## AMERICAN DOCUMENTATION INSTITUTE CATALOG OF AUXILIARY PUBLICATION

Copyright 1946 by American Documentation Institute

First Edition: 5,000 October 15, 1946

This publication will be distributed free so long as this edition is available. Thereafter it will be obtainable as are all other ADI documents:

For ADI Catalog of Auxiliary Publications, 1946, order Document 2338 from American Documentation Institute, 1719 N Street, N.W., Washington 6, D. C., remitting \$0.50 for microfilm (images 1 inch high on standard 35 mm. motion picture film) or \$5.00 for photocopies (6 x 8 inches, readable without optical aid).

### AMERICAN DOCUMENTATION INSTITUTE

For the promotion and development of documentation in scholarly and scientific fields. Organized 1937 as a non-profit corporation, with members nominated by scholarly and scientific agencies. Board of Trustees: Dr. Stewart H. Britt (Treasurer), Dr. E. J. Crane, Watson Davis (President), Dr. Kayes D. Meicall (Vice-President), Dr. Vernon Tate, Helen M. Davis, Secretary. Offices: Science Service Building, 1719 N St., N. W., Washington 6, D. C.

This is a listing of documents deposited with the American Documentation Institute under its auxiliary publication program which was established in 1937 to enable scientists and scholars to publish, in convenient and usable form, important papers too long to be published in the journals. In most cases a condensed version or notice of the original paper has appeared in an appropriate journal, together with a statement that the entire paper, with its charts, diagrams or illustrations if any, can be obtained as microfilms or photoprints on order from ADI. The documents listed herein, therefore, are available to all at a small fee. They are always "in print". They require a relatively small amount of space for storage.

A rather wide range of subjects is covered by these documents, as may be seen from a quick glance at the index on the next page.

Some of the documents listed, including some of those that are translations of foreign language scientific papers, have been deposited with ADI under the Translations Clearing House project, jointly sponsored by the Office of the Alien Property Custodian and ADI. Deposits of these translations by cooperating individuals, libraries and laboratories constitutes a contribution on the part of the depositors to the general accessibility of such literature, and those who benefit by utilizing these translations will be indebted to such cooperation. Those who translate foreign scientific articles and desire to make them available to others are invited to deposit with the American Documentation Institute clear black carbons or originals of their translations which will be duly acknowledged and accessioned, and added to future lists.

Any of the documents listed in the following pages may be obtained either on 35 mm. microfilm or in photoprints 6" x 8" by addressing a request for the document by its number, stating whether microfilm or photoprints are wished, to the American Documentation Institute, 1719 N Street, N.W., Washington 6, D. C., and enclosing check or money order to cover the cost stated in the catalog under each listing. In the listings the first price indicated is for microfilm, the second price is for photoprints.

Available in microfilm are sets of scientific journals for the use of libraries unable to get runs of issues missed. Included among these journals are several early and hard-to-get issues of value to the collector and the scientist. The listing of journals is in the back of the booklet on page 47.

This is the first edition of this catalog. Additions will be issued from time to time as new deposits are received.

### HOW TO ORDER DOCUMENTS

State whether microfilm or photocopy is desired. Remit fee shown (first price given is for microfilm, second for photocopy, \$ sign omitted in each case). Give document number. Write name and address clearly. Allow about 10 days for delivery. Mail order to American Documentation Institute, 1719 N Street, N.W., Washington 6, D. C.

## AMERICAN DOCUMENTATION INSTITUTE ACTIVITIES

The American Documentation Institute was formed on behalf of some 60 of America's leading scientific and scholarly societies, councils and institutions, and arose out of the need for a broad and intellectually motivated development of all phases of documentation, particularly microphotographic duplication and its ramifications, in the fields of physical, natural, social and historical sciences and the general sphere of libraries and information services.

The scientific and scholarly agencies of America have in ADI an institution that is capable of doing what they wish in the broad field of documentation. Without the burden of private profit, with control solidly vested in America's organized intellectual world, ADI is able to administer, organize or operate activities that would be uneconomical for any one institution. Significantly, ADI brings into the same community of interest sectors of the intellectual world that otherwise do not often cooperate. In its councils and activities physicists, astronomers, biologists, economists, librarians, historians, bibliographers, archivists and many other kinds of specialists come together to solve problems common to all.

A widely used service of ADI is its auxiliary publication plan, in which documents made available as microfilm or photoprints on order serve increasingly as an aid to research and scholarship.

This plan supplements other forms of publication and makes accessible material of all sorts that cannot be printed because of economic factors. It makes available valuable research data that otherwise would go unrecorded. It also makes available out-of-print and rare books and is adapted to the publication of photographs and other illustrations. This publication service is auxiliary to established channels of scholarly publication, and aids and does not hinder journals. Editors of journals and institutions act as intermediaries between the authors of papers and ADI.

A journal editor can publish as much or as little of a technical paper as he wishes. In the case of a very specialized paper it may be only an abstract or summary. He appends to the notice or article a note saying that the complete article with diagrams, pictures or other descriptive material can be obtained by remitting the specific price and specifying the document number under which the complete article has been deposited. Orders are sent by readers directly to ADI. Microfilms or photoprints of the document are made only if and when ordered. In this way the document is perpetually "in print", but no extensive, space-consuming stocks need be stored -- only the document itself, and in some cases, the microfilm negative from which copies are made for distribution.

The operation of the plan is simple and uncomplicated, and editors use it when, how and if they find it helpful. No financial participation or guarantees on the part of the editor or author are required.

About 2,000 ADI documents have been deposited as of October 15, 1946, and are available on request. A list of them arranged by fields of research has just been compiled and published. Journals and institutions already utilizing and contributing to ADI's auxiliary publication service are listed alphabetically at the end of this brief article. Editors of journals and institutions are invited to utilize this service, and scientists and scholars are invited to bring this service to the attention of editors.

Rare and out-of-print journals of a scientific or scholarly nature may be obtained at reasonable cost through use of the ADI sets of journals project. Microfilm master negatives have been made of journals that are most in demand, and can be added to libraries and collections at unusually low cost, several of the journals being available at a considerable reduction from the 3/4 cent per page nominal fee.

To facilitate further the enrichment of scientific and scholarly research, the American Documentation Institute will accept orders for the microfilming of runs of journals totaling five or more volumes in any one run, at the special price of 3/4 cent per page, provided such material is available in a cooperating library, and with the understanding that such long-run microfilming may be given deferred handling. Shorter runs are available through Bibliofilm Service, U. S. Department of Agriculture.

The laboratories of the American Documentation Institute are located in the Library of the U. S. Department of Agriculture under cooperative agreement. They are used jointly for the operation of Bibliofilm Service and the work of the American Documentation Institute. Their location is: Room 1551 South Building, U. S. Department of Agriculture, 14th and Independence Avenue, S. W., Washington 25, D. C.

Bibliofilm Service, formerly operated by the American Documentation Institute, under cooperative agreement with the United States Department of Agriculture, is now being operated by the Library of the Department of Agriculture. ADI is continuing to cooperate by loan of equipment and joining in facilitating maximum service, and is enabled by this arrangement to give major attention to the important function of auxiliary publication through microfilm, provision of sets of journals in microfilm, and other activities of service to the scientific and scholarly world.
