

8th National Monitoring Conference
May 4th, 2012

Stormwater Management Success through Green Streets

Tim Kurtz, P.E.

City of Portland, Bureau of Environmental Services
Sustainable Stormwater Management

ENVIRONMENTAL SERVICES
CITY OF PORTLAND

working for clean rivers

Stormwater | Regulations

Clean Water Act (1972)

- Combined Sewer Overflow (CSO)
- NPDES / MS4

Endangered Species Act (1973)

- salmon
- other fish
- amphibians
- birds

Safe Drinking Water Act (1974)

- Underground Injection Control (UIC)
- drinking water well protection

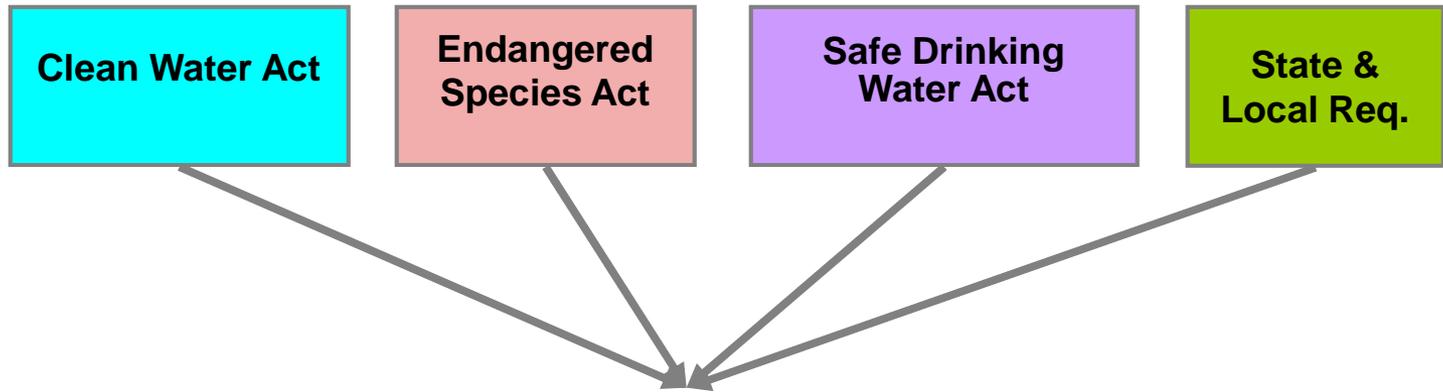

State & Local Req.

- sewer capacity
- flooding
- erosion
- development
- zoning

Stormwater | Regulations

reduce peak flows
+
reduce flow volumes
+
reduce pollutant loads

Many Names of Green

- Bioretention
- Green Solutions
- Stormwater Inflow Controls
- Sustainable Stormwater
- Low Impact Development (LID)
- Sustainable Site Development
- **Green Infrastructure**

Green Streets | Types

Swales

Curb Extensions

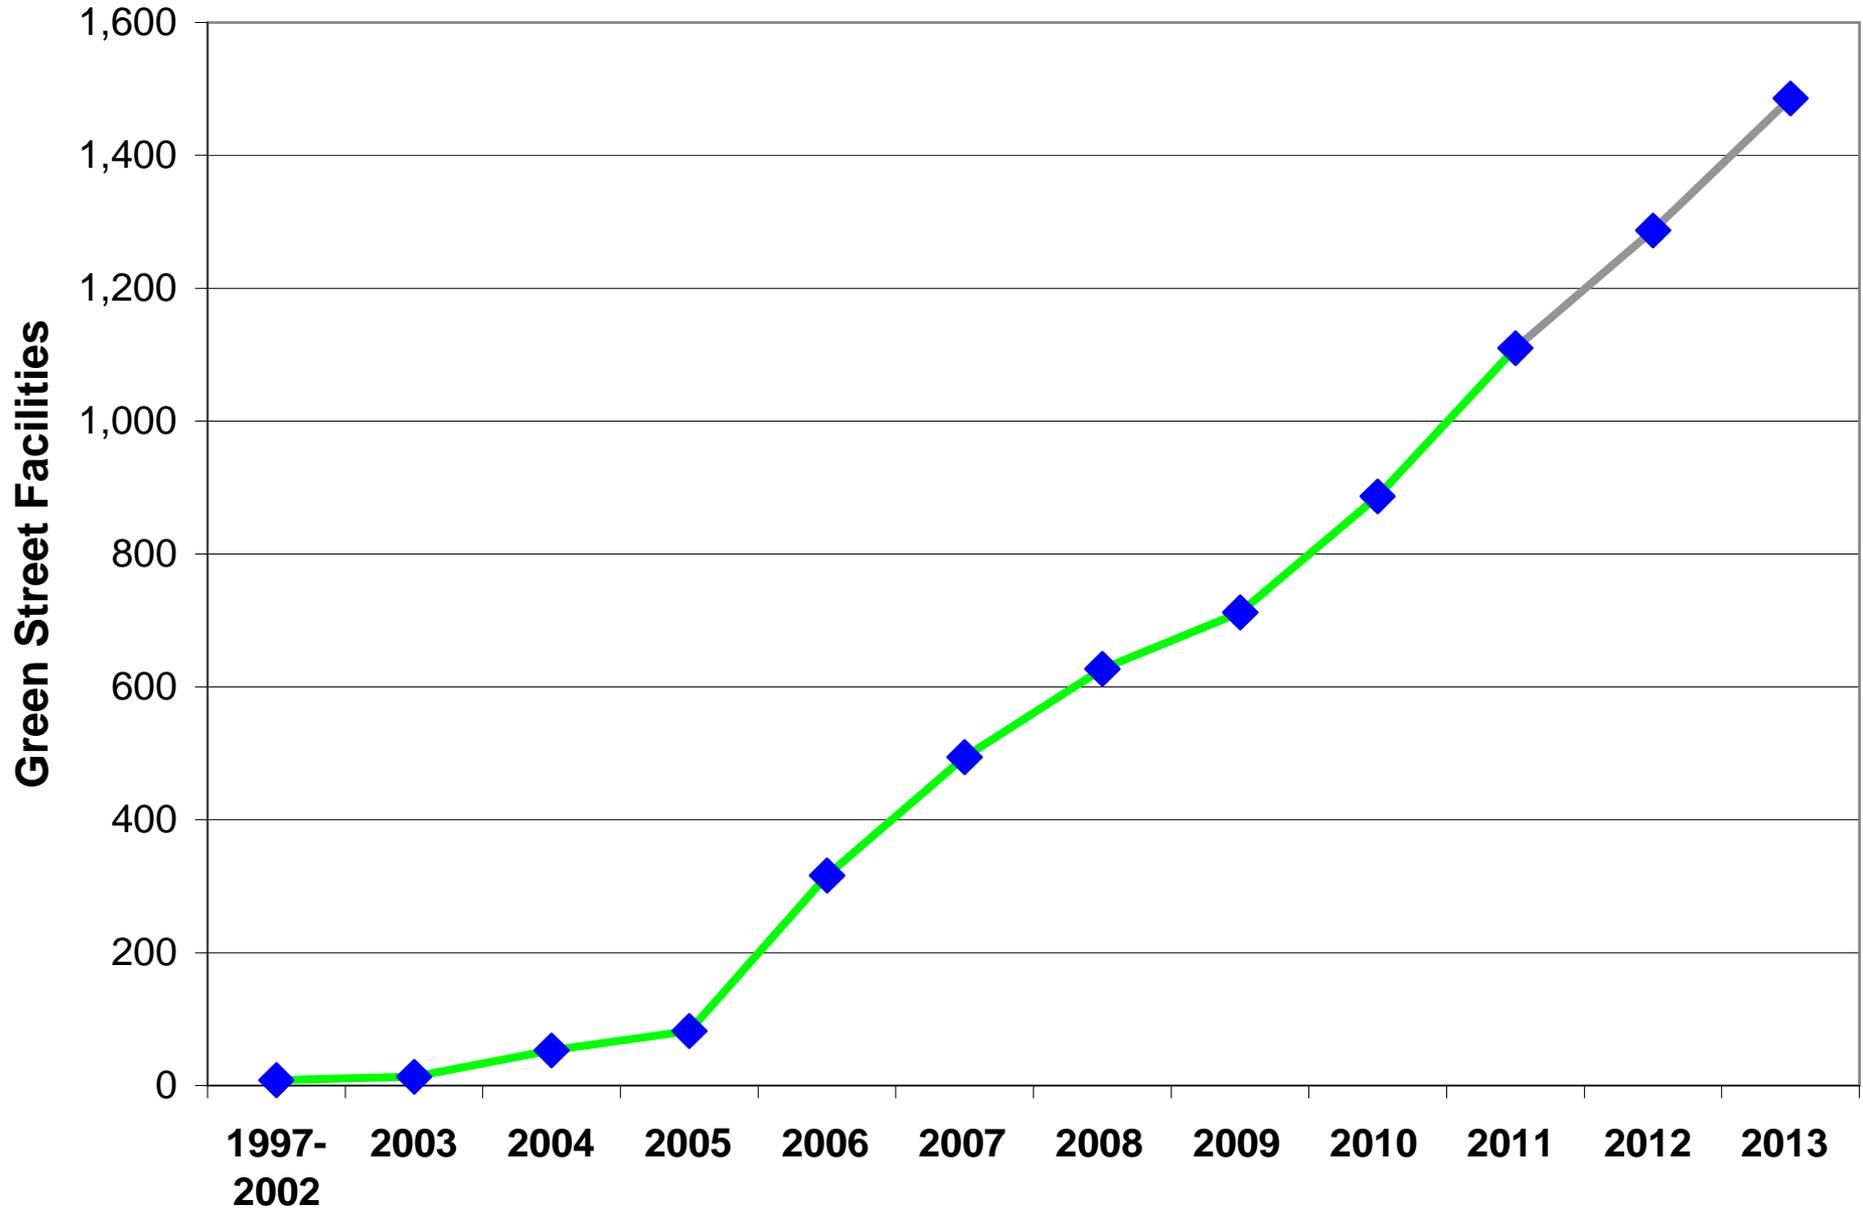

Planters

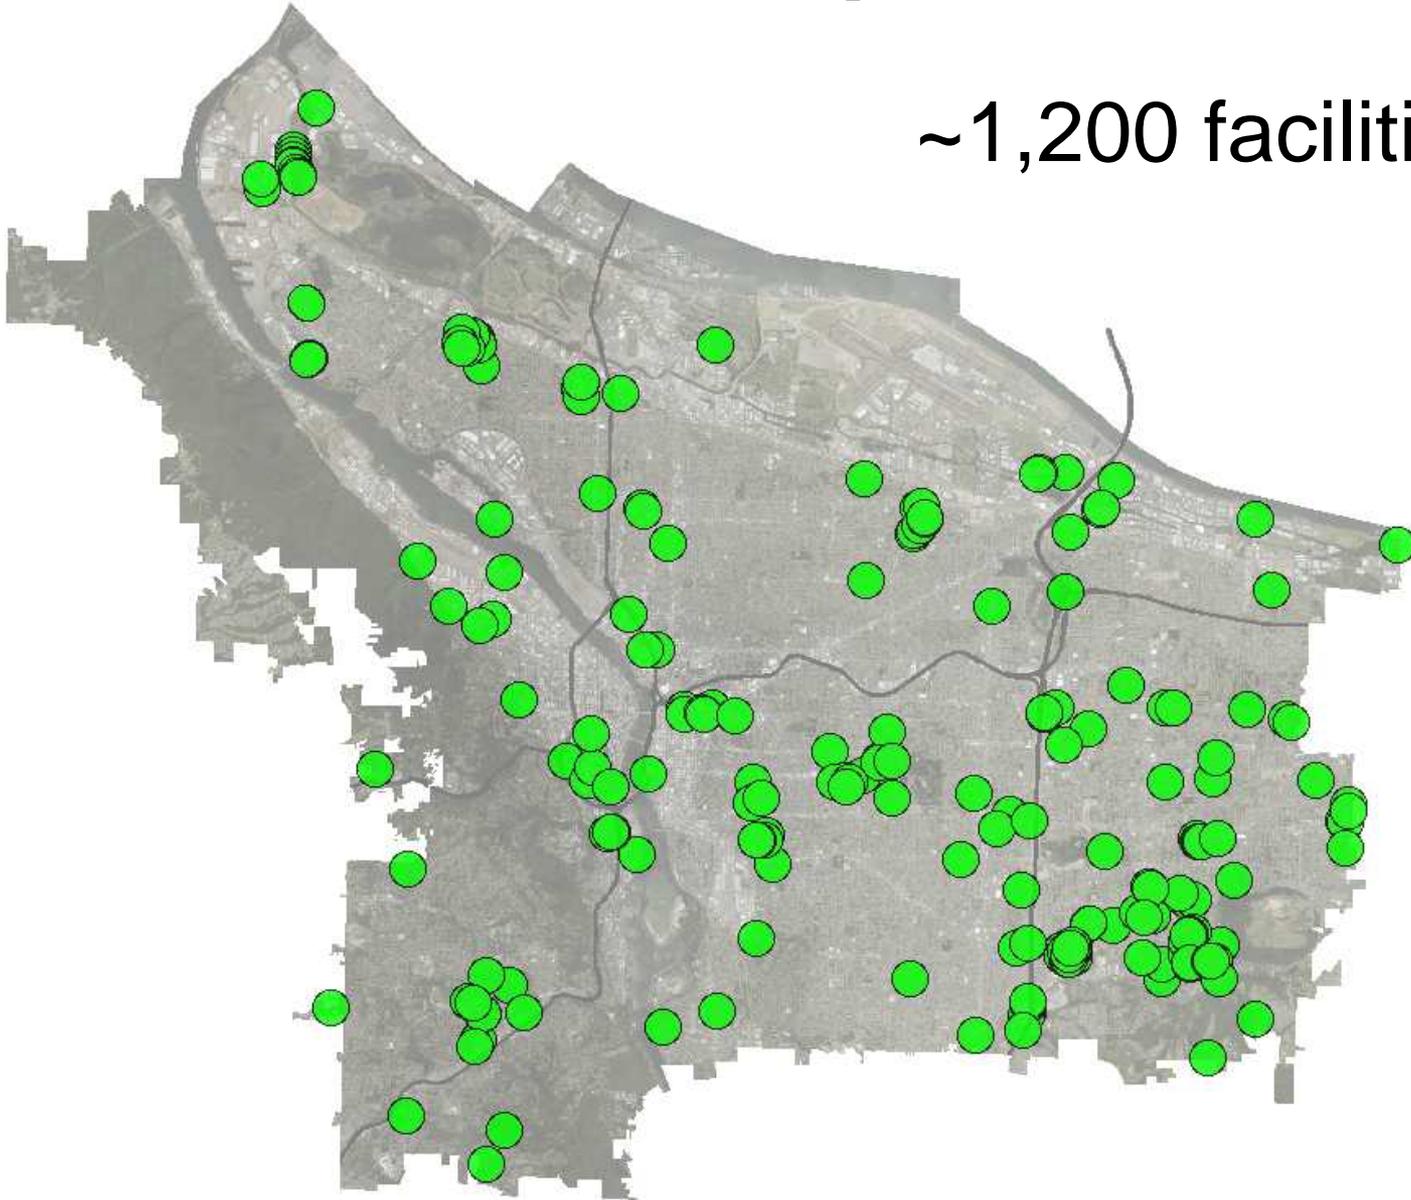

Basins

Green Streets | Facilities

Green Streets | Facility Locations

~1,200 facilities

Monitoring | Objectives

- **Quantify benefits to watersheds and sewers**
- **Identify design & maintenance issues**
 - » design variables (inlets, soils, checkdams, ...)
 - » maintenance frequency / level of effort
- **Quantify changes over time**
 - » variations with facility age, season

Monitoring | Continuous

WINIS connected to server FAI STAFF

Meter Installation: Wash GARDNER ROAD GARDEN

Row 1 of 14

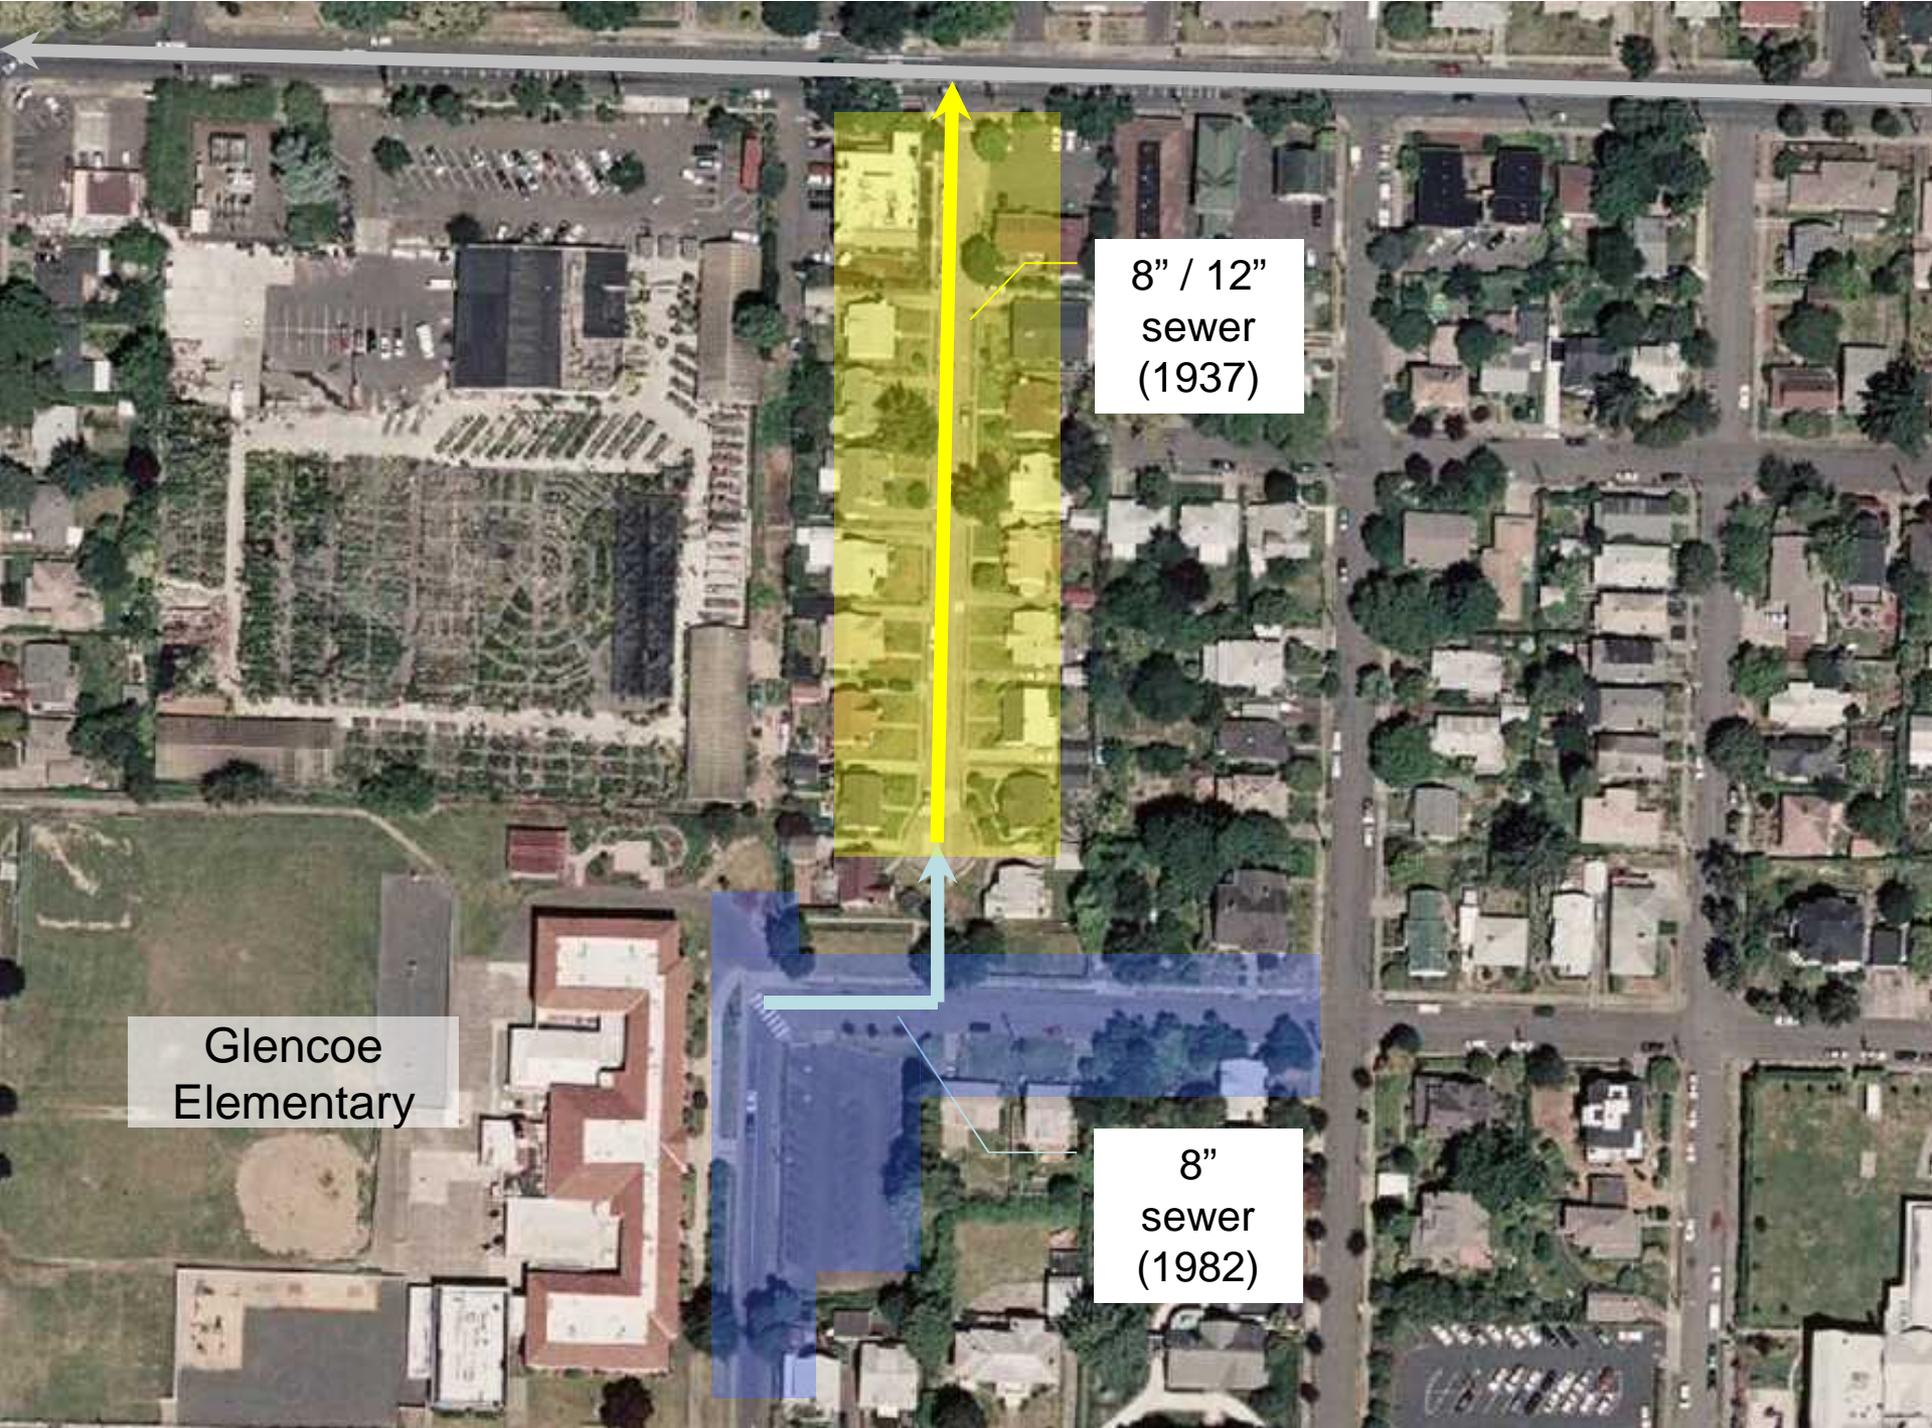

Time	Annual	Manual	Depart
09:29	0.4	0.25	0.25 PST
09:27	0.4	0.25	0.25 PST
09:32	1.3	1.0	0.5 hts

Flow: 0.4 0.4 0.25 0.25 PST
Vol: 1.3 1.0 0.5 0.5 hts

Report: Data looks good when flow occurs. The rest is low flow. No data.

Monitoring | Continuous

- Advantages:
 - » recording all the time
 - » data collected for a wide variety of rain events
- Disadvantages:
 - » unattended for a month at a time
 - » need a raingage nearby
 - » no guarantee you'll get the storm intensities / volumes you're interested in

Glencoe Rain Garden | Flow Volume

Monitoring | Flow Tests

Monitoring | Flow Tests

Design Storms

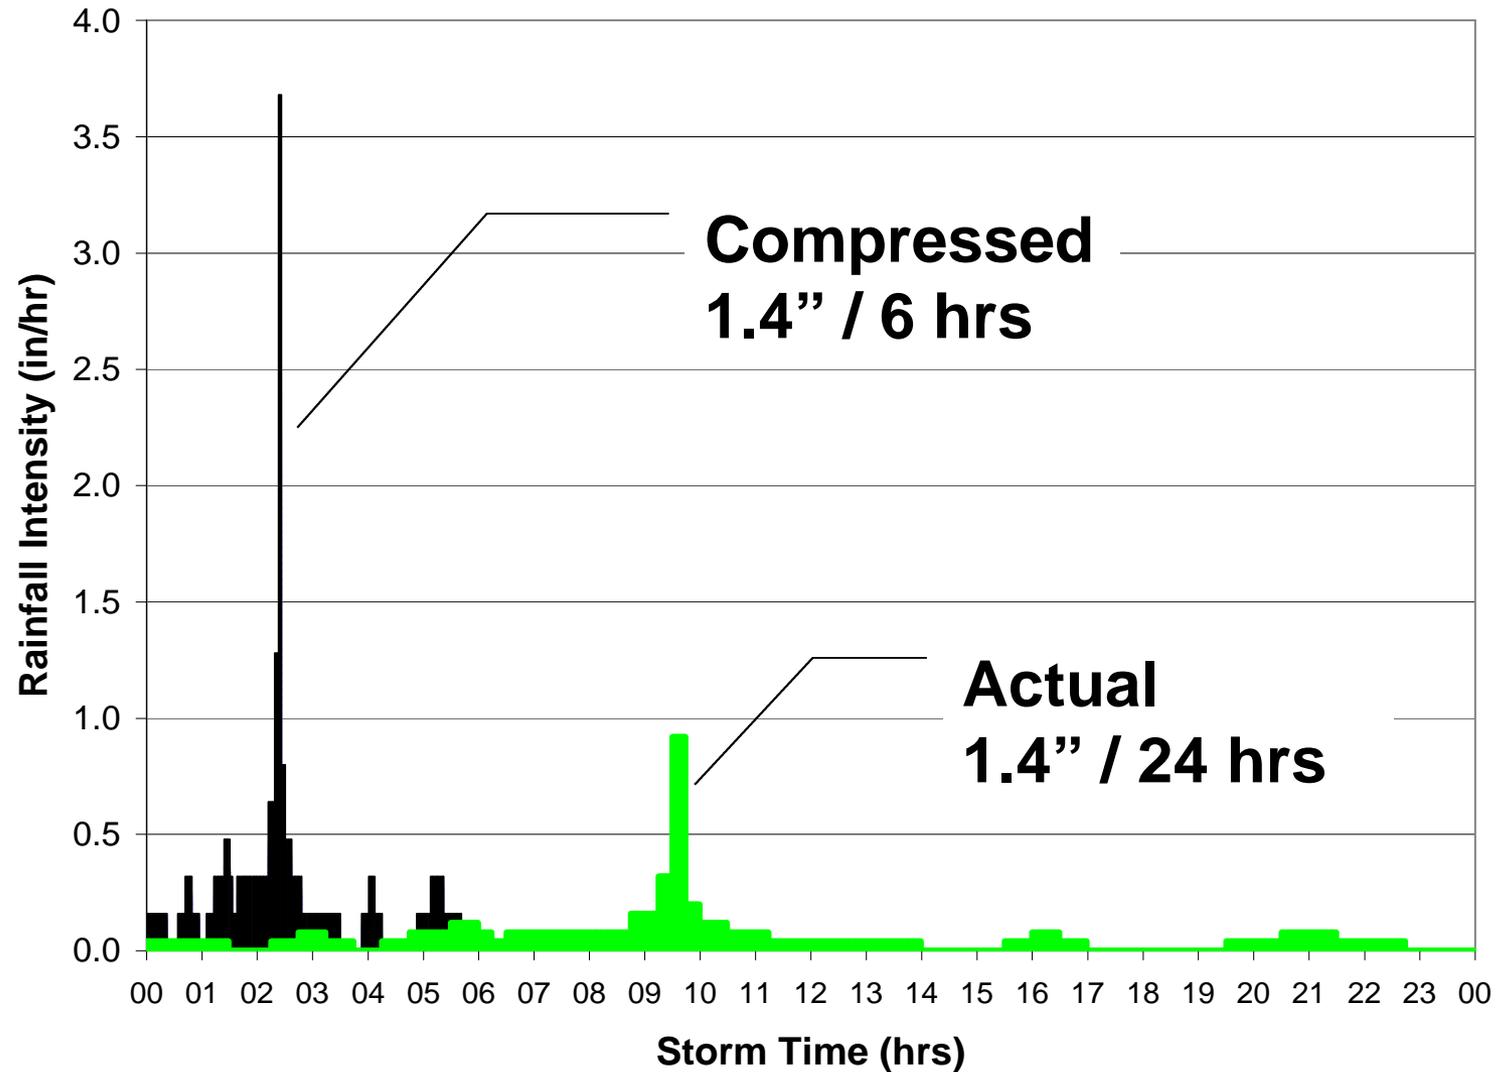

Flow Table

<i>Time interval</i>	<i>25 year Storm (gpm)</i>
0 to 5	166
5 to 10	64
10 to 15	67
15 to 20	32
20 to 25	31
25 to 30	28

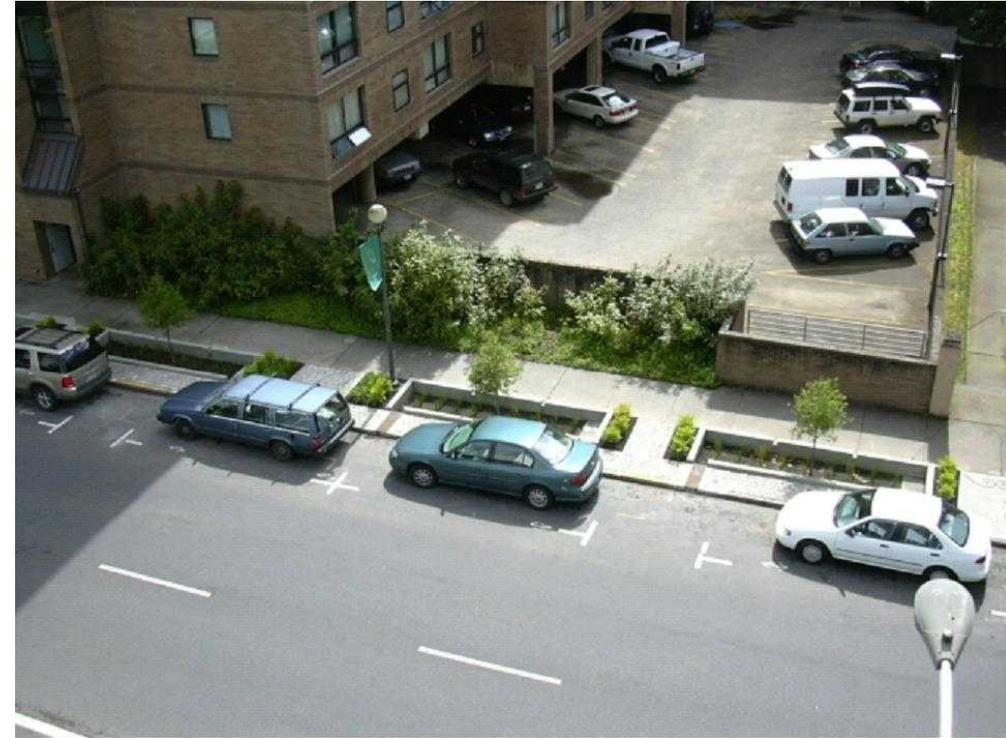

Monitoring | Flow Tests

- Advantages:
 - » you'll get data on the storm you're interested in
 - » higher data quality
- Disadvantages:
 - » simulated events
 - » time compression

Flow Tests | Time Compression

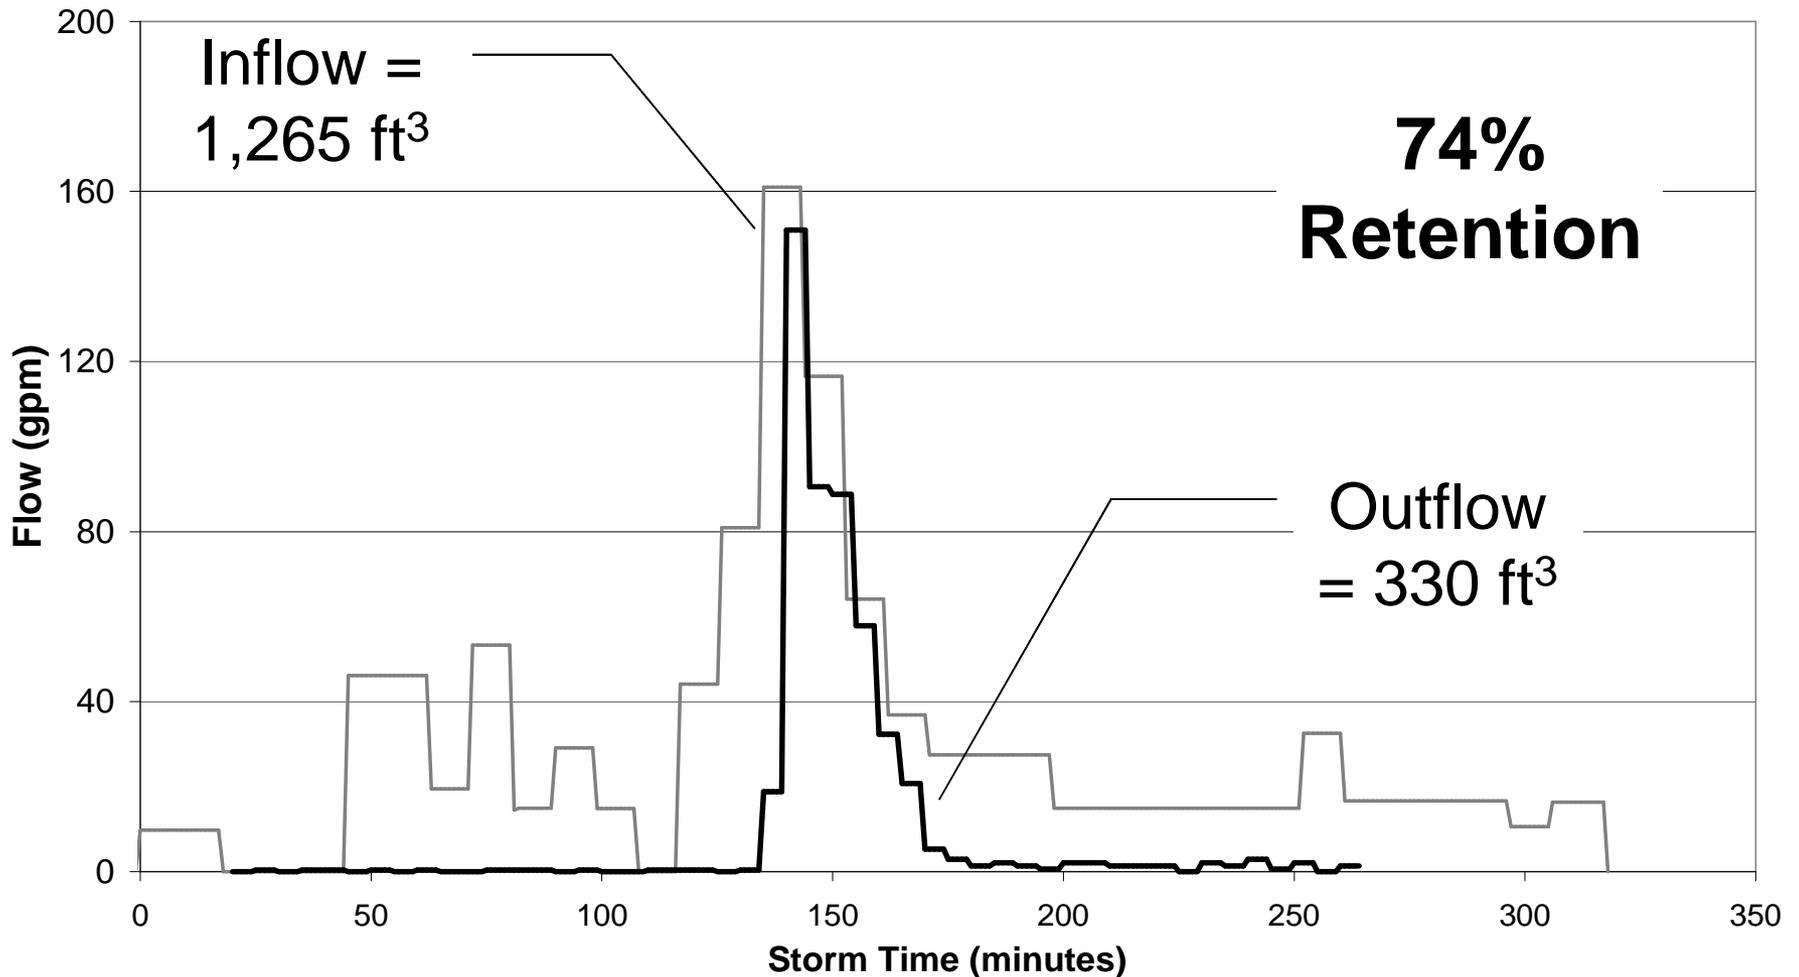

Flow Test | SW 12th & Montgomery

Flow Test | SW 12th & Montgomery

- CSO Design Storm (compressed)

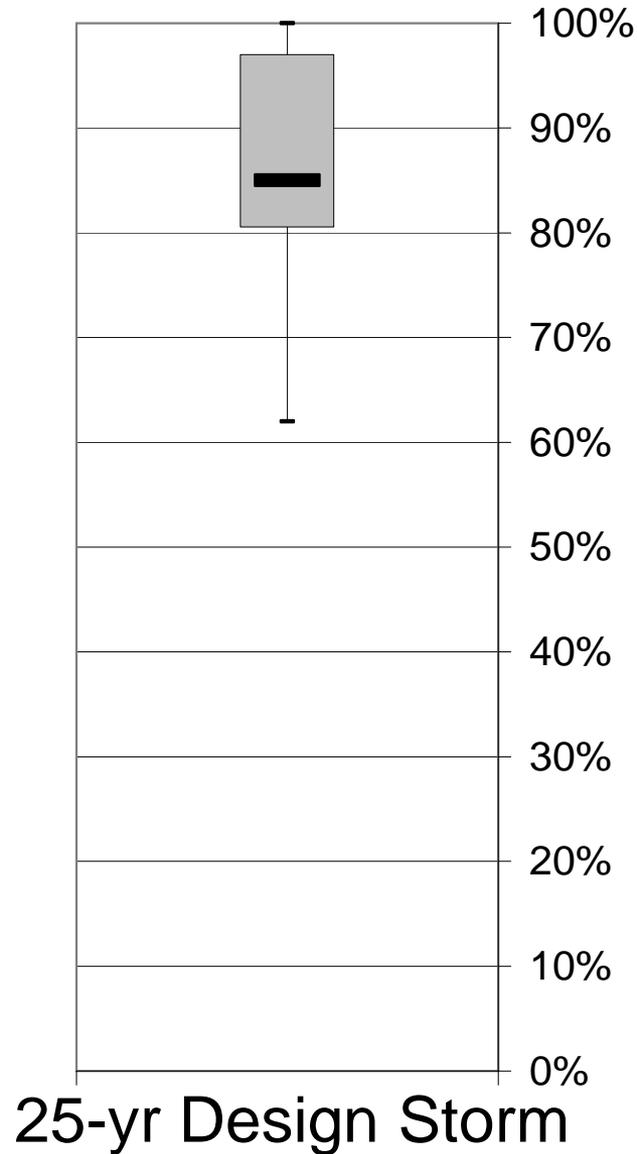

Flow Tests

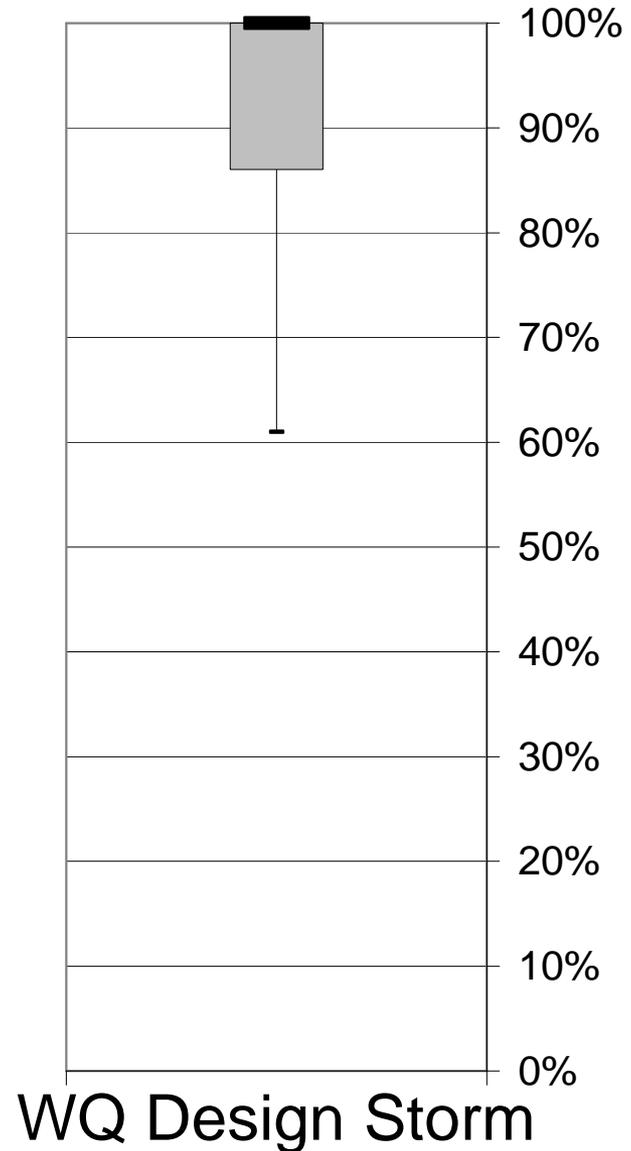

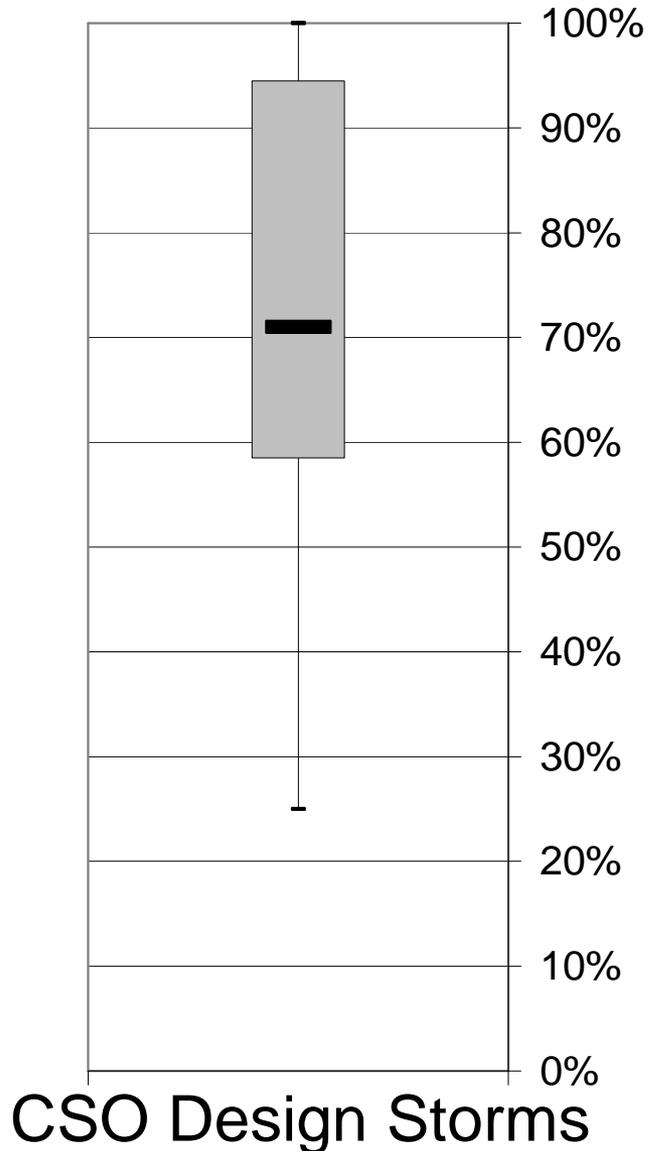

- ~60 flow tests
- 27 facilities

Flow Tests | Peak Flow Reduction

Flow Tests | Flow Volume Reduction

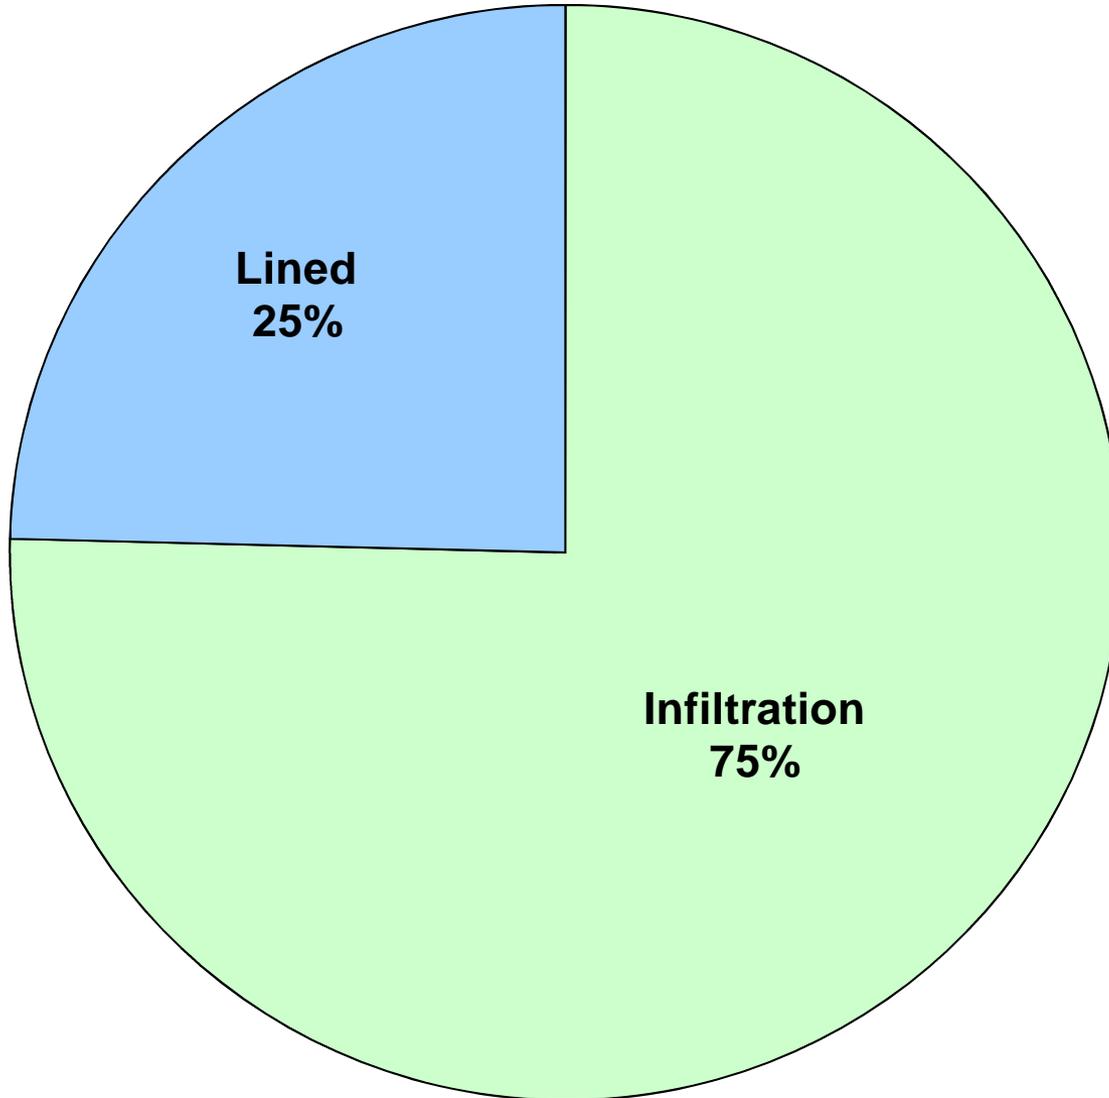

Lined Facilities | Why?

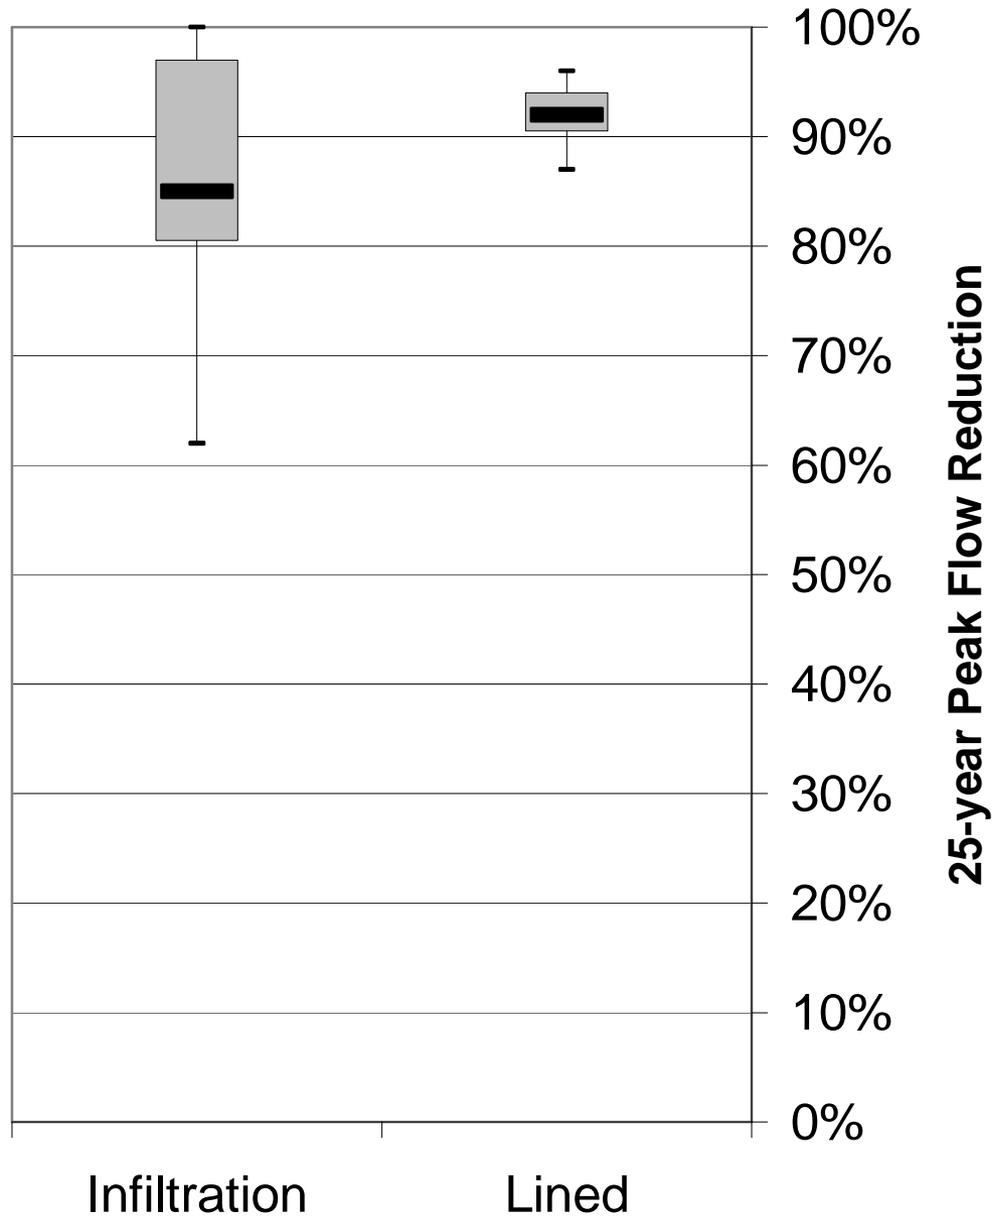

- Soils
- Setbacks from structures
- Depth to groundwater
- Steep slopes
- Utility Conflicts
- Wellhead Protection Area
- Contaminated soils
- Source control

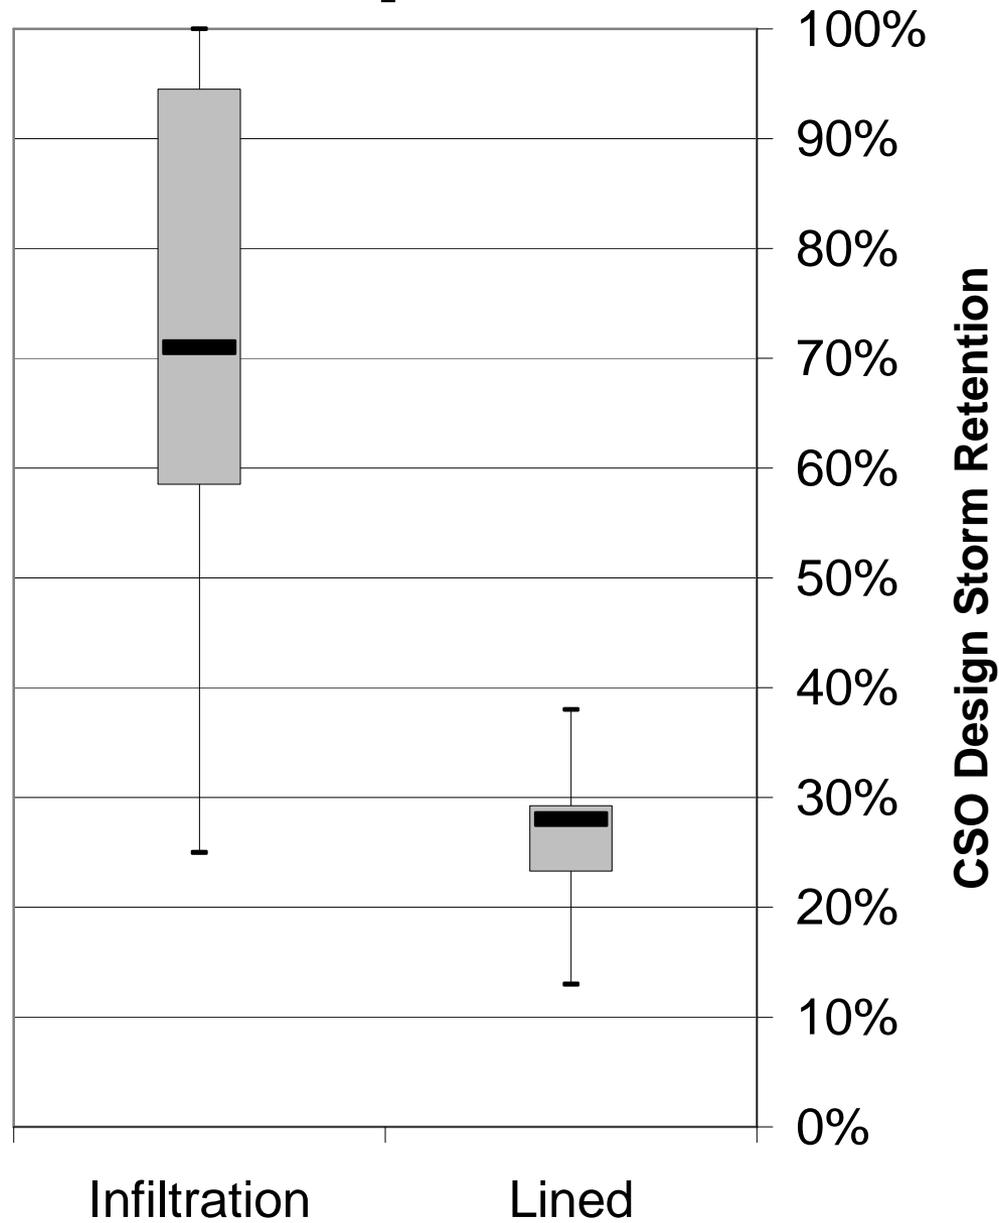

Green Streets | Infiltration or Lined?

Comparison | Infiltration vs. Lined

Comparison | Infiltration vs. Lined

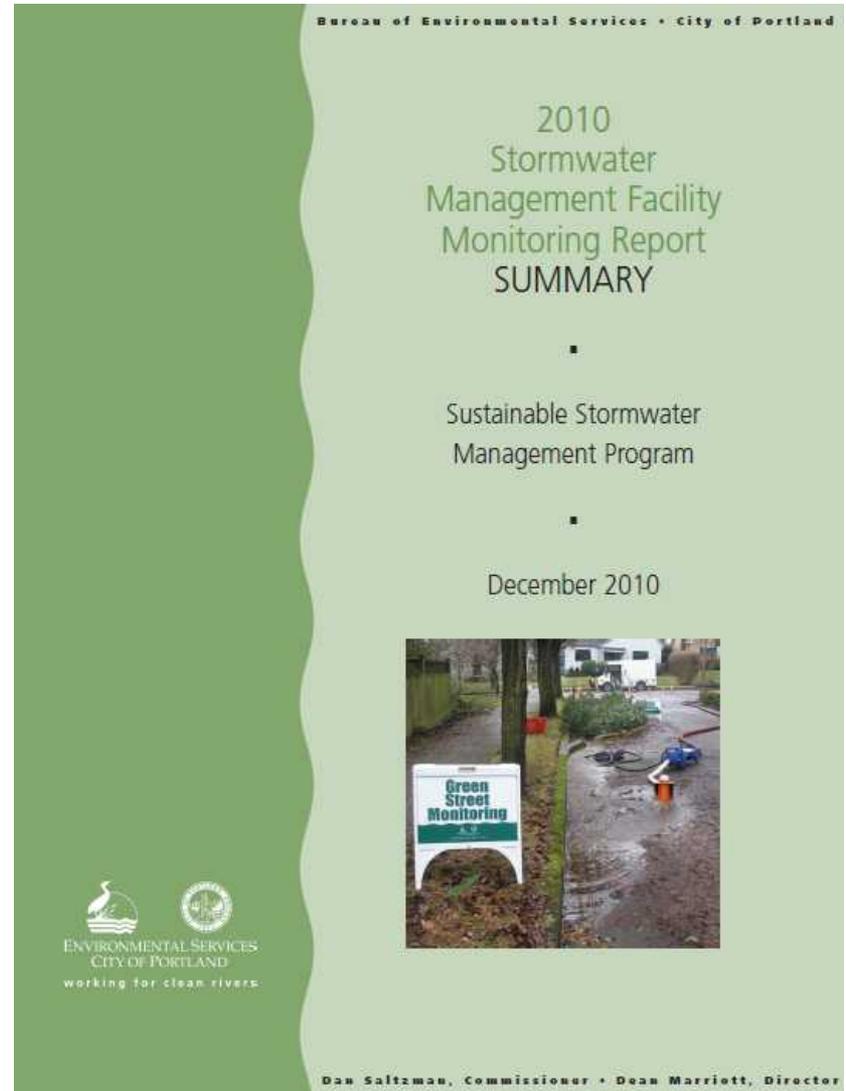

Green Streets | Other Monitoring

- soil pollutant accumulation
- sediment accumulation
- vegetation performance
- groundwater impacts
- lined facility export
 - » dissolved copper, phosphorus

Monitoring | Reports

- Monitoring Report
 - updated every 2 years
