(cont.)

The government could support trail associations, at the local level, and train to trail build.

The federal government should assist the public with its recreational needs, but stay out and leave the local people in charge.

The federal government should support local groups that manage local lands.

The government should support education and teachers who utilize the outdoors.

The government needs to provide sustainable funding for wildlife management, including non-game species and their habitats. This should be dedicated funding, not grants we reapply for each year. The state has a wildlife trust fund.

Protect Large Landscapes: Opportunities for Park Expansion 1) The Blue Ridge Parkway 2010 marks the 75th anniversary of the creation of the Blue Ridge Parkway. The Parkway is the most visited unit of the National Park System, with nearly 20 million visitors per year, contributing an estimated \$2.3 billion annually to the economies of Virginia and North Carolina. It is the economic lifeblood of nearby mountain communities. The Parkway traverses a distance of 469 miles, linking Great Smoky Mountains National Park in North Carolina with Shenandoah National Park in Virginia. The very nature of the Parkway requires a regional approach to landscape level conservation, since it bisects 29 counties. Such an approach must engage county governments, planners, municipalities, NGOs, developers, etc. in an integrated effort to channel necessary and inevitable development in ways that protect and enhance the viability of the Parkway and its' mission.

The degree to which the Federal government, regional stakeholders, and local decision-makers become invested in this process will determine whether the Parkway remains a jewel of the National Park System, or whether it slowly becomes just one more commuter route in the regional transportation network. The federal government needs to increase funding for conservation easements that protect private lands on the borders of our national parks. The Federal government also should promote efforts at regional consultation between the National Park Service, other federal agencies, and state and local governments.

The opportunity now exists to provide landscape level protection for this corridor through the innovative use of a dual National Park and Preserve designation. Dual designations have been used in Alaska and in the west (e.g. Great Sand Dunes National Park and Preserve in Colorado and Craters of the Moon Monument and Preserve in Idaho). However, they have not yet been employed in the eastern U.S. A dual designation provides a mechanism for integrating the protection of highly sensitive archaeological sites and cultural areas, with other important, but less sensitive areas.

Discussion Question 3

Written & Online Comments

(cont.)

The Greater Macon Chamber of Commerce, in consultation with the National Park Service, is seeking to undertake a study of the potential for enlarging the boundary of the Ocmulgee National Monument. The Monument embodies the vestiges of over 12,000 years of Native American culture. It is also viewed by contemporary Native Americans as the "Cradle of the Creek Confederacy", which played such a critical and tragic role in the early history of the United States. Thus, an expansion of the National Monument would provide the medium for communicating a superior telling of the ancestral Muscogean story and its intersection with American history. Ideally, a boundary adjustment for the Monument would extend to the northern border of the Bond Swamp National Wildlife Refuge. It would include the full extent of the Ocmulgee Old Fields and as much of the Muscogee Traditional Cultural Property as possible.

In addition to the boundary expansion, local Macon-area citizens, along with the Georgia Wildlife Federation and the National Parks Conservation Association are requesting that Congress designate a National Preserve to safeguard in perpetuity wildlife habitat and natural areas along the Ocmulgee River, from Bond Swamp south, incorporating the Oaky Woods and Ocmulgee state Wildlife Management Areas (see Appendix A).

The importance of this broader river corridor south of Macon is widely acknowledged. In 2004 a resolution passed both the House (HR 1256) and Senate (SR755) of the Georgia General Assembly - Urging the Congress of the United States to consider creating a national preserve or other similar federal property to protect land and other natural resources and promote hunting and fishing in a continuous corridor of the Ocmulgee and Altamaha Rivers in central and south Georgia; and for other purpose

Furthermore, in 2005 the Georgia Department of Natural Resources published its Comprehensive Wildlife Conservation Strategy for Georgia. This document recognizes both the Ocmulgee and Altamaha river corridors as among the most ecologically important landscape features in the state, and as having the highest conservation priority. The Federal government has a critical role to play in supporting and completing these efforts, if potentially nationally significant resources are to be protected for future generations.

Currently, the long-term security and public accessibility of many of Georgia's WMAs is in doubt and under threat. This is due to the fact that a significant fraction of the state WMA system is under lease, rather than being owned by the state. In recent years, the sale of these leased private forest lands has resulted in a continuing loss of public lands and wildlife habitat in Georgia. The Altamaha is a critical wildlife migration corridor between the Okefenokee Swamp National Wildlife Refuge in the south and forest lands in the middle of the state. One potential solution to protecting this corridor would be to designate the Altamaha as a National River. Congress should strongly consider this possibility, as was requested by the Georgia General Assembly in 2004.

Discussion Question 3

(cont.)

We strongly encourage the inclusion of fee interests in land donated for conservation purposes in the anticipated re-enactment of the federal tax incentives for conservation, which expired in December 2009. Under that version of the federal tax incentives, only conservation easement interests were eligible. Given the current effort to enact legislation making the conservation tax incentives permanent, we feel that those generous individuals who are willing to donate their land outright for conservation purposes should be given the opportunity to benefit at least as much as those giving only an easement interest. Inclusion of fee interest in those land conservation gifts eligible would have huge impact on the pace of land conservation in Massachusetts and nationwide - a timely public policy when viewed through the lens of climate change and when considering the massive transfer of important land from an aging landowner base anticipated in the next decade.

Commercial timber harvest in our National Forests should be discontinued. This practice, which is heavily subsidized by the tax funds of the citizens of our country, cannot be justified under any pretense except as noted here. Our timber resources should only be commercially harvested, if needed in the event of a catastrophic event that severely damages private forest lands over a very large area of several million acres. As the US Forest Service (USFS) now practices commercial timber harvest, and growing timber for this purpose, private businesses that own and grow timber for the wood products industry are forced to subsidize their competition.

The primary mission of the USFS should be to manage our National Forests for water quality protection and recreation. There are several ways that users can assist in funding the recreational programs, which I will not attempt to enumerate here, that should be considered by the USFS.

But there are many other roadless areas in the Cherokee, Nantahala, and Pisgah National Forests identified by both the USFS and citizens organizations that should be designated as wilderness study areas. They should be given immediate protection from timber harvest, road building, and any other development until their qualification for protection under the provisions of the 1964 Wilderness Act has been determined.

A number of our National Forests throughout the nation should be officially, by legislation, designated as National Recreation Areas with qualified areas given additional protection under the provisions of the 1964 Wilderness Act. The Cherokee, Nantahala, and Pisgah National Forests are three of our National Forests in the southeast that should be designated as National Recreation Areas.

The use of ATVs and ORVs for recreational purposes, should be prohibited on all federally managed public lands, except on roads maintained for use by ordinary passenger automobiles.

The use of bicycles and motor vehicles (wheeled vehicles) in our National Parks and all other units managed by the National Park Service should be restricted to use only on roads maintained for use by ordinary passenger automobiles, except on roads and trails constructed and maintained specifically for use by wheeled vehicles other than ordinary passenger vehicle.

Discussion Question 3

Written & Online Comments

(cont.)

The long standing controversy (67 years) concerning the construction of a road in the Great Smoky Mountains National from Bryson City, NC to Fontana Dam will be resolved once and for all, only when Swain County, NC is paid the full amount of \$52 million in lieu of building the road, as agreed to by the new agreement which replaced the earlier "1943 Agreement" that promised the road.

The Department of Interior should include in it's budget, starting with FY 2011, sufficient funds to complete full payment of the \$52 million in no more than another 5 years. Current payments (2) add up to \$12.8 million, leaving \$39.4 million due.

I'll close by providing some perspective on federal agency involvement in Chicago Wilderness. Unlike many conservation partnerships around the country where federal agencies intentionally and perhaps necessarily stay behind the scenes, federal agencies have been front and center in Chicago Wilderness since its inception. This has been of great benefit to both the federal agencies and to the greater partnership. In the Chicago region, federal agencies have fulfilled several roles and these have been critical to our mutual success. These include roles as landowner, as deliverers of federal programs, and as organizational leaders

There is much opportunity and much to learn about how parks and nature can be incorporated into education, can benefit human health, and in a range of other areas. We are here to listen to you and learn.

- The federal government is in possession of nationwide data that can be used to illustrate and educate communities at the local, regional, and national levels about these interconnections by building decision support tools that allow communities to understand these interconnections and the consequences of their resource stewardship decisions.

- A nationwide Natural Resource Knowledge System needs to be developed with the next generation of imagery (Probably LIDAR) and a common nationwide landcover at its foundation. This GIS layer would be critical to every community in the nation in understanding and appreciating its Green Infrastructure and the contribution of that infrastructure to their economic and social well-being.

- Many of the emerging pressures upon our natural resources, like climate change, invasive species, and energy and water development, are regional or national in scope. The federal government is uniquely positioned to coordinate the first line of defense against threats at this scale. A robust, nationwide monitoring network that targets standardized landcover classes is needed, and feeds data to the US Natural Resource Knowledge System, where it can be accessed by the broad spectrum of partners who are needed to manage the nation's natural resources. Such a system could provide the under-pinnings for Adaptive Management nationwide.

Discussion Question 3

Written & Online Comments

(cont.)

· Coordinated landscape-scale management decisions are needed to respond to threats like climate change. The only way to effect such management is by establishing and nurturing robust public-private partnerships for resource management. There are many successful models that can be built upon, Chicago Wilderness, for example, the Migratory Bird Joint Ventures, and Illinois' Ecosystem Partnerships. The Department of Interior's new Landscape Conservation Cooperatives and Climate Science Centers are a tremendous first step in providing landscape conservation science to natural resource partnerships. But now it is time for the federal government to take the next step in building natural resource management partnerships by empowering those partnerships to make decisions about their own futures.

· This may require a change in mindset in some agencies. We are asking that, in the face of local and regional unanimity, when a broad spectrum of local and regional interests bring their own dollars to the table, and these interests can articulate an educated and thoughtful vision for their natural resource and economic future, that you trust their judgment. We are asking that you build flexibility into funding programs, that in such cases you reward the partners by cutting through the rules and red tape, and that you trust the collective wisdom of an engaged community. Thank you.

Recently we did an inventory of restoration projects in 2007 in three counties, identifying 169 projects restoring natural areas in the heavily industrial locations in Indiana. We are now documenting the results of what happens when you restore nature in these types of areas, and that information is being used by the agencies that own and manage those lands to improve their results. This was federally funded through a program that sponsors service learning by college students. The federal government is already doing a lot to support these kinds of efforts, and we need more federal leadership in setting priorities and facilitating local public and private partnerships.

We need public agencies to have consistency in their policies, and we need to focus on partnerships, and on kids' involvement.

The Chicago Wilderness Green Infrastructure Vision is important in that. Our 2040 plan focuses on development to promote economic growth, and sustainable development. We've heard from people here that it's important to them to have sustainable communities that are safe and have access to amenities, including parks and open space. Public and private involvement in land conservation is important.

We believe federal investment in regional plans is critical and we need to think about it together. We need to talk about what it will take to solve problems at the local level, and we need involvement from multiple federal agencies. This will determine whether we become a sustainable region or not. We thank you for your time and look forward to a continuing relationship

Chicago Wilderness members are working together on this instead of competing. The federal Leave No Child Inside act needs to focus not just on children and teachers at school, but also on informal educators.

Discussion Question 3

(cont.)

I also represent Eden Place Nature Center in Chicago. Everything we do is close within the community, and I think we need more investment in smaller organizations already operating in communities to make a large scale difference. We train youth, and pay them when funding is available. Allowing them the time to learn and come back the following year is what we hope for. We also recognize the outdoors is a personal experience and should not always be looked at as a quota. We work closely with the schools in our area to plant the seed with youth, implanting the passion and love and give them something they enjoy doing. That leads them to get their families involved. The Chicago area has a lot of park districts, but on the south side the park districts are not as cooperative as they might be. A lot of youth on the south side don't have a place to go and we can provide that. And we can redefine 'outdoors' as a safe place between school and home.

The ADMC welcomes this opportunity to submit comments to help achieve your objectives. Most specifically, we believe tremendous improvements in water quality, reductions in greenhouse gas emissions, reduced flooding and an increase in productivity of American agriculture can be achieved through better water management practices. Attached with this letter are a number of recommendations for achieving our shared goal of expanding and enhancing wildlife habitat, outdoor recreation and the environmental health of our nation in manner that benefits the economic well being of our rural communities. We would be happy to provide you and your staff with additional information related to the recommendations set forth in our attached comments.

Progress in developing and testing ecosystem markets in the United States continues to lag. Selected pilot projects can help overcome some of the impediments to potential innovation. The ADMC recommends establishment of pilots in the Chesapeake Bay, Great Lakes and, subject to funding availability, additional watersheds. The purpose of the pilots would be to demonstrate on operating farms the potential for ecosystem service markets to advance cost effective conservation strategies. As a result, the pilots would provide real world experience to foster environmental improvement within the agricultural sector and between sectors such as point source industrial and municipal facilities and agriculture. Initial pilots could be targeted at the development of a pilot water quality and conservation credit trading. Tools and practices utilized to initiate development of the initial credits could include nitrogen removal, flood and water quality management through temporary restoration of landscape functions and the establishment of wetland and riparian habitat.

FUNDING

This is a big issue, but the main issue is really one of national priorities. There is money available for programs, but the Administration and Congress need to push much harder to shift spending priorities toward programs that directly benefit Americans and our environment. That might mean, for example, that departments that have huge budgets, like Defense, have funding shifted away from them. Also, the current system of government subsidies needs to be overhauled so that money

is not going to support activities that harm the outdoors, like oil and gas companies (which seem to have no problem being very profitable). Agricultural and transportation subsidies also need to be examined for their environmental impacts.

Discussion Question 3

Written & Online Comments

(cont.)

The Department of Interior needs to undertake a study to determine what would constitute full funding for proper management of our public lands agencies. The Administration should then use this information to request full funding every year. The Administration should support full funding for, and the extension and renewal of, the Land & Water Conservation Fund as well as the Historic Preservation Fund.

LOCAL INTERESTS VS. NATIONAL INTEREST

The Administration needs to proudly broadcast its support for public lands, from the President and Secretary of the Interior on down, and at every opportunity. It was disconcerting to see Secretary Salazar say that 'land use decisions would be made at the local level in Utah where politicians and others in that state, representing a minority of Americans, voiced opposition to the

possibility of new national monuments. This is not to say that local opinions should be ignored, but federal public lands belong to all Americans. Only a small minority of Americans lives in those states having the most vocal anti-public lands attitudes, and this minority should not be allowed veto power over proposals and management policies that benefit the majority of Americans.

The history of land conservation issues repeatedly shows that in the long term local citizens see the benefit of conservation initiatives, even if they initially opposed a park or monument designation. For example, Utah's national parks are now among the crown jewels of the National Park System, even though most of them faced vehement local opposition initially.

Discussion Question 3

Written & Online Comments

(cont.)

PARTNERSHIPS & CONCESSIONAIRES

There is a growing trend toward the development of public-private partnerships in the management of our federal (and other) public lands. While useful in the short term, because of funding constraints, in the long term these partnerships will tend to undermine the notion of public lands being the birthright of every American. Rather, the natural temptation will be to plan

around and for those projects that will attract private funding. And while this temptation might be overcome, it will take a special kind of land manager to do so. In any event, the commercial interests of planners must be always subservient to public interest and benefit.

A related topic is the role that private concessionaires play in the running of our public lands. Again, the public interest must take precedence over the interests of private concessionaires. Resource management decisions must be made on the basis of sound science and not private desires. Concessionaire fees must return a fair value to the agency since it is a public resource being exploited [or private gain (even while providing a public service)]. But charges to the public (citizens) should not be exorbitant, either, such that average citizens are priced out. Prices for lodging in the national parks are becoming far beyond the range of ordinary Americans to enjoy. A quick look at some lodgings shows the following examples:

Yosemite Lodge, mid-week, after Labor Day, \$208 minimum for 2.

Awarona Hotel, Yosemite, 2 adults, mid-week, after Labor Day, \$498 for 2.

High Sierra Camps, Yosemite, (tent cabins, including dinner & breakfast), \$153/person.

Zion National Park Lodge, mid-week after Labor Day, minimum \$158.95 for 2.

Fees need to be reasonable for families to be able to camp, but the use of concessionaires, by the Forest Service in particular, to run campgrounds causes several problems. The first is that not only must campers pay the costs of maintaining the campground, they must also cover the concessionaire's fee to the government plus cover a reasonable profit. So campers pay much higher fees than they might if the government were running the campground. Secondly, concessionaires are closing "non-profitable" campgrounds earlier and earlier every year, whereas

the Forest Service used to keep campgrounds open, with bad weather being the more decisive factor. The trend toward concessionaire operations is depriving people of opportunities to enjoy their public lands in an inexpensive manner.

Discussion Question 3

Written & Online Comments

(cont.)

Ducks Unlimited is especially interested in ensuring the protection of key Great Outdoors and national economic and conservation objectives. However, we are focusing on the Prairie Pothole Region in these remarks as an example of how to be effective in this most endangered habitat. All of these recommendations include programs and initiatives that are both beneficial to waterfowl and will promote, support, and sustain the goals of America's Great Outdoors. These recommendations are:

1. Designate the Prairie Pothole Region as a key part of the AGO initiative;
2. Focus key conservation programs in the Farm Bill on the Prairie Pothole Region;
3. Provide full funding for the North American Wetlands Conservation Act;
4. Increase the price of the Migratory Bird Hunting and Conservation Stamp;
5. Fully fund the Land and Water Conservation Fund; and
6. Create a market mechanism to sequester carbon in ranch lands.

habitats of the Prairie Pothole Region (PPR) in the North Central States. While we are interested in a number of key landscapes across the country, the Prairie Pothole Region is at the greatest risk of loss, and there is a need (and opportunities) for immediate action. The following recommendations relate to the overall policy goal of keeping the PPR's native grasslands and wetlands intact for the benefit of all Americans. Many of the programs and policies that are needed to accomplish this objective will benefit other aspects of America's We look forward to working with your Administration and its agencies on these programs, and offer our assistance and expertise as requested, particularly on waterfowl, wetland and grassland-related projects. Many of these efforts require Congress to take action and we are already working with them to shape and implement appropriate legislation. We hope the Administration will include these legislative efforts in its work with Congress.

Full funding of the North American Wetlands Conservation Act

One of the most immediate and direct ways in which the Obama Administration can influence waterfowl populations through the America's Great Outdoors Initiative is to fully fund the North American Wetlands Conservation Act (NA WCA). This 20-year-old matching grant program has been used to conserve or restore over 25 million acres in the U.S., Canada, and Mexico, and given the nature of waterfowl migratory patterns, this continental effort has paid off tremendously.

Authorized at \$75 million, the program has never been fully funded.

Appropriations in FY 2010 were at the highest levels since the program's creation- \$47.6 million - but funding is almost certain to decrease by close to 10% in FY 2011.

Discussion Question 3

Written & Online Comments

(cont.)

NA WCA is a tool that can be used by the America's Great Outdoors Initiative to conserve and restore wildlife habitat and areas for outdoor recreation in perpetuity. In his FY 2010 budget, President Obama pledged to provide full funding for the NAWCA program by 2012. The America's Great Outdoors Initiative is the perfect opportunity for the President to fulfill his pledge, and make a difference for waterfowl populations across the continent.

Iconic parks' attendance is up -- all others are down

Work with park concessionaires as partners

Consumer-generated websites for promotion

Prioritization (cut some programs in favor of outdoors)

Mandates that reduce budgets can be changed

Volunteer programs --create ownership and bring others in

Government-driven media campaign to raise visibility of outdoor pursuits and natural areas and make it "cool" to spend time outdoors

Government regulations to discourage over-sensationalization of crimes against children and negative media regarding natural areas and wildlife

Decrease barriers for partnerships between agencies and with others

Fund federal recreation programs

Partner with communities

Use mineral royalties, etc. to support programs -- not just purchase lands. Fully fund LWCF and provide for equal stateside portion. Effectively use those funds

Discussion Question 3

Written & Online Comments

(cont.)

The federal government needs to increase funding for conservation easements that protect private lands on the borders of our national parks. The Federal government also should promote efforts at regional consultation between the National Park Service, other federal agencies, and state and local governments.

In addition to the boundary expansion, local Macon-area citizens, along with the Georgia Wildlife Federation and the National Parks Conservation Association are requesting that Congress designate a National Preserve to safeguard in perpetuity wildlife habitat and natural areas along the Ocmulgee River, from Bond Swamp south, incorporating the Oaky Woods and Ocmulgee state Wildlife Management Area (see Appendix A).

The federal government has a critical role to play in supporting and completing these efforts, if potentially nationally significant resources are to be protected for future generations.

Among the Commission's most important outcomes were recommendations to the president to "map a national strategy for protecting America's natural and cultural heritage.... And articulate the role of National Parks... in carrying out the nation's conservation and preservation strategy".

The Commission also urged Congress to protect "critical habitats -- especially freshwater and marine areas, and corridors connecting protected areas with broader wildlife ranges -- to ensure the ecological integrity and long-term viability of National Park ecosystems". Further, Congress was asked to identify "historic sites and cultural landscapes that broaden the diversity of the national narrative embedded in the Parks".

LWCF is an exceptional program that needs to be fully funded and better targeted to meet priority access needs. Access to federal lands is a problem- we need to make Public Lands Public. Current priority scoring rules make it difficult to fund small acreage but strategically critical parcels to secure access to our public lands, and this needs to be changed.

Partnering is an efficient investment of Federal dollars, often leveraging with returns of 4:1

Voluntary Public Access and managing lands for wildlife habitat incentives for private farm and ranch owners should be enhanced in Farm Bill.

Opportunity: Much Foundation Work is Already Available (e.g. State Wildlife Plans, Regional Fish Habitat Partner Plans). The federal government should ensure that it works closely with State partners in developing landscape scale plans.

The Federal government and partners should reach out to Sportsman and blend in the North American Model of Wildlife Management into Education Curriculum. This information is already in place, and there is no need to start from scratch.

Small Urban Parks can be dangerous, and they don't offer the opportunity to teach natural history. Better for the Federal government to go the educational route rather than invest in new small urban parks.

Discussion Question 3

Written & Online Comments

(cont.)

FED GOC needs to collaborate w/Ngo's and States to support, not attempt to lead, efforts to provide enhanced Access, Opportunity, Education. Many organizations already have established programs to promote outdoor recreation to women, disabled persons, youth, and other targeted populations.

The Administration should facilitate close coordination between USDA, DOI, and EPA to ensure that decisions related to toxic substance control petitions (i.e. lead shot and tackle) are informed by sound science, as well as recognition of unintended consequences, such as a decrease in Pittman-Robertson funds if lead shot/bullets are banned.

USDA and DOI should undertake site specific assessment to identify and pursue opportunities to expand recreational access and enhance wildlife management by providing access through units of public lands that prohibit hunting to adjacent lands where hunting is permitted.

Life in the prairies is changing with land use changes, and much prairie and wetland habitat is at risk. USDA CRP works- a proven effective program, with 4.3 million acres currently enrolled. CRP works, and recommend that the department do a 25 year review to make a strong program even stronger. Prairie pothole region deserving of Treasured Landscape designation.

Landscape restoration program in the area with the USDA private lands programs for conservation. Private lands/treasured lands something to focus and do more with private lands. Need to be more aggressive in the south to help with bird habitats. Manage areas with prescribed fires. Midwest improve water quality in the Mississippi river water shed. See what programs will do for the people who live there. Open Fields is a good program and needs to be continued and enhanced, voluntary open grounds can help reconnect youth to the outdoors.

Funding the North American Wetlands Conservation Act (NAWCA) of 1989 needs to be a high priority. A federal investment of \$23 Million was leveraged to \$71 Million through this program.

Long leaf pine restoration, East Texas, many different federal agencies are working well together to see help with conservation (listed them) in the Natchez River basin. Big challenge in changes to who owns the different wood lands. The best federal role should be to assist and support areas where there are multiple agencies working together, and concentrate funding where it will do the most good. TMO's are now the major landowners in the Natchez, and the lands are at risk. Tools: 100 years of Weeks act 1911 is being celebrated this year (the 'organic act' for Eastern National Forests), substantive legislation to reinvigorate the act should be passed.

Prairie Pothole region, really need to look at a way to look at conservation in the 21st century look at places at landscape scale and adopt a model of public/private partnerships. Like to see fed to use all existing tools/programs that are currently formula driven, to create a new pool of funds to really help certain areas. National Fish Conservation Act must be passed into law.

Renew law providing dedicated to conservation land in the west. Creates \$50 Million fund which can be used for many different things. Want to reauthorize this legislation because it has expired, has 1 year extension.

Discussion Question 3

Written & Online Comments

(cont.)

Highlight volunteering public access program. Engage private landowners with incentives to encourage recreation access and conservation and fully fund LWCF, including a 1.5% guaranteed for procurement of access to existing public lands. Please to use LWCF funds (CLEAR Act?) to open access. Build up quality of quantity of recreational opportunities and elevate the Prestige of Recreation in organizational structures.

Sod saver and Farm Bill, the Federal government should reconcile current conflicting programs, by removing the subsidies which are currently being used to destroy prairie pothole country and other native lands which are excellent habitat but marginal farm land. Get administration to get more involved in prairie pothole Treasured Landscape area, in close cooperation with the governors and State agencies, to leverage capacity and to save money. And thank you for work in the Gulf.

Full dedicated funding for LWCF. CRP think creatively about keeping the programs going and successful. Stack payment system as commodity prices rise, farmers need higher subsidies to keep lands in conservation status. Consider carbon sequestration credits for farmers.

Put more focus on outside recreation look and coupling with the Lets Move and the First Lady. Consider appointing a "Recreation Czar" to help get kids and families outside, connect outdoor activity to health benefits, promote private land access incentives such as the USDA Open Fields program.

Sporting Conservation activities are critical to the Economic well-being of rural America. Wildlife is a huge part of bringing people to areas for hunting, fills hotels restaurants etc. Need to fix clear cutting.

Full funding for LWCF, including guaranteed portion for access to existing public lands. There are ways to see improvements to LWCF, like to see everyone working together to make sure this all gets done.

Support what all the people have said regarding protection of Treasured Landscapes and private lands, but reminded Federal government that the States have primary responsibility for fish and wildlife in the state. Need to make sure that State agencies are in the loop and working with everything to get the initiative done. Like looking at a landscape lens lots of the problems and solutions are on the landscape level. Linkages and corridors funded through LWCF has merit and is supported by States, but must be coordinated.

Need to do a better job financing the different natural resource agencies. Consider conservation, transportation, energy development revenues and royalties dedicated to State and Fed Natural Resource Agencies.

Education of the outdoors is important. It has to be fun for the kids to truly get involved. Learning and understanding are good, but also getting out there is essential for engagement of young people. Permanent legislation is needed to make sure it stays past the current administration.

In May of 2008, Congress approved a two-year extension of expanded federal tax incentives for conservation easement donations. Specifically, the new law raised the deductions a landowner can take for donating a conservation easement from 30% of his or her income to 50%, and to 100% percent for qualifying ranchers and farmers. The law also extended the carry-forward period for the donor to take the deductions from 5 to 15 years. Recent data indicates that the increased incentives have resulted in the protection of upwards of one million acres a year since they were first enacted in 2006. Despite this success, the incentives are set to expire at the end of this year. Include permanent extension of the expanded deductions in the President's FY 2012 Budget Proposal.

Create a Private Lands Conservation federal advisory committee (FACA) charged with developing conservation and outdoor recreation tax incentives and policy proposals. Made up of experts in the field from the conservation, outdoor recreation and tax finance communities, the FACA would be charged with developing consensus recommendations that would guide the federal government in the area of private lands conservation and recreation issues. For example, the FACA might consider:

A 50% capital gains exclusion for conservation related donations that further the goals of programs such as NAWCA and State Wildlife Action Plans.

A "New Market" tax credit for conservation credits related to the protection, restoration, and enhancement of habitat for priority and/or declining species and other fish/wildlife species.

Expanded conservation related deductions, exemptions, and credits that could be enacted as incentives to keep family owned private lands intact when inherited.

Investment, or new market tax credits that would incentivize development of improved technologies for utilizing woody biomass for cellulosic ethanol. The credit would apply to all stages of a project including the removal of woody biomass and its transportation.

IRS guidance or legislative report language confirming that private land forestry meets the definition of "Agriculture" for purposes of qualifying for expanded deductions.

The creation of a full time political appointee or high-level FTE at the Treasury Department tasked with the domestic conservation tax portfolio.

Work with the Department of Treasury to develop and transmit legislation to Congress authorizing a conservation tax credit.

To that end, the ADMC proposes two actions we strongly believe will concurrently result in significant benefits to farms, watersheds, wildlife and outdoor recreation throughout the nation through expanded utilization of hydrology management practices. The practices and tools used to achieve these goals on the ground will 1) Provide the science and education needed to enrich conservation planning, implementation, management decisions, and environmental health; and 2) Measure, monitor, quantify and utilize project outcomes for the development and enhancement of market based approaches for achieving conservation and environmental goals on a watershed scale.

The ADMC commends USDA for recently completing and issuing the "Assessment of the Effects of Conservation Practices on Cultivated Cropland in the Upper Mississippi River Basin," (CEAP.) While we have found CEAP to be a helpful and informative tool, we also believe the potential exists to broaden and expand upon its applications through a new USDA-NRCS led initiative. The initiative would include consist of collaboration between your departments and agencies, the conservation and sportsmen's community and the agricultural sector to identify and pursue opportunities to expand the capacity for actively managing our water resources to provide economic, environmental and societal benefits for generations to come.

Theodore Roosevelt Conservation Partnership, work with USFS and BLM, energy policy. Hard to find hunting and fishing in policy documents. First thought of fed is not as partner but as a regulator. Want them to be seen as stewards of the land. Want to see the uniqueness in each local community, see the resources of the local folks, bottom up not top down.

Landscape conservation, focus on things that work: Protect good health habitats which we already have through full funding for LWCF, including some guaranteed for opening up access to the public lands. Keeping asian carp outside of the great lakes, could ruin the lakes. Restoration and reconnections have some very good programs, e.g. Farm Bill Conservation Partnership Program, . Does realize that funding will be in short supply. Great projects to restore fisheries Fish Passage Program, Partners for Wildlife are excellent for leveraging fed dollars, youth educations as a priority is key, service learning is important and get connected, "Open Fields" has been authorized to open up private lands to hunting and fishing. River restoration/dam removals (e.g. Penobscott, Elwha, Klamath) should be done in partnership through National Fish Habitat Program legislation.

Feds should implement service learning curricula for schools, and require volunteer work.

Full fund LWCF, including a small percentage to secure access to existing public lands. Coast Guard is a critical player working with the shipping industry with ballast water. One of the barriers to connect with the outdoors is a lack of information about where you can go, especially for hunting and fishing, where to take the kids. Important role that the government can do. Directly interact with kids to get them in there and out there. National Wildlife Refuges are great and have multiple uses, and should be better funded to accomplish AGO goals.

Discussion Question 3

(cont.)

Echo what everyone is said. Climate change is the biggest threat to climate change now and in the future. National adaptation strategy is important and urgently needed. LWCF as a conservation tool is an important part, and should be fully funded.

Prairie Pothole region is very important and at risk of being lost, and should be a designated Treasured Landscape. Key conservation programs in the Farm Bill should be focused on the Prairie Pothole Treasured landscape.

The National Wetlands Conservation Act is critical and is working, but increased funding to fully authorized level is needed.

National Wildlife Refuges are important to sportsmen and outdoor enthusiasts, but the National Wildlife Refuge System lacks the brand awareness of the National Park System. Steps should be taken to raise the profile of Refuges and promote them, so people will know about them and so use them.

Fully fund and improve the operation of LWCF at \$900 Million per year, and make it a permanent dedicated source of conservation funding..

Create a market mechanism to sequester carbon on ranch and farm lands.

Adopt legislation that includes coordinated changes to the tax code to encourage private land conservation.

Recreation is the foremost issue that needs to be addressed in AGO. Conservation is important, but so is recreation. Feds have hundreds of conservation goals, but few recreation goals. There is no one in the Federal Government who is responsible for promoting and managing recreation. AGO should promote a recreation perspective that is “breathtaking” and bold. Bring more Recreation Specialists to the decision table. Partnerships are important, and programs like “Take Me Fishing” are excellent. To engage youth, their learning must come through experiential immersion- textbook lessons will not be effective alone.

Partnerships are important. The MOU on improving recreational NRA stuff on federal lands, has been a good relationship with the agencies and more than 40 organizations. Round table addresses issues and solutions, and the National Park Service should sign on with the rest of the land management agencies. Working on “Making Public Lands Public.” Ensuring adequate access to existing public lands, and educating sporting community through “Respected Access Is Open Access” campaign. User conflicts are avoidable if taken into consideration during Planning , so want to make sure hunting and fishing are important in area planning. Echo ___’s comments- “Make sure to focus on recreation”.

Studies have also found that protection of water supplies is the most cost efficient way to ensure clean and plentiful drinking water supplies to communities.

Discussion Question 3

(cont.)

The U.S. Forest Service in its groundbreaking Forest on the Edge report in 2005 predicted unprecedented new threats to eastern forests from forest subdivision and development through 2030.

It is imperative that we continue to make significant public and private investments in forest conservation to limit and offset impacts from new development on our most critical forest resource areas.

Enact Full and Dedicated Funding Legislation for the Land and Water Conservation Fund

There have been several pieces of legislation introduced during this Congress to fully fund and dedicate \$900 million annually to LWCF, including provisions within the House passed oil spill legislation (HR 3534, the CLEAR Act), and S.2747, the Land and Water Conservation Authorization and Funding Act of 2009.

At AGO listening sessions through the Eastern Forest region, the need for full, dedicated funding of LWCF to meet pressing needs in eastern national forests, parks and wildlife refuges was raised repeatedly.

We urge the Administration to support the enactment of legislation for full, dedicated funding of LWCF as part of your AGO recommendations.

Increase and Provide Consistent Federal Funding for the Following Programs that are Critical to the Conservation of Eastern Forests

We are encouraged that the Administration has proposed a robust FY 11 level of \$100 million and urge continued increases to meet demand.

We urge the Administration to support full funding of the Highlands Conservation Act.

Established in the 2008 Farm Bill, the Community Forest and Open Space Conservation Program has yet to receive adequate funding from Congress to administer this program targeted at protecting and preserving forests and open space vital to local communities. In the East we have identified potential projects in Vermont, Pennsylvania, and North Carolina.

We urge the Administration to fund the Community Forest Program at \$10 million in FY 12.

The unique needs of the eastern forests cry out for exactly the kind of modern solutions sought by President Obama through the America's Great Outdoors Initiative, and we stand ready to work with you to examine how best to integrate public and private lands, identify key remaining natural systems and recreation lands deserving of permanent protection, and pursue ways to connect the millions of residents of the east to the natural areas outside their doors.

Discussion Question 3

Written & Online Comments

(cont.)

I am writing to you to implore you to save Bristol Bay from a mining disaster. We have already ruined our Gulf Coast line with a massive oil spill. We cannot afford to leave our children a ruined country. The destruction that will occur is unthinkable. As you know Bristol Bay area is a treasure drawing many forms of wildlife, that require our protection to their habitat such as: grizzlies, wolves, seals and whales spawning salmon which are the linchpin of this glorious wilderness, supporting valuable commercial fisheries, indigenous people and a vast array of wildlife. Yet the whole system could come crashing down if giant mining interests get their way.

The only way these foreign mining companies can get at the rich gold and copper deposits located in this pristine area that we the United State people have preserved, is to extract this ore through destructive and pollution-producing hard-rock mining. At risk is over 1 million acres of public land. This land should be preserved for our children and grandchildren. What kind of a legacy are we leaving exchanging dollars for natural resources that once gone will never come back? I tell you this beautiful piece of natural beauty must remain in its natural glory. It is our duty as human beings protecting the earth to be excellent sheppard's of this treasure. I implore you to use your conscience and protect this natural wonder that we the people of the United States have inherited.

Think about it, do we want pristine areas with animals in their natural habitat roaming free? Or an open-pit mine that would be 2 miles wide (enough to line up nine of the world's longest cruise ships end-to-end) and 2,000 feet deep (enough to engulf the Empire State Building)? As proposed, the mine would generate more than 9 billion tons of waste held behind a series of massive earthen dams -- all of them taller than China's Three Gorges Dam and located just 20 miles from an active fault line. A proposed a single accident here would be disastrous. But even the construction and operation of the mine could disrupt salmon migration and jeopardize the larger ecosystem. It's a risk most local Alaskans and United States citizens all over the country are not willing to take -- the true gold of this region, they say, is its fish and wildlife. I live in New England and feel strongly we need to protect this area. It is our duty.

The federal government should provide strong oversight of the Pebble Mine permitting process and analysis of cumulative impacts to the Bristol Bay watershed.

Relationships between federal and tribal governments should be strengthened.

Standards for mineral development in wetlands should be tighter.

Clean Water Act standards for large-scale metallic sulfide mining should be more stringent

Discussion Question 3

Written & Online Comments

(cont.)

Can the Obama administration really afford to leave a legacy of destruction of our natural resources? Or will the administration take the only solution to saving our beautiful land by protecting Bristol Bay from ruin. I implore you to act on behalf of our children and all the living creatures of Bristol Bay to stop the Pebble Mine development.

The Northeast State Foresters Association (NEFA) has asked selected organizations for comment on NEFA's far reaching proposal for a \$2 billion federal, state and preservationist group program to purchase 15 million acres (23,437 square miles) throughout New England and eastern New York State. The purchase appears to combine outright public purchases and easement purchases by private preservationist groups. There is no indication that this land purchasing initiative will end when the \$2 billion is spent. NEFA plans to present this proposal, or a modified version of it, to the New England Governor's Conference later this year. NEFA also appears to desire integration of this proposal with the U. S. Department of Agriculture's "All Lands" land management policy, the Department of Interior's "Treasured Landscapes" program, and the Department of Energy's renewable energy program in an, as yet, undisclosed manner.

VTC's initial reaction is that the proposal fails to meet some of its key stated goals. Second, the proposal probably marks the most profound overhaul of the North Woods economic and cultural fabric of all-time. As such, VTC is worried that far reaching decisions will be made within the federal bureaucracy, the uppermost levels of state government, and the preservationist group board rooms before the residents of the North Woods region have a chance to determine whether they are even interested in a complete overhaul of their current way of life.

The rationale for the former Champion Lands purchase and the promises made prior to the purchase sound vitually identical to the rationale and promises in the abovereferenced concept paper. With respect to the Champion lands purchase, while Vermonters were promised that the land purchase and grant of "conservation" easements would preserve the time-honored traditional uses of Vermont's Northeast Kingdom, the reality that had been worked out by preferred stakeholders outside of public view was quite to the contrary. The preservation groups' "conservation" easement banned tree cutting in a 20 square mile "core area" and other large acreages, sought eventual closures of public access roads, eventual destruction of generations old hunting camps, and a ban on ATV riding. Furthermore, the preferred stakeholders proposed a series of restrictions such as bans on worm fishing, target shooting, fish stocking, horses, and new snowmobile trails. The Nature Conservancy and Vermont Land Trust became easement holders in an arrangement where these wealthy private special interest groups are making public management decisions on all facets of activity on the above-referenced Essex County properties. Plus, the federal government has become a major public influence in Essex County land decisions.

Discussion Question 3

Written & Online Comments

(cont.)

VTC fears that NEFA's proposal is sending us in that direction again. NEFA's Draft Concept Paper speaks of 15 million new "conserved" acres in the Northeast, and recruitment of funding from private interests, such as those involved in the Champion purchase, whose policies are well-known to include all of the restrictions mentioned above. The \$2 billion proposal also suggests large federal land purchases. The timing of the proposal closely follows the Green Mt. National Forest Twenty-Year Land Plan controversy that rocked Vermont from 2003-2006. The outcome of this controversy resulted in 42,000 acres (65 square miles) of new federally designated "wilderness". As NEFA members know, federal "wilderness" designation involves many of the aforementioned restrictions associated with the Champion Lands purchase. The GMNF "wilderness" designation would have been much more expansive if the Vermont Traditions Coalition, the administration of Gov. Jim Douglas, ten forest host towns, and a plethora of other traditional interests had not fought the "wilderness" proposal tooth and nail including two trips by Vermont Traditions Coalition representatives to the nation's capitol. The Vermont House of Representatives even passed a Resolution calling upon the U. S. Forest Service and Congressional delegation to refrain from designating any new "wilderness" in the Green Mt. National Forest. Regarding the NEFA proposal, why would all the interests that have been victimized by the restrictions outlined above want to bring on a massive new injection of the same prescription? Why would they be interested in a drawn out highly technical, highly contentious public input process which pits ordinary citizens who want to preserve their current way of life against a small army of well-paid hired personnel associated with numerous preservationist groups?

At present, Vermont includes the ever expanding 400,000 acre Green Mt. Forest stretching from our southern border all the way into Chittenden County on the Northwest side of the state. There's a proposed federal Wild & Scenic designation stretched over a sprawling chunk of Northwest Vermont. In Northeast Vermont, there's the former Champion Lands and substantial expanses of easement lands. Plus, there are thousands of acres of state lands throughout Northern Vermont. Finally, VTC understands that there is a new proposal that has not been widely publicized to designate the Lake Champlain basin as a "Heritage Area." Do Vermonters and other residents of the great North Woods really want wealthy national preservation groups, the federal government, and state entities controlling much of the remaining real estate on the northern tier? The model NEFA proposes seems to be exactly that. While NEFA talks about preservation of the culture and traditions of the North Woods, the original Champion lands purchase and NEFA's Draft Concept Paper suggest that a restrictive model controlled by outside interests will once again be advocated by the controlling interests.

In addition to the 65 square miles of restrictive "wilderness" that Vermont's Congressional delegation added to the Green Mt. National Forest in 2006, there are 91 square miles of pre-existing restrictive "wilderness" in the GMNF: a total of approximately 100,000 acres. Plus, much of the remaining land in the forest is locked up in other restrictive federally designated categories. Timber sale acreage on federal lands throughout the country has nosedived in recent decades. Due to an entanglement of procedural pre-requisites to any timber sale, the federal government doesn't even come close to "Allowable Timber Sale" quotas that delineate the timber cutting goals of the forest.

Discussion Question 3

Written & Online Comments

(cont.)

That's not all. While the State of Vermont's public lands timber cutting efforts have greatly improved during the last eight years, Vermont state government still falls woefully short of cutting even the available timber left after exclusion of cutting by "sensitive" land classifications. Conservation easements owned by preservation groups, whose mission is often hostile to timber cutting, also tend to sharply limit our open landscape's timber management potential rather than preserving it. Rather than supply "expanded forest products production and consumption" as your Concept Paper proclaims, federal ownership and preservationist groups ownership sharply limits timber product availability for the forest products industry. NEFA's purported solution to future forest products industry sustainability fails, and produces outcomes contrary to NEFA's stated goals.

The limits on timber cutting and termination of traditional access roads by the federal government and easement owners also discourage hunting. A landscape with reduced timber management depletes the health and abundance of virtually all wildlife species. Lack of access roads prevents sportsmen from using large amounts of the preserved land. Plus, restrictions placed on access roads, snowmobiling and ATV riding sharply-limit recreational tourism potential. The Champion Lands proposal often years ago, like your proposal, touts the eco-tourism potential of the public and preservationist group land acquisitions, but then proposes restrictions on traditional tourism opportunities such as fishing, hunting, and motorized recreation. It is no secret that, by far, the number one tourist driver of the Champion lands region economy is snowmobiling, yet the Champion lands purchases sought limitations on future snowmobile trails in the Champion region. The Nature Conservancy and Vermont Land Trust routinely try to terminate motorized recreation in easement lands that they acquire even if motorized recreation trails pre-exist the easement acquisition. Plus, the Nature Conservancy stops open hunting on lands it requires, and mandates "Hunting By Permission Only". Often times, finding out where to get permission and other impediments make what should be an unnecessary requirement even more difficult to comply with. Plus, TNC is quick to shut off "sensitive areas" to hunting (while continuing to allow other user groups to utilize these areas).

Like timber cutting, creation of recreational amenities on public land has nose dived in recent years. The federal government has created such a tangle of procedural prerequisites to recreational amenity creation that federal land managers have trouble creating such amenities even when they want to. Instead, federal trends demonstrate that closure of access roads, trails, camping areas, and other amenities is more likely than creation of such amenities.

Discussion Question 3

Written & Online Comments

(cont.)

The federal land management system also suffers from a revolving door of land managers. National Forest managers are routinely transferred to a different national forest location every few years thereby diminishing institutional knowledge and mission connectivity. Vt. Traditions Coalition opposes NEFA's advocacy of regionalism, because smaller bureaucratic entities such as the individual states are able to better manage their lands than larger entities such as the federal government. For many reasons, regionalizing the future of North Woods land management will create negative consequences for residents of the North Woods. To the maximum extent possible, residents of the North Woods should remain in control of their land base. The above-referenced federal and preservationist group initiatives that have been completed or are being attempted already involve a dangerous amount of land use control being transferred from North Woods residents to outside conglomerates and the loss of local control that goes with it.

The federal government's appetite for restrictive land designations that cut off public access and use of public land shows no signs of going away soon. Major new "wilderness" designations involving millions of acres throughout the United States passed in the last couple of years. Now, proposals are already floating about for another massive national effort to add millions of acres of federally designated "wilderness" to the millions of acres of recently designated "wilderness" and the millions of acres of long-time "wilderness". Thus, the entities that NEFA selects to preserve the future of forest industry sustainability and traditional rural land uses, in fact, have a demonstrable record of failure to deliver on such promises. Furthermore, time and again, these entities have demonstrated an appetite for adding new restricted acreages that ban many of the activities NEFA claims they will promote. Fundamentally, there is no "end game" to the drive to add restrictive roadless acreages to the vast expanses of previously restricted lands.

Yes, real estate development consuming our Northeastern woods is a concern, but the alternative NEFA proposes to resolve that concern brings a potentially larger set of negatives to the situation. And yes, the public's protests against restrictionism, public education about the benefits of more aggressive timber management, and public education about the value of public access/ use have resulted in modest gains for all of these interests since the original Champion lands purchase. However, at the end of the day, there has been no significant moderation by preservationist interests, and no indication that a proposal involving unprecedented land acquisition by these interests will be much more friendly to traditional rural culture than the Champion lands acquisition.

NEFA's proposed \$2 billion, ten year acquisition of 15 million acres (23,437 square miles) of the North Woods sections of New England and New York does not deliver on NEFA's stated goals, and therefore, if NEFA's goals are truly as stated, NEFA needs to seek a different solution. The proposal needs to paint a realistic picture of its outcomes. What is actually being proposed appears to be a National Park. At present, Vermont Traditions Coalition has seen no indication that the people of the North Woods want to undergo such a wholesale transition in their way of life.

Discussion Question 3

Written & Online Comments

(cont.)

In the 1990's, a study commission thoroughly considered the desires of N011h Woods residents for their future. It is VTC's understanding that ideas along the lines of the NEFA Draft Concept Paper were rejected. The outcome of the 1990s study, if VTC's recollection is correct, calls into question whether NEFA should even be embarking on the herein referenced proposal. If NEFA insists on moving forward with the proposal regardless of whether it conflicts with the desires reflected in the 1990s study, then, at the least, a thorough public input process should be undertaken before decisions are made, not after. For a proposal as dramatic and far reaching as NEFA's Draft Concept Paper, a much longer comment period for public input and greater outreach than NEFA has used would seem to be highly advisable.

Rather than reiterate those March 31, 2010 Comments for you in the context of the Great Outdoors Initiative, VTC will simply include them here. VTC strongly suspects that the Great Outdoors Initiative is headed toward the same policy that's advocated by the Concept Paper. VTC therefore asks that you simply extrapolate the comments from the March 31 VTC submission to the Great Outdoors Initiative. If the Great Outdoors Initiative is headed in the direction of restrictions on recreation, timber management, and road access to federal lands or federal lands to be acquired, VTC's opposition and the rationale for it are clear. Based on the experiences of the last 12 years, both in Vermont and nationally, VTC does not trust the federal government as a landowner and strongly opposes land ownership interests being conveyed to private preservationists groups with restriction agendas.

These federal land restrictions have worked to displace hunting camps, shut down snowmobile trails, outlaw all motorized use, ban horseback riding and mountain biking, close off road networks, shut down timber harvesting, end fish stocking, and on and on. These federal restrictions and ever changing land plans cater to, in many cases, unnecessarily to only a small user group. VTC believes all forms of recreation are important. Not only to the people who visit, but to those who live there and depend on recreation to fuel the economy. These broad-based restrictions that are filtered down from federal agencies working in conjunction with wealthy, national, extreme environmental organizations work to only disconnect people from nature, hurt local economies and divided recreational user groups. Battles over land use can create great distaste, ripping local communities apart over unnecessary federal restrictions. VTC has witnessed this firsthand. When the federal government worked with the Nature Conservancy and the Vermont Land Trust to conserve the 126,000 acre champion lands timber company lands as part of the Silvio Conte Refuge system, they coined the lands pristine. Yet, they strived to remove the people who cared for the land for generations. A decade later those scars are still not healed.

It is our hope that this new Great Outdoors Initiative will truly create new policies dedicated to working better with local communities, landowners and state agencies, discovering new ways to protect traditional values and land use practices that connect a large number of Americans to the great outdoors. Let's cut through the red tape and celebrate Rural America, not work to destroy it. Let's continue to conserve important lands, but allow the people to continue to use it and the natural resources it holds, not lock it up and shut it down.

Discussion Question 3

Written & Online Comments

(cont.)

A key factor in helping maintain the public benefits from private working forests is ensuring those private landowners have an economic incentive for keeping their forests as forests. Without markets, landowners won't have the capability to derive revenue for forest products, thereby decreasing or extinguishing their ability to manage and protect their forests. If a landowner no longer has the fiscal means to keep their lands in forest, a common alternative is to sell it off as building lots, causing a permanent conversion and thereby negating all the positive public benefits that the forest once provided. Supporting existing and new markets will be key in ensuring we keep forests as forests. Biomass is one example of a blossoming market for low-grade wood. Yet while USDA seems to be promoting the use of biomass, EPA seems to be downplaying or even penalizing its importance in the renewable energy arena (EPA tailoring rule). Any assistance the federal government can provide in helping develop and maintain markets, particularly emerging markets such as carbon and other ecosystem services, would be very beneficial.

Yet another factor in making it economically viable to maintain working forests is making sure regulations are not unreasonably restrictive to the harvesting and transporting of forest products. Once again, if the permitting regulations and costs become prohibitive for a landowner to practice good forestry, that land may not remain in forests. Federal agencies that develop regulations that may directly or indirectly impact the ability to manage forests should seriously scrutinize those regulations to determine whether they are reasonable. If regulations become so burdensome or costly that a landowner can no longer afford to manage their forests, and subsequently sell it for development, have we really protected the environment in the big picture?

Support by the federal government for regional land conservation initiatives is also a way to conserve America's Great Outdoors. A regional example from the Northeast is the recent report by the New England Governor's Conference on Keeping Forests as Forests. This initiative has several "pilot" projects. Some of these projects have already shown their value, such as the Quabbin to Cardigan project (Q2C), which is made up of 27 private and public partners in two states. Targeted support for these regional projects that have proven effective is yet another way the federal government could assist in conserving these valuable landscapes.

This past year each state developed a Forest Assessment and Resource Strategy as required by the 2008 Farm Bill. These assessments are a comprehensive look at the key issues facing the forests of the individual states, as well as regional and multi-state issues. Implementation of these strategies will be fundamental in how successful we are in accomplishing the goals we've set out to do to protect our forest resource.

Discussion Question 3

Written & Online Comments

(cont.)

Yet an overall comment on the AGO initiative is the importance of reaching our children. Forest landowners are aging. Many of today's younger generations are no longer connected with the land like past generations. Whether it's hunting, fishing, gardening, camping, etc., these pastimes seem to have given way to computers and technology. We need to make sure education about the local forests and natural resources are part of the curriculum in schools. Not just learning about the African savannah or the Brazilian rainforest, but what's in their backyard. Programs like Project Learning Tree are wonderful. Here in New Hampshire we used to take Smokey Bear in schools all the time and talk about the importance of forests and fire protection. In the last decade, less and less schools have time for us to do a Smokey program, and we have had to resort to other venues. If today's children grow up with a lack of respect or a lack of understanding for the importance of our forests and other natural resources, we will have a bleak future, as these children will be the decision makers of tomorrow. Also, if they don't learn about the importance of working forest, and instead think it's a crime against the environment to cut a tree, we have failed.

Developing a strong and lasting campaign to educate the public about the many benefits they derive from forests and open lands, particularly private forests, will be necessary in order to accomplish many of the goals mentioned above. Given the state of the economy, a person living in a high-rise in downtown Boston may wonder why his tax dollars should go towards purchasing an easement on private property, funding the Stewardship program to benefit a private landowner, or helping develop markets for forest products. If that person clearly understands that the lands protected by Legacy funding as part of the Quabbin to Cardigan project protected the water supply for the water that comes out of his tap, he may support these initiatives. However, the public benefits derived from private forests are not necessarily intuitive for many people, and it's all of our responsibility to do everything we can to make sure all the public understands the importance of these private working forests, and why it's in everyone's best interest to maintain them as such.

Discussion Question 3

Written & Online Comments

Convert all USFS, BLM and NPS facilities to renewable energy. Technology exists to accomplish this. It would demonstrate to the world and to our children that we are trying to conserve the resources that the future will need.

How on earth did these beautiful trees get left out of Redwood National Park? These are some of the biggest trees in the world, and there are almost none left because loggers have cut them all. Your suggestion is absolutely solid. But I would go further. We need an Ancient Forest National Park, because the Redwoods that remain need the surrounding other forests to be a complete ecosystem. There are presently no complete Ancient Forests represented in the US national Park System, though we're always hasseling South America to set aside the Amazon. Go figure.

I don't care if it costs a billion bucks. I need trails to hike on. Taxpayers should pay for installation and maintenance of a new trail system for hikers only. Just like the forest service road system OHVers want to use, my hiking trails should be built along 500 foot contours. I gotta see it all. And there are a hundred million people just like me who want to see it all. And we wanna hike, so no motorized vehicles. And, because there are so many of us, we're all paying taxes and that's how we want our money spent. Actually, why don't we make some trails up and down the ridges too, so we can hike at 1500 feet for a while and then hike up a ridge and get on the 2500 foot contour. This'll be great for wildlife too. Bears love trails. They'll be able to get to their favorite blackberry patches a lot easier.

Most, by far, of the lower 48 is covered with people. The only places that are not covered are places that are too dry, too cold, too high or too far from a mall. Protecting land is for wildlife, not humans. The areas that are protected already are too small to have thriving, vibrant interactions between life forms that most folks don't care about or understand, even though protecting them may benefit humans in some way.

Nature is basically a dictator and it's laws are inflexible. Governments who don't align laws carefully to reflect the laws of nature won't last for long. This is where we are getting in trouble with carbon emissions, ocean acidification, air and water pollution, over fishing and farmland destruction right now. We need to line up our law with the law of nature right away, or we are going to be extinct.

Some public lands that are presently managed by the USFS and BLM possess outstanding scenic, cultural and wildlife values and should be transferred to the National Park system so that they can be protected in a way that will preserve the outstanding values for future generations. These new national parks need to include whole ecosystems, not just fragments. If not enough public land is available to preserve this whole ecosystem, then private land should be aquired adjacent to the public land.

Discussion Question 3

Written & Online Comments

(cont.)

The government needs to get out of the welfare business and quit giving extravagant amounts of money to people who spend their time lazing around wasting natural resources and when they should be out there working for a living like the rest of us hard working Americans. Every year millions of government dollars go to mining, logging, cattle grazing, auto companies, huge banks and oil drillers. The government builds them roads, leases land to them for almost nothing and then taxpayers have to come in and clean up their messes when they're done destroying the planet for their profits. And quit subsidizing OHVs and their high maintenance trails. And quit making big campsites in National Parks to accommodate people who waste gas and parking space moving their house around. Get out of the welfare business and this country would run like it was intended by our founding fathers.

The new national parks should be huge and not necessarily be for people. Wildlife should be the factor that dictates what new parks are established and where they should be. The new parks will not be "land grabs" but will be just a change of use of already government owned land. As far as I'm concerned, there is no backlog of maintenance that needs to be done in National Parks. If the parks can't accomodate visitors in ways that certain visitors expect, maybe those people should go to Vegas or Disneyworld for their vacations.

Government promotion of local environment coops that could unite together for the restoration and maintenance of wild lands within the community. Coop members could buy individual plots of land to care for, which adjoin national or state parks, or just have a lot of wild acreage. This would expand the wild areas locally, land owners would take responsibility for their own areas, decreasing the burden on government agencies. They would live close to the land they buy and have more insight and working knowledge of their own individual land. The privately held lands would be restored and maintained by the individual owners who would utilize the coop to pool wholesale buying power and resources, work as a group with local forestry, fish and wildlife services to make land management plans for the land. Land owners would have pride of ownership and feel responsible for their land, the animals living there. It would give people something tangible that they would want to visit to enjoy, but more importantly, to care for. Coop members could receive financial assistance via government cost sharing programs.

Before there are no more wild places we must set aside the spectacular wilderness areas located on Federal BLM lands in Utah. The highest and best use of these lands is to preserve them for future generations in their natural state. As man and our machines encroach, this opportunity is being lost. We can not turn back the hands of time; we must act now. Local communities will benefit directly from tourism and all of the economic benefits that the tourism economy brings. It is a win-win situation, and future generations will appreciate our support for these permanent protections for all time.

Actually, that's not the case. Under the 1872 mining law, land can still be claimed and patented, but since 1994, congress has cut all funding for processing of patents and does so on a year-to-year basis. So all it takes is one Congressional session to restore funding and the land is gone.

FLTFA should be reauthorized but amended to allow funding to go to lands anywhere in the U.S.

I'd much prefer to see a tax on something destructive, such as fossil fuels or coal-based electricity (just to name two simple examples; I'm sure there are others we could target), with those revenues going to the same conservation goals you mentioned -- rather than taxing the very items that help people enjoy and experience the outdoors.

On the surface, I love this idea. However, it's just a band-aid. Instead, we need to encourage Congress to act, and to do it in a timely, positive, and non-partisan way. Better that we put the pressure on our representatives to stop bickering and instead take action to preserve our wild spaces.

The AT is wonderful! It is a treasured resource for us all. But some of the ten other National Scenic Trails (NSTs) have hundreds of miles of corridor that needs to be acquired, just as was the case with the AT 35 years ago. The federal government needs to bring to the other NSTs the same commitment that it so successfully brought to the AT before additional NSTs are designated. The NSTs in the Great Lakes area like the NCT and IAT in particular, where there is tremendous public support for increasing the amount of public land, are ready and ripe for the federal government to begin acquiring land from willing sellers.

The BLM needs to obtain access to the 9,100-acre BLM Berryessa Peak Unit from the Yolo County side of the Blue Ridge. This is the closest public land to all the towns in the County, but the public has no access.

The BLM started work on a 38-mile ridgeline trail in the late 1960's, that runs from Cache Creek to Putah Creek along the Yolo/Napa county lines. They need to complete this trail. They stopped after only building 8 miles, because a few people who had exclusive access to BLM land further down the ridge, complained. They need to finish the trail.

The land access decision making process is in the hands of career bureaucrats who are allowing themselves to be manipulated by special interests and failing to ensure that valid science and proper analysis are applied prior to land access decisions. The Federal Government must start from the default position that public lands should be kept open for the public to use and lands made available for all use patterns. Withdrawing land from public access should require a stringent burden of proof be provided by anyone who wants to exclude the public from public land. Today land is closed on trivial and unproven pretexts. This must be immediately stopped.

The last thing you want to do is give the EPA more power. Too many other government organizations (transportation, cities, utilities) spend so much time and resources because they are concerned about the EPA enforcing severe fines for any environmental violation. Its crazy to have government organizations hire lawyers to defend themselves from other government organizations. It's bureaucracy at it's best. It's your tax dollars being spent on both sides.

This area should be preserved as a National Conservation Area.

The designation of "wild" or "natural" lands refers to the lands themselves, not to how we can travel across them or otherwise mess with them. Even those places that are designated "wilderness" are being degraded due to heavy visitor use. Trails are eroding and delicate life communities are being damaged. We are "loving the wilderness to death". But - love means doing what is best for the loved one. How about deciding the management of the wild areas based on what is best for the _area_, not for people? After all, we're only one species. And some of these wild areas are endangered. Should we even go there? Maybe there should be places where people just stay out.

One of the greatest ideas the United States ever had, our National Parks, are falling apart. The State Parks are even worse. We need creative fixes NOW. Let's use the Peace Corps, or the Conservation Corps (from long ago) ideas, and pay people who are out of work to fix the problems in the parks. The money the US government gave to the banks would have been better spent paying people to work in our parks. At least everyone would have benefited. Combine the need for environmental conservation, and the need for people to work. Put in solar panels on the roofs of all buildings in the parks to reduce the need for electric power. That would take care of two important issues at once, reduce the need for electric generating plants, and put people to work.

Local-level politicians in southern Utah should not have such a disproportionate voice on the management of federal public lands in that region. These are lands that belong to the federal government, and thus to the hundreds of millions of American citizens, not just the officials of a handful of counties. Southern Utah is a nationally significant landscape. This administration should put local politicians in their place by enforcing the federal government's right to manage these lands. National Monument designations, interim conservation designation, Executive Orders, whatever it takes to keep these lands as they are, and exert the Constitutionally-mandated federal control over our federal lands. Failing action, these county commissioners will continue to erode the federal jurisdiction over federal lands in their counties. Their voices should only count in the context of what the majority of all Americans want for their public lands: keeping wild places wild, and keeping roadless areas roadless.

While Congress has reserved to itself the right to enact wilderness legislation, the administrative agencies and/or the President should immediately provide interim designation of our highest-quality federal lands, providing a default of conservation in an 'as-is' state until later times when Congress passes legislation. I suggest this idea to comprise all existing USFS and BLM "recommended wilderness," "inventoried roadless areas," "wilderness study areas," and other similarly labeled lands. Preservation of intact ecosystems, diversity of wildlife, and clean air and water are the highest common good. When concerning pristine and near-pristine federal lands, industrial, economic, recreational, access, and user-based arguments are irrelevant.

The things people are saying in this discussion are absolutely ridiculous. There is a lot of hypocrisy and ignorance going on here. Offroading is my passion and I will defend my rights to enjoy my hobby. Share the land!!! The government needs to stop controlling every aspect of our lives...

My counter The great tragedy is that technology is one of the few subjects that the left and the right, and the environmentalists and the corporations, all tend to view in the same way....technology is neutral!! And yet technology is certainly not neutral, and we need to understand this. Nuclear power and solar power will both light the lamps in your house. But to have nuclear power requires that society provide huge financial resources from central sources, apply fabulously high technology skills, and employ a military capacity to protect poisonous materials from terrorism and from accidental release, for all the 250,000 years that it remains highly dangerous. So society is essentially committed to a centralized technical military and financial mode of organization for a quarter of a million years. On the other hand, solar energy can be built by you and me, paid for by us, and it would not require support from any central system, whether technical, military, or financial. At least not from now on, because the technical base has been achieved. What this guy is selling is another 1/4 million years of enslavement to the centralized government we have in place. He is not saying hey why don't we cut back on how much we consume. During world war 2 all forms of energy be it food gas or lamps were all rationed. The fact of the matter that no one is saying is no form of mass produced energy is sustainable. Now to put the second to last nail in the coffin; Safety isn't the real issue (to the government that is)nuclear power hasn't become ubiquitous in the US, it is because it's so damn expensive. Even after decades of subsidies, it can't compete with other forms of energy. The cost of a kilowatt-hour of electricity generated by nuclear power is about 7 cents, coal 5 cents, natural gas 4 cents(note it is on the rise), wind power, solar, and hydro, at 3-5 cents. What is more amazing about the continuing high cost of nuclear power is the scale of subsidies lavished on the industry. In the past 50 years wind, solar and nuclear power combined have been funded to the tune of \$145 billion. Unfortunately 95% of those funds went to nuclear energy, the other two forms managed dramatic drops in unit costs, efficiency and, production of energy. Some versions of the White House- backed energy bill offer federal loan guarantees to cover half the cost of the first new plants to be built in 30 years. yet the Congressional Budget Office warns that it expects these plants to be " uneconomic to operate". Last nail on safety; On August 14, in New York, there was an electricity failure that plunged fifty million people into darkness. 16 nuclear power plants automatically shut down in the US and Canada. nuclear power plants run on off site power, not their own reactors. If the grid fails, reactors are designed to automatically close down. One or more diesel generators, with the capacity to power basic safety equipment including the cooling system, are supposed to start up. If a generator fails, the reactor cannot be restarted without off site power: another wonder of fanatic technological optimism. Something has to continually pump circulating cooling water to the reactor and to the giant, densely packed wasted fuel pools, or those fuel rods, active and spent, will catch fire and reproduce Chernobyl or worse. Don't just listen to me..... Please feel free to actually research these issues and find your own answers instead just moving with the herd, and repeating the propaganda.

(cont.)

all the gov. agencies do is lock out the public rather than actively manage the public lands. We dont need more rules, just enforce what is in place! I regularly ride horses, dirt bikes, hike,etc. and segregating land for this or that is not right. Everyone should have access to all public lands. And maybe one day the gov and the "anti everything" people will stop trying to use the few "bad apples" as excuses for land closures. Well over 95% of the public lands users are responsible and take care of the land: pickup trash, stay on trails, are polite to other users, etc. Its time to stop punishing those of us who are good land users! A thought that seems to get overlooked: Public lands are entrusted to the gov, at the publics acknowledgement and approval, Its OUR land to use and enjoy.

It is nice to finally hear a reasonable point of view. Honestly, it has been pretty much anger and bile from the OHV side every time I enter into one of these discussions. For funding: Wouldn't it be awesome if the Land and Water Conservation Fund (which uses money from oil/gas leases) were fully funded so it could help states fund all those little projects that have been cut!? That Fund is all about recreation access for all; it has built city ballparks all the way up to fixing national park resources, and a huge chunk of the projects are initiated by states and local municipalities, not the Feds, so it's really a great tool for the states. There is a neat interactive map in WA (I'm from there too!), you can see where the money is doing good:

The federal government needs to take action to protect and preserve our nation's wildlife. We have carelessly paved over and poisoned the land, polluted the air and water, destroyed wildlife habitat, supported the wanton killing animals for the fun of it, and pushed species to extinction. We need to change direction, correct our mistakes, and learn to share the earth with other beings who have just as much right to be here as we do. Some suggestions: 1. Restore our Wildlife Refuges to being true sanctuaries by banning hunting, trapping and fishing. Theodore Roosevelt would turn over in his grave if he saw how our refuges have turned into today's killing fields. 2. Extend the above protections to wildlife on all federal lands. 3. Eliminate the USDA Wildlife Services, who indiscriminately kill our nation's wildlife. 4. Refocus the Fish and Wildlife Department to protect and preserve our wildlife instead of managing wildlife for the benefit of hunters, fishermen, and trappers. They should also focus on educating the public on the importance of wildlife and the need to coexist. 5. Ban grazing on public lands, which is currently being done to the detriment of our wildlife. 6. Ban BLM round-ups and killing of wild horses. 7. Expand protections for threatened and endangered species. Speed up the listing process. There are many species in dire need of help that have been denied protection. 8. Ban the use of lead shot and lead fishing tackle, which needlessly poisons our land, water, and wildlife. 9. Ban plastic bags and bottles. 10. Ban the use of dredge nets and long line fishing. 11. Protect wildlife by restricting mining, drilling, logging, and other destructive activities in key habitat areas. 12. Protect our land, air, and water from pollution and global warming. 13. Restore damaged areas and help our wildlife to recover.

Dear President Obama and advisors, One of the biggest threats I see to the balance and protection of Earth and nature is the genetic manipulation of food crops and the resulting increase in the use of herbicides and pesticides that kill bees, birds, frogs, fish and ultimately humans. GMO crops themselves have also been implicated in killing cattle and in causing human illness. This is big business with big money behind it, yet it is supported in part by the farm subsidy programs paid for with our tax dollars. As a tax payer, I don't want to support farms growing GMO crops! (I also don't want to see former Monsanto executives appointed to public office!!) It would make much more sense to offer farm subsidies to the organic farmers who grow food without poisoning the environment, particularly those who grow the fruits and vegetables that are so necessary for human health, rather than supporting the financial health of mega-corporations (like Monsanto) that bully farmers into growing crops for the environmentally-destructive meat industry and the junk food industry with its demand for the cheap high fructose corn syrup that is rapidly undermining the health of our nation. We need GMO labeling laws to allow consumers to choose whether to buy these products or not (and most would not). We need laws protecting our farmers from the bullying of large corporations. I think a large percentage of the U.S. population would agree with both of these points. We also need to put the health of our environment and of our human population above financial interests by supporting clean, sustainable energy, clean sustainable farming, and much less meat consumption, since cattle are a significant factor in greenhouse gas production (in addition to high meat consumption being a major factor in diabetes, heart disease and cancer). I am also very concerned with the unregulated use of nano technology, because these microscopic particles can penetrate through the skin and enter the brains of humans and animals. There is no way of knowing what harm they could do when unleashed into the general environment. Of course there is a lot more we need to do to protect our planet, but these issues stand out as the greatest threats at the present time, because they could have huge consequences. And, though we can already see the increased pollution from toxic herbicide (i.e. Roundup and the like) and pesticide use, as well as allergic reactions to GMO crops, we really have no idea how much damage they could do once unleashed in the wider environment. I cannot overstate how important I feel these issues are and I hope someone in the Federal government will take note and start listening to the demands of the majority of U.S. taxpayers on the GMO issue in particular. For a cleaner, greener world, Bernadette Wulf

I have just returned from the annual Ft. Stevens Day event sponsored by Rock Creek Park (NPS) and their Civil War Defenses of Washington coordinator Alexa Viets. Fort Stevens is an excellent, urban example of a fairly well preserved Civil War fortification; however, it -- like many battlefields throughout the country -- is threatened by development, encroachment and otherwise incompatible structures which will negatively affect its beauty and sanctity. The Federal Government, specifically the National Park Service and its partners, needs to take whatever steps are necessary to protect these endangered sites. The approaching Sesquicentennial of the Civil War is the perfect time for our government and its citizens to rededicate themselves to this effort. American Recovery Acts funds have been allocated to help restore and preserve Ft. Stevens' nearby Battleground National Cemetery, but this should be just a first step towards assessing, conserving and preserving these monuments to those who gave so valiantly.

Over 27 million acres of the most amazing BLM lands are included in the BLM National Landscape Conservation System. The protect biological diversity, offer opportunities for recreation consistent with that goal and help with the economic sustainability of gateway communities. Protecting these lands as part of the NLCS makes sense on many levels. It should be strengthened, the science mission should be expanded, and conservation programs with gateway communities should be encouraged.

This is a great idea. A tribute to America's history and a great step forward for the future. I love the name "Buffalo Commons National Park," but as others have said the name is less important than the idea. This is a great example of how history can be preserved as both a story of our collective past, as well as an on-going testimony to the our current and future values. What more can I do to make this happen? I am prepared to spend my tax dollars!

Over 80% of lands West of Mississippi are open space. Wildlife has plenty of places to live. There is no need to create Wildlife Corridors or designate additional Wilderness Areas. The creation of Wildlife corridors will have a disproportional and severe negative impact on rural communities. It appears that organizations such as The Nature Conservancy stand to make huge illicit profits by swapping lands to the government for Wildlife Corridors

(cont.)

Over the past decades Multiple Use Lands and Trails have been closed at an alarming rate. This has been done with Wilderness and Monument Designations supported by a vocal minority and against the wishes and recommendations of the local residents, Forest Service and BLM. These closures have concentrated use on the remaining Multiple Use lands putting them in danger of being over used. The restrictions on the Wilderness and Monument lands have also eliminated conservation work. This is true in Sequoia National Forest and other Forests and BLM lands. The America's Great Outdoor Initiative must permanently protect remaining Multiple Use lands in order to: 1. Promote active conservation work and Forest Health. 2. Ensure all forms of recreation continue to be allowed for current and future generations. 3. Prevent any further concentration of use or closures of these lands where the majority of the public recreate. 4. Support local rural economies which depend on the income generated by the recreational user of Multiple Use lands, as well as sustainable grazing and timber harvesting which provide much needed products, jobs, income and taxes. 5. Protect Multiple Use lands where the majority of the public can go to refresh and recharge while recreating and supporting local rural economies. I attended the Los Angeles listening session on July 8, but was not chosen to speak so I have provided my testimony and suggestion here. I am the Executive Director of Stewards of the Sequoia. Since forming in 2004 we have continued to be the largest on the ground volunteer organization in the Sequoia National Forest. Our volunteers perform maintenance on over 200 miles of trails per year. Our conservation work has provided over \$350,000 in benefit to the local community and the Forest Lands at zero cost to the community. Our work is done on Multiple Use Trails which are enjoyed by everyone including motorized recreation, mountain bike, horse riding, hiking, hunting, fishing, rock climbing, camping and more. Our concerns are based on actual day to day involvement and working in the forest with land managers.

The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less. The proposed Wildlife Corridors along with the proposed Wilderness and Monument designations would harm rural areas, push people out of their homes and force them into cities. This destruction of our Rural Communities, also known as the United Nations Wildlands Project, is detrimental to the interests of all Americans and should not be supported in any way by the Outdoors Initiative.

Although the Federal portion is important, an equal share of stateside funding is crucial.

(cont.)

Perhaps the Obama administration should take pause and consider that had this most necessary and horrific war not been fought he would not have achieved as much as he did in this great country. Over 2% of the population died in that war, a figure that would be 6,000,000 in today's numbers. Brothers against brothers, fathers against sons to insure that freedom in America was just not words on a paper and not for a select few, but for all that live here. Battlefields need to be preserved so that the memory and the sacrifice of those brave souls would not be in vain and that future generations will know what took place here during those bloody four years of struggle, strife, atrocity, heroism, sacrifice, and death. To understand America you need to understand the Civil War. The Revolution made us a country and a free standing nation; the Civil War defined us as a nation "...of the people, by the people, for the people...." If the battlefields are forgotten then those brave men would have truly died in vain.

Invasive species, especially invasive plants, are a top threat to our wildlands. Many local initiatives bring together public and private stakeholders to plan and implement restoration projects. At the same time, more states are organizing inter-agency councils to ensure strategic efficiency. Both local and state efforts show the kind of working together that we need to conserve our great outdoors. Support from the federal government is key. First, leadership from federal land management agencies is vital for supporting state and local efforts. Second, development of biological control agents, our only truly effective tool against many widespread invasive species, needs federal expertise and resources. Finally, small but steady amounts of federal funding can leverage extensive action at the state and local level. Lastly, it's important that all of us who spend time on our public lands learn about how we can prevent the spread of invasive species and protect the places we love. Coordinated education campaigns can aim at this important education.

(cont.)

The federal government employs hundreds of veterinarians all over the nation, myself included. As I have started to see the images of the oil soaked wildlife along the Gulf, I feel a strong desire to offer my assistance to help save the suffering wildlife, preserve the habitat, and do anything I can do to keep the precious wetlands in the danger zone from being destroyed forever. I understand my job serving the taxpayers to ensure a safe food supply is very important and cannot be ignored, but in times of great ecologic disasters involving great numbers of wildlife that need more assistance than can ever be offered, I think it would be worth consideration to look into the possibility of establishing a network of federal veterinarians able and willing to serve as consultants or hands on care providers to aid in relief efforts following various natural or man made disasters. Federal veterinarians have been utilized as consultants and team members of reconstruction teams in Iraq and Afghanistan. When veterinarians have volunteered for these details, their regular federal duties have been covered by existing resources and the veterinarians covering the duties have been willing to take on the extra workload because they know it is all for a good cause. I believe federal veterinarians could play a vital role in efforts to "clean-up" following disasters. Teams of people mobilized to go into disaster areas will inevitably come across injured wild and/or domestic animals. Veterinarians could be a valuable asset to these teams to not only provide veterinary care to the animals, but educate and advise the team on how to avoid injury to themselves when they encounter these animals. I am not sure exactly how a network of federal veterinarians for disaster relief can be organized or how they can be inserted into the disaster areas. I am sure there are thousands of questions to be answered concerning how to get the clean-up effort mobilized in the aftermath of the Gulf oil spill, but I can see where my expertise and skills could be useful and I am sure there are many other federal veterinarians that feel the same. Even if there is no way to create a permanent network of federal veterinarians available to assist in the event of national or international disasters, I still think federal veterinarians could be utilized in some way in the interest of Public Health and also the interest of Conserving our Precious Ecologic Flora and Fauna. I am willing to volunteer for such a service and to help in any way I can to mobilize other veterinarians to action for this cause.

The AT, PCT, and CDT are great, and now so are the PNT, NCT and the rest, but the more major trails there are, the better. Each of these trails relies on major community involvement to stay open and well-maintained, and that raises awareness of the need for conservation within the community involved. Right now trails like the Great Eastern Trail and the Great Western Loop are still mainly grassroots movements (as many of the others were when they began) and a little more government recognition would do a lot to help them out.

I think that each state should take care and manage the lands in their states. The decisions need to be made on a state level and by people who know what is best for their land. And not by someone involved in the politics of the federal government. The land needs to be treated with the upmost respect and be able to be used by all. everyone has a place. even OHV use has a place.

Discussion Question 3

Written & Online Comments

(cont.)

National park units have abandoned coal mines and active oil and gas wells. These lands should be reclaimed, abandoned mines closed, water quality restored and all mineral interests bought out by the Federal government to prevent more mining scars on America's landscapes. National parks are truly America's jewels and any signs of mining (including drilling) should be erased and the lands preserved in a better scenic and environmental condition. The Federal government should buy the mineral interests of any newly acquired property. Some mines and wells have been degrading Federal lands for over 50 years with no clean-up effort. Old mines and wells are safety and environmental hazards.

A spectacular idea that would in effect create the Buffalo Commons in one large step.

Agree 100%. Add Big Cypress National Preserve (BCNP) and the Addition Lands, North of BCNP to the list. Problem being that the true legislative intent is not being followed. Example - Senate report says NO construction except for land mg't. needs (equipment shed or pole barn) but yet many visitor support facilities have been planned and built which flies in the face of intent. One more example is that ORV's that provide the only means of accessing many areas of these places have been banned from large areas which goes against the intent which never mentioned bans without scientific justification. One part of the reason is that the NPS says the Senate and House reports are not part of the law. If that is the case someone needs to figure out how to append them to the wiggly room filled enabling acts that get passed by some minimally informed legislators too worried about being re-elected. Cultural tragedies have happened there due to enviro-extremist induced law suits and pressures being applied to an agency and government lacking the funds and expertise to refute their lying junk science. This is a really good idea that could bring folks together and eliminate confusion for visitors, land managers and the courts.

Discussion Question 3

(cont.)

The situation is in our Nation's first National Preserve. The problem is in applying adaptive management (am) to an ORV plan Record of Decision signed and adopted nearly 10 years ago. A FACA committee composed of extremely diverse people (some whom were usually diametrically opposed to one another) has been established for about 2 years. Over the last 2 years committee members have grown to understand each other much more than they did at first. The previously opposed factions actually have dinner together with NPS after some meetings. The committee and others all agree that some of the guidance provided by the ORV plan ROD could be modified slightly in order to accomodate some special situations but NPS says that can't be done because there isn't a statement that am applies very near to that particular subject in the ROD. NPS says it would take an EA at minimum or an EIS to accomplish folks desires due to NEPA requirements rather than using the more informal adaptive management process. Some of us suspect that the real reason is the rapidly approaching ORV plan implementation schedule deadline of 2010. I hope I am explaining this so it is understandable. If what NPS says is accurate my suggestion is that NEPA somehow be modified to authorize broad application of adaptive management throughout an ROD so as to provide NPS and FACA committee members the ability to come together on issues that folks have been diametrically opposed to previously. I have witnessed Defenders of Wildlife, NPCA, Fl. Wildl'f. Federation and ORV advocates surprisingly come to agreement on some very tough issues only to have their consensus be prevented by something in the NEPA process. I am not a NEPA specialist but do know it has a lot to do with public input into decision making. Hopefully this further description helps someone more knowledgeable than myself to chime in here with on the ground knowledge.

Those who want to kick the Feds out of their State must do it one step at a time. What lets the Feds into a State is the State itself, otherwise it is treason. States routinely and willingly get into cooperative agreements with the Feds for grant money. One example is Section 6 cooperative agreements set up by the Endangered Species Act. The bait is federal money and States bite on it like starving fish. In the process of swallowing the hook, line, and sinker the State gives the Federal Government the authority specifically reserved for the States in the Constitution. This process in my opinion is legalized treason. Most folks don't have a clue. It is not irreversible though since in these 10 page agreements there is an escape clause for either party to the agreement. All one party has to do is write the other party a letter stating they want out. It is that simple. Sadly there are many of these type agreements allowing the Feds into many areas of our lives. First find out which of your State agencies has entered these type agreements with the Federal gov't. and second attend that agencies meetings repeatedly demanding vociferously for them to withdraw from them until they do it. It shouldn't take too many attempts to succeed since cockroaches run from a bright light quickly as a rule.

(cont.)

NEPA established regulations around both environmental policy and managing cultural resources. While writers of this act saw significant comparisons between these two components of our country, many organizations and agencies do not see the same correlation. The federal government can help to convene the leaders of these two interconnected groups to find ways to get more people outdoors. One possible solution is further identification and interpretation of cultural resources within cities. This process may be aided by further development of an urban trail system - walkable cities. Developing cultural identity in both local and national context) while getting people outdoors is a great starting point for those who may not be comfortable outside of traditional institutions. I spend quite a bit of time in the Cascades of Washington state. Very few trails identify or interpret cultural resources connected with Northwest history or culture. When they do, they can be effective tools to getting people outdoors. For example, the Iron Goat Trail is extremely effective at connecting people with history and the environment. The 4-mile loop identifies an early rail road line which was destroyed by a deadly avalanche. This highlights both a connection to nature and the recent past. This is just one effective example.

Animals that walk, fly, or swim to do have national boundaries. We should be looking at connecting several migratory routes in the United States with the nations of Mexico and Canada, for joint International Parks. The Monarch Butterflies of Mexico, feed in Michigan. The birds of Alaska, travel the entire coastal areas to nest and feed. Four International Migratory National Parks should be created in the United States, Mexico and Canada. They should include an area from Quebec to Florida, from Alaska to Mexico, from Alberta, Canada to Mexico along the Rockies, from the Grasslands of Manitoba to the grasslands and deserts of Mexico. Animals, like man, can swim, fly, walk and run. Plants can also. Let's start looking at this magnificent New World of ours and work with our neighbors to create a giant preserve involving all three of our nations. Each segment, can still run its own jurisdiction, just like the State Parks in Redwood National Park in California maintain their jurisdiction, within the greater National Redwood Park. We have national parks and recreation areas, that can be connected with others by trails, states parks, city parks, recreation areas etc. All into a very large idea of what we can do to protect our wonderful heritage given to all of us.

Designate the two segments of the Hiawatha National Forest in the Upper Peninsula of Michigan as the Three Great Lakes National Park. Using all the now Federal lands, firstly designate the entire two segments of about 900,000- acres as a National Monument by the stroke of the pen from our President Obama. This would create by parkland, an unbroken forest connecting three of the Great lakes, Michigan, Superior, and Huron. Once it is protected as a National Monument, as so many in the past have been, Congress could vote to make this into an incredibly accessible national park. Detroit, Chicago, Milwaukee, etc. all would be in easy driving to access it. Imagine, three of the Great Lakes connected and protected for the future use of all.

I agree that all the remaining Old Growth in the United States, especially in roadless areas, need to be protected by law. The greatest way is to designate them National Wilderness areas under the 1964 Wilderness Act. My grandfather was the foreman of the French Canadian lumber camps in the Michigan Woods, and my grandmother, the "Cookie". They never dreamed that the forests would all be destroyed, but we are at that point. In the lower peninsula of Michigan, there are only 50 acres left of Ancient Old Growth. These forests take 500 years to replace, if left alone. I will never see them, nor will anyone for all those hundreds of years. I was a "stump hunter" for deer in the Michigan Woods. I used to squint my eyes and imagine what the forest must have look like. It was not until I saw the Redwoods, that I understood all that we had lost. Please designate all that is left of all humanity, wildlife, and flora. The whole world depends on this.

Lets create a National Park connecting the three states of Washington, Oregon, and California with the nations of Mexico and Canada. Using existing National Parks, Wilderness, National Forests, BLM lands in deserts and mountains, lets connect using the mountain ranges of the Sierra and the deserts of the three states to do an international park that finally connects areas along the Pacific Coast trail. Imagine three nations cooperating with three states, using national and state parks in all three nations. The wildlife and flora for all three nations will be enhanced and it would stand as a symbol of our commitment to be friends.

The Land and Water Conservation Fund (LWCF) is the perfect vehicle for preserving open space, developing parkland and greenway trails. LWCF is a competitive grant program, which one component is a federal, state and local partnership called the State Assistance program. The BP oil spill has degraded some of America's most treasured recreation land and water, which prompts an urgent call to action for Congress to provide full and dedicated funding for the LWCF program. LWCF is a critical part of America's energy and outdoor recreation future.

The preservation of Civil War battlefields (and other historic sites) should be of the highest priority. This is one of the ways the Federal Government can work with citizens groups on both the local and national levels to form public/private partnerships that get real results. Saving land from development will encourage future generations to connect with our country's history and develop an appreciation for the enormous sacrifices made by previous generations of Americans. It is refreshing to note that respect for our country's history, particularly the Civil War, is one of the things that helps bring Americans together, regardless of their background or political affiliation. Finally it is a proven fact that Civil War battlefield parkland is of tremendous economic benefit to nearby communities.

Methane is a difficult greenhouse gas to control and everyone knows that. Before you can successfully burn it to provide energy, effective equipment and methods must be in place so you are not trading one problem for another. However, we went from cathode tube to transistors to solid state to microchips in short order, and the time between innovations is shortened. Surely we can meet that challenge. We would want to spend the R&D time, energy and money for this reason: Using methane to generate energy is a smart way to go because there is nothing more renewable. Cities, towns, burgs, businesses, and farms all generate many metric tons of sewage, a primary source of methane gas. Let's capture it, refine it, and burn it instead of dump it. Separate out the water for the water reclamation facilities (we have them in Arizona and they are used to water golf courses) and use the resulting matter to generate methane. Once the methane has been processed out, the remaining material has enough safe nutrients to be made into fertilizer. They do that in Pennsylvania now. There may have been an experimental community in Virginia or Maryland years ago that did exactly this. If they are still functioning as a community, let's look at their success. If they are not, then let's examine their failures and learn from them. But, let's do it. It is the ULTIMATE recycling venture!!

This should be linked with "Federal Government role" and "Challenges" as well. The feds say it's a state issue, the state says its local, the locals say it's state, and everyone is just waiting for the appointed Pa Gaming Control Board to make the decision on the application, as though our national honor were not at stake. The Gettysburg Address is the most memorized speech in the world. This casino less than 3000 FEET from hallowed ground would be such an embarressment to the United States.

A federal, interagency commission should be created to focus on the long-term protection of endangered species and ecosystems. This commission should have authority to issue reports directly to the President of the United States. Members of the commission should include trained ecologists representing the federal land-holding divisions, as well as regional representatives from the states and non-profit conservation organizations. The commission's objectives should include prioritizing actions to reduce losses of habitat and to control invasive species, as well as prioritizing endangered species recovery plans. This commission should be backed up by a federal policy that acknowledges the importance of biodiversity protection.

A fine idea. This suggestion is better, in my opinion, than simply extending the enhanced tax incentives for conservation easements, as promoted by the Land Trust Alliance. The difference is that these "targeted" lands potentially would offer greater-than-average public benefits through their protection.

A great idea! There are huge expanses of the high plains in the West where agriculture has not been economically successful. A park of this sort would give an economic boost to its region, as well as provide an anchor for this largely-lost ecosystem. We could see the Great Plains as they appeared 200 years ago to Lewis and Clark.

(cont.)

A great many social and economic problems worldwide, as well as most of our environmental and conservation problems, have roots in human overpopulation. No one denies the right of people to have as many children as they wish. However, for a very long time, businesses and religious groups have effectively blocked our addressing overpopulation as a serious national and worldwide concern. For the sakes of our children, our societies and our fellow creatures, the President of the United States and other world leaders should make a strong case for intelligent family planning.

Creating a Buffalo Commons National Park provides an opportunity to work with the affected communities to plan their future within and adjacent to the new park. Development of the park must provide a new model for collaborative stewardship that honors the communities within the peopled landscape as well as the landscape itself.

it is a lie that only the rich and the young will be able to access Wilderness. I am neither. If you would like to see a change in the Wilderness Act begin to work with your representatives in D.C. and suggest that bicycles be allowed on trails. Re read the Wilderness Act and see what is allowed. Understand that access on foot costs very little. Understand that I hike with two groups of women who are all over 55. Understand that humans in their greed have devastated millions of acres. Do we need to do so to more? And in the case of Utah. All of us should be supporting America's Red Rock Wilderness Act. Just because you can't see life does not mean it isn't there. We are part of a web. Destroy one strand and we are all hurt Why as humans are we also leaving Nature worse off than when we found it?

The role of the Federal Government in connecting people to the beauty of the outdoors should be one of example. Hike, fish, ride a bicycle. Then study all you can find about all the values of wilderness - how it shaped us as a nation. How we came to be afraid of it and want to subdue it. We have been separated from wilderness for many generations and need to relearn its lessons. President Obama - Get outdoors and listen to the sounds of Nature without any manmade interference. Show your respect for what is still wild without making fun of any of it. Be a leader, President Obama and teach respect and ask all the schools to teach respect for Nature. While we use it how do we leave it better off for the next generation??

Responsible use of public land is the only thing that makes sense. Land that is managed and utilized for grazing and timber harvest is much better for the land and the environment. MORE GOVERNMENTAL REGULATION AT THE PROMPTING OF ENVIRONMENTAL RADICALS IS THE LAST THING WE NEED! SUWA – GO HOME!

(cont.)

Across the country, small-scale meat producers are raising grass-fed, sustainable livestock, creating healthy pastures that can aid in the sequestration of carbon, preserve the natural qualities of the land, and provide an alternative to oftentimes poorly planned housing and urban development projects. Providing these farmers with the USDA slaughter and processing infrastructure to allow them to get their products to market, make a living, and keep their land is crucial. These processing facilities must cater to small producers with small batches of livestock. These facilities are economically self-sufficient, but the US government can put in place USDA and HACCP regulations and infrastructure that encourage and incentivize small farmers. Specifically, the federal government can partially subsidize the creation of USDA slaughter and processing facilities specifically designed for small farmers, and ensure that HACCP plan requirements are feasible and appropriate for the small producer and processor.

After 40 years of posting "Public Land - Keep Out" signs on the boundaries, it's time for the US Fish and Wildlife Service to allow the public to visit Featherstone NWR on the Potomac River, just downstream from Washington, DC. The Federal officials who recently completed the "Strategy for Protecting and Restoring the Chesapeake Bay Watershed" recognize that the general public will get more engaged in protecting places that they can experience, in person. The vision is "A Chesapeake watershed with ample access to provide for public enjoyment." Blocking public access to land already owned by the Federal government, with a mile of Potomac River water access, is counterproductive. Wildlife-dependent recreation is appropriate for the 325 acres of tidal marsh and riparian wetlands with mature oaks, tulip poplars and red maples. The dramatic population growth in Northern Virginia has made it even more critical to connect people to nature. If no one but Federal biologists are aware of the natural assets, don't be surprised if local officials propose developing the refuge site for commuter ferry landings, school bus parking lots, or other inappropriate uses.

Environmental and outdoor education is the foundation of efforts to reconnect citizens, and particularly our youth, with America's Great Outdoors. It also improves student achievement in STEM and other subjects, provides the knowledge and skills needed for the "green" jobs of the 21st Century and to address the increasingly complex environmental and natural resource challenges facing the nation, and helps contribute to healthy lifestyles. The Obama Administration should support and the Congress should promptly enact the No Child Left Inside Act, sponsored by Senator Jack Reed and Representative John Sarbanes. The NCLI Act provides incentives for states to provide high-quality environmental instruction, outdoor learning activities, and teacher professional development and will help ensure that every student graduates from high school environmentally literate and prepared for real-world challenges and careers.

Discussion Question 3

(cont.)

Every land use agency including the USDA Forest Service, BLM and US Park Service have a harder time each year managing the lands under their care due to conflicting regulations, analysis paralysis and onerous policies. Adding the responsibility for these agencies to plan for lands beyond those in their care would be even more difficult. Private property owners such as Indian Tribes are better stewards of lands than our federal agencies. Tribal lands are not subject to the onerous regulations that tie the hands of our federal land managers. In many cases wildfires have devastated our overgrown public lands and cannot be stopped by million dollar fire fighting efforts, yet the fires lay down once crossing onto tribal lands where the forests have been nurtured, thinned and/or harvested. On the ground projects are fewer and fewer in our National Forests, while there are more and more costly plans. The Great Outdoor Initiative should encourage on the ground projects by removing the onerous regulations. Completing projects like forest thinning and trail maintenance will provide better conservation and ultimately better Landscapes and watershed health.

I strongly support making the tax incentives on conservation easements permanent. Easements are particularly effective in communities that are concerned about having too much tax-exempt land owned by the government or land trusts. Local officials and residents who are concerned about lost revenues are more willing to support this approach when they understand that the private landowner will still pay some taxes, even if the amount of tax on land under easement may decrease.

Mountain Biking is a healthy way to experience the environment and keeps kids and adults from becoming obese. The government should promote the construction and maintenance of singletrack trails for all ability levels of mountain bikers. The trails should access scenic areas to promote conservation and appreciation of nature.

"As an aside, do we really need the National Forest under the Department of Agriculture anymore? Or would it make more sense to put them under the Department of the Interior?" Only if we are giving up on the concept of our National Forests actually providing forest products. A lot of our rural communities have been gutted by divergence away from timber industry. Otherwise, I agree with this idea, as long as increased resources are used to improve recreation opportunities for everyone as appropriate.

"Roadless" designations during the Clinton administration were a subterfuge leading to Wilderness Study Area designation and then inclusion in Wilderness Area legislation. Through the use of Orwellian "Roadless" labels, places with historical motorized trails were shut down, and now are in danger of being closed under the Travel Management Planning process. To the uninformed public, "roadless" conveys an idea of pristine condition that is contradicted by a history of mining claims, homesteads, historical multi-use trails, etc. Environmental advocacy groups do nothing to dispel this incorrect assumption because it furthers their goals to eliminate motorized recreation from public lands.

Discussion Question 3

Written & Online Comments

(cont.)

"Roadless" does not mean "Wilderness." The Clinton-era Roadless Initiative was an Orwellian process that saw areas with extensive historical trail networks declared as Roadless areas, which then became fodder for inappropriate candidacy as Wilderness. Myself and others in the motorized recreation community would be far more supportive of Wilderness Area designations if we didn't observe the blatant disregard of the terms of the Wilderness Act in selecting areas for congressional nomination. The principle of soft release means that areas once rejected as lacking wilderness characteristics keep coming up for nomination in a political process whenever the pro-Wilderness lobby gains political power. By holding to the original test of Wilderness designation--that of areas truly "untrammelled by man," and not dredging up the same areas time after time whenever the political winds blow favorably, the diverse communities of people who value public lands can unite behind what is in principle a very good law.

Even if they're not "big city legislators," they're often eastern state legislators like Rep. Hinchey (D-NY22), who keeps sponsoring western state Wilderness legislation. I said it elsewhere; one for one--for every acre someone like Hinchey proposes, he should have to find an acre of proposed Wilderness in his home district.

you need to read 1491: New Revelations of the Americas before Columbus ([Link](http://en.wikipedia.org/wiki/1491_(book))) } New research shows that the coast-to-coast wilderness to which you referred in another post existed only before the first human settlement--not just European settlement--of the American continents. It hasn't "been 200 years since this whole country was a wilderness"--it's been 12,000 years, perhaps more. As for the original idea posted here, _____ has it correct. People seeking wild and quiet places, such as they are, have vast acreage available to them, especially in the Western states. Here's a one-for-one idea: for every western acre proposed for Wilderness by an eastern-state Congressman, designate one acre of that person's congressional district as Wilderness.

is advocating preserving the MUSY framework for public lands management that is threatened by the new Forest Service idea of using "restoration" as a guiding principle.

In the current travel management planning process, documentation of historical OHV use is being ignored by the land managers. They are operating toward a foregone conclusion that OHV access will be drastically reduced from existing conditions. NEPA requires consideration of a no-change alternative, but Travel Management Planning requires that the no-change alternative be discarded.

your statistics do not document EXCLUSIVE use. I may go to the forest on my motorcycle, and then engage in other non-motorized activities. The statistics are easily mis-interpreted. The 44,000 acre Cerro Grande fire was started by the US government and shut down access to an extensive multi-use trail network developed and maintained by dirt bikers from the local Los Alamos NM area. Kind, courteous motorcyclists lost their trails, perhaps permanently, because the government could not be trusted with matches. Opportunity was lost. The Great Outdoor Initiative should incorporate restoring sustainable access to historical use areas.

(cont.)

I agree completely. The preservation of an area of prairie in Western Kansas would be an appropriate addition to the National Parks' system. Somewhere around Fort Larned, a National Historic Site, would be very appropriate and bring many travelers to view our eco system as well as "how it used to be." I remember that area as a young girl, and it is much like it was 70 years ago. I think Kansas has been overlooked in the National Park System as we have many areas that could be preserved and protected from the inroads of civilization and society, to show people how it was before we began to feed the nation.

As the pace of urban and suburban development rapidly increases, it's absolutely essential to continue to increase funding for LWCF, so that additional lands may be aquired and added to our federal and state systems of public lands. Check out the Wilderness Society's recommendations about this -- { Link } and The Trust for Public Land -- { Link }

Assist states, regions, and localities in linking land use planning, transportation planning, and conservation/biodiversity planning: The American Planning Association (APA) recommends that biodiversity should be protected and enhanced by being included in the early stages of the land use planning process. "Planning for biodiversity should use the best available science to assess natural resources and determine areas of environmental vitality as the first step in incorporating 'green infrastructure' into human settlements." Wisconsin provides an example of one state that developed a planning document that identifies places critical to meet Wisconsin's conservation and outdoor recreation needs until 2050. This Land Legacy Report, compiled between 1999 and 2003, identifies 229 critically-sensitive environmental areas, or "Legacy Places" in need of protection as the state develops over the next 50 years. The federal government might use Wisconsin's Land Legacy initiative as a model to encourage or require other states to develop such biodiversity/conservation plans. The APA supports federal and state agencies providing assistance to county and local governments to collect and analyze information on natural communities and processes. "County and local governments should supplement this information with local knowledge. Using the combined information, all levels of governments should work with non-profit organizations, businesses, and citizens to designate green infrastructure policies and carry them out." "Many local governments, where land use planning takes place, do not have the staff or technological resources to inventory and map biodiversity resources for their communities. Federal and state agencies that have the resources and scientific and technical knowledge needed on topics such as ecology or biodiversity should provide financial and technical assistance to county and local agencies, which augment the information with local knowledge. A county benefits by obtaining technical information necessary to write a strong plan, while the state and federal governments benefit by enhancing the protection of natural resources through partnerships with local governments and non-profits." The Government Accountability Office (GAO) did a study that found that, for many urban and rural communities, open spaces including park lands, environmentally sensitive lands, and farmlands are integral to planning for and managing growth. "The federal government could play a greater role in such preservation activities by, for example, expanding the education and technical assistance it provides to local communities through such resources as USGS' mapping capabilities. Communities have responded favorably to such assistance in the past, but any expansion would involve a consideration of costs and of the appropriate role of the federal government in local land-use planning." References: -APA's Smart Growth Policy Guide: www.planning.org/policyguides/smartgrowth.htm -Community Development, Local Growth Issues- Federal Opportunities and Challenges. (cont.)

State Fish and Game agencies are a logical way to promote habitat restoration and preservation using federal \$\$\$. This program was just barely able to establish itself in many States when it was pitched overboard. Many States have private lands programs that need a consistent source of funding, other State Fish and Game agencies have no program or capacity to work with private landowners; this was a valuable program for those states with a high percentage of private property (like Texas) but most importantly, for states with a small amount of private land compared to public land such as BLM. Most always, the most valuable wildlife habitat is privately owned--if we have no consistent funding to support our work with these landowners, they lose faith in government and we lose wonderful opportunities to build bridges with the public we work for. In some cases, the Landowner Incentive Program also provided the mechanism to increase collaboration with the Natural Resources Conservation Service to facilitate capacity in both agencies to promote important Farm Bill programs like the FRPP, WHIP, WRP, etc.

NPCA has been saying it better than I can for over 10 years. My feeling is that radical preservation of large tracts of wilderness will serve mankind tremendously in the long run. Here are NPCA's talking points: National parks preserve large areas of land, yet many of the wildlife that live there must move outside park boundaries to feed, breed, and survive. It is critical that the Administration work to support or lead efforts to safeguard these iconic landscapes in a way that works for both wildlife and the people that live there. National parks and adjacent lands provide some of the best outdoor classrooms in the country. The Administration should do all it can to help support and significantly grow successful service learning and other education programs so that youth have an opportunity to experience our national parks and public lands. We have already begun to see the impacts of climate change on our parks--through the loss of Glacier National Park's namesake glaciers or the increase of fires in and around Yellowstone. The Administration must start now to protect these great landscapes so that our wildlife and rivers can sustain and adapt to the impacts of climate change. The Land and Water Conservation Fund (LWCF), a little-known conservation program, has funded wide-ranging land protection. Full, dedicated, and permanent funding of the LWCF is a key component to fulfill the vision of America's Great Outdoors. The Administration must lead efforts in supporting full funding for this program.

The role of the Federal government in facilitating the preservation of the sacred ground embodied in the Civil War battlefields through making available matching funds for non-profit organizations is vital to our ability as a nation to the continued recognition of our heritage. Private sector groups have had great success in laying the groundwork and developing the arrangements for critical land acquisitions. These efforts, when parleyed with the ability to show financial leverage through matching gifts from sources with common interests such as governments, individuals, and grass-roots organizations have proven invaluable. These successes can continue if reliable public funding is established/continued.

(cont.)

A host of rules and regulations, missions and methods might be more cleanly and clearly organized with more distinct definitions that differentiate the primary concepts employed by departments, agencies and NGO's. I propose the following specifications for the primary constructs of preservation, restoration, conservation and consecration ...

To Protect and Preserve: We work to safeguard the existing integrity, quality and health of the water, its associated diversity of land and wildlife, from further declines and losses (threats) through monitoring (watch and ward) and advocacy (shield and defend) activities with other individuals, families, organizations and communities. [save ... maintain] "A thing is right when it tends to preserve the integrity, stability and beauty of the biotic community. It is wrong when it tends otherwise. A thing is right only when it tends to preserve the integrity, stability, and beauty of the community, and the community includes the soil, waters, fauna, and flora, as well as people." -Aldo Leopold [To Preserve: keep safe from harm or injury; retain (a condition or state of affairs); maintain or keep alive]

To Restore: We seek to improve water quality (recover and reestablish), recognizing its interconnection with land use by humans and wildlife, and seek to restore (rehabilitate and reclaim) important natural and scenic areas along waterways and throughout watersheds and landscapes by partnering with other organizations focused on ecological restoration (repair and reconstitute). [secure ... manage] "Every creature is better alive than dead, men and moose and pine trees, and he who understands it aright will rather preserve its life than destroy it." -Henry David Thoreau "On the mountains mistakes are fatal. In politics, mistakes are wounding emotionally, but you recover. Personally, wilderness helps me get back in touch with natural rhythms, helps me reflect and, in the process, restore my creativity." -Mark Udall [To Restore: bring back (a previous right, practice, custom, or situation); reinstate; return (someone or something) to a former condition, place, or position; repair or renovate (a building, work of art, vehicle, etc.) so as to return it to its original condition; give (something previously stolen, taken away, or lost) back to the original owner or recipient]

To Conserve: We engage people living within the river corridors and habitats, increasing stewardship through educational, recreational and volunteer stewardship activities that give them the understanding and motivation to advocate at the local, state and national levels on behalf of the river's values. We partner with other conservation organizations seeking to insure long-term stability through land purchase (sequester in reserves, parks, and sanctuaries), easements and other mechanisms to sustain (perpetuate) a legacy of high quality land and water ecology into the future. [sustain ... mind] "In the end we will conserve only what we love. We will love only what we understand. We will understand only what we are taught." - Baba Dioum [To Conserve: protect (something, esp. an environmentally or culturally important place or thing) from harm or destruction; prevent the wasteful or harmful overuse of (a resource); maintain; retain]

To Celebrate and Consecrate: This watershed/landscape/habitat is a national treasure. We live, work and play here because we love the place, and we celebrate that love at every opportunity. [serve ... deference and devotion] "O if we but knew what we do when we delve or hew -- hack and rack the growing green! Since country is so tender to touch, her being so slender, that like this sleek and seeing ball but a prick will make no eye at all, where we, even where we mean to mend her we end her, when we hew or delve: after-comers cannot guess the beauty been." -Gerard Manley Hopkins [To Consecrate: declare something sacred; devote (something) exclusively to a particular purpose]

Discussion Question 3

(cont.)

There are many ranches and working lands with fines, liens, or notes outstanding that are held by Federal agencies and/or Federal lenders. Private landowners should be able to get some of these debts or fines removed via the donation of a conservation easement. This would allow them to keep the farm and would provide a strong public benefit as well. A variant of this idea has been used extensively in South America when nations defaulted on their debts to the World Bank and instead "repaid" the loan by preserving forests.

I heartily agree! I don't think it would take much to re-tool the program so as to meet modern needs; abolish the gender/marital status rules, up the pay, make the Corps an independent government program as it was originally. Many glowing testimonials can be found from those who served in the CCC during the great depression of the 30s; providing jobs, reforestation and maintaining our natural resources, planting lots of trees (which eat up CO2) and having a fantastic training, learning and working experience for people of all ages..it's a win-win. No reason why this can't be funded, either; Nader's proposal of taxing the biggest polluters (BP comes to mind) something like 0.5% per CO2 amount output (with NO "credits"!) would provide plenty of money to pay a civilian corps. We could also levy a tax on the big banks that practice casino capitalism (Goldman-Sachs comes to mind) equal to the tax we citizens pay for gambling winnings; that would raise plenty!!

Urban families need urban parks, urban trails, scenic highways and pocket parks. The local governments know what the people need and want, but they need help with the funding. How can we raise urban children in central Los Angeles who have never been to the beaches of the Pacific Ocean? Or to the nearby Santa Monica Mountains? They need not only their own central parks (almost none now) but also public transportation to the available recreation 20 or 50 miles away, like the beaches of Santa Monica Bay and the wild state and federal preserves in the Santa Monica Mountains. The U.S. Government can help local governments (both the City and County of Los Angeles, for example) with the funding for recreation access to green space inside the inner city and transportation to recreation at the edge of the city. See what the Santa Monica Mountains Conservancy has accomplished on both of those access issues. Talk to its long time leader Joe Edmiston.

As far as I have seen the concept of corridors first came about 15 years ago or so and was initiated by the Heritage Foundation a subsidiary of the United Nations. I have maps of how they virtually want to make the vast majority of Montana corridors. Mostly No human use. I don't want the United Nations telling me or our country how to use our land. I have seen lots of open space and use it regularly. I have lived in Mt. and currently live in far north east Calif. On the border of Oregon and Nevada.

-Stop subsidizing destructive development projects. A case in point is the Federal Aviation Administration's intention of supplying \$30 million dollars to expand a small private airport by filling in a stream valley of a tributary to Mattawoman Creek, which has been documented as Maryland's most productive Chesapeake Bay spawning and nursery ground for migratory fish. - Enforce Total Maximum Daily Loads of pollutants to improve water quality—otherwise, we will not restore valuable waters like Mattawoman Creek. There are existing tools not exercised, such as requiring National Pollutant Discharge Elimination permits for stormwater to quantitatively reduce loads, and denying new development permits as necessary. -Display leadership: overcome reticence in protecting land over the objections of local officials. We did it in the Smokey Mountains and Grand Teton National Park. Now let's do it for Chesapeake Bay Treasured Landscapes, like Mattawoman Creek, at the heart of the tidal Potomac River Treasured Landscape. Mattawoman is one of the Chesapeake Bay's most productive fish nurseries, yet is threatened from overdevelopment by local officials who will not take the larger view over real estate interests.

ED OUT is an exciting new partnership that uses parks, forests, and refuges as outdoor classrooms to improve learning, enhance fun and learning during the summer, better prepare students for the next school year, and encourage outdoor recreation experiences that help America's youth fight the epidemic of childhood obesity. ED OUT resulted from discussions among Prince William (Virginia) County Schools leadership, senior federal executives and leading national recreation officials at a June 2009 awards program at the U.S. Department of the Interior honoring the school system's role in Monarch Live, a remote learning program highlighting the birth and migration of Monarch butterflies in the Americas. The Prince William County School District has some 80,000 students in grades K-12. It is the second largest, the fastest growing and one of the most technologically advanced school systems in Virginia. The system includes 88 schools – including 55 elementary, 15 middle and 10 high schools – and more than 5,000 teachers. The system is quite diverse in population: White... 39.7%; Hispanic... 24.3%; African American...22.9%; Asian...7.7%; Other...5.3%. ED OUT launched after less than a year's planning during Great Outdoors Month 2010, as nearly 600 students went outdoors on June 4 for education and fun. Students in 4th and 7th grades rotated through learning stations and activities during the day, just as they would during most school days. But the difference was that the instruction was provided by adjunct faculty drawn from NASA and the Forest Service, BLM and the National Wildlife Federation and many more. Science, art and history were presented in ways that tied to the coming year's curriculum – and a new website (www.edout.us) provided even more information on how summer months could be used to combine fun and getting a head start on the next academic year. From learning about light spectrums and wetland mitigation projects to drawing entries for the Junior Duck Stamp Contest and learning about the music of nature, the students were attentive and very engaged. Healthy lunches – with carrots and fruit and juice – provided energy while special water bottles and ample refill opportunities kept the action going even on a hot day with temperatures in the 90's. The day wrapped with a mass swearing in of Junior Forest Rangers followed by fruit popsicles – and lots of smiles. The day utilized one of the closing days of the academic year - after traditional testing and teaching have largely concluded, and a time of significant challenge in most classrooms. The program also helps students understand more about career opportunities involving the Great Outdoors. When fully implemented, ED OUT will offer each child in grades K-11 a day of experiential learning outdoors. The day may involve outdoor activities in and nearby school campuses, including planting gardens, trees and introductions to outdoor fun. In addition, tens of thousands of students will travel to nearby recreation sites, where adjunct faculty will work with classroom teachers to deliver lessons ranging from physical sciences to history to art to forensic science. While in the outdoors, students enjoy a healthy lunch and learn more about good eating practices and the connection between eating and activity levels. This reinforces the school systems efforts beginning in 2007 to revamp school cafeteria menus to emphasize healthier eating habits, a process begun after the school system found itself a regional leader in the percentage of children classified as obese and overweight. Participating student are provided with (1) suggested summer break activities, readings and trips specifically addressing the academic program of the next grade, including suggested family trips and activities, (2) information about nearby summer fun at federal, state and local sites, and (3) special offers from recreation retailers and service providers. A new website, www.edout.us, provides information

and opportunities for students, parents and teachers alike to access the wealth of information about ways to make the outdoors an exciting and relevant year-round classroom. Following its successful June 2010 pilot effort, Prince William County is planning to drastically increase the number of its students invited to participate in ED OUT. Expansion of ED OUT to other school districts across the nation is also underway. Pilot locations are under consideration in the Denver, Chicago and Seattle/Portland metropolitan areas. Prince William County Schools' (PWCS) dynamic superintendent, Dr. Steven Walts, who participated in most of the ED OUT planning and the pilot effort, told the event partners that the day had overcome the challenges of making the final days of the school year quality learning time and proved to the students that great fun and adventure can be found beyond electronic screens – where studies now show American youth spend, on average, 7.5 hours daily.

Ah, you had my support until the last sentence. Government + money = disaster and deficit.

Sounds good to me...as long as it doesn't require my tax dollars to employ and/or a government agency to oversee.

Wouldn't this open the door to countless law suits filed in order to delay any action? Law suits that we, the tax paying citizens of the US, would, ultimately pay for? No thanks.

It is no secret that Oregon and the Intermountain West have a terrible pine beetle problem and fires are well outside the historic norms. Could it be attributable to federal forest policy? E.g., of Oregon's non-reserved federal forest's annual growth, 8% is harvested while 19% is lost to mortality (i.e., left to rot, feed bugs, and fuel fires). The remaining 73% is left as growing stock. NO piece of ground has the ability to add that much growing stock year after year after year. At some point it no longer has the moisture, nutrients, or sunlight necessary to sustain that increasing amount of vegetation. It becomes susceptible to drought, insects, disease, and fire. This is known as 'carrying capacity', a concept that explains why a farmer can not feed a hundred steers on an acre of pasture, why a wildlife biologist can not sustain a 1000 deer on a section of land, or why the gardener does not plant tomatoes 3 inches apart. It is simple biology. This concept is not politically correct and is not one a politician wants to hear. To ignore the concept is to wear blinders or to keep the head in the sand. Until our politicians in both the Executive and Legislative Branches have the political gumption to put politics aside and base federal forest policy on biology, our federal forests will continue to decline. Though this is a biological given, I am not holding my breath. Politics (i.e., gaining power and getting re-elected) will ALWAYS trump biology.

(cont.)

The federal land managing agencies serve a critical role in supplying a diverse range of recreational opportunity to the American public. Recreation is a key multiple use value. The federal agencies should seek to enhance recreational opportunities on lands that they manage. Training for local recreation program managers is essential, especially in the area of developing funding opportunities through private sector and federal grant programs such as the Yamaha OHV Access Initiative GRANT Program or the Recreational Trails Program at the federal/state level. Federal agencies can provide many tools and opportunities for all to enjoy OUR lands. One thing I have seen work well is a federal agency supply dumpsters for trail cleanup while local clubs and local users do the work by volunteering time.

Return to a Multiple Use philosophy. Before the great (?) environmental and preservational movements of the '70s, this worked best. We all shared the land with respect for those who recreated on it and for those who produced commodity resources from it. Commodity production creates wealth. If we don't create our commodity resources, we must import them, exporting our wealth in the process. It seems hard for urban America to grasp that land, whether public or private, is the larder from which we derive all our needs to maintain our quality of life, but this we must understand and respect. The chief obstacle now to Multiple Use is the fragmenting of our public lands into special use areas. The Federal Government should cease being intimidated by vocal minorities and return to a Multiple Use philosophy for the common good. Our political leaders can assist in this by de-politicizing our land management agencies. These are staffed by trained professionals that we have hired to manage our lands. Let them do their jobs. One tool that would help in these regards is to allow no more life-time appointments for Federal District judges. Far too often, with no accountability to hinder them, they follow their own agenda, with little regard to the impact their decisions have on those trying to produce raw materials and on the rural communities affected by their decisions. Another tool would be to rescind the Equal Access to Law consideration for all of the professional protesters who seek to inhibit any further meaningful development of our public lands. Our public land management agencies must pay these court costs out of their own budgets. This seriously erodes their ability to meet their more important obligations. A third tool is to amend the NEPA and ESA laws so that only those appeals of public land management programs by folks who have standing and credibility, and whose appeals have substance, will be considered by the agencies. This would do much to inhibit the myriad of appeals filed by bored college students with nothing better to do on Saturday nights. Finally, with regard to public lands conservation, we need no more. We have National Parks, National Monuments, Wilderness Areas, Wildlife Management Areas, and Areas of Critical Environmental Concern, to name the most common. Enough is enough! It is time we start managing our public lands in a more realistic, responsible, and mature manner, and bring an end to the public land wars of the PAST THREE DECADES. Montana

No we already have this it is called wilderness study area's they need to revert back after 5 years and congress doesn't act.

(cont.)

Federal Government Role – How can we partner with the federal government to make outdoor education programs available to our disadvantaged and at risk youth groups? We have a part-time grant writer and would welcome the opportunity to bridge grants that make these effective programs available to low income schools and organizations.

Impact studies are the only way land, water, and wildlife will remain sustainable. We are ALL special interests when it comes to wanting a voice for how our Federal, Public, and Private lands are put to use. Sadly, money has been a huge factor. That has to stop. The gulf was the victim in that battle. Please continue to have scientists and conservationists maintain a watchful eye over all the lands. Once they are gone....they are gone forever.

Preserved Civil War battlefields are cultural and historic landscapes that serve as a constant reminder of the sacrifices our ancestors endured to make our nation what it is today. These historic landscapes are true American treasures as well as the last tangible links to our country's most tumultuous conflict. Preserved battlefields become outdoor classrooms for today's visitors and those of countless generations to come. They provide environmental benefits, including the protection of watersheds and wildlife habitats. Further, studies have repeatedly found that visitors to preserved battlefields help generate revenue for local communities by spending money on lodging, meals and other travel-related activities. The need to preserve these battlegrounds is immediate ? the Civil War Preservation Trust estimates that 30 acres of highly significant battlefield land are lost to development every day. Timing is especially critical in areas of the country experiencing rapid growth and development pressures. Time is running out and opportunities are dwindling to forever protect these hallowed grounds. With the Civil War Sesquicentennial just around the corner, now is the perfect time to take action to save our nation's treasured Civil War battlegrounds. The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites. The protection of America's remaining Civil War battlefields will leave a legacy of national commitment to preservation and conservation. These lands will be open spaces for the public to enjoy, preserved in their natural and pristine state, allowing visitors to walk in the footsteps of their Civil War ancestors. This experience will be unlike anything they could have read in a book or watched on television about the conflict.

I went to far -- it is a county issue first, a state issue second. Never federal government. This is not a federal issue. I ride places 99%+ of the United States population has never heard of, never seen, never will see and has zero impact on their life. Those who do know and are most impacted are members of my county. This is why it is a county issue first.

I wonder how Rebecca gets into her home without trampling the earth. And what about that home -- it also tramples the earth. Are we to all leave the earth and live on the moon so the earth does not get trampled? I cannot understand why anyone would want the federal government involved in this decision. The closer government (community, county, state) is to the people, the more effective government will be. Each person can have it their way by selecting the community, county, or state for their residence that best represents their stand on land/recreation use.

Discussion Question 3

Written & Online Comments

(cont.)

Let the citizens of their state decide recreation use. The closer government is to the people, the greater it can serve. Citizens in eastern states can decide what recreation needs suit them without enforcing their will on western states. Obama and the federal government with their giant bureaucracy don't belong in this arena. The states created the federal government, not the other way round. Now the creation is greater than the creator. Again, let the citizens of each state decide land/recreation use in their respective states. The federal government's role is foreign affairs and military, not recreation.

By all means this would be a positive step in reconnecting people to Americas Great Outdoors. It is not done nearly enough in my opinion. Most of all current living cultures such as Native Americans and even newly discovered living cultures such as Gladesmen Culture should be portrayed in a positive and uplifting manner. Often nowadays man within a natural landscape is portrayed in a negative manner by many agenda driven entities to suit their myopic narrow set of goals. That breeds hard feelings and contempt towards those entities and their goals. These backlashes can set conservation back years in attaining justifiable goals. Cultural respect and acknowledgement may well be the missing link in connecting Americans to Americas Great Outdoors. Google Gladesmen Culture to find out more.

Federal, Records of Decisions pertaining to National Park Service management plans need to allow adaptive management(am) to be applicable throughout entire ROD's. Currently we are being told am is only applicable to whatever specific topic is near the mention of am in an ROD's text. This situation is preventing folks who are usually diametrically opposed who are wanting to come together on issues from doing so. We are also being told by NPS that the NEPA process causes this. If this is accurate than NEPA should be modified to allow carte blanche use of adaptive management throughout signed ROD's.

Florida and Collier County , Florida in particular is doing a great job of promoting youth hunting, fishing and conservation. At the last minute Collier County actually stopped a plan to turn 2500 acres of conservation land scheduled for only passive use into a hunting area with the help of knowledgeable volunteers, the State wildlife agency and their County Commissioners. It saved the County from having to pay professional USDA hunters to come in and kill feral hogs considered an invasive species there. The whole operation from beginning to end only took a month or so. The Future of Hunting in Florida program is a whopping success with large landowners with large game populations and volunteer hunting mentors for the youth flocking to participate. States and Counties are more appropriate for these type programs though since the Federal government takes years to implement any projects and would inevitably have to overcome HSUS or PETA protests over programs such as these. The other problems would be Federal strings on the money.

Great idea but in these austere economic times it may not be feasible or advisable when so many more necessary programs are suffering for lack of funding. During this difficult economic period of our Nation's history Americas Great Outdoor program should always ask itself prior to funding its ideas "Will our action adversely impact more necessary National programs (e.g. health care, education, social security etc.)?"

Discussion Question 3

(cont.)

I think the 100ft. x 4 mile easement is about 48 acres. One should check and see what 48 acres of land in LaHabra, Ca. is worth. If other property in the vicinity goes for around \$20,000 an acre - the \$1,000,000 fee is reasonable. Union Pacific is a private business that apparently owns this property if I am understanding this correctly. Private property owners rarely give away their land. I feel bad to demote but the Constitution is what it is and serves a very important purpose in America.

I thought NEPA was instituted to improve management in general and provide an avenue for input from citizens. NEPA is a somewhat cumbersome and expensive protocol to work within. Once that process is completed it seems as though NPS or other Federal agencies should have some leeway as to how a plan is implemented based upon research results accrued over nearly a decade. Otherwise why do research when the knowledge gained cannot be applied without a 2-3 year million dollar plus NEPA re-run.

I understand what everyone has said up to comment 7. It is all true but there is another side to this coin. Other tax payers must make up the difference for every tax exemption including a conservation easement. The President may be hearing from many tax payers that do not want to foot the higher bill put on them due to these type easements. He is probably trying to be sensitive to all sides or possibly just believes the government needs every dime it can get because of our wrecked economy. Many amenities available in good economic times are impossible during times such as these.

In a previous comment I made the concern was about living human cultural community members with strong association with their traditional landscapes being accommodated by land managers so as to sustain the old cultures still remaining in America. I believe this would greatly aid in the acceptance of the Great American Outdoor Initiative. Failing to do so will increase opposition and litigation costs of programs, especially when they do not take a Federal actions impact upon cultural resources and cultures into account during the embryonic stages of planning. That is the law and failure to do so will open the door for ESA style lawsuits that supply plaintiffs with a refund at everyone's expense. It is cheaper to do a job correctly the 1st time and have an efficient program.

It is quite accurate to deem this idea as "pretty extreme". No surprise since extremists have seized the opportunity provided here by Mr. Obama to promote many extreme ideas. The bad part is that Obama and his team will use the extreme enviro ideas as a basis to promote these anti-human access policies throughout the Federal agencies. I have actually linked one of the top 5 innovators to a Defenders of Wildlife contractor verifying to my satisfaction that a lot of coordination is going on here. I must admit I wish more of it was going on the other side of the issues. I will commend some very good comments from the OHV community. If nothing else this site is good for identifying the foes. Of course that works both ways. I saw the other day on a different web site a full report on one of the listening sessions associated with this program. They were said to be a sham, mainly providing high officials a speaking platform with little or no opportunity for real public input or interaction from the audience suckered into attending. Thank goodness there were none in my neighborhood since I probably would have gone.

Discussion Question 3

(cont.)

Many very serious albeit very (hidden)subtle problems are associated with the intermingling of environmental priorities within agencies who's name is indicative of a specific priority such as Transportation. A few worth mentioning here are that dollars collected from motorists through Federal gasoline taxes thought to be for improving Transportation are diverted into many projects having nothing to do with improving the efficiency or maintenance of our Nations transportation system and are spent on items such State Scenic Highway Programs which morph as quickly as their proponents can cause it into Federal scenic Byway programs. The sales pitch to sell these programs to an unsuspecting public are all of the freebies that come with the program (e.g. boardwalks, government visitor centers, wildlife underpasses etc. etc.) that contribute not one iota to the efficiency of getting people or goods from point A to point B. In fact these programs prohibit any of the dollars appropriated from motorist contributed tax dollars from even being spent on pre-existing necessary road repairs. If this isn't enough to bring question to programs such as these here is what happened on one Florida highway designated as a National Scenic Byway due the State's own Program Manual. The manual specified that authority over decision making on that segment of the highway was slated to be taken away from local elected officials and transferred to a group mostly comprised of Federal and State land managers along the highway. This was one of the State mandates controlling their program. Luckily in Florida when local elected officials found out 7 or 8 years late that this theft of their authority was imminent they quickly demanded that both the State and Federal designation be removed from the Tamiami Trail in South Florida. Elected officials were totally unaware of the onerous implications of such a nice sounding program they had supported years before. In the end the unimpeachable grassroots opinion was to retain the elected officials control rather than give it to a bunch of unelected folks in a back room called a Corridor Mg't. Entity (CME) with only environmental goals and looking to spend motorist contributed transportation dollars to attain them. Protecting the environment and bio-diversity is worthwhile but the funds to do that should be raised by up front programs rather than programs containing issues that are subtle to the point of being invisible to average citizens much less elected officials. In this particular locale attaining environmental initiatives was set back decades by the exposure of this programs real intentions in my opinion. From my experience with this intermingling of priorities I have witnessed it causing internal conflict at many levels within Departments of Transportation. What I have seen is that most folks go to work in a Tranportation Dept's. to build roads not boardwalks and visitor centers. That is very sad. I don't know how to put a link here but I would suggest participants to google the following topics to gain a better understanding what drives the idea here: The last 2 do not agree with the 1st 3 Agenda 21 Rio Summit The Wildlands Project Freedom 21 Sovereignty International Environmental Perspectives Inc.

(cont.)

One can demote this idea all day long but if the shoe fits the Feds need to wear them. On the other hand local folks with the most at stake must begin demanding exactly what they want in their comments to management plans - no more whining about how it used to be. That means when necessary the agencies must be supplied detailed maps of where desired trails should be located to facilitate hunting, fishing, OHV's, hiking etc. General statements to management plans do not tell agencies what they are looking for. The extremists know exactly how to work the comment system with precise comments demanding EXACTLY what they want and where they want it - LOCALS must do the same. Oh one more thing - don't waste time fighting the junk BS science citations touted by enviros since honest agency folks know it is BS. What the agencies can't do is give you anything you don't ask for specifically in comments because they can't prove you want it if it is not in their legal record of the NEPA process. Your comments are part of that record. We are doing this in Florida and it works. Good Luck.

Sadly but truly these animals are regarded probably as invasive exotics. The habitat they use and consume may be caused to become unsuitable for many native species by the horses. That is probably why the government thinks they are doing the right thing. Penning and auctioning them is better than putting them down - the cheapest option. One might want to consider the glass half full and thank the Feds for not simply killing them and/or turning them into dog food.

So mad over so little. Just so you know - I do not carry a gun on my person and do not possess a concealed weapons permit although one can in Florida. I am ignorant in the sense that I have not allowed the cries of eminent catastrophe on all environmental fronts to totally permeate my entire thought process. I apologize to you and others if you don't appreciate my attempts to bring balance or a different perspective (sometimes facetious) to this site. My belief is that in order to improve the environment it will take support from more than those with an extreme eco-centric viewpoint. Being insensitive to the needs and desires of fellow humans breeds opposition to everything that extreme gaia worshipers desire. Oh by the way the Feds and States have given themselves authority now to declare anything they want to be FERAL. In FL the Florida Fish and Wildlife Conservation Commission's "Invasive Species Working Group" handles that with 8 other State agencies. They have declared wild hogs as feral. They have been here as long as the horses. Fla's. wild hogs are being eradicated by increased hunting opportunity with no size limits and professional trappers that catch them and sell them to hunting leases etc. We have fought the State on this with only minor victories.

This magnificent River is threatened with mining methods that can destroy the wildlife so dependent upon it. The entire area encompassing the Siskiyou National Forest needs to be made into a National Park, at the very least. This is the most bio-diverse region of the entire Pacific Northwest, and its protection must be designated by law. Lets start now! This river is the heart of that region. Protection is long overdue.

Discussion Question 3

Written & Online Comments

(cont.)

America's fisheries are not producing fish and fishing opportunities at a rate that is needed to offset development pressures and human needs. There is an initiative that is already started that has shown it can improve fisheries habitat and is "shovel" ready to get fully to work, the National Fish Habitat Action Plan (NFHAP). This voluntary plan is bringing together broad groups of stakeholders to protect intact, rehabilitate degraded, and improve engineered fisheries habitat. The plan is at the edge of full development and only needs to the Administration to: 1) actively support passage of the National Fish Habitat Conservation Act (current support is on the record, but has not been actively pushing passage); 2) put in place an Executive Order that encourages all Federal agencies to participate in NFHAP; and 3) consider NFHAP needs when proposing budgets for enactment by the Congress. This plan has a broad fish habitat assessment system in development that will provide insights into habitat priorities and allow the measure of success of plan projects. It has an administrative structure ready to go and has a fully science and data backbone. It just needs to be formalized with Congressional action and provide a some federal funding to allow for the operation of the plan and to attract new partner and foundation funding. The time is now for administration action on this plan that is ready to move fisheries habitat forward that will provide new outdoor opportunities for America.

Congress authorized the creation of a National Trails System in 1968. Since then 11 National Scenic Trails and 19 National Historic Trails have been authorized spanning more than 50,000 miles through 49 states. They touch or go through 100 of the metropolitan areas with 50,000 or more people. These trails are managed through innovative public/private partnerships that rely essentially on the contributions of citizen stewards organized by nonprofit trail organizations. These trails involve all of the Federal land managing agencies and numerous State and local park, recreation, and resource agencies. However, after more than 40 years only one of these 30 trails (the Appalachian National Scenic Trail) is fully open for Americans to use, appreciate and enjoy. We need to hasten the work to complete all of these trails for public benefit by providing more operating funding to the Federal agencies that administer and manage them. We also need substantial annual appropriations from the Land & Water Conservation Fund to purchase land from willing sellers to close the many gaps in the National Scenic Trails and protect critical historic, cultural, and natural resources along the National Historic Trails. Finally, we need to support and assist the nonprofit organizations that are recruiting and training the citizen volunteers that build, protect, interpret, and sustain these trails. In short, we need to complete the National Scenic and Historic Trails as corridors that link together the many parks, wildlife refuges, conservation areas, wildernesses, preserves, and historic landmarks into a network of "green infrastructure" that spans across America.

Discussion Question 3

Written & Online Comments

(cont.)

Full, guaranteed annual appropriation of at least \$900 million from the Land & Water Conservation Fund is absolutely essential to enable long-standing Federal projects, such as the 30 Congressionally authorized National Scenic and Historic Trails, to be completed and fully opened for use, enjoyment, and learning by Americans and our visitors from throughout the world. With the great increase in land values since the 1960s, when the Land & Water Conservation Fund was authorized by Congress, the annual appropriation from the Fund should be increased to at least \$3 billion to maintain the buying power that the authorized \$900 million had then. Preservation and restoration of our natural, cultural, and historical resources by local, State, and Federal governments in partnership with private land trusts and other nonprofit organizations is one of the most magnificent manifestations of American democracy and our culture as a Nation. Our investment in preservation and sensitive stewardship of these lands, waters, and resources will ultimately save our Nation from collapse. Parks, trails, wildlife preserves, conservation lands, etc. are not just nice amenities to enhance our communities. Rather they are critical elements of the "green infrastructure" that sustains our lives and our livelihood. The Land & Water Conservation Fund fully funded and assertively and strategically used is one of our most essential tools for sustaining and enhancing our life sustaining "green infrastructure."

Orienteering is a wonderful method for youth and families, and all of us, to become more connected with the outdoors, while learning skills in navigation and problem solving and becoming physically active. In Sweden, about 30 percent of the population has orienteered, and many are avid orienteers. In the United States, perhaps one percent have orienteered at some point in their life, mostly through the military or Scouts. The U.S. government can help by encouraging the use of non-wilderness land for orienteering, where appropriate and within environmental guidelines. Many land use managers are not familiar with the sport and thus are overly cautious in approving permits because of lack of familiarity/understanding. A good start would be for major U.S. land owners such as the Forest Service, BLM, and National Park Service to enter into agreements of understanding with the United States Orienteering Federation that can then be used to facilitate contacts between local orienteering groups and local parks/land areas.

The land can't save itself, it needs our help. When I worked for the Bureau of Land Management I saw the pressures on agency managers to open the lands to development. President Obama can help by directing BLM and the Forest Service to give temporary protection to all federal lands with wilderness character until Congress has decided whether or not they should be permanently designated as wilderness.

The United States has been at the forefront of public lands conservation. Unfortunately, many people who live in urban areas never have a chance to get to the National Parks and Forests. We need to develop a system of urban forests, greenways, parks and trails to enable city dwellers to easily connect with nature. This is where children will learn to value trees, plants and wildlife - in their own backyards. Local governments are so strapped for cash that many are no longer building parks and green space, even though the housing developments continue to be built. Please provide a grants program for urban green infrastructure.

Discussion Question 3

(cont.)

California's Central Valley is identified as one of America's most completely altered eco-regions with the fewest remaining natural landscapes. Remarkably, many of its last natural landscapes are still intact near the city of Sacramento. These include riparian forests, fresh water marshes, vernal pools, wildflower prairies, alkaline prairies, oak woodlands, and chaparral. Sacramento is also one of the most underserved of America's great cities for nearby recreational experiences in natural landscapes. Even its one remaining natural park, the American River Parkway, is threatened because of its shattered economy. This situation presents a great opportunity to save the Central Valley, provide recreation for Sacramento, and stimulate its economy through development of a regional park system similar to the one Golden Gate National Recreational area provides for San Francisco. Habitat 2020 of Sacramento has initiated an effort to do this called the California Heartland Project. It is endorsed by the Environmental Council of Sacramento, Sacramento Urban Creeks Council, Save the American River Parkway Association, California Native Plant Society, Sierra Club, Audubon Society, Save Our Sandhill Cranes, and Friends of the Swainson's Hawk. On behalf of these organizations we urge Federal help to implement this project.

The desire to preserve the Forest, as museums preserve art, is what is driving the Forest agenda and thereby their policies. What is conveniently forgotten is the Forest's original mandate was to manage the forests of this nation for reasonable resource extraction and public access. Environmentalists and their Forest associates, out of their fear of rampant Forest development (which will never happen thanks to protections already in place), have lumped motorized recreation into the drive to stop mining and timber harvest. Reasonable Americans realize that Forest resources are a very important commodity for the betterment of this country, so environmentalists prefer to attack motorized recreation to close roads, as recreation is seen as a luxury that they can make into their poster child for wilderness campaigns. The skewed unsupportable data used to attack motorized recreation make it blatantly obvious that the true agenda is merely to close the Forests to future resource extraction if the strategic needs arise. One look at the volatility in the world today and one can see that that strategic need will be upon us one day and we better not be stuck sitting on our hands!

My suggestion for the organizers of this effort is to choose 20 success stories AND to identify 20 "cases" of concrete environmental problems (usually jurisdictional) as identified in the 20 Listening Sessions. Showcase the success stories. Then have the Obama Administration instruct the relevant departments at the federal level to roll up their sleeves and do their best to solve the problem cases over the next 12-18 months. Then run these solved cases up the flagpole as examples of what the federal government is capable of doing in the area of environmental challenges/opportunities.

I support incentives for the smaller farm product producers. The current subsidy system provides more dollars for the "Goliath" operators. I am not so in favor of regulation because it brings enforcement and I think that is already compromised. Regulation can also be an undue burden on smaller operators forcing them out of business. If there is regulation, the smaller operators need to be "subsidized" to meet those regulations.

Discussion Question 3

(cont.)

In the West, there are millions of acres of wilderness-quality, Bureau of Land Management (BLM) public land, including 6 million acres in Utah; 650,000 acres in Colorado; over 5.5 million acres in Arizona and over 2 million acres in New Mexico. The BLM should provide interim protection to the lands it has already identified as having wilderness quality until Congress makes a decision about wilderness designation, as prescribed in the Federal Land Policy and Management Act of 1976 (FLPMA). In addition, the BLM should conduct a new wilderness inventory to identify additional wilderness-quality lands and offer them interim protection as well.

I believe many government agencies are trying to satisfy the public's need for more nature projects. However, I think the government should empower more people and organizations to steward lands beneficial to the public. For example, the BLM governs hundreds of thousands of acres and has little manpower to improve these lands. "We the People," need to stop relying on the government to create these projects for our children and force the government to give us back our land. "We the People," can decide how best it should serve the public. We do this by land stewarding and land grants for non-profits that benefit our communities. I am tired of seeing the government give more rights to big companies for drilling oil and natural gas, then using public lands for projects that could help our children.

Ban Off Road Vehicles (ORV or OHV) from National Forests near water. These vehicles are only used by a few but they destroy the trails and streams with mud and runoff. These noisy vehicles make quiet enjoyment of the outdoors impossible and should only be allowed in limited areas that do not have ecological significance.

HistoriCorps is an idea already in action. Its purpose is to save special places on public lands by teaming preservation experts with volunteers to work on the restoration of cabins, ranch houses, and other types of buildings on or eligible for the National Register. Participants get to work on historically significant publicly-owned buildings on U.S. Forest Service lands with the purpose of returning them to productive use as rental facilities that can be enjoyed by hikers, equestrians, campers and others. Along the way, participants learn preservation and building trades job skills, get to work in the great outdoors, meet interesting people and have fun while making special places on our public lands more accessible and useful to anyone who wants to experience them. Colorado Preservation, Inc, the U.S. Forest Service and Volunteers for Outdoor Colorado began to pilot this new initiative in the Rocky Mountains in the Fall of 2009 (over one third of Colorado's lands are owned and managed by state and federal agencies). Mandated to preserve the historic resources under their control, our public land managing agencies, like the Forest Service, have core missions that often make it difficult to meet their legal obligation to safeguard our cultural resources. HistoriCorps is a solution to this problem that extends the capacity of our state and federal agencies to preserve historic resources while also reducing the costs, ultimately shouldered by the taxpayers, to get the work done. Although initiated in Colorado, HistoriCorps is an initiative that will work anywhere in the U.S. and with any agency (BLM, DOD, NPS, etc.). You can help by asking your public officials to learn more about HistoriCorps by going to www.historicorps.com and/or contacting Colorado Preservation's HistoriCorp manager, Jonas Landes, at jlandeshistoricorps.org

Replace government subsidy for timber harvesting and building roads for timber companies with a recycling subsidy. Put this money into subsidies for recycling which help localities create jobs and reduce their landfill space. Recycling Paper also makes us more energy independent and saves forests for wildlife and recreation. Deforestation is endangering the Cerulean Warbler and huge amount of forest dwelling animals and plants.

That should be up to the local cities and counties, not the FEDS.

The biggest challenge I am running into is pollution, and specifically a form of pollution that knows no boundaries: CO2 greenhouse gas pollution. You can draw whatever boundaries you want and say "This is a National Park" or "This is a Designated Wilderness Area" but CO2 will still go there and destroy the environment, and do so a rate which is so fast and so expensive to US citizens that any other effort you take Except real CO2 reductions will amount to vacuaous "Greenwashing." For example, environmental economists have done an inventory of the economic value of the Puget Sound environment to its residents and that value ends up being about \$1,000,000 per citizen. But climatologists are saying that our fossil fuel consumption is destroying the planet at a rate of about 1% a year. This means \$10,000 real economic loss per year per citizen of the Puget Sound Region due to CO2 pollution. Compared to about \$100 a year per citizen to get started with Cap and Trade. This means investments in reducing Fossil Fuel Consumption PAYS BACK to each citizen about \$100 in reduced environmental economic damages per each \$1 invested in cleaning up our act! Climatologists say the planet cannot wait any longer! Let's Go! Use the President's EXISTING Authority under sections 115 and 615 of the Clean Air Act and DO IT!

The Shenandoah National Park, Jefferson, George Washington, and Pisgah- Nantahala National Forests preserve Drinking water resources for many, provide recreation for many and preserve many species. I have counted the Cerulean Warbler in Shenandoah National Park which needs large tracts of land to breed or it will get displaced by the Brown-Headed Cowbird. Many species depend on these lands for survival. It would be terrible to let them vanish because of logging.

Isn't there an Association that could do this and provide trend of use, type of use and useful informational items so that no more govt layers are added?

- The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites.
- Protection of America's remaining War Between the States battlefields will leave a lasting legacy of national commitment to preservation and conservation.
- Battlefield preservation in Virginia, Georgia, and Mississippi where many significant sites are located, is also vital for protecting local waterways. Parkland created through battlefield preservation near growing population centers like Nashville, Vicksburg and Atlanta and elsewhere can benefit quality of life for residents.

The local community park, trail or natural open space represents the first and most accessible opportunity for Americans to get outdoors and connect with nature. These local park jurisdictions are the grassroots of great American park endeavors. Without the facilitation and financial support of federal resources, local park providers will continue to struggle as the lowest infrastructure priority, competing with other municipal services for diminishing fiscal resources. For the majority of Americans, their first experiences beyond their backyard (if they have one) will be on an urban trail or in a local park. The urban core has been neglected as a focus for land conservation for decades yet the bulk of humans are exposed to nature in the city as their first steps to recreating in natural landscapes outside the urban area. If this Presidential directive to get Americans outdoors is to be successful, it must help bridge the gap between the urban environments where the bulk of Americans reside and the great outdoors of our national parks, forests and larger landscapes. Financial resources need to pour in to local park jurisdictions where dense populations reside and the first steps to outdoor experiences can be encouraged and enhanced.

In many urban environments (such as my hometown of Los Angeles), the problem is not only a lack of parks but equally importantly a lack of good bicycle connections to those parks that do exist. In an era of limited funding, bicycle infrastructure can be provided at a fraction of the cost of new parks. Not only do family-friendly bikeways improve access to parks, they can serve as recreational facilities in their own right. They improve access to schools and libraries. Unfortunately, they do not make good photo or naming opportunities for elected officials. We need a concerted effort by the federal government to require local governments to make bicycle improvements a required component of receiving federal funding.

I have been attending meetings for the US forest Service as they make plans to close off the roads to our forest. We might be successful in keeping 100 of the 400 miles of road they wish to close in one forest alone. If you want people to "reconnect" with the Great Outdoors, you must give them access. For reasons unclear to me, it seems the FS wants to turn forests into wilderness again. We do not have any place to go and play without fear of arrest or impoundment of our vehicles. Leave the forest roads open. You can not maintain them and leave them for 4 x 4 access. If you close all the roads, we will not have a place to camp anymore, no place to be at one with our beautiful outdoors.

Lets do something positive for the country right now and create the Buffalo Commons National Park in Western Kansas. Less then 4% of our native prairie land remains. Lets conserve this for future generations and to honor our western heritage. This will also offer a opportunity to provide bison a home and open range to graze and be observed in their native environment. This will also provide much needed economic development for this area of the country.

It is usually difficult to call the different agencies to get information regarding practices such as logging or breaches in conservation. For instance, I noticed on Google Maps what appears to have been logging in Olympic National Park and in the Tatoosh Wilderness Areas. I called to enquire about this but referred several times to different agencies and departments. It would be useful for all agencies to be able to access a mainframe data base to see the bigger picture. Nature is not designed with clean lines of demarcation and we should consider thinking in the way nature depends on the whole instead of sections for healthy habitats. I have written letters to National Parks, the Wilderness Society, elected officials and the White House to no direct answer to my question, 'Has there been illegal logging in our National Parks and Wilderness Areas?' Responses have been, "I'm not aware of any breaches," or "It's unlikely this has occurred." For me, that as a concerned citizen that our National Protected Areas are being misused and any loss of the remaining isolated habitats in protected areas should send warning flags to the agencies to investigate. I talked with Conservation Groups and they said it is very difficult to get any action and that as a private citizen I have to physically go to the site, do some surveying and prove that there is a breach. I am stunned that with all our technology we are unable to review the submission made by concerned citizens using this technology. I would like to see an independent entity set up to investigate these reported breaches and that any people illegally degrading protected habitat are made accountable for these breaches. It's time for the different Dept. such as National Forests, National Parks, National Monuments, State Forests, Dept. of Resources, etc. all communicate with each other and make it easier to access databases to ensure the best outcome for our forests, habitats and bio-diversity.

America's NEXT idea: The Old-Growth Forest Network. In the same way that the National Parks were America's BEST idea, the Old-Growth Forest Network is America's NEXT idea. One forest in each county (where forests grow) will be identified to be part of the network. These forests will not be logged and will be allowed to develop old-growth characteristics. They will be places of recreation and education. Most of them will already be public land, federal or state, and will just be identified as part of the network. Did you know that only 0.1% of Eastern Forests have old-growth characteristics? Less than 5% of Western forests? Yet Old Forests are places of beauty and critical habitat. Let's be the first generation to increase the amount of old-growth forests! Have one close to every community.

I'm glad to see President Obama emphasizing history and heritage in this initiative. An easy first step toward these goals is to fully fund the Preserve America and Save America's Treasure historic preservation grant programs. Funds are used to help national historic landmarks become visitor-ready, safe, well-maintained and interesting for all Americans. Mr. Obama should abandon plans to eliminate these programs, as his staff announced last winter. Also, the administration should support plans to strengthen federal law governing the National Park Service's heritage area program, which promotes heritage tourism. It's a simple way to stimulate our economy and get Americans out to visit our irreplaceable historic sites.

The administration needs to seriously consider economic impact of catering to the whims of eco maniacs. I live in a small town in Oregon that's barely alive due to logging and fishing restrictions I have seen first hand how well meaning environmental concerns can get way off balance and kill commerce, with little or no benefit to the eco systems. Now we have Public recreation lands the BLM is considering closing to motorized use. NOT a good idea! it will only add more strain on the economy! and again with little or no benefit to the actual environment. some folks hate motorized recreation. Let me make this clear..... I am opposed to ANY more closure of Public lands to Off Highway use. While I'm at work earning a living (and paying ever increasing taxes) the folks that are voted into office (you and others) are busy making changes that negatively affect my leisure time. THIS Must stop! A small minority of people believe that any motorized enjoyment of nature is wrong. Therefore these people exploit laws to satisfy their agenda. These type of changes should be put to a vote of the people not slammed dunked by lawmakers or railroaded by department heads. GIVE US BACK OUR LAND !

I THINK THE U.S. GOVERNMENT SHOULD START AN AGENCY THAT DEALS STRICTLY WITH ALL ANIMALS (DOMESTIC, WILDLIFE, AND MARINE) AND THE AGENCY WOULD STRICTLY DEAL WITH ANIMAL WELFARE, ALSO AT ZOO'S AQUARIUMS WILDLIFE REFUGES ETC... THE AGENCY WOULD ALSO GO TO SCHOOLS ALL OVER THE U.S. TO SHOW THEM THE IMPORTANCE OF THE ANIMALS AND HOW TO TREAT THEM RIGHT.

Corps programs, such as the California Conservation Corps (CCC), are excellent ways to re-engage youth with nature, teach them employable skills while protecting our heritage, and give them the responsibility of civic duty. I was one of the youth that benefitted from the CCC, and now I have the honor of being a crew supervisor in that same program. Everyday I get to be with urban and suburban youth as they make discoveries in nature for the first time. Most recently, several saw their first bear while we were building a trail near the border of the Siskiyou Wilderness. Corps programs instill so many of the values that we as Americans hope our youth receive. Sadly, however, corps programs are always struggling for funding. We can continue to be arm-chair critics of this recent out-of-touch with nature generation or we can support corps programs that develop these youth into the responsible citizens that are necessary for the perpetuity of our nation.

Creative Map Drawing. I've seen it before and I'm sure it will continue on. Years ago I saw was an original "Blue Print" map, sent directly to me from a congressman's Washington office. This was for a soon to be approved (and was) Wilderness and National Park status. I was horrified in that this wilderness was so close to getting approved and so much of the area could in no way legitimately pass as true wilderness. A visit with the Chief Ranger, the map in hand, a small furry seemed to have been put in place. Congressman's staff member asked me to consult with head person responsible for the mapping. This responsible person's answer to my question of how this map could have been drawn up this way – "Creative Map Drawing". In other words they go for everything they can, real wilderness or not, then give so called concessions to get the bill passed. I was discussed with this. It's flat out lying when a group - any group - knows it does not belong yet they include it away. Do you really think the groups that are for wildlife corridors and wilderness are drawing up 100% accurate maps? If you are you are blinded by your desires for what you want. OH! The group that did the Creative Map Drawing – The Sierra Club!

I fully agree with this. Public school educators should not have to jump through hoops to use Public Lands as an extension of the classroom. No permit should be required and all rules and regulations need to be followed.

I would gladly agree with this having used the PCT in the past for years. Now that I have the age and physical problems that often come with age I can no longer enjoy the trails. I now have to use off-road vehicles and ATV's. In these days of lower funding for recreational needs the government should give "more government recognition" and funding to these types of trails. But more importantly is to realize there is a stronger need by larger user groups than hikers in ATV'ers and Off-roading community. Create separate but very similar multi-use trails to be used and enjoyed in a responsible and environmentally sound way.

Provide federal support for trail associations, without taking them over or mandating how they do things. Federal support could be land management agency collaboration, coordination of training for association managers, coordination of a seasonal volunteer system that combines travel with service learning, or other support that helps the association get their mission accomplished while increasing local ownership of the natural resources.

With no net loss or gain, trade away or sell small land parcels that are not attached to larger federal lands and acquire acreage adjoining the large tracts. Be strategically smart- don't just add acreage but improve corridors and be habitat-savvy. Think ahead 7 generations and consider the sustainability of both the new wildlands and the new private lands: both systems need to be more economically and environmentally sustainable for this pattern to be mutualistic

Discussion Question 3

(cont.)

Connect conservation districts and local school districts through a sustainable, competitive micro-grant program (\$250) for funding environmental education projects in local elementary schools. Conservation districts in both urban and rural areas are local champions for conservation on public and private lands. They are coordination points for many local, state, and federal initiatives and have well developed communication networks. Elementary schools across the nation have audiences eager to learn about the environment and can be the grass roots for a systemic behavior change towards our environment through knowledge and fun experiences with the outdoors.

Each year we see more and more users of the National Trails System, whether it be a through hike, a one or two week trek, a weekend family outing, or day-use. It's imperative that these national treasures get completed, knowing that there will always be issues arise that may find it necessary to relocate segments of the trails. President Johnson's vision for this Trail System in 1968, was a system of trails that crossed this nation, north-to-south, east-to-west, connecting the entire nation. The commitment of the various agencies, along with their non-profit partners, is very evident. Without adequate funding from the government, the task of completing the system will be very difficult.

My idea is quite simple; follow existing laws to protect public and private property, take away corporate personhood and prosecute the officers of those corporations that violate existing laws to the fullest extent, fine those who damage the environment to the maximum allowed. Quit compromising with Republicans on drilling for oil, mining and opening up protected land for development. Protect endangered species, and strengthen the laws protecting them to permanently put lands critical to their survival off limits from development! Do what you promised when you were running for office, pass a strong Global Warming law and ask other governments to join in with the US on these new standards!

Great idea, but I think it needs to be taken a step farther. The federal government should recover land and homes around large urban areas. The houses could then be removed and the land returned back to the way they were before development. This would increase the wilderness areas for those living in major cities and give residents more opportunity to see nature. It would also lessen the massive negative environmental impact large cities have on the land around them. It may result in the removal of a suburb or two, but the environmental gain would be more than worth it.

The people have spoken loud and clear, "No more monument designations!" Take note Mr. Obama, and leave our land alone.

I would like to see an opportunity for serving the US in the National Parks. It could be along the same lines as the Peace Corp, or military service. We have gotten away from having high school / college graduates giving back to their country. Whether it be serving as a naturalist, trail manager, or camp ground manager; students could use their skills and talents for the benefit of the parks and people who visit the parks.

Discussion Question 3

(cont.)

Don't forget full funding for historic preservation! Reconnecting to the great outdoors includes reconnecting to the roots of our history and culture, as well as the roots of natural environment. What makes us fully human includes our physical world but also our historical and cultural values.

Federal lands belong to all citizens but it is the nearby local people who intimately use, know and love their local BLM or NFS lands. It would make sense for policy decisions and implementation to proceed with input from and consensus with local users as well as state fish & game and forestry experts--particularly on decisions that effect land and economies outside the federal land such as access restriction, watershed management, or fire fighting.

Too often have I been in a National Park or other conservation area and noticed that the park ranger's vehicle is polluting the very area they are trying to protect. I would like to see the government leading the way by utilizing the best technology available for their park-based vehicles and watercraft that does not emit fumes, leak oil, or cause unnecessary noise disruption. Apart from the unknown amount of disturbance to the local wildlife, it can be a great nuisance to be casting your fishing line or watching a rare species of bird from your canoe only to be interrupted by the ranger's motorboat passing you at full throttle. I therefore would like to propose that our government sets an example by requiring that their land and water vehicles used in reserves and other conservation areas utilize technology and engage in practices that eliminate or minimize pollution to the area that our tax dollars are paying them to protect.

Farmers need regulations as much as the petroleum industry. Massive mono crops, owed by Goliath will prove to be destructive. Factory size meat corporations the same. The monopolization of farming is making super power giants. They are to big even for their own good. GMO's and chemicals add to the imminent dangers. The industry must be broken apart. Incentives and protections for responsible small farmers is a must. Organic, biodiversity, and sustainability is our only hope for a prosperous future. We need to start living responsibly. We are NOT at the moment.

I think these agencies can be fixed, and oh lordy they need fixed!

More people getting out is a good thing. More cars in the parks, not so great. California is proposing a bill that would put a park fee on our DMV. All CA cars would be pre paid for state parks. I hope if it passes they use some to fund mass transportation into parks. We should also find a way to keep pollution down in National Parks. Limiting personal vehicles, and having a convenient alternative will help in over crowding, and aid in enjoyment.

(cont.)

Some conversations I have had with CA Fish and Game biologists have left me with questions. I have the feeling they are very pro hunting because of hunting revenue. Hunting permits are paying their salaries. I am NOT anti hunting. I am anti hunting of struggling, threatened, and endangered animals. I think hunting should only be done for food, not trophies. I hope with this administration a smarter way of running these agencies will be adapted. From what I understand Missouri is the only state whos funding infrastructure is separate. If this is more a state issue, I would hope for stronger federal protection for threatened species. An audit of the agents and agenesis could help promote a more protective governance.

We need a shake up of the agencies. If you look at who hired who, and under what administration they were hired, you get a better idea of their ideology. It is OK for pro resource abusers to have a voice. I'm hoping in this political climate we promote conservation. We have sweet little time to make headway. Ken Salazar better get his green on, or we are in big trouble!

H.B. 4318 currently in Congress proposes a new conservation corps at the federal level.

Much work has already been done to create national trails that celebrate the parks, wildlife, and historical landmarks that make our country great. We need to continue this work so that the rich history and natural variety that exists in the United States can be appreciated by as many Americans as possible.

I recently attended the President's Great Outdoors listening session in Missoula, Montana. As a professional forester of over 40 years, I appreciate the emphasis on encouraging public use of our public lands; however, I remain dismayed by the lack of attention to the unhealthy nature of much of our national forestlands. Not unlike the BP oil spill that is currently spreading through the gulf waters... insects and disease has been spreading through western forests for over a decade: 18 million acres west-wide, and over 5 million acres in Montana. We are but a perfect storm away from a catastrophic wildfire that will devastate lives and property... yet, Congress and this administration remain ambivalent about this impending calamity. I lay the blame at the feet of Congress because they refuse to give federal land management agencies the financing and manpower they need... and I blame the Administration because they refuse to include adequate funding in their annual budget. Therefore, I recommend the following: 1. Direct the Chief of the United State Forest Service to send a letter to Congress acknowledging that federal land management agencies lack the manpower and financing to manage the threat of catastrophic wildfire near many local western communities. 2. Allow state and local governments to identify national forestland that are at significant risk from wildfire near local communities... and give them the authority to manage that risk through fuels-reduction projects. 3. Set up a fuels-reduction fund—similar to the BP reimbursement fund for the gulf area—adequate to allow state and local governments to address national at-risk forestlands that threaten their communities. I have grown weary of listening to members of Congress—most of which have no national forestland in their districts—refer to our national forests as “national treasures” that need to be managed for future generations... when in fact too many forested acres out west are a “national disgrace” that future generations will be denied beneficial use of. In states like Montana where the forest is largely owned by the US government, it is long past time that federal land management agencies became good and responsible neighbors... and the steps listed above are the best way to move towards that objective.

(cont.)

Multiple Use Management was the catch phrase in the 1960's, when it came to how the federal government managed federal public lands. The whole concept was, and is, a great way to manage public lands. Public lands are critical to the wealth of the nation, as well as local communities whose lifeblood depends on the natural resources on public lands. Range management and forestry have come a long way in the years since their inception and the science is sound and workable, providing the management principles that create the opportunity for multiple use while sustaining and improving the natural resources on our public lands. Unfortunately, so-called environmentalists, politicians and others who have no idea what they are talking about, have actually caused degradation to our public lands by preventing logging and grazing. The Jefferson Fire on the Idaho National Laboratory lands northwest of Idaho Falls Idaho is a classic result of mismanagement. If the 109,000 acres that burned in one day had been grazed, the fuel load would have been much less and the fire would not have been so catastrophic. Granted, high temperatures and strong winds were major contributors to the event but it would not have been so bad if there had been less fuel. I have worked many years in noxious weed control on both private and public rangelands and I understand how they work. Our public lands must be managed properly to sustain them into the future. Let's tell our congressional delegations to support multiple use management and stop the President from doing something really stupid.

Strongly support idea of Civil War Battlefield Preservation as a terrific means of conserving open space, particularly in the highly populated states of Virginia, Maryland and Pennsylvania. This will help preserve and hopefully improve the Chesapeake Bay watershed, which has suffered enormous degradation over the past several years, and help provide opportunities to teach and educate everyone on the incredibly important history of our Civil War, whose 150th anniversary will be upon us next year.

Long overdue. We could have a major nationwide listening effort on this idea alone.

The Government needs to use power of Immanent Domain to stop the encroachment of private businesses upon or adjunct to historical sites. Once businesses are established near historical sites it is too late to save it in its natural sitting. The present and future generations can only learn what a site looked like if the area is in a pristine condition when the historical event occurred. A historical site should make you think about what occurred there and why. Rember what George Santayana said "Those who can not remember the pat are condemned to repeat it. Also what Cicero said "History is the witness that testifies to the passing of time, it illumines reality, vitalizes memory, provides guidance in daily life and brings us tidings of antiquity." I know that when I am at a historical site I always wonder why people did what they did there and how did they come together to make the event that changed what the country looked like for better or worse. Please save our historical sites before they disappear beneath a parking lot or a business.

Discussion Question 3

Written & Online Comments

(cont.)

Nearly all of the National Scenic and Historic Trails within the National Trails System have significant gaps in each of these trails. There are multiple existing opportunities for obtaining properties that are strategically located to close gaps in these trails while providing for the greatest recreational opportunity. Some of these properties are facing immediate threat from rural residential and industrial development. The Nation's economy has been harshly affected by the current recession and the rapid rate of land development in many parts of the country has sharply decreased. With this slowdown in growth comes a rare opportunity to acquire essential parcels for national scenic and historic trails if money is appropriated. Now that the cost of land has decreased, it is a "buyer's market" and landowners have renewed motivation to sell lands for conservation and recreation. Unfortunately, land acquisition funds for these trails are not sufficient to take advantage of these motivated sellers. In the absence of Federal funding, the trail program managers and non-profit organizations work with state and local government land acquisition programs to protect these trails. However, these partnership approach is now constrained by decreases in state and local revenue and sharp cutbacks in state funding for land acquisition. Because of: 1) the USDA Forest Service's and the National Park's great success in spending the Land and Water Conservation appropriations to protect the route of these trails, 2) the willingness of landowners to consider a government offer in today's real estate market, and 3) the real-world limitations on protecting these trails through state and local funded programs, Congress is strongly encouraged to appropriate supplemental land and water conservation funding for the FNST. The window of opportunity is open; the time to protect segments of the national scenic and historic trails is now.

Accountability is a huge problem. We are increasingly being asked to "pay to play" on public lands we already own and it's just about impossible to find out what they do with the money.

All of the federal land management agencies face huge backlogs of deferred maintenance at facilities that have already been built, yet they keep building more. They are responsible for the stewardship of hundreds of millions of acres of land, in some states more than half the land is in federal control, yet they keep acquiring more. Given limited financial resources, the federal government should concentrate on taking care of what they already have, not reach out into telling non-federal landowners what to do. The best way to promote conservation by non-federal landowners is for the federal agencies to set a good example and be a good neighbor.

Discussion Question 3

Written & Online Comments

(cont.)

All of the land management agencies receive appropriated funding from Congress, and a portion of that is for managing recreation. These budgets have gone up steadily, the Forest Service for instance over 60% since 2000. There is plenty of funding to manage recreation. The problem is getting it to the ground. Far too much is sucked up into administrative overhead. The agencies have legal authority to charge for camping in developed campgrounds and for use of specialized and highly developed facilities and they can retain that revenue to manage the site where it was collected. I think those kinds of fees are appropriate. But to say, as one commenter did, "If you can't pay \$3-\$5 to spend a few hours outdoors, then your [sic] not really serious about it" that is so arrogant and elitist it just takes my breath away. There are plenty of people in this country who have to watch their pennies never mind their 5 dollar bills. You would deny them the chance to take a walk in the woods? If the agencies put half as much effort into enforcing the laws about trash, vandalism, and other misuse as they now dedicate to catching people who don't have the right "pass" to be there (Achtung! Papers please!), those problems would go away. In southern California they issue so many "Notices of Non-Compliance" to people without an Adventure Pass that they have had to set up a special website and contract with a private company to collect all the fines. This is a waste of effort that would be much better invested in education and resource protection.

Entrance fees (modest ones) for National Parks, or fees for use of specialized facilities like developed campgrounds, are reasonable and have never been controversial. But charging a fee merely for access to the outdoors was a new idea first tried as a demo program beginning in 1996, during one of the most prosperous economic periods in American history. Fees are not an economic necessity, they are the manifestation of the philosophy that everything is a commodity and should have a price tag. If we want people to love and care for our public lands, they have to experience them. If we want people to engage in healthy active outdoor recreation, it has to be accessible to them. Placing financial barriers in the way works against these worthy and important goals. Several studies have shown that even a small fee deters half of low-income people, and a third of people at all income levels from visiting a National Forest. Yes, managing these lands costs money, and that is why we pay taxes. The Forest Service, and even the National Parks, did not charge access fees through two World Wars or the Great Depression. The federal land management agencies get ever-increasing appropriations from Congress (Forest Service appropriation up over 60% since 2000), but too much of that gets spent on administrative overhead and never makes it to the ground. In regards to the Forest Service for example, the GAO said in 2009, "Regarding its performance, the agency has not always been able to provide Congress and the public with a clear understanding of what its 30,000 employees accomplish with the approximately \$5 billion the agency receives every year." People who want to enjoy some time in the Great Outdoors should not have to buy a pass just to be there.

Discussion Question 3

Written & Online Comments

(cont.)

Many popular areas have used permit systems since the 1970s to limit use to what the resource can support, and I am all in favor of that. However since 1997 almost all of these permits cost money, and I think that is wrong. Also permit systems are being put in place where they are not really needed, just to generate revenue. (Example: Cedar Mesa Utah, less than 10,000 visitors per year - brand new visitor center in the middle of the desert built with permit fee money they couldn't find any other use for since the actual land is managed for primitive recreation which doesn't cost much.) As to BWCA, you failed to mention the \$12 reservation fee to reserve a permit, which is for all practical purposes required because you won't get one without a reservation. The fee started out at \$10 but was raised to \$16 (60%) in 2007. If fees are the tool to be used to limit use, then we can expect the most popular places to soon become affordable only to the wealthy. Is that what we really want our public lands to be? The lands belong to all of us and we should all have reasonable access. Limiting use to what the resource can support is one thing, but using money to determine who gets to go and who doesn't is something else entirely. It's not whether any particular fee is "debilitating" or not, it's the basic idea of selling access to nature. If we want our young people to truly learn to love their public lands, we cannot allow them to be commercialized and privatized just like any other market commodity. It's like the difference between sex for love and sex for money. Do we really want our public lands to be whores?

Consider promoting the idea of fully funding the Historic Preservation Fund, which is the source of Federal support for State and Tribal Historic Preservation Offices, as well as Certified Local Governments and local Historic Preservation Commissions. The HPF supports the National Register and National Historic Landmark programs, the Federal Rehabilitation Tax Credit, and any number of other extremely important historic preservation programs. Currently, the administration has expressed its support for fully funding the Land and Water Conservation Fund, the HPF's larger sister program. Funding the LWCF is important, but the HPF is equally important - and reaches into every single community in the country. Unlike the LWCF, which is largely a land acquisition program, the HPF works to promote and encourage private investment in existing communities, which is environmentally, economically and culturally sustainable.

So far, the Obama administration does not have an amazing track record for environmental protection. Please don't misunderstand, the emphasis on reducing global warming from the Obama administration has been excellent, but the emphasis on protecting endangered species and funding our national parks has been sadly lacking. While community parks, streams, and other natural areas are also very important, fully funding our national parks and fully protecting endangered species on a federal level is one of the most important roles the federal government must fulfill. I hope we will see better protections for our wild places now that preserving nature for future generations is high on the president's agenda.

The BIm in California should all be fired for inventing a non-existent threat in order to shut out the public from it's public lands. Re-open Clear Creek.

Discussion Question 3

Written & Online Comments

(cont.)

The inefficiency of federal bureaucracy is a significant challenge. Disengaged or uninterested land management staff is also a challenge. The problem known as "analysis paralysis" is a major concern. It should be a priority to review the reasons the U.S. Forest Service is having problems writing Forest Plans. More and more land is being placed into protective designations. The increased focus on conservation in these areas lead to restrictive land use plans. In Wilderness for example, there are many restrictions including a group size limit. These group size limitations hurt scouting and other youth programs. There are two key challenges related to funding federal outdoor programs. One problem is that much too much money is being spent on overhead and infrastructure and not on recreational infrastructure. The initiative should find ways to focus agency budget spending on recreational infrastructure, including roads, trails and winter sports areas (including ski areas). The other problem is the lack of funding, especially appropriated funds. The initiative has ambitious goals but we must face the fact that federal budgets aren't going to be significantly increased, and may be decreased in coming years. The initiative must focus on locally based cooperative efforts to accomplish its goals. An excellent example is leveraging the various State off-highway vehicle programs. Many states benefit from millions of dollars made available for OHV trails and snowmobile areas via these "user pay" programs. The initiative should enhance these programs where they exist and encourage their formation in states where they lack an off-highway vehicle program.

The famous San Juan Trout fishery is an irreplaceable public resource that was once estimated to bring as much as \$40m a year to the regional economy. Much of the fishery is now smothered under sediment/silt caused by a combination of a new low-flow plan by the BOR and increased erosion from rampant oil and gas activities on the surrounding BLM lands. Unfortunately, the environmental impact studies for the low-flows were flawed and misleading and the mitigation goals of no net-loss of in-kind aquatic habitat established by the Fish&Wildlife Coordination Act Report (FWCAR) were ignored. The BOR now says that the fishery is not a priority and the BLM denies that any of the damage is caused by oil and gas operations. Nothing meaningful has been done to correct the problems and things are going to get much worse as the flows continue to be cut. This is an opportunity to show that we can protect these priceless places by practicing responsible water and oil/gas development. To properly address the problems on the San Juan river will require that environmental protection of the San Juan Basin lands, the river and the fishery is made a top priority for the BOR and BLM. And, they must seek federal funding to complete the fishery silt transport/deposition and habitat mapping studies necessary to develop long-term mitigation measures to meet the FWCAR goals. That would be a huge win for all including the sportsmen, state, federal agencies, and our unique natural resources.

When we do our taxes there is a box which if checked automatically gives a dollar to the presidential reelection campaign. We spend an obscene amount of money of campaigns and this dollar should go toward National Parks and historic preservation.

Discussion Question 3

All sixth grade students in California spend one week at a local outdoor school to learn about the natural environment in and around their community. The kids get to go on hikes, breathe fresh air, and gaze at the night sky unfettered by city lights. They learn valuable lessons in conservation, wildlife studies, and the joy of outdoor recreation. The federal government should encourage states to create sixth grade outdoor school programs similar to California's. This program works! People here fondly remember their outdoor school experience for the rest of their lives. It builds a love for the outdoors that can only be fostered by real, meaningful experiences in nature. Plus, the outdoor schools help improve the students' Science test scores by giving them hands-on experiences in Science rather than just reading about it in a text book. What better way to learn about science than to go out in nature and experience what science is all about? Here is a link to the study by the American Institute for Research: { Link } The outdoor schools also serve as a main gateway into nature for the community. Even after the students 'graduate' from the outdoor school, they maintain a connection with the school that encourages them to get outside. Many outdoor schools host community events on their campuses, providing activities such as nature walks and picnic lunches. They also foster volunteerism by hosting events on National Public Lands Day. As a result, the outdoor school becomes a major part of getting the community out into nature. President Obama's administration should strongly consider supporting this model on a national level. This generation of youth is experiencing a greater disconnect with nature than any other in our nation's history. Without the help of outdoor schools, our nation's characteristic love of nature may fade, along with our public lands units. Please follow the link to learn more about the benefits of nature to children's health, yet another reason to provide them with outdoor school experiences: { Link }

The proposal for protecting the Siskiyou Crest as a national monument is generating enthusiasm and receiving widespread support on both sides of the state border. Just this week the North Siskiyou Democrats voted unanimously to endorse the campaign. Shortly before that, Northern California's Redwood Group of the Sierra Club did the same. As has been the case with nearly all bold conservation initiatives in the American West, a small contingent of ultra conservatives have been highly vocal in their overheated, fear based rhetoric. Unfortunately, a great deal of misinformation has been spread to the local communities that bears no resemblance to the actual monument proposal. This will pass. We have seen this before. Klamath County vehemently opposed the creation of Crater Lake National Park, as did the local counties in Washington and Idaho oppose the Grand Tetons and Olympic National Parks. Fortunately, this special landscape belongs to all Americans and its fate will be decided in a national context.

No topic is more prevalent in hunting and fishing circles than the problem of access – to both private and public land. Even though some of the good ol’ days of healthy wildlife populations, wild trout fisheries, and unfettered landscapes are still here today, thAT means less and less if the pubic cannot get to them. Recreational access is exponentially becoming more endangered. The seriousness of the situation is obvious to even the casual observer. As population grows, hunting, fishing, and recreating on private land will become rarer and the demand for access on our public lands will explode. The solutions to these conflicts will be difficult and many questions must be answered. How many access points to a national forest and public lands are necessary? Do we pay landowners to allow an easement across the property? What is a public road? If the public cannot access a large parcel of land managed by our state or national entities, should a private landowner be granted that privilege? Should he or she be allowed to benefit commercially, by guiding hunters or selling them access to it? Should the public through government assert public trust property rights? The Forest Service (and other government agencies) need to get far more involved with illegal and unreasonable closures of back country roads leading to public land. Here are some things they, congress, and the administration can do: 1/ Generally mandate Federal Land management agencies the mission of increasing access to boundaries of public land. 2/ The agencies need to step up and be party to litigation when roads historically used by the public are closed by private action. As it is now, the burden of litigation is often placed on private parties. (A \$15 padlock can trigger a \$150,000 lawsuit to correct.) 3/ The Forest Service and other agencies must rigorously research and enforce easements for public access across private land. 4/ Roads on public land should be open to everyone or closed to all - no private access roads on public land. 5/ Provide special funds to assist land management agencies in the construction of short new access roads to public land that will circumvent private land which blocks access. 6/ Use Eminent Domain to acquire access to public land when other options are exhausted. This is important for firefighting as well as access and conservation. Landowners often paint the conflict as an attack on private land rights. Even though I am a proponent of upholding private land rights, it is difficult to side with the landowners in many cases. Public property rights and the public trust doctrine of resource management are equally important. The Forest Service and other agencies need to be the point of the effort to enforce and expand those rights. (This is not a one sided plea for more OHV access. That is a separate issue to be resolved after we get folks ON to the public land.)

By a contract finalized on 6 February 2010 the Department of the Interior, TVA, the State of North Carolina and Swain County, North Carolina agreed to a monetary settlement of the North shore Road Controversy. The agreement calls for the Department of the Interior to pay Swain County \$52 million in lieu of building a road in the Great Smoky Mountains National Park. Of the promised amount, \$12.8 million has been paid. The contract contemplates payment of the balance in installments. Care must be taken to make sure this agreement is not forgotten, or the payments becoming intermittent. The Depart of the Interior should have its budget preparation process programmed to provide of appropriation of an annual installment on this debt.

Hold on a minute. The federal government is cutting programs like crazy and you want them (or trust them) to fund sidewalks so you can get to local parks? Lovely idea, just a bit unrealistic. If a community wants a green space or a sidewalk to get there more easily, they should get it built whether by voting on a bond to pay with public funds, raising funds privately or build it themselves. The feds don't need to take us by the hand like children and fund every local project (thereby also giving them the opportunity to also exert more control locally).

I think states need to take their land back and decisions regarding it's governance and preservation should be made by people who live near that land.

Without dissing the federal gov't, I do believe local politics work better for local populations (those of us who live in an area 24/7 and have to deal with what folks from other areas bring with them and also leave behind). I think if land was left to the states and counties to manage, it would prevent the broad brush approach to management that the fed. gov't tends to apply to different situations in totally diverse parts of the country. Perhaps the fed. gov't could then better focus on making sounder financial decisions?

I would like to suggest that anyone who is making this suggestion come out to Montana and learn what you're talking about. Just drive the 150 miles between Roundup and Malta and see what it's like to go past one town -- Grass Range that has maybe 25 homes there and then not be able to see more than 10 houses in that drive. Look out and realize that in some places for 70-100 miles on either side of the road, there is nothing but open landscape to the casual observer, but actually know that there are ranches producing beef and farmers producing wheat that may have been part of your meal this last week. You don't need to waste government money taking our ranches to "preserve it" -- we've done it for a 100 years already. Years ago, when I was living in Missoula I had a roommate who was working on a masters in wildlife management. She was from New Jersey and her boyfriend was from back east. She was a nice girl but she got her masters by doing a study on what kind of animals are predators of duck eggs. When she told me she was going to do a study like that I asked her what it was going to prove. "Everyone knows what kind of animals eat duck eggs -- racoons, skunks, coyotes... And what will you do with that -- you can't teach ducks to build their nests in different places?" I asked her. I wasn't upset, but I just thought that if you were at a masters level program that you should be working on figuring out something new not just coming up with something that a 5th grader could tell you. Well, she blew out the insides of 144 eggs, filled them with wax and even "duck scent" to make them real. She thought that when the animal bit into the egg, it would leave a tooth mark and from the tooth mark she would know what animal was preying on the nests. See anything wrong with that idea? Think you're going to learn something that most native Montanans who lived on a ranch didn't already know? Well, first of all those of us who know animal behavior know that if you've got a mouth full of wax, you're not going to carefully extract the wax egg from your teeth and gently set it back in the nest. Nope - you're going to break it up and do whatever you can to get rid of the wax. I asked her what her results were after she had carefully planted these nests of fake eggs all over the state in a variety of reseviors (using grant money of course). The answer: She couldn't get any valid results because the wax was too broken up to tell what it was. (My suggestion would have been to look at the tracks of the animals but that evidently didn't occur to her) . But she's now probably one of these idealistic geniuses who want to play in someone else's backyard and take over their ranch and do nothing more productive than sit on a ranger station with a nice salary and benefits to "watch over the buffalo". Her boyfriend's study was about some kind of ferret that he wanted to transplant to Montana. So he went out to MN, spent 3 mos. living in a cabin and cross country skiing and finally came up with 6 little critters to bring out to the Yaak. Well, he got to stay in a beautiful 3 story cabin and outfitted them with radio collars to see how they'd do. Do you think a radio collar slows down a little animal? Well, one by one in short order they were all eaten before spring -- but he still got a masters degree out of it and is now qualified to make decisions like this. I asked her one time if any of the wildlife majors were Native Montanans and she thought about it and said no. It explained everything to me then -- and it explains why we're having this conversation today. People from back east come from places where development is guaranteed -- populations grow and stay there. But in a ranching area, most ranches don't support more than 2 families. They support the family who started it -- and then the one son or daughter who's going to take it over in the next generation. Those people don't get it -- our growth is limited by the ability of a ranch to sustain a family. And as for wanting to come enjoy it -- well come out during hunting season and you can enjoy our

hospitality. I doubt any of them would let strangers onto their land to walk around fairly freely for hours on end. So here are my questions when you're examining feasibility. 1. Exactly how many people do you think are really going to come out here to watch these buffalo? And how long would you actually spend watching these herds? 5 minutes, 10 minutes, maybe 20? My cousin had buffalo on his farm in Illinois for years -- right next to a highway with 10,000 cars a day going by. Less than 10 cars a year ever pulled in to simply watch the buffalo. 2. Did you know that some of the Indian reservations have buffalo herds. Why not offer your money to those tribes to develop and increase their herds. Wouldn't it be nice to give them back the staple of their diet that was taken away when the white man came? I think it'd be cool to see them use a buffalo jump the way they did a couple hundred years ago -- if they wanted to. If the tribes were open to it and were allowed to hunt them and money was given to them to vaccinate them, build fences, even process the meat -- this would become a win/win/win situation. Frankly, I think this is an idea that's used to con people out of their money and then scam our government out of more money. It makes a really cushy job for someone to sit on a foundation, pull down a good salary and benefits and work people up into a lather about a romantic idea of buffalo running on the plains. But if you took those same people out to a buffalo herd, I doubt they'd stay entertained for more than half an hour -- and maybe 3-4 hours for the truly hardcore -- provided they were sitting on the back of their camper, or maybe hiking on a groomed trail looking at some of the great scenery in Yellowstone Park. You can't justify destroying an entire county or two for that.

IN the U.S.A., there NEEDS to be a new Law that states that ALL businesses, restaurants, public and private events such as free music concerts, or and recreational event, or business event.. every movie theater, every place in America... MUST provide recycling.. and they MUST actually recycle plastic bottles, cans and paper. The build-up of plastic in the ocean is appalling. I am shocked and slightly disgusted to see that I have to actually type this idea out. My government should be thinking of these ideas. That is what they get the big bucks for... right? And don't complain about your paychecks. I am certain they make way more than me. I'd be happy to trade my income with theirs anyday. That is one of many easy ideas to make the nation better. Keep track of all the ideas I post. Because it is about to get interesting.

Many ranchers in our area of Colorado have protected their private land with conservation easements, but they are still dependent on grazing permits on BLM and US Forest Service land to produce food and to make a living. If the federal government wants to protect productive agricultural lands, they also need to support the continued use of federal lands for livestock grazing. The two issues are connected. There are ranchers in the region who are concerned that if federal grazing leases are further curtailed or eliminated, they will not be able to continue to make a living. These landowners are reluctant to place conservation easements on their land because of this fear of losing their grazing permits.

A couple thoughts come to mind some of these thoughts may have been mentioned in one manner or another... • Education and Re education - I believe the future of conservation will rely within the will of the people, but unfortunately large aspects of our society are disconnected from the land value of open space/wilderness. There needs to be constant/consistent reminders about the positive values of land/open space/wilderness. People need to understand the linkage between riparian buffers and water quality. I would think that the government could partner with the talent of colleges and university programs to educate the masses. There needs to be a more organized/aggressive effort to encourage people to embrace the outdoors and to support the land/sustainability of the land. • Government organizations/restructuring/promoting cohesiveness – I think there should be some heart to heart discussion about creating teamwork/vision between the Forest Service, the Park Services, the Land Management Bureau, and Fish and Wildlife Services. If there is going to be a national dialogue about conservation in America, the individuals within these departments need to be willing to work together. It seems that the visions of the Forest Service could sometimes go against visions of the Fish and Wildlife Services. One groups “vision/role” could hamper/take away from another departments. If these groups are unable to work together in a fruitful manner, why have these discussions? • Continue to Reward individuals/companies who choose easements. We face the reality that in order to encourage conservation - the private landowner plays an enormous role. I think that greater opportunities/creative economic & tax incentives should be given for small farmers, companies, individuals willing to put their land into an easement. With this said, I believe the government should make sure that organizations caring for easements meet national/state regulations. I would even suggest that open space easements should be encouraged within urbanized regions/near wilderness & national/state parks. Easements provide a great opportunity to buffer between open space and developed regions. • I would encourage the president to expand the national parks and designated wilderness areas. • Eco regionalism and wilderness corridors should be a priority within the focus of conservation/wilderness expansion. Within this topic, I would even suggest finding ways to create conservation routes to link different areas nationally. This will require compromise and willingness to work together. If government organizations are willing to work together, if easements are encouraged, if there are aggressive education efforts, and a variety of organizations like The Nature Conservancy can assist with data...I think there can be great progress towards conservation within America.

(cont.)

Early in the 20th century, Congress recognized that setting aside federal lands from settlement, removed a large chunk of natural resources from private economic development. It also established boundaries on adjacent communities so that they could not grow. This affected tax revenues to support basic services like schools and roads. Consequently, local Counties were given a 25% share of the revenues from federal land use. When timber harvest levels dropped so precipitously following the Pacific Northwest Forest Plan (n. spotted owl,) { Link } so did money to sustain local schools and roads. The Secure Schools and Communities Self Determination Act fiunding goes to backfill that loss. This sunsets soon unless reauthorized. I know our road department budget will be halved. Money will go to maintain roads where populations are concentrated, not for roads to access federal lands. Maintenance/access will soon become a problem and will impact communities where federal staff live.

Federal Land Planning can't just be about landscapes, trees, critters and watershed health. It must consider the local human context of the communities that surround federal land. This is required under NEPA and was highlighted as part of the recent Consolidated Salmon Cases (Wanger.) I recently did a statistical analysis of the impact of state and federal regulation and management policies on the welfare of residents in my county. There is a direct correlation between major federal land managenet decisions and the official statistical increase in poverty, unemployment and the dramatic downward trend of the well-being of our residents during the past 20 years. { Link } Many rural communities and Counties continue to have intimate social and economic dependencies on the continued use of federal lands. Logging, grazing and mining are important to the vitality of neighboring communities. The Forests must coordinate with County governments. They are not islands unto themselves.

I like your idea for promoting managed land use with real outdoor careers. The problem is that what the government promises it refuses to do for political reasons. Look at Anwar - bought to provide the country with oil and other resources. Those activities are supported by the people (both indigenous and new arrivals) yet the federal government won't allow the use for the purpose the land was bought. This is true in CO, WY and other states. Look at the promise of water to the farmers in CA - cut off for a guppy they don't even know if it's a native fish. Look at the 80 mile stretch of about 6800 acres along the AZ border that's supposed to be federal land for camping, hiking and vacations. It's posted with something like: enter at your own risk bandits/drug gangs control the area. You cannot believe in the promises of the federal government. And it's alot harder to take the land back from the federal government than from a state government. The best way to conserve land is through Nature's Conservancy. The land is privately held and cared for. It's traded and used to encourage habitat and common usage. Federal acquisition is not a good idea.

(cont.)

If you really paid attention to the gulf oil spill you'd know it wasn't the lack of regulation that was the problem. It was the combination of being required to use known bad government supplied current information and regulators ignoring that regulation sign-off reviews are not paper in an office. Both BP and THE GOVERNMENT were/are equally at fault. Oh, and sign-off was by an Obama appointee not a Bush one. All lands that are open to the public should be owned/operated by the states and local communities, or subcontract operation to private parties, NOT the over-bearing-it's-good-for-you federal government. Look at the misery the federal land management is causing in many of the western states. If the federal government had it's hooks into proportionately as much land in the east and far west, this new expansion would be quashed summarily.

The federal government needs to be reminded of Constitutional limitations as do the people of this country. The federal government has no allowable Constitutional role in education. In fact, since the Dept of Education has been involved, education has gone downhill. A recent article pointed out that students of the early 60s had 40,000 words they could use and understand while the graduates of the 90s only had 24,000 that they could recognize. Don't even mention math..... And, ethically <10% thought it was OK to cheat and lie for promotion in the 60s and at the end of the 90s >75% thought it was OK. If the federal government didn't suck up all the financing from states (take to give back for social engineering reasons) we could locally manage our lands and get our kids outside. Oh, kids outside - unplug, open the door and say "out". You'd be amazed at the great activities kids can come up with when left to their own imagination no matter where they live.

This sounds as though you are part of an organization, if not the government, promoting land management; Sierra Club maybe. Kind of like the revised "Clean Water Act" that removes the word "navigable" from the waters the federal government controls and opens 85% of the US land mass to Federal government control, which = bye bye private property use. That word is the only reason the federal government has not already taken that control. The word navigable was purposely put into the original law so the federal government could not take that control. While your ideas and presentation sounds good, you need to take it to the private sector, perhaps the Nature Conservancy, to incorporate what you propose. You cannot trust the federal government and the political pendulum to support this proposal in perpetuity. Nor can you expect them to follow their own rules of access and maintenance as we've seen time and again. States working together with private organizations would accomplish more, and more equitably, than getting the federal government to do this. When you deal with a state or local community, you deal with the people who care most about the environment in which they specifically live. Those people are more likely to personally want to meet the goals you suggest.

(cont.)

We have two proposals for national monuments in my district - Siskiyou Crest and expanded Cascade Siskiyou. My constituents are concerned that the President could wake up tomorrow and unilaterally create these monuments. The People would have no opportunity for input. The County held hearings where hundreds of people came to speak on the monuments. The people overwhelmingly do not want them! { Link } We are tired of having land set aside and "preserved" by the federal government.

Our nation's heritage of public lands is a national treasure. Ample funding to acquire and protect key inholdings and expansion areas throughout our national parks, forests, trails, refuges, wilderness and BLM areas as well as grant funding for state and local parks is necessary to protect the integrity of these special places. Funding for this purpose comes from the Land and Water Conservation Fund and has been low and inconsistent for many years. The solution is full and dedicated funding of the Land and Water Conservation Fund. This will ensure that Americans will have greater opportunities to enjoy outdoor recreation, wildlife, natural settings, and historical and cultural sites. Consistent and reliable full funding of at least \$900 million annually, as authorized by Congress, would fulfill the goals of the program and protect the American outdoors for future generations.

Education is not the realm of the federal government.

The Federal Government should have no role in education whatsoever!

We MUST have full funding to succeed in preserving the structures and sites of the past.

Historic preservation has consistently not just been a "giveaway" program. It has sought to provide matching funds where needed, often \$2 or \$3 (if not more) for every dollar provided in grant funds. The HPF should be funded at \$150 million, and local communities and NGOs will add many hundreds of millions in private funds to restore nationally important landmarks. This has worked successfully with the Preserve America and Save America's Treasures programs, and would enable HPF to be even more successful than it's been in the past. I've been disappointed in the Obama Administration's level of support for preservation, and this is one place they can step up. With HPF funds originating from oil leases, and the mess BP is making of our country, Mr. Obama should see this is a consolation prize for our nation's communities.

point is an all too common problem. His is only one example of the federal government closing trails and areas despite the presence of organized maintenance efforts. There have also been numerous instances of the federal government blocking these efforts, often due to the onerous requirements placed by the courts and those higher up the chain of command in the executive branch, (and not just the current one) who are often completely out of touch with reality on the ground. In principal, I support the idea, but without significant changes, there can't be anything resembling a partnership.

Just like the rest of our government, the NPS HAS NO MONEY. I have borne witness to many items in disrepair in several of our national parks. I would also argue, however, that many of these items may not really be necessary to the park. Obviously, certain infrastructure has to be provided, but it should be as minimal as possible. If we really think we must have elaborate, climate controlled visitor centers at every attraction, then perhaps concessionaires should be considered as a possible alternative. Additionally, a huge step in cost reduction would be to eliminate some of the more ridiculous federal contracting requirements, such as requiring them to be minority/female owned. Quite often, the most cost effective means of addressing things are eliminating by this and other requirements. Providing an opportunity for individuals and organizations to volunteer their time to help complete repairs and improvements would also be helpful. As it stands now, this can be difficult at best. I am part of an organization that has repeatedly offered to repair a forest road on our time and on our expense. Unfortunately, due to certain regulations the USFS has been unable to allow it, even though it is desperately needed and will likely not otherwise be accomplished. I can only imagine how much worse it is within the carefully managed boundaries of a national park.

This is a fantastic idea and one that is long over due in being pursued!

If land in the Mojave Desert of California, Nevada or Utah is to be used for solar or wind power development, let it take place on already degraded land (not on land that is relatively undisturbed) and near by the urban/suburban areas that could benefit from its development.

Federal Agencies like the National Park Service, US Fish and Wildlife Service, Forest Service, BLM, should be strongly encouraged, and I stress the point-strongly encouraged-to make sure they are working with, at a minimum, High School level after School Nature Clubs. Each unit could make presentations to a number of schools over the course of a school year, presenting information on the units natural resources and showing them the opportunities available for hiking, camping, birding, etc. It might even work better at the middle school level?

I agree totally with this assessment. I worked many years in the longleaf habitat. One caution. In federal land longleaf management might be made into policy. On private and state owned land the role of government stops at encouraging owners to change, not forcing them.

Discussion Question 3

(cont.)

If there is one thing we need, its updated/fixed/repared infrastucture to our parks, sanctuaries, wildlife refuges, forests, etc. Tweak the old program as many suggest, and lets get to work in our national (and state and local - don't forget about state agencies and urban park systems - where the need is arguably even higher) treasures.

Preservation of our Country's history should be a priority of any administration. Sustaining our nationals parks and perserving historically sensitive areas that are not your protected should be a paramount goal. While they are many short-term gains made through these actions, they pale in comparison to the long-term preservation of our Country's history for our children and children's children. We owe to those who came before us and those who will carry-on the idea America as a beacon of light.

The federal government used to use funds from oil revenues from drilling on federal lands to buy and protect lands for conservation and recreation. The was stopped by Republicans in Congress and the WhiteHouse- even though it maintained a very conservative principal. If we are taking resources from our future generations, we should preserve something for them in return. The writer is correct that parklands do not have adequate funding. This should be corrected by directing more federal funds to the parks.

These are federal lands and should be managed for best use for the country, even though the local yokels may object to restrictions on what they consider their own private backyard.

I agree, The world was a different place in 1933, the cost/benefit of a similar federal-sponsored program today would simply not be advantageous. It would need to be very different if started today. What-if... in place of student loans and federal grants, CCC-type work could be credited toward University tuition or some 'time served'. There are plenty of federal expenses that could be paid through some extra labor. This type of program might also be beneficial to employers to filter through applicants. I for one would be more interested in hiring college grads who has worked in a group trying to achieve a goal vs. one that it great at video games.

I am for multi-use, but not for multi-use of every inch of public land. Certainly we do not want boats in swimming areas or ORVs in playgrounds. Agencies should provide a diversity of opportunities by varying access limitations by area and types of activity. A diversified approach to management policy can provide something for everyone. The demographics of an area - along with available inventory- should provide the legal basis for access limitations and recreational zoning.

The Historic Preservation Fund should be fully funded at \$150 million. In addition, the President's proposal to eliminate funding for Save America's Treasures and Preserve America should be tossed out. These are the only two federal bricks and mortar preservation programs in existance. They are very effective in leveraging federal money to create jobs, preserve historic resources, and support local economies over the long-term through cultural tourism and the revitalization of traditional communities and business districts.

Discussion Question 3

(cont.)

The Wilderness Act of 1964 is a wonderful tool for people to use to protect their very special places for them to enjoy today and for our children to enjoy tomorrow. President Obama signed the Omnibus Public Lands Management Act to protect 2.1 million acres across nine states and helped citizens to save wilderness for them to hike, hunt, fish, and enjoy America's Great Outdoors. More can and should be done. The President can ask land managing agencies for their wilderness recommendations, and pass those ideas along to Congress to act. Acting expeditiously will help stem the tide of loss -- 6,000 acres a day of open space disappears, according to Secretary Salazar. We need to pass along the gift of wilderness to future generations.

Tom, You are so right! The idea of preservation by removing the ability to access it is insane. When can we make the government realize the benefits of giving people the able to access more area is better than having more people in a smaller area?

Check out what the Bureau of Land Management has done to our supposed public lands. They were mandated to protect wild horses and they are demolishing them in favor of cattle. Our public lands are full of toxic mines that compromise our underground water systems. The land is leased out so cheaply that cattle ranchers and miners use our land instead of their own. In the meantime, despite laws already on the books, the BLM cruelly rounds up the horses by helicopter, running some until they drop--all at the taxpayers expense. The entire BLM should be closed.

Under Section 319 of the Clean Water Act, states have access to Clean Water State Revolving Funds (CWSRF's) that may be used to upgrade local water systems but also to reduce nonpoint source (NPS) pollution. Low-interest loans are available to local governments, water systems, and qualified nonprofit borrowers such as land trusts. In some cases there have been 0% loans, and in other cases state agencies have obligations to provide "additionally subsidized" loans; this means that some portion of the loan is, in effect, a grant. For example, in Maryland loan applicants "undertaking an eligible non-point source, green infrastructure, water or energy efficiency improvement or environmental innovation project that does not have a dedicated source of revenue, such as a user charge system to repay a loan are eligible to receive up to 50% of the project costs as grant." (MDE) In other states, the rules may be different (?) Data on this is hard to come by, but it would appear that very little of the CWSRF funds are being spent on land conservation and restoration projects to reduce or prevent NPS pollution. On the front end, private entities, such as land trusts and watershed organizations, do not receive a formal mail solicitation to apply for CWSRF loans - as local governments do. In Maryland a few such loan transactions have been successfully completed, helping to protect the waters of the Chesapeake Bay and restore wildlife habitat lands, but such projects are little known. State agencies need to hear from land trusts and other conservation groups who can bring project proposals to their doors. We need to demonstrate demand for NPS project funding, shine a light on this resource, sit down with the agencies that have the Section 319 money, and work out some land conservation deals.

(cont.)

We as Americans need to preserve Civil War Battlefields. It is important that future generations know about the struggle and the horrible cost of this war. They need to know that people of this time held their beliefs so high that they fought in war to defend them. I believe that most Americans don't know their own Nation's history. This is a very sad thing, we as Americans come from a long line of hardworking pioneers and trail-blazers. Some of these people were the first Americans to go somewhere or to accomplish something. Think of Lewis & Clark, Daniel Boone, Jedidiah Smith, and Samuel Morse. How can we know as a country where we are going if we don't know where we've been? We need to know the past in order to understand the future.

Our Galveston Bay Area Master Naturalist volunteers give thousands of hours towards protecting our natural resources, improving our environment, and educating our local children, and we volunteer with other like-minded environmental groups, such as Audubon, Galveston Bay Foundation, local nature centers, nesting sea turtle beach patrols, and much more. President Obama, because you asked, one of your goals should be the establishment of more Master Naturalist groups, who can help manage and conserve state and federal public lands everywhere.

Close all the tax loopholes on all companies that extract fossil fuels and logging companies and use a healthy portion of the money (say 1/3rd which could be billions of dollars) to help fund the national parks, hire more rangers and hire workers to restore areas degraded by years of neglect due to being underfunded. Then begin imposing fees on oil, gas, coal and logging companies. Charge by the acre and by the amount of damage to the environment their projects commit. Call it a "destruction of the environment fee" and then use the money to restore damaged habitat and forests, to hire workers to restore those areas and to buy land that will then become permanently protected with a special emphasis on buying land near national parks and then turning that land into NP land. This will accomplish many things. 1) It will stimulate the economy by bringing money into the system we do not have now and by creating thousands of jobs. 2) It will restore millions of acres lost to development and ruined over the years by these companies. 3) It will make energy companies think twice before destroying a pristine forests or the habitat of a threatened species knowing they will have to pay an increased fee to do so. They will instead look for areas and ways to extract their product in a more environmentally responsible manner. 4) It will create more interest in our National Parks and forests. As parks become bigger and more diverse with the money gained from these fees more and more people will want to visit them. This in turn will bring even more money into the park system which will create even more jobs and better maintained parks and forests. Some on here will complain that this will cause companies to go elsewhere but that is ridiculous. These companies are making over ONE HUNDRED BILLION DOLLARS IN PROFITS EVERY YEAR and they are destroying our environment and causing many animal species to go on watch lists due to extinction dangers yet they get off with only minimal fees placed upon them and way too many tax loopholes. They are as greedy as any other company and they will go nowhere because there is a lot of money to be made here. They have been destroying our environment and profiting from it for too long, it is about time they started to pay their fair share for the destruction and death they cause.

(cont.)

Do you have nothing better to do than bash everyone's ideas on how to conserve land and promote a greater bio diversity of wildlife? The only ideas you support are ones that either kill animals or destroy our public lands. Here is an idea, since you are so concerned how about putting in an idea of your own. Try not to include the killing of Buffalo (what is it you have against buffalo anyway?) and other endangered species please. I support any conservation of public lands and I would love to visit another national park and having never been to Kansas I can think of no better way to get me there than to preserve the 300,000 acres and repopulate it with wild buffalo, elk, deer and grizzlies!

I 100% support giving national parks and forests more money but I am not sure giving more money to the Dept. of the Interior will do that. As we saw the dept. in the Bush years and even now with Obama the Dept. of the Interior has been more concerned with increasing oil, coal and gas production, expanding logging, building highways and roads and dams than protecting national parks and forests and the wildlife that calls them home. Much like the MMS, BLM and Wildlife services the Dept. of the Interior has become anything but the watchdog for open space and wildlife that it is supposed to be. While I fully support the idea of more money to parks, forests and wildlife unless I were given some assurances that the money would indeed go to national parks, forests and wildlife conservation measures instead of to some highway project or oil drilling scheme I cannot support this idea.

I suggested it before but I will say it again. Close all the tax loopholes for big oil and coal and impose an extra tax on corporations that destroy our environment with the revenue to go to funding national parks, public lands and outdoors education programs for children.

(cont.)

I disagree! For too long America has put economic development first and foremost and what has it gotten us? We have more oil drilling, coal mining and gas extraction than ever before yet prices remain high and corporations scream for more and more access to public lands and wilderness areas everyday despite the fact hundreds of wells lie capped since the recession. Millions of homes lie abandoned or foreclosed on yet developers want more and more public lands everyday. Pristine forest is cut and roadless areas are developed on so resorts can be built for millionaires. Who does this benefit? No one except the developer and the rich who can afford to stay there. Even with the huge push for development of all kinds the last 8 years under Bush we see huge jobless numbers and more and more people becoming homeless everyday. I know what the duties of the BLM are so I do not need a history lesson from you thanks. I also know that the BLM totally ignores existing laws to grant access to our lands and that benefits very few while harming many and completely destroying the ecosystem, biodiversity and beauty the country once had. Many animal species are down to their last 1 or 2% of their range and many, many more are either threatened or endangered of becoming extinct yet time and time again the BLM ignores scientists' recommendations and gives the land away. You talk about responsibility but does that sound like responsibility to you? Corporations have more access to our lands than ever before and yet we are in the midst of what truly is a depression, a quickly dwindling middle class, record numbers of homeless, near record numbers of jobless, deflating wages, increasing energy costs, etc. etc. so how exactly are we prospering now that we have put economic development so high and preservation of land and wildlife so low? Looking at your voting record I can plainly see you are no fan of nature, wildlife or the preservation of either so I am not surprised by your comments but the least you could do is provide a valid argument.

Much like the MMS the BLM has become a corrupt organization. They regularly give away public lands and federal forest land for pennies on the dollar and do very little to preserve the land they are supposed to protect. Like the MMS the government needs to gut the BLM and form a branch of government run by scientists, conservationists and environmentalists that will put animals and plant species, forests, streams, rivers and lakes first and economic development 2nd.

The federal government should NOT make new acquisitions, new designations, or develop new programs unless and until it provides acceptable stewardship for its current holdings. Maintenance backlogs are visibly apparent in many, if not most federal land units. Campgrounds, trails, and other facilities that are closed for lack of maintenance funding certainly do not help in the goal of getting Americans outdoors. Lack of acceptable levels of conservation stewardship in federally-owned forests is resulting in overcrowded stands where disease and insect infestation become prevalent, fuel loads become intolerably high, resulting in dead/dying forests that explode into conflagrations with a single lightning strike, poorly extinguished campfire, a carelessly discarded cigarette, or even a spark from a muffler or train car wheel.

Discussion Question 3

(cont.)

There are many counties around the nation where federal government land ownership is a significant factor for the county general fund and budgeting. I live in a county where 62% of the land is held in various federal units, primarily national park and national forest. The federal government does not pay property taxes for the lands it owns. Instead, it makes a payment in lieu of taxes (PILT), which is intended to at least partially make up the difference. Unfortunately, PILT has been fully funded on only one occasion since its inception, to the best of my knowledge. To make matters worse, PILT payments were several weeks late this year, with only a short announcement on the Department of Interior's website that failed to provide a reasonable explanation for the delay. This required considerable consternation and financial difficulties for the county where I live, and I'm sure that was repeated in many other counties. What gets set aside when PILT isn't fully funded, or doesn't arrive on time? Educational services, particularly the outdoor "frills" that AGO is touting sits at the top of that list. Maintenance for county trails and parks is close behind. I've personally made up some of the difference by going out with John (Deere), me, myself, and I to mow along a local trail because the county had to take their mower and employee time off the plate because PIT did not arrive as scheduled. So, full on-time payment of PILT at a rate matching the county tax rate for similarly classed land use is necessary before the federal government acquires more land, makes new designations, or develops new programs. I don't get to have a meaningful decision as to how much I am going to pay for my property taxes this year, or when I get around to sending it in. Why should the federal government be allowed to behave less responsibly than I am required to?

Whether it be the larger, more devastating wildfires, the surge in beetle populations or drought, just to name a few, our public lands, forests, national parks and our wildlife are being ravaged by climate change/global warming. Anyone with a brain can see that climate change/global warming is happening now and is getting worse every year we do nothing about it. Do something now or pretty soon there will be no nature left to connect with and pretty soon after that there will be no human population left to worry about!

While I am all for new and stricter regulations protecting our public lands how about enforcing the laws we do have. The MMS, BLM, US Fish and Wildlife Service and in some cases the EPA have been ignoring existing laws for years. As a result our public lands have been ravaged, given away to energy companies, loggers and developers. Animal species have suffered huge losses, plains have been bulldozed, forests have been clear cut, rivers and streams have become polluted or dammed up and access has been taken away from the public no matter what type of outdoor activity you enjoy. If current organizations cannot handle or enforce the laws now in the books then create a new one that will. Our public lands are there not only for people who enjoy nature and the outdoors or the animal species that call them home but for the entire country because a country without a healthy ecosystem is a country with a healthy anything and they are not for the profit of a few people or a few corporations.

Discussion Question 3

(cont.)

With the Gulf disaster and the consequences sure to follow in form of greater regulations (much needed I might add) some companies are already turning to oil shale as an alternative to off shore drilling. Oil Shale extraction is among the most environmentally destructive forms of extracton, right up there with mountain top removal mining and the tar sands. Large public land areas in Montana, North Dakota and Texas could be lost forever if oil shale production is approved and millions of acres of natural beauty will be destroyed along with the wildlife that lives there. This is also a costly way of production to the oil companies and no matter how much crude they pull from these areas it will only bring a couple pennies of relief at the pump if that. If we are to reconnect to nature and the outdoors there needs to be nature and outdoors left to connect to. Restrict areas to shale production and make the areas that are opened so costly (base the cost on actual loses in habitat and beauty) that companies will think long and hard before proceeding.

We enjoy spending time in our great outdoors with our RV trailer. However, the variety of websites and terminology used in researching and making reservations has been cumbersome. We need a uniform style of website and reservation system, ideally for all campgrounds: city, county, state and federal. At least all the federal sites should be consistent in the website signup procedure. This same concern applies to other outdoor opportunities as well, such as hiking trails. With our current technology available, we could significantly improve our "advertising" and communication to outdoor connection opportunities.

Discussion Question 3

(cont.)

Some of the worst devastation in this country (and others) is caused by our insatiable appetite for energy. Even when we talk about "green" energy, we make it wasteful. We want to generate power in one part of the country, then spend millions to construct transmission lines across our public and private lands which kill untold numbers of birds (including hundreds of golden eagles), use vast amounts of fossil fuels to maintain the lines with helicopters and vehicles, require thousands of miles of new roads to get to the lines to maintain them, which results in water quality issues and fisheries degradation. All for transmission lines which lose electricity during transmission and don't generate anything. How green is that? We need to: 1. insist that every home has a solar panel or two built right into it or added to it. We all seem to have the money to afford dishwashers, air conditioners, clothes dryers, big screen tvs - we can afford a solar panel or two that will eventually pay for itself. Something our tv will never do! And there is virtually NO harmful environmental effects to solar panels on a home. No co2, no dead wildlife, no emissions of any kind, no moving parts, no habitat degradation, no excuses. 2. require power generation to occur where it will be used. This results in fewer transmission lines, less energy to make and maintain the lines, no new roads through currently roadless areas. And people are much more likely to CARE about what kind of energy production is happening if it's right next to their home - so coal and oil are not as appealing as other greener energies. 3. and give incentives for conservation. Virtually every household and company building in this country could cut their energy consumption dramatically if a few simple steps were followed. 4. Tax power that has to be imported in, and make it cheaper to use locally produced green power. You'd see a lot more solar panels going up on private homes real fast. This is not rocket science. There is no reason for us to allow big energy companies to destroy our lands by fouling our air, water and soils to make energy for us that we can help make ourselves. And transmission lines are an unnecessary environmental travesty that use power rather than generate it.

Land grant universities are usually designated with a "State" following the universities' name (ex. North Carolina State, Ohio State, Oregon State, etc...). Land grant universities are often at the cutting edge of research in agriculture and have provided many modern farming and ranching practices. Land grant universities also offer many other degrees in areas such as engineering, business, and natural sciences. A list of the top universities in the United States always includes many land grant universities. Funding education is always a great idea and there is no better way to invest in the future. Public universities are drastically underfunded as it is and often look to students to make up for rising costs and lagging funding. Funding state schools would be a very beneficial use for public dollars.

The impact this proposal would have on the local economy and the ability to control wildfires would be entirely disastrous. The people who live and vacation there are clearly in opposition to this monument, and the government needs to abandon this idea before it goes any further.

(cont.)

I live in south central California and have been kayaking the Kern River for most of my life. A couple of years ago the Sequoia National Forest proposed requiring entrance fees for most of the public lands surrounding the town where I live, including all access to the Kern River. The local reaction to this was summed up well by the local paper in their front page article "Mob Scene at Forest Service Fee Workshop." What most everyone was disturbed about at this meeting was the complete lack of accountability, financial and otherwise, on the part of the US Forest Service. Googling "GAO" and "Forest Service" will yield multiple reports to Congress documenting this. What about government accountability?

Yes, not only should wilderness quality land be managed as such, the amount of wilderness should be dramatically expanded. In addition to ANWR, there are approximately 9 million acres of wilderness quality lands in southern and central Utah that desperately deserve--need--protection. If Congress won't pass the America Redrock Wilderness Act, then pieces of it should be designated wilderness, as occurred with Grand Staircase-Escalante and Washington Co. II that passed last year.

Don't subsidize, but quit putting crazy regulations on farmers. The cost of doing business with the rules our gov puts on landowners is a bigger problem than finding a meat packer.

Over the last decade or so, national park units have developed records on the maintenance they do not have the funding to complete but which should be finished to prevent even more damage to built features of the parks. A few years ago, the amount of the deferred maintenance totaled to about \$6 billion for all the 400-ish units in the NPS system. Working with the Facility Management Division, which generates and maintains these records, let's put folks back to work fixing the problems in parks that have already been identified and that need to be addressed to further preserve our parks.

Downed timber creates an opportunity and a cost to National Parks. Excessive fallen timber has considerable market value that could bolster the revenue of the park, and provide work opportunities for local loggers and sawmills. If not removed, the timber can create an extreme fire hazard, such as was created in Yellowstone before their devastating fire. A similar potential exists now in the Olympic National Park which has millions of board feet of timber that was blown down in the 2007 and 2008 storms. Referred to as the 'Asbestos Forest', it burns only once in about every 300 years, but when it does, the accumulated fuel will incinerate even the buried seeds. That condition exists right now. The locals, including the local Indian nation, BEGGED to allow logging to remove the excessive fallen timber but federal managers refused to budge. Of course now the timber is no longer good for prime lumber and much of the value is lost but perhaps someone in the government actually is imbued with common sense and can reverse this terrible policy.

Discussion Question 3

(cont.)

Federal agencies and Congress have at various times and in different ways attempted to extend federal authority outside the boundaries of the area itself using buffer zones and perceived threats to the park as a tool to control land outside the park boundary. The Solution: Federal agencies should focus their efforts and attention on the management of the area within authorized boundaries and on cooperative management with other agencies and landowners outside their boundaries. Attempts at extending federal authority outside area boundaries raises suspicions as to motives and intentions of the federal government, causes conflict and tension with nearby communities, and undermines local and state zoning authority and private property rights. Where federal lands are concerned, buffer zone initiatives tend to cause unnecessary interagency feuding by making the interests of one agency subservient to another. Forcing buffer zones through legislation that has been proposed in Congress at various times, or by national directives, also preempts the proper methods of dealing with common resource concerns, methods based on cooperation and good will among neighbors. Similar buffer zone legislation passed the House of Representatives at various times and caused great controversy and negative feelings from local government, commercial recreation interests and private rights owners in areas adjacent to national parks. This type of legislation raises fears about the long term goals of the National Park Service regarding its neighbors. It turns local communities against the potential for new National Parks because the agency does not have the reputation of being a good neighbor. In the long run, this prevents the creation of parks and other conservation areas and exacerbates exist fears in landowners and user groups. This idea was submitted on behalf of the American Land Rights Association www.landrights.org

Not all designated wilderness decisions are to protect nature, some are political. Clinton put Staircase Escallante off-limits to protect his Chinese campaign contributors. There is as much as \$1 trillion in very clean coal buried there, but it competed with the Lippo Group's plans. When I worked there as a supervisor, the Port of Long Beach canceled part of its expansions when the possibility of exporting the coal to China evaporated. Along with those plans went thousands of union jobs, and the potential boost US exports. So now China burns dirtier coal, the effluence of which gets delivered to us a few days later.

Discussion Question 3

(cont.)

Planning, acquisition and management costs of new park and recreation proposals need more careful scrutiny. Present methods result in huge costs overruns, angry landowners, and high overhead while taking funds away from other important agency needs. The Solution: Require a thorough study of each proposed area with carefully developed cost estimates for planning, acquisition, and life costs of management. An economic impact study should be completed with a full cost-benefit analysis. Recent proposals for new parks and recreation areas have underestimated the costs for acquisition, planning and management. The result is higher than expected costs taking funds away from other projects and priorities. According to a recent Interior Department Inspector General's investigation (E-FW-NPS-5-81-A), when Santa Monica Mountains NRA was created, Congress was told the cost would be \$155 million. The Inspector General found that the Park Service had eight estimates in hand, when the bill passed, ranging from a low of \$242 million, to a high of \$675 million. None of these figures were ever shared with Congress. In the case of Redwood National Park, estimates were about \$250 million. The final cost is not known, but it's presently over \$2 billion and growing, causing a great strain on acquisition funding nationwide. Former Assistant Secretary of Interior Robert Herbst estimated the acquisition backlog was approximately \$3 billion in October 1980. Some estimate that the figure may now be as high as \$10 billion. With complete estimates and proper implementation this did not have to happen. The Columbia Gorge National Scenic Area passed Congress in 1986. \$35 million was the cost allocated to the bill, yet it was common knowledge in the area, and even among some members of Congress that the cost could exceed half a billion dollars. No quality cost estimate has been completed. Costs are not just the funds to acquire interests in land, but in losses incurred to local businesses, local government in lost taxes and in social and welfare costs associated with the lost jobs and economic activity. The Tall Grass Prairie Preserve in Oklahoma was another example. Cost estimates were \$70 million with no plan for the possibility of having to purchase the oil rights of the Osage Tribe underlying the entire area. Those costs could have been in the hundreds of millions. Congress chose not to go forward with the proposal in 1986. While most landowners do not wish to sell, some are forced to by hardship, change in circumstances, or deteriorating living conditions due to ongoing acquisition programs. Poor initial planning and understated costs often leave landowners in limbo, ultimately turning them into angry enemies of the acquisition agency. Before Congress passes legislation, and prior to endorsement by the Administration, a thorough study of each proposed area should be made showing the economic impact and costs related to the project. A clear understanding must be developed between proponents, the agency, and the Congress about expectations for the future project. Without such an understanding, many parks and recreation areas suffer from creeping size, expenditures, and expectations far beyond what was envisioned by Congress. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

Discussion Question 3

(cont.)

Something along these lines are needed. N.E. Ohio has no place to ride with more than 10 miles of trails. Sure Wayne National forest has what 28 miles of trails but for us we have to drive 8 hours away (to WV) to ride trails that have any worth while lengths to them. We have hundreds of miles of horse trails & vacant railway beds that are never use, why not convert some of those to OHV trails? Why not help us open trails here in N.E. Ohio too? We pay taxes just the same as everyone else.....

The Department of Interior created the Land Protection Planning Process for the purpose of protecting more land at less cost, but plans have not been effectively implemented to meet that purpose. The intent was to prioritize the lands that needed conservation the most and acquire the appropriate interest in those lands. The Solution: Land Protection Plans should be rewritten where Department purpose and intent has not been achieved. They should be updated with public involvement every two years. The Land Protection Planning process is one of the most innovative and necessary programs to be initiated in the conservation process. It is a logical approach to the broad question of “what are we buying, why are we buying it, and at what cost?” Land Protection Plans both identify the land and degrees of title to the land needed by the federal government to protect the resource and designate cost-effective alternatives to full federal purchase, such as easements and cooperative agreements. Local government officials need to be part of the public involvement process because of the potential of long term damage to the tax base and development planning options. During times of severe fiscal constraints, this approach is even more valid. Aside from the issue of social and cultural disruption associated with large-scale acquisition of lands, our government can no longer afford to buy lands at the same rate as in past years. We must begin to determine how much is enough. The general Accounting Office, now called the Government Accountability Office, in their report GAO/RCED-86-16 dated October 31, 1985, “New Rules For Protecting Land In the National Park System – Consistent Compliance Needed,” “ found that 25 of 38 Land Protection Plans it reviewed did not implement Interior policy or comply with National Park Service rules.” “If the Park Service implements the plans’ recommendations that do not comply with its rules, it could acquire more interest in land than it needs, incur unnecessary acquisition costs, and deplete the limited funds available for land protection.” The Land Protection concept should be revived with the idea of achieving the purpose for which it was intended. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

(cont.)

The GAO (Government Accountability Office), has been critical over the years of the National Park Service and other agencies with respect to land acquisition. The Federal Agencies, Congress and recreation advocates have largely ignored the GAO findings and recommendations. The Solution: Congress and the Agencies should review these GAO reports and begin implementing the recommendations. The result would be substantial cost savings, better landowner relations, and improved land conservation. Today's readers would benefit greatly from reading these reports. They are as contemporary as if they were written yesterday. In one report, the President's Commission on American's Outdoors was severely criticized for failing to follow the law and the Federal Advisory Committee Act. It is hoped that the America's Great Outdoors Initiative follow in the PCAO's footsteps and will not make these same or similar mistakes. It appears it already is by largely only notifying the environmental groups about Great Outdoors meetings while failing to notify a broad section of landowners, recreation and community groups. In six earlier reports, the GAO heavily criticized the Park Service and other agencies for: (1) not following the intent of Congress; (2) failing to consider cost effective alternatives; (3) buying more land than was intended by Congress or needed to manage the area; (4) failing to prioritize land purchases; and (5) failing to pay attention to the needs of local government, landowners, or local communities. Three of the GAO reports recommended that the Park Service sell back land they had needlessly purchased. The GAO is the investigative arm of the Congress. Their reports, together with the Interior Department Inspector General's reports, are critical of agency activities and clearly indicate that something is wrong with the system. These reports need to be reviewed and their recommendations implemented. A recent GAO report reviewing the Land Protection Planning Process of the National Park Service indicated that in most cases the plans themselves were not consistent with Park Service or Interior Department Policy. It is likely that when a review is made of the implementation of the Land Protection Policy plans, the Park Service will be found not to have followed their own plans, much less Department Policy. They will be found to have failed to update the plans or involve the public. The result is lip service to creative land protection alternatives. "Federal Protection of Wild and Scenic Rivers Has Been Slow and Costly" (CED-78-96) (May 22, 1978) "The Federal Drive To Acquire Private Lands Should be Reassessed" (CED-80-14) (December 14, 1979) "Federal Land Acquisitions By Condemnation – Opportunities to Reduce Delays and Costs" (CED-80-54) (May 14, 1980) "Lands In The Lake Chelan National Recreation Area Should Be Returned to Private Ownership" (CED-81-10) (January 22, 1981) "The National Park Service Should Improve Its Land Acquisition and Management at Fire Island" (CED-81-78) (May 8, 1981) "Federal Land Acquisition and Management Practices" (CED-81-135) (September 11, 1981) "New Rules For Protecting Land In The National Park System – Consistent Compliance Needed" (RCED-86-16) (October 31, 1985) The scanned 1988 GAO report on the Commission on Americans Outdoors, Interior Did Not Comply with Legal Requirements for the Outdoors Commission, GAO/RCED-88-65, March 1988, is at { Link } (17.6 MB). (cont.)

The LWCF has become a tool for some special interests to destroy the fabric of rural communities and reduce recreational opportunities for large segments of society at unnecessary cost to the taxpayers. In 2000 there was a proposal, the Conservation and Reinvestment Act, to give the land buying agencies over \$3 billion per year, off budget and automatically. If that had passed it would have meant the end of rural America over time. The Solution: Any future fund of this type must have tight controls and effective and continuous oversight. Any new funds including the LWCF must go through the appropriations process each year and compete with other Federal funding needs. The new direction must be to purchase only sufficient interests in lands necessary to meet the intent of Congress for the area. According to the Government Accountability Office, formerly the General Accounting Office (GAO), to a large extent, no effective priority system has been used with this fund. Lands have been purchased in fee title without considering the need for such purchases, alternatives to fee acquisition or cost-effectiveness of such purchases. For too many years, the federal government has supported the philosophy that we need to buy in fee as much land as possible within dedicated boundaries regardless of: (1) cost; (2) whether the purchase is necessary; (3) whether alternatives exist; (4) the rights of the landowners; and (5) the socio-cultural effects of large-scale purchases of land on local communities and land use patterns. Robert Herbst, former Assistant Secretary for Fish, Wildlife and Parks described the result at the 1980 National Park Service Advisory Board meeting as a land acquisition backlog exceeding three billion dollars. Others have suggested that the figure may be much higher. Each federal project must have a limited amount of funding for fee title purchases for public use areas with adequate provisions for alternatives. Each federal area should have an approved Land Protection Plan along with a General Management Plan prior to beginning acquisition. Priorities should be established after full public participation. Only the interests necessary to manage the area and meet the intent of Congress should be purchased. Public involvement must take place at least every two years to update the Land Protection Plan. Without these safeguards, area managers won't know which land to buy or what interest will suit the need of the project. Any increases in the price of land caused by waiting until the plans are complete would be more than offset by the lower total expenditures since only the correct interests and amount of land required to fulfill congressional objectives would be purchased. In other words, will conservation easements satisfy the legislation or could a lesser interest be purchased. Or should the land be purchased in fee title. As of now, the agencies just assume they will buy it all in fee title so why bother with a priority system. If these guidelines were followed, substantial savings would result without the huge cost overruns and needless acquisitions of the past. The cost of management would be reduced. No new funding system should be created without a carefully crafted oversight system that makes sure the funds are spent properly and consistent with the intent of Congress. In addition, any future funds should be available for maintenance as well as acquisition. That way the agency can set its own management priorities. It may be reasonable to move away from dedicated funds of this type and allow competition for funds with other national priorities. This issue was developed in cooperation with the American Land Rights Association www.landrights.org

Benefits of the original CCCs: They constructed cabins, shelters, etc. on public lands that are still used today, e.g. in NJ, in Stokes State Forest: the current School of Conservation and the State 4-H Camp were both CCC Camps, as were many lean-tos and cabins. But this happened in just about every state. Today, those facilities, most of which still survive, I suspect (they were built to last) provide inexpensive places for people to stay! Young people from cities got experience in the Great Outdoors, and learned to love it. Years later, they took their families camping, hiking, etc. in the Great Outdoors, based on their happy memories of their CCC days. They also learned teamwork, discipline, practical skills and had fun! They sent most of their money home, to support their families. Since maintenance is one of the first budget items to be cut, most parks in the country have a long list of maintenance projects that could be started quickly. Many are labor intensive.

The manmade oil disaster in the Gulf is a current example of the need for Federal plans to deal with any and all possible disasters that can affect our wild places. These plans should be detailed down to listing all possible sources for needed materials/resources depending on type of disaster and include logistics for transportation and speed of delivery to affected area. Any and all hands on deck approach. These should also be specific to each area and should be updated quarterly. *Man power and innovations available to deal with current Gulf situation are still being ignored and BP's detailed environmental plans included the Gulf "Walrus". Something is surely needed. If such plans were in place, the Federal Government would not be crying that their hands are tied to address the clean up of the BP Disaster since BP is lax on cleaning up their own mess. We seem more concerned with the money issues here than the oil washing into our marshes and onto our beaches. Instead of trying to figure out what to do now, we'd already have something in place and there'd be no need for states to get permission from the Army Corps to stop the oil from coming ashore. With The Tortugas, The Everglades, Breton Refuge to name just a few National Parks that ring the Gulf, our government should have moved on day one to start protecting and cleaning up. The Federal Government, of, for and by the People, could then bill BP for our efforts.

Currently, Internal Revenue Code section 2031(c) provides an estate tax exclusion of 40% of the value of land protected by a conservation easement. Unfortunately, this exclusion is capped at \$500,000. In the context of rising farm values this exclusion is woefully inadequate. The American Family Farm and Ranchland Protection Act, H.R. 3050, would increase this existing exclusion to 50% and raise the cap to \$5 million – providing a powerful incentive for owners of high-value agricultural, forest, and natural habitat lands to protect these properties in perpetuity. More than 70 percent of wildlife gets food and shelter from our working farm, ranch and forest lands, and the greatest value for wildlife and other public benefits comes from the large, contiguous properties where estate taxes frequently force families to subdivide and sell their land for development. In fact, due to high land values, farmers and ranchers are disproportionately subject to an estate tax at a rate of approximately 4 times that of the general public. On private forest land, the U.S. Forest Service has invested heavily to promote sustainable forestry. As second home development pushes deeper into our forests, inflated tax values make it increasingly difficult for forest owners to hold on to the timberland they've stewarded for generations. In fact, a 2006 study indicates that approximately 2.4 million acres of forest land are harvested and 1.3 million acres are sold annually to pay the federal estate tax. These outcomes are no way to reward a good deed and good stewardship. We can avoid them by expanding the estate tax benefits for landowners who have permanently protected their land. The Joint Committee on Taxation has scored H.R. 3050 as costing just \$132 million over ten years, but its impact would be enormous, encouraging thousands of landowners to work with land trusts in their community to ensure that lands with important conservation values for the public are never lost to development. This provision works well with a deferral of estate taxes on family farmland (H.R. 3524) and we expect new House and Senate legislation in the coming weeks that will combine these provisions. This provision also works well with the enhanced income tax deduction for conservation easements (H.R. 1831) setting up the opportunity for America's Great Outdoors to promote a conservation tax package. For more information please visit: www.lta.org/estatetax.

America's youth increasingly suffers from both "nature deficit disorder" and insufficient physical exercise. These problems contribute to reduced mental, emotional, and physical health. For example, there is mounting childhood obesity and diabetes linked to sedentary lifestyles and the veritable addiction to electronic media and devices. And the absence of exercise and outdoor exposure is further linked to lower test scores and higher depression. It is therefore clear that we need much more aggressive and effective programs to get young people out in nature for physical exercise. The obvious best place to do that is through kindergarten through 12th grade educational programs. As such, my idea is to have the U.S. Department of Education partner with the Interior and Agriculture Departments to develop these youth programs and to strongly encourage state education agencies and local school boards to adopt and implement them. Programs should be designed to include science or environmental themes and to enable students to accomplish worthwhile results-oriented projects. Academic credit should be provided based on the educational components. Indeed, students should be outdoors and exercising while learning about issues and doing projects to address those issues. For example, students could learn about the energy and resources wasted through excessive packaging, and conduct a community litter clean up or recycling project. Or students could learn about the increasing problems with invasive and noxious weeds, and conduct a weed eradication project. Or students could learn about organic gardening, and then create and maintain their own such garden. The possibilities for positive opportunities to combine learning with exercise in the outdoors should be almost limitless. If these programs are properly carried out, the result should be smarter, healthier, and more connected with the outdoors young people. And by giving them a sense of accomplishment and purpose, they will also likely be well on their way to becoming more involved and productive adults.

It is no secret that livestock grazing on federal lands in the West is a controversial subject. For example, there was a GAO report about five years ago indicating that the BLM and Forest Service grazing programs represent over a hundred million dollar a year loss in terms of low permit fees versus the much higher cost of administering these programs. Livestock grazing may also cause a number of adverse environmental impacts, such as degradation of riparian habitats and the spread of harmful invasive or noxious weed species. Some non-profit groups have initiated projects to obtain federal livestock grazing permits from willing sellers. The purpose of these voluntary permit buyouts is usually to protect riparian habitats or improve other degraded wildlife habitats. However, even when a group makes a substantial investment to acquire a federal grazing permit, they must generally continue to run livestock on that allotment or risk losing their permit. This may create an inherent conflict in that a group wishing to reduce or eliminate livestock grazing impacts in an area may need to buy livestock and become a bona fide ranching operation. Many people promote the free market system and that grazing permits are private property rights. If so, why should a group that locates a voluntary willing seller and purchases a grazing permit to reduce or eliminate grazing have to then continue grazing? Is this fair? Such projects of voluntary buyouts may benefit habitat restoration and special status species recovery efforts, and save the BLM or Forest Service the cost of administering those allotments. These are benefits to the American public, both by benefitting federal lands and resources and saving some taxpayer money. As such, I suggest that the federal agencies involved in this AGO initiative recommend to Congress that they amend the Taylor Grazing Act, the Federal Land Policy and Management Act (FLPMA), and any other appropriate laws to enable these voluntary grazing permit buyouts to be permanent.

There are many, many examples of multiple-use groups cooperating/collaborating with government agencies (such as the BLM) to maintain and even restore public land with great success. Unfortunately, these stories are generally ignored by the mainstream media. It's a shame, because the public needs to see the positive results of government agencies working hand in hand with recreational vehicle enthusiasts, mountain bikers, hunting and fishing enthusiasts, and even loggers. Bringing together representatives from all stakeholder groups is a common sense approach that balances access and responsible land use with conservation and sustainable land management. These interests are not mutually exclusive. I'm very concerned with this administration's land management approach as detailed in the Great Outdoors initiative. There is something intrinsically wrong with a government arbitrarily restricting access to our public lands without listening to the voice of the users of that land. If President Obama truly wants a long-term solution, then each stakeholder group must be invited to the table with an equal share in the decision making process.

We need a comprehensive federal program to restore natural springs and seeps on federal lands in the West. There are many thousands of such springs and seeps in the West, but most of them have been substantially altered. In many cases, the springs or seeps were capped, channeled, or diverted into pipelines to provide water for domestic livestock. Ranchers usually filed for and obtained state water rights for these developments and those rights are private property. Some of these developments provide water for wildlife as well as livestock, but there may be a wildlife drowning risk in troughs or tanks that do not have adequate escape ramps or ladders. Over the years, some of these water developments have not been properly maintained and/or have been abandoned. As these developments deteriorate they may become dysfunctional for both livestock and wildlife. For example, I am aware of two such developments on BLM land in Utah near where I live. They once provided water for wildlife and created modest wetland habitat in an otherwise arid area. They are now dysfunctional, the wetland habitat died out, and any dependent wildlife either moved elsewhere or perished. This is a complete waste as a former natural spring or seep on federal land is no longer serving a human beneficial use under state water law nor benefitting wildlife. Climate change is projected to perhaps cause more prolonged droughts in the West, and this could make the loss of these natural springs and seeps even more significant in terms of harm to wildlife and remnant, localized wetland and riparian habitats. Indeed, wetland and riparian habitats are incredibly important to native species and biological diversity in the West, including for a large number of listed, rare, and/or endemic species. Therefore, a comprehensive, coordinated federal program should: (1) identify those abandoned water developments and dysfunctional springs and seeps on federal lands; (2) work with state water rights officials to obtain the associated water right (as it was abandoned by the previous owner); and (3) work to re-establish the natural spring or seep to a fully functioning condition. Those who abandoned their water rights for many years should not object, and the state and federal officials should recognize the benefits of this program, including in aiding recovery of many special status species and helping wildlife cope with climate change.

I am a lifelong resident of Kansas and have camped, hiked and stargazed in as many places as I could all over the state. I must confess, though, that western Kansas has always held a special place in my heart. The idea of a National Park in Kansas has been contested by many ranchers and farmers in the state who resent big government taking their land and I can't say I blame them. That said, the state and all America could benefit from an American bison refuge and a National Park allowing hiking, camping and providing educational programs to learn about what was once considered the beginning of the "Great American Desert." Perhaps Kansans could even overcome their fear of the National Parks system to learn to appreciate a natural preserve where "the bison and the antelope roam" to paraphrase our state song. For too long, the only place where one could hike and camp were centered around Army Corps of Engineers reservoirs and even those facilities are usually secondary to fishing and water sports. A National Park certainly makes more sense than pumping the Ogallala aquifer dry for irrigation and watching most of the water evaporate.

Statewide Comprehensive Outdoor Recreation Plans (SCORPs) are required for states to participate in the federal Land and Water Conservation Fund (LWCF). Produced every five years these plans are of varying quality depending on the availability of funding and a given state's dedication to comprehensive planning. One thing all SCORPs have in common is an identification of outdoor recreation issues. I'm proposing that these state-identified issues be aggregated into a regular national report on The State of Outdoor Recreation in America. This document would serve to focus attention on the most widely recognized issues and opportunities we face. It could also serve as a showcase for LWCF funded projects and encourage congressional delegations to make state-by-state comparisons. That would help build continuing support for the program.

Develop a coordinating council of resource user groups whose missions support the protection, conservation and enjoyment of our natural resources. Groups such as American Whitewater (moving water river users), American Hiking (hiking), Surfrider Foundation (beach, coastline use by surfers, swimmers, etc.) and the International Mountain Biking Association utilize and draw on the expertise and accomplishment of their staff and volunteers to protect and improve the experiences of citizens everyday. Funnel public participation through these trusted public-minded experts to minimize the influence of those with unfounded cliques and empower those who have already lived for decades in the trenches with underfunded voices. The answers are there if you'll empower the experts. Your challenge will be to simply find them, create a forum for their collaboration and translate their formidable input into action. You will create more positive steps more quickly than you would imagine.

Major wind and solar projects are being proposed on BLM lands in the Mohave Desert region. People need to realize that the BLM is a multiple use agency, meaning that wild farms, wildlife, recreation, water, etc are analyzed in tandem to come up with a way to satisfy the larger whole. Now whether this concept is possible or whether satisfaction of big-business precludes satisfaction for wildlife and water quality is the larger question.

(cont.)

The initial "Wilderness Act of 1964" envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where Public Access is restricted to non-mechanized means, excepting the use of wheel chairs meeting "Hospital Specifications" which are of no use to Americans who are confined to them but still want to enjoy OUR Public Lands. This also severely limits the activities and hence effectiveness of various Government agencies who are responsible for maintaining these lands. The majority of recreating Americans have been forced onto smaller and smaller areas outside of Wilderness given studies which have concluded that only approximately five percent of recreating Americans use them. In order to encourage Americans to enjoy the Great Outdoors we do not need more "Wilderness", "Wilderness Study Areas" or "National Monuments". If the President were truly interested in local involvement in his plan, multiple use groups would have been included or invited to the various "Listening" sessions taking place around OUR Nation, often with little prior scheduling notification. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to OUR Public Lands. My family, friends and fellow OHV enthusiasts spend many enjoyable hours recreating in our National Forests, National Parks and on BLM lands taking in the wonders of nature. My family travels to our chosen destination via a four wheel drive vehicle as it allows us to get away from paved roads and into areas we could not otherwise reach by other means due to our age and an injury I incurred while serving OUR Country. I served OUR Country in part to protect access to these lands for all Americans, not just the five percent who are able to walk into "Wilderness", "Wilderness Study Area" or OUR "National Monuments". As an owner of many acres of private property for decades and an OHV enthusiast for forty years I can say that the cougar, bear, deer, raccoon, possum, rabbit, squirrel, birds and other animals who call my property their home are welcomed, thrive here and coexist just fine with my OHV use and that of my friends and neighbors. The land does not suffer from the OHV use, my woods are properly thinned, healthy and clear of standing and fallen dead trees unlike our National Forests and BLM managed lands. Locking OHV users out of OUR Public Lands (yes, they belong to everyone) via "Wilderness", "Wilderness Study Area" or the "National Monument" designations being implemented Nation Wide, many times in direct violation of the "1964 Wilderness Act" implemented by Congress is not the answer to protecting animals, nature or OUR Public Lands. Only Congress can designate "Wilderness"! The "National Monument" designation has been and is currently being used unlawfully against the letter of the law as spelled out by the "Antiquities Act" to bypass Congressional scrutiny and hence We The People to lock up Public Lands without public debate as are "Wilderness Study Areas". Much of the land being designated as "Wilderness", "National Monuments" and "Wilderness Study Areas" does not meet the criteria set forth in the "1964 Wilderness Act". Many of these Federal lands include roads, bridges, campgrounds, trails, etc. This contradicts the intent of the original "1964 Wilderness Act", which essentially defines "Wilderness Areas" as lands that show "little or no signs of human involvement". These areas are not National Parks, they are lands administered by the Bureau of Land Management and National Forest Service and should be managed as such. Most importantly, the President and Congress should honor the established protocol of respecting State and local rights by not imposing "Wilderness", "National Monument" or "Wilderness Study Area" designations on people whose elected Congressional delegation are not in full support of the designations. The OHV community supports conservation efforts including support of the

“travel limited to designated roads, trails and areas” paradigm as outlined in the Forest Service travel management regulations and BLM’s planning directives. The OHV community also supports conservation through environmental review and analysis in route designation processes, as well as ongoing monitoring and maintenance of the OHV infrastructure. The OHV community supports conservation efforts by contributing substantial funds to implement OHV management and volunteers tens of thousands of man hours in volunteer work projects. Much of this funding is made available to federal land managers via state OHV programs. These programs exist today because years ago motorized recreationists voluntarily “taxed ourselves” via state OHV registration programs. Some of these funds are used to supplement the agencies’ law enforcement efforts. Recently, Governors of many States have raided these funds in ill fated attempts to fix the budgets that OUR Public Servants failed to balance and in doing so have removed this important funding source from the agencies responsible for managing OUR Public Lands. The majority of we OHV users are motorized environmentalists and good stewards of our Public Lands. The failure of the BLM and National Forest Service to maintain public lands in the manner they are charged to is the problem not the OHV Community. This is in part due to a lack of will, the theft of the OHV funds previously mentioned and the absence of Congressional budgetary support for these land management agencies. Back in the 60s development of America’s wild lands and backcountry was a threat. Now the threats are the Wilderness Act, the National Environmental Policy Act (NEPA), and many other environmental protection laws passed by Congress due to the way they are being used by Wilderness lobbies to lock recreationalists out of our public lands via “Wilderness”, “National Monument” and “Wilderness Study Area” designations. Public lands are important recreational opportunities; there are other alternatives such as “National Conservation Areas” or “National Recreation Areas” which would provide the same level of protection from development that these various designations carry while still preserving a diverse array of opportunities for recreation. While I understand that non-controversial bills can be lumped together to make the legislative process easier, Omnibus initiatives like the “America’s Great Outdoors” are far from non-controversial. I am concerned that any Omnibus initiative such as this would include measures that are both controversial and will not received a hearing or proper vetting in one or both Houses of Congress. Public lands bills and initiatives have a significant impact on economic development, recreational opportunities and the day-to-day lives of people who live and work near the areas in question. As a result, it is imperative those most affected have sufficient opportunities to provide input on any Public Lands legislation. The “America’s Great Outdoors” initiative process should allow for Congressional review, State, local government and public input before any designations take place.

Utah’s red rock country is one of our nation’s most magnificent wild landscapes and a great treasure. Unfortunately this wonderful land is at great risk from oil and gas exploration and rampant abuse by off-road-vehicles, which destroy vegetation and leave tracks that can last for a generation in the fragile desert ecosystem. Let’s protect it for the benefit of wildlife, air, water and future generations of Americans.

Require that all new roads or road improvements that use federal funding include pedestrian and bicycle friendly facilities (bike lanes, side walks, or seperated paths from streets). And to get federal highway funds, states/cities must have included pedestrian and cycling in their transportation plans. The benefits are multifold. Decreased air pollution from reduced car use. Better health of the population with increased walking and biking. People that are walking and biking are connecting to their community and to the outdoors in a different way than people driving in cars. Urban green belts are very popular and help to start the process of connecting to natural spaces. Some additional ideas: Currently many urban areas have sidewalks but don't provide sufficient space for bike use. There are too many bike-car fatalities and there is actual hostility on the part of motorists toward bicyclists. Many suburban and rural areas don't provide for either pedestrian or bicycle use. No sidewalks means walking and riding on the shoulder of busy roads. The Great Outdoors is not just the wilderness, the desert or the forest. It is also our neighborhood parks, and our county and regional parks. We need connections (physical and mental)to these local areas. These parks and paths are where we can provide for the first taste of enjoying the out of doors and improving our nation's health.

NPS actually does have a facilities program in which this is one element. And ARRA stimulus funds are moving some of these projects forward this year. But this is a far bigger topic than USFS, BLM and NPS. Shouldn't this goal apply to all government facilities? Is the technology really available? (show me how you're gonna heat Wrangell NP HQ & VC overwinter) Responsible stewardship of public lands isn't carried forward by merely dumping unfunded mandates upon already over-stretched land management agencies. If you're really serious about making a contribution, not merely bumping your posting count, think further before posting?

Please read about the Nature Conservancy's Ellsworth Creek Preserve { Link } and Lomakatsi { Link } thinning projects. Please read the Environmental Assessments for USFS projects to accelerate the development of old-growth characteristics in formerly clearcut areas, now being managed as Late Successional Reserves under the Northwest Forest Plan. I mention this because your proposal reads "These forests will not be logged and will be allowed to develop old-growth characteristics." That's fine, if the stand has never been logged. But Congress set a much more ambitious goal under the 1994 NWFP: the goal returning millions of formerly clearcut acres to old growth conditions. That requires thinning, removing the smallest trees to release the growth of the largest, removing the monoculture of replanted fir and releasing more a more diverse forest of cedar, pine, maple, etc.

Here's my best idea for how we could achieve large scale restoration of longleaf pine forests and other similarly endangered ecosystems in the USA: provide a federal incentive for landowners to voluntarily restore their land to natural longleaf conditions (and keep it that way). Instead of just handing out the money to anyone who applies for it, the process should be based on competitive proposals from groups of landowners. The larger the contiguous land base represented in the proposal, the more money per acre each landowner would receive. I would set the incentive scale such that really good rewards kick in at the 10,000 acre plus range, and then truly outstanding benefits could accrue at the 100,000 acre range. Existing protected areas and identified high priority linkages and corridors would count in the proposal scoring process as well, so that the newly restored forests would help expand habitats for current populations of rare plants and animals. Fund the system via an expanded and revamped version of the Land and Water Conservation Fund. Funds could also come from carbon mitigation markets if those get established. There is an urgent need to restore several more million-acre blocks of longleaf pine forest habitat in the southeastern coastal plain, and the Federal Government (and states) need to commit the funding to make it happen.

I am pro-hunting in general and I don't agree that hunting should be banned from all public lands. White-tailed deer are driving native plants to extinction in numerous small parks and protected areas, especially in suburban areas where predators are scant and hunters few. That said, I don't think National Wildlife Refuges should be managed as deer and duck farms, that is just as destructive to native biodiversity. I agree that grazing livestock on public lands needs a serious overhaul - the federal government should charge higher rates and use the money to monitor for over-stocking and overgrazing. Wild horses are already overpopulated and need active management, at least until it can be shown that native predators like wolves and mountain lions can control their populations (it might take african lions to do the job!). Otherwise I agree with most of your points.

I feel very strongly that the federal government needs to take back on a leadership role in protecting land, water, and wildlife. In fact, my top two priorities for federal spending would be 1. funding national and international family planning programs in order to stabilize human populations, and 2. buying large tracts of land (and large conservation easements from private landowners) to expand the base of natural habitats around the country. We need to fully fund the Land and Water Conservation fund, so that we can buy up (from willing sellers) crucial inholdings and linkages that exist in and around our national parks, forests, and wildlife refuges. The money should be targeted towards major ecosystem types that have been the most destroyed - longleaf pine in the southeast and tallgrass prairie in the midwest are two great examples. With a month's worth of DOD operating expenses in Iraq and Afghanistan (~\$15 billion, right?), we could protect and restore enough habitat to permanently remove hundreds of species from the Endangered Species list. This funding would also create an outstanding legacy of outdoor recreation space and cleaner drinking water for future generations to enjoy. Specifically, I would love to see the creation of several new million-acre longleaf pine forests in the southeast. We could put together the land base with purchases and easements, and then a revived Civilian Conservation Corps jobs program could take on the task of planting the trees and restoring the longleaf forests of old.

Discussion Question 3

Written & Online Comments

(cont.)

It would be great if we could expand one or more of the existing national forests in the southeast coastal plain to the point where the center of the forest could be restored to wildfire-maintained longleaf pine. I'm thinking of a wilderness pine savanna covering a couple hundred thousand acres or more - perfect for reintroducing red wolves, florida panther, and bison, all of which used to call this habitat home before it was destroyed. Even a million-acre addition of longleaf pine acreage would only represent less than 1% of the original range of this ecosystem. Instead of crisscrossing the core forest with dusty roads and tiny burn blocks, which is currently the standard management technique, the new wilderness could be road-free and let alone to burn as droughts and lightning dictate. Only at the margins would firebreaks be needed to keep the wildfires from spreading too far. Removing roads and planting trees and wiregrass would be great job-creation devices, suitable for the new CCC if we can bring that institution back online. Providing such a large roadless area of longleaf would also provide superb protection for endangered reptiles like indigo snakes, eastern diamondback rattlesnakes, southern hognose snakes, pine snakes, and gopher tortoises, all of which are severely impacted by road mortality. And you can only imagine the beautiful scenery that would be available to the public for extended hiking treks and horseback rides into the wilderness savanna. No one alive (old-timers correct me if I'm wrong!) has ever heard the breeze whispering through the tops of a million acres of mature longleaf pine, but if we think big it could happen in our lifetime.

Just returned from SE Utah last month. I'll gladly drive 2000 miles every year to immerse myself in this place of spectacular beauty! The Monticello BLM oversees more than 1.8 MILLION acres of some of the most scenic, fragile and culturally rich land in America (Canyonlands, Cedar Mesa, Grand Gulch, Comb Ridge) - and much of this land is designated as wilderness quality by the Utah BLM. However, 'wilderness quality lands' in Utah are caught between State and Federal politics because of the 2003 'No More Wilderness' policy. Repeal the 'No More Wilderness' policy that keeps Utah wilderness-quality lands in limbo. Wilderness designation could provide the additional level of oversight and funding needed to protect these fragile areas for generations to come.

Discussion Question 3

(cont.)

The best available scientific information clearly indicates that top carnivores play essential roles in maintaining the health of native ecosystems. We've known this since Aldo Leopold wrote about it back in the 1950's, and recent analysis of the impacts of returning wolves in Yellowstone (and cougars in Zion) confirms that you just cannot expect to have high-quality nature preserves without the big predators. In the southeast, except for a small pocket of red wolves in eastern NC, and a small band of panthers in southern FL, we don't have much in the way of top predators anymore. The official US FWS recovery plans for both species call for restoration of an additional two populations each so that the wolves and panthers can be delisted. Now would be a great time to carry those reintroduction projects out. Otherwise, all of our efforts at protecting natural habitat in the southeast will continue to be ruined by the deleterious impacts of overabundant deer, raccoons, possums, and wild pigs. President Obama could set the process in motion with a quick memo to the relevant federal agencies, and this would provide a much-needed conservation success story for his administration. Likely candidate locations for top predator restoration would include Okefenokee NWR-Osceola NF, Ft. Stewart, Francis Marion NF, Croatan NF, Apalachicola NF, Great Smoky Mountains NP, Pisgah NF, Nantahala NF, Ozark NF, and Ouachita NF. The goal of the projects should be to establish large, interlinked populations of the predator species so that they can be delisted from the Endangered Species Act and carefully managed (like other wildlife) by the states.

Not only do private land owners have a vested financial interest in taking care of their land, they also pay taxes. Every time we add acres to our public holdings, we decrease the local tax base. And, it is apparant in MT that the government does not have the resources to properly manage the huge amounts of land they currently own.

Public Statement for “America’s Great Outdoors Initiative” Good morning, my name is Rosalyn LaPier. I am an enrolled member of the Blackfeet tribe. I came here today to offer my voice to the discussion regarding public land use in the United States. I come with a unique perspective and background. I grew up in a family that gathered plants on a seasonal basis for medicinal and edible purposes. Until this past year when my grandmother passed away at the age of 95, she oversaw our family’s efforts to gather and process plants. My grandmother was taught by her grandmother, Mary Spotted Bear, about the use of native plants. For the Blackfeet, plant knowledge was taught through the generations from woman to woman, usually from grandmother to granddaughter. Not only was the knowledge of gathering plants taught, but also how to process, preserve and prepare plants for future use. Archaeological evidence suggests that humans have lived on the northern Great Plains for at least 10,000 years. And that throughout that time humans have used the numerous rich natural resources found on the landscape. The Blackfeet used at least 200 different plants from a variety of habitats. The Blackfeet collected these plants all over what is now the State of Montana and the Province of Alberta. The Blackfeet went to specific places each season to gather and collect specific plants. Despite the stereotype that the Blackfeet “followed” the bison, the Blackfeet strategically traveled to certain places at certain times of the year specifically to gather plants or other natural resources and to also hunt animals. My family has gathered plants on the northern Great Plains and on what is now Montana for generations. I have spent my entire life helping my grandmother gather plants. It is something I continue to do (even after her passing) and that my family continues to do. However, I have found that we are an invisible presence on the land. Even though we continue to go to certain places to collect plants during certain times of the year, just as our ancestors did before us, no one recognizes that we have been there. This is in part because we do not harm the land or over-harvest it. Because of this we are often overlooked as a stakeholder in the discussion of public land use. And we are rarely, if ever, asked our opinion of issues related to public land use. Today, I would like to make you aware of a few of the challenges we face and the obligations that we believe the federal government has toward traditional cultural resource use. Challenges to traditional gatherers: 1) Each year it seems that there is more public land that is being leased for natural resource development, logging or for livestock use. Because of this there seem to be more roads, more ATV’s and more erosion on public lands. 2) Each year it seems that there are more pesticides and herbicides being used on public lands and that I have to ask where and when they are being used. We try to avoid places that are being sprayed but sometimes it is difficult, especially for older or elderly gatherers who cannot walk far from roads or far away from the car to gather plants. 3) Each year it seems that there are more noxious weeds on public lands. These seem to be near roads or development and they greatly impact the growth of native plant species. Sometimes it seems that we have to travel farther and into more remote places to avoid noxious weeds. 4) Each year it seems that there are more commercial harvesters on public lands. I have seen areas where commercial harvesters have over-harvested and have literally stripped a site of all natural resources, leaving nothing for either animals or other humans to share. 5) Finally, it seems that whenever there is a discussion of conversing land in Montana that it is said that the land needs to be restored to the way it was when Lewis and Clark arrived. People forget that when Lewis and Clark arrived there were numerous tribal groups in the region who had lived here for thousands of years and who

Discussion Question 3

(cont.)

utilized the land. There seems to be a perception that “no one was using the land”, when in fact, people did use the land and continue to use the land every season and rely on that land for their health. America’s Great Outdoors Initiative should work toward: 1) Increasing and protecting access to traditional cultural resources on public lands for traditional gatherers. 2) Limiting development, the creation of roads, leasing for livestock use, and controlling erosion on public lands. 3) Limiting the use of pesticides and herbicides on public lands. 4) Restoring natural areas impacted by noxious weeds or erosion. 5) Protecting traditional cultural resources from over-harvesting by commercial harvesters. 6) Ending using the language of “restoring the land to they way it was when Lewis and Clark arrived” as if no one was here and no one was utilizing its natural resources. 7) Asking if traditional gatherers use public lands before allowing projects or leasing to occur. 8) Promoting the perpetual use of traditional cultural resources on public lands by traditional gatherers. For years my grandmother helped people on the reservation by providing medicinal plants for their illnesses and for their health. On Memorial Day I was on the Blackfeet reservation decorating graves. While there an elder (who is a veteran) came up to me and asked that now that my grandmother was gone, if I could make some medicine for him. Gathering and using plants has been a vital part of my life and the life of my family for many generations. We collect plants in a wide range of habitats – both on the reservation and off the reservation and both on private and public lands. I hope that I can continue this practice and so can the rest of my family. However, unlike commercial harvesters, we do not gather plants to sell them, we use them for our own family use and also for members of the community. I hope that my public statement will provide some awareness of how these issues impact individuals, like that tribal elder. Although this man does not gather the plants himself, he relies on others so that he can continue to live a healthy life. Ultimately though, he relies on the federal government to provide protection of public lands so that he can continue to benefit from that land. Just as his ancestors did for thousands of years. Even though our presence on the landscape is invisible I hope that my voice is heard today. Thank you for your time.

I suggest that we cut timber again in California. Our roads are in serious deterioration due to the lack of harvest. The dollars generated from timber sale receipts allowed maintenance and repairs in the past. Current road conditions are rapidly approaching dangerous due to the neglect caused by environmentalists stranglehold and control of our national forests. I did a 100 mile paved road stretch yesterday and found horrendous conditions: potholes, root surfacing, line of sight restricted by overgrowth, slumping and general road maintained ignored. At the core of this situation is the Endangered Species Act. The endangered species act should be repealed and modified. It has been used to stop actions rather than to improve habitats. Habitats of our NF's are deteriorating with many lost to wildfire. Let's not continue to allow the minority voice direct actions for us all.

(cont.)

Increase or remove limits on charitable tax deductions towards conservation easements targeting highly degraded or fragmented landscapes, endangered ecosystems, or threatened or endangered species; as determined by the Secretary of the Interior. Across the country, our primary conservation challenges are habitat loss, degradation, and fragmentation, which all contribute to loss of biodiversity and ecosystem services. Conservation easements are an invaluable tool for addressing conservation challenges on Private Lands. The DIO has already identified the ecosystems and species that are threatened or endangered within our country and encouraging conservation easements to target these Private Lands challenges is an excellent form of support from the Federal Government. A Task Force should be created to identify these priority areas. Charitable tax donations to organizations purchasing conservation easements within the priority areas should not be limited or the limits should reflect the level of priority the DOI believes is necessary to achieve it's Private Lands conservation goals.

(cont.)

Today life is filled with noise, distractions and stress; all leading to reoccurring health problems. People have forgotten how to "detoxify" their life by living within their means, conserving and most importantly reconnecting to nature and outdoor recreation. As life gets more complicated, it becomes absolutely important to protect our remaining wilderness through the Omnibus Land package (H.R. 146) for generations today and in the future. If "lasting effects" is what President Obama is seeking, then passage of the Omnibus bill is the way to go first; this is what would work!!! It's the concrete foundation needed to administer the President's declaration of creating strategies and programs to reconnect people to our earth! As a representative and future educator (currently an education student at New Mexico State University) of the newly organizing "Friends of the Organ Mountains-Desert Peaks Wilderness," I am in support of proposed bill S.1689 which would protect our sacred Organ Mountains and surrounding desert wilderness areas. Our groups goals and mission are to reach our community about the importance of protecting our wilderness through education, awareness, advocacy and youth wilderness or nature programs. Our biggest challenges are creating knowledge, understanding, and support in the community. But it's the Understanding that's important to get across; that the effect of protection is great!!! Continued Life!!! As you can tell, My love is Nature, the Great Outdoors; the master works of God. I enjoy taking my family hiking and exploring into the Organ Mountains and surrounding areas every Spring and Fall and times in between for tranquility and harmony with the lands of my ancestors. My Apache (and Special Forces) father gave me a love of the wild-lands and what the lands can teach us by studying it. Exploring the lands of the Organ Mountains-Desert Peaks Wilderness and seeing its beauty gives me a longing to deepen the roots of my Apache heritage and needing to share it with my children and future students. I'm a new grandmother and I want the opportunity to be able to share with my grandson the legacy of beauty, wildlife and history of our lands & wilderness; the same that my father shared with me. Many people come to our southwestern lands (Las Cruces & Dona Ana) because of the beauty and tranquil air it brings. If our remaining wilderness is left open for developments, etc.; Where shall our future generation go? Will they walk the sands of a beauty forgotten as the Sahara? Our natural beauty will no longer be, and we will no longer have the attraction and breath-taking valley of green. When the air is no more, our Mountains and indigenous wildlife will die. We need to protect as much of the wild as possible for future generations. If our remaining Wilderness is left unprotected, what is affected is our ecological systems that sustain us and give us life. Our wilderness carries many values. There is a high diversity of plant and animal life as well as a diversity of geographical lands and rock formations. It carries historic values of prehistoric markings and cave dwellings; footprints of our past. So Not only does our wilderness preserve our very Life, Protection of our remaining wilderness aides in physical, emotional and mental well-being as well as aiding in our children's educational studies; giving us our future generation geologists, doctors, environmentalist or physicists and allows them to dream of possibilities for a better future. It is imperative that we protect our remaining wilderness, such as our Organ Mountains and surrounding desert areas (Bill S.1689) through the passage of the Omnibus Land package (H.R. 146) so that our future generations may have continued life and continue to enjoy the Great Outdoors!!! Thank you very Much

People are twice as likely to be killed by a stranger with a car than a stranger with a gun. In urban areas that boomed after the automobile became the primary transportation mode, low income areas also lack sidewalks and safe street crossings. Federal transportation dollars should be made more available for projects that facilitate short trips on foot.

The federal government also needs to provide more transportation funding for sidewalks so people can get to local parks.

Regarding the 3rd and 4th paragraphs, government enforcement agencies must be sure to focus as much or more on unseen environmental harms -- ie depletion and degradation of groundwater resources and subterranean and atmospheric pollution.

Please consider the creation of a Buffalo Commons National Park in western Kansas. "Kansas defines the American prairie, the world's most endangered ecosystem. the prairie is also environmentally important. It both hosts a wide range of plants and animals." Kansas City Star A visit to the Tallgrass Prairie Preserve in Kansas gives you just a glimpse of what the prairie once was. Kansas farmland can be turned back into its natural state. It is the last chance for the survival of not only the land but of the communities of western Kansas.

Here in Hawaii we have a very successful program called the Hawaii Association of Watershed Partnerships (www.hawp.org). Local, state and federal landowners sign a memorandum of understanding to protect the forested lands that are the source of our water. This means providing habitat for rare and listed species, managing invasive plants and animals and providing educational stewardship opportunities for local residents in the watershed lands. The best part is that conservation happens across ownership boundaries, and the newest partnerships are forming with the idea of the Hawaiian ahupuaa in mind - meaning that conservation happens in the ENTIRE watershed, not just parts of it - from the mountains to the sea - because what happens upland will affect the lowlands. Look to watershed partnerships as a successful cooperative agreement between all types of landowners, private and public, and that are supported by all levels of government and private granting organizations and as a way to include local residents in the everyday tasks that are necessary for successful conservation.

Any plan that does not give as much control as possible to the real people, "on the ground", who are living there (within an area reasonably described as local)--is just another special interest agenda getting played out; some of which are good--some are not. The real priorities for rural or urban communities is to recognize that their best interests are served by becoming sustainable. (Sustainable living is visibly discernible from non-sustainable attempts to get ahead in life, damn the consequences.) Moving 350 million acre feet into the desert does not sound sustainable. Lets just be sure all pertinent information about every proposal is wholly and accurately depicted and thoroughly disseminated to everyone whose lifestyle or livelihood may be affected. (Thank goodness we live in the information age. This would not have been so possible 5 or ten years ago, but it is now, even in rural areas) Let it suffice to say that every federally produced improvement program should be implemented by and for, (and be somewhat self-regulated by), the people who have the most "priority" vested in the outcome, because it affects them locally.

(cont.)

Good information is key--even if it is debatable. Sustainability is becoming more and more prescient all over the world--but it is hotly contested--for anyone who gets in the way of big money is automatically labeled a radical fanatic and an enemy of capitalism; even if they are only pointing out obvious flaws with how things are done and suggesting alternatives. A national conservation effort would need good consistent signage, with science that stands on its own and advocates with enough capital to stand up to all the special interest money that will flood in to dispute, defame or obscure that good science. It would be nice if the USDA or other Govt. organizations who serve the interests of average Americans could be funded as well as the charlatans on Wall street. Imagine a \$500 billion project to disperse and defend accurate information!

Lets: Give communities the tools they need to reclaim power over the surrounding landscape, particularly where water or mineral rights are concerned. Support Organic Farm science and promote rural regeneration by aiding new and transitioning farmers to supply healthy food and jobs to communities. Give incentive to young, (-45) skilled and educated applicants to relocate and function as entrepreneurs and consumers of diverse service and goods in rural communities. Re-test aquifers and publish an official US water report. Call out Polluters; be clear about the spirit and letter of the law, and let good science and public conscience serve as judge. Be sure culpable entities pay for clean-up and submit to regulation. Protect peoples' right to choice and increase their access to fair and accurate information. Eliminate the power of misinformation campaigns regarding harmful products, by-products, and practices. Allow consumers the right to examine and compare true and full costs to decide what stays, what changes, and what goes.

There is so much more to communities: Shelter, safety, and good nutrition (which can and should be abundant) Education for children, work for grown-ups Goods and services that are easily available and equitably distributed with minimal violence Health care and information providers Areas to recreate in and out of doors and enough time to enjoy it These are the priorities for communities; any other initiatives labeled as "sustainable, community ..." have to be able to reflect the attitudes and preferences of actual communities of real people. Any plan that does not give as much control as possible to the real people, "on the ground", who are living there (within an area reasonably described as local)--is just another special interest agenda getting played out; some of which are good--some are not. I am not inferring anything about this or any other idea submitted here I am just clarifying what the real priorities are for rural or urban communities, whose best interests are served by becoming sustainable. (Sustainable living is visibly discernible from non-sustainable attempts to get ahead in life, damn the consequences.) The only way to do this is be sure all pertinent information is wholly and accurately depicted and thoroughly disseminated to everyone whose lifestyle or livelihood may be affected. (Thank goodness we live in the information age. This would not have been possible 5 or ten years ago, but it is now, even in rural areas) Let it suffice to say that every federally produced improvement program should be implemented by and for, (and be somewhat self-regulated by), the people who have the most "priority" vested in the outcome, because it affects them locally.

(cont.)

FS to promote an email list to give out current information on proposed projects in the idea stage, allow public to participate in the ID team meetings. By the time a project gets to the public comment stage it is way to late. FS should have round table discussions and work groups with conflicting user groups so we get to know each other. After all the local community usually has ownership in what is going on in their back yard. When the logging was shut down the forestry companies were to get restoration work. However, those in the rural community did not get those jobs because the county they lived in did not qualify for HUB zone jobs. Federal Gov. is too slow to correct this. It has been 15 yrs since the Forest Plan came out and no work in out own back yard. So where is the local rural community support?

The positive side of our economy is that people return to places where memories were once created, places that are familiar, places that are affordable, and places that offer true intrinsic benefits that are not tied to anything that is man-made, material-oriented, and/or technologically 'advanced'. I believe that all federal agencies that manage public land need to review their mission and values, develop clear goals and objectives for future management and then be given the resources to be able to implement management strategies that will protect our lands while allowing access to the land. We need more professional federal (non contracted) staff to enforce laws, implement interpretive programs, oversee use, limit use (many of our parks allow WAY too many visitors in a given time frame) and manage land systems. Further (random), commercial concessionaire agreements need to be terminated; professional federal staff should be managing gift shops (with original, local and US made gifts), lodges, and everything commercial in parks, forests, and other federally 'owned' lands. I'd like to see partnerships for land conservation and preservation however would appreciate close monitoring for there affectiveness. I feel too much money is given to non-profits and it is then poorly managed. Several NP's do amazing things but there are some bad apples out there. More money for parks, recreation and open space, period - however that money needs to be managed from within by creating more jobs to protect and educate the public.

And neither of you have been to a state park or forest. Contained in the Rocky Mountain West are vast areas of "PUBLIC" land managed by the states. As a rule the state is more responsive to environmental problems. Currently the radical enviromentalist has stopped all efforts to slow the spread of Mountain Pine Beetle on National Forest land. The BLM and the State of Montana are light years ahead of the FS in managing their lands. When I commented on the Forest Service Planning NOI, I took it one step further and suggested that the county level is where land management decisions should be made. Unless you have stood in the middle of 1.6 million acres of red, dead beetle killed forest (I have)you can't understand the need to take land management away from Washington and give it to the people that have to live next to these lands.

Grazing on federal lands is a great deal for the cattle ranchers but a disater for our wilderness areas. It's misuse of public lands, it polutes streams AT THEIR SOURCE, causes erroision, breeds flying insects and insect borne diseases and makes for a very unpleasant experience for those of us who like to explore the great wilderness areas in our country. Proper, responsible management of these lands should not include grazing in any form.

Discussion Question 3

I don't disagree with hunting and fishing; but we don't need to be hunting and fishing everywhere. I'd prefer to see isolated parcels remain isolated.

I'm in favor of designating additional wilderness areas, and I promoted this idea. However, it is the same as the one submitted by ____ on May 7. This website has an abundance of duplications.

Our kids' shortcomings at outdoor play and natural history awareness are becoming well recognized and are reflected by many AGO ideas about these subjects. It's a good bet that our government is listening.

Several years ago, the late Dale F. Lott, a Professor Emeritus of Wildlife, Fish, and Conservation Biology at the U. of Cal, Davis, wrote a book entitled "American Bison, A Natural History". His concluding chapter in this book was called "A Great Plains Park". Professor Lott suggested that such a park be at least 5,000 square miles in size and include both upland and river bottom habitat. He suggested a location in northeastern Montana, directly across from the two units of Saskatchewan's Grasslands National Park. This still seems like a good place to me; but I'd also like to see additional park units be located in the central states, like Thomas Gould comments above.

The BLM should be run by people who are motivated to protect, restore and connect their land's diverse ecosystems.

To all: It would be great to have a Buffalo Commons National Park in western Kansas. Those of you who are residents of that region should contact your local politicians regarding it. Please also be sure to "promote" this idea and the other ideas in this website that are closely related to it, like the "Great Plains National Park" and "Tallgrass Prairie Conservation". With your determined efforts, we can make this happen.

Very well said, Kristen. I agree with you completely. It could be argued that our President's personal background leads him to think of the environment as a balance between economics and social justice, more so than as an issue of Nature for Nature's sake (ex. endangered species). Our Secretary of Interior has a ranching background that may make him sympathetic to protecting the outdoors from harsher forms of resource extraction (ex. mining). However, ranchers are not always sympathetic to wildlife and wilderness. Clearly, we are much better off, administratively, than we were two years ago; so I don't want to be critical. Still, as a country, we can and should do much better than we currently do at protecting our natural heritage.

Your idea provides a good summary of the kinds of actions that are needed to address this serious problem. This issue is part of the Federal Biodiversity Protection idea that I suggested a few days ago. Because exotics exist across state lines, federal coordination makes lots of sense. Thanks a lot!

(cont.)

Limited access to federal public land often has frustrated and disappointed hunters, anglers, and other naturalists and undermined the relationship between land owners and the general public. Some landowners are reluctant to provide access across their land to isolated parcels of federal public land through agreements with the federal government because those agreements invariably require perpetual access. State and tribal governments frequently secure access on or across private land through short-term agreements, contracts, leases or easements, and are not required in all cases to secure only perpetual access arrangements with private landowners. The Recreational Trails Program provides funds to the states to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. The authorized funding level for the program for FY 2009 under SAFETEA-LU is \$85 million. Establish a voluntary federal public-land-access (Open Trails) program under which States and tribal governments may apply for federal grants to encourage owners and operators of privately-held land to voluntarily make a portion of that land available for access by the public to federal public lands for non-commercial wildlife-dependent recreation that shall include but is not limited to non-commercial hunting and or fishing, under programs administered by the States and tribal governments. Current law provides funding for the development and maintenance of trails that are used by anglers, hunters, wildlife viewers, and hikers annually. However, millions of acres of Federal public land remain either inaccessible or severely limited in public access opportunities. I believe the Recreational Trails Program should be strengthened by opening trails to sportsmen to address these needs in the following ways: Open Trails • Establish a voluntary Federal “Open Trails Access Program” under which states, tribal governments, and conservation organizations may apply for grants to encourage owners and operators of privately-held land to voluntarily open trails for access by the public to Federal public lands that is either inaccessible or severely limited in public access opportunities for non-commercial wildlife-dependent recreation that includes hunting and or fishing under programs administered by a Federal agency, state, tribal government, or conservation organization. • The Recreation Trails Program (within the Federal Surface Transportation Bill, SAFETEA-LU) in general, and the “Open Trails Access Program” more specifically, should allow states, tribal governments, and conservation organizations to enter into property leases to open trails to enhance non-commercial public access to isolated parcels of Federal public lands. • I propose that the Federal agency responsible for administering the “Open Trails Access Program”, should give priority to those applications that propose to: o maximize participation by offering a program the terms of which are likely to meet with widespread acceptance among private landowners; o ensure that private land enrolled under the Federal, state, tribal government, or conservation organization program provides open trails access to Federal public land that supports fish and/or wildlife populations and that provides or can be made to provide regulated, non-commercial hunting and fishing opportunities to the public; o ensure that any access secured across private land (road, trail, etc.) through the program is maintained at a standard necessary to protect adjacent private and public property and public safety; o strengthen wildlife and fish habitat improvement efforts on Federal public land accessed by the program; and o use additional Federal, state, tribal government, or private resources in carrying out the program. • The Transportation Bill should establish that the use of funding through the existing Recreation Trails Program generally, and the “Open Trails Access Program” more specifically, will allow Federal agencies, states, tribal governments, and

Discussion Question 3

Written & Online Comments

(cont.)

conservation organizations to enter into property leases to enhance non-commercial public access through open trails to isolated parcels of Federal public lands as a permissible use of funding. • I believe \$110 million should be dedicated annually to the Recreational Trails Program of which a minimum of \$20 million will be allocated to the "Open Trails Access Program" in order to begin implementing the program with Federal, state, tribal, conservation organizations, and landowner partners.

Many parks never completed the acquisition of lands authorized in their enabling public law. Using funds from existing land leases and fees fully fund the acquisition of these critical resources. For example Ocmulgee National Monument in Georgia was authorized at over 2000 ac in the 1930s at a time when the local citizens were required to pay for the land. As a result, many important natural and cultural resources remain on private lands that in some cases were destroyed by development including an entire Woodland village (Swift Creek). It would a wonderful time to save the remaining unspoiled cultural and natural landscape. This would provide protection and recreational opportunities for an entire region. In addition to the cultural resources it can provide a haven for the 3rd large black bear population in the southeast and as well as protection for many bald eagle nest sites.

The nation's outdoor interests are growing increasingly competitive. On one side there are those who would like to protect and preserve things as if no human had ever set foot there. On the other, there are those who would like to travel some of the vast open spaces on an ATV. Somewhere in the middle is the correct solution. I propose the federal government recognize that our public lands have many uses and interests. In an effort to reduce the "I win, you lose" mentality of modern politics, the government should not consider setting aside any new wilderness without setting aside an equal amount of dedicated OHV area within a reasonable proximity.

President Obama has said that he is interested in local involvement in his plan, yet no multiple-use groups have been invited to meet with his representatives. The initial plan has been scripted by a small segment of special interest groups seeking to limit access to our public lands. President Obama needs to include the three largest forms of recreation; off highway vehicle recreation, mountain biking & horseback riding. By excluding millions of Americans from having any participation in his plan, President Obama is declaring that it is acceptable to ignore those elements that he finds objectionable. Additional lands need to be made available to these groups to recreate.

So much public lands are managed by the government. I would like to see a government role to enhance and add to outdoor, active recreation, and figure out ways that we can enjoy the outdoors. Provide education to protect the outdoors. Provide education how people can learn to share the outdoors rather than shut other users out.

What does this land need to be preserved from? If the government acquires private property, will the government need to provide reservations, like those of Native Americans, when you remove the people from the land?

Discussion Question 3

Written & Online Comments

(cont.)

Your steps 1 and 2 are very consistant with a communist country. Poor idea

I'm not in favor of the "government" grabbing more from us if he...I mean they, can't deal with what currently needs attention at the nations parks and monuments.

Western Kansas would be a perfect location for a Great Plains National Park. It has been stated that less than 4% of the prairies, tallgrass, mixed grasses and short grasses is left. Due to the federal government owning less than 1.2% of Kansas, we receive very little help for land development compared to states such as Nevada where the governmnet owns 84% of the state. Kansas is known for it's prairie and historic image and it would be a shame not to protect and preserve it for future generations. Presently the endangered ecosystem of the prairie could be sustained with bison, plant and wildlife. This could be a wonderful way to pay respect and remember how the pioneers, early settlers, farmers and ranchers lived and paved a way for us.

The Pebble Gold Mine is proposed for Bristol Bay, Alaska. It would be the worlds largest gold and copper mine in the world. It would destroy the worlds largest and most productive salmon fishing grounds in the world and forever polute all the surrounding fresh lakes. The massive open-pit, hard-rock mine known as the Pebble Project calls for the creation of 10 square miles of "lakes" to contain an estimated 2 billion to 3 billion tons of contaminated mine waste at the head of salmon spawning streams. Opponents warn that a single earthquake in this seismically active region could release a poisonous stew that would take generations to clean up. "It's a region with huge, off-the-charts biological value," says Tim Bristol, Trout Unlimited's Alaska program director, noting that nearby Katmai National Park has the world's highest concentration of brown bears. Audubon Alaska has identified four large Important Bird Areas at the head of the bay that are major migratory waterfowl flyways for the Steller's eider and other federally threatened species. Plus, the watershed accounts for a third of all salmon caught in Alaska; its sport and commercial fisheries together earn about \$350 million a year.

Use OHV funds to restore backcountry wilderness. These people need something motorized and vibrating to sit on, can do it at home.

At the cabinet level, the Secretaries of Agriculture and Interior and the appropriate undersecretaries should use the America's Great Outdoors Initiative as a launching pad for an interagency effort to develop a long-term strategy for public land management. The natural landscape does not recognize jurisdictions or agency boundaries, so it's important to plan for the future in a coordinated way. A vision for our public lands would be an important tool that our organizations could organize around and find our place in. It could give appropriators in the House and Senate the confidence that when they fund programs, they'll be doing so in a way consistent with agency priorities.

Discussion Question 3

Written & Online Comments

(cont.)

While volunteers can shoulder important projects, it's incumbent upon the federal government to set priorities, balance competing interests and adequately staff their agencies. Without a clear vision for what needs to be accomplished on our most treasured landscapes, we run the risk of attacking the many problems we face piecemeal. That's why the America's Great Outdoors Initiative is so important. It could create the framework for managing public lands for decades to come, providing predictability and government impetus to move us forward. But it won't succeed without stable and predictable funding. We need a six-year transportation budget re-authorization that includes funding for the National Recreation Trails Program (N RTP). The FLAME Act has to be authorized for at least a decade with funding attached so that recreation funds are not raided to fight increasing catastrophic wildfires. And, federal appropriators need a consistent vision that they can plan funding around.

National Forest and National Parks have lost control of many camping areas to concessionaires. These controlling parties have not served us campers well. Fees have gone wild with no upkeep. Those of us with Access Passes are not getting the discounts we are counting on as we did in the past. Gates are locked, fees are up, and something needs to be done.

- Climate change is the largest threat our fish and wildlife have ever faced. Temperature increases, altered precipitation patterns, and declining water supplies in the Western U.S. are already adversely impacting many fish and game species sportsmen cherish. Bird migrations are becoming more unpredictable, numbers of caribou, moose, and bighorn sheep are dwindling in some regions and fish kills resulting from rising water temperatures are becoming more common. The Fish and Wildlife Service said, "the warming of the earth could potentially have more far reaching impacts on wildlife and habitat than any challenge that has come before us."
- The only way to stave off this crisis is to dramatically alter the way we think of land and wildlife conservation; we must focus on building resilience into ecosystems to help them adapt to a warming world. The Treasured Landscape initiative should be structured specifically to address the challenges of climate change, and should include as a major strategy protection of crucial areas of habitat and connective migration corridors.
- Public lands in Montana are going to be critical in maintaining viable populations of game and non-game species and in providing high-quality public hunting and fishing opportunities for the public. Their management can be directed towards climate change amelioration by federal authority. All relevant land management operating units within Department of Interior must have explicit mandates to manage their lands for both present and future climate impacts, and all decisions should be based on sound science.
- The Department of Interior is responsible for the majority of our country's federal lands. The National Park Service, Bureau of Land Management, and the Fish and Wildlife Service collectively manage about one fifth of the land area - some 507 million acres - in the United States. The Great Outdoors Initiative should begin by ensuring that all 507 million of these acres are managed for climate change.
- The Forest Service and the Bureau of Land Management, in addition to the Montana Department of Fish, Wildlife & Parks, should receive dedicated funding to implement natural resource measures and strategies adaptive to climate change.

(cont.)

The Civil War changed us from The United States are to The United States is. it made us an united country. the Federal Govt should appropriate funds for Battle Field preservation and preserve as much of this Hallowed Ground as possible. Do not allow it to be lost forever. Bill Yankowsky

Our country is fortunate that we still have some lands of wilderness quality that are not now protected. We should protect these lands while they are still undeveloped.

create more marine reserves (no-take areas) in coastal areas, science shows these are effective in restore fish populations. I fish and see populations declining, catch is down and size of fish caught are down. Reserves work and the feds and states need to work together to create reserves

Establish a Great Plains National Park. When you look at the park system this is one of the major ecosystems that is not well represented in the system. The park needs large enough to allow the plains species (bison, wolves, grizzly bears) to be returned to the plains.

The first thing I respectfully ask Secretary salazar to do is to direct additional law enforcement resources to Region 2 for use in this investigation

Second, I ask him to request the cooperation and assistance of all federal agencies-and in particular, the Federal Bureau of Investigation-in the apprehension and prosecution of these egregious violators of the Endangered Species Act. Allowing this situation to continue seriously undermines federal authority and jeopardizes the very existence of the Mexican gray wolf.

Expedite the Environmental Assessment (EA) on direct releases into New Mexico to allow more releases in 2011. Right now, Mexican wolves can only be released into Arizona directly from captivity. The Fish and Wildlife Service should move forward quickly with an EA to allow wolves to be released from captivity directly into New Mexico as well.

Request Mexican Gray Wolf SpeCies Survival Plan cooperation in preparing more wolves for release in 2011. The USFWS and the SSP captive breeding facilities must prepare now to release additional wolves in 2011 to help offset the disastrous effects of recent illegal killings.

Discussion Question 3

(cont.)

The Bureau of Land Management is mis-managing our public lands to death and costing hundreds of millions of taxpayer dollars in the process. They aren't supposed to be the Bureau of Livestock and Mining but that is what they are doing. Organic grass fed beef produced by family ranchers is a good thing but that is not what is going on. Less than 3% of US beef is produced on the range. Large corporations like Hilton and millionaires like Ted Turner own most of the grazing rights. The grazing program loses hundreds of millions of dollars annually. The price charged to graze on public land is decades old as is price charged for mining and drilling. Our public lands are being eaten and drilled/mined to death and we aren't even making any money on it. The Bureau of Land Management spends millions of dollars needlessly rounding up wild horses and holding them in pens in the Midwest and killing animals across the West. They pay to have coyotes, wolves, cougars, bobcats, foxes, badgers, prairie dogs, raccoons and other wildlife trapped and poisoned because it might cause harm to a cow or sheep. The BLM just killed a bunch of wild horses in Nevada removing them from the land that British Petroleum (BP) wants to put the Ruby Pipeline through. They ran them in the heat for over twenty miles with a helicopter and over a dozen dropped dead of exhaustion and dehydration. They killed over 200 last winter in the Calico round up. They are in violation of the Free Roaming Wild Horse and Burro Act and they are also acting with extreme cruelty. Water holes are being fenced off so they can say the horses are dehydrated and must be removed for their health. Horses do not have the same negative impact on the ecosystem that cattle do. There are also less than 30,000 in the entire West compared to close to 10 million cows and sheep. The numbers speak for themselves and there is no documentation that horses are causing any damage and they are very healthy animals. Horses actually evolved in North America and spread to Asia and Europe via the same land bridge people came here over. Unfortunately, their temperaments that made them so easy to domesticate in Asia led to them being easily killed and eaten in North America. Eaten to extinction. Hundreds of horse bones have been found here with spear and club marks on them and cliffs have been found with thousands of horse bones below where they were stampeded off and then cut up. The Conquistadors were actually returning the horse to North America, not introducing an invasive species. Many mustang herds in the West have been DNA typed to prove they are of Spanish descent. They are gorgeous, healthy horses and when adopted become extremely hardy, healthy, trainable riding horses yet the BLM would have everyone believe they are jug headed, skinny and worthless. That they are pests and have no value. We should be promoting our mustangs to the world rather than rounding them up. Land areas set aside by Congress in 1971 specifically for horses have now been reduced by more than half. There are less than 200 wild horses left in all of Montana yet the Pryor Mountain Wild Horse Refuge continues to be emptied. Even Cloud, the wild stallion made famous by three PBS Nature series documentaries is rounded up every year and members of his family taken away. If such a beloved mustang isn't safe, no mustang is safe.

Discussion Question 3

Written & Online Comments

(cont.)

Your proposal confuses and conflates too many issues. Yes the grazing program gives away too much for too little, and damages the environment. And while wild horses and burros may not cause exactly the same problems as domestic livestock, they are nevertheless having a negative impact on public lands. The BLM wild horse policy IS a disaster, because it spends a lot of money for a very debatable purpose: treating horses and burros as wildlife deserving of protection when in fact: 1) many of these animals (burros especially) are feral, not wild. 2) if we do classify them as wild, they have overpopulated their habitat, just like deer, in many areas, and need to have their numbers managed HUMANELY. I agree that the federal land agencies must stop causing these animals to suffer, starve, die of thirst. We need to change the policy to allow the BLM & other managers to control equine populations humanely, rather than adhering to a sentimental idea about horses which ties the land managers' hands, and leads to the use of cruel techniques like stampedes and roundups. Sorry I have to demote your idea, even though I COMPLETELY AGREE that livestock grazing and timber production policies and mining law are all badly in need of reform.

I agree that BLM is not adhering to either the rules or public opinion. They are way out of line in many areas and need an overhaul and perhaps investigation into exactly who is supporting all the grazing of public lands that is practically 'free', and why! Not only are wild horses suffering but also the endangered desert tortoise. The cows are eating all the wildflowers these tortoise need to survive when they emerge from hibernation in the spring. Something is wrong with BLM and they need to be investigated!!

I also agree that BLM needs to be investigated & completely overhauled. We definitely should not be subsidizing mega-corporate ranching & farming & allowing them to abuse our wildlands. I am not sure about how the treatment of wild horses should be handled, but it needs to be one of the things addressed in the investigation & overhaul so very needed! So I am voting YES on your idea.

The BLM is in the pocket of corporate ranching and farming. They are a disgrace and need to be overhauled. You have my vote.

Agreed. Eohippus was native to North America. If you compare the numbers cited by Ms. Goen, 30,000 wild horses compared to 10 million cattle and sheep is a minority indeed. The BLM definitely need an overhaul, and most Americans agree that wild horses need to be protected. (How many movies are there about Moo, the Wild Bull of the West? I haven't seen any.) You have my vote too. Well said, Ms. Goen.

(cont.)

In 1971 Congress set aside approx 50 million acres as wild horse sanctuaries. Today, there are horses on about half. Wild horses are not starving anywhere, there are not too many of them anywhere. 200 in the entire state of Montana? Look on a map, Montana is huge and just happened to have an anti-wild horse senator, Conrad Burns for years. The Pryor Mountain Wild Horse Refuge contains one of the most documented wild horse herds in the country and there are books, videos, photos and three documentaries available for anyone to see that the refuge is almost empty of horses and in excellent health. The BLM's says there can be 2600 horses in the herd management areas in Oregon alone but there are 2300 horses again, according to the BLM and yet they rounded up 120 two weeks ago with some deaths. This was reported in the Oregonian newspaper recently sourced directly from the BLM. Why did they round up those horses at all let alone in the July heat? No wild horse groups or observers agree with the BLM's tally of wild horses, they all insist there are far less. Actually, ten million cattle and sheep is very conservative, I read yesterday there are 15 million cattle alone but I of course, have not counted the cows. Not just Eohippus was native here, Equus was here until ten thousand years ago and all the evolutionary steps in between the two were here in the preceding years as well. Equus spread from here to Asia and Europe. At the very least the BLM needs to stop rounding up horses and shipping them off to corrals in the Mid West. 35,000 horses in pens, it is ridiculous, costly (millions annually) and cruel. With no valid plan to solve the problem and American's have demonstrated very clearly that slaughtering them all isn't valid, round ups need to stop. Now.

I realize I didn't finish a comment: The Pryor Mountain Wild Horse Refuge is almost empty of horses and in excellent health and could support many more as it used to. Cattle are not grazed there BTW, it is too rugged. The horses were removed for political gain and nothing more. I urge you to watch the Nature specials available on PBS.org on Cloud and his herd. There are three and they are spectacular.

It should be obvious to everyone by now that republicans no longer care about the environment or our wildlife. While republicans of the past have done marvelous things with an eye to conservation that is no longer true and it seems most, if not all, republicans would just as soon see our forests and wildlife disappear altogether. If it were up to republicans we would sell our national parks off to logging, mining and oil companies and would sell hunting licenses for endangered species. If they are not voting down bills for climate change or holding up legislation for oil drilling safety they are trying to promote mountain top removal mining, logging in pristine, old growth forests and getting rid of the ESA. Bush underfunded our parks for years, opened some up to mining, logging and drilling and closed dozens if not hundreds of wildlife refuges. He and his cronies tried their best to get rid of the ESA, the roadless act and many more environmental laws, now the holdovers in congress and the senate have taken up right behind him. If you are someone who loves and respects nature, has a fondness for wildlife and would like to see both around for your children and grandchildren to enjoy get out this November and vote for the representative that will do his best to preserve and protect what little is left of our forests and wildlife.

(cont.)

I think this is just the forum to bring this to light. The policies under Bush, Cheney and the republican lead senate and congress did more damage to our forests, lakes, rivers, wildlife and overall environment than all other factors combined. It is imperative that we get representatives that will protect what wild lands are left or there will be no places left to connect to.

I don't know how this turned into a political agenda but I agree that things need to change back to taking care of the Environment. Since the Republicans are the ones that screwed it up then I think the Democrats need to be given a chance to fix it. The President cannot fix all the problems we have in 18 months, it took longer than that to cause them. I think President Obama is doing the best he can under the mess he took on, and I truly believe he cares about this Country. We need to get past Racism and Bigotry that has taken over this Country, we are just showing the World our BAD side. Let's stop all the HATE and give President Obama a chance, if it doesn't work than there is always the next election, that's the way America works best.

Agree with #10, but partly in hopes that the GOP can return to its old strengths, one of which was conservation.

1) Restore lobo the federal protection that Interior Secretary Salazar removed as one of his first implementations. 2) Use volunteers to remove & prevent invasive species from getting a toe hold. A stitch in time saves 9. 3) Eliminate ORV/ATV from the majority of wild spaces. Noisy, polluting, degrading of the eco system. There is NO place for them in wild places. They must be confined to restricted areas of private operations or designated areas. They also introduce invasives on their tires. 4) Encourage folks to pick up one piece of litter. After all these lands are the face of our nation. Cigarette butts do not belong here. Or anywhere actually. 5) Enforce quiet in the campgrounds. No music or radios etc. without headphones. The wilderness experience should not include the media without headphones. 6) Keep it dark. That we may see the Milky Way once in a while. 7) The National Parks are in disrepair. I saw sewage running from the bathrooms, thru the parking lot, into the earth, in Sequoia National Park. Fund our national jewels appropriately. 8) Pursue poaching avidly. 9) Promote catch & release programs in fishing. 10) Promote quiet sports such as bird watching & identification. 11) Protect the bio crust by insisting people remain on the trail. I saw German tourists running all over off of the trails in Arches National Park. 12) Encourage loud mouths to tone it down & listen. We are not in the city anylonger. 13) Prominent recycle bins which can be removed upon bear sitings. 14) No food or cosmetic products such as toothpaste in camping tents. Bears have enough trouble keeping away from humans without scent enticements. 15) No feeding of the wildlife. Keep 'em WILD! 16) QUIET!

(cont.)

I agree that Federal Land Management Agencies routinely exceed their Congressional authorities. However, I doubt that requiring managers to read the legislation will fix the problem. Here are a couple of suggestions: Just as the MMS is "too cozy" with Big Oil, the FS and BLM are far too cozy with wealthy, influential conservation organizations. Effectively, this relationship has resulted in top-down, "one size fits all" policies that reflect the agendas of a few wealthy special interests. The AGO initiative is a prime example. All Federal Agencies need to have an "arm's length" relationship with wealthy Beltway special interest groups, and should be required to do so. Revise the Equal Access to Justice Act (EAJE). The original intent of this Act was to provide a means for individuals who cannot afford lawsuits to redress their legitimate grievances against Federal Agencies. Exceedingly wealthy conservation organizations should not qualify. Organizations like the Wilderness Society and Sierra Club have more money than God and their frequent lawsuits should not be supported by public funds. Doing so simply invites more lawsuits. Revise the Appeals process for USDA and DOI. Currently, the Appeals process for these Agencies is dysfunctional. Appeals are virtually never granted or upheld, and individuals and organizations only appeal in order to preserve their opportunities for litigation. Establish an independent, non-partisan Appeals Board composed of real experts in environmental law.

Update and strengthen the technical guidance for preserving cultural heritage. Create market research that identifies the top ten issues that property owners and contractors have regarding work on historic properties and create best practices documents. Think outside the Sec. 106 box to actual tools needed to implement the Secretary's standards. Get more specific.

One of the most critical things the Administration can do to protect and enhance wildlife in national parks across the country is to restore the landscapes and watersheds surrounding the parks. Restoration efforts underway in the Great Lakes, Chesapeake Bay, Everglades, Columbia River Basin, and other major watersheds should be supported and sustained. Restoration of these systems brings the added near-term benefit of thousands of American jobs on American lands, and the long-term benefits of clean water, recreation, tourism, and other values that are the economic backbone of countless communities across the country. Development, pollution, invasive species, and the changing climate are taking a toll on our national parks and their wildlife, from the coral reefs of Biscayne National Park in Florida to the salmon that migrate through Olympic National Park in Washington.

Discussion Question 3

(cont.)

Federal enforcement resources are limited due to pressure on the budgets of the BLM, National Park Service, and other agencies will patrol and protect our federal lands. It is unrealistic to increase the allocation of resources for appropriate enforcement efforts. The penalties for those who are caught by federal enforcement agents on the ground need to have more "bite" to really discourage encroachment on federal wilderness areas, wilderness study areas, and other proposed wilderness land. Sanctions can include much higher fines; and the seizure of equipment used in wilderness areas, including ATVs, trailers, and vehicles that trespass on federal wilderness land. A public awareness campaign about new "very high fines" are needed to create awareness of the new penalties. Without increasing sanctions, and in the absence of increased patrol and enforcement resources, wilderness areas will continue to be disrespected and irreparably harmed. Additionally, more power can be given to citizens to record illegal activities and report them to federal authorities. On the basis of this evidence, federal prosecutors can pursue known violations with vigor.

The federal government needs to focus on three things: 1-rampant off road vehicle use is damaging and fragmenting our public lands and harming watersheds and wildlife. The feds need to focus on controlling these OHV users and closing environmentally sensitive areas to OHV riding. 2-renewable energy may do extreme harm to our public lands and wildlife. The feds should not be promoting renewable energy on intact public lands, but should be steering renewable development onto rooftops and in the urban core, and onto disturbed, formerly agricultural or industrial lands that are not currently being used. 3-grazing is also damaging our public lands. Very few areas that are grazed would qualify as being healthy ecosystems. The feds should severely reduce, if not ban outright, grazing on the public lands. This is a program that loses money for taxpayers and hurts the ecosystem in this short and long-term. All of these threats reduce low-impact recreation opportunities on public lands, and should be addressed as part of any recreation-management strategy.

Take the US Forest Service out of the Department of Agriculture which has a culture of extraction and environmental degradation and put it into the Department of Interior with other agencies that have stronger conservation objectives.

???? This only makes sense!!!!

Great idea !! You go!!!

This is a great idea unless you have a Bush era Secretary of the Interior. There needs to be a Conservation Department and along with it a far-reaching energy policy that takes into account how all our resources will be used and maintained.

Discussion Question 3

Written & Online Comments

(cont.)

We need another "department" whose ONLY agenda is that of conservation, protection and long-term planning for open spaces and wilderness. Agri-business pollutes waterways--aquifers, rivers and areas like the Gulf of Mexico (yes, all those farmers growing corn for alternative fuels have fertilizer pollutants flowing down the Mississippi into the Gulf. Before the BP disaster, there was a huge dead zone due to this). Same with cattle and dairy...the run-off from dairy farms is huge, and pollutes the same aquifers and rivers. Department of Agriculture oversees these businesses. Department of the Interior, besides "stewardship" of Federal lands, also must adhere to the Mining Act of 1872, which states that all mineral resources (gold, silver, uranium) are available for mining to anyone. These commercial priorities take precedent over other existing Federal law. (I'll paste in the reference below) . Ken Salazar does not have a history of being pro-environment, either. There are over 10,000 claims for uranium now staked on the edge of the Grand Canyon. Even if Congress overturned the Mining Act of 1872 today, these claims can still be worked. So, placing faith in the Department of the Interior may not be a good idea. In fact, there is no existing department within the Federal Government that does not represent those that have a commercial interest in our wilderness areas and the environment. "MINING LAW OF 1872 30 U.S.C. §§ 22-24, 26-28, 29-30, 33-35, 37, 39-42 and 47, May 10, 1872, as amended 1875, 1880, 1921, 1925, 1958, 1960 and 1993. Overview. This Act authorizes and governs prospecting and mining for hardrock minerals such as gold and silver on public lands. A brief summary of the Act is included in the Handbook because application of broad provisions of the Act allowing for purchase of and mining on public lands has an impact on wildlife. "Lands Open to Purchase. The Act provides that all valuable mineral deposits in lands belonging to the U.S., both surveyed and unsurveyed, are free and open to exploration and purchase by U.S. citizens. The Act further provides that the lands in which the minerals are found are open to occupation and purchase by U.S. citizens. § 22. "Mining Claims. The Act provides that locators of all mining locations on a mineral vein, lode or ledge on the public domain have the exclusive right of possession and enjoyment of the surface included within the lines of their location, and of all veins, lodes and ledges throughout their entire depth. The Act sets forth the method to obtain a patent for land claimed and located for valuable deposits. The Act also provides the manner in which adverse claims are to be handled."

There are many restrictions, and widely varying policies depending on what agency manages the land. In California, it is illegal in most state parks, only a few allow it. In National Forests, it is generally legal, but there are different policies and permit requirements in each forest. The attitude of forest, park, and other agency personnel (rangers, etc) seems to vary in an arbitrary way. A national policy for federal lands would be a good idea.

We should have something along the lines of a Civilian Conservation Corps, available for environmental activities requiring large numbers of helpers anywhere in the world. This plan is not only a way to foster appreciation of nature, it is also a jobs program and an international assistance program since the Corps could be used as the Peace Corps is used today. Corps resources could be used for clean-ups, data gathering, small farm support, natural resource protection and enforcement, endangered species protection and enforcement, agricultural improvement, and related infrastructure.

I completely agree with the idea of something like the CCC. If the Federal government is either unwilling or cannot afford what it takes to keep our National Parks and other federally managed land in good order, we must find an alternative. Something like the CCC could fill this need. I would certainly be interested in volunteering if such an organization was put in place.

I completely agree with the idea of something like the CCC. If the Federal government is either unwilling or cannot afford what it takes to keep our National Parks and other federally managed land in good order, we must find an alternative. I agree !! An alternative would be to use folks that have been on unemployment for over 26 weeks , dope addicts , and other non violent criminals .

To protect wildlife migration routes and give national park wildlife the freedom to roam, the Administration should require measures to enhance current and projected wildlife migration routes in all federally funded transportation and energy transmission projects, and in leases for resource extraction on federal land. Throughout history, Americans have worked to save national treasures in their own backyards to retain what they find special for our children and grandchildren. At Yellowstone and Grand Teton National parks, pronghorn have seasonal migrations, but fencing and road development outside of the parks have threatened migration routes, limiting access to winter habitat, and leaving the park's pronghorn at risk. To further protect wildlife, the Administration should create a multi-agency wildlife habitat and migration corridors information sharing network; push for new revenue sources and prioritize existing resources for the acquisition or protection of vital wildlife migration corridors. National parks are not islands and their humanmade boundaries are not recognized by wildlife. As the climate changes it is widely expected that wildlife will migrate further from their park homes in search of suitable habitat.

The feds should have to start paying both state and local property taxes on all wilderness and other lands that they are refusing to allow ATV/UTV access to. If we can not have access then the exemption of property taxes should be ended. We grant this exemption because this is property that we share in common and can use. If we are no longer going to be able to use it then this is a violation of the agreement and they should start paying taxes. I would also include all land they do not allow OIL and GAS drilling on. If they are going to lock it up then they get no exemption. I think this would be a good policy that would allow some land to be locked up but prevent to much of it from being locked up because it would cost to much.

(cont.)

Currently, Internal Revenue Code section 2031(c) provides an estate tax exclusion of 40% of the value of land protected by a conservation easement. Unfortunately, this exclusion is capped at \$500,000. In the context of rising farm values this exclusion is woefully inadequate. The American Family Farm and Ranchland Protection Act, H.R. 3050, would increase this existing exclusion to 50% and raise the cap to \$5 million – providing a powerful incentive for owners of high-value agricultural, forest, and natural habitat lands to protect these properties in perpetuity. More than 70 percent of wildlife gets food and shelter from our working farm, ranch and forest lands, and the greatest value for wildlife and other public benefits comes from the large, contiguous properties where estate taxes frequently force families to subdivide and sell their land for development. In fact, due to high land values, farmers and ranchers are disproportionately subject to an estate tax at a rate of approximately 4 times that of the general public. On private forest land, the U.S. Forest Service has invested heavily to promote sustainable forestry. As second home development pushes deeper into our forests, inflated tax values make it increasingly difficult for forest owners to hold on to the timberland they've stewarded for generations. In fact, a 2006 study indicates that approximately 2.4 million acres of forest land are harvested and 1.3 million acres are sold annually to pay the federal estate tax. These outcomes are no way to reward a good deed and good stewardship. We can avoid them by expanding the estate tax benefits for landowners who have permanently protected their land. The Joint Committee on Taxation has scored H.R. 3050 as costing just \$132 million over ten years, but its impact would be enormous, encouraging thousands of landowners to work with land trusts in their community to ensure that lands with important conservation values for the public are never lost to development. This provision works well with a deferral of estate taxes on family farmland (H.R. 3524) and we expect new House and Senate legislation in the coming weeks that will combine these provisions. This provision also works well with the enhanced income tax deduction for conservation easements (H.R. 1831) setting up the opportunity for America's Great Outdoors to promote a conservation tax package. For more information please visit: www.lta.org/estatetax.

1) We want wilderness designations for all qualified lands on National Forests in Utah, specifically in areas currently under consideration like the La Sal Mountains, Elk Ridge, and Abajo Mountains in San Juan County and the Marysville Peak and Tibadore Canyon proposed Wilderness areas on Monroe Mountain on the Fishlake National Forest.

This program while not ideal is essential to protect critical lands like those inside established wilderness areas. I would generally oppose any lands going back to development interests, but since Congress and the Admin won't step up to the plate to do the job that needs doing, this is a workable alternative.

Park management can go a long way toward promoting appropriate, low-impact access by the visiting public by providing informative programs, such as slide shows, campfire talks, and guided naturalist tours; and well-defined venues for conservation-appropriate activities. The latter include, but are not limited to, interpretive Nature trails with signage and brochures emphasizing flora, fauna, ecology, geology, hydrology, etc.; designated kayaking and canoeing runs; cross-country ski trails; birdwatching trails and brochures; scenic hiking trails; and kayak, canoe, and bicycle rentals.

well said. Government promotion of cultural and scientific progress doesn't have to be at odds with economic and organizational efficiency. American citizens are expected to multi-task every day. No reason our taxes can't be used as efficiently as we manage our own paychecks.

Our Parks are non negotiable National Treasures ! Our National Parks were never meant for any one era. To manipulate them in anyway during any one era is to augment the prescribed purpose of such. No such era should ought to vie lien on any such National Treasure in lure of personal provocation ! I urge we denounce any such lien on our National Parks and preserve them for future generations lest the selfishness of our day be unto the future.

Our National Parks were never meant for any one era. To manipulate them in anyway during any one era is to augment the prescribed purpose of such. No such era should ought to vie lien on any such National Treasure in lure of personal provocation ! I urge we denounce any such lien on our National Parks and preserve them for future generations lest the selfishness of our day be unto the future.

If you want people to get out and visit the parks, talk about how CHEAP camping can be!! you don't have to spend a million dollars at Disney to have a great family vacation!! It is amazing what the kids learn being away from the TV and their toys. They have such great imaginations and will be totally stimulated by nature once they arrive at the campsite!! They will find a million things to do they never even knew they loved!! In today's economy, people need some help finding ways to escape the stress of life and camping is almost as cheap as staying home!!! Pack your food, go somewhere close by and pay less than \$20 per night for the whole family!!

Support federal legislation to avoid permanently protected lands during the siting of utilities. If protected properties cannot be avoided, utilities should be required to mitigate the damage. LTA is sponsoring a National Utility Infrastructure Coalition and working with Congress to pass legislation to ensure that our permanently protected lands are safeguarded forever.

Discussion Question 3

(cont.)

Recreation in the Salmon Challis National Forest is not going to be an issue soon, as the Forest is dying. I would call the attack of the Western Pine Beetle a National Emergency! Hundreds of thousands of trees are dying daily. Every summer that goes by we see more and more forest dead, and new trees dying, and yet we see nothing being done. Mother Nature isn't going to take care of this one. I was recently in Canada and stopped to read about how the beetle had come to their forests near Revelstoke, BC. The Canadian government realized they had to take action and they did, with aggressively cutting down, spraying and whatever it took to eradicate this destructive pest. I can't understand why nothing is being done in this country. I'm frightened that we won't have any forest left in Idaho, not to mention the fire threat these dead trees pose.

If the country is broke, we need to make a choice on what our spending priorities are. What are your priorities? 1. Accomplishing worthwhile conservation goals while providing training and employment opportunities for young adults 2. Providing more subsidies to private companies (forcing citizens to give their wages to private business), in the hope that this time they will do what we want instead of just increasing their profits Tax money is not "your" money - our democratically-elected representatives have voted to levy taxes on workers and allocate the money as they see fit. That's how our government works. I'm sorry if it's not in your best (financial) interests - welcome to the working class's world for the past 30 years. If you don't approve, you're free to leave!

In economics, free goods are one justification for government. Because the good is "free" most people have no incentive not to waste or destroy the resource. National Parks, wilderness areas, national monuments, national forests, etc fall into this category. The government MUST regulate users of these resources in order to maintain its natural state. Roads and especially off road travel severely damage the resource. If off roaders want to damage a resource, they should damage their own property not the publics.

Cheatgrass and other invasive species are gradually destroying the natural habitats in the West. These invasive species are expanding and reportedly collectively now cover an area larger than the state of California. Cheatgrass crowds out native vegetation, and creates excessive fuel loads when it dries out in the summer. When fires occur, these excessive fuel loads can change what was once a natural and beneficial disturbance process (fire) into an unnatural agent of destruction. Cheatgrass thrives on repeated fires, but the frequency and severity of the fires may gradually remove the natural vegetation and even the natural seed bank in the soil. Eventually, the permanent outcome can be an alien, annual grassland that is largely sterile for native wildlife and ugly to look at. This is a relatively quiet ecological crisis. Can you imagine the public outcry if many millions of acres were strip mined in the West? In my view, the response thus far by federal agencies and other stakeholders has been proportionally small compared to the enormous magnitude of the threat posed by invasives. Indeed, in most places, the invasives are still expanding. The challenge will be to aggressively apply the best science and tools to stop and reverse this expansion, and to better educate the public about how they may be inadvertently aiding in this expansion.

(cont.)

I strongly support the Obama administration's efforts to establish new Climate Science Centers (CSCs) and Landscape Conservation Cooperatives (LCCs). I believe that these CSCs and LCCs could be very effective in making sure that federal agencies have and hopefully apply the best and most timely scientific information. While the primary emphasis is and should be climate change, and how federal agencies can best adapt to those changes, I believe that the CSCs and LCCs could also play pivotal roles in coordinating research on other important and likely related issues. These are issues that tend to go beyond the traditional governmental agency roles or political boundaries. These issues could include: improved control of cheatgrass and other invasive species; improved coordination of various land use and resource management planning processes (BLM, NPS, FWS, Forest Service, etc.); improved coordination of management of landscape linkages and wildlife movement corridors; and improved coordination of water and energy transport systems. There is already a lot of wasteful redundancy in federal management programs, whereby each agency tends to address common issues in its own somewhat separate way, or conduct land use planning in a somewhat different format. Since federal agencies' budgets are likely to remain flat for the coming years, the only way to increase the capacity to do more is through greater streamlining and efficiency. As the CSCs and LCCs work with staff from many agencies, I hope that some of the institutional barriers will be broken down and that government can learn to work smarter and better. The challenge will be to advance CSC and LCC work so that it "adds value" without creating any new bureaucracy for its own sake.

Discussion Question 3

(cont.)

As someone who has followed federal lands issues in the West for many years, I believe that federal agencies need to be much more consistent and effective in how they respond to illegal or trespass livestock grazing situations. I have heard or read about BLM or Forest Service livestock grazing trespass situations that have lasted many years. For example, there is one publicized chronic situation near Mesquite Nevada where the trespass has reportedly occurred over the past fifteen years, and in critical habitat for the threatened Mojave desert tortoise. I believe that federal agencies can charge the offending rancher for the administrative costs of enforcement against the trespass, for the resulting resource damage, and, as a last resort, for the agency to round up, impound, and auction the trespass livestock. These cumulative costs should add up to a large bill hanging over that rancher and his family/heirs, and so I wonder why these chronic trespasses continue. Are the agencies not adding up these costs or submitting these bills? Are the federal managers afraid of the ranchers or their possible political connections? Are there no ways to track these chronic trespass situations so that the managers and ranchers can be held accountable? I recommend that the Obama administration establish a consistent program for tracking and monitoring the status of all federal lands trespass grazing situations. This would bring accountability from outside the local areas, and perhaps motivate more managers to do everything legally possible to stop the trespasses and recover the costs. The general data showing the status of trespass cases around the nation should also be available to the public, as part of the Obama administration's commitment to greater government transparency. Where there is a substantial delay in stopping a trespass or recovering costs, this program could flag those delays so that the manager could either provide a reasonable explanation for the delay or be disciplined for dereliction of duty. The BLM and Forest Service are supposed to manage livestock grazing as a multiple use, consistent with a variety of laws, regulations, plans, and policies. Allowing trespass grazing to continue violates all of those, and should be a huge embarrassment for these agencies. As such, the agencies themselves should support greater transparency and accountability to help shield them from the local pressures that may otherwise undermine prompt compliance.

Discussion Question 3

Written & Online Comments

(cont.)

As someone who has followed BLM issues in the West for many years, I believe there is a pervasive, unwritten "culture of secrecy" in some BLM offices. This occurs where managers unofficially let employees know that they should not put anything in writing on sensitive issues unless they obtain prior approval from the managers. This can have a chilling effect on any employees who may want to document a concern in writing on a sensitive issue. This can also include when an employee wants to document something that they reasonably believe may be improper or illegal. BLM resource professionals are hired because of their substantial academic training and practical scientific experience, but that expertise may be diluted or lost if they are too intimidated to put their actual findings and recommendations in writing. This secrecy would also seem to frustrate the Obama administration and Interior Secretary Salazar's professed commitment to greater government transparency and accountability. If managers are successful in preventing anything in writing that they may disagree with, what is the point of Freedom of Information Act (FOIA) requests or discovery requests in litigation when everything in the official files has already been "sanitized" (like a motel room toilet seat) for the managers' protection? If President Obama and Secretary Salazar want to walk their good government talk, they need to root out this de facto BLM "culture of secrecy" wherever it exists, and discipline any managers who seek to maintain it.

(cont.)

Dude, There isn't room for all the studies - hey and try to be a little civil with your tongue. Here's a start on your query. Currently, hundreds of thousands of miles of routes give off-road vehicles abundant access to our parks, forests, and other public lands and waters creating an imbalance between the amount of land available to off-road vehicles and the amount of land available to non-motorized users. For example, off-road vehicles are allowed on 93% of the 264 million acres managed by the Bureau of Land Management. Although ORV users represent only a small percentage of the total number of people recreating on public lands they are having a disproportionately large and harmful impact. Since the roar of motors can be heard by people and wildlife miles away, these vehicles can ruin the experience for those who choose to experience the outdoors without motorized vehicles. 3. Federal agencies have failed to enforce laws designed to protect our wildlands and drag their feet on implementing important new regulations. Exacerbated by inadequate or no route planning as well as severe lack of monitoring by these agencies, illegal and inappropriate off-road vehicle use has continued largely unchallenged. Americans want to experience natural quiet to camp, hunt, hike and fish with their families on their national public lands free from the roar of engines and the pounding of pistons. The Federal government has an abysmal record of enforcement of even established regulations barring ORV use. My personal experience comes from Arizona and the Coconino National Forest where ORV users transit signed/prohibited areas regularly. Repeated calls to Forest Service Law Enforcement brought zero results. The excuse given was insufficient resources. There is NO reason to believe that the situation for FOREST SERVICE is any different. Now in Williams, I hike an area where it is clearly signed "No Motorized Access", but ORV use takes place there regularly. 4. ORVs also emit large amounts of pollution, including carbon monoxide, hydrocarbons, and carcinogens such as benzene. The small, inefficient two-stroke engines of some of these machines spew out as much as 30 percent of their fuel unburned polluting the soils, air, and water of our National Forests, National Parks, and other public lands including Oregon FOREST SERVICE holdings. With 36 million registered all-terrain vehicles and 12 million registered snowmobiles in the U.S. alone, these machines are a significant source of pollutants. They run on inefficient two and four-stroke engines that emit several dangerous gasses and chemicals including carbon monoxide (CO), hydrocarbons (HC), nitrogen oxide (NOx), and particulate matter (PM) (US DOT 2001). These emissions have all been shown to affect human health. Despite this fact, the U.S. Environmental Protection Agency (EPA) has yet to establish emission standards for off-road vehicles. Carbon monoxide binds to the hemoglobin molecule in blood and inhibits the transportation of oxygen in the body. High levels of carbon monoxide exposure have been shown to lead to visual impairment, reduced work capacity and mental dexterity, poor learning ability, nausea, headaches, dizziness, and even death (USEPA 1991). Carbon monoxide is especially dangerous to the elderly, people with cardiovascular disease or other circulation disorders, anemic individuals, young infants, and pregnant women (USEPA 1991). Hydrocarbons are volatile organic compounds that include benzene, toluene, ethylbenzene, and xylenes. While these compounds can cause dizziness, headaches, and loss of consciousness, the EPA has also identified benzene as a carcinogen and those exposed to benzene have an increased incidence of leukemia. Nitrogen oxides can cause shortness of breath and chest pains and increase a person's susceptibility to respiratory infections and asthma. Long-term exposure can cause chronic lung disease. Particulate matter, also found in off-road vehicle

Discussion Question 3

(cont.)

emissions, is detrimental in fine and coarse forms as it accumulates in the respiratory system, and can lead to decreased lung function, respiratory disease and even death (Janssen and Schettler 2003). Of the pollutants emitted by ORVs, particulates are of special concern because their small size makes them easily respirable and thus deliverable directly into the lungs, causing any number of the aforementioned maladies (NPS 2000). The EPA found that ATVs emit more than 381,000 tons of hydrocarbons, 1,860,000 tons of carbon monoxide, and 11,000 tons of nitrogen oxide each year across the country (USEPA 2001). While emissions from on-road vehicles decreased 56 percent over the last 20 years as a result of emission control programs, there was a 42 percent increase in ATV emissions during the same time period (Grambsch 2002). The list of greenhouse gases continues to show the impact of these vehicles. For example, on-road vehicle emissions of nitrogen oxide were virtually unchanged during the same twenty-year span, while emissions from off-road vehicles increased 56 percent (Grambsch 2002).

Anthropogenic emissions of nitrogen oxide account for a large majority of all nitrogen inputs in the environment and off-road emissions are a large contributor (Grambsch 2002). The EPA went even further to research individual ATVs: they showed that a two-stroke ATV or motorcycle could emit as much pollution as more than thirty automobiles operating in the same time frame. Even more shocking is that the ATV took a distant second from two-stroke snowmobiles, which can emit as much as nearly one hundred automobiles in the same time frame (USEPA 1996). It is well-established that off-road vehicles contribute a large amount of pollution to the air.

According to the EPA, if left uncontrolled, off-road vehicles will contribute 33 percent of hydrocarbon emissions, nine percent of carbon monoxide, nine percent of nitrogen oxide, and two percent of particulate emissions nationally by 2020 (USEPA 1996). The Environmental Protection Agency has yet to establish emission standards for off-road vehicles and the engines on which they run. The off-road vehicle industry has been slow to adopt technological changes that could lessen the impact of its machines on air quality at the local and, even the global, level. And while the industry has been sluggish, government regulatory and enforcement agencies have been all-too complacent in allowing continued degradation. References Cain, C.J. and J.

The idea that most ORV riders obey the laws and regulation is patently FALSE, and additional designation of ORV areas will NOT solve the problem. It will only exacerbate it. I incorporate, for the record, the following research article. Just a Few Bad Apples: Research Shows Many Off-Roaders Break the Law. Introduction The ecological impacts of off-road vehicles on water, air and land have been well documented. In the past five to ten years, however, these issues have taken on social dimensions, and social scientists have begun exploring the attitudes and behaviors of off-road vehicle drivers. Countless newspaper articles are peppered with myths perpetuated by off-roaders, such as: "elite environmentalists are locking the public out of public lands;" "the old and infirm need vehicles to explore the forest;" "if you give folks a place to ride their ATVs, they won't break the rules;" and "it's just a few bad apples riding where they're not supposed to and causing damage." This article examines important social science research that debunks the "few bad apples" myth. Analysis includes a review of three state-level surveys revealing that a majority of off-roaders break the law. These studies point to the failure of this myth and show a pronounced preference and practice among off-road vehicle recreationists to travel cross-country and ride off of legal routes. Montana In 2006, Montana Fish, Wildlife and Parks received survey responses from 446 owners of registered off-road vehicles. Among the full sample of respondents, 23% "always or sometimes" ride cross-country even though off-route

Discussion Question 3

(cont.)

riding is against the rules in Montana and has been since 2001. Over 28% “sometimes or never” avoid riparian areas and wetlands, in violation of rules for federal and state public lands in Montana. Sixty-four percent of those surveyed have used an off-road vehicle while hunting. The majority of this hunting subset admits to riding cross-country — over 58% have traveled off of legal routes to retrieve downed game. Colorado A 2001 Colorado study cited the state of Montana’s off-road vehicle public education program as a model to emulate. According to the Colorado study, Montana’s “On the Right Trail” program “provided a list of key behavioral traits that define an ‘ethical hunter’ — with several of these related to proper OHV use.” However, as discussed above, the more recent Montana study revealed a significant disregard for the rules among many off-road vehicle riders, pointing to the ineffectiveness of the state’s education program. This supports the key conclusion of the Colorado study: “information and education per se – will not result in substantial behavioral change” (emphases in original). Monaghan and Associates, a marketing research firm, conducted the 2001 study at the behest of the Colorado Coalition for Responsible OHV Riding, a coalition of off-road vehicle representatives, environmentalists and public officials. Researchers surveyed Colorado off-road vehicle riders through a series of three focus groups. Monaghan and Associates found that the majority of off-roaders understand that staying on designated routes is “fundamental trail etiquette” and that going off trail is not “correct” off-road vehicle behavior. The survey revealed, however, that regardless of this knowledge “as many as two-thirds of adult users go off the trail occasionally.” A significant percentage of riders, 15-20%, admitted to frequently breaking the rules and riding off of legal routes often. Survey participants also stated that “others” ride off-route and cause most of the damage. Utah In a separate study, the Utah Division of Parks & Recreation commissioned Utah State University to survey riders to determine their “OHV uses and owner preferences.” The university conducted a telephone survey of 335 riders from a random sample of the 50,676 people who registered off-road vehicles with the state in 2000. The Utah report reveals that a high percentage of riders prefer to ride “off established trails” and did so on their last outing. Of the ATV riders surveyed, 49.4% prefer to ride off established trails, while 39% did so on their most recent excursion. Of the dirt bike riders surveyed, 38.1% prefer to ride off established trails, while 50% rode off established trails on their most recent excursion. When surveyed on issues affecting off-road vehicle use in Utah, survey respondents recognized the need for enforcement but not the need for protecting the natural resources where they ride. This questions the assumption that off-road vehicle riders will stay on-route if educated that cross-country travel is illegal or damaging. One-third of the respondents said there should be more law enforcement presence in OHV areas. Only 6% cited “resource management conservation” as the most important issue affecting off-road vehicle use in Utah. Nevada The U.S. Fish and Wildlife Service found a near universal disregard for motorized guidelines when the BLM experimented with a “voluntary off-road vehicle route system” in Nevada. The area in question serves as a refuge for the disappearing Sand Mountain Blue butterfly, a species proposed for listing under the Endangered Species Act. A 2006 monitoring report compiled over a three-year period found that “98 percent of all existing routes continued to be used and new routes were created, indicating an ongoing expansion of habitat degradation.” The study also found that half of the places where riders violated guidelines were near signs that discouraged them from proceeding into sensitive butterfly habitat. The cumulative impacts of such “noncompliance points” were

Discussion Question 3

(cont.)

four-fold as each discouraged route experienced multiple incursions. Conclusion One can assume that many folks will not tell the truth when asked if they participated in a behavior known to be illegal or generally perceived to be in conflict with social norms. This tendency is known as the “social desirability bias” and defined as under-reporting undesirable attributes and/or over-reporting desirable attributes due to the tendency to present oneself in a favorable light (Groves et. al. 2004). Therefore, the percentage of off-roaders who violate the rules is likely even higher than revealed in the survey results discussed above. Many public land managers assume that designating additional off-road vehicle routes will lead directly to greater compliance, less cross-country travel and, as a result, less resource damage and fewer conflicts among incompatible uses. Some believe that off-road vehicle riders will quit creating renegade routes once more routes are designated “open” and riders are educated as to where they are and are not allowed to ride. In contrast, the research above shatters the myth that damage and conflicts are being caused by an insignificant percentage of off-road vehicle riders. The findings of these studies suggest that even if the “demand” for more off-road vehicle riding opportunities is met, riders will continue to fulfill their preferences by riding off legal routes. They also conclude or at least strongly suggest that education and information alone are not effective strategies for changing off-road behavior. Instead, Monaghan and Associates offers the following recommendation: “In order to be successful and actually influence behavior, OHV users must be motivated to behave properly.” While more social science research is needed to determine what will motivate users to behave properly, anecdotal research (Wildlands CPR 2007) argues most strongly for increasing enforcement, and especially increasing the consequences for breaking the law, through mechanisms like vehicle confiscations, increased fines, and closing areas to all motorized users when motorized trespass occurs. Many Native American Tribes are committed to restoration and protection of natural resources that have always supported their people. These efforts complement Department of the Interior and other federal agency goals articulated in “America’s Great Outdoors.” The Department of the Interior and other federal agencies should use existing programs to leverage the contribution of Tribes toward the protection of wilderness, endangered and threatened species, at-risk ecosystems, and other priorities. Recent agreements to remove the Klamath River dams provide one of many examples where Federal agencies have worked with Tribes to achieve mutual objectives. One of the key contributors to dam removal negotiations, the Yurok Tribe of Northwest California, is engaged in a related land acquisition effort on the lower Klamath River. The acquisition provides another example where principles articulated in “America’s Great Outdoors” coincide with Native American priorities. The Yurok Tribe subsisted on fish runs and other forest wildlife on the lower Klamath for centuries prior to the arrival of European settlers in the late 19th Century. In the decades that ensued, however, intensive timber harvest drastically altered the landscape. Like much of the California Coast, harvesting practices threatened endemic species, old growth forest and water quality. Consequently, many of the natural resources that the Department of the Interior now seeks to restore (resources once, and still, essential to the Yurok People’s healthy and prosperous way of life) disappeared. When the Federal Government recognized the Yurok Tribe in the early 90’s, the Yurok Tribe established a constitution that requires tribal government to establish policies intended to “restore, enhance, and manage the tribal fishery, tribal water rights, tribal forests, and all other natural resources” and “provide for the health, education, economy, and social wellbeing of our members and future members.” To help achieve these ends, the Yurok Tribe and Western Rivers Conservancy are in contract with Green Diamond Resource Company to purchase ~47,000 acres within the Yurok Tribe’s Ancestral Boundary. The acquisition would increase protections on approximately 29.3 miles on the eastern watershed of the lower Klamath River, and four important tributaries: Blue Creek (24,861 acres), Pecwan Creek (16,719 acres), Ke’pel Creek (1,015 acres) and Weitchpec Creek (4,503 acres). The Yurok Tribe has published a Yurok Tribal Park Plan which lays out the general objectives for management of these properties. More specific management will focus on cultural resources, and the recovery of endangered, threatened and at-risk fish and wildlife species. The Tribe is in, or seeking, partnerships with: the United States Department of the Interior, the State of California Water Resources Control Board, the North Coast Regional Water Quality Control Board, the US EPA, the California Department of Fish and Game, the State of California Department of Forestry, NOAA Fisheries, the Climate Action Reserve, Western Rivers Conservancy, Green Diamond Resource Company and others. Of most importance to the Yurok Tribe and its many of its partner federal and state natural resource agencies, the acquisition boundary includes the remaining unprotected portions of the Blue Creek watershed. As the westernmost cold- water tributary to the Klamath River, the perennial Blue Creek is one of the best salmon streams remaining in the Klamath Basin. It is also likely to remain cool in the face of climate change, as upstream tributaries become increasingly too warm for salmon and steelhead. The Tribe will manage Blue Creek primarily as a preserve for the benefit of endangered fish species that have traditionally provided a staple for the Yurok People (including the Southern Oregon / Northern California Coho, and California Coastal Chinook). Through this management -- which will complement US Forest Service Management in the adjacent Siskyou

Wilderness -- the Tribe hopes to restore historic salmon runs to Blue Creek and maintain the watershed as the most reliable cold-water source for anadromous fish species in the Klamath Basin. The Lower Klamath Restoration Plan – a document itself resulting from broad local input -- addresses means of restoring riparian and instream habitat for fish protection. The vision for properties outside of the Blue Creek watershed includes sustainable harvest. Specifically, the Tribe will manage Phase 1 lands according to longer rotations that reflect Yurok cultural and Constitutional priorities. Among other actions, the Tribe will initiate an uneven-aged management regime that increases species diversity, extends riparian zone restrictions, sets aside late seral carbon reserves (enhancing marbled murrelet, spotted owl, and other endangered, threatened and at risk species habitat), and restores grasslands. The Regional and State Waterboards are key partners in this effort, as is the U.S. EPA. Throughout the property, the Tribe will also restore historical meadows to invigorate populations of elk and deer for hunting purposes and to restore natural forest complexity. The restoration of grasslands will revitalize possibilities for traditional practices like gathering and basket weaving. The Tribe also seeks to reclaim and protect important culturally important sites, allow for public trail access, and improve regional management with adjacent publicly managed lands. Western Rivers Conservancy, a 501(c) (3) dedicated to protection of outstanding river ecosystems in the western United States, is working with the Yurok Tribe to acquire the property. In the course of our dealings with them, we have discovered several useful tools, but have two recommendations: • Expansion of the USEPA's State Revolving Fund to include more loans and grants dedicated to the reduction of non-point source pollution. Currently, the State of California dedicates 5% of its State Revolving Funds to Non-Point Source projects, and a few other states have similar efforts in place. The initiative taken by these states is commendable, and effective. More can be done with a small increase in resources, and duplication in other states. • Use of Land and Water Conservation Fund, and other conservation land acquisition programs, for acquisitions within and adjacent to protected Tribal lands, and management agreements that help ensure protections in cooperation with Tribes.

I like it. This concept is already in use at Cape Hatteras National Seashore to support ORV closures for bird and sea turtle nesting sites, under a court-ordered consent decree. A closed area expands 50 meters for the first violation, 100 meters for the second, and 500 meters or more for the third. Violations are subject to as much as a \$5,000 fine and/or imprisonment up to 6 months.

It is so ironic that the Historic Route 66 Bridge in Eureka, MO was added to the National Historic Register last year only to be added to the demolition list by MODOT shortly thereafter. The Historic Route 66 bridge was built in 1931 and is one of the few remaining reverse trestle bridges left in America. This bridge is now the link between the Route 66 State Park Historic roadhouse Visitor Center and the Route 66 State Park. Since the bridge closure the visitor center and park staff have been cut off from the remainder of the park making visitation difficult for both local and foreign travelers alike. Travelers come from all over the world on a daily basis to visit our historic roadhouse and bridge. How is it then that we can deem a site valuable enough to add to the National Historic Register but not valuable enough to maintain and preserve. MODOT is trying to give the bridge away due to the public outcry to save the bridge but no one has the money to fix MODOT's failure to properly maintain the bridge. MODOT wants to demolish the bridge unless someone steps forward to take ownership and responsibility to repair the bridge. This bridge is also an important link to other trails in this area. There is a National Route 66 Corridor Preservation Program but there are no funds available to preserve and maintain this historic bridge. What is the purpose of these historic preservation programs and National Registers if our government is not going to see fit to maintain and preserve sites on the National Historic Register????? We need our President to champion the cause to save the National Historic Route 66 Bridge. Perhaps the National Parks and Sites should assume ownership of the bridge and see to its preservation. SAVE THIS AMERICAN ICON!!

Trees all across the west are dying due to climate change. Warmer winters and longer summers allow insects of all kinds to live through winter and produce more offspring. Rainfall is down, temperatures are up. Dead trees and increased fires are not caused by poor forest management. They are caused by climate change and will continue to increase if we don't work to mitigate our impact on the environment. There is not enough money in the world to manage all the forests that will be affected or fight all the fires that will occur if we don't deal with the fundamental problem: climate change. Read Bill McKibben's book *Eaarth* (2 a's because it's not the same planet anymore). He provides some staggering statistics on forest lands in the west.

Protecting private lands FROM 'park sprawl' is the larger danger in this country. There is a law of diminishing returns as larger parks (in rural areas with over 10,000 acres) get larger and smaller parks (near urban centers) are under managed.

Agencies do not need MORE land to manage. They need to manage the land under their jurisdiction more productively. In place of "acquisition", agencies should promote private land conservation.

Maureen, Most, if not all of the land involved in this proposal would involve redesignation and management of lands already within federal, and in some cases, state, ownership. It would not incorporate a significant amount of private land, and where it did, the government would likely enter into a management agreement with the owners, affording them assistance or tax advantages for participating.

Discussion Question 3

(cont.)

Letting locals decide how to use federal lands would be an abrogation of federal responsibilities and obligations to the citizenry as a whole. Locals always want to have dibs on federal resources because they think they own them, personally, and should be able to develop and exploit them because the local monied interests almost always control the local politicians. I've seen it all before. Forget it. My tax dollars, and those of my parents and grandparents paid for their acquisition and management just as much as anyone's and all Americans have an equal say. The feds employ scientists and professional managers to follow the federal law. That doesn't mean enriching local power brokers.

you are right on, here. I'd go further: You have a kid and you end up on welfare, you get sterilized. We need more tax incentives to not have children, and to adopt instead. Even if you buy into the mythology that God somehow told us to go forth and populate the earth, the corollary is that "He" gave us a brain big enough to figure out when we were done.

We are putting increasing amounts of CO₂ into the air. The CO₂ does not stay in the air forever. Some of the CO₂ is absorbed by the ocean. The ocean is becoming more acidic. The increasing acidity of the water harms life forms that build shells. Whatever the cause, the atmosphere is warming. The heat does not stay in the air forever. The biggest heat sink is the ocean. The ocean is becoming warmer, more slowly than the atmosphere. As the ocean warms, the volume of the water expands, raising the sea level. The rising sea level covers land that people used. The warmer surface water prevents the upwelling of cold nutrient-laden water that supports phytoplankton. The loss of nutrients has caused the phytoplankton to decline by 40% since 1950. Phytoplankton is the base of the food chain. The smell of the sea is the respiration of phytoplankton. Phytoplankton breath includes sulfur. Sulfur particles are a nucleus of raindrops. Phytoplankton produced 50% of the oxygen in the atmosphere. The warming atmosphere melts the tundra, releasing methane, a more powerful greenhouse gas. The warming ocean melts the methane hydrates locked in the continental shelves, releasing more methane. Methane caused the extinction of the large animals once before, leaving the world open to the dinosaurs.

Bring all agencies under USDA including Forest Service, Bureau of Land Management, etc. as well as Army Corps of Engineers up to date so that their mission regarding the environment is more future-thinking. This country is not all-about 'building' as much as preserving. Americans may be ahead of the government and the civil servants who carry out the mission of these agencies. I have worked for the Forest Service [Range and Experiment Station/Moscow, ID] and appreciate the work everyone does -- we need to forecast into the next millennium.

(cont.)

Oh yes, Let us have the Federal Government take charge of just everything. Or better yet, why not have all the IMPORTANT people just tell the rest of us where we can live, how we are to live, how much money we must contribute to the whims and wishes of the IMPORTANT people. Then we can all wait in anticipation while the yellow school bus brings everyone lunch - this in light of the fact that Mom gets food stamps but is too stoned to make the kids a P&J. Then because we are all becoming fat off the yellow school bus we will have to pay more so the IMPORTANT people can steal people's land and homes to make parks so we can go and work off our fat. Children will grow up to believe that everything is brought to them by the Government - Oh wait - it already is.

I might not get to visit wilderness areas because of the cost for me to travel to them. There are not any anywhere near my home. Just knowing that they exist gives me piece of mind. I think more wilderness should be saved. There should also be more multiple use federal land set aside.

"we are the worlds worst polluters" Really, what about China and India? "european nations have cars that get 60mpg" True, and did you know most of those cars run on small effcient diesel engines? The reason we dont have the same cars here is because they are diesel and the EPA will not allow them. Plus the oil companies wouldnt want us to start getting good mileage. "we are responsible for the loss of 110,000,000 trees every year" In the state I live in (Idaho) more trees die and rot every year than are harvested. If you cut trees they can and will grow back most of the time. How many trees are planted every year by the Forrest Service and by timber companies?

Federal land agencies should implement a system where designated routes are monitored for ORV user violations. They should then close routes where there are violations beyond a set standard (say for example, two violations a month). This system is already in place on USFS land in the cottonwood canyons above SLC for dog use. This would give users an incentive to police their own, and compensate for the agency's lack of enforcement capability.

I believe the Feds already have the authority once the rule is in the land manager's compendium and/or 36 CFR.

The federal government should financially support and encourage the development of quiet off-road vehicles (SUV's, trucks, 3 and 4 wheelers, snowmobiles, jet skis, etc). These could be dual powered, gasoline/diesel and electric. They would be certified for off-road use in specifically designated sensitive areas. Since the majority of people objecting to OHV's is due to the noise that they create, this would satisfy both groups for the most part.

(cont.)

This sounds like a great idea, on the surface. I do not trust the federal government and the Obama administration especially has shown that their interest lies in more government control. We have a very large national park in Northern Minnesota, and there are areas of wilderness, that if logged and hunted would show an improvement in the overall health of wild life. Deer, grouse, rabbits and other wild life do well on a new growth forest, and right now, the only new growth in the park is the result of wild fire or controlled fire. There is no logging or hunting in the park. I also believe that local control of waters and land is always better for the environment and the tax payers. Any government project always cost many times that of a local project, and the results of the local program may take the local population in to consideration. Federal restrictions usually mean stricter restrictions and more rules for the sportsmen and women to follow. Any use of public lands and waters is becoming so complicated, that I believe many people are getting discouraged. So when I say "watch out for the feds", make sure this is not just another power grab.

In Southern Oregon nearly three times as much State money goes into expanding OHV opportunities than enforcing the law. It is virtually impossible to catch a trespasser without a violent confrontation. Violators on both public and private land have repeatedly maintained to me that they "don't carry identification" when they ride. Often law enforcement is miles away. We need a way to identify these miscreants. We also need local law enforcement to quit looking the other way, to pursue these violators vigorously and no longer dismiss their actions as "minor."

Most off-road vehicle routes were not created with resource sensitivity or public land/national forest management in mind. Route designation is necessary on all public lands and national forests where multiple use management is an objective to determine what existing routes can sustain continued vehicle use along with the management of non-motorized uses and appropriate biological resource management. This is called or per the Federal Land Policy and Management Act and various statutes relative to our public lands and national forest lands. Route networks need to be closely monitored and managed, with open routes signed as such and designated closed routes put to bed with vertical mulching and other revegetation methods so they do not look like vehicle routes open for use. These efforts need to be fully funded by the government, using young adult labor where possible, to be completed in a timely fashion and promote awareness of our shared resources. There must be penalties for use non-compliance and the creation of unauthorized routes. Non-Compliance with a designated network needs to be fostered in the offroad vehicle use community to ensure these networks are available for use into the future.

The BLM needs a fiscal and policy overhaul desperately.

Thanks for great comments and information, Barbara - couldn't agree more strongly about the importance of the Great Lakes, and need for more protection and cooperation re: fresh water resource.

Good idea but I think the closed area should double every time an infraction is committed. 1st offense =1 mile, 2nd = 2 miles 3rd =4 miles 4th =8 and so on. Also a limit should be placed on the number of times an area can be damaged before it is closed permanently.

Good idea and I promoted it but I do not know if it would help. Many of our senators need their hands greased through "campaign contributions" (a nice name for BRIBES don't you think?) in order to vote a certain way so unless there is a grizzly bear or moose holding \$1,000,000 for them when the senator arrives I cannot see a visit to view the beauty of nature overtaking their greed.

National parks and wilderness lands in general need to be protected from ever-threatening noise, construction, and traffic pollution. The federal government, in concert with local municipalities and land-conservation non-profits, should provide economic incentives (grants, tax breaks) for smart development near pristine spaces.

Hmmm...not so sure that I'm really excited about exposing our President and his family to a highly publicized vacation in the outback with the ready access to high powered rifle-toters who are of extreme and dangerous political persuasion. Easier for the Secret Service to shore up a hotel than a 50 mile stretch of river. Allow the First Family to choose their own vacations while their security is at risk.

The time has finally come to have Congress designate all of ANWR as official Wilderness, which would put this spectacular Alaska wildlife refuge off limits to oil and gas companies and all other industrial uses.

National Parks are the perfect place to learn about our natural environment. All children deserve an opportunity to learn in nature's classroom, see up close what they are being asked to preserve and protect, and understand the connections these wild places have to their communities back home. We cannot create a sustainable future without education. People don't care about what they don't know. The government can help make this possible by collaborating with strategic partners that have proven success, streamlining processes to encourage these partners to grow and serve more youth in more national parks, and actively working with states, counties, and local school boards and communities to find ways to fund participation in these experiences for all students. What do you think?

With today's seemingly growing environmental calamities, it is ever more apparent that our youth today will be the guiding force for the preservation of our environment. To help facilitate their actions, it is imperative for them to experience nature first-hand through an educational lens. National Parks is a prime location for learning and observing pristine nature sites. It behooves the government to partner with educational providers and be a part of the movement for a sustainable future.

(cont.)

The President and Mrs. Obama should go camping in National Forests and National Parks. Look what Teddy Roosevelt did by camping with John Muir, even Jimmy Carter floated the Snake River. Give up the Ritz hotels get those kids in the woods. What a boost that would bring to the "get outdoors" initiatives and "child in the woods" type initiatives in the great outdoors of the USA.

Is it just me or does the Cape Hatteras closure expansion seem wimpish. On a OHV I could run over fifty turtles before I even had to speed up for the get away.

Establish an Ancient Forest National Park that connects over 100 wilderness and roadless areas into one manageable whole forest for the protection of wildlife migrations, and mitigation of climate change. The park would provide a solid block of ancient forest habitat stretching from the Yolla Bolly Wilderness in California to the Rogue and Elk Rivers in Oregon. It would also include all of the proposed Siskiyou Crest National Monument and Cascade Siskiyou National Monument, the Smith River NRA and the Oregon Redwoods. This is the forest where the myth of Bigfoot began. It's wild, wooley and outstanding, renowned for its biodiversity.
www.ancientforestnationalpark.org

I keep hearing that the fed has no right to own land, bla bla bla. The legal system in this country relies on precedence. Over the years, the lay of the land and rights of ownership have changed. Get over it. When the constitution was written, there we're almost no people in the US and not nearly as much land. It's a different country now and to try to reduce everything to the original definition is absurd. The fed obviously has a right to own land because..WE DO!

Local politics and prejudices can make it difficult to ensure state and federal laws are enforced. State officials are hesitant, and don't have the power in some cases, to punish infractions even if they are continual and blatant. It takes concerned citizens to ensure state and federal laws are enforced in a municipality and often times the citizens are ostracized and punished by the local officials. There must be some protection for those citizens who take on local governments.

I think a lot of people lack motivation to go out and take the steps to becoming more environmentally friendly. Giving rewards such as tax breaks to those who have "gone green" would be a huge incentive to take the steps necessary to change our earth. These rewards could be given to people who use solar panels, buy hybrid cars, consistently buy organic foods, install energy smart appliances, and to those who do similar things to help make this world a cleaner place to live in.

US Senators and Congress members should be invited and actively encouraged to visit federal lands already designated as wilderness lands or seeking wilderness protection. For too many members of Congress, wilderness is a vague notion. Without direct experience and personal appreciation for lasting value of wilderness lands, there will not be the passionate support needed to protect appropriate federal wilderness lands forever. The visits will benefit other federal land programs, including the maintenance of the National Parks operating budgets, and the public outreach programs to ensure use of parks by those most in danger of Nature Deficit Disorder.

Transportation Enhancements – Federal support for transportation initiatives that link destinations with each other and major transportation hubs are needed while ensuring access for all ages and abilities including: •physical trail connections that link urban areas with nearby open spaces and waterfronts; •transportation programs to support pedestrians and bicycles; •funding to inventory and convert abandoned rail beds into trails, and improve existing trails for pedestrians and bicycles; •increase flexibility in highway design to better accommodate bicyclists and pedestrians.

Development of the “Smart Park” – In a world of new communications technologies, alternative energies, and integrated systems, many nature preserves lack the capital for investment in planning and design that will make them more efficient, effective, and sustainable in serving their missions. Assistance upfront can leverage investment by donors in the implementation of strategies that will reduce the bottom line while enabling organizations to provide better service to more people.

Hey here I am. I live about as close to fed lands and the Crest as peopel in Siskiyou County. I WANT A MONUMENT.

Discussion Question 3

Estate taxes can undermine important conservation values by forcing the break-up, sale and development of family-owned farm, ranch and forest lands, even when those lands provide important resources for the public, including open space, clean air and water, wildlife habitat, outdoor recreation, carbon sequestration and local food and fiber production. The Family Farm Preservation and Estate Tax Act, H.R. 3524 or H.R. 5475 would indefinitely defer estate taxes on working family farms and ranches - unless these lands are taken out of production or sold outside the family. If this legislation were to become law, no farm or ranch family would be forced to sell or subdivide working lands just to pay estate taxes – but would also ensure that if working landscapes are sold or converted to other uses for any reason, estate taxes would be paid. This is an effective policy for promoting continued family ownership of farms and ranches and ensuring that the lack of estate planning or cash resources does not result in the breakup of large farms and ranches, which provide critical wildlife habitat in increasingly fragmented landscapes. Federal, state and local governments are investing billions of dollars to protect and restore these resources, and it makes good sense to amend current tax policy so that it doesn't undermine these efforts. In the coming weeks we expect a new Senate version of H.R. 5475 to be introduced, carrying a much smaller price tag and including the provisions of H.R. 3050, a separate bill which increases the estate tax exemption for lands protected by a conservation easement. Ultimately, this provision could be enacted as part of a conservation tax package along with the enhanced tax incentive for donated conservation easements (H.R. 1831). For more information please visit: www.lta.org/policy/documents/hr3524-packet This idea was originally posted in the Private Lands Conservation category where it had a total of 60 votes. The following comments were posted before that idea was "archived" in late June: Comments: 1) (11 May 2010) This is a good idea so long as it does not open loopholes for estate tax evaders to invest in farm properties solely to protect their wealth. On the surface estate taxes seem crude and unnecessary, especially for the average American; but when you consider the vast difference between the rich and poor nowadays, and you recall why the founders of this country despised landed, multi-generational wealth and the entitlement and undue influence in politics and business it affords you can see why all the implications of any changes in estate taxes laws should be well spelled out and transparent for all to understand. Yes farmers and holders of open space should be allowed to keep these things in the family, so long as it is not just a tax-evasion strategy for those unconcerned with conservation or sustainable agriculture. For the original list of votes see the archived idea here: { Link }

Ohio is one of the most underserved states in the nation, in terms of the amount of public land per capita. The federal government should work with land trusts, the state, conservation organizations and private citizens to expand existing public lands and create new federal and state units around the state. One example would be to start building a "Tecumseh National Forest" centered around the Mohican State Forest in north central Ohio. Ohio should have a recreational public land system to rival those of Pennsylvania and Michigan. Right now it has nothing of the kind. The Federal government should help to build a green infrastructure for Ohio in the 21st century.

Programs like this are an excellent idea because, like all science, environmental science is best learned in an authentic, hands-on manner. Alas, it is true that because there is no state-mandated test for science, all science curriculum is becoming marginalized. Also many, if not most, teachers feel anxious about taking time out of the classroom until the state tests are completed. In our state that means no one is interested in big field trips until May. May may or may not be the best time to observe any given ecosystem or to integrate those observations into the curriculum, but certainly no state park, hatchery or watershed district can handle every school in the region in just one month. So I would agree with the above author that the current educational policies do interfere with the schools' attempts to utilize our national natural resources. Could something be done?

Often designated Wilderness Areas include parts that do not qualify as a TRUE wilderness. DON'T drop the standards that make a wilderness, just to change a title of an area.

The Feds already regulate OHV activities and everything else. This idea is way moot.

A public transportation system of electric, hybrid, or natural gas vehicles in some of our most popular national parks (e.g. Yellowstone) would reduce congestion, noise and pollution from private cars. People who insist on driving their own cars could be charged a hefty fee for the privilege.

Funding for horse trails across each state with linking trails would add so much to our nation. As of now, the horse showing industry is about the only way to safely go and ride a horse. There are very few areas to ride, and to have an adventure with a horse without being run over by a car. I would recommend that the land that was purchased by our Great Smoky Mountain National Park in the state of TN to build the foothills parkway, that may never be built, be designated as the beginning of a national horse trail with watering tanks every 5 miles, tethering and backcountry camping areas for through riders. We have our Appalachian Trail for hikers...let's make a trail for horseback riders that is not treacherous but fun for families and riders of all ages. This would be a benefit to the horse industry and add a safe riding area other than the show circuit for children and adults interested in trail riding.

Giving humans more access has never been a good thing for animals or forests. Leave Wilderness lands wild and free of humans. We have so much area yet animals have so little.

We need to protect more wildlife habitat by designating more of our open spaces as wilderness. It is important for the enjoyment of future generations and for the health of the planet. We need more land that is not used for anything but the replenishment of life. Places where streams can run without polluted run off, where the air is clean and where creatures other than ourselves can live.

(cont.)

The proposal to add 1 acre of OHV land for each new acre of wilderness land unnecessarily pits those who favor preservation and/or restoration of wilderness lands against OHV enthusiasts. Both groups favor increased recreational opportunities and designation of lands for public use, and therefore could work together to achieve their common objectives. At this point, there is no need to redefine the proportion of new recreational lands will allow OHV use. There is an existing precedent, so for the time being, let's follow it: keep the proportion the as it is in existing lands, and as new lands are added, maintain the same proportion. Designation of lands for OHV use can be considered on a case-by-case basis. The proposal seeks to force the government to disproportionately allocate new recreational land for OHV use. Since the current proportion is far below 50%, this has no appropriate basis, and asks that the government favor OHV users over all other groups in the future. Given the environmentally destructive nature of OHVs, this would lead to a proportionate degradation of public recreational lands.

Leg-hold traps are dangerous to humans and pets recreating on public lands, and do not discriminate among species not approved for trapping, endangered or not. The practice is inhumane in the same way cockfighting or dogfighting is inhumane. There is NO EXCUSE for this sort of barbaric practice to be allowed on public land.

I know we have shirking recourses and both groups have legitimate concerns But I think one of the biggest problems is developers buying up land and building big projects in the middle of what should be reserved land for all including the animals that have an equal right to it. This is not going to happen unless the government starts buying the land and does a better job of management for all to enjoy. I really enjoy the out doors I use to hunt and fish and miss both a lot but now the only way for me to enjoy the out doors is use my OHV and I except most limitations the forestry and fish and game have come up with however I see more trails being closed to me. There are different types of disabilities and age is one that affects me I also have other friends that are affected by the same disabilities that depend on OHV's to be able to enjoy the out doors as well. Destroying the trails and back roads is not what we are about but when I see another trail closed because someone in good health wants it just doesn't seem fair. It is a law that you can not discriminate against disabled persons but no one thinks about it when it comes to the out doors. I hope the forestry takes this into account when making future changes.

Outdoor recreation and equipment has evolved dramatically since the Wilderness Act was enacted in 1964. While the Wilderness Act is valuable and has been a net benefit, it often unduly restricts otherwise quiet or otherwise low-impact activities. Mountain biking, climbing, and ski touring are all examples of low-impact activities that are banned in designated wilderness areas. There are only a select few wilderness areas where this level of protection is justified; there is a need for a less stringent forms of protection for lands that we wish to preserve, yet enjoy. The new designations should be tiered - for example, there might be a zone that allows only human-powered activities (such as backcountry skiing) and another that allows motorized activities (OHVs, boats, etc).

(cont.)

Climate change is already drastically affecting the earth's climate and causing damaging mega-storms and drying out tinder dry forests causing them to be extremely vulnerable to fire. Motor vehicles in the United States are now on about every available road and trail through out the country. This type of vehicle adds to the pollution that the US Government needs to begin reducing. Animals are being pushed further and further into smaller and smaller spaces by the intrusion of motor vehicles into their realm. The recreational use of motor vehicles on federal lands is destructive to the land, destructive to wildlife habitat, noisy, polluting and has reached a stage where it needs to be curtailed and reduced. They have a limited role in a forest environment if the forest is to protect water, wildlife, and soil.

Food for thought: the last time the earth went into a long solar minimum (prolonged lack of sunspots), the earth went into a mini-ice age. We just started coming out of a long solar minimum in January. Yes, we had a harsh winter, but there certainly is no ice age, with glaciers visibly melting all over the world. We thought we would have wars over petroleum? I fear wars over water. When the fresh water glaciers melt, what then? We have got to stop basing energy usage on carbon. There should be a carbon tax on all carbon used. We must start paying the REAL cost of what we are doing to the only planet where we can live! Preserving wildlands helps absorb some of the carbon, any way. It will take a lot more to "fix" what we have destroyed, if we can! How about some stewardship of creation here? How about renewable/sustainable energy? Bark beetles are caused by stresses in the environment. Wake up before it's too late.

How did I fool you? That is exactly what I was saying, we need to enforce the laws we now have on the books instead of looking the other way. I was more talking about grand scale like enforcing the road-less forest laws, environmental safety practices for drilling, mining and logging and strictly enforcing the ESA but sure fining or arresting people for dumping trash in forest areas would be a great thing.

Park rangers play a key role in educating the visiting public about appropriate park uses and in enforcing regulations on inappropriate uses. Interpretive programs that do not incorporate the message of appropriate, low-impact use miss a crucial opportunity to educate park visitors as to what activities are compatible with the objective of preserving and protecting a park's natural resources for the appropriate use and enjoyment of future generations. All possible opportunities should be utilized to promote the concept of appropriate, low-impact access to the visiting public.

Protect Oregon's Owyhee Canyonlands Southeast Oregon is home to the most remote expanse of the Great Basin desert found in the continental United States: the Owyhee Canyonlands. The Oregon Owyhee features red-rock canyons, spiraling volcanic columns, and sagebrush plateaus that offer scenic beauty for visitors and provide homes to a variety of native plants and wildlife. The largest herd of California bighorn sheep can be found in the Owyhee, along with Rocky Mountain Elk, mule deer, pronghorn antelope, sage grouse and pygmy rabbits. Outdoor enthusiasts enjoy thrilling whitewater rafting trips in the Owyhee Wild and Scenic River, while bird watchers can scan the skies for soaring golden eagles, prairie falcons and red-tailed hawks in the Canyonlands. Hikers revel in the magnificent solitude, exploring canyons and creeks for days without running into another person. Fisherman cast flies in search of world-class brown trout, small mouth bass and redband trout. The Canyonlands is also host to an array of vivid wildflowers including Indian paintbrush, lupine, and arrowleaf balsamroot and at least 28 endemic plant species like Owyhee clover and Packard's blazing star. Over 2 million acres of wilderness-quality land in the Owyhee remain without permanent protection-- an idea noted by the Department of the Interior when it named the Owyhee as one of fourteen possible landscapes eligible for National Monument designation. Our future generations need the opportunity to enjoy this place in the same way we do today.

Set size goals for parks and public lands so that they are big enough to provide territory for a variety species to eat, live, and breed--as well as corridors for creatures such as turtles to move in-between areas. Connect public lands and parks physically, through such quiet avenues as bicycle trails, and psychologically, by educating people about a network of natural areas that supports life seen and unseen. Help people to grow in respect and love for nature, as they make room for their neighbors, from black bears to dragonflies, who have no voice in this process.

A Call to Protect a Monumental Landscape The Siskiyou Crest is a land of superlatives, a place that evokes excitement from scientists and poets alike, attracting hikers, botanists and outdoors people from around the world to visit, research and explore. (Please see www.siskiyoucrest.org for a full campaign description) Gaining meaningful protections for this ecological and recreational centerpiece of the Klamath-Siskiyou bioregion is a primary goal for KS Wild. We are now embarking on a journey to create the Siskiyou Crest National Monument, and we need your help.

A Land Bridge at a Crossroads The crest is geographically and geologically remarkable, consisting of high ridges of complexly varied rock types criss-crossing the Oregon/California border. While almost every other montane system in North America is positioned north to south, the Siskiyou Crest stretches east to west. This unusual orientation gives the crest a vital role as the only high quality habitat corridor connecting the Coast Ranges of Oregon and California to the Cascade and Sierra Mountain systems, creating a “land bridge” much like the crossbar in a giant “H” on the west of the continent. Sitting at the crossroads of so many far-flung ecosystems, the crest contains species from all of them, leading to an exceptional array of life forms living side by side, including many endemic species found nowhere else on earth. The crest is home to the highest concentration of plant species in one area in the state of California, making it a globally significant hotspot for botanical and butterfly diversity. This land bridge effect acts as a travel conduit for wide-ranging mammals to migrate and disperse between populations. Wolverine, marten, lynx, fisher, mountain lion, bear, and elk currently inhabit or have been recently sighted in the area. The cool, clear waters flowing from the crest into the Rogue, Klamath, Applegate, and Illinois basins are a refuge for endangered wild salmon, and provide drinking water for many local communities, including Ashland.

Biodiversity at its Best The Siskiyou Crest contains ancient forests, high elevation meadows, spectacular peaks, free-flowing rivers, native grasslands, oak woodlands, pine savannahs and lush streamside forests. The Siskiyou Mountain Salamander lives only on the slopes of these mountains. Over 20 conifer species grow along the wildlands of the Siskiyou Crest, and the area is associated with numerous rare and unique plant species, including Brewer spruce, Baker cypress, Applegate gooseberry, Siskiyou lewisia and Siskiyou fireweed (see page 13). While hundreds of thousands of acres of the landscape surrounding the crest remains wilderness-quality, very little of it is substantially protected. Industrial logging, road-building, intensive livestock grazing and off-road vehicle abuse have taken a toll on significant areas of the crest.

Why a National Monument? Climate scientists are adding urgency to the calls of conservationists to protect intact habitats immediately. The threats global warming presents to the survival of America's wildlife requires the protection of landscapes that connect critical habitats. While protecting the best, we should also focus on making the degraded landscape more resilient to changing conditions. A national monument designation on the Siskiyou Crest would offer full protection for the most pristine places, while allowing for active management and restoration on already impacted areas. We envision job creation for restoration projects ranging from small diameter thinning to road decommissioning and fire hazard reduction.

No Invitation Required Monument status also encourages public access and provides for continued recreation use, including hiking, camping, hunting, fishing and back-country skiing. Nearly 60 miles of the Pacific Crest Trail pass through the proposed monument, and the main access roads to the area would remain open. Visitation to the area is already a boon for gateway communities as outsiders inevitably spend money in local food and gear stores, restaurants and hotels. Private

Discussion Question 3

Written & Online Comments

(cont.)

landowners within the boundary of the monument would see no affect to their property rights, and may witness increased land value. Please visit www.siskiyoucrest.org for much more.

America's public lands are meant for the American people--not special interests like mining, drilling and logging companies. Therefore, the government should promote recreational uses of public lands, and should give priority to the American people whenever there is a conflict.

Designate certain days of the week as non OHV days. That way hikers and backpackers seeking the sounds of the wilderness and encounters with wildlife won't be frustrated by listening to motorized vehicles and raised voices. You're not gonna see many animals with that racket. Hopefully this would reduce the antagonism between the two groups

Do us hikers not drive to trailheads? Do we not live longer if we are healthier? I think instead of alienating the OHVs, who will never completely go away, we can increase public OHV education regarding personal safety and local environmental safety. We can remove OHV trails that cross back and forth over stream bed and riparian habitat, as they recently did in Georgia. We minimize greed by recognizing the number of existing miles of ATV trails and the number of existing areas of Wilderness, Wilderness Study Area, and wilderness-character lands and try to keep them balanced. There are many more ways we can deal with climate change because the ATV-guzzlers are not the ONLY ones to blame, even though they do use a lot of gasoline. How about a hybrid ATV? Solar panels and local noise factor! That would be a great way to improve the industry.

Existing park space should be fully usable by the people, not preserved and made inaccessible. We have millions of acres here in NYS that the government cannot afford to manage, but they try to keep the people from having the full usage. The governments role should not be in purchasing additional land for preservation with tax dollars.

In the interest of safety for the many families enjoying wilderness and other areas of National Parks & Monuments, please do not allow anyone other than park rangers to carry firearms of any kind--whether openly or hidden. I am one of many, many people who hesitate to hike in our local national parks because we are afraid that we may run into someone with a gun. This needs to become law, and it needs to be enforced.

It would be far better to require recycling of the old tires when new tires are purchased and placed on a vehicle and not allow the old tires to be removed from the premises. If someone wants to use those tires on another vehicle, they can bring said vehicle in and have the old tires mounted. A deposit is not the way to go.

My idea of Cap and trade is to tax heavily all offroad vehicles as well as speedboats , motorhomes , giant pickups and suv's , Also houses over 200 Sq ft but that is another subject .

Discussion Question 3

Written & Online Comments

(cont.)

No, I'm sorry but we Americans as a group have rights too. What do you mean by full usage? We don't have "full usage" on most all public property. No ORVs in grave yards, no boom boxes in concert halls. No camera's in area's of national security. No mining for copper at the Statue of Liberty. Use must be compatible with the mission for the public ownership of the property. Government acts as our representative to do the jobs that no one one else will or can do. One of those jobs is preserving some of our land as God created it.

OHV trails are an excellent use for abandoned strip mines, clear-cut areas, and other sites of environmental disasters. If they're willing to use those places, and we designate those places as public parks, I'm fine with that. Just keep the machines (but not necessarily their owners) out of the as yet undamaged areas, or those areas on their way to some kind of recovery.

OHV use is a legitimate use of public lands, but due to it's impact on soils, water, wildlife and other users OHV use does need management. Trails are great for OHVs, but some riders choose to ride off trail. The default management of BLM lands in the west is that land is open to cross country travel unless designated otherwise. While this designation made sense when user numbers were small, with growing popularity of recreational OHV use, management needs to keep pace with usage. A portion of BLM lands should be designated for cross country travel. If land is not designated for cross country travel, it is not open for cross country travel. Designating lands as open to cross country travel should remove much of the confusion that results in riders leaving the trail when they are supposed to stay on the trail.

One of the worst problems any generation will ever face is the one we face now - global climate change. All forestry policy and wilderness policy should be shaped to protect the planet from further global climate change and the destruction that will come from it. We need to get OUT of our vehicles and we certainly do NOT need to be driving all sorts of little personal gas guzzlers all over what wilderness and wildlife habitat we have left. We need to guard against more pollution and more greenhouse gases - and most especially this is so in sensitive lands.

The federal government could encourage states to place a five dollar deposit on tires. This would ensure tires are brought to recyclers and lead to less people dumping their tires in the woods. When you buy new tires your old tires would cover the deposit so there would be little or no added expense for the average citizen, but people who have been saving tires, unable to afford to recycle so many at once, would be able to receive a little financial boost which they would put back into the economy instead of the forests, streams, and trails.

It stops new road construction in national forests in areas that don't already have roads. There are already way too many roads in national forsests. More than can be maintained.

Global Warming is definitely a national and international problem. I have just recently begun to visit national parks in the USA. In 2011, I plan to visit Glacier National Park. From information I received from Glacier NP, the glaciers have receded at an alarming rate. Not only have the glaciers receded, but polar bears are affected also with the global warming. Other wildlife are also affected by global warming. Legislation needs to be passed to deal with global warming.

Discussion Question 3

Written & Online Comments

(cont.)

Public lands should be quiet harmonious places, where people can experience nature at its best and see sites they have never seen before, take pictures and bring those pictures to all who have never been to the public lands. The recent PBS special by Ken Burns on the public lands did us a great service, by showing all that watched what there is to see in our great and beautiful country. The spiritual feeling I felt when at Muir Woods several years ago, would be destroyed by the roar of recreational engines. Muir Woods just as an example by being a quiet and reflective place should be preserved to allow nature to give us the connection to the spirit. It is told that when a President, I think it was Theodore Roosevelt or it could have been Woodrow Wilson, wanted to bring to life the League of Nations, which then became the United Nations, he brought the delegation that was influential in deciding the fate of the League of Nations to Muir Woods and the deed was done. Muir Woods influenced all that gathered to bring all the nations together in a League of Nations. These quiet reflective places that stir the soul, should be preserved for all generations to experience.

I wholeheartedly promote this idea provided traditional access roads remain open. I can't speak for Alaska, but there is much land in need of wilderness protection in the desert SW. This area is largely waterless, so closing traditional roads would prevent any and all access for most. These areas should be difficult to access, but this is the case even in a Jeep or OHV.

When I buy any recreational equipment, that doesn't give me the right to demand that the US government provide me with a place to use that equipment. I don't care whether it's a pair of hiking boots, an ATV, or an RV. Federal land managers should look at the capability of the land for different types of recreation, and provide opportunities for those that are consistent with that capability. When any form of recreation exceeds the capacity of the land, it should be cut back. That's been done with hiking for many years as trails have been closed or relocated. It's now being done with OHVs. Limits apply to everybody.

I agree. The job of National Parks is to preserve the natural beauty of these places, not destroy it. The gasoline engine is not a part of this natural world and its use should be severely limited on lands that have been set apart as parkland.

Totally agree with #11. Implement the ideas of the National Parks 2nd century commission.

Implement most of the ideas for the National Parks 2nd Century commission including more funding for upkeep, maintenance, new purchases, conservation corps funding as a green jobs and economic stimulus, paying more attention to migration corridors and staffing. The only worry I have are off road motor vehicle use by visitors, including but not limited to snowmobiles and ATV's. These should not be used in pristine wilderness areas. Part of the pristine nature of these places is the lack of noise as well as undevelopment of the land.

As an outdoor person, I see the value and quality of life when shared with others, everyone is a different person when involved with nature, we must implement the best recommendations provided by the National Parks 2nd Century commission.

Discussion Question 3

Written & Online Comments

(cont.)

Quite honestly, I would rather my taxes be increased if it meant better environmental protection.

The San Gabriel mountains are a fantastic resource for hikers. Making it part of the National Parks would provide the resources it needs to accomodate the millions of people who visit each year.

The BLM is yet another renegade Government agency. They slap the law in the face. The BLM has taken millions of acres away from America's Wild Horse. Their horrendous management of America's Wild Horse and the BLM's flaunting of the 1971 Wild Free Roaming Horse and Burro Act is staggering. I thought we were a Nation of law? Where is Congress in this? What is the Dept of the Interior doing? Our voices are being ignored, swept aside just like the law. We are no longer a Democracy. We are ruled by special interests. The management of our treasured wild horses is a shining example of our country being taken over by those with money. For whom does the BLM work as demonstrated by their management of America's Wild Horse? Where are the scientific, facts that substantiate the BLM's actions towards this now threatened, vulnerable, suffering animal? Threatened, vulnerable and suffering at the hands of the BLM. What is the REAL reason America's Wild Horse is being driven from our public lands? President Obama, Sec'y Salazar and Congress, i demand an answer based on scientific fact. Nothing less than a study done by the National Academy of Sciences will suffice. Public hearings need to be conducted. All actions of the covert BLM need to have sunlight shone on them. Why are these roundups conducted without public observation? The whole thing rather reminds me of the MMS, BP and the destroyed Gulf of Mexico. By the way, speaking of environmental degradation, cattle will degrade our Public Lands horses do not.

Discussion Question 3

Written & Online Comments

(cont.)

Our government should STOP letting big companies do whatever they want or should I say do what they want and face no really penalty if they get caught. Take a good look at BP right now. What banalities are they facing? Our own government has yet to file any federal charges or make them totally responsible in any way shape or form. If it was a small to medium business'; they probably would be in jail with outrageous financial penalties hanging over their heads. If our government started passing strong, tough, no loop hole or grandfather clauses; but real honest to goodness Conservation laws - then our government would collect a lot of money for the ones that can afford it and they could use that money toward Conservation programs. Bio Gems is a great resource and A strong, non-profit company that looks out for the Planet, wildlife, the environment, our Oceans, etc. I truly believe that our government can do a whole lot more. Heck, I am fighting to get recycling of Plastic and glass in my town. Plastic which is so highly used and they don't want to be bothered. Think if our Government made the recycling law; my town would have to follow it or pay fines. Which do you think they would do. And if you want a real kick-in-the-teeth - a great family had started their own recycling business and the town shut them down and charged them all kinds of financial fees. They were at the farmer's market every Saturday to take your stuff, pick up once a week at your house, they made a lot of people much more aware and encouraged them to recycle. I still can't believe it. Our family went from using 3 garbage cans a week to at the most 3/4 of a can a week. Big difference. Now if our Government made it Federally Mandatory and everyone started recycling; the money saved and/or could be made. Companies are looking for large loads of stuff to recycle and will pay for the used product and recycle it and make money. See our government could start and/or fund some new recycling companies (either collecting; distribution; recycling; etc.) There are a lot of possibilities and this would greatly help the dumps, wildlife, pest and bugs would decrease, general waste; just to mention a few. I really pray this idea gets off the ground. I see so much potential with little work but a few small changes that will really add up.

In the western 12 states the federal government already owns 48% of the land. They should sell it to the states & private citizens who have a better track record of conservation.

Personally, at times I wish that the local lands could be voted on by those living and residing there as to how public lands will be used. Unfortunately, the Federal Government will always have the last and final say - so good luck working with the Feds. Normally, whatever they want they and their corporate interests get!

Rachel, the government will spend several million dollars to build roads so lumber companies can log in an area that will produce \$100,000.00 worth of lumber. Your point is it would be too expensive to pay someone for their property if the land was turned into a national park? I say it would be a worthwhile expense. What I was talking about was not every area needs facilities (park store, full time employees, new roads, etc.). What I've seen in my state is when the federal government creates a national park or forest, the people who have property there stay until they want to sell, then the federal government is given the first shot at buying the property.

(cont.)

Geez, if you're worried about not having tax dollars for basic services, perhaps you should let your Congressional reps know they should stop spending A TRILLION DOLLARS (!!!!!!!) on endless wars! With the money we're handing over to the military industrial complex we could have free health care, beautifully managed national parks & forests, free college educations for our children, a healthy Social Security system, and on and on. Our military budget is MORE THAN ALL OTHER COUNTRIES ON THE PLANET COMBINED. Think about what else could be done with that money to benefit all of us.

To lay down, give up and let large corporations have all the tax exemptions and subsidies they want is essentially flushing our country down the drain for good. If you look at the countries that were least affected by the economic crash that destroyed us, you will see a pattern. Their politicians don't take money from those companies like ours do. They also have much higher regulations and taxes and WAY more social programs that support their average citizens. Big oil and coal cost the average American more than they benefit us. The top 10 percentile in the world controls something like 90% of the economy. Why is it that the no tax, no regulation and trickle down fantasies have done nothing for us in the last 40 years but create a greater disparity between rich and poor? Why have we continually fallen down the ranks of education and our money is devalued amongst top nations in the world? Taxes on the rich and the corporations MUST be GREATLY used to dig us out of this hole. Our population will not disappear, therefore the demand for those services won't either. Let the rich and the corporations run away and leave. They will lose all the business from the 350+ million people still living here and it will open up the market to new companies who care about the triple bottom line. During the greatest economic times the US has ever seen, taxes were upwards of 90%. Almost everyone was doing well back then. TAX THE TOP, it's the only way.

As our population grows and more pressure is placed on our National Parks and wilderness areas it becomes increasingly important to provide financial support for staffing and maintenance. The federal government must play the primary role in the funding efforts.

(cont.)

Lets see, deficit spending is over some trillions of dollars and we should spend more money we don't have to fund our National Parks. Exactly HOW DUMB IS THAT? People do not have jobs, nor are there going to be any jobs as long as business owners and CEOs of corporations do not create jobs. Why? Little economics lesson here, folks: Radical leftist government, constantly in flux, changing the rules as fast as that horse changed color in the Wizard of Oz, businesses have no clue what's going to happen next -- waiting to see how ObamaCare, Illegal immigration, regulatory reform, and who knows what else the Obama Congress has in store for America plays out, and PEOPLE WANT TO INCREASE FUNDING FOR THE NATIONAL PARKS? I SAY, OBAMA, YOU AND YOUR CHICAGO THUGS IN CONGRESS, GO ON VACATION UNTIL JANUARY -- MAYBE BUSINESSES WILL STOP WORRYING THAT YOU HAVE ABSOLUTELY NO CLUE HOW TO RUN A GOVERNMENT AND START CREATING JOBS. If I were you people, unless of course you work for this over bloated hog of a government, I would worry about having a job in the very near future, instead of increasing funds for the National Parks -- hey, I get it -- you guys want to work for the National Park Service, NO wonder! I must be on the wrong website -- I was looking for the one that believes in protecting State public lands and Private citizens' lands from the Federal government's BIG UNCONSTITUTIONAL LAND GRAB ACROSS AMERICA.

Thank you, for providing a little balance. Stop... I say STOP the reckless spending! Focus on what we HAVE to fund. Reduce Federal Government's control. Stop the powergrab!

Keep in mind that in many cases, landlocked public land is landlocked because the surrounding land was a free or nearly free gift from the public through homesteading, mining grants, etc. While I don't advocate renegeing on the transfers of ownership of those lands, I do feel that the current landowners owe some consideration for the public's interest in the landlocked public property. Possible approaches are 1. Deny grazing or other rights for landlocked public lands to owners of surrounding lands who do not allow public access across their lands. Granting the access doesn't cost the landowners anything substantial, but restores the balance of fairness for public access. 2. Grant property tax relief for land dedicated to public right-of-ways across private land adjacent to public land. The Federal Government would compensate local governments for the loss of revenue that results.

I think the #3 comment for an exit fee to help fund the national parks is a great idea! If the government also cut its overspending on unnecessary and ineffective programs and advertising, recouped monies from overpayments and owed funds, and simply kept a more stringent control and review of given loans and grants, we would have plenty of money for our parks!

(cont.)

"I am anti hunting of struggling, threatened, and endangered animals." Much like said, there is no state that allows any endangered species that legally open to be killed. Trophy hunting is huge money in this country. As long as the rules and regulations are followed there is nothing wrong with this practice. I myself have killed multiple trophy bucks, but at the same time I have harvested those animals for food. The public and our government should be supportive of all fishing and hunting as it a money maker for our economy across the United States every year. Even through the economic lows of our country in the last few years the amount spent on hunting and fishing is still on the increase. With increase in funding to our state agencies there would be a greater chance to help protect these beautiful landscapes and animals that are in our great country.

Better idea: Get rid of all political parties and make legislators vote individually, not according to some stupid party platform.

I'm fairly conservative, but Irene Schmidt makes a good point. We do spend way too much on defense. Being the only remaining superpower, you'd think we could cut back a bit now...

The BLM has been mismanging our public lands for decades. Foreign corporations such as British Petroleum rule. They are right now removing thousands of wild horses from several states to make way for the Ruby Pipeline. All at taxpayer expense. They allowed the BP Gulf disaster to happen and they are allowing mining and drilling on public lands without environmental studies. They do make money on mining and drilling leases but they are not at fair market value. They are at fees that were set decades ago. When the West was vast and unpopulated. They've blown hundreds of millions of dollars on wild horse and burro "control". They are feeding 38,000 stuck in pens in the Midwest right now. They've emptied lands set aside by Congress for horses and burros of horses and burros. They paid one family over \$12 million dollars to round up horses using helicopters in the last ten years. They lose hundreds of millions annually on the cattle/sheep grazing permit program. Yes, I said LOSE. Large corporations, some foreign owned graze over ten million cows on public land for pennies. Not even close to fair market value. Producing less than 3% of US beef but at a ecological cost and taxpayer cost of billions. Family ranchers hold a small minority of permits. Ted Turner has permits though. He could certainly afford to pay fair market value, ya think? The Myth of the Cowboy and Good Old Boy politics has ruled the BLM for decades. The General Accounting Office (GAO) has documented their excesses and waste but nothing has been done. Secretary of the Interior Ken Salazar is a Democrat but has acted like a Reagan/Bush Republican during his time in office. Oh yea, he is a cattle rancher....

(cont.)

Horses did evolve in North America. This has not been in question look in any textbook on the subject. Horses spread to Asia and Europe via the Bering Sea Land Bridge. Humans came to North America via the same land bridge. Horse bones that have been dated to long before Columbus have been found in North America with spear/knife marks on them. Recently, cliffs in Canada have been found with hundreds of horse bones with tool marks on them below, indicating that early Native Americans drove whole herds off the cliffs to their deaths for food. While climate change may have played a part in the possible extinction of horses in North America, human predation did too. When the Spanish brought horses to our shores in the 1500's they were re-populating them not bringing an invasive species. Regardless they've been here 500 years which is far longer than most of our ancestors..... The Bureau of Land Management has been in the horse business for thirty years. They have spent hundreds of millions of taxpayer dollars. They have 38,000 horses in pens in the Mid West right now. More than on the range. There are tens of millions of cattle on our public lands in the West and about 30,000 horses. Do the math, cattle are destroying the ecosystem, not horses. There are scientific studies that prove this yet the BLM persists in removing horses spending hundreds of millions of taxpayer dollars in the process. The BLM grazing permit program loses over \$100 million annually. Most permit holders are large corporations not family ranchers producing less than 3% of our beef. Foreign owned mining and drilling corporations are raping our public lands as well. British Petroleum is part of the Ruby Pipeline going through several states and thousands of horses are being rounded up this summer to make way. Horses with nowhere to go but feedlots in the Midwest costing the taxpayers millions to feed as they stand nose to tail in misery. Madeline Pickens has proposed to buy land for a sanctuary with her own money and donations not taxpayer money. She has proposed to take all of the horses now in pens. She has asked the BLM for grazing leases surrounding the sanctuary to pay for horses grazing instead of cattle and they have refused. They have refused all offers from all groups to have grazing leases to let them go to wildlife or horses. The BLM is lying in the first place about them being over populated. There are only about 150 mustangs in all of Montana. How can that be over populated? Look on a map. Lands set aside for mustangs by Congress in 1971 are being emptied out. The BLM is zeroing out whole herds all over the West. Colorado is close to losing every mustang. There is no cost to leaving them be. It would be a huge savings and if the BLM spent a few million on parking and signage and advertising tourists would come by the thousand to try to see a wild horse. American Mustangs are fantastic riding horses that are very trainable and very healthy, their feet and legs are far healthier than modern horses. There are multiple groups and programs working to get some trained and adopted but the horse market is terrible now due to over breeding by pros and back yard breeders. Slaughter was a dirty little secret for many professional breeders and now that it has been stopped breeders must cut back. Mustangs should not be caught in the crossfire. We should be advertising these healthy hardy horses to the world not treating them like worthless plugs. They are just as much a symbol of America as the bald eagle and the bison.

(cont.)

FYI Madeline Pickens is a long time horse owner. She isn't some do gooder with no clue. Her former husband was Allen Poulson and together they bred and raced some of the top Thoroughbreds of the last twenty years such as Cigar, Azeri and Rock Hard Ten. She has a website and a Facebook page detailing her plans for a mustang sanctuary and is taken seriously by everyone but the BLM.....

54 Congressional Representatives sent a letter to the BLM in July of this year asking them to stop the round ups but they were ignored. The BLM insists they are "saving" the horses and they have convinced many including Congress, the Senate and several Presidents that this is true. There are about 150 mustangs in all of Montana. Look on a map and see that saying they are over populated is ridiculous.

The BLM is a rogue agency that is managing OUR wild horses and burros on OUR public lands into extinction in order to pander to special interests in their incessant land grab of rangelands designated by law to our wild equines as stated in the 1971 Wild Free-Roaming Horses and Burros Act. The BLM refuses to be transparent, they lie about EVERYTHING to justify this shameful equicide, they waste taxpayers' money, they break one law after the other and they apparently answer to NO ONE and all the while the will of the American people to preserve these national treasures is completely ignored. THIS MUST STOP NOW! It is time to clean house!

I am strongly opposed to the government closing more federal lands to multiple use and even more against the government purchasing more private lands. Wilderness type of lands are nonproductive lands and with the economy so bad these days it would be the wrong thing to do.

In Washington designated "forestland" gets a huge property tax break, with the property tax bill for 1,000 acres of timberland about the same as a medium sized home. This tax break is in place because forestland has public benefits, including outdoor recreational access. Since this tax break was put in place, many large timberland landowners have closed their land to recreation, even charging a fee. These type of property tax breaks should be reduced if private landowners insist on keeping the public out. The resulting revenue could be dedicated to providing recreation on public land.

As a non-hunting hiker, I give a big thumbs-up to this idea. I've often felt hunters and anglers put us backpackers to shame on the "put your money where your mouth is" front! Most wildlife enthusiasts I know voluntarily donate to conservation organizations, but I doubt the average casual weekend backpacker is putting up %11 of what they paid for their boots, tent, pack, and camp stove. (should be aware that most tent-camping and hiking gear not related to hunting or fishing isn't included in current federal excise tax programs.) Granted, some hikers aren't going to use their gear on public land. Well, some hunters belong to private hunt clubs, and some anglers fish on private property, but they're still paying the excise taxes on their gear.

(cont.)

At the very least, the federal government should prohibit children under the age of 16 from driving ATVs on public land because that practice is simply too dangerous according to the American Academy of Pediatricians and other medical, safety, and health groups. Pediatricians and neurosurgeons who have to deal with the deaths and the brain and spinal cord injuries to children on a regular basis want to see this practice stopped. Young children do not have the physical or mental abilities needed to safely drive these vehicles. The federal government should take the lead by banning this dangerous practice on federal lands since the Consumer Products Safety Commission and other agencies are well of the risks.

While I don't think the First Family necessarily needs to DO more camping, it would be good if they mentioned more of what they have done.

We have a unique opportunity to use the 150th Anniversary of the Civil War and the attention it will draw to make a difference probably for the last time to preserve the battlefields of that conflict. Whether it is to support increasing land preservation or fighting to keep urban sprawl and traffic from interfering with tourists visiting those hallowed grounds (i.e. Walmart at Wilderness or Casinos at Gettysburg to name a few.) Mr. President, please support any efforts to at least maintain current funding for preservation and the National Park system if not increasing those budget items. Even taking 1% of what you are attempting to save in Defense spending and putting towards these efforts can help. If it was important enough to the veterans of the Civil War to work together North and South to preserve the battlefields of that conflict, its the least we can do and the current generation to do the same.

This idea has merit and should really be considered. There are incredible opportunities throughout the country for federal dollars to leverage private investments in conservation. In the Hudson Valley region of New York State, Scenic Hudson's Saving The Land That Matters Most initiative proposes to match every public dollar with an equal share of private monies. The return on investment increases significantly for the federal government and taxpayer when one considers that a significant portion of the public investment would come from local communities through initiatives supported at the local ballot box.

Urban parks would be an ideal opportunity to provide school students with an opportunity to experience nature first hand. Programs can teach them about conservation, restoration projects, wildlife, and recycling. This may be the only avenue for innercity kids to explore, enjoy and participate in nature. This experience can only grow and develop with the years. The federal government's role is to provide for experienced park rangers, equipping them with the necessary tools to run the parks and to provide educational programs. Urban parks must be protected from builders or those who want to encroach upon this land by official designation from the Park Service (e.g., National Wilderness Area). For those like me with physical disabilities, urban parks would help us to get outdoors and walk or ride wheelchairs if pathways can be developed that would be wheel-friendly.

(cont.)

The drug cartels love your idea! Arizona wilderness areas, nature connectivity corridors, national monuments, etc. have restrictions on law enforcement that restrict them from traveling freely and make them ideal corridors for drug and human smuggling. Federal lands in Arizona are THE entryway of choice for murderers, rapists, and terrorists. More than 50% of all illegal entry into this country is through federal lands in Arizona. There are restrictions on BLM employees telling them where they can and cannot go just to protect their lives because of all the thugs out in the National Monuments protecting their drug loads and have no respect for human life. Ranchers are getting shot. Not just Rob Krentz. Ranchers 50 miles north of the Krentz ranch have been shot at while just minding their business. The cartels will always have guns. They are murderers. My home is on the smuggling trail. There is a rape field near my house, a whole roadless area full of rape trees. In the Sonoran Desert National Monument just 30 miles south of Phoenix and 80 miles north of Mexico, there are signs warning citizens not to travel there because that land is owned by the drug cartels. Border Patrol Chief Aguilar called the area from that point south to the border a "third country. And you want to take guns away from law abiding citizens? People live and work in these areas. They have the right to go on living!

that is an ignorant statement. We go through hundreds of hours of planning with state, local and federal agencies to plan any new ORV trail.

Great discussion. Glad to note most of the comments stay on wildlife corridors and what they mean to the health of our planet and our own health. Interesting to watch the usual suspects from the OHV crowd try to turn the focus on their issues. I am not a scientist. I do have a forestry degree and training as a land steward. So my observations are based on 40 years of living, working, hiking, and studying a small headwaters in southern Oregon. In my travels I have compared this small ecosystem to other areas. In the little mid-elevation migratory corridor where I live, 40 years have seen a lot of changes. There are no more pheasant. The timber wolves are gone. There are fewer hawks, more ravens. Both grouse and quail are in decline, while flocks of turkeys now roam the hills. There are fewer porcupines, more raccoons. Fewer bobcats, more cougars. I have no illusions that these changes are the result of changes in this one drainage. The landscape is changing, and changes in the valley bring changes to these mountains. The real problem is that no one is asking why. Our government is doing a poor job of protecting our health by failing to protect the health of our planet.

O.K., Sonny, I'm trying to follow the logic here. You don't like rich people who live extravagantly. Got it. Have to agree. They are the ones telling you your activities are ruining the planet. If so, that is, of course, hypocritical. But - are they the only ones telling you about the problems they see with your activity? These minions you speak of.....would that be the government employees that (supposedly) work for all of us? Not just the rich.....although maybe their bosses just work for the rich. Admittedly, our citizenry is a bit confused on that point. Now here's where I'm having trouble with your logic. You want to strike back at rich people by spending ten to fifteen thousand dollars on a play machine, a couple thousand more on a toy hauler, and then rip up the public commons? That, my friend, is not logical.

I want to help define some terms and clarify some thoughts on this contentious issue. Wilderness (with a capital W) is federally designated on Forest Service land for essentially no human change. There is no firefighting, timber cutting, mining, motorized vehicles, etc. There are over 100 million acres in the US, with a large part in Alaska, but quite a bit in the western states. Smaller portions in the eastern US forests. wilderness (small w) is whatever we think it is, usually land without houses. Some is private, or public. Some is managed for timber production. There is something like 600 million acres of forest land in the US, plus hundreds of million acres of open/desert/range land that provides wildlife habitat. West of the Mississippi, over 50% of the land is owned and controlled by the federal government. Total for the US is something like 43%. Add the state and local government land, and conservation easements, and well over half of the nation is protected from development already. How we use that land (timber, wilderness, wildlife habitat, mining, ranching, etc) is open to constant debate and change. Over the last 30 years I have seen that change more and more to Wilderness and semi-Wilderness use. We are a wealthy nation that can afford to "not use" our land, as long as we can import food and wood from other nations. The Nature conservancy is a non-profit multinational corporation that has accumulated over 2.7 billion dollars in assets. Most of the species of wildlife in America are doing just fine. Black Bears for example, which use huge swaths of habitat and are an indicator of healthy landscape ecology, are on the increase in all the northeastern states. When we discuss perishing species and loss of "biodiversity", this is mostly in developing nations and not a huge problem in the US. There is an extreme proposal called the Wildlands Project, which has published maps of huge areas of land as basically off limits to human use, with connecting corridors and buffer areas where farming and forest management might be "allowed". Several states use these maps for their long term planning. They promote the government taking these lands and designating them as they have proposed. The federal government has a track record of either taking huge swaths of land from citizens, or creating conditions where the land become valueless, (such as losing water rights,, access, or development rights) and the owners become "willing sellers" or willing donors to groups like TNC. A quick cruise through google earth will show any interested party the extent of undeveloped "wilderness" that is available for wildlife. The USA imports a large proportion of wood products from other countries, while our western forests burn and eastern forests rot. Wood is the very best raw material on environmental grounds, using less energy and creating less pollution than almost every other raw material. Think globally and act locally.

I agree with a recent article by Kurt Repanshek, the basic premise of which is that its not we/USA/Fed gov't doesn't have the money (we do, as we have a budget every year) its that many of us believe the priorities are out of whack. And while I agree the deficit is an issue and we need to reduce, if not abolish it, I STILL believe we should fund national parks, a new CPCC, etc. Again, its about priorities, and mine lie here. Here is an excerpt from the article: "The chronic under-funding of the National Park Service is not now and has not been for the past 50 years a matter of money – it is a matter of priorities!" Dr. Pitcaithley told those who attended that conference back in April. "Five billion dollars amounts to 0.002 percent of the president's 2008 proposed budget." For the sake of comparison, while the National Park Service slogs along with its insufficient budget, the Defense Department is funded at roughly \$550 billion, the professor points out. Just one B-2 bomber costs \$2 billion, he adds for emphasis. "Do you really think the American people would notice if this country's military industrial complex held one less bomber than it does today and that those funds were transferred to the National Park Service?" he wonders. "The president and Congress took less than ten minutes to determine that the economy needed an economic stimulus package totaling \$150 billion. Do you think anyone would have complained if it were \$148 billion? And the resulting \$2 billion saving were given to the National Park Service?" Over at the U.S. Marine Corps, Dr. Pitcaithley points to the Osprey aircraft that cost \$110 million apiece. "They are currently being sent to Iraq even though military analysts believe they don't work as designed," he says. "Here's the punch line: Several branches of the military are planning to purchase 400 of these flawed aircraft! Four hundred times \$110 million equals \$44 billion!" The money is there. The problem, though, is we let Congress get away with more than a few decisions that are terribly misguided. The problem is that there are not enough advocates for the National Park System. "It's not a matter of money, it's a matter of priorities and the National Park Service over the years has not developed a constituency that will lobby on behalf of it. The National Park Conservation Association is simply not enough and clearly no match for other park interest groups. If you doubt that in any way, consider the recent ... effort by the National Rifle Association to change decades-long NPS policy on guns in parks," says Dr. Pitcaithley. "A goofy idea by any measurement, but one that went unopposed except by a handful of editors. "In the world I envision for the National Park Service, the 50 congressmen who endorsed the (gun) proposal would have been instantly balanced by 50 congressmen and women who opposed it – delegates in Congress who had been cultivated over the years to support various pieces of legislation that benefit the national parks and, through the parks, the American public. Where are those congressmen and women? Why don't we do that? The Department of Defense passes up no opportunity and spares no expense in cultivating congressmen to support its programs. Why doesn't the National Park Service do the same?" When you realize that a single B-2 bomber retails for \$2 billion, is it really far-fetched to want to believe that the National Park System with its 391 units stretching from Acadia National Park to Zion National Park is worth at least three bombers?

(cont.)

Perhaps we need a new political party that respects the public nature of the environment and the need to respect the work of scientists while still holding individuals accountable for their own personal needs and for budgeting independently. I don't think the government needs to provide everyone with everything, but we don't have a private company creating air, water, and wildlife for individual sale. No, we do share some things in this world and must manage them with the understanding that one cannot create scientific principles the way we create art or ideologies. No, science is something that has to be understood and accepted. It is not like the fashion industry, politics, entertainment, poetry, etc.... that has cycling trends. We can't just 'will' oxygen to be produced with the shake of a magic wand. We can't avoid food shortages or desertification by putting all our trust in the charismatic twinkling smile of a talk show host, corporate CEO, or scientifically illiterate conservative or liberal politician.

I don't think that scientists who study primate social systems in the Congo and compare the highly organized knowledge sharing of those primates in undisturbed areas with the less organized and less well versed in survival strategies of those in highly human impacted areas are trying to bring down the economy of the people in the Congo. Seriously, scientists are simply looking to understand what they are studying and how it is impacted by all kinds of external variables. If I am just an avid reader of wildlife books and I don't even belong to any organization (which I don't), then why do I agree that we should share our planet and designate areas for wildlife protection in every country in the world. The United States should care about its own ecosystems as much as about those in other countries, and I can't say i blame scientists in other countries for looking at our environmental practices as many of us look at theirs. It hurts to think that more oil has been spilled in wilderness areas of Uganda than anywhere else. It hurts to think that happens anywhere on Earth. i may not be in favor of expansion of many government programs and I may agree with the conservative fiscal responsibility viewpoint, but not where environmental matters are at stake. I agree when it comes to people taking responsibility for their own personal needs, but we all breathe the same oxygen, and can you find one politician anywhere who can explain how oxygen is generated? Probably not on the Right or on the Left. Politicians, from Socialists to Republicans tend to understand very little about any aspect of science, and if it costs them money, they are going to understand it even less.

No money left because * The federal government cannot account for \$24.5 billion spent in 2003. * A White House review of just a sample of the federal budget identified \$90 billion spent on programs deemed that were either ineffective, marginally adequate, or operating under a flawed purpose or design. * The Congressional Budget Office published a "Budget Options" book identifying \$140 billion in potential spending cuts. * The federal government spends \$23 billion annually on special interest pork projects such as grants to the Rock and Roll Hall of Fame, or funds to combat teenage "goth" culture in Blue Springs, Missouri. * Washington spends tens of billions of dollars on failed and outdated programs such as the Rural Utilities Service, U.S. Geological Survey and Economic Development Association. * The federal government made \$20 billion in overpayments in 2001. * The Department of Housing and Urban Development's \$3.3 billion in overpayments in 2001 accounted for over 10 percent of the department's total budget. * Over one recent 18-month period, Air Force and Navy personnel used government-funded credit cards to charge at least \$102,400 for admission to entertainment events, \$48,250 for gambling, \$69,300 for cruises, and \$73,950 for exotic dance clubs and prostitutes. * Examples of wasteful duplication include: 342 economic development programs; 130 programs serving the disabled; 130 programs serving at-risk youth; 90 early childhood development programs; 75 programs funding international education, cultural, and training exchange activities; and 72 federal programs dedicated to assuring safe water. * The Advanced Technology Program spends \$150 million annually subsidizing private businesses, and 40% of this goes to Fortune 500 companies. * The Defense Department wasted \$100 million on unused flight tickets, and never bothered to collect refunds even though the tickets were reimbursable. * The Conservation Reserve program pays farmers \$2 billion annually to not farm their land. * Washington spends \$60 billion annually on corporate welfare, versus \$43 billion on homeland security. * The Department of Agriculture spends \$12 billion to \$30 billion annually on farm subsidies, the vast majority of which go to agribusinesses and farmers averaging \$135,000 in annual income. * Massive farm subsidies also go to several members of Congress, and celebrity "hobby farmers" such as David Rockefeller, Ted Turner, Scottie Pippen, and former Enron CEO Ken Lay. * The Medicare program pays as much as eight times the cost that other federal agencies pay for the same drugs and medical supplies. * Congressional investigators were able to receive \$55,000 in federal student loan funding for a fictional college they created to test the Department of Education. * The Army Corps of Engineers has been accused of illegally manipulating data to justify expensive but unnecessary public works projects. * Food stamp overpayments cost \$600 million annually. * School lunch program abuse costs \$120 million annually. * Veterans' program overpayments cost \$800 million annually. * Earned Income Tax Credit (EITC) overpayments cost \$9 billion annually. * Better tracking of student loan recipients would save \$1 billion annually. * Preventing states from using accounting tricks to secure additional Medicaid funds would save several billion dollars annually. * Medicare contractors owe the federal government \$7 billion. Keep creating more government programs America! Keep sending Washington MORE MONEY! Intelligent people would solve their perceived problems in the private sector where they are forced to make a profit and are held accountable.

This program is critical, strengthening land trusts in the Upper Hudson Valley and throughout NYS - it supports transaction costs, building capacity for land trusts and vastly increasing the ability of government to assist and support property owners.

Great idea! Everyone should be able to enjoy the sky at night as part of our national heritage. In the northeast there are many cultural sites which are unidentified or unstudied. These sites were meant to be viewed at sunrise, sunset and during certain night events, such as the Perseid Meteor shower. These ceremonial landscapes played a 'lost' role in our nation's history. The federal government could now play an important role in supporting the identification and protection of these sites. The federal government could also play a role in reforming our nighttime lighting - inefficient fixtures, wasteful timing and overuse of lighting. 'Dark sky' street fixtures are no more expensive than traditional fixtures. Residential lighting can also be manufactured to be 'dark sky' friendly - I own several. The federal government could provide incentives to states and towns to become more lighting efficient. Public education could go a long way. A one night national 'dark sky' event could bring partners together to raise awareness of the beauty of the night sky as part of our great outdoors and to generate support for more year round changes. In the recent National Geographic issue, a nonprofit in New York working with community farms asked children who had participated in their programs if they had seen the stars - sadly only two children who had recently immigrated from Africa could answer 'yes'. Viewing the stars should part of the outdoor experience for every child. Consider starting with a 'Big Star Night' on August 11th each summer to coincide with the Perseid Meteor shower. Partners around the country would offer local family oriented events (a sort of 'Trails Night' similar to Trails Day). When everyone realizes what we've been missing, it'll generate excitement for restoring our national night sky.

Although this suggestion focuses on a specific project, the bigger theme is that successful cooperative and collaborative efforts reap extremely valuable benefits, even if they are very hard to accomplish, and take a lot of time. My experience has been that proactive outreach by organizational and agency leaders to each other to propose interagency connections is what it takes to get started, and then there will be plenty of support from organizational/agency members and volunteers. Since "all politics is local," the focus should be on the community project/s, with federal folks aiding and supporting, for mutual benefit.

I say bring it back and get them working on our national infrastructure. We need to invest in our own country and stop sending hush money to these other countries. National Defense needs an overhaul and needs to have some pork trimmed out of it's budget. So much money is being wasted that it's absolutely appalling. As far as problems with sexual harassment or civil rights, this is baloney. Just pre-screen the applicants and ask for references. Make everyone sign a liability release and a form saying that they understand this work has inherent risks and that they will not hold the US liable.

Discussion Question 3

Written & Online Comments

(cont.)

The Endangered Species List is being used like a club for the federal government (under threat of lawsuit) to maintain control over the wolf population. The problem that was unforeseen (or unheeded) is that with wolves there is a cultural/societal population limit. I would love it if wolves were found in all of the areas they did pre-settlement; however in this day and age with so many more millions of people in this country it's not feasible, at least not in the large numbers they had before. The wolf populations of the Northern Rockies are recovered as indicated by numerous wildlife biologists who live there. Ranchers and others who have lost animals are indicating that the numbers are too high in some areas. Allowing the states to have control gives them the freedom to manage the population as they see fit, while allowing for the long-term survival of the species in that state. Keeping the wolf on the ESL does not provide for their long-term survival because it: 1. Cheapens the ESL by keeping a species on the list that no longer requires protection to survive. 2. Increases the angst and frustration of local landowners who cannot deal with livestock losses without fear of legal proceedings and fines. The only way that wolves will have long-term survival in a locality is to get the local landowners to understand and value them as part of the ecosystem. Some will never understand and will choose to demonize the wolves regardless. However, if a majority of the people in an area value wolves the consensus will turn to discourage the hatred that wolves currently espouse. This situation is also being replicated in the Great Lakes wolf population that has been recovered for the last decade; to no avail.

The State urges the Obama Administration to increase funding for the Forest Service's Forest Legacy program so more private working forest conservation easement projects can be undertaken by New York and other states.

The Legacy program works well with the States to leverage state and private resources for sustainable private forestry conservation easement programs, but is underfunded.

Doubling the annual Legacy appropriation to \$200 million would be a modest investment in the region's forest products and outdoor recreation industries that will be repaid many times over by the enhanced economic activity it generates.

Expanding funding for forestry incentive programs can directly enhance and complement other efforts for retaining forests and implementing sustainable forestry on-the-ground.

Efforts should be undertaken to increase funding for the forestry component of EQIP, and to enlarge the budget of the State and Private Cooperative Forestry program of the USFS.

Community forests can provide outdoor recreation and education, forest products for community use, sustainable biomass for community based energy systems and carbon sequestration. The USFS is preparing to roll out the program soon, but the initial appropriation of \$1 million for the program is woefully inadequate. Here in New York alone, there is great interest in this program, and increased assistance from the USFS Community Forestry Program will leverage significant local and private resources for this exciting new program.

Discussion Question 3

Written & Online Comments

(cont.)

The USFS can help the States, the forest products industry and private forest land owners develop carbon sequestration and ecosystem services programs that reward forest land owners for the carbon sequestered and other environmental benefits on their forest lands.

While much work has gone into this effort, there is no national standard or program that has yet been developed to provide direct financial assistance to forest land owners for the significant carbon sequestration and ecosystem benefits forest lands provide to society at large.

It is time to recognize, and reward, the long term management of forests, and to help ensure that the forests of today remain the forests of tomorrow by providing meaningful assistance to current forest land owners to keep their forests as forests.

Regardless of whether a national Climate Change program is authorized by Congress, a voluntary approach to the issues of carbon management and ecosystem services through forestry practice is a critically needed opportunity for family forest owners, the forest industry and public forest lands.

Enhancing the budgets of APHIS for its regulatory and control work and for the Forest Service's Slow Ash Mortality (SLAM) program will directly benefit New York's efforts. Every dollar that is expended on either eradication (as is the case with ALB), or slowing the movement (as is the case with EAB) is money well spent and will give the State, private land owners and local governments more time to intelligently plan for and mitigate the impacts these pests have had on forest resources in other parts of the country.

Supporting the Northern Forest's forest-based economic development activities offers additional opportunities for promoting sustainable forest management and long-term retention of forested open space, particularly in large tracts that have significant ecological benefits.

The States have developed many innovative conservation tools with our many partners. Perhaps chief among our partners has been the steady and reliable support of the USFS's State and Private Cooperative Forestry program. The continued and expanded support for the USFS State and Private Cooperative Forestry program is critical to the ability of New York and other Northern Forest states to extend our conservation activities on the region's forest lands. A modest federal investment in the program will leverage considerable state and private conservation investments, and help secure the future of the Northern Forest. At the same time, it will build constituencies and connections to our great outdoors and create the next generation of advocates for our forests.

State, federal and private conservation organizations need to do all they can to promote and support hunting and fishing and other outdoor recreation opportunities on lands that they control and manage.

Discussion Question 3

Written & Online Comments

(cont.)

Building upon the successful aspects of federal funding programs like the North American Wetland Conservation Act (NAWCA), Partners for Wildlife(PFW), Forest Legacy Program (FLP) the Land and Water Conservation Fund (LWCF) and conservation programs of the farm bill like the Wetland Reserve Program (WRP), Conservation Reserve Program (CRP), Wildlife Habitat Incentive Program (WHIP), and the Grassland Reserve Program (GRP), America's Great Outdoors Initiative has the potential to dramatically improve the protection, restoration and enhancement of our nation's natural resources for future generations.

These federal programs provide the necessary government incentive to attract private investment and participation that has been key in helping DU and others achieve significant conservation objectives over the past several decades, but much more needs to be done and we encourage this Administration and Congress to continue to support and fully fund these, and other important federal initiatives.

Farm Bill programs such as Conservation Reserve Program (CRP) and Sodbuster have thus far played a critical role in preserving millions of acres of prairie grassland that benefit many species of wildlife. We strongly urge that they continue and expand.

Since 1990, sixteen NAWCA grants totaling \$7.9 million have been approved to protect over 125,700 acres of critical wetlands and associated uplands in NH. These grants have been matched by nearly \$27 million in non-federal funds. Many of these properties are now under the management of state and federal agencies and conservation organizations like the Society for the Protection of NH Forests, The Nature Conservancy and others. In all cases, every effort is made to make these properties available to the public for a variety of recreational and educational uses. The NAWMP, and the JV model for implementation, is recognized as one of the most successful conservation initiatives ever undertaken. The American Great Outdoors Initiative should explore ways to replicate this model when and wherever it is appropriate.

Although much has been accomplished, more work remains and more collaboration is needed. In order to build upon this success it will take increased funding to meet the backlog of interest.

The America's Great Outdoors Initiative may be the last and best opportunity to preserve the world class resources of the Northeast's vast working forest, the mid-west Prairie Pothole Region and the southeastern Gulf Coast estuarine and freshwater wetlands recently threatened by the Deep Horizon oil spill disaster, among others .

We appreciate the Administration's effort to reach out to all stakeholders to bring new ideas, perspectives and concerns to the table as we look for ways to collectively formulate policies and legislation that will have positive impacts how we manage, protect and restore and enjoy our Nations rich natural diversity and beauty by this generation and all generations that follow.

Please add Houston to your list of stops on the "America's Great Outdoors Initiative" listening tour. Houston Wilderness would be pleased to act as host and stands ready to facilitate a successful event.

Discussion Question 3

Written & Online Comments

(cont.)

Even the best of local grassroots efforts often need the support and dollars of federal assistance programs, and for this reason, I will focus my comments today on the full funding of the Land and Water Conservation (LWCF), especially that state-side assistance program.

Traditionally, urban parks have been considered purely facilities of local interest – in contrast to urban roads, for instance, or urban wastewater facilities. Today, however, it is recognized that there is a considerable federal interest in high quality city parks. For one thing, city parks are the principal place where urban residents can exercise, and exercise is key to reducing the nationwide obesity crisis and related health problems and expenses. For another, city parks allow denser urban growth and infill surrounding them, reducing edge sprawl and ever more exurban automobile use, congestion and pollution and when connected create systems of parks linked to each other and to their communities allowing greater access and mobility which encourages increased use. There is therefore a great need for federal leadership and resources to expand and better shape our rebounding urban parks movement.

Including city parks and open space in a major new outdoors initiative could encourage cities to engage in long term planning and analysis. In addition to funding for planning and park system analysis, cities need help funding land acquisition for new parks, site clean up, and park design and development. A matching grants program for cities, similar to the USDA's federal/state Forest Legacy Program would leverage city money for these critical investments and allow the federal government to play an important stimulus and partnership role in support of local efforts. Multiple federal agencies have a role and all should be tasked with bringing their resources to cities' parks and recreation needs.

We recommend that while overall coordination is overseen by the Council on Environmental Quality, the actual federal funding and "work" be carried out through the existing programs of the Department of Housing and Urban Development (HUD), the Department of the Interior (DOI), the Department of Transportation (DOT) and the Environmental Protection Agency (EPA), and other agencies as follows:

1. Waterfronts. Conserving vulnerable coastal and flood zone areas as parks can save the nation vast sums of money and reduce the loss of life from storms and surges. Revitalizing derelict industrial waterfronts can help cities renew themselves.

Discussion Question 3

Written & Online Comments

(cont.)

Potential: NY/NJ Harbor and Newark/Passaic River At the heart of the nation's largest metropolitan area, the NY/NJ Harbor plays multiple important roles--as a recreational and environmental educational resource for the region's population, as one of the largest ports in the country, and as a critical natural habitat for birds and other wildlife. As the region's economy has slowly transitioned away from its industrial past, portions of the waterfront have been reclaimed for parks and natural areas, yet much needs to be done to provide adequate recreational opportunities for this growing region. Waterbodies such as Jamaica Bay, Raritan Bay, the East River and the Arthur Kill are surrounded by substantial amounts of private land vulnerable to development that would be suitable for public access and natural areas. Similarly, current efforts to establish a linear park along Newark's Passaic Riverfront offer unparalleled opportunities to meet many federal goals: transit-oriented development, improved environmental and human health, urban reinvestment, job creation and tree canopy expansion. These efforts are consistent and aligned with other efforts in the larger urban focus area, including the Army Corps' Comprehensive Restoration Plan for the Hudson-Raritan Estuary, and efforts to restore and enhance Gateway National Recreation Area.

2. Connectors. Linking destinations within metropolitan areas by using trails and greenways along creeks, abandoned rail lines and other corridors can encourage non-motorized transportation as well as recreational movement of people (as well as of wildlife).

Potential: The Bloomingdale Trail Project, Chicago, Ill. The Bloomingdale Trail – conceived in the spirit of the New York's Highline Park and the Promenade Plantée of Paris—will provide multi-use recreation opportunities and alternative transportation for the 100,000 residents of Logan Square, Humboldt Park, Wicker Park, Bucktown, and neighboring communities. (Logan Square has the second-least amount of park space in all Chicago neighborhoods.) The trail will include three new ground-level parks and three expanded existing parks at points along the route, providing twelve acres of new park space in these densely populated neighborhoods. The Bloomingdale Trail will link downtown with the lakefront and will have access ramps every six to nine blocks. This infrastructure re-use project will transform a piece of Chicago's industrial heritage into Chicago's first - and the world's third - elevated greenway and multi-use trail.

3. Anchors. Anchors are new or refurbished signature parks in city centers or in redeveloping communities that generate jobs and economic growth and promote social health. Anchor parks, whether large or small, spur development, engender smart growth, result in construction and maintenance jobs, and draw tourism.

Discussion Question 3

Written & Online Comments

(cont.)

Potential: Uptown Parks, Charlotte, N.C. In areas now taken up by parking lots, Charlotte hopes to develop center-city parks to anchor rehabilitated walkable neighborhoods and provide key cultural offerings to the region's burgeoning population of residents and workers. Concerned about growing problems with traffic and flooding, Mayor Pat McCrory actively supported light rail and infill development in Uptown (what Charlottians call downtown). Now the city wants to provide two new anchor parks for the area -- Romare Bearden Park, named after the famous artist who grew up in the city, and First Ward Park, located next to a new University of North Carolina-Charlotte campus. Uptown Charlotte is growing --15,000 people who live there now, up from 5,000 a decade ago -- and these anchor parks can provide a powerfully attractive environment for both workers and center-city families and residents.

4. Environmental Justice Parks. Low-income neighborhoods and especially the children who live there often do not have access to green space; many of these places are located next to noxious factories, sewage plants, waste transfer stations or landfills. A special program to bring the amenity of parks can go a long way to making these areas healthier and raising them economically.

Potential: A new park in Santa Ana, Calif. The eighth most densely populated place in the U.S., Santa Ana has only one acre of parkland for every 1,120 residents, among the lowest ratio anywhere in the country. Over 75 percent of the city's 340,000 people are Latino and 20 percent live below the poverty line. With most citizens not within walking distance of a park, it is a fact that Santa Ana has the highest rate of overweight children in California. Furthermore, many of the tightly-packed apartment buildings ban any recreational activity, and public schoolyards are locked after school hours. Residents have lobbied for one new park, for which the city has dedicated funds, but that will barely make a dent in the larger problem.

Potential: Sonoran Preserve, Phoenix, Ariz. The Sonoran Preserve, one of the nation's most grandiose urban conservation concepts, is a vast 21,000-acre parcel of critical desert habitat threatened by development as soon as the Phoenix housing market rebounds. In 1998, responding to a land development rate of one acre per hour, the city of Phoenix adopted a plan and a sales tax funding mechanism for the Preserve. But because the land must be purchased at full market value from the state trust land agency, and because the city does not have right of first refusal, the area is still at risk. With the help of matching state money, land is now being acquired at the rate of about 700 acres per year, not nearly fast enough. The preserve is managed for trails and wildlife habitat; the city hopes to also guide the quality of development along the urban/park interface.

The military has been a great partner to land trusts and national conservation groups in preserving thousands of acres near military bases in North Carolina. The original impetus was to protect endangered species habitat, but it has expanded to include preservation of buffers around bases to ward off encroachment and ensure the safety of training exercises. The Administration could encourage DoD to pursue similar conservation projects at many of its facilities.

Discussion Question 3

Written & Online Comments

(cont.)

Fully fund the Land and Water Conservation Fund

Make permanent the expanded (but lapsed) federal tax incentives for donated conservation easements

Devote significantly more funding to land acquisition along the Blue Ridge Parkway

Work to make USDA conservation programs more user-friendly, particularly the appraisal process, and make them more available for land trust involvement

Ask Department of Education to provide incentives and materials to schools to include in their curricula outdoor experiential environmental learning

Provide more funding and incentives for local greenways, trails, and parks

Provide more funding and incentives to encourage greater farmland preservation and production of fresh, local and healthy foods

National legislation has helped to define three of these five landscape: the NJ Pinelands in the 1978 National Parks and Recreation Act (followed by the 1979 NJ Pinelands Protection Act); the Highlands Protection Act that Congress enacted in late 2004 that has established a federal-four state conservation partnership for the 3.5 million acre Highlands Region (I served as co-chair of the Highlands Coalition for several years); and the Fire Island National Seashore Act. NY state law in 1993, the Central Long Island Pine Barrens Protection Act, has established the governance and management of the 100,000 acres of the LI Pine Barrens, but the 2500-acre Wertheim National Wildlife Refuge, the largest such refuge on Long Island, is part of the core of the LI Pine Barrens. No comparable federal legislation exists for the NY Harbor area, but we are in the process of forming a coalition to develop such national legislation. Land conservation, protection and acquisition is central to the goals of preserving the NJ Pinelands, the four-state Highlands, the LI Pine Barrens and the Fire Island National Seashore (where the NPS has never had any funding to acquire land seaward of the coastal high hazard line following storm destruction of dwellings). Presumably all of these four landscape would be eligible for LWCF dollars if that Fund is fully funded. While there is a land preservation/acquisition plan for the NY Harbor region, to my knowledge no recent federal funding has been used to protect any such lands. Interior is involved with all five of these landscapes in that there are Interior land-holdings in all five. In addition, Interior is the approving and funding agency for state-federal acquisition of high priority parcels under the 2004 Highlands Protection Act.

(cont.)

I attended the AGO meeting held in Denver, Colorado on July 16th in the Denver West Marriott as a representative of the BACK COUNTRY HORSEMEN OF AMERICA. Note-takers recorded our comments and we were told that a report containing our input would be issued at a later date. However, nobody knew how that data would be disseminated or when. Can you answer my question?

I got your invitation to participate in a dialog around the health of our national parks. I was asked to put in my email address to start. I put in my home email and got this response from your website: D'oh! that's not a valid email address It was my valid email address and, as a result of your response, I'm no longer planning to be part of the dialog.

We are preparing materials for National Wildlife Refuge Week in October and would like to promote the IdeaJam site. (<http://ideas.usda.gov/ago/ideas.nsf/>) Will it still be operational in October?

Could you please me how long comments will be collected on this site? I write a newsletter for the National Wildlife Refuge System and we are wondering if we can include the website in materials that will be distributed in October 2010, during National Wildlife Refuge Week.

What is the deadline for these conversations to take place and results to reach your offices? Do you have a preferred format?

I am in the education department at the Minnesota Zoo (mznzoo.org) and also involved in the leadership of the Minnesota Children & Nature Connection (mncnc.org). I am very interested in learning about the logistics and planning for the listening and learning sessions that were mandated in the April 16, 2010 Presidential Memorandum establishing the America's Great Outdoors. Since families and children are primary audiences for both the Minnesota Zoo and the Minnesota Children & Nature Connection and the America's Great Outdoors "initiative will also help families spend more time outdoors" (source: <http://www.whitehouse.gov/blog/2010/04/16/creating-a-21st-century-strategy-americas-outdoors>), we would like to be involved and could potential host a listening and learning session. Any additional information would be greatly appreciated. Please let me know if we could provide leadership and support for this important initiative.

Would it be possible to add me to your e-mail contact list so I receive information on upcoming listening sessions and other events? And is your list the only one or does USDA also maintain a list? Thank you

Thank you and thanks to President Obama for initiating this very important outreach program! Because we are dependent every day upon our environment for survival, it is great that the Administration is providing a forum to raise awareness about our precious natural environment. Can you please tell me what the deadline is to send in comments?

This is really late notice – our event is planned for Sept 24th. Any way you can make this work? You could have someone attend with preliminary conclusions. This is a public event that invitation have already been issued for. I hope we can do something that works.

Discussion Question 3

Written & Online Comments

(cont.)

Please provide the LOCATION, ADDRESS, DATE + TIME of upcoming America's Great Outdoors' Listening Sessions. In specific, for the Los Angeles listening session, WHERE will it be held on July 8, 2010 and at what time PST?

We are interested in hosting a listening session. Do we have to register in order to host one? Do you know of any that are happening in Hawaii?

I am interested in attend the listening session that is scheduled for Charleston, SC on June 28th, but there is NO information about where it is, what time of day and how to register. How can I get this information? I am the director of the Friends' group for the National Wildlife Refuges and the National Forest of coastal SC, and we have over 800 members in this area. I would love to get information out to them so they can make plans to attend. Please send information ASAP so we can work this into our schedules and get the word out to everyone!

Hello and thanks for the interesting presentation in Minneapolis yesterday. I appreciated the opportunity to listen and to contribute. I am curious if the America's Great Outdoors video is available for educational use? I am an outdoor educator at the University of Minnesota Duluth. We have a Seminar course for our graduate students where we consider new ideas, initiatives, programs, etc. It is our chance to expose our students to the breadth of the outdoor and environmental education/recreation fields. Thus, I would like to present the Presidential Initiative as a federal collaboration on behalf of land and people in the US. I envision using the President's April 16 Memorandum and on-line resources from your website as background, I thought the video would add a colorful touch to our discussion. My outcome would be to get each of our students to contribute a comment via your web site, i.e. promote their engagement in your process. Thanks for your consideration of my educational use of the promotional video, if it is available, please instruct me how I can access it.

I'm teaching a class in Honors Writing at the University of Utah this fall. I'd like to have my students write essays on America's Great Outdoors for you. Where shall I submit them? And what's your deadline for including them in the input for the final report?

I greatly appreciate the AGO web site, and I've posted several ideas on it. However, I cannot locate any information on the site about when it may be closed or inaccessible to further public posting of ideas, commenting on ideas, or voting on ideas. I understand that the AGO public input will eventually be consolidated and included in a report to President Obama by November. Since people are still learning about the availability of this AGO site, and others may procrastinate if they think the comment period is open-ended, I recommend that a deadline be shown on the AGO home page. This would enable people to plan ahead, and warn procrastinators when they may miss their comment opportunity.

Discussion Question 3

Written & Online Comments

(cont.)

I also have two other questions First, although both Arizona and Nevada are states with relatively large amounts of federal lands (Nevada has the highest percentage of any western state), there have not been any held or scheduled AGO listening sessions in them that I am aware of. Why? I would especially welcome a session in Las Vegas, as it is only a two-hour drive each way from where I live. Second, what process will the Obama administration use to review all of the AGO public input (both from listening sessions and submissions on the AGO web site) and to evaluate the input to determine which ideas are the best and most feasible to implement? I think that some explanation of this process on the web site would help assure the public that their input was genuinely appreciated and helpful in preparing the final AGO report to President Obama.

I am organizing feedback from a rural setting where we will not get together in person and wonder if this is the right address to have people direct their input to.

I've registered on the America's Great Outdoors website but I'd like to get the press releases/announcements emailed to me when they come out. I work with a number of conversation groups which want to stay current as new Listening Tours are announced. I cant seem to find the place to sign up to receive the press releases/announcements. Can you point me to the right place?

I would like to find out if there will be a session for the southeast region (I live in Greenville, SC) as is planned for the Chesapeake Region June 25. If so, when and where will that session be held and how can I help with it? I have done volunteer work with local conservation groups and am retired from the Biology Dept at Lander University in Greenwood, SC.

Thank you for initiating this invaluable effort to reconnect our people with conservation and the outdoors at a national scale. Given the massive & multiple challenges facing our society and world, it is tempting to overlook the power and importance of our environment. Yet when we don't respect and care for it, civilizations fall. I live in Montana, but won't be able to attend any of the listening sessions being held this Wednesday. How long to I have to submit ideas/comments on line? What is the timeline for moving ideas into action?

The U.S. Department of the Interior, U.S. Department of Agriculture and National Oceanic and Atmospheric Administration should work collaboratively with states and local governments to establish new federal land management units and expand existing units, including : National Wildlife Refuges, Bureau of Land Management units, National Forests, and national Marine Sanctuaries.

The U.S. Department of Defense (DoD) should budget and allocate additional Readiness and environmental Protection (REPI) program funds for conservation of lands and encroachment mitigation adjacent to military installations and coordinate those funds with other federal land conservation programs.

Federal tax benefits for qualified conservation contributions should be extended.

Discussion Question 3

Written & Online Comments

(cont.)

The U.S. Department of the Interior, through the National Park Service and U.S. Fish and Wildlife Service, should facilitate efforts to provide the public with meaningful watershed experiences along the Captain John Smith Chesapeake National Historic Trail to expand student knowledge of the Bay ecosystem, history and American Indian cultures. This can be accomplished by supporting outdoor education programs, such as the Chesapeake Bay Foundation's student field programs, and the development of heritage and geo-tourism programs, such as the Watermen's Heritage Tourism Training Program

The Department strongly supports the passage of House Bill 2054 and Senate Bill 866, the No Child Left Inside Act. Provisions from this Act would enable New York to train teachers to deliver high quality environmental education, utilize the local environment as an extension of the classroom and develop State Environmental Literacy Plans to insure that students are prepared to understand and address the environmental challenges of the future. DEC educators stand poised and ready to implement these components in New York State.

In 1963, President John F. Kennedy made a pledge to the nation that, as this country exploited offshore oil and gas resources, the proceeds would be invested through the Land and Water Conservation Fund (LWCF) into the outdoor recreation needs of the states and local communities. It worked, and worked well to re-connect people to the outdoors in their own communities. The state side of the LWCF has been used in the past by virtually every community in New York State to acquire and build local parks and preserves. We are encouraged that legislation is pending in Congress to fully fund the state side of the LWCF; this would address an immediate and pressing need that can quickly help the AGO meet many of its goals to reconnect Americans to nature and promote community based recreation and conservation. In New York, the Office of Parks, Recreation and Historic Preservation administers this program in conjunction with funding from the State Environmental Protection Fund. the infusion of new federal funding could re-invigorate this program and stimulate extensive local conservation and recreation projects.

Other Department of Interior programs that need additional funding, as well as a temporary reduction in the state match requirement in light of states' dire fiscal situations, include the North American Wetlands Conservation Act (NAWCA) and the Coastal and Estuarine Land Conservation Program (CELCP). Both programs have been instrumental in conserving valuable wetland and coastal habitats and leveraging private investments and support from not-for-profit partners.

Discussion Question 3

Written & Online Comments

(cont.)

New York is proud of its work with and investment in the state's land trust community. The Conservation Partnership Program (www.dec.ny.gov/lands/48901.html), a partnership between the state and the Land Trust Alliance, is a model not-for-profit capacity building grant program for the country. Development of a nationwide grant program to provide capacity building assistance to local, regional and statewide land trusts and other conservation non-for-profit organizations could leverage substantial private conservation funding and build even more effective networks in communities across the nation. Pairing this concept with the ability of land trusts to access LOCF, NAWCA and CELCP land acquisition funds, similar to the Great Outdoors Colorado model, would yield even greater results and leverage of private conservation dollars.

In 2006, New York passed and implemented a state Conservation Easement Tax Credit (CETC), which offers landowners a refundable tax credit up to \$5,000 per year to offset the property tax burden on lands for which a conservation easement was donated to a qualified conservation organization. The CETC has proved to be a benefit to both the public and landowners. Similarly, the federal conservation easement tax incentive enhancements, first enacted in 2006, have increased the rate of land conservation benefiting landowners and the public. The enhancements raise the deduction a donor can take for donating a conservation easement from 30% of their adjusted gross income in any year to 50%; allows qualifying farmers and ranchers to deduct up to 100% of their income; and extends the carry-forward period for a donor to take tax deductions for voluntary conservation agreements from 5 to 15 years. While initially enacted for the period of one year and extended each year, the enhancements expired at the end of the 2009 calendar year. New York enthusiastically supports the renewal of these enhancements and making them permanent.

The Highlands Conservation Act, passed in 2004, provides funding to protect the Highlands region, which extends from Pennsylvania through Southeast New York and Northern New Jersey to Northwest Connecticut. In the four states, the Highlands region serves as a critical public drinking water supply. It contains exceptional natural resources including contiguous forests, scenic vistas, wetlands, pristine watersheds and important plant and wildlife species habitats. The region contains many sites of historic significance and provides abundant recreational opportunities for residents and visitors. This area is also one of high population density and development pressure, and is highly susceptible to forest and landscape fragmentation. New York supports full funding under the Highlands Conservation Act.

This year, Governor Paterson and Mayor Bloomberg requested a necessary and appropriate increase in federal funds for HREP through the EPA National Estuary Program that would address issues in the Raritan River in New Jersey, the New York/New Jersey Harbor Estuary and the Hudson River Estuary. The request for \$52 million for FFY 2011 (copy of letter attached) would implement the existing, consensus-based plans for the restoration of these estuaries: the Hudson-Raritan Estuary Comprehensive Restoration Plan (prepared by the Port Authority of New York and New Jersey and the Army Corp of Engineers in partnership with the New York-New Jersey HEP) and the related Hudson River Estuary Action Agenda (developed by New York State in conjunction with federal, local, and not-for-profit partners). The Hudson River Estuary Program is an excellent model that could be replicated in watersheds with additional federal funding.

Discussion Question 3

Written & Online Comments

(cont.)

New York's wastewater infrastructure is in decline and needs at least \$36.2 billion in funding over the next 20 years to address the needs of aging, failing and new facilities. [See DEC's report: "A Gathering Storm" <http://www.dec.ny.gov/chemical/42383.html>] An enhanced, consistent commitment of federal funding is absolutely essential to protect this vast and essential infrastructure whose failure will result in irreparable harm to our waters, imperil the health of our citizens and ecosystems and cause havoc to our economy. And as we work to upgrade these critical facilities, we also need to think of new approaches to protect our waters. New York has been working closely with the EPA to (1) make our state revolving fund (i.e. Clean Water SRF and/or Drinking Water SRF) more sustainable by examining how it could better support smart growth, energy efficiency, and asset management and (2) support better wet weather controls and the need to adapt to a changing climate by encouraging the wider use of so-called "green infrastructure" projects to protect natural resources.

Finally, you ask about our view on the appropriate role for the federal government. In general, the answer to this question is that we need and appreciate the federal government as a full and effective partner in this overall effort. The Environmental Protection Agency, the Department of Interior and the Department of Agriculture fill critical roles, and provide the human and financial resources that are crucial to the success of many important programs. For this, we thank you. In terms of enhancing that role, we reiterate our need for steady, consistent funding for programs, such as the Land and Water Conservation Fund or for youth conservation service efforts like AmeriCorps. Another parochial recommendation is for the federal government to take on a major role in applying the collaborative national park or national recreation area model for the Hudson River Valley similar to the Cuyahoga River National Park and National Heritage Area and the Mississippi River National Recreation Area. [NOTE: As proposed by Congressman Maurice Hinchey and Senator Kirsten Gillibrand.]

Also, our system of government subsidies needs to be overhauled so that money is not going to support activities that harm the outdoors, like to oil and gas companies (which seem to have no problem being very profitable).

The Department of Interior needs to undertake a study to determine what would constitute full funding for proper management of our public lands agencies. The administration should then use this information to request full funding every year. The Administration should then use this information to request full funding every year. The Administration should support full funding for, and the extension and renewal of, the Land & Water Conservation Fund as well as the Historic Preservation Fund.

The Administration needs to proudly broadcast its strong support for public lands, from the President and secretary of the Interior on down, and at every opportunity.

Discussion Question 3

Written & Online Comments

(cont.)

It was disconcerting to see Secretary Salazar say that land use decisions would be made at the local level in Utah when politicians and others in that state, representing a minority of Americans, voiced opposition to the possibility of new national monuments. This is not to say that local opinions should be ignored, but federal public lands belong to all Americans. Only a small minority of Americans lives in those states having the most vocal anti-public lands attitudes, and this minority should not be allowed veto power over proposals and management policies that benefit the majority of Americans.

There is a growing trend toward the development of public-private partnerships in the management of our federal (and other) public lands. While useful in the short term, because of funding constraints, in the long term these partnerships will tend to undermine the notion of public lands being the birthright of every American. Rather, the natural temptation will be to plan around and for those projects that will attract private funding. And while this temptation might be overcome, it will take a special kind of land manager to do so. In any event, the commercial interests of partners must be always subservient to public interest and benefit.

A related topic is the role that private concessionaires play in the running of public lands. Again, the public interest must take precedence over the interests of private concessionaires.

Fees need to be reasonable for families to be able to camp, but the use of concessionaires, by the Forest Service in particular, to run campgrounds causes several problems. The first is that not only must campers pay the costs of maintaining the campground, they must also cover the concessionaire's fee to the government plus cover a reasonable profit. So campers pay much higher fees than they might if the government were running the campground.

Tax revenues should pay for the majority of costs associated with the management of our lands.

Though not mentioned at the Davis meeting, the Administration should include the preservation of historic and cultural resources in its final proposals. The Historic Preservation Fund should be fully funded.

We look forward to reading the final report and sincerely hope that the administration makes its implementation a top priority.

This rush to preserve without use is advocated on many fronts. Government, often under cover of insufficient funds, is also a culprit. For instance, the Pacific Southwest Region of the US Forest Service manages 20 million acres in California or almost 20% of our state. If one looks at its Mission, Motto, Vision and Guiding Principles however, the word "recreation" does not appear. Whatever happened to the motto "land of many uses"? It is no wonder that we are losing touch with the outdoors when access is not a priority for one-fifth of the entire state.

One easy answer to the question how the federal government can help conservation, recreation or reconnecting people to the outdoors is to go back to your own agencies and make public recreational access a part of their mission.

Discussion Question 3

(cont.)

Encourage with money, tax credits, etc land trust conservation easement for private landowners. Consider partnering with state and local entities.

Pass Legislation, such as the Utah Red Rocks Wilderness Act, to preserve valuable open space on public lands

The coalition group that formed to sponsor this event represents diverse interests both on a national and local scale on issues such as wilderness protection, diversity parity and equitable access to parks for all of our communities, urban parks, river parkways and wetlands restoration just to name a few. We fully expect to continue our collaboration to insure that the policy and funding opportunities we have identified are reinforced with our Federal agency partners through on-going dialogue with agency and political representatives as appropriate.

This 300,000 acres of floodplain is crucial to local and regional nature-based tourism interests . However, the land has to be properly managed and local Federal Land Managers from both Agencies have to be properly resourced to do so. Beyond stewardship, there is a need for reliable public access for these destinations to be safely experienced. Local Federal practitioners need your support.

Throughout consideration should be given to building on past experiences with resource leveraging and capacity building via partnering and collaboration. Partnering mechanisms employed by Federal resource management agencies should be streamlined and incentivized.

Following the America's Great outdoors Great Rivers listening Session conducted on August 20, 2010 in Alton, Illinois, the following team, consisting of experienced practitioners from the following organizations, will convene on recurring basis for the purpose of providing ongoing assistance and support to the efforts of Interior Secretary Ken Salazar, Assistant Secretary of the Army for Civil Works o-Ellen Darcy, Secretary of Agriculture Tom Vilsack, Secretary of Transportation Ray LaHood, Secretary of Commerce Gary Locke, and White House Council on Environmental Quality Chair Nancy Sutley.

A great partnership between federal, state and local authorities presents a new model of collaboration. The U.S. Army Corps of Engineers, National Park Service, EPA's Harbor Estuary Program, NY/NJ Port Authority, and hundreds of local groups and agencies are dramatically expanding their efforts to restore hundreds of sites in the NY/NJ Harbor under the guidance of a Comprehensive Restoration Plan (the CRP) to restore tidal wetlands, oyster reefs, eelgrass beds, colonial bird breeding sites, maritime forests, and other ecotypes to the area, as well as increase public access. At the same time, New York City is investing tens of millions of dollars in a series of investments to improve public access, improve water quality and address flooding issues throughout the Harbor as part of the Mayor's Plan NYC 2030 sustainability efforts. The National Parks of New York Harbor is knitting together its offerings, from Federal Hall to the Statue of Liberty and Governors Island, into new visitor experiences. It offers a terrific lesson on how government can work together to address a common agenda, restoring environmental quality and creating jobs and lasting economic value in our cities.

Discussion Question 3

Written & Online Comments

(cont.)

As we listened and talked with others at the April 16th event, it became apparent that many of our report's recommendations are central to realizing the full promise of America's Great Outdoors. As the Conference discussions underscored, partnerships among levels of government and the private sector, including the land trust community, will be essential to achieve the goals of America's Great Outdoors. Another impressive aspect of the day was the prominent representation from many key agencies with responsibilities for outdoor recreation.

We recognize this call comes at a time when the country faces significant deficits and mounting debt, making the prospect of new federal or state funding problematic. We also note that the President's memorandum launching America's Great Outdoors cites the need for fiscal constraint, keeping OMB's role intact and thus making a larger task for LWCF more difficult at least near term.

New Administrations, of course, could undo what your Administration constructs. At some point it may be opportune to seek a statutory foundation for an independent American conservation Trust as the permanent successor to a new America's Great Outdoors office within the Department. As suggested in our report, an independent, quasi-public entity in the deferral establishment offers a means by which to ensure, as Administrations and Congresses come and water conservation. The board of such an entity chaired or co-chaired by Cabinet officers, would draw in federal agencies, states, the private sector, and other stakeholder, improved planning, and catalyst funding.

- Open up to cross participation with groups like the Sierra Club who FOR YEARS have had a vested interest / track record for conservation in the wilderness

- Break with going to the various Corporations 1st instead of seeking help from conservation groups.

- Clean up the Organ Pipe area so people can hike in there without fear of being shot

- o I guess this would mean making drugs legal to get the drug traffickers to stop – and NO, I don't nor have I ever done drugs

- o Like prohibition, people are going to do it, you can't stop them, so quit trying, the thugs will go away, and you can tax the drugs and make money, the Pharms will thank you

- You have some GREAT rangers in the field. These people too are passionate about their parks. Let them be a part of the decision process because in the end, THEY are the ones on the front line. Hire more of them, because IF you do this you'll need a LOT more help in the field

Discussion Question 3

Written & Online Comments

(cont.)

Government bureaucracy and red tape continues to be obstacles to effective and efficient partnership response to enhancing conservation and increasing opportunities for outdoor recreation. While adding another layer to the federal bureaucracy seems counter-intuitive, collaboration among federal agencies would probably improve with the establishment of an inter-departmental coordinating council or committee. The Secretary of Interior would likely head said council.

To be a better partner, the Federal government needs to be more responsive. Forest Service and Bureau of Land Management have been slow to react to stewardship contracting authorities. Some of this is no doubt due organizational culture and structure; leadership perceptions; lack of initiative; fiscal constraints, limited funding and inadequate knowledge of or availability of personnel. Even with the slow response to embrace this new tool, there have been some notable successes.

Invest in the successes of others and try not to duplicate efforts. Provide more federal funds to successful programs. More Kids in the Woods – Add DOI and DOD to these programs.

- These thoughts come to mind that might strengthen on-going activities that are working across the urban/rural/wild-land continuum: Reposition the Land and Water Conservation Fund to better address local and state concerns; reduce competition, and improve collaboration among partners and the federal managing agencies. A national recreational resource conservation strategic plan might also be useful to public agencies, private businesses, communities and other stakeholders.

- Reframe the role and relevancy of Statewide Comprehensive Planning, as it needs to be more inclusive, inter-agency in nature, and expanded to include local, state and federal agencies, communities, private sector entities, and other stakeholders.

- Work to make Stewardship authorities for the Forest Service and BLM permanent. The authority to trade goods for services through contracting and agreements has proven to be a successful tool in every region. The ability of a Forest or District to use these tools has resulted in getting more work done on the ground, putting local contractors to work in areas they care about, and the agreement authority allows groups and organizations to raise additional funding to leverage against scarce federal dollars.

- Expand the delivery of NWTF programs that have demonstrated they can have landscape impacts, get more people outdoors, particularly kids and help local economies.

1. The perception that the federal government will control property protected by conservation easements

1. Keep programs and goals broad and flexible to meet local and regional priorities

Discussion Question 3

Written & Online Comments

(cont.)

1. Don't let funds get swept for single species initiatives like NFWF monies

Help your Eastern program officers, attorneys, and reviewers understand Western issues and land owning and management issues

1. Require the IRS to honor the intent of the law in allowing federal tax deductions for conservation easements.

1. Make expanded tax incentives permanent

1. Production of effective education materials that describe the government's role in partnering with non-profits

Most importantly, TPL urges the Administration to immediately complete the rulemaking process for the Community Forest and Open Space Conservation Program (CFOSCP) which was authorized in the 2008 Farm Bill but has been mired in administrative delays. This program offers local communities and tribes the opportunity to purchase important forestlands for public use and enjoyment. This program will be particularly meaningful to urban areas and connecting underserved populations to forests and natural systems. The CFOSCP is well-designed to help implement the goals of the America's Great Outdoors Initiative if the rulemaking were completed, and if funding of \$10 million or more were allocated in FY12 for a first round of grants from the Community Forest and Open Space Conservation Program.

Transportation. Since 1991, DOT's trail, transportation enhancements and non-motorized programs have exemplified how federal agencies can work cooperatively with state and local governments. We support the continuation and expansion of these programs that have created and improved many urban trail and park systems for purposeful and recreational transportation.

We recommend establishing a new active transportation fund to provide focused investments in walking and bicycling systems connecting the places people live, work, play, learn, and shop. This will provide safe and convenient options for clean, healthy and affordable travel and more routine outdoor experiences.

Environment. EPA's Brownfield program has successfully cleaned up many polluted properties and returned them to industrial, commercial, retail and residential productivity. Relatively few, however, have become parks. We recommend that EPA promulgate new Brownfields language to give priority consideration for the establishment of parks in urban areas that are short on parkland or that have neighborhoods with particular park inequality.

Discussion Question 3

Written & Online Comments

(cont.)

Planning. Many federal programs require planning prior to the disbursement of federal funds. We support this concept. For urban parks that planning should take place on the urban or regional (i.e., Councils of Governments) level rather than at the state level. Such planning should include community-wide gap analyses that identify where parks-to-people connections especially related to children and underserved neighborhoods - will be most meaningful. This will ensure that limited federal dollars will be used most effectively.

We recommend that CEQ adopt language requiring urban park planning and analysis necessary to evaluate existing park systems according to consistent standards for accessibility and equity. HUD's CDBG program should also be focused further on planning that targets AGO goals.

III. Increase and provide consistent federal funding for other grant programs that support state and local conservation.

There are a host of federal matching grant programs that leverage state and local investment in outdoor recreation lands and are critical to a successful conservation outcome and require active partnerships among federal, state, and local governments. These programs complement existing federal investments such as the Great Lakes Restoration Initiative and/or meet federally-required state resource plans, such as the State Wildlife Action Plans and State Forest Resource Assessments. These programs also help address the AGO Initiative's focus on private land conservation by providing permanent conservation easement protection of private working farms, ranches and forests. TPL strongly recommends that the Administration recognize this suite of programs as essential to the successful outcome of the AGO Initiative, and provide full support to them in budget proposals and future legislative re-authorizations such as the Farm Bill.

This suite of programs includes:

USDA/US Forest Service: Forest Legacy Program, Community Forest and Open Space Conservation Program

USDA/NRCS: Farm and Ranchland Protection Program, Grasslands Reserve Program, Wetlands Reserve Program

DOI/USFWS: Cooperative Endangered Species Fund, National Coastal Wetlands Grant Program, North American Wetlands Conservation Act

NOAA: Coastal Estuarine Land Conservation Program

DOD: Readiness and Environment Initiative

IV. Focus and coordinate federal investment to support landscape conservation.

TPL believes that multi-partner initiatives to advance conservation across all ownership types within large priority landscapes are a highly effective strategy for conservation delivery. This type of landscape conservation will be particularly important to achieve higher level conservation outcomes, such as watershed protection, climate mitigation and climate adaptation, where isolated conservation actions will not be sufficient to achieve these larger goals.

Discussion Question 3

Written & Online Comments

(cont.)

Landscape conservation also creates a framework for collaboration, and reliably increases the leverage and integration of conservation actions. It supports integrated conservation planning, so that multiple actors can work from coordinated strategies, often based on GIS mapping and other tools.

Landscape conservation can also be particularly useful to break down silos in conservation approaches, linking public land managers and private landowners, and getting experts in conservation, restoration, and stewardship to deploy their skills and resources in an integrated approach.

Finally, landscape conservation can create leverage for implementation synergistic use of public funding source--federal, state, and local--and private match funding.

We recommend continued investment in identified landscapes based on ready-to-go projects that meet identified criteria and outcomes.

V. Propel climate change response through federal leadership.

In addition to existing initiatives, TPL believes that there are many new opportunities for federal agencies to advance a climate change response even without new legislative authorities.

U.S. farms and forests now sequester almost 15 percent of annual U.S. carbon emissions. This is a critical piece of climate mitigation that can be expanded with conservation of these carbon absorbing lands and enhanced management of these systems, including restoration, to increase their rate of sequestration.

TPL believes that the federal government should look to expand these partnerships with private entities to other agencies, such as the U.S. Forest Service, where carbon credits might be developed as part of a project, and utilized to help finance that transaction. This will require work through the Office of General Counsel to develop legal agreements to facilitate these partnerships, and pilot efforts by vanguard federal land management units to test these project types. TPL believes that these efforts would be worthwhile for their strong potential to help advance biological carbon sequestration and to advance other conservation objectives simultaneously.

2) Grant funding to TPL and other private partners for outreach and convening that help deliver coordinated participation in implementation across each landscape.

Private Landowner Engagement: 1) Agency staff capacity to support technical assistance and delivery of programs for private landowners;

2) Grant funding to private partners to support coordinated outreach and technical assistance;

Discussion Question 3

Written & Online Comments

(cont.)

3) Private landowner incentive funding to support private landowner participation in achieving shared conservation, restoration, and stewardship objectives within each priority landscape.

Permanent Land Conservation: 1) Agency staff capacity to coordinate conservation actions with private partners, including real estate transactions;

2) FY11 LWCF and Forest Legacy funding of \$22.05 million to conserve 53,000 acres, including additions to Umbagog NWR (NH) Forest Legacy Program funding for the Crocker Mt and Orbeton Stream (ME), Androscoggin River Headwaters (NH) and Northern Green Mountains (VT) projects;

and 3) Incentive funding for coordinated conservation actions on private lands.

Priority objectives identified in TPL's MOU with U.S. Forest Service are: 1) Carbon Mitigation Deployment of TPL's Carbon Conservation Mapping Facility to develop a regional carbon sequestration inventory and parcel-level priorities, leading to development of USFS-TPL carbon sequestration pilot projects as a model for this work at scale across the Northwoods;

and 2) Climate Adaptation Development of an adaptation plan for high priority watersheds within the Northwoods region, and implementation of those plans through integrated conservation, restoration, and stewardship projects to protect key resources. There is also a robust role for DOI in these efforts, including strategic additions to refuge lands in priority areas like the Upper Mississippi and DOI-led efforts on fish passage and other habitat improvements. These combined USDA and DOI efforts will help to sustain Laurentian forest ecosystem services ranging from carbon sequestration to forest products, maintain water quality in the Great Lakes and important tributaries, and provide future security for native coldwater fisheries and sensitive wildlife threatened by climate change.

Priority Needs from Federal Agencies: 1) Grant funding to TPL and partners to support development of parcel-level watershed conservation plans and ecosystem markets assessment;

2) FY11 and 12 LWCF and Forest Legacy Program of \$16 million to conserve 25,000 acres, including additions to the Ottawa, Hiawatha, Chequamegon-Nicolet, and Chippewa National Forests and 18,000 acres of private working forest;

3) Support for GFLA, AFF, and NWF-led work with private landowners, including outreach, technical assistance, and convening;

and 5) Dedicated pool of incentive funding for private landowners willing to undertake activities that will help achieve Northwoods watershed and/or Laurentian forest restoration objectives.

2) FY11 LWCF and Forest Legacy funding for the Montana Legacy (LWCF) and Clearwater (Forest Legacy) projects these projects in the Crown of the Continent ecosystem contain key watersheds that are region-wide priorities for watershed adaptation and habitat connectivity;

Discussion Question 3

Written & Online Comments

(cont.)

3) FY12 and FY13 LWCF and Forest Legacy Program funding to complete TPL's work on Montana Legacy and related projects, and new projects currently being developed in the Salmon-Selway;

4) USFWS and NRCS easement funding to address watershed conservation needs on non-forested lands in priority watersheds;

5) Fisheries habitat and forest restoration funding for conserved tracts, including USWFS Fish Passage funding.

2) FY11 and FY12 LWCF funding for the Silvio O. Conte NFWR project at full request this funding will enable conservation of rare grassland habitats along the Fort River, the longest un-dammed tributary of the Connecticut River in MA and source of rare aquatic habitats;

3) FY11 Forest Legacy funding for the Scantic River Headwaters (CT) project in at full request this project contains 1000 acres of headwaters that rank among the most important for future security of eastern brook trout in the State of CT;

4) Restoration funding to help restore fish habitat on conserved properties, including Fish Passage funding for barrier removal projects led by TU and other partners;

5) Incentive funding through the Partners program, NRCS programs, and other sources for coordinated conservation actions on private lands

Priority Needs from Federal Agencies: 1) Grant funding to TPL and Carpe Diem to support data acquisition and development of parcel-level watershed adaptation plans;

2) FY11 LWCF funding for relevant watershed conservation opportunities in the Wenatchee NF and Pacific Crest Trail/Snoqualmie-Baker NF;

3) FY12 LWCF and/or Forest Legacy for Watershed Adaptation Projects;

Further, TPL believes that existing landowner incentive programs should be modified, or new programs created through the next Farm Bill if more practicable, to incentive landowner actions that will protect and enhance carbon stores and sequestration. A program modeled on the Carbon Conservation Program contained in S. 2724 would be an excellent approach. This would establish a set of approved carbon activities for each land type, activities that would include permanent conservation through easements, and would pay landowners on a per-acre basis for undertaking the specified practices. The program would be run through USDA with forest elements administered by the US Forest Service.

Discussion Question 3

Written & Online Comments

(cont.)

Finally, land conservation projects that can be demonstrated as helping to achieve climate mitigation objectives should be given special assistance from the range of potentially relevant federal land conservation, restoration, and stewardship programs. Potentially relevant programs for TPL's carbon-oriented land conservation project work include the Land and Water Conservation Fund, Forest Legacy Program, Coastal and Estuarine Lands Conservation Program, among others. Accordingly, all federal land conservation programs with potential application to climate change mitigation should contain some clearly written criteria reflecting this priority. This will enable federal land managers, program staff, and private partners alike to have clear guidance as to how projects will be measured against climate mitigation objectives. Already, the U.S. Forest Service has integrated such criteria into its Strategic Land Acquisition Ranking System, providing a strong model of how this can be accomplished.

The federal government is to be commended for its natural resource adaptation response. Already the U.S. Fish and Wildlife Service is leading efforts through its new strategic plan and the Department of the Interior's Landscape Conservation Cooperatives (LCC) to create a science-driven response to adaptation that integrates land conservation, habitat restoration, and stewardship strategies. The U.S. Forest Service has produced a new "roadmap" and "scorecard" to guide its climate change response, from land managers to state and private forestry and research.

TPL is deeply engaged in these important efforts, and believes that they must be continued.

TPL is on the steering committee of most LCCs and is attempting to develop science based adaptation plans to guide TPL projects to conserve parcels that contain habitat refuge and offer connectivity benefits, both important elements of adaptation. TPL encourages that the LCCs be provided adequate resources to support adaptation research, but also to help support on the ground implementation through collaborative conservation.

TPL is also deeply engaged with the U.S. Forest Service in an "all lands" approach to climate change response, and believes that these efforts should also be given the needed resources to thrive.

Land conservation projects that can be demonstrated as helping to achieve the climate adaptation objectives of the LCCs, USDA-led "all lands" responses like the Northwoods Climate Change Response Framework, and other similar efforts should be given special assistance from the range of potentially relevant federal land conservation, restoration, and stewardship programs.

Accordingly, all federal land conservation programs with potential application to climate change adaptation should contain some clearly written criteria reflecting this priority. This will enable federal land managers, program staff, and private partners alike to have clear guidance as to how projects will be measured against adaptation objectives. Already, the U.S. Forest Service has integrated such criteria into its Strategic Land Acquisition Ranking System, providing a strong model of how this can be accomplished.

Discussion Question 3

Written & Online Comments

(cont.)

Landscape Conservation Strategy: Collaborate with DOI and USDA to develop multi-partner initiatives to employ integrated conservation, restoration and stewardship actions across large priority landscapes to achieve targeted conservation outcomes, including climate mitigation and adaptation.

Planning. Utilize TPL collaborative planning skills (“Greenprinting”) to develop plans that target conservation actions to highest value sites within each priority landscape and support integration

Partnership. Create collaborative structures that create robust roles, engagement, and partnership across federal, state, local, and private actors, including private landowners at all scales.

Funding. Utilize TPL Conservation Finance to enhance match funding through state and local measures.

Projects. Create leverage for implementation through coordinated conservation actions across public and private boundaries and synergistic use of public funding sources federal, state, and local and private match funding.

Priority Conservation Outcomes: 1) Water Security. Create future security for public drinking water supplies and coldwater fisheries through integrated watershed conservation;

2) Forest Systems. Protect forest-based ecosystem services, including carbon sequestration, timber production, and recreational use, through conservation and restoration of key forest types and climate-resilient resource areas;

3) Habitat Connectivity and Refugia. Protect key wildlife habitat functions and features, including connectivity and adequate distribution of “redundant and resilient” habitats for species most vulnerable to climate change; and

and 4) Outdoor Recreation. Enhance public access for a wide range of outdoor recreation, including hunting and fishing.

Requests for Support from DOI and USDA: Planning: 1) Agency data and scientific expertise on adaptation and carbon mitigation;

2) Grant funding to support TPL adaptation planning and mapping, including vulnerability assessment to help set adaptation priorities in targeted landscapes;

3) Grant funding to support construction and application of TPL Carbon Mapping Facility as a tool for carbon mitigation project development.

Partnership: 1) Agency staff capacity to coordinate partner actions at the landscape scale;

Discussion Question 3

Written & Online Comments

(cont.)

4) USDA agency capacity for convening and outreach;

5) Grant funding to Carpe Diem to support outreach, technical assistance, and convening around watershed adaptation objectives;

and 6) watershed restoration funding for public and private lands, including funds dedicated for newly conserved tracts.

Priority Needs from Federal Agencies: 1) Grant funding to TPL to support data acquisition and TPL Carbon Map implementation in the Northern Sierra;

2) Development of an MOU with USFS Region 5 to support development of projects subject to reserved carbon rights;

3) Collaboration with USFS staff to identify two carbon projects for FY12one under LWCF and one under Forest Legacy;

4) Access to LWCF and Forest Legacy to assure funding for these projects.

TPL, the American Forest Foundation, and the National Wildlife Federation seek to partner with USDA and DOI in integrated landscape conservation in the watershed that can deliver future security for public water supplies, economic opportunities and recreation access for local communities, forest carbon sequestration, and adaptation for fish and wildlife. This project is linking together in new and innovative ways permanent conservation strategies, such as federal acquisitions in the Chattahoochee River headwaters region, with efforts to reach unengaged private landowners and to facilitate their participation in helping to achieve landscape conservation goals. This project will focus on developing synergies between public lands and private lands initiatives, including coordinated management activities across public-private boundaries.

2) FY12 LWCF funding for acquisitions in the Chattahoochee NF and Chattahoochee NRA properties under negotiation within the national forest boundary include critical inholdings for watershed protection;

4) FY12 Forest Legacy Program funding to support relevant projects currently being developed in the watershed that feature longleaf restoration;

5) Restoration funding for improvement of public acquisitions, including fisheries habitat improvements and longleaf restoration;

6) Assistance in identifying areas where NRCS and DOI easement funding can be used to support conservation of non-forested areas in service of watershed conservation objectives;

Discussion Question 3

Written & Online Comments

(cont.)

7) Support for AFF and NWF-led private landowner outreach activities;

and 8) Dedicated pool of incentive funding for private landowners willing to undertake watershed and/or longleaf restoration objectives.

The Forest Legacy Program was established in 1990 to provide federal funding to states to assist in securing conservation easements on forestlands threatened with conversion to nonforest uses. Over the past 20 years, the Forest Legacy Program has prevented the loss of almost 2 million acres of forestland in 42 states and Puerto Rico and has leveraged an equal amount of state, local, and private funding for every federal dollar spent. In FY 2011, 39 states submitted proposals for 60 FLP projects and a robust President's budget of \$100 million will provide full funding for only a portion of these identified projects, leaving thousands of acres of important forests in many parts of the country at risk. TPL urges the Administration to increase its investment in this program in order to ensure the permanent protection of the myriad benefits provided by our nation's private forests.

FRPP is a vital tool in helping landowners and communities protect agricultural land that is being lost to development and fragmented at an alarming rate. FRPP helps ensure the food security of the nation, stabilizes rural communities, promotes regional food production, saves critical wildlife habitat, protects our water quality and assists family farmers and ranchers in passing their land on to future generations of producers. Since its inception in 1996, FRPP has been enormously successful and remarkably beneficial to the agricultural community. For example, 97% of land under FRPP is still in agricultural production and 22% of FRPP farmers market locally in comparison to the national average of 5%.

This program so critical to keeping farmers and ranchers on the land in a productive way was proposed to be capped in FY 2011 at \$160 m -- \$10 m more than last year but a \$15 m cut from the level provided in the Farm Bill. TPL urges the Administration to maintain the Farm Bill authorized funding level for this program in FY 12.

Prior to program changes enacted in the 2008 Farm Bill, the Grassland Reserve Program had protected over 677,000 acres. Under new rules, the program is projected to protect another 500,000-800,000 acres. In FY 2009, GRP funds protected almost 57,000 acres in 31 states. This important wildlife habitat and working lands program was proposed to be reduced in the FY 11 President's budget by 183,662 acres, a cut of about \$22 million. TPL urges the Administration to maintain authorized levels of enrolled acres under the GRP in the FY 12 budget.

Over the history of the program through FY 2009, over 2 million acres in all 50 states and the Commonwealth of Puerto Rico have been protected under WRP ensuring the protection of critical wetlands on actively worked farmland. However, under the President's budget for FY 2011, the WRP would be reduced by 57,018 acres, cutting expenditures by about \$111 m. TPL urges the Administration to maintain enrollment levels for WRP as authorized in the 2008 Farm Bill.

Discussion Question 3

Written & Online Comments

(cont.)

The U.S. Fish and Wildlife Service (FWS) administers the Cooperative Endangered Species Conservation Fund, commonly referred to as Section 6 funding, which provides grants to States and Territories for species and habitat conservation on non-Federal lands. Habitat Conservation Plan Land Acquisition Grants allow the FWS to reduce conflicts that arise between the conservation of listed species and land uses on specific parcels of land associated with approved Habitat Conservation Plans. The use of Federal acquisition dollars by States for habitat protection within and adjacent to HCP areas is an important and effective mechanism to promote the recovery of threatened and endangered species. In addition, Recovery Land Acquisition Grants seek to prevent the loss of critical habitat for listed species by assisting states and territories acquire these habitats from willing sellers through land acquisition in support of approved species recovery plans. To date, there have been 432 land acquisition grants awarded through the program, and 38 states and 2 territories that have used land acquisition dollars since the program began in 1997. TPL recommends that the Administration maintain its current level of support for this important program.

The FY 2011 President's budget reduced funding for NAWCA by \$5 million from the previously enacted level. TPL urges the Administration to reinvest in this important wetlands protection program.

Created by Congress in 2002, NOAA's Coastal and Estuarine Land Conservation Program protects "those coastal and estuarine areas with significant conservation, recreation, ecological, historical, or aesthetic values, or that are threatened by conversion from their natural or recreation states to other uses." To date, the program has supported over 160 conservation projects in 28 of the nation's 35 coastal states. In total, the CELCP program has helped preserve approximately 45,000 acres of America's most important coastal areas. All federal funding for CELCP is leveraged by at least an equal amount of state, local and private investment. In March 2009, the CELCP program was formally authorized as part of the Omnibus Public Lands Management Act. In recognition of the significant demand for CELCP projects, the bill authorized the program at \$60 million annually. Over the last three years, NOAA, in partnership with the States, has identified over \$270 million of vetted and ranked projects eligible for CELCP program funding. CELCP funds have also been targeted to Great Lakes states under the President's Great Lakes Restoration Initiative.

In FY11, the President's budget recommends only \$25 million for the program -- an increase of \$5 million over last years enacted level but still well shy of the urgent need for coastal conservation. TPL urges the Administration to continue to increase the funding for this program to meet the authorized level of \$60 million a year.

Discussion Question 3

Written & Online Comments

(cont.)

Established by the Coastal Wetlands Planning, Protection, and Restoration Act of 1990, the National Coastal Wetlands Conservation Grant Program is a matching grant program administered by the U.S. Fish and Wildlife Service to acquire, restore, and enhance the wetland ecosystems of coastal states and territories. Funding for the program comes from excise taxes on fishing equipment and motorboat and small engine fuels. Projects in states bordering the Atlantic, Gulf of Mexico, Pacific, and Great Lakes are eligible for funding. The one exception is the state of Louisiana, which has its own coastal wetland program administered under the Act. Projects are given priority if consistent with the criteria and considerations outlined in the National Wetlands Priority Conservation Plan; are located in states with dedicated funding programs to acquire coastal wetlands and open spaces; are located in maritime forests on barrier islands; benefit endangered species; encourage cooperative efforts among diverse partnerships; and benefit other ongoing conservation efforts. Federal funds leverage more than equal levels of non-federal matching dollars.

To date, over \$240 million in grant funding has been awarded to 25 coastal states and one U.S. territory to acquire, protect, or restore over 260,000 acres of coastal wetland ecosystems across the country. This small but critical program has been effectively used to enhance conservation efforts through the Great Lakes Restoration Initiative and should be part of similar landscape-level program investments in identified focus areas.

Appropriations for REPI have generally increased each year since the program began in FY 2005, but the appropriated funds have fallen far short of the need, as evidenced by the number of funding requests submitted each year by the services to OSD. In recent years, these requests have been greater than \$100 million annually. The FY 2010 appropriation was \$57.4 million and the Administration's budget request for FY 2011 is only \$39.8 million. TPL urges the Administration to restore budget investments in this important and effective program, which addresses both a military and an environmental need.

Investing now in the continuum of conservation from the urban core to wilderness areas will ensure a healthier and greener future for America and leave an important legacy for our children and grandchildren.

Our vision, shared with many other organizations and individuals around the country, is for the Federal government to act as the catalyst for federal, state, tribal and local agencies and private interests to work together across America to protect a network of critical ecosystems, natural resource areas and recreation lands from the inner city to wild lands.

Metropolitan and urban parks and greenways that structure urban growth, connect metropolitan area residents to natural areas, and provide access to high quality recreation. Urban greenways, parks, and trail systems can greatly enhance the opportunity for all Americans to experience the outdoors and learn about nature, in particular those living in high density areas or experiencing a park deficit close to home. The AGO Initiative's focus on places where people live is timely and important

Discussion Question 3

Written & Online Comments

(cont.)

Public and private lands including existing, expanded and new Federal and state parks, forests and refuges that are further insulated from the impacts of unplanned growth by working farm, ranch and forest lands protected with conservation easements and other economic based land conservation measures. Individual properties that ensure public access for recreation and preserve our nation's history as well as larger open space corridors that conserve whole functioning ecosystems are integral to the goals of the AGO Initiative.

Important lakes, rivers, watersheds and estuaries that provide clean and abundant water for human use, sustain aquatic species and ensure opportunities for water-related recreation

Cultural landscapes that protect and interpret America's diverse cultural heritage.

I. Enact full and dedicated funding for the Land and Water Conservation Fund (LWCF).

LWCF is the only account that provides a specific conservation offset to federal energy development. Now is the time to ensure that LWCF becomes a true dedicated trust fund to protect these receipts from being diverted to unrelated spending.

The House of Representatives has approved legislation, H.R. 3435, the Consolidated Lands, Energy and Aquatic Resources Act, and this fall the Senate may consider legislation that includes a similar full and dedicated funding provision. TPL urges the Administration to support enactment of legislation that truly dedicates LWCF funding to its intended purposes without being subjected to the vagaries of annual budgeting.

With a steady annual provision of \$900 million, both the federal side and the state grants portion of LWCF would be able to see a consistent flow of meaningful funding, allowing for better planning and targeting of land acquisition and recreation investments.

The conservation outcomes made possible through LWCF funding are also closely linked to a sound economy. The Outdoor Industry Association (OIA) reports that recreation contributes \$730 billion annually to the U.S. economy, supports nearly 6.5 million jobs across the U.S, touches over 8 percent of America's personal consumption expenditures more than 1 in every 12 dollars circulating in the economy, and generates \$88 billion in annual state and national tax revenue. The 2009 National Parks Second Century Commission estimated that every \$1 in taxpayer money spent on National Parks returned a \$4 economic benefit through tourism and private sector spending. In the West, OIA reported that more than 43 million people participate in hunting, fishing, and wildlife viewing each year, spending over \$33 billion annually. Maintaining healthy wildlife populations and providing access for recreation on public lands is a key component to maintaining these economic benefits.

Discussion Question 3

Written & Online Comments

(cont.)

In addition to investing in the protection of critical lands within and adjacent to federal units and the formula-driven grants to state park agencies, and in order to best leverage limited federal dollars, TPL recommends that the Administration use a portion of the increase in LWCF to create a nationally competitive matching grant component to better incentivize state and local investments in conservation.

Finally, TPL strongly supports the continued annual allocation of LWCF dollars to two complementary grant programs the Forest Legacy Program and the Cooperative Endangered Species Fund, both of which are critically important to the goals of the AGO Initiative.

II. Increase conservation investments in cities across America.

Better open-space planning; creation of trails, waterfronts, and anchor parks; and protection of natural lands will help transform our urban areas, where the majority of Americans live, and address park equity issues. These investments will enhance connections to the natural world, foster a healthier lifestyle for children and adults alike, create livable and prosperous communities, and support improved energy efficiency in transportation, land-use patterns, climate regulation, and water management.

Moving forward in this direction will require multi-agency coordination and focused funding.

Traditionally, urban parks have been considered purely facilities of local interest --in contrast to urban roads, for instance, or urban wastewater facilities. Today, however, it is recognized that there is a considerable federal interest in high quality city parks. For one thing, city parks are the principal place where urban residents can exercise, and exercise is key to reducing the nationwide obesity crisis and related health problems and expenses. For another, city parks allow denser urban growth and infill surrounding them, reducing edge sprawl and ever more exurban automobile use, congestion and pollution and when connected create systems of parks linked to each other and to their communities allowing greater access and mobility which encourages increased use. There is therefore a great need for federal leadership and resources to expand and better shape our rebounding urban parks movement.

A matching grants program for cities would leverage money for these critical investments and allow the federal government to play an important stimulus and partnership role in support of local efforts.

Multiple federal agencies have a role and all should be tasked with bringing their resources to cities' parks and recreation needs.

In order to best focus limited federal funds, TPL believes that planning requirements are an essential pre-requisite to grant awards, and that federal investments should target projects that will best transform cities into more economically productive and sustainable places.

Discussion Question 3

Written & Online Comments

(cont.)

There is currently no federal agency that has full responsibility for urban conservation projects. Numerous agencies have partial interest and partial jurisdiction, such as planning, acquisition or development. But completing an urban conservation program today is often so bureaucratically challenging that many communities give up or don't even try. Thus, we call for the creation of an urban department within the Council on Environmental Quality to streamline and coordinate funding by multiple federal agencies for urban park and conservation programs to help accomplish these national goals.

Housing and Urban Development. HUD's Community Development Block Grant (CDBG) program provides grants to needy neighborhoods in many cities and urban counties. CDBG funds may be used for numerous activities including acquisition of real property; relocation and demolition; and construction of public facilities and improvements. We recommend the addition of specific CDBG language to give priority to urban parks and nature conservation initiatives to mitigate the many concrete and asphalt hardscapes in today's cities.

Interior/LWCF: We recommend using a percentage of LWCF "stateside" funds on a nationally competitive grant program for urban projects. Factors for screening could include the quality of the planning process; having a nexus to a larger conservation effort; building off previous government investments; demonstrating regional cooperation and public/private engagement; improving nature access and outdoor recreation for children, the underserved and high-density populations; and protecting water. As with stateside LWCF now, any urban project would require a 50 percent non-federal funding match.

We also recommend continued focused investment in DOI's many federal units located in and around our nation's cities and metropolitan areas, such as the Santa Monica Mountains NRA in Los Angeles, Cuyahoga Valley NP in Akron-Canton, E.B. Forsythe NWR in southern New Jersey and the Chattahoochee River NRA in Atlanta.

LWCF funding is also needed to support the creation of newly-proposed urban-focused wildlife refuge units such as Hackmatack NWR in Illinois and the Middle Rio Grande Unit of the Bosque del Apache NWR.

The Department's many urban units provide millions of Americans with outstanding recreational opportunities in their own backyard and should remain a departmental focus.

USDA/US Forest Service: We recommend investment in US Forest Service programs and activities that help connect Americans in urban areas to forests. These programs include the Urban and Community Forestry program and the Kids in the Woods program.

Discussion Question 3

Written & Online Comments

(cont.)

Even the best SCA/Corps career training and federal intern programs have no extended value unless used strategically by agencies as pathways to jobs. SCA and Corps programs provide a broad-range of top-notch conservation-related training, and provide an excellent way to identify and select motivated and qualified workers for entry-level agency jobs. However, currently none of the SCA/Corps participants have a direct pathway to entry-level jobs within the agencies. We recommend that the federal government make SCA/Corps career training a mission-critical hiring priority and workforce development tool for entry-level hires. This commitment, for example, may include, among other things, increasing summer agency hires under such programs, adapting hiring plans to include noncompetitive intern job conversions (see below), and holding managers accountable for intern hiring goals from such programs.

We recommend adding a noncompetitive job conversion option for participants completing 640 hours of SCA and Corps training programs. As exists for certain current federal intern programs, we also recommend that the Office of Personnel Management be given authority to waive up to 320 of those hours for exceptional performance by any SCA or Corps participant. Finally, given the current length and cumbersome nature of the federal hiring process (which process we hope will be streamlined), we recommend the conversion period extend to 2 years after participants complete SCA and Corps program.

Creating a dedicated and expanded funding stream within each public land management agency for existing and new SCA/Corps models and programs that connect youth to the outdoors or address youth challenges with conservation service. Dedicated and expanded funding also would help stabilize funding for these programs.

Providing funding for wrap-around services (e.g. transportation, gear, travel scholarships), as well as for training, further career development, and environmental education. Funding currently is not allowed for these services with the fee-for-service project-based funding typically provided by the agencies to get youth conservation projects completed.

Creating a \$250 million Conservation Youth Innovation Fund to pilot innovative, scalable public private nonprofit models and intermediary approaches for pathways to professional, technical, and vocational careers in public land agencies for youth with priority funding for programs targeting disadvantaged and diverse youth. This fund should be administered at the department level in the Department of the Interior and the relevant bureau levels at the Department of Agriculture.

Funding and implementing the 21st Century Conservation Corps as recommended by the Public Lands Service Coalition, of which SCA is a founding steering committee member.

We recommend that the federal government help facilitate linkages between the stakeholders to provide expanded opportunities for young people to connect to the outdoors at every level of engagement. Working through nonprofit partners, this facilitation could include: (i) an outreach and education campaign for youth regarding engagement options; (ii) conferences or workshops for stakeholders to discuss ways to connect various levels of engagement; and (iii) funding for nonprofit initiatives that link engagement levels in collaborative, innovative models.

(cont.)

The AMA is aware of at least a dozen more possible "listening sessions ~ in the coming months. However, specific information has not been made available to the general public. Therefore, we request a list of all "listening sessions so our members may participate in these public meetings.

I was delighted to read about the roll-out of the America's Great Outdoors (GO America) initiative a few weeks ago. It brings you and the Secretary one step closer to fulfilling a dream. I am hopeful that having the Department of the Interior take the lead on it and involving the Department of Agriculture, the Environmental Protection Agency and the Council on Environmental Quality will broaden the base of support at the federal level and in the region, too.

There may be a lull in development in the natural areas of this country right now, but it will not last. As soon as the economy improves, the cost of open space will go up. We need to secure public outdoor spaces now and make them integral parts of our communities.

Thank you for meeting with us to talk about the Hudson Valley as a model of collaborative conservation that may be a good fit for President Obama's America's Great Outdoors initiative. Scenic Hudson is very excited about the initiative and grateful that the administration and the Department of the Interior are moving forward with this. We appreciate how much you and your staff at the Department of the Interior and the other agencies still have to do to plan, the listening tours and then design and implement new strategies that result.

As follow up to our meeting, we would like to offer to convene a group of key public and private Hudson Valley stakeholders for a conference call with you to discuss how we can assist you to structure a listening tour event here. One possibility might be to combine a visit to the Hudson Valley with one in New York City, which could highlight both urban and rural conservation opportunities and how they can be linked.

I don't see why we can't dedicate an area for motorized use just like they do for Wilderness Areas? Call it a Recreation Area and it can never be changed to anything else just like a Wilderness Area." Believe it or not, Senator Feinstein of California has legislation in the works, S2921, which would establish Congressionally mandated OHV areas. Her staff and The California Wilderness Coalition worked with a number of willing off roaders to establish these areas and others in the Southern California desert areas. I was one of those off roaders who had the chance to successfully negotiate motorized access in a couple of those desert areas. It was a little mind bending to say the least to be working with those which I had historically felt were just out to close everything they could. But to be very honest, I discovered a genuine interest on the part of the Senator's staff and the wilderness group to work with us in keeping areas open. The practice should be a national model when ANY areas are being considered for closure of any type.

The national parks have been a wonderful instrument of environmental education. Exhibits, campfire talks and nature walks have introduced many adults and children to the ecosystem concept. Growing environmental literacy in our country has contributed to better environmental legislation at the state and federal levels.

Discussion Question 3

Written & Online Comments

(cont.)

Designation of a national scenic byway or All-American Road is by the Secretary of Transportation and does require the involved municipalities and agencies to collaborate on a corridor management plan to recognize and protect intrinsic values (scenic, historic, recreational, cultural), but the plan does NOT utilize any new federal controls or requirements. Nor does it prevent safety enhancements of the roadway. The goal is for communities and agencies to shape growth and change, not try to block it. And we are now approaching the 20th anniversary of the first round of designations (of which there are now 150+ for some 35,000 miles of road). The results are encouraging. Economic value of the designations is proven by increases in visits and use of the featured assets of the corridors, and local pride and awareness of the corridor value is widespread and greatly increased.

Clean up the polluted mess, and restore the nature. Keep it that way. Simple! Agencies do need to work together, involving green building, transportation, waste, erosion and impact of population.

Please open more public land, BLM and National Forest to OHV activity. More land is needed, not less. Please!!!!

Establishing an Ancient Forest National Park is simply a matter of re-designating the land. The vast majority of the proposed park is already established wilderness. What would be needed? Some infrastructure in the front country? Environmentalists need to have a higher consciousness of the rural poverty that is endemic in many of these areas. A national park designation immediately raises the stature of the land, it brings significantly more tourists, and allows for some benign economic development in these rural enclaves. The National Park System needs to be significantly expanded. The excuse that other units in the system are underfunded therefore we should not add more is fallacious. Many of these potential national parks are under constant development pressures, national monument status still allows many of them to be exploited by timber, oil and gas, grazing, mining and agricultural interests. If you want more money for conservation, parks, and environmental initiatives then it will be imperative to re-task money already in the budget, 52% of which goes to "national security" in the form of the budgets for DoD, DHS, and various intelligence agencies. That's an abomination, we spend more on "national defense" than the next 30 countries combined! As for the notion that ranchers are responsible stewards of the land, that is a dubious statement at best. Most ranchers are a subsidiary of Big Agra, they exploit federal lands, exhaust the resources, socialize all external costs, then internalize the profits. I dare anyone survey a grassland after it's been invaded by tens of thousands of cattle. The evidence just doesn't support the notion that ranchers are responsible stewards of the public commons, they may be better at caring for their own parcels of land where they cannot pass off the external costs to taxpayers, but I've seen what's happened to grasslands in Oregon after grazing interests ripped the hell out of the place, and it wasn't responsible stewardship. Ranchers masquerade as free marketeers, but in reality they're just free loaders.

Discussion Question 3

(cont.)

We must ALL come together on the climate change, government, non-profits, and the people at large. Can't anyone realize that as we kill the climate we are forcing our great-great grand children to find an off earth home? Will the technology be there to find one or do we doom them to a horrible death here? As a world, we are one but to argue and push each other away for fear and loathing we ALL loose!

Note: We are protecting humanity by the protection of wildlife and habitat/ecosystems. This action needs to involve all functional and restorable systems, including ALL federal lands.

Why am I even wasting my time with this? Why should the NPS have even more land to mismanage? Right now, the Crown Managers are planning on a conference about how they are going to "protect" Glacier by encouraging buffers around the park. As in, let it burn, don't allow access, let the wolves eat everything, close all the roads, kill all the non-native fish, blah blah. This Treasured Landscapes initiative is a scam.

Reward people who come up with good ideas and think outside the box.

Support alternative energy. There are many intelligent people in the U.S. and they have great ideas. Support them.

In partnership with the USFWS Southwest Region 2 Director Dr. Benjamin Tuggle, Houston Wilderness has already scheduled a day-long session at Rice University on August 10, 2010. The purpose of the session is two-fold: to roll out the Gulf Coast Prairie Landscape Conservation Cooperative to stakeholders within the 24 county southeast Texas region, and to present the Houston Wilderness region's newly developed joint strategy for increasing conservation within current budgets to representatives from federal agencies including EPA, FEMA, the Department of Agriculture and Interior, and others. This event could easily be adapted to become an official America's Great Outdoors listening session. We are still in the planning stage so if August 10th is unworkable, we will do everything possible to accommodate your schedule.

The Obama administration should create new national programs that help connect people - especially our youth - with nature. Outdoor play and a connection to the natural world benefit children in many ways. The federal government should develop new administrative incentives and funding to expand state and local opportunities for students to reconnect and learn about nature.

Increase funding for recreation, improved access and trail system revitalization through the Public Lands Service Corps Act of 2010: The bill (H.R. 1612) "increases service opportunities for youth and young adults on public lands (ages 18-24), providing green jobs, improving infrastructure, restoring public lands, encouraging cultural and historical research, improving the health of coastal, marine and estuarine ecosystems, addressing climate change and assisting with scientific data collection."

Discussion Question 3

Written & Online Comments

(cont.)

Fully Fund the Land and Water Conservation Fund: The administration should support full funding of the Land and Water Conservation Fund and other programs that foster conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas, protect lands around lakes, rivers and streams. The fund can also be used to establish new local parks and trails, or provide key wildlife linkage areas.

In California, we are working with Congressional leaders to protect wilderness and wild and scenic rivers in the San Gabriel Mountains, the California Desert, in northern San Diego County, and many other regions. Your support of these proposals can preserve our wildest lands for future generations.

Please support conservation of large landscapes like Berryessa-Snow Mountain that include pristine wildlands, working forest and ranch lands, private parcels, and connections across large areas. The protection of Berryessa - Snow Mountain as a National Conservation Area is a key step. This provides us with the best hope for addressing loss of species and open space, preserving water quality, and climate change adaptation while preserving the wildlife and lands we enjoy today.

Support nature education programs, a revived civilian conservation corps, and programs that inspire people to go outdoors. In Southern California, a proposal to create a National Recreation Area for the San Gabriel Mountains and River will benefit many urban communities that lack easy access to the outdoors. No matter where they live, all children deserve the opportunity to learn about and experience the wildlands that belong to all Americans.

The administration should support fully funding the Land and Water Conservation Fund and other programs that foster conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas and protect lands around lakes, rivers, and streams. The fund can also be used to establish new local parks and trails, or provide key wildlife linkage areas.

Please protect key landscapes on a large scale -- for the land, for the people.

The Obama administration should conserve large landscapes, including our healthy wildlands, connecting them with working forest and ranch lands, private lands and the connections across these large areas.

Protect large natural areas such as: San Miguel River corridor: This river corridor not only provides stunning natural scenery, but acts as an important ecosystem that creates a protected open space and wildlife habitat; Western Colorado's Gateway area: This diverse and beautiful area includes the Palisade's towering sandstone spires which create an ecological bridge between rock tributaries and verdant aspen forests; Wildlands of the Arkansas River Watershed: These ecologically rich, lower elevation lands provide essential habitat, protect major water supplies, and provide quiet recreation opportunities for two million people living nearby.

Discussion Question 3

(cont.)

Just recently, there was a huge success for wildlands protection in the magnificent Vermillion Basin, which the Bureau of Land Management (BLM) announced it will close to future oil and gas leasing. We need more bold actions like this to protect large, unfragmented and treasured landscapes.

This effort should include reaffirming and implementing the BLM's authority to establish new Wilderness Study Areas and to protect the wilderness characteristics of those areas.

Support and implement more science-based management of our resources in Colorado. This science-based management needs to provide a better understanding of the impacts of conflicting land uses on other resources across the landscape.

We are working with congressional leaders to protect the Organ Mountains wilderness, a spectacular backdrop to the city of Las Cruces. Your support of these proposals can preserve our wildest lands for future generations.

The designation of the Manzano Wilderness Study Area as part of the existing Manzano Wilderness will preserve a critical wildlife corridor through the Sandia and Manzano Mountains.

Create a National Conservation Area in the Ute Mountain area: This will protect the amazing high desert along New Mexico's river, the wild and scenic Rio Grande. This designation will protect important wildlife corridors.

Otero Mesa should be permanently protected as a national monument. The million-acre grassland is home to more than a thousand native species and sits above a vast, untapped freshwater aquifer. A half-million acres of Otero Mesa qualify for wilderness designation; and a national monument would preserve these fragile wildlands while promoting traditional uses such as hunting and hiking.

Utah needs your help to preserve its precious wild lands that give us clean air, drinking water, open space, beautiful recreation areas and wildlife habitat. From Cedar Mesa to Red Cliffs, Utah offers an extraordinary home to wildlife and outstanding recreation opportunities. However, development, increased recreation and climate change has put some of our most precious outdoors destinations at risk.

Large natural areas, such as Cedar Mesa, the San Rafael Swell, Wasatch Mountains, Beaver Dam Wash and Red Cliffs -- provide our best hope for addressing loss of species and open space, preserving water quality and adapting to climate change while preserving the wildlife, recreation and lands we enjoy today. Protecting these lands will give us the opportunity to actively reconnect our children to their incredible natural heritage.

The Wasatch Wilderness and Watershed Protection Act would provide valuable protections to the watershed that provides municipal water to more than a half-million residents of Salt Lake City while maintaining access for backcountry skiing. The proposal is supported by local governments, recreation interests, and local conservation organizations.

Discussion Question 3

Written & Online Comments

(cont.)

Permanent protection of The Grand Gulch and Cedar Mesa Plateau as Wilderness will protect an unsurpassed primitive outdoor museum of rich cultural resources and spectacular geology containing deep twisting canyons, alcoves and natural bridges - along with one of the most significant archeological landscape in the west. San Juan County Commissioners and Senator Bob Bennett, along with conservation organizations, are working to reach consensus on the protection of this landscape within San Juan County.

This effort should include giving the BLM the authority to protect wilderness quality lands until permanent protection of these iconic Utah landscapes is made possible by the diversity of voices speaking out in favor with the collaboration of government, local citizens and user groups.

The San Gabriel Mountains soar above our homes, from Santa Clarita to San Bernardino, providing much of our public open space. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers. I urge you to recommend the creation of a robust San Gabriel Mountains National Recreation Area that would improve the visitor experience in the mountains and better connect families to the recreational opportunities inside the forest.

A National Recreation Area Should Include: Recognition of the importance of wilderness and Wild & Scenic Rivers. It should address opportunities to expand these resources and support their recreational use with additional rangers.

A National Recreation Area Should Include: All of the area historically considered to be part of the San Gabriel Mountains including all of the national forest land between the I-14 on the west and the I-15 on the east.

A National Recreation Area Should Include: All of the watershed study area in the San Gabriel Valley outside of the national forests including cities such as Azusa and El Monte.

A National Recreation Area Should Include: A major effort to connect surrounding communities to the forest. This effort would include a robust system of trails, parks and public transportation.

A National Recreation Area Should Include: The management structure in Alternative C in which the National Park Service takes the lead in creating a partnership between the Park Service and the Forest Service (which would continue to manage the San Gabriel Mountains).

A National Recreation Area Should Include: Enhanced educational and interpretive programs so that kids--and everyone--can learn more about native habitat, plants and animals.

A National Recreation Area Should Include: Additional resources to help with Station Fire recovery and a public education component associated with the NRA to track recovery and educate the public about wildfire.

Discussion Question 3

Written & Online Comments

(cont.)

The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation.

Multiple Use lands are where the majority of people recreate, as well as where much of our timber and beef products come from, but these lands have been closed at an alarming rate. The President must protect these precious lands by designating them permanently as Multiple Use.

The President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors. That would be Off Highway Vehicle recreation and Mountain Biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors.

Renewable resource harvesting in America, also known as logging, is done under the strictest environmental regulations in the world. The Initiative should encourage logging, otherwise we are supporting poor logging practices in other countries where they may have little or no environmental regulations, not to mention wasted fuel and energy shipping wood from far away places.

Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans.

The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less.

The Initiative seeks to address Climate Change and should use the best science, such as the Sierra Nevada Conservancy/USDA Climate Change Report, which determined the primary need for fuel reduction to promote forest watershed health and reduce greenhouse gas emissions.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

Address Conservation at a Large Scale

Protect our wilderness

Discussion Question 3

(cont.)

Improve Watersheds and Wildlife Habitat

Connect people with Nature

Provide Increased Access and Recreational Opportunities

Fully Fund the Land and Water Conservation Fund

Within the Prairie Pothole Region lies the Missouri Coteau, America's last great landscape of richly diverse wetlands and native grasslands. This ecologically and culturally unique landscape provides breeding habitat for millions of waterfowl and other migratory birds, and it is also home to a strong outdoors-focused culture and a proud ranching tradition.

We also support a strong North American Wetlands Conservation Act program and full funding of the Land and Water Conservation Fund.

Ducks Unlimited, in partnership with the federal and state agencies, numerous NGOs and private landowners, including the U.S. Fish and Wildlife Service, have worked to curb habitat losses in the Prairie Pothole Region to ensure the future of migratory birds and related natural resource conservation opportunities. Despite these efforts, the native grasslands and wetlands of this cultural and ecological treasure continue to disappear faster than they can be conserved. For these reasons, I urge the administration to recognize the Prairie Pothole Region as a Treasured Landscape.

By employing a landscape-scale approach to protect, reconnect and restore habitats and sustaining our conservation legacy through youth engagement, we can develop a strategy that achieves the goals of the AGO Initiative. Building on the projects and programs mentioned above will help implement the activities to make the initiative a success.

Thank you for launching the America's Great Outdoors Initiative. We need real innovation and dedicated resources to conserve and protect our land, water, and wildlife. Your active leadership is crucial to develop this conservation strategy for the 21st century.

Our parks, refuges, national forests, and public lands represent the best of America. They are home to our most treasured and historic places. Protecting our public lands from poorly planned development, mineral extraction, pollution, and the impacts of climate change should be a key priority for the Obama Administration.

There has never been a more important time for a comprehensive approach to conserving our treasured landscapes.

Discussion Question 3

Written & Online Comments

(cont.)

There is a tremendous need to do landscape-scale conservation to address critical issues facing ecosystem services, wildlife conservation, outdoor recreation and clean water. In addition, now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change.

To assist fish, wildlife, natural resources and human communities in adapting to climate change, this initiative must include the conservation of large, connected landscapes to help build resilience to the impacts of climate change and other threats. It must also include the protection of large watersheds and their wetlands to mitigate the impacts of flood and drought that result from changing weather patterns.

I am thrilled that you have launched this important process and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

Earlier this month, Tennessee's U.S. Senators Corker and Alexander introduced the Tennessee Wilderness Act of 2010, which could protect nearly 20,000 acres of wilderness in the Cherokee National Forest. It would specifically designate six areas of wilderness, adding acreage to the beloved Big and Little Frog, Sampson Mountain, Big Laurel Branch and Joyce Kilmer-Slickrock wilderness areas, while creating more than 9,000 acres of Upper Bald River Wilderness. The Tennessee Wilderness Act represents the opportunities that exist within America's Great Outdoors to change conservation for the 21st century. This historic bipartisan push to expand Tennessee's wilderness is long overdue. However, the true victory will be seeing Congressional approval of the bill, providing everlasting protection for eastern Tennessee's land and wildlife.

Protect our Wilderness and the Cherokee National Forest in Tennessee. We are working with Government leaders to protect wilderness and wild and scenic rivers in the Cherokee National Forest. Your support of these proposals can preserve our wildest lands for future generations.

Please support conservation of large landscapes that include pristine wildlands, working forest and ranch lands, private parcels and connections across large areas. This provides us with the best hope for addressing loss of species and open space, preserving water quality and climate change adaptation while preserving the wildlife and lands we enjoy today.

Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. The Obama administration should prioritize collaborative restoration projects on public lands, making restoration a national priority.

Support nature education programs, a revived civilian conservation corps, and programs that inspire people to go outdoors. No matter where they live, all children deserve the opportunity to learn about and experience the wildlands that belong to all Americans.

Heed the advice of the National Parks Second Century Commission, a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans two them in the next century.

Discussion Question 3

Written & Online Comments

(cont.)

Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum-based materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands-on learning experiences.

Build on programs that work. The National Park Service has tremendous technical expertise and know-how that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country.

We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up.

Provide wildlife corridors to ensure that the wildlife in our parks can find the food it needs and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map.

Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

We are pleased to hear that the Obama administration will be hosting an America's Great Outdoors event in the Los Angeles region on July 8, 2010. We are particularly interested in the administration's goals to encourage individuals from underserved, diverse communities to enter into career paths that these public land agencies, and also to bring recreational and educational opportunities to these communities.

Discussion Question 3

Written & Online Comments

(cont.)

The Los Angeles region, specifically the Santa Monica Mountains National Recreation Area (SMMNRA), is an exceptional area for showcasing best practices and innovative partnerships towards reaching these goals. We urge you to consider holding a listening session and field trip to the SMMNRA.

The National Park Service is currently conducting a special resources study of the Rim of the Valley Corridor that may lead to enhanced recreation and educational opportunities for communities challenged with the lack of open space. The administration can glean best practices from the SMMNRA's programs that will shape how our land management agencies better connect to urban communities.

We are confident that you will find many projects and partnerships that exemplify the America's Great Outdoors agenda in the Hudson Valley and we hope that you will be able to include our region in your upcoming tour of the country.

I am delighted to hear of the America's Great Outdoors/Treasured Landscapes Initiative. I understand that you are planning to hold a number of listening sessions around the country after your formal launch in Washington, D. C. on April 16th. I appreciate your leadership on putting American's national forests in the forefront. This will be a great opportunity for the Department of Interior, the Council on Environmental Quality, and the other engaged agencies to hear from the public about the on-the-ground needs and opportunities to protect and manage our natural resources across a broader landscape for all Americans.

We are writing to encourage you to schedule an America's Great Outdoors listening session in our home state of New Jersey, also known as the Garden State. We believe that the America's Great Outdoors Initiative will provide an opportunity for the Environmental Protection Agency, the Council on Environmental Quality, the Department of Interior and the other agencies to hear from the diverse audiences who often live in densely populated cities and face significant obstacles when searching for healthy recreation opportunities.

In our country, only one in five homes have a park within a half-mile and this number is even higher for New Jersey's cities, which are some of the country's most densely populated. All Americans are adversely affected by limited green spaces, deteriorating community facilities, health problems, and juvenile delinquency. Research shows that healthy and vibrant urban areas play key roles in improving the economy, health, and quality of life in our communities. Urban parks are instrumental in helping our nation achieve important national goals of increasing exercise, providing safe, healthy alternatives for at-risk youth, and spurring local economic development. Providing cities with outdoor resources is a necessity and will reconnect people to the great outdoors.

Twenty million people live around the New York/New Jersey Harbor Estuary, an area that is also home to a broad variety of plant and animal species. There is a great need for protection of underdeveloped land in densely populated communities where open space is scarce and public access to the estuary and its tributaries is often limited due to past industrial use.

Discussion Question 3

Written & Online Comments

(cont.)

Currently, there are America's Great Outdoors listening sessions that have taken place in Los Angeles and other areas. Currently, there are America's Great Outdoors listening sessions that have taken place in Los Angeles and other areas in the South and West. We believe that the challenges that New Jersey faces in regards to the need for urban parks and access to quality recreation opportunities in densely populated cities and suburbs is unique and should be part of our national public lands agenda and the discussion should take place in New Jersey.

We appreciate your efforts in this regard and agree that new conservation initiatives should be based on the input from local citizens and landowners who will be most directly affected by them. In that spirit, we are writing to ask you to consider holding a listening session in Pierre, South Dakota, this summer to allow the citizens of our state to express their views on potential future AGO initiatives to conserve South Dakota's natural resources.

Well-regarded national conservation organizations, led by Ducks Unlimited, and including Pheasants Forever and the Boone and Crockett Club, as well as the U. S. Fish & Wildlife Service, have expressed support for additional efforts to conserve the Prairie Pothole Region.

In closing, we hope that you will hold a listening session in Pierre, South Dakota this summer to hear from South Dakotans about their conservation objectives in the context of your America's Great Outdoors initiative.

1. We need the Land and Water Conservation Fund to be fully funded and Maine needs a fair share in the allocation of the federal portion, not just the state portion, of those funds.
2. Change the Forest Legacy rules so that states with a high amount of unprotected forests can get a higher amount of annual Legacy funding.
3. Adopt a landscape connectivity based conservation plan for Northern New England and provide funding to accomplish it.

If we want the New England's wildlife and native plants to survive in a changing climate, we must help them to adapt by protecting critical habitat cores and creating corridors that will allow for migration as temperatures rise. Main's Western Mountains are an essential physical link in that process. wedged between the densely populated southern Province of Quebec just across the border with Canada to the north and the population centers of southern Maine, this region serves as a critical connector linking large blocks of existing conservation and providing opportunities to maintain habitat continuity on a landscape scale.

Discussion Question 3

Written & Online Comments

(cont.)

Key to the Initiative's success is Section 2 of the Presidential memorandum that you signed, requiring "listening and learning sessions around the country where land and waters are being conserved and community parks are being established in innovative ways." As you and your "Green Team" of Chair Sutley, Administrator Jackson, and Secretaries Salazar and Vilsack begin identifying locations to hold these sessions, please give strong consideration to Washington State. My state is one where conservation is a way of life and where "tribal leaders, farmers and ranchers, sportsmen, community park groups, foresters, youth groups, businesspeoples, educators, state and local governments, and recreation and conservation groups" can provide your administration with the creative conservation strategies you are looking for to share with the rest of the nation.

As you continue your work on the America's Great outdoors program, we hope you will consider visiting the Adirondacks to conduct a listening session and learn about local innovative strategies to conserve our lands and water. The Adirondack Region of northern New York State, which is home to the Adirondack Mountains, covers over six million acres and contains the largest wilderness area east of the Mississippi River, the Adirondack Park. The area contains over 3,000 lakes and ponds, 2,000 miles of hiking trails and is a truly unique state park.

Support Implementation of the National Fish Habitat Action Plan The National Fish Habitat Action Plan is a partnership-based initiative that uses best science practices to protect, rehabilitate and improve fish habitat. The Action Plan is implemented through 17 Fish Habitat Partnerships under National Fish Habitat Board guidance. These partnerships span all 50 states and bring a broad coalition of partners together, including federal and state agencies, tribes, NGO's, private industry and recreational angling groups.

Support Dedicated Funding for Fish and Wildlife Conservation Extraction of oil and gas from federal lands and waters makes use of a natural resource that will not be available to future generations. In addition, all energy development on public lands, traditional and renewable, has impacts to fish, wildlife and their habitats. A portion of fees and royalties from these energy development activities should be invested strategically in state, federal and private lands conservation through investments in State Wildlife Action Plans. A portion of fees and royalties also should be invested in state and federal programs that can help avoid, minimize or mitigate the impacts of oil and gas development. The Land and Water Conservation Fund should be fully funded with 50% of the funds directed to states and 50% to federal land management agencies. Parity will help ensure investments are made in land conservation and recreation programs at the state, county and municipal levels where accessibility is the highest for the greatest number of citizens.

Discussion Question 3

Written & Online Comments

(cont.)

Support Landscape Level Conservation Landscape-level impacts to habitats from energy development, transportation, climate change, agriculture and urban growth require increasingly coordinated efforts between state and federal natural resource agencies. In addition to State Wildlife Action Plans, state fish and wildlife agencies are engaged in developing and implementing landscape-level conservation strategies such as the North American Waterfowl Management Plan; National Fish Habitat Action Plan; regional sagebrush strategies; and range-wide management plans for big game, coldwater fish, resident and migratory birds and other species. Habitat connectivity should be achieved between federal, state, local governmental lands and key private conservation holdings (including easements). Federal land protection funds should be prioritized for securing greater access to land-locked federal lands for the purpose of reconnecting youth and adults to nature through fishing, hunting and wildlife-dependent recreation.

Support Climate Change Adaptation Climate change is and will continue to have devastating impacts on many fish and wildlife species and their habitats. Federal policy and associated climate-derived funding (e.g. from sale of carbon allowances, a carbon tax, etc.) are urgently needed. Legislation introduced by Senators Bingaman, Baucus, Whitehouse and Udall (S1933) provides the right approach to addressing climate change by accurately reflecting the roles of federal and state government. The nation needs to move to renewable sources of energy, but also recognize the importance of proper siting and mitigation of impacts to fish and wildlife. There should be a mechanism to assess these impacts and a source of funding from royalties or excise taxes on renewable sources that are put in a dedicated trust fund and invested in strategic fish and wildlife conservation.

Support Conservation of Fish and Wildlife on Private Lands Most fish and wildlife are found on private lands. We can not be successful in conserving fish and wildlife without strong support by and partnerships with the farmers, ranchers, homeowners, corporations, etc. who own and manage private land. We need increased investment in working lands and better incentives for stewardship that keep lands in private ownership but maintain and enhance their value to fish and wildlife. continued Administration support for robustly funded conservation programs under the Farm Bill is clearly needed.

Support the North American Conservation Education Strategy The nation needs environmentally literate citizens with the knowledge and skills to support natural resource conservation; participate in outdoor recreation activities; pursue green economy jobs; and make decisions that will positively impact the future of our resources and America's Great Outdoors. Federal agencies involved in conservation education (natural resource agencies and education) should actively engage with state fish and wildlife agencies and conservation partners to support environmental literacy standards that connect students more closely with the natural world; recognize the value of outdoor skills in the education process; and help ensure every child has access to a natural area (no matter how small) within walking distance of his/her school which can be used as an outdoor classroom.

Discussion Question 3

Written & Online Comments

(cont.)

Designed by experts from state fish and wildlife agencies and the U.S. Fish and Wildlife Service, the North American Conservation Education Strategy identifies what every citizen should know, feel and do related to fish and wildlife conservation. These core concepts have been translated to meet K-12 academic standards (science, social science, health and fitness) while shaping students' environmental literacy, stewardship and outdoor skills. By encouraging support for the North American Conservation Education Strategy on a broad level, federal and state agencies can help Americans of all ages understand and appreciate fish and wildlife management including the sustainable enjoyment and use of those resources.

1. Develop a National Wildlife Corridor Inventory. We need to inventory and assess the conservation status of wildlife movement areas across the nation. Precise knowledge of this major ecological phenomenon is lacking. A national migration database is recommended.
2. Develop incentives to conserve wildlife corridors on private lands either through new funding initiatives or adding wildlife corridors as preferential selection criteria for the expenditure of Land and Water Conservation Funds, Farm Bill provisions, and Transportation Bill support.
3. Incorporate wildlife corridor considerations within all federal natural resource planning efforts such as the National Forest Management Act and the Federal Land Policy and Management Act.
4. Develop a national designation process for categorizing and delineating ecologically and culturally important wildlife corridors. In most places, wildlife corridors do not have any formal designations. A national designation will help bring attention and awareness to outstanding wildlife movement areas and provide planning guidance for proposed development. The Western Governors Association has developed a Wildlife Corridor initiative that includes designating corridors and zones of ecological connectivity within State Wildlife Action Plans.
5. Improve federal transportation policies that support wildlife crossing efforts and incorporate wildlife crossing considerations in the review of federally supported highway projects, especially in high wildlife-vehicle collision areas.
6. Provide federal funding to state and local efforts such as State Wildlife Actions Plans that seek to conserve wildlife movement within and between states.
7. Provide federal funding for Tribal lands and waters to support efforts to conserve connectivity on reservations and adjoining treaty areas.
8. Establish a national conservation registry of the most iconic wildlife corridors in the nation. There are many iconic wildlife corridors that deserve special conservation status such as the Path of Pronghorn in Wyoming or the Bowhead Whale migration around Point Barrow.
9. Fund pilot climate adaptation pilot projects that test the ability of wildlife corridors to assist species in responding to climate change.

Discussion Question 3

Written & Online Comments

(cont.)

You're asking how the government can help. I believe what could be of real benefit to our region would be federal funds designated specifically for particular projects such as building and maintaining multiple use trails to augment the growing ATV tourism in addition to the important snowmobile industry. Helping the ongoing, local efforts to increase tourism activity could be a genuine help for northern Maine.

TWS supports a thoughtful approach to alternative energy development that considers the effects of solar, wind, and biofuel on wildlife and wildlife habitat at every step of the way. Choosing alternative energy sources is an important way for people to make a difference for wildlife, and choosing to develop those energy sources in an environmentally conscious way should be a top priority for the federal government as it crafts national energy policy and plans for its own facilities and agencies.

Invasive species are a profound threat to ecosystems across North America. TWS encourages effective laws and regulations at the state and federal levels that control the spread of invasive species by discouraging further introduction of invasive species for any purpose; prevention of the accidental escape of exotic animals already in captivity into the wild; and programs to monitor and control invasive species capable of modifying native wildlife habitat and affecting support tourism, recreation, and love of the outdoors.

The federal conflict of interest statute (18 U.S.C. § 208) should be amended to exclude professional and scientific societies, so that service in leadership positions within these organizations is encouraged. Full participation by a variety of individuals, including federal employees, in professional and scientific societies is essential for the conduct of science and the integration of research into management decisions.

Federal agency scientists and managers that use science should not be speaking only among themselves. This increases the probability that the agencies will become isolated and develop an insular culture that does not interact with or is not aware of information or ideas being generated by academia, NGOs and industry. The federal government's agencies and their ability to do their important job of protecting our natural resources will be strengthened as their employees benefit from membership in professional societies.

The Endangered Species Act should be strengthened to increase the effectiveness of threatened and endangered species conservation, through improvements to the law and its funding, administrative implementation, and integration with efforts by other parties, especially private landowners. The success of the ESA is apparent in the recovery of species and populations such as the Yellowstone grizzly bear, which draw thousands of visitors to the National Park System each year. Thank you for considering the views of wildlife professionals.

Discussion Question 3

Written & Online Comments

(cont.)

Recreational Trails Program (RTP): American Trails strongly supports continuation of the Recreational Trails Program (RTP), administered by the Federal Highway Administration, funded by federal taxes paid on gasoline used in non-highway recreation. RTP funds are distributed through the state transportation departments and natural resource agencies in cooperation with citizen advisory committees and a network of organizations and communities. These partners leverage available funding with cash and in-kind support. Work for these projects is primarily done by youth corps, volunteers, and small businesses. Even more encouraging would be a permanent line of federal funding that would ensure consistent trail-related projects over the years. Please consider increasing funding for trails and bikeways as a critical part of the solution to the childhood obesity problem.

The Land and Water Conservation Fund: This is another crucial program that can provide grants to states for parks, trails, and acquisition of lands and waters. It is authorized at \$900 million per year. However, Congress has fully funded the program only twice since its inception and rarely has the funds come close to matching the full amount authorized. Appropriations over the years have varied wildly and have been a mere fraction of the total amount authorized, to the detriment of our parks systems.

Federal Land Management Funding for Trails: The U.S. Forest Service currently has a backlog of 148,000 miles of trails on USFS lands that need deferred maintenance (this is major maintenance, not routine maintenance, and is work needed to bring a mile of trail up to its designed standard for the use it is receiving). The Forest Service cost to bring this 148,000 trail miles up to their design standard is estimated by the Forest Service to be \$294,000,000.

Additionally, the AHC specifically recommends the Administration work with Congress to:

- Pass the Conservation Easement Incentive Act of 2009 and Rural Heritage Conservation extension Act of 2009.

- Ensure the Farm and Ranch Land Protection Program and The Grassland Reserve Program are adequately funded.

The Equestrian community understands the current fiscal situation precludes major increases in the budgets for the federal land management agencies. However, the AHC believes the Administration, Congress and recreational users must come together to find a solution to address the current situation.

Equestrians are also concerned about any serious threat to our public lands that could have a lasting impact. For example, the spreading infestation of the mountain pine beetle in the west and hemlock wooly adelgid in the east are causing great damage to our nation's forest or the growing acreage of forest destroyed by wildfires each year. The Equestrian community believes action must be taken to address such threats to our public land and is ready to help in anyway it can.

Additionally, the AHC specifically recommends the Administration work with Congress to:

- Fully fund the Land and Water Conservation Fund.

Discussion Question 3

Written & Online Comments

(cont.)

- Support Reauthorization of the Federal Land Transaction Facilitation Act (FLTFA) for ten years.

• Support the Recreational Trails Program reauthorization in the next national surface transportation bill.

- Pass the Complete Americas Great Trails Act

- Ensure the Rivers, Trails, and Conservation Assistance Program is adequately funded.

The AHC believes as we consider policies concerning America's outdoors it is important to remember the ability to experience America's outdoors can be limited for individuals with disabilities. The horse is a major means of access for disabled individuals. Many therapeutic riding programs prepare handicapped individuals for the experience of trail riding. Indeed, such programs are working with disabled veterans of the Iraq war and teaching them to ride or facilitating their riding under new limitations.

When considering outdoor recreation, access to trails and natural places, any significant medical condition that impairs a person's ability to gain such access deserves consideration, including people with limited mobility due to arthritis, heart disease, lung problems, peripheral vascular disease, etc. as well as those confined to wheelchairs.

We hope as the Administration and Congress determines future policy the contribution of America's millions of equestrians make to support and conserve America's outdoors and the role equestrian activities can play in connecting Americans of all ages with the outdoors will be considered. The equestrian community is part of the historic legacy of America and riding on America's public lands continues to play an important role in the lives of many Americans and their families today.

Please develop and implement a comprehensive, national, coordinated strategy to reconnect children and families with the great outdoors through policy solutions and federal funding.

I look forward to following up with you and your staff to understand how we can partner on this region's approach to sustainable forestry and sustainable community development. In particular, I ask for your support of the Center's application to USDA Rural Development for a "Great Regions" Rural Business opportunity Grant. This investment will match significant private investment and advance this coordinated strategy across one of America's greatest forested regions.

Make the forest-based economy an interagency priority to keep forests as forests and revitalize rural communities.

Discussion Question 3

Written & Online Comments

(cont.)

1. Diversify Markets and Promote Investment in the Forest Products Industry by funding a Forest Products Advisor position to continue developing Maine's niche in the global marketplace.

2. Increase Energy Efficiency by tailoring the Rural Energy for America Program to meet the needs of large mills and other forest-based businesses.

3. Advance Workforce Training and Business Assistance Programs by increasing funding and flexibility for USDA Rural Business Enterprise Grant and Rural Business Opportunity Grant Programs.

Develop creative, flexible partnerships with local entities to better deliver services in support of the forest-based economy.

4. Expand Rural Broadband Access by creating state allocations from the USDA Broadband Program and revising the Community Connect Program to allow multi-community grants and expand eligibility to underserved areas.

5. Improve Landowner Relations by allowing state authorities to use the US Fish and Wildlife Service's Wildlife and Sport Fish Restoration Program and the USDA Farm Service Agency's Voluntary Public Access and Habitat Incentive Program to improve enforcement of recreation laws and educate recreational users of private land.

Provide incentives to landowners to continue management and stewardship in support of the forest-based economy (See the Keeping Maine's Forests Proposal for additional ideas).

6. Reduce Landowner Costs of trail construction and maintenance by opening the Challenge Cost-Share Program - currently restricted to federal or federally-designated lands and rail trails - to allow its use on non-federally owned, but federally-funded conservation land and easements.

7. Enhance Wood Supplies from family forest owners by restoring WoodsWISE (USDA Forest Service Forest Stewardship Program in Maine) funding and by authorizing the Maine Office of the USDA Natural Resources Conservation Service to deliver forest conservation financial assistance through the Maine Forest Service.

These broad, thematic ideas are not new. The second one, for example, is a hallmark of the Obama Administration and included the the goals of the America's Great Outdoors Initiative. What is new, however, and what this Committee is excited to offer are seven specific, actionable recommendations that USDA and USDI can implement by collaborating with state government and private businesses to enhance forests as an economic engine.

If implemented, these seven recommendations will strengthen the markets for forest products and forest-based tourism. They will provide additional revenue streams for landowners and added means for Maine's forest-based businesses and rural communities to realize enhanced value from Maine's forests.

Discussion Question 3

Written & Online Comments

(cont.)

Maine has institutional infrastructure to promote rural broadband access and adoption: the ConnectME Authority is the State's coordinating agency to bring broadband to unserved and underserved areas, and the Broadband Strategy Council advises Connect ME through a statewide strategic broadband infrastructure plan. The USDA has rightly made rural broadband access a priority, but more support and flexibility are needed.

To address the fact that rural communities have circumstances that are often not directly compatible with federal program guidelines, a state allocation from the USDA Broadband Program would be most effective at improving rural broadband access, as opposed to making individual grants to specific towns. The ConnectME Authority is well positioned to coordinate efforts in Maine, including state match for federal resources.

The KMFE Steering Committee believes the most effective way to reduce costs for landowners and increase public appreciation for the benefits they provide is to simultaneously increase enforcement of laws for recreational users on private land and to educate recreational users about current laws and the critical economic role that landowners play in Maine's rural woods-based communities.

Floodplain reconnection. In addition to removing barriers to fish passage, the reconnection of rivers to their floodplains is a good way to promote healthy fish populations and protect downstream communities. Rivers should not be confined into narrow channels but rather allowed access to broader floodplains. We also should seek to restore floodplains and streamside vegetation. These measures transfer flood energies into well-vegetated floodplain zones while dissipating flows and protecting soils from erosion.

Bureau of Reclamation. Given its role in managing water resources in the West, the Bureau of Reclamation is in a position to enhance stream flows for fisheries if the appropriate emphasis is placed on environmental flows. In planning exercises and operation of federal water facilities, the Bureau of Reclamation should ensure that streamflow needs are met.

Discussion Question 3

Written & Online Comments

(cont.)

Forest Service Reserved Water Rights. After more than a decade of negotiations with the State of Montana, the Forest Service in 2007 was given an opportunity to apply for water rights to protect the health of more than 700 rivers, streams, lakes and wetlands in Montana's 10 national forests. Passage of a negotiated state of Montana-US Forest Service Compact by the 2007 Montana Legislature, and subsequent approval by the Secretary of Agriculture, cemented the agreement. But progress has been slow. In the last two-and-a-half years, only six water rights have been perfected. Because the Compact provides only a 30-year window to perfect instream flow reservations on Montana's national forests, we are concerned that the current pace will mean the Forest Service will ultimately fall short of what is needed to legally protect water from future development in the streams, rivers, lakes, and wetlands of some of the West's most outstanding landscapes.

Trout Unlimited wishes to work with the Forest Service to facilitate instream flow reservations, and recommends that the Forest Service dedicate an annual, internal appropriation to Region 1 that helps ensure it gets at least 30 waters a year into the state's streamlined pipeline for approving instream flow reservations.

Water monitoring data. Effective water management depends upon reliable data. TU recommends strengthening the U.S. Geological Survey's (USGS) National Streamflow Information Program and restoring the capacity for USGS to match non-federal cost-share investments in the Cooperative Water Program on a 50:50 basis. Full implementation of the National Streamflow Information Program will require an annual appropriation of \$110 million. With a fully functioning National Streamflow Information Program, the USGS will also need approximately \$95 million for the Cooperative Water Program to restore its capacity to fully match state, tribal and other non-federal investments in data collection and interpretive investigations.

The National Forests received \$40 million in 2008, \$50 million in 2009, and a record \$90 million in fiscal year 2010 for Legacy Roads work. The Forest Service FY2011 budget request for Legacy Roads and Trails was \$50 million. TU recommends funding Legacy Roads and Trails at \$120 million, with an additional \$30 million dedicated to the national, regional and forest-level planning required to determine minimum road systems.

Wildlife Habitat Incentives Program. The demand for this program well exceeds available funding. Trout Unlimited strongly recommends restoring WHIP to the FY2010 enacted level of \$85 million.

We also suggest some changes that would enhance the effectiveness of Farm Bill for conservation programs. A grant through the Cooperative Conservation Partnership Initiative for restoration in the Driftless area will have a tremendous impact on the region's lands and waters. The impact of the grant could be further strengthened, however if a portion of the grant could be used for staff or administrative support. The time spent cultivating landowner participation and providing assistance during project implementation is an essential component of a successful project.

Discussion Question 3

Written & Online Comments

(cont.)

Finally, we recommend applying Farm Bill watershed programs like the Agriculture Water Enhancement Program (AWEP) and the Cooperative Conservation Partnership Initiative (CCPI) on a regional level rather than a producer by producer approach. This effort will create incentives for small-scale watershed restoration projects to move toward larger scale efforts.

Water resources and water quantity. To help protect water supplies and maintain stream flows, the Forest Service and BLM should emphasize the restoration of high elevation wet meadows, wetlands, riparian areas, and floodplains. These habitats act as natural hydrologic sponges that slow water discharge and recharge groundwater aquifers, which in turn increase dry-season stream flows. The proper function of these habitats will be increasingly important as snowpacks diminish.

Invest in Non-Profit Partnerships. TU began its Potomac Home Rivers Initiative in 2005 with an emphasis on the South Branch sub-watershed in West Virginia. Since then, TU has formalized a partnership with the USFWS Partners for Wildlife program to install at least 100,000 feet of livestock exclusion fencing on an annual basis. TU also facilitated the forest Conservation Reserve Enhancement Program project in Pendleton County, West Virginia through the Farm Services Agency, and cultivated Environmental Quality Incentive Programs and Wildlife Habitat Incentive Programs contracts through the Natural Resources Conservation Service for additional protection on six miles of brook trout streams. In this and other watershed restoration programs, TU's experience has been that non-governmental organization (NGO) representatives with roots in a community have a high degree of success in building trust with agricultural landowners and helping them understand their options for implementing conservation practices on their land.

In West Virginia, NRCS conservation program contracts in Pendleton County doubled in the three years after a TU coordinator began working with private landowners. NGO coordinators help overcome barriers to participation by 1) educating landowners on the benefits of BMPs and the sources of funding available for implementation, 2) helping to design and implement restoration projects, and 3) assisting the landowner with filling out paperwork and administering contracts. TU encourages the administration to consider ways to expend these types of partnerships with NGOs as a way to accelerate conservation adoption.

Use Small Grants Programs to Catalyze Grassroots Activity. A great deal of energy and commitment exists in communities throughout the country to improve the condition of local waters. TU supports the goal of large-scale efforts to restore habitats and encourages the administration to develop ways to ensure that local initiatives are fostered and integrated into comprehensive, large-scale restoration plans.

Volunteers at TU chapters regularly develop local partnerships to complete small projects such as culvert removals, biological monitoring, stream assessments, bank stabilization and other habitat improvements, as well as extensive outreach and education. A small matching grants program, perhaps from an increase in Section 319-funds, would be one way to catalyze extensive volunteer contributions and leverage resources for small-scale projects in the context of larger restoration initiatives.

Discussion Question 3

Written & Online Comments

(cont.)

Wildfire. Wildfires are increasing in western forests because of reduced snowpack and earlier vegetative drying during summer. To deal with more frequent and intense wildfires, agencies should selectively thin forests, primarily in the wildlands-urban interface zones and plantations. To prepare aquatic systems, we also should improve road networks and stream crossings, restore up-and downstream connectivity, and recover degraded riparian areas.

Finally, we should adopt strong post-fire logging standards that protect soils and stream systems while providing for adequate recruitment of large wood to streams. These actions will result in less wildfire damage and decreased erosion and stream sedimentation. Riparian habitats, old growth and mature forests, and roadless areas should be protected as well because these are the most fire resistant habitats.

Funding Transition. Areas like the Tongass National Forest in Alaska that were subjected to decades of unsustainable logging and road building practices are now in need of intensive restoration work. Administrative support for the shift of timber harvest and road building subsidies to investments in timber industry re-tooling, restoration job training and the funding of fish habitat improvement projects will not only revitalize and protect the region's valuable salmon and trout resources, but will also create jobs and stimulate new economic activity in rural Tongass communities.

Cooperative Watershed Management Act. The Cooperative Watershed Management Act presents an excellent vehicle for investing in watersheds but is currently under utilized. The act has passed Congress but lacks funding and an implementation strategy. TU recommends that the program be fully funded, and the U.S. Fish and Wildlife Service named as the implementing agency.

This bill was crafted to replicate the successful watershed restoration effort in Montana's Blackfoot Valley, which started with small projects and evolved to address watershed-wide issues. An implementation strategy should be developed so that successful landscape pilot projects would compete well under the bill's competitive grants program. This could result in increased funding for local watershed group staffing as well as project money, funding the groups that are doing the collaboration.

Liability Relief for "Good Samaritan" Abandoned Mine Cleanup. TU has long worked to improve water quality and recover fisheries in watershed degraded by abandoned mines. Cleaning up abandoned mines is one of the single most important, least addressed environmental challenges in the nation. A major impediment to making progress on the ground is the lack of a clear permitting process that allows for would-be Good Samaritans to initiate cleanups.

Discussion Question 3

Written & Online Comments

(cont.)

CWA liability for potential Good Samaritans is still a major limitation. TU supports S.1777, the Good Samaritan Cleanup of Abandoned Hardrock Mines Act of 2009, which would create a permitting process to greatly assist would-be Good Samaritans in abandoned mine clean up efforts. The bill would create a new program under the CWA to help promote the efforts of people who had no involvement or responsibility for abandoned hardrock mines, but would like to make their communities safer by cleaning them up. This program would allow qualifying individuals and entities to obtain CWA permits and conduct cleanups of abandoned or inactive hardrock mines. These permits would give some liability protection to those who volunteer to clean up these sites, while also requiring those volunteers to meet certain requirements. The bill specifies who can secure these permits, what a cleanup plan would require in order to qualify for a permit, and the extent of liability exposure. TU recommends that the administration support S. 1777 and help to facilitate Good Samaritan abandoned mine cleanup efforts.

If we are to clean up our nation's waters, we need strong public awareness of the factors that influence water quality and the measures that can be taken to restore our lakes, rivers and streams. Yet the amount of environmental education occurring in schools has leveled off and may even be in decline for the first time in three decades. Further, lessons that are confined to the classroom "remain abstract and irrelevant, beyond the experience of the learner and inconsistent with cultural norms.

Expand conservation focus of Corporation for National and Community Service (CNCS). Although an environmental category does not exist within current grant opportunities, a majority of AmeriCorps and AmeriCorps VISTA programs emphasize social issues and disaster relief efforts. By dedicating themselves to these causes, AmeriCorps volunteers earn valuable vocational experience and educational awards. Trout Unlimited and other non-profit conservation groups would greatly benefit from a national ConserveCorps model that would enrich internship experiences and encourage young adults to seek long-term employment in the conservation field. AmeriCorps support would give additional resources to college students who, up to this point, cannot afford the limited wages that accompany internships. Federal agencies would also benefit from a ConserveCorps model as it would allocate more resources for individuals interning and volunteering with the respective agency.

Waterway access proposal. We must continue to seek opportunities to expand safe access to our nation's lands and waters so that more Americans experience the great outdoors. Whether through an amendment to the transportation bill or changes to Department of Transportation policy, ensure consideration of water access when designing road projects, and authorize the use of transportation bill funding for improving access along public rights of way. We see this as a simple, cost-effective way of creating safer access to public waters for anglers and non-motorized boaters.

The changes we seek would accomplish the following: • Ensure that waterway access for anglers and non-motorized watercraft is considered in every comprehensive transportation plan and in conjunction with all new construction and reconstruction of transportation facilities, except where such use is not permitted, unsafe or unreasonable.

Discussion Question 3

Written & Online Comments

(cont.)

- Make "waterway access facilities for fishing, canoeing and kayaking" along the public rights of way of appropriate roads and bridges eligible for funding from the major Federal-aid highway, safety, and bridge programs including the Surface Transportation Program, Transportation Enhancement, and bridge funding. These changes would help to enhance waterway access, providing opportunities for anglers to experience the waters they love and to share those experiences with future anglers and conservationists.

The White House should issue guidance to provide the federal agencies with a policy framework that defines how protecting, reconnecting, and restoring landscapes will be coordinated with state and federal agencies and interested private partners.

Such an integrated and landscape scale approach to conservation will ensure that fish and wildlife resources and human communities can cope with a changing climate. Connecting public land efforts with associated private lands will also be essential. For example, incentives should be given to private landowners participating in Farm Bill conservation programs with projects that protect, reconnect, or restore watershed health and function.

In order to more effectively work at the landscape scale using the protect-reconnect-restore-sustain approach the administration should develop a series of national pilot projects that illustrate how implementing existing programs and authorities at a larger scale can bring on greater efficiency, leverage more private investment and jobs, enhance the payoff for collaboration, leverage federal investment, and encourage better local planning that will save taxpayer money in the future. The administration will learn from these pilot projects about what new conservation tools and protections are needed in the future.

Selection of pilot projects will be through a competitive process, based on self-nomination according to specific criteria, with clear incentives for being selected. Once selected, and interagency federal taskforce would be appointed that would focus on how to leverage existing federal programs across the broader landscape. These efforts would be to help direct federal programs and activities toward developing a "green infrastructure" that creates more jobs, improves air and water quality, leverages private, state and local investment, and inspires people to care about nature.

This process is informed by the recent Forest Service process around implementing the Forest Landscape Restoration Act. Under this act, forest interest groups were given clear criteria and incentives to collaborate around forest restoration projects. In this once very contentious arena, more than 60 groups collaborated to write proposals around projects. Thirty-one of those projects were recommended by regional foresters and 10 were selected, the maximum allowed by law. Once a project is approved, it will receive up to \$4 million a year in funding, so there were clear incentives of the program, informed by clear criteria.

Discussion Question 3

Written & Online Comments

(cont.)

In the case of large landscape-scale pilot projects, the incentives will be a mix of prioritized federal funding from existing programs, synergy between programs, coordination between agencies and improved policy outcomes. The result will be stronger outcomes for conservation, including water, wildlife connectivity, forest restoration, opportunities for recreation, keeping traditional uses on working lands while enhancing conservation values, and encouraging people to connect with nature.

Trout Unlimited (TU) recommends the adoption of the following framework to achieve the goals of the America's Great Outdoors Initiative: protect high quality habitats, reconnect them to surrounding areas, restore degraded habitats, and sustain conservation gains by engaging the next generation of environmental stewards.

First, protect the highest quality lands and waters. In a warming climate, national forests, and particularly roadless areas, are thermal refuges. Protecting these lands protects fish and wildlife, maintains groundwater recharge, removes carbon dioxide from our atmosphere, and also reduces the costs of filtering and treating water for downstream communities. Wild backcountry areas are critically important to maintaining healthy habitat, water quality, and tremendous hunting and fishing opportunities.

Second, reconnect landscapes. If fish and wildlife habitats are fragmented, the species they support they will not survive the floods, fire and drought predicted to increase with climate change. Identifying and protecting important wildlife corridors on public lands and allowing rivers to access floodplains are good not only for fish and wildlife, but for human communities as well. A healthy landscape will recharge and replenish underground aquifers that supply municipal drinking water, minimize the potential for downstream flooding, filter pollutants, and improve soil productivity for farmers and ranchers.

Third, engage communities in restoration. Recovering the ability of our lands to withstand the effects of climate change is essential. Reconnecting people, children and communities to the landscapes that provide their food, energy resources, and recreation opportunities is important to our nation's well being. Restoration activities such as tree planting, trail maintenance, and river clean-ups improve ecological resiliency and bind us to the lands and waters that sustain us.

Protecting, reconnecting, and restoring landscapes describe the biological imperative of climate change adaptation. The social imperative is to sustain these efforts over time.

The greatest threat to America's great outdoors may lie in public ignorance of their extraordinary values and a generation of children more connected to video games and computers than they are to lands and waters. Investing in youth education and getting kids out of doors is vital to building tomorrow's constituency for conservation.

Discussion Question 3

Written & Online Comments

(cont.)

As part of the AGO Initiative, the Forest Service should issue direction to field managers to sustain the wilderness potential and values of agency-recommended wilderness areas by disallowing motorized and mechanized transportation within recommended wilderness areas. Similarly, TU recommends that the Secretary of the Interior issue guidance to field managers regarding the National Landscape Conservation System so that units are managed in a consistent manner that emphasizes conservation so that the values for which the lands were designated are sustained.

Water quality. To protect water quality, agencies should designate adequately sized streamside buffer zones and adopt management standards that emphasize aquatic system protection. These riparian zones should be large enough not only to provide shade to streams, but also to buffer from upslope erosion and allow fallen trees to enter the stream channel providing the complex stream habitat critical to aquatic species. Protecting water quality in headwater streams such as roadless areas serves to diminish downstream drinking water filtration and treatment costs. Agencies also should protect landslide prone areas. Inadequate protection of these areas will increase siltation and erosion, which will degrade stream systems, water supplies, and fisheries.

TU supports the EPA's current efforts to make storm water permitting more consistent and robust nationally, and particularly to address stormwater impacts outside the MS4 boundary. TU recommends that the EPA take into consideration the impacts of scour, sedimentation on impervious surfaces in its national rulemaking for stormwater. It will be important for EPA to establish specific requirements for stormwater discharges beyond MS4 boundaries, given the relatively low impervious surface tolerance of coldwater fish and the location of many coldwater fisheries in less-developed areas. Clear standards should be established for best management practices, and protective measures such as stream buffers should be used to minimize impacts on outstanding resource waters and other sensitive aquatic environments.

Due to the demonstrated relationship between scour, sedimentation and impervious surfaces and salmonid persistence, new stormwater sources that may contribute to an impairment of designated and existing uses should be required to provide baseline information and be subject to anti-degradation review. In order to maintain hydrologic conditions that can sustain trout and salmon, EPA should aim to use its stormwater rules to require that development meets the runoff profile of the natural landscape.

TU also supports Congressional efforts to restore Clean Water Act jurisdictional protection of "isolated" wetlands and headwater streams. A bill passed by the Senate Environment and Public Works committee, the Clean Water Restoration Act, and a bill sponsored by Committee Chair James Oberstar, America's Commitment to Clean Water Act, would accomplish this vital goal. We urge the administration to support the bills and to work with Congress to secure enactment.

Biodiversity. To prevent the loss of plant and animal diversity, lands and waters should be managed to provide adequate habitat to support native species. Agencies should manage to protect genetic diversity, including wet stocks and peripheral populations. High levels of genetic, life history, and ecological diversity will be necessary for species to adapt to rapid environmental change.

Discussion Question 3

Written & Online Comments

(cont.)

Maintaining genetic diversity is particularly important to sustaining Pacific salmon and steelhead. Protecting the best remaining stronghold populations has long been recognized as the first principle of conservation biology. The concept of protecting salmon strongholds has been promoted as a scientifically sound and cost effective approach to anchoring wild salmon populations. Additionally, scientists have argued for a large, watershed scale approach to fisheries conservation that would protect entire healthy watersheds and the native fish communities contained therein.

One such watershed exists in the area surrounding Bristol Bay, Alaska. The area is currently threatened by plans to construct a massive open pit gold and copper mine in the headwaters of Bristol Bay. The administration should do all that it can to prevent harmful impacts of mining on this vital resource. In addition, we recommend the management approach taken in the Pacific Salmon Stronghold Conservation Act of 2009 by identifying and protecting a network of wild salmon strongholds and empowering voluntary, incentive-based actions to achieve salmon conservation goals.

Inventoried Roadless Areas. By upholding the Idaho Roadless Rule, developing a strong roadless rule for Colorado, and protecting the remaining inventoried roadless areas on national forest lands, the Department of Agriculture can sustain the ecological and recreational values of these backcountry lands.

Private lands. Private agricultural lands harbor important fish and wildlife habitats, many of which are threatened by development. The departments of Agriculture and Interior should work with landowners and provide incentives to those who help conserve high-value lands.

Invasive species. Weedy and invasive species are more likely to flourish in degraded habitats and be favored in highly fluctuating environmental conditions. Some invasive species will spread more quickly during warming trends and will cause greater harm and be more expensive to control if left untreated. To better manage invasive species, we should become more aggressive in programs to detect new species invasions and in programs to control established exotic species - both terrestrial invasive weeds and aquatic non-native species.

One prominent example of the threats posed by invasive species is the potential for Asian carp to take hold in the Great Lakes. The evidence of Asian carp above the barriers on the Chicago canal is a reminder that the only long-term solution to the problem is full ecological separation of the Mississippi River basin and Great Lakes. Ecological separation of the Great Lakes and Mississippi River systems should be an explicit and top goal of the Inter-Basin Feasibility Study being conducted by the U.S. Army Corps of Engineers. This is the only viable way to limit the exchange of aquatic invasive species between these major systems over the long term.

Discussion Question 3

Written & Online Comments

(cont.)

The timeframe for the Inter-Basin Feasibility Study must be accelerated. The portion of the study examining options for ecological and physical separation should be completed by the end of 2010. The goal for completion of the entire study should be 2011 rather than 2012. Aggressive monitoring and netting efforts should be continued in the Chicago Area Waterway system and near shore areas in Chicago, and expanded to include a broader swath of the near-shore areas of the Lake Michigan covering and expanse starting at minimum from the Wisconsin-Illinois state border to the area east of Burns Harbor in Indiana.

Off-Road Vehicle Management on Public Lands. In order to ensure that off-road vehicle use is compatible with the land's capability (particularly fish and wildlife habitats) and the needs of sportsmen/women, recreational users, and others who rely on America's public lands for their enjoyment, TU offers the following recommendations:

1. Public cross-country OHV travel should be prohibited on all National Forests and other federal public lands except for special OHV management areas and for special needs. In the future, all illegally created user trails should be closed to any public use.
2. A visible tag that can be used to identify the rider needs to be mandatory for all OHV's used on public lands. These identification tags would greatly help in reporting and deterring illegal activities, as illegal riders are now essentially invisible. Funds generated by the sales of these required tags would go toward law enforcement, thus buoying sadly deficient agency capability in this area. This may prove to be the single most effective deterrent to illegal activities.
3. The US Forest Service should develop an estimate of the total costs to implement their Travel Management Plans, including necessary monitoring. The agencies need to develop a funding strategy (including the use of partners) to implement these plans.
4. Finally, the Bureau of Land Management should adopt a similar process as the U.S. Forest Service to ensure that these public lands have well thought-out Travel Management Plans.

Secure Rural Schools and Community Self-Determination Act. TU recommends support for, and changes to, the funding formula under the Secure Rural Schools and Community Self-Determination Act to provide incentives to counties to restore and protect conservation values on public lands.

- Partner with NPS to develop a stronger presence for world heritage site with an attractive, attention grabbing logo on opening page of federal/NPS websites
- Partner with media sources to broadcast to the widest public, not focused on heritage conservation community as its audience
- Partner with Dept of Commerce to integrate into US tourism publicity overseas

Discussion Question 3

Written & Online Comments

(cont.)

- Partner with NPS to develop program-focused articles on each site into airline magazines

- Partner with NPS to develop appropriate literature (brochures, posters) for distribution to the travel industry, school systems, etc

- Partner with National Geographic, American Express, VISA, ASTA, and others to assist in creating visibility

- Partner with media - Expedia, History Channel, PBS, etc. to make the program known

Partner with media to develop short public service announcements for commercial media

a. America's Great Outdoors showcase for Americans and all the world our US treasured landscapes and the intersection between culture and nature

c. Make the US contribution to the world's heritage known

The founders of the national park system showed great foresight and great wisdom in recognizing the importance of preserving of open spaces for future generations. We urge the federal government to now do the same by greatly increasing the federal government's attention to and funding of open space protection. Demographic forecasts predict a continual increase in population growth. The consequence of will be a continual increase in sprawl and a continual erosion of open space.

Open space is required to support the local farmers who supply us with fresh, healthy food. The role of governments in preserving open space has always been important, but there has never been a time when it is more important.

The Westchester Land Trust has helped protect more than 6,600 acres and the lion's share was done through partnerships with the state, the county, and the towns and with New York City. Right now those partnerships are impossible to replicate because there's virtually no government money anywhere for land acquisition. Therefore there is a great need for more land acquisition money not just from the federal government, but also from the state, the county, the towns, and New York City.

Provide funding to state and local governments and to land trusts to preserve the land that they know is the most important land in their area.

Increase its direct role in acquiring land for open space protection;

Discussion Question 3

Written & Online Comments

(cont.)

Provide the funding required to make viable the programs established by Congress for land preservation

Insure open space protection is a consideration required in all federal policies, rules and regulations affecting land use.

Shift national farm policies from their heavy bias towards factory farms and increase support for individual farmers.

Promote the health and environmental benefits of locally grown food.

The Endangered Species Act is one of the most powerful tools the Federal Government has to protect wildlife. This important law requires the government to conserve the habitat of all endangered and threatened species. Unfortunately, the Dept. of Interior under both Pres. Bush and Pres. Obama have not enforced the Endangered Species Act with much vigor and as a result wolves and other rare animals have been killed and the habitat of other rare species have been destroyed. Please vote YES to send our Federal Government a strong message that you want the Endangered Species Act enforced.

The lakes and streams of the upper midwest are generally in sorry state due to some agricultural practices, specifically non-point pollution sources. Since wetlands are the sponge that filters these contaminants and we have lost over 90%, I think more needs to be done with state and federal partnerships to restore much needed wetlands.

The national parks are truly one of the best parts of this country for both the people and the environment and I cannot think of a better use of funding than to invest it in preserving these national treasures. I would however, wholeheartedly suggest banning private vehicles in the park and promoting park operated vehicles running on natural gas.

The National Parks provide education and opportunity for health exercise. They need to be fully funded.

The National Parks should always be fully funded. They are a precious and irreplaceable resource and must be fully protected for all future generations. My favorite times throughout my life have been spent in our national parks and national forests.

The NATIONAL PARKS SYSTEM needs full financial support to provide lasting examples of natural settings and wholesome enjoyment for wildlife and the enjoyment of the nature that these parks were developed to sustain.

Discussion Question 3

Written & Online Comments

(cont.)

The Obama administration and Congress should work together to address the huge backlog of backcountry areas in national parks that the National Park Service (NPS) has recommended over the past three decades for consideration as wilderness areas. During the NPS General Management Plan (GMP) planning process, NPS identifies those backcountry or primitive areas in national parks that they believe appropriately qualify for wilderness protection, and those areas receive interim administrative protection as "proposed wilderness." NPS has been doing these GMPs for many years, yet some of these wilderness recommendations have languished for up to three decades without any Congressional consideration. For example, in 1980 over a million acres in Grand Canyon National Park were so recommended. While wilderness is normally a controversial subject on BLM and Forest Service "multiple use" lands, NPS lands are set aside for the American people to "preserve and enjoy." The NPS proposed wilderness areas have already been administratively protected for many years, and I am not aware that this has caused any serious conflicts or problems. Given all of the NPS and public time and effort put into these various GMP planning processes, and the huge backlog of proposed wilderness areas that resulted, it is time for the Obama administration and Congress to do their part by comprehensively addressing this backlog. Indeed, since omnibus federal lands bills have become so popular and effective, perhaps a number of NPS proposed wilderness areas could be added to the next omnibus legislation.

The parks must be maintained for the enjoyment of all citizens. However, there are a number of points that must be paid special attention to. Stop the invasion of off-road vehicles of all kinds; this includes ATV's, snowmobiles, motorcycles/dirt bikes etc. any motorized vehicles used off the main roads must be park owned only. If people want to drive they can go to New York or one of many wonderful rural towns where they would welcome you with open arms. The parks should not be destroyed for the 'convenience' of tourists who don't want to expend a little energy hiking, camping skiing etc. Of course the parks must be funded in addition to reasonable park fees. If parks become too congested they should create a lottery system whereby everyone applies and once they have had the wonderful experience of enjoying a specific park they would then be put at the end of the line once again. Some parks become way too congested and I would really support this method of controlling the number of visitors. One major concern is the destruction caused mining and oils drilling . This must be stopped and such leases rescinded. They cause too much damage and never clean up after themselves.

The Parks need to have full funding in order to carry out programs, have rangers available, maintain roads and public areas.

The recreational carrying capacity of all federal lands should be estimated, so that many discussions of what recreational activities to allow in a given area, including to what extent and when, could include at least some data on sustainable recreational activities. This should be a nationwide effort, and it should encompass many types of recreational activities. It should also be done a per-park basis, taking into account the unique aspects of each park. It should be overseen by the federal government, and be as objective as possible.

Discussion Question 3

Written & Online Comments

(cont.)

The San Gabriel Mountains are a huge recreational resource for millions of residents of the LA basin. Clean water, clean air, recreation and habitat protection are vital to maintaining this resource. Designation as a National Recreation Area would be ideal for this area. Resources for visitors in heavily impacted areas are needed. Restroom facilities, trash, interpretive info , along with trails and parking are critical to preserving these areas. Added wilderness designation in appropriate areas will also help protect watershed, habitat and the wilderness experience.

The simple fact is that some places are more important to America than others even though its hard to say so when 435 Members of Congress all want attention in their states and districts. The Administration initially indicated that they had the fortitude to make hard choices in selecting specific places that have the most significance to the country – they should do so. There are landscapes like the Grand Canyon, Sierra Nevada Mountains of California, Chesapeake Bay, and r Mississippi River Valley that support some of America's most diverse ecosystems and most unique places and that also contain fabulous historical, cultural and recreational resources. More federal effort from all agencies should be focused on a few places.

The Siskiyou Crest is a valuable and precious ecosystem, and the proposed monument area is a short distance from my home town. This part of Oregon and California have been severely degraded by a long history of unregulated logging and mining, and very little remains of the ancient forested landscape. Thank goodness for the efforts of those who have been working for the protection of what remains. Of course there are always short-sighted locals who do not seem able to see or care about the larger picture and complain they are losing their "rights." I trust that a balanced discussion of the issues will lead to the preservation of this area for future generations.

There are so many resources at the Federal level, especially in planning, construction standards and plans, communication pieces, etc. Making that available to local governments and NGOs for use in conserving the best of their natural resources just makes sense and improves public relations.

There is no better, easier, or fun way to teach our children to appreciate our planet than to spend time with them in our national parks. Full funding is an absolute necessity.

There should be no question as to full funding. National parks have played a huge role in many people's lives. They are a necessity for future generations. They are the ideal places to get away from it all; to enjoy the serenity it provides, along with its beauty and grandeur. We need to protect and maintain God's country that means so much to us.

This commission is the authority on moving forward in the next century of service to the nation in the area of national parks. The present administration must listen carefully to their gathered wisdom and implement their recommendations without delay.

We have beautiful National Parks and fully funding them will ensure they will be available for our children and grandchildren in the future; therefore, you have my vote!

Discussion Question 3

Written & Online Comments

(cont.)

We have to fund the parks. Completely. Bring back the CCC.

We leave these to generations to come. Care and respect are mandatory!! Please fund the parks.

We need fees plus government support

We need our National Parks more than ever!! We need more money to develop & keep them up.

We need to fund the Parks.

We need to have funding for our National Parks and to protect them. They represent our heritage and the beauty of our great country as well as being part of God's great work. I have never been able to see a national park in person and if we don't support and take care of them then many people like myself will never get the chance to see these awesome places. Nora Reed

We need to increase funding with reasonable user fees. This is where respect for our parks starts, by showing visitors that the parks are a privilege, not a right to use as you please. The fee demonstrates that you are using a service that literally does not grow on trees, but one that is precious and tenable. Our parks need TLC!

When foreigners leave the US an exit fee should be assessed (much like Costa Rica does) and the money go directly to the National Parks. This would increase funding and all at no expense to the budget.

White bread becomes very boring, and in fact, can be unhealthy. Our national parks should reflect the ingredients, the people, who make up this nation. Expand, diversify, become more fully inclusive.

Yes! It is a wonderful (yet relatively quaint) thing for Congress to designate a National Scenic Trail. But it is a truly noble thing to COMPLETE a National Scenic Trail. The Appalachian Trail is complete. Great job!! Now please take the steps necessary to complete the ten other National Scenic Trails -- before it is too late.

Yes, I strongly believe we should expand our National Parks to include all our country's history. What better way for visitors of all ages and places learn about our rich heritage?

Yes, National Parks and other sites need full staffing. And they need to be protected from off-road vehicles, snowmobiles and guns. If we don't take steps to protect and preserve them now, they won't be available for our grandchildren.

Discussion Question 3

Written & Online Comments

(cont.)

Yes, our parks must have the full funding. They are our heritage.

Yes, with something as important and valuable as preserving and enhancing our National Parks for now and in the future, we need to pay fairly for it. It is well worth it!

Our national parks are a finite resource that, once lost, cannot be remade. It is imperative that we work aggressively to protect the parks (and other natural resources)!

Our parks have been neglected for years. Increased funding is essential to remedying

Our population is changing, and the character and accessibility of our National Parks must change with our demographics in order to survive as America's Best Idea.

Our young people are spending far too much time doing passive activities - which does not help foster their curiosity about the world, stimulate their brains or get their bodies moving. I believe our society is in real danger of creating a society that cares less and less about nature and our world, which is why the America's Great Outdoors initiative is so important, and will help get our young people reconnected to nature and help those organizations who are doing something about it. The U.S. has some of the most incredible terrain in the world, much of it at our National Parks, and everyone should have a chance to experience it.

Restricting recreational use FROM these areas would go a long way to prove agencies are serious about this issue. If water quality in these areas are important to protect, agencies should stop ignoring the increase in recreational activities that damage riparian flora and cause siltation in the streambeds.

"Federal Government already controls what is taught in public schools" This is an unfortunate fact and the primary reason things are the mess they are. The federal Department of Education should be abolished and the federal government should get back to doing the things it's actually SUPPOSED to be doing. Education is a state and local issue. If you want to change education, start there.

You have a point that some (or many) Americans may have obese trends. But this is not a good solution. I have a hard time believing anyone would promote the idea that the Federal Government make it a requirement for physical exercise to be performed in order to be allowed to use the land that belongs to ALL of the people. This just seems to me to be such a BIG BROTHER IS WATCHING situation. More government telling you what to do and when to do it, it's scary! post above is so right on, she has the right to live her life in the fashion she desires as long as it's within the law and common courtesy of others! Now may think she is a racist, a teabagger and need a little bit more tinfoil and I guess he has his right to express his views – if they are right or not. But I think there is there is a possibility he really is offering up the extra tinfoil just so the government will be able to track better to see if she is doing her jumping jacks while in camp!

Discussion Question 3

Written & Online Comments

(cont.)

But GAO really did issue reports...and no I am not a member of the above organization. There are still outstanding lawsuits due to the Federal Government taking land for parks in the 30's. Eminent domain is a hot issue with many other people than American Land Rights Association. How would you feel if someone forced you to sell land or a house that you loved? If you live in a county that already has more than 80% federal land, it can be unpleasant when even more is taken out of the tax base. I do think we need to be more organized and prioritize what we add to federally owned lands.

I think this is just the forum to bring this to light. The policies under Bush, Cheney and the republican lead senate and congress did more damage to our forests, lakes, rivers, wildlife and overall environment than all other factors combined. It is imperative that we get representatives that will protect what wild lands are left or there will be no places left to connect to.

During the Great Depression a lot of work was done to preserve and maintain our parks. It gave work to help support the unemployed. Our unemployed population is losing their financial base just as the banks (very foolishly and due to massive corruption lost their ability to function). It is not the fault of the unemployed that they do not have jobs. It is the job of Government to see that our unemployed do not completely lose their ability to function. Why not jobs in the parks?

EDUCATION, EDUCATION, EDUCATION!!!!!!!!!!!!!!Federal Government already controls what is taught in public schools so.....Why not Outdoor Education in ALL public schools? You can't wait until High School to get children involved in the "Great Outdoors". Children already have their "Boogie Men" in place by an early age. They need assured that the only Boogie Man in the wild is ignorance. Family involvement could be achieved by making an official holiday for getting outdoors. Fund local outdoor information seminars. Not just at the National Parks but right down the city block. Go where the families are. Make it easier for the entire family to attend. Also, why not NOT tax camping equipment for X amount of days per year? Some people just can't afford to get out.

As the administration considers how best to protect America's great outdoors in the 21st century, it is imperative to remember that we face far different threats to conservation than we did in the 20th century. Already facing increased habitat fragmentation and development, pollution, invasive species and overuse, America's great outdoors are increasingly experiencing the effects of climate change. Indeed, climate change is directly threatening many of the conservation investments made over the last century. As the administration draws up its blueprint for conservation in the 21st century, it must include strategies to reduce carbon pollution and safeguard natural resources from the impacts of climate change that are already occurring.

The U.S. must reduce carbon emissions that cause climate change, and Congress must provide long-term dedicated funding for natural resource adaptation. The report should discuss the synergies between climate mitigation and adaptation, and the important role of land use and land conservation in both climate mitigation and adaptation.

Discussion Question 3

Written & Online Comments

(cont.)

The administration must develop and implement a national adaptation strategy that clearly delineates how natural resource agencies should practice climate-smart conservation and coordinate their activities across jurisdictions and across the landscape.

Above all, we have a moral imperative to protect America's treasured wildlife and special places from the impacts of climate change. Twenty to thirty percent of species are at even greater risk of extinction due to global warming under even moderate global warming scenarios.

By investing funds to safeguard natural resources from climate change impacts, the administration will revitalize local economies and reinvigorate local communities, all while ensuring our children have the same outdoor opportunities and benefits of nature that we enjoy.

On behalf of Defenders of Wildlife, thank you for the opportunity to provide our recommendations for the administration's America's Great Outdoors initiative. We commend the administration for this important effort to enhance the conservation of our nation's wildlands, and reconnect Americans with nature.

The America's Great Outdoors initiative has been described as a conservation agenda for the 21st century. Global climate change is the defining environmental threat for the 21st century and beyond. Changes in ecosystem structure and function resulting from climate change require fundamental rethinking of how and where conservation occurs. Accordingly, the America's Great Outdoors initiative must work to promote conservation of wildlife and its habitats and, in particular, to assist wildlife and natural resource adaptation to climate change. To accomplish this, the America's Great Outdoors initiative should focus on, and further, the protection of large, interconnected natural landscapes.

Focus on key landscapes for priority investment.

Protect and enhance our federal public lands, including national wildlife refuges, national forests, national parks, and lands administered by the Bureau of Land Management.

Provide dedicated funding for the acquisition of conservation lands and easements by fully funding the Land and Water Conservation Fund.

Target federal conservation incentive programs to landowners who further the conservation of key landscapes.

Conserve large, connected landscapes to build resiliency necessary to assist wildlife and natural resources adaptation to climate change.

Integrate implementation of the America's Great Outdoors initiative with the national strategy for climate change adaptation, and prioritize those actions that assist wildlife and natural resources adaptation to climate change.

Discussion Question 3

Written & Online Comments

(cont.)

Whether it's the treasured watershed of the Chesapeake Bay that provides wetland habitat for migratory waterfowl in the millions, the spectacular vistas of the Grand Canyon that inspired Theodore Roosevelt to first protect it as a national monument, or the southern Appalachians with rivers and streams containing the greatest freshwater biodiversity on the planet, or the Sierra Nevada Mountains with a snowpack that provides much of California's water supply - some places, due to their ecological importance, their iconic status, or their importance to human well-being, are of key importance to the nation. Consequently, the America's Great Outdoors initiative should focus on key landscapes, and give conservation of those key landscapes priority for funding and attention.

Key landscapes should be those which are particularly important for the ecological and environmental health of the nation. Identification of these landscapes will require close cooperation among federal, state and local entities. For each key landscape identified, priority should be given to funding those federal agency actions that further conservation of the key landscape. For example, the Gulf of Mexico, which supports one of the nation's most productive ocean fisheries and provides vital wetland habitat for migratory waterfowl and other birds could be a key landscape. In developing the administration's budget, priority would be given to actions such as expansion of national wildlife refuges, creation of marine reserves, and regulation of ocean energy development that would further the conservation of the Gulf of Mexico. Similarly, priority would be given to Farm Bill conservation incentives that conserve the Gulf and to integrating federal conservation initiatives in the region with state and private efforts.

We support efforts to shift staff and dedicate grant and other program resources to these areas of special importance.

Our national wildlife refuges, national forests, national parks, and Bureau of Land Management administered public lands represent the best of America. They are home to our most treasured wildlife, contain some of our most scenic and historic places, and embody the ideals of American democracy and values. Protecting our public lands - from poorly planned development, inappropriate energy and mining activity, pollution, and the impacts of climate change, should be a key priority of the America's Great Outdoors initiative.

Priority should be given, with increasingly limited federal budgets, to purchasing lands and easements to complete and buffer conservation areas on federal public lands.

In addition, programs for the management of federal public lands should be reexamined to determine how best to further their conservation and protect them from development, climate change, and other threats.

Efforts should be made to ensure that natural resource management agencies are working cooperatively, across their jurisdictions, at the landscape level wherever possible.

Discussion Question 3

Written & Online Comments

(cont.)

Efforts should also be made to coordinate broad agency initiatives among agencies and to ensure that compatible protocols, modeling methodologies, and data standards are used across all programs. Federal public lands management also should be coordinated with conservation of state and private lands to enhance the effectiveness of conservation measures across land ownerships.

Federal public lands management also should be coordinated with conservation of state and private lands to enhance the effectiveness of conservation measures across land ownerships.

Providing dedicated funding for the acquisition of conservation lands and easements will be essential to the success of the America's Great Outdoors program. At minimum, the Land and Water Conservation Fund (LWCF) should be fully funded at the authorized level of \$900 million. The Secretary of the Interior has the discretion to reserve 10 percent of LWCF funding for Departmental priorities and we believe this action should be taken to increase land protection activity in key landscapes. Since the majority of LWCF funds are allocated through specific Forest Service, National Park Service, and other programs such as the Cooperative Endangered Species Conservation Fund and American Battlefield Protection Program, the agencies administering those programs should amend program guidance to target an even greater share of LWCF resources to key landscapes.

Many federal conservation incentive programs have match ratios that influence partner and landowner participation in those programs. Adjustments in these match ratios could help achieve the goals of the America's Great Outdoors program. For example, planning grants under the Interior Department's State and Tribal Wildlife Grant Program, or grants for specific conservation practices under the Agriculture Department's Environmental Quality Incentives Program, could be adjusted to allow 75 percent match ratios for planning and practices that significantly advance America's Great Outdoors priorities.

In addition, federal conservation incentive programs for landowners should be expanded and fully funded, with priority given to actions by landowners that complement the conservation of key landscapes and wildlife on interconnected federal lands. For example, the Natural Resources Conservation Service (NRCS) administers four easement programs - the Emergency Watershed Protection Program, Wetland Reserve Program, Farm and Ranchland Protection Program, and Grassland Reserve Program.

In addition to seeking changes in statutory limits on state by state allocations of these programs, the Secretary of Agriculture has significant discretion and should direct NRCS to make policy and rule changes in these programs to amend ranking systems and create other ways to prioritize projects in key landscapes.

Similarly, the Fish and Wildlife Service's Partners for Fish and Wildlife Program, which has been providing funding to private landowners for fish and wildlife conservation for over 20 years, should be fully funded and targeted to key landscapes.

Discussion Question 3

Written & Online Comments

(cont.)

Indeed, all federal conservation incentive programs for private landowners should be coordinated at the landscape level to give priority to conservation of key landscapes identified through the America's Great Outdoors initiative.

Climate change is the single greatest threat to wildlife and habitat. Changes in temperature, precipitation, and sea level are literally shuffling the deck of natural ecosystems, significantly increasing the threat of extinction for numerous species. As wildlife seeks to move to more hospitable habitat in response to climate change, such movement becomes increasingly difficult in landscapes already fragmented by roads and other human development. Resilience to the impacts of climate change for wildlife will be enhanced through the conservation of large, interconnected landscapes, providing protected habitat and corridors for wildlife migration. Accordingly, the America's Great Outdoors initiative should give the highest priority to conservation of large, interconnected landscapes that will assist wildlife and natural resources adaptation to climate change.

In addition to the America's Great Outdoors initiative, the administration is developing a national strategy for climate change adaptation. These two efforts must be complementary in design and implementation. A critical factor in selecting key landscapes for conservation under the America's Great Outdoors initiative should be the degree to which a particular landscape will provide resilience for wildlife and natural resources adaptation to climate change.

Similarly, the national strategy for climate change adaptation should include measures that emphasize the need to conserve large, interconnected landscapes to provide protected habitat and corridors for wildlife migration in response to climate change-induced habitat transformation.

Actions that further the objectives of both the America's Great Outdoors initiative and the national strategy for climate change adaptation should be given the highest priority for funding and implementation.

Finally, for the America's Great Outdoors initiative to have a meaningful and lasting impact on federal natural resource policy, it is essential that the administration produce a final report specifying how the initiative's conservation objectives will actually be achieved. We urge that the report spell out detailed implementation strategies. These strategies could include new legislative proposals, Executive Orders, and agency guidance. At minimum, the report should be specific about how each of the federal agencies implementing the conservation objectives articulated by the America's Great Outdoors initiative will allocate their resources and annual budget priorities to achieve those objectives. Without a clear strategy to implement the initiative's conservation vision, it could prove to be a costly undertaking that produces few tangible conservation benefits. With a well-defined implementation strategy, the America's Great Outdoors initiative can fulfill its purpose of providing a conservation agenda for the 21st century.

o Keep doing what America does better than any other nation in the world and provide new, expanded and better protected parks, wildlife refuges, monuments, rivers and trails that will benefit us all.

Discussion Question 3

Written & Online Comments

(cont.)

Provide full and dedicated funding for the Land and Water Conservation Fund (LWCF) at the promised and appropriated level of \$900 million a year. This fund – paid for by revenues from offshore oil drilling – is used to protect parks, forests, oceans, refuges and local recreation areas. But it has only been fully funded once since it was created 45 years ago.

Provide annual funding for the Urban Park and Recreation Recovery Act grant program, which directs funds to local jurisdictions for urban park projects.

- o Increase the opportunities to connect Americans –especially our children – to the Great Outdoors.

- o Encourage the kinds of public/private partnerships that have proven to be so effective in the Chicago Wilderness region, Illinois, and across the country. Communities are developing homegrown, collaborative solutions to conservation challenges and the federal government should support them.

- o Invest in public land and support local economies.

As millions of families, including the first family, visit national parks across the country, we are once again reminded that our national parks are a core part of our nation's great outdoors. As you work to define the administration's America's Great Outdoors initiative, we write to remind you of the centrality of our beloved national parks to America's great outdoors and to encourage you to include a robust national park component in the initiative.

Because of this relevance to the aims of the America's Great Outdoors initiative and in light of the upcoming National Park Service centennial in 2016, we ask that you include a national campaign and partnership to connect Americans to a restored, strongly protected National Park System. Such a campaign can unite in the minds of the American public our efforts to bring education outside of the classroom, to protect our wildlife from habitat loss and climate change, and to encourage active outdoor lifestyles for young and old alike, while also providing important economic and employment benefits.

We would appreciate the support of the Administration and would ask that the following core principles be prominent features of the America's Great Outdoors initiative: (1) a commitment of federal dollars to ready the parks for their next 100 years; (2) a new, viable public-private partnership program to leverage philanthropy as we approach the centennial; (3) a campaign to increase Americans' engagements with parks as we head toward 2016; and (4) a strategy to promote the educational, health and service benefits of national parks.

Discussion Question 3

Written & Online Comments

(cont.)

Keep the OHV roads and trails open for Public use. Maintain the roads and trails and complete the rehabilitation of damaged areas. Enlist the assistance of OHV groups in Rehabilitation Work on these damaged areas. Complete the necessary Law Enforcement work in these damaged areas. This would eliminate the damage from occurring in the early stages. Inform the Public of the enforcement efforts in these damaged areas. That would be a means of discouraging continued and future damage to sensitive areas and would permit roads and trails in or near these sensitive areas.

Increasing environmental education in national parks is essential for the future of the parks. Our nation continues to grow more urban, more engrossed in technology, and less connected with the natural world. The national parks are in real danger of losing relevance for the majority of our citizens. The parks must partner with schools and private organizations to help create the next generation of park stewards. Students who participate in environmental education programs in national parks develop an appreciation for our open spaces and discover that the national parks have more relevance to their lives than they might have imagined.

Open more public lands for everyone to use. This is OUR country, that implies ALL of us.

We have to start valuing the ecosystem that supports as as highly or more highly than our manmade resources. This wild ecosystem is more important than the low-grade gold available there.

Fully Fund the Community Wood Energy Program at \$5M. This program was authorized in the 2008 Farm Bill and would provide up to \$50,000 grants to plan and help capitalize locally scaled biomass utilization systems. Such systems increase the economic benefits of low value wood and therefore support forest stewardship efforts. They also help communities transition away from fossil fuel use, particularly for thermal heat and small scale electrical generation.

Maintain and increase funding for those federal programs that have made such an important difference for federal agencies to be good partners in landscape conservation, especially the U.S. Fish and Wildlife Service's Partners for Wildlife Program, USDA, NRCS, State, and private Farm Bill financial and technical assistance programs.

Finally, we would like to acknowledge how important NRCS and Farm Bill programs like GRP, FRPP, WHIP, and others have been for land conservation and stewardship in the Crown, and we would encourage the Administration to support and enhance the delivery of those programs to rural landowners.

Based on our experiences and these observations, we strongly recommend that America's Great Outdoors Initiative should be designed to support communities in participatory conservation and to provide specific policy changes and resources that can better sustain working landscapes and local communities, while at the same time empowering people to be responsible landscape stewards.

Discussion Question 3

Written & Online Comments

(cont.)

We believe that one of top priorities of America's Great Outdoors should be to make investments in initiatives that bring together community-based and large landscape conservation.

Support grass-roots initiatives to address landscape scale conservation by providing resources and technical assistance. We believe that America's Great Outdoors should support existing landscape partnerships, enabling them to achieve a higher level of success.

America's Great Outdoors should facilitate community-based conservation leadership and collaboration.

This initiative should provide funding to build the capacity for place-based conservation and networked systems of action for large landscape conservation.

Without an investment in the hard work of facilitating communication and building trust and understanding, it is almost impossible to agree on and carry-out effective conservation action plans. Building this infrastructure from the ground-up helps ensure that there is ownership in both the process and the outcomes, and maximizes the opportunity to sustain this capacity over time. This is perhaps the most important contribution that America's Great Outdoors could make to current and future conservation efforts.

We are talking about federal support for community conservation capacity that includes funding for land stewardship, technical assistance, community outreach, and project level support that may arise from community innovation in conservation.

Create the right set of incentives and opportunities for federal agencies to be effective partners in community-based and large landscape conservation. While there are many good examples where federal agencies are excellent partners, the nature of the administrative system often makes this a challenge. This is not a suggestion for agencies to abdicate their statutory authority, but a realization that agencies bring valuable resources – information, expertise, funding, and authority – to the table. What we need – in the Crown and throughout the country – is a way for the agencies to both empower others to share the responsibility for solving problems related to public lands and resources, and to be empowered to engage in more flexible, adaptive means to achieve their mission and mandate.

America's Great Outdoors should provide incentives, performance measures, and rewards for local agency staff (on program and regulatory side) to participate in place based collaborative groups.

America's Great Outdoors may seek to create "Conservation Investment Zones" that connect protected area management with surrounding private landowners in developing consistent management practices. These efforts exist in some working landscapes using New Market Tax Credits.

Discussion Question 3

Written & Online Comments

(cont.)

Enable and support best practices. One way to make the type of investment suggested here, and to create the legal and administrative space for federal agencies to be effective partners, is to sponsor a set of pilot project or experiments. The idea here would be to create a source of funding and facilitate a national competition to highlight the most promising approaches to community-based and large landscape conservation. A national competition would inspire innovation and generate lessons that could be captured and shared with others. America's Great Outdoors might consider a national competition for innovative community-based conservation and showcase these efforts as best practices.

Encourage public and private universities to play a more active role in partnering with community-based conservation efforts to support large landscape conservation. Public universities are in a unique role to help build the type of sustainable infrastructure contemplated here – given their public service mission the relatively objective, impartial role they play as educators. Universities are relatively untapped assets in supporting locally based efforts through convening, coordinating, and providing technical assistance. Given that they are also training future leaders in conservation, this is a perfect opportunity to encourage their active involvement in achieving working landscapes, working communities, and working people.

Support and Fund the Land and Water Conservation Fund: The most crucial and timely opportunity the federal government has now to protect landscapes is to support full, dedicated funding for the Land and Water Conservation Fund (LWCF) at \$900 million a year. Fully and permanently funding this account will allow for broader, more reliable conservation and greater leverage of all resources in the Crown and other landscapes.

More broadly, we strongly encourage expanded use of LWCF funds for conservation easements over private, working lands that are integral to important public lands. While we have had great success in the Crown using LWCF funds for this purpose, landowners from other landscapes tell us it is very difficult to access LWCF funds for conservation easements.

Make permanent the enhanced tax deduction for conservation easement donations. This incentive has been renewed for one, two, or 4 years at a time, and currently - has expired. This incentive is a critical tool for landowners to have, in order to make the right planning decisions.

Fully Fund the new Conservation Forest Land Restoration Program (CFLRP) at a minimum of \$40 million/year. This program is already based on a national competition model that incentivizes communities to work together around a scientifically sound and viable forest restoration program.

I suggest that the Federal government fully fund our National Park system. They belong to us so we the taxpayer should fully fund them. They are a national treasure!

I support full funding for the new project.

Discussion Question 3

Written & Online Comments

(cont.)

I think a little more research into the current policy on mining is in order. The mine shafts, tailings piles etc. are all left from old mines. I see alot more responsible activities at active mines than those 100 plus years ago. When does a mine stop being an eye sore and transition into a historical site?

I vote to have the Federal Government totaly fund the National Parks.

I was alive during the 30's and have seen just how much good the CCC camps did for many areas of our country. This would be a superb solution to the lack of jobs AND funding that are so prevelant.

Implement the idas of the National Parks 2nd century commission including more funding

In addition, river protection and restoration should be a national focus, because rivers provide fishing, paddling and other forms of recreation, not to mention their ecological values. They connect our communities to parks and other natural treasures, and they give us clean water - the number one envimetal concern of Americans.

In response to climate disruption, remove stressors on the forests like livestock grazing, roads in streams, and old culverts blocking fish migration. Don't do anything to encourage more logging.

In the western 12 states the federal government already owns 48% of the land. They should sell it to the states & private citizens who have a better track record of conservation.

Increase Funding to Fully Staff National Parks

Increased funding for National Parks is vital to save them from becoming run down and underused. There is such a reward to humans when they connect with nature and the wilderness. National Parks provide this much needed pause especially in a society where we are so on the go and bombarded with stress like never before.

Increased funding is necessary to the preservation of the US. human race. We need to reconnect with nature, and need educators, and rangers to protect what we have. With limited income, many folks are turning to parks for recreation. It's a time to help people understand the importance of nature around them

It can't happen too soon. Parks are in dire need, as is much of our infrastructure.

Discussion Question 3

(cont.)

allow sale of yearly passes or monthly use fees for locals and seniors. Keep the revenue from these passes in the areas where they are used. Note that the White Mts charge a parking fee at trailhead accesses and locals can buy a pass if they visit often. User fees are better accepted than taxes. Seniors get a lot for free and can mostly afford to contribute to the parks they use.

e National parks should be totally funded. What a thrill to see buffalo trotting down the road in Yellowstone.

Let us maintain our national parks by fully funding. Use our youth to maintain them. Let us keep them in their natural beauty. We don't need mining and all terrain vehicles in our parks. Once the parks are gone, they will be gone forever.

LWCF is oil revenue. LWCF funds have been stolen by Congress for other things. This cripples its ability to protect threatened farms, forests, riparian corridors and shorelines-especially the Stateside program. BTW-These are voluntary programs-the land owner must be a willing seller. LWCF should be fully funded and it should require 2/3's vote of the House and Senate to remove any oil revenue from it.

National parks and heritage site should have permanent sources of funding and keep their own admission fees. Staff should not be slashed every four years in congress' whim of budget. Long range planning is essential to public lands and adequate salaries are important to attract and hold valuable people. Treat the Public Lands as the jewel that they are and fully fund their plans to protect their charges.

National Parks are a national treasure, but they need proper funding so all Americans can enjoy them. They are not Disney properties where one pays a fee to a private, for-profit corporation. They belong to all Americans and it is the responsibility and actually the privilege of the U.S. government to make sure they're well cared for. That means money. Funding national parks allows them to be used for both education and recreation.

National Parks are a treasure to all

National parks are our legacy. There will be no way to replace them if they are not maintained. We have to preserve their essential wildness and character for generations and for the health of the planet.

National Parks are too important for ALL Americans to not have full funding.

National Parks deserve FULL Funding

National Parks deserve Full Funding.

Discussion Question 3

Written & Online Comments

(cont.)

National Parks have been chically underfunded for years and that really has taken a toll especially in a time when they are more heavily visited than ever. The National Park system is our heritage so let's protect it and invest in it for future generations to enjoy by fully funding the park system. It would be shameful not to!

In both cases, the corruption of money in our electoral and governing processes is destroying our democracy, our soul as a nation, and the world itself. We are no longer a nation of, by, and for the people.

Our "Great Outdoors" is NOTHING to the monied powers that actually control every aspect of our government and culture.

I believe that shielding our park and forest districts from poorly planned development, mineral extraction, pollution, and the impacts of climate change should be a key priority for the Obama Administration.

If you have the opportunity to select another nominee for the Supreme Court, choose one with knowledge and kinship with the natural environment, not another person with nothing but an urban, eastern background. We need another William O. Douglas on the bench, one with a visceral relationship with nature. In fact we need nine such justices.

. Replace Secretary of the Interior Salazar with someone who understands--and will fight for-- protection of the natural environment.

Washington must recognize that the most effective conservation program(s) varies with state. Increased effectiveness and efficiency is accomplished through:1) close relationships between federal and state employees, 2) use of state forest assessments to establish criteria/goals for grants, and 3) flexible grant criteria tied to state assessments.

Incentivize by establishing market value for ecosystem services

Wetlands are a very important issue everywhere in the world, with sea levels on the rise. Our government needs to take the lead in planning ways to mitigate the effects of global warming on our economy and our global food supply or there will be a food crisis eventually. A really big one that is sure to affect us here in America.

Before Federal dollars are spent to buy easements an assessment such as an EA should be completed. Some of the questions that should be asked, documented and made public: What is the long range plan for the area? How does this Tract fit into that plan? What is the impact of this easement on surrounding owners? (most often it increases their land value) Why are Federal dollars necessary? What is the future of sponsoring agency and who will administer the easement if they cease to exist.

Discussion Question 3

Written & Online Comments

(cont.)

I believe a much cheaper solution is to developed a system of rewards in the form of annual Federal tax credits for landowners who don't subdivide their land and allow the public to use it. It could be administered by NRCS and modeled after the Current Use Law of NH with modifications. I would be willing to volunteer for a National working Group to developed such.

- Reduce defense spending to fund robust land acquisition, habitat, conservation, etc. programs for all lower levels of government. Even if all we did was buy land and give people access to it, that would be better than not having it protected from development.
- Require outdoor and environmental education in education curriculum levels preschool thru college.
- Take seriously implementation of the UN Urban Environmental Accords to: 1) protect critical habitat corridors and other key habitat characteristics (e.g. water features, food-bearing plants, and shelter for wildlife, use of native species, etc.) from unsustainable development; 2) ensure that there is an accessible public park or recreational open space within half-a-kilometer of every city resident.
- Incentivize/fund green jobs, green industry innovations, renewable energy, housing innovations, and zero waste.
- How about a national reforestation initiative/campaign?
- How about a higher profile Get Outdoors campaign?
- Please BE BOLD in behalf of having a future!
- Help us fund Nature in the 'Hood' programs.
- Promote national values other than materialism, instant gratification, consumption. Don't shy away from helping U.S. recalibrate its fundamental values and how wealth, success and wellbeing are measured. Help us leave a fundamentally different legacy than the one we have now.

Please tell Obama to REPEAL THE P-R GUN TAX, give some of the \$ to crime victims, and STOP STATE WILDLIFE MGMT FROM QUALIFYING FOR IT BY "GROWING HUNTERS"!

Discussion Question 3

Written & Online Comments

(cont.)

Mr. President, conservation biologists will tell you that, in order to ensure species long-term survival, these wilderness cores must be connected by means of wildlife corridors. You should order that Federal Agencies adopt policies to establish such corridors immediately, and then your administration should work to have these embodied as the law of the land. Furthermore, since many of our key core wilderness areas are beset with potential destructive private inholdings, you should seek funding to buy out as many of these as possible. This does not have to add to the administrative burden of your Presidency. There already exists a very effective non-profit, The Wilderness Land Trust (www.wildernesslandtrust.org) that pursues this goal. They just need some additional funding to make it happen. In the interest of full disclosure, I proudly serve on the Board of Directors of that organization.

LWCF and other federal initiatives should designate a portion of the resources to directly support, where applicable, year-round outdoor recreation and education facilities, programs and activities. Outdoor recreation, environmental learning and nature discovery need to occur year-round.

Rail to Trails connects people to green spaces and supports fitness in a fun, healthy way by allowing folks to bike, run, walk and rollerblade close to home. Enhance the Dept. of Transportation's efforts in converting abandoned rail corridors in suburban, urban and rural neighborhoods across the country.

Support recreational fishing and beginner birding activities. Along with bikes, animals are a great way to introduce kids to the outdoors.

Support alternative and affordable transportation methods to link visitors to outdoors. For instance, our park is accessible by public rail transport - but the last leg of the journey requires additional transport via taxi. Two communities that border the park, on the other hand, were able to secure a federal transportation tourism grant to purchase a shuttle bus to move tourists around the towns. This system could easily serve as a conduit for transporting folks to the park if there were flexibility in the funding/use guidelines, or it could provide a similar transportation grant to significant parks that could benefit from such a service.

I believe that all life is interconnected and wildlife should be protected at all costs.

But designating trails is not enough. We need sustained programs which help fund needed trail maintenance and programs which map trails and make info available to the public -- including info about current conditions. Best tool now is the Recreational Trails Program (see post on this program).

Discussion Question 3

Written & Online Comments

(cont.)

Designation of a national scenic byway or All-American Road is by the Secretary of Transportation and does require the involved municipalities and agencies to collaborate on a corridor management plan to recognize and protect intrinsic values (scenic, historic, recreational, cultural), but the plan does NOT utilize any new federal controls or requirements. Nor does it prevent safety enhancements of the roadway. The goal is for communities and agencies to shape growth and change, not try to block it. And we are now approaching the 20th anniversary of the first round of designations (of which there are now 150+ for some 35,000 miles of road). The results are encouraging. Economic value of the designations is proven by increases in visits and use of the featured assets of the corridors, and local pride and awareness of the corridor value is widespread and greatly increased.

Pebble Mine threatens Bristol Bay's clean waters, wild salmon, wildlife and traditional subsistence ways of life. Public lands in the Bristol Bay watershed should be closed to large-scale metallic sulfide mining. Protecting habitat, subsistence and recreation resources should be the top priority. The federal government should provide strong oversight of the Pebble Mine permitting process and analysis of cumulative impacts to the Bristol Bay watershed. Relationships between federal and tribal governments should be strengthened. Standards for mineral development in wetlands should be tighter. Clean Water Act standards for large-scale metallic sulfide mining should be more stringent.

Again, if you do not like OHV/ATV then partake in the millions of designated wilderness acres. You won't find us there. Who has made the biggest footprint on our beautiful national forests? What about all that fossil fueled asphalt or concrete to build all those roads, you travel on. Wind and time will take thousands of years to cover (not restore) that. But look at the wagon trail ruts left on the Oregon trail, you can hardly find them. The only ones I have seen where on protected farm ground, that the farmer has diligently protected and preserved and that was only a couple hundred years ago. I am all for government policing of OHV recreation. Please donate your tax dollars to any anti-access organization. Or just write a check to the US Treasury and in the memo, write to help police our national OHV areas and to help keep those dirt roads open.

As a struggling ATV enthusiast, hunter and outdoorswoman, I see the benefits of protecting our environment and natural resources. I find it very interesting that today's national forests, BLM and private land is even here today for us to enjoy due to today's environmentalists. Conservation is the answer to improving and sustaining our environment, managing our national forests by continued support from the public from fees charged to access and enjoy the forests not closing the roads and keeping our public lands from the public. I for one am against anymore tax dollars going to our national parks, most of the visitors are from across our borders that have not contributed a dime to sustain. Whereas keeping all our national forests open to the public, foreign and domestic, sustains the state and local economies, not just our government, to be spent in other mismanaged divisions. I have enjoyed the natural wonders and woods of the Pacific NW for over 50 years, I have not seen Yellowstone.

Discussion Question 3

Written & Online Comments

(cont.)

There are many, many ways to enjoy America's public lands while preserving them at the same time. In fact, each promotes the other. Using the land for recreational activities OF ALL KINDS can generate revenue, promote land resource education, and of course provide Americans a wonderful way to relax and enjoy this country. The easy way out to protect our lands is to limit anyone from using it. It's cheap and it doesn't require any thought or foresight. But the reality is that it's not complicated or expensive to find a way to manage public land that allows everyone to use it and preserve it at the same time. There are no lack of enthusiasts who will devote their FREE time and knowledge to this cause. Just give them a chance. This country is at its best when the citizens are involved and managing it at a ground level. Not when bureaucracy and limited interest radical groups are making the decisions.

It is blanket laws and rules like these (declaring wilderness and also the no more wilderness act) that ruin it for everyone. There is no reason you cannot make a rule that keeps oil companies and the like from destroying wilderness areas while still allowing outdoor recreationists to enjoy it. I see some of the good intentions of designating land as wilderness but until it is better thought out and fair I cannot support it. Demote.

Oil companies don't have permission to drill on public land without first leasing that land from the Government. Designating an area a wilderness restricts the government from leasing that land. It also restricts the public from accessing it and restricts the government from maintaining federally funded roads and trails through those areas. As to the decisions of the Bush administration, if you don't want all of our land sold off to oil companies, don't elect a president whose entire family and their fortune are built on oil. When your president (and the majority of his Cabinet) are oil barons, that makes THEM a special interest group. There is a lot of cleanup and damage control ahead of the new administration. Hopefully with a responsible concerned administration, the public land will be used appropriately in the best interest of the public, rather than in the interest of profiteering. If the Obama administration wasn't concerned with appropriate use of public lands then this motion would be very valid, however, seeing that they ARE concerned with appropriate use of our public lands this motion is a stumbling block for them in their attempt to correct the problem. The fact that the current president has launched this national dialog bolsters my hope that he and his administration have OUR best interests at heart. Let's not tie their hands from fixing the problem created by their predecessors.

I know there are several very long hiking trails in this great country. I wonder if there is, or there ever will be, a coast to coast or border to border OHV trail system. Yeah, it might be dual sport and require a plate, but think of the possibilities.

I strongly support and applaud this idea. We need more roadless areas designated as permanently protected wilderness. I am one of the fortunate few: I can walk to a BLM wilderness area near my home in Utah. I wish that more Americans had a similar opportunity.

Discussion Question 3

Written & Online Comments

(cont.)

I think there are two separate issues in this idea. On so-called "below cost" timber sales, I agree that the Forest Service and American public should not be subsidizing or losing money to facilitate private timber company profits. The companies won't bid on a sale that is not profitable, so why should the federal government offer one that is not beneficial for the public interest? On clearcutting, I agree that it is not appropriate in most cases. Even major natural disturbance processes like fire, disease, and high windthrow tend to leave some standing trees and snags across the landscape, and these provide important structure and habitat moving forward. However, there may be some limited cases where small clearcuts may be appropriate, but I would tend to question anything larger than 20 acres.

I strongly support and applaud this idea. We need to protect and restore "night sky" viewing opportunities, especially in urban and suburban areas where there is too much wasteful light pollution at night.

I strongly support full funding for our national parks. With additional funds, I would hope that more NPS interpretive rangers could put on school assemblies or class presentations at urban and suburban schools. And more field trips to national parks by school students would be wonderful. Young people need that connection to our national parks so they will care about them as future taxpayers and voters.

I strongly support and applaud this idea. I would love to see a proposed shortgrass prairie national park be considered. Imagine what it would be like to bring back healthy bison herds, wolves, prairie dog colonies, black-footed ferrets, and much more over a large, connected landscape. There are already many large BLM and Forest Service (national grasslands) shortgrass prairie land holdings in several states. A feasibility study could look at these holdings and assess the pros and cons to determine which overall area would be best suited for a new national park. Many of these areas are currently economically depressed due to low cattle prices and low land values, and the rural communities are losing population. Converting existing BLM or Forest Service lands into a new national park, perhaps combined with some willing seller acquisitions around this "nucleus" to expand the size and make it more manageable at a larger scale, could create a major tourist draw that would bring one or more of these depressed rural communities back to economic and social life. Of course, the locals would inevitably fight this initially, but come to love it later.

Cut the military budget by 75% and use the funds for our National Parks and for development of mass transit and alternative energy sources.

The Federal lands belong to the American people and we should all be allowed to use them within reason. In the west there are several areas closed to Bikers and OHV yet open to Horses and Hikers. Common sense must prevail and the agencies that guard these area must realise that they are there make sure the lands are used in a responsible way only.

Discussion Question 3

Written & Online Comments

(cont.)

Our National Parks in their pristine condition are the greatest treasures that this nation has. They need to be protected from degradation in quality and the wildlife in them needs to be protected and enhanced. In particular they need to be protected from overuse overdevelopment noise air pollution and other threats posed by our overpopulated and industrialized society. decrease immigration and encourage smaller families so that overpopulation does not destroy all the progress that has been made in the past century and which may ultimately destroy our parks. THIS IS AN EXTREMELY IMPORTANT ITEM. HOWEVER IF THERE ARE TOO MANY CHILDREN AND GRANDCHILDREN OUR PARKS WILL BE OVERRUN AND DESTROYED AS THEY HAVE BEEN IN OTHER NATIONS. Remember that our overpopulation MUST be addressed if we are to protect what we have and pass it on.

I am sending this message through an advocacy group that asks you and other decision makers to work to support and maintain our national parks. I am sure you are familiar with that group's very persuasive arguments and you will receive many copies of the letter that was in this window. So I am replacing that message with an idea of my own. I propose a multifaceted "package deal" that would directly benefit families in the lowincome bracket while having a stimulative effect on the general economy and drawing public attention to numerous worthy causes within the government and in the community at large. Please consider offering packets of vouchers to people who have little to spend on personal experience and the broadening of their own lives that would enable them to have these experiences. What I suggest is that the government enable a certain number of recipients from below the poverty line each year to take a "really great vacation" and see some part of the United States that they would normally never get to see. The packet for each family would contain a voucher for rail travel by Amtrak to take them to some exciting destination far across the country. Send for example a family from urban New Jersey to go hiking in Glacier National Park. There are literally thousands of possibilities using the resources of Amtrak lowcost motels and the National Parks System. The benefits would include the opportunity you desire for American children (and their parents) to encounter the great outdoors and see some alternative ways of solving life's issues and living the life we are given. In addition there would be gift shop purchases and ways of spreading the wealth around on a modest scale. The packet would include vouchers for simple healthy meals and lowcost lodging and the enclosed literature would be educational in addition to encouraging the travellers to take advantage of the educational offerings of the National Parks as they exist. As a teacher of career skills to lowincome adults I see many Americans who would benefit beyond what words can describe from an opportunity to go where they have never been before and see a world of new sights and thoughts as a family over a period of 45 days. It would give the children plenty of material for "show and tell" at school and the whole family wonderful memories to share forever. I don't have a clue how such a program would be funded. There may be funds for a pilot project somewhere in some existing program budget. There may be some way for the Congress to provide some seed money to be matched and augmented by private foundations. Or a direct appropriation might be possible. In any event I have thought through this idea at length and am prepared to make a more extensive and detailed presentation. I can be reached at 704.983.5525 and I would be delighted to come and discuss the elements of this package with you and other appropriate persons. Just let me know.

Discussion Question 3

Written & Online Comments

(cont.)

Our National Parks are indeed our greatest treasure. We have treated them like 3rd world citizens and need to step up our care so future generations can share what I have lived. I also believe Senator Tom Coburn is on the right track for what is best for our country. Please heed his words in the following quoted letter: "I agree the financial sustainability of the National Parks Service (NPS) must be improved. Unfortunately however Congress has allowed for the deterioration of the current NPS system through mismanagement and an inexcusable lack of oversight. To reverse course I believe Congress must stop the tide of new parks and programs authorized until we can figure out how to meet our current commitments to these national treasures. While we do not know for sure how much land the federal government already owns we know that it is more than 30 percent of all land in the United States. We cannot keep adding new land until we can sufficiently take care of the land we already own. Our grandchildren deserve better. I have worked tirelessly to improve the management and sustainability of the NPS in order to increase the public confidence in Congress ability to take care our public lands. For illustration during consideration of the Interior spending bill (H.R. 2996 which became Public Law 111180 on October 30 2009) I attempted to persuade my Senate colleagues to set funding priorities for our current national parks and public lands. The Interior bill for instance increased spending for the Department of Interior by \$4.6 billion (16 percent) over last year's funding which does not even account for the more than \$10 billion the department received in stimulus funding. The bill also funded nearly \$400 million for new federal land acquisition while the Department of Interior currently faces a maintenance backlog ranging from \$13.2 billion to \$19.4 billion. The Interior bill also included over 303 earmarks totaling \$244.5 million which siphoned funds from NPS maintenance needs. Despite the millions of dollars of known waste and duplication within the Interior bill the Senate rejected an amendment I offered that would have required certain federal funds intended for land acquisition to be spent to reduce the maintenance backlogs that threaten the health and safety of visitors at national parks and other public lands. My amendment would have saved taxpayers approximately \$263 million and helped to ensure we are properly taking care of what we already own before we add even more land (to see the vote totals please click [here](#)). I also offered a similar amendment that merely prohibited spending on new projects until we had taken care of existing ones (to see the vote totals for this vote click [here](#)). The rejection of my amendments is another example of shortsighted politicians in Washington legislating for their own political interests rather than what is in the longterm interests of our nation. Congress is out of touch with the priorities of the American people. I believe that increasing oversight of the federal government will increase transparency and force politicians and bureaucrats to be accountable to the American public. PLEASE forget the current path of destruction and mismanagement and heed Senator Coburn's words. Work with him. His plan can save the parks from our own politicians.

(cont.)

Thank you for making a commitment to America's Great Outdoors. Protecting our nation's historic and natural resources in the national park system is an important part of our nation's past present and future. It provides a historic chance for present and future generations to learn about the past to recreate and to protect the environments within them. As important as it is to expand those parks particularly in sensitive areas it is important to protect those already there that are threatened by inappropriate development. Gettysburg National Military Park may be the most important historic resource in the nation a site that memorializes a battle where over 50000 men and women were either killed wounded or missing over three days in a battle that likely saved the union from becoming two nations one free and one not. There are plans to potentially place a casino one half mile from the battlefield. The hearings on this project will begin in August and it would be a very important word from you that could stop this project from moving forward. There is only one Gettysburg and we can not take the chance that allowing a development such as this right on the doorstep of american history will affect the character of the area and potentially diminish the impact of the park by harming its allure and special character. I ask that you consider making a statement against the casino and urge that you take the time some weekend while at Camp David to visit there with your family. It may be the most important historic resource our nation has and deserves to be protected from unwarranted projects that may be fine for other locations but not for Gettysburg.

Reestablish the Youth Conservation Corp (YCC). I worked as a site coordinator in the Black Hills of South Dakota for 4 years. The respect for our national treasure and work ethic the youth learned were a lifetime asset to the youth and our nation's greatest treasure. Get the environmentalists out of the way. Due to litigation actions we will lose the entire Rocky Mountain Forest because of the pine beetle infestations. The forests are not healthy in large part because the National Parks have not been managed as they needed to fight the infestations. The regulations will not allow any cutting of standing trees. The forests needed to be thinned for the past 20 years and have not been due to absurd litigation by environmentalists. Mr. President take on those that are not allowing the professional park personnel to do their jobs.

I use our national parks. They require more funding and allowing each park to retain a portion of its fees for park improvements is a great idea and long overdue.

Discussion Question 3

Written & Online Comments

(cont.)

A centerpiece of the "America's Great Outdoors" Initiative should be affordable access to and thoughtful preservation of our nation's great playgrounds and classrooms our national parks. Fees for national parks are already prohibitive to many people. In fact my 20yearold daughter just returned from a longplanned for and hardearned road trip to Alaska volunteering on organic farms studying flora and fauna and camping her way to the Artic Circle. It was disheartening to hear that she spent no time at a longdreamed of destination Denali National Park. With great anticipation she arrived there only to find that in addition to the \$20 vehicle/admission fee she had to pay over \$40 for a shuttle bus into the park her cheapest option since visitors' vehicles are barred from entry. While she agreed wholeheartedly with the objective of keeping traffic out of the Park it was akin to extortion to charge Americans \$60 to see the majesty of their own publicly owned lands. On principle she refused to enter. Surely we can provide free or cheaper transportation into this magnificent place and others like it so all may know its grandeur. Park fees continue to rise and those who could most benefit from a free or affordable recreational experience are those least able to afford it. While wealthier families have a host of recreational opportunities available to them poorer citizens and their families should be able to rely on national parks as an affordable destination for day trips and vacations. National parks belong to all of us and no one should be barred from visiting them regardless of income. One suggestion might be to provide a free or subsidized annual national parks pass to families receiving federal or state assistance such as food stamps. While it may seem contrary to the goal of making parks more affordable and thus accessible to poorer Americans accessibility and its oftaccompanied development must be curtailed. Anyone desirous of a truly momentous outdoors experience should be afforded the opportunity; however creating that opportunity should not compromise the very essence of the offered experience. Our national parks are ever approaching an amusement park ambiance with concessions congestion and too much concrete. With greater funding for parks perhaps we could eliminate profitmaking ventures that interfere with a true appreciation of nature and its sublime absence of commerce. We need to adhere to our national parks' mission of preserving our wild spaces. To this end we must limit the footprint we leave on those areas. The most natural way to limit congestion and paving of park lands would be to do as Denali National Park does and make entry into the park communal albeit more affordable than that park's buses. While Americans with Disabilities should be enabled to enjoy our parks paving should be extremely limited so as not to ruin the overarching aesthetic for all.

Teddy Roosevelt will forever be remembered for establishing our national park system and when I think of adventure in America I think of our national parks. I urge you and your administration to take the following actions:

1. Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016.
2. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers.
3. Preserve for all Americans present and future large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage.
4. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives.

Discussion Question 3

Written & Online Comments

(cont.)

You sir are no FDR and no TR. Perhaps after the total botch on financial reform you might try to redeem some of your term by paying attention to the protection of our natural resources and maybe make up for the Gulf spill in part. And reminds us of how the oil companies continue to get away with low and no payments for the country's property.

STOP ALL MINING and FOSSIL FUEL extraction around the National Parks immediately on principle. Clean up all pollution and prevent any future contamination of waters and skies and grounds in the National Parks. Remember people live in some of the parks such as the Havasupai Native Nation in the Grand Canyon. This is their long historic home. Keep it clean and say no to miners and attempt to extract resources there.

Thank you for your leadership in health care global peace climate energy and environmental issues. Please consider the importance of America's national parks in your Administration's agenda. America's national parks ARE America's national treasures and something that all Americans can get behind. Please know that America needs more parks for people to enjoy. In the Las Vegas Valley we're working on creating a new national monument that preserves and protects a significant Ice Age Fossil site an area that will surely provide insight into global warming and cooling periods. Please consider using The Antiquities Act to create this new national monument and bringing new sites into the system that better represent our changing country and protect remaining natural areas before we use them all up. The proposed new national monument in the Las Vegas Valley Tule Springs Fossil Beds will provide a significant wildlife corridor that will link four federal agencies.

we need to complete the parks that were promised such as the Santa Monica Mountains National Recreation Area. We don't want our wildlife to have to date their cousins in order to reproduce in an "island park.

Please remember the importance of protecting our national parks and the many programs managed by the National Park Service that improve our communities.

Approximately 1 million acres of Greenspace are being lost to illegal as well as other immigrants each year. To end this defilement of the environment the illegals must be sent home by removing the jobs magnet with Mandatory Everify as well as curtailing all legal immigration to stabilize our population with careful attention to stop the further degradation of our outdoor spaces.

Our National Parks should be interesting beautiful safe places to take our children so they will have memories of their own. There is no place for guns in the parks system; no shooting ranges no animals to kill no sporting shooting events to attend. Even the rangers don't carry them. What guns do do is make a child's experience a scary one and makes for a worrisky visit for the parents. Please exclude guns from our National Parks once gain.

Discussion Question 3

Written & Online Comments

(cont.)

The remaining parks are impacted with too many people wanting to use them. Camping sites must be reserved six months in advance and even then it is virtually impossible to get campground spaces in the summer months. The park system must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country and protect remaining natural areas before we use them all up.

Please increase the funding for the National Parks; make them a central pillar of your "America's Great Outdoors" initiative.

Consider protecting the soundscapes of the national parks as much as possible. It is terrible that there may be as few as three places in the US (including places in the backcountry) where there is uninterrupted natural silence for at least 15 minutes. Limit overflights with small planes/helicopters and persuade the FAA to change the three or so flight paths near Olympia National Park so that one park will preserve natural sounds. This is important both for people and for wildlife (especially diminishing populations of songbirds).

At the very least please evaluate and engage in restoring the National Parks we already have.

In the spring of 1980 my husband and I canoed the 100 Mile Waterway in the Everglades. The thought of oil seeping into the park is sickening. This is fragile territory and the main water source for Miami. I am very disturbed that Yellowstone's wolves are being killed. Those are my wolves since I am a taxpayer. The famed Cottonwood pack brought thousands of tourist dollars to the area. Now they are gone. Bad public policy for sure.

I would like to see motorized vehicles strictly restricted in our national parks. Use electricpowered shuttle buses to move people around. There are too many roads in our parks now and the roads are destroying wildlife habitat interfering with wildlife being able to get to feeding areas and keeping them from their normal range. Motors do not belong in nature! Don't bow to the lobbyists from the jet ski manufacturers and the snowmobile manufacturers and the dirt bike and ATV manufacturers! These motorized "toys" destroy the land erode the land terrorize and stress wildlife and very often kill wildlife and totally wreck the wilderness experience and the peace of nature! As an older worker who has been unemployed since 2007 I will soon be living out of my backpack and I will depend on the parks for places to pitch my tent which will be my sole shelter.

I encourage you to support and uphold citizen and public interest efforts to continue securing and preserving national parks and national forests and improving ways of introducing urban and suburban youth to them so the resources can be preserved for future generations.

Discussion Question 3

Written & Online Comments

(cont.)

I am an active National Park and Seashore user and feel strongly that there is a strong link between a strong and well funded National Park System and the America's Great Outdoors Initiative ("AGO"). I applaud the administration for their efforts to promote AGO and when I think of America's Great Outdoors I think of our national parks and seashores. They further engender personal reflection in an increasingly fastpaced and digital culture.

Please save our wildlife sanctuaries especially the one in Arizona that the smugglers use.

Being a biologist a member of Concerned Scientists and a long time teacher I think our national parks. This money should definitely be spent quickly and as originally promised to support parks seashores forests and waterways across the country rather than just another broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise.

National Parks are more than a place of pretty sights and wild animals they restore our soul and make us better people. They bring us to places we've never dreamed of even if it is our 16th visit in the same park. We started this great idea of setting aside land for the People now we need to show the world our pride in our beautiful country and how amazing this land really is.

Our parks are treasures of the earth that we must preserve and protect so that our children's children's children can enjoy them like we have. We depend upon the balance of the entire earth ecosystem for our survival. Keep our National Parks. User fees are fine to help but the country must support the basics of the land.

America's national parks are in deep trouble. For the last 30 years the system has been grossly underfunded the only thing that prevents its collapse is volunteers (like my wife and myself). Delayed maintenance and understaffing combined with overuse are causing the parks to decline they won't survive another century of overuse and abuse.

I am thrilled when I see that you are taking your family to see our national parks. Presidents and citizens have worked very hard to preserve these areas for future generations. Please provide funding and legislation to ensure the parks will always have an important place in our country. Protection from oil and gas companies is especially necessary at this time. As added notes of concern the BLM should not be allowed to continue the mistreatment of the nation's wild horses. The cruel roundup and/or selling of these animals to end up at a slaughter house in Canada or Mexico is totally unacceptable to many Americans. The Yellowstone bison should be allowed access to natural migration corridors especially during the spring birthing season. Hazing of the bison by government agencies influenced by the cattle industry must stop. Americans care about the future of these incredible places and wildlife so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. I would welcome the opportunity to talk to you about these issues.

Discussion Question 3

Written & Online Comments

(cont.)

When we went to the national parks in Utah it was my first time. I was truly awestruck! Words cannot describe the amazing beauty of these places. Please continue to invest in them.

I am very concerned that we are not appreciating the value of our national parks and hope that you will do anything you can to support and nurture our park system everywhere.

Please rescind the recent legislation allowing for concealed weapons in National Parks. This is an affront to the very meaning of National Parks and poses a serious danger to people and wildlife.

This land is our legacy especially now as it becomes increasingly apparent how fragile these lands have become in the face of overharvesting of resources and overdevelopment of unprotected open space.

LEAVE the wild horses ALONE you tool! .

. GET THE GUNS OUT OF OUR NATIONAL PARKS .

Keep the National Parks and related wildlife areas (national forests wildlife refuges etc.) from encroachment by industry and commercial ventures. This is a time to encourage and emphasize alternative energies on already exploited lands so that my and your precious and currently protected lands remain just that protected from exploitation and degradation.

President Obama please bring First Lady Michelle and your two girls to the Great Smoky Mountain National Park! Due to the economy record numbers of people are spending their vacations in this beautiful National Park this year instead of traveling to farther places. Frankly I can't think of a better place to go camping and be so close to the beauty of nature!

Please also work to restore and improve the National Mall in Washington DC so that it will be a welcoming place for visitors and fitting symbol of our dedication to environmental quality.

We have our national treasure the National Parks because of farsighted "average" Americans brilliant visionaries and planners others in high political office. I hope we as a people with the help of our elected officials will always protect and cherish the National Parks not to mention maintain them by every possible means. We all have to do our share to keep our National Treasure available always for all Americans.

So put back the funding that all of you in Washington without exception for either party nor the pork that still flows along with legislation in the nations capitol and RESTORE THE MONEY THAT OUR PARKS AND PERSONELL HAVE DONE WITHOUT FOR SO VERY LONG. It's our country and we are to steward and enjoy it we must care for it and the people who help keep it safe and whole for the people and animals who call it home and visit within it.

Discussion Question 3

Written & Online Comments

(cont.)

Something we don't need in our national parks are motorized vehicles and guns. Our parks should be a place for enjoyment of the natural environment. ATVs etc disturb the peace and beauty of these areas. There are plenty of other places outside the boundaries of national parks where ATV snowmobiles etc can be enjoyed. Our parks should be a safe environment for visitors especially children. Guns bring in the likelihood of violence.

Please ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. Please preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage.

I want to include our "wild Mustangs" in this. They are wandering our public lands and being forced out by the BLM and the cattle ranchers. They need to be in a national park where they will be protected from helicopter roundups. Citizens need an opportunity to see their mustangs running free and protected like the other wild animals that reside in our national parks. Madeleine Pickens has some good ideas with lots of backing from us. Please listen to her.

When I think back to the legacy that CCC gave us in the 1930s I often would like to go back and tell those guys what wonderful places they created. They would be shocked to see the wanton development but could be proud that what they built continues to exist. Let's have a new generation of people who leave a larger legacy of federal parks to honor the work that was done so well. As an outside person I can only say protect the undeveloped areas from wanton greed that is so much a part of the American culture.

Every President leaves behind a legacy. Whether good or bad people will remember what that President did during their time in the White House. I hope that as the current President of these United States of America you will make the right choice by funding our National Parks and helping to continue support for them even after you have left office. Conservation and National Parks may not be at the top of the list for funding but when you think about it the wilds and Great Outdoors go back to the most basic aspect of human life.

National parks fiscally speaking take up a portion of the budget known as "budget dust". To keep these beautiful and priceless pieces of our national heritage alive takes fractions of a percent of the national budget. Their worth cannot be considered on a spreadsheet or with numbers and words alone. They exist because our former presidents and leaders believed in preserving the beauty of this country forever. Let's not sully that preservation with shortsighted budget gouging or greedy corporate pressure to open the lands to their filthy insidious fingers.

Our parks are our future. Please do all you can to fund them.

Discussion Question 3

Written & Online Comments

(cont.)

I have been visiting our national parks for 40 years and just have a few to go before I see them all. My husband and I have taken our 3 sons to many parks and national forests. When they were younger they loved working on getting their ranger badges. The national parks forests and forest employees are what the govt gets right. I have traveled all over the world but I have never experienced the excellent services our park employees provide be it scientific or informational. Please do all you can to make the parks and forests a priority for your children and mine.

Please preserve our National Parks system by providing the funds necessary to sustain wildlife to preserve these lands to maintain public access and to improve public access for our children and our children's children. Our country has many wonderful national parks which my husband and I have just begun to enjoy in our retirement. I would hope that these lands are there for future generations to enjoy and use. Our country's national parks are some of our country's greatest assets. Please see that they are funded adequately to ensure their use for many generations to come. Thank you

President Obama it will be a good idea to set up educational programs that will encourage and educate young people and young adults more about the importance of the environment and how we can all help to preserve the natural habitats and the environments in the communities we live in. Teach us the way to heal the earth especially from the damages done from the likes of polluters and big corporations like BP and chemical factories. There is a calling for more good people to stand up for the environment and good causes that will help people worth fighting for Mr. President Obama.

I recently got to visit three National Parks in California (Alcatraz Island San Francisco Maritime National Historical Park Muir Woods National Monument). Through this visit I was able to put money back into the economy and experience some of the great joys of our National Park System. Despite the crowds it was clear that the National Park System should be an economic priority and should receive stronger funding. I ask you to consider in your next budget strong increases in funding for our National Treasures. I can think of many things that receive funding that are not as high of a priority to the greatness of this nation.

Bring back the Civilian Conservation Corps It will create jobs and help restore America's landscape!

Please protect the beauty of our amazing planet & the beautiful & precious wildlife that depend so much on these habitats for survival. Life is so much worth living knowing places & creatures like this share our home with us. Without these marvelous places on our planet what would it be like? I could never imagine. With so much going on around us it's nice to know we have places like this on earth that are beautiful & peaceful. God created such amazing unique places please let's keep it that way forever beautiful & forever preserved & protected for it is sinful to let it disappear forever. We must always protect the amazing habitats & creatures that the Almighty created for we must always protect his creatures & creations. Let our future generations have places like this on earth to enjoy the innocent precious beauty as we do.

Discussion Question 3

Written & Online Comments

(cont.)

. These places are treasures to me. Let us please not allow them to be underfunded and fall into disrepair. .

. Over the last seven years I have spent most every summer in our great southwest national parks. I have recently taken my two youngest grandchildren out there. They would rather go to a national park than Disney. They earn Jr Ranger badges learn about the environment and recycling and get a chance to explore the great outdoors without much cost involved other than meals and motels. My daughter recently (June) hiked the Grand Canyon from the North Rim to Phantom Ranch and then up to the South Rim. This came about after her first trip to the Canyon in 2008. We need to do all that we can to get people out to our National Parks and get them active in the grandeur of our country. Please help to see that funding is in place for the celebration in 2016. Please do all that you can as our president to insure that these parks are there for your grandchildren and their children.

. I live just down the road from the Rocky Mountain National Park and am surrounded by public land. We are just a couple hours outside of the metro Denver area if that. I don't know how to succinctly convey the importance of public land in particular the National Parks. Public land provides economic recreational health and educational opportunities for a wide range of folks in addition to the habitat it provides for diverse species. However many folks who opt to take a break from the city or their office lives need education about as well as protection from the wilderness. Info centers trails and maintenance education programs toilets! maps and such are all crucial. I have spent some time working volunteering and collaborating with the Park Service and I know that these programs are underfunded as much as they are needed. Please keep the parks for the public!

A President started the National Park Program now it's up to every current President to protect them. . .

. . . I agree with the points stated in this above petition. In Alaska we have many wild places & grand national parks like nowhere else. These need to be preserved for the health of our wildlife and people without the intrusion of industry development and other activities that bring many varieties of pollution that besmirch the natural order we are trying to preserve. In Denali the development inside the entrance to the park takes away from its natural beauty and intact ecosystem found deeper in the park in my opinion. I can only hope this cancer isn't allowed to spread out to any further. Over the years I have witnessed firsthand how this development has created a tacky tack freak show village right outside and inside the park for the sake of attracting people for commerce. This should not be the purpose of our national parks. Even so Denali is a jewel. Let's work to keep that park and others in their natural condition rather than "developing" them.

I would like to see the lease of our federal lands to private interests like cattle ranchers and oil and gas. . .

Discussion Question 3

Written & Online Comments

(cont.)

. Our parks have a way of reaching people who would otherwise not be interested in wildlife and conservation. . We must have more park rangers.

I would also like to thank you for your outstanding efforts and accomplishments in permanently protecting more forest from being consumed for corp. profits. T.R. would be very proud of you.

. The parks are the best way people can get outdoors and they should be protected staffed funded and encouraged to the fullest. .

. . National parks are good investments in our future. Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage. Strengthen the capacity for federal regional state and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife plants and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives. I'd rather my son take his family to the park than go to war.

During the Great Depression when I was growing up some of the older guys signed up for CCC camps. They were a motely group but in a few weeks they were squared away and after that they worked like beavers and made our parks like they are today. My Father in Law was one of them. He told me if it weren't for the CCC he would probably been a bum or in jail. When you are planning for the CCC renewals think about taking guys off the street who have nothing to look forward to and stand back and watch them turn into valued citizens and proud of what they did for their country. .

. Preserve the parks to improve the quality of the air we inhale for life. Preserve the land that our forefathers once traveled for exploration.

. . Many people have trips to foreign nations as vacationing goals but my vacation goal is to visit all of our National Parks. We are so blessed to have had Presidents who have supported our Park system by adding new Parks or by providing the funds to support our present parks. By ensuring preservation of our special lands these Presidents have given the people of the United States a lasting treasure. I hope that you will also consider this approach to ensuring a visible tangible environmental gift as your legacy. Please support our National Parks so that future generations of Americans can enjoy the natural lands as I have.

Discussion Question 3

Written & Online Comments

(cont.)

. . . We were thinking that we couldn't afford a vacation this summer but then we remembered that our national parks are still there for us. We can visit Rocky Mountain National Park for a fraction of a cruise to Alaska and see more breathtaking mountains. There are so many interactive things to do like campfires hikes and ranger managed programs that explain the geology of the Rockies. What would we do without our national parks and the great hardworking people who staff them? Don't underestimate how important they are to our fellow citizens from all walks of life as well as for future generations. Keep them intact well maintained and readily available to everyone.

. We currently find ourselves very concerned about obesity among Americans. Providing interest in the outdoors will also help get people moving. Our National Parks are a very majestic place to exercise and enjoy the company of family and friends. Please consider seriously the advertizing and promotion of all our National Parks.

President Obama National Parks our wildlife (also the abused wolves in Idaho) the beautiful wilderness areas the beautiful water (lakes rivers and oceans) need to be cared for and saved from those who want to profit from them!! President Obama please step up and help us keep people from buying these lands and harming them! We must buy back land that is close to a national Park and has slipped into the wrong hands! We also must protect our wildlife like National Parks so they will not all be killed off by greed! We must protect all of our water from pollution! Our Country America must be preserved for posterity! Mr. President please protect air land wildlife water and oceans so our planet will survive! NO MORE DEEP WATER DRILLING PLEASE!

. Please also protect the animnals that have made the parks their home that is very important to me. .

When I think of America's Great Outdoors I think of the jewel of our National Parks Yellowstone. There is no other Park like it in the United States perhaps in the World. Visitors from all over the World come to Yellowstone to see its wonders and its incredible display of wild creatures who live and thrive within its borders and along its borders. The wolf packs and bears need your help to survive. They are targets the minute they step outside of Yellowstone. There needs to be a designated space so that hunters do not kill these creatures when they step one foot out of the park. Especially when adult wolves are killed their puppies do not survive. I know you have so much that is important on your plate. I hope you do not forget them because if you do they will disappear. Please please keep these animals on the endangered species list. With all due respect Secretary Salazar is a rancher and bows down to ranchers wishes especially when it comes to wolves and bisons. Let's hunt what we eat...not what we stuff. Yellowstone is a special and enchanted place and for me and for thousands of others. Please save the animals so that our children and grandchildren can witness the incredible beauty of this special place and the magnificent wild things that inhabit it. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

Discussion Question 3

Written & Online Comments

(cont.)

I think our national parks are to be used and treasured. When I think of our country I like to think that we respect our beautiful parks...and even more importantly our wild horses that are struggling to live free...without the horrific round ups by the BLM!!! These horses were supposed to be able to live free under a 1971 law...that was sneakily amended by a Senator Burn and a Senator Reed!!! President Obama you promised no lobbyists in your cabinet....but Kenth Salazar was a cattle industry lobbyist!!!..This is a national disgrace!! When are you going to live up to what you promised...and do what the people want?!! When word gets out what the BLM has done and still plans to do the American people will be outraged as am I !! ..

. Americans care about what is left of our beautiful horses roaming free...a symbol of our free country and a lasting treasure of our heritage! How could we betray these beautiful animals...all for the greed of special interests!!? I expect you to take action in this matter.

I believe one of our greatest national treasures are the many beautiful National Parks that we have here in the United States. My parents never had a lot of money but we had enough to take a trip to a national park when we got the chance and I believe that is what taught us to understand our great nation a little better. I have seen some of them when young and full of wide eyed wonder and I have taken my own family to see as many as I can and again even as an adult I stand in wide eyed wonder at their beauty. Now I want my grandchildren to be able to make these same trips to see the parks in their time. With this anniversary coming up for our National Parks please take the time to recognize the importance of our wilderness Land management areas and National Park areas for the wild animals and for the wonder in each and every one of us. I feel we need to focus our attention to the National Parks Land management areas and wilderness areas and ensure we maintain their future. Americans need to get out and see their beautiful country more and marvel in the diversity and yet harmony of it all. I wish everyone had the opportunity that I have had. I don't even mind that I may never leave the United States to see other countries as there is so much wonder to see here in our own back yard. The national Parks Conservation Association has worded some points below that I would like you to review. . This money should be spent as originally promised to support parks sea shores forests and waterways across the country rather than just another broken federal promise.

Discussion Question 3

(cont.)

Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. I am currently volunteering in a national park because they do not have funds to hire workers to do all that needs to be done there to preserve the park for future generations. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. We don't want private land in parks being developed in inappropriate ways that detract from the park. Preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage. Strengthen the capacity for federal regional state and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife plants and rivers beyond park borders. this plan can be winwin for all involved. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives. If kids don't get into parks they won't know to take their kids to our parks. This will erode the support for national parks. when they are gone they will be gone forever.

I remember the first time I went to a national park and saw the beautiful Sequoia Trees in California. There was almost five feet of snow on the ground and this magical canopy of green and white was supported by these majestic redwoods. It was so amazing and has inspired me to see as many national parks as I can. I plan to see Shenandoah and Great Smoky Mountains National Parks this year bringing my total of visited parks up into the teens. I have a long way to go but we need your help to ensure that I and generations after me have the ability to see these one of a kind places.

Get private enterprises out of the parks! These profiteers care only about the bottom line massive executive bonuses and of taking advantage of whoever they can as much as they can in essence they are parasites. Ronald Reagan handed over parts of our National Parks to these corporate interests in the 1980's and now it is time to cleanse our National Parks of these corporate parasites for good.

Instead of continuing to extend unemployment how about attaching some public service to the extended benefits? Remember the great work done by the CCC? Our parks need help!

With Teddy Roosevelt as a great outdoorsman and Park proponent the support for National Parks should cross both major political parties. . . .

Your administration needs to take the following steps: Recreate the CCC jobs that worked so well during the Depression and use those workers in national parks monuments wildlife refuges and conservation areas. . . .

We need more public access to seashore locations like Acadia National Park and the Cape Cod National Seashore along with all the items noted below. . . .

(cont.)

Please help save our park lands for future generations to enjoy and for the preservation of animal species that dwell within them. This is part of the American Heritage.

My husband and I just returned from Alaska where we spent several days in Denali National Park and in Wrangell-St. Elias National Park. Since I was ten years old my family and I have often planned our vacations around our country's beautiful national park system. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. We ask you to please take the following steps:

Dear President: I'm 65 years old now and still visit America's National Parks several times each year. On many occasions I take my grandson and his friends. I have visited just about every park since I was a kid and they are absolutely vital to preserving the essence of America the Beautiful and they must not only be protected through sufficient funding but must also be expanded wherever possible.

p.s. I was so happy to know that you and your entire family headed out to Acadia National Park recently. I am an ardent supporter and donor to our National Parks and happen to believe that they are certainly our most precious natural resource. I will be so appreciative as you pursue every action within your power as our chosen President to see to it that they are honored and preserved for our children and grandchildren. Bless you Mr President for your recognition and demonstration of the value of our precious National Parks.

Please support our parks.

ALL THE ABOVE IS A DREAM WHICH I ENDORSE HOWEVER WHAT IS NEEDED MORE THAN ANYTHING IS JOBS....JOBS....JOBS JOBS...WHITH OUT THEM THE AMERICAN PUBLIC CAN NOT HAVE THE REQUESITE INCOME TO USE OUR PARKS. THERE FORE IT IS ESSENTIAL THAT PARK BUDGETS BE MORE WAR TIME LIKE REALISTIC TO CUT BACK EXPENSES F WASTE EXCESSIVE FAT TO INSURE THAT FUTURE GENERATION AS WELL AS CURRANT ONE WILL HAVE ACCESS AND NOT FIND GATES LOCKED TO THEM. THE ABOVE APPLIES TO STATE COUNTY & CITY BUDGETS FOR SURE AS WELL!!! I MAJORED IN RECREATION IN COLLEGE AND SEE A LOT OF WASTE IN THE PRESENT SYSTEM AND I HAVE BEEN IN SERVERAL PARKS IN THE WEST EAST AND CENTER OF AMERICA. WE NEED TO GET OUT DEBT FIRST BEFOR WE SEEK SELFISH NON PRORITY THINGS!!!! ATG AGE 78 YEARS OLD....IS SEE CLEARLY WE ARE HEDDED DOWN A VERY LARGE DEBT COURSE WHICH IS NOT SUSTAINABLE!!!!

All of the above is true with the exception that YOU CAVED IN TO THE NRA and allowed a ryder to be attached to the Credit Card bill that allows LOADED GUNS that can be taken into the parks by any visitor. I would be loathe to walk the trails or camp now in these beautiful lands. WHAT IS THE PURPOSE OF LOADED GUNS except to KILL wildlife and people (accidentally of course) in the case of persons. WHAT AN ENDING TO THE LEGACY OF THEODORE ROOSEVELT'S HARDEARNED WORK TO PRESERVE ALL THIS FOR GENERATIONS !!!!

Discussion Question 3

(cont.)

President Obama I know you and your family recently visited Acadia National Park in Maine and I share your deep appreciation of the many treasures our National Parks contain. Please act now to protect and preserve this precious natural heritage; I know the National Park System is severely underfunded and I would hate to see harm come to these sacred places because of our collective neglect.

We are counting on you to do the right thing with the wildlife and the environment.

After visiting Acadia National Park over the weekend I hope you will continue to put strong funding toward our national parks. They are our legacy to our children and future generations.

With our children we have vacationed in some of wonderful National Parks. Yosemite Grand Canyon Bryce Zion are some of them. It was a great experience we all treasured. We must protect our natural treasures for the next generations to enjoy. THIS IS OUR LAND. We must guard it well. Please do what you can to help

Please save our National Parks for our kids to enjoy as well as yours. Thank you

No more wilderness areas please. We need a moratorium on locking more land away from young and older Americans. Wilderness areas REDUCE access by all but the extremely able-bodied and even some of them cannot reach the interiors of many of the newer so-called wilderness areas and national parks like Death Valley NP.

We care about the future of these incredible places so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

Our National Parks are the last of the great places in this once pristine country. Please do whatever you can to preserve and enlarge and increase the numbers of these wonderful places.

We do care about the future of these incredible places so they will also be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

I am very concerned about the possibility of a casino very close to Gettysburg National Military Park in Pennsylvania. It is a travesty and brings dishonor to our country to allow such a thing to happen. I hope your administration the Park Service and the National Trust for Historic Preservation will speak out clearly that a casino does not belong anywhere near Gettysburg

Discussion Question 3

(cont.)

Through the 71 years of my life I have visited many of our National Parks and Forests. I am convinced that they are not only wonderful for the obvious esthetics and food for the spirit but also for a greater understanding of the earth and the vital need to protect it for future generations. I encourage you to do all that you can to protect and enhance our parks and our eco systems to ensure that future generations can reap the benefits of their good care. The National Parks and Conservation Association has developed a list of several needs for the preservation of this system. I encourage you to put that plan into place.

Please evaluate and consider new sites to bring into the system and protect remaining natural areas before we use them all up.

We have seven grandchildren and want them and all of their generation to be able to enjoy our national parks as we have and their children as well. These are resources for the mind body and spirit and our greatest national treasure. Please take all steps to protect our national parks and to conserve them for the future. Our national wildlife is a second treasure; we have been at best negligent in providing habitat and corridors so they may live in peace with human beings. Finally the economic benefits of preserving our living natural resources plant and animal are huge. It is foolish and shortsighted not to take that into consideration when considering conservation and preservation issues.

We have a great many troubled youth who could use the discipline and income working in our National Parks. Why not take the CCC as a model to put our youth from broken homes jails homelessness and a life of desperation and give them an opportunity to work and live in the great outdoors. This will give them the character to help straighten out their lives and make a contribution to society and have a decent income to build a useful life. Not only will such a program restore the health of our youth it will benefit our parks which Americans care about now and wish to preserve for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and restoring our youth to mental and physical health.

I grew up in California 70 years ago when you could eat any fish you caught in a stream camp in most any open area drink any snowmelt water in the mountains and enjoy the wonder of nature and wilderness not that far from your cabin door. Most people live surrounded by concrete and asphalt nowadays and the national parks are the only way they have of connecting with our planet our home our common womb. Not only do they provide family entertainment and vacations education climate moderation beauty and spiritual renewal they cannot be 'revived' in the future if they are destroyed now. Just as the Conservation Corps helped provide work for many and preserved the outdoors for posterity we need current programs that protect and preserve our parks in this generation.

(cont.)

I used to run a large afterschool program in Los Angeles County for the University of California Cooperative Extension (4H ASAP 19892002). The program served children living in public housing in the City of Los Angeles and in the County of Los Angeles. There was and is a huge need to bring inner city children to our state and national parks and I did my best to come up with ways to make this happen. However transportation costs made even day trips to the Santa Monica Mountains National Recreation Area almost impossible. I was never able to pull off even one trip to the nearest national park Joshua Tree a place I personally love and visit often and this is something that I still regret. Metropolitan Los Angeles is a vast ugly unnatural environment that is hostile to healthy child development. No after school program has the resources to address this. Only dollars for transportation and overnight accommodations that would allow these programs will help make a difference.

I love our national parks and have visited many of them over the years. But now I would have serious second thoughts about going into our parks because people are allowed to take their guns when they visit. I would not feel safe knowing that someone could be shooting at targets wildlife or even people. Where there are guns there will be killings. My husband and I feel so unsafe in our country now we're talking about leaving. It saddens me greatly that a country with so much wealth and potential is in some ways spectacularly backward. We squander our resources spend billions on wars instead of education and health care and are rapidly heading towards a fully armed populace thanks to the Supreme Court. At times with John Roberts calling the shots I feel like we still have W in the White House. He seems determined to turn our country into one run solely by corporations and right wing groups like the NRA and the rest of us the majority matter not. Give us back our national parks gun free and well managed.

National parks play an important role in connecting people to the outdoors. I fully support increased funding for our National Park System and oppose allowing concealed weapons or loaded guns in our national parks. Our parks should be a place of peace and quiet as well as a safe haven and refuge from our everyday stresses.

When you took office my wife cried with joy. Though a lifelong Republican (a real one not one of these greed mongers and pretenders) I found myself thrilled and expectant. As a teacher I know what it is to have great hopes and expectations and then to come to earth and accept reality for what it is. I have gone through it every year for the last thirty. It doesn't mean you must face disappointment you simply must realize that most change is slow nearly imperceptible. However the ruinous greed and wholesale plundering of America has gone on now for far too long; someone must say "It stops! We begin change now!" My wife and I had hopes your election signaled that the process of reclaiming America might begin. Protecting the rights of Americans should be the job of the government and ensuring that everyone has equity in this complex world is a difficult job but a necessary one. And it is your job. All Americans deserve the same protection the same opportunities and the same ability to dream. Saving the wildlands and National Parks of America from exploitation is just one of the things that you can do to see that the promises of your campaign are realized. And it is one step toward that change so many of us desire.

(cont.)

I care about the future of these incredible places so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities.

I don't know how to express to you how valuable the national parks are to me. They are places of such beauty and peace and they are truly our greatest treasures. I know that your administration has restored funding cut by the Bush administration and I am very grateful for that. I hope that you will continue to support our parks. Among other things I urge you to fund the Land and Conservation Fund and to begin spending the money in it which has been building up for years unused. That belongs to the people and should be used to restore and maintain our parks.

My wife and I are retired. The highlights of every year are our visits to National Parks. Please do everything you can to keep the Parks strong and effective in continuing to bless our people by their preserved presence and vitality. The struggling bison of Yellowstone Park cry out for life.

America's national parks are incomparable treasures. Sadly years of delayed maintenance and cries for privatization have weakened this great system. I urge your administration to take the following steps: The administration should prepare our parks for their next century.

Thank you for all that you are doing for this country and the environment. I add my voice to the many thousands of others who urge you to continue to support our national parks.

I am writing to urge your administration to preserve and expand our National parks program. As a native New Yorker I have benefited from the parks in our state enormously. There is the Statue of Liberty the Montezuma Wildlife Refuge and the Delaware River all of which I use regularly. I am most concerned about preserving the quality of the water in the Delaware River. Gas drilling threatens to spill impurities into the waters. After the disaster at Deepwater in New Orleans we have an opportunity to husband our wondrous natural resources including clean waters beautiful lands and healthy environment. I would ask that the advice given the National Parks Second Century Commission be taken seriously with regard to critical habitats especially freshwater and marine areas and that corridors connecting protected areas with broader wildlife ranges be conserved to ensure the ecological integrity and longterm viability of national park ecosystems. This money would come in very handy in supporting parks seashores forests and waterways across the country.

Also think about banning ATV's and Snowmobiles in the parks because most of the most precious critters in those lands can't outrun machines. This is not a video game or cartoon that the squashed come back to life they are dead and gone forever. I have visited most of the parks in America a long time ago and the experience was truly life changing. If you don't believe me then go to them and see for yourself!

Bring back the CCC!

Discussion Question 3

(cont.)

I urge you to champion the protection these places deserve.

Remember you are our green president our future for the earth.

And don't destroy them by logging or drilling for drops of oil.

And finally PLEASE do not allow a casino to built on the hallowed ground of Gettysburg.

Please set an example buy visiting the parks with your family and letting the country see you doing it.

National parks play a tremendous role in helping my children appreciate the great outdoors. This summer we were able to travel to Zion National Park Bryce Canyon and The Grand Canyon. Without national parks a great American treasure will be lost. PLEASE use the power of your office to preserve what now belong to All Americans. Keep to as public land for all to enjoy learn from and share.

Please remember the importance of the wildlife like our wolves. More elk caribou deer moose means less trees.

PLEASE HELP US PROTECT WILD ANIMALS AND ECOSYSTEMS FOR FUTURE GENERATIONS!!

Do the right thing. Insure that our Nation's Parks our American history are cared for and loved and preserved for our childrens' children.

There should also be someone in charge of making sure monies is equally divided so 'conserve' wildlife there is much going on that is unjust.

Lastly Americans need jobs. The Natl Parks need serious TLC. How about a conservation job corp? It's not original but a great idea for now!

I BELIEVE THAT YOU NEED A MORE RESPONSIBLE CABINET TO ENSURE RESPONSIBILITY IN OFFICES OF THE ECONOMY ENVIRONMENT EDUCATION LABOR SECURITY AND TECHNOLOGY

Stop the killing of species that should still be on the Endangered Species list. The Mexican Lobos population is down to 42 wolves thanks to your Administration's policy.

(cont.)

I am from WA state and enjoy visiting the national parks here. When I think of America's Great Outdoors I think of our national parks. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. I have visited many parks in the west and hope to see more of our national parks throughout the country. Our national parks are one of the best ideas this country has ever had. We need to protect and preserve them in every way! I know many Americans visit them but there are still many who have never been to one thinking it too expensive or not worth the visit. This image needs to be changed. Every American should feel welcome in our national parks and every American should be encouraged to help preserve them. Young people especially could benefit from working in them. Another effort like the CCC could help restore and maintain trails and buildings an area where young people and newly unemployed people could be hired to work. Please consider this and all the ideas for maintaining our country's true treasures our National Parks.

There are so few places in the big beautiful country where we can feel and enjoy NATURE in all her glory...please help us keep this important and vital resource to help us know the wonder of our lands.

National parks are good investments in our future. After all is said and done the disappearing National Parks could be just a memory and the culprits that much richer. We as a species are selling our heritage future and lives to people that only care about their immediate comfort on this planet. Rampant kickbacks and payoffs are dealt with and ignored on a scale that is an embarrassment to us as a nation and a people. From the Amazon to China to our own parks we are killing our planet at an alarming rate. And all that is said is "We must do something!" When legislation is passed the usual timing on it is 10 to 12 or even more years before it's implemented. By that time it's forgotten and the government has gotten another one over on the American people. But the real consequence isn't just felt by the common people....it will also be felt by everyone that was involved in passing the lie. I have absolutely NO faith in the human species to suddenly come to it's senses and say "Enough is enough!!!" We are far too simpleminded and greedy for such an advanced thought as that. People are stupid and lazy as a species. They believe that some invisible man will come out of the sky and save their insipid asses. By the time they realize that it's been a lie for centuries it will be far too late. They will be praying to an empty sky wondering why their invented god didn't save them! I guess we're doomed.....I could go on for hours about it but I'll stop here. Please come to your senses and save our planet..... s.

Our national parks are the best thing the American people have ever done for the generations that follow. Period. We need more land devoted to preservation. May I suggest the Christmas Mountains in Big Bend Texas. The idiots in office here are trying to sell them.

When I think of unemployment insurance I think that everyone who receives unemployment insurance needs the opportunity to 'work' or 'volunteer' for our national parks! .

(cont.)

Listen to the American People and renew our national parks by providing permanent funding for the Land and Water Conservation Fund. We LOVE our natural places of beauty!

We believe our parks are one of the best programs ever initiated in this country and hope you will offer strong support to their preservation and revitalization. Thank you.

. PLEASE BRING BACK THE CIVILIAN CONSERVATION CORPS. It's the kind of jobs program we need. It did good lasting work brought people together and helped stimulate the economy. We need it again.

Please hear my plea. The health of man depends on the health of the world around us. Please do all that you can to ensure a quality experience for all that want to visit a national park.

People like me with limited income enjoy our only vacations at our national parks. They have fallen into great disrepair in the last decade. Please save the regular peoples parks and make protecting these wonderful wild places a priority in your budget over oil co. tax breaks.

. DO NOT ALLOW ANY CORPORATE PROFITEERING for Natural Resources Within park limits. These lands MUST be safe healthy ecosystems for ALL to enjoy and have access to NOT just corporate pillagers!!

. Every school child should have the experience of at least one field trip to a National Park. This would be the start of a life long love affair and stewardship of the environment that is so precious to all of us.

. Protect and nurture the last wild buffalo herd one of our national icons in Yellowstone Park. Stop the hazing and killing of them; let them roam free; support Buffalo Field Campaign and their important work!

. Through the Sierra Club the American Hiking Society and the North Country National Scenic Trail I have served on many a "volunteer vacation" doing all kinds of trail maintenance flood restoration "bogwalk" building...you name it. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year. If not now...when? If not you...who?

. Promote the Passport to Your National Parks program and the accompanying children's booklet get kids involved and challenged by learning about and visiting the different parks and becoming aware of all the places America has to offer and needs to maintain so they are there for future generations. There's little sadder than going to a place you visited as a child full of wonder to find it's now roped off and separated from visitors. Invite them to do the same as your family does visit a different park in a different section of the country each year. Our family trips to many of the National Parks when I was young and then with my own children remain some of my most cherished memories and gave me my love of the outdoors.

(cont.)

The National Parks system is truly a treasure. Please please please reverse years of neglect and outright hostility toward our parks from greedy self-serving Republicans and fully fund and protect OUR parks. . . .

. Please take the following steps: Renew the CCC and WPA in addition to extending the funding for the unemployed. Offer the unemployed a "wage" for maintaining and updating the National Parks. See BELOW!! . . . These funds could be used to establish OBAMA'S CIVILIAN CONSERVATION CORPS and OBAMA'S WORKS PROGRESS ADMINISTRATION!

National parks help preserve the remaining natural world as well as the cultural diversity of our nation and contributing to the health of our people. First I want to mention the most important thing of all please do not allow anyone else to construct roads in the many roadless areas of our forests as it allows parks destruction in the future for economic value. And please enforce the construction of small passage ways beneath our roads connecting our few prestine forests that way wild life is not killed crossing the road or get mixed up in our city life.

. Protect the Wildlife that lives within the parks and forests. Keep endangered speices on the Endangered list. Track down and punish to the strictest letter of the law all poachers polluters and crimminals who attempt to harm wildlife and/or it's sanctuary.

Bush cut the budget in favor of bigger profits for corporations. This needs to be fixed and you can do it. Ken Salazar should never have been hired. Mr. President one of your big mistakes. We need an environmentalist in that job. Thank you. . . .

As a child I had the good fortune to spend lots of time with my grandparents. My grandparents told me how the WPA and the CCC saved a jobless generation and our national parks and forests and other public assets. We need the WPA and the CCC once again! . . .

I absolutely love visiting our parks they are a precious commodity and should be protected at all costs! Anyone can afford to go nature is wonderful and good for people in so many ways and we need to protect the nature that we have left. We cannot continue to abuse our land! . . .

I love our National Park system. I go to them any chance I get. Since I've been in all our 50 states that adds up to a lot of parks. WE NEED THEM. TAKE CARE OF THEM. They may be the only places left in this country to see something natural we pretty much destroyed a lot of the rest. . . .

RESULTS BASED ACCOUNTABILITY. IS THE NATIONAL PARKS PROGRAM WORKING?? YES IT IS !!! THAT'S WHERE THE MONEY SHOULD BE SPENT. ARE THERE PROGRAMS IN THE FEDERAL SYSTEM THAT ARE NOT WORKING?? YES. IF THEY ARE NOT DOING THE JOB THEY ARE SUPPOSE TO DO CUT MONEY THERE. IT CAN BE A SIMPLE AS THAT. . . .

. Stop letting the influence of big oil and therefore ORV's and the ever insidious boating community take over more and more of the land necessary to preserve biodiversity and PEACE! Get rid of driving on beaches and force the need for a local economy composed of electric buses or the like to transport folks TO the beach not ON the beach! . . .

Repeal the law that allows guns in national parks. This was and is a horrible idea; guns are the antithesis of what an experience in a national park should be. The recent episode where 2 people were killed one on each side of a dispute in a national park makes this point in the most obvious and tragic way.

Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. Improve opportunities to use our national parks to get kids into active healthy outdoor activity that will help them lead long healthy lives.

Hi Mr. Obama I still think you are the best president ever. But I have a request for you. We need strong national parks to preserve our country's true heritage and most of all to give us all a place to treasure the wonders of nature. We need a place to take our kids away from computer games and into REAL life.

Understand that though Americans may be too busy trying to find work or just too broke to travel we love our National Parks. A paid conservation corps would be useful to give unemployed citizens from the middle and lower economic classes experience jobs AND the ability to get out into the parks to take care of the areas we want to preserve for coming generations.

Our National Parks need the immediate help of the Administration. Having had the opportunity as a young man to work in a few of them and having visited several of them in later life I am fully aware of their importance. I am also aware of the need to maintain them financially and the great need to upgrade the infrastructure. I would urge your administration to take the following steps: Take the advice of the National Parks Second Century Commission which is a group of well respected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century. Take advantage the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new publicprivate partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation.

TAKE THE INITIATIVE TO PRESERVE RAIL TRAILS AND RIGHT OF WAYS FROM BEING BROKEN UP SPLIT AND SOLD OFF. FORMER RAILROAD BEDS HAVE BEEN LOST FOR PUBLIC USE IN FAR TOO MANY TOWNS ALREADY. ALSO BIKE TRAILS NEED TO BE BUILT OR ROADWAYS WIDENED TO ALLOW FOR BIKERS. I realize these things are mostly state and locally controlled but the Fed. Govt. could offer incentives and aid.

Preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage. We were finally able to travel to Yellowstone and what a truly great treasure we have in our National Parks. I cannot imagine no longer having the wildlife and ecosystem available to the citizens of this great country.

. Our family has used the National Park System for 45 years! Our grandchildren are beginning to see the importance of conservation of ALL living things by visiting our National Parks. We make sure they are subscribed to a children's nature magazine that emphasizes these ideas. Any thing that you can do to enlarge our Parks educate young and old alike there and conserve every inch of precious ground would be our greatest gift to them! .

When I think of America's great outdoors I am grateful that my parents introduced me to our national parks at an early age. Your administration would help Americans become better connected to our natural and historical heritage by taking the following steps: Consider the impact of noise in the national parks. One snowmobile in Yellowstone one logging truck in Yosemite or one oil exploration vehicle in Denali are each one too many. The noise from one vehicle can spoil the enjoyment of many visitors not to mention frighten some of the animals the parks were meant to protect. Heed the advice of the National Parks Second Century Commission a group of wellrespected individuals who spent more than a year developing a vision for how to protect the parks and connect Americans to them in the next century.

. We have visited many of the National Parks over the years and have enjoyed the scenery and the Ranger talks. We have been sad to see the lack of funding for the parks which has limited the number and scope of what the Rangers are able to do. Please help by providing more funding to maintain the parks and hire more Rangers. We truly enjoy camping at the National Parks and hope to continue doing so in the future. Thank you for your consideration. .

Since this stupid "War on Terror" is making the rest of the world unsafe for Americans I think investing in parks is a good idea. Cut about 30% off the war budget and give it to parks. Take another 30% off the war budget for healthcare since I can't and never will be able to afford it myself. Don't try to say the gov will help me cuz that's not what you are about. You are all about helping the corporate elite. . .

HERE IS A LETTER THAT I SENT TO MY REPS EARLIER TODAY:

Dear [Decision Maker]: Please support funding for the Land and Water Conservation Fund in the oil spill response and energy package that is expected to be on the floor next week. I care about the future of our national parks they will be better protected in the long term if this provision is adopted by Congress. PROTECTION OF NATURAL RESOURCES IS ABSOLUTELY ESSENTIAL. EDUCATION ABOUT THE CARE AND MANAGEMENT OF THESE RESOURCES IS ABSOLUTELY ESSENTIAL. OUR CHILDREN AND GRANDCHILDRENS' FUTURES DEPEND ON IT. THE LONGER WE WAIT TO ATTEND TO THE SAFETY OF OUR RESOURCES THE HARDER IT IS GOING TO BE TO FIX PROBLEMS IF THEY REMAIN FIXABLE. THE PLANET IS BECOMING ONE BIG GARBAGE DUMP AND SOME OF THE "TRASH" i.e. TOXINS LEFT IN THE GROUND AND WATER RESOURCES MAY NEVER BE RECOVERABLE. NANO PARTICLES OF THESE CONTAMINENTS ARE ALREADY FOUND IN FETAL BLOOD SAMPLES AND FOOD SAMPLES AROUND THE WORLD. THE POTENTIAL BRAINDAMAGE LET ALONE OTHER DAMAGE IS ONLY GOING TO ADD TO THE FEDERAL DEFICIT AS THIS WILL LEAD TO A DRAIN ON THE MEDICAL COMMUNITY AND SOCIETY AT LARGE BY THE NEEDS OF "TREATMENTS" TO ADDRESS THIS POISONING. This legislation will guarantee that a portion of revenues from offshore oil and gas leases are appropriated as originally promised for the protection of our national parks forests wildlife refuges trails rivers and recreation areas as well as grants for state and local parks and recreation. For too long the promise of balancing resource extraction with resource protection has gone unfulfilled. The chronic underfunding of LWCF has meant \$17 billion collected from the profits of oil and gas companies has accumulated in an account in the federal budget but is being spent on purposes other than those originally promised conserving our precious natural and cultural resources for our children and grandchildren. It is time to keep the commitment about how those funds should be spent. This legislation provides a deficit neutral way to finally keep this promise to the American people. The Gulf of Mexico oil spill illustrates the wisdom of the Land and Water Conservation Fund's design. In exchange for the environmental risks inherent in developing finite offshore oil resources AS WELL AS LANDBASED RESOURCES OF OIL COAL GAS WIND AND WATER Congress intended that a portion of the receipts be dedicated and reinvested in conservation assets across the nation. The Gulf spill tragedy provides an opportunity to fulfill the promise that Congress made to the American people in 1965 by creating the Land and Water Conservation Fund. After the Exxon Valdez oil spill in 1989 the state and federal trustees of the oil spill settlement decided that the highest and best use of the natural resource damage funds was to protect and conserve lands and habitat. The Exxon Valdez land conservation precedent highlights the urgency for Congress to make a similar investment of the assets of the LWCF in the wake of the Gulf spill. I AM ALSO EXTREMELY CONCERNED ABOUT THE HEALTH OF OILRECOVERY WORKERS AND THEIR LUNGS IN THE GULF. EVEN THE REPORTERS THAT ARE OUT THERE ON THE OILCOVERED WATERS ARE AT RISK. EVERY SINGLE ONE OF THESE PEOPLE SHOULD HAVE BEEN PROVIDED BREATHING APPERATUS/FILTERS WHILE ON THE OIL SLICKS. PROBLEMS COULD FLARE UP FOR THESE FOLKS IN MONTHS OR YEARS. THE DAMAGE BEING DONE DAILY IS JUST FRIGHTENING. AND HAVE WE FOUND OUT WHAT THE LONGTERM EFFECTS OF THE DISPERSANTS IS GOING TO BE ON HUMANS AND WATERS AND THE INHABITANTS ALIKE??? I urge you to support an energy bill that includes funding for the Land and Water Conservation Fund and please oppose any amendments that would weaken the LWCF proposal in the bill.

Discussion Question 3

(cont.)

We always find money for things like war and other things that are destructive or benefit us in some way. But we don't seem to find the money or effort to help save the natural part of our world to just leave it as is. I implore you to do so so that future generations can see what our world looks like outside of cities roads and other man made changes. Natural beauty means more to some of us then those man made things. . . .

. I have visited many parks over the years with my children who are now grown. The parks have helped teach them a love of nature and also encouraged them to hike and camp canoe etc. as adult hobbies. It is my hope that the parks will still be there and be in as good condition as they now are for their children and grandchildren. Your administration needs to take the following steps: Think about establishing a program similar to the Civilian Conservation Corps (who built many stillstanding buildings and other things in the National Parks) as a part of the stimulus program.

: Invasives cost the country 120 BILLION DOLLARS each year. How about a personal appeal from YOU asking people who care to remove their invasives and STOP the reseeding? Also Please ask the National Register of Historic Places to require REMOVAL of all invasives by 2030 on any property registered nationally? Finally Please give no more federal monies for ANY PROPERTY (or highway) in which the invasives are not removed from the property in question. . . .

As an educator I realize that children need time outside. With so many inside distractions many children lack oportunites to be outside. Lack of nature actually increases violence! Please consider the many organizations that can help children learn and enhance their outside opportunities as the Boy and Girl Scouts and the YMCA/YWCA. Not only do children develop a respect for the outdoors they learn social skills and develop healthy bodies and self esteem and life skills. . . .

Below is message i support My own is that i am in colorado as i write the gunnison sage grouse needs tp be on the endangered list I live on the tex coast the wjopping cranes need more space. So do the brown pelicans. And the humans for coastlines free from private ownership that makes it impossible to walk or bike or horseback ride around what is possibly the only long open coast left. Now is the time to extend padre island and aransas wild life to preserve the wetland and coast of Calhoun county peninsula . . .

As a seasonal ranger with the National Park Service I see firsthand the important impact Redwood National Park has on visitors from all across America and around the world. Our national parks are some of our greatest treasures and as such deserve our greatest attention and care. Please fund the National Park Service programs fully and allow them to accomplish their great potential in service of our nation's citizens as well as the many visitors from around the world who also appreciate their amazing qualities. . . .

Discussion Question 3

Written & Online Comments

(cont.)

Frankly the National Parks are one of our most treasured and fought for national resources. Presidents of long ago fought to make National Parks a reality. Don't let this change by cutting funding. If Michelle Obama wants to decrease obesity one way is through diet another way is to get out and move! Also when the economy is tight and people are choosing staycations what are they choosing? Camping Overnights locally. Where can they do this? Our National Parks. But help keep the rangers so they can protect and maintain them. . . .

. . . Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe clean and rewarding park experience by the National Park Service's centennial in 2016. . . Preserve large areas of public lands and waters to secure the health of our ecosystems ensure wildlife conservation maintain public access to parks and open spaces reduce the impacts of climate change and protect our cultural heritage. . . Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. . . .

. . . I live in Louisiana and what has happened to our coastline is a travesty. We rely on the federal government to provide the monies to protect our wet lands coastal habitat and water purity. So...why was this monumental cleanup effort in our gulf put in the lap of BP? We have so many earth and water scientists at the ready and they were not even consulted about this spill. What was that all about? I like so many other citizens demand that offshore drilling be stopped. We need a comprehensive jobs program in place to transfer the petroleum workers to developing clean fuel technology. Why can't we as a nation look to the Scandinavian countries and pattern ourselves in developing clean energy as they have done? This country is light years behind and we need to catch up. We could be doing so much more in this quest. We could be doing so much better.

My goal is to visit ALL of the U.S.'s National Parks National parks while I am on this earth. So far I have only got 16 under my belt. But hoping to retire next year I am looking forward to "filling" up my bucket list. Last year I had the pleasure of visiting Yellowstone National Park (for the 4th time) but this time with my 9 and 5 year old grandchildren. What a glorious experience! The opened my eyes to many things we adults tend to overlook. We also met a young woman from France. She has long had a desire to visit the U. S. for the sole purpose of visiting our National Parks. And now she was. Renting a car and seeing 9 parks in 3 weeks. Our National Parks are our heritage. They National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation history and civics education for millions of people each year including those from other countries. Your administration needs to take the following steps to help preserve our parks: . . .

It's time to move beyond the short-sighted policies (and myopic thinking) of the past.

Discussion Question 3

(cont.)

Thank you for declaring National Wilderness Month. As a lifelong Westerner who grew up on the National Forests of Utah and California, I agree that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Unfortunately the greatest unprotected wilderness in the lower 48 -- Utah's wild canyon country -- remains in jeopardy from policies leftover from the Bush administration. I'm a SUWA member and I agree with their analysis:

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies remain in place which threaten the natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat.

Please set aside as much wilderness as possible! These pristine wildlands are our nation's natural heritage and should be placed in escrow for ours, as well as, all future generations.

I completely agree with recent statements that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. This is unacceptable to me, my family and friends and the future generations that may seek out these quality lands in our Nation and particularly Utah. In the past 15 or so years I've explored each and every wilderness area in Utah. I have no new wilderness areas to explore. I'm counting on the Obama Administration to serve its people by setting aside more wilderness. This action will be a legacy that future generations will cherish.

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place that threaten the pristine natural beauty, quiet, and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat. Right speech is always welcome, but specific action (which accomplishes something) would be even more admirable (and more valued by future generations).

(cont.)

After 35 years in Massachusetts, I think I can finally call myself a New Englander, and I love my home here. But I also have a great fascination with the wild lands of the Colorado Plateau, especially the canyon country of southern Utah. I've made nearly annual trips to that country for almost 30 of those years. When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." I know you must be tired of dealing with the wreckage bequeathed you by preceding administration. However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

That needs to be reversed. Southern Utah is an amazing place. Driving through it you can see mesas and buttes of different heights and colors, that stretch over miles. It is easy to imagine what was here and has disappeared due to erosion over the centuries. It is a place where the geologic history is easy to see and marvel at. This area does not need 20,000 miles of ORV roads. They do not need access to every square inch and that is what they want. Too many operators of those types of vehicles have no regard to where they are driving through or over. They care only about their fun. People who will intentionally ride through an area that is off limits just to prove they can't be stopped, have little sense of right and wrong. And they have done that with ORV's in Paria Canyon earlier this year.

If this administration actually cares about Wilderness, as opposed to simply saying pretty things about Wilderness, then you must begin to protect these precious places so that they will not be ruined for the next several hundred years by careless ORV users and oil companies.

I recently was privileged to visit Utah and experience some of its majestic beauty first-hand, and I implore you to give wilderness-quality lands in Utah the protection they deserve.

The Land Use Management Plans from 11 million acres of BLM land in Utah put management prioritize archaic values that assume that climate change is not occurring. This is not an approach that the Obama administration should support. When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Please protect these areas.

Thanks for declaring September as National Wilderness Month. Supposedly, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. However, I have taken numerous trips throughout these lands across south and central Utah and, well, literally ten million acres of land there deserve to be designated "wilderness." You would do a wonderful service to this and future generations if you started designating some of these acres as wilderness. Of course, it also would help address the potential devastation of climate change, as well.

Discussion Question 3

I urge you to restore the proper manner of land review which highlights those areas holding wilderness values and gives due consideration to their designation as wilderness. I urge you to be sure we are not governed by policies that cannot value wilderness and fail to do all that is necessary to protect our natural heritage to the greatest extent possible. With all the pressures on our world today due to increased human populations and varied human impacts on our world, we need more than ever the capacity to judge such impacts and limit them, particularly as that pertains to wild lands largely remote from previous human intrusion. To value such lands and determine patterns of preservation is at the heart of our national contribution to the world, even as we also do things to detract from natural values. Please allow wilderness designation a proper and critical role in protecting this land.

The wilderness values of my home state, California, and other states, especially Utah, are very important to me. These are world-class landscapes and are my favorite places to visit when I take a vacation. We have a pressing need to make significant progress in protecting our natural and cultural heritage from off-road vehicle damage, oil and gas development, mining development, and other threats. They are too important to be lost by compromise or political extortion or simple inaction. Protecting these lands is just as essential as legislation dealing with the other crises we face, such as assistance for those affected by the current economic conditions, education reform, the fight for human rights, and the fight against terrorism. If we desecrate our land, all these other issues will in time lose their meaning. In fact, you could use wilderness protection to create jobs - our wilderness "border" is just as important to patrol and guard as our international borders. Let's fund some public lands warden positions and equip the wardens with American-made products like helicopters and uniforms. Let's fund scientific and cultural research on these lands. Let's fund restoration of already damaged wilderness areas. Let's develop ORV parks in appropriate (non-wilderness) places to provide recreational opportunities that don't damage our national heritage. Let's provide grants to small businesses to develop non-destructive eco-tourism and environmental education programs. Let's fund development of technology to survey and protect the lands, such as using satellites to recognize improper use and identify the perpetrators. So once again, thank you for your leadership in declaring September as National Wilderness Month, but please back up your words with deeds. I am proud to be represented by a President who shares my environmental values.

I am a native Utahn and have been active as a member and volunteer of the Southern Utah Wilderness Alliance. I have spent a great amount of time exploring Utah's magnificent canyon and desert areas with my children and now with my granddaughters. I mourn the likelihood that these lands and wildlife will be lost for future generations if action isn't taken very soon. Please make protection happen now!

We need more wilderness.

Discussion Question 3

Written & Online Comments

(cont.)

I ask you to bring the actions of your Administration into congruence with your words. Your words: "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." are inconsistent with BLM's lack of action in addressing the fact that America's wilderness quality lands located in Utah are still subject to the Bush Administration's policy of excluding wilderness designation from the spectrum of acceptable land management prescriptions. The passage of time is transforming these Bush Administration policies into Obama Administration policies. Policies threatening the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

Please remove the Bush policy of No More Wilderness and protect Utah's spectacular wild spaces from rampant energy development and ORV use. Future generations will look kindly upon such a decision.

Please enlist Sec. Salizar's assistance and go forth to bring about a new beginning to name more wildernesses across our great country.

We need MORE wilderness---not less!

Many issues will be part of this administration's legacy. Please, make wilderness protection part of your legacy!

I wish you could take a kayak ride down the Dirty Devil in Utah, as I have. Then you would, without hesitation, INCLUDE this redrock masterpiece in September's National Wilderness Month. You would put your HEART in your own statement: "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." You would NOT ALLOW policies from the Bush administration to remain in place. To do so, to allow them to stand, is to threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country -- where the Dirty Devil runs.

I grew up in Colorado and developed a deep appreciation for the beauty of American wilderness. When declaring September as National Wilderness Month, you stated "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

Please remove Interior Secretary Salazar, as he has allowed the failed Bush policies to remain. Obviously his agenda is in conflict with his job.

When it comes to wilderness preservation, we have no second chances, particularly in area already damaged by human intrusion. Please take action to preserve the delicate and fragile environments that remain at least partially pristine before it is too late.

Discussion Question 3

Written & Online Comments

(cont.)

I have always believed that wilderness is essential to the health of the planet and the health of humans. As a lifelong resident of Pennsylvania, I've traveled often to southeastern Utah -- including BLM Wilderness Study Areas -- for the kind of physical, spiritual and emotional rejuvenation that comes from experiencing the peace and life-altering beauty of wild places. When declaring September as National Wilderness Month, you alluded to the power of wilderness when you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Yet, as of this writing, you've continued policies from the Bush administration that threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. Specifically, I expected -- and continue to expect -- more from your administration.

Although you declared September as National Wilderness Month, "No More Wilderness" policies from the Bush administration still threaten wilderness-quality lands throughout the West, especially in Utah's redrock country. It's time to dump this policy and start moving forward in protecting our children's heritage.

During National Wilderness Month we should recognize that the redrock country of Utah has been waiting for years with a proposal ready for enactment. This would be a perfect time for the administration to move that forward.

Thanks for the proclamation for Wilderness Month. Now please let us have some action! The Bush Era policy of "no More Wilderness" as brokered by Gale Norton and our own Governor Mike Leavitt are still in place! Please have Sec Salazar rescind that terrible policy and allow the BLM to consider - and have Congress implement - more wilderness. The resource plans for 11 million acres of BLM land in Utah were rushed through under pressure from development, extractive and motorized lobbyists. As my dad said, please (respectfully) put your money where your mouth is (respectfully).

We have fought 8 long years against one of the worst environmental Administrations in history. Your election represented hope for all of us who love and respect our natural heritage. To not at least modify these disastrous RMPs for OUR public lands in Utah would be deflating to say the least. Please bring that "change we can believe in" to environmental policy.

I could give you reasons such as ATV impact, Climate Change, pollution, erosion and general irreverence to the land, but as an educated person, you must realize this. Now you need to enact your responsibility as an elected official to protect delicate lands such as those in Utah for our future generations as stated in the reason for National Wilderness Month. We look to each one of you elected officials, regardless of political party to do the right thing and protect these few gems left or American Wilderness.

Please protect the unique beauty of Utah.

Discussion Question 3

Written & Online Comments

(cont.)

Dear Mr. President, Please reverse Bush Era polices still in place that degrade the protection of lands of wilderness character in the U.S. There is much that the BLM can revise in their management polices that will enhance the wilderness quality of public lands including incorporating considerations of climate change in granting protected status. Please take stronger action to reverse the worst of the worst environmental policies at the BLM. This organization is too locally controlled and too often makes decisions about public lands that all own based on local politics. Just like the MMS needed serious reorganization so too does the BLM in my opinion.

These lands are a vitality important to keep wild and free and safe for future generations of Americans to enjoy and soak in their grandeur, beauty and uniqueness. Land once lost can never be reclaimed from either the drilling or the ORV routes and all the damage they cause. To despoil such landscapes for a few more thousand barrels of oil or the machines that are a part of Americas crazy love affair with burning all the oil seems such a poor tradeoff. Furture generations won't much remember the oil, they will cry in sorrow over the loss of such beauty.

Tonight we are camped at Millsite State Park in Ferron, Utah. We spent the day touring the northern section of the San Rafael Swell. These lands need permanent protection from coal mining and oil and gas blight. From the huge coal fired plant spewing haze causing pollutants into the air, to the bullet holes in the canyon walls and road signs, to all of the OHV "trails" scarring the landscape it is clear that these lands need protection from all of those who do not care in the least for pristing wildlands that can support wildlife. We only saw cows today, not a single antelope or bighorn sheep. How sad. Thousands of people come from all over the globe to see the redrock country of Utah every year. I hope in years to come there will still be something to see.

Too much of our wild lands and special places have been lost, we must fight to preserve what little remains.

You promised change if you were elected, I voted for you but you have not brought change to Washington! Now is the time to throw out all of the Bush Administration policies!!

Utah is grandiose! Utah is unique! We absolutely need to preserve its beauty. We can't be complete without this food for our souls.

The San Rafael Swell/Wedge Overlook area in southern Utah's redrock is especially deserving of protection! Please consider designating this spectacular country as a National Monument under the antiquities act!

Please ensure protections for wilderness quality lands in Utah!

We have visited these remote areas for over 25 years, and we have seen them gradually disappear--just during that short time period. Please stop their disappearance.

Discussion Question 3

(cont.)

These lands are irreplaceable, and thus need protection from abuse by those who do not appreciate them. Please protect them.

In January 1964 I sent a statement to the House of Representatives Subcommittee on Public Lands of the Committee on Interior and Insular Affairs to be included in their hearing in Las Vegas, Nevada on legislation to establish the Wilderness Preservation System (HR 930 and HR 9070). I wrote that "as one who has enjoyed wilderness areas in California, I wish to see a bill passed without concessions to those who would seek to destroy these areas by developing them. I realize the threat that these and other land areas face from an expanding population, and I feel that this Wilderness Bill would preserve the best for the enjoyment of future generations." The Wilderness Bill passed, and the nation has been blessed with the preservation of many unique wilderness areas that my grandchildren can now enjoy. In celebrating National Wilderness Month we need to renew our efforts to continue to preserve wilderness-quality lands for even future generations. When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, there are policies from the Bush administration that remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West. I am especially concerned about the policies for lands in Utah's redrock country which I have enjoyed in the past. These land use management plans deserve better study and review than that!

The Bush plan for "No More Wilderness" has no place in America in 2010. Expansion of wilderness designation and protection, including those BLM lands in Utah with wilderness qualities needs to be a priority for the Obama Administration in order to protect those lands once and for all against local interests whose only concern is ever greater utilization and destruction.

Our country's wilderness deserves protection and preservation. I applaud your recognition of that fact.

(cont.)

As a longtime backpacker, and a wilderness-lover and advocate, I am thrilled that you've named September National Wilderness Month. When you did this, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country, where I often hike. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat. In addition, I have personally observed the destruction of ancient ruins in some of these back country canyons in repeated trips. Turkey Pen ruin in Utah's Grand Gulch, for one example, on my first triip there in 1983, had an intact ceiling (one of the few left on any ruin) and a large number of turkey feather blanket remnants and pottery shards lying about. The second time I visited, in 1995, the roof was showing signs of destabilization and there were only a few artifacts left. The last time I was there, 2007, the roof had been caved in and there were virtually no artifacts left. The degradation was obviously the result of increasingly easy access to the site made possible by ORV enthusiasts. I've found that the easier a place is to get to, the more damage results because these intruders do not seem to have the respect for the wilderness and its attributes that those who reach it only with difficult hiking have.

Please protect Southern Utah as one of the Nation's last best places! Mr. President, you have visited Grand Canyon, but have you visited non-stop spectacular Southern Utah? The "Take Back Utah" organization feels that ALL of Utah should be open to their ORVs when they already have 20,000 miles of ORV routes. That's right, 20,000 miles!!! Routes that have torn across formerly pristine desert and redrock land causing accelerated erosion and slashes of ugly trails. Desert land does not recover quickly, if it ever recovers at all. Please end this destruction! Mr. President, there is much on your plate, but you are the man to put a stop to this. Thank you for all you are doing and I look forward to voting for you again in 2012. The rest of this email was written by the Southern Utah Wilderness Alliance and I completely agree with its content:

I'm truly amazed that after more than 18 months in office more has not been done to offset the Bush administration's ill-conceived plans to turn the public's land over to private exploiters! I'm afraid its one of many reasons that your Administration has, and is, losing credibility. You have recognized this when, declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

I visit this area regularly and have seen the results of this mismanagement directly. We need to protect the last remaining wilderness areas.

Discussion Question 3

Written & Online Comments

(cont.)

I have visited some of these fragile places and been awed by them. Please stop this destruction and save these gorgeous places for future generations.

It is time to give our wilderness at least the same kinds of protection we are giving Illegals in our country illegally. Time to spend on our wilderness what we are spending on anchor babies!!

Please commemorate the National Wilderness Month of September by preserving and taking good care of the quality wilderness land in Utah. As in Norway, there are big problems with all the ORVs crisscrossing terrain and serious difficulties in keeping those vehicles on the recommended trails. The big tracks they leave take so many years to dissolve. The ORVs are also disturbing shy animals on the verge of extinction when they drive outside. As a young girl I happened to read some National Geographic Magazines at a neighbour. They opened a new world to me. And I was so impressed by photos from the Grand Canyon and other magnificent spots in the U.S. Please tell the BLM to take proper care of wildlands in Utah, so all of our descendants also will have the chance to see this magical landscape.

I hope you will work to ensure that these beautiful lands are preserved for long into the future.

We need REAL PROTECTION of wilderness areas. Please UNDO the policies of the Bush administration that open wilderness to extreme environmental damage.

When these priceless redwood trees are logged and gone there is no chance to save them. Act NOW TO DO WHAT MUST BE DONE.

There are footpaths and cowpaths all over the west that have been falsely labelled as roads for the purpose of ATV and dirt bike use. These should be protected from erosion by including them in wilderness study and quality restrictions for hiking, biking, horse back riding, and river transit. Access for lumbering and mining and drilling can be regulated to reduce impact on open range areas. It is not necessary, here or in the wetlands of the Gulf, to cut straight access across undeveloped land. Please focus on the long range and reverse the destructive policies of the Bush administration.

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in effect in your administration, which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. That greatly differs from your stance on the subject of climate change action

Discussion Question 3

(cont.)

During the past 25 years, my wife and I have spent several weeks each year hiking, photographing and in general marvelling at the majesty that is America's Red Rock Wilderness in Southern Utah. The quiet, the strange beauty, the total solitude of this area is a thing to be cherished. However, during the past 10 years we have noticed marked changes in the landscape, the overall quietness and the destruction showing up in the general landscape and the ancient dwellings, pictographs and petroglyphs. Most of this damage can be traced to the Bush era's misguided, anything goes, "No More Wilderness" policy that gave a green light to off road vehicles of all kinds and law enforcement and BLM non-enforcement that made those abuser feel like THEY were the protected ones rather than the land that belongs not only to us, but to future generations. We can't pass on to them a land scarred with OHV tracks, looted or simply ridden-over ancient dwellings, and an attitude that one can go anywhere one wants on a monster, noisy machine. We, indeed, you must take a stand and do what is necessary to protect this land. And, it won't contribute to the deficit, it won't raise (or lower taxes) and if President Clinton's proclamation of Grand Staircase Escalante National Monument is any indication, preserving beautiful lands, protecting them from OHV abuse and excessive energy exploitation, preserving the solitude is a boon for tourism in the area while actually creates jobs. Do the right thing. Stand up for Utah's Red Rock Wilderness.

Mr. President--Please protect all our wilderness lands and animals from ORV pollution and destruction, oil and gas drilling, coal mining and climate change. Also please rescind the "No More Wilderness Policy" immediately.

Please stop the destruction of Utah's beautiful lands. Please designate the wilderness quality lands in Utah as Protected Wilderness Areas! This issue is very important to me.

President Obama-- Thanks for declaring September as National Wilderness Month. It was very timely for me as I have just returned from vacation at Yellowstone National Park, our nation's first designated national park. As much as I love visiting our national parks and monuments, it is also essential that we protect "the tranquility and grandeur of America's natural places", especially those still remaining wilderness areas. However, policies from the Bush administration remain in place which threaten our ability to do this throughout the West, especially in Utah's redrock country. Please push to enact the America Red Rock Wilderness Act while rescinding the Bush administration's ill-conceived "No More Wilderness" policy that will decimate wilderness quality areas with drilling and ORV use. And, while your at it, in your spare time:), please revisit the 2008 Resources Management Plan, another short-sighted, wilderness unfriendly fiasco. Thanks and keep up the great work.

I know that other vitally important issues have been demanding your attention. Wilderness advocacy, while not affecting as many people and not as tangible a benefit as health care or oil cleanup, may in the long run be more important. Wilderness, if not protected, is forever lost -- lost to us, to our children, our children's children -- forever. I am disappointed in this administration's progress to protect our wilderness areas.

Discussion Question 3

Written & Online Comments

(cont.)

The redrock country of southern Utah is some of the most unique in the world, and will be a national treasure long after our time IF WE PROTECT IT. Please protect it for my children and their children.

So many of our public lands, forests, and open spaces have already been ruined by development, drilling, OTV/ATV use, and roads! Enough is enough! Our wilderness, forests, and public lands are under threat from so many angles. They desperately need to be protected. Our parks and forests are supposed to be a place of peace and quiet, for us and for the animals who live there. PLEASE let our public lands stay as beautiful and peaceful as Mother Nature intended!! Their future is in your hands! PLEASE help save the wilderness for ALL future generations!!

All this leaves wilderness-quality lands out in the real wilderness. Who will rescue this land for our children?

Please establish more wilderness protection in Utah. I lived there many years and know very well how precious and fragile are Utah's wilderness quality lands. Thank you.

We are traveling to Utah later this month and wish to continue to do so because the lands are intact, not because they have become a moonscape of drilling rigs and trucks and roads. For crying out loud, DO SOMETHING!!!

I personally know the wild beauty of Utah's redrock country, as I have been a frequent visitor since 1989. I live in the Chicago area and happily drive 1400 miles to visit places like the San Rafael Swell to hike in the quiet backcountry with camera gear in my pack. Talk to Sen. Durbin, a fellow Illinoisan and sponsor of America's Red Rock Wilderness Act (S. 799) since 1997, and he will tell you why Utah's wild places must be protected and preserved. Illinois' other senator, Sen. Burris, is a cosponsor of the Act. Thirteen congressmen from Illinois cosponsor the Act (H.R. 1925), including three Republicans.

Once wilderness is gone, there's no going back. Why allow vandalism affecting future generations?

Thank you for declaring September as National Wilderness Month. However, I have hiked and camped in Utah's redrock country which continues to be threatened by the Bush-era policy of no more wilderness. Land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. It is past time to protect these precious lands.

Utah is the most spectacularly beautiful state in the country. It's awe-inspiring scenery needs to be protected. I have already seen what the oil and gas industry has done to NINE MILE CANYON. Please don't allow the rest of Utah to be despoiled as well. Thank you!

Discussion Question 3

Written & Online Comments

(cont.)

Utah contains large tracts of pristine wilderness that is unbelievable beautiful, serene, peaceful, and spiritual. There is nothing like it in the USA and for that matter, the world. It must be preserved. I am counting on you President Obama and you Secretary Salazar to investigate this and change the current management plan to protect this last remaining wilderness. As one of your campaigners and supporters, I have walked the streets to help elect you because I believed you would do what is right for Americans and future generations!!! I look to you to stand up to special interests such as oil and gas companies that have financial interest in America's LAST remaining wilderness lands. The BLM management plans for 11 million acres will ruin this land--believe me I know--I have walked this fragile unreplaceable landscape for 20 years. I left my family in Michigan to be near it. We have to save this President Obama!!!

Save our country please. Make sure it is " Oh Beautiful, for spacious skies ..." etc. Now is the time that will continue or end.

I plan on visiting Utah and do some exploring and sight seeing this great state. There is nothing that can destroy a trip more then seeing the fragile areas destroyed by the use of ORVs! We need to protect these areas by creating more wilderness areas!

Being able to go out in the woods just to sit and relax and get away from the real world, is the only thing that keeps me going! The chatter Of the Mountains keeps me alive! please protect All of our land!

Only way to preserve all these precious scenic beauties is for YOU & Congress to fulfill your promise & enact & support legislation for such!!!

save are national parks also

Please protect our outdoor spaces for our children and our children's children.

If you have to cut back on the number of government employees, do that, but save our outdoor spaces.

My family and I just got home from a week long vacation in the Adirondack mountains in New York. We hiked Mt. Jo as a family (the youngest is 2), and enjoyed exposing our children to the great outdoors. It is a place to rejuvenate the spirits and breathe in fresh air. I cannot imagine what the world would be like without outdoor spaces. Local building creeps closer and closer to the borders of national and state land. Poisons produced by Hydrofracking leach into the water systems - killing wildlife and endangering human life. Isn't losing the Gulf enough? Something needs to be done to protect and increase outdoor spaces. Our Governor does not share our interest in protecting outdoor space. I'm hoping that our President will do better. Protection now ensures the future of the spaces, the forest creatures, and the plant life that is only seen there.

Discussion Question 3

Written & Online Comments

(cont.)

Please seriously consider the economic and social benefits of protecting and expanding our extremely valuable and limited parks, forests, trails, and wildlife refuges.

I was raised the the Northwest in the outdoors& forests & there is no better pl;ace to be saved for our upcoming generations. This is prob one of the most impot=rtant things to be preserved!!PLEASE!!!!!!

I love this country and don't want to see natures wonders all turned into condo's and parking garages. Protect our rights to our great American outdoors.

Please protect our lands from Big Oil and Mining companies that will inevitably destroy these beautiful places in the name of greed. If we continue to abuse the Earth as we have done in the past we our future generations will live thru some disastrous times as a result of climate change.

The River is still semi clean but having grown up hear I have seen it's beauty slowly deteriorate. I would love to see new regulations put on it's use.

I just returned from a three week backpacking trip in the Sierras. While I was there I thought about the trips I had done there with my parents, and the trips they did there with their parents; a big part of my love for the mountains, national parks, and forest lands is what they mean to the history of my family, as well as this state and country. We need these places to be taken care of, and well.

There are more users for the land than just 4 wheelers, oil and gas and cattlemen. Listen to the rest of us please

Please allow my daughter and her children to have the same great outdoor memories that I grew up with.

In this time of economic trouble, The Civillian Conservation Corps of the great depression would be a great way to help put people back to work. Stop giving money to banks who are afraid to lend it and invest in real outcome oriented endeavours.

Given the record levels of heart disease and obesity, the need has never been greater to get the American public off their couches and onto the trails, whether they walk or ride!

please listen to our pleas, our outdoor our in great need of protection and funding. i go hiking often and find new homes being built further and further into our great forests and it seems that we our losing more of our parks national and city. these spaces need to be protected please help protect these spaces so that future generations can enjoy them as i did and do.

Not only is protecting these areas important but funding for management (prescribed burning, invasive species control, and restoration), research, and monitoring needs to be allocated for the long term.

Discussion Question 3

Written & Online Comments

(cont.)

The American wilderness is one of our greatest treasures and must be preserved not only for generations of Americans to come but as a lasting testament and example to the entire world. So please take this opportunity to do a great service for our country and protect our legacy as a nation of Great People.

There are ways to do this without closing these lands to the development of domestic energy sources. That means oil exploration Mr. President. Protect our shared outdoor spaces without caving in to ""wacko"" environmentalist groups. They are NOT the majority in this country as you are about to find out in November. The people of this country want energy independence and do not want to wait for solar, hydro or wind power to deliver their max potential of about 30% of our needs combined. I'd happily hike or cycle by an oil field that was responsibly maintained and designed so that I could afford the gas to drive back home when I was finished. Oh, by the way Mr. President, you can't spend your way out of debt. If you do put some laws into place that help protect our wild spaces you should get the money from some other less useful program/s. I already have taxes that are high enough to cover my enjoyment of open spaces.

I often walk my dogs with my husband on Colorado's Open Spaces. We need more Open Spaces throughout the country.

Too often beautiful lands are under private ownership and thus inaccessible by the American public. This is our land and we should be able to enjoy its beauty. Please increase the amount of land available for public use.

. Let's support a healthy lifestyle too, by allowing Mountain bikes where ""mechanized travel"" is not allowed.. it's doesn't seem fair to group bicycles with snowmobiles and motorcycles.. one thing about large areas of protected land is, it's kind of hard to access.. Please help to open greater access to bicycles on our public lands.

The outdoor spaces that we as Americans have to enjoy are dwindling.... . However, as you work to conserve America's special places, do not forget to include those who use those spaces now, and consider their stewardship of those areas. I am specifically concerned with the willingness of the government to designate as wilderness areas that are currently used for activities, specifically mountain biking, that can not be done in a wilderness area. As a mountain biker, I know that many hours are spent designing and developing ecologically responsible trails and use plans, and maintaining those trails in a way that respects the environment. I fully support protecting the great outdoors, but just ask that you consider all stakeholders in doing so.

My children and I go to our state parks several times a year for camping or enjoying a picnic. These spaces are enjoyed by many thousands, if not millions of people each year. We need to save as much of the wilderness as we possibly can.

It is so important to retain the parks, forests, wilderness, trails, and other scenery. Once gone we cannot get them back. Please do your best to keep them safe.

Discussion Question 3

(cont.)

For my granddaughter, her granddaughter and the future generations to come. Please make the right decision.

Oregon is where I live, and it one of the most beautiful places in the United States to live, and I want it preserved as much as possible.

I am also asking for the creation and expansion of environmental education opportunities for children and adults. Through education, citizens will be activated to play a more important role in the conservation and the preservation of our great outdoors.

Please do not allow them to be used for and destroyed by mining and foresting.

Please fight to protect our public lands from the greedy depredations of industrial special interests.

So far you are very questionable in my mind with agreeing to build the Moske that is an OUTRAGE and you should be ashamed of yourself for even letting the words ""I support it"" touch your lips. At least do one thing right and protect our beautiful land.

That's why I am asking you to seize this opportunity to start winding down drilling, pumping and digging for fossil fuels. Do not resort to nuclear unless and until there is clean fusion reactors. Put an end to this environmentally destructive madness. Instead, create a new industry (with JOBS) that is focused on making solar and fuel cells, etc. the power of choice. By not developing and using solar, we are throwing away the opportunity to take the lead in the world technologically, restore energy independence and boost our economy when it badly needs it.

This includes actual legislation towards CLEAN ENERGY.. we are not stupid and are sick of this oil driven society dragging everyone's spirit down.

I'd also appreciate if you could push extra hard for alternative energy and help say ""NO WAY"" to Fracking of Pennsylvania etc.

Please protect our wild spaces, they cannot be rebuilt and are not less valuable than transient ""progress.""

I'm 12 and my dad and I are big time campers. I would like it if instead of just endangered animals all wildlife was protected

Please make sure we don't lose our natural lands ...

I want the my grandchildren to enjoy America's great outdoors too... We need to improve our declining National Parks and bring back the rangers to protect visitors, educate visitors, etc. at our National Parks and and monuments.

For our Childrens Children Sake and the Earths Please Help as much as you can.

The money that is being spent in foreign wars could be spent here, at home, to better preserve our environment and keep our Earth alive and healthy for many years more.

When you look around at the different parts of our beautiful country of America, would you rather see hundreds of skyscrapers, especially where large forests used to be. . .Or would you like to see the real America, the America that our founding fathers came too, or the America that looks like China. The air being completely polluted, and you have smog rolling in. Instead of a light morning for. Something that anyone who lives on the coast of Maine has seen in their life. It is a truly beautiful thing, you should come see it sometime. I shall take you out on my brothers lobster boat and you can go to haul with him. By doing that you will the true working America. Not the people that sit in offices all day. The kind that get up and a do a hard days work, every day. They do it because they have too, to support their families. If forests, and rivers, and the right to lobster gets taken away. . . Well, you are ripping apart hundreds of families and ruining their lifestyle. If you make sure all these things stay, you are getting the support of hundreds of people, who work in the true working America.

Please help preserve the wild! It's all we have of the original America!

I work in public health so I see the various ways money is spent for programming.It disturbs me to see the public parks in our area have done away with lifeguards. I SERIUOSLY DO NOT THINK THAT A FEW TEENAGE JOBS TO PROTECT OUR CHILDREN is a waste of tax dollars...I see the horrible waste in medicaid managed care,(i wonder if our elected officials are aware of the freebies that are given away to entice people to choose a particular managed care) and yet our families are not protected for summer entertainment!!!! I would welcome he opportunity to discuss issues that are destorying families.

I voted for one President who I thought would do a lot to help the environment but sadly Clinton did little. In 2008 I voted for you and so far I am dissappointed.

Looking back at the accomplishments of previous Presidents creating, saving, caring for our great outdoors ranks high as a great achievment.

Please help save the wild bison that leave the park and walk into Montana and are killed by the state.

The outdoors are one of our greatest assets! Please protect them and keep them open for our kids!

(cont.)

We currently camp in our State Parks and plan to travel and visit our National Parks when we retire. Please protect them for us and our future generations. They need to be able to see the beauty of our natural earth!!!

I know you know the importance of our natural resources, and I have been reading a book by Thomas Friedman, ""Hot, Flat, and Crowded"", that I think you would be interested in as it expounds on how the environment and economies are intertwined. It promotes green concepts and the preservation of our natural resources as a direction to sustainable growth. I hope you get a chance to read it, as I think its in the direction or environmental policy was intended to go. Please way the cost heavily on allowing companies to take from public lands resources that belong to us at pennies on the acre and bring our country into an environmentally conscious focus.

With out these areas protected, and useful to the general public, those that would do things illegal would destroy it! Please save it, thank you.

It is in these places that I find myself, where I find peace and serenity. I think when people have peace of mind and well being, that we are better people all around. Better people make for a better county. Please protect our outdoor spaces.

State + local lands should get there fair share of any federal funds provided to protect these important lands.

Consumers need support against urban sprawl...we need your help since real estate developers seem to have deep pockets to fight our efforts to save a few trails!

Please help stop the needless butchery of mother nature.

Funding maintenance and children's programs at our city, county, state and national parks!

* Additional resources to help with Station Fire recovery and a public education component associated with the NRA to track recovery and educate the public about wildfire, including a National Service volunteer recruitment to help maintain the lands.

We Californians love conservation and our outdoors, we want to ensure them for future generations.

Americans deserve this Administration exhibiting farsighted intelligence in regard to protecting our natural resources and environment. The recent horrific events in the Gulf and the changing weather patterns, which have wrought great devastation on some areas of this nation must be acknowledged and action taken to stop the course of these events.

And PLEASE FORCE BP TOPUBLICALLY DISCLOSE PROPRIETARY GEOLOGICAL MUD LOG DATA FOR THEGULF'S DEEPWATER HORIZON, BECAUSE OF GIANT METHANE BUBBLEUNDERNEATH, AND THE SAFETY OF RESIDENTS ETC.

But I must stress that all the most important and ultimate goalis to protect these natural lands with the utmost care byteaching all the importance to our own survival, health, andhappiness. Our kind cannot survive well in a sickened world.Therefore please put in your utmost effort to brighten thefuture for ourselves and for those who cannot not speak.

I am excited to learn that you are in a position to recommendprotection of wild areas such as the San Gabriel Mountains around Los Angeles.There is a gestalt principle at work here. Protected areas must be contiguous or will not thrive. Animals and plants disperseover a territory; they cannot cross highways or commercialzones. To preserve a natural environment that benefits the airand water we depend on and offers residents an outlet forrecreation and education, the entire ecosystem must be allowedto function.* Management must consider the needs of predators in the region-- mountain lions, bobcats, bears, etc. -- and designrecreational areas that do interfere with the animals'migration, reproduction, or search for food.* Protection of the D.E.L.T.A. rescue sanctuary must beincluded. If Los Angeles County continue to harrass thisoperation, we will lose it.Thank you for considering my comments, and good luck with thisimportant issue.

I have lived within sight of them for most of my life,and enjoyed recreating in them many times.These mountainsbenefit our quality of life and the health of our families byproviding us with clean air and water and incredible naturalbeauty. Our region's youth obesity and diabetes crisis hasbrought new urgency to connecting our people and communitiesback to our mountains and rivers.* Additional resources to help with Station Fire recovery and apublic education component NOT associated with the NRA, butrather with a non-gun-proponent, pro-animal group opposed tohunting, to track recovery and educate the public aboutwildfire.

I truly believe that we need our innate, natural surroundings in order to appreciate the simpler things in life. In an age ofelectronics and gadgets, we truly need deliverance and need togo back to our roots! Please strongly consider our requests for the people of America who have yet to see and appreciate the beauty of the natural mountain environment!

Not allowing private owners/developers to build more unsightlyhomes/housing units on the hillsides, that take away from theareas natural beauty and displace the animals from rural areasto urban areas, where they cannot survive. Offer landowners fairmarket value for their land so it can be preserved and/ordeveloped for parks/recreation areas.

If the government won't protect these areas they will be lost forever. We the people, have all ready shown that we are not responsible enough to do it.

It belongswith the other National Parks/Recreation Areas approved byprevious presidents. Please join the list and become a "creator of parks" and not a destroyer of natural beauty.

Discussion Question 3

Written & Online Comments

(cont.)

On the High Desert side of these mountains we have some of the best quality water in the North Americas! We need to take actions to protect the future of this invaluable watershed! Our wildlife needs to be managed in a realistic way that allows for hunting when it can be a valuable resource to replace the role of our depleted or missing apex predators in maintaining healthy wildlife populations.

our mountains and rivers cannot be replaced. Do not let them be ruined by people trampling and camping. I urge you to recommend the creation of a robust San Gabriel Mountains National Preserve that would keep human impact to the very least. People need to respect nature and not misuse it when they do not even have a respect for their own health. * Recognition of the importance of wilderness and Wild & Scenic Rivers. It should address opportunities to expand these resources and support Nature right to be protected from people using it for their personal needs. * a major effort to keep nature free from cars and motorcycles. Buses can be used for viewing. * A small management structure in Alternative C in which the National Park Service takes the lead in creating a partnership between the Park Service and the Forest Service (which would continue to manage the San Gabriel Mountains). * Enhanced educational and interpretive programs so that kids--and everyone--can learn more about native habitat, plants and animals. These programs can take place outside the preserve with supervised talking walks.

Please make gardens out of some of this public land. Teach people to garden and to grow vegetables. The LA schools are a good example of this this right now.

Prohibiting building of commercial and residential structures. Enhanced protection of wildlife residing in these beautiful areas.

The San Gabriel Mountains above our homes, from Santa Clarita to San Bernardino, have been a major source of inspiration for myself and have also served as one of the main reasons for our good health. Without an access to preserved wilderness, I can't imagine surviving when I would be exposed to noise and air pollution through day and night.

The simplest way to improve people's health and thereby connection to the environment and nature is to eat a diet high in raw fruits, vegetables, nuts and seeds, to the extent of 60% to 100%. This eradicates addictions, diabetes, as well as many other "modern living" diseases and this also preserves the resources of our planet. A natural life, that includes growing at least part of one's own food supply, leads to a natural connection and empathy with nature. It's as simple as that. In terms of specific regional issues, the San Gabriel Mountains soar above our homes, from Santa Clarita to San Bernardino, providing much of our public open space. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers. * Enhanced educational and interpretive programs so that kids--and everyone--can learn more about native habitat, plants and animals, as well as growing fruits, vegetables, nuts and seeds.

(cont.)

Protect the Old Growth Redwood forest from destruction by CalTrans at Richardson's Grove State Park. Also along with that, a ban on cutting old growth redwoods by the timber industry. Pine is the fastest growing evergreen and is much better for construction. If people want the look of redwood, let them buy redwood colored wood stain for their pine lumber. Fishing used to be a big thing here in Humboldt County, CA. The fishermen are complaining now because fishing has gone downhill. This is a direct result of overfishing the Coho Salmon and polluting waters. PLEASE also STOP B.P. FROM DRILLING OUTSIDE OF ALASKA! We, here on the Pacific coast do NOT want to see a repeat of the disaster in the Gulf! B.P. with their corporate practices have murdered sea life, birds, and plants in the Gulf as well as humans. PLEASE, I beg you, do not let that happen here too. They are endangering not just livelihoods, but various species' lives, including humans. We cannot have this happen to our country! Many lives depend upon you taking control of this country back from the corporate and political murderers! We, the "peasants" and our children and grandchildren have as much right in this country as the conservative wealth. There are far more of us as well!

It is time to tell Big Biz to take a hike (they pretty much have anyway - job outsourcing) and, since they want to leave our country anyway, leave it AS IT IS!

Protecting our wild lands is one of the most important missions our generation has before us. It will insure the well being and even survival of those yet to come. Protecting our natural world should be our most treasured duty.

These lands do not really belong to us - we are merely stewards with the ability to protect the land from harm caused by us. Please make this protection a priority. Too often, of late, decisions come down on the side of economic gain rather than caution - we use "not enough proof" as an excuse to go ahead with untried practices. Time and again, we then have to clean up the messes - frequently with more untried ideas - rather than waiting for science to catch up, or just stepping away secure in the knowledge that we do not know enough! We only have one planet - we are quickly reaching the point of "no do-over's."

We should protect our public lands for wildlife and people and from the harmful activities of many corporations.

My personal comments: This isn't just all about people! It is our responsibility to protect our wildlife, to share this earth with them, see that they have their own space and water and shelter and rights. Also, the wilderness protects our lives with oxygen, quiet places to restore our spirits and beauty to enchant us. Don't abuse our awesome world; let it thrive. We should all consider the burgeoning human population--there won't be enough water someday, everyone will be fighting for land. Let's be sensible and set a limit of 2 children per family--some will be outraged of course--but we must think ahead. Simple arithmetic will warn us about increasing our population. Have the courage to do the right thing. We should also decrease the herds of cattle, sheep, etc. Their wastes are despoiling our land, water and air.

Discussion Question 3

(cont.)

Our public land belongs to all residents in the USA as well as to all Earthlings. Our public land provides us with clean supplies of drinking water, healthy air, and an opportunity to experience wildlife and nature. The USA as well as the entire American continent is stunningly beautiful and unique. I urge you to implement the following priorities: Protect the watersheds from toxic waste. Protect the wolves, bears, mountain lions, sea lions (and all other animals) and fish from oil spills, pesticides, and hunting. Please stop offshore oil drilling, stop the use of dispersants, stop the use of pesticides, stop the use of chemical fertilizers, stop GMO production, stop overfishing, stop whale hunting and stop cruelty in general.

Water is an essential necessity for all life on earth. We need to protect the source of good water first and foremost. Too many exploitive aggressive invasive man made activities destroy this essential source of survival. Protect water first and to the ultimate degree possible...our lives depend on it. Respect mother nature and the outcome of eons of evolution.

Stop all ocean industrialization. When the ocean dies, so do we all.

Ensure enough water in the Sacramento and Klamath/Trinity Rivers for the healthy return of their endangered Salmon and Steelhead runs. If they disappear they will become shameful ghosts.

Our public lands become more and more valuable with each passing year.

Please for the sake of all Mother Earth, humankind and all of God's other creatures do what's in your power to protect us all.

Rural America needs funding to support these treasured places. Much of what our great country means to our citizenry and visitors alike is found in rural regions. Please help us to help ourselves! Your support through funding and recognition of these important sites is necessary and rural America needs your help!

Please consider including the preservation of our rural pioneer cemeteries in this initiative. These are examples of our cultural heritage that need to be saved for future generations. Thank you.

Each day we read of historic sites that are being lost or threatened with development. Some are just amazing that they would even be an issue such as the USS Olympia battleship in Philadelphia. It was so much a part of our history during the Spanish American War and the thought of it becoming a fishing reef is beyond belief. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

History as a whole is important to help our youth understand what unites us in this nation. Please continue to fund Teaching American History grants which also make use of historic sites.

Discussion Question 3

(cont.)

Funding these historic preservation and heritage programs and historic and archaeological sites in our National Parks and on public lands are important. This will ensure that America's Great National Heritage including our natural historic and cultural legacy can continue so that all Americans and especially young people can better understand learn from and appreciate our rich and diverse past. Please do all you can to put history back in the conversation about our National Heritage.

There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage. Specifically our maritime and naval heritage ships such as the USS Olympia USS Hornet USS New Jersey and SS United States deserve preservation and access as symbols of our our national history and the produce of our laborers and natural resources. I advocate for the creation of a maritime national park that would bring together these great vessels.

Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage and to the American people.

The federal and state governments have not adequately contributed to the preservation of African American heritage sites. Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with treasured African American historic and cultural sites and landscapes. These historic and cultural sites reflect the African American voices whose interpretations help all Americans celebrate our shared earth and heritage.

Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. As a resident from the beautiful Grand Canyon State I believe we need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important for our children and grandchildren.

Please protect The Crane Estate and Crane Beach in Massachusetts. Please also protect Longwood Gardens in Kennett Square Pennsylvania. Please also continue to protect Mt. Desert Island / Acadia in Maine. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Historic preservation really does mean economic development for America's small to mid-sized cities like here in Pittsburgh and throughout the "rust belt".

(cont.)

Here in Hingham the Save America's Treasures matching grant for critical repairs to the 1681 Old Ship Meeting House has been a catalyst for community support for preserving its history and the democratic principles developed and practiced in colonial America. Historian David McCullough said " Landmark Buildings are parts of our life: they are not just buildings. They are aids to navigation through daily life. They are where and who we are in time." These grants provide Americans with the opportunity to connect with our most treasured historic and cultural sites and landscapes.

In small towns and especially rural communities I see that we need outside resources like the Trust to provide accurate unbiased guidance. Rural people are intensely proud of the heritage that surrounds them but we often lack the connections and knowledge to preserve structures and sites -- so they disappear. The National Trust is clear in its commitment to just such communities.

Full funding of the Historic Preservation Fund and Land and Water Conservation Fund is critical to our natural and cultural heritage. Protection of our drinking water through these initiatives is of greatest importance.

I have been involved with the Boy Scouts of America for over forty years. The Scouts have enjoyed the federal state and private lands that provide the opportunity to connect with the outdoors promote conservation and recreation. My Boy Scouts stand ready to help.

Americans need to connect with the outdoors more. Towards that end federal state and private land can provide Americans with that opportunity and at the same time promote conservation and recreation. These lands are also intertwined with our most treasured historic and cultural sites and landscapes. It costs money to maintain natural and cultural sites and landscapes. Environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Natural and cultural sites and landscape areas whose resources are closely related to one another are inextricably linked . Environment shapes human societies and people in turn affect their environments. Historic and natural sites reflect a wealth of places resources histories and voices whose uniqueness helps all Americans celebrate our shared heritage. Federal state and private historic and recreational lands provide Americans with the opportunity to connect with the outdoors as well as promote conservation and preservation. These resources are intertwined with our most treasured historic and cultural sites and landscapes. There has been a need for over a decade for additional funding for our historic and cultural resources in our National Parks and other public lands. Please bring funding for cultural resources back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. Important places and lands still need your help to guarantee their preservation. We need more permanent protection for the sites lands and landmarks that are included among National Parks Monuments and Trails so important to our heritage.

Discussion Question 3

(cont.)

In New Bedford Massachusetts we have a rich history and architectural heritage that needs to be preserved for residents visitors and future generations.

There remain important places and lands that need your help to guarantee permanent protection. For example I live near Detroit Michigan where the concept of the assembly line process in industry was introduced in the early 20th Century and the automobile industry ruled the economy for nearly a century. -- Remember the old saying "What's good for General Motors is good for the nation." ? Well it still rings true. -- There are many wonderful historic and architecturally important buildings and sites that are now turning to dust throughout the city. They can and should be saved revived re-tooled and repurposed in the 21st Century as a sign of America's resilience and resourcefulness.

The buildings and their settings together with the natural landscape and the decisions we have made about preservation conservation and development have shaped the cultural landscape of this country. As a retired State Historic Preservation Officer I have seen the results of the lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. Please bring funding for cultural resources back into balance with our natural resources. .

Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are critical to our well being and our freedom. The natural environment is more precious than any built environment since it sustains our life and all the resources for sustainability of our planet and our life form. You must continue to preserve open space and create spaces that all Americans from any socio-economic background can enjoy not just the wealthy and privileged. Large open natural spaces of significance need permanent protection and vigilance.

We need your leadership to end the disconnect between appreciation for great natural landscapes with the cultural (human-made) heritage that is indelibly imprinted on those landscapes. We need funding to conserve cultural landscapes as part of our nation's heritage. Let's stop spending our national wealth to destroy other countries and use it to enlighten and uplift Americans at home by preserving our heritage.

There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. Please bring funding for cultural resources back into balance with our natural resources or we could lose them altogether.

Dear President Obama I come from Kentucky Ohio West Virginia and now live in NY. I came from pioneer stock who lived off the land and preserved it. I am dedicated to preservation of our heritage in all areas whether cities country creeks lakes rivers or mountains. I have hiked in the beauty of countries around the world and in the USA. I am a practicing doctor at a major medical center in NYC. PLEASE increase support of preservation and conservation thereby providing our children and grandchildren the opportunity to connect with the outdoors and promote conservation and recreation. Our cultural and natural sites and our built sites in nature and landscapes are not replacable once destroyed. Witness the mountain top removals in WV by coal mine companies. Without rich natural environment and landscapes we lose our humanism for one another and for our humanism. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. Our historic and cultural resources in our National Parks and other public lands are desperately in need of additional support funding and conservation. Americans connect to the land and its historic and cultural resources and these remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage. I bicycle every possible chance on the Harlem Valley Rail Trail converted from the former NY Central RR. This opportunity must be extended to many many more. I thank you for your continuing efforts to improve our great country. I am grateful for all the efforts you are putting into getting us back on track in the USA THANK YOU.
Linda D Lewis M.D. 320 Central Park WEst NYC NY 10025

Discussion Question 3

Written & Online Comments

(cont.)

There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. Please bring funding and needed environmental regulation for cultural resources back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection such as those in SE TN. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage but please do so in a way that will rightfully respect the rights of private property owners in all possible ways so that it can be a nationally happy and proud experience for all. In SE Tn we continue to need much help preserving from annexation unwanted (transportation etc.) development and/or spot rezoning etc. areas such as Apison Collegedale Ooltewah Summit Chattanooga and parts of adjoining SE Hamilton Co SW Bradley County and on into Georgia as well as some other areas in and around these. We need to retain our rural historic farming and cultural geo heritage and promote much more natural/heritage/agri/cultural/arts tourism. Along with the important history of DeSoto's route The Red Clay State Historic Park/Area Sacred last council grounds of the Cherokee Indians the area of SW Bradley Co. is also said to have been where the left flank of Sherman's army camped out on the way to "Sherman's famous March to the Sea". We need more effective national protection and restoration for these farming and historic scenic areas with incompatible developments such as the huge substation in SW Bradley Co. removed and other housing developments already in the area renamed to be more respectful and compatible with the area that they are in with no more formal nonfarm friendly housing developments businesses transportation developments or expansions etc. to come later. We need to preserve our significant railroads and roads such as Tunnel Hill RD Red Clay Road Blue Springs Apison Pike and many more in the area. We need the homeland many of the current area residents ancestors first settled in to be preserved for future generations. The Red Clay State Park would benefit from having an upgrade with interactive exhibits for learning a restaurant in the park welcome center (like the one at Fall Creek Falls) more screenings of concerts (ie Brule Reconciliation of the Cultures) movies etc. or even live performances at Red Clay instead of everything being at Ooltewah/Collegedale. Also everyone should be able to create art call it Native American etc. for the right to self expression unhindered by the Government in doing so with rights to create and engage in Native American or historical arts fully protected. Everyone needs to be able to express who they are ie Native American Cherokee Indian etc. mixed Native/White heritage etc. when describing themselves in exhibiting their art/craft etc. as this is how people connect to their private or nations history and they should not be prevented from doing so so that everyone can freely "advertise history or culture". Hopefully in the future we can have more Christian naturalist preservation minded Democrats in this cong. TN 3rd district if we are allowed to and if we can have a good fair chance to do so along with a Democratic GOV etc! Also our first female TN Senator (democratic) would be very good to vote in in our next Senatorial election! We need different leaders because our needs are different than who we currently have in office with many issues that are more tourism arts and agricultural oriented among other things! We need to bring back Native America Rural America etc. and preserve the back country of the USA forever!

Discussion Question 3

Written & Online Comments

(cont.)

However I hope you will not leave out of the equation those historic and cultural artifacts (both inside and outside of national parks) that tell the story of our country. Our historic buildings and landscapes have been sadly neglected and de-funded through a series of previous administrations. Please include Preservation funding in this initiative!

Especially in slow economic times Americans need more than ever to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

Please restore the commitment our country once had to preserving its wilderness areas its national parks and its heritage sites. It shouldn't have been possible for a Wal-Mart to consider building a store on a Civil War battlefield and similar attempts to destroy lands and buildings once deemed crucial to our history continue to be under similar attack. iOnce gone there is no way they can be recovered. If you want to make clear just how much more committed your administration is to preserving the country you will speak out loud and clear about saving our natural cultural and historical treasures. Save--and perhaps even expand--the federal state and private lands that enable Americans to connect with the outdoors. Help them realize that conservation and recreation are intertwined with our most treasured sites and landscapes. Such areas contain resource closely related to one another. Environments shape societies and peoples just as people affect their environments. For over a decade there has been no adequate funding for the historic cultural and wilderness areas in either our National Parks or other public lands. Please bring funding for cultural resources back into balance.

Please look at the ways preservation and conservation of our unique land resources intersect with our preserved historic sites. Please help fund the America's Great Outdoors Initiatives with that in mind. The outdoors is intertwined with the preservation sites and continues to make significant contributions to our nation.

There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. We can't let these places degrade; we can't allow them to suffer our benign neglect. Once they're gone they'll never come back - and we as a nation can't afford that! Please bring funding for cultural resources back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. Especially as the population continues to grow and development continues to push into more and more areas we need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

I support several private programs that conserve our cultural treasures both built and natural and others that give children from the city access to them. The value of the federal government's programs is also clear and adequate funding should be maintained.

Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes. These historic and natural sites reflect a wealth of resources histories and voices whose interpretations help all Americans celebrate our shared earth and culture. Americans continue to connect to the land and its historic and cultural resources and these resources connect Americans to a higher more idealistic state of mind and state of being. This beauty and idealism is what we all ultimately seek. There remain important places and lands that need your help to guarantee permanent protection. We need permanent protection for the sites and lands that are important in our national heritage.

I live in Michigan a wonderful state that has seen its share of difficult economic times of late. What is a constant source of pride however is the natural beauty of the Great Lakes and the thousands of lakes streams and rivers that cover the entire state. But adjacent to these bodies of water are the towns and cities that grew up because of them. They're rich in history distinctive one from the other economic engines that are resilient and destinations that draw vacation dollars into local hands. There has been a lack of parity for over a decade between funding for our historic and cultural resources. Please bring funding for cultural resources back into balance with our natural resources.

We are a small very historic town in NE North Carolina. We can attest to the value of supporting the preservation of our historic sites. Save America's Treasures grant program helped us save and guarantee continual preservation of one of our nation's most important buildings the Cupola House built in 1758. We trained local craftsmen and workers in the art of preservation. We added over \$250000 to our local economy and will continue to add more with increased tourism. Our nation must not lose sight of our heritage and the people and places that sculpted our destiny as a free democracy. Please reconsider and provide the funding required to keep the valuable asset of the National Trust Save America's Treasures funded. It is a true economic engine of our country's future.

Dear President Obama I am a retired urban and environmental planner in Southern California. In my retirement I am active with our local historic preservation group. I am on its Board of Directors and also write our newsletter. I have found my life's cause--everything I did before was simply good training for what I am doing now. The preservation of our historic buildings and landscapes is so important to our generation's legacy for if they do not survive they are gone forever. Dr. Aref knows me you can ask him about me if you wish.

I have just come from our local Historical Society meeting this Thursday evening. We are struggling to restore a Sheriff's home and attached Jail built in 1880. A few weeks ago I visited an archaeological dig with my nephew and his family at Fort Michilimackinac. We saw first hand items that have been unearthed that were here long before the territory was settled by the French and English. These historic and natural sites reflect a wealth of resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. We appreciate the funding for cultural resources trust it will be brought back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more Parks Monuments Trails and other permanent protection for the sites and lands that are important in our heritage. The Rail-Trail projects undertaken across the country are an excellent example of connecting people back to the land.

Some of this heritage is mine from before the Revolutionary war. My family arrived here in about 1650. Our second homestead still exists from the late 1600's and is part of a historic site. We need to preserve where we came from!

Americans need to continue to connect to the land and its historic and cultural resources. I have done so throughout our wonderful country and I cannot imagine not providing this opportunity for future generations. There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

I did not vote for you and personally I believe that you are screwing up this country. But this may be a way for you to redeem yourself a little. Historic landmarks are important you can replace trees and butterflies but you can't replace history.

Another area that needs support for preservations are many of the lighthouses around the United States coasts. These provide great exercise of climbing and beautiful views of our country. These lighthouses and the people who were the light keepers offer valuable history lessons to people of all ages.

The great outdoors especially parks wilderness and historic lands and objects in federal and other state and local controls are our nation's legacy. Their majesty will far out last any administration generational fad or temporal crisis.

Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes. I have done several cross country road trips over the last 50 years and I have seen the changes that development has brought. It is important that we preserve open lands for future generations!!!!!!!!!!!!!! Natural and cultural sites and landscapes areas whose constituent resources are closely related to one another are inextricably linked because environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Please help save the historic buildings so our children and grandchildren will have something to relate to in the history of this great country

There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. As a result their architecture and the treasured artifacts they house have had sub-standard care and are deteriorating at an alarming rate. Please bring funding for cultural resources back into balance with our natural resources.

Every great society and people has a rich culture and sense of their history. We need to preserve our culture within our arts music historic landmarks and parks now and not as an afterthought. Please bring funding for cultural resources back into balance with our natural resources. Our history is so short compared to many other countries and we need to be aware to preserve the history and culture we already have. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes. I am told that there has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. I also know that our schools have cut back education in history and social studies in order to emphasize science and math. This means that a generation is growing up with little knowledge of its cultural history and fewer historic and cultural places to visit. If a nation doesn't know or care about its past what does that say about the quality of its future? Please bring funding for cultural resources back into balance with our natural resources!! In addition there remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage.

I realize that you already have a full complex and difficult agenda. I'm optimistic though that you will continue your good work on behalf of our people by lending your support in this area. Historic preservation can I know seem somewhat remote from our immediate problems. But in the longer term our history will continue to play a crucial role in defining who we are. Preservation can be a vehicle for creating American jobs that will make a genuine contribution to our society. It deserves a place in your already commendable legislative record.

(cont.)

While public and private investments in historic properties dramatically improve the tax base and the economic viability of neighborhoods communities counties and states there has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. In the Preservation Community we like to say "The greenest building is the one that's already been built." Imagine the resources embodied in any historic structure - hundreds of years of sunlight incalculable human and financial resources - all of which continue to serve humankind without additional inroads into the environmental integrity of the planet. With that image in mind I trust that you will bring funding for cultural resources back into balance with our natural resources.

As island owners on Rainy Lake very near Voyageur's National Park for almost 25 years my husband and I see every day the importance of Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation and that are also intertwined with our most treasured historic and cultural sites and landscapes. Natural and cultural sites and wilderness areas abound here thanks to Voyageur's Park but need more funding to purchase the last privately held cabins and land within the park boundaries. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Do not compromise the wilderness with oil drilling when cleaner renewable energy sources should be explored instead.

As more & more Americans are struggling with job loss and other hardships this is one area that you can preserve for Americans to enjoy and be proud of.

As a professional museum curator and historian I feel very strongly that America's historic sites are critical to helping the next generation understand our past.

Discussion Question 3

(cont.)

I agree with the statements given about providing for our National Heritage. We have just found what we believe is a Cherokee built cabin hidden under a hotel here in Cave Spring. By that discovery all manner of people have come forward talking to each other. A side effect is that many are claiming Cherokee blood no doubt truly spoken for this area and for Georgia. That we are all related no matter our colors is making us more connected and gives rise to more tolerance of each other than ever. This is definitely worth some thought as money is allocated. People are our resources too. Therefore the statements below should be heeded. Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation and are intertwined with our most treasured historic and cultural sites and landscapes. Natural and cultural sites and landscapes areas whose constituent resources are closely related to one another are inextricably linked because environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage because once we know where we've been then we know where we're going.

Please make historic preservation a priority for the 21st century.

As a person who has worked extensively with museums of all types it is vital that we continue to preserve our history and heritage.

If not for the Save America's Treasures Grant we would not have been able to preserve the colonial era Memorial Cemetery in Ste. Genevieve -- the oldest cemetery in the State of Missouri. We need programs such as S.A.T. to provide support when local resources are simply inadequate to the task. Local money sufficient to match the Federal money dollar for dollar was raised but without S.A.T. as a partner the project would have not been possible.

The Dimock Center in Roxbury Massachusetts is a historical landmark in the inner city and has applied and received several grants from Save America's Treasures over the years to restore our landmark buildings. These buildings serve our most vulnerable and without the support of these grants for bricks and mortar Dimock would not be able to provide respectful environments for our community. We ask for your support in preserving these critical funds.

These sites are part of the complex character and weave of the fabric of our American cultural landscape.

Discussion Question 3

(cont.)

As a retired federal museum curator collection manager and director and an active volunteer and board member for the Edinboro Area Historical Society and the Erie Center for Design and Preservation I know firsthand that our governmental program are essential in helping America preserve it's historical and cultural past. At this moment the Edinboro (PA) Historical Society is beginning to look for grants to develop a condition survey and an even larger grant to stabilize and digitize hundreds of rare historic glass plate negatives that reflect the history and heritage of our fine community. Without the trickle-down effect of preservation funds provided by our Federal government much of our culture and history stands to be lost.

The work associated with preserving our national treasures and historic resources is about much more than saving the symbols of our national history. It is about economic development. Construction associated with preserving historic resources is much more labor intensive than new construction which is more materials intensive. So preservation work creates jobs. Further heritage tourism is one of the most popular leisure activities. Heritage tourists tend to spend more per day and stay longer in a place. We need to do all we can to stimulate the economy in these tough times and funding historic preservation programs is a great way to do that.

One of the greatest initiatives in the global culture is the sustainable environment movement. This pertains to the built environment as well as the natural environment. The observation of history and all of its variables shows us how we have managed to get ourselves bogged down in a culture of obsolescence and unsustainable thinking and processes. It's time to get a complete and true understanding of the dynamics that have compromised our cultural values and quality of life. Sometimes we need to take a couple of steps back to make any progress forward. Our built environment and the study of the cultural environment that supported it is an excellent map that directs us in how to proceed - or not in the creation of a sustainable future! Don't destroy that map.

As Director of a private non-profit historic site in the downtown of an economically hard-hit city I see the impact that historic preservation has first hand. Our work inspires pride and civic activism as well as bringing in tourism. We need to work together on all levels to preserve and maintain our natural and historic resources!

The nation's diversity of resources and historical background often makes it overwhelming to know where to start but continued funding for America's Great Outdoors Initiative will help local activists do their part to preserve our national treasures.

Please bring funding for cultural resources back into balance with our natural resources.

Preserve what little old growth forest remains Make safe Native American and other irreplaceable heritage areas

The fact that these two Republican Senators with at best marginal voting records on conservation and environmental issues in the Senate (Corker with a 7% record and Alexander with a 37% record in 2009, according to the League of Conservation Voters) indicates that even these individuals believe protecting Wilderness lands in Tennessee to be important!

Tennessee must protect its most precious resources. I am asking you as a concerned resident of Tennessee to do everything in your power to help this vital piece enacted.

America is losing at least one million acres a year to development roughly equivalent to the size of Delaware. Coastal lands will be lost at an accelerating rate due to climate change. Unless we protect these areas now, our treasured lands could be lost forever. Seventeen billion dollars in revenues, primarily from oil and gas leasing, has accumulated during the past several decades in the federal government's Land and Water Conservation Fund. This money was supposed to be spent on land and water conservation and acquisition. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. What's happening in the Gulf of Mexico makes keeping this promise as important as ever. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum based materials which they bring back to the classroom. This program needs more funding. Our national parks are routes to healthier lifestyles, and gathering places for local communities. National Park Service programs like the Rivers, Trails, and Conservation Assistance program supports community led natural resource conservation and outdoor recreation projects. They work with a wide array of community based partners from the conservation, recreation, and public health sectors. This program needs more funding. The park system must evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country. Americans care about the future of these incredible places. Please do not overlook the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are the right places to invest your administration's time and money.

Within this letter are points to consider that will help you understand the many reasons why we need to protect, strengthen and use our National Parks...Our greatest treasures.

We love and use our national parks. They are a resource without parallel in our country. Ensuring the continued funding necessary to keep our parks as a national treasure is an important component of any budgetary concerns. With the exception of the new rules allowing loaded guns in our national parks, the parks reflect what is best about America.

I was fortunate enough to have a family that took us on summer vacations to a number of our wonderful national parks. These remain among my most important memories of childhood. Each one of us has the opportunity to experience the beautiful sights to be seen in our national parks. It would be tragic to let that go away.

Discussion Question 3

(cont.)

We need to preserve our land heritage for future generations. We need to provide the park system with the needed personnel to provide the care / and protection of the land, the wildlife, and provide the educational opportunities to the public.

I just returned from an Elderhostel in Alaska, mostly in Denali National Park and the Kenai Fjords National Park. What a wonderful experience! I was awed by the grandeur of Denali, the mountain, and the unspoiled lands around it. Being near the wildlife was amazing. I feel so fortunate to have had this experience. Such areas must be preserved and protected.

P.S. Since the economy is totally screwed up, the outdoors is, for millions of people, the ONLY affordable vacation that is left for them to do. So please don't take that away also.

So does everyone else. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year, not to mention just good ol' clean fun! Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. This is a perfect opportunity to create public jobs. Most of our parks National & State are understaffed and underfunded. They need manpower to maintain trails, build new ones, more rangers to protect the parks from littering campers and patrol them so families feel safe at night. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This is the third time this week I'm hearing about unspent money when things need to be done! What's happening here? Where is the logic? Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers. Again...I smell jobs here. I smell work.

Subject: PLEASE PROTECT ALL FEDERAL WILDLANDS! Our National Forests' and National Parks' Wildlands Are America's GREATEST Resource! July 20, 2010 When I think of America's Great Outdoors, I think of our National Forests and National Parks. National Forests and National Parks play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, protecting biodiversity, providing clean air and pure water, and contributing to the health of our people. National Forests and National Parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, conservation biology, rare and endangered species protection, science, history, and civics education for millions of people each year.

1. Mandate the U.S. Forest Service to "Provide habitat for viable populations of all indigenous wildlife species." This mandate needs to be implemented throughout the entire National Forest System. By providing habitat for viable populations of all indigenous species, we will restore biological health, biological integrity, and biodiversity throughout our National Forests. This single step by the Obama Administration will be the most significant improvement in public lands management since Congress first established the National Forest System and the National Park System.
2. Permanently protect all roadless areas of all federal lands, starting with all public roadless wildlands on U.S. Forest Service and U.S. Bureau of Land Management Lands, and for all eligible acreage within all National Parks.
3. Fire oil and coal industry pawn, Interior Secretary Ken Salazar.
4. Hire Bill Richardson, a man who represents integrity, for Interior Secretary.
5. Actively promote the passage of the Northern Rockies Ecosystem Protection Act (NREPA), which will protect 24 million acres of priceless public roadless wildlands in Montana, Idaho, northwestern Wyoming, eastern Oregon, and eastern Washington.
6. Heed the advice of former President Jimmy Carter who supports NREPA and of the National Parks Second Century Commission, a group of wellrespected individuals who spent more than a year developing a vision for how to protect Americans' public lands legacy.
7. Seize the opportunity that the upcoming Park Service centennial provides to renew our National Parks and National Forests. The Obama Administration should apply the lessons that were learned from the Centennial Initiative to developing a new publicprivate partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our National Forests and National Parks for ALL future generations.
8. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support National Parks, threatened habitat in National Forests and adjacent lands, nonmotorized trails, scientific education, conservation biology, seashores, and for cleaning up ALL creeks, rivers, streams, lakes, reservoirs, and waterways across the country. What has happened with Ken Salazar's Mineral Management Services in the Gulf of Mexico reminds us how important it is to keep that promise.
9. Do more to use National Forests and National Parks to inspire and educate young people. Our National Forests and National Parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as forest and park rangers, where they develop and present interpretive programs, staff visitor centers, and develop curriculumbased materials which they bring back to the classroom. This program should be expanded. And, the Department

of Education should work with the Forest Service and Park Service to excite kids with hands-on learning experiences. 10. Build on programs that work. Our National Forests and National Parks have tremendous technical expertise and knowhow that can help communities preserve their special places and provide recreational and educational opportunities for people. For example, the Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. 11. We need more National Parks for people to enjoy. Our National Forests and National Parks Systems must also evolve to fully represent the history and culture of our diversifying nation. Please evaluate and consider acquiring endangered wildlands and watersheds to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. 12. Provide wildlife corridors to ensure that the wildlife in our National Forests and National Parks can migrate and find the food it needs and reproduce successfully outside, as well as within all federal lands. We need much better cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand boundaries on a map. 13. Immediately halt all U.S. Department of Transportation funding for new or improved highway construction that severs wildlife transportation corridors or linkages. 14. Mandate wildlife underpasses, overpasses, and marked crossings for ALL highways and other transportation projects receiving ANY funding from ANY federal agencies. 15. A recent study found that every federal dollar invested in National Parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, National Parks and National Forests visitations increased, demonstrating the enhanced value of our National Forests and National Parks to our people in difficult economic times. 16. Americans care about the future of these incredible places, especially our priceless legacy of wildlands, so they will be there for our children and grandchildren to enjoy. 17. PLEASE PROTECT EVERY SINGLE ACRE OF WILDLANDS CURRENTLY IN FEDERAL OWNERSHIP. 18. PLEASE remember to protect ALL National Forests and National Parks, all aquatic and terrestrial wildlife dependent on National Forests and National Parks, and the many programs managed by the U.S. Forest Service and National Park Service that improve our communities. 19. Remember: Protecting our National Forests' and National Parks' wildlands legacy is the BEST POSSIBLE investment in our future. Please keep me posted concerning this important issue.

A lot more protection for the animals that call them home. I go to the park to see wildlife. Our parks deserve permanent protection from oil and gas drilling, poaching, hunting outside of designated areas, destruction for any purpose other than a national treasure and I do not mean man-made structures.

Our national parks must be protected for future generations of Americans. Legislative protections must be strong and irreversible so that no matter who holds power, these cathedrals to nature cannot be abused! These lands belong to ALL Americans and as such should always remain intact.

Discussion Question 3

Written & Online Comments

(cont.)

Build on programs that work. The National Park Service has tremendous technical expertise and knowhow that can help communities preserve their special places and provide recreational and educational opportunities for people. Children learn so much through exposure to the natural world. Perhaps some economic stimulus could be part of the focus on the parks, provide jobs for hardworking men and women fixing roadways, new signs, clearing paths, etc...

>> Put our unemployed youths to work by hiring them to maintain our National Parks. This gives them work and what better way to become connected with the Great Outdoors!

Our National Parks are our greatest treasures. They are our legacies. They need to be properly funded and maintained. Please remove the snowmobiles and all terrain vehicles from the parks. They injure the environment and the animals that live there.

I was watching a show on PBS the other night and they commented that 60% of China is set aside for National Parks. If they can do it so can we.

Reject any and all requests from the greed stricken and absolutely corrupt oil and gas companies for more land or any drilling rights in or near OUR National Parks. They already own too much of OUR land and are always looking for more handouts.

When I think of America's Great Outdoors, I think of our national and state parks. They play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. As a resident on the largest State Park in the Union (The Adirondack Park) I urge you not to cut spending to either the National or the State parks. Here in Northern New York, our park is a great draw for tourists and generates much income for an otherwise economically depressed region! Our state is in dire financial trouble, so federal funding is extremely important to us.

I have spent as much time as I can visiting the national parks, I have enjoyed them. I hope that future generations will have the chance to have as much enjoyment as I have had.

Today I am a senior with grand and great grandchildren. When we raised our sons in a much leaner financial time, each year we took them to visit national parks, or national historic sites, which enhanced their education and their appreciation for God's natural wonders. Our families and younger generations need access to these same wonders and should be so directed to build character and appreciation of our great nation. These gifts are far more valuable than any electronic gadgetry on the market.

The original plan for National Parks was to create a resource available to all Americans. The fact that parking and/or admission fees are now imposed on National Parks limits the availability of these parks to those that can pay. This is contrary to the ideal of National Parks. Our tax dollars should be employed so that no one pays for the privilege to use our National Parks (as the name implies National Parks.)

Discussion Question 3

(cont.)

So much has been neglected in the US over the past 30+ years, not the least of which is our parks and open spaces. Meanwhile, there are millions of Americans who are ready and eager to get to work. It would be a matter of plain common sense to establish a WPA type program to solve both problems at once. History shows us that this model can and does work, to the benefit of the jobless AND the country as a whole.

P.S. Have over the years enjoyed many of our national parks. Would like to see this ability to enjoy our national parks as national treasures continue into the future for generations to come.

Most important of all is to educate the public that preserving and nurturing wilderness and wildlife are essential to human welfare that it stabilizes the physical, social and economic worlds. One often overlooked fact is that those civilizations that destroyed life were themselves destroyed.

When Pres. Teddy R. realized we needed to protect our environment and so many parks were protected, we won. Today we have the greed of OIL attacking our national parks, we don't want drilling in our parks!!! We also need to protect our water. Today in Michigan we have 2 companies extracting water from our water table, and someone in Congress who want to drill for OIL in LAKE MICHIGAN. These things cannot be tolerated. We must put an end to the insanity of destroying the environment of the world. Please help us protect our greatest resources and our lives.

I hope and encourage you to make your legacy a great one by keeping word and follow through with being an ecology and natural environment preservation president. Please continue to fund and protect the little that's been set aside as National Parks.

PS: One of the truly grand things we as a people have done was to create these sanctuaries, and care for them. Observation: I notice that the super wealthy always build abutting these great public spaces, if they possibly can tells one something doesn't it.....enjoyment and no maintenance fees.

When I think of America's Great Outdoors, I think of the national parks. When I immigrated to this country nearly 30 years ago, America's National Parks were one of the major reasons for settling in this country. Today, my family and I are enjoying these parks almost on a weekly basis. I strongly urge you to help protect and support them for current and future generations alike.

They are important to our country. Please save them.

Discussion Question 3

Written & Online Comments

(cont.)

The upcoming Park Service centennial provides a chance to renew our national parks. We should apply the lessons that were learned from the Centennial Initiative to developing a new public-private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. Reinvigorate the civilian Conservation Corps; stop paying anyone to do nothing, there is a park that needs work everywhere there is a person that needs a job. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades, unspent for its intended purpose. This money **MUST** be spent as originally promised to support parks, seashores, forests, and waterways across the country, rather than just more poured into the drain of entitlements. The state of the Gulf of Mexico reminds us how important it is to keep that promise.

I have been ashamed recently visiting some of our national parks. They seem rundown and shabby in places. Put Americans back to work by making many more jobs available to update the parks. Don't be intimidated by the people who are hollering that government is too big. We have not done nearly enough to put people back to work!

America's Great Outdoors includes our world famous national parks. Our national parks must have the funds necessary to preserve and safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience. The National Park Service's centennial in 2016 is a perfect target for a renewed emphasis and support of our incredible NPS wonders. I would love to see a NPS project, perhaps utilizing those out of work or people like me who have retired, but would love to have another gratifying part-time job. Compensation would be free housing and food and a "bye" on income taxes in any year in which you worked 100 days in a National Park! I would be delighted to participate in a deal like that! We need to fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Please preserve and guard large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. Wildlife, plants, and rivers beyond park borders need attention as well. Improve opportunities to use our national parks without adding to the pollution of our parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. National parks are part of our national pride and play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Please consider taking the following steps:

Next, you might consider preserving the animals of the land; the animals who had a right to this land long before human beings decided to usurp her. Animals, like the WOLVES, & the PUMA's & the FLORIDA PANTHERS as well as smaller, less obvious animals that all take a part in our Heritage & Our Natural Beauties of this Land we now call home. **STOP THE WAR ON THE WOLVES & OTHER ANIMALS BEFORE THIS COUNTRY DECIDES TO WE'VE MADE A HUGE MISTAKE IN ELECTING YOU.**

(cont.)

Thank you Mr. President for your America's Great Outdoors initiative. I hope and pray that it will prove a tremendous success. I also agree with and support the aforementioned suggestions and urge you to take them seriously in your plan for the America's Great Outdoors, and that you would always keep our national parks as one of our national priorities. God bless you and your family. Parson

The National Parks suggested I add my comments to their letter, but it is difficult to improve upon perfection. I would like to add though that I've had the privilege of enjoying our National Parks for more than the last 50 years. For me Yellowstone National Park is the one of the most inspiring places on earth. Every time I go there I leave with a renewed commitment to do whatever I can to help take care of our planet. It saddens me to know that some people in our country will never have an opportunity to experience "America's Great Outdoors.. I'd like our country, under your leadership, to change that.

You and your family recently vacationed in one of the parks. I believe that you enjoy these areas. Please consider protecting these areas and include more.

I think kids must learn the benefits to them of the natural world, even direct consciousness elevating ones. This went by the wayside when emphasis was on making \$ and being a business major. Without values of "greatest generation" the result was our present financial debacle! Arts, philosophy, aesthetics were discouraged in schools. We need a Roosevelt scenario for employing young and old and restoring our parks and wildlands. (D.C.)

I ALSO THINK OF LAMAR ALEXANDER AND HIS CONSTANT VOICING OF SUPPORT FOR PROTECTION OF THE PARKS. JOIN WITH HIM TO KEEP OUR PARKS HEALTHY AND SAFE FOR HABITAT. Impose visitor restrictions as needed to maintain a balance between human debilitation of the parks and access to them. Revenue from The Bush tax cuts could be used to increase the value of America's parks more effectively than if it was used too increase the consumption economy that only feeds the redistribution of wealth from the public to the liberal financiers who trade in false assets of their own invention. Do more to use national parks to inspire and educate young people who are not necessarily privileged enough by circumstance to visit the parks. Volunteers, like ward workers for example, could be organized to get kids in the parks if they were protected from mean spirited litigation and greedy opportunists that use the courts for impeding education rather than improving it. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculumbased materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with handson learning experiences. Parks have the potential for touching more lives than midnight basketball.

My Mother introduced me to America's Great Outdoors, by way of several amazing national parks. At 85, she was still despite handicaps taking the tram to the top of a snowy peak in the Grand Tetons, which she had wanted to see for many years. At 45, she stood on a fallen redwood and exclaimed "Can you imagine what a great tree this was!" Now, I remember her awesome spirit by these adventures together in our national parks. National parks play a major role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health as well as soulful inspiration of our people. Since we are still in difficult economic times, we should invest in these national destinations. Americans care about the future of these incredible places. They are the beautiful national treasures that we expect will be there for our children and grandchildren to enjoy, even if personal fortunes are not available to be inherited. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are priceless and good investments in our future.

Monies could be directed to busses taking individuals from cities instead of multiple cars. Rangers could host hikes which would ease the minds of parents in knowing that the trails are safe and enjoyable.

With the continued destruction of forest lands and natural areas it is vital that we maintain and hopefully expand the National Parks for protection of natural areas and the wildlife that live there. Children need the experience of being outdoors and experiencing the wonder of nature (and so do adults) and it is sad to think that there may be a day when our natural areas will only be a story told on the internet.

My personal first experience at a national park was in our first national park as a fifteenyearold. Yellowstone was amazing! I saw many animals I had never seen before. While it wasn't my first time in the mountains, as an Iowan at the time, I was still amazed. But the mud pots and painted rocks and waterfalls were dazzling. I would like to see the parks have a steady funding source and for user fees to be either cut or curtailed completely.

And how about getting more jobs for unemployed, bycleaning up and restoring parks that have been neglected? The WPA was not a bad thing, back in the "good old days."

Dear Mr. President; They are our National Parks so of course they should play a large role when thinking of America's great outdoors. Please remember we need to preserve as much of them as possible as pristine as possible for your children's grandchildren's grandchildren! thanks!

When I think of America's Great Outdoors, I think of our national parks and forests. National parks, forests and recreation areas play a tremendous role in connecting people, young and old, to the outdoors, preserving the natural and cultural diversity of our nation, and contributing to the health of our people. Recreational use of these Federal lands provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year. Allow our public lands to remain accessible to the public for nondestructive recreational uses. Closing access to forest lands due to lack of funding or overzealous environmental concerns has happened far too much in recent years and must not continue. We need more parks for people to enjoy. The park system must also evolve to fully represent the history and culture of our nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks, other public lands, and the many programs managed by the National Park Service that improve our communities. National parks are good investments in our future.

Please make saving our National Parks a priority.

The National Parks have been starved financially by the Bush Administration...they want to privatize everything so that the average person can't enjoy the legacies left to us by presidents such as Teddy Roosevelt. We need our National Parks to be expanded and wellfunded.

Discussion Question 3

(cont.)

I spent more than 35 years living and working in the national parks, many of them as manager of an archeological and collections conservation center responsible for assisting parks in the Western states to properly care for their cultural resources. I know from firsthand experience that national parks play a tremendous role in connecting people, young and old, to the outdoors, in preserving the natural and cultural diversity of our nation, and contributing to the health (emotional, mental and physical) of our people. They also provide economic benefits in many ways, both large and small, that should not be overlooked. Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration should apply the lessons that were learned from the Centennial Initiative to developing a new publicprivate partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for future generations. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in unused revenues, primarily from oil and gas leasing, have accumulated during the past several decades in this fund. This money should be spent as originally intended to support and preserve parks, seashores, forests, and waterways across the country, rather than becoming just one more broken federal promise. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. Do more to use national parks to inspire and educate people. Our national parks are classrooms for discovery and learning for students and teachers. Because of their experiences living in and visiting national parks, my younger son has himself become a park ranger and my older son has drawn upon his background to creatively illustrate several children's books. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculumbased materials which they bring back to the classroom. This program should be expanded. And the Department of Education should work with the Park Service to excite kids with hands on learning experiences. My two youngest grandchildren eagerly seek out junior ranger programs in every one of the many parks they visit. Their experiences give them an eagerness for learn more and a broader perspective on life. We need more parks for people to enjoy. The park system must evolve to more fully represent the history, culture and natural resources of our diversifying nation. Please evaluate and consider new sites to bring into the system that better represent our changing country, and protect remaining natural areas before we use them all up. Please also remember that new units need additional, adequate funding; other units should not be shorted to stay within arbitrarily imposed general funding limits. Provide wildlife corridors to ensure that the wildlife in our parks can find the habitat needed to live and reproduce successfully outside, as well as within park boundaries. We need cooperative efforts between federal, state and local agencies and private landowners, because wildlife doesn't understand politically imposed and continually shrinking boundaries drawn on a map. Americans care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy. Please remember the importance of protecting national parks and the many programs managed by the National Park Service that improve our communities. National parks are critical investments in our future. Thank you for considering my comments (Io Triumphe 1957).

(cont.)

Even though I cannot camp in the National Parks any more, I still relish the memories of my experiences in many of them. They were our best vacations for the beauty and serenity to be found there. We are so in need of this remarkable natural foundation of our country!

I would also encourage you to support our National Wildlife Refuges and Marine sanctuaries too and make these places safe from incompatible destructive and extractive uses.

Thank you for considering my comments You might also think about taking some hard core inner city kids and introducing them to the great outdoors, for some of them, it will probably be the first time in their lives that they breathed fresh AIR!~.

Ensure that national parks have the funds necessary to safeguard park wildlife and provide park visitors with a safe, clean, and rewarding park experience by the National Park Service's centennial in 2016. Fully and permanently fund the Land and Water Conservation Fund (LWCF) to enable the Park Service to buy private land within park boundaries from willing sellers. Preserve large areas of public lands and waters to secure the health of our ecosystems, ensure wildlife conservation, maintain public access to parks and open spaces, reduce the impacts of climate change, and protect our cultural heritage. Strengthen the capacity for federal, regional, state, and local agencies and private landowners to work collaboratively in order to protect not only our national parks but the wildlife, plants, and rivers beyond park borders. Improve opportunities to use our national parks to get kids into active, healthy, outdoor activity that will help them lead long, healthy lives. As a longtime lover of the outdoors and of our national parks, it is hard to overstate the importance of preserving these gems of the American experience. They truly are "America's Best Idea". Thank you for anything you can do to make sure that all future generations have unimpeded access to these paragons of American culture.

STOP the roundup and removal of America's wild horses and burros, and release the ones already captured.

National parks have for years played an important role in my lifetraveling with family as a youngster; hiking in the Smokies every chance I got while I was in graduate school; taking my mother, aunt and and landlord who were all in their seventies on a trip across the United States from North Carolina to California and the Pacific North West. Now I am a senior citizen and still cherish our national parksI spent my 10th wedding anniversary riding a mule to the bottom of the Grand Canyon. The national parks preserve the natural and cultural diversity of our nation, and contribute to the health of our people. What a great opportunity to put people who need work to work doing the backlog of work that needs to be done to maintain trails and other infrastructure.

When I think of America's Great Outdoors, I think of our national parks, forests and wilderness areas. Of those I believe that the I recommend that you take the following steps: Protect the integrity of our parks from becoming "developed" by surrounding them with inappropriate commercial activity and by permitting inappropriate and highly polluting caravans of offroad vehicles to damage young trees and chase wildlife from their habitat.

Discussion Question 3

(cont.)

America's national parks must BE PROTECTED FOREVER....& ever! Don't mess around with them. Conservation & environment is priority 1! Please.

First of all, let me say that you and your administration must learn to protect the environment you claimed you cared about before you were elected. Despite that pledge and our corresponding votes, you appointed a Sec. of the Interior in Ken Salazar who has spearheaded the butcher of our nation;'s wolf population, animals who belong here, had been restored at great expense by those of us who care, and who were improving the natural aspects of the environments they inhabited. Right now America's environment is in much worse shape than it was under the reign of the self proclaimed "world's greatest polluter", George Bush. For the first time in over 30 years I am thinking I cannot vote Democratic again if this is the result. I find it incredible that you have sanctioned this type of despicable behavior from your Cabinet officers.

The Asian Carp need to be stopped and they threaten National parks and Shoreline here in Michigan. Please stop them in your home state before the ruin ours!

America's national parks must BE PROTECTED FOREVER....& ever!

Our national parks are national treasures. I love spending time in our parks, enjoying all the wonderful sights and wildlife.

Our National Parks are at the very heart of "America the Beautiful," in every way. We need to ensure the viability of longterm survival of these irreplaceable national treasures that we call our National Parks. It is critical that your administration take the following steps:

I was raised in the outdoors, because we didn't have a lot of money when I was young, we would go to parks within driving distance. I learned to camp, hike, fish and boat in these beautiful places. I learned about the night sky, the local plants and animals from my father who loved these things. Is there anything better than the smell of a campfire and roasted hot dogs? As an adult I found I am at peace when walking through the woods and still often go there now with my husband and family. And though I do not yet have children, when I do, I will teach them to love, respect and admire the natural beauty that we live in. The National parks in our country will be where I continue to go for vacation as long as they exist. There are many people who care about the future of these incredible places, so they will be there for our children and grandchildren to enjoy.

Discussion Question 3

(cont.)

It has been suggested that your administration take the following steps: Heed the advice of the National Parks Second Century Commission, a group with a vision for how to protect the parks and connect Americans to them in the next century. Seize the opportunity that the upcoming Park Service centennial provides to renew our national parks. The administration could apply the lessons that were learned from the Centennial Initiative to developing a new public/private partnership to prepare our parks for their next century. We need a new national campaign that will involve people in communities throughout the country in protecting our parks for the next generation. BUT IF THIS INVOLVES PUBLIC PARTIES 'OWNING' ANYTHING, I WOULD NOT SUPPORT THIS. Provide permanent, mandatory funding for the Land and Water Conservation Fund. Seventeen billion dollars in revenues, primarily from oil and gas leasing, have accumulated during the past several decades in the Land and Water Conservation Fund, unspent for its intended purpose. This money should be spent as originally promised to support parks, seashores, forests, and waterways across the country. What's happening in the Gulf of Mexico reminds us how important it is to keep that promise. Do more to use national parks to inspire and educate young people. Build on programs that work.

Please keep ATV's & guns out of our National Parks...

I'm writing to urge you to protect our national parks. This is a very important issue to me. I grew up camping at National Parks with my family, and I want to be able to do the same with my children. Therefore, I ask you to take the following steps:

PROTECT THE YELLOWSTONE BISON STOP LETTING MONTANA HAZE, CORRAL, VACCINATE AND KILL THEM!!!!

While our children were growing up, we camped and toured some of our great National parks....it was a wholesome experience that helped nourish our children and teach them the beauty and value of God's creation. Camp fire talks by Rangers were very educational, so Last year, my husband and I toured Roosevelt National Park in North Dakota....what a treasure to see the buffalo grazing in the grasslands. I cringe when I think of how the herds have been wiped out for greedy purposes. I am a little concerned now about guns allowed in our National Parks. I don't think I would feel as safe camping as I did a few years ago. Stop the killing of wolvesit is so sad to see how they are slaughtered. Every animal that God created is precious and has a valuable purpose in the overall health of the ecosystem. It would be great for you to take your family to Mt. Rushmore....what an awesome place to reflect our heritage.

I have been enjoying the National Parks for the past 60 years. I am now looking forward to enjoying them with my grandchildren. The National Parks Conservation Assoc. has a plan to keep our parks viable. I heartily agree with them and pray you will take action where possible to maintain or greatest asset.

(cont.)

The National Parks are the jewels of America. They provide outstanding recreational and educational opportunities to all Americans. They must be supported financially to upgrade and maintain their infrastructure and public facilities. More support for expanded staff at the parks is needed. A new program to put the unemployed youth of America to work maintaining the national parks, similar to Roosevelt's CCC, should be instituted. Build on programs that work. The National Park Service has tremendous technical expertise and knowhow that can help communities preserve their special places and provide recreational and educational opportunities for people. The Park Service's Rivers and Trails Conservation Assistance program has a long history of working with cities, suburbs, and small communities across the country on conservation efforts and providing expertise to help conserve rivers, preserve open space, and develop trails and greenways. You already have a great program, but it's under resourced. There's no need to reinvent the wheel. Invest in a model that is working in communities across the country.

This initiative is a GREAT idea, a step in the right direction, positive, brilliant! I only wish I lived closer to one of our National Parks, or could afford to visit any of them, or could do something for them, the ones I've seen are truly magnificent, and I've seen pictures of many of the rest and know they are too, they are treasures to be preserved, saved, cared for! Thanks for doing this, I hope it works!!! Next on the agenda...JOBS, PLEASE!!! There has to be a way to change this outofcontrol, surreal nightmare of an economy!!! It's so discouraging, depressing, frustrating and sickening what is happening to the dreams of so many people no jobs, no homes, financial ruin, sick, no health care, you know all about it. But for those of us on the receiving end of this insanity, it feels hopeless. And, I certainly don't see a way out of this, I don't see it getting any better anytime soon. But, what do I know, I'm just an administrative assistant, living outside of Detroit, trying to hold onto my little home, like my family members and friends, and I know that's not what this is supposed to be about but I saw the opportunity to reach you and had to take it! I don't know what you can do, I don't know what ANYONE can do, but we need help!!! Please!!! ALL my comments!

Why just use the military to fight with? How about putting those people to work in noncombat capacities for our national good?

In addition, put some stimulus money to work creating jobs, like the Civilian Conservation Corps of the past, to do the work repairing and building park infrastructure, as was used to help create some of our national parks. We are not a monarchy, but the national parks are some of the American equivalent of the nation's "Crown Jewels."

Please invest in the National Parks!

And PLEASE put the wolves back on the endangered list...I don't go to wilderness areas to see white rednecks with guns! America is so out of whack.

I also think of how much of our wonderful open space is being eaten up by development and overpopulation. We need to preserve and protect the national parks we have and create more! Lots more.

My wife and I have visited over 300 of our National Park sites during our 47 years together. Those locations are some of the most awesome and inspirational places we have been. I can not emphasize enough that our NPS must have the money and support to continue the legacy into the 21st century and beyond. Thank you.

And one last thing, use this opportunity for a hiring opportunity and greatly increase the park staff by hiring many more employees and train them from the ground up.

Our National Parks belong to all of us and we need to protect them

What has been lost can never be recovered. Please help us protect these wonderful parks!

When an old retired national park ranger like me thinks of America's Great Outdoors, I think of our national parks. National parks provide some of America's finest outdoor classrooms and serve as a basis for conservation, history, and civics education for millions of people each year, but they could do much more. College professors too need to be encouraged to work as naturalists in summer as they used to when I was a ranger. The ski industry is also an excellent source of seasonal talent. Heliski guides, like I was for instance, could be encouraged to help fill in the shoulder seasons when teachers aren't available. National Forests are especially important in this regard.

President Obama, I realize you have so many decisions to make for so many earthshaking problems we face today, but I hope you will find the time to support this protection of our National Parks, so vital and so taken for granted. Please provide this permanent funding. Thank you for all you do.

WHEN I TAUGHT 4TH GRADE, WE TOOK THE CHILDREN TO THE BIG THICKET NATIONAL PRESERVE. THE PARK RANGERS HAD WONDERFUL PROGRAMS FOR THEM! I LIVE 45 MINUTES FROM THE GULF COAST. Do more to use national parks to inspire and educate young people. Our national parks are classrooms for discovery and learning for students and teachers. Programs like Teacher to Ranger to Teacher (TRT) allows teachers from low income school districts to spend the summer working as park rangers where they develop and present interpretive programs, staff visitor centers, and develop curriculum based materials which they bring back to the classroom. This program should be expanded. IT HAS BEEN EXTREMELY SUCCESSFUL IN THE BIG THICKET NATIONAL PRESERVE. And the Department of Education should work with the Park Service to excite kids with hands on learning experiences. MY HUSBAND AND I HAVE TRAVELED TO 49 OF OUR 50 STATES AND HAVE VISITED NATIONAL PARKS IN MOST OF THEM. WE HAVE LEARNED SOMETHING NEW EVERY TIME! MY GRANDCHILDREN LOVE THEM TOO.

Discussion Question 3

(cont.)

..Allow no mining or drilling or casinos on land immediately adjacent to parks. They would interfere with the preservation purpose of our parks forever.

The great national parks which our county has are an important part of our heritage, and once they are gone or fall into further states of disrepair, it could be too late. When I recall taking my children and other family members to some of our parks like Yosemite, Grand Canyon, Rocky Mtn. Nat. Park, just to name a few, I remember the wonderful times we all shared by being in these vast and majestic places, places that we need to preserve and keep for generations to come. Perhaps it is time to focus on employing our many unemployed in a new program similar to Rosevelts when we created so many jobs and built parks and systems for the masses, which we still enjoy. Whatever we do, we must help these great places survive, they give so much to all of us.

Those of us in Utah need your all the help we can muster, including yours, to preserve our precious wild lands that give us clean air, drinking water, open space, beautiful recreation areas and wildlife habitat against the onslaught of off road vehicles and a myriad of other threats.

We are asking you to preserve what we have left !

As the author behind the pseudonym of William Sarabande and creator of Bantam Books' internationally best selling series, "The First Americans", I have long attempted through my novels to to be a voice for conservation of our nation's precious wilderness heritage. Our nation's most populous state desperately needs your help to preserve its remaining wild lands that give us clean air, drinking water, open space, beautiful recreation areas, and wildlife habitat.

Take back the Lake Tahoe Basin from developers and their customers. Protect the critical wildlife habitat of the Upper Truckee River marsh and wetland by establishing a core wildlife protection area.

Create more wilderness areas in the Shasta/Klamath region, one of the most biologically rich and diverse ecosystems in the world. Protect the northern Sierra Nevada from "checkerboard" development.

What kind of world do we want to leave behind for future generations? Please do everything in your power to ensure that we preserve our natural resources and respect wildlife. We depend on nature for our survival so it makes sense to take care of her.

And, let's not forget Mt. Shasta or the lava bed area or Big Sur and the Ventana wilderness.

Preservation of California's wild places is a priority for me and the majority of Californians.

Discussion Question 3

Written & Online Comments

(cont.)

Mono Lake and the watershed that feeds it also needs help.

Off road vehicles should be banned to prevent habitat destruction.

As a second generation native Californian, I love my state and believe it has some of the most beautiful land and wonderful diversity of species anywhere on earth. I would also like to see a zero population growth policy instituted nationally, as there are far too many people on earth as it is, and our quality of life, not to mention the possibility of life itself for the many species we are imperiling and driving to extinction by choking the planet with our own unneeded progeny, is suffering greatly.

Protect and reform the BLM's Wild Horse & Burro program. The Salazar Initiative is bad for wild horses and burros the Administration must change the business as usual approach and manage these animals on the range and stop the roundup removal warehouse process continued by Ken Salazar.

I suggest that preserving the Pacific coastline as undeveloped should be a top priority for the enjoyment and wonder of future generations. I also suggest that development in the western Sierra's be limited to avoid overuse in all areas above 4000 feet elevation in order to limit encroachment of development and urbanization that would create poor air quality throughout the Sierras (which are fortunately already protected from "local"... i.e. development etc. in the currently protected Wilderness and National Parks. The Tahoe area should have further development curtailed for the same reason to avoid irreversible damage due to overuse and toxic air quality.

Make national forests like the Stanislaus in the Sierra Nevada mountains a priority, as they contribute immensely to our national beauty, wildlife and livelihoods.

Please give special attention to protecting the San Jacinto Mountains and great Desert Area of Palm Springs.

First and foremost I would like to suggest that the Spotted Owl be placed on the endangered species list as there are approximately 200 owls left in California and we need to prioritize safekeeping and preservation of their habitat.

Please protect California.

while I have little faith in you if some monied interest offers you a sawbuck to rape the land. For mouthing a desire to fund the land and serve Californians I must thank you, President Obama. We look forward to your involvement with the America's Great Outdoors Initiative.

Discussion Question 3

(cont.)

California, one of the most known states in the grand U.S., needs help to preserve its remaining wild lands that give us clean air, drinking water, open space, beautiful recreation areas, and wildlife habitat. Protect our Wilderness: In California, we are working with Congressional leaders to protect the San Gabriel Mountains, the California Desert, in northern San Diego County, and many other regions. Your support of these proposals can preserve our wildest lands for future generations. Address Conservation at a Large Scale: Please support conservation of large landscapes like BerryessaSnow Mountain that include pristine wildlands. This provides us with the best hope for addressing loss of species and open space, preserving water quality, and climate change adaptation while preserving the wildlife and lands we enjoy today. Improve Watersheds and Wildlife Habitat: Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. TBy restoring our northern forests in the Sierra and the Klamath, or the San Gabriel Mountains in Southern California, we can spur economic growth by providing needed jobs, and improve recreation opportunities. Green jobs can include removing illegal roads and forest restoration projects in northern forests, and cleaning up San Gabriel Mountains and River areas that lack enough trash cans and restrooms. Most importantly, having two daughters of your own, you understand the importance of teaching ethical decisions at a young age. Hopefully, you agree with Supporting Proposals to Connect the Outdoors to People Especially Youth: Thank you, President Obama, for working to keep California the Golden State. With the busy schedule always piling, please really consider this act. Keeping our wildlife and state beautiful is certainly key for a brighter future.

The Buttes in Chico are said to be where the souls of the local Indians go when they die. The Buttes are unique landforms and should be preserved for the future generations of Californians.

Stop largescale wind power projects (turbines) from being placed in natural, public lands including national forests. Ditto for powerlines.

We need to save our wild open places for our emotional and physical health and that of our children. Stewardship for the future.

Help keep wild lands and forests, hills and rivers free and safe for wildlife : declare them OFF LIMITS to hunters and fishermen and restricted to motorized vehicles of all sorts . Please allow animals their peace and quiet , they deserve it as well as men do. No private cattle on federal lands .

We also need to protect working landscapes, small farms and ranches, rangelands, and working forests for food and balanced harvests.

Reprotect our iconic wild horses & burros on their legal Western public lands before they're managed to extinction by the BLM at huge taxpayer expense. Create ecotourism opportunities/jobs to raise awareness & educate the public/youth about these symbols of our Western culture & heritage & encourage/promote visitation to wild herd areas. Our national treasures deserve their fair share of the public lands.

Discussion Question 3

Written & Online Comments

(cont.)

Stop outsourcing the management of our national monuments, parks and other lands. And, stop closing State Parks and monuments. These are among the priorities that are important to continue those traditions that make our country the country to which people want to emigrate. CCC buildings are still standing proudly as working buildings reminding us of ways to serve our people and the land instead of business interests and those of profit only. To ensure a promising future for California, the nation's most populous state, please consider these priorities for your America's Great Outdoors initiative:

As a California native, I'd like to say that our nation's most populous state needs your help to preserve its remaining wild lands that give us clean air, drinking water, open space, beautiful recreation areas, and wildlife habitat.

As we watch the Gulf of Mexico slowly turn into a permanent toxic sludge pond, we realize that we need to be even more vigilant in our protection of our remaining healthy pristine natural areas from corporate profiteering and destruction and careless abuse. Please add our land and water to the oath you took to "preserve and protect".

Please protect key landscapes on a large scale for the land, for the people, before it's too late. I ask that: 1) The Obama administration conserve large landscapes, including our healthy wildlands, connecting them with working forest and ranch lands, private lands and the connections across these large areas.

I moved to Colorado to experience the open spaces of the West yet all I've seen is prime land gobbled up for development (either building or extraction industries). Over the decades what I've experienced is less access to areas where I was free to hike and explore. Private entities purchase land surrounding the BLM, Forest Service or wilderness and deny access to the public lands behind their properties. Our public lands are not their private playground or buffer zone. Please choose wisely when deciding which areas to protect and make sure access to these wonderful areas is provided. Make sure there are provisions disallowing surrounding landowners to cut off or deny access to these areas. This final point is extremely important as we have seen the ruinous effects left behind by shoddy mining practices and the terrible destruction of ecosystems surrounding oil shale projects. Every man, woman and child need to be a steward of this world and a good place to set an example is in this still-great nation of ours by protecting that which is most precious to our lives. Thank you for your time.

The Obama Administration stops Christo's Over the River project on the Arkansas River in Fremont County, Colorado.

Discussion Question 3

(cont.)

As a 20 year resident of Colorado, I know that the public lands in this state are essential to the health and welfare of its people and its economy. Support opportunities for sportsmen to continue enjoying healthy and challenging hunting and fishing on federal public lands. Preserve the values and access that make backcountry hunting a wholly unique endeavor. This can be done through a variety of measures, including through the designation of backcountry hunting Special Recreation Management Areas as has been proposed by the Jarbidge, Idaho and Little Snake, Colorado BLM Field Offices in their respective Resource Management Plan revisions. Thank you President Obama, we look forward to your involvement with the America's Great Outdoors Initiative in Colorado.

It is time to get our priorities straight. The good of the country must come ahead of corporate greed. Left unchecked, corporations will use our wonderful land for profit only

It's crucial to act now to preserve New Mexico wilderness for future generations. Please don't delay!

The birthplace of wilderness, New Mexico, is home to some of this country's wildest remaining public lands. From the southern desert grassland Otero Mesa to the wild and scenic Rio Grande, our vast public lands support native wildlife and plant species, significant water resources, and imperiled desert ecosystems. These amazing places are beloved by New Mexicans and many more Americans for their hiking, hunting and fishing, and river running opportunities. Constantly under threat from oil and gas development, many pristine lands and important habitats have been destroyed.

. Once these wild natural sites are opened to development they are lost forever. They are irreplaceable.

People come to NM to appreciate the open spaces and vistas that we all treasure. Please help us preserve our public lands for generations to come. More and more people need the spiritual nourishment that comes from the land.

With a Republican almost sure to be our next governor, and her ties to the oil and gas industry, New Mexico needs your help in preserving our wilderness. She certainly wn't. She's even running on that sort of platform. Thank you, President Obama. This independent voter still believes in you.

(cont.)

Protect the Corrales Bosque Preserve, a highly successful Nature Preserve along the Rio Grande, with bird counts rivaling that of rainforest populations. This section of The Rio Grande Bosque provides habitat to numerous species of birds, mammals, reptiles and amphibians as well as Native plants, and should be treated separately and with greater care than other restoration areas along the river. Bulldozing techniques for lower bank elevation and invasive thinning techniques including herbicide use should be replaced by a more careful approach to protect species already present. Strict adherence to limitations set by The Migratory Bird Act should be enforced particularly regarding actions of MRGCD, the agency most involved in its maintenance, and to a lesser degree SCAFCA, and also The Army Corps of Engineers, whose levee improvement requirements should consider the effect on precious limited habitat in this unique section of riparian habitat along a much altered and degraded International Flyway.

Increase funding for recreation, BUT ELIMINATE OFF ROAD VEHICLE ROADS/RECREATION AREAS AND RESTORE THEM TO PROTECTED NATURE RESOURCE AREAS. improved access and trail system revitalization through the Public Lands Service Corps Act of 2010: The bill (H.R. 1612) "increases service opportunities for youth and young adults on public lands (ages 18-24), providing green jobs, improving infrastructure, restoring public lands, encouraging cultural and historical research, improving the health of coastal, marine and estuarine ecosystems, addressing climate change and assisting with scientific data collection."

Instead of spending money on messy wars that don't go anywhere, why not spend the money on our public lands, so all can enjoy them?

I am especially interested in programs restoring the health of San Francisco Bay the water, the marshlands, and the fish and other animals. The Bay has been sadly abused over the past 150 years, and its restored health would help everyone.

We have barely enough of them for the constantly burgeoning population.

While a huge fuss was kicked up at the time the coastal lands north of San Francisco were protected, that public land is now part of what draws tourism here, and creates jobs in our region.

All requests for increasing existing financial support, or creating new programs that need new financial support, should follow the significant reduction of our current federal and state deficits.

Public lands MUST BE 100% PROTECTED!! The San Francisco Bay Area hosts unique public lands of incredible beauty and wildness close to large population centers. I STRONGLY urge you to implement the following priorities:

Discussion Question 3

Written & Online Comments

(cont.)

I do not want to see any more of our PUBLIC LANDS seized by the FEDERAL GOVERNMENT!! We have plenty of parks already and it seems as if the GOVERNMENT is having a hard time taking care of the ones we have. I attended one of the forums the president and our illustrious secretary of the interior sponsored and I can tell you they are not interested in making our land accessible to the people. I had to laugh when one of the men there was complaining because the trails in wilderness areas are deteriorating because you can't do any improvements to trails (or anything else) in these areas. Wow, imagine that! I personally have seen hundreds of thousands of acres of dead trees (beetle kill) just waiting to catch fire because these dead trees happen to be in a wilderness area and NOTHING can be done to eliminate this HUGE DISASTER waiting to happen because it's a wilderness area! This is insanity! I could go on and on but the one thing I want you to understand is this, I love this land and I don't harm it by going out in the wild and staying on trails and good roads that have existed for years and years. Locking us out of our PUBLIC LANDS is an attempt to control our movements and I for one do not appreciate any attempt to do that. If you love freedom then let THE PEOPLE be free to roam this great and wonderful land in which we live.

That last thing the US government should do is to take away the land of the people that care for it. Please let the american citizens take care of this land as private property as the only way to conserve our rights. Please put a stop to this land grab.

Our Country is number one in land of the free, home of the brave Our Children need to be encouraged to see our Country it National and State parks The HISTORY in our Nation is learned from the sight, the walk and the touch of the trees and rocks that form our Country. Keep America Beautiful and Save the open lands that make us unique. The Youth of our Country needs your support

Hiking America's great wild places is a way that my family connects with each other, and connects ourselves to the outdoors, a vital part of the human experience.

What is the future to look like? A Dickensian land of industrial soot and barren, treeless soils; of slag and smoke; a country so devoid of any majesty that one must look to the corporate-enslaved media in order to view what our National Parks used to look like? Or, do we do the right thing for (hopefully) countless future generations and stand up to Corporate America by saying that there are some places on this planet that have not yet been utterly devastated by the hands of man for the cause of something as greedy and insipid as profit, and shall not be as long as this government endures?

One of the largest challenges faced in the future is how to encourage young people to learn to appreciate the country's natural resources. I serve as Vice-President of the Natchez Trace Parkway Association. The explorer Meriwether Lewis's grave is located within the jurisdiction of the Parkway. The Park Service should use Lewis's story to engage younger generations and to encourage them to explore national parks. The story of the Lewis and Clark Expedition still captivates all generations. Lewis's mission to make discoveries of new species and to carefully record his findings could be modeled by young people in national parks. Many young people today have a fear of nature - it is foreign to what they see on their electronic screens. The themes of adventure, overcoming challenges and discovery that Lewis's story conveys would encourage young people to overcome their fears and to want to learn about nature. An education center should be built at the Meriwether Lewis site on the Parkway to begin to develop methods to use new technology and time-tested hands-on methods based upon Lewis's story. The methods could be tested in the three states through which the Parkway passes. If successful, the methods easily could be incorporated into interpretation at Lewis and Clark-related sites across the country and then to other parks. We are missing out on an opportunity to make continued exploration of nature an enduring legacy of Meriwether Lewis.

I want the next generation to enjoy America's great outdoors too, but if this means that the government can continue to buy vast amounts of land just so they can do whatever they want with it in the future forget it!!! The public needs to continue to have the freedom to buy American property and develop it as they wish. Exactly what is the Federal Government's plan for protecting America's great outdoors?

Ever since early childhood, I have spent a considerable amount of my free time outside hiking, camping and just enjoying the great outdoors. Not only important to me, the outdoors are vitally important to what America stands for. The United States was founded by people who sought freedom. America's wildernesses represent that in their essence. I want my children to enjoy America's great outdoors just like I have. The time to act is NOW.

My husband is from Scotland where history is cherished and respected. I make a point of making sure that my children see America the beautiful. Experience the beach the mountains the cities. Please protect it so that I may share it with my grandkids. I am 35 years old. Already planning what I am going to show my grandkids!!

I am a supporter of yours, and like many others who voted for you, would like to see a strong land protection initiative, one that benefits all areas of our country. Please be bold! People need open spaces, wildlife, and access to the outdoors to live a healthy life! Especially people living in overbuilt places like southeastern Pennsylvania, where I live!

America's environment is in critical condition. I ask you to support the movement to protect the environment so that we can live in a pleasant environment, and not one of waste.

Please stop closing our public lands. That is our recreation is to explore and four wheel in the back country.

Thanks for taking on such a great initiative. Please support full funding of the Land & Water Conservation Fund, and ensure that the Recreational Trails Program -- the only national trail grant program in the United States -- receives continued investment nationwide. I am asking you to seize this opportunity to create, expand and better protect America's shared outdoors spaces including parks, forests, wildlife refuges, wilderness, trails, wild and scenic rivers and historic sites and monuments, and to find new ways to support conservation of our farms, ranch lands and forests.

I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to keep our natural resources available to all, free of charge. Why should we have to pay to enjoy what is naturally there?

Saving and preserving our land is so important! Without the land, trees, plants, water, we cannot survive. Our job is to care for the creatures and living things we have been given. Protecting our resources is vital for our future. Without it, the next generation of Americans may not be able to enjoy America's great outdoors. We also need to work together as a nation to find new ways to support conservation of our farms, ranch lands and forests. Something must be done before these outdoor spaces are gone forever.

"Everybody needs beauty as well as bread, places to play in and pray in, where nature may heal and give strength to body and soul" - John Muir John Muir knew it. So did Teddy Roosevelt, Walt Whitman, Robert Frost, and thousands of other great Americans. One doesn't have to be a granola crunching tree hugger to appreciate Nature's wonders. Wild spaces are therapeutic for even the most citified soul. There is something precious and unique about America, one of the last great frontiers of the world. That's why our national parks get millions of international visitors each year; Europeans who need to experience the wilderness because they have none left. Please protect our open spaces and wilderness for future generations. Let our children have the opportunity to swim in a wild river, climb a mountain peak, commune with Mother Nature with the grass beneath their feet, witness other species, besides homo sapiens, fulfilling their circle of life. Protect our wild lands and you protect the nation's soul.

Please include a large Hawaiian initiative in America's Great Outdoors. Hawaii has an incredible number of endangered birds, plants, and other organisms. The last bird extinction in the United States was a Po'ouli in Hawaii in 2003. Unfortunately, the next bird extinction in the United States will probably also be in Hawaii. One estimate is that we will need to spend \$100 million per year over the next ten years to give native Hawaiian birds and plants a chance for survival. Hawaiian birds are threatened by global warming, as well as by non-native invasive species and non-native diseases.

If we do not preserve enough wilderness, the health and sanity of human beings will suffer even more than current trends. Anxiety will increase, war over natural resources will increase, and the Earth will continue to respond with abnormally frequent natural disasters. Please remind people that life is a dynamic process and that if we do not plan for the long term endurance and health of our planet, then we can be assured that we will disrupt the pleasant future for our children, grandchildren, etc. PS--thanks for doing such a great job in a VERY DIFFICULT environment thus far. The people are ready to have courage, now.....go for it!

I take my children backpacking every summer. Despite the initial complaints, they love being on the trails and looking for wildlife, especially lizards.

I want people to think first because this is really important. What is keeping us alive? : Nature. What creates oxygen from carbon dioxide? : trees and What are we cutting down every single day? : trees Now if trees keeps us alive then isn't this and act of suicide because we are killing if not us our later generation?

I want to enjoy America's great outdoors!!! SAVE OUR BEAUTIFUL EARTH & ANIMALS!!

Every American should be able to enjoy the beauty of their homeland. My best to you and your family. You are doing a great job!

I live in western colorado. I am a refugee from washington, dc. There are seldom days any more when the air in this rural part of the state isn't filled with a thic, noticeable haze. It used not to be like this at all. I've been in and out of colorado for the past thirty years, and I see the damage done to the wilderness by rampant development of homes and indiscriminate mining and drilling. wilderness areas need to be actively protected against those who seek short term gain while destroying our natural areas in perpetuity.

Yet another valid reason to support OHV use in the US: Economic impact. Americas active OHV lifestyle circulates billions of dollars within our borders. A typical family's recreation expenditures include RV, trailer, camping gear, ATV/Dirtbikes, protective gear/apparel, accesories, fuel, food, etc. Every weekend, millions of citizens are sustaining our needy economy by enjoying their public lands. We should encourage the growth of our recreation-oriented pastimes. We need more designated OHV trail systems to meet the demand. Thank You,

Having just returned from a trip to Glacier National Park, I can see how important it is to not only set aside lands for national parks, but to also protect the lands surrounding this park and the many others like it. Thank you.

(cont.)

New York State's Great Swamp should be a National Park. The 20 miles of New York's second largest freshwater wetlands known as the Great Swamp should be part of the National Park Service. Because of geo-political boundaries, the Great Swamp needs national protection or it will become so degraded as to lose its biodiversity and character as a tri-state recreational wonderland, and its value as a benefit to the regional public health. Under intense development pressure because of its proximity to New York City, the Great Swamp runs through six towns, from Brewster to Dover Plains, and lacks a single strong conservation and management plan. It spans two counties, Putnam & Dutchess, and two watersheds: Croton & Housatonic (Bi-State w CT); it flows into two rivers, the East Branch of the Croton and the north-flowing Swamp River; and it is governed by two state regulatory agencies, DEC & DEP. Because of NYS Home Rule, local municipalities can and often do fly solo on significant land and water use decisions, despite the impact on the shared ecosystems of neighboring towns and States. Much of the Great Swamp lies above and serves as a recharge area for the Harlem Valley Aquifer. The Aquifer serves five towns and villages with four governing bodies, and supplies drinking water to over 20,000 residents; another 5,000 are estimated to come on line over the next 10 years. The Aquifer's public health benefits are being ignored right now as the Town of Dover grapples with a solid waste facility asserting grandfathered status under current zoning laws prohibiting the industry, and proposed on a site over our drinking water supply. Similar decisions are being made by Dover and neighboring towns without serious regard to the cumulative impact on the Swamp River, despite monumental efforts by NYS DEC. Without protection at the Federal level, we have no hope to save this remarkable and significant Outdoor Space. I propose the National Park Service work with New York State and conservation groups to extend existing NPS boundaries within the area which border the Appalachian Trail to protect and conserve The Great Swamp. Thank you,

Save our open space, clean air and water! I want my kids to be able to enjoy the outdoors as much as I did growing up.

I think an increase of smaller neighborhood schools would create more opportunities for reconnecting children and their parents to the outdoors. This could also have a positive effect on the whole community.

I want to be able to enjoy America's outdoors for the remainder of my life. It is important to our way of life that future generations be able to enjoy the outdoors too. Please take a stand and support conservation of our parks, forests, lakes, shorelines, wildlife refuges, and so many other outdoor spaces.

How about employing Americans like Roosevelt did during a great economical down turn with the creation of "The CCC" instead of bail outs to banks and so forth.

Please educate the people who input on this forum that: We have to remember that we are voting on things we want the Federal Gov to implement, manage and support financially, Almost none of these ideas should be run managed and supported by the Feds, although many ideas are good, these are ideas that families and local government needs to implement and support. I mean come on, "create an agency to help kids get outdoors" have you ever heard of the Forest Service, National Park Service or the Bureau of Land Management? This entire Forum is an exercise in how to prove to American citizens how under-educated American citizens are on public land issues. All this forum will accomplish is more funding for the Feds to create BS "agencies" that try to control our lives, by deciding where our money is best spent, and it will be MANDATED, that is, LAW!!!! The Federal Government is not here to save us or better manage our lives, that is our responsibility!!!!!!!!!!!!

My recommendations for connecting us with the great outdoors: It's got to be a comprehensive. Remember what John Muir said about connections... Schools: 1.recess: kids benefit from more unstructured outdoor activity. the more time they get in the out, the better they'll think on the in. 2.placed-based education, i.e. incorporate nature nearby into every subject of the curriculum 3.minimize standardized testing and encourage whole child development teaching Young Adults: Replace military recruitment and training with a conservation corp program where youth are given job training and jobs in their communities and in parks Funding/Tax Shift: 1. stand up to corporations and end perverse pollution subsidies 2.tax waste and pollution, i.e. so producers pay/internalize their full costs. 3.lower labor taxes for earners of less than \$250,000, e.g.payroll tax 4.reduce spending on defense \$100B/year for six straight years.

I am writing to you today to talk about our protected lands (National and State Parks and Forests). There was a letter pre-written for me to send to you, but I don't believe in that. Instead I'm going to tell you a little about myself. I am 25. My mother is from the Seminole Nation of Oklahoma, and my father is a field biologist. So I grew up half in the city and half in the wilderness. I am now a river guide in California and in the off seasons I try to spend as much of my time back-packing as often as I can. It is really a shame that you can't go anywhere in this beautiful country without being on somebody else's land, be it private or owned by the government. However, at least I am allowed to go and explore on the state and federal lands set aside for the people. I am a poor, working man and can not afford land, nor can I see myself owning land in the next ten years, especially in the state our economy is in. I know that I am not the only poor man who loves the outdoors, in fact there are probably millions of us. Please do not allow our protected lands to be sold to the private sector, and PLEASE do not allow our protected lands to be developed on! As the saying goes, "only when the last tree has been cut and the last fish has been caught, will we realize that we can not eat money!" The point is, that in the end our wilderness is more important than our economy. It is more important than Wall Street. It is more important than the most powerful people and the most powerful groups of people on the entire planet! It is infinitely more important than me, and it is infinitely more important than you. We are from the Earth and in our demise we go back to the Earth. Therefore, the Earth can never belong to us because, ultimately, we belong to the Earth. Thank you for your time.

(cont.)

For years American have participated in vehicular enjoyment and its ability to access places where humans cannot travel, especially ones with disabilities. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation. The situation at Cape Hatteras National Seashore where the National Park Service is destroying a community, a way of life for generations to save 6 pairs of NON-ENDANGERED birds is moronic at best, tyranny at its obvious worst. Multiple Use lands are where the majority of people recreate, as well as where much of our timber and beef products come from, but these lands have been closed at an alarming rate. The President must protect these precious lands by designating them permanently as Multiple Use. The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less.

Folks, I enjoyed your meeting in Bangor, Maine. I'm glad you place so much importance on the outdoors, as its crucial to our future for so many reasons. I put in my 2 cents worth at the meeting, but I'll repeat it here. 1. Get the kids outdoors. I suggested "No child left indoors" as a campaign slogan, and found it was being used. Great! Don't just say it, do it! We have had an education program in the past at DSF, but we have been short of funding it at the level we have in the past. This program has paid dividends and helped get many people involved. We could use the funds to renew its role in helping keep and get our youth in the outdoors. 2. Use local resources. By spending the available funds in small communities, groups, NGO's you get better results and the people take ownership of the projects. Volunteering is amplified, and interest multiplied. Each little group does a lot and it amounts to great things when looking at it accumulatively. 3. Use science and not politics to work restoring Mother Nature's Charm. A good example is in the salmon recovery. Politics plays a bigger role than good science, and as a result we have not recovered them! That has to change for any real improvements to evolve. 4. Promote the outdoors in all schools, public, private, or other. This is somewhat of a repeat of number 1, but it is that important. If we don't reach our younger generations, we can't much succeed with any of the programs, whatever their intention. We need to reconnect them with Mother Nature. They need this, and it will lead to healthier lives for all, and everything involved with the great outdoors. Thanks for listening,

(cont.)

I hereby submit the following comments for the Administration's consideration, as it develops the report for submission to President Obama. These comments cover both successes or programs in North Carolina that could be exported to other parts of the country, and recommendations that the Initiative should embrace to increase the pace of land conservation and reconnect American families to the outdoors.

North Carolina has four conservation trust funds (Clean Water Management Trust Fund, Natural Heritage Trust Fund, Parks and Recreation Trust Fund, Agricultural Development and Farmland Preservation Trust Fund) that over the years have spent hundreds of millions of dollars to purchase land and easements for conservation purposes. They have been used as match for a variety of DOI, USDA, DOT and NOAA programs. Two of them are funded from general appropriations provided by the legislature, but the real innovation is that NHTF and PRTF receive their funding from a dedicated funding source - a percentage of the deed stamp tax - so we don't have to fight for their budgets each year at the legislature. To encourage other states to create and expand such trust funds, the Administration could place a higher priority on funding projects with greater non-federal match.

North Carolina was the first state to create a conservation tax credit for donated conservation easements. Two years ago, the state passed a law and is implementing a "Wildlife Use Value" property tax category so that farmers or forest owners who want to preserve their land as wildlife habitat rather than as a working farm or forest can continue to have the same low property tax rate as before.

Last year the General Assembly passed a law making it harder for local governments to condemn properties that have conservation easements on them. Similar bills could be introduced in other states.

North Carolina is a leader in targeting high priority lands for conservation purposes. Through a state contract for preservation mitigation six years ago (more details below), many of the state's land trusts were provided with GIS mapping software. Concurrently, the NC Department of Environment and Natural Resources was putting together its "One North Carolina Naturally" plan, which targets areas of the state that DENR agencies are interested in. Today, between 15 and 20 land trusts have the staff and technology to create their own digitized conservation plans, by parcel, based on their organization's conservation priorities.

Six years ago, the state was way behind in producing wetlands and stream mitigation credits for roads and other projects to move forward. The state DOT, DENR and the Army Corps, with EPA's blessing, created the Ecosystem Enhancement Program to accelerate the process of securing mitigation credits. The creative stroke was developing a contract with the Conservation Trust for North Carolina to provide preservation properties as mitigation, on a 10:1 ratio as compared to restoration. CTNC then subcontracted with land trusts in the parts of the state that needed mitigation. The land trusts in turn worked with landowners to place conservation easements on nearly 100 properties, which had both important water quality attributes and imminent threat of development. The state was able to catch up on its credit needs quickly. The money came from DOT, which paid for acquisition and transaction costs, and for staffing and other administrative costs at the land trusts. This contract proved hugely important to land trusts' ability to increase their capacity. EPA's wetlands guidelines still allow preservation as mitigation, so the Administration could encourage other states to use preservation as a mitigation strategy.

North Carolina land trusts are pursuing a number of avenues to diversify who we are and who we work with, so that we better represent and serve all North Carolinians. Initiatives include: land trusts working with community development

(cont.)

corporations to create site plans for conservation-based affordable housing (clustering housing units and preserving open space and stream banks); a summer internship program at land trusts for students from Historically Black Colleges and Universities (stipends provided by foundation grant funds we raised); increased outreach to minority farmers regarding their conservation options; passage of a law on heirs property issues that makes it easier for families to hold on to their land; and creation of a community garden in the middle of a Hope 6 housing development.

The military has been a great partner to land trusts and national conservation groups in preserving thousands of acres near military bases in North Carolina. The original impetus was to protect endangered species habitat, but it has expanded to include preservation of buffers around bases to ward off encroachment and ensure the safety of training exercises. The Administration could encourage DoD to pursue similar conservation projects at many of its facilities.

The following is a list of recommendations that the Conservation Trust hopes the Administration will champion as part of the AGO initiative. Briefly:

- Fully fund the Land and Water Conservation Fund
- Make permanent the expanded (but lapsed) federal tax incentives for donated conservation easements
- Devote significantly more funding to land acquisition along the Blue Ridge Parkway
- Work to make USDA conservation programs more user-friendly, particularly the appraisal process, and make them more available for land trust involvement
- Ask Department of Education to provide incentives and materials to schools to include in their curricula outdoor experiential environmental learning
- Provide more funding and incentives for local greenways, trails, and parks
- Provide more funding and incentives to encourage greater farmland preservation and production of fresh, local and healthy foods.

(cont.)

Our ecosystem is in danger and its up to all of us to make the crucial changes needed to start healing our planets wounds. these changes must be extreme, they will challenge us, as a nation, to step up and endure the radical process of awareness or be forced to face the consequences of ruining our most precious resource and our home. although change is hard for some, the rewards of sacrificing convenience and vanity for an enlightened world of sustainability and balance are worth it. we need to make investments of our time and creativity to find solutions to our nations and worlds problems. i believe this will take an effort bigger than health care reform. it is going to take all levels of government to enforce change. it will also take the effort of each individual to be the generation that WOKE UP and realized that we are like disrespectful fools. would you let your kids destroy a home you worked so hard to create for them? NOOO!! you would set them straight, punish, explain, maybe even make them move, but you would not let them destroy it. so lets stop destroying our home planet ok? we cant just fine companies for destroying our planet. they shouldnt be given that opportunity if such a catastrophe of global significance is within their abilities. lets all eat some humble pie and think about what we are investing our lives in. i know its fun to drive nice(pollution producing) cars and its fun to eat chemically preserved fast frozen quick fried foods, but the impact our greedy lazy bad habits have on us, our kids and our earth is sadenning, frightening, unexusable, ignorant and pathetic. we can either get excited about being intelligent and inventive and acclamate to change or just sit on our behinds and watch the world be destroyed by our own selves, by our own denial. how do we go to war to teach another country how to thrive when the example we set in reality could end in destruction of all? that is extreme to say but we have to be the example of how to live well and hurting our planet to live well is not acceptable for most people. when we stand to fight for good let us fight for all that is good, not just what we decide for ourselves. we fight for freedom...let us use that freedom for what we know is right. let us be known for a nation that not only is free but a nation that protects for the good of all humanity. we have fought so hard for individual rights and freedoms. now let us fight for the freedom of humanity to be cut loose from the harm that we cause our earth. let us find new ways to still live happily but without impacting our planet in such harmful ways. WE CAN DO IT!!!! we need for companies, individuals and schools to be encouraged, aided and rewarded for any and all contributions, inventions, ideas and plans that will slowly begin the change of going from a grey polluted society to a green healthy one, as it should be. the recent oil well catastrophe made me ashamed of so many people. even myself. how did we let this happen and more importantly what other disasters are just waiting to happen if people dont speak up and let the right people know of any impending doom. yes jobs could be lost but MAYBE we could give assistance to whistle blowers in order to enable them to speak up and save us all. as i watched that oil gush and gush and it just didnt stop i thought WHAT THE F***? ARE YOU KIDDING ME? WE ARE SMARTER THAN THIS. but it kept gushing and gushing and it became clear to me. idiots. greedy, fearful, self centered, ignorant, unrealistic, UNACCOUNTABLE PASS THE BUCK kind of people. i know they dont care about our natural world so this is just an inconvenience to them, and a few bucks. what confounds me is that most people i know are really good people. why isnt our government representing us like we truly are? we want our government to run our country like we run our lives, efficiently, with care and with respect for its environment. americans have to budget their income so does our government. with COMPROMISE AND INGENUITY, PRIORITIES AND NEEDS ESTABLISHED, WE CAN REACH OUR

GOALS AS A NATION AND A PEOPLE!

Mr. President. I am a 20 year old pre-Environmental Studies Major at Southern Oregon University. I recently started taking backpacking trips into remote areas of Oregon's beautiful backcountry, and although i've seen Discovery's 'Planet Earth', i was utterly astounded at the literal wonderlands. These trips have inspired me to learn and participate in the environmental revolution, and have also given me a greater sense of empowerment. I know that i am capable of single handedly existing in the wilderness for at least four days (my longest trip so far) with minimal impact, and relative comfort. This feeling of capability extends to all areas of my life and makes it easier to support what I believe in. Action on the individual level, as much as in the government, has been one of the more prominent themes of your administration, and we both know that the inability to inspire action is the most frustrating part of change. I want to see the expansion of shared and protected parks, trails, forests, and other gems of wilderness so that future generations may experience the same inspiration i have, and will feel capable of impacting their world in more ways than just the size of their carbon footprint.

Please stop trying to shut the door on Americans enjoying the outdoors. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation.

Solutions must be for ALL users, not just hikers and the Wilderness Act of 1964 needs to be revised to include mechanized travel. Wilderness should not be open to just hikers, horses and pack animals. NO MORE WILDERNESS! We want to enjoy the land and experiences that a well managed forest provides to ALL USERS, not just the Sierra Club. Let me be clear: NO MORE WILDERNESS!!!

Now is the time to stand by your promises, honor your words, and possibly save the human race from extinction by protecting as much original genetic material as possible through conservation across our nation & world. We need to help the human race off the planet as fast as possible before our current breeding trends/consumerism cause global ruin. Please reconsider ALL lobbyists and follow your best interests in your great grandchildren children's future. The only hope is conservation until we can devote more resources towards space colonization. I would welcome any contact for help from your administration toward this purpose.

Remember the inherent financial wealth contained in natural spaces and the income from tourism and educational visits.

Please protect our wild lands and open spaces. Once they are gone, we can't get them back. Wild lands are vitally important to the well-being of our population. Wild lands can be many thousands of acres or even just a small lot in a town. Please protect undeveloped areas EVERY WHERE. Thank you

I reall mean it I want my kids kids kids to be ale to use and drive on public lands.

Discussion Question 3

(cont.)

Thank you for the opportunity to provide public comment.. I represent the California Enduro Rider Association and a number of families and individuals in the greater San Francisco bay area and northern California which are interested in public lands issues and the preservation of public access and multi-purpose recreation opportunities on public lands. Our concerns and comments are submitted to help shape future management and to develop safe guards for the conservation and maintenance of cultural well-being provided in recreation opportunities on public lands.

Keep the fumers out of Yellowstone in the winter.

I have believed in you and your team since the start, and I know you realize and understand that we as a species need our planet to be healthy in order to survive. Being in the Military I have seen how destructive the human race can be, and I hope that 2011 will actually feel like 2011 and not like the 80's.

Our national parks, forests and wilderness areas are under stress due to lack of funding for maintenance, preservation and law enforcement protection. I am hoping you will work to resolve the deteriorating state of these national treasures. Thank you for your consideration.

I have always enjoyed visiting national and state funded parks and hiking trails. I have never been when I have not seen an animal, plant or sunset that I was not awestruck by its design, complexity or beauty. Some of my greatest memories are of going camping and hiking with my dad. I think kids who get to see natures balance of beauty and respectable ferocity appreciate life in a different way. Cities protect us from dangerous encounters yet shield our eyes from its beauty. I want my children and grandchildren, and any other man, woman or child to experience the vast expanse of untamed and untouched wilderness this great nation holds.

I am all for conservation and sustaining a healthy ecosystem, but more so I am concerned about the various trail user groups being shut out from thousands of acres of trail accessed land all over the country. Many mountain bike advocates have been working with other environmental groups to designate and share trails while preserving the land around those trails. I hope ALL trail users are considered before any legislation is passed designating wilderness. If equestrians can have land access then so should mechanized bicycles. Hikers must also learn to share trails.....this land is your land and this land is my land.

Please consider OTHER OPTIONS BESIDES WILDERNESS - like "roadless areas", "protected areas", "open unless posted closed".

I would like the nature will save for the next generations in all over the world. It's a pity biodiversity is going down from year to year. So many beautiful species of plants and animals have already irretrievably lost.((If it is possible, I would like to participate at any nature-conservative measures, what you can offer.

Discussion Question 3

Written & Online Comments

(cont.)

We are using up way too much land for housing and business developments. We seriously need to rethink our own infrastructure, recognize its flaws, and construct a more resourceful and environmentally protective way of maintaining our country and the people in it. The wilderness is a delicate place and humanity is only now beginning to recognize its importance. Act before it's too late and we end up screwing ourselves and the rest of the world over! PLEASE!

The federal government should be in the business of SELLING its massive land holdings to private citizens and NOT BUYING more land moving it from the private to the government sectors. The Great Outdoors Initiative should be immediately terminated as a grotesque waste of money and asset grab by the federal government.

We need the Federal government to get out of the public land business. They have messed up almost everything dealing with the forest and public lands. When Clinton was leaving office he signed into law things we here in Montana are still suffering over. That was the stupidest thing I have ever seen. Federal Government just does not understand how to manage and supervise for individuals. It is much better to have States regulate and manage as the people are affected have a better voice rather than having to sue the Federal Government to fix stupid acts. No government intervention, you don't know what is best.

Discussion Question 3

(cont.)

When a site marries environmental, historic, and cultural resources you'll find the most successful formula for bringing people outdoors to enjoy the places that tell America's stories. Take Saugatuck, Michigan for example. It's a sparsely-developed landscape of spectacular beach, rare freshwater dunes, water, woods and wetlands; habitat to several endangered species; and home to a large number of significant historic and archeological sites. Saugatuck has been a very successful draw for Chicago residents and others for more than 120 years because all of these resources work together for one of the best visitor experiences.

What works: What are the most effective strategies for conservation, recreation, or reconnecting people to the outdoors? One of the most effective strategies for reconnecting people to the outdoors is providing federal dollars for local projects. Modeled after its sister program, the Land and Water Conservation Fund (LWCF), the Historic Preservation Fund (HPF) provides dedicated funding to support the programs and activities for historic and cultural sites. Programs like Save America's Treasures and Preserve America along with National Heritage Areas play important roles in promoting heritage tourism which brings people with their dollars out to experience those sites. The programs also attract private dollars to restoration projects and work in partnership with the federal government to promote economic development and create jobs.

o According to one analysis, between 1999 and 2009 the Save America's Treasures program allocated around \$220 million dollars for the restoration of nearly 900 historic structures. This investment by the SAT program generated in excess of \$330 million from other sources and created 16,000 jobs (a job being one full time equivalent job for one year) at a cost of \$13,780 per job created. (D Rypkema)

o We are fortunate to have in our midst the I&M Heritage Corridor, which was the first explicit bringing together of preservation, conservation, recreation, and economic development in the country. There are now almost 50 national heritage areas in the U.S. that owe their existence to the pioneer I&M Canal National Heritage Corridor.

Challenges: What obstacles exist to achieve your goals? (for conservation, recreation or reconnecting people to the outdoors) The obstacles to achieving our goals of reconnecting people to historic sites outdoors are The lack of full, permanent and dedicated funding for the Historic Preservation Fund limit the matching grants for State Historic Preservation Offices; Tribal Historic Preservation Offices; and limit funded preservation activities like planning, survey, and public education for historic preservation. Eliminating funding for SAT that leaves no preservation \$\$ for "bricks and mortar" projects and ends the most successful preservation effort in the country's history.

o If the I & M Corridor, with its many natural, historic, and cultural resources were given more funding, it could continue to rehab historic resources, and develop more programming to draw even more people to the to this beautiful 96 mile-long historic site.

Federal Government Role: How can the federal government be a more effective partner? (in helping achieve conservation, recreation or reconnecting people to the outdoors) The Federal Government can be a more effective partner by:

- Reinstating FY 2012 federal funding for historic preservation for Save America's Treasures, and Preserve America at FY 2010 levels.
- Increase to at least FY2010 levels National Heritage Areas' funding.
- Provide full, permanent and dedicated funding for the Historic Preservation Fund at \$150 million and the Land and Water Conservation Fund at \$900 million.

Tools: What additional tools and resources would help your efforts be even more successful? We believe that increasing the capacity of federal, state and local agencies

to care for and interpret historic and cultural places would go a long way to helping our efforts be more successful.

Why are we closing these lands and saving them for the future. What is wrong with me enjoying them while I am here on this earth. Don't I count. Dig deeper and see how much profit those "best for all conservancy groups" stand to make from closures and wilderness areas. No one will talk the actual truth of the matter. Seems like it is always some "best interest for all" group that cry's the loudest. Save the world for the future generations. I think it's time we let the present generations enjoy what we have on this earth. Time to take stand. It is a world for all, not a few.

Please restrict the lock-up of public lands! If off road vehicles are causing a problem arrest the problem makers and leave the rest of us alone!

I know you are getting mostly form letters from here. So I'll type my own as it's very short. The takeover of public lands by special interest NGOs posing as good environmental stewards needs to cease. I am extremely displeased at how these organization can run amok as they have in Cape Hatteras National Seashore. NEPA and other federal laws have been broken while instituting new wildlife protection measures and limiting public access at the nations first national seashore and recreation area. Yet nobody seems to care, and the appearance of collusion between federal agencies and these NGOs is hard to deny. Please fix these problems and encourage responsible access to OUR public lands.

Here we are, in 21st century America. Nearly 250 years after the beginning of the global industrial revolution. One hundred twenty years after the debut of the automobile. One hundred and ten years after the anthracite coal strikes sparked discussion of the need for renewable energy, especially solar, to replace dirty, dangerous coal sources. More than 90 years after America's wartime economy surrendered to one that focused on disposable goods (when we beat our swords into trinkets). Eighty-eight years after the coolant dielene replaced ammonia in air conditioners, which locked in their commercial success. The dawn of the 20th century wasn't just famous for anthracite strikes: turn-of-the-century Americans were treated to two landmark - forgive the pun - actions. One by a strong president, and one by an uncompromising environmental campaigner: 1901 was the year that John Muir published *Our National Parks* and President Theodore Roosevelt gave his first conservation speech to Congress, waxing lyrical about America's abundance. And yet, in spite of bold pronouncements and a century of conservation action, America's fabled abundance is in danger of being exactly that: a fable. A memory. Let's zoom in closer. Once upon a few decades ago, there was a fast-running stream near my family's favorite camping spot. I could swim in its lazier hollows. I could drink the water from the springs that fed the stream. During any old spring day, I could take walks in the bracken around my house, and play with my neighborhood friends in the shade of pecan trees. The same pecan trees that gave us winter pies that to this day are the source of many family food stories. Amongst those pecan trees, I'd listen to a hundred birds - calling for love, singing for the future. Weekends were for hiking or beachcombing - our favorite campsites always saw deer passing through and we'd hear owls and wolves and coyotes and rattlers and crickets and the unmistakable, slow amble of satiated bears. The nights were full of cookfire sparks and lightning bugs - though the lightning bugs visited us in the city, too. Only 40 years later, highways crowd our forests; sprawl gnaws on our open spaces; industry edges out marshlands; rivers dry up on their way to the sea; and natural areas look more like theme parks than wilderness. We can't live without Nature. We can't eat, we can't build houses, we can't recreate. The vast empire that Madison Avenue built says that we need disposable goods to be happy, to be patriotic. But what we **need** - for our souls, for our country - is connection - with Nature, with each other. How do we build that connection, we're asked. Well, how do we build muscle? Goal-setting. Practice. Humans have taken more than our fair share of the land's bounty. Therefore, agenda item number one to help us achieve conservation goals must be to mandate the recycling of all disposable products. This would not only reduce pressure on public lands that are denuded from extractive industries and protect natural resources, it would also expand or create municipal infrastructure jobs. Agenda item number two: no more extractive permits approved. Period. Agenda item number three: to protect the recreation experience for everyone, reduce development in national parks. By caving to the pressure to "give the people what they want," our parks are less like Muir's grand cathedrals and more like cheap tourist traps. Scale it back, lower the volume. Achieving connection is more of a cultural practice. No one who's at least 30 years old **doesn't** know about the crying Native American in the "Keep America Beautiful" campaign. Internet and television PSAs should be a cheap and easy way to get the conversation going and entice kids and families to outdoor adventure (and of course, to pursue adventure responsibly via Leave No Trace principles). Mr President, the truth is, we need even bolder action now than we did during President Roosevelt's

(cont.)

administration. Our status quo isn't working. We've shared too much with industry, allowed too many uses on public lands, signed off on too many permits; the federal government has betrayed the public's legacy, the public trust, and Nature, Mr President. In other words, the time for compromise on environmental issues has long passed us by. The staggering number of species on the brink of extinction is hard to ponder, and heartbreaking. The last 5% of our old growth forests can't take much compromise. The last 10% of America's wild, free-flowing rivers need staunch advocacy, not compromise. There's so much to grieve for. (Still, there's so much to fight for, too.) We'll stand with you, Mr President. Be bold. be uncompromising. It's the only way to protect America's grandest legacies.

I just moved to Northern California from Chicago and I am amazed at the difference in scenery. It is beautiful everywhere you look out here. I ask that you do something to protect the few spaces we have left that are under-affected by industry and development. thank you for listening.

Preserve what is preserved. We need natural areas to reconnect with the natural environment. We should focus on America being the most beautiful land. Take more pride in what we have. Where I live there are barely any places where there is no intrusion of man made objects. this saddens me. I think we are better than this.

This is a message pertaining to the environment in Utah. When do you think secretary of the interior Ken Salazar will do something about the unmanaged ATV free for all on our public lands? 800,000 of these beasts are registered in this state, and it's nearly impossible to find a quiet place anymore. Everyone from the department of motor vehicles, county commissioners, beers harley davidson, the LDS church, to the BLM seems to encourage more of the same. I'm sure someday soon we will get tired of riding rough shod over every square foot of the state, but what is worrisome is what it will look like until when we do. Until that time we need to protect that which we have left. Scars take a long time to heal in canyon country. People need to be told in clear terms we can't behave like this everywhere and to have a little respect.

this message is for our liders in the goverment to allow americans to go out and enjoy the outdoors,im part of various mtb clubs in AZ,and our goal is to take people to enjoy our trails and be out excersice and promote health and teach them to care and protect the outdoors,keep and maintenance the trails and built new ones,we need your help by not closing or restrict areas to mtbikers because if we help conserving and building trails we should have the right to enjoy them to,thanks

Please salvage and expand the beauty of nature in this country we live in.

I want more shared and better protected outdoor spaces. Protected outdoor spaces are important for our public health, management of natural resources not to mention a moral imperative.

Discussion Question 3

Written & Online Comments

(cont.)

The legacy of our natural national heritage, passed on to the next generation as it was passed to us from prior generations, is priceless and vulnerable. We cannot take for granted that it will exist as it is today without action now, to ensure that it is all it can be. What is a nation without its treasures? Very poor indeed. Please act now.

Without our precious natural world, the foundation on which our entire species rests will not be able to sustain us. From the air we breathe to the food we eat, our economy and the exchange of good and services, the materials we use to build every object that exists, as well as the awe inspiring divinity of forests, oceans, rivers, wetlands, and deserts, all of this is given to us from our natural world. Everything in our power must be done to preserve and protect what is so near and dear to us. Without mother nature we simply cannot survive. As we love our own human mother with such deep conviction, let us turn our love and attention toward the rest of creation and preserve and protect the sacred lands from which we all have come.

I applaud the Obama Administration's conservation leadership embodied in the America's Great Outdoors Initiative. It is inspiring to see the President make conservation of America's treasured outdoor places a national priority. Our natural resources are threatened by pressures like expanding population, unguided development and climate change. We need presidential leadership now more than ever to protect our wilderness quality lands so that future generations may also enjoy them. I'm asking the President to please make wilderness protection a central component of his policy emerging from the America's Great Outdoors Initiative. The President has the authority to facilitate better cooperation among the federal public land agencies and Congress to identify eligible landscapes and protect them as wilderness. Currently, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. Worse, the Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President, and I urge that this be done. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds and recreational opportunities. Again, I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

I personally am one of many.... I enjoy fishing, hunting, site seeing off roading and just about anything the good old USA offers to the tax paying and non tax paying citizens. For your information, I happen to be one of the tax paying citizens. I dream about a world that would just stay at the status quo for just one year. No more Political Bills or changes in our legislation (state, federal or local). I know, you are going to say that this is an unreasonable request. If it is, I would ask for a minute to embrace the reason for the suggestion. And after contemplating the reason consider that most of what we have changed in the world is what people are arguing about. Lets try to slow down the changes! Not continuing to accelerate them causing continual anger and frustration.... If you insist on more Bills and Acts of Legislation my recommendation would be to create a Bill that preserves what we have today!!

(cont.)

This email is a submission to America's Great Outdoors Initiative, and a copy has been sent to my legislators and leaders who could have an influence in resuscitating the Maine Forest Service WoodsWISE program. First, let me say that I've reviewed comments and ideas that have been submitted under President Obama's America's Great Outdoors Initiative. While it's great that we live in a democracy where everyone has a right to express their opinion, I urge our leaders to use caution in acting upon ideas that sound great, but could have serious social, economic and environmental repercussions. It's no secret that while many people consider themselves to be environmentalists, most are generally uninformed when it comes to the outdoors, particularly in managing the balance between social, economic and environmental demands. Like turning to doctors for medical advice, you may want to turn toward professional foresters for forest management advice, as we are the only people trained to balance the demands listed above. That said, there is one highly efficient and effective conservation program that has fallen through the cracks this past year, due to significantly reduced funding (see <http://www.maine.gov/doc/mfs/fpm/wwi/wwi.htm> for details), and given that independent professional foresters traditionally have a weak lobby, this program hasn't been given the attention it deserves. The Maine Forest Service WoodsWISE program is Maine's forest Stewardship Incentive Program. This program offers a small financial incentive to Maine's forest landowners who work with professionals to achieve a much higher level of management than they would have utilized otherwise, which has huge and diverse benefits to the public. Public benefits include identifying and protecting significant features, including deer yards, unique or significant wildlife habitats, threatened and endangered species, and areas of historical significance, not to mention hundreds, if not thousands of rare features that would not have been inventoried, if not for the high level of inventory specifications required under WoodsWISE. WoodsWISE has the added benefits of creating long-lasting working relationships between professional foresters and landowners. We all know the stories of poorly planned logging sites where a professional forester was not utilized. Unfortunately, poorly planned logging is far too common over many non-traditional private ownerships, which the WoodsWISE opportunity would help combat if made available to landowners again. It should be noted that WoodsWISE planning standards meet or exceed American Tree Farm Standards, for those who promote "Green Certification". WoodsWISE has a couple added benefits that aren't usually advertised. First, it creates jobs. Simply planting the forester/landowner relationship seed leads to hundreds of new job opportunities...foresters, forest techs, loggers, truckers, surveyors, road construction crews, pulp and saw mills, chipping and biomass operations, wildlife biologists, invasive control experts, accountants and every service industry you can imagine benefit from WoodsWISE economic ripple effect. Several land trusts have also utilized the WoodsWISE program, with great results. The second non-advertised benefit of WoodsWISE is that it's a low-cost forest conservation program. It creates an incentive to keep forests forested, healthy and undeveloped for at least 10 years, at an average cost of less than \$10/acre, after taxes. A well-managed, undeveloped forest in the tax base, at less than \$10/acre, is a much better public investment than purchasing land, with either public or non-profit entities, at the tune of hundreds or thousands of dollars per acre, with more taxpayer money inevitably needed for future management. Please take into consideration that you are hearing this from a leader in the land trust community! It's great to have a diverse set of forest conservation tools, but programs such

(cont.)

as WoodsWISE should meet full landowner demand before even considering purchasing conservation forestland with public money! I'm asking you to resuscitate the WoodsWISE program, at the cost of between \$100,000 to \$200,000, to benefit Maine's woods, wildlife, society and economy. This is not a matter of funds lacking. This is a matter of priorities. This past year, in my region alone, over \$30,000,000 of taxpayer money was paid out through the federal BCAP biomass program (interestingly, WoodsWISE also contributes to the biomass industry). Over \$600,000 of federal conservation money was paid out in Penobscot County through NAWCA. Several million dollars are dedicated to removing a dam in my town, for conservation purposes. I could go on and on, but you get the point. WoodsWISE is a very small piece of the financial pie, with the greatest return over the greatest area. I'm asking you to fund the Maine Forest Service WoodsWISE program as soon as possible, at \$100,000 to \$200,000, to reopen Maine's best forest conservation program, measured by public cost vs. public benefit. Stimulus funds and/or fair trade funds, if made available, should not be ruled out as potential funding sources, along with the traditional USFS State & Private Forestry funds (who took the primary hit). Credibility diminishes when forest managers hear legislators promote forest conservation programs and green certification, but let Maine's premier Stewardship Incentive Program fall apart under their leadership. Simply put, if taxpayers want highly productive sustainable forests, or more specifically, sustainable public benefits from private forests, then sustaining the Stewardship Incentive Programs is paramount. I hope to see action on your part in resuscitating the WoodsWISE program. Please feel free to contact me anytime with your thoughts and follow up. Warm regards, , LPF Golden Forestry Services, Inc. consulting forester, serves hundreds of forest landowners throughout Maine, including private, corporate, municipal and non-profit entities, with acreage exceeding 100,000 acres. He is a forest landowner, a board member of the Orono Land Trust, founder and chair of the Veazie Land Association, and a member of several forestry and conservation organizations.

Currently, the U.S. Forest Service uses overly restrictive criteria in determining their recommendations for lands that should be designated wilderness. Worse, the Bureau of Land Management is bound by a directive from the previous administration to cease all wilderness assessments. Both constraints can be lifted by direction of the President, and I urge that this be done. Expanding America's wilderness preservation system is the best way to protect wildlife, watersheds and recreational opportunities. I want to thank the Obama Administration for taking the initiative to protect America's Great Outdoors. I look forward to seeing the president use this opportunity to establish a new and substantial legacy of wilderness conservation, one that can stand as a visible and enduring accomplishment of his presidency.

The greatest single thing the Obama administration could do for America's Great Outdoors is to get the magnificent wilderness of southern Utah canyon country protected through legislation to designate wilderness areas. I worked for BLM during the original wilderness inventory in 1978-80. That inventory has been corrected by later BLM work, but very little of those lands have been designated as wilderness, because of opposition by county commissioners. Please help the Utah conservation groups get wilderness legislation through Congress for these beautiful lands.

The most important selling point of the 1964 legislation on the continental oil lease rights was the fact that lease payment money would be deposited back into saving natural resources through the land and water conservation fund . As has been said I too believe we have a responsibility to protect this nation's treasured places for future generations of Americans. That is why I would like to see the promise of full, dedicated funding for the Land and Water Conservation Fund (LWCF) fulfilled in order to achieve the Obama Administration's conservation vision for the 21st century. LWCF is a simple idea that remains as important today as it was 45 years ago when President John F. Kennedy enacted it into law. Please support full, dedicated funding of LWCF to protect clean drinking water, support jobs in local economies, and conserve our common heritage and natural areas for wildlife, recreation, and for our children and grandchildren to enjoy.

Please add my comments to those you will deliver to President Obama and the Department of the Interior. My family and I greatly appreciate the AGO initiative and the opportunity to comment. We urge that the Administration and the Interior Department begin its implementation by engaging individuals and the private sector in soil and water conservation, carbon sequestration, renewable energy development in appropriate locations, and protection of wildlife and natural areas. The AGO initiative is a great beginning of connecting people to the land. When we are connected to the land, we take better care of it. We all need to remember that our daily survival depends upon clean air, clean water and healthy land. Our environment is our home, and it seems that many of us humans need more education about the monetary value of ecosystem benefits - for example, the role that forests and wetlands play in keeping our water clean, the role properly managed forests and agricultural lands can play in sequestering carbon and how open space and outdoor recreation provide huge health benefits as well as ecotourism opportunities. Full funding of the Farm Bill conservation programs is critical in order to protect our farmland and precious agricultural soils. Appropriate siting of renewable energy on rooftops, existing structures including parking garages, mall rooftops, abandoned shopping centers and parking lots, brownfields, is preferable as opposed to targeting preserved lands first. Thank you very much for preserving America's heritage and lifeblood-our lands and the natural world.

I believe we have a responsibility to protect this nation's treasured places for future generations of Americans. That is why I would like to see the promise of full, dedicated funding for the Land and Water Conservation Fund (LWCF) fulfilled in order to achieve the Obama Administration's conservation vision for the 21st century. LWCF is a simple idea that remains as important today as it was 45 years ago when President John F. Kennedy enacted it into law. Please support full, dedicated funding of LWCF to protect clean drinking water, support jobs in local economies, and conserve our common heritage and natural areas for wildlife, recreation, and for our children and grandchildren to enjoy.

My family pays taxes and enjoy OHV trail riding. do not allow special interest groups that live in a unrealistic world sue the government. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation, followed by Mountain Biking. The Initiative must preserve Multiple Use lands as Multiple Use for current and future generations to enjoy these and all other forms of recreation. Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans.

I hope you will consider protecting Bristol Bay from mining by mega-corporations. It will destroy the clean waters, wild salmon, wildlife and traditional subsistence ways of life that exist there. I believe that public lands in the Bristol Bay watershed should be closed to large-scale metallic sulfide mining. Protecting habitat, subsistence and recreation resources should be the top priority. Thank you.

It is so important to respect the Earth we live on, and without these kinds of areas, I fear that people will soon loose touch with it altogether.

Discussion Question 3

(cont.)

What Works: Involvement/participation- WE need to get people involved. WE have too many public employees who try to take over and be gate-keepers which make many stay away from public places. I was able to get 100 acres on a Scenic River for a Public Park and kept it for 10 years with a single Ranger. One day Ranger Jane showed up with 2 other ladies and told me that I had NO RIGHT to tell people they could come to the place even though I had signed waivers and had an agreement. They also made up some story about my being a "gay basher." They got rid of the hard-working Ranger and replaced him with 4 others... I do not lead hikes there anymore, I do not do "kids in creeks" there anymore and I seldom visit and pick up the site. I saw the same public employees who try to limit public participation at the AGO meeting along others who think parks belong to Park employees and not the citizens. In trying to deal with our Natchez Trace Park people, there is no concern for the public nor genuine safety issues. As a full time volunteer for public parks, spaces and Green-ways, I tend to feel less than welcome..... My suggestion is to replace most of the paid bureaucrats with motivated volunteer groups and neighborhood coalitions. Challenges? Absolute indifference of Government to dumping and filling and ruining of watersheds by a few connected developers.... When you complain or report incidents - you become the enemy. There is something wrong! It is not that we have too much government, it is that we employ too many who do not care, work as little as possible and work against and not for PUBLIC interests. I say motivate or terminate. Most Public employees work fewer hours for more money and benefits that most other workers..... We have a volunteer network in Nashville Parks and Greenways which should be a model for others. Federal Role? Funding, incentives and motivation... Get friendlier, more committed and dedicated workers who care..... Think about those who have worked to conserve great parks, forests and places- not many were Government Employees. Continue to get more public input outside of the paid to work group.... Tools? SCHOOLS! Conservation incentives- Identify the treasures and publicize more about what WE should and can do... Work with existing conservation organizations and help locals to help themselves... A 20,000 acre tract near me that was bought with Federal money is now like a War zone with insensitive shooters and 4 wheelers. There is something wrong in our society with militant groups intent on violence which tool should be training and behavior modification. We need more public education about Good and Bad practices and more public information about what is sane and rational and to do more about those who abuse the environment and to make it news.

For the Outdoors Project: National Park Service Heritage Areas have been an effective alternative to the proliferation of small NPS units, and they have mobilized public sentiment, volunteerism, and charity to support these regionally and nationally important areas. However, my understanding is that funding for these Areas cannot be directed to acquisition of land or interests in land, even by non-profit organizations or state agencies partnering with the Heritage Area. I submit that the restriction against acquisition is unfortunate. The ability of Heritage Areas to assist in funding acquisitions that are a priority for protection within a Heritage Area could be quite important in leveraging other funding. I know that Heritage Areas can provide grants for planning and for restoration of historic sites and structures; it is a shame that they cannot provide similar grants for acquisition of preservation easements, conservation easements, trail easements, or even fee ownership of high priority properties. Thank you for considering this suggestion,

Friends: I live in Wallace Stegner's Geography of Hope--but as I grow older, my beloved American West seems to be evolving into a Geography of Hostility. Here in my home state of Utah, when we speak of the proper use of our great outdoors we often descend so far into polarized screaming that we essentially disqualify ourselves from productive dialogue and allow the debate to move elsewhere. It's clear that we must take back control of the conversation if we are ever to have a sense of real community. We must get everyone to the table. And once we are there, we can't walk away. Stegner decried "our headlong drive into our technological termite-life, the Brave New World of a completely man-controlled environment." If we turn over the last remaining wilderness to unlimited energy development and a million off-road vehicles with free access to tens of millions of acres of wild country, we'll get that world that Stegner feared, plagued by "the noise, the exhausts, the stinks of human and automotive waste," ruled by the principles of exploitation. So I ask for the same strength from federal agencies that Stegner asked for fifty years ago in the "Wilderness Letter." I ask for all of us to quit hollering at each other from spittle-flecked mouths and calm down and look for common ground. My love of the land goes back to my earliest memories. My love of the land goes right back to my father.

My father is a 94-year-old geologist who worked for his entire career with the U.S. Geological Survey. Every summer, we left our home in Denver and headed west, renting a house near his mapping area. Every vacation, we visited national parks and monuments, where we walked the nature trails, read the interpretive booklets, and listened to naturalists tell stories. We didn't camp. These weren't wilderness experiences. We really were just tourists. But I grew up with the firm belief that park rangers were rock stars, my guides to the coolest places in the universe. I grew up believing that Dad and his fellow geologists working away in their Department of Interior offices were the adults that a boy should choose to emulate. Though comfortable with the millions and billions in geologic time, these scientists spent their days in contact with the earth, collecting knife-sharp chunks of obsidian warmed by the sun. I grew up assuming that civil servants did visionary work. In my twenties, I worked seasonally for the National Park Service, for the Forest Service, and for the Bureau of Land Management, and I was proud to do so.

I believe in public lands as our permanent common ground. The American people own these public lands. The federal agencies manage these lands for us, and only the agencies can truly lead us to the reconnection, restoration, and protection asked for by the president in his memorandum. Land management agency visionaries must feel free to act courageously, backed by good science and by the force of law. This will be difficult, but no one else can take the long view--past political expediency and the relentless pressures from those interested only in making a quick buck. You--the federal land managers--are the grown-ups, and you have the ultimate responsibility to preserve biodiversity, protect wilderness, reverse global warming pollution, conserve working landscapes, facilitate the work of land trusts, and prohibit destructive development in our last open spaces. It's a dauntingly huge job, but you must fight all of these battles. You must pressure Congress to pass strong legislation. No one else has your authority and powers of advocacy. But never forget that you have allies out here. Like so many of my generation I have carried the catchphrases of the first Earth Day in 1970 in my catalogue of truths: Thoreau: "In wildness is the preservation of the world." Aldo Leopold: "I'm glad I shall never be young without wild country to be young in. Of what avail are forty freedoms without a blank spot on the map?" I grew up in Colorado and Idaho and

Discussion Question 3

(cont.)

Washington—always with mountains rimming my views, always with the sense that there were plenty of blank spots still on the map. I came of age in Utah and Colorado and Arizona—especially in the sensual redrock maze of the Canyonlands, and the deep stark wildness of the Sonoran Desert. I matured as a writer in New Mexico and Nevada—below the sacred mountains of Pueblo people and in the space and silence of the Great Basin Desert. Today, I’m astonished and thrilled to own land that borders proposed wilderness on BLM land in southern Utah’s Wayne County, just outside Capitol Reef National Park. The West made me who I am. I define my home by landscape as much as I do by family and friends. This is a gift, and I know it’s becoming more rare as the nation grows overwhelmingly urban. How do we pass this on? How can we, as parents, play effective matchmakers between our children and the earth? In my 1994 book, *The Geography of Childhood: Why Children Need Wild Places*, I did my best to answer this crucial question: None of us can predict or control the career or avocational choices of our children. All we can do is introduce, try to prevent prejudice, battle gender stereotypes, teach by the example of our own attention and wonder. All we can do is recite from the Scripture of maps and field guides. Give names to the mountains and rivers, give names to the trees. Give voice to the emotions that storms and tundra flowers, young bison and soaring ravens can pull from us. As parents, we can take our children with us to the land. We can be there with them as they climb on rocks, play in streams and waves, dig in the rich soil of woods and gardens, putter and learn. Here, on the land, we learn from each other. Here, our children’s journey begins. Fifty years ago, Wallace Stegner wrote his “Wilderness Letter” in response to a prompt much like this one. In 1960, Stegner sent his small masterpiece to _____ of the Outdoor Recreation Resources Review Commission to address “the wilderness idea, which is a resource in itself.” Seated at his desk in the hills above Palo Alto, Stegner imagined the view across his boyhood haunts in southern Utah’s Wayne County, ranging out from the family cabin at Fish Lake, from the Robbers Roost, from the Aquarius Plateau. He called these lands “the geography of hope.” My own home in Wayne County looks out on the same view, the same geography, the same “lovely and terrible wilderness” (in Stegner’s words) that I have visited yearly since working as a seasonal ranger at Capitol Reef National Park 35 years ago. I described that view in my recent book, *Bargaining for Eden: The Fight for the Last Open Spaces in America*: Sunrise hits the top of the Cockscomb, a brilliant white-gold flare on the Navajo Sandstone cliff. I’m partial to the monumental, transcendent stripes before me: red Moenkopi ledges in the foreground, piñon-green hills and mesas midground, then the sea-monster ridge of the Cockscomb spotlighted by shafts of sunlight from the Fresnel lens of moving clouds. The green-black mountain rises beyond these as backdrop and finally gives way to blue sky, with strokes of cloud swashed across the firmament. And that’s just the view to the south. Maybe it’s this predilection for stripes that has always made me so sympathetic to the landscape of Capitol Reef. The long, rolling cliff face of the reef, its monoclinical tilt eroded in hogbacks and ridges, color by color, formation by rock formation, runs across the horizon in what the Paiutes call a “sleeping rainbow” for a hundred-plus miles. In the still cool air I write these thoughts in my journal as I listen to the ravens and Red-tailed Hawks that nest on the cliffs within a couple of hundred yards. I hear the croaks and cries when the adults flap off their nests to hunt and return to eggs and fledglings—generation to generation, here, sharing our ledges. If, as Stegner wrote, wilderness defines the American character, what will it mean to be an American when we have destroyed the last wilderness?

Living in the greater Albuquerque area and being a non-motorized outdoor enthusiast, I would ask you to consider preserving other areas within an hour's drive of Albuquerque for protection and public recreation.

Aldo Leopold said, "Conservation is a state of harmony between men and land." I want the next generation to experience America's great open lands, as I have. But open space that is 'useful' to loggers, utilities, building groups has been diminishing, and lost out because of financial reasons. I am asking you to be a meaningful voice now that has not been present in many years. ACT NOW. Tomorrow will be too late

I have heard that you are not (a gun/outdoor/hunting/fishing guy but i would appreciate it if you let hunters and fisherman be able to do what they like best i am not allowed to go hunting now but i hope that i will in the future and you please protects my rights.

As President of the Board of Carolina Mountain Land Conservancy I see opportunities on a regular basis to acquire in holdings, and round out boundaries of National Parks, US Forest Service properties and the Blue Ridge Parkway holdings. We cannot have a large enough war chest to jump when opportunity arises. The financial climate is not good for these opportunities. What is needed is a pot of cash for critical properties. The moment of opportunity is often short. Consider empowering several land trusts with review authority to prioritize key acquisitions. Create a nation land bank to fund short term critical properties, while long term ownership is sorted out. We in the land trust business know what is important and we can be quite creative in locking the land down. What we lack is a dependable funding stream. We will have saved over 29,000 acres in Western North Carolina in our 16 year history at the close of 2010. Visit our site at <http://www.carolinamountain.org/>

.This shouldn't even be needed to get the attention on the subject. the earth is all we have and there is only 1. It saddens me that this is needed

I was raised and born in a beautiful country town in Michigan, but have recently moved to Long Beach, California. Seeing the difference here, the amount of constant litter and pollution, I realize how absolutely precious mother nature is. Please help to conserve the few areas we have left to ride off-road in the sand, hike in the mountains, surf in the ocean, and so on. Thank you very much for your consideration.

it can always be developed later - save lands as is - be a hero to the future.

The National Parks are the most wonderful places to vacation. We have gone to many each summer and we consider them as our best vacations. We have done many hikes in them and have stayed in many of their lodges. I hope that they will be around for many more generations to enjoy.

I want a change in pesticide, fertilizer and production ag. The soil can not sustain our future generations farming field corn #2. Our municipal wells are contaminated all across America. How can we let our freshwater be polluted. Its insane. Put the chemical companies out of D.C. For instance, the crop pollinators are being devastated by pesticides and loss of suitable habitate. This costs our econoly over 200 million is losses.

I really wanted to comment on your site, but I simply could not figure out how to use it. I went to the "post an idea", clicked on it, but never did see "post my idea". I was very frustrated with the experience on how to use that site and did spend several hours working on different approaches to using it. My comments are as follows: I am totally against the overturning of the Multiple Use and Sustained Yield Act, repealing the Taylor Grazing Act, repealing the 1872 Mining Act, banning guns on federal lands, creating massive new spending programs to promote nature appreciation/worship, taking time out of the school day for hiking field trips (schools are for teaching the basics, like reading and math), creating new government agencies, spending massive pork dollars on projects that benefit only local community, or bringing back the CCC which cost entirely too much money; money that we don't have to spend. My biggest concern for the American Great Outdoors Act is to make the US/Mexican border secure. Our great outdoors don't mean a thing unless one can feel save. If money must be spent, then let's create an "America's Great Secure the Borders Act" which will benefit the outdoors, but also benefit the entire country, and especially those border states that are inundated with drug and human trafficking. Let's get our priorities straight!!

I do not support the NRA or the expansion of hunting or fishing beyond the permitted limits. We do not need more campgrounds in endangered areas. We do need to preserve old growth forests. Thank you, President Obama, for being MY President and representing the interests of individuals who care about Planet Earth. God bless you and your family!

We need to keep open spaces for NON-motorized outdoor activities.

I took my children out to state & national parks as they grew up and although grown up now, they still look forward to "going camping".

Today life is filled with noise, distractions and stress; all leading to reoccurring health problems. People have forgotten how to "detoxify" their life by living within their means, conserving and most importantly reconnecting to nature and outdoor recreation. As life gets more complicated, it becomes absolutely important to protect our remaining wilderness through an Omnibus Land package for generations today and in the future. If lasting effects is what President Obama is seeking, then passage of the Omnibus bill is the way to go first; this is what would work!!! It's the concrete foundation needed to administer the President's declaration of creating strategies and programs to reconnect people to our earth! As a representative and future educator (currently an education student at New Mexico State University) of the newly organizing "Friends of the Organ Mountains-Desert Peaks Wilderness," I am in support of proposed bill S.1689 which would protect our sacred Organ Mountains and surrounding desert wilderness areas. Our group's goals and mission are to reach our community about the importance of protecting our wilderness through education, awareness, advocacy and youth wilderness or nature programs. Our biggest challenges are creating knowledge, understanding, and support in the community. But it's the Understanding that's important to get across; that the effect of protection is great!!! Continued Life!!! As you can tell, My love is Nature, the Great Outdoors; the master works of God. I enjoy taking my family hiking and exploring into the Organ Mountains and surrounding areas every Spring and Fall and times in between for tranquility and harmony with the lands of my ancestors. My Apache (and Special Forces) father gave me a love of the wild-lands and what the lands can teach us by studying it. Exploring the lands of the Organ Mountains-Desert Peaks Wilderness and seeing its beauty gives me a longing to deepen the roots of my Apache heritage and needing to share it with my children and future students. I'm a new grandmother and I want the opportunity to be able to share with my grandson the legacy of beauty, wildlife and history of our lands & wilderness; the same that my father shared with me. Many people come to our southwestern lands (Las Cruces & Dona Ana) because of the beauty and tranquil air it brings. If our remaining wilderness is left open for developments, etc.; Where shall our future generation go? Will they walk the sands of a beauty forgotten as the Sahara? Our natural beauty will no longer be, and we will no longer have the attraction and breath-taking valley of green. When the air is no more, our Mountains and indigenous wildlife will die. We need to protect as much of the wild as possible for future generations. If our remaining Wilderness is left unprotected, what are affected are our ecological systems that sustain us and give us life. Our wilderness carries many values. There is a high diversity of plant and animal life as well as a diversity of geographical lands and rock formations. It carries historic values of prehistoric tracks, markings and cave dwellings; footprints of our past. So Not only does our wilderness preserve our very Life, Protection of our remaining wilderness aides in physical, emotional and mental well-being as well as aiding in our children's educational studies; giving us our future generation geologists, doctors, environmentalist or physicists and allows them to dream of possibilities for a better future. It is imperative that we protect our remaining wilderness, such as our Organ Mountains and surrounding desert areas (Bill S.1689) through the passage of an Omnibus Land package so that our future generations may have continued life and continue to enjoy the Great Outdoors!!!

As a child my family took us on month long, cross country, camping trips to see the wonders of the state parks and other natural beauties. I like to think my daughter will be able to see these beautiful landscapes.
