

The Hydrologic Modeling Work Group is primarily responsible for planning, organizing and managing the series of Federal Interagency Hydrologic Modeling Conferences which are held at four year intervals.

In April, 2006, the work group collaborated with their counterparts from the Subcommittee on Sedimentation to hold a joint hydrologic modeling and sedimentation conference at the Silver Legacy Hotel in Reno, NV. More than 250 technical papers were presented along with more than 60 posters, 10 very well attended short courses and three technical field trips. Total attendance for the joint conference exceeded 600.

Proceedings for the series of Hydrologic Modeling conferences will be posted by February, 2007. Additional information about the 2006 conference can be found at:

<http://www.jfic.org>

The two sponsoring subcommittees have determined that the joint conference format should be continued in 2010. Dates and a location for the 2010 conference will be determined in the coming months.

Those seeking additional information on the work group should contact:
