VISION IMPAIRMENT AMONG OLDER AMERICANS

THURSDAY, AUGUST 3, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 10 a.m., in room 6226, Dirksen Senate Office Building, Hon. Frank Church, chairman, presiding.

Present: Senators Church and Randolph.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Garry V. Wenske, assistant counsel for operations; Alan M. Dinsmore and Kathleen M. Deignan, professional staff members; Jeffrey Lewis, minority professional staff member; and Pamela Klepec, assistant clerk.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. Today, the Senate Committee on Aging will take testimony on many issues related to vision problems and care for older Americans.

Our immediate goal is to examine issues related in one way or another to legislation intended to help visually impaired persons to cope better with everyday life or to receive desperately needed care or devices.

But our additional goal is to draw from today's hearing and from other sources the information needed to put this one need of older persons into proper perspective, now and in the future.

We will, in the next few months, issue a health care status report on the subjects before us today.

We believe that this document will have direct relevance to all forthcoming discussions of a national health care plan for all age groups.

We also believe that it will be valuable in preparations for the 1981 White House Conference on Aging authorized in the 1978 Older Americans Act amendments which the House and Senate have passed.

One of the issues which will certainly receive our careful attention is the limited role that medicare has in helping older persons with vision problems.

Medicare is often called a leaky umbrella, providing important protection in many respects, but leaving big holes where other protection may be equally needed.

I have gone further. I have called medicare a program better designed to meet the needs of the young than the old, since it does a good job in providing protection against costly institutional charges and medical bills for short-term illness.

But when it comes to the widespread and sustained need of older persons for dentures or eyeglasses or hearing aids or in-home services, medicare falls short.

And so, we will ask questions about medicare and vision loss. But our purpose is much broader.

We will hear, during this morning's session, predictions about the startling increases which will soon occur in blindness and vision loss among older persons in this Nation, particularly among the very old.

A soon-to-be-released study of the Division of Social and Demographic Research of the American Foundation for the Blind states that there will be about 1.5 million older Americans with severe vision impairment by the year 2000—80 percent of whom will be 75 years of age and older.

This means that in just about 20 years the population of severely visually impaired older persons will be larger than the National Center for Health Statistic's current count of severely vision impaired persons of all age categories.

Within recent months, we have seen much written about the "graying" of our population. We talk about its impact on retirement income systems, work force projections, and even our educational system.

This hearing may help us make the additional point, rather emphatically, that we must also gear up to meet—far better than we are now doing—the special needs of those whose sight becomes less dependable with passing years, even to the extent of total blindness.

And it will also help us make or explore other points:

Points For Exploration

(1) Whether the many special programs to help the visually impaired fall into categorical traps, often producing despair or frustration, rather than assistance.

(2) If the goal is to prevent dependency, what use is being made of models already provided, including the stimulating and heartening work to be described by one of our witnesses today, the director of the New York Infirmary's Center for Independent Living?

(3) Why has there been, as reported to this committee, a 5-year gap between the onset of disability and the linking with any rehabilitation services?

(4) What linkages should there be between existing therapy and rehabilitation opportunities and area agencies on aging under the Older Americans Act?

(5) Whether, as in so many other "age-ist" attitudes toward older persons, there may be a tendency to write off the older victim of vision problems as beyond help or concern.

(6) Whether institutionalized patients are receiving adequate vision care. There is good reason to believe that many are not, and we want to know why.

I will close this brief statement by thanking the American Foundation for the Blind, the National Federation of the Blind, and the American Optometric Association for agreeing to provide this committee, not only with additional background material, but with specific recommendations for legislative action.

Senator Pete V. Domenici, the ranking minority member of this committee, is unable to be with us today because of a prior commit-

ment. He has, however, submitted a statement for the record, and it will be put into the record at this point.

[The statement of Senator Domenici follows:]

STATEMENT OF SENATOR PETE V. DOMENICI

Mr. Chairman, I am pleased today that we are holding hearings on "Vision Impairment Among Older Americans," a topic which has been of great concern to me and one which I believe has been ignored for too long.

In these days of attempting to control health costs and minimize premature institutionalization, the need to develop adequate low-vision services to maximize the potential for Americans to remain independent becomes exceedingly critical. This problem becomes even more important when we realize that it is estimated that there will be approximately 1.5 million older Americans with severe vision impairment by the year 2000, 80 percent of whom will be 75 years of age and older. Thus, with an increasing visually impaired population over age 75, we need to examine how we can strengthen existing legislation to help visually impaired Americans to remain functionally independent.

Furthermore, in a soon to be released study by the American Foundation for the Blind, it is estimated that there are only 200 low-vision clinics in the country. Their survey indicates that one-third of the clinics are open for only half a day a week or less; 20 percent are open up to 1 day per week; and 8 percent are open 1½ to 2 days a week. Thus, the scarcity of clinics plus the short time they are open makes it difficult to obtain services.

I look forward to reading the transcript of today's hearings concerning the needs of visually impaired older Americans.

Senator CHURCH. I would like to thank Senator Harrison Williams, chairman of the Senate Committee on Human Resources, for expressing his personal interest in these proceedings and for taking such effective action. Senator Williams has introduced a bill to provide medicare coverage for low vision services. He has submitted a statement which will be entered into the record at this point.

[The statement of Senator Williams follows:]

STATEMENT OF SENATOR HARRISON A. WILLIAMS, JR.

Mr. Chairman, and members of the committee, I am delighted to be here this morning to discuss vision impairment among older Americans. Before I do, I would like to take this opportunity to commend the distinguished chairman of the committee for his outstanding record of leadership and achievement on behalf of our Nation's senior citizens. As the former chairman of this committee, I have observed the work of my successor with interest and pleasure. Under his leadership, the Senate Committee on Aging has demonstrated that it truly understands the problems of the elderly. Older Americans can take great comfort in knowing that in Senator Church they have an advocate and a friend.

Other participants here today can no doubt describe better than I the technical medical aspects of severe vision impairment among the elderly. I believe that one overriding fact will emerge from this discussion—that the great majority of legally blind senior citizens can be helped by low-vision services. These services include a detailed ophthalmological examination, an optometric examination to prescribe a low-vision aid, and training in the use of the prescribed aid. Low-vision aids encompass a variety of special lenses and devices which enable persons with severe vision impairment to regain useful sight. Unfortunately, most legally blind senior citizens are unable to afford these services.

I recently received a letter which I think well illustrates the plight of these persons. On July 2, Thomas Bethea of Metuchen, N.J., wrote: "Dear sir: I am 76 years of age, my wife is 75. I have macular degeneration in both eyes, leaving me legally blind. Please note the enclosed clipping showing custom-made glasses . . . that would enable me to read. I am not able to buy them. The question is, do you know of any Government agency that would give help on this?"

Sadly, the answer in most cases is "no." Because of gaps between various Federal programs, most legally blind senior citizens cannot obtain low-vision services. Federal legislation recognizes the sight problems of a number of groups,

but not older Americans. For example, the Vocational Rehabilitation Act of 1973 authorized Federal funds for States to provide low-vision services to people preparing for employment. Most older Americans fail to qualify for these services, since they are not looking for jobs. Similarly, the Education for the Handicapped Act covers visually impaired children, while legally blind senior citizens are omitted. In effect, our society tells these individuals that they are no longer useful or needed.

Congress has twice tried to fund rehabilitation services for older blind persons. The 92d Congress included in the Rehabilitation Act of 1972 a pilot program for blind persons over age 55. The act also included a special comprehensive rehabilitation program, dropping the vocational requirement. Then President Nixon pocket-vetoed this measure. Similar legislation was vetoed by the President in early 1973, and Congress failed to overturn that action.

Failure to address the needs of legally blind senior citizens has had great consequences. The lack of low-vision services robs nearly all legally blind seniors of their dignity and independence. Without the assistance they need, many are forced into nursing homes. The human, as well as the dollar costs of this situation are intolerable. An estimated 400,000 to 500,000 recipients of social security are legally blind, and their numbers can be expected to swell since the elderly are now the fastest growing segment of our population.

For only a fraction of the cost of nursing home care, we can help legally blind older Americans to obtain low-vision aids and thus enjoy more independent and active lives. For thousands of these individuals, such devices can literally mean the difference between day and night, between a world of expanded activities and one of severe limits. Moreover, the cost of low-vision aids is relatively low. According to an American Foundation for the Blind study, the average cost of low-vision service, including professional services and the aids themselves, is about $200. The choice in deciding to make this small, one-time investment is clear. We can assist visually impaired older Americans to fulfill their human potential, or we can continue to force many individuals into nursing homes where they do not belong.

I have introduced legislation to enable us to make the former choice. My bill, S. 3038, would extend medicare coverage, under the supplementary insurance program, to include low-vision services provided to legally blind persons. This measure covers professional services, low-vision aids, and training in the use of these aids. Approximately 400,000 would benefit from this bill, both retirees and disabled younger persons.

I believe that my proposal is a modest one. While the Social Security Administration estimates that the bill will cost about $20 million in each of the first 2 years, the American Foundation for the Blind, proceeding on different assumptions, projects an initial cost of $4 million, rising to $7 million in subsequent years as facilities expand to handle the increased pool of legally blind senior citizens who would be able to afford low-vision services. Even with the higher estimates, providing for the coverage of low-vision services is far less expensive than the alternative.

The bill has benefited from the contributions of a number of organizations with long experience in the field of vision problems. The American Association of Workers for the Blind, the American Council of the Blind, the American Foundation for the Blind, and the Blinded Veterans Association all support medicare coverage of low-vision services for the legally blind. However, I realize that the legislation could be improved. Some might call for the coverage of all severe visual impairments, even when a person is not legally blind. While I favor the widest possible coverage, I also believe that the bill's approach is a most prudent one. By providing for only the legally blind, the bill would better demonstrate the efficacy of medicare coverage of low-vision services. The legally blind serve as a readily definable group of beneficiaries, and the present scarcity of low-vision clinics means that even this smaller group could lead to sizeable backlogs. Eventual coverage for all older Americans with severe visual impairment depends on our success in constructing a solid foundation now.

I am hopeful that today's proceedings will serve to heighten congressional awareness of the problems of visually afflicted older Americans. Given this awareness, I am sure that my colleagues will be able to agree on the need for remedial action. By addressing the special concerns of legally blind older Americans, we will be taking yet another step toward our national goal of assisting all senior citizens to live with dignity and respect.

Senator CHURCH. Senator Jennings Randolph, chairman of the Subcommittee on the Handicapped, has introduced similar legislation and, like Senator Williams, is a former member of the Senate Committee on Aging. The Senate is scheduled to act soon on Senator Randolph's amendments to the Rehabilitation Act, which would provide rehabilitation services for older persons.

Our witnesses today are: Dr. August Colenbrander, professor of ophthalmology, and medical director of the Pacific Medical Center's Low Vision Service; Dr. Gerald Friedman, optometrist and director of Retina Associates Low Vision Clinic in Boston; Dr. Douglas Inkster, director of the New York Infirmary's Center for Independent Living; and Donald Wedewer, director of the State of Florida's Division of Blind Services.

Before we begin, I want to take note of the special arrangements of the room. As you can see, this is not the usual formal hearing setting. I have asked for this arrangement because the problems of vision impairment are so linked that I want to encourage as much informal exchange among our witnesses as possible.

We are going to begin with Dr. Colenbrander who will help us set the scene by describing the leading causes of vision impairment. Then I would like to ask Dr. Friedman to let us use his low-vision simulators so that we can more fully understand what these vision impairments mean on a very personal level.

So, Dr. Colenbrander, would you like to lead off this morning? Welcome to the committee.

STATEMENT OF AUGUST COLENBRANDER, M.D., PROFESSOR OF OPHTHALMOLOGY, AND MEDICAL DIRECTOR OF THE PACIFIC MEDICAL CENTER'S LOW VISION SERVICE, SAN FRANCISCO, CALIF.

Dr. COLENBRANDER. Mr. Chairman and members of the committee, it is an honor and privilege to have been invited today to speak to you about visual loss in an aging population. That may seem like a simple topic that could be dealt with in some simple statistics. It is not. In your deliberations you may already have pondered the question, "How old is old?" The parallel question, "How blind is blind," is no easier to answer.

"How Blind Is Blind?"

One problem is the definition of blindness itself. The dictionary tells us that blindness is total lack of sight, but in a social and socioeconomic context the definition of blindness is considerably wider. Some years ago the World Health Organization found that 65 different countries used 65 different definitions of blindness. It is the confusion about the many definitions of blindness that made Jehoda once state: "More people are blinded by definition than by any other cause."

First of all, we must recognize that there is a large gray area between normal vision and blindness. The term "low vision" is most descriptive for this condition. The word "vision" distinguishes it from blindness; the word "low" distinguishes it from normal vision.

The existence of these three levels—normal vision, low vision, and blindness—has now been recognized by the World Health Organiza-

34-836 O - 79 - 2

tion and will replace the old distinction between those who are legally sighted and those who are legally blind.

For more precise reporting, these levels can be further subdivided into normal vision, near-normal vision, moderate low vision, severe low vision, profound low vision, near-total blindness, and total blindness, indicating that the transition from normal vision to blindness is, indeed, a gradual one.

Low vision and blindness represent various degrees of visual loss. How about some of the other terms we often hear such as visual handicap, visual impairment, visual disorder, and visual disability? These terms do not indicate different degrees of visual loss, but represent different ways of looking at visual loss and its impact on the individual. We will consider each of these terms in succession.

Visual Disorders

The visual system can operate perfectly only if all of its components are in perfect order. Under the term "visual disorder" we describe changes in any of the parts of the visual system. The eye often has been compared to a camera. The essential elements of the camera are the film and the lens. Without the lens on our camera we cannot take a picture, but even with the most expensive lens we cannot take a picture unless we have a good film. Analogous to the camera lens is the optical system of the eye composed of lens and cornea. Analogous to the film is the retina, the layer of ultrasensitive cells that can detect so many shades of light, dark, and color.

In a system so complex as the human eye many things can go wrong. Let us take a look at the three most common disorders whose incidence increases with age: senile macular degeneration, glaucoma, and cataract. Together, these conditions account for 50 to 60 percent of all visual loss in the population over 45.

You probably are familiar with the concept of cataract. A cataract is a clouding of the lens which prevents that lens from forming an adequate image of the outside world. Although there is no way in which we can prevent the formation of most cataracts, we do have a good cure for cataracts. That is, we can surgically remove the lens and thus restore normal vision, provided that no other defects are present.

Glaucoma is a condition in which increased pressure inside the eye slowly damages the visual cells. Once these cells have been damaged, there is nothing that can restore them. Glaucoma is an insidious disease. When the patient detects the damage, it is too late. Glaucoma control must come from early detection and control of the increased pressure before the damage has been done.

Senile, or involutionary, macular degeneration occurs in retinal tissues that are "worn out" after 70 or 80 years of continuous service. As patients live longer, their chances of developing senile macular degeneration become higher.

As in glaucoma, the process cannot be reversed once it has occurred. Unfortunately, unlike glaucoma, we do not know of any good ways of preventing this degeneration. Only in some cases can we do something to arrest or slow down its progression.

Senator Church. May I ask about this macular degeneration which

is depicted here where peripheral vision is retained and central vision is lost, does that condition deteriorate into total blindness?

Dr. COLENBRANDER. It is strictly limited to the central or macular area, and so these patients lose central vision, that is, reading vision, and the ability to recognize details, but they will maintain gross peripheral vision, and the ability to move around.

VISUAL IMPAIRMENT

We have mentioned three disorders that may affect components of the visual system, but this does not tell us the full story. We also want to know the impact these disorders have on the organ as a whole. This we call visual impairment. Speaking about visual impairment, we do not discuss the disease process, but the functional loss that results. We measure such things as visual acuity, visual field, and color vision.

Let us take a look at the impairments that may result from the three disorders discussed earlier.

A cataract will cast a general haze over the image. Its effect is like that of a dirty windshield on your car. Fine details cannot be seen adequately and visual acuity is reduced. As with a dirty windshield, the degree of impairment will often vary with the illumination. With the sun behind you, the effect will be far less disturbing than when looking against the light. In bright sunlight people with cataracts often try to shield the sun from their eyes.

The visual loss resulting from glaucoma is not so diffuse. Glaucoma primarily attacks side vision. In advanced glaucoma all side vision may have gone and only an island of relatively unimpaired central vision may remain. This condition is called tunnel vision.

In senile macular regeneration the reverse occurs. The macula is the central area of the retina, which is most highly developed, it provides us with finest detail vision. Because of its higher level of sophistication, it is also more prone to deterioration. In macular degeneration central vision will suffer and eventually disappear, but peripheral vision is unaffected.

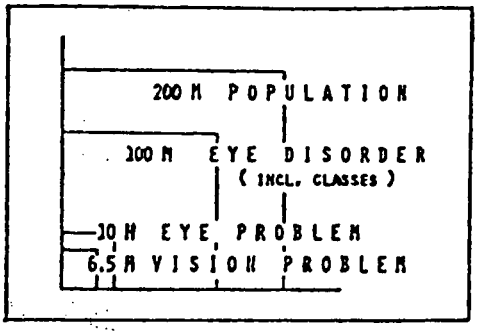
SUMMARY

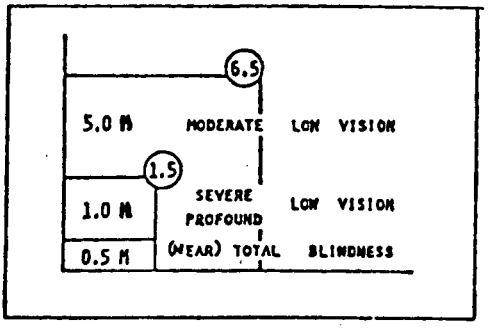
In summary, when we describe how well the eye functions, we are talking about visual impairment. Visual disorders are specific disturbances that cause the eye to function that way. We have also seen that the most common age-related visual disorders cause visual loss that should be classified as low vision rather than as total blindness.

Visual acuity is easily measured and therefore is the criterion most often used to define various levels of visual performance. Unfortunately, most statistics utilize only the simplistic dichotomy between legally sighted and legally blind. The more detailed levels of impairment now recommended by the World Health Organization and the International Council of Ophthalmology will allow more detailed statistics. The additional detail will allow us to identify the needs of various population groups more precisely. You may recognize that the severe visual impairment level in this table corresponds to what is generally known as legal blindness in this country.

With currently available data, I can only give you a gross approximation of the prevalence of various impairment levels.

The following data are compiled from a variety of sources. They are meant only to give you an impression of the magnitude of the problem and have been purposely rounded for easy presentation.





If the population of the United States is rounded at 200 million, it is estimated that about half, or about 100 million individuals, have some eye disorder. This includes those who maintain normal vision with the help of glasses. It is estimated that there are about 10 million individuals with a more serious problem in one or both eyes. The number of people with a vision problem—that is, a problem in both eyes—is estimated at 6.5 million.

How do these 6.5 million break down? We estimate that there are about 5 million with moderate low vision and 1.5 million with severe

low vision or worse. Only one-half million of these are totally or near-totally blind. The 1 million in the severe and profound categories still have significant residual vision which can be useful to them.

Senator CHURCH. Excuse me, the number wearing glasses is roughly half of the population today. What proportion of the population over 40 would require glasses? Have you any figures on that?

Dr. COLENBRANDER. Over 40, almost the entire population requires glasses for reading. Statistics indicate that 90 percent of the population over 45 wears glasses or contact lenses.

Senator CHURCH. When was the discovery made that by grinding and shaping glasses you could deal with eye disorders? Or when were glasses first invented?

Dr. COLENBRANDER. That discovery is quite old. The German word "brille" for glasses reportedly goes back to the word "berylium," and some lenses reportedly were produced from these crystals even in antiquity. At the end of the Middle Ages, and in the Renaissance we see pictures of people using simple lenses for reading and near vision. The prescription of glasses was placed on a scientific basis, and the difference between nearsightedness and farsightedness was explained, in the middle of the 19th century by Donders in Holland.

Next, we must look at the age distribution. We are struck immediately by the fact that about half of the visual impairment occurs in the population over 65, although this presently is only 10 percent of the total population. This means that the frequency of visual impairment increases enormously with age, from 0.5 percent in the under 20 age group to 15 percent over 65. For the over-75 or over-80 age groups, the frequency figures are even higher.

How will that change in years to come? A population estimate by the Bureau of Census shows that by the year 2000 the population over 65 may have grown by 50 percent. Applying these increases to the impairment estimates shows that we may expect 3 million more individuals with reduced vision. Half of them will be over 65. That is a sobering thought.

How will that increase in the number of visually impaired individuals affect our society? To answer that question we must again widen our perspective. We have taken a look at visual disorders and at visual impairment—that is, at how the eye functions. We must now consider how the individual functions with these eyes.

VISUAL DISABILITY

When we discuss the performance of the individual rather than of the eyes, we are talking about visual disability. Visual ability or disability is not measured in terms of organ functions such as visual acuity or visual field, but in terms of personal skills such as reading skills, daily living skills, orientation and mobility skills.

When we consider the disabling effect of various visual impairments, we have to make a distinction between tasks requiring detailed central vision and tasks requiring gross, peripheral vision.

An example of the first is reading; an example of the second would be orientation and mobility. Consider, for instance, the task of a person faced with crossing an intersection. A person with advanced glaucoma and tunnel vision may be able to see the walk sign, but when he starts walking, he cannot see the cars around him. That may make him

feel quite unsafe. A person with a central blind spot due to senile macular degeneration, on the other hand, cannot read the walk sign, but can see when the cars are stopped and will generally feel safer in crossing.

Widening our perspective from visual impairment to visual disability, from the organ of vision to the person, we must also widen the range of the factors we are considering. Visual impairment is one of the factors that determine disability, but it is not the only one.

The abilities of a person depend on visual as well as nonvisual skills. Deficiencies in one type of skills often can be compensated for by extra concentration on other skills. Thus, two avenues are open to reduce the impact on visual impairment. One is vision enhancement; the other is vision substitution.

Vision Enhancement and Substitution

Vision enhancement aids are those that facilitate the use of whatever vision is available. Optical aids are one group; accessory aids, such as the use of large print, form another. In this slide, which is deliberately out of focus to simulate the effect of reduced vision, the regular print has become difficult to read, but with the aid of a magnifier reading is possible again. A regular check written with a regular ballpoint pen is hard to recognize. A large-print check and a felt-tip pen are examples of accessory aids that can make it possible to read your own check again.

Under vision substitution, we talk about the use of other senses to replace or supplement vision. Raised dots on a thermostat knob allow settings to be made by touch. Talking books can often conveniently replace regular books, as radio can replace newspapers as a source of news.

Many simple tricks that do not even require aids can make daily living a lot easier. Paper money can be recognized on touch by folding the various bills differently; coins can be identified by feeling their edges. Optimal contrast makes reduced vision more effective. Dark coffee is most easily seen in a white cup. A glass of white milk stands out against a dark background.

Other simple points can help in orientation and mobility. Proper sighted-guide technique can save much embarrassment.

Visual Handicap

The last example points to the role and skills of others. This brings us to the last aspect of visual loss to be discussed: That of visual handicap. The handicap dimension, again, widens our perspective, this time from the individual to the society in which he functions. We must consider not only what the individual can do, but also what is expected of him.

This includes the demands of the physical environment as well as the expectations of friends, relatives, employers, et cetera.

An example from the field of physical impairment can make this clear: Providing an environment free of steps and stairs does not reduce the disability of the physically disabled, but it considerably reduces their handicap. An architectural environment with appropriate light levels and proper contrast of doors and walls, steps, and stairs

can similarly reduce the handicap of the visually impaired. This should be a consideration in any building, but especially in homes for the elderly where so many impaired individuals can be expected.

The human and social environment is also a key factor. Educating family members and the public at large is an important task. Too often, well-meaning friends who do not understand either the limitations or the potentials of a person with limited vision become overprotective on the one hand, or overdemanding on the other.

By this time it should be clear that the resources that can be brought to bear on the combined problems of aging and visual loss are many and of widely varying nature.

To combat visual disorders and visual impairment through medical and surgical care is the primary task of the ophthalmologist. But medical care traditionally does not deal with visual disability and visual handicap.

Optical and nonoptical aids cannot change a visual disorder but can significantly reduce visual impairment and visual disability. This is the domain of ophthalmologists and optometrists.

Education, instruction, and counseling are additionally needed to round off the services. This is the domain of social workers, psychologists, rehabilitation workers, counselors, et cetera.

When we recognize this spectrum of services, we will also recognize that no single profession alone can deal with all problems. Effective services for the patient with visual loss require a truly interprofessional effort.

As we thus widen the scope of our services, we need no longer dismiss patients with mere sympathy and the statement that "nothing can be done" about their disorders. As we broaden our perspective beyond medical and surgical care to include visual disability and visual handicap, we must state that much can still be done to enhance the functioning of individuals in the environment in which they live.

The Importance of Terminology

Where does that leave us with respect to our earlier question: How blind is blind?

Since a variety of professionals must be involved with the services of low vision patients, accurate communication is a must. This is one of the reasons we have stressed the proper use of terminology.

We have seen that indiscriminate use of the word "blindness" only confuses the picture. The word "blindness" tends to promote black and white thinking; either one is blind, or one can see. It also does not recognize the fact that different individuals may have different needs.

Let me give you some examples of how the more accurate terminology can help to promote better understanding.

The definition of legal blindness in this country is based on the measurement of visual impairment. Substituting the term "severe visual impairment" where legal blindness now appears in legislation and regulations would not change any established right, but would make it easier to recognize this definition for what it is, only one point on a continuous scale.

In health surveys and questionnaires the question is often asked: "Do you have problems reading newsprint?" A positive answer is usually referred to as "severe visual impairment." Since this question

refers to an ability of the individual rather than to a condition of the eye, the term "severe visual disability" is more appropriate.

In several countries blindness is also defined as "visual loss that precludes normal employment." This definition speaks to the individual's position in society and to socio-economic independence. It is a definition of visual handicap.

We may ask again: How blind is blind? There is no single simplistic answer to this multifaceted problem. Many factors are involved. We may say, "You are as blind as you feel," but we must also stress the importance of the attitudes and support of others. So we must add, "and as others make you feel."

Those others include all of us in private and public functions. We hope that the attention your committee is giving to these problems will help to change attitudes and to make more resources available to help reduce the "blindness" of visually impaired individuals.

Senator CHURCH. Thank you Dr. Colenbrander.

Dr. Friedman, would you like to follow?

STATEMENT OF GERALD R. FRIEDMAN, O.D., DIRECTOR, RETINA ASSOCIATES, BOSTON, MASS.

Dr. FRIEDMAN. Senator Church, I would like to thank you and the members of your committee for inviting me to attend and contribute to the important subject of "Vision Impairment Among Older Americans." I would like to utilize the time allotted me in two phases.

First, I would briefly like to present some clinical information on elementary ocular anatomy which I feel is relevant to understanding the problem of the elderly visually impaired.

The second and most important part, I would like to simulate for you what visual loss is, and how it affects our lives. We will take some of the more common visual losses that affect the elderly and distribute some pathological simulators which will allow you to instantly witness what these patients actually have in the way of visual handicaps.

In working with severe visually impaired elderly we must treat more than the eye. It is important we treat the person. We must treat this person as a total organism, not simply an eye problem. We must look at this person's interaction with his environment. This is a visually oriented environment and is becoming more visually oriented. We must look at his interaction with this environment because to the visually impaired elderly this has become a hostile environment. This is an environment with which he is progressively losing contact.

"FUNCTIONAL VISION"

We must look at his needs, not in the form of just visual acuity such as 20/100 or 20/200, we must look at his functional vision, which is the interaction of whatever residual vision he has with the environment. We must look at other problems that he has, other physical and psychological problems, and we must look at another important factor: motivation.

When we talk about motivation we find minimum problems with the elderly patient because the motivating factor with the elderly patient is independence.

In order to obtain or keep this independence, all the visually impaired elderly requires is the basic tools. The low vision examination determines the problem, the low vision aid becomes the basic tool.

How do these low vision aids work to allow this patient to successfully react with his environment? We have in this slide a diagram of the eye cut in cross sections. The front is the cornea, the window where the light must come through. We have the lens which is the focusing element much as it is in the camera. The lens places the image on the retina. The retina is this posterior part and is analogous to the film of a camera. For our purposes, the important part of the retina is this small area known as the macula, the only part of the eye which is capable of achieving 20/20 vision—the only part of the eye which is capable of seeing minute detail. The rest of the area is incapable of seeing fine detail under normal conditions.

The important thing about the elderly visually impaired is that many of the problems that occur occur with this small area, the macula. This area is a very vulnerable area.

This slide shows the back of the eye as seen with an ophthalmoscope. The macula shown here is this tiny area, small compared to the whole back of the eye, and yet the only part of the eye which is capable of resolving small details. When something happens to the macula, vision can fall to 20/200, the notation for legal blindness. The effect of this loss in a visually oriented world is obvious; to the elderly it can be catastrophic.

On this slide we have graphically represented what happens to vision as we move to areas of the retina away from the macula. A quick scan of the graph shows us that the macula, as mentioned previously, is the only part of the retina where 20/20 vision is present—the only place the graph touches the 20/20 line. As we move away from the macula in any direction, something very disturbing becomes evident. Not only is achievable vision decreased, but at an alarming rate per area moved. This drastic reduction in ability of the retina to resolve detail as we move from the macula becomes evident by the fact that when we are just 10 degrees away from the macula we have a potential vision of no greater than 20/200—legal blindness.

As we go further out to the side we find that we are very quickly down to 20/800, 20/1,000 vision. So the only part of the eye that really can function with detail is the center.

This is another slide demonstrating the importance of the center part of the eye and what happens as we move off to the periphery. Although the peripheral part of the eye is functioning it cannot resolve the detail. The purpose of the low vision aid is twofold: to move the image to another part of the eye which still has the ability to function and to enlarge the image so this part of the eye can now resolve it.

If we have 20/20 vision we have no problem and details are quite evident. As the vision starts to decrease in the center part of the eye as pathology and age afflict the macula area, visual acuity drops off and very quickly it can be 20/200 and worse.

This slide illustrates how a person with impaired central vision would see this scene of Boston. Take note that the building and large objects have not disappeared, but the detail, the windows, signs, peoples' faces would not be seen. The problem is that in today's visually oriented world we cannot afford to be without the ability to resolve detail.

34-836 O - 79 - 3

Senator CHURCH. That is 20/200 you were showing on that?

Dr. FRIEDMAN. This is slightly better than 20/200. Nothing has disappeared as a lot of people think with the definition of legal blindness. Legal blindness is often confused with blindness or total absence of sight. A legally blind person can be totally blind or have vision 20/200 or worse—or a visual field of 20 degrees or less in the widest meridian of the best eye. A low vision patient need not be legally blind at all, but have a problem not helped by medical, surgical, or ordinary optical means.

What has happened is that the detail is gone. The large objects are still here and what you are using here is essentially your peripheral retina, that part which is not in the center.

This slide demonstrates another problem which occurs in conditions such as retinitis pigmentosa and advanced glaucoma. In these conditions, the peripheral or side vision is affected with or without a corresponding decrease in central vision. This is the commonly referred to condition of "tunnel vision." With this condition, it is possible to pick up a pin from the floor if you are looking directly at it and trip over a large desk in getting to it.

HUNDREDS OF PATHOLOGIES

Although there are hundreds of pathologies that afflict the eye, we can oversimplify and say they affect the peripheral vision resulting in this tunnel vision or they affect the central part of the eye resulting in a decrease in central vision, or a combination of the two, such as we see right here.

This is the same picture, by the way, as this.

This slide shows another condition which we are seeing more and more of today in which one-half of the picture or one-half of the view is completely missing. The condition demonstrated is an homonymous hemianopsia.

Now this part remaining could have different problems. It could be completely clear, like this, resulting in 20/20 vision, or this could also become very, very blurred. What is this the result of?

This condition is the result of a cerebral vascular accident or stroke. We are seeing more and more of these today.

If we throw this out of focus we will see what happens when the macula is not spared. Depending on where the stroke is you could have a sparing of the macula, resulting in good vision in the remaining field. If it is not spared, you will still have one part visible, but this will also be blurred. How does this affect the other important factors of today, like close work? The reduction in central and/or peripheral vision can have an adverse effect on the important everyday function of reading and writing.

Senator CHURCH. May I interrupt you a moment? I would like to acknowledge the presence of Senator Jennings Randolph who has come to participate in these hearings today. You will have legislation on the floor.

Senator RANDOLPH. In the near future.

Senator CHURCH. Is there anything you would like to say, Senator?

STATEMENT BY SENATOR JENNINGS RANDOLPH

Senator RANDOLPH. Yes, if I may. I will not take too long.

Chairman Church, I am grateful for your reference to the work I have tried to do in the Subcommittee on the Handicapped. In that subcommittee, Senator Stafford and myself and others are interested in new approaches to alleviating vision impairment of older Americans in this country.

I am sure you are all familiar with the Lions Club, and with their noteworthy and significant programs to aid the blind. In 1931 I was the governor of the Lions Clubs of the State of West Virginia. At that time we only had 50 clubs in West Virginia; we now have almost 300. It seemed to me and to others that a service club should be more than a place where you come together and listen to a speech. The very word "service" club itself means that you take unto yourself some active program that will help people.

It was my feeling that the Lions programs in West Virginia should cooperate with our West Virginia School of the Blind at Romney to have operations performed on partially blind children or those who might become blind. We had the problem of raising, through our clubs, $3,000 to take care of the transportation, hospitalization and other expenses of approximately 85 children. The reason I tell the story actually is to speak of that which often goes unheralded. Dr. Jay Blades, who was an eminent surgeon in Bluefield, W. Va., and his associates decided not to charge one single penny for all the operations they performed. Dr. Blades has since died, leaving a great record not only of personal achievement but of service to the blind; his clinic is carried on today by his son and others at Bluefield.

It is important, I think, to point out that because of this program, these young people were enabled to become independent, productive members of society as they grew older.

I also want to mention the Randolph-Sheppard Act which was passed in 1936. I recall that during hearings on this measure, the then Assistant Postmaster General testified and said, "How naive can you be. It is wonderful to have compassion but the blind cannot be trained to do these jobs of the vendors," and I remember saying, "Let's have a pilot project and see what can be done." So the program came into being and today there are 3,995 blind vendors in this country. In 1977 these men and women had earnings totaling $36,540,835.

That was a group of people that many uninformed persons thought could not do the job. But given the opportunity and the training, they did the job.

In 1975 over 27,000 blind men, women, and children were rehabilitated through the vocational rehabilitation program. These handicapped individuals are a vital, vibrant testimony to the value of the investment in Federal programs that developed their ability and their opportunities to fit themselves into our life, economy, and our system.

I commend you today for receiving testimony on the needs of visually impaired older Americans.

"OLDER PERSONS . . . OFTEN OVERLOOKED"

You and I know that the Congress, in 1972 and 1973, addressed the needs of the older persons in this country in the rehabilitation legis-

lation, but they were vetoed by the President. Now during the 95th Congress, the Subcommittee on the Handicapped, with Senator Stafford as the ranking minority member, has held 18 days of hearings in which we have reviewed all the programs for the handicapped that come under the jurisdiction of that subcommittee and of the Human Resources Committee.

We have had brought to our attention the fact that older persons are often overlooked in our Federal programs. There are approximately 265,000 older blind persons in the United States. Existing assistance to the older blind person includes income maintenance, health service and library services, and such programs as social service, housing assistance for the elderly and the handicapped, and older American programs. They do not address the specific special problems of dependency such as the loss of ability and the will to function which affect our older blind citizens.

For this reason S. 2600, the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, includes a rehabilitation program for older blind individuals so that at least in part their needs will be met. This program, we hope, will offer a wide range of services and goods to assist the older blind person to adjust to his blindness and to increase his independence. As we are aware, when a person grows older that person begins to lose hearing and the dependence on vision therefore becomes doubly important. It is important that these services be provided to older Americans with low vision, and that we do all we can to improve their vision.

So I applaud what you are doing, because you are doing the job of taking a closer look than ever before at the needs of visually impaired older Americans.

I want our Subcommittee on the Handicapped to work as closely with you as possible. It is our desire within the subcommittee to help you in any way that you feel we can to bring these programs for the visually impaired to those older Americans who constitute a reservoir of strength, a reservoir of vitality, a reservoir where there is still the vibrancy of people who want to be given an opportunity. They do not want handouts, but helping hands. They need programs that are realistic and well-reasoned to assist them in the older years of their life.

This final story—there was a person a few days ago way, way up in years—I want to tell this story for the reason that years do not necessarily stunt or dwarf the feeling of the spirit of a person—this person was celebrating his 81st birthday and a friend said, "How does it seem to be 1 year older at the age of 81?"

This person replied with a chuckle. "I don't think I am 1 year older really. I have just been privileged to enjoy an additional 365 days of living."

What a philosophy. What strength. The blind—they are in that group of people who can enjoy those 365 days of each year if they have at least that partial sight which permits them to read and to continue to be a part of our society.

I just rambled today, I realize that, but you have been very kind to permit me to come here. Senator Church, I thank you very much.

Senator CHURCH. Thank you very much, Senator Randolph. We appreciate the long service and the record you have on behalf of the handicapped. We wish you were still on the committee.

Senator RANDOLPH. I miss it.

Senator CHURCH. But I would like to know if you will have your bill up this week.

Senator RANDOLPH. We do not have a definite date for floor action on S. 2600, but we are hopeful it will be scheduled soon.

Senator CHURCH. Let me know.

Senator RANDOLPH. Thank you all.

Senator CHURCH. Dr. Friedman, you may continue.

Dr. FRIEDMAN. I would like to change my format slightly in light of these remarks by Senator Randolph.

CASE EXAMPLE

At the end of my statement, I was going to give a case example of a patient that we have seen in our clinic in Boston. Instead, I will present it now.

We have seen patients from 59 countries and 43 States in one low-vision clinic alone. One particular case I think worth mentioning involves an 87-year-old gentleman from rural Vermont. He has lived on his farm for 87 years. This gentleman was referred to me for a low-vision problem, and he has about 20/200 vision.

When I was talking with this man he said, "Doctor, I want you to save my life." I was taken aback slightly by this remark because in reviewing the medical history there was no life-threatening disease present.

I asked him to please clarify his statement, and he replied, "You don't understand. Nobody understands. I have lost my functional vision. I cannot maintain my farm any more and I cannot take care of my wife." His wife has severe arthritis and also has a visual problem.

The only alternative that had been given to this man was to move him and his wife into a major city and place them in a nursing home. He stated he would rather not continue living.

With the prescribed low-vision aid this gentleman now can walk into town and do the shopping, pick up the mail, walk back to his little farm. He can do the cooking chores, and read to his wife. He even drives around in a small tractor taking care of the farm. The financial implications of this also become evident, as this aid cost under $100. I don't think we have to be accountants to realize what the cost would be to maintain him and his wife in a nursing home for the rest of their lives.

Senator CHURCH. What was the aid?

Dr. FRIEDMAN. This was a telescopic type of system which allowed him to successfully put the image of his peripheral retina, and magnify it, so he now had 20/40 functional vision.

From 20/200 he had 20/40. This also allowed him, with a slight modification, to be able to read, to set the dials on the stove, to set the thermostat, to read mail, to even given his wife her medication, and also to do the plowing of his garden. One of the simulators you will use today will demonstrate the same reduced vision.

This is what happens again when we have a functional impairment at the center part of the eye. Our macula is impaired, central vision goes down, we get a blur on what we look at. The worse the impairment, the blurrier this gets. Another simulator will allow you to witness the other type of situation where 20/20 vision is maintained through the center, but the peripheral field is all lost.

You will find this is much worse for orientation, for mobility and walking around, even though 20/20 vision remains through the center. This is a type of patient that could pick up a pin on the floor if they are looking right at it and stumble over the whole desk getting to the pin.

Low Vision Population Increasing

One of the most important factors I would like to bring up and conclude with is that we are dealing with an increasing population.

Senator Randolph brought this up.

I would like to show you some of the reasons why it is increasing and not decreasing. With all the money in research it is still not decreasing. These are the reasons. Causes of many eye and neural diseases are unknown, and consequently there are no cures. Many are hereditary diseases and are passed on from generation to generation.

The inability to transplant eyes—even in the distant future there is not going to be an ability to transplant eyes.

Many of these conditions are degenerative conditions and they go along with age. Ocular manifestations of many systemic diseases: the leading cause of blindness in the United States today is ocular manifestations of diabetes. Trauma: until we cure accidents, we will never conquer trauma. Because of the vulnerability of the eye, we will continue to have reduced vision and blindness due to trauma.

The increased demand for acute vision: Society itself is creating low-vision patients. At one time you could get a job with 20/70 vision or 20/80 vision. That same job today may require 20/20 vision.

At one time you could drive with 20/70 in the State of Massachusetts. Now it requires 20/40. We are living in an increasingly visually oriented society which itself is contributing to the increase in low vision. In humans, the eye does not regenerate.

Senator Church. You say "in humans." Does the eye regenerate in animals?

Dr. Friedman. Certain parts of the eye will, but in the human eye we have no regenerative capability. So when something goes wrong in the human eye we either correct it or we live with it. We have a statistically increasing population.

If a certain percentage of the population has a visual problem, if we increase this population, I think it becomes obvious we are going to get more and more visual problems. Because of the longer life expectancies, the wear and tear on the eyes and the components of the eyes have increased. Modern techniques of vitreous surgery and photocoagulation add to the low-vision population by preventing total blindness.

Low vision is simply a maximum utilization of whatever vision is there. We work with whatever vision is there. If something is affecting the center of the eye, we will take the peripheral part of this eye, try to put the image there, and make it correspond and take over where the center failed.

If the peripheral part is gone, we will try to magnify everything and place it in the center part which remains. It is an extension of total eye care. Where it is possible to have, for instance, 20/800 vision preop in a detached retina—as Senator Randolph explained—postop, you might have 20/200 or you might have better, and this is where most of the eye care stops today.

It certainly is an improvement over the original, but when you look further, low vision could offer you, perhaps, 20/40 or better vision out of this situation, so it is a matter of where we want to stop in the care delivery system.

VISUAL LOSS SIMULATION

I would like to have a few volunteers—two specifically—to put on these demonstrations and tell the rest of the committee what they witness when they put these on.

If we could use the old adage of a picture is worth a thousand words, I think a simulation is worth unlimited words. We will pass the simulator around so everybody can get an example of what happens when we have a visual loss.

Thank you.

Senator CHURCH. Thank you, Dr. Friedman.

Dr. FRIEDMAN. What Mr. Dinsmore has here is an example of tunnel vision as you would find in advanced glaucoma or retinitis pigmentosa.

He will now tell you what he sees or what he does not see.

Mr. DINSMORE. The only thing I can see—I am looking right at the screen with the slide on it—is just the center part that says "macula utilization of residual vision." I can't see the screen surrounding it or any other part of the room. If I looked at the panel I can see Dr. Inkster in the blue suit and Dr. Wedewer behind him, but I can't see anybody else. Only if I look directly at Dr. Inkster—and if I walk toward him, I would not know where the edge of the table was. My impression would be I could just simply walk toward him and not trip over anybody, which obviously I would.

Dr. FRIEDMAN. Mr. Affeldt has a demonstration of a loss of central visual acuity in his right eye, due to a macular hemorrhage in the left eye, which is due to macula degeneration. He can actually describe two different conditions.

Mr. AFFELDT. My vision is very cloudy. However, when I adjust my head to the right, I have better vision. I can read on the screen, in large words, "maximum utilization of residual vision." I can read the numbers.

When I move over to the left, however, the screen can be seen but I cannot read any of the writing or the numbers on the screen.

Dr. FRIEDMAN. Can you see the members of the committee or any people in this room?

Mr. AFFELDT. I can see Jeff Lewis.

Dr. FRIEDMAN. Would you know it was Jeff Lewis if you did not know he was sitting there previously?

Mr. AFFELDT. No, I can't see him. I think I could identify him when I turn my head properly and my vision becomes sharper. Otherwise, I would not be able to. At the present time he is just a blur. I cannot see anything at all.

I can pick up people as I move my head, but the slightest movement the other way will cause them to be entirely outside of my eyesight.

Dr. FRIEDMAN. We will have these available for anybody who wants to try them.

[The prepared statement of Dr. Friedman follows:]

PREPARED STATEMENT OF DR. GERALD R. FRIEDMAN

The severely visually impaired population is neither sighted nor blind; however, this population has been taught and encouraged not to utilize the residual vision present. The ironic consideration is that with minimum help this population can function as sighted individuals in an increasingly visually oriented world. Through properly funded programs and training, the blind can also function in this sighted world. With increasing programs for vocational rehabilitation and education for the young, the elderly visually impaired become the forgotten segment of these populations.

Most rehabilitation programs today emphasize employability and the retired elderly visually impaired is forgotten, yet it is this population most in need of attention and assistance. To this neglected patient, low-vision treatment offers a means of regaining or maintaining precious independence. Utilization of a low-vision aid offers a chance to pursue those daily tasks we take for granted. Reading, mobility, occupation, education, recreation, shopping, housekeeping, contact with family and friends, television, and even paying bills are not luxuries; however, these essentials of daily life in a visually oriented society are denied the visually impaired and particularly the elderly visually impaired.

The low-vision aid offers this person a means of independence through maximum utilization of residual vision. Without this means we deny this person the use of his vision. By creating blind patients from those capable of functioning as sighted, we create a dependency role far more costly, financially as well as psychologically, than the cost of the low-vision evaluation and aid.

FACTORS CONCERNING LOW-VISION EVALUATION AND LOW-VISION AIDS

(1) Low-vision aids are not eyeglasses. (2) The low-vision evaluation is not a refraction (the refractive error of the eye is corrected by prescription of eyeglasses). (3) The purpose of the refraction is to determine the proper eyeglasses which, when worn, will focus the image clearly on the macula of the eye with resultant clear vision. With the severely visually impaired patient, even when the image is focused on the macula, the eye fails to resolve this image because of the diseased, destroyed, or absent macula. An analogy can be drawn utilizing the camera as a focusing instrument to place the image on the film. In the severely visually impaired patient, there is no film to focus the image on, or it is too damaged to resolve the image. (4) The low-vision aid replaces diseased or absent tissue. This tissue is a part of the retina identified as the macula which constitutes only a tiny part of the eyes, but is the only part of the retina which is capable of providing detailed vision. (5) The low-vision aid is analogous to an artificial limb or orthopedic brace restoring function to a nonfunctioning part of the body.

THE ELDERLY SEVERELY VISUALLY IMPAIRED: DEFINING AN INCREASING POPULATION

Causes and cures of many ocular diseases are unknown;
Numerous degenerative diseases afflict the eye;
The inability to transplant the eye;
The increase in population;
The increase in life expectancy;
The incidence of traumatic injury (vulnerability of the eye);
Ocular manifestations of systemic diseases (diabetes, strokes);
Insiduous onset of some ocular diseases eludes detection (glaucoma);
Medical science—preventing blindness but unable to restore complete vision;
Society itself requiring increased vision to fulfill its highly technical needs.

SUMMARY

This severely visually impaired elderly population exists and is being denied vision in a visually oriented world. The ironic factor is that these people are not blind but are in need of a rehabilitation program that will permit them the maximum utilization of their remaining vision. To deny them the use of this vision is to relegate them to the role of functional blindness. The eye as a body tissue is being selectively denied the rehabilitation devices (low-vision aids) that are granted to other body tissues (arms and legs). The lack of function of the eye in today's society remains far more devastating than the loss of function of these other body tissues.

Mr. DINSMORE. Senator Church has stepped out for a moment, but asks that we continue. So, Dr. Inkster, could you provide us now with your testimony? Dr. Inkster is director of the New York Infirmary Center for Independent Living.

STATEMENT OF DOUGLAS E. INKSTER, ED. D., DIRECTOR, NEW YORK INFIRMARY CENTER FOR INDEPENDENT LIVING, NEW YORK, N.Y.

Dr. INKSTER. I certainly can. I appreciate the opportunity to share the experiences we have had at CIL, and I would like to ask that the paper that I have submitted be incorporated as part of the record of this hearing.[1]

Very briefly, I would like to review how the Center for Independent Living in New York came into being. There was a home for the blind that decided to close its doors after it had built up some resources, and they were looking around for a new program. After reviewing two major studies. "The Making of Blind Men," by Robert Scott, funded by the Russell Sage Foundation, and "Blindness and Blindness System in the United States," prepared by the OSTI organization in Cambridge, Mass., they discovered the facts that are commonly known now: that 50 percent of the blindness population are over the age of 65, and yet less than 10 percent of all resources are devoted to the rehabilitation of that older group.

Consequently, they joined with the Administration on Aging to embark on a new program serving just the individuals over the age of 55 who have a severe visual impairment.

The doors of this facility opened on May 14, 1973, so it is a little over 5 years that we have had experience in working with this group exclusively.

FINDINGS SUMMARIZED

I would like to briefly state some of our findings. First, we were surprised to learn that only two out of every three people referred to us would come in or could come in to the central facility. We thought this was unusual, and so we did a followup of 135 of these people and we found that 25 percent of them did not recall our initial contact at all.

Another 25 percent were under the impression that they had been accepted for service and were on some kind of a waiting list. We made some changes in our procedures as a result of these findings that I will discuss later.

Some other things we learned: Of all the people referred to us there was an average 5-year gap from the onset of the disability to connection with any rehabilitation service. Sixty-five percent of the people referred to us had had no previous service at all from any agency. Very few of them had any coping information regarding their medical condition, either eye condition or general physical condition.

We found, of the people who came into our program, approximately 225—30 percent of them—were interested in and capable of work potential. Maybe not full time, 40 hours a week, but part time and voluntary activity.

[1] See page 24.

We found that 80 percent of these people did welcome and looked for things that would maximize their independence. They fought against the dependency systems that they were being offered. The people who did come to the center tended to be brighter than the average person in terms of intelligence. They had more education. Our average educational level for the student coming to CIL was high school graduation. For this general population, completing the eighth grade is about the typical level of education.

Also, we have begun to do a followup of the people we have served; people who have gone through the program and were determined to be well adjusted to their disabilities at the time they left.

We found a great number of them—approximately 40 percent—need additional service because their vision or their physical condition has deteriorated and additional skills and techniques need to be learned.

Approach To Adult Learning

These are some highlights of our findings. As a result of these findings we have been experimenting with some concepts. One of the concepts is a premise that we held at the beginning of the program; that if someone had attained the age of 55—and that was our admission requirement—that they had certainly earned the right to self-determination. So we adopted a policy of andragogy versus pedagogy; andragogy meaning adult learning versus pedagogy, child learning.

In pedagogy, the progression of education is controlled by the teacher. In andragogy, you put the person you are working with in charge, much as if you were hiring a tax consultant. You stay in charge; you tell the tax consultant exactly what you want, what your problems are and you bring out from him his system of approaching problem solving and his expertise to assist you in solving your tax problem.

In working with the elderly blind we found this policy has great benefit in terms of movement toward the goals of the rehabilitation program. Our diagnostic week, where we try to determine exactly what these problems are, end with a meeting with the student, where each staff member reports, as a consultant, to the student, exactly what they saw and what they recommend.

At the end of this meeting the student has to decide what recommendations he chooses to respond to and which he chooses not to. As a result of that, a curriculum is developed.

This has worked out well. They can monitor their own program. They meet the needs they feel are real and relevant. They take control readily.

Admittedly, it is occasionally very uncomfortable for the student when they begin this, but the end result in terms of self-worth and self-esteem is overwhelming and highly significant.

The 5-year gap problem is primarily related, I feel, to the lack of real communication between the medical community and the rehabilitation community. This has been historically so. Agencies for the blind raise their own funds, set out in the community and do their work, which is fine. I feel that there is a place for the medical community to follow the pattern of, for example, the orthopedic surgeon and be concerned with maximum function even after physical restoration cannot be achieved.

Medical coping is a problem. I feel that any physician, or at least the medical group that is treating a patient, should inform him as to what his medical condition is, what chances the future holds, and what to do when a change in physical function occurs.

Ongoing Followup Needed

Analysis data from our followup study found that 50 percent of our "graduates" had lost the ability to function. Consequently, we feel that an ongoing followup is needed, intervention service to provide brushup skills and new techniques in order to maintain the original investment in rehabilitation services.

Our other followup study of people who did not come to the center revealed that we lost 50 percent just by accepting their statement of lack of interest. So, followup here is important to make sure that their interest in and understanding of the program is clear.

In other programs we find that people are referred to meals-on-wheels, for example, with a visual problem who really do not desire meals-on-wheels but have not been offered a choice, an option to learn these skills of preparing their own food independently and thereby maintaining their independence in their own home. So, we feel there should be a braking mechanism in all programs to make sure that the individual is aware of alternative services that may be more appropriate than the dependency service that is being offered.

I was going to use the example of mental health when States moved patients out of the institutions and developed alternative treatment programs in the communities as an option to State institutions. It is very similar to this; alternatives should be identified and developed.

The 30 percent of the people who did come to our center that expressed an interest in continuing to make contributions in their community were not given exposure to all of the professional rehabilitation services that exist. I inquired of the New York Commission for the Blind and Visually Handicapped how many people in New York City had been referred for work evaluation over the age of 65 during the calendar year 1976. It is not surprising to hear that not one had been referred to this recognized procedure for assessing vocational potential that is available to younger people who are disabled.

Sixty-five means that they have no vocational potential in the rehab program, and we feel that this should be reviewed in terms of contributions older Americans can make to the community and that "substantial gainful employment" might be revised to include contributions to the community through voluntary or part-time employment.

Self-help and self-study sources indicate two out of three would not come to a centralized facility. Every program that I have talked to and every administrator who maintains such records has indicated they are only getting this percentage into their programs. So, programs have to be developed that go out into the community and into the home. This is an expensive operation. But the field of service for the blind is sophisticated enough to develop preprogramed courses on cassettes that trained paraprofessionals, under the supervision of a professional, can deliver service to remote areas of the State by having people indigenous to their area, training their neighbors. We feel this

should be explored as a way of reaching underserved visually handicapped in the ghettos of New York as well as the remote areas of New Mexico.

Program choice is important. I think that programs for the elderly blind should be available on a center basis for intensified rehabilitation services and education. Also, in the community, where an itinerant teacher goes to the community and makes services available in a congregate way, and finally, in the home for those people who either chose not or cannot leave their homes but still would like to remain living in their homes and need the educational skills and techniques to do that.

At CIL, in our 5 years, we have received numerous requests for assistance to learn what we have learned so that other people will not have to make the same mistakes that we have made. The technical assistance type of program that is available to other rehabilitation services should be made available to organizations and groups planning to work with visually impaired older Americans so that people who have developed programs and gathered information can share this information and help programs get started in communities where the need exists.

Usually, groups do not have the money to pay expenses for people to come in and help them do a needs study or design a program of activities based on that study. So, we hope that these things can be incorporated into new legislation. We want to endorse Senator Jennings Randolph's comments and encourage the passage of Senate bill 2600, especially those elements of it that encourage services to older, visually handicapped Americans. We would also like to urge that medicare and medicaid programs be expanded to include payment for orientation, mobility, and rehabilitation teaching services, much as OT and PT are offered to people to help them remain independent in their own homes. This would include the provision of low-vision aids which enable visually limited persons to function and carry out their duties in their homes, as well as travel about their communities.

Again, I want to express my sincere appreciation for having the opportunity to share our experiences at CIL with the committee and those who will read this report.

Senator CHURCH. Thank you very much, Doctor, for your testimony.

[The prepared statement of Dr. Inkster follows:]

PREPARED STATEMENT OF DR. DOUGLAS E. INKSTER

There are today more than 20 million individuals in this country over the age of 65. By the year 2000, the figure is likely to be around 30 million; and if the birth rate retains its present low level, the proportion of the population over the age of 65 will be significantly increased.

Within the aged minority, there are subminorities whose needs are not being met, whose existence is even ignored, or at best, given the same fleeting recognition that characterized programs for the aged a decade or so ago. One of the most significant of these minorities within a minority is the elderly blind—older individuals who have lost or are losing their sight as a result of disease or ailments often associated with aging. According to current figures, there are between 220,000 and 450,000 legally blind individuals over the age of 65 and as many as 2 million more are functionally blind and cannot read newsprint. These figures represent over half of all the legally blind people in the country. And the proportion is increasing. Yet, it is an undisputed fact that less than 10 percent of service resources are directed toward this group. Most funds and rehabilitation services go to younger people—people who are considered to have "contributive

potential" to society. Older people are not considered "contributive." The standard cost-benefit equation does not work in their favor. As a result, virtually no funds are allocated. Fortunately, there are signs of change.

The New York Infirmary/Center for Independent Living—NYI/CIL—was established in May of 1972 as a model project jointly supported by the Administration on Aging and the Rehabilitation Services Administration to demonstrate that newly visually impaired individuals, particularly the elderly, can maintain themselves independently in their own community, free of costly institutions or nursing homes following effective rehabilitation in normal daily living skills.

The NYI/CIL provides a wide range of rehabilitation courses for approximately 60 resident and nonresident students a year, but continues to function primarily as an experimental laboratory where new concepts are being developed in such areas as teaching methods, self-held approaches, and evaluative techniques.

Experience with the elderly blind at NYI/CIL has shown that by stimulating the individual's capacity for self-determination and self-help, learning rates are increased and potentials for independent living are greatly enhanced.

The aim of the program has been to offer effective training in the adaptations necessary to overcome some of the more dependency-causing characteristics of blindness. Students are directly involved in every aspect of the program. They are required to set their own training and rehabilitation goals, select their own courses, and determine their graduation date. In addition, they are taught to monitor their own progress; they are directly involved in all progress review sessions, and they recommend specific program modifications or shifts in program emphasis.

The results of this approach have been encouraging. State rehabilitation counselors have commented on the dramatically improved levels of self-dependency evidenced by their clients following training at the center, and clients themselves, in various media forms, have expressed a new sense of personal independence as a result of this participatory training. Moreover, many elderly ex-students exhibited an enthusiasm for involvement in public service and other activities including regular counseling of other newly visually impaired individuals in their communities and the establishment of "watchdog committees" to monitor the effect of existing delivery systems of local civic organizations with regard to the utilization of financial resources for the handicapped.

Following research and experiments in new rehabilitation approaches and concepts, the NYI/CIL has compiled a considerable body of data and information which it is anxious to make readily available to all agencies and organizations serving this group or sharing similar interests. For the purposes of this hearing, the following needs have been identified that might be addressed through legislation. This priority listing is subjective and open to discussion.

The major recommendations, based on the NYI/CIL experience, are as follows:

LEGISLATIVE RECOMMENDATION NO. 1

Need.—To establish a working climate of mutual inquiry for problem identification and solving that recognizes the older person's maturity, enhances positive self-concepts, and encourages self-direction in problem-solving.

Experience.—Throughout the NYI/CIL experience, the client has been placed in a position of key decisionmaker. He/she is the key figure at staff meetings where service goals and objectives are discussed and established. Instructors and other personnel providing direct client services report findings and recommendations to the client and must demonstrate the capacity to tailor educational curriculums and services to comply with an individual prescription, provide the client with criteria that will enable him/her to monitor and judge his/her own performance. It has been found that this consultant approach to service delivery promotes personal autonomy and the resultant elimination of restrictions of latitude of choice contribute positively to high self-esteem, morale, life satisfaction and personal happiness of older people. These are worthy benefits of this self-help, self-monitoring, and self-control approach that have application to all services.

Legislative recommendation.—In all federally sponsored programs, professionals serving older Americans should be required to demonstrate a working knowledge of the "andragogical" approach to service delivery by functioning

as a consultant to their clients. They should be required to place the client in charge and follow these seven steps in service delivery:

Setting a climate for communication;
Establishing a structure for mutual planning;
Assessing interests, needs, and values;
Formulating objectives;
Designing corrective activities;
Implementing corrective activities;
Evaluating results (reassessing needs, interests, and values).

LEGISLATIVE RECOMMENDATION NO. 2

Need.—To bridge the gap between medical eye care and blindness systems.

Experience.—Statistical analysis of cases referred to NYI/CIL reveal an average 5-year gap between the onset of disability and the linking with any rehabilitation services. It is strongly suspected that this is due to a lack of direct communication between the medical and rehabilitation professions serving the visually impaired population. The following recommendation should have some impact on increasing this communication and salvaging valuable lost time.

Legislative recommendation.—Medicare/medicaid program services should be expanded to include services of rehabilitation teachers and orientation and mobility instructors of the older visually handicapped population, in addition to the existing nursing, physical therapy, occupational therapy, and other physical restoration services. It may be desirable to require these services to be prescribed by ophthalmologists which would emphasize to this medical specialty a broader responsibility for "maximizing" the physical functioning of those cases where vision cannot be maintained or restored.

LEGISLATIVE RECOMMENDATION NO. 3

Need.—To develop medical diagnostic and evaluation systems that identify medical abnormalities, define treatment and monitoring regimens, and provide structured counseling programs for the individual on self-monitoring and medical maintenance procedures to prevent further decrement.

Experience.—The NYI/CIL has demonstrated that such "coping" information, the older individual is better able to manage changes in physical functioning and status by taking appropriate corrective action, prescribed in advance, to stabilize, reduce, or reverse the disability.

Legislative recommendation.—Medicare/medicaid should identify a primary service provider for each individual to function as the principal medical counselor. This provider would be held responsible for the ongoing orientation of the patient to health problems and future expected changes. Model programs might be established to develop diagnostic evaluation tools that can be used by paraprofessionals in an essentially nonmedical setting. Such tools could be in the form of a procedures manual with instruments on how to collect, analyze, and develop a "risk" profile for each individual served. Such tools or kits could be made available to agencies, facilities, and health maintenance organizations across the country.

LEGISLATIVE RECOMMENDATION NO. 4

Need.—To invest in an ongoing followup of clients after referral and delivery of services to determine emerging needs and provide the additional services in order to protect the initial service investment.

Experience.—Services are often relevant at one point in time, but are not followed up or reviewed to insure initial investment is protected by early identification of emerging additional needs and delivering services to meet them.

A followup of referrals to NYI/CIL closed as "not interested" revealed that 25 percent did not recall being contacted. Another 25 percent thought they had been accepted for service and were on a waiting list. Routine followup on cases referred for service has increased NYI/CIL linking effectiveness. Also, NYI/CIL learned that one-third of its service population had some previous experience with other agencies; yet, all exhibited a fundamental lack of basic skills. Thus, previous rehabilitation exposure was not effective enough to obviate NYI/CIL rehabilitation. In addition, as a result of NYI/CIL postservice followup, it was realized that deterioration in daily use of skill learned was experienced by about half of the students due to further deterioration of vision and health, resulting in the need for supplemental training. Older Americans are a population with rapidly changing characteristics.

Legislative recommendation.—All federally funded programs serving older Americans be required to build in an ongoing followup component to their program to assess program effectiveness over time, modify program services to achieve outcomes in line with goals, and provide supplementary service where necessary to protect initial investment in goal attainment.

LEGISLATIVE RECOMMENDATION NO. 5

Need.—To incorporate a braking component in all service programs designed to slow down the rush toward dependency on outside service resources.

Experience.—Many current programs identify needs of the visually handicapped elderly population and develop systems to meet these needs through outside resources such as meals-on-wheels, transportation services, home care aides, etc. Many individuals would prefer to prepare their own meals, utilize public transportation,[1] and take care of their own housekeeping chores, but this choice is not pointed out to them.

For example, Meals-On-Wheels may not be an ongoing need. Should the visually handicapped individual receive rehabilitation teaching services to learn adaptive techniques in the area of daily living skills, including food preparation, this person will ultimately be able to care for his/her own nutritional needs in the home. In the same vein, if a visually handicapped elderly person would prefer to learn independent travel skills that would enable him/her to use available public transportation, then an O & M instructor should be made available to teach these skills and thus provide the individual with an alternative to special transportation services. The same holds true for home care aide services.

Legislative recommendation.—Review of all service programs with the objective of adding a "braking" component. Existing programs should require screening of all referrals to identify those individuals who would choose an alternative to the service to which he/she is being referred and then provide those individuals with appropriate services to achieve that goal.

LEGISLATIVE RECOMMENDATION NO. 6

Need.—To provide the opportunities for the elderly to gain greater economic security through whatever they can contribute to their community's vitality and to encourage retirement based on choice and not on chronological age.

Experience.—The elderly segment of our population must be restudied in terms of their work potential with the goal of maintaining financial independence as a choice option available to members of this group. Professionals in work evaluation, work development, and placement must recognize these new challenges. NYI/CIL is currently developing and implementing a continuing or "second careers" research and demonstration program (funded by the Rehabilitation Services Administration, Grant No. 30–P–65081) for older visually impaired individuals over 55. Findings will be made immediately available to the field.

It is expected that such developments will ultimately result in greater financial independence in old age for an estimated 20 percent of those individuals presently relegated to poverty because of outdated legislation that penalizes the individual who would rather work.

Legislative recommendations.—The current Vocational Rehabilitation Act should be amended to remove age as a criteria for determining work potential and to modify the requirement for an expectation of substantial gainful employment to require substantial employment. This revision of the act would recognize that regular voluntary activities are, in truth, a contribution to the community and are worthy and respectable vocational goals.

The disabled older worker should have the same rights as proposed for the ablebodied worker. Thus, comprehensive rehabilitation services directed towards continuing or second careers should be available to those handicapped older people who have the desire and demonstrated ability to continue to make contributions to their community through full, part-time or volunteer activity. Vocational counseling, work evaluation, work adjustment, vocational training, sheltered employment, job-seeking skill training, and job placement services should all be made available to qualified individuals regardless of age.

---

[1] We would support current efforts to require all new public transportation systems to be so designed to accommodate visually handicapped elderly as well as other handicaps by following the model of the Bay Area Rapid Transit System in San Francisco, Calif. We also encourage the construction of buses which can accommodate wheelchairs and walkers.

Use of the social security trust funds to underwrite the cost of rehabilitation services of an insured person should be extended to qualifying individuals beyond the age of 65. If working after retirement age, an individual might continue paying social security. The additional contributions should increase retirement benefits at the time of decision to retire. Alternatively, at the age of 65, such an individual may choose to "freeze" his/her retirement benefits and further contributions would not be required.

LEGISLATIVE RECOMMENDATION NO. 7

Need.—To develop self-help and self-study rehabilitation materials through programed instruction on cassettes and step-by-step guides for use by older visually impaired adults.

Experience.—At NYI/CIL, it was discovered that two out of three individuals identified as eligible for service chose not or could not participate in centralized programs. If this is a representative sample, this could imply that as many as 600,000 people will have to be served in their own community, possibly in their own home. NYI/CIL has developed four self-study courses on cassettes with a large print transcript for newly visually handicapped adults. The first course covering housekeeping skills was tested in eleven agencies throughout New England. The test revealed that this was a viable way to stimulate learning without the need for a full-time instructor. The Administration on Aging funded the development of three more self-study courses covering the following subjects: basic indoor mobility, personal management, and sensory development. These are now being tested through a program instructing older Americans to bring services to their neighbors through self-study kits. Neighbor serving neighbor through programed instruction on cassettes shows promise of a new effective, but economical service delivery system.

Legislative recommendation.—The development of self-study rehabilitation materials written by professional personnel, experienced in working with the older and visually handicapped adults, should be supported and their use developed in the field. These will aid in the development of an economically feasible itinerant service delivery system by allowing paraprofessionals, indigenous to the area they serve, to use prerecorded lesson plans in serving their visually handicapped neighbor and encourage independent self-study in rehabilitation centers, the home, and other environments. Encouraging commercial distribution of such prerecorded lessons on cassettes may also enable individuals in every community to benefit from efficient, effective, and pragmatic rehabilitation skills.

LEGISLATIVE RECOMMENDATION NO. 8

Need.—Twenty-five States do not have available to them specialized rehabilitation facilities or community-based rehabilitation services for the visually handicapped.

Experience.—NYI/CIL has received requests for service from individuals living in Arizona, Colorado, Connecticut, Maine, Missouri, Louisiana, etc. Referrals are made to the facility closest to their place of residence. Also, as previously stated, two out of every three referrals to NYI/CIL could not or chose not to come to a centralized facility. Those that did come tended to be more aggressive, had gone further in public school, and have had previous success experiences in coping with personal problems. The real bulk of the target population was not being reached.

Legislative recommendation.—Health care programs should plan for the development of regional facilities with a rehabilitation center supplemented by community-based outreach programs which will provide options for rehabilitation services to older Americans with a visual handicap to meet individual needs. Community-based programs could use professionally supervised and trained paraprofessionals working out of general hospitals on an itinerant basis.

LEGISLATIVE RECOMMENDATION NO. 9

Need.—Most developing service programs have few resources to provide guidance in the allocation of resources to meet the needs of older Americans with a visual handicap.

Experience.—As the experiences of NYI/CIL become more widely known, increasing requests are being received for visitations (163 visitors last year), training (over two dozen within the last year), and consultations (over 30, but

mostly within the region). Through consultation, in-service training, and sharing ideas for utilizing existing community resources, many fine programs are developing to meet needs peculiar to their geographic area.

Legislative recommendation.—Funds should be made available to award technical assistance grants to public and nonprofit agencies to employ mobile consultancy teams of highly experienced professionals to assist in designing community needs studies, make assessments of existing community resources, develop regional and/or community tailored service plans with time frames for implementation, and offer intensive indepth, inservice training to personnel to be utilized in service delivery.

Senator CHURCH. Our final panelist this morning is Mr. Wedewer.

STATEMENT OF DONALD H. WEDEWER, TALLAHASSEE, FLA., DIRECTOR, STATE OF FLORIDA DIVISION OF BLIND SERVICES

Mr. WEDEWER. Thank you. It certainly is appropriate, I think, that someone from Florida come here, because we in Florida have a large population of elderly people and many of them are blind. We like to share our experiences and our needs with you.

I would also like to say that Senator Randolph took away a lot of what I was going to say this morning.

Senator CHURCH. Senators are good at that.

Mr. WEDEWER. We in Florida have had to face a problem of dealing with elderly blind people for a number of years. We have 9 million people in Florida, and statistics show we have 2 million classified as elderly. It is a large population and many are blind.

For many years we, as a comprehensive State agency for the blind, have served blind people of all ages, from little children to the elderly people. For the elderly people, however, for many years we have been primarily limited to a prevention of blindness kind of medical program.

We have also recognized the fact that, as an old blind friend of mine says, nothing helps a blind person like a little bit of vision. You have heard this here in the low-vision discussion. So we have spent a lot of State money doing eye surgery, eye treatment, eye care to help elderly blind people in that respect.

But until 4 years ago all we did for elderly blind was to send 5 rehabilitation teachers to the 67 counties of Florida and to these people with home teaching. That was the extent of rehabilitation for the blind.

Now those of us who have worked in vocational rehabilitation for the blind know that rehabilitation works. It worked for me in World War II, after being blinded, and it works for blind people in that group. What we have found is that no one has paid any attention to the elderly blind with regard to rehabilitation except for minirehab teachers programs for many years. Consequently, nothing much was done.

TAPPING INTO TITLE XX

With this facing us in Florida, we finally tapped in, 4 years ago, to title XX funds coming from Congress here. Now in every State title XX funds are not tapped by the blind agency. I think you all know every State has either an agency for the blind or a program serving blind people that is part of another agency or a section. Twenty-nine

34-836 O - 79 - 5

States have a separate State plan and draw on letter of credit direct money for vocational programs from the Federal Government. The bill that Senator Randolph talks about—we are certainly for that.

A little later we will talk about funding and what we really need from that title XX.

Most of the services we provide for the elderly blind are through a network of private facilities. At this time we feel, and I think Dr. Inkster would agree, that the best delivered service is a rehabilitation center. Now we have a rehabilitation center; one like the Army started and everybody imitates. That rehab center is for vocational handicapped, for vocational service, and for younger people, but the rehab centers like that don't attract elderly blind people. However, in 10 areas of the State a local agency for the elderly blind people offers services with the same increments, independent living training, recreational activity, and sometimes even new career training for the elderly. Those places do exist in some communities. We are funding them, each one, to a tune of $100,000 to have an elderly blind program. We have eight of those in full operation in metropolitan areas. It is a network. We sign contracts every year with them using title XX State money and then their local money to match.

In addition, we have two more developing. In a State where you don't have those, you could still develop them. A couple of ours developed when our own staff social worker, a counselor, rehabilitation teacher, and using adult basic education teachers, home economics teachers, demonstration teachers from the Agriculture Department, developed programs using Lions Club buildings and church rooms.

We have developed group training for elderly blind communities not large enough to have their own facilities but eventually some of these groups have caught on and we actually now have large facilities functioning that we fund from that kind of group training. That takes care of the communities that are not big enough to start with.

In fact, in one of the communities we have the elderly retired citizens' RSVP group, and they now are the board and run one of the facilities for us which developed right out of ours, working hand in hand with our retired friends.

Now the other area of group training is by far the best with the State agency using the rehab teachers' technique with team work. We have expanded that program to some 15 teachers, again using title XX State and local money. So we have a network program, and I think it works very well.

Now, unfortunately, not all States are equal in what they do for the blind, like in any other way. Where they have these 29 State separate agencies, they are more visible, they have more money, power, and more strength. I hope that eventually we will see all 50 States go back to that kind of strong program.

Meanwhile, every State does have a vocational rehabilitation—VR—agency that has a blind division separate, so money flows through. The VR mechanism is a good system coming down State, Federal partnership funding in the State agency, in the position to use the private facilities, at the same time, while using them—actually giving the local communities an opportunity to participate and develop training facilities locally.

We do not believe in big government or expanding our own place, but to share statewide. Every State has facilities. so that network

potential is there. It is a State agency with Federal Government assisting, certainly in the area of leadership, with money and expertise.

The Issue of Funding

Now today I will get to the funding part of it. Today we all understand inflation is a big problem, and it is not always everybody else's problem. It is our own, too. I mean by that we should not look to the other agencies or the other programs to cut money and expand our own. So what I would recommend strongly is that the House bill, which nas passed—Senator Randolph's bill which, hopefully, will pass in good order without too much funding cut—will be brought together in a conference committee and funded in a strong way.

What is important in Senator Randolph's bill is that the $10, $20, and $30 million passage in there for elderly blind be kept in. That is extremely important, and I hope that will prevail in his bill and the Senate will prevail.

Beyond that, it is also important that the title XX funds continue to come, but there are some blocks in many States. Fortunately, we got into the act early, but now most States are not using title XX. If the blind people and their agencies have not fought for that money, they are not getting it and they are usually told: "It is already all allocated; I am sorry."

I think from this level, if we go back to an old mandate that was in the original mechanism mandating *x* percentage—in my paper,[1] which I hope people will get a copy of, I recommend a minimum of 1 percent go to the elderly blind program. We actually get more than that. We get some $1.5 million in Florida out of just a little over $100 million. However, I think that is a start and it should mandate that kind of activity for the elderly blind.

I don't think that is too strong. I certainly would not substitute Senator Randolph's money to the VR for title XX money. I think both of them could be used well.

Now the medicare legislation involving low-vision aids that Senator Williams introduced is excellent, and certainly it is needed. We would caution that it not be a carte blanche sort of thing; that it just not be indiscriminately issued to elderly people. So we recommend that regulations be set up so there is some training after the issuance of the aid and that aids are not given out in a carte blanche way, because they are expensive, but rather in a meaningful way and hopefully through the State agencies and facilities they work with in cooperation with the medical community, and we all work closely with them.

So I think the funding mechanism through the VR-type system, through the State agencies for the blind and facilities that serve blind people, can be done well and does work serving every part of our State. We all know about the needs of the blind in that area.

The Elderly and the Young Blind

I would suggest, although there are differences between the elderly blind and young blind, major differences do not exist. We do find that

[1] See page 33.

the same kind of rehab services work with the elderly blind. They can learn mobility and they can learn communications skills and so on. We are fortunate in our agency; we also have libraries for blind and we can introduce them to that service quickly and extensively and alleviate this problem of adjusting to the psychological problems of losing sight, which we really have not touched on here today.

But that is why, when Dr. Inkster talks about 5 years, often it is a hostile person who is actually fighting blindness and fighting those who are trying to help. The library services are underutilized, I think, many times because they are in the hands of librarians who are not really in the field of rehabilitation, and I think that is unfortunate. But we can't change it from up here, I am afraid. It is a State issue.

But it is a fact that library services are not potentially utilized because the biggest loss you heard today is in the ability to read. That is the biggest loss for an elderly blind person, and the library service—almost immediately they can become independent because of all the resources, the books and magazines available through the library system. That is the one they seldom find out about early and are not properly introduced to. That is unfortunate.

If something could be done to tie that in better for the States that don't have libraries in blind agencies, that should be done.

Summary

Summing up, I would like to emphasize what I think is a better cooperation between the State agencies and private facilities. Unfortunately, I go to meetings and find in some States there is some sort of hatred or feud, and that is too bad; so the funding mechanism breaks down.

Now I know under the Older Americans Act there is money used in some States for elderly blind. Unfortunately, that money is short term. I think we need to take some of the money and put it in basic services rather than pumping so much into a bureaucracy that grinds out this mountain of paper that we all have to read or throw away in the end. What we really need is the basic money going through the VR and through the flow system. In that way we can still fight inflation. We can cut back in that area and put interest where it is needed most. That is why I encourage medicare money, in which people participate in part B, and encourage the VR system as a mechanism and include delivery systems that are already there. We don't need new ones. There is too much money spent on surveys and studies.

Then with all the wasting of money that does occur where we made a study and another survey, that money could well be saved up here. We see a lot of it and there is a lot in the House bill, too; it is not all needed. We do need the basic money just to keep up with the inflation, and that is the way we would like to have it. So I would encourage, then, that in looking at the problems here of the elderly blind, that we look back on a system that has helped so many of us who are blind, a rehabilitation process that does work, and install it in the system as part of it to meet the needs of all these many, many elderly blinds.

I can tell you this; we are not meeting all the needs in Florida. One of our facilities has a 1-year waiting list to get into the system. This is a long time for an older person or for anybody. That is our problem.

Just not enough money to cope quickly with all that, so we need some more facilities and a little more staff and a little adjustment to meet these needs.

Thank you, Mr. Chairman, for giving us the time. I would like anyone to come visit us in Florida and see what we are doing. We are not perfect in every way, but we would like to share our experience with the rest of the Nation. The elderly blind who come to Florida do become younger and live longer.

Thank you.

Senator CHURCH. Thank you very much.

[The prepared statement of Mr. Wedewer follows:]

PREPARED STATEMENT OF DONALD H. WEDEWER

INTRODUCTION

Florida's Division of Blind Services is a State agency formed as such by the State legislature in 1941, following an appearance of Miss Helen Keller before a joint meeting of the house and senate. Since that time, the agency has been actively involved in providing services to the blind and severely visually handicapped of all ages, including parent counseling for parents of blind children: vocational rehabilitation of the blind; operation of a rehabilitation center; a vending facility program under the Randolph-Sheppard Act; talking-book library services provided through the Library of Congress; a variety of services to meet the needs of the elderly blind, including home and facility instruction; eye medical care; family guidance; and many others.

PHILOSOPHY

As a basic philosophy for its varied programs, the Division of Blind Services subscribes to one which states that blind and severely visually handicapped individuals of all ages, with competent professional counseling and guidance, coupled with adequate training programs, can—and should—function very adequately in all of life's situations. We have strong convictions that the highest caliber of services to the blind are provided by highly specialized State agencies for the blind and private facilities which limit themselves to serving blind persons. Admittedly, other clearly identified programs or facilities serving the blind, along with other handicapped persons, sometimes provide quality services. Experience clearly shows that integration of specialized services for the blind into other programs, however, will generaly result in inferior services to meet the needs of this special population.

We also have a strong view that (again, with the provision of adequate professional services) there is no need for special, separated. living facilities for adult blind. Experience clearly demonstrates that the great majority of blind individuals can stay in their home living situations, or, if the situation dictates, in normal retirement facilities, nursing homes, etc. There is no need for "homes for the blind." We have surveyed blind people and found that blind persons prefer to live in their own homes or apartments or, if necessary, in private facilities which are open to all persons handicapped or nonhandicapped. We are proud to say that in Florida we have no homes for the blind and recommend against such homes being constructed in the future.

NEEDS AND TRAINING TO MEET THOSE NEEDS OF THE ELDERLY BLIND

The older blind person shares in common with older people in general a number of needs which simply stated are: Need for more adequate income; need for better transportation; need for more adequate medical care and need for less expensive housing.

In addition to the needs shared by other older people, blind and severely visually handicapped individuals have a number of special needs requiring attention. Such needs can be overcome by special training. Most blindness occurs with advancing years, with 50 percent of the blind population recognized to be over the age of 60. For those losing sight in mid-life or later, there is a need to learn the skills of living as a visually handicapped individual in the following areas:

(1) Independent travel (mobility and orientation training);
(2) Personal care and grooming;
(3) Homemaking;
(4) Household arts;
(5) Communications (braille, typing, handwriting, telephone dial training);
(6) Training in the use of electronic recording equipment such as talking books, cassette tape recordings for reading purposes, acquaintance with library for the blind services in their State so they can independently read books, magazines, and other reading material.

Also, the elderly blind can be helped in their social and psychological adjustment to the loss of sight by:

(7) Expert counseling;
(8) Introduction to appropriate social services;
(9) Therapeutic craft activities;
(10) Participation in discussion groups;
(11) Participation in social and recreational groups;
(12) Making them aware of special appliances and training them in their use such as braille alarm clocks, braille rulers, braille games, braille watches, braille carpentry tools, special braille or adapted cooking utensils, etc.;
(13) Familiarizing them with radio-reading services where available;
(14) Teaching them special benefits available to them as sight handicapped persons as provided by Federal, State, and local laws, to include such things as: extra income deduction, real and personal property tax exemptions, white cane law, antidiscrimination statutes, etc.;
(15) Acquaint them with special transportation for the handicapped and how to use it if such transportation exists in their community or area;
(16) If there is some residual vision, referring them to low-vision clinics so they may avail themselves of low vision aids;
(17) Acquaint them with telephone assurance program.

An all too common attitude on the part of family, community, and social groups is that of over-protectiveness of blind people, to such an exaggerated extent that normal social activities are almost completely dropped. The need is for orientation of family and community to the fact that blind people are not necessarily helpless, and there is a need to help family and community understand how to deal comfortably and competently with visually handicapped individuals.

STATE AGENCIES

Services to the blind under the aegis of State agencies vary considerably from State to State. Twenty-seven States have identifiable agencies for the blind, roughly similar to Florida's Division of Blind Services. All States have programs of vocational rehabilitation of the blind, either under a specialized State agency, or as a section of an overall general rehabilitation agency. Unfortunately, the majority of State agencies have legislative authority and funding only for vocational rehabilitation programs, leaving serious gaps in such important service areas as parent counseling for parents of blind children and particularly programs designed to serve the needs of the elderly blind. Florida's Division of Blind Services is fortunate in having a broad legislative base, and reasonably adequate funding for service programs for blind people of all age groups.

LOCAL AGENCIES

Many of the larger cities of the Nation have local service organizations for the blind. Most such agencies provide social outlets and social services for blind residents of the community and others provide training in independent living skills, sheltered workshop activities, etc. They are generally funded by United Fund organizations and public fund solicitations. In major metropolitan areas, a number of service organizations for the blind may function independently. New York City, for instance, lists more than a dozen organizations serving blind people, and also serves as headquarters for many national service organizations.

IDEAL SERVICE DELIVERY SYSTEM FOR THE ELDERLY BLIND

Ideally, the prime responsibility for the delivery of services listed above in the section under needs (1 through 17) should be that of the State agency or program serving the blind. All Federal funds serving the elderly blind should be funneled through that agency insuring that all elderly blind in the State are

afforded equal opportunity or access to such services and the State agency would then clearly be identified as the agency responsible for serving the elderly blind and be held accountable for the quality and quantity of such services as provided for in Federal statutes and regulations. In addition, because there are sometimes many private agencies in some communities competing with one another, the State agency will be in the position to select appropriate private facilities for use.

Where good private agencies exist, the State agency should contract with them to provide suitable services. Where no State agency facility or private facility exists, the State agency can provide such services through their social service workers, rehabiiltation teachers (home teachers), counselors, and through group activities and training classes organized by State professional staff. Consequently, the State agency will probably bear the direct responsibility for training of the elderly blind in rural areas. This can best be accomplished by the use of the group training class using local facilities such as churches or public buildings, bringing together adult basic education instructors, extension workers, home economics teachers, nurses and other instructors in providing the teaching. Where individual teaching is required, the home teacher from the State agency can provide it in the person's home. The State agency is wise to contract with private facilities in the larger communities where they do exist. Private facilities are then accountable to the State agency for quality and quantity of services and there will be no duplication of services or conflicts as to jurisdiction.

FLORIDA'S SERVICE DELIVERY SYSTEM

The State of Florida, as earlier noted, is fortunate in providing a broad legislative base for its Division of Blind Services, which permits development of delivery systems to provide services to blind and severely visually handicapped people of all ages. This is in contrast to most State agencies, whose services are limited largely to the vocational rehabilitation age client. In particular, the agency has been able to develop a statewide program to help meet the needs of the older blind person. Funding for programs for the elderly blind, as well as for blind children, is derived from State general revenue funds, and from social security title XX funds, provided under a purchase of services agreement with the State Department of Health and Rehabilitation Services. The latter source of funding, title XX, is a recent development as far as the agency is concerned and has permitted substantial expansion in services to the elderly blind.

Florida's service delivery system is much as described above in the ideal delivery system. Nevertheless, our statewide services are not adequate because either a private facility does not exist in some localities or the State agency staff is not adequate to provide the same service. New facilities are being planned and a network of private facilities in the larger communities now exists in eight cities and two more are expected to open their doors in the next couple of years. One facility currently has a waiting list of more than 1 year. The average length of time for rehabilitation in a private facility is 3 months. Elderly people attend these classes a minimum of 2 days a week and, in some cases, 5 days a week. Attendance often depends on availability of transportation and the physical condition of the elderly person.

Followup training from the group training sessions is provided in the elderly blind person's residence or apartment. Thus the purpose of keeping the blind person at home and of the institution in most cases becomes a reality.

Area Agencies on Aging can play an important role in the final return of the elderly blind person into the mainstream of elderly people in their community. The main role of such organizations which, of course, do not have the expertise in the area of adjustment to blindness, should be to encourage the elderly blind people to participate in their senior citizens programs as they presently exist. If senior citizen councils or facilities are uncomfortable, special instruction can be obtained from the State agency serving the blind or private facilities serving the blind in their community.

FUNDING AND LEGISLATION

Presently, as we understand it, most programs for the elderly blind rehabilitations are funded through title XX or the Older American's Act, State general revenue, and, in a limited way, others are rehabilitated with vocational rehabilitation funds. We would recommend the following consideration for legislation and funding:

(1) Authority for training programs in independent living for the elderly blind be vested in the Rehabilitation Administration Services. Within that agency exists the Office of Blind Services which would be responsible for monitoring such programs.

(2) Funds for independent living be provided for in a special category under the Rehabilitation Act as currently stipulated in S. 2600.

(3) Title XX funds be amended to again include a mandatory provision designating that a minimum of 1 percent from the State allotment be provided for the elderly blind. Hopefully, it would be more. Preferably the vocational rehabilitation agency for the blind, or its counterpart in a general handicapped program, would have direct access to title XX money through a letter of credit so that it would not have to become part of a State plan of a large umbrella or welfare agency.

(4) Additional funds through Older American's Act to State commissions on aging would not be necessary to serve the elderly blind.

(5) Low-vision aids should be available through medicare as now being considered in present legislation but provisions should be made that State agencies for the blind certify their need and be responsible for follow up on training in the use of such aids. Otherwise, such aids will be widely distributed where they are either not needed or because of lack of training in their use wind up in dresser drawers.

(6) Although we understand there is a possibility of some legislation to provide mobility and orientation training under medicare, we believe that such funding would best be provided directly through State agencies serving the blind. Possibly such funding still could be derived from medicare reimbursement.

(7) We are conscious of the necessity to limit government spending to slow down inflation. Therefore, I would recommend that the thousands, even millions, of dollars spent on research, surveys, and special studies be eliminated or at least declare a moratorium on them for 3, 4, or 5 years. Probably there have been too many surveys and studies on aging, blindness, and other research concerning the handicapped. This money could better be used in direct services to the client. In addition, probably a significant number of Federal jobs could be eliminated—again—saving money that could be better used in direct services to the clients. Sometimes we cannot get our work done because of the studies we are obliged to read and the questionnaires we are forced to fill out. There simply is too much research over trivia and far too many grants and, over and over again, the wheel is reinvented. The Federal Government is the biggest culprit, eliminating excessive use of Federal funds for research would also eliminate the "jungle of jargon" that emanates from Washington. Again, please spare us and put the money where it helps.

SUMMARY

Florida's experience with service programs for the elderly blind clearly shows that the quality of life of older blind people can be greatly improved through provision of professional services, capably administered. Not totally adequate, of course, our program is looked upon with considerable envy by other State agencies who lack the structure, the funding and the authority to provide necessary services for this important segment of the blind population. Its importance certainly equals that of established programs of vocational rehabilitation for the blind, and we would hope that the Congress would take the lead in developing nationwide programs to meet the needs of the older blind person.

Senator CHURCH. I think I might start with you in the questions. We have a few minutes left this morning for questions.

As director of the State agency for the blind in Florida, what requirements must an older person meet to qualify for rehabilitation services in your State?

Mr. WEDEWER. We normally require they are legally blind following the usual definition of legal bindness. However, we are not picky about it. We have right now 15,000 people on our list that we are serving today that are elderly blind, and it turns over. That is all they need to qualify; is that visual problem.

Now under title XX, you have to have x percentage of people meet the eligibility requirements. We find we have that number of people

that meet that financial qualification. Therefore, we serve everybody, so no one is eliminated. Everybody who is legally blind or near legally blind or has double eye pathology can be served under that program. That is the only qualification.

Need For Home Care

Senator Church. We have heard a good deal of testimony this morning about the increasing numbers of older people in the years ahead. We have been trying in this committee to emphasize the need to expand the kinds of services that will enable older people to remain in their own homes and will avoid institutionalization as long as possible.

I wonder what you might tell us about how we can encourage this kind of in-home care, community-based care, and specifically, whether you can tell us how much flexibility the title XX part of the Social Security Act allows for the development of this kind of service.

Mr. Wedewer. Title XX, of course, is broad in its scope, and that is why you can almost put anything into it to call it social service. Much of it is rehabilitation, or whatever. So it is very broad and it is not restrictive. So that part is good.

Now as far as getting it down to the community and the facilities there is nothing that tells State agencies they must do this. It has to be a good working relationship. Someone might stipulate in legislation that there be a sharing with private facilities. I don't know how that would work, necessarily. It just requires at this point a good relationship between the State. As you know, right now one large State agency—the umbrella or whatever it is—receives title XX money, and the problem there is, as I mentioned, even in a State agency such as ours, many of them do not get 1 cent of it—the blind agency—because they don't have enough political strength. Those that have enough strength in their State can do that. Getting it to the community level like we do has to come through people working together at this point.

There is nothing that mandates it. There is nothing that mandates even money for the blind, and I would like to see that provision back, like I said. I can't give any advice on how to get it there, except the State agency working with it, and possibly something mandatory in the title XX legislation.

I did mention the Older Americans Act. We forget the old age part of it, but they are good for followup. Once you finish up with the older person you try to get them back into social activity. That is where the senior citizens' program takes over.

We are grateful—Dr. Inkster mentioned they closed the home for the blind—we have no homes for the blind in Florida. We don't have any. We don't want them. Blind people should live in the sighted community.

Cooperation Among Providers

Senator Church. You know, the 1973 Rehabilitation Act amendments which authorize rehabilitation services for old blind persons contains a direction to the State rehabilitation agencies to cooperate with other private and public institutions and agencies to assist the older blind persons.

What form does that cooperation take in the State of Florida?

Mr. WEDEWER. It does take cooperation, and I did not mention that. It is in my paper.

You are right; it does. And more agencies are serving the elderly and all handicapped because of that. There is a problem there, though, and that is simply this. There is just not enough money to rehabilitate all the handicapped people of vocational age and at the same time do the elderly.

All of us do some work with elderly with rehab money. Some use project VR money that we know about to get it started. Some of it is used, but there is not nearly enough money. In fact we are almost all short now of serving the vocational. And you don't want to take the kids out of college and all that, so we are using some. Here is one of the good spinoffs in developing these adult elderly blind programs.

We find that if we have blind young people in a community and they can't attend our regular rehab center in Daytona Beach, we buy, with VR money, services of that agency such as Mr. Inkster mentioned, which is much the same. They can learn braille and communication skills and white cane travel in that facility. So we have had reverse spinoffs of those communities. That has helped.

We are also saving some of our elderly blind money by putting VR money in there and paying for the service. There is some of this of what you are saying, but you are really robbing Peter to pay Paul here.

WASTE IN RESEARCH?

Senator CHURCH. It is not often that witnesses can tell us what all of us know; mainly, that specifically an awful lot of money is being wasted. You have mentioned the amount of money that went into duplicate kinds of research and the enormous papermill, time, and cost involved in making out endless questionnaires in connection with various kinds of studies.

How do you suppose we can get a handle on this? We recognize a certain amount of research is necessary, but yet this can become a big boondoggle, and often has become a big boondoggle.

Mr. WEDEWER. I appreciate what you are saying because that is the way we feel. We agree research is needed and so on, but the Federal agency will hire private contractors for research. They come out to us. We spend a lot of time working with them, filling out their questionnaires.

Finally, there is a big fat document that I don't think anybody reads much. That is what really happens. Then along comes the recommendation that because of that survey, they found out they need to survey other needs, and on goes another one and out comes another contract. I think simply we work through RSA and HEW. I think we can eliminate some staff and eliminate some research and put the money in the basic program and just put a cap on it somewhere. It is overdone and I recognize it is needed.

Also, it takes away a lot of our time to get into the act. We do some of our own research in the field in the States. It is not just as though we just sit there and keep doing the same thing year after year.

I think maybe just letting the States do it, using the basic money if they need that for research, too. I don't see a need for so much grinding out of paper.

Senator CHURCH. I am inclined to think the only way we can cope with this problem is simply to reduce the amount of Federal money available for it. Otherwise, you would never come to grips with it.

Mr. WEDEWER. I agree with that.

CLOSING THE REHAB TIME GAP

Senator CHURCH. Dr. Inkster, I wonder if I might ask you a question. In your written statement you refer to a 5-year gap between the onset of a disability and linking up of that person with the rehabilitation services. What is the cause for the long lapse?

Dr. INKSTER. It is difficult to determine in terms of asking the people who would not come why they did not come and asking the people who did come why it took so long. Some time is spent seeking medical sources that will give them better news. Individuals will travel great distances to an ophthalmologist who might promise them some cure, and so there is some time spent in searching.

There is time spent also in what is broadly described as adjustment, in mourning, in depression, and then finally beginning acceptance and then planning to do something about it. There is not a standard time for this. It varies in terms of the ability of the person to adapt to dramatic changes.

Senator CHURCH. There is nothing much really we can do about it.

Dr. INKSTER. I think there is. When talking to ophthalmologists about this problem the most common response I get is, "When I tell someone that they have cataracts, which is probably one of the nicest things I can tell them, they seem to quit listening." Many ophthalmologists would like to have the resource of a psychologist or social worker on their staff. Then, as soon as they have to tell someone they have cataracts or some other impairment, they could immediately schedule an appointment with someone knowledgeable in helping their patient deal with that news, not stop living, but begin planning for the future with this new impairment, this new image of themselves.

This does not exist. There is no training provided for assistance to ophthalmologists in terms of blindness and coping with this kind of irreversible eye condition.

There has to be some planning for transition from the medical into the rehabilitation community. There is no bridge now. Low vision is a nice neutral ground that might be used as a bridge. Dr. Colenbrander's chart shows how it bridges across. There is an aversion to blindness. We have grown up with negative images of blind people, and most people avoid them when they can.

It is a rare person that will offer assistance unless they are forced into a situation. These feelings are suppressed because we don't want to admit them. However, when blindness hits you, you still have those feelings and you don't want to become a member of that group unless you really have to. This is one kind of adjustment that goes on. If we can build a bridging mechanism to immediately support the person who gets the news of an irreversible eye condition, that person may more readily accept the low vision and educational resources available. There is need for some kind of mechanism to start the linkage right away.

Ophthalmologists need some kind of support services. Making such services mandatory through medicare and medicaid would be one way. I don't know how long it would take for the individual physicians, optometrists, and educators to actually begin functioning in this way.

Mr. WEDEWER. In Florida we passed a law mandating referral by the medical community to rehabilitation agencies. The penalty clause was taken out. Medical schools need a rehabilitation element in their training, and they are so busy when you talk to them they don't put it in. The doctors don't really refer them.

When you are blind—when I was in an army hospital I wanted to go back to college and be discharged, and I refused to go to the rehab center. I didn't want to go. Finally they gave me military orders and sent me.

We can't do that. That is one of our problems. So the gap there is adjustment to blindness. People losing sight don't want to be thought of as blind. They don't like the word blind and sometimes doctors tell me, "Take blind out of the name of your agency. Call it Division of Impaired Vision." It frightens them. But you are right; we need to get to them much sooner.

One of the things we did, we did use Federal money and VR money in the right way. We now have actually a grant going—someone going around the State teaching what can be done. We use the Lions Clubs a great deal in teaching the public that if someone has a problem, get this service in making the facilities a little better than they are.

Many of our facilities in the past have been known as shelter workshops and drudgery places, and we always ask a person like yourself, Senator Church, "If your mother were blind, would you send her to that facility?" That is the crunch. Most of us say no.

But the facilities are getting better, so we will send our mothers.

BRAKING MECHANISM NEEDED?

Senator CHURCH. One further question from your testimony, Dr. Inkster.

I noted that in your prepared statement you have a rather intriguing recommendation for braking components, to slow down, as you put it, the rush or dependency on outside service. Would you expand on that point?

Dr. INKSTER. I would be very happy to. Really, I don't have any statistical facts to support it. It is just the impression that I have in becoming aware of the systems that are developed to help older people as a part of the development of the Center for Independent Living of the New York Infirmary.

I have had to relate to meals-on-wheels for some of our students—we call the clients whom we serve, students—I find that when we refer to a program for temporarily needed services, the students are eagerly incorporated into the program's service body. It is another referral and it helps justify their existence.

There is not that element of intervention where the program makes the referral aware of alternate service options. Ask the question: "Does this person really need this service or is there an alternative service program that would maintain independence?" I use the example in the formal paper of someone being referred for transportation services. It

may be that with the provision of an alternative service disclosure policy, the older visually impaired person elects to take instruction in orientation and mobility, using the long cane or even the use of a dog guide, thus making transportation services unnecessary.

I suggest that programs for the aging should build in a kind of braking mechanism where referrals are interrogated as to whether services are needed or whether an alternative service could maintain the individual at a high level of independence. I hope that clarifies it a little.

Senator CHURCH. Yes; thank you. How that can be done is something we need to think about.

PROGRESS IN PREVENTION AND TREATMENT

Dr. Colenbrander, your projection of increases in the number of older persons with severe vision impairment is one of the most striking parts of your testimony. Is there any way to temper this? Is there any prevention that would help to avoid these large numbers?

Dr. COLENBRANDER. We are doing our very best. If you compare the amount of visual loss that exists today with, say, 50 years ago, enormous advances have been made, especially in the infectious diseases with antibiotics. Major advances have been made in preventing trauma and its consequences.

What we are up against now, especially in the older individuals, are, by and large, degenerative diseases. Senile macula degeneration is an important topic of research at the National Eye Institute.

Senator CHURCH. You are doing pretty well, aren't you, in detecting glaucoma as compared to, say, 20 years ago? At least I noticed whenever I take a physical examination I am always examined for glaucoma.

Dr. COLENBRANDER. Yes; we are much more aware of the need for early detection of glaucoma, and we can get an edge by treating it early. Glaucoma is a disease of old age and the incidence increases with age; we are also fighting that increasing incidence. In the 80-year group, it is higher than in the seventies, and in the nineties, it is higher again.

Senator CHURCH. But the treatment itself, if you discover the glaucoma through the pressure test prior to any serious damage to the eye, is that treatment anything more than a remission or does it check it?

Dr. COLENBRANDER. We have a number of treatment modalities—either with eye drops, with surgery, or with general medication—which reduce the pressure to a level where it is not dangerous. A continuous high pressure damages the eye. If we get the pressure down to a normal level, the eye will stay at that normal level and will not experience visual loss.

Some patients may say, "Well, I don't notice any change from these eye drops. They give me a headache, so why should I continue?" It is only a year or two later, after they have discontinued their eye drops and stopped seeing an ophthalmologist, that they notice the visual loss, which is then irreversible. So, glaucoma is the area where we can do most, but we cannot hope to be 100 percent effective.

In macular degeneration we can do a little with laser coagulation, but many people who hear the word "laser" think it is magic and they believe anything can be done; but it cannot.

Cataracts we can take out. That is a condition we are least uncomfortable with.

Eye damage resulting from diabetes is another area of intense study, and we are making some advances. But the population is increasing faster than our advances.

Senator CHURCH. Do you wear glasses because of a partial macular degeneration?

Dr. COLENBRANDER. No; I wear glasses because of nearsightedness.

Senator CHURCH. What is that caused by?

Dr. COLENBRANDER. An abnormal condition where the effective power of the lens does not match the length of the eyeball. What these glasses do is adjust that discrepancy. Like when you are taking a picture with your camera, you focus the lens for different distances.

Senator CHURCH. Is the nearsightedness or farsightedness caused by actual distortion in the shape of the eyeball?

Dr. COLENBRANDER. It is not just mechanical distortion. There are hereditary factors. There are developmental factors. But it is not a degeneration. When we focus the lens, my macular, which is normal, can reach 20/20 vision. Macular degeneration should be compared to a camera that has no film in it. No matter what lens you put on that camera, you can't take a picture if you don't have good film. That is an entirely different situation.

Senator CHURCH. I see.

Let me ask anyone on the panel whether there is a problem, and how serious it might be, in acquainting the people at large who may be suffering from visual impairment with the existence of rehabilitation services or with the fact that there are certain treatments available that may be helpful.

Is this a serious problem anymore? I judge it used to be.

Mr. WEDEWER. It still is a problem. We mentioned the Lions Club. I am a Lion, and many of us are. The Lions are supposed to be close to the situation, and we have had a man go around to some of the clubs and ask them, and in some clubs of 50 members, no one knows where or what services you could get if you lost your sight. Yes, it is a problem; there is no question about it.

That is why I think more needs to be done, maybe, by the American Foundation for the Blind, and some of the other organizations for the blind could do some of it. We, as agencies, mostly in government, cut out the PR men or information people to save money. We don't have them, and it is hard to get the information out. We are trying to do it with the free stuff, and public service radio and television. It just takes a lot of hard work.

Dr. COLENBRANDER. It takes hard work, but it is very well possible.

I might refer you to an article in the January issue of the Journal of Visual Impairment and Blindness describing work with an adult discussion group of elderly visually impaired individuals and describing that process of adaptation through the stages of rejection and adaptation, to where these people took on an activist advocacy role and actually went out to get others involved and distribute more information about what services are available.

"FALLING OUT OF THE SYSTEM"

Dr. FRIEDMAN. There is also a problem of not only disseminating information and making services available, but there is an acute problem in keeping the patient from falling out of the system. The rehab pro-

gram and rehab system becomes so complicated that many times the patient leaves the system for one reason or another before he can fully benefit from the services that are available.

Dr. INKSTER. I would like to comment in terms of utilizing more resources than we presently do. We tend to be stuck with our institutions and our current systems. I can remember my father, when he began to have trouble reading, going down to the dime store and sorting through a whole bunch of glasses until he found some he could read with. I am not sure that maybe that is not where we might start in communicating with people, to make our systems available to low-vision centers. Prerecorded techniques of how to perform tasks that are troublesome when you lose some of your vision might be on a cassette that could be available for a few dollars in a dime store or vision center. This could be the first exposure toward full rehabilitation. That exposure, the quicker it happens, will lessen the fear or aversion to joining the system. We ought to broaden our minds beyond our current institutions and seek out what other institutions, private enterprise, commerce, what have you, that can be utilized or tapped to get the message out and get linkage established at whatever level.

Mr. WEDEWER. We have not mentioned radio reading services that are provided through some of our programs. That is another way of getting to the people with vision problems who listen to those programs, telling them constantly about what is available.

Senator CHURCH. On the other side of the coin, are ophthamologists and optometrists sufficiently familiar with the rehabilitation services that may be available?

Mr. WEDEWER. No, they are not. It is so hard to reach them because they are so wrapped up in what they are doing. When we find an ophthamologist or optometrist who is interested, we jump on them and make a consultant out of them right away because we need those kinds of people. It is hard to get that kind of people involved. The most they will ever say to people where they failed—it is their failures—usually, that they need rehabilitation. That is the only word they know and they know we pay some of their bills for their patients, but they are not much concerned about rehabilitation as a group.

I don't know where to start except in the medical school. They don't think it is important enough to put in. It does represent, many times, their failures.

Senator CHURCH. You mentioned your father going down to the dime store, shuffling through the glasses. It reminded me of an uncle of mine who did the same thing when he began to need some help. For the rest of his life, that is how he managed to get his glasses, and it seems to me he did as well as anyone else who was going to an optometrist and has special fittings.

I read about the medical profession closing in to exclude that; forcing people to come for prescriptions. What is the situation in New York, for example? I haven't been looking for glasses in the five and dime store, but I am not entirely opposed to that. Are they still available for people of limited income who feel they can't afford professional help? Do you know?

Dr. INKSTER. I can't recall actually having seen them in New York, but I was in a town in Ohio in one of these discount centers—I think it was Bargain City—and I noticed some glasses there. They were just the magnifying glasses, but they still sell them.

I am not sure about New York. There must be some in New York. They have everything in New York.

Dr. COLENBRANDER. In the State of California, these are available at Sears or at drug stores and, on occasion, if a patient needs nothing more than that, I have told them you have the option of going to an optician and selecting a fancy frame or you have an option of going to a drug store, spending $7 and getting basically the same lens.

One real danger there is that glaucoma would not be detected. A cataract will be detected as soon as the vision starts going down. You don't get a cataract without knowing it. But glaucoma detection is important. As far as ophthalmologists being aware of rehabilitation services, we have rehabilitation service in our eye department and we have what we call a low-vision coordinator with training in the education of the visually handicapped. It has made an enormous difference in the delivery of our care and also in the awareness of the ophthalmologists who are being trained in our program, to the existence of those services and in getting to know more about it.

Senator CHURCH. I wish we had more time this morning. I could ask you a great many more questions. But I think the record, which will consist not only of your actual testimony but of the papers that you have prepared, is a good foundation for the inquiry which we made into this subject.

I want to thank all of you for coming. We appreciate it very much.

[Whereupon, at 12:20 p.m., the hearing was adjourned.]

APPENDIXES

Appendix 1

LETTERS AND STATEMENTS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER FROM JAMES GASHEL, CHIEF, WASHINGTON OFFICE, NATIONAL FEDERATION OF THE BLIND, WASHINGTON, D.C., TO SENATOR FRANK CHURCH, DATED AUGUST 1, 1978

DEAR SENATOR CHURCH: This will reply to and thank you for your letter of July 20, relating to the committee's survey of service programs and legislative initiatives to meet the needs of older Americans with vision impairments. I will be pleased to give you some brief comments in this letter in response to the questions you have asked, but I would also be glad to meet at a later time for a more detailed discussion.

With respect to the Williams-Keys bill, we support the idea of medicare reimbursement for low-vision aids; however, we have some concerns about the idea of establishing a policy of medicare reimbursement for the full range of services which should be be available to older blind persons. What I mean by this is that some have proposed that medicare should be available to pay for mobility training, counseling services, and braille instruction, just to name a few of the services suggested. On the surface this might seem like a good idea, but we are concerned that this practice would result in a substantial medical orientation to what are essentially personal adjustment services. Blind people who are receiving training services should not be made to feel that they are patients or that they are sick, for if they do, it is likely that they will forever regard blindness as an affliction. This is obviously not a healthy attitude.

Expanding services to older blind persons should take the approach of title IV of S. 2600. This would tie the new programs to the already-existing vocational rehabilitation system for the blind. This in itself would be very desirable, but title IV also has the advantage of encouraging States to develop comprehensive programs to serve the blind through identifiable agencies. Idaho has been a leader in this regard, having one of the more successful commissions for the blind in this country. The Idaho commission is charged with the responsibility of serving blind people of all ages, and it fulfills this mandate with both State and Federal funding by taking advantage of any programs which might have funds available to support its efforts. In the States which have comprehensive service programs for the blind of this type, the entire population is better served, with no group (such as the older blind) falling through the cracks. Of course, Ihado and the other States with comprehensive service programs would benefit greatly if title IV becomes law since this would make new sums of Federal money available for expansion of their programs.

You also asked about pilot projects. I am sure you are aware of the authority under section 304(b) of the Rehabilitation Act of 1973, as amended, for the funding of special projects to serve older blind persons. One of the larger (and, I believe, more successful) projects funded under section 304(b) is located in Texas, and administered by the Texas Commission for the Blind. You may want to be in touch with its director, Mr. Burt L. Risley, at P.O. Box 12866, Austin, Tex. 78701. I think you might also want to survey (and perhaps visit) the State commissions in Iowa and Idaho. While I believe neither of these States has a special federally funded project for the older blind, they do provide services to this population to the extent that it is possible under current funding arrangements. The director of the Idaho Commission for the Blind is Mr. Howard Barton, Statehouse, Boise, Idaho 83720. The director in Iowa is John Taylor, 4th and Keo, Des Moines, Iowa 50309.

On February 7, 1977, 12 of us testified on these and related issues before the Subcommittee on the Handicapped of the Senate Committee on Human Resources. I suggest that you review the record of this hearing for additional background information. The testimony of the 12 witnesses will explain why we favor the comprehensive services approach and what the advantages of this are for particular groups among the blind, especially older blind persons. Incidentally, based on evidence available to us, we would estimate that there are approximately 250,000 older Americans who have visual impairments severe enough to consider them legally blind and thus (in rehabilitation terminology) severely handicapped.

I hope these comments are helpful, and I have noted the meeting on August 3. Thank you for inviting me to the hearing, and I do hope to be present.

Cordially yours,

JAMES GASHEL.

ITEM 2. LETTER FROM DOROTHY DEMBY, NATIONAL SPECIALIST ON AGING, AMERICAN FOUNDATION FOR THE BLIND, INC., NEW YORK, N.Y., TO SENATOR FRANK CHURCH, DATED AUGUST 7, 1978

DEAR SENATOR CHURCH: The U.S. Senate Committee on Aging and its staff are to be commended for a growing interest in the special problems, needs, and potential of over 1 million older Americans who represent about 65 percent of the severely visually impaired population in the United States. This commendation refers to the August 3 briefing/hearing, Washington, D.C., on "Vision Impairment Among Older Americans," conducted by the committee in preparation for a health care status report.

It was heartening to me, as national specialist on aging, American Foundation for the Blind, to hear you and Senator Jennings Randolph of the Subcommittee on the Handicapped, not only express your respective interest in vision problems but also to show sensitivity to the issues and information presented in the testimonies of four excellent witnesses.

I write this letter as a concerned individual, professionally involved in national program development on aging and blindness, as a social issue, over the past 11 years.

It was in 1969 that the American Foundation for the Blind assumed an advocacy role in what was recognized as a critical issue: "Because the major causes of blindness are conditions associated primarily with aging and because more people are living to an older age, the number of aging blind persons is steadily rising."

In spite of the fact that more is being done these days about disabilities and impairments such as blindness, services and programs for older people with severe vision problems by no means are adequate in quality or quantity. Shocking conditions continue to dehumanize the older blind individual in a variety of settings: often unattended and unidentified in their own home; inappropriately placed in nursing homes; isolated at social centers; undiagnosed health conditions, etc.

This situation calls for, among many things, understanding about blindness, specific legislation, more funding and team work at the national, State, and local levels. It also calls for specific programs that lead each older visually handicapped person to his/her maximum functional independence.

Those who have been tackling this problem concur that goals and objectives of any group, agency, or individual interested to do something about aging and blindness need to be concerned with:

Integration into the mainstream of society;

Provision of quality services (accessible, available, adequate, and acceptable) to the blind individual;

Reduction of isolation;

Widening of communication networks;

Expansion of public's understanding on vision problems;

Independent living programs to meet special needs related to mobility, communication, and independence;

Comprehensive health care programs, including vision care;

Policies and standards;

A continuum of care to meet changing needs.

The American Foundation for the Blind has persisted in its role as principal national advocate and catalyst on all of these issues affecting older blind persons. The program objectives established in 1969 by AFB's National Task Force on Geriatric Blindness were:

(1) To sensitize public and private agencies and individuals (both citizens and professionals) to the special needs of older persons with severe visual problems;
(2) To influence these agencies and individuals into action; and
(3) To translate this action into the delivery of meaningful services to older visually handicapped people at the local level.

Implementation of these objectives on aging and blindness by AFB has resulted in:

The establishment of a Board Advisory Committee on Aging;

The development of a national policy statement on aging and severe visual impairment;

A 1971 White House Conference on Aging—special concerns sessions on aging and blindness;

Demonstration and pilot projects on integrating services; provision of in-home services within various states; low-vision services;

Development of educational materials, such as guidelines, handbooks, fact sheets, and other materials;

Legislative activities;

National and regional conferences on aging and blindness;

Training courses on aging and blindess;

Consultations.

The foundation's 1977–80 plan of work in aging has, as a focal point, a continuum of services at the local level, to meet the changing needs of the older blind person. In this area, concerns and gaps continue to be related to shortcomings in legislation, funding, advocacy, information exchange, prevention, family education, program standards and the need for an organized body of knowledge on blindness and aging. Consumer involvement needs to be expanded through opportunities, choices, and options for the older blind population—many of whom are multiple handicapped, poor members of any ethnic minority group.

These issues call for the attention of legislators. They call for financial support. Other materials for this hearing have given you details and documentation. The American Foundation for the Blind will be pleased to share with the Senate Committee on Aging the proceedings of the Second National Conference on Aging and Blindness, held in March 1978 in Atlanta, Ga. The recommendations therein will be of special interest for your committee's health status report on visually impaired. You will find further insight into the problems, needs, and potential of an increasing number of visually impaired older persons in the United States from the point of view of almost 500 professionals and older people who came to the conference.

Sincerely,

DOROTHY DEMBY.

ITEM 3. STATEMENT OF IRVIN P. SCHLOSS, DIRECTOR, GOVERNMENTAL RELATIONS OFFICE, AMERICAN FOUNDATION FOR THE BLIND, INC., WASHINGTON, D.C.

Blindness and severe visual impairment are conditions whose handicapping effects vary with the individual, depending on the degree of remaining useful sight; the person's ability to use residual sight effectively and efficiently in the performance of various tasks; the presence of other impairments, such as loss of hearing or loss of tactual sensitivity; and age. It is estimated that 90 percent of all information is received by humans through sight. With loss of sight, humans must rely principally on the sense of hearing followed by the sense of touch.

The aging process inevitably results in loss of hearing in the high-frequency range—the range useful for orientation and mobility for blind persons. Younger individuals blinded in explosions, such as servicemen blinded in combat or civilians subjected to bombing or shelling, invariably lose high-frequency hearing from nerve damage as well. Noise pollution in modern urban centers is accelerating hearing impairment at an earlier age in persons who may later suffer serious vision loss, as well as in younger blind persons who would otherwise not incur the same degree of hearing loss until later in life.

The principal problems resulting from blindness are loss of mobility, ability to read print, employability, and ability to perform other daily living activities.

THE SEVERELY VISUALLY IMPAIRED POPULATION

The National Society for the Prevention of Blindness (NSPB) estimates that there are some 490,200 persons in the United States who are legally blind. The

definition of blindness used in arriving at this estimate is the same as that used in section 216(i)(1) of the Social Security Act; i.e., central visual acuity of 20/200 or less in the better eye with correcting glasses, or a contraction in the field of vision to 20 degrees or less in the better eye if central visual acuity is better than 20/200. The prevalence rate of legal blindness is 2.25 per 1,000 of population.

The NSPB also estimates that 75 percent of the legally blind population is 45 years of age and older. It also estimates that some 45,750 Americans become legally blind each year and that 78 percent of this number is 45 and older.

Based on preliminary data from its 1977 health interview survey, the National Center for Health Statistics of the U.S. Public Health Service estimates that there are some 1,391,000 civilian noninstitutionalized individuals in the United States who have severe visual impairment. The definition of severe visual impairment used in reaching this estimate was inability to read ordinary newspaper print with the aid of correcting glasses. The prevalence rate is 7 per 1,000 of population for all ages.

The National Center estimates that 142,000 of these individuals are under age 45 (prevalence rate 1 per 1,000), that 259,000 are between the ages of 45 and 65 (prevalence rate 6 per 1,000), and that 990,000 are 65 and older (prevalence rate of 44 per 1,000).

Based on a 1973–74 survey of 1,075,800 nursing home patients, the National Center for Health Statistics found that 30,400 were blind, which the survey questionnaire characterized as "sight completely lost." In addition, the same survey indicated that there were 107,900 nursing home patients with "sight severely impaired," which the survey questionnaire characterized as able to "recognize the features of familiar persons if they are within 2 to 3 feet." With this definition, it is likely that virtually all of the individuals described as having "sight severely impaired" would be legally blind if their visual acuity were measured. Of the number described as blind, 10 percent were under age 65 while 90 percent were 65 and older. Of the number described as having sight severely impaired, 5 percent were under 65 while 95 percent were 65 and older. We have no authoritative estimates of the number of blind or severely visually impaired individuals in other types of institutional settings, such as homes for the aged.

The leading causes of blindess in the United States—senile cataracts, diabetic retinopathy, glaucoma, and macular degeneration—are conditions which principally affect people over 40. In addition, blindness is sometimes caused by cardiovascular diseases, such as arteriosclerosis, hypertension, and stroke, as well as other conditions which frequently accompany the aging process. Since the prevalence of blindness in the United States in the light of current scientific knowledge is a function of population growth, we can expect that the number of older blind persons will increase as the number of older persons in the population increases.

Since only preliminary data are available from the 1977 health interview survey of the National Center for Health Statistics, it is necessary to use the detailed report of the 1971 survey for other characteristics of the severely visually impaired population. Of the total estimated population of 1,306,000 severely visually impaired persons in the 1971 survey, 503,000 are male while 803,000 are female. For the age group under 45, approximately 69,000 are male, and 51,000 are female. For those 45–64, it is estimated that 119,000 are male, and 157,000 are female. For the group 65 and older, 314,000 are male while 595,000 are female. It is likely that the 1977 survey will reveal similar proportions of males to females in this population group.

In 1971, according to the National Center, 518,000 severely visually impaired individuals had less than $3,000 annual family income. Of this number, 427,000 were 65 and older. Although similar data from the 1977 surveys are not yet available, it should be noted that, according to the Social Security Administration, there were 77,362 individuals on the supplemental security income (SSI) blind rolls in December 1977 with a median age of 59 for this group. Also, Social Security Administration estimates that 9 percent of the individuals on the SSI aged rolls (approximately 180,000 persons in December 1977) and 4.7 percent of the SSI disabled rolls (approximately 99,000 persons in December 1977) were severely visually impaired, using the same definition as the health interview survey. It should be noted that all persons on the SSI aged rolls are 65 and older, while the median age of those on the SSI disabled rolls is 55. It is likely that some 36 percent of the individuals on the SSI aged and disabled rolls described as severely visually impaired are legally blind. Thus, there are approximately 356,362 severely visually impaired individuals in financial need serious enough to be eligible for SSI payments in December 1977.

The 1971 health interview survey revealed the following prevalence rates per 1,000 of population for severe visual impairment on a regional basis: South, 68.2; Northeast, 39.1; North Central, 38.7; and West, 32.7.

No one knows the exact number of totally blind individuals in the United States. Authorities associated with rehabilitation centers for the blind and other agencies providing direct services to blind persons estimate that between 12 and 20 percent of the legally blind population have no useful vision. Therefore, we can assume that a maximum of nearly 100,000 persons in the United States are totally blind or have only light perception without light projection. The rest have varying degrees of residual sight, which may be useful to them in the performance of various tasks, especially if the usefulness is enhanced by optical aids, training in various techniques, and other aids and devices.

FEDERALLY ASSISTED PROGRAMS

During the past 45 years, a considerable body of Federal legislation has been enacted in the human services area. The programs established by congressional action range from income security and health care services for individuals administered directly by the Federal Government to Federal financial grants to State and local governments for a variety of purposes, such as health care for needy persons of all ages, education of handicapped children, employment and training services, and vocational rehabilitation of the disabled.

Some are designed for special groups relatively small in number; others are virtually universal or cover large segments of the population. Some have specific Federal requirements for compliance; others allow broad authority to States and localities in carrying out a program as long as basic general requirements are met. Whatever the type of federally assisted program, the important thing to emphasize is that, for nearly half a century, the pattern in the United States has been to establish a federally assisted program to deal with special needs.

With specific regard to the older blind and severely visually impaired, the impact of federally created and assisted programs is great from both a positive and negative viewpoint. On the one hand, many of the federally created programs, particularly those involving income security and health services for older persons, are especially helpful to our special segment of that population. On the other hand, the special programs designed for younger people with limited or no sight are not routinely available to older persons with the same vision problems. Ironically, by far the largest segment of the blind and severely visually impaired population remains the most neglected.

The American Foundation for the Blind (AFB) believes that the most effective way of assuring essential rehabilitative services to older blind and severely visually impaired persons is to include these services in medicare or in any national health insurance program which may be enacted. These services are low-vision service, including prescribed low-vision lenses, to enhance the usefulness of residual sight, as well as orientation and mobility training, rehabilitation teaching services, and other special services designed to restore a patient to maximum functional independence after loss of sight.

Similar basic rehabilitative services, such as physical therapy, occupational therapy, and speech therapy are covered for persons with other disabling conditions. For example, a stroke victim who loses full use of limbs and has slurred speech is covered for the services of a physical therapist or speech therapist. If he is blinded by the stroke, he is not entitled to therapeutic services which would enable him to function more independently without sight.

As a means of correcting shortcomings in the medicare program for persons with sight loss, the AFB supported enactment this year of H.R. 13248, a bill to cover the cost of low-vision service to the legally blind under part B of title XVIII of the Social Security Act, which was introduced by Representative Martha Keys of Kansas. A companion bill, S. 3038, was introduced by Senator Harrison Williams of New Jersey.

These bills were limited to legally blind persons whose residual sight could be enhanced by low-vision aids owing to cost considerations. However, cost constraints this year for expansion of medicare make enactment unlikely. Attempts will be made during the 96th Congress to secure enactment of similar legislation and in succeeding Congresses to cover mobility training and rehabilitation teaching services under part B of medicare.

AFB believes that ultimately comprehensive rehabilitative services of the type previously described should be made available under parts A and B of medicare, or a comprehensive national health insurance program, so that indi-

viduals of all ages who sustain substantial sight loss can receive these rehabilitative services in any setting, including hospitals, skilled nursing facilities, other long-term care facilities, rehabilitation centers, in their own homes, and on an out-patient basis.

Until specialized medical rehabilitative services for individuals with severe sight loss can be assured under medicare or a comprehensive national health insurance program, the AFB will continue to support legislative effort to assure these services to older blind persons in the Rehabilitation Act of 1973, title XX of the Social Security Act, and other appropriate Federal grant-in-aid programs to the States. A pilot target program of grants to States for rehabilitation services to older blind persons was included in the Rehabilitation Act of 1972 for blind persons aged 55 and older, as was a special program authorizing comprehensive rehabilitation services without a clear-cut vocational objective (independent living rehabilitation). The bill was pocket vetoed by President Nixon. An identical bill was vetoed by the President early in 1973, and the Congress failed to override.

The Rehabilitation Act of 1973, which was approved by the President early in the autumn of that year, contained authorization for special projects in the rehabilitation of older blind persons. Projects are currently under way in six States at an annual cost of $441,000.

Pending legislation in the Senate (S. 2600) to extend and improve the Rehabilitation Act of 1973 includes provisions for grants to the States for rehabilitation services for older blind persons, as well as provisions for independent living rehabilitation services. The AFB is supporting these provisions as well as the independent living rehabilitation provisions of H.R. 12467, the House-passed bill extending and improving the Rehabilitation Act of 1973. If the 95th Congress fails to enact a target program for rehabilitation services for older blind persons, the gap in services to assist this major segment of the blind population will continue, while the numbers requiring service will also continue to grow.

In 1956, the Congress added authority for provision of social services to promote "self-care" of cash public assistance recipients to the cash assistance titles of the Social Security Act. State welfare or social services agencies, which administered the cash assistance programs, also administered the social services program, except in Delaware, Massachusetts, New Jersey, North Carolina, and Virginia where separate State agencies for the blind then administered the title X cash maintenance and the social services program for legally blind recipients of all ages. The Federal Government paid 50 percent of the cost of social services to promote self-care, with the Federal share provided on an open-end funding basis.

The Public Welfare Amendments of 1962 strengthened these provisions and authorized Federal reimbursement to the States of 75 percent of the cost of specified social services designed to promote self-care and self-support and "prevent dependency." Financing was still open end, with the Federal Government obligated to reimburse States for approved services.

Except in the five States where separate State agencies for the blind had specific legal authority to obtain reimbursement from the Federal Government, there does not appear to have been much evidence that these social services funds were being used to provide or purchase specialized rehabilitative services for blind persons, particularly for older blind persons. It is likely that older blind persons benefitted to some degree in some States from more general social services.

In 1972, as a result of concern in both the Congress and the administration over the rapidly increasing cost to the Federal Government of social services on an open-end funding basis, Congress put a ceiling of $2.5 billion on the authorization of appropriations for social services while still retaining a 75 percent Federal share. Late in 1974, the Congress enacted title XX of the Social Security Act, establishing a bloc grant mechanism under which requirements for States to obtain Federal funds for social services were minimal and States were given maximum latitude as to the social services they provided.

There is a statutory requirement that States must spend 50 percent of social services funds on recipients of SSI, aid to families with dependent children, and medicaid. State agencies for the blind which had previously administered social services programs for blind persons could continue to do so under title XX. However, as a result of State reorganization, only agencies in Massachusetts, North Carolina, and Virginia now administer title XX State plans for blind persons.

Amendments to title XX in 1976 authorized States to have the option of providing social services on a group eligibility rather than individual means test

basis in geographic areas of the State where substantially all of the resident have incomes below 90 percent of the State median income. This has implications for provision of social services to older persons in senior centers, as well as older blind and severely visually impaired persons.

In 1976, an AFB study of first year comprehensive annual social services program (CASP) plans revealed that only 17 States indicated that they would provide specialized services to blind persons, such as orientation and mobility and rehabilitation teaching services. An HEW publication summarizing CASP plans for the fiscal year 1978 revealed that 12 States said they were providing special services to blind persons, while 33 States were providing a variety of general social services to blind persons.

Since 45 States would reach their title XX expenditure ceilings by September 30, 1978, thus foreclosing the possibility of expansion of the program to include services to blind persons in succeeding years, the AFB this year supported increases in the entitlement ceiling for title XX. H.R. 12973 as passed by the House of Representatives, would authorize increases in the ceiling to $2.9 billion for fiscal year 1979; $3.15 billion for fiscal year 1980; and $3.45 billion for fiscal year 1981 and succeeding years. This bill is currently pending in the Senate, and AFB, in concert with other organizations interested in handicapped individuals, is supporting its enactment.

Although title XX of the Social Security Act is presently the most logical mechanism for providing specialized rehabilitative services to older blind persons to foster their ability to attain maximum independence, the competition at State level for these funds between the disparate groups eligible for services makes it unlikely that the older blind and severely visually impaired population will be adequately served without special earmarking in the Federal act as has already been done for child care services.

The Older Americans Act of 1965 was enacted to assure provision of a wide variety of necessary services to the growing proportion of older persons in the population who need them. This is to be accomplished through the establishment with Federal financial assistance under the act of State and area agencies on aging, which can serve as advocates to assure utilization by older persons of other federally financed programs, as well as through programs established by the act itself. There is also authority for model projects, including specific provisions for special services to older handicapped Americans. Amendments enacted in 1975 require State agencies on aging to spend not less than 20 percent of their allotments for community services for transportation services, home services, legal and other counseling services, and residential repair and renovation programs.

The Older Americans Act of 1965 must still be regarded as having its greatest impact on the lives of older blind and other handicapped persons at some time in the future. Except for the nutrition for the elderly program, the bulk of Federal funding has necessarily been devoted to the establishment and operation of State and area agencies on aging, research programs, training of personnel, and increasingly for social services. Special services to blind and other handicapped older persons can be handled on a model project basis as well as through community services. Obviously, substantially higher appropriations will be needed in the future—coupled with expanded program authority—if the Older Americans Act of 1965 is to fulfill its potential for assuring essential services to older blind and handicapped persons, let alone the needs of low-income older persons without serious handicapping conditions. Legislation in the current Congress to extend and improve the act promises some expansion in services to blind and other handcapped persons. The House-passed bill, H.R. 12255, contains authority for special projects related to older blind persons in 10 States. In addition, it includes provisions relating to long-term care services. Similar provisions for long-term care services are contained in the Senate-passed bill, S. 2850. The AFB is supporting these improvements and expects a committee of conference to approve a bill which will contain expanded provisions for long-term care services and for special projects for older blind persons.

CONCLUSION

Major gaps in services to older blind and severely visually impaired persons continue to be lack of general availability of quality low-vision services with the cost covered by a Government-financed program, as well as the lack of adequate financing of specialized services designed to foster independent living and prevent premature institutionalization. No federally created health care program covers low-vision services for all who might benefit, and the only federally financed pro-

gram under which specialized services for independent living of older blind persons can currently be provided—title XX of the Social Security Act—has too many demands upon it.

The AFB believes that the most effective way of assuring older blind and severely visually impaired persons of low vision and specialized rehabilitative services, such as rehabilitation center training, orientation and mobility services, and training in other daily living skills, is to cover them as health and allied health services under medicare and, subsequently, under a comprehensive national health insurance program. Similarly, long-term care services, such as homemaker and mobile meal services, should be covered under medicare and a national health insurance program for those who need them as a means of delaying costlier institutionalization.

The advantages of coverage of these services as part of a comprehensive national health insurance program are uniformity of entitlement and payment mechanisms and assurance of quality professional standards through accreditation of providers of services. Unlike existing Federal-State matching fund programs, a comprehensive national health insurance program would not be subject to the vagaries of Federal and State appropriations processes with their dependence on matching fund allocation formulas and inevitable limitation on the numbers of people served.

Until a truly comprehensive national health insurance program is implemented, a separate title should be added to the Rehabilitation Act of 1973 to cover independent living rehabilitation services to handicapped persons of all ages without regard to potential employability. A special target program of rehabilitation services for older blind persons should also be added to the Rehabilitation Act of 1973 or enacted as a freestanding law as provided for in S. 2600. A Federal-State matching fund program of this type could be phased down as medicare and national health insurance increasingly cover the cost of these services.

ITEM 4. STATEMENT OF THE AMERICAN OPTOMETRIC ASSOCIATION, WASHINGTON, D.C.

The American Optometric Association appreciates this opportunity to assist the Senate Special Committee on Aging in its study of vision impairment among older Americans. This issue is indeed an important one that affects nearly every senior citizen, and we would like to commend the committee for taking an active interest in it.

Our statement will cover the following points:

(1) The need for medicare to reimburse select optometrists for covered services that are within the license of optometry but are currently reimbursed only if provided by a physician (M.D. or D.O.);

(2) The need to expand medicare coverage to all optometric and medical eye/vision care services which are required by older Americans;

(3) The importance to senior citizens of legislation, introduced by Senator Williams, Representative Keys, and Senator Randolph, which would provide for medicare or other Federal coverage of services and low-vision aids for the partially sighted. On this point we will describe the vision conditions which constitute partial sight, the various types of low-vision aids which optometrists and physicians prescribe, and applicable cost factors; and,

(4) Throughout the statement we will cite appropriate data concerning the incidence of vision impairment among older Americans and existing programs which demonstrate the contribution that optometric services make to their health.

MEDICARE SHOULD REIMBURSE FOR COVERED OPTOMETRIC SERVICES

Medicare's current eye/vision care coverage severely restricts both the scope of care available to older Americans and the availability of health care professionals to provide even the current limited scope of care.

Current coverage now extends only to costly "crisis care" when the eyes are concerned. Thus, hospital and surgical services are covered, as are eye examinations provided by physicians (M.D. or D.O.) when a patient has symptoms of possible eye injury or disease. The services most universally required by senior citizens—routine eye examinations and eye appliances—are not covered.

Many senior citizen leaders have stressed the need for specific medicare coverage of routine eye/vision care, including refraction and eyeglasses. They have

pointed to such facts as a recent National Center for Health Statistics report showing the almost universal affliction of visual acuity problems in the population group over age 65. Similarly, a 1975 senior citizens' survey demonstrated that 40 percent of older Americans have problems going up and down stairs; nearly 30 percent have difficulty reading the newspaper; and among those surveyed who drive, 45 percent have some trouble or can't drive at night. For these reasons, senior citizen and optometric organizations have sought medicare coverage of routine eye/vision care as essential for accident prevention and the ability of older Americans to live full, active, independent lives.

Yet, even medicare's very limited scope of services is further restricted by discriminating against patients who selects optometrists for covered services. A senior citizen with symptoms of possible eye injury or disease may secure an eye examination from a physician (M.D. or D.O.) under medicare and be reimbursed; but medicare will not pay for the same examination if it is performed by an optometrist. Some senior citizen groups, noticing this fact, have worked out agreements with physicians at a reduced fee. In fact, one Minnesota group has gone so far as to state the "tricks of the trade" in making sure that an eye exam is reimbursable.

The need for the widest availability to older Americans of eye/vision care manpower is particularly underscored by the high incidence of blindness and potentially blinding eye problems in this age group. The National Society for the Prevention of Blindness has estimated that 4.1 percent of the population, mostly senior citizens, have glaucoma. Some 7 percent of senior citizens are legally blind; three-fourths of these are partially sighted and can, with the help of low-vision aids, apply their residual vision in a limited fashion. In 1976, HEW found an incidence of cataracts of 11.4 percent, or three-fourths of the annual incidence of cataracts in the entire population, among persons over age 65. Finally, a 1973–75 Johns Hopkins University study in Massachusetts showed the following prevalence of eye disease, primarily among senior citizens: diabetic retinopathy, 3.1 percent; and senile macular degeneration, 8.8 percent.

A 1976 HEW study on medicare coverage for eye and vision care services notes that many areas of the country, particularly nonmetropolitan areas, are served only by optometrists. Approximately 40 percent of the counties have an optometrist but no ophthalmologist. There are twice as many optometrists as ophthalmologists. Also noted by the HEW study is an Institute of Medicine description that: "Optometrists are trained to recognize disease conditions of the eye and ocular manifestations of other diseases, and to refer patients with these conditions to the appropriate health professional. We would estimate that optometrists refer some 5 to 10 percent of their patients to physicians, primarily to ophthalmologists. Still another observation from this study is that even in urban areas: "Under present circumstances the vision care needs of the elderly are not being met in timely fashion, and that to do so requires full utilization of all types of vision care manpower, including optometrists. . . ."

The qualifications of optometrists to perform currently covered medicare eye examination services are further underscored by table 1 in the 1976 HEW study. The table lists the following services which are within the scope of practice of both optometrists and ophthalmologists, and then notes that except for "refraction" and "ophthalmic prosthesis and services," medicare will now reimburse only ophthalomologists for these services:

Personal and family health history, symptoms and vision requirements;
Visual acuity—distance and near, with and without correction;
External examination (eye and adjacent structures);
Direct and indirect ophthalmoscopy;
Biomicroscopy;
Tonometry;
Central and peripheral visual fields;
Ophthalmometry/keratonometry;
Refraction—objective and subjective distance and near;
Ocular motility and binocular function;
Visual perception, color vision, stereopsis, motor;
Evaluation for contact lenses;
Evaluation for low-vision aids;
Evaluation for vision training therapy;
Ophthalmic prosthesis and services.

In summary, the reality faced by the optometric patient who acquires medicare eligibility is that his or her eye examination suddenly becomes reimbursable if

performed by an ophthalmologist but not by the optometrist. This patient must then decide whether to remain with the optometrist and pay the bill, or seek out an often-less-accessible ophthalmologist whose services would be reimbursed.

We would recommend that the Congress erase this absurd, arbitrary distinction by simply altering the definition of an optometrist as a physician under medicare. This definition now reads, "establishing the necessity for prosthetic lenses." It should read, "functions which he is legally authorized to perform in (his or her) State (that are covered by medicare)."

Such coverage already has ample precedent in Federal programs and, in fact, medicare stands virtually alone in restricting its beneficiaries' ability to select optometrists. Optometrists in direct service Federal programs such as the military and Indian Health Service have responsibility for the detection and referral of possible eye disease and ocularly manifested systemic disease. The Federal Employees Health Benefits Act specifically provides that a patient may select an optometrist for any covered service that is within his license. Most federally qualified health maintenance organizations utilize optometrists, and most of these utilize them in a primary entry/primary care setting. Most of the 40 States which cover optometric services under medicare also assure freedom-of-choice of provider. Another example is CHAMPUS, which recognizes the ability of optometrists as well as physicians to perform eye examinations in connection with the treatment of covered eye diseases and injuries. Finally, the privately practicing optometrist has a legal and ethical responsibility, enforced by State law and court decisions, to detect and refer suspected eye and systemic diseases.

MEDICARE SHOULD COVER ALL REQUIRED EYE/VISION CARE

Senator Ribicoff and Representative Corman, together with nearly 200 of their colleagues, have introduced legislation to add routine optometric or medical eye examinations and eyeglasses to medicare coverage. The principal bills, which also provide that doctors of optometry, as well as doctors of medicine and osteopathy, may be reimbursed for any covered service within their license, are S. 514 and H.R. 2020.

The House Select Committee on Aging, under the leadership of Representative Pepper, has introduced a number of comprehensive medicare expansion bills which include needed routine eye and vision care.

The American Optometric Association has joined senior citizens' groups in actively supporting the enactment of this type of legislation. As noted above, nearly every senior citizen has at least a routine sight problem, with a strong possibility of eye disease as well. Underscoring the need for this legislation are some additional facts from our 1975 senior citizens' survey.

Among the senior citizens who did not go to an eye specialist the last time they felt the need for eye care, 48 percent did not go because of lack of money.

Forty-five percent of the senior citizens surveyed with limited finances would visit their eye specialist more often if money were no problem.

Over 80 percent of those responding do not have company or personal insurance (other than medicare) that pays for all or part of their eye care.

Five out of six senior citizens would urge federally subsidized programs to pay for eye care services including glasses.

Nearly one-third of those surveyed feel their inability to see well prevents them from performing different activities such as household chores, recreation, business, etc.

One out of every four citizens surveyed indicated they had an eye problem which required regular care, and only about 15 percent of those surveyed categorized their vision as excellent.

The need for low-vision services and aids alone is discussed in the next segment of this statement. (Some 750,000 older Americans are visually handicapped by this condition to the extent that such aids and services are needed.)

As is true with refractive and other relative uncomplicated sight problems, many persons do not notice symptoms of the early stages of eye disease or of systemic diseases which may be detected in eye examinations. Coverage of routine eye examination thus is essential not only for the diagnosis and treatment of sight problems, but also for the early detection of potentially blinding eye disease as well as of such systemic diseases as diabetes, arteriosclerosis, and hypertension, which often show up first in the eyes. Routine eye examinations, if covered under medicare, could provide early detection for these frequently occurring diseases and thus bring further benefits to the elderly citizen. This surely must be considered a major unmet need which medicare should cover.

The importance of eyeglasses to senior citizens is demonstrated by the fact that vision problems may precipitate other problems as a result of accidents and injuries attributable to visual difficulties. A good deal of correct balance depends on good vision and the elderly are particularly prone to suffer from defective vision. Falls in the elderly constitute a serious hazard. The death rate among those over 65 years from accidents rises sharply with age. In fact, accidents are the sixth major cause of death among the elderly, and 85 percent of all injuries sustained by persons 65 and older are caused by falls. Twenty-five percent are attributable directly to uncorrected visual problems.

In many cases, geriatric patients labeled as senile, reclusive, bothersome, or irritable actually have vision problems which affect their behavior. Once the problems are corrected with proper vision care, the patients' behavior often changes remarkably for the better. A study of the Ebenezer Center, a leading geriatrics center in Minneapolis, Minn., has confirmed that in many cases older persons may "have been inappropriately labeled mentally impaired as a result of unresolved vision needs."

There are specific areas of disability which although not life threatening illnesses per se, are nevertheless extremely vital to the well-being of the individual. The human being is primarily dependent upon his vital functioning. The incidence of visual impairment, however, is rather significant among the geriatic population. Quite often, the aged neglect attending to their visual handicaps due to their inability to afford such care. With improved vision the aged find their other disabilities easier to bear because they now can read, sew, knit, or engage in a number of visually oriented activities.

The following statement by the Director of the National Eye Institute underscores the importance of vision to the individual:

"The greatest toll taken each year in the United States by eye disease is not measured in terms of mortality—few disorders originating in the eye cause death—but rather in degrees of physical limitation and financial burden. But such measurements are inadequate, or they do not convey the hardship or mental anguish of having to function in a complex environment deprived of normal vision. Perhaps for these reasons, Americans have indicated that they fear blindness more than any other physical affliction with the single exception of cancer."

The statistics cited are inadequate for describing the burden imposed on the individual by vision disorders. They cannot convey the hardship and anguish experienced by the elderly in functioning in an environment without normal vision. Thus, the vision care needs of the elderly population are a significant component to the overall health and welfare of the elderly. Certainly, this is a vital area of need, when one considers these needs and contrasts them with the inadequate attention presently being devoted to this area. Medicaid covers routine eye/vision care in most States; so does vocational rehabilitation. Why not medicare?

MEDICARE SHOULD COVER LOW-VISION CARE

Senator Williams and Representative Keys have introduced, respectively, S. 3038 and H.R. 13248. These bills, if enacted, would include optometric and medical low-vision services and aids for the legally blind within medicare coverage.

In addition, Senator Randolph has included important provisions within title IV of S. 2600 that would accomplish the same objectives as the Williams' and Keys' proposals, using general revenues as the financing mechanism.

The American Optometric Association supports the concept of financial assistance to partially sighted older Americans in obtaining the optometric and medical services and aids that can enable them to see. Thus, we favor the enactment of legislation such as S. 3038, H.R. 13248, or title IV of S. 2600.

As noted above, some 7 percent of senior citizens are legally blind; three-fourths of these are partially sighted and can, with the help of low-vision aids, apply their residual vision in a limited fashion. The prevalence of low vision among senior citizens is more than eight times the rate for all other age groups. Also, partial sight is the third most prevalent chronic health condition among the aging. Partially sighted are those who cannot identify letters 30.45 mm high (approximately one and one-quarter inches) from a distance of 20 feet (20/70), but can identify large objects in their vicinity. Their condition of partial sight may stem from any of the following problems:

(1) Diffuse blurring (e.g., scarring of the cornea from accidents, ulcers, or infection; excessive fluid in the cornea due to corneal dystrophy, postoperative

cataract, or corneal surgery; or vitreous hemorrhage from diabetes, hypertension, sickle cell anemia, or trauma).

(2) Blurred or poorly defined central vision without field loss (e.g., complete or incomplete ocular albinism; refractive amblyopia secondary to strabismus; swelling of the macula area of the retina in diabetes; congenital cone dysfunction; or involuntary repetitive eye movements.

(3) Central or macular (the macula is an area of the retina) field loss (e.g., senile macular degeneration, hemorrhagic macular disease, juvenile forms of macular degeneration, macular cysts and holes, diabetic macular disease, some optic nerve disease such as glaucoma, or degenerative myopia).

(4) Extensive peripheral or perimacular field loss (e.g., retinitis pigmentosa; advanced chronic simple glaucoma; neurological diseases such as multiple sclerosis, brain tumors, organic brain injury, stroke, or trauma: detached retina from a variety of causes; diabetic retinopathy in the hemorrhagic or proliferative phase; advanced retinal damage from infantile retinal and vitreous inflammation; or occlusive disease in retinal artery or vein).

(5) Sector or segment loss (e.g., early retinitis pigmentosa, early glaucoma, neurological disease affecting the optic nerve, guadrant loss from stroke, occlusion of artery or vein branch, diabetes with sector proliferation, segmental detachments of the retina, or mild or moderate forms of infantile retinal and vitreous inflammation).

(6) Mechanical factors affecting visual acuity, such as glare, lighting, pupil size, or aphakia, may cause even greater reduction of vision in the presence of other pathology.

Visually impaired people with sight far outnumber those who have no usable vision. The partially sighted person has potential for independence if he or she gets optical or other aids, and learns to adjust to the way his or her vision has changed. Some of these aids are telescopic, microscopic, and contact lenses; light control devices; closed-circuit television, and functional aids.

Optometric research leading to further refinements of these special optical aids is a continuing project to which many individual practitioners and optometric teaching institutions have addressed their efforts. Dramatic progress has been made in the last 20 years and even greater breakthroughs are anticipated for the future.

A number of Federal programs now cover services and aids for the partially sighted. For example, state vocational rehabilitation plans cover eye examinations for visual loss, visual training, eyeglasses, and low-vision aids. The late D. C. MacFarland, Ph. D., reported to the 1966 AOA conference on aid to the visually limited that in 1965 approximately 20,000 persons with partial sight were helped under vocational rehabilitation. Many State medicaid and crippled childrens' services plans cover low-vision services, and partial sight is a form of physical handicap covered under the Education of Handicapped Act.

In the private sector, urban low-vision clinics associated with the Pennsylvania College of Optometry and the Southern California College of Optometry are two important success stories describing the contribution that optometric low-vision services can make to the partially sighted. Also, over 40 percent of optometrists in the United States provide these services.

Cost figures are available for services and aids to the partially sighted. Typically, a low-vision evaluation adds 50 percent to the fee for an optometric diagnostic eye/vision examination. With $26 being the average fee in 1975 for an optometric examination of a person 65 years or older, the total charge would thus approximate $39.

Around 90 percent of all low-vision aids are high intensity lights, available commercially at $12, and hand-held magnifiers, which are sold commercially for $8 to $100, depending upon the complexity. Telescopic systems typically cost $200, with TV monitor systems running around $1,200. Surely this legislation is a fair investment by our Nation in the well-being of its senior citizens who have contributed to its growth.

CONCLUSION

It is well known that the elderly as a group tend to have low income. In addition, the elderly are those who are most afflicted with visual problems which can limit their independence in our society, increase their susceptibility to falls and injuries, and lessen their total enjoyment of life that comes from being able to see. For older persons, who have gradually become spectators rather than participants in life's affairs, vision assuredly must be preserved and enhanced where possible.

By allowing for medicare coverage to include those services that are within the practice of optometry, but are currently reimbursed only if provided by a doctor of medicine or osteopathy, government policy will do much more to increase the availability and efficiency of covered services.

At present, the services most universally required by senior citizens—routine eye examinations and eye appliances—are not covered benefits under medicare. As noted in this statement, many diseases of the eyes common to this age group could be detected by regular examinations, but almost half of the surveyed elderly did not have regular eye examinations because of lack of money. With medicare coverage, many blinding eye diseases could be alleviated with regular examinations, and early detection of many other systemic diseases, which often show up first in the eyes, could be treated.

In addition, visual aids for the partially sighted, which have provided miraculous improvements for those who would not otherwise see at all, should not be excluded from medicare coverage.

With government assistance, ability to pay for visual services can result in improved consideration for the needs of older Americans.

LOW VISION CARE:

A new, ongoing obligation of the ophthalmologist*

by H. MacKenzie Freeman, M.D., Senior Clinical Scientist and Vice President, Eye Research Institute of Retina Foundation

Today, advances in retinal and vitreous surgery and photocoagulation have resulted in improvement or preservation of vision in eyes that were heretofore inoperable or untreatable. Upside-down surgery may unfold a giant tear. A vitreous balloon can be used to break retinal adhesions making retinal reattachment possible and enabling some vision in the eye to be salvaged. Vitreous membrane scissors may make it possible to reattach a retina where multiple scleral buckling operations have failed. Open-sky vitreous surgery makes possible the removal of preretinal membranes so that a retina may be reattached. Argon laser photocoagulation may arrest or improve certain cases of macular degeneration. A long standing vitreous hemorrhage may be successfully removed by closed vitrectomy. But in many cases these new procedures are performed on patients with eye conditions so severe that treatment, no matter how successful, can bring improvement only into the low-vision range.

We have taken a hard look at the results of our surgery in terms of visual performance and have come to recognize the need and obligation to include low-vision care and rehabilitation in the spectrum of patient management, which should not end following successful surgery.

Further, with increasing life expectancy, more people will reach the age where macular degeneration is prevalent. The sad truth of the matter is that laser photocoagulation will help only a small percentage of those affected. But the elderly, now more involved in society, are no longer complacent about accepting poor vision as a part of aging. They demand, quite rightfully, that all possible steps be taken to improve their vision. Therefore, we should evaluate the eyes of these frustrated persons as thoroughly as possible. Granted, a large percentage of these patients can be brought only to low levels of visual acuity with laser photocoagulation; nonetheless, even a small improvement by low-vision aids in that salvaged vision may mean much to the patients. It can make a world of difference in their lives, enabling them to be independent, self-supporting members of society, or to enjoy the pleasures of retirement.

Traditionally, retina surgeons have striven to improve techniques and instrumentation to achieve better anatomic results. Now we are approaching a second equally important milestone in retinal care, which involves improving functional results in desperate cases. We feel that our obligation does not end with a reattached retina, a vitreous cleared of chronic hemorrhage, or a macular condition arrested or improved. The orthopedic surgeon does not perform a hip procedure and then consider patient management completed. He calls in a team of physiotherapists to teach the patient how to make the repaired hip function optimally. Similarly, we must realize that where our treatment ends, low-vision evaluation should begin.

New vitreoretinal surgical techniques can take the patient only so far. The ophthalmologists must encourage him further along the next step in a continuum of eye care which involves a comprehensive study of retinal function, a low-vision assessment to determine visual needs and desires, followed by the prescription of low-vision aids, then mobility training, and social and vocational rehabilitation.

Why should ophthalmologists take on this added responsibility of overseeing care? Without question ophthalmologists are best fitted to assume this leadership role inasmuch as they can diagnose and define which patients may benefit from surgery, photocoagulation, medical therapy, or low-vision aids. They are equipped to oversee total eye care and to follow ocular conditions most knowledgeably. Now more than ever, the ophthalmologist should promote, stimulate, and support the establishment of multidisciplinary Low-vision Clinics. Here the opthalmologist, the optometrist specializing in Low-vision, the optical engineer, the social worker and the visual aid therapist must work as a team to give the patient maximum use of remaining vision.

An operation for a giant retinal tear at Massachusetts Eye and Ear Infirmary using the upside-down operating table conceived, designed and built at the Eye Research Institute of Retina Foundation. This is one of the retinal and vitreous surgical procedures mentioned by Dr. Freeman that now give useful vision to many victims of eye diseases once considered untreatable.

**This article is adapted from a paper delivered by Dr. Freeman to the Symposium Low Vision at the Eightyfirst Annual Meeting of the American Academy of Ophthalmology and Otolaryngology, October 1976 and reprinted in full in Ophthalmology Transactions, published by the Academy.*

Low Vision USA

Low Vision Specialist and Assistant Scientist of the Eye Research Institute of Retina Foundation, Gerald R. Friedman, O.D., discusses the dimensions of the problem.

A young, low vision patient tries a ring telescope–an important low vision aid. As Dr. Friedman points out, low vision knows no age boundaries.

There are 6.4 million people in the United States alone who suffer from some form of severe visual impairment. Of this 6.4 million, 400,000 have no useful vision, which leaves 6 million with some degree of sight. These statistics are generally accepted as being underestimated and unfortunately, they also represent a visually impaired population which is increasing and not decreasing. The incapacitating nature of visual impairment is readily demonstrated by the fact that most of these people are in good health but for their eyes. However, they cannot function in the visually-oriented world of today. Ironically, and this is most important to remember, these people are not *totally* blind.

Among the reasons for the increase in visual impairment in our population are: the eye's vulnerability to injury; degenerative conditions of the eye accompanying age; systemic diseases which also affect the eye; increasing life expectancy which leaves the eyes vulnerable to the aging problems of all organs of the body; and the increasing population itself.

Two causes of the increasing incidence of visual impairment warrant special attention because of the seeming paradox involved. These are: a) advances in medical and surgical treatment of the eyes and b) the advanced technology of today's society.

Advances in eye treatment have made it possible to preserve sight on a level never before thought possible. New techniques in vitreous and retinal surgery and photocoagulation with the laser have preserved the vision of eyes which previously would have been lost. In preserving vision, these advances have cut down blindness, but in many cases leave reduced vision, hence adding to the visually impaired population, an outcome, however, far preferable to total blindness.

On the other hand, the technological society of today, while giving us miraculous developments to enhance our lives, even to preserve life, is itself responsible for creating de facto visual impairments by simply denying the visually impaired access to jobs because these jobs now require superior vision. Certain jobs which once required 20/40 vision, today require 20/20 vision, a level of vision much higher than the 20/40. States which once required 20/70 vision to operate an automobile, now require 20/40, a much higher visual level than 20/70. These are but two examples of society contributing to the creation of a visually impaired population through definition and legislation.

Low Vision Defined: What then do we call this group in excess of 6 million which cannot "see", but is not "blind"? Historically, these people would be considered to have inadequate vision to function and would be classified for all intents and purposes as blind. Today, we are in a fortunate position to offer them a much better future than that definition would imply. First, we call this condition "low vision", not blindness, and second, of far greater importance, we can offer low vision people the means of utilizing whatever vision they have left, no matter how great or how little that may be. In a visually oriented society, this can be the difference between independence and dependence, of being a productive part of society, or a victim of it.

If one has good sight, one can perform two simple experiments and experience two forms of low vision. To personally experience the impairment of central vision, cover one eye and observe the area around you, looking through a glass of salt water. During this exercise, look out the windows and also look at the newspaper. The impairment of peripheral, or side vision, can be appreciated by closing one eye and looking through a straw with the other eye. Again, look out the window and at a newspaper. These exercises demonstrate two distinct types of visual impairment. What they have in common is that *some* vision remains. This residual vision is what keeps this person from being considered "blind". The person with low vision then, is not blind; the term "blind" should be reserved for those without *any* remaining vision.

"Low vision" is the vision one has left (residual vision) after all the medical treatment of the cause of the disability has been utilized. A more technical definition of low vision would be, "any pathological congenital or traumatic condition of the eye which results in a decrease of central vision or peripheral

continued

Low Vision USA *continued*

field and which is not amenable to medical, surgical, or ordinary optical means." If this remaining vision is insufficient to read or travel, or even watch TV, low vision evaluation and specially designed systems can, in a gratifying number of instances, increase this remaining vision to a usable level.

Low vision knows no age boundaries. It affects the young as well as the elderly. People are born with it and people develop it later in life. Although low vision is often associated with increasing age, it is interesting to note that a study of the low vision population seen in two of the low vision clinics in Boston show that 40% of those seen were under the age of 35 with a substantial number under the age of 16. The population seen at one of these clinics consisted of patients from 51 countries and 36 states which offers further insight into the geographical distribution of those with low vision.

The systems which are utilized to enhance the remaining vision range from the relatively simple to the extremely complex. Each has its specific advantages and can only be determined after careful low vision evaluation which first determines the amount of useful vision remaining, then, the most efficient way to utilize it.

Making the Most of Low Vision

The low vision systems do far more than help someone to read, although reading is extremely important in society today. They can make it possible to stay in school or go on to advanced study, find and keep a job, walk from one point to another, fulfill household and cooking requirements. The effectiveness of the low vision system varies with the ability of the patient to master it; the highly motivated patient rarely has difficulty. The need to use vision varies considerably and is dictated by one's environment. This need combined with motivation accounts for the variations in results achieved with low vision systems. If you were to observe people with 20/80 vision in their daily lives, you would think some of them had no problem at all with their eyes, while others had no vision at all. The group which is attempting to make the most use of their vision is the group which would have little difficulty in adapting to the low vision systems.

In summary, the low vision systems give the user an ability to compete in his visual world to a degree never thought possible. Utilization of these low vision systems is seldom easy, but one has only to consider the alternative, *not* seeing, to realize the advantages which these systems offer. Research in the area of low vision is being carried on in order to find new and better ways to evaluate the residual vision and develop new techniques and technology to enable the more efficient use of the precious residual vision for as long as possible.

Making the Maximum Use of Minimal Vision

Marvin Brotman demonstrates what proper motivation can do for the visually-handicapped.

He walks down the street at a fast dog-trot. Only occasionally does he use a white cane. "Mostly," he says, "so that aggressive Boston motorists will know that I might not be able to play the usual pedestrian games." It is difficult to guess on first acquaintance that Marvin Brotman's vision is limited to 5% sight in one eye.

For the past two years, Mr. Brotman has been Executive Director of FERRAT (Friends of Eye Research, Rehabilitation and Treatment). But his interest in both eye research and rehabilitation of the visually impaired extends much further back than this. Legally blind since birth, Brotman insisted on making maximum use of his remaining vision despite constant admonitions, "You will strain your eyes."

"Ours is a separate problem and must be dealt with as such—in education, rehabilitation and in terms of how the public comprehends our situation," Brotman said in speaking of low vision people like himself.

In 1953 Marvin became one of the first legally blind people to receive a M.S. degree from the Graduate School of Journalism at Columbia University. Following this, he was a science writer for a large midwestern newspaper. Marvin later went into public relations, serving as PR Director of Kansas' largest private hospital. He later moved to Denver and became Director of Public Relations for the famed National Jewish Hospital and Research Center.

Marvin is one of the founders of the Council of Citizens with Low Vision (CCLV). The new membership-advocacy group is in the process of organizing low-vision people throughout the nation in order to improve the quality and availability of specialized services. Marvin is also a member of the Legislative Committee, American Association of Workers for the Blind; he also is active in the Affiliated Leadership League of Agencies of and for the Blind.

Mr. Brotman with a closed circuit TV Reader/Writer. This superb low-vision aid was developed by Dr. Sam Genensky and colleagues at the Rand Corporation. Dr. Genensky, a nationally known mathematician, is a low-vision person himself.

Marvin travels extensively on behalf of FERRAT. Through his efforts, agencies and organizations for the blind, senior citizens groups and others have learned more about the progress and needs of the eye research community and have given invaluable support to FERRAT's efforts to increase Federal funding of vision research. Since FERRAT's inception in 1975, funding has grown from $44 million to $85 million—nearly double.

"Our goal for fiscal '79 is $118 million," Brotman said. "The National Eye Institute would get this sum, then dispense the greatest percentage of it in the form of grants to eye research centers throughout our nation."

Correspondence relating to hearing:

Item 1. Letter and enclosure from Senator Frank Church, chairman, Senate Special Committee on Aging, to Frank S. Beal, Deputy Administrator for Operations, Health Care Financing Administration, Department of Health, Education, and Welfare, dated August 9, 1978 37

Item 2. Letter and enclosure from Senator Frank Church to Frank S. Beal, Deputy Administrator for Operations, HCFA, HEW, dated August 10, 1978 37

Item 3. Letter from Frank S. Beal, Deputy Administrator for Operations, HCFA, HEW, to Senator Frank Church, dated September 21, 1978 40

Item 4. Letter and enclosure from Senator Frank Church to Charles F. C. Ruff, Deputy Inspector General, Department of Health, Education, and Welfare, dated August 7, 1978 42

Item 5. Letter from Charles F. C. Ruff, Deputy Inspector General, HEW, to Senator Frank Church, dated August 25, 1978 43

Item 6. Letter from Senator Frank Church to Stephen H. Press, director, Medical Care Administration, State Department of Social Services, Hartford, Conn., dated August 9, 1978 45

Item 7. Letter from Stephen H. Press, director, Medical Care Administration, Hartford, Conn., to Senator Frank Church, dated August 23, 1978 46

Item 8. Letter and enclosure from William M. Hermelin, acting administrator, Government Services Division, American Health Care Association, Washington, D.C., to Senator Frank Church, dated July 24, 1978 47

MEDICAID ANTI-FRAUD PROGRAMS: THE ROLE OF STATE FRAUD CONTROL UNITS

TUESDAY, JULY 25, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 10:08 a.m., in room 1212, Dirksen Senate Office Building, Senator Frank Church, chairman, presiding.

Present: Senator Church.

Also present: William E. Oriol, staff director; Garry V. Wenske, assistant counsel for operations; Alan Dinsmore and Nancy Coleman, professional staff members; Jeff Lewis, minority professional staff member; Marjorie J. Finney, correspondence assistant; Theresa M. Forster, fiscal assistant; and Madonna S. Pettit, research assistant.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. The hearing will please come to order.

My opening remarks this morning will be brief since we are going to deal with a very challenging subject and we want to have the fullest discussion possible in our limited time period.

I shall also ask the witnesses this morning to summarize their statements in order to enable the committee to hear fully from everyone and to permit us to move directly to questioning. I would like though, to make a few key points before hearing from you.

First, the Federal Government, in partnership with the States in the medicaid program is the largest purchaser of medical services in this country—and over one-third of the money spent is supposed to purchase vitally needed services for our citizens aged 65 and over.

Unfortunately, investigations and hearings before this committee show that medicaid fraud exists on a massive scale. These proceedings revealed such practices as providers charging medicaid for expensive personal luxury items, kickbacks to nursing home owners by suppliers, and forced contributions by relatives as a condition for accepting a patient.

The first annual report of the Inspector General of the Department of Health, Education, and Welfare estimates losses in the Federal share alone of the medicaid program due to fraud and abuse at approximately $653 million—in fact, the total amount of loss due to fraud, abuse, and waste for all HEW programs is estimated by the HEW Inspector General at a staggering $7 billion. The executive vice president of the Idaho Hospital Association, John D. Hutchison, points out that this figure is over 50 times more than the total 1976 expenses of all Idaho hospitals put together.

My point is this: Whatever the losses to the system are, and we still have only estimates of these losses, the bottom line is a loss to the taxpayers in the States and the Federal Government and, most important of all, reduced medical services to those who can least afford the loss.

My second point is that the hearings and investigations before this committee have revealed a pattern of massive fraud deterred by only patchwork investigation and prosecution. In fact, a recent congressional report revealed that 20 States had never referred a suspected medicaid fraud case to State or Federal law enforcement agencies for prosecution.

On October 25, 1977, the President signed into law the medicare/medicaid antifraud and abuse amendments. This legislation, which became Public Law 95-142, was designed to facilitate Federal and State efforts to identify and prosecute cases of fraudulent and abusive activities and to strengthen penalities for persons convicted of provider related violations.

Section 17, one of the most important provisions of this law, authorizes 90-percent funding for the States to establish investigative fraud control units for a 3-year period. This provision was intended to encourage the creation of a central organization, distinct from the State medicaid agency, with the capacity to detect, investigate, and prosecute medicaid fraud.

This committee is greatly concerned that only nine States are now certified to take part in this program. While we understand that a large number of other States have expressed interest in the program and that a number of these may be certified in the near future, we are also concerned that Federal share funding will expire on October 1, 1980, and we want to examine the consequences of this.

My third point is this: This law gives States 3 years to prove themselves. This is reasonable. However, only one of the nine certified States is in the top five spenders in the medicaid program. New York State's special prosecutor, who is with us this morning, pointed out recently that it took 3 years in the courts to simply gain access to one suspected provider's account books. What about those other States. They may have less than 2 years to prove that their State fraud control unit can work.

The major questions before this inquiry are:

One: Why has so little progress been made in the implementation of the medicare/medicaid antifraud and abuse amendments' call for the creation of these units?

Two: What steps are being taken to encourage the formation of these units?

Three: What will happen after October 1, 1980, when the Federal matching share for the financing of these units expires?

Four: What steps are being taken to implement the provisions of the law which deal with ownership and management disclosure for medicaid providers—a significant aid to the work of the State fraud control units?

Our witnesses, I am sure, will have more to say about this situation and we look forward to your comments and recommendations.

Senator Pete V. Domenici, the ranking minority member of this committee, is unable to be with us this morning. He has, however,

submitted a statement for the record, which will be entered at this time.

[The statement of Senator Domenici follows:]

STATEMENT OF SENATOR PETE V. DOMENICI

Mr. Chairman, I am pleased today that we are holding hearings on the role of State fraud control units, an area which I believe we need to reexamine. Although we enacted legislation only last year to establish the medical State fraud control units, to date, only nine States have certified units. This is extremely distressing since the Federal Government is subsidizing 90 percent of the cost for the establishment and operation of these units, and the funding for these units expires on October 1, 1980. Subsequently, I am greatly concerned over why more of these units haven't been established and if a sufficient number will be in operation long enough to effectively evaluate their performances.

This legislation was designed to curb the increasing problem of fraud and abuse in costly, problem-riddled medicaid programs. At the same time, however, we have to be cautious that these State fraud control units don't become federally funded harassment units. I believe we need to explore alternate ways to provide funding for these units; that is, make these units dependent upon their actual recoveries. We are in a time now where we have to begin to truly curb Federal expenditures and Federal subsidizing and force some programs to pay for themselves. That is why I am particularly interested in ascertaining actually how much money these units have been able to recover to date, and how much we can anticipate their being able to recover.

I look forward to hearing from our distinguished witnesses this morning and their response to my questions.

Senator CHURCH. Our leadoff panel this morning consists of Charles Ruff, Deputy Inspector General of the Department of Health, Education, and Welfare; and Frank Beal, Deputy for Operations of the Health Care Financing Administration. Mr. Beal is accompanied by Don Nicholson, Director of the HCFA Office of Program Integrity.

Gentlemen, if you will briefly summarize your statements, the full text of those statements will be included in the record and then we will go to questions.

STATEMENT OF FRANK S. BEAL, DEPUTY ADMINISTRATOR FOR OPERATIONS, HEALTH CARE FINANCING ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, ACCOMPANIED BY DONALD NICHOLSON, DIRECTOR, OFFICE OF PROGRAM INTEGRITY

Mr. BEAL. Thank you, Mr. Chairman.

I am Frank S. Beal, Deputy Administrator for Operations of the Health Care Financing Administration. With me is Don Nicholson, Director of the Office of Program Integrity.

We appreciate this opportunity to discuss with you progress in implementing the Medicare/Medicaid Anti-Fraud and Abuse Amendments of 1977—Public Law 95-142. This law greatly strengthens the ability of the States and the Federal Government to take action against fraud in the medicare and medicaid programs.

FRAUD CONTROL UNIT STARTUPS

Let me first discuss implementation of section 17. This section provides the incentive of 90 percent Federal matching funds to States which establish independent units to investigate and prosecute medicaid fraud. Because of this provision we are beginning to see a major

infusion of State investigative and prosecutorial resources in the area of medicaid fraud.

The Department met its obligation to publish regulations concerning the establishment and operation of the units within 90 days after passage. Based on comments received and implementation experience acquired since then, we published amended regulations this week clarifying several areas of concern.

At the present time there are nine State fraud control units certified under the provisions of Public Law 95–142. Annual budgets of these units range from $300,000 to $1.5 million, with total annual budgets of $5.3 million. We are presently reviewing applications for certifications from 11 other States. The 20 units which have been certified, or whose applications are being reviewed, cover States which expend 72 percent of medicaid funds.

Many other States are preparing applications and we expect that by the end of this year, or even sooner, at least 35 States will have fraud control units in operation covering 85 percent of medicaid expenditures. Our efforts to encourage States to establish units and to assist them in making applications are having substantial results.

Some States or jurisdictions have indicated that they will not establish independent fraud control units. Several reasons for these decisions have been given.

First, some States do not want to separate the fraud unit from the agency administering the medicaid program as mandated by Public Law 95–142.

Second, some States believe that they do not have the workload necessary to justify establishing a separate unit.

Finally, some States are reluctant to establish a unit in light of the fact that the 90 percent Federal funding expires October 1, 1980.

We believe the decision to place the 3-year limit on increased Federal funding was a sound one. It gives HEW time to evaluate the performance of the program and gives the Congress an opportunity to determine the proper level of Federal support after 1980.

A primary key to the success of a fraud control unit's performance is the relationship of the unit to the State medicaid agency which has a major responsibility through its claims processing and other activities for the detection of provider fraud. We mandate that there be a memorandum of understanding between the fraud unit and the medicaid agency which provides data concerning vendor billing patterns and practices which are necessary to the fraud units investigative work. We will closely monitor this flow of data to insure that fraud units are receiving from medicaid agencies the information they need to investigate fraud.

Improvements in Fraud Detection

Mr. Chairman, you have asked us to address specifically the use of a data system as a tool for deterrence, detection, and investigation of fraud. A sound data system is an indispensable component of a meaningful fraud control program. Such systems are critically important in identifying providers whose billing and practice patterns indicate a potential for defrauding or abusing the medicaid program.

As part of its technical assistance role, the HCFA Office of Program Integrity assists the States in developing systems of prepayment and postpayment controls. The quality of these reviews is a standard feature in our periodic assessment of State medicaid programs.

As part of our effort to improve medicaid management generally, and fraud and abuse detection in particular, HCFA is placing increased emphasis on State development of medicaid management information systems—MMIS. There is a generous Federal financial incentive to such development and we are increasing our technical assistance to the States. To date, 18 States MMIS systems have been certified as meeting all Federal requirements and we expect to certify at least another 7 by the end of this year, and many more in 1979.

Each medicaid management information system contains a subsystem which compares patterns of provider practice and recipient utilization and identifies providers and recipients whose experience is exceptional with respect to established norms. This output is analyzed by State medicaid agency personnel to determine whether the patterns are indicative of fraud or abuse. The output of their analysis is crucial input to the State fraud control unit's investigative activities.

Disclosure Provisions

Mr. Chairman, let me now briefly describe implementation of the disclosure provisions of Public Law 95–142. These sections impose upon providers and contractors disclosure requirements that are central to fraud and abuse detection efforts, including information concerning ownership, subcontractor relationships, supplier relationships, and convictions of owners and others of offenses related to their involvement in our programs.

Proposed rules covering sections 3, 8, 9, and 15 will be published in a few days.

The regulations require providers and contractors routinely to report ownership information. For providers, we will use the medicare medicaid provider certification process to gather this information. This information, and related information required to be made available, will be used to determine the potential for fraud and abuse. The Office of Program Integrity has been charged with developing systems, including data processing systems where useful, to achieve this end.

Mr. Chairman, the last 2 years have seen remarkable advances in HEW's efforts to eliminate fraud and abuse from its health care programs. The creation of the post of HEW Inspector General; the establishment of the Office of Program Integrity in HCFA to integrate medicare and medicaid fraud and abuse detection activities; the passage and implementation of Public Law 95–142; expedited development of medicaid management information systems; and a determination at all levels in the Department to root out fraud and abuse have all contributed.

These efforts will continue to have top priority so that we can strengthen public confidence in the integrity of our health care programs.

Thank you very much.

[The prepared statement of Mr. Beal follows:]

PREPARED STATEMENT OF FRANK S. BEAL

Mr. Chairman, members of the committee, I am Frank S. Beal, Deputy Administrator for Operations of the Health Care Financing Administration. With me today is Mr. Don Nicholson, Director of the Office of Program Integrity.

We appreciate this opportunity to discuss with you the progress in the implementation of the medicare-medicaid anti-fraud and abuse amendments of 1977 (Public Law 95–142). We strongly support this legislation because it strengthens the States' and Federal Government's ability to take action against fraud and abuse in the medicare and medicaid programs. The elimination of fraud and abuse is one of HEW's highest priorities.

SECTION 17—INCENTIVE FUNDING FOR STATE MEDICAID FRAUD CONTROL UNITS

Mr. Chairman, as you indicated in your letter of invitation, section 17 is one of the most important provisions of Public Law 95–142. This section, which provides an incentive of 90 percent Federal matching funds to States that establish independent medicaid fraud control units, recognizes that the State is the most appropriate investigator and prosecutor of medicaid fraud. Because of this provision, we are beginning to see a major infusion of State investigative and prosecutorial resources in the area of medicaid fraud. The Health Care Financing Administration's Office of Program Integrity, in cooperation with the Office of the Inspector General, is charged with responsibility for developing the policies necessary to implement section 17 and to evaluate the State operations under that policy. Interim final regulations were published in the Federal Register on January 23, 1978. Final regulations resulting from comments received and from experiences during the initial implementation stages are scheduled for publication this week.

CURRENT STATUS

At the present time, there are nine certified State fraud control units, located in Louisiana, Alabama, Michigan, New Mexico, Connecticut, Rhode Island, New Jersey, Washington State, and Colorado. The annual budgets of these nine units range from $300,000 to $1,500,000, with a total annual funding of $5.3 million. This will fund 164 professional staff—35 attorneys, 45 auditors, and 84 investigators.

In addition, we have received applications from 11 other States and anticipate receiving many more this year. The 20 States whose units have been certified or whose applications are being reviewed for certification account for 72 percent of medicaid expenditures. We expect 35 units to be certified by the end of the year covering nearly 85 percent of medicaid expenditures.

HCFA EFFORTS

We have encouraged every State to set up a special fraud unit and have taken a number of steps in this direction:

We conducted two 2-day training sessions in January for our regional staffs on the section 17 regulations and guidelines. Following that, letters were written to the Governors of each State asking that representatives be sent to special training sessions conducted by our regional staffs—10 sessions were held throughout the country;

Secretary Califano, in a letter to the Governors dated April 5, 1978, encouraged each Governor to become familar with the newly enacted provisions and asked them to support the formation of fraud units;

We made presentations before components of the National District Attorneys' Association and the National Association of Attorneys General to discuss the effects of section 17; and

We have had countless contacts with State officials to explain the provisions of section 17 and help them to establish fraud units.

STATE CONCERNS

Twelve States or jurisdictions have indicated they do not plan to establish fraud and abuse units under section 17. The unwillingness of States to apply for Federal matching has occurred for a variety of reasons:

Some do not want to separate the fraud unit from the agency administering the medicaid program;

Some States of jurisdictions feel they do not have the workload necessary to justify the establishment of a separate unit that meets the requirements mandated by law and regulations;

Finally, some States are reluctant because of the 3-year limitation on 90 percent Federal funding. Calculated over the period of certification, they have concluded that the added Federal revenues do not balance the work involved in establishing the units.

Although some States may be reluctant to file an application for section 17 funding because of the funding limitation, we believe that it was appropriate to place the 3-year expiration of funding clause in the legislation. The performance of States over the next 3 years can thus be evaluated to determine the proper level for continued support. We require periodic reporting by State, fraud units on the volume of cases worked, the amounts of overpayments established, and the number of convictions obtained. The time limit on Federal funding also provides added incentive to fraud units to demonstrate effective performance. Based on our experience with the program over the next 2 years, we will be prepared to recommend appropriate legislative changes.

CERTIFICATION PROBLEMS

For States which do wish to establish fraud control units, our most frequent problem has been in reaching agreement with States on the level of funding. The funding levels are tied to, and limited by, the level of medicaid expenditures in a State. The law provides that a State can be funded at a level up to $125,000 per quarter or one-fourth of 1 percent of the receding quarter's medicaid expenditures, whichever is greater. In order to secure annual funding to the limit of what is allowed by this formula, a State must project its workload figures and manpower needs. Some States have had great difficulty supporting their funding requests, and the resulting need to negotiate has delayed the certification of some fraud units.

The requirement that the expenditure cap for the 90-percent funding be calculated on a quarterly basis has been particularly troublesome. Medicaid expenditures can vary sharply from quarter to quarter. Basing Federal payments for a fraud control unit on the preceding quarter's medicaid expenditures can cause large fluctuations in Federal participation for the unit. We believe that basing Federal funding for a unit on the previous year's medicaid expenditures would allow more predictable budgeting and operation.

RELATIONSHIP TO STATE MEDICAID AGENCY

A primary key to the success of a fraud control unit's performance is its relationship to the agency administering the medicaid program. The law allows the higher Federal funding only for *investigation* and *prosecution* of Medicaid vendor fraud. Detection of the potentially fraudulent vendor is the responsibility of the State medicaid agency. Without identified cases for investigation, there is no need for a fraud control unit to exist. For this reason, it is a condition for certification that a fraud control unit have a memorandum of understanding with the State medicaid agency to assure referrals are made. This memorandum of understanding must also provide for data reflecting vendor billing patterns and practices which may be necessary to the fraud control unit's investigation. We will closely monitor the flow of information from State medicaid agencies to fraud control units to ensure that the units are receiving the data they require to effectively investigate potential program fraud.

DATA SYSTEMS

As a part of its oversite and technical assistance role, HCFA's Office of Program Integrity assists the States in developing and maintaining systems of pre- and post-payment controls. A good postpayment data system is indispensible to any State medicaid agency as a tool in fraud and abuse detection. Although important in medicare, the significance of data in medicaid takes on added importance because the medicaid patient is not required to pay deductible and coinsurance. Under medicare, if there is something amiss with regard to the providers' billing for services, this will often be noticed and reported by the medicare patient who must pay a portion of the bill.

Under medicaid, however, the incentive for patient feedback to the case worker or other responsible medicaid official is not as strong. Therefore, it is critically important that medicaid programs have data systems capable of identifying health providers who demonstrate a potential for defrauding or abusing the program.

Medicaid regulations require each State medicaid agency to have a system of postpayment review. In our ongoing review of State medicaid agencies, one area that we continually focus on is postpayment review and the way that the States are utilizing the data available through those systems to analyze patterns of practice and take corrective or punitive action where appropriate.

MEDICAID MANAGEMENT INFORMATION SYSTEM (MMIS)

As part of its effort to improve medicaid management and to improve States' abilities to detect fraud and abuse, HCFA is placing increasing emphasis on the development by States of medicaid management investigation systems.

There are now 18 State mechanized claims processing and information retrieval systems certified as MMIS. Thirteen other States are actively developing MMIS and we expect to certify 7 of these before the end of this year.

MMIS systems can detect fraudulent or abusive use of medicaid services by physicians, pharmacists, and others who provide services as well as by persons who receive services. While the system designs and reporting formats vary from State to State, each system:

Covers all categories of medical services (inpatient hospital, physician, pharmacy, etc.) and all classes of recipients;

Analyzes medicaid utilization experience by means of statistical norms of care;

Compares patterns of provider practice and recipient utilization and identifies providers and recipients whose experience is exceptional and automatically produces summarized information about them.

While the collection of data is necessary for the detection of medicaid fraud, it is not in itself sufficient. The data must be carefully analyzed and it is critical that the analysts at the State agency level have the ability to draw meaningful conclusions from that data. The output of their analysis is the crucial input to the fraud control unit's efforts to investigate and prosecute fraud.

DISCLOSURE PROVISIONS

Finally, Mr. Chairman, I would like to describe briefly our efforts to implement the disclosure provisions of Public Law 95-142. The legislation imposes on providers several reporting requirements that are central to our fraud and abuse detection efforts. A proposed regulation will be published in a few days that will require providers to routinely disclose ownership information as mandated by section 3 of Public Law 95-142. The medicare and medicaid provider certification process will be used to gather this information. This information and related information, required to be made available under the law, will be used to identify potential fraud and corporate interlocks that involve hidden ownership and other practices. We expect that once the new detection system is fully developed, it will complement the fraud and abuse systems and controls currently in place.

Mr. Chairman, we are encouraged by the Federal-State cooperation that we have seen since the enactment of the medicare-medicaid antifraud and abuse amendments. We intend to pursue aggressively our responsibilities to stamp out program abuses and the fraudulent activities that can cripple our efforts to serve beneficiaries and to preserve program moneys.

Mr. Nicholson and I will be happy to answer whatever questions you and your committee members may have.

Senator CHURCH. Please proceed Mr. Ruff.

STATEMENT OF CHARLES F. C. RUFF, DEPUTY INSPECTOR GENERAL, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Mr. RUFF. Senator, would you prefer that I follow with a brief summary?

Senator CHURCH. If you have one, why don't you do that and then I will ask questions.

HCFA-INSPECTOR GENERAL RELATIONSHIP

Mr. RUFF. It might be useful just very briefly, although I will try not to duplicate Mr. Beal's statement, to indicate what the relation-

ship has been between the Office of the Inspector General and the Office of Program Integrity of the Health Care Finance Administration in connection with attempts to implement section 17. We, of course, have the statutory mandate of the Inspector General's Office to supervise all fraud detection and enforcement efforts within the Department, and in that connection of course we were eager to see the passage of section 17 of Public Law 95–142 and have welcomed it as a major step forward in what we see as the crucial joint effort between the States and the Federal Government to address the problem.

Although HCFA has the responsibility for funding and certification of these units, we have worked closely together from the beginning to insure that our office had an appropriate role in certifying units, particularly from the point of view of their investigative and prosecutive capacities. Indeed, each application for certification, before it is approved by the HCFA Administrator, must be concurred in by the Office of Inspector General. To date, we have had absolutely no difficulty in working out this joint arrangement and I would expect this cooperation to continue as the remaining States submit their applications.

Now during the period in which the regulations were being drafted and since that time we have met regularly with representatives of both the National District Attorneys Association and the National Association of Attorneys General to discuss the special problems the section 17 regulations pose to them in making these applications in an attempt to offer some informal guidance through the application process. Particularly we were concerned that we implement through the regulations and through the close scrutiny of the application what we viewed as the essential congressional intent to create, wherever possible, a central and continuing body of expertise. Hence our regulations, we think consonant with the statute, create a strong preference for the placement of the fraud control unit in the Office of Attorney General or other statewide prosecutive agency. Even in those States which do not have such a prosecutive authority, we have been very encouraged to see a remarkable cooperation between the attorneys general and the district attorneys to create a unit which meets their needs but still complies with the requirements of the statute and regulations.

Progress at State Level

Our continuing role in the implementation of section 17 is principally that we will serve as liaison between the unit and other Federal law enforcement and prosecutive agencies. We hope to be able to provide some guidance, where necessary, in auditing techniques. We are working at this very moment with representatives of the special prosecutor's office in New York and the attorney general's office in New Jersey to develop a training program for auditors, investigators, and prosecutors, which we hope we will be able to put on in the fall and which we hope will be able to reach out to not only those States which have ongoing efforts in this area but those which have newly come to the medicaid law enforcement business. All in all, I think that our relations with the States over the past several months, as we moved to the implementation of section 17 of the regulations, have been excellent. I am encouraged by the efforts of the States to adjust. Sometimes

there have been difficult jurisdictional problems to solve in order to meet the requirements of our regulations, which we feel are consonant with the legislative intent.

I would be glad to answer any questions that the Senator may have or to explore, if you wish, some of the other aspects of Public Law 95–142.

[The prepared statement of Mr. Ruff follows:]

PREPARED STATEMENT OF CHARLES F. C. RUFF

Mr. chairman and members of the committee, thank you for the invitation to appear before the committee today to discuss the Federal funding of State medicaid fraud control units. We greeted the passage of section 17 of Public Law 95–142 with enthusiasm, and we see the development of State investigative and prosecutive expertise as a major step forward in our joint effort to combat fraud in the medicaid program.

Until recently, State investigation and prosecution of fraud by medicaid providers have been spotty, at best. With the exception of such States as Massachusetts, New York, New Jersey, Colorado, and California, where well-organized investigative and prosecutive offices have existed for some time, the resources needed to deal with sophisticated and complex criminal activity of the type involved in medicaid fraud simply were not available. Nor, it must be noted, was the Federal effort adequate. HEW's investigative staff was minimal, and only in a few of the larger U.S. attorneys' offices was there any substantial enforcement effort.

A change in this picture was first signalled by Congress' creation of the Office of Inspector General at HEW. Over the first 15 months of our existence, as our investigative staff has grown from 10 to almost 80 professionals, we have devoted an ever-increasing amount of our resources to medicaid fraud cases. Further, the Office of Program Integrity, Health Care Financing Administration, has intensified its own efforts to provide support and technical assistance to the States in this area. But we have always recognized that there could be no real impact on the problem unless there was a substantial improvement in the capacity of the States to handle these cases.

Immediately after the passage of Public Law 95–142, the Secretary appointed the Deputy Administrator of HCFA, the Deputy General Counsel, and the Deputy Inspector General to oversee the preparation of the regulations to implement section 17, and they were published a few days before the deadline set in the legislation. HCFA followed with the publication of guidelines, and a number of meetings were held at which Program Integrity and Inspector General's staff briefed the regional personnel who would be responsible for the certification of the fraud control units.

It was clear from the very beginning that, although HCFA had the principal responsibility for administering the certification process and the funding of the units, the Office of Inspector General must play an important role. We agreed that the Inspector General would assist Program Integrity in reviewing State applications to insure that adequate provision was made for the investigative and prosecutive aspects of the unit's operations, and we agreed that the Inspector General's concurrence in the recommendation for certification would be required before the application was finally approved by the HCFA Administrator.

Accordingly, the special agents in charge of our investigations field offices joined with their counterparts in the Office of Program Integrity to provide assistance to the States in developing their applications for funding. In addition, this Office has worked both formally and informally with representatives of interested States, and with such organizations as the National Association of Attorneys General and the National District Attorneys Association to solicit their comments on the draft regulations and guide them through the application process.

In assisting HCFA to draft the regulations, we acted in the belief that Congress intended to encourage the development of a central body of investigative and prosecutive expertise which would prove so valuable that the State would elect to continue its operation after the end of the funding period. Because the legislation had so clearly been modeled on the structure of the New York Special Prosecutor's Office, and because we felt strongly that early and continuing participation by prosecutors was vital to the success of the unit, our regulations created a strong preference for the first of the three alternatives provided by the act—that is, placement of the unit in an agency with Statewide prosecutive authority.

This preference caused difficulties for the district attorneys in some States, and, in response to their concerns, we included a provision for referral by the attorney general of individual cases to district attorneys whose offices had a demonstrated interest and capability in the prosecution of medicaid fraud. The regulations also provide that, where a State has no central prosecutive authority and elects to adopt the alternative method of referring all cases to the local prosecutor, the fraud control unit must consult with the prosecutor at the earliest possible stage in order to insure that the case will be developed in a manner which meets his needs. To date, we have seen an extraordinary effort on the part of such States as Colorado and Washington, to name but two, to coordinate the work of the attorney general and the district attorneys in a way that is adapted to their special requirements, but at the same time complies with the regulations under section 17.

Once the State units are in place, this office will assume responsibility for providing advice, as needed, in investigative and audit techniques and will serve as liaison between the units and other Federal law enforcement and prosecutive agencies. In addition, we have principal responsibility for developing and coordinating training for fraud investigators and prosecutors assigned to the units, and we have begun planning, with the cooperation of some of the more experienced States, to present an extensive training program for unit personnel in the Fall.

We expect the State fraud control units to carry the major burden of enforcement in this State-administered program, but this does not mean that the Federal presence will diminish. The Office of Investigations will continue to work with the Justice Department on the more complex provider frauds, particularly those having multi-State or national implications and those involving either organized criminal influence or public corruption. We intend to pursue, together with the Office of Program Integrity and the States, a variety of fraud detection programs, and we hope that the product of these programs will be of value to both Federal ane State investigators.

In sum, we view the creation of the fraud control units as a major advance in the fight against program fraud, and we feel confident that they will, over the next 2 years, prove themselves to be so cost-effective a law enforcement device that the States will elect, without any hesitation, to continue them even without Federal funding.

Senator CHURCH. Thank you very much.

This program took effect at what time? When was the effective date of the program relating to the State units?

Mr. BEAL. Senator, the regulations relating to the program were published, I believe, on January 23 of this year.

Senator CHURCH. How long was that after the law itself was to take effect?

Mr. BEAL. It was approximately 90 days. The law specifically required that we have regulations published within 90 days, sir.

Senator CHURCH. So the regulations were in effect as of January this year?

Mr. BEAL. That is correct; yes, sir.

Senator CHURCH. And as of now, nine States have set up these special investigative and prosecutorial units?

Mr. BEAL. We have certified, as of yesterday, nine States for this, Senator.

Senator CHURCH. How many States have applications pending?

Mr. BEAL. Eleven States, Senator.

Senator CHURCH. So up until now, only 20 of the 50 States have applied?

Mr. BEAL. Yes. That is, that have formal applications in our office. There are other States that are in the process and are working with us in the preparation and have worked with us over the last months, back and forth.

Senator CHURCH. How many States would you estimate, based on all the data now available, will set up these units by the end of the year?

Mr. BEAL. We have reasonable confidence, Senator, of 35 of the States or jurisdictions. There may well be more than that.

Senator CHURCH. I think that means that, with the 90-percent Federal funding, at least there is considerable interest on the part of the States to participate in the enforcement effort.

Mr. BEAL. Yes, sir.

THE FEDERAL EFFORT

Senator CHURCH. Now in addition to these State units that are being established, what direct investigative and enforcement efforts will you undertake at the Federal level in connection with medicaid fraud itself?

Mr. RUFF. It would be more appropriate if I were to respond to that, Senator. The direct investigation of medicaid fraud falls under the jurisdiction of a number of agencies, principally in HEW, the Office of Inspector General, Office of Investigations. We have grown in the past year from a minimally staffed office of some 10 investigators to almost 80 professional investigators, and assuming that our appropriation makes it the rest of the way through the Congress, we will have authorization for 160 professional investigators in the next fiscal year to get the staff up to that level.

I think it is fair to say that over the past several years the direct Federal investigative involvement in medicaid fraud, as opposed to medicare fraud, has been minimal. There have been a few U.S. attorneys' offices throughout the country—particularly the southern district of New York, the northern district of Illinois, and a few others—which have been very much involved, using the services of the FBI and the postal inspectors, but by and large I think it is fair to say that the direct Federal effort has not been what it should be, which is why we did welcome the State fraud control units.

At the moment I would estimate that perhaps 15 of our man-years in the Office of Investigation are devoted to medicaid fraud and related matters. We would expect that to increase as our staff increases. We would also expect, as I indicated in my prepared statement, that the States will probably bear the burden of the day-to-day enforcement in the medicaid fraud area with the Federal Government playing the role of investigator and prosecutor in the particularly complex multi-State or national investigations or those which have particularly sensitive organized crime or public corruption implications.

JURISDICTION AND DUPLICATION PROBLEMS

Senator CHURCH. So you would see the line of demarcation between the Federal and the State effort being drawn on the basis of the character of the nature of the offense. If it were a multi-State offense that would involve jurisdictional problems for the individual State governments, then it would be appropriately a Federal matter, is that correct?

Mr. RUFF. There is, of course, a Federal jurisdictional interest in any medicaid fraud case given the Federal participation in funding but, yes, when the system is working at its best, I would hope that the line we would be able to draw would place the principal burden on the States and leave to the Federal Government the sensitive area.

Senator CHURCH. I agree with you there because the thing that I think we should strive to avoid is an unnecessary duplication of effort.

Mr. RUFF. I agree, Senator.

Senator CHURCH. And I should think that if the Federal effort would be directed toward the instances of fraud that involved a number of States' operations that extend to a number of States, that would make a good deal of sense. You may get very complex forms of fraud, and that seems to be the way we are trending, that might require specialized skills unavailable at the State level and there Federal assistance might be necessary in cases of that character.

Mr. RUFF. Absolutely, Senator. We would be responsive in any ad hoc situation in which our special skills were required.

Senator CHURCH. I don't want to be too critical in our jump to the premature conclusion because I recognize that you are just beginning to move into this field and you have not had a great deal of time to prove yourselves, but this committee, in my judgment, should establish some benchmarks for determining how effective these stepped-up efforts to deal with the problem of fraud actually prove to be. We need some sort of cost-benefit ratio in determining whether the public is getting its money's worth out of this enforcement and investigative effort.

Now starting at the State level, our objective in passing the law was to give the States incentive to enter the field by providing seed money for the initial establishment of these fraud units, but we will be greatly mistaken, I think, if we don't attempt to furnish the States with sufficient incentive to maintain those units on the basis of State appropriations and work the Federal dole out of the system. Now the only way I can think of for doing this is to provide, by law, for State retention, either all or some part of the recoveries, so that the State agencies can make their case before the legislature on the basis of 3 years of experience. It is clear that this would be money well spent, and the return to the State would be more than sufficient to cover the costs. I think if we don't do that, we are likely to find that the Federal contribution becomes permanent and the cost-benefit ratio will prove to be very disappointing.

I would like to have your own feeling about how we could move toward giving the States this incentive and working the Federal Government out of the picture insofar as a constant Federal subsidy is concerned.

Mr. RUFF. My personal view, Senator, is that your suggestion is a wholly appropriate one. I would have to consult with my brethren to know what the numbers are. That may indeed be the simplest and most straightforward way of continuing the Federal incentive, recognizing that it is indeed a Federal contribution, although perhaps not specifically denominated as such.

We would be giving up the 55-percent—approximately—that otherwise we would be entitled to have. At some point I would like to see that cut off. I think the States ought to bear some burden in this area, but I think the general idea of recoveries being retained by the State at least appeals to me personally without stating the departmental position on it.

Senator CHURCH. What do you have to say about that, Mr. Beal? Do you think it would work, first of all, and do you think it is necessary to yield to the States? Under present law States can recover

their portion, can't they, of whatever may be collected in a fraud case?

Mr. BEAL. Yes, sir, that is correct. The States, of course, contribute to program costs in the medicaid program anywhere up to 50 percent of the cost of that program, so when they recover program moneys properly spent, they share substantially in that recovery, depending on their share, which varies from State to State. They do have that because, in some cases, they are recovering their own State programing funds.

Senator CHURCH. Have you any notion as to whether the inducement would be sufficient to lead these States to appropriate the necessary administrative cost for adequate investigative units if we were to simply follow the present practice of letting the States keep their share of the recovery?

Mr. BEAL. I think, Senator, a great deal of this will depend on how this particular program develops and evolves over the next couple of years if it proves itself, and we have considerable confidence that it will. State medicaid directors and Governors can make the case to their legislatures that in fact this program is paying for itself. But again I think that has to depend to some extent on the experience we see in the next years.

968 CASES UNDER REVIEW

Senator CHURCH. Yes, well, coming to the Federal side, I have an exhibit here which comes from the first annual report of the Office of the Inspector General which determines the cases handled by the Office of Investigation, and this has to do with health care cases, long-term care, hospitals, pharmacies, laboratories and clinics, physicians, other practitioners and beneficiaries, and it shows that presently there are 968 cases under review. Part of these are listed under the Office of the Inspector General and the larger number, in fact, under the OPI. What does OPI stand for?

Mr. RUFF. That is the Office of Program Integrity, Senator, and until the recent months when we have moved to assume full responsibility for criminal investigation of all medicare as well as medicaid cases, the Office of Program Integrity bore the principal responsibility for the investigation of medicare fraud cases.

Senator CHURCH. In addition to the Office of Program Integrity, you have an additional category of Project Integrity that is divided into parts directly monitored. Can you explain that to me?

Mr. RUFF. Yes; Project Integrity is the program that was begun in the spring of 1977, in an attempt to analyze all of the 1976 claims filed by physicians and pharmacists in the medicaid program, to identify billing practices that might be an indication of fraud. We selected 2,500 physicians and pharmacists, approximately 50 in each State, for further investigation. Since that time considerable work has been done by us, by the individual State agencies with whom we cooperated, and by the Office of Program Integrity, so that at this point some 500 cases have been identified as meriting full scale criminal investigation and that is the figure that you see before you.

Senator CHURCH. Now that Project Integrity has been handled by what branch of the Department?

Mr. RUFF. It has been handled by our office through the Office of Program Integrity.

Senator CHURCH. I see.

Mr. RUFF. Our auditors did the computer work; our investigators have done some direct investigations as well as monitoring; and Mr. Nicholson's program has full participation as well.

Senator CHURCH. Now this shows that at the Federal level of the investigation there are just slightly less than 1,000 cases that are under some stage of processing for possible enforcement action and possible prosecution. I have some other figures here which I want to check with you for their general accuracy. Now beginning with the total cases that are being processed—just under 1,000—I have figures here that show that in 1977 the Office of the Inspector General formally referred 19 cases to the Department of Justice and had informal contact with U.S. attorneys in 38 other cases. As of the date of the report, March 1, 1978, six indictments had been returned with convictions in four cases. Seven cases are pending decision by the Department of Justice.

Now I have further information to this effect. During the same period the Office of Program Integrity referred 83 cases to the Department of Justice with 20 indictments returned and 12 convictions. Project Integrity, a special pilot program, has resulted in 197 cases involving civil representation in the amount of $395,000 and, as of this date, none of that money has been recovered. This would show that in 1977 and up to March 31, 1978, about all we have to look at in terms of completed cases are 19 with 19 convictions. Now I assume that at the State level these units have not been set up long enough so that there is any record available.

Mr. RUFF. That is correct, Senator. We did have a very rough figure of something in the neighborhood of, I believe, 129 State medicaid convictions, but it is very difficult to collect that information in any reliable form and I hesitate to use that figure.

WHAT ARE STATES DOING?

Senator CHURCH. Well, I think that we have to find out how to do that. If we are going to monitor this program and determine its effectiveness and decide whether or not the tax money going into it is producing results, we are going to have to have a way to find out what the States are doing. We are going to have to have reliable information concerning both the number of cases and the number of convictions, the amount of money to cover it in the way of penalties, fines, and so forth.

Mr. RUFF. Senator, I think it is clear that once the section 17 units are in place there will be very accurate information about their activities. In addition, as I understand it, the Office of Program Integrity has made some strides in this direction.

Mr. NICHOLSON. We have established a system that we will use to select information on the fraud and abuse cases that are worked by various components at both the Federal and State levels so we can get feedback on a more precise nature in the whole system. The instructions have gone out and we have gotten approval on the forms. We will be in the process of implementing that over the next couple months. I feel confident as a result of the implementation of that reporting procedure that we will be able to provide more accurate information on the success rate of the fraud units that have certified

other contractors in medicare State agencies and their responsibilities in the fraud abuse area.

Senator CHURCH. Well, this committee will be requesting that kind of information as it becomes available so that we can oversee this program and try to make it as effective as possible, and that data will be essential to the committee.

"AN ANEMIC RECORD OF RESULTS"

In the matter of these 19 convictions, that really is a very unimpressive figure and I do not have information as to what was recovered in these 19 cases. I know in the past we have discovered that the courts have been extremely lenient in dealing with doctors, pharmacists, and others who have been actually convicted of fraud. It is a kind of double standard that apparently is at work here and the sentences have tended to be very light—the fines have sometimes been only token fines, very little more than that. In the civil side of our effort there has been no recovery, if this information is correct, so this is sort of an anemic record of results.

Mr. RUFF. Senator, I think first of all the vast bulk of both the investigative and the prosecutive effort in the health care area has been on the medicare side represented by the activities in the program of the Office of Integrity, now being assumed under our office. There has been substantial recovery of the funds on the medicare side. It is true that on the medicaid side neither the Justice Department nor HEW, over the years, has devoted enough resources to investigation, prosecution, and civil recovery of the funds in that area, but we trust that that is going to improve now that we have additional manpower to devote to it, as well as the new thrust that will be given to the effort by the State control units.

Let me just say, by the way, on that score that our current figure of recoveries under Project Integrity—that is the nationwide medicaid State-Federal program—now is in the area of $2.6 million, so I think that our general success in attempting to recoup funds misspent will be more evident next year at this time.

Senator CHURCH. I think it would be well for the staff to calendar another hearing about a year from now so that we can trace this along and see what progress is being made. The figures that we have been using that I have been quoting here deal with the numbers of cases that are under investigation and all relate to the medicaid side, is that correct?

Mr. RUFF. No, that is not correct, Senator. The 1,000 cases represents the entire workload of the Office of Investigation. As I indicated, the principal caseload in the health care area has always been medicare and principally carrying the load has been the Office of Program Integrity. Perhaps Mr. Beal and Mr. Nicholson can be more specific on those numbers, but we are, as I indicated, in the process of bringing that criminal caseload into the Office of Investigation so that next year our report will indicate the full scope of criminal activity by HEW within the Office of Investigation.

Senator CHURCH. Well, the number of indictments and convictions that I referred to covers both medicare and medicaid?

Mr. RUFF. That is correct.

Senator CHURCH. Well, to get back to my earlier conclusion, it is pretty anemic.

Mr. RUFF. I grant you that, Senator, and I think there is considerably more success on that side, both civil and criminal.

Mr. NICHOLSON. We have had, Senator, over the period of our existence as the Office of Public Integrity, approximately 300 convictions for medicare fraud. That is based on the referral of around 800 cases that have been done by the U.S. attorneys. We have had overpayments established in the neighborhood of $31 million over the last several years since we have been actively involved in areas of fraud and program integrity. Of that amount, we recovered about $20 million, so there is still about $10 million outstanding.

Senator CHURCH. I wanted to be sure we have the accurate figures in the record. I thought that the ones I quoted seemed very trivial.

Have you any information as to what this enforcement effect has cost over this period of time as compared to the amount collected?

Mr. NICHOLSON. I could try to provide that information to the committee if you like, Senator.

COST-BENEFITS DATA REQUESTED

Senator CHURCH. I wish you would, and I wish you would include the whole cost involved so that we get some idea of what it is costing us to try and clean up and police this program, compared to the results. It may very well prove to be that we will have to take a different approach in the criminal law enforcement, which is totally inadequate even with State participation. That may be what will happen: I don't know. We may have to cut this whole system and set it up a different way and attempt to find whether there are some structural changes that can be made that will eliminate the incentive to cheat.

Your own estimates of the amount of fraud that exists within the program I have no reason to question, and they are staggering. The attempt to get at these cases and to eliminate this problem is frightening, apparently, because of the size of the profit. Inform us of the public money that is being wasted, that is being skimmed off this whole medical effort by crooked people. I wish you would furnish us with the cost figures and do so in a way that will enable us to identify just what those figures represent so that we can check those figures against the congressional appropriations and try to make some sense out of them.

Mr. NICHOLSON. Yes, sir.

[The following letter was received by the committee:]

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
HEALTH CARE FINANCING ADMINISTRATION,
Baltimore, Md., August 17, 1978.

Hon. FRANK CHURCH,
Senate Special Committee on Aging,
Washington, D.C.

DEAR SENATOR CHURCH: You may recall during the July 25, 1978, hearings on the DHEW progress in implementing the section 17 medicaid fraud control unit provision, the cost benefit of the Office of Program Integrity's (OPI) fraud and abuse control programs was questioned. The table below demonstrates the cost benefits derived.

	Cumulative Federal dollars identified for recovery through March	Cumulative Federal costs through March 1978—Central office and regional offices
Medicare	[1] $31,770,000	[2] $35,000,000
Medicaid	[3] 9,000,000	[4] 5,700,000
Total	40,770,000	40,700,000

[1] For period January 1970 to March 1978.
[2] Approximate administrative costs for the medicare program integrity effort for period January 1970 to March 1978.
[3] Approximate figure for period January 1976 to March 1978; information reported from the States incomplete. The new fraud and abuse reporting system developed by OPI will correct this situation.
[4] Approximate administrative costs for Medicaid Fraud and Abuse Control Division (Social and Rehabilitation Services) for period January 1976 through March 1978.

It should be noted that prevention and deterrence of fraud and abuse is a primary goal of the HCFA OPI programs. The above table does not reflect any valuation of that deterrence factor.

If you require additional information, please call me.

Sincerely yours,

DON NICHOLSON,
Director, Office of Program Integrity.

"WHO OWNS WHAT"

Senator CHURCH. As I mentioned earlier, there appears to be an escalation and a growing sophistication of the kinds of fraud being practiced. It is no longer a matter of owners buying boats or vacation homes with medicare or medicaid money; we now have instances of multiple ownerships, related businesses, and the contracting for services with a variety of businesses in ways that open the door to complex and hidden manipulations. In fact, one of our committee staff members who specializes in reimbursement in ownership issues feels that it is increasingly difficult to know who owns what, and the first annual report of the Office of Program Integrity to the Inspector General of HEW seems to acknowledge this point when it says, and I quote from the report:

> The new breed of financial manipulators who have invaded the health care industry, particularly the chain organizations, have devised new methods for maximizing program funds which are exceedingly complex, difficult and, in many cases, their action is illegal.

Now I know that you are in the process of drafting regulations to comply with section 3 of the law to require medicare and medicaid providers to supply full and complete information as to the identity of each person with an ownership or control interest in the entity or any subcontractor in which the provider directly or indirectly has a 5-percent or more ownership interest. We have been looking at these draft regulations and some questions have arisen on the basis of our review having to do with this requirement for more complete information with respect to ownership.

I am advised that on the basis of this staff review, the proposed regulations apparently provide no means for validating the information to be supplied by the owners of the contractor providers. Does this mean that the submitted material is to be taken at face value and in no way checked out?

Mr. BEAL. The draft regulations do not specifically provide for validation to the best of my recollection, Senator. However, I am

sure that they will be the basis for monitoring, for checking out, if there is any indication of fraud in the operation.

Mr. RUFF. I think it is fair to say, Senator, that that part of their compliance will be audited by the Office of the Inspector General as we go into the health care providers to check on the accuracy and the validity of their disclosure information. I think it would be unusual to have that kind of provision in a regulation. I don't really believe that the absence of a specific validation function in the regulation really bears directly on the issue. It is something that we are very concerned with because we intend, in the Office of the Inspector General, working with the Office of Program Integrity and HCFA, to make use of that information for criminal investigative as well as auditing purposes, and obviously it is crucial to us as well as to other States and others. We would see both, I suppose, the Office of Program Integrity as well as our auditors spot checking this information as appropriate, Mr. Chairman, to determine whether or not the information was provided accurately.

Senator CHURCH. Well, in looking at these regulations, we were left to wonder whether they were drafted in such a way as to enable you to identify interrelationships and ownership networks that seemed to be the norm. An owner of a nursing home, for example, may own an interest in a pharmacy and possibly a piece of a laundry, a hospital, what have you, construction business, and instead of charging competitive prices at the nursing home, the auxiliary service charges as high a price as possible because of this interconnecting, interlocking ownership network.

Now unless a systematic means of discovering and identifying such patterns is established, hidden ownership may go undetected and the disadvantage for abuse will go unrecognized. Given the fact that we know that the methods for milking the system keep getting more ingenious and less evident, how do you propose to cope with this developing problem?

Mr. NICHOLSON. Senator Church, I think the regulations as they are drafted will give us an opportunity to be able to examine those kinds of interrelationships. The regulations require that if there is a 5-percent or more ownership interest in a particular facility, that information be furnished. That would include not only individual interests, but corporate interests of, let's say, a holding company over a particular group of facilities. I believe it will be able, on the basis of those requirements, to examine to a level of detail and to be able to detect where there is an interlocking arrangement that might suggest a potential for abuse in the program.

Senator CHURCH. Well, you are aware of the problem.

Mr. NICHOLSON. Yes, sir.

Senator CHURCH. And you try to deal with it in devising these regulations.

Mr. NICHOLSON. Yes, sir. Very shortly, as these regulations are proposed, we will be releasing instructions and information to medicare contractors, medicaid State agencies, and to the private community to make sure they understand what these disclosure requirements entail.

Mr. RUFF. I think on that score, Senator, the key is what we do with the information after we get it and we hope we will get it in the course of the next year so that we can, in fact, determine that an

owner of a facility in one State also has an interest in a facility in another State. That really is a matter of how the information is treated once it is gathered.

Criticism: Slow Implementation

Senator Church. We have a letter [1] addressed to me, as the chairman of the committee, from one State attorney general to get its operation approved for participation in its program, and the attorney general has reported to us, to summarize:

> I believe that the general posture in HEW in the substantive areas of how to tackle fraud and what is the appropriate role of a single State agency, vis-a-vis fraud control, is lacking in vision and lacking in aggressiveness. I get the impression that HEW is more concerned with setting up a structure for evaluating grants than in implementing the purposes of the law which, as I understand it, was to encourage aggressive and innovative approaches on the part of States to protect and vigorously prosecute medicaid fraud.

He also says in his letter:

> I can only conclude that HEW is implementing H.R. 3 with people whose sole knowledge of fraud stems from medicare experience and who are trying to force the single State agency and medicaid fraud control unit into a Federal medicare investigative and prosecutorial role. This amounts to the Federal agency substituting its own definition of fraud with a far more encompassing State definition.

Now what about these criticisms?

Mr. Beal. I think there are two, Senator. The latter one, in terms of any effort by us to force a particular pattern or definition of fraud or method for its investigative and detection, I don't think is correct. I think the law very wisely left to the States the responsibility for establishing these units and for operating them under their laws with the Federal involvement limited to the funding of them, the establishment of standards, and the maintenance of records of their performance, which I think we have an obligation to do for the Congress. So I do not think that is a valid criticism. The States are operating these programs and they will continue to do that.

On the other, in terms of aggressiveness, I think we have come a long ways in recent years and in recent months in the efforts by this Department in the whole area of fraud and abuse. I think that is particularly so in the area of establishing these units. We have worked with States and we have encouraged the development of these units. We have, as I say, applications in hand, or States certified, which would cover 72 percent of the medicaid expenditures. It is our objective to get those units into opertation to the extent that it is in the Federal power to do so, and we mean to keep at it.

Mr. Ruff. Senator, I think I just have to comment, without knowing what State that attorney general comes from, but I think he is just dead wrong. I think that first of all we have to begin with a congressional determination that the kind of structure evidenced by the provisions of section 17 is the optimal structure for the investigation of provider fraud—not beneficiary fraud, but provider fraud. This program is modeled directly on the office of the man who will testify later, Deputy Attorney General Hynes. The statute calls for what I think is an appropriate mixture of investigative and auditing functions;

[1] See appendix, item 2, page 37.

indeed we have forced that structure on the States because that is what Congress called for and that is what I believe to be the most effective prosecutive and investigative device. Some States have, in fact, been reluctant to put that kind of an effort together; others have welcomed it.

"No Claim of Perfection"

I think that, yes, there have been delays. We have made no claim of perfection here, but I think by and large we have attempted to work both formally and informally with States to try to meet their special concerns. We look to a State like Colorado, for example, where the attorney general may not have had statewide prosecutive authority and where there was a district attorney's office in Denver which had been active in the medicaid fraud field. I think that State represents a really shining example of their willingness to work with us.

Our flexibility and their willingness to work together helped create a system in which the attorney general and the district attorneys got together and said, "Let's work out a way of addressing this problem and not worry about our special jurisdictional concerns," and I think that is an example of the best of this system. We have had problems and we are working on them, but I think that that characterization of HEW's approach to this issue, as I said, is just dead wrong.

Senator Church. Can you give me an idea of what the average time has been for the certification process? We have one case here—I think it is Wisconsin—where the application has been pending since March 27. I am just wondering how long it takes, once a State formally applies to participate in this program, for it to be certified and for its agency to be set up.

Mr. Nicholson. It normally takes a couple months, Mr. Chairman.

Senator Church. A couple of months?

Mr. Nicholson. Normally it takes a couple months, but it would be around 2 months from the time the application is filed.

Mr. Ruff. I think it is worth pointing out though, Senator, that funding is retroactive to the date of application, so it is not a matter of losing that funding through the period between the filing of the application and actual certification.

Senator Church. How do you determine the amount or what formula has been adopted for determining the amount of the Federal Government's role for making available in a given State? I know it is 90 percent, but does that depend upon how large the local contribution is or does it depend on other factors?

Mr. Beal. The limit, Senator, is spelled out in the legislation, which is $125,000 per quarter or one-quarter of 1 percent of the State's previous quarter's medicaid expenditures, whichever is higher.

Senator Church. I see. Now have you found that that quarterly determination has been unsatisfactory?

Mr. Beal. In some respects it has, Senator, because the medicaid expenditures in the State can fluctuate rather significantly from quarter to quarter and it has not, I think, been the ideal basis on which to do budgeting and planning of expenditures. I think fixing the participation ceiling at, say, some percentage of the previous year's expenditures or something like that would give you a more level Federal participation in the program.

Senator Church. Do you have any other recommendations to make to this committee as to how the present law can be improved?

Mr. NICHOLSON. We do have the item that Mr. Beal mentioned. We are putting together a technical amendment to change it to an annual computation. Aside from that, there is nothing at this point to really come forward with. There have been some problems. One concern, for example, is whether or not the staffing problem that is currently envisioned as being necessary for a fraud unit to function is appropriate for some of the smaller States. We have interpreted the intent of Congress to suggest that we need to have at least full-time individuals as auditors, investigators, and attorneys in order for any unit to be certified, and this is creating a problem as far as some of the smaller States are concerned. That may be an appropriate thing to come forward with.

NEED FOR FLEXIBILITY

Senator CHURCH. Well, I would hope that we can administer the program, at least within permissible boundaries into the law, in such a way as to accommodate the smaller States, and that means showing such flexibility as you can. There are certain standards that are definite that you have to provide and certainly I would not criticize you for doing that; that is your obligation. If that proves to be the case, I wish you would furnish this committee with the recommendations as to what changes in the law would help to facilitate the program and give the flexibility that it needs to accommodate very differing needs of small States as compared to large States. So often in these Federal programs we don't have that flexibility.

I know that in connection with medicare, for example, and nursing homes and little country hospitals in my State we have a dreadful time of trying to get Federal administrators to understand that they are not dealing with Washington Central Hospital or Georgetown Hospital, but with small units that have very limited resources.

All right. I want to thank you for your time. I would hope that as you get additional experience you would feel free to volunteer to this committee whatever recommendations you may have for changes in the law and the views you have to make it more effective.

Mr. BEAL. We will be pleased to do that, Senator.

Mr. RUFF. Thank you, Senator.

Senator CHURCH. Our second panel this morning consists of Charles J. Hynes who is deputy attorney general of the State of New York and special prosecutor for nursing homes, and Stephen Press who is the chief medical officer of the State of Connecticut.

STATEMENT OF CHARLES J. HYNES, DEPUTY ATTORNEY GENERAL, STATE OF NEW YORK, AND SPECIAL PROSECUTOR FOR NURSING HOMES

Mr. HYNES. Good morning, Mr. Chairman.

Senator CHURCH. I am glad to welcome you back. It has been your perseverance and your effort that had so much to do with our coming to establishing a national enforcement program.

Mr. HYNES. Thank you.

Senator CHURCH. We are indebted to you for showing us the way.

Mr. HYNES. If I may, Mr. Chairman, I would like to summarize my statement and offer it for the record.

Mr. Chairman, I believe that Public Law 95–142, particularly section 17, provides a significant tool to the States to properly contain health care fraud. I further believe that the Department of Health, Education, and Welfare has a fundamental obligation to the taxpayers of this country to encourage States to apply for certification, I am distressed, as you are, at the slow pace of certification, particularly since New York State today has not been certified. I think it is going to lead to a 2-year project rather than the 3-year project which is the congressional intent. I earnestly hope that Congress will amend Public Law 95–142 to permit the 3-year period to begin from the date of certification. That makes more sense.

The New York Experience

Now if I may, I would like to briefly discuss some of the changes that have occurred in New York State in the last 3 years. When we began in 1975 we had a medicaid system that was literally riddled with fraud and abuse, a system regulated by an understaffed, underfinanced State health department which, incredible as it seems now, assigned but a dozen auditors to check the books and records of more than 2,700 facilities with medicaid expenditures of $2.5 billion. Today I am happy to report that between our office and the State department of health, there are more than 300 auditors in New York State.

Before 1975, not one single nursing home owner had been prosecuted anywhere in the State of New York, nor was there any serious attempt to recover fraudulent overpayments to providers. Quite simply, health care providers and other similar white collar criminals—the real profiteers in the system—were pushing us toward fiscal and moral bankruptcy in the nursing home industry.

Today 138 institutional providers, and vendors of services to those institutions, have been indicted by our office. Of the 90 cases completed, 7 have had their cases dismissed, 5 have been acquitted and 78 have been convicted. Jail sentences ranging from 6 months to 10 years have been handed down by an increasingly concerned judiciary. We have received, in cash or by assignment of assets, over $6 million in restitution from convicted providers. Moreover, we have discovered overstated expenditures of $64 million, and of this amount our auditors have turned over to the State department of health and to our own in-house civil recovery division audit reports identifying more than $43.5 million in overpayments.

Our civil recovery division, which was established only last September, has brought 23 lawsuits to date which total over $12 million in claims and has recovered three-quarters of $1 million. And finally, in cooperation with the New York State Tax Department, liens of over $4 million have been assessed against providers.

New York's fraud problem, as this committee and the House of Representatives' committee concluded, was not unique. I think that Public Law 95–142 offers the hope so desperately needed to contain health fraud in this country. Yet the elimination of fraud, however critical in the effort to control costs, must not be viewed as a panacea. It is, to be sure, medicaid's most apparent and controversial problem but, in terms of our entire health care system, it is not the only problem.

This Nation has been talking about national health care for many years. Based on present predictions, total annual health expenditures

will go up $85 billion by 1980, reaching a total of $244 billion. By then experts calculate the cost of hospital care will average well over $200 a day and at some major medical centers the rate will probably reach $500 a day. At this very moment it is estimated that 12 cents of every tax dollar goes to health care.

Fraud, Waste Endanger National Health Insurance

With such figures staring us in the face, universal health insurance plans for people of all ages will never be economically feasible and, thus, can never become a reality unless the economics of health care are carefully analyzed with an eye to evaluating and stopping the waste brought about by fraud and mismanagement.

Today, Mr. Chairman, no one knows how much good patient care really costs and I submit that the first priority of all of us concerned with this issue should be to provide that answer for each of our States.

With the passage of Public Law 95–142, we have the opportunity at last to gather essential information as to the cost, the quality, and the distribution of patient care in this country. It is for these reasons that I have proposed that such offices be made permanent.

Thank you.

[The prepared statement of Mr. Hynes follows:]

Prepared Statement of Charles J. Hynes

Senator Church, members of the committee, ladies and gentlemen, for nearly 4 years my office has struggled with the problems of medicaid fraud and mismanagement in New York State. While we have been reasonably successful in identifying fraud and abuse and in beginning the process of administrative reform, it is clear that lasting improvement will require a major overhaul of the ways we deliver and pay for health care in this country. Until we design and implement long-term reforms in our current medicaid system, the crisis in medicaid and in the rest of the health care system will continue to grow.

When we last met in late 1976, I testified that I would have liked nothing more than to tell you that the forces of evil in the health care industry in my State and elsewhere had been vanquished, and that order and justice had returned to the benefit of our elderly people. I also stated that I feared there still existed a climate in this country where the exploitation of old people was a respectable and risk-free profession and that our Nation was in danger of losing far more than Federal and State tax dollars—it was in danger of losing a cornerstone of the American way of life itself.

I now believe that the tide has begun to reverse itself through the efforts of your committee, Representatives Jim Scheuer of New York and John Moss of California, and others, in passing a bill Public Law 95–142, commonly referred to as H.R. 3. This bill, signed into law in October 1977, gives each State, perhaps for the first time since the advent of medicaid and medicare, an opportunity to properly contain health care fraud.

The basic purpose of section 17 of this law is to improve the capacity of State and Federal governments to detect, prosecute, punish, and discourage fraud and abuse by providers participating in the medicare and medicaid programs. Proposals merely to make existing single State agency fraud programs eligible for special Federal funding were rejected, and I believe correctly so, as only providing additional Federal dollars to the status quo.

Congress has wisely concluded, I believe, that without meaningful and independent State programs of criminal prosecution, medicaid fraud could not—and would not—be brought under control. New York State's experience has demonstrated clearly that programs and prosecutions would not mix. The agency responsible for dispersing medicaid and medicare dollars could not be expected to look for criminality in the system.

Further, the average local prosecutor, weighed down with street crimes, muggings, murders, and rapes, could not be expected to prosecute massive white-collar criminal conspiracies. They simply have enough on their hands without the additional burdens imposed by these highly complex and sophisticated schemes.

In its wisdom, Congress provided funding incentives for States to establish medicaid fraud units in their attorney general's offices with statewide investigative and prosecutorial powers over the entire medicaid system.

If they meet the Federal standards, these units will receive Federal reimbursement of 90 percent of their costs for a period of 3 years. Although it is 9 months to the day since this bill was signed into law, only a handful of states—Alabama, Louisiana, Michigan, and New Mexico—have applied and received H.E.W. approval for the Federal funds. A number of other States have submitted applications for the funds and are awaiting similar approval.

With respect to my own State's application, after the promulgation of the regulations and the clarifying of various jurisdictional concerns, New York submitted its application to the Department of Health, Education, and Welfare almost 3 months ago. Having been cited by Congress as the "model agency" for these units, we had hoped for a rapid and affirmative response. This response has not been forthcoming.

Many States that we have contacted are experiencing similar difficulties which can only be blamed on a kind of bureaucratic delay. For example, a "new" unit being set up in a Midwestern State received the following reply in response to its application: "Accompanying your budget by quarters, we will need to know in which quarter each staff member will be hired, the established caseload by quarter, including the delineation by type of case and level of investigation, and a time estimate for case processing by type of case and level of investigation."

What possible answer could be given to such a request by a unit that has yet to undertake the investigation of medicaid fraud within its State? I suggest to you, Mr. Chairman, that had New York been asked for this type of information at the outset of its investigations, the office of the special prosecutor would today be reporting a more moderate story.

Further, the quarterly restrictions and reporting imposed by Public Law 95-142 create a second type of problem. Because the medicaid budget of each State varies from quarter to quarter, there seems to be little, if any, redemption in requesting quarterly reports. The same objectives could as easily be accomplished by annual reports and would, indeed, assist the States in their planning function as well as reduce both Federal and State paperwork and staff time and, hence, dollars expended.

Given the difficulties in establishing or maintaining medicaid fraud control units, it appears that the investigations will actually be funded, then, for a period of 2 years, and not the three as was the original intent. This is not satisfactory in my opinion, Mr. Chairman, when one considers the kind of investigations to which I have been referring.

They are long, they are tedious, and they are difficult. In our office, such an operation is generally begun by sending a team of auditors into a facility or by bringing the books and records of a nursing home or other institutional provider into our office. Usually these particular facilities have been carefully targeted in advance for investigation. Some of the targeting factors we use are as follows:

(1) Operators previously known or believed to be engaged in fraudulent activities;

(2) Affiliation with consultants, vendors, contractors, etc., known or believed to be engaged in fraudulent activites;

(3) Improprieties identified by review of audits conducted by or for other government agencies, referrals from agencies, civic groups, informants, anonymous tips, ect.;

(4) Geographic considerations—certain investigative techniques are more successful in one area than others; certain schemes are more prevalent in certain areas;

(5) Type of facility (voluntary, public, proprietary);

(6) Size of facility;

(7) Medicare/medicaid percentage;

(8) Cost analysis;

(9) Multiple ownership (interlocking ownership in separate free standing hospitals, nursing homes, health-related facilities, etc.);

(10) Multiple facilities—hospitals, nursing homes, health-related facilities, etc.—combined in one facility.

Once the subjects of investigation have been selected, our auditors, using a variety of techniques developed, tested and refined from the inception of our office over 3 years ago, make preliminary judgments as to the validity of the expense claims submitted by the facility to the State. This initial audit work generates leads which are handed over to investigators who operate under the

direction of an experienced prosecuting attorney assigned to the case from the beginning.

All manner of books and records must be obtained by subpena, search warrant, or consent and carefully examined. And I refer not only to the books and records, but also to the myriad of public and quasipublic documents that can often yield substantial investigative leads, such as the following:

(1) Corporate papers;

(2) Title searches, mortgages, etc.;

(3) Professional licenses and applications to the State education department can prove pertinent background data;

(4) Records of credit card companies (D & B); and

(5) Bank records.

These crimes are "paper crimes," and there is rarely an eyewitness. The only "smoking gun" we are likely to find is a set of phony books and records. We must often rely on circumstantial evidence, but evidence that must be more than sufficient to prove criminal knowledge and to rebut the all-too-common defense that "My accountant did it," or "I had nothing to do with the daily financial operation of the home," or "I'm a doctor; I only care about patient care—not books and records." All of these defenses must be anticipated and negated from the outset.

Our investigations to date make it clear that medicaid fraud in New York State prior to 1975 existed on a massive scale. What kind of frauds have we found? We have found everything from the most obvious to the most highly sophisticated criminal scheme. Among the less sophisticated, we have uncovered:

(1) The outright theft of funds by an owner or employee;

(2) The intermingling of patient funds with the proprietor's accounts;

(3) Double billing for items included in the medicaid rate;

(4) Requiring donations from patients and families as condition of admission to the home. In one of the more heinous cases yet uncovered, a Buffalo nursing home operator named Trippi was extorting under-the-table cash payments from family members on the threat of lodging their relatives in the antiquated and ill-kept wings of his facility. The owner, Frank Trippi, was convicted and was himself lodged in the State correctional facility at Attica for nearly 2 years.

(5) The retention of interest on patient accounts; and

(6) The retention of deceased patients' funds. Only slightly more sophisticated are the following schemes:

(1) Billing the State for patients who have died or moved; and

(2) "No-show" or "phantom" employees who are usually relatives of the operator, and who are often carefully disguised as "consultants."

More significantly, we have found vendor frauds that are equally pervasive and even more difficult to detect. My previous testimony before this committee details the types of schemes which, generally, result in cash kickbacks ranging from 5 percent to 33⅓ percent of a facility's gross monthly billing with a particular vendor. In addition to these vendor frauds, which to date have yielded some 50 indictments, we have also seen a dozen more subtle schemes, including phony construction costs, hundreds of thousands of dollars in falsely inflated accruals, and concealed ownership of related companies.

To develop these cases, I have selected and trained a staff of capable lawyers who are, for the most part, former prosecutors. This group works closely with our auditors and our special investigators, who are generally former police detectives, ex-FBI agents, and the like. We conduct frequent in-house seminars. We have invited prominent members of the legal profession, in and out of law enforcement, who have lectured to the staff and kept them current on the latest developments in the law, strategy, and techniques. All this in the pursuit of a standard of excellence which is necessary to cross swords with the best lawyers that white-collar criminals can buy.

From the beginning, our office has proceeded from the principle that there is no pride in authorship—that cooperation among agencies in and outside of New York must be the cornerstone of any hoped-for success.

Our office and the State health department—the State agency responsible for monitoring and setting nursing home rates and standards—have entered into a memorandum of agreement designed to insure that our work dovetails with and complements the programmatic and monitoring work of the department of health. We provide the State health department with technical assistance and up-to-date training in the art of fraud auditing.

We have provided information and expertise beyond New York State, as well. We have encouraged and will continue to encourage law enforcement agencies throughout the country to avail themselves of our experience and intelligence

information—and they have done so on a regular basis. Certainly, no arm of government has a right to think that it can achieve success in an arena of these dimensions without such regular candid exchanges.

In addition to these efforts, we also initiate and support legislative recommendations which will help to eliminate the problems which infect the medicaid program. Similarly, we have an active community liaison program which reaches out to citizen groups in the communities to aid us in enacting remedial changes in the law and in gathering critical intelligence information.

Now let me tell you briefly about some of the changes that have occurred in New York in the last 3 years.

When we began in 1975, we met a medicaid system that was literally riddled with fraud and abuse. A system regulated by an understaffed, underfinanced State health department which, incredible as it now seems, assigned but a dozen (between 11 and 26) auditors to check the books and records of more than 2,700 facilities with medicaid expenditures of $2 billion.

Today I am happy to report that between our office and the State health department there are more than 300 auditors in New York State—a formidable army to contain health fraud.

Before 1975, not a single nursing home owner had been prosecuted anywhere in the State of New York. Nor was there any serious attempt to recover fraudulent overpayments to providers. Quite simply, health care providers and other similar white-collar criminals—the real profiteers in the system—were pushing us toward fiscal and moral bankruptcy in the nursing home industry.

And where are we today? Today 138 institutional providers, and vendors of services to those institutions, have been indicted by our office. Of the 90 cases completed, 7 have had their cases dismissed, 5 have been acquitted, and 78 have been convicted. Jail sentences ranging from 6 months to 10 years have been handed down by an increasingly concerned judiciary, to whom our attorneys have advocated the need for strong deterrent sentencing. We have received in cash or by assignment of assets over $6 million in restitution from convicted providers.

We have discovered overstated expenditures of $64 million and of this amount our auditors have turned over to the State department of health, and to our own in-house civil recovery division, audit reports identifying more than $43.5 million in overpayments.

Our civil recovery division, which we established only last September, has brought 23 lawsuits to date which total over $12 million in claims and has recovered more than three-fourths of a million dollars.

Finally, in cooperation with the New York State Tax Department, liens of over $4 million have been assessed against providers. Twelve defendants have been indicted specifically on tax charges. To date, six have been convicted. There have been no dismissals or acquittals. I might add, parenthetically, that before we began our investigations, there had hardly been a single prosecution anywhere in New York State for violation of the State, as opposed to Federal, tax laws. This extremely valuable weapon against the white-collar criminal had become a dusty relic on the statute books.

Today in New York—at least in the nursing home industry—I believe that we have made fraud a very precarious activity. We have done this, not with mirrors or any other magic, it has been accomplished with resources—the same resources that will now be available to all States under Public Law 95–142.

The medicaid system in this country has been a hostage to fraud and so, too, has been our entire health care system. Yet the elimination of fraud, however critical in the effort to control costs, must not be viewed as a panacea. It is, to be sure, medicaid's most apparent and controversial problem. But in terms of our entire health care system, it is not the only problem.

This Nation has been talking about national health care for many years. Based upon present predictions, total annual health expenditures will go up $85 billion by 1980, reaching a total of $244 billion. By then, experts calculate, the cost of hospital care will average well over $200 a day, and at some major medical centers the rate will probably reach $500. Physicians, already higher paid than members of any other profession, will probably be earning a median income of over $80,000 a year. At this very moment, it is estimated that 12 cents of every tax dollar goes to health care.

With such figures staring us in the face, universal health insurance plans for people of all ages will never be economically feasible and, thus, can never become a reality, unless the economics of health care are carefully analyzed with an eye to evaluating and stopping the waste brought about by fraud and mismanagement.

For the past 3 years, our office has immersed itself in the economics of medicaid and, in turn, the health care system. We have learned that State and Federal

laws which require reimbursement based upon so-called reasonable costs of doing business and prudent buyer concepts are meaningless in practice. The fact is that reimbursement is based upon costs submitted by individual providers who are given little, if any, incentive to economize. Cost ceilings, where they exist, are generally based upon operator versus operator comparisons, often fraudulent operator versus fraudulent operator comparisons, and nothing more. As a result, today no one knows how much good patient care really costs. I submit that the first priority of all of us concerned with this issue should be to provide that answer for each of our States.

With the passage of H.R. 3, we have the opportunity, at last, to gather essential information as to the cost, the quality, and the distribution of patient care in this country. And, it is for these reasons that I have proposed that such offices be made permanent. Among reasonable men and women, the deterrent nature of the operation, as well as its cost-effectiveness, could lead to no less a conclusion.

In closing, Mr. Chairman, I would like to quote something to you: "Beyond the specific instances of fraud and deceit as they may be revealed and must be dealt with, we are bending every effort to produce constructive results that will prevent recurrence of cheating and misrepresentation: Results that will strengthen the administration of regulatory and medical care programs of city departments, and above all, results that will upgrade proprietary nursing homes in respect to operational effectiveness and quality of patient care—all in the public interest."

These words were spoken some 18 years ago by Louis J. Kaplan, then New York City's investigation commissioner and author of the celebrated "Kaplan Report." Those same fraudulent providers found by Kaplan 18 years ago, who were not prosecuted and were allowed to repay their ill-gotten gains at 10 and 20 cents on the dollar, have in the last 3 years been prosecuted and convicted by my office.

New York is committed to seeing to it that our elderly and our poor receive that to which they are entitled and that the scandal of the 1960's, and the scandal of the 1970's, does not become the scandal of the 1980's. And New York stands ready to assist anyone who shares this same concern.

I thank you and will welcome any questions you might have.

Senator CHURCH. Thank you very much for your statement.

STATEMENT OF STEPHEN H. PRESS, HARTFORD, CONN., CHAIRMAN, PROGRAM INTEGRITY SUBCOMMITTEE, NATIONAL COUNCIL OF STATE PUBLIC WELFARE ADMINISTRATORS

Mr. PRESS. Mr. Chairman, as you indicated, I am the head of the Connecticut program. I am also the chairman of the Program Integrity Subcommittee of the National Council of State Public Welfare Administrators. I hold one more distinction which is probably quite unique and has something to do with the statement that I would like to make here today. That is contained in the fact that my medicaid program has within it a successful program integrity unit. Funding for the unit was recently terminated by the Connecticut State Legislature in the current session.

While this action may not have been meaningfully carried out by the legislature and has already been partially revised, it points out one of the problems of operating the medicaid program on the State level. That is that the Federal Government may set its mandates, but Governors and State legislatures will determine how those mandates will be carried out.

In the case of Public Law 95–142, the fact that Congress voted 90 percent financial participation for State fraud units was very effective in putting weight in our State and other States behind prosecutorial functions. However, it ignores the basic function of the single State agency in investigating basic fraud, and particularly in the area of abuse.

In our own State I would say that 90 percent of the collectible cases are in the area of abuse and I would say that this figure is effective throughout the country. The program integrity units or surveillaince and utilization review units are funded with Federal participation from 50 to 75 percent, depending upon whether the State involved has a certified medicaid management information system or not.

Now my State legislature and several others took 95–142 to mean that they no longer had to continue surveillance and utilization review efforts or program integrity units because the State fraud units would do the job. Well, the State fraud units are supposed to do the job of investigating fraud and, as I indicated before, a major part of the collectible dollars in States like my own are in the abuse area.

Senator CHURCH. Could you distinguish between fraud and abuse for purposes of the record?

Mr. PRESS. Well, really what it comes down to is, in many cases, abuse is where intent cannot be proved, where fraud cannot be proven, and in a great extent of the cases this is the fact. Where there is no intent to defraud, with built-in errors of any type, a fraud case cannot be made. In fact, the original program integrity action by HEW—Project 500—is a situation where the bulk of the cases are involving civil recovery and nonindictment because they are not provable fraud cases.

In fact, in my testimony I wanted to mention the fact that Secretary Califano issued a statement a year ago indicating that he has stopped the program integrity computer program because it already had spit out the names of some 47,000 potentially fraudulent providers. The fact is I think that there has been possibly 10 indictments out of the computer list and I think all the situation did is face the State people against angry providers who seemed to be feeling the statement as one which blanket indicted large numbers of physicians. I would have to say that indictments and convictions are much more effective tools for fighting fraud than public relations.

RECOMMENDATIONS

In terms of this situation I would recommend that the State fraud units be continued beyond its 3 years in general because I feel that they are and can be an effective deterrent against fraud. I do not personally believe that they will pay for themselves, particularly in States where a 50–50 match is involved, and I have spoken to attorney generals in other States than New York who agree with that position, such as New Jersey. I have gotten a feeling that they themselves feel that abuse is the more effective area for collection of dollars than fraud.

Beyond that, I heard mentioned earlier the fact that the reimbursement under 95–142 may be retroactive. This is not necessarily helpful because we have a variety of States, unlike New York, which do not have fraud units and will not be given the State go-ahead to start up until they get Federal approval of their programs because their proposals contain staffing requirements. Therefore, they are going to be waiting for approval before they start.

Connecticut did not start its hiring process until it got approval of its grant. Even though it is one of the nine States with certification, it has not yet put its people on board and has not gotten underway, and

I would say that effectively would even shorten the program from what Mr. Hynes just stated earlier. So if we are going to have 26 more States certified at the end of this year, well, then maybe it will be a 1½-year program rather than a 3-year program.

In addition, I would like to recommend that the SUR function within the single State agency be funded at least at the 75-percent level as opposed to its 50-percent level. In terms of this unit, this unit in my State and in most other States is a major source of referral for cases to the State fraud agency. Now if you don't have that unit operating, it essentially would cut down the effectiveness of the State fraud unit and, as I will indicate, they provide the principal preliminary investigative source for the State fraud unit. In my own State this unit operates at a cost-benefit ratio of about $7 to every $1 spent. The unit has only been functioning since last October. It has collected about $100,000 a month and operates at a cost of about $150,000 a year.

Senator CHURCH. Can you explain just how that program operates? Is that a computer operation?

Mr. PRESS. Yes. I was going to get into that.

Senator CHURCH. Good.

Mr. PRESS. We operate on everything from a variety of sources, everything from tips to medicare referring the cases to us. We also have in being right now a system called Amoeba, which essentially is a table-driven system which ranks deviated providers by the amount of deviation. In other words, if they perform more than one first office visit, if they perform too many lab tests, give too many prescriptions, whatever particular example we use in the system, they will be ranked by the system in the order that they perform these deviations.

This essentially is nothing more than additional tips for investigations. It provides us a place to start investigations along with a number of dollars that the provider has received. This is equivalent to, but probably not as effective as, the MMIS systems. We expect this to be in operation next year in Connecticut. I would mention in terms of the MMIS system that there are some States that have certified systems which do not necessarily get the maximum benefit from them.

One of the problems in one big Western State is that they have a system which reports all the deviations by providers from that State in a single month but it does not rank them. In other words, it has 10,000 pages of reports indicating what doctors have deviated, but it does not say which are the worst and which are the best. Essentially you have to go through the 10,000 pages to determine who the worst offenders are. The fraud and abuse unit in that State is not using the system except as backup. In other States they have got the same extensive reporting system, but no staff.

Without staff at the surveillance and utilization review level, the reports pile up in the corners of rooms and again the system is not effective. I point this out because it is important within the State agencies themselves that they have staffing to do the job of preliminary investigation. Out of those preliminary investigations frequently come the fraud referrals to the State fraud units. Now without the 90 percent funding incentive, the States have not worked as well, and I say they may not do their job in the future. Again I would urge that some thought be given to raising the funding level of these units which operate within the single State agency.

Senator CHURCH. In these civil recoveries that the surveillance program assists in the endorsement, how is the recovery treated as between the States and the Federal Government?

Mr. PRESS. It is essentially the same as under the State fraud unit. The recovery is divided by the percentage to which the State participates in the program, so it is essentially 50–50 recovery. I should add that in most cases the recovery is done fairly simple. In some cases we have to exercise State regulation which allows us to withhold the provider's payments and potentially remove him from the program on civil grounds for violating the regulations of the State agency so that we do have those powers.

I know that HEW has drafted regulations which would force those States to carry out that kind of methodology, but it is in effect in a good number of the States of the country, this civil process which allows the suspending of payments and potentially the suspending of the provider itself for the abuse rather than just for fraud.

"TIGHTROPE" BETWEEN SERVICE, DETECTION

I wanted to point out another factor that we suffer from in the medicaid program. The goal of the medicaid program is to provide services to recipients, not just to catch fraudulent providers, and we sort of walk a tightrope between providing the services and trying to eliminate from the program those providers who are treated poorly. Developing claims processing systems to capture fraudulent providers and abusers may be a good thing, but if paperwork drives frustrated providers from the program, its goals will not be met, especially if bill payment is slow as well. We want to keep those providers in the program and we want to make sure that we throw out the bad apples, but we want to retain the rest of the providers in the program as well as we can.

That is why I mentioned that statement before about the 47,000 providers in terms of project integrity who are potential fraud cases. I think we have to be a little bit more careful about what we say. Many of the statements made in terms of fraud, including inspector general reports, were large guesstimates and not necessarily accurate at all. I know that on the floors of Congress there is a great feeling of horror when those figures are announced, but they are just guesstimates.

I know there is a great deal of fraud and I feel there is a great deal of fraud, but I don't feel it is necessarily within the kinds of figures that have been spoken about nationally. I think that what it should be called, even the collectibles that have been mentioned to you this morning, is frequently really what I call abuse, because these are cases which they started investigating on the fraud basis and are kicked back to other State agencies for collection because there are no indictments possible in a particular case.

I guess I have gone through a good deal of what I was going to say. One other area that you did mention was the area of exposure of ownership interests in nursing homes and I did want to indicate that I felt that this was not an area where computer systems would be particularly effective. On the other hand, I think this is an area where it is the major answer and that essentially State and Federal investiga-

tors, as mentioned before, will still need to research facility and land records to come up with the vital information.

Again I would like to stress the importance of keeping providers in the program in terms of providing recipients the proper care. With that I would be happy to answer any other questions you might have.

Thank you.

[The prepared statement of Mr. Press follows:]

PREPARED STATEMENT OF STEPHEN H. PRESS

I am an attorney, a medicaid director of a program with a successful program integrity unit, and the chairman of the Program Integrity Subcommittee for the National Council of State Public Welfare Administrators. I hold one more distinction which is probably quite unique. That is contained in the fact that the Connecticut State Legislature recently voted to eliminate funds from the program integrity or fraud and abuse unit which I oversee. While this action may not have been meaningfully carried out by the majority of our legislature and has already been partially revised, it points out just one of the problems of operating a medicaid program on the State level.

First of all the direction of State medicaid programs is dependent upon Governors and State legislatures. Regardless of the direction of the Federal Government and its mandates, if the State government is of a different mind, that mandate will not be carried out. This is certainly the case in the area of fraud and abuse where many States have ignored the function at lower levels of Federal financial participation—FFP. The fact that Congress voted 90 percent FFP for independent State medicaid fraud units essentially strengthened the case for prosecutorial units, but did little to assist the basic investigatorial units within, State agencies.

The new State fraud units will be a major deterrent against future fraud, and I see this as their major benefit. While collections through them may be considerable, I don't believe they will be able to be self-supporting operations. The reason is the difficult task they face, plus the fact that the bulk of potentially recoverable dollars in the medicaid program are in the abuse area which is still the province of the single State agencies. The abuse function is generally handled by surveillance and utilization review units who received Federal financial participation of from 50 to 75 percent. This was perhaps overlooked by the drafters of Public Law 95–142 who spoke only of 90 percent FFP for the fraud units. This encouraged States to develop the new units but did nothing to encourage the strengthening of the fight against abuse, which is where the dollars are. In addition, State legislators, like my own, viewed the units as a reason for eliminating their ongoing surveillance and utilization review operations. If that would have occurred in Connecticut, the State fraud unit would have been seriously hindered because the S/UR unit will be its major referral source and does much of the basic investigation prior to a determination that fraud may exist.

HEW has since recognized the importance of the SUR units and has asked States to continue to maintain this function. I would recommend, however, that the S/UR function be funded at a minimum of 75 percent FFP if not at the same level as the State fund units. In addition, I would recommend that 90 percent FFP continue to be provided to State for their fraud units after the 3-year period, provided under 95–142, expires. The benefit of these functions is just as important to the Federal Government as the States and in these days of restrictive State budgets, the States must be encouraged to maintain their vigilance against fraud and abuse.

It should be noted that in Connecticut an excellent relationship exists between the single State agency and the new State fraud unit. We expect to work very closely together. Perhaps this is because the relationship is between attorneys. I do know that in some States the relationship is less satisfactory. That possibility may be caused by the fact that the fraud unit is taking over a function previously handled by the single State agency. In Connecticut, referrals for prosecution were always made to an outside agency.

Beyond the problem of interacting with State government is the problem of maintaining sufficient provider participation to insure that medicaid recipients are receiving the services they require. Developing claims processing systems to capture fraudulent providers and abusers may be a good thing, but if the paperwork drives frustrated providers from the program, program goals will not be met. The fact that boycotts of services have arisen in several States gives evidence of this kind of problem. But even more important for the States are the thousands

of providers who silently leave the program and refuse to service recipients because of too much paperwork or they see as harassment. We must walk a tightrope with these providers while trying to eliminate the bad apples and retaining the good ones. Thus, most medicaid directors shuddered when Secretary Califano indicated that HEW had discovered thousands of fraudulent physicians as part of Project 500. First, because we did not believe there were that many provable cases and, second, because of the problems it would cause the States in trying to maintain the level of provider participation in our medicaid program. Fighting fraud via public relations is not as effective as indictments and convictions.

The relationship between provider groups and the State medicaid agency frequently mandates the approach the State takes toward the question of fraud and abuse. In Utah a dental organization reviews and authorizes all dental services, a medical foundation carries out review of physician services, and there is a strong feeling at the State level that strong provider participation in the program, as well as a more-than-adequate fee schedule, mitigates against fraud and abuse by the professional provider. In Connecticut we do refer questionable cases to our State medical society's medical liaison committee, but make fraud referrals based on our medical staff's recommendations. There are a variety of other approaches that States have utilized to ferret out and deal with fraud and abuse. I would like to touch on some of them.

In my own State, several of these approaches are being utilized or are in the planning stage. As mentioned earlier, we do have a surveillance and utilization review or program integrity unit. This unit has been identifying fraud or abuse dollars at the rate of about $7 to every $1 spent on its operation. This unit of nine staff carries out basic investigations based on complaints from a variety of sources from a complaint hotline to medical consultants to medicare. They work with recipient and physician profiles which are provided by our data processing system.

When their investigations are completed, they may recommend the case be referred to the State prosecutor's office for a fraud investigation or sent to our agency's audit unit for collections. We collect almost all of these claims without further problem, but we can use State law and regulations to collect or withhold payment from providers, or to suspend them for violation of our regulations. We also continually use the findings of this unit to tighten and improve our medical policy.

We have recently had Amoeba installed by the Control Analysis Corp. under a Federal grant. This is a table-driven surveillance and utilization review system which provides us with a ranked listing of providers who deviate from the norm in the way they provide services. Such a listing will tell us what doctors are providing more than the average number of lab tests per office visit, or initial office visits, etc. While these factors are not proof of fraud, just like the tips we may receive over our hotline, they pvovide us with a likely place to begin investigations, particularly where the derviating provider bills the State heavily.

Like many other States, we are developing a medicaid management information system. This sophisticated computer system is aimed at providing a quality preaudit on all claims submitted to the State. It also provides a postaudit on claims, similar to the Amoeba system mentioned above, through its surveillance and utilization review subsystem. Many States already have federally approved MMIS systems in operation but some do not use the surveillance and utilization review system effectively. In some cases it is because they are not sufficiently staffed to be able to review the reports turned out by the system. It should be obvious that the computer makes the job of locating deviating providers mush easier, but human beings must investigate to determine whether the deviation is improper or not. In the case of one State, highly staffed in the area of fraud and abuse, their MMIS surveillance and utilization review system provides little assistance. The State staff continues to use other sources of information to begin investigations. This is because their computer system reports all deviations but does not rank providers in the order in which they deviate from the norm. An investigator would have to read thousands of pages in reports to determine who the worse offender is.

Many of the States have contracted their MMIS systems or like systems out to private contractors who operate the system, pay claims, but refer questionable cases to State agencies for prosecution and investigation.

In addition to the kinds of approaches I have already mentioned, several States, like my own, have recently developed medicaid fraud units in their attorney general or States attorney's office. Some States, such as New York, New Jersey, and Massachusetts, had such units prior to Public Law 95–142 which offered major Federal funding for such units. These units have organized significant

resources to bear against fraudulent practices. Some States, such as New Jersey, have enacted legislation which has authorized the collection of treble damages, interest, and other penalities against abusing practitioners.

Public Law 95–142 called for the disclosure of provider ownership as a condition of medicare or medicaid provider certification. This is an important element of the fight against fraud and abuse in the nursing home area. It is something that several States required prior to 95–142. However, by itself it will not be a significant factor in dealing with the nursing home fraud. An effective audit system, both desk and field, coupled with effective regulation plays a much more important role in this area. Once again the Federal penalties may be a major deterrent in preventing hidden ownership in nursing homes. It is unlikely MMIS or equivalent systems will be of any help in uncovering this information. State and Federal investigators will still need to research facility and lend records to come up with the proper information.

Senator CHURCH. Thank you very much, Mr. Press.

CHAIN OWNERSHIP

Mr. Hynes, what kind of ownership disclosure of regulations are we going to have to deal with the chain operations in connection with fraud investigations? We are attempting, as you know, to determine ownership of nursing homes and other facilities. We are beginning now on this committee to look at the chain operations in the nursing home and we find that some of these chains are huge—many thousands of beds. The largest number is nearly 21,000 beds. Some of these are owned, some are leased, some are owned by others but managed by the chain, and finding out who owns that becomes exceedingly difficult. Have you any ideas based upon your own experience that might be helpful?

Mr. HYNES. I don't think that there is any particular evil attached to a chain. It is obvious what we are all concerned about is the non-arm's-length problems that deal with application for reimbursement. We have had a number of cases. I know one case in particular that comes to mind which may interest my friend from Connecticut—a New York operator who was supporting our Connecticut home on New York rates. I think the disclosure provisions in Public Law 95–142 will be an investigative tool. I hope we are certified so that we can get that information into the office.

I don't really know what you are getting at, Senator. I cannot be helpful except to state that we are always concerned in our investigation to insure that the owners of the facilities don't have ancillary services, that they are charging as arm's-length transactions.

AMENDMENT FOR 3-YEAR TEST PERIOD?

Senator CHURCH. I think you testified that because of the time delays in starting up these State units it would be advisable to change the law in the 3-year test period as of a date of certification. I think that is a very good suggestion and it will then give each State fully 3 years of testing and experience. I think that that 3 years is about the minimum time to get some notion of what will be accomplished.

Mr. HYNES. It really depends on the kind of staff that is on board and, in some instances, the type of the investigation. New York, of course, has a history of nursing home fraud dating back to 1960 and 1961 with the New York City commission investigation finding the wholesale fraudulent patterns but, unfortunately, no one had the resources in New York from 1961 to 1975 to do anything about it.

I think 3 years is a good time period. We thought that was the time frame when I first began coming to Washington to suggest these kinds of programs, but it is critical and certainly makes more sense. I believe it falls within the congressional intent that it runs from the date of certification.

Senator CHURCH: I am going to ask the staff to select from these hearings this morning certain statistics that have been made with regard to possible amendments to the law so that this committee can take those suggestions up with the Finance Committee that has the legislative power and see if we cannot work these amendments into the law. I think your recommendation is a very good one.

HOSPITAL FRAUD UNDER REVIEW

Mr. Hynes, you have an HEW grant for investigative fraud and abuse serving New York medicaid and medicare patients. It is my understanding that this investigation is oriented toward a termination of how much growing hospital costs are due to mismanagement and criminal fraud. What are you discovering in this particular area?

Mr. HYNES. I am afraid at this point, Senator, I cannot respond. We have active grand jury investigations in a number of institutions in New York State and it has been our constant policy not to comment while those investigations are on. I will be leaving my current assignment shortly, but I will be happy to pass on to my successor as soon as we have significant developments and assist you in any way I can.

Senator CHURCH. I wish you would do that because we wondered, having looked thoroughly into nursing home abuses, as to what extent these abuses may affect actual hospital operations.

Mr. HYNES. Senator, I share the concern that Mr. Press has that we have to be very careful in this area lest there be an inference that we have the same kinds of problems that we apparently had in nursing homes in New York State, but it was never contemplated by either HEW or the New York office that we would necessarily find fraud in hospitals. It was a concern of both of our agencies that in view of the rising health cost that there will be a survey for a 2-year period to determine whether it is fraud, mismanagement, or waste. I hope to have a report for HEW when the Congress convenes at the first of the year.

Senator CHURCH. Well, I think those categories are, of course, the ones we know about—fraud, mismanagement, and waste—but it would also be helpful to know if there is any noticeable difference between privately owned hospitals that are operated for a profit and nonprofit hospitals that are either publicly owned or are church connected.

Mr. HYNES. Mr. Chairman, we investigated a proprietary hospital, and the indictment alleged kickbacks of a substantial amount of money approaching $2 million, but I have not drawn any inference that is necessarily a pattern in New York. That is the point of the project in HEW, in my office, to determine.

Senator CHURCH. Well, we will look forward to your report and to your successor. Are you moving out of government entirely, or are you——

Mr. HYNES. No, I have been nominated for another position.

Senator CHURCH. You have been nominated for another position.

Mr. HYNES. Yes.

Senator CHURCH. Well, we wish you well.

Mr. HYNES. Thank you.

Senator CHURCH. I appreciate very much your coming down and testifying. Both of your contributions have been very helpful.

Mr. HYNES. It is always a pleasure, Senator. I think the record should disclose that you and your committee have made a tremendous contribution together with, of course, the House of Representatives, and the taxpayers are in your debt.

Senator CHURCH. Thank you very much. I hope that our efforts prove to be successful. We will have to wait and see.

Thank you.

Actually we finished on time this morning which is unprecedented.

The hearing is adjourned.

[Whereupon, at 11:55 a.m., the hearing adjourned.]

APPENDIX

Correspondence Relating to Hearing

Item 1. Letter and Enclosure From Senator Frank Church, Chairman, Senate Special Committee on Aging, To Frank S. Beal, Deputy Administrator For Operations, Health Care Financing Administration, Department of Health, Education, and Welfare, Dated August 9, 1978

Dear Mr. Beal: Thank you very much for your testimony at our recent hearing on medicaid fraud and the role of the State fraud control units. I am glad that you could participate and I look forward to a close working relationship with personnel from the Health Care Financing Administration as the committee pursues its agenda on medicaid fraud and related issues.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by August 25 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

Frank Church.

Enclosure.

Questions For Frank S. Beal, Deputy Administrator For Operations, Health Care Financing Administration

At the present rate of certification it would appear that, for the bulk of the States, this will be a 2-year program. Does this give sufficient time for evaluation of the performance of the program and for recommendations to be made to the Congress regarding the proper level of Federal support after 1980?

Given this rate of certification, would any significant problems be posed if Public Law 95–142 were amended to permit a 3-year period of Federal funding from the date of certification rather than the date of enactment?

What recommendations can you make with regard to congressional action on this matter?

I have suggested that we provide by law for State retention of either all or some additional part of the recoveries made by these units as a means of assuring adequate levels of funding after the expiration of the Federal share. It would be helpful if you would indicate appropriate initiatives in this area.

Item 2. Letter and Enclosure from Senator Frank Church to Frank S. Beal, Deputy Administrator for Operations, HCFA, HEW, Dated August 10, 1978

Dear Mr. Beal: During the course of your testimony at the July 25 hearing of this committee on medicaid fraud, I asked for your comments on issues concerning the State fraud control unit certification process raised in a letter from Wisconsin Attorney General Bronson La Follette.

Because you did not have an opportunity to review the full text of the letter during the hearing, I have enclosed a copy for your reference. This letter will be made a part of the hearing record.

If you wish to have your comments on the issues raised by Attorney General La Follette made a part of the hearing record, I would be pleased to have them by the August 25 record closing date.

With best wishes,

Sincerely,

Frank Church.

Enclosure.

STATE OF WISCONSIN,
DEPARTMENT OF JUSTICE,
Madison, Wis., July 24, 1978.

Hon. FRANK CHURCH,
Chairman, Senate Special Committee on Aging,
Washington, D.C.

DEAR SENATOR CHURCH: I understand that you are chairing a hearing that will soon be held by the Senate Special Committee on Aging for the purposes of evaluating HEW's implementation of H.R. 3.

Wisconsin is an applicant for H.R. 3 medicaid funds and expects to receive HEW's approval for funding in the very near future. As you can imagine, the process of securing such funds was not fraught without the trials and tribulations associated with a large bureaucracy, and while I am tempted to fully elaborate on those problems, I believe it may be more productive to comment on the substantive areas of H.R. 3.

We have received several indications of changes in policy on the part of HEW that are of real concern. First, HEW seems to have substantially confused the appropriate role of the single State agency, vis-a-vis the medicaid fraud control unit. It was my clear understanding that section 17 of H.R. 3 contemplated the fraud control unit would have a substantial role to play in the detection and investigation as well as prosecution of suspected fraud. Specifically section 17(q)(3)'s provision for the "conducting [of] a statewide program for the investigation and prosecution of violation of applicable State laws * * *" seemed to authorize, if not mandate, substantial investigative capabilities within the unit. We contemplated that the unit could solicit complaints, and once received could exercise discretion on whether to follow through with more detailed investigations. We contemplated further that if these investigations revealed the potential for prosecution of criminal fraud, or an action for damages of civil fraud theories, the prosecution unit's attorneys would pursue the matter to fruition.

We further contemplated that the unit's attorneys would in many cases be involved at the initial stages in the investigation, in order to direct the investigators to appropriate leads, and advise as to legal ramifications of the investigation at various stages. In any event, we anticipated that the "statewide * * * investigation" capability would permit our unit to do a substantial amount of detection of fraud on the basis of complaints received from district attorneys, social service agencies, etc., with referrals being made to the single State agency for administrative action only after the potential for suspented fraud had been excluded. We further contemplated that the definition of fraud, both civil and criminal, would be as provided by State law.

Such an integration of investigation and prosecution in the fraud control unit seemed sensible. While our single State agency functions well, it lacks the necessary resources, having a limited staff, no statutory authority to prosecute and substantial program administration responsibilities that have nothing to do with fraud. In addition, the single State agency's investigative unit does not have the independence from medicaid administration that is required by H.R. 3. Furthermore, since our relationships with the single State agency have been excellent, we thought an appropriate working relationship could evolve without any difficulties.

What Office of Program Integrity seems to say, however, is something vastly different. The Office of Program Integrity officials have, on many occasions and in many different contexts, sought assurances that the principal investigative role would remain within the single State agency. While not excluding the possibility that our "fraud control unit could follow through with independent investigations of complaints received directly, the suggestion has been made very strongly and vociferously by Region V representatives that Congress intended the single State agency to have the principal statewide investigative powers, whereas by contrast the fraud control unit was supposed to operate in a secondary fashion upon referrals from the single State agency. We have received strong suggestions, and have been requested to provide assurances to the effect, that complaints of suspected fraud received by the fraud control unit would be forwarded for further evaluation to the single State agency, a concept which seems totally foreign to H.R. 3 and also unworkable in view of the limited resources and statutory powers held by the single State agency.

I assure you that if the fraud control unit must take second chair to the single state agency (or to any other agency having multiple responsibilities and obligations) for the initial detection and workup of initial complaints, H.R. 3 is doomed to failure. True, obvious frauds by small providers may be detected by such a reduced effort. But the more sophisticated patterns of frauds, especially those in

the institutional areas such as nursing homes and large provider groups, requiring evaluation of massive amounts of documents, and extensive time in John Does or before Grand Juries, will be totally beyond the reach of such single State agencies or any groups. When you deprive the fraud control units of that initial investigative capability, you deprive the States of the ability to work an investigation up to the level of suspected fraud.

In discussing with our staff, the HEW representatives have indicated their concern that permitting the fraud control unit to follow up on investigations directly may enocurage States to strip investigation resources from the single State agency which receives 50 percent Federal funding. While this may be true, there are better ways to deal with such incentives than closing the door to aggressive fraud control investigations where, as in Wisconsin, the unit and the single State agency coordinate their efforts.

HEW personnel also convey the belief that a substantial portion of the complaints received will be with respect to something called "program abuse", which, they say, is not fraud, and should not be within the jurisdiction of the fraud control unit. The term "program abuse" is foreign to the Wisconsin law of fraud. As best as can determine "program abuse" has meaning primarily in the medicare program, where it is defined as an instance of overutilization of medical services, or of billings for more services than were actually provided, and where the Medicare investigators have concluded that they cannot prove the specific intent necessary to prosecute for criminal fraud. Almost every example that HEW has provided of HEW has provided of program abuse is something that would probably be prosecutable as fraud in Wisconsin, either criminally or civilly. Thus, while program abuse may have relevance in other States for defining the proper allocation of investigative resources between the single State agency and the fraud control unit, it has no such relevance in Wisconsin.

I can only conclude that HEW is implementing H.R. 3 with people whose sole knowledge of fraud stems from the medicare experience, and who are trying to force the single State agency and medicaid fraud and control unit into a Federal medicare investigative and prosecutorial role. This amounts to the Federal agency's substituting its own definition of "fraud" for the far more encompassing Wisconsin state definition.

I fear that HEW's disinterest in strong initial investigation by the fraud control unit will function to create an insurmountable bureaucratic barrier against Wisconsin's unit even being able to investigate such potential areas of fraudulent activities as what the medicare people call program abuse, and those patterns of sophisticated institutional-related fraud which greatly exceed the capacities of the single State agency to detect or investigate even at the preliminary stages.

I urge you to consider drafting amendments to section 17(g)3 of H.R. 3 which further define the meaning of the "statewide * * * investigation," with respect to the role that the Congress contemplates for the single State agency. I propose that you make it plain that the medicaid fraud control unit has initial jurisdiction to undertake whatever investigations are necessary to evaluate fraud, and that it in no way takes second chair to the single State agency in investigating fraud complaints.

I would further commend to your attention the need for further refinements in the definition of fraud to make it plain that State definitions govern and that "program abuse" has no role in implementation of H.R. 3.

I understand that you are also considering the question of whether the expiration date of H.R. 3 will come too early for any meaningful development of a vigorous fraud and control unit in States such as Wisconsin, which has only recently developed a medicaid fraud program. We anticipate a minimum elapsed time of 9 months to a year from the date of receipt of an initial complaint of any kind of. sophisticated fraud to commencement of appropriate prosecution, civil or criminal Depending on the number and nature of motions and appeals which may occur after commencement of prosecution, the elapsed time from commencement to verdict may take up to an additional year or two. As a result, it seems reasonable to conclude that the time period for assessing the effectiveness of fraud units created under H.R. 3 should be extended for another 2 to 3 years beyond 1980.

We also anticipate that significant time may be consumed at the investigative level in processing the substantial volumes of records that can be accumulated in a fraud investigation, to identify patterns of conduct. For example, if initial investigation reveals that a provider has billed for services not provided, we would ordinarily ask our investigators to obtain and evaluate as many of the provider's records as possible for the purpose of determining whether and to what extent the pattern is systematic and repeated. This evaluative process is now done manually by our investigators and auditors, a process that has consumed

in several cases months of painstaking investigative man-hours. This time could have been reduced to days if the material had been placed initially in a computerized data bank and then evaluated with the assistance of an analyst. In addition, once the materials obtained from an investigation are placed in the data bank, the materials are readily available for retrieval in many different relevant formats (e.g., all claims filed by that provider for one recipient, all claims filed in a specific category by chronological dates, etc.), a procedure which lends itself to far more exhaustive and sophisticated analysis than can be done manually. We believe, therefore, that the fraud control unit must have access to computer time, system analysts, and programers.

While this need for investigation—specific computer assistance should seem obvious, our informal requests have fallen on deaf ears in HEW's Office of Program Integrity. HEW apparently believes that this is the sort of function that the single State agency is supposed to be conducting, and that Congress did not intend the fraud control units to get into the areas of computer assisted investigations.

While I hope to eventually convince HEW that we stand a much better chance of accomplishing Congress' objectives if we have substantial computer oriented investigative capabilities. I sense that the agency's reluctance to willingly accept this concept derives from the same apparent lack of understanding on HEW's part that the agency having statewide prosecutorial capability must also be the lead investigative agency, and that some States such as Wisconsin are willing to prosecute as fraud matters which HEW prefers to consider as something less than fraud.

To summarize, I believe that the general posture of HEW in the substantive areas of how to tackle fraud and what is the appropriate role of the single state agency vis-a-vis fraud control unit is lacking in vision and lacking in aggressiveness. I get the impression that HEW is more concerned with setting up a structure for evaluating grants than in implementing the purpose of H.R. 3 which, as I understand it, was to encourage aggressive and innovative approaches on the part of states to detect and vigorously prosecute medicaid fraud.

I want to close this letter with a caution. We hope that fraud is not out there. We make no promises on numbers of prosecutions or dollars to be recovered. We will be delighted to prove the absence, and not just the presence of medicaid fraud in Wisconsin. At the same time, unless we are given sufficient authority and encouragement to structure an aggressive and innovative unit, I am afraid that we will reach 1980 having come to no conclusions, because we were deprived of sufficient resources to make the necessary investigations to determine whether or not the alleged fraud had taken place.

For these reasons, I strongly encourage you to consider amendments which would provide the medicaid units with sufficient resources from the onset to conduct the kinds of thorough and comprehensive investigations necessary to determine whether or not there is fraud and, if so, vigorously pursue it from that point onward. This will require, at the very minimum, a change in attitude on HEW's part, if not further legislative revisions.

Sincerely yours,

BRONSON C. LA FOLLETTE,
Attorney General.

ITEM 3. LETTER FROM FRANK S. BEAL,[1] DEPUTY ADMINISTRATOR FOR OPERATIONS, HCFA, HEW, TO SENATOR FRANK CHURCH, DATED SEPTEMBER 21, 1978

DEAR SENATOR CHURCH: This is in response to the list of questions regarding medicaid fraud control units you submitted to the Health Care Financing Administration in your letters of August 9 and 10. We have also incorporated our response to the issues raised by Wisconsin Attorney General Bronson La Follette in his July 24 letter to the committee. The Health Care Financing Administration appreciates the opportunity to aid the committee in improving legislation to control fraud and abuse in the medicaid program.

Our responses to your specific questions are as follows:

Question. At the present rate of certification it would appear that, for the bulk of the States, this will be a 2-year program. Does this give sufficient time for evaluation of the performance of the program and for recommendations to be made to the Congress regarding the proper level of Federal support after 1980?

Response. Since the date of the hearings, fraud control units have been certified in six additional States (Hawaii, New York, Wisconsin, Massachusetts, Cali-

[1] See statement, page 3.

fornia, and Pennsylvania). This makes 15 units now certified and we expect a total of approximately 35 units to be certified by the end of the year. Thus, we anticipate that a majority of States will have operating fraud control units for at least a period of approximately 2 years even if the law is not amended to extend the funding period. We believe that this period of time and the number of units certified should provide ample evidence on which to evaluate the value of such units. The time limit on Federal funding also provides an additional incentive to the fraud units to make an effort to demonstrate effective performance.

The Health Care Financing Administration recently implemented new forms and procedures for reporting cases of medicaid and medicare fraud and abuse. These reporting procedures will provide accurate data on the number of fraud and abuse cases being investigated, the number of indictments, the number of convictions obtained, and the extent of overpayments established. These reporting requirements, together with the various reports required from the fraud control units, should provide an accurate and sufficient data base to evaluate the unit's effectiveness. Thus, we feel sufficient time will exist to evaluate the performance of the units and to recommend appropriate Federal levels of support to the program after 1980.

Question. Given this rate of certification, would any significant problems be posed if Public Law 95–142 were amended to permit a 3-year period of Federal funding from the date of certification rather than the date of enactment?

Response. Amending the legislation to provide for 90-percent funding from the date of certification would result in significant Federal outlays. It appears somewhat premature to recommend additional funding at this time.

Question. What recommendations can you make with regard to congressional action on this matter?

Response. We do not recommend congressional action at this time.

Question. I have suggested that we provide by law for State retention of either all or some additional part of the recoveries made by these units as a means of assuring adequate levels of funding after the expiration of the Federal share. It would be helpful if you would indicate appropriate initiatives in this area.

Response. States now retain the portion of recovered overpayments that reflect the State share of medicaid expenditures. In effect, States recover 100 percent of the moneys they spend for the medical assistance program. In addition, any criminal or civil fines and/or penalties imposed by the State courts are retained by the States. The Health Care Financing Administration feels that the present method of distributing recovered overpayments is sufficient incentive for the States to engage in an active program to identify and investigate and prosecute cases of medicaid fraud or abuse.

The letter addressed to you from Attorney General La Follette of Wisconsin raises several issues upon which the Health Care Financing Administration would like to comment for the record, as follows:

First, we believe there will be enough States certified during 1978 to make an adequate evaluation of the concept at the conclusion of the funding period.

He also expressed concern that HEW's suggested definitions of "fraud" and "abuse" will limit the jurisdiction of the fraud control unit in Wisconsin. The HEW operating definitions of "fraud" and "abuse" are certainly not intended to and do not restrict State authorities in investigating and prosecuting possible criminal acts of medicaid fraud or abuse. Rather, these definitions are simply an effort to generally provide for consistent and understandable application throughout the country. If practices labeled "abusive" by HEW are prosecutable as fraud under Wisconsin's or any other State's law, either civilly or criminally, the State is certainly free to investigate and prosecute these practices as fraud. The section 17 statute explicitly states that the unit's function is to ". . . prosecute violations of all applicable State laws regarding any and all aspects of fraud . . ." in the medicaid program.

Attorney General La Follette seems very concerned over the Department's interpretation of the unit's functions in the "investigation" and "prosecution" vis-a-vis the State agency function in the "detection" of medicaid fraud. Our interpretation in this matter has been solely based on the statute and existing regulations and is not meant to impede, infringe, or undercut in any manner the effectiveness of the State fraud control unit. However, it should be noted that whether or not a State establishes a fraud control unit, the State medicaid agency has, and should continue to have, certain responsibilities for the prevention, detection, and control of fraud and abuse. The current HEW medicaid regulations (42 CFR 450.80) require that a State agency must establish methods to identify situations of fraud in the medicaid program. The realization that to simply identify

situations of fraud and then do nothing to curtail this fraud is unproductive and led directly to the creation of section 17 of Public Law 95–142. The units established under this section would investigate these indentified fraudulent situations, prosecute those engaged in them, and generally act as a deterrent to future attempts to defraud the system.

Attorney General La Follette also contends that the Health Care Financing Administration intended that the "principal investigative" role would be the responsibility of the State agency. This is not correct. Again, it was the realization that the State agencies were doing too little in investigating incidences of potential fraud that created the section 17 units. The units' primary function, as required by statute, is to investigate and prosecute incidents of medicaid fraud. As attorney General La Follette has pointed out, the State units are certainly allowed to engage in independent investigation of complaints received directly by them. The regulations have been amended to require that the State agency "refer all cases of suspected (provider) fraud to the unit." This does not preclude a unit from independent investigation based on leads from other sources. The relationship between the State agency and the fraud control unit should be one of cooperation in an effort to eliminate medicaid fraud or abuse. Moreover, we do not believe that the statute of our regulations preclude exchange of information from the fraud unit to the medicaid agency or that a unit may not request the cooperation of the agency on a particular case.

Finally, Attorney General La Follettee feels that the fraud units should have their own computer capability. Our interpretation of the statute does not prohibit the units from utilizing programers or computers to aid in their investigatory efforts. Many, if not all, of the State agencies already have the hardware and the data resources that the fraud units may require, when appropriate. It is our position that a State fraud unit development of an independent computer system and data bank would be a duplication of valuable resources. The State fraud unit may utilize a programer to devise programs that utilize the data and systems maintained by the State agency. Additionally, the Health Care Financing Administration believes that computer screening, to detect possible cases of fraud or abuse, remains the responsibility of the State agency, State fraud units, however, are encouraged to work with the State agencies to point out how such systems can be improved or expanded.

We appreciate this opportunity to present recommendations and comment for inclusion in the committee's hearing record. We will certainly be available for any additional information or comments you may require.

Sincerely yours,

FRANK S. BEAL.

ITEM 4. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH TO CHARLES F. C. RUFF, DEPUTY INSPECTOR GENERAL, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, DATED AUGUST 7, 1978

DEAR MR. RUFF: Thank you very much for your testimony at our recent hearing on medicaid fraud and the role of the state fraud control units. I look forward to a close working relationship with personnel from the Office of the Inspector General as our study of medicaid fraud and related issues continues.

I have compiled a list of questions and requests either made at the hearing or added since. The hearing record remains open for 30 days, and we would like to have the additional material by August 25, If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

FRANK CHURCH.

Enclosure.

QUESTIONS FOR CHARLES F. C. RUFF, DEPUTY INSPECTOR GENERAL, HEW

Public Law 95–142 calls for the Federal share to expire on the first of October, 1980, This leaves a very short time for the evaluation of this program. What benchmarks are you proposing for the evaluation of these units' continued eligibility for Federal funding during that period, and will this evaluation provide recommendations to Congress with regard to the status of this program after the scheduled expiration data of Federal funding?

In his testimony, New York Deputy Attorney General Charles J. Hynes called for an amendment to Public Law 95–142 to permit the 3-year period to begin from the date of certification. Mr. Frank Beal testified that it is hoped that some 35 States comprising 85 percent of medicaid expenditures will be certified by the end of this year. In light of Mr. Beal's statement, what is your opinion of Mr. Hynes' suggestion? What recommendations can you make with regard to congressional action on this matter?

In your full statement for the record, you state that your office is confident that these units will prove themselves to be so cost-effective a law enforcement device that the States will elect, without any hesitation, to continue them even without Federal funding. What evidence does your office now have to indicate this cost effectiveness?

I have suggested that we provide by law for State retention either all or some part of the recoveries made by these units. You have indicated that this is an appropriate suggestion. It would be helpful if you would indicate appropriate initiatives in this area.

It would be helpful to the work of this committee if you would update the information contained in the annual report of the Office of the Inspector General regarding the number of medicaid cases, the number of convictions, and the amount of money recovered in the way of penalties and fines, particularly with regard to the cost of this enforcement effort as compared to the amount collected.

ITEM 5. LETTER FROM CHARLES F. C. RUFF,[1] DEPUTY INSPECTOR GENERAL, HEW, TO SENATOR FRANK CHURCH, DATED AUGUST 25, 1978

DEAR MR. CHAIRMAN: In reply to your letter of August 7, I have set out in the following paragraphs my responses to the additional questions you posed concerning the State medicaid fraud control units.

Question. Public Law 95–142 calls for the Federal share to expire on the first of October, 1980. This leaves a very short time for the evaluation of this program. What benchmarks are you proposing for the evaluation of these units' continued eligibility for Federal funding during that period, and will this evaluation provide recommendations to Congress with regard to the status of this program after the scheduled expiration date of Federal funding?

Response. Neither the Office of Program Integrity, HFCA, nor the Office of Inspector General has as yet set any firm guidelines for evaluation of the "success" of the State fraud control units, nor will such a judgment really be feasible after only 1 year of operation. Eligibility for continued funding, on the other hand, will be the subject of periodic review by both our offices. Recommendations for annual recertification will be based less on the number of investigations conducted, indictments returned and convictions obtained, than on a showing that the unit has performed the statutorily required functions in compliance with the law and regulations.

We will, of course, inquire into the manner in which the unit has pursued the investigation of medicaid fraud, the relationship between the unit and the State medicaid agency, the use of budgeted funds, and other key indicia of effective administration. We will also be compiling, on a regular basis, statistical information concerning the work of the unit, including the amounts of Federal and State funds saved or recovered as the result of the unit's work, and these figures will provide the Congress with some basis for its judgment as to the need for an extended funding period. We would expect to be able, by early 1980, to make recommendations to the Congress on this question with some greater assurance as to the effectiveness of the States' efforts.

Question. In his testimony, New York Deputy Attorney General Charles J. Hynes called for an amendment to Public Law 95–142 to permit the 3-year period to begin from the date of certification. Mr. Frank Beal testified that it is hoped that some 35 States comprising 85 percent of medicaid expenditures will be certified by the end of this year. In light of Mr. Beal's statement, what is your opinion of Mr. Hynes' suggestion? What recommendations can you make with regard to congressional action on this matter.

Response. I do not agree with Deputy Attorney General Hynes that it would be appropriate to provide for funding for 3 years after certification, for I believe that the States should be given some incentive to make their applications at an early date. I do agree, however, that some flexibility in the existing limitation is necessary in order to afford this Department and the Congress a realistic oppor-

[1] See statement, page 8.

tunity to evaluate the success of the program. I would recommend, therefore, that the Congress consider a 1-year extension of the funding period up to October 1, 1981, which would provide 2 full years of experience for the bulk of the States involved and still leave a full session of the Congress in which any appropriate action could be taken.

Question. In your full statement for the record, you state that your office is confident that these units will prove themselves to be so cost-effective a law enforcement device that the States will elect, without any hesitation, to continue them even without Federal funding. What evidence does your office now have to indicate this cost effectiveness?

Response. My judgment that the State units will prove sufficiently cost-effective to convince the States to continue them without Federal funding is not founded on a firm statistical base but does represent my evaluation of the problem that now exists in the medicaid program and the impact that a coordinated enforcement effort, supplementing effective management, can have on reduction of program losses. In our annual report we estimated that $653 million in Federal medicaid funds were lost through fraud and abuse in 1977. This represents a parallel loss of approximately $534 million in State funds. If the maximum statutory allotment is spent by all the States, the cost of the fraud control units will be approximately $20 million and if that investment results in a reduction of only 4 percent in State program losses, the units will have paid for themselves.

The test, however, will be not only whether the units' work results in the actual recovery of fines or overpayments sufficient to meet their budgets. Their impact will include the removal of defrauding practitioners from the program and the deterrence of fraud by others—an effect that is not quantifiable but is nonetheless real. Beyond this, the very presence of the units bespeaks the willingness of government to take action to insure the integrity of public benefit programs, and without evidence of that willingness there can be no continued public support for those programs.

Question. I have suggested that we provide by law for State retention either all or some part of the recoveries made by these units. You have indicated that this is an appropriate suggestion. It would be hlepful if you would indicate appropriate initiatives in this area.

Response. Deputy Administrator Beal has commented on your suggestion that the States be permitted to retain the Federal share of recovered overpayments, expressing his belief that the recovery of the State's share of medicaid expenditures, in addition to any criminal or civil fines that may be imposed, is sufficient to encourage an active fraud control program. HCFA is, of course, the agency responsible for the administration of the medicaid program and has the greatest expertise in dealing with the States in this area, but my personal view remains that a plan of the type you suggest represents a feasible solution to the problem of continued funding of the State units.

To the extent that there may be some concern about the amount of overpayments that would accrue to the States, much of the problem could be dealt with by placing a ceiling on the recoveries that could be held by the State similar to the existing ceiling on section 17 funds.

In any event, no judgment can be made on the need for alternative forms of funding nor on the manner in which such funding would be implemented until we have had sufficient experience with the operation of the units under section 17 to determine the level of their success and the program savings they may create.

Question. It would be helpful to the work of this committee if you would update the information contained in the annual report of the Office of the Inspector General regarding the number of medicaid cases, the number of convictions, and the amount of money recovered in the way of penalites and fines, particularly with regard to the cost of this enforcement effort as compared to the amount collected.

Response. The statistics in our annual report cover calendar year 1977 and, unhappily, very little information is available on State activity during 1978. The Office of Program Integrity has implemented, effective on July 1, 1978, a new statistical system which should provide more rapid and accurate information on both State and Federal activitiy in the medicare and medicaid areas, but as of this date the only data available to us on State medicaid prosecutions covers the first quarter of the year. During that period the States reported only that they had 1,076 medicaid cases under criminal investigation, that they had recovered $3,318,000, and that there had been no convictions.

We do have separate statistics for cases developed under Project Integrity, and there, as of August 11, 1978, 539 cases have been designated for full criminal investigation; 759 cases have been designated for recovery or other administra-

tive action; and recommendations for recovery now total $2,900,000. In addition, 13 indictments have been returned in Project Integrity cases, resulting in 5 contions and 1 acquittal, with 7 cases pending trial. Although the Office of Investigations does not maintain records which are formally divided into medicare and medicaid prosecutions, our files indicate that during 1978, of the 26 individuals convicted of medicare or medicaid fraud in cases handled by the Office of Investigations, working alone or in cooperation with other Federal or State agencies, five were charged with medicaid violations.

You also asked in your letter of August 10 for my thoughts on Attorney General LaFollette's letter to the committee. Although the bulk of the attorney general's letter is directed toward positions taken by the Office of Program Integrity, and Deputy Administrator Beal has, I believe, adequately responded to the issues raised, I would like to make a few comments for the record.

There may simply have been a misunderstanding between representatives of Program Integrity and of the State of Wisconsin, but it is clear in the regulations issued by HEW and in the guidelines provided to the States that responsibility for the criminal investigation of medicaid fraud is vested in the section 17 unit. It is equally clear, however, that the State medicaid agency must continue to bear the responsibility for claims screening and other detection methods designed to uncover illegitimate billings and aberrant practices indicative of fraudulent or abusive conduct. The section 17 unit cannot undertake the agency's administrative and review duties, although it can, and should, offer guidance on more efficient methods for the detection of fraud and is specifically empowered to obtain from the agency provider profiles and other claims data in both computerized and manual form. Similarly, the State agency cannot assume the criminal investigative functions of the unit, but it must, if the system is to work efficiently, scrutinize billing practices and be able to identify those cases where the potential for fraud is sufficient to warrant the attention of the unit and its limited investigative resources.

The attorney general also suggests that HEW is attempting to impose its own definitions of fraudulent conduct on the State. As Mr. Beal has noted in his response, this is not the case; those acts encompassed by any State's criminal code may, of course, be prosecuted as such. It is important to note, however, that the distinction between fraudulent and abusive conduct is not, as the attorney general suggests, unique to the medicare program. There are practices in both medicare and medicaid that fall on the borderline between the legal but unreasonable and the clearly illegal, and both State and Federal prosecutors have regularly encountered difficulty in prosecuting practices which seem illegitimate but which are not so clearly prohibited by the law or regulations as to support criminal charges. We continue to believe that, although a vigorous criminal enforcement effort will deter much conduct that is "abusive" as well as that which is criminal, the primary vehicle for attacking abuse must be strong and effective management, adequate screening procedures, and, most importantly, rapid administrative or civil action to recover overpayments and to remove abusive providers from the program.

In sum, let me assure you that both the Office of Inspector General and the Health Care Financing Administration are committed to the development of "aggressive and innovative approaches" to the detection and prevention of medicaid fraud, and we look forward to a close and productive working relationship with all the State fraud control units.

Thank you for the opportunity to testify before the committee and for the opportunity to respond to these additional questions. If there is anything further that this Office can do to be of assistance to you or the committee, please let me know.

Sincerely,

CHARLES F. C. RUFF.

ITEM 6. LETTER FROM SENATOR FRANK CHURCH TO STEPHEN H. PRESS, DIRECTOR, MEDICAL CARE ADMINISTRATION, STATE DEPARTMENT OF SOCIAL SERVICES, HARTFORD, CONN., DATED AUGUST 9, 1978

DEAR MR. PRESS: Thank you very much for your testimony at our recent hearing on medicaid fraud and the role of the State fraud control units. I am glad that you could participate, and I have asked that the staff of this committee work closely with you and the National Council of State Public Welfare Administrators as the committee pursues its agenda on medicaid fraud and related matters.

I appreciate the points you raise concerning the role of the single State medicaid agency and its relations with the State fraud control unit. I would be very interested to know if the decision made by Connecticut reflects the wider view of other States.

Your comments concerning program abuse are also well taken. In your remarks before the committee and your written statement you comment that program abuse is the more effective area for collection of dollars than fraud. I am intrigued by this point and I would appreciate a more complete explanation.

I would like to have this additional material by August 25 for inclusion in our hearing record.

With best wishes,

Sincerely,

FRANK CHURCH.

ITEM 7. LETTER FROM STEPHEN H. PRESS,[1] DIRECTOR, MEDICAL CARE ADMINISTRATION, HARTFORD, CONN., TO SENATOR FRANK CHURCH, DATED AUGUST 23, 1978

DEAR SENATOR CHURCH: This letter is in response to your letter of August 9. Pardon my delay in responding as I just returned from vacation.

My response and testimony is derived from more than my experience in Connecticut. It includes the feelings of my colleagues from New Jersey, Texas, and other States who participate on the National Medicaid Directors' Program Integrity Committee which I chair. In my testimony I indicated that the investigation of medicaid abuse involves a far larger amount of dollars nationally than that of medicaid fraud. The simple reason for this is that the vast number of investigations of wrongful medicaid provider acts do not bring about indictments because they do not involve provable cases of fraud. The bulk of the cases investigated, outside of nursing homes, are where physicians or other providers bill for procedures which are more expensive than the ones they have actually performed. The bulk of indictments are obtained where the provider has billed for a service he has not performed. The former situation rarely leads to an indictment unless the provider has been previously notified by the State that his practices were improper and the State can prove an absolute pattern. Even where an indictment is brought, it frequently involves only the most obviously wrongful practices leaving the rest for civil recoveries. It is likely, nationally, that more than 90 percent of the cases of wrongful provider cases investigated involve only abuse with a like percentage of the potentially collectible dollars.

Since State medicaid fraud units are designated under Public Law 95–142 only to investigate medicaid provider fraud the single State agency's program integrity unit, if there is one, is still left the responsibility of investigating abuse and recipient fraud as well as the original workups on most fraud cases. In fact, without referrals from the program integrity units most of the State fraud units would have very little work to do. As I stated at the hearing, the program integrity unit is funded by HEW at a far lower level of Federal reimbursement (50–75 percent) than the State Fraud Unit (90 percent). It appears to me, therefore, that the Congress has continued to ignore a far more lucrative area than fraud in its funding of the medicaid program. The lack of parity in funding has already caused disruptions in operations in the fraud and abuse area. In New Jersey funding for their existing State fraud unit has doubled while the program integrity unit has stayed the same size. In Connecticut funding for the program integrity unit has lessened while a 19-member fraud unit has been established.

This letter in no way is aimed at denigrating the value of the State fraud unit which is an important deterrent against fraud. I support its continued funding. If, however, Congress was aiming at stopping the flow of errant dollars from the program it should have provided the States with greater financial incentives to develop their program integrity units because that is where more than 90 percent of the errant dollars can be stopped.

Very truly yours,

STEPHEN H. PRESS.

ITEM 8. LETTER AND ENCLOSURE FROM WILLIAM M. HERMELIN, ACTING ADMINISTRATOR, GOVERNMENT SERVICES DIVISION, AMERICAN HEALTH CARE ASSOCIATION, WASHINGTON, D.C., TO SENATOR FRANK CHURCH, DATED JULY 24, 1978

DEAR SENATOR CHURCH: The American Health Care Association (AHCA) would like to call to your attention several issues for consideration at the hearings of the Senate Committee on Aging on implementation of section 21 of Public Law 95–142. This section provides that States will be eligible for 90 percent Federal funding for the creation of medicaid fraud control units to investigate and prosecute fraud in their medicaid programs.

AHCA, a national federation of providers of nursing home services, with more than 7,500 facility members, supports State and Federal efforts to detect and eliminate fraudulent and abusive practices in medicaid. We believe the attention the Aging Committee has given to fraud and abuse in Federal health programs has contributed to the development of effective programs to control this serious problem. We also believe that the hearings on State fraud control units will provide an opportunity to more clearly define the objectives and improve the operation of this Federal grant program.

We urge the committee to address three issues in these hearings and have enclosed documents relating to State fraud control units which AHCA prepared several months ago. The issues are as follows:

(1) Whether the establishment of a separate and independent State fraud control unit is cost-effective. It is our contention that fraud is not so widespread as the media and self-appointed reformers would have the public believe and that, except in a limited number of instances, the moneys recovered under a system of special medicaid fraud control units would not justify the costs of operation. We believe this would be particularly true where a State established a prosecuting agency but failed to provide an administrative mechanism for the recovery of overpayment.

(2) Whether the conditions imposed by departmental regulations are so restrictive in certain areas and so ambiguous in others that States fail to see the advantages of participating in the program. It is our view that the regulations should emphasize Federal responsibilities to oversee fraud control unit operations (see (3) below) rather than impose conditions on the structure and functions of these agencies. Enclosed is an AHCA memorandum prepared several months ago citing deficiencies in the implementing regulations.

(3) Whether the statute should be modified so as (a) to impose minimum standards on the operation of these units, and (b) to permit the States flexibility in establishing the structure of fraud control units.

AHCA believes that the statute and regulations should address due process implications by requiring that fraud control units adopt certain criteria for the conduct of their investigations. These criteria, which would be set forth in regulations, should be designed to assure that audits and investigations are conducted fairly and objectively with due recognition of the rights of the public, the recipient and the provider of services.

Enclosed is a copy of a manual prepared by AHCA entitled "Procedures for Handling Medicare/Medicaid Fraud and Abuse Audits and Investigation." This document suggests areas which should be addressed by regulations governing investigative techniques. For example, the procedures cover notice as to the nature, scope, and estimated duration of the investigation, rights of recipients, providers, employees and vendors, findings required upon completion of an investigation and other due process considerations.

We hope this information has been helpful and request this letter and the enclosed memorandum and procedures manual [1] be included as part of the hearing record.

Sincerely,

WILLIAM M. HERMELIN.

Enclosures.

[1] Manual retained in committee files.

MEMORANDUM

To: State Association Presidents and Executives.
From: William Hermelin, acting Administrator, Governmental and Legislative Services.
Subject: State medicaid fraud control units.

INTRODUCTION

This memorandum is designed to bring to your attention certain aspects of the recently adopted Federal regulations of the Department of Health, Education, and Welfare (HEW) governing Federal funding of a State medicaid fraud control unit.[1] These regulations set the terms and conditions upon which a State may receive 90 percent Federal funding for the investigation and prosecution of fraud in the State administered medicaid program.

AHCA supports State and Federal efforts to investigate and prosecute those who defraud the medicaid program. AHCA believes, however, that State officials and legislators should be advised of certain conditions and limitations of the regulations which bear on the advisibility of establishing such a unit. In this regard, the following comments of AHCA, as well as the comments of State officials relating to these conditions and limitations, will assist you in acquainting your State officials with the regulatory requirements.

SUMMARY OF THE REGULATIONS

The duties of a State fraud control unit are to (1) conduct a statewide program for investigation and prosecution of suspected criminal violations pertaining to fraud in all aspects of administration of the medicaid program and the provision of medical assistance, and (2) review complaints alleging abuse and neglect of medicaid patients in health care facilities. The latter includes investigating any complaint which indicates substantial potential for criminal prosecution.

The regulations require:

(1) Establishment of a unit which is separate and independent from the State medicaid agency;

(2) Execution of an agreement between the unit and the agency; and

(3) Employment of a minimum staff.

The regulations require that the unit be located in either the office of the State attorney general or other State department having statewide prosecutorial authority. When located outside the office of the State attorney general, the unit must have an agreement with that office which establishes formal procedures for referring suspected criminal violations. That office must agree to assume responsibility for prosecuting such referrals, or, where appropriate, forward such referrals to the appropriate authority for prosecution while maintaining oversight responsibility for such prosecution.

The regulations prohibit any official of the State medicaid agency from either reviewing or monitoring the investigations or referrals of the unit. The unit must, however, have a formal working agreement with the State medicaid agency. This agreement requires the State medicaid agency to:

(1) Refer all cases of suspected fraud to the unit.

(2) Comply promptly with any request for access to, and free copies of, any records or information in the possession of either agency or its contractors.

(3) Comply promptly, and without charge, with any requests for computerized data stored by the agency or its contractors.

(4) Initiate any appropriate administrative or judicial actions available to recover sums identified by the unit as having been improperly paid to a provider.

(5) Arrange for access to any information or record kept by a provider of services to which the agency is authorized access.

The unit must employ at least one person in the following categories:

(1) An attorney experienced in the investigation or prosecution of civil fraud or criminal cases.

(2) An experienced auditor capable of supervising the review of financial records and advising or assisting in the investigation of alleged fraud.

(3) A senior investigator with substantial experience in commercial or financial investigation, capable of supervising and directing the investigative activities of the unit.

Once such conditions are met and the unit is certified by HEW, it may be reimbursed by an amount equal to 90 percent of the costs incurred, except those

[1] 42 C.F.R. 450.80(a)(8), 450.310. A copy of the regulations is included as appendix A.

costs attributable to (1) investigation of nonfraudulent abuse, failure to comply with applicable laws and regulations, or (2) programmatic screening and early detection activities required of the agency. The maximum amount of Federal financial funding will be the greater of $500,000 per fiscal year, or 1 percent of all the sums expended by Federal, State, and local governments during the previous fiscal year in administration of the medicaid programs of that State. The certification of the unit must be renewed annually by HEW and the unit must submit annual reports to HEW delineating its actions.

1. Establishment of a fraud control unit separate from the office of the State attorney general.

One consideration involving the establishment of a unit separate from the prosecutorial arm of State government, which in most states is the office of the State attorney general, relates to the ability of your State to delegate criminal investigative functions to the unit. Under the regulations, a unit which is separate from the office of the State attorney general is required to embark on statewide criminal investigations and establish a formal procedure for referral of criminal cases it has developed to that office. Such a delegation of criminal investigative functions may run afoul of your State constitution, or other State statute, establishing that prosecutorial arm of State government. Usually, such laws require that the prosecutorial and investigative functions be lodged solely in one arm of State government.[2]

Another consideration involves the absence of accountability of the State fraud control unit for its investigative activities. Under the regulations, a unit which is separate from the office of the State attorney general is apparently not accountable to anyone in State government for its investigative activities. The only check by State authorities upon the investigations of such a unit is for the Governor not to approve the request for annual certification of the unit, or the office of the State attorney general not not prosecut certain cases referred for prosecution by that unit. AHCA believes that the unit should be accountable to the office of the State attorney general for its investigative activities. AHCA is not alone in this belief. Several States have formally expressed concern over the lack of accountability of the unit, and the lack of coordination among the unit and other State agencies and officials, in comments submitted to HEW on these regulations.

Another area of concern is that your state medicaid agency must provide the fraud control unit with computer records and other data, in such amounts and in such form as the unit deems necessary, without cost.[3] AHCA believes that because no provision is made under either the statute of the regulations for reimbursement for such services of the agency,[4] the operations of a unit could significantly affect the budget of the State medicaid agency as well as its administration of health care to the residents of your State. Indeed, many States, in comments on these regulations submitted to HEW, have expressly noted that this condition will, in all probability, adversely affect the medicaid budget.[5]

2. Lack of coordination

HEW maintains that the requirement in the statute that such unit be "separate and distinct" from the State medicaid agency proscribes any official of that agency from reviewing or monitoring the activities of the fraud control unit. AHCA believes that neither the legislative history, nor the language of the statute, necessarily require such a stringent separation from the agency. All the statute requires is the establishment of a separate and distinct unit.

Again, AHCA is not alone in this belief. Several States have expressly noted the potential problems inherent in the requirement that the unit be "separate and distinct" from the State medicaid agency in comments submitted to HEW.[6] In general, these comments make it clear that many States believe there should be cooperation between the unit and the agency in order to coordinate the administration of the State's medicaid program. Some States have expressed the opinion that the overall administration of the medicaid program would be much more effective if the regulations required the agency and the unit to operate as partners not adversaries.

---

[2] Many States have voiced this concern in comments submitted to HEW.
[3] 42 C.F.R. 450.80(a)(8) (ii) and (iii).
[4] 42 C.F.R. 450.310.
[5] One State noted that the cost of a computer printout of only payments made to a medium scale pharmacy provider exceeds $1,000.
[6] Some States have noted that this condition will reduce the effectiveness of preexisting fraud control units. Because of this condition, these States have indicated that they may not establish such a unit.

The lack of coordination inherent in these regulatory requirements involves more, however, than a conflict with the State medicaid agency. Some States have preexisting mechanisms for investigating alleged incidents of patient abuse. By making the duty to investigate possible criminal patient abuse a condition of certification, the functioning of the unit will duplicate the functioning of such separate preexisting units. Some States have suggested that the unit should be required to refer such complaints to other such agencies. These States have noted that nothing in the statute or legislative history expressly precludes such referrals.

Another instance of lack of coordination involves the relationship of the unit to the Bureau of Surveillence and Utilization Review, Provider Standards Review Organization, the State survey agency, or any other agency in your State charged with similar responsibilities. Because the function of your State's agency may be very similar to that of the fraud unit, AHCA believes that such agency and unit may have redundant duties. Some States have expressed concern over whether establishing such a fraud control unit will usurp the function of such other agencies. AHCA believes that such concern is legitimate because this issue is not resolved by the regulations. Therefore, your State officials and legislators should give careful consideration to the effect of establishing such a unit on the other State agencies.

3. Fraud in recipient applications

HEW states that not all criminal investigations of the unit relating to the "provision of medical assistance" qualify for Federal funding. HEW believes that investigations into possible criminal conduct relating to a recipient's application for medicaid does not qualify because such conduct "cannot properly be construed as fraud 'in the provision of medical assistance,' since only providers may thus defraud the medicaid program." [7] In HEW's view, only investigations into instances of possible criminal conspiracy between a provider and recipient to defraud the medicaid program qualify for Federal funding.

AHCA believes this position is erroneous. The legislative history states: "The entity must also conduct a statewide program for the investigation and prosecution of violations of all applicable State laws relating to fraud in connection with the provision of medical assistance and the activities of medicaid providers. Such unit is not however required to examine potential instances of recipient fraud; this function may continue to be the responsibility of the State medicaid agency. H.R. Rept. 393, 95th Cong., 2d sess. 81 (1977)."

ACHA believes that it is clear that nothing in the statute or legislative history precludes such a unit from investigating recipient fraud and qualifying for Federal funding for such investigations.

4. Access to records

As a mandatory condition of certification, the fraud control unit is to have access to any records in the possession, custody, or control of the State medicaid agency, any of its contractors, and providers. No consent is required. The regulations contain no guidelines governing the use or disclosure of such records by the fraud control unit, except with reference to patient records.[8] Confidentiality of business records is a necessary adjunct to any privately owned and operated business. In the area of medicaid providers, unauthorized use or disclosure of such records could have serious business repercussions particularly when the investigators are not accountable to the people they investigate. You should advise your State officials to consider instituting controls on the use and disclosure of all records available to the unit to insure only the legitimate use and disclosure of the records, and to preclude breaches of confidence.[9]

5. Recovery of overpayments

The regulations are unclear regarding the recovery of alleged overpayments made to providers of health care. In one section, the fraud control unit is to initiate such action or refer the matter to the appropriate State agency.[10] In yet another section, the agreement between the unit and the State medicaid agency indicates that the agency is required to initiate such action after appropriate referral.[11] In

[8] The regulations provide that the privacy rights of patients must be protected. *See* 42 C.F.R. 450.80(a)(8)(v).

[9] Some suggested controls are found in "Procedures for Handling Medicare and Medicaid Fraud and Abuse Audits and Investigations," prepared by AHCA's legal counsel. Pierson, Ball, and Dowd. AHCA has distributed copies of this handbook to State association executives.

[10] 42 C.F.R. 450.310(f)(3).

[11] 42 C.F.R. 450.89(a)(8)(iv).

still another section, the State fraud control unit must report to HEW how many actions were referred, and how much was collected, by the unit and the agency.[12] In comments previously submitted to HEW, many States have noted that such provisions are not only apparently internally inconsistent, but also are inconsistent, with certain previously enacted State recovery mechanisms.

In addition to such ambiguity, AHCA notes that many States do not have any recovery procedures. The Health Care Financing Administration of HEW has published suggested procedures for States to adopt for recovering overpayments.[13] AHCA believes these suggested procedures are deficient in a number of respects, especially in the area of the provider's due process rights and has submitted formal comments to HEW requesting that such deficiencies be corrected.[14]

6. Staffing requirements

Some States have questioned the staffing conditions of the regulations by pointing out that the minimum requirements relating to the full-time employment of attorneys, investigators, and auditors cannot be justified in their States because of limitations on the number of State employees or the increased costs and wasted manpower to the State stemming from such full-time employment. AHCA agrees with these States. AHCA believes that such decisions relating to staffing should be left to the discretion of individual States. To require otherwise not only erodes States' rights but also infringes the ability of a State to tailor a fraud control unit to its specific needs.

7. Fraud unit participation in administrative procedures

One State has suggested in comments submitted to HEW that an attorney of the fraud control unit should participate in any administrative hearing against a provider for sanctions or termination for alleged abusive practices. The rationale for this suggested participation is that such an attorney would be in a better position to develop the requisite evidence of intent necessary for a subsequent criminal prosecution for fraud against the provider and its personnel.

AHCA believes that such tactics are unwarranted because of their elemental unfairness. Without being given advance notice of basic constitutional rights, a provider and its personnel may unknowingly make statements which could be the basis for a subsequent indictment for alleged fraud. Although such an indictment may subsequently be quashed, the case dismissed, or the provider and its personnel acquitted at trial, the harm to the provider and its personnel will have already occurred.

AHCA believes that because of the inherent potential for abuse in such tactics,[15] you should urge your State officials and legislators to prohibit their use. In lieu of such formal prohibition, you should acquaint members of your association with the possible use of such tactics and advise them to obtain competent legal advice before testifying at an administrative hearing or voluntarily producing documents for such a hearing. AHCA believes that the use of such tactics will erode the confidence of providers and their personnel in all State officials.

8. Federal financial participation

The statute and regulations declare that 90 percent Federal funding for State fraud control units will only be available through fiscal year 1980. Due to the lead time that may be necessary to establish such a unit in your State, including the time required for legislative action, the prospect of certifying such a unit in fiscal year 1978 may be remote. By that time, the amount and duration of Federal financial participation available may not be cost-effective to establish such a unit in your State.

Another consideration involves the budget of the unit. Potentially, its budget may be very large: the greater of either $500,000 per fiscal year, or 1 percent of all the amounts expended on medicaid by the Federal, State, and local governments in the State. Conceivably, this could run in the millions of dollars. After fiscal year 1980, however, the State would have to provide greater fiscal support for the actions of such a unit.

---

[12] 42 C.F.R. 450.310(1)(1) (i), (iii), and (iv).
[13] HFCA Action Transmittal No. 77–105.
[14] A copy of AHCA's comments has been distributed to you.
[15] AHCA notes that such tactics may not be confined to administrative hearings, but may also be used in audits or investigations. In this regard, AHCA's handbook, "Procedures for Handling Medicare and Medicaid Fraud and Abuse Audits and Investigations," should be consulted. The recommendations contained in that handbook may be adapted to situations involving administrative hearings.

A third consideration involving the budget of the unit relates to the precise scope of Federal funding. In one section of the regulations, the fraud control unit is charged with the duty to investigate all cases of suspected fraud.[16] In another part of the regulations, however, it is stated that: "[Federal financial participation] * * * is not available * * * for expenditures attributable to: (i) Investigation of nonfraudulent abuse or of failure to comply with applicable laws and regulations; or (ii) programmatic screening and early detection activities required of the medicaid agency * * *." [17]

In comments submitted to HEW, several States have voiced concern over these apparently contradictory regulatory provisions. These comments indicate that such conflicting requirements make it unclear whether the unit will be reimbursed for its activities relating to collection of overpayments when the State gives the unit authority to initiate such nonfraudulent activities. Yet other States have expressed concern whether any reimbursement will be available for any efforts of the unit which fall short of criminal prosecution, regardless of whether the unit is authorized to collect such overpayments. AHCA notes that these concerns are legitimate because the regulations leave unresolved the question of whether, or in what amounts, a unit will be reimbursed for its nonfraudulent efforts.

A number of States, in comments addressed to HEW, have rejected the argument that the savings engendered by the operations of such a State fraud control unit will enable the unit to become self-sufficient by 1980. AHCA agrees. AHCA believes that the addition of yet another layer of bureacracy to a States' medicaid program cannot be justified on the basis of cost-effectiveness. AHCA concurs with the concern of some States that the budget of a unit could exceed the costs of administrative recovery of alledged overpayments.

9. Scope of authority of a fraud control unit

AHCA notes that there are other conditions in the regulations which leave unresolved certain issues relating to the authority of a fraud control unit. These unresolved issues concern the functioning of the unit. The first unresolved issue relates to the scope of its authority. Such a unit is authorized to investigate suspected criminal violations relating to provider fraud and patient abuse. It is unclear, however, of the extent of such authority. For example, it is unclear if such a unit has the authority to require the State medicaid agency to submit any or all program materials, such as provider contracts, policy statements, manuals, bulletins and regulations, to the unit for prior approval. Several States have voiced concern over such a possibility. AHCA believes that your State should carefully delineate the exact scope of the authority of a fraud control unit sought to be established in order to preclude such a possibility.

10. Proposed guidelines for conducting audits or investigations by State medicaid fraud control units

If your State establishes a fraud control unit, the potential for misunderstandings between providers and State auditors and investigators is great. There is also the possibility of violations of provider and patient constitutional rights if there are no specific guidelines for State fraud control unit auditors and investigators to follow when conducting such audits or investigations. In this regard, AHCA urges you to review the material contained in a handbook, entitled "Procedures for Handling Medicare and Medicaid Fraud and Abuse Audits and Investigations," which will be published by AHCA shortly. AHCA suggests that you attempt to have the recommendations contained in the handbook adopted as a manual for the personnel of any State fraud control unit. In lieu of official adoption of such guidelines, AHCA advises you to acquaint all members of your State association with these materials to preclude any misunderstandings between providers and State officials.

RETIREMENT, WORK, AND LIFELONG LEARNING

WEDNESDAY, JULY 19, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to recess, at 10:55 a.m., in room 6226, Dirksen Senate Office Building, Hon. Frank Church (chairman) presiding.

Present: Senators Church and Percy.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Garry V. Wenske, assistant counsel for operations; Letitia Chambers, minority staff director; David A. Rust, minority professional staff member; Alison Case, operations assistant; Theresa M. Forster, fiscal assistant; and Madonna S. Pettit, research assistant.

Senator PERCY [presiding]. I would like to announce that Senator Church is still at the White House, but because of the time schedule of Chairman Campbell, we will proceed immediately and hope that Senator Church will arrive shortly.

Chairman Campbell, we appreciate your appearance today. We have had outstanding testimony in these hearings. As you well know, an increasing portion of our population falls in the 65 and over category. This is a matter of concern to the country and certainly ought to be developed, analyzed, and reflected in our policies. Your expertise and counsel in this area are very valuable to the committee and we welcome it.

STATEMENT OF HON. ALAN K. CAMPBELL, CHAIRMAN, CIVIL SERVICE COMMISSION; ACCOMPANIED BY THOMAS A. TINSLEY, DIRECTOR, BUREAU OF RETIREMENT, INSURANCE, AND OCCUPATIONAL HEALTH

Mr. CAMPBELL. Thank you very much, Senator Percy. With you sitting there and me here, I will occasionally lapse into some statements on civil service employment.

I am accompanied today by Thomas A. Tinsley who is Director of our Bureau of Retirement, Insurance, and Occupational Health. We are pleased at this opportunity to discuss implementation of the provisions in the Age Discrimination in Employment Act Amendments of 1978, which abolish the mandatory retirement age for Federal employees, which previously had been at age 70.

Although we are not certain, we do not believe that eliminating the mandatory age of 70 for retirement will have much impact on the Federal service. Statistics show that there has been a gradual but discernible trend toward early retirement among Federal employees, not unlike the private sector.

Over the past few years, for example, while the Federal work force has remained relatively static at about 2.7 million persons, the number of employees remaining in service long enough to be mandatorily retired has steadily declined. In 1956, of a total of 33,090 retirees, 2,391, or 7 percent, were separated under the mandatory retirement provision of the law. In 1977, this dropped to 1,773 of 85,568, or 2 percent mandatorily retired.

The retirement trend for employees in general has followed essentially the same pattern. The average age of employees retiring has, for example, declined from 63.2 years in fiscal year 1970 to 58.3 years in fiscal year 1977. This data would seem to indicate that eliminating the requirement for mandatory retirement at age 70 would not create an obstacle to the employment of younger people in the Federal service.

Although we do not expect any major impact from this law, we are currently studying its effects as mandated by Congress. The study report, due January 1, 1980, will only encompass 1 year of experience and thus will permit us to draw only tentative conclusions. The report will make before-and-after comparisons in selected agencies, by age groups, in such categories as retirement, other separations, hiring, promotions, and discrimination complaints.

Since mandatory separation in the past has affected few Federal employees, we expect no serious increase in the number of older employees which might adversely affect the efficiency of the Federal service.

Measuring Job Skills

Concerning the development within Federal agencies of objective means of determining job skills obsolescence, the removal of mandatory retirement can be expected to impact performance evaluation programs in at least two ways. The first impact is upon the manager who, seeing his staff growing older, begins to interpret the performance evaluation guidelines more strictly in evaluating middle-aged and elderly employees to provide an alternative to mandatory retirement. The second impact is upon the employees themselves, whose job skills become outdated over time and must be renewed or changed.

Senator Church [presiding]. Aren't you saying, in a rather opaque way, that the alternative to mandatory retirement is firing people who don't perform outstandingly?

Mr. Campbell. Well, what we are saying is——

Senator Church. If that is possible in the Federal service.

Mr. Campbell. What we are saying is that we will need to evaluate the performance of older people carefully because retirement will not be mandatory, and that will put a new burden on performance evaluation that it has not had before.

Senator Percy. Could the charge be made the older workers are subject to unfair evaluations and standards?

Mr. CAMPBELL. I don't think we have any evidence to suggest that that is the case. I would guess, as I am sure you would, that if a person was relatively near retirement, the tendency would be to relax the application of performance evaluation standards in anticipation of any problem solving itself in a short time through retirement.

Senator PERCY. Do you, in your testimony, expand on the phenomena of why so many are retiring earlier, and the underlying reasons for it?

Mr. CAMPBELL. No.

Senator PERCY. Briefly then, in your judgment, what are those reasons? When you consider the popularity of mandatory retirement at age 70 rather than 65, and the support for this change by retirement groups representing senior citizens. Why this phenomena of people leaving? The inflationary pressures and the high cost of living would seem to encourage retiring at a later age, yet the Federal Government, which is the largest employer in the country, seems to be encouraging early retirement of their employees.

Mr. CAMPBELL. I don't believe we have systematically questioned people who are leaving to determine why. Our impression is that the Federal retirement system does indeed make it economically feasible to retire. The possibility of a job after retirement outside the Federal sector, and the automatic cost-of-living increases for Federal retirees, make retirement quite feasible.

Second, I would think that organizations want to bring in new talent, new energy, particularly in middle and upper management. From what I know of the private sector, I believe it also applies in corporations. So corporate executives were very much concerned about the change in the mandatory retirement law. There probably is some encouragement of people to retire once they are eligible.

Senator CHURCH. Please continue.

Mr. CAMPBELL. Basic to all our considerations, however, is the need for more effective performance evaluation for all employees. May I add that adequate performance evaluation is critical to the entire civil service reform effort, as well as to what we are discussing today. A performance evaluation program should include positions described by skills and abilities required. Staffing and performance standards must be reasonable and job-related, and not arbitrarily exclude or discriminate against older workers. The needed skills, abilities, knowledges, and aptitudes necessary for satisfactory performance must be specified and justified. Neither chronological age nor other nonmerit requirements are legal except for isolated positions having bona fide exceptions.

Each employee should receive an impartial evaluation to determine the adequacy of current performance and capacity to continue performing on an assignment. The performance should be measured against established performance standards or against specific performance goals.

Appraisers should be trained and coached, and the appraisals should be monitored to insure that the system is understood and applied without bias.

Provision should be made for additional assessments of individual skills and abilities through interviewing, testing, or other methods to determine training needs and/or qualifications for alternate job assignments and responsibilities.

Components of Evaluation

Other systems would supplement the basic performance evaluation system to provide corrective solutions to performance problems and to assure the absence of age or other discrimination in the process. These include:

Counseling and guidance would be provided under this program to help each employee evaluate personal abilities, limitations, interests, goals, and plans. For employees whose performance is found to be unsatisfactory, additional assessments of individual skills and abilities would be provided through interviewing, testing, or other methods to determine training needs or qualifications for alternate assignments and responsibilities. The program will also assist employees in individual retirement planning and aid in solving alcoholism, drug, financial, and other life adjustment problems.

Modified work arrangements, where appropriate, may also be provided for employees who want to continue to work but at a reduced activity level. Included among such arrangements may be: Part-time work; special work assignments; voluntary reassignment to lower position and pay; and other flexible work arrangements.

To retire or terminate an older employee would require evidence that would stand up in court that the employee was not performing properly—the employer must demonstrate that the separation was not based on age alone. To obtain this evidence, agencies would have to make their programs for evaluating employees more objective. All ages must be evaluated on the same basis. Evaluating an older employee under more severe standards is age discrimination.

Alternative work schedules are a way to continue to utilize advantageously the skills of older workers as well as all workers. Over the years, the Commission has provided encouragement to agencies with needs for part-time workers. Several Commission publications have highlighted the benefits derived from part-timers, for example, "Part-Time Employment," in Women in Action, [Federal Women's Program, CSC], January–February 1978; "A New Look at Part-time Employment," in Civil Service Journal, July–September 1977; and "Flexibility Through Part-Time Employment of Career Workers in the Public Service" [Personnel Research and Development Center, CSC], June 1975.

Part-Time Work and "Flextime"

The Commission is also working with the Office of Management and Budget to make the personnel ceiling system more conducive to the use of part-time workers. Under current definitions, a part-time employee consumes one ceiling space whether that employee works 2 hours or 39 hours per week. Because of the limited number of ceiling spaces, managers have no incentive to use their allocations to hire employees for less than the number of full-time staff hours.

I wish to emphasize that we favor the expansion of part-time opportunities in the Federal service and, as you know, flextime has proved to be a very satisfactory way of organizing the workday.

Flextime has been adopted in more than 150 Federal Government installations covering more than 141,000 employees. Additionally, the Commission is strongly supportive of the Federal Employees Flexible and Compressed Work Schedules Act—S. 517 and H.R.

7814—which recently passed in the House by a wide margin and is presently under consideration by the Senate Governmental Affairs and Human Resources Committees.

In addition to the favorable impact on Government operations, and the extension of hours of public service which we believe will result from use of alternative work schedules, we foresee a number of social benefits flowing from widespread use of these systems. Rush hour traffic, for example, can be dispersed over more hours in the morning and evening with a commensurate increase in the operating efficiency of public transit systems.

More important to this committee is the favorable impact flexible working hours can have on older workers. Testimony from representatives of organizations of older persons on the Federal Employees Flexible and Compressed Work Schedules Act mentioned that many older workers would find it easier to commute by public transportation outside rush hours when sets were more available. Some older persons wake up very early in the morning and would like to start work during their own most productive hours. Others find that they need a little longer time at home in the morning and prefer to work later schedules. All of these personal needs can be easily accommodated under a flexible working hours program.

Preretirement Training

You asked in your letter for a status report on preretirement training. Chapter supplements 831–1, 780–1, and 890–1 of the Federal Personnel Manual require that counseling be available to employees about benefits to which they are entitled by right of their employment. Thus, employees must be offered, and if they wish, be provided counseling in addition to the general information made available to them on retirement, health benefits, and life insurance.

In fact, a new employee is provided a certificate of membership in the civil service retirement system. It contains much of the basic information about the retirement system—eligibility requirements, creditable service, annuity computation formula, and more. They are also furnished information concerning other benefits.

Formal retirement counseling seminars are usually aimed at employees within 5 years of eligibility for retirement; that is, generally age 50 and up. Preretirement seminars use technical experts from the Social Security Administration, local banks, and hospitals or clinics, covering such subjects as estate planning, taxes, nutrition, and housing. Other speakers may include retired employees and members of retiree organizations. In addition to informational materials produced and provided by the Commission, many agencies supplement this effort with other information, such as commercially prepared booklets which are mailed to the residences of employees nearing retirement eligibility.

Aside from the Commission's role in encouraging and assisting agencies to make preretirement planning services available to Federal employees, the Commission has recently become more active by responding to requests to participate in agency programs. During 1978, we participated in 29 preretirement seminars. These seminars have been well received and most agencies are planning to reschedule preretirement counseling sessions later this year.

36–152—79——2

Our view is that preretirement counseling is a continuing learning process—starting with the initial orientation about the benefits provided by an employer, progressing to periodic reminders—via informational issuances or group meetings—throughout one's career, and culminating in formal seminars or individual counseling sessions in the years immediately preceding retirement. We will, however, continue to review existing policy in this area and make any changes which will assist employees in making decisions concerning retirement, and make the transition from the work-a-day world into retirement smooth and satisfying.

I wish to thank you for the opportunity to discuss these matters with you this morning. I will be pleased to do my best to respond to any additional questions or requests you or the members of the committee may have.

Senator CHURCH. I know your time is constrained this morning.

Senator Percy, you had the opportunity to hear the whole testimony and I would like to defer to you for some questions.

Senator PERCY. First, I would like to ask about the preretirement training you mentioned in your testimony. Several other witnesses addressed this issue and spoke on various topics—nutrition, housing, relationships, and so forth—and their relation to retirement. Poor retirement planning causes problems, such as selecting a favorable climate and then finding out they have the sunshine but they don't have friends, and then becoming disillusioned.

Have you found that counseling seminars are valuable for the prospective retirees?

Mr. CAMPBELL. Mr. Tinsley certainly has more experience in this area than I have and I ask him to respond to that.

Mr. TINSLEY. The programs, Senator Percy, are usually tailored to the audiences. We have no standard programs. In many instances, we discuss relocations to another geographic area unfamiliar to the retiree except for a previous vacation. We believe it has been very productive to discuss economics, geography, and things of that nature.

Senator PERCY. The civil service is quite unique when compared with the private sector, because moving the retirement age from 65 to 70 is expected to have little impact. A civil service employee may retire at the end of 30 years of service with approximately 56 percent of his three highest years of earnings as his retirement income. Is that a more generous kind of benefit than most individuals have available to them in the private sector?

Mr. CAMPBELL. I ask Mr. Tinsley to comment.

Mr. TINSLEY. You can retire at age 55 and 30 years service with full annuity. In most private systems, if you retire under age 60, there is usually a substantial reduction, which tends to discourage earlier retirement. So the earlier age permitted by the Federal Retirement Act is a liberal provision and it does encourage early retirement.

Senator PERCY. Even though individuals may only be in their late fifties or early sixties, the benefits they accrue from staying on after 30 years, staying on to age 65 or 70, is not commensurate with the benefits they could get if they just stopped their Federal service and maybe got a part-time job some place else. Their retirement from civil service is not at all affected then by outside income.

Mr. CAMPBELL. As long as that is not in the Federal Government, it is not affected.

Senator PERCY. So, in a sense, it is possible that most of these people are not retiring, rather they are just leaving the Federal Government and seeking employment in other places. Do you have any studies, Chairman Campbell, which indicate this to be true?

RETIREMENT OR NEW CAREERS?

Mr. TINSLEY. We have no detailed study, Senator, but one study several years ago, when we had the problem of frozen salaries for a considerable period of time, indicated that people were leaving and going into second careers. In fact, more and more of this is occurring, even in the private sector, where people leave and engage in a second career. Very few people who retire at age 55 or even at 60 today, really retire in the strict sense of the word, they usually find other gainful employment, if possible.

Mr. CAMPBELL. I would like to make one further comment if I might. It is important to keep in mind that with Federal pay for executives, operating the way it does, that is, long periods of frozen pay, frequently retiring and receiving cost-of-living allowances which would in the long run, produce more income for the retiree than staying in service.

Senator PERCY. Those are all things that ought to be brought up under civil service reform, I suppose. As to how long this policy can be continued, especially in view of the fact that people are living longer. I don't know. Social security will go bankrupt if we continue the current retirement policy of eligibility for retirement benefits after 20 years service. If those people are not going to retire from the work force, then they are going to spend the last 5 years of that 20 years of service lining up another job. They are going to be working while collecting retirement pay. Is there some concern in your mind, Chairman Campbell, as to whether or not we are going to be able to sustain and afford this policy in the light of increasing longevity, and in the light of the number of people who are seeking early retirement, leaving the service at a prime time in their life, but taking their talent some place else?

Mr. CAMPBELL. I think it is a serious problem. It is a problem, particularly in the Federal sector, because of the relatively early retirement age. I would suggest, however, that it is a total societal problem, as more and more people have valuable time left in their careers following their retirement.

I would make only one point; that we are under legislative mandate to produce a study, along with HEW, the Treasury Department, and OMB, to report to Congress by 1980 on the combination of the Federal retirement annuity system with the social security system, and that study will look extensively into the kinds of problems you just raised.

Senator PERCY. I think, Chairman Campbell, you could be excused. We appreciate, very much, your appearance here today. I have two other questions but your colleague could answer them for you if you must leave. I am not sure whether Senator Church wanted to question you personally.

Mr. CAMPBELL. I just would like to add that these are matters of tremendous concern to those of us having responsibility to the Federal work force, and we look forward to working with this committee in this area.

Senator PERCY. Thank you very much.

Mr. Tinsley, one question on social security. There is a provision in that bill which reduced the amount for the surviving spouse. Would the 5-year grandfather clause in this protect employees who are close to retirement and include social security benefits in their retirement plan? Could you briefly explain the rationale for this provision and could you tell us what effect this will have on Federal employees, particularly in terms of retirement income which will be available to them?

Mr. TINSLEY. Although I was not privy to the development of that provision, I think the rationale grew out of a sense that individuals were beginning to be able to multiply their retirement income by virtue of acquiring eligibility for retirement benefits under various systems. There was a particular political sensitivity, and a sensitivity on the part of the public, to the fact that some civil service retirees, particularly those who retire early, go out and obtain eligibility under social security, and, therefore, they are getting two benefits from the Federal Government.

There were a number of proposals to try to correct that problem, some of which were benefit offsets. One proposal contained in the fill involved the problem you mentioned; that is, the impact of combining the two systems. It will undoubtedly result in a reduction of benefits for some individuals. Beyond that, I would have to do much more analysis and study to be able to give you additional information.

Senator PERCY. We would appreciate that.

The difficulty of expanding part-time opportunities within the Federal service has previously been described. The way OMB counts job slots increases pressure within each agency to hire part-time employees who will work almost a full-time schedule, 30 hours a week or more. What can be done administratively to correct the situation? Is there a need for any legislative action on our part and, if so, would you recommend any such changes?

Mr. TINSLEY. There is part-time legislation currently in Congress. The Civil Service Commission and OMB, however, are already acting at President's Carter's direction to expand part-time opportunities under existing rules and regulations. Regardless of the legislative outcome, this effort will continue.

Senator PERCY. Finally, we have heard testimony on part-time modified work arrangements such as part-time work and flextime for older workers. How prevalent are such arrangements in the Federal Government, and can you cite examples where these arrangements have been used successfully? To what extent do we need to expand the provisions of these to have a timetable or have such arrangements available?

Mr. TINSLEY. I don't think the practice has been very widespread to date, Senator. It is part of both the planning of the Civil Service Commission and the agencies to expand these efforts. The impetus here came from the President's interest and direction to all agencies to expand permanent part-time opportunities for employees of all types. Although the effort has been underway only since last fall, the results thus far are encouraging. Part-time permanent employment is up by almost 20 percent over last year. We hope this progress continues, and as I mentioned earlier, are taking a number of administrative actions to ensure that it does.

As far as flextime is concerned, Federal agencies have initiated programs with the limited forms of flextime permissible under current law. Legislation to expand the types of flextime schedules available for use in Federal agencies has passed the House and is presently awaiting action in the Senate. Passage of that bill would undoubtedly spur increased use of flextime in Federal agencies.

Senator PERCY. Thank you very much. I appreciate the information you have provided us with.

Senator CHURCH. Thank you, Senator Percy.

I appreciate your testimony. Thank you very much.

Mr. TINSLEY. Thank you.

Senator CHURCH. Senator Pete V. Domenici, the ranking minority member of our committee, cannot be with us today. He has, however, submitted a statement for the record, which I will insert at this time.

[The statement of Senator Domenici follows:]

STATEMENT OF SENATOR PETE V. DOMENICI

Mr. Chairman, during the past 2 days of hearings on "Retirement, Work, and Lifelong Learning," we have garnered a great deal of information on various topics related to changing work retirement patterns. The hearings, to date, have been informative and I have been most impressed with the testimony presented. We are beginning to bring these issues into clearer focus, which I hope will lead to the formulation of plans and policies consistent with our changing demographic situation. Today, we will hear from our last two experts, Chairman Alan Campbell of the Civil Service Commission, and Stanley Babson, an industrial financial consultant.

Chairman Campbell's testimony and his comments on Civil Service Commission efforts in the area of innovative work arrangements should be helpful and informative. As older Americans choose to remain in the work force for longer periods of time, they will need a more flexible work structure so that they can cope with changes in their needs and capabilities. Preretirement counseling, trial retirement, gradual retirement, and part-time employment will help our citizens adjust to longer work spans. As the largest single employer in the country, the Federal Government has an opportunity to serve as a laboratory in the search for viable alternative work modes. Those approaches which prove successful in the Federal civil service can then be adapted for use by State and local governments, as well as the private sector.

Senator Chiles and I recently introduced legislation, S. 2805, the 1978 amendments to the Comprehensive Education and Training Act, which includes a provision designed to expand job opportunities for older workers. I am pleased that the portion of our bill entitled "services for older workers" was incorporated into S. 2570, the CETA reauthorization bill which will soon be considered by the Senate. Our provision encourages older worker participation in work sharing and flextime arrangements. The latter of these two innovations is, in my opinion, a most interesting work style alternative. It has worked well in some Federal agencies, and implementation of the flextime concept on a broader scale is worthy of full exploration. I am interested to hear from Commissioner Campbell about the extent and effectiveness of flextime among Federal employees.

Needless to say, both private industry and the Federal Government must adjust to the changing demographics which accompany the imminent "senior boom." While it is appropriate for the Federal Government to take the lead in the development of flexible work arrangements, experiments in alternative work styles should also be pursued in the private sector. In this regard, I look forward to hearing from Mr. Babson about industry attitudes toward, and implementation of, various nontraditional work arrangements.

I also hope that Mr. Babson's testimony will concentrate on the costs associated with changing work retirement trends. As a member of the Senate Budget Committee, this subject is of tremendous interest to me. I have reviewed Mr. Babson's testimony and found it to be a very thoughtful analysis of the economic ramifications of changing work retirement styles. I believe today's witnesses will contribute significantly to our efforts to explore, in depth, the evolving roles of employment and retirement in our dynamic society.

Senator CHURCH. Our next witness is Stanley M. Babson, Jr., who is a management consultant and former vice president of finance for the Technicon Corp., and the author of a book called "Fringe Benefits, the Depreciation, Obsolescence and Transience of Man." Interesting title.

Your statement is nearly as think as your book, Mr. Babson, but I am confident that you will submit it for the record and highlight it for the committee.

STATEMENT OF STANLEY M. BABSON, JR., NEW CANAAN, CONN., MANAGEMENT CONSULTANT, AND FORMER VICE PRESIDENT OF FINANCE, TECHNICON CORP.

Mr. BABSON. Senator Church, Senator Percy, I am deeply honored to be permitted this opportunity to be a speaker before your committee. As I pointed out in the text of my statement submitted to you, I am really surprised to be here because I don't consider that I am any expert on pension planning. I have been the chief financial officer of a variety of companies over the last 25 years ranging from $2 million in size up to over $200 million in size, and therefore I have been interested, from a private sector standpoint, in this whole matter of the economics of "people cost," and not just retirement alone.

Many of the comments that I have put in my statement, which has been distributed here, come from my book, and I have to advise you that my material may be somewhat dated. Some of the thoughts and provocative arguments that I may have raised 5 years ago are rather like yesterday's mashed potatoes these days, because every newspaper you pick up has similar comments from a variety of experts. I do appreciate the opportunity to be here and I hope that I can contribute something to this committee's very worthwhile project.

There is no way in the time that you have allotted to me that I can go over the 46-page statement that I have submitted.[1] Therefore, I urge you to read it, because I have tried to be provocative and thoughtful in some of my comments, and deliberately so.

As I understand the purpose of this hearing, it is to bring into focus what is happening currently in the United States regarding the trends of aging, retirement, and employment opportunities for the aging, together with the economic consequences of such trends, whether funded privately, publicly, or both. Therefore, really, the only thing I could accomplish here—and I think that perhaps this is all you wish me to accomplish—is merely to try to pose to you some fundamental questions or issues as I see them as a financial observer from the private sector.

First of all, I think that it is important to review the background of our ideas and philosophies of people and the importance of people as a resource to our society. Therefore, I have developed the first section of my material on the question of whether we should see man—when I say man, I mean women here, too, that is, the working person—as an asset to our society and to the industrial enterprise, or whether man is just merely an expense and not an investment.

Being a financial man, I have come from the public accounting community, the financial community, and the industrial community,

[1] See page 196.

and it is rather interesting to me that the historic perspective of man in this environment is as an expense. We charge him off to the profit and loss, and the earnings per share of the corporation, and we really don't consider that he is an asset or an investment to any large degree. This is very startling to me because other resources, such as capital, such as facilities, and such as equipment, we don't treat that way at all. We consider they are assets. Yet, they are passive assets and they don't "do" anything of themselves. It is man that is the dynamic catalyst in this whole equation.

You take, in public accounting philosophy, a building or a piece of equipment and you elect an arbitrary life such as 10 years for a piece of machinery, or 30 years for a building, and then you charge off that investment to your operating expenses and your costs over that period of time. But there is nothing that says that when that period of time is over that you immediately discard that asset, that you say that that investment is no longer of any value to you, or to the corporation, or to society at large. Actually, fully depreciated assets are frequently in use. I think that you could go to any plant in the United States and you would find something that has outlived this defined chronological timeframe.

Senator CHURCH. My two automobiles would qualify.

Mr. BABSON. Right, but why shouldn't we consider that a working person is really the same kind of a thing? Why do we have to say that when he reaches a chronological point of time that he has no further contribution either to his company or to society? I personally reject that philosphy, and as you will see in the latter part of my statement, I am arguing that we should abandon the concept of mandatory retirement. I don't think it has a place in our society. I think the concept of people as a resource in our society is a fundamental philosophy that we should reexamine currently and establish positively.

INDIRECT PEOPLE COSTS

The second point that I wish to make in my text is that indirect people costs are kind of sneaky and they have been rising quite rapidly over the past generation. By indirect people costs, I mean other than direct salary and wages. It is interesting to note that from 1930 to the current day, they have increased over 10 times, that is a tenfold increase, and that is because they started from the very low base. But even when I wrote my book, 5 years ago, they were 30 cents on the payroll dollar at that time, and when you consider that the payroll dollar itself over the last generation, and even currently, is rising very rapidly, you can see that an indirect people cost increase of tenfold on a rising payroll base is an enormous geometric progression. Pensions and retirement cost are, of course, a fundamental cornerstone of that increase. There are other indirect people costs that I think are just as alarming and should be examined.

Senator CHURCH. Would you mention them?

Mr. BABSON. Well, certainly the trend toward more vacations, the trend toward more holidays, the trend toward a shorter workweek. Even within the last week, since I submitted my statement, there was a major article in the Wall Street Journal on some study that has been done by a Mid Western consulting firm that indicates that within 10 years the 32-hour workweek will be the norm. Whether that is true or not remains to be seen, but there is all of this trend for giving people more time off with pay, in other words, paying for more nonproduction.

I think this is a very worrisome thing, and something that we should be alarmed about as a society, becaues there seems to be a need and a pressure for what I call "the onward and upward society"—more time off with the same pay, higher retirement pay, early retirement, etcetera, and I think that one study that this committee should undertake is to understand why this need psychologically arises.

Is there some inequity? Is there a real need for people to work less time and get paid for nonwork? I don't know the answer to that, but I think it is a fundamental psychological study which should be made made so that we understand the motivation for people working and nonworking.

The third point that I think is important and really fundamental——

Senator CHURCH. May I just say that as the burden of cost connected with nonproductivity increases, it could reach a poing where the economy itself is no longer competitive, then living standards for everyone begin to decline. Isn't that true?

Mr. BABSON. Yes, sir; I believe that is true.

Senator CHURCH. Prior to that point in time, I cannot tell you when that point of time will be reached, or if it will be reached, but from an industrial standpoint, what would industry do toward this problem?

Mr. BABSON. Well, one thing you do of course, is to go toward increased automation. To replace man, who has become too expensive an asset or a cost to the company, so that to protect your earnings per share, you go toward increased automation and reduced labor intensive activity. You try to reduce the labor intensive nature of your business to get away from this high pressure and this onward pressure. That is one thing you do.

Another thing you do is go to other countries. That is one thing that multinationals have done. It is not the only reason they go across, however. For the last 2½ years I have been involved in international operations and there are some major advantages in doing just that. That opportunity will be closed in due course of time because all wages worldwide will be leveled up eventually, I am sure. So that is a short-term opportunity at best.

COSTS OF RISING LONGEVITY

The third point that I think is fundamental is that people are living longer. There is no question about this. Mr. Califano spoke the other day about this in his opening remarks. It has been well known from many sources that longevity is definitely increasing. Even in my own lifetime, the increase in longevity of males is 10 years at least. I believe this trend will continue. I don't believe that we have just reached the point where people will now stop increasing longevity. I am sure that the biomedical community can advise you on this more professionally.

A 10-year increase in longevity, as I attempted to show in my statement, in a very simple illustration, could triple your planned pension costs. One of the things, of course, historically, is that people generally were not expected to live past 65. Now that they are living in increasing numbers to 70, 75, 80, and 85—my own father is 88 and I hope he goes to 100—one of the things that is inherent in this is that this is escalating enormously the cost of retirement. It is rather odd

that there is a trend toward early retirement because this even further increases costs.

In my book 5 years ago, I calculated that, for certain planned assumptions which were realistic at the time, that a 5-year earlier retirement would increase your pension cost by 69 percent. Deferring the time by 5 years from 65 to 70 reduces your retirement cost by 45 percent, because your only have 55 percent as much to pay out. Now those figures obviously should be recalculated for the current variables now, but I am sure that the relationship would be similar, the same result would be presented to you. There is no question but that there is an enormous difference between having people try to retire at 60 or even 55, than retire at 70 or 75.

Senator CHURCH. This fact we know arises from the economic consequences of the needs of our society and the greater emphasis on increasing employment opportunities. The Government has long engaged in the practice of encouraging employees to retire early in order to reduce personnel on the payroll and to increase job opportunities, as a savings in unemployment costs, whereas in proof, such actions in reality, increase the total overall cost to the Government.

Mr. BABSON. Yes, I can understand why the Government, from a public policy standpoint, would be interested in encouraging earlier retirement, because you are concerned about overall unemployment in the United States. That is not the same motivation that private industry has. As a company executive, I have no interest in how long a line is standing outside the door, I don't feel I have any mission to just create jobs for people that are unemployed.

Senator CHURCH. If that line gets too long, will they break down the door?

Mr. BABSON. That may be true. But nonetheless, as a corporate executive, I'm more concerned with doing a good job with those that are already inside the door. I think this is a fundamental difference.

THE INFLATION FACTOR

Also, the effect of inflation after retirement is an additional factor. It is not surprising to realize that in the private pension plan sector it is not a very popular or widespread feature to see cost-of-living clauses in post-retirement benefits for retirees because the cost represents a significant increase. Further, just as a rule of thumb, the information that I have is that a 1-percent average annual inflation rate will create about an 8-percent increase in pension plan costs, given everything else is the same. If you translated this to a 5-percent average inflation factor, assuming that you could control inflation to 5 percent, this would further increase your pension retirement cost by about 40 percent, probably.

Senator CHURCH. Now 40 percent over the entire period of retirement?

Mr. BABSON. Right.

Senator CHURCH. On the other hand, if you don't have such provisions in a retirement benefit and inflation continues——

Mr. BABSON. Well, you erode the effective purchasing power of retirement benefits.

Senator CHURCH. Then you pauperize those that are retired over a period of time.

Mr. BABSON. Yes. But to build in a cost-of-living escalator, this could translate itself into probably something like 4 cents additional indirect cost per payroll dollar of working persons, just as a quick simple rule of thumb. This should be calculated out, but that would be my guess.

Well, what is a proper balance? I think one of the fundamental questions for the committee is, What is the proper balance between working life and nonworking life? If it is to start into the workstream at age 25 and work to 65, that is 40 years, but if it is to work until maybe 60 or 55, and then live in retirement for 5, 10, 15, 20, 25 years, would it not get kind of silly if we spent more time in a retirement mode than in a productive work mode? That does not make sense to me at all.

Senator CHURCH. Do you know what the average retirement age of the Federal employee is today?

Mr. BABSON. I don't know.

Senator CHURCH. It is 58.3 years.

Mr. BABSON. If they are really in retirement. But as we heard in our earlier dialog, this is not often the case.

Senator CHURCH. Many of them are not.

Mr. BABSON. Many of them are not, so they are going on to other forms of production of income, which should be considered in your overall retirement philosophy, in my opinion.

So I think we have a fundamental question of just how much "nonwork" can a society support. I like to refer to the concept of "a drone society," which is likened to the hive of bees, where you have a group of workers and a group of drones—drones don't do any work, they don't bring in any honey, they just "consume" and have "fun and games" with the queen. That may be the sort of society we are building in the United States.

Senator CHURCH. You mean the drones are sort of the queen's court?

Mr. BABSON. Yes.

Senator CHURCH. How do bees work this out?

Mr. BABSON. I think when they get too many drones in the hive they get rid of them. The hive can't support them.

Senator CHURCH. Do you know what the proportion is?

Mr. BABSON. No, I don't.

Senator CHURCH. We might get some informtion on this.

Mr. BABSON. Yes, but I don't know this.

Going on to the next idea, what is a proper retirement benefit? I am sure you are aware of the fact that there is a big difference, even in the private sector, of what different companies have. Bankers Trust puts out a survey of corporate pension plans, which shows you when you look at it, that there is a wide disparity in features between corporations. By feature, I mean, what is popular in industry today. So there is no norm for any such thing as a standard set of features.

There is an even bigger difference between the private and public sector, a startling difference to me. I don't know much about the private sector, but in the public sector, from what I have read and heard, I think that it is not uncommon to find in the Federal sector, and a lot of State and municipal sectors, that you could work for full retirement pay in maybe 30 years. I had thought that it was full retirement pay,

not 56 percent that I heard from Mr. Campbell and his associate earlier today. I don't know what the facts are, but in industry, if I had to say what could be termed as the norm—and again I have a caveat on that, there is no such thing as a norm—but this could mean probably 1½ percent of final compensation, or final average compensation, per year of service, which means that if you have 40 years of service, that you have 60 percent of final average pay for a retirement income.

Senator CHURCH. In the Federal retirement, I believe that is 2½ percent a year. So it varies.

Mr. BABSON. There is a difference.

Senator CHURCH. A big difference.

Mr. BABSON. It is a significant difference. Now one of the things I feel, as a taxpayer, one that really bothers me, is to realize that there are some sectors like the armed services, where you can work only 20 years and get full retirement pay, and then shortly before you retire, I understand you can "take care of Joe" who is a nice guy, boost him up to lieutenant colonel, and have his retirement pay based on this late promotion to a job which he never earned. That is an abuse of our retirement funds, but I am sure there are many such abuses, both in the private sector and in the public sector.

WHAT IS PURPOSE OF PENSION BENEFIT?

One of the things that I urge this committee to do, and I think that there is a serious need for, is define the logic of a pension benefit. What are we trying to accomplish? What is our social philosophy? What do we expect a working man or woman to do for society, and what do we expect society to do for them, in terms of retirement compensation? What can our society afford?

I think that for a government that is committed to removing discrimination in all areas of our society, that you should address yourself to understanding the forms of discrimination in our own retirement system. To me, it is discriminatory for one man to work 20 years and another man to work 40 years for his retirement benefit.

It is discriminatory for a man to get at retirement 100 percent of his final pay to retire on and another to get only 60 percent of his pay. Then, of course, it is discriminatory to have one man have a protection against future inflation and another not to. So I think that there is a wide area of discrimination that I suggest that this committee look at and consider as part of its investigation.

The importance of cost controls. As a financial executive, I am well aware of the fact that there must be an incentive to control costs and abuses and there must also be productivity of the funds that you are using for retirement. In industry, the chief financial officer most likely is the man who is worried about this because he is trying to control and protect earnings-per-share performance. That is the code that the corporation in the industrial area lives by, and when retirement costs go up, the monkey is on his back to do something about it, and he will analyze different alternatives and options and ways of reducing that cost.

Senator CHURCH. May I just insert here, in order to correct the record, that under the Federal system there is a difference between the executive branch and the congressional branch. The congressional branch accrues a pension at 2½, percent a year, perhaps on the theory

that life is very chancy for a Congressman. In the executive branch, where there is greater security, the percentage is different. For the first 5 years, the retirement is computed on the basis of 1½ percent a year; for the second 5 years, on the basis of 1¾ percent per year; and from the 11th year and beyond, on the basis of 2 percent a year.

Mr. BABSON. I think that there needs to be a serious incentive to control costs. I am not sure how this is accomplished in the public sector. I am sure how it is done in the private sector, because I have been engaged in this in a variety of companies over the last 25 years.

I also worry, as an individual, about Government distributions, because I have a feeling that they are psychologically perceived to be "free money." Somehow the Government is considered to be a money tree to be pruned by the opportunistic. I see cases of this in my own experience, and I am sure that you have many, many illustrations brought to your attention of the same thing. I feel that this is a very difficult problem, not just from an economic standpoint and a cost-containment standpoint, but from a moral and psychological standpoint as well, because I think that to the extent that the Government is in the "dole business" and is perceived to be in the "dole business" as opposed to redressing grievances and abuses, why you may run a serious risk of eroding the national morality and work ethic.

Should retirement be mandatory? There is no question that we are healthier and younger at age 65 today than we were 50 years ago. This has been amply documented. It has been referred to in the dialog surrounding your recent legislation, and there is no point of my dwelling on this discussion. I have covered it in my prepared statement.

If people wish to work, I think that, in my view, it is better to pay them for work than to pay them for nonwork if you adopt a social philosophy that you are going to support a certain level of income for members of your society. I also feel that there is an important psychological and moral aspect to having a person work for his or her retirement and for his or her pay, rather than receiving it for not working. I would not overlook this aspect of the problem.

Many retirees, even now, I am sure, seek postretirement employment. I don't know what studies have been made of just how extensive this is, but I think that it is worth studying. I think we should study the purpose of retirement and what are we trying to accomplish, and why do people want to retire. Are they tired? Are they bored? Do they want to go off and have merely enjoyment of leisure? What do they want to do? I don't know the answer to that, but I think it is a fundamental question for this group to study the motivation of retirement itself.

WHY "ALL OR NOTHING"?

I think that it is important that we define a more variable alternative to an "all or nothing," "jump off the cliff," or "dump him on a trashpile" approach to when a man or woman reaches a chronical age in time. I don't think there is any purpose to be served by mandatory retirement. I reject the concept that there is no economic contribution to society or to a company that can be made by such a person on some basis. Therefore, my personal view is that we should totally eliminate the mandatory feature in any consideration of retirement philosophy, public or private.

The role of the Federal Government in retirement. I think the Federal Government is in the best position to understand the problem as it relates to all sectors of society, both public and private, and the need for planning and protection. I think the Government should develop the social philosophy that we want to accomplish, the strategic plans, and define the minimum specifications for retirement benefits, and perhaps even the maximum, too. I think some thought should be given to that.

I think the Government should see that all plans are adequately funded, that abuses are controlled. I think you should police implementation and reduce discrimination among the various sectors of our society. I personally believe in complete portability of pension contributions wherever sourced, from the cradle to the grave. That is not what we have in this country now. I think it is one of our key pension abuses and one that your legislation a few years back was designed to try in part, to correct.

I would go much further than that legislation. I see no reason why the people in our society should not earn their own retirement pay as they go along, and have it funded adequately and set aside for them. There are lots of techniques for doing this in both the public and private sectors. I would urge that all pension retirement contributions should be moved from company to company, for an employee, through his productive life cycle, no matter how many companies he works for.

Senator CHURCH. To what extent has this been accomplished by the legislation that is passed?

Mr. BABSON. Well, I don't think that the legislation has gone that far toward it. I think you have gotten a minimum. For instance, if I were a 27-year-old worker now, I could work for 9 years under your legislation, if I am correct, and still have earned no pension benefit at all right now, under your present legislation. This should be verified, but I believe that is true.

Senator CHURCH. And in a private plan?

Mr. BABSON. In a private plan, I believe that it is still an area of abuse and that pension contributions in industry that are being set aside for an employee should follow him throughout his entire working career. Therefore, if you do that and an employee works for 40 or 50 years, he, together with his various companies, through mutual contributions of varying degrees, will have paid for his retirement benefit, and then you won't have the bind that you have now. I really urge that we move in that direction, both in the private sector and in the public sector, on a going forward basis and figure it out separately, as far as past service funding is concerned.

Senator CHURCH. Of course, with the social security coverage today extending to nearly all of our workers, that problem is mitigated to some degree. Practically everybody is covered by social security as they move from one job to another. So this really is a problem that is within the private pension system.

Mr. BABSON. Well, I partially agree, but I think that you should reflect on the redundancy I suggest in my statement. Actually, since I wrote the statement, it occurred to me since then that really, when you originally set up social security, there were no defined retirement goals, objectives, or philosophies, and there was no regulation or control of the private sector at all, such as you have now taken great steps to move into recently.

Public and Private Redundancy

Having gone now into the private sector in defining what they must do and the minimum specifications, et cetera, to the extent that you have, it seems to me that administratively you have a partial redundancy between social security and private pension plans and that it may be more efficient to give corporations the option of merging these funding vehicles into one scheme so that you don't have two plans for the same employee. You have one, that is, either all private or all public, and then roll over that pension plan to the next corporation or to a centralized Federal pool of retirement funds.

There are a lot of choices that you could elect there, but I think some consideration of this redundancy should be examined from an efficiency standpoint.

Skipping on, because I realize we are running short of time, I have said something in my prepared presentation about the philosophy of setting aside, through a worker's productive life, a pension contribution for him which is really a mechanism for letting his company and he himself earn the pension benefit as he goes along through life. To me, I favor that philosophy. However you fund it, I still favor the philosophy of having an employee earn his level of pension benefit by work and by the attainment of the degree of skill that he has achieved. But I think that there should be minimum benefit, and one prescribed by Federal legislation.

I favor that approach as opposed to the public approach of what I call the "giant kiting operation," where currently you are taking from Peter to pay Paul, because there has been an inadequate sum set aside in the social security pool. But some day Joe Zilch, whom you are going to have to take money from 20, 30, 40, 50 years from now to pay for Peter's retirement, Joe Zilch may not be around or resist paying, and you will get stuck. I don't think that the Peters in this country realize this currently to a very widespread degree, and I don't think it is as sound a device as the earlier suggestion that I have made, which is used fundamentally in the private sector.

I realize it is an enormous task of getting over to that kind of a program in the public sector, and in some cases even in the private sector. I suggest, however, that we could do this over the next generation or so to cover the past sins and to consider the immediate possibility of starting this.

Dependency ratio, I don't think there is any need to discuss this here, I have covered it in the prepared statement. If you want to go into it, we can.

I have already discussed the elimination of the impact of mandatory retirement on private pension plans. Well, as Mr. Campbell, said I really don't see the problem. It has been my experience that the people who are reaching 65, when mandatory retirement was 65, who did not want to retire and who had a critical problem, there was usually a provision in the pension plans of private companies that if such an employee had a hardship case, that the board of directors of the corporation would consent to a relaxation of the rules for that employee. That has been my experience in the companies that I have worked with. Whether that is widespread or not, I cannot tell you, but I really don't think it is going to be a significant problem eliminating the mandatory feature entirely.

Senator CHURCH. All of the testimony we have had so far seems to agree that the legislation to increase the mandatory retirement age from 65 to 70 will not make much difference immediately in terms of employment decisions by workers. It appears that you approve of this legislation. We would like to see mandatory retirement eliminated entirely. In fact, it has been for most of the Federal employees. But do you think raising the mandatory retirement age is going to make much difference?

Mr. BABSON. I don't think so.

Senator CHURCH. With respect to the trend toward earlier retirement, and so forth, the impact of the law may be very minor in actuality.

Mr. BABSON. That is not the fundamental problem. Eliminating mandatory retirement really is de minimis, it really does not affect that many people. Certainly, if a person wants to work after 65 or even 70, I don't see how in good conscience we cannot let them work providing they can do so safely, and pay them a fair wage for whatever task they perform. But that is not really the fundamental problem. The problem is that people are not staying to 65, and they are not staying to 70, and I think it is important to understand why not, because if the reason why not is that we are creating too liberal a pension benefit and making it too attractive for them to retire, than I think we may be building a real problem for ourselves and our people down the road.

Senator CHURCH. Although we have seen some cases where people have managed to add one pension onto another and retire under even more favorable circumstances than when they were still working, those are exceptional cases. They certainly don't represent the typical case by any means. Typically, I think we were told on Monday that social security replaces, on the average, about 47 percent of a worker's prior wage.

REASONS FOR RETIREMENT

If 47 percent is typical of the average of retirement income, as compared to working, then I would not think that it is because we are overpaying retired people on the whole, which leads them to want to retire early. My guess is that they don't find their work sufficiently compelling. Look at professional people and some people who find their work sufficiently rewarding. They frequently will work to advanced ages without retiring at all. We have many, many people who will do that, and I think it has more to do with the nature of the work and the sense of fulfillment. If people have engaged in work that they like, this is an incentive to continue working or, in the opposite case, to retire early.

Mr. BABSON. Well, I think it is a very important point. I don't know how you reassess retirement—social philosophy, economically or otherwise—in the United States without having some kind of a study and understanding why people are retiring earlier. What are they doing and why are they doing it? I think to the extent there are no serious studies, it should be studied.

Senator CHURCH. We should look into that, I agree with you.

I am sorry to say there is a rollcall vote, and I must go soon. I wonder if you could sum up in a minute or two, because you are close to the end of your paper.

Mr. BABSON. All right. There are a few suggested possible approaches to the economic use of an aging working population, as I have suggested here in my report, to give more flexibility and more options to them after they reach, let's say, a trigger date, that could be whatever date is reasonable. They could either take earlier retirement at reduced benefits, continue working full time as long as they wished to, and can do so safely and productively, or to go into a manpower pool of part-time semiretirees, because they could serve a very useful function to the corporation that has a need for sporadic help outside and can use the help of its own retirees for that, and also eliminate lots of temporary overtime which is expensive, so there must be some usefulness in that.

Preretirement counseling. I believe this is going to become a substantial increased activity of industrial relations departments in the future.

I see no reason why we cannot develop the psychology and philosophy of downgrading an employee after he has reached a certain period of time, just like a product has a life cycle that rises and later declines. I don't see any reason why a person cannot do the same. It is surely an emotional problem. If you eliminate the personal stigma of John Jones taking a lesser job in the organization, then you can accomplish a useful and productive value to the corporation, to the society, and to the individual. We have got to get away from the personal stigma, and I think this can be achieved through a psychological campaign that begins when he joins the company, knowing that this is one of the options that will be available to him upon retirement at a certain age.

DANISH "DECRUITMENT"

There is no question in my mind but that this should be considered. There are people in Denmark that are doing this. In my prepared statement, I didn't refer to an illustration of a big company in Denmark where 70 percent of the executives and managers over the age of 50 indicated that they would prefer downgrading to retirement, and that some of them expected to even work past the age of 80. This is referred to as "decruitment," and it is working in Denmark. I think it is an interesting experiment. Certainly there ought to be encouragement for a lot of experimentation of this kind here in the United States, and I am sure it will happen.

[The prepared statement of Mr. Babson follows:]

PREPARED STATEMENT OF STANLEY M. BABSON, JR.

Senator Church, associated senators on the Special Committee on Aging, and members of your staff, I would like to thank you for the honor allowed me in being invited to present before you my ideas and thoughts on the subject of retirement trends and related costs thereof.

I must advise you, however, that I cannot claim to represent any particular group, industry, association, or even company and that my presence here is merely as an interested citizen, a financial executive who has been chief financial officer of small, medium, and large corporations over the past 25 years and, hence, exposed to the topic under consideration by this committee in a number of different circumstances, but always from the perspective of a financial officer of an industrial enterprise. I, therefore, cannot claim to be any sort of expert in this field of your investigation only an active and mature participant whose personal experience, personal curiosity and inclination may perhaps have developed some

thoughtful reflections on this subject that are worthy of consideration. The ideas and observations that I will express in summary form herewith are largely drawn from my book, "Fringe Benefits, the Depreciation, Obsolescence and Transcience of Man," published by John Wiley and Sons in 1974. Some material from this book, together with supplementary comments I have furnished the authors in a taped discussion, were also included among the material published in 1977 by Dr. Harold L. Sheppard and Sara E. Rix, under the title of "The Graying of Working America."

THE OBJECTIVE OF THIS TESTIMONY

As I understand the purpose of this hearing, it is to bring into focus, from a variety of perspectives, what is happening currently in the United States regarding the trends of aging, retirement, and employment opportunities for the aged, together with the economic consequences of such trends, whether funded privately, or publicly or both.

This is a highly complicated subject matter, as I am sure that you are well aware, and a highly ambitious undertaking, but one I believe of overwhelming social as well as economic significance, and I certainly congratulate you on recognizing the need for such a current reassessment and starting this present dialog.

The particular objective of an initial meeting of this sort can only be to pose the issues, hopefully to identify most of the larger ones, and to begin to suggest ways to develop possible alternative solutions.

My own role in such an initial meeting can only be to present to you such issues, observations, and cost indications as would represent the perspective and interest of the financial executive of an industrial corporation.

Simplistically, the perspective of the financial executive of an industrial corporation relates to: (1) Strategies for increasing the revenues; (2) strategies for containing or reducing costs; (3) strategies for improving productivity and return on assets.

In this connection, I would try to generalize by characterizing the historic perspective of the financial executive as it relates to retirement and pensions as follows: (1) Compliance with the law; (2) reasonably equated with competitive practices in industry, particularly within a given regional area; (3) minimum cost to the company and minimum impact on current earnings per share, compatible with acceptable union/employee relations.

POSING THE ISSUES

1. Is working man an asset or a cost?

Accountants generally think of man in terms of cost, that is, an overhead expense, a charge against operations, a committed cost only relieved by "bodies out the door." This does not apply to direct factory labor, which is productive and, hence, may temporarily be deferred from the inevitable charge against income by being in the transitional stage we call "inventories."

It seems strange that we are accustomed to think of man in such terms rather than as another form of asset available to the industrial enterprise. Capital is unquestioned in its role as a necessary and fundamental resource and asset. Equipment likewise, and facilities, are readily accepted as "assets" for the benefit not merely of the present, but for a stream of future years and to be charged off to expense over such a future period of productive usefulness.

But what of man? Is he not also a valuable and necessary tool of production, as equally important to the corporation as capital and equipment?

Capital and equipment, to the industrial enterprise, are "passive assets," requiring man to translate them into effective earning power. Man, therefore, is the dynamic catalyst in the equation, but strangely enough, man in our current financial and accounting philosophies, is considered as an element of cost, either direct cost or indirect cost, ignominously assigned the demeaning term of "burden" and very rarely perceived as an asset to the corporation.

Also frequently ignored is the extent of the investment that corporations make in an employee. It costs to attract him, to recruit him, sometimes to relocate him, to train him, to maximize his productivity and momentum, and finally to terminate him.

All too often, these peripheral costs are lost sight of and superficial decisions can be made as to the temporary advantage to the corporation of an employee severance motivated by cost reduction per se.

This philosophy of man as a cost rather than an asset is particularly fundamental as it bears on the issue of retirement and early retirement.

With a piece of machinery, the proper and accepted financial strategy is to write off the cost over its estimated useful productive life. This is certainly proper in the view of the public accountants and also the IRS, the only difference being that they bicker frequently on the definition of acceptable useful life. But how often do you find in industry a piece of machinery that has been fully depreciated but still in use and still being productive to the industrial enterprise? Quite often, I think. There is no requirement that a piece of machinery is disposed of when its depreciation schedule runs out, no mandate that you vacate a building when it becomes fully depreciated per the generally accepted financial norms. So, why then push man out the door when he reaches a similar arbitrarily defined chronological point? Has his usefulness to the corporation suddenly disappeared from one day to the next? Is there nothing further that he can do? Is there no residual asset power remaining, even if of marginal benefit?

Logic would compel us to realize that this is an indefensible reasoning, I feel sure. And yet, this is perhaps one of the key issues to be considered by this committee, i.e., the concept of mandatory retirement itself. Mandatory retirement at any arbitrarily defined age, implies that the investment value of man is finished and there is no further productive contribution that is worth considering. I, personally, reject this concept.

2. Man's indirect costs are rising rapidly and are often not clearly perceived

There is no need to comment on the rise of direct wages and salaries over the past generation or so. This has been widely documented and is certainly well known. Perhaps somewhat less known, however, has been the "sleeper effect" rise of indirect costs, i.e., fringe benefits. As a percent of payroll, the more prominent and identified of such costs (as measured and reported) have risen from approximately 3 percent of payroll in 1930 to what in undoubtedly over 30 percent of payroll currently, a tenfold increase in ratio on a payroll basis that has itself had a major growth trend over the same period of time, creating in effect a geometric progression of cost increases and one that I feel is accelerating. Also, I am sure that the reported fringes fall short of what the real costs of such indirect items are, if everything were properly captured and identified.

Is this something to be alarmed about? Yes, in my opinion, surely. Firstly, because I believe the trend will continue. See now the social benefits of some of our European neighbors which are even more pronounced than ours here in the United States. Certainly, the tendency will be to continue in the "onward and upward society" that we seem to be in.

This trend, coupled with a continuation of spiraling salary and wage rates will keep raising the price tag for man as a resource. Industry, to protect itself from the impact of this spiraling cost of man, can either go elsewhere, i.e., overseas, where such costs may not as yet have reached this level (but this is at best only a temporary solution and it carries with it a great many other collateral problems as well that serve to discourage this approach). Another avenue open to industry in the face of this trend is to seek increased use of automation and, hence, less dependence upon the quantities of manpower currently in use. This could lead us towards what I choose to call "the drone society," where productivity is placed more and more in the hands of fewer poeple using highly automated resources at their disposal and the function of the rest of the population, whether aged or young, is to be "nonworking," to "consume," not to produce. This, I suspect, be where we're headed.

A second concern here is the "motivation" of why these extra fringes are needed and demanded. Is it because there is a fundamental need, or because in the gamesmanship of labor versus management negotiation, you have to "win something" in order to maintain status. This to me is an important point. Is there really a fundamental need for the extra holiday, the third week's vacation, the 32-hour work week, the dental insurance plan, etc., the provisions for early retirement, and for a higher level of retirement pay? What is the motivation that drives us in this direction? Is it some inequity that needs redressing? What is it? To the extent that these motivations have not been thoroughly studied, I believe that such a study is needed.

3. The economics of retirement, as it has been historically defined, are dramatically escalating

Retirement economics are really quite a complicated subject and there is much available literature and expertise on the matter. In order to pose the issue, however, let me be somewhat simplistic by saying that the logic, generally, is that a

man will enter the work force, let us say at age 25, work 40 years to retirement at 65 and then have, from a combination of public and private sector pension funding, an annual annuity for life equivalent to perhaps 60 percent of his final 5-year average pay—again, I repeat, this is simplistic and there are many variations of this logic, but it serves the purpose of the discussion to use one particular set of circumstances.

This implies a defined period of productivity of 40 years. If final average salary at that time is $20,000 per annum, it means that an annual annuity of $12,000 per year for life must be provided. This sum of money presumably is to be provided over the span of 40 years of productivity so the cost per year translates down to a certain annual charge against corporate earnings. If the employee retires at 65 and lives to 70, 5 years of annuity must be provided by the pension benefit, i.e., $60,000. If he lives to 80, then an additional $120,000 for a total of $180,000 must be provided, and if he lives beyond this, even more. Thus, it can be seen that a 10-year increase in longevity can, in effect, triple the expected cost of retirement. Multiply this by the aggregate working population, and it can be seen that the longevity of our working population can be a very fundamental and dynamic cost to the industrial enterprise, directly and, hence, to society indirectly.

If an employee wishes to retire at 60 instead of a 65, without sacrifice to the level of retirement pay, then all of these costs, such as they are, must be provided over the shorter period of productive life.

The economics of this simplistic illustration are, in reality, horrendous and place what could be an extraordinary burden upon the industrial enterprise, and again, indirectly on the economic society at large, because any and all costs to the individual enterprise get passed on in time to the society within which it operates.

It is already well established that life expectancy in the United States is increasing, both for males and females. I personally believe this trend will further continue, but this I'm sure will be documented from the testimony of the biomedical community to this committee. I believe that it is important for us to forecast what further longevity is probable over the next 50 years because this bears significantly upon future costs.

A further major factor affecting future retirement costs is the matter of inflation.

To build protection from future inflation into the pension benefit even further enlarges retirement cost by astronomical proportions and it is hard to doubt that future inflation will occur and perhaps even be as significant, or more significant, than it has been in the past.

And lastly, to contemplate a widespread social desire for earlier retirement and a motivation to enter the "drone society" and be a consumer rather than a producer, leads to further cost aggravation.

Can our economic society stand such costs? As a financial executive, I for one, am deeply concerned about this.

4. What is a proper retirement benefit?

The Federal Government has, for some time now, taken upon itself the role of defining "a minimum age," leaving the economic society the freedom to enlarge upon this at its own discretion, but providing, nevertheless, "a floor."

It is somewhat disturbing to me that there can exist such wide discrepancies in the United States in the "logic" of a defined pension benefit. I am sure that pension plan professionals can give you elaborate testimony on this subject, both in the public and private sector, but I do believe the wide divergence of such plans cannot be overlooked. There are elements in the municipal and Federal government sectors that define such liberal pension benefits as to make the industrial sector look sick. Dr. Harold L. Sheppard has touched on this in his book, "The Graying of Working America."

But if society at large, one way or another, really "picks up the tab" for both industrial, municipal, and Federal pension costs, then it does become pertinent to examine why such a divergence exists, and is there real justification for it. To do this, there must first be developed a philosophy on man's role in terms of a productive contribution to society, and society's role in turn in providing him with a suitable retirement benefit when he is phased out of the productive mode.

I must say, as a private citizen and taxpayer, that it is anathema to me to be "ripped off" by some elements of our society that one way or another enjoy a totally unrealistic retirement benefit, totally out of context with a reasonable correlation to their productive contribution to society. For a government that is committed to eliminating discrimination among its citizenry, how can we justify one man working 20 years for his pension benefits and another working 40 years? How can be justify one man receiving a pension of 60 percent of final pay and

another receiving over 100 percent. And one man having protection against future inflation, and another not? Or, a man being promoted just prior to retirement to a higher position and salary level so that his future stream of retirement benefits will be based on the higher level . . . a level he never really earned at all? All of this makes no sense to me at all.

In short, I think the Federal Government, and this committee, may well serve a useful purpose in attempting to define a "logic" for a norm in pension benefits. Again, freedom to enlarge upon this within reason can and should be left to any given institution, to fit any given local circumstance, but the norm should be defined as a guideline at least.

5. The importance of cost control—fringe benefits derived directly from the Government, or similar institutions, are perceived to be "free money"

While this is a somewhat provocative statement, I think, nevertheless, it has some pertinence and I personally believe it to have some validity. I think there is a corrollary that the farther removed from the source of money you are, the more you feel that it is "impersonal money"—"a free-bee," "up for grabs," and something that's "fair game to pluck" and take as much as you can get away with. Abuses of many of our social benefits are apparent and I am sure that the correction of such absues is administratively difficult and politically unpopular However, in assessing the burden of pension costs and other social benefits in a society that is aging, the problem of abuse of those benefits becomes even more critical as burden is borne by fewer productive shoulders.

The problem with social benefits management is that there must be an incentive to control costs. In industry, the incentive falls with the financial executive who is oftentimes straining to protect or improve earnings per share performance for his corporation. Benefit cost controls become of vital interest to him in this perspective. I'm afraid that no such incentive or motivation exists for government-managed programs and perhaps even for institutionally managed programs like insurance companies and health agencies, where their rates are really geared to a "cost-plus" concept and high cost basis may mean higher administration pools of money available for them, etc. To the extent that public sector institutions are involved in the direct distribution of cost benefits to our citizens, I believe the matter of how best to establish incentives for effective cost control should be seriously reexamined. Federal cash distributions, must be directed towards redressing real misfortunes and not perceived as a money tree to be harvested by opportunists.

6. Should retirement be mandatory?

At what point does a man become unproductive from a working viewpoint, and do all men reach the same point at the same time, and does this mean that there is no further economic contribution that a person can make after such a point is reached?

I would be surprised if your biomedical witnesses did not advise you that it is difficult, if not impossible, to name a chronological date, that would have general applicability, where all workers could be realistically declared to be at the end of productivity. Where the age of 65 might have been such a possible date many, many years ago, it certainly does not apply in today's health-care-oriented world. The general physical well-being of persons aged 65 as a group is certainly far superior to what it would have been for a comparable group 50 years ago. No doubt about it, persons aged 65 are, as a class, much younger than a generation or two ago.

Moreover, it should be obvious that some persons age faster than others and whereas one man at a given age may be considered physically ready for retirement, another may be full of physical and mental capability and ready to go on for some time. Should this man (and society) be penalized by the application of an arbitrary norm?

And what about persons who do retire; is there no further contribution they can make towards productivity? The answer is most certainly—"of course there is," and a great many retirees, even now, seek and find other productive occupations and turn away from the concept of vegetating in leisure activities.

All of these observations are familiar to you and were alluded to in the text of the Age Discrimination in Employment Act Amendments of 1978.

Perhaps it would be useful to extend your dialog into this question to reexamine the purpose of retirement.

What is the purpose of retirement anyway? Is it a device to get rid of someone who is in the way, or a device designed to allow someone who wishes to step aside from productivity the opportunity to do so, or to change his lifelong pursuit of livelihood without income penalty. I, personally, favor the latter purpose—and yet, even under this definition, retirement shouldn't be an "all or nothing" choice—either 100 percent work or no work at all. There is no reason why aging persons, who wish to, shouldn't be allowed to scale down their participation over a period of years, with direct compensation reduced accordingly. Perhaps as direct compensation is reduced, such supplemental pay as is needed could be withdrawn from a "semiretirement fund," short of full pension pay. This is a possible approach which could be discussed under "possible solutions."

I think it would be important to study and learn an employee's motives for retirement. Is he tired? If so, why not scale down by degrees instead of all or nothing; it is certainly a cheaper approach than full-scale retirement. Is he bored? If so, why not a new assignment after a certain number of years? Isn't it conceivable that a person could be recycled into another type of activity entirely? If wage level is a barrier, let the new wage apply and again draw down a supplemental wage from a "semiretirement fund." Is he tired of work entirely and does he just want to go off and have a good time, i.e., join "the drone society" and goodbye to the establishemnt, etc.? This is his privilege, surely, but why should the rest of society make it overly easy for him to choose this path and leave us the burden of picking up the tab for its extra costs? There is no question but that a man who puts aside extra savings, or earns extra compensation, can certainly choose this path freely and without criticism. He is in effect paying out of his own savings the extra costs associated with this course of action. But this extra cost burden should not, and in the final analysis cannot, be placed upon society generally, in my opinion.

Another query for the sociologists associated with this project is not only to study the principle of retirement motivation, but also to study how much leisure can a retiree really enjoy. For example, in a working mode a man works, let us say, 220 days per year, which is 60 percent of his time, the remaining 40 percent being available, presumably, for leisure activities, if he so chooses. After retirement, the 60 percent disappears and it's 100 percent leisure activities. And for how many years—5, 10, 15, 20, 25, perhaps even longer in tomorrow's world?

Wouldn't it be silly if we structured our society that man spends as much time in retirement, living the leisure life as he does in his working career? Not only strange, but I doubt that our society can afford such a negative burden—this would truly be the creation of "the drone society" and would probably lead to decadence of our spiritual and moral will.

And, can a man really mentally and emotionally cope with such a large dose of leisure? I would tend to doubt it and would be interested in the response of psychiatrists and sociologists on this point.

It would be an interesting study to see what use, in fact, is made of the time of retirees? I would suspect that in a fair percentage of cases, supplemental part-time or perhaps even full-time employment may be happening. The facts of such a study should surely be developed and perhaps they could guide the restructuring of a sound retirement policy in the future for the United States.

7. What is the role of the Federal Government in retirement planning and funding?

The Federal Government, in my view, is in a unique position. First to understand the problem of retirement and the need for planning and protection as it applies broadly to all walks of life, all activities and industries throughout the United States, both in the public and private sector. This places the Federal Government, in my view, in the strategic planning role of defining the minimum (and perhaps maximum) parameters of what constitutes a suitable retirement benefit and how it will be funded and made available, as well as control of abuses and policing of implementation.

One of the big abuses of private pension plans in the past has been in the matter of vesting. Even though sums of money were, in fact, calculated and set aside for a given working man, if he failed to remain to full retirement with the company, certain of the sums, and on occasion perhaps even all of them, would be forefeited and he would not receive the pension for which he worked over those years. Congress has recognized this abuse and the need for portability in its recent legislation. It is my personal view that there should be 100 percent portability of pension benefits, either transferred from employer to employer, or from employer to central pool, managed by a separate Federal agency or private financial institution set up to administer such a fund.

In a society where productivity gains will become increasingly important to the trend of future standard of living levels, productivity of the use of money set aside to fund such a retirement pool is of major importance. Even as I demonstrated in my book, "Fringe Benefits," that within private financial insitutions there is very often considerable difference in the performance of the management of earnings of investment portfolio funds, the fund earnings bear significantly on the net costs of a given pension commitment to society. Therefore, productivity, or performance of fund management cannot be overlooked in this important issue.

As to the all important question of the role of the Federal Government in controlling the pool of pension funds, this question to me revolves around the issue of who can best control costs, who has the best incentive to eliminate abuses, and who can achieve the best productivity of the pool of funds without risk of the principal? Answers to these questions determine where the reservoir of pension funds should be placed.

8. Should retirement funds be funded currently or should public sector retirement provisions be made on a "pay as you go" basis?

One way to provide for a man's pension is to set aside a sum of money, actuarily determined each year that he works, put it in a retirement fund, invest it suitably and then when he retires he draws from this fund. In a sense, he, through his FICA payroll deductions, and his company (or series of companies) through their matching FICA payroll deductions and through their own additional private pension plan contributions, are buying his specific pension benefit. It is either properly funded or improperly funded, but nevertheless, it is funded and moneys are set aside for him and for his future use. If he dies before the norm, his excess funds are used by the fund to pay for the man who lives beyond the norm, etc.

Opposing this method, is the one currently used by the social security system which was never funded from the beginning and which apparently has never attempted to be. Current FICA contributions from one man and his employer are funnelled to the social security coffers where they are not set aside for this man at all but are spent on some other man long since retired for whom no such monies were put into the fund, or for whom inadequate sums were put in. One might say that we're robbing Peter to pay Paul—In fact, we are, and it'll all presumably turn out all right if tomorrow we can rob Joe Zilch to pay Peter. But if something "blows" in this whole process (likened to a giant kiting operation) and Joe Zilch doesn't put in or doesn't put in enough, Peter isn't going to get paid and somehow I don't think the Peters of this country are really aware of this nicety just now. Needless to say, I prefer the former approach.

An interesting observation in one of the studies illustrated in my book is the amount of retirement benefit that the combined employers' and employees' FICA contributions would provide upon retirement compared with the published benefit that a current 25-year-old working man has to look forward to from social security. The amount that would be provided in the private sector from the same source of funds would be almost double that indicated as the promised social security benefit.

If I were the 25-year-old worker and was aware of this, I might be tempted to say "why do I need social security then—I'm better off putting the same moneys into a private fund and forget about social security?"

This prompts me to raise the question "Is our social security vehicle obsolete and should it be junked and replaced by an entirely different mechanism?"

9. How important is a significant change in the dependency ratio?

In my view, the only reason why dependency ratio is important at all stems from the historic method of funding social security and other public sector retirement payments, i.e., what I describe as a gigantic "kiting system." Continuing down this same funding path will surely mean that the demographics of tomorrow will catch up with us via an increasingly burdensome dependency ratio.

The same would not be true under a fairly conventional private sector pension plan where, in essence, today's worker is having his retirement benefit put aside for him throughtout his working life. His retirement payments, therefor, represent a planned disbursement of his retirement fund itself and not a burden upon the then current work force that the worker has left. Under such a funding mechanism the size of the future work force vis-a-vis the size of the ranks of retirees has no pertinence. The only difficulty might be the solvency of the retirement fund itself through improper management or through inadequacy of planned retirement benefits in the face of future inflationary erosion of effective purchasing power.

This difference in funding approaches between public sector and private sector provision for retirement benefits seems irrevocably irreconcilable, but is it? Is it totally out of the question to compute what a proper fund should be to adequately provide future commitments of public sector social security and retirement plans and is it totally inconceivable that such funds could actually be set aside, either lump sum, or progressively over a period of the next 20 years or so, to the end result that at a certain future period of time all retirement funds, both public sector and private, would be in fact on one universal "funding as you work" system. At such a point of time, dependency ratio would be a meaningless and academic terminology.

An additional point in this regard is not to overlook the psychological and moral value of the concept that each person earns his own retirement pay. Not to equate more closely persons working for retirement benefits with the level and value of retirement benefits themselves is to me an error in strategy. The concept that society in general and the government specifically "owes me a living" is a very objectionable and debilitating concept to me.

10. What impact will elimination of mandatory retirement have upon the retirement plans and other fringe benefit plans of the industrial sector?

I certainly have no credentials to speak for the industrial sector at large, and as the Bankers Trust "Study of Corporate Pension Plans" shows, there is a fairly wide divergence of pension plan specifications within the industrial sector itself. Corporate pension plans are certainly not static things; in my experience it is a rare year when there is not some change that is made in a corporate pension plan, entirely apart from adjusting to governmental legislation requirements. Employee benefit plans, including pensions, represent a never-ending and almost restless dialog with employee interests and attitudes and this will not change, in my opinion.

Many pension plans have had a mandatory retirement provision in the past. In my personal experience, such provisions seemed more as guidelines than as arbitrary rules locked in concrete. It is frequently the practice that employees of retirement age who wish to continue working and have a hardship case to plead if retired, are frequently granted a deviation of retirement policy by action of the corporate board of directors. I don't know how widespread this practice is, but it certainly has been quite common in my own experience.

It is not the natural motivation of the industrial corporation in displacing a person who has reached retirement age merely to create a job opening for another person, currently unemployed and waiting for a job opportunity.

It may sometimes be the corporate view to replace a more expensive employee, who has had a series of wage progressions to the point where he or she is overpaid for a given job, with a younger, newer recruit who can start the wage progression cycle at a lower point and, hence, provide the corporation with a temporary (and probably deceptive) cost advantage.

It may also be to the corporate interest to have some mechanism to gracefully replace an executive-level employee who has reached a certain chronological milestone with a younger executive who needs advancement and the opportunity to assume greater responsibility. Rapidly growing corporations create such opportunities in the normal course of their growth, but corporations that are not growing so rapidly often do not create sufficient advancement opportunities to fulfill the needs of its cadre of up-and-coming young hopefuls. The result can be stagnation at the top of the corporate ladder and increasing transcience among the young hopefuls who get tired of waiting and flee to another corporate opportunity elsewhere. But this problem is an internal corporate one and does not belong to the legislative domain to seek a solution, in my opinion.

I don't believe that corporations in general feel any "mission" per se to create more jobs, reduce national unemployment, etc. Therefore, I, personally, do not see why the elimination of mandatory retirement at age 65, or even at age 70, should greatly change the corporate approach to retirement plans and/or other fringe benefit plans. I believe that industrial corporations will merely amend their plans to accommodate the new philosophy and proceed to adjust their own local personnel practices and strategies to best meet their own needs from an employee motivational and from a cost containment standpoint.

SOME POSSIBLE APPROACHES TO THE ECONOMIC USE OF AN AGING WORKING POPULATION

I have a great deal of respect for the resourcefulness of corporate institutions when confronted with the need to solve a given problem and I have no doubt that if Congress elected to eliminate the element of discrimination on the basis of age entirely, without reference to even a 70-year-old chronological benchmark, that our industrial institutions would find, in due time, innovative and resourceful ways of constructively meeting this new challenge. I feel certain that many are well along on this path even now. I feel that it is appropriate for the Federal Government to establish the social philosophy and leave the implementation and experimentation up to the private institutions themselves as how best to comply.

Here are some ideas that might form the basis of some experiments in this area:

(a) When employees reach an early retirement "trigger date," they may have the following options:

(1) Elect early retirement, at actuarially reduced benefits.

(2) Continue working full time in present job.

(3) Go into a manpower pool of part-time employees available for short-term assignments that would replace the use of outside temporary services and the use of overtime for present inside employees.

(4) Go on a progressive program of increasing time off, that grows each year. Employee would draw only basic wage for time worked and start to draw down partial retirement benefits for time not worked, to an agreed formula actuarially determined.

(b) Undoubtedly, preretirement counseling will become a much more significant activity of the industrial institutions in the future. An outgrowth of this could be a growing interest in and a need for "out-placement assistance" where corporate industrial relations departments work with aging employees on a planned basis to assist in defining lifestyle goals and objectives for the employee and in designing a personalized implementation program to assist the employee in phasing into his defined post-industrial role.

(c) Our corporate experience reminds us that many things have a life cycle, i.e., a demand curve that rises, peaks, and declines. Certainly industrial products have such a life cycle—and why not an individual worker? Why does the wage have to go constantly onwards and upwards? When a given worker is no longer worth the wage he is being paid, or is physically incapable of performing this job efficiently and safely, why must termination be the only answer? When the above have been assessed to be valid, why not offer the employee another, lesser job in the corporation, one with a lesser wage as well? If an employee would accept a downgrading assignment gracefully, isn't it to the corporation's interest to have him do so? I believe it is. It is only the matter of ego that is a deterrent to what could be a pragmatic solution.

It is interesting to note from an article appearing in the economy and business section of Time magazine in the May 15, 1978 issue, that in Denmark certain "decruitment" experiments are being tried out, in the recycling of older, middle, and top managers to lower level jobs after they reach the age of 60. This program, pioneered by Co-op Denmark, reflects a survey of Danish managers over 50 years of age, where 70 percent of such managers preferred downgrading to retirement. Some people in this program expect to work past the age of 80.

Certainly, some experimentation along these lines would be useful and should be encouraged in our own country.

(d) Public sector and governmental service types of assignments could and should be made increasingly available for aging citizens. The mobility factor associated with offering new productive activities to older citizens is certainly a problem area, because many older persons would be reluctant to uproot and move away from their sphere of familiarity. But there are many public sector services now being performed at the local level, and if the need were there to capitalize on a mature and capable local resource like our aging retirees from the private sector, I feel sure there are even more public sector functions that could be decentralized and performed at the local level by his cadre of senior citizens.

These are only a few of the avenues that could be explored to find ways of increasing the productive utilization of our aging population. I am sure that future examination and discussions of this subject will develop many constructive suggestions for consideration.

CONCLUDING REMARKS

I realize that the objective of this initial hearing on this highly important and sensitive subject matter is essentially to pose the issues that are present. Returning then, to this objective to summarize, I consider that:

(1) There is a very real problem in the issue before us. That the present retirement practices and trends of our economic society, coupled with increasing longevity of our population, will create an enormous economic future burden upon our society.

(2) This burden can be relieved to a considerable extent by eliminating the mandatory feature of our retirement philosophy and allowing interested workers to continue actively in the work force on some basis for a longer period of time, reducing their need for retirement funds.

(3) The presently defined retirement age population of our work force represents a useful and valuable resource, an asset, or an investment if you will, that should be utilized, again on some variety of bases, perhaps entirely different than the mere continuation of their historic activity.

(4) The divergence of present pension benefits, specifications of retirement plans and means of assuring adequate funding, among the various elements of our society, both public and private, need serious reexamination and there is a fundamental need to redefine the objective of retirement itself, retirement pay, the "logic" of the wage continuation after productive employment ceases and the role of the Federal Government itself in this process.

(5) I congratulate this committee on recognizing the importance of this subject matter and initiating this dialog, which I am sure will become highly worthwhile and constructive as it develops over the future months and even years ahead.

(6) I wish to express my appreciation for the privilege of being allowed to present my personal thoughts, observations, and ideas on this subject and hope that perhaps a few of them may contribute somewhat to the success of your inquiry.

I thank you.

Senator CHURCH. Thank you very much.

We will look also to your other final recommendations. I want to commend you for an excellent statement and for a very fine, fluid, and well informed presentation. We appreciate it very much.

Mr. BABSON. Thank you.

Senator CHURCH. The hearings will be adjourned.

[Whereupon, at 12:06 p.m., the hearing adjourned.]

APPENDIX

CORRESPONDENCE RELATING TO HEARING

ITEM 1. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH, TO HON. ALAN K. CAMPBELL, CHAIRMAN, CIVIL SERVICE COMMISSION, DATED JULY 31, 1978

DEAR MR. CHAIRMAN: Thank you very much for participating in our recent hearing. We appreciated the opportunity to receive your firsthand report on procedural and conceptual changes which will accompany the end of mandatory retirement for the most Federal employees. We also appreciate the invitation to stay in close touch as you put new procedures into effect. It is clear that Federal agencies will be required to exercise great sensitivity and ingenuity in meeting the challenges ahead.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

FRANK CHURCH,
Chairman.

[Enclosure.]

QUESTIONS FROM SENATOR FRANK CHURCH

Question 1. You point out that only 1,773 persons, or about 2 percent of all those retired in 1977 from the Federal service were mandatorily retired—at age 70 or above. Would you say that one reason for the small number of those mandatorily retiring may be the Federal agencies have, from time to time, offered inducements for early retirement in order to comply with a job freeze or other restriction?

Question 2. We've heard a great deal said in the past 2 days about the heavy cost to the economy of earlier and earlier retirement. Are you concerned about an average retirement age of 58.3 years for Federal employees?

Question 3. A July 15 "Federal Diary" article in the Washington Post said that the Federal Government is developing a middle-age spread of about 230,000 persons who are old enough and with enough service to retire on a full pension. Do you think that they should be retired now or do you think there might be good reason to try to persuade them to stay? Eligibility age for full retirement in civil service now stands at 62 years with at least 5 years of service, 60 years with 20 years of service, and 55 with 30 years. Do you think these are appropriate ages at which to provide full benefits?

Question 4. You use the future or conditional tense when you talk about approaches to such performance evaluation possibilities as:

Positions described by skills and abilities.

Fair and effective performance appraisals.

Self-analysis and career planning.

How far along are you toward any of these goals? Had you started toward them before this year's law banning mandatory Federal retirement went into effect? How are you working with unions to win their cooperation in arriving at fair and effective performance appraisals?

Question 5. What can be done to make what we now call preretirement training a more dynamic and acceptable process?

Question 6. The committee understands that phased and partial retirement have had limited acceptance in the Federal service. Does the problem relate to the way in which this option was presented? What can be done to make it more attractive?

Question 7. You endorsed flexitime and part-time work arrangements in your statement. In recent testimony before the Governmental Affairs Committee I pointed out the potential importance of such work arrangements to the older worker. I suggested either statutory or report language to emphasize that part-time employment positions should not be confined almost exclusively to the lower grades. Do you agree? In addition, I-suggested that the Civil Service Commission should be encouraged to develop personnel regulations to give career workers the option of selecting career part-time status and returning to full-time career status. Do you agree?

ITEM 2, LETTER FROM HON. ALAN K. CAMPBELL,[1] CHAIRMAN, CIVIL SERVICE COMMISSION, TO SENATOR FRANK CHURCH, DATED SEPTEMBER 6, 1978

DEAR SENATOR CHURCH: This is in reply to your letter requesting answers to additional questions which have occurred since the hearing held by our committee on July 19, 1978, concerning "Retirement, Employment, and Lifelong Learning." I have answered the questions in order as presented in your letter.

[*Question 1.* You point out that only 1,773 persons, or about 2 percent of all those retired in 1977 from the Federal service were mandatorily retired—at age 70 or above. Would you say that one reason for the small number of those mandatorily retiring may be that Federal agencies have, from time to time, offered inducements for early retirements in order to comply with a job freeze or other restriction?]

Response. In the public sector, like in the private sector, it sometimes becomes necessary to reduce the number of employees on the rolls, or the number of employees to be hired. There are several reasons for this, such as the discontinuance or reduction in certain work. Congress may decide to discontinue all or parts of programs, or funds may be reduced. For whatever reason there is a cutback, Federal agencies offer inducement for early retirement. That is, the Civil Service Retirement System provides that an employee under the retirement system who is involuntarily separated from the service is entitled to an immediate annuity if:

(1) He or she has been employed under the retirement system for at least 1 year within the 2-year period immediately preceding the separation on which the annuity is based, and

(2) He or she meets either of the following minimum requirements:

(a) Attainment of age 50 and completion of 20 years of creditable service, including 5 years of civilian service, or

(b) Regardless of age, has completed 25 years of creditable service, including 5 years of civilian service.

Figures show, however, that out of the total number of retirees (85,568), only 3,636, or little over 4 percent, were separated under this provision in fiscal year 1977. There are no available statistics which would show how many of the employees, who retired under other provisions of the law, may also have been subject to the reduction in force situation. But, a reduction in force situation probably would have little effect on the number of employees subject to mandatory retirement at age 70.

[*Question 2.* We've heard a great deal said in the past 2 days about the heavy cost to the economy of earlier and earlier retirement. Are you concerned about an average retirement age of 58.3 years for Federal employees?]

Response. Naturally, we are concerned when employees retire at an early age, particularly when the retiree receives an annuity which may not meet his needs (there are some annuitants receiving less than $200 per month). A chart showing the number of employee annuitants and survivor annuitants on the retirement roll as of September 30, 1977, by monthly rates of annuity is attached.

---

[1] See statement, page 177.

TABLE B–2.—EMPLOYEE ANNUITANTS ADDED TO THE RETIREMENT ROLL DURING THE FISCAL YEARS 1921 TO 1977, BY PROVISION UNDER WHICH RETIRED AND NUMBER ON THE ROLL SEPT. 30, 1977, BY FISCAL YEAR RETIRED

Fiscal years	Number on roll Sept. 30, 1977	Total	Optional							Involuntary		Special provision			Transferred from other systems	Average initial annuity
			Mandatory 15 yrs' service	Disability	30-yr service: Age 55	30-yr service: Age 60	20 to 29 yrs' service, ages 60 to 61	12 to 29 yrs' service, age 62	5 yrs' service, age 62	Deferred	20 yrs' service, age 50	15, 25, or 30 yrs' service	Hazardous duty	Air traffic Controllers	Members of Congress		
1921–30	7	27,759	20,897	6,862													(1)
1931–40	517	72,868	32,775	20,676		7,809						11,608					(1)
1941–50	9,695	154,430	20,406	46,840	4,608	29,634		17,429	31,630			2,207	224		59	1,393	$78
1951–60	91,257	341,897	30,115	102,678	23,589	66,091		54,699	56,762		1,431	3,719	2,566		170	77	148

[1] Not available.

We would like to point out here, however, in answer to your question, that while the average retirement age for a Federal employee may be 58.3, nearly 43 percent of persons who retired in fiscal year 1977 were age 60 or over. Those who retired at a much earlier age, thus bringing the average age down, included air traffic controllers, who are mandatorily retired at age 56, due to the uniqueness of their profession; firefighters and law enforcement officers who are eligible to retire at age 50 with 20 years of service (because of the need for a young and vigorous work force in these occupations), and those employees mentioned earlier who were separated involuntarily.

[*Question 3.* A July 15 "Federal Diary" article in the Washington Post said that the Federal Government is developing a middle-age spread af about 230,000 persons who are old enough and with enough service to retire on a full pension. Do you think that they should be retired now or do you think there might be good reason to try to persuade them to stay? Eligibility age for full retirement in civil service now stands at 62 years with at least 5 years of service, 60 years with 20 years of service, and 55 with 30 years. Do you think these are appropriate ages at which to provide full benefits?]

Response. The fact that an individual has reached a certain age or has served a certain number of years is not sufficient reason to persuade or encourage him, or her, to retire, or not to retire. The Federal Government often loses a skilled employee at the peak of his career through retirement. This has always been, and will continue to be a problem, especially when retirement benefits make it economically feasible for the employee to retire at an earlier age. It must be kept in mind, however, that the liberalized benefits are necessary in order for the Federal Government to attract and retain competent employees in competition with private industry.

[*Question 4.* You use the future or conditional tense when you talk about approaches to such performance evaluation possibilities as:

Positions described by skills and abilities.

Fair and effective performance appraisals.

Self-analysis and career planning.

How far along are you toward any of these goals? Had you started toward them before this year's law banning mandatory Federal retirement went into effect? How are you working with unions to win their cooperation in arriving at fair and effective performance appraisals?]

Response. The future and conditional tenses were used in referring to the three possibilities listed in the question to indicate that they are not existing accomplishments but are among several proposals being considered as ways to improve personnel management in general and performance appraisal in particular. These improvements are intended to apply to Federal employees regardless of age. In the areas of performance requirements and performance appraisal, developmental work was underway well before enactment of Public Law 95-256 banning age 70 mandatory Federal retirement. Such basic improvements, however, are especially applicable to the needs of older workers. There has not yet been any substantive work on the self-analysis and career planning techniques as applied to the older employee.

Material on performance appraisal published last year was submitted to unions as well as other interested organizations and agencies for comments and suggestions which were carefully considered before publication. The same practice will be followed wherever feasible. We recommend to agencies which are undertaking changes in their performance appraisal systems to involve unions in early stages of planning and all along the process through the implementation of the new systems.

[*Question 5.* What can be done to make what we now call preretirement training a more dynamic and acceptable process?]

Response. There is nothing to add at this time to our previous comments concerning preretirement training or counseling.

[*Question 6.* The committee understands that phased and partial retirement have had limited acceptance in the Federal service. Does the problem relate to the way in which this option was presented? What can be done to make it more attractive?]

Response. Phased and partial retirement has never been formally presented. Information has only been presented to agencies through a Civil Service Commission bulletin. As stated in our letter of June 27, 1977 to the committee, participation in agency gradual retirement programs was slight in the most recent survey conducted by the Commission. This may, in part, be attributable to the civil service retirement law's liberal age and employment requirements for retirement.

Many civil service workers are eligible to and do retire at age 55 (after 30 years service). These people probably contemplate working in private industry or for themselves after retirement. They may not be interested in total immersion into the "leisure life" of a bona fide retiree. Another obstacle to gradual retirement participation is the before-the-fact commitment to retire at a specific future date. They are reluctant to participate because of such future uncertainties.

Methods of increasing agency and employee participation are simple and basic. First, greater publicity would have to be afforded to gradual retirement. Second, explanations of the advantages that would accrue to them through gradual retirement programs would have to be given to agencies and employees.

At this time, we cannot say whether more agencies are considering the implementation of gradual retirement programs. We consider it highly unlikely.

From what we have seen, the major obstacle to increased use of phased or partial retirement in the Federal service is an economic one. Under our current system an employee's annuity is computed on the basis of length of Government service and the highest average pay received during 3 consecutive years of employment. Because of career progression and the effects of annual Government pay raises, an employee's highest salary generally occurs at the end of his or her career.

Employees who opt for phased retirement by working part time, cut themselves off from the effect of this annual increase in their annuity, since their "high 3" pay level would probably have occurred before they began working part time. The longer an employee works part time before final retirement, the more he or she "loses." Although the amount of their creditable service increases, it is not enough to offset the loss of annual pay raises. Employees realize this and are generally reluctant to "phase out."

[*Question 7.* You endorsed flexitime and part-timework. arrangements in your statement. In recent testimony before the Governmental Affairs Committee I pointed out the potential importance of such work arrangements to the older worker. I suggested either statutory or report language to emphasize that part-time employment positions should not be confined almost exclusively to the lower grades. Do you agree? In addition, I suggested that the Civil Service Commission should be encouraged to develop personnel regulations to give career workers the option of selecting career part-time status and returning to full-time career status. Do you agree?]

Response. As I indicated in my testimony, this administration is taking a number of steps to increase the availability of part-time employment in the Federal service. One of our actions has been to emphasize increased part-time employment in professional positions at GS–7 and above. While we do not yet have complete reports of agency progress in this area yet, our belief is that substantial gains have been made over the last year. I should add, however, that we do not favor the "earmarking" of a specific percentage of jobs at each grade level as part time along the lines proposed in various legislation. This would severely limit the staffing flexibility of Federal employees and could restrict promotion opportunities for current full-time employees.

Current civil service regulations give agencies the authority and responsibility for setting work schedules. Agency officials can then permit employees to voluntarily switch from full time to part time and vice versa as the situation demands. Although we encourage agencies to accommodate employee needs in setting work schedules, the requirements of the organization take precedence and not all employee desires can be realized.

For the future, we may need to make some changes in this arrangement. The growing number of women in the work force and the desire for more employee control over the quality of work life are certain to increase the need and demand for part-time employment. Some European countries have already recgnized this situation and given public employees the right to switch from full time to part time under certain circumstances, e.g., if they have child caring responsibilities. We will be looking at these arrangements in developing our recommendations for the President on Federal part-time employment next year.

I hope the foregoing will be helpful for inclusion in your hearing record.

Sincerely yours,

ALAN K. CAMPBELL,
Chairman.

ITEM 3. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH, TO STANLEY M. BABSON, JR., NEW CANAAN, CONN., MANAGEMENT CONSULTANT, AND FORMER PRESIDENT OF FINANCE, TECHNICON CORP., DATED JULY 31, 1978

DEAR MR. BABSON: Your excellent statement at last week's hearing provided a fitting finale to our opening round of testimony. Your view from the private sector supplemented the viewpoints heard earlier in constructive and challenging ways. Thanks once again for participating.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes.

Sincerely,

FRANK CHURCH,
Chairman.

[Enclosure.]

QUESTIONS FROM SENATOR FRANK CHURCH

Question 1. You heard the previous witness discuss Civil Service Commission plans for dealing with the end of mandatory retirement at age 70 in the Federal service. How adequate, in your opinion, will that program be?

Question 2. You have suggested that the Federal Government has a strategic role in defining the minimum and perhaps maximum standards of what constitutes a suitable retirement income. What do you think the minimum monthly and annual standard should be today?

Question 3. One of the major issues for our hearings is the appropriate role for the private and public sectors in responding to retirement income adequacy. I realize that it may not be possible now for you to tell us quantitatively what the appropriate mix should be. But could you outline in broad principles what would be the proper role of each and what emphasis should be placed upon public and private efforts to respond to the retirement income needs of older Americans?

Question 4. You also talk of short-range and superficial advantages to a company from an employee's severance motivated solely by cost reduction. Does the same apply to retirement? The notion of "making way for younger workers" often blinds assets the firm may be losing when enforced retirement is imposed. Do you agree?

Question 5. You have been associated with large corporations and with smaller firms. Have you seen, in any of the organizations you have been associated with, recognition of your concept of the employee as an asset instead of a cost?

Question 6. You talk about a "semiretirement fund" for employees who do not wish to work full time after some years with the company. How would this work? How would you prevent it becoming a prop for employees who want to coast restfully on the job, and who think that they will be able to do so on reduced pay for reduced hours?

Question 7. You mention in your testimony a study, cited in your book, which asserts that a current 25-year-old working man would gain more from a private investment fund than from social security. I am sure you know that social security, in addition to providing retirement income with cost-of-living adjustments, also offers survivors and disability benefits, as well as hospital insurance protection. Do your calculations take these factors into account?

Question 8. The 1975 Social Security Advisory Council recommended that serious consideration be given to extending gradually the eligible age for unreduced benefits for retired workers from 65 to 68, starting in the year 2005 and ending in the year 2023. Do you believe that this would be a socially desirable policy for future social security beneficiaries?

Question 9. You seem to suggest (bottom of page 34 and top of page 35) a pooling of funds by social security and retirement funds progressively over the next 20 years or so that "at a certain future period all retirement funds, both public sector and private, would in fact be one universal funding-as-you-work system." I would like more details. For example, how do you deal with current needs while building the universal funding system?

ITEM 4. LETTER FROM STANLEY M. BABSON, JR.,[1] NEW CANAAN, CONN., MANAGEMENT CONSULTANT, AND FORMER PRESIDENT OF FINANCE, TECHNICON CORP., TO SENATOR FRANK CHURCH, DATED AUGUST 28, 1978

DEAR SENATOR CHURCH: Thank you for your kind letter of July 31. I am glad you felt my statement before your committee hearing was constructive and useful and I am happy to be able to participate in this very excellent and important undertaking.

You have forwarded to me certain additional questions which have arisen out of the study of my testimony and I shall endeavor to answer them herewith to the extent feasible in letter form.

[*Question 1.* You heard the previous witness discuss Civil Service Commission plans for dealing with the end of mandatory retirement at age 70 in the Federal service. How adequate, in your opinion, will that program be?]

Response. I have no familiarity at all with the Civil Serivce Commission and I feel it would not be appropriate for me to comment on this particular question.

[*Question 2.* You have suggested that the Federal Government has a strategic role in defining the minimum and perhaps maximum standards of what constitutes a suitable retirement income. What do you think the minimum monthly and annual standard should be today?]

Response. As I indicated in my testimony, I feel that a "norm" in the private sector would be around 1½ percent of final 5 years average compensation, times years of service. This would mean that 40 years of service would provide a retirement benefit of 60 percent of pay, and 50 years of service, 75 percent of pay. Years of service in my concept would be years of service in the productive mainstream, whatever series of companies may be involved. I have recommended complete portability of retirement contributions, with no forfeitures at all.

This "minimum" concept does not preclude superimposed thrift plans on top of the pension plan, nor does it preclude even a more liberal retirement income feature, if such is the basis of the productive career of an employee.

I do personally favor putting some form of ceiling on the retirement feature, if only as a control against inflation. I would not approve any accumulating of pension benefits that yielded over 100 percent of final 5 years compensation after 40 years of service.

[*Question 3.* One of the major issues for our hearings is the appropriate role for the private and public sectors in responding to retirement income adequacy. I realize that it may not be possible now for you to tell us quantitatively what the appropriate mix should be. But could you outline in broad principles what should be the proper role of each and what emphasis should be placed upon public and private efforts to respond to the retirement income needs of older Americns?]

Response. As indicated in my text, I believe that the Government's role should be to define the minimum retirement benefit that is socially acceptable in our country in the present era; to police this policy, see that such benefits are adequately and soundly funded and that abuses and discrimination are controlled.

I feel the Government's role in the public sector amounts to, or should amount to, the same thing as in the private sector and that the present "giant kiting system" approach to public sector financing of retirement disbursements be totally changed over to a system paralleling the common practice in the private sector. I believe that the individual himself and his accumulated roster of employers should have the burden of providing for his retirement needs on a "pay-as-you-go" basis.

I believe the Government's only role in this, except insofar as it is the "employer" of public sector employees is to define the social policy and see that it is fairly and properly implemented.

Without doubt, there will be a large body of present retirees to whom this logic cannot apply because no such funding was set aside for them historically. These present retirees represent a financial obligation that must be faced and liquidated outside of this proposal. What I am proposing is to cover new employees entering

[1] See statement, page 186.

the productive mainstream and as many of existing workers as practical. It will admittedly take a generation or so to resolve the burden of transition from our past method of funding retirement benefits and what I am proposing for the future.

[*Question 4.* You also talk of short-range and superficial advantages to a company from an employee's severance motivated solely by cost reduction. Does the same apply to retirement? The notion of "making way for younger workers" often blinds assets the firm may be losing when enforced retirement is imposed. Do you agree?]

Response. When companies are seeking ways to prune costs, for whatever reason, they almost invariably look at payrolls to see what can be reduced from roster. Marginal employees are weeded out in this process, where possible, and also it is not uncommon to try to persuade employees who are nearing retirement to step aside and retire earlier. Some companies even offer pay incentives to encourage these employees to elect earlier retirement. The logic here is that such an incentive bonus is a "one-shot" payment that hurts earnings per share initially, but is designed, after the initial impact, to shift the payroll, which is an annually recurring change for this employee, away from current profit and loss impact and instead into the disbursement from retirement fund category, which does not affect current year profit and loss. This strategy does reduce annual costs to the corporation, after the initial incentive bonus is paid. It also does allow younger workers to remain with the company and not face the cost reduction "axe." The fact that a valuable asset to the company and to society, in the form of the mature and experienced worker who is placed on retirement, is lost for what appears to be a short-term economic gain, is, in my view, somewhat deceptive and illusory, particularly when viewed in the context of society at large.

[*Question 5.* You have been associated with large corporations and with smaller firms. Have you seen, in any of the organizations you have been associated with, recognition of your concept of the employee as an asset instead of a cost?]

Response. I think I would have to answer this question in the negative. While obviously, in individual cases, the asset value of a particular person is widely recognized, the application of this concept to employees generally is not.

[*Question 6.* You talk about a "semiretirement fund" for employees who do not wish to work full time after some years with the company. How would this work? How would you prevent it becoming a prop for employees who want to coast restfully on the job, and who think that they will be able to do so on reduced pay for reduced hours?]

Response. A good question and possibly a thorny one. The "semiretirement fund" could not become operative before a certain chronological date, let us say age 60, for example. Not all jobs within a given company must necessarily be eligible for such a program, so an employee moving to this program from full assignment might have to accept a different duty. Even if the new assignment only calls for 20 hours per week, or perhaps, if seasonally set up, only 30 weeks in the year, there would still have to be performance characteristics for the job which must be met, or the person would be asked to resign from the position. This would be the same as any full-time job now. If you don't perform the job adequately, you are dismissed. Also, the economics of the semiretirement fund should be established as an incentive to work, not as an incentive for nonwork. The mechanism is really designed to accommodate those employees who are tired and wish more time off to pursue other interests: its merit lies in the deferrral of the horrendous economics of full early retirement for too protracted a period of remaining life for an employee who wants some form of reprieve from full work.

[*Question 7.* You mention in your testimony a study, cited in your book, which asserts that a current 25-year-old working man would gain more from a private investment fund than from social security. I am sure you know that social security, in addition to providing retirement income with cost-of-living adjustments, also offers survivors and disability benefits, as well as hospital insurance protection. Do your calculations take these factors into account?]

Response. I am aware of the fact that social security offers protective payments for more than just retirement alone, but it is difficult to separate out the costs of these other features and isolate a true "applies to apples" comparison. Therefore, my calculations are admittedly somewhat simplistic. I feel quite sure, however, that whatever refinement in cost comparisons are made, the basic premise would remain true, i.e., that a worker would get significantly more for his dollar under a trusteed private fund than he would get from the social security system. Bear in mind, your social security system is a "giant kiting scheme" and you are still trying to take money from Peter to pay your past deficiency as regards Paul—

there is no way you can do this except by short-cutting Peter and hoping to be able to make it up some future day. This is getting to be an untenable strategy.

[*Question 8.* The 1975 Social Security Advisory Council recommended that serious consideration be given to extending gradually the eligible age for unreduced benefits for retired workers from 65 to 68, starting in the year 2005 and ending in the year 2023. Do you believe that this would be a socially desirable policy for future social security beneficiaries?]

Response. Yes, I believe this would help the economics of supporting the future retirement burden. It is only one recourse, however, and I would advise that you only do this one after, or simultaneously with, the correction of a number of abuses and discriminatory elements already identified in the retirement cost area. To defer the taking down of full social security benefits for one employee while still allowing, let us say, a public sector employee to enjoy a highly liberal retirement formula would be intolerable. You can't continue to have armed services noncombatant personnel earn full retirement benefits after 20 years, or the 2½ percent per annum formula for certain congressional members and pay for these lush benefits with the "stretched" timing of full social security pay eligibility for the rank and file employees in the United States. This would be unthinkable. I'd suggest correcting the abuses and reducing the discrimination first; plus, encourage more years of productive employment by eliminating the mandatory retirement date feature, also by allowing the flexibility of working part time and starting to draw down some partial retirement supplemental pay. Then, when all these things are done, it may be appropriate to make the move to deferring the date for eligibility of full social security benefits.

[*Question 9.* You seem to suggest (bottom of page 34 and top of page 35) a pooling of funds by social security and retirement funds progressively over the next 20 years or so that "at a certain future period all retirement funds, both public sector and private, would in fact be one universal funding-as-you-work system." I would like more details. For example, how do you deal with current needs while building the universal funding system?]

Response. There are two points that lie behind this question. The first relates to the private sector plans. Back in the distant past when the Federal Government had little control over, or visibility of, private pension plans, and even when there were few such plans in existence, there was a need for public sector funding, i.e., the social security system. The same conditions as existed then are far from today's present private pension scene, and while even the most recent legislation as regards private plans needs further "sharpening," nevertheless, the private plans are certainly now under good Federal vigilance and meeting such prescribed minimum specifications as have been to date promulgated. This being so, there is a redundancy in private sector pension plans and the social security system as it relates to employees covered by private plans. If you accept my recommendations for complete portability of private sector pension benefits for a given employee, then his pension funding (derived from his personal payroll contributions to social security, his employer's payroll contributions to social security, plus his employer's supplemental contributions into the defined private pension fund) are unnecessarily cumbersome and no longer serve the useful purpose planned in the past by the establishment of the social security system itself. I envisage that employee A will start work for company X and he will contribute a defined contribution toward his own ultimate pension benefit out of his weekly payroll. This contribution is presently going into a social security fund where matching contributions by his employer are also directed and credited to his account.

With the present status of Government regulation of private pension plans, in my opinion, such funds are more appropriately contributed *directly* into the employer's duly qualified pension fund together with the additional contributions required of the employer to properly fund this qualified plan on an annual basis. To split these various contributions between a Government social security fund and a private pension plan no longer serves a useful purpose in my view. I am sure that Government economists would agree and opt that all such funds go entirely into a social security pool. In this I disagree. The Government's direct access to, and control of, such funds does not serve the best interest of the employee himself nor the employer, inasmuch as there is no preservation of the integrity of funds earmarked for a specific employee. Nor is there adequate incentive for Federal administrators to optimize the productivity of the funded investments, maximize their yield, control costs and eliminate abuses. These highly important economic necessities are more likely to be found in the private sector than in the public sector.

Therefore, it is my recommendation that for such private sector employees and employers, all pension contributions be funded privately by the employer. Complete 100 percent portability be required for all contributions. Certification of adequate cash funding be required by law annually of all employers, assuring that control of funds has been placed beyond the corporate reach (except for the efficient management of fund resources). As employee transfers, for whatever reason, from company X to company Y, his total accumulated pension contributions in pension plan of company X, with accumulated earnings plus appreciation of portfolio, or its equivalent, would be transferred without forfeiture of any kind to the pension fund of company Y, where it would be "folded in" for the benefit of employee A into company Y's own pension trust vehicle, etc.

In the public sector, the funding crisis is really approaching critical proportions. In spite of this, I believe the same rules, the same definitions, the same techniques should be set up in parallel fashion to those of the private sector. Whether you call the public sector pension fund "social security" or some other name, or define some other vehicle, is immaterial, but the concept should parallel that of the conventional private sector pension plan on a going forward basis.

And how, you ask, do you take care of the transition from the present unfunded status to this new concept for public sector employees? In my view, you treat this as you would any new pension plan established by a company in the private sector. You calculate an unfunded past service liability and you agree to provide such funds over a certain extended period of time, i.e., 20, 30, perhaps even 40 years. The important thing is (a) to go forward on a proper basis and put a curfew on continuation of the past historic inadequate plan, and (b) to have a plan for reducing the unfunded past service liability over an acceptable economic timespan, one that is reasonably realistic.

In conclusion, I apologize for the brevity in treating these highly complex questions. Some of these require much more dialog and examination than I can possibly hope to convey in any letter such as this. The only objective I can accomplish here is to respond initially to your query and stimulate a direction, and perhaps interest, in your future investigation along these lines.

Again, I thank you for the interest you have shown in these ideas and I hope they may be somewhat useful in your project.

Very sincerely,

STANLEY M. BABSON, JR.

ITEM 5. LETTER FROM SENATOR FRANK CHURCH, TO ALFRED B. KIRSHNER, DIRECTOR, NEW YORK TEACHERS PENSION ASSOCIATION, INC., NEW YORK, N.Y., DATED AUGUST 4, 1978

DEAR MR. KIRSHNER: Thank you for your recent letter concerning possible testimony before this committee regarding the public employee pension system.

I appreciate your concern regarding this matter, and would like to invite you to submit written testimony for inclusion in the hearing record for the July 17, 18, and 19 hearings on "Retirement, Employment, and Lifelong Learning." The record will be held open until August 25 for your testimony.

Enclosed please find copies of written testimony submitted by witnesses for our hearings held in mid-July.

If this committee should have any future hearings on retirement policy directly related to pension issues, you may wish to submit additional testimony at that time.

I look forward to receiving your written testimony.

With best wishes,

Sincerely,

FRANK CHURCH,
Chairman.

ITEM 6. LETTER AND STATEMENT FROM WILLIAM WITHERS, PH. D., PRESIDENT, NEW YORK TEACHERS PENSION ASSOCIATION, INC., NEW YORK, N.Y., TO SENATOR FRANK CHURCH, DATED AUGUST 18, 1978

DEAR SENATOR CHURCH: Mr. Alfred Kirshner, one of our directors, has informed me that you are willing to accept a statement from our organization to be included in the record of the recent hearings of the Special Committee on Aging. We greatly appreciate this privilege and the statement is enclosed.

If we can be of any further service, or provide testimony at any future hearings, please let us know. We are anxious to cooperate with you in every possible way.

Sincerely yours,

WILLIAM WITHERS, PH.D.,
President.

[Enclosure.]

STATEMENT OF DR. WILLIAM WITHERS

There are thousands of public pension systems in the United States with funds amounting to $115 billion. Between 75 percent and 80 percent of these systems are contributory. This means that the life savings of millions of retired public employees are involved. In some plans, as much as 50 percent of the assets have been saved by employees from salary deductions during their years of employment. The assets of the New York Teachers Retirement System, despite large contributions from New York City prior to New York's present financial difficulties, are to a very considerable extent the actual savings of the teachers.

But public pensioners in the United States, unlike private pensioners, have little or no protection. During the hearings on ERISA (the Employee Retirement Income Security Act), Prof. Dan McGill, one of the leading authorities on pensions in the United States, pointed out that public pensioners are in as much need of protection as those in private pension systems, and for this reason a task force of the House Committee on Education and Labor was established to study the matter. Its report has been published recently.

The report reveals that most public pension funds are controlled by elected public officials and to a lesser degree by trustees elected by active employees. We find nothing in the report to refute the conclusions of an earlier study made by the Twentieth Century Fund that there exists a great conflict of interest. (Louis Kohlmeier, "Conflict of Interest: State and Local Pension Fund Asset Management," Twentieth Century Fund, New York, 1976.) Based on the decision of Judge Cardoza in *Meinhard* v. *Salmon* (1928), and other cases, the sole responsibility of a trustee is to protect the assets of a trust in the interest of the beneficiaries. But public pension trustees have frequently and flagrantly violated this responsibility by using trust funds for purposes unrelated to the welfare of the beneficiaries. In so doing, they have jeopardized the solvency of the funds they were supposed to protect. The pensioner has been helpless to prevent this. He has no representative on his board of trustees. If he goes to court, he is faced with huge legal expenses and is very likely to lose his case unless he appeals, since the lower courts are hesitant about charging public trustees with fiduciary irresponsibility.

The sad history of what has occurred in New York City since 1975 strongly supports this need for protection. Under pressure from the Governor, the mayor and the controller, and with the support of leaders of the municipal employee unions, the pension funds have been forced to buy millions of city and MAC bonds, most of which are unmarketable and have Caa ratings. To buy these bonds, millions of dollars worth of good pension assets had to be sold by the funds at huge losses. In 1977, the unamortized loss to the teachers pension fund alone amounted to $180 million. Why was this done?

New York City was on the verge of bankruptcy. The banks refused to buy any more city bonds. They were unloading them on customers who have since filed suits. City expenses or salaries were not cut sufficiently to balance the budget. The unions opposed such measures. They demanded salary and cost-of-living increases. Money was available in the pension funds and because the pensioners were unrepresented and had no political influence, fiduciary responsibility was totally disregarded.

As a result, the five city pension funds are now threatened with bankruptcy as well as the city. No permanent or long-run solution to the city's fiscal dilemma has been provided by literally robbing the pension funds of millions of dollars to provide salary and cost of living increases for union members and assist the banks to avoid any sizeable risk taking to finance New York City. Less than 1 percent of the total assets of the large city banks are invested in city securities.

The city controllers' office reported to Congress that 35 percent of the total pension fund assets are already in these securities. This was a gross underestimate intended to make Congress believe that the pension funds could legitimately be expected to buy even more of these bonds. The actual figure is at least 48 percent. The controllers' office included the variable assets in the total assets. The

variable assets cannot legally be used to buy these securities and most of the pensioners have claims only to the fixed assets which can be used. If one excludes the variable assets from the total, the five city pension funds are already about 50 percent invested in unmarketable city securities. If private pension fund trustees did this (invested more than 10 percent in the securities of one company or employer's securities) it would be illegal under ERISA, and it is certainly a violation of the common law concerning the obligations of trustees.

What has happened in New York City amounts to political expediency. But it is even worse. It is discrimination against a minority, old retired people, thousands of whom in New York City are receiving pensions of $4,000 a year or less. Many of these small pensions were 50 percent paid for out of employee savings.

What kind of old age discrimination is evil? Is it worse to deny a competent older person a job because of age than it is to rob him of his pension when he retires? The first of these has been prohibited by Federal law, but not the second. Why not? Let us not mince words. What has happened in New York City is outright theft condoned by a Federal statute, Public Law 94–236. Whether the city bonds bought by these funds are ever saleable, many millions of the pensioners' assets were squandered to buy them.

We have been working for 3 years to have the protections of ERISA extended to public retirement systems. There is no logical or moral reason why this should not be done. At the very least, public pension systems should be covered under the insurance provided by ERISA through the Pension Benefit Guaranty Corporation, or a similar corporation should be established to protect public pensioners.

RETIREMENT, WORK, AND LIFELONG LEARNING

TUESDAY, JULY 18, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to recess, at 10 a.m., in room 6226, Dirksen Senate Office Building, Hon. Frank Church (chairman) presiding.

Present: Senators Church, Chiles, and Percy.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Garry V. Wenske, assistant counsel for operations; Letitia Chambers, minority staff director; David A. Rust, Tony Arroyos, and Jeffrey R. Lewis, minority professional staff members; Marjorie J. Finney, correspondence assistant; and Madonna S. Pettit, research assistant.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. The hearing will please come to order.

My statement will be brief this morning because I judge by yesterday's session we will have much to talk about today, with both a Cabinet member and a highly informed expert on our witness list. But I would like to point out that yesterday's testimony and the questioning provided a good foundation for what may be the primary point to be discussed this morning. And that question is: What more should the United States be doing to promote retention of older persons in the labor force, as a matter of their own choice, instead of retiring them, often without choice?

Yesterday, we heard compelling reasons for questioning the current trend to earlier and earlier retirement:

No. 1, it flies in the face of clearly foreseeable demographic changes, including a rising proportion of older persons at the same time that the percentage of younger persons in the work force is expected to decline.

No. 2, some of the sharpest growth will be among the very old, especially those 80 or over. Both Secretary Califano and Dr. Harold Sheppard emphasized this point yesterday, and Dr. Sheppard said that there will be 8 million persons over 80 by the year 2,000, or about 1.7 million more than had been projected as late as 1971.

Will even a four-generational family be able to provide support services to the very elderly of the year 2025? After all, if current trends hold, the very old persons of that period will have fewer offspring to help care for them.

And, unless the inflation is somehow checked, won't more workers opt against early retirement because of their own individual realization that retirement income is far less adjustable to rising prices than is work income?

And so, if early retirement is under increasing scrutiny and concern, what do we do to answer the question raised earlier? How do we keep older workers working after we have been so profligate with their talents over the decades?

Secretary Marshall, I am glad that committee discussions with your Department indicate that you plan to grapple with that issue, among others, this morning.

I would like to close with two questions.

The new "Employment and Training Report" of the President, issued annually as required by the CETA—Comprehensive Employment and Training Act of 1973—has a chapter on older workers. At one point, page 98, the report says that the senior community service employment program funded through the Older Americans Act but administered by the Department of Labor, offered part-time work to 37,400 economically disadvantaged persons aged 55 and over. That number has gone up to more than 47,000 at this time. We would like to know if you, yourself, are satisfied with the growth of this particular program.

Second, the recent "Age Discrimination Report," together with information received from the committee from time to time, asserts that directors of general manpower projects, such as CETA, often say that they do not have to serve older workers because, after all, there is title IX, a categorical program for that age group.

Now the committee has been told that there has been some upgrading of older worker participation in CETA, but we would like to have your view with respects to this as well.

Mr. Secretary, I ask these questions now in the hopes that you may deal with them as you wish during the presentation of your testimony this morning.

We welcome you, Mr. Secretary, and I invite you to proceed.

STATEMENT OF HON. F. RAY MARSHALL, SECRETARY, DEPARTMENT OF LABOR, ACCOMPANIED BY PETER HENLE, DEPUTY ASSISTANT SECRETARY

Secretary MARSHALL. Thank you, Mr. Chairman.

I am pleased to have this opportunity to present to you my testimony on retirement issues. The Employee Retirement Income Security Act, which is designed to protect private pension funds so that they will be available for workers when they reach retirement age; and the Age Discrimination in Employment Act, which is designed to prevent discrimination against workers for reasons unrelated to their ability, that is, discrimination because of age.

That act also requires that we attempt to help older workers meet the employment problems they face and to see employers develop procedures to make better use of older workers. We are, in addition, responsible for the Comprehensive Employment and Training Act, which provides job opportunities for older Americans.

Retirement Trends

I think that some of the basic trends that influence our ability to carry out our mandate have been presented to you, but let me highlight a few of them. One is that Americans are retiring at earlier ages. In 1950, 46 percent of men aged 65 and over were in the labor force. By 1978, this figure had declined to 20 percent. There have been less dramatic trends for women, but the figures are similar. There are also similar declines for workers age 55 to 65.

A major reason for this tendency for Americans to retire at earlier ages is that the social security and private retirement systems provide greater opportunity for people to retire. The Social Security Act now makes it possible for people to elect benefits at 62. The evidence indicates that the benefits available under the social security system have improved from $138 in 1960 in constant 1975 dollars, to $207 in 1975. In 1960, 85 percent of the people eligible for social security received benefits. By 1976, this number had increased to 95 percent.

At the same time, there has been a rapid expansion of private pension plans. In 1960, there were about 1.8 million beneficiaries in these programs and they received $1.7 billion. By 1975, there were 7 million beneficiaries and these beneficiaries received $14.8 billion. Right now, just about one-half of all private wage and salary workers in the American work force participate in retirement plans.

Another significant part of the trend is that a larger and larger number of people retire and participate in social security plus some other retirement plan. Social Security Administration data show that in 1977, 30 percent of married couples and 15 percent of nonmarried persons receiving social security retirement benefits. The figures are higher for those just entering retirement, with 40 percent of the couples and 25 percent of individuals participating in social security also receive payments under some other plan.

Persistence of Poverty

I think it is fair to say that with social security, and with the expansion of private pension plans, older Americans today are much more fortunate than their predecessors. They are retiring with greater financial security than ever before. However, too many Americans past 60 are not financially secure. While we have done much to eliminate poverty among older people, it is still a serious problem in terms of the number of people involved, even if less dramatic, in terms of percentages of people involved.

Your interpretation of this particular problem depends upon the estimate that you use. The official poverty level is about $2,700 for one person over 65, and $3,400 for an aged couple in 1976. Using this formula, the number of older persons with incomes below the level may be as low as 1 million, or less than 5 percent of persons over 65. The BLS family budgets provide an alternative measure of living costs for retired persons in urban areas. In 1976, the lower level budget was about $4,700 for a retired couple—nearly 40 percent higher than the poverty standard. Using this budget, the number of older Americans falling below this level may be as high as 3 million, or almost 15 percent of those persons over 65.

It is important to ask who are these people who are below the BLS lower level budget, and they tend to fall in two categories. One consists of people with no private pension plans. The other includes those receiving benefits from private pension plans which are not protected against inflation so that the longer they are retired the less valuable their pension plans become.

There is a correlation between wage and salary levels and participation in private pension plans so that workers with very low levels of income are less likely to have coverage than workers with higher levels.

The second category consists of those people who are forced to retire from the work force because of various personal or physical conditions. We are, therefore, left with a challenging problem of providing for active participation of older workers in the work force well into their sixties and beyond. It seems to me that one of the most important challenges that we face is not just to make workers secure in their retirement but to make it possible for them to have fuller employment at higher earnings if they want to continue.

Changes in the ADEA

Now there are a number of laws and programs designed to help older Americans, and I would like to mention just a few of these. One that we are responsible for is the Age Discrimination in Employment Act, which is a major tool for assuring older workers of their job rights.

Now the purposes of ADEA are threefold: (1) To promote employment of older persons based on their ability rather than age; (2) to prohibit arbitrary age discrimination in employment; and (3) to help employers and workers find ways of meeting problems arising from the impact of age on employment.

As you know, under the ADEA amendments enacted in April of this year, protection under the act has been extended by barring mandatory retirement in private industry before age 70, beginning January 1, 1979. Under the original act, employees in private industry could be mandatorily retired at age 65. However, as of September 30 of this year. ADEA coverage for Federal employees will apply without an upper age limit, and an age 70 mandatory retirement requirement will be repealed. The enforcement provisions of the act are also strengthened by the 1978 amendments. Work opportunities for older workers will be expanded greatly by the amendments, especially for those who would have faced mandatory retirement at age 65 and desire to continue working.

The Department of Labor is also required to examine the effect of raising the upper age limit in the act from age 65 to 70 with a view to determining the feasibility of raising the limit further or eliminating it in the future. We are required to report to the President and the Congress on this study on an interim basis by January 1, 1981, and to submit a final report by January 1, 1982.

An Aging Population

The issues of income adequacy and employment options for older Americans will become more acute as older persons become a larger and larger share of the total population.

It is important to note that this process will take place gradually over the next three-quarters of a century. Currently, the 25 million men and women over 65 make up about 11 percent of the population. By the year 2000, their numbers will increase to 33 million—still only 12 percent of the projected total—however, by 2035, with the aging of the "baby boom" cohort, there will be almost 58 million persons over 65, or 19 percent of the projected total population.

This growth will have far-reaching effects on society and social institutions. It will place a tremendous burden on the social security system and therefore on the younger working population. In strengthening the financing of the social security system in 1977, Congress mandated an increase in the payroll tax from 12.1 in 1978 to 15.3 percent in 1990. Given current actuarial projections, the tax rate will have to be increased by an additional 4 percentage points by 2035 in order to maintain the system's solvency and projected benefit levels. Our advance knowledge, of course, affords us time for considering other approaches. The administrators of public employee pensions supported by tax revenues, and of some underfunded private plans, must come to grips with these same questions.

The impact of these changes will be mitigated by two factors. One is the increased participation of women in the labor force resulting in increased revenues for the social security and public treasuries. The second is the relative decline in the youth population, which may result in slower growth in school and other child-oriented expenditures. One way of expressing these factors is through the so-called "dependency ratio," which denotes the average number of nonworkers who must be supported by each worker. This ratio is expected to decline from its current level of about 80 children and aged persons per 100 adults between 20 and 64, to only 70 per 100 by the start of the next century. At that point, though, it will begin to rise once more, passing the 80 per 100 mark again by about 2025. The extent to which these factors will mitigate the problem posed by an aging population cannot be accurately predicted at this time.

These trends, however, lend greater urgency to the necessity of expanding the employment options of the aged. It will be increasingly difficult for all older Americans to experience a comfortable retirement if we depend primarily on "transfer" systems supported by smaller cohorts of younger workers. And yet, the prospect of an expanding older population also has its optimistic aspects. As the current low birthrate makes itself felt in the labor markets of the future, the skills and contributions of older workers will be increasingly sought. Employers will find themselves competing for the services of older workers, possibly bidding up wages and accommodating their desires for more flexible work schedules. As employers take a positive approach in which they recognize the worth of their older employees, the ultimate result will be wider opportunities and more cooperative relations among different age groups.

Current DOL Efforts

The Department of Labor is actively seeking to meet the present and future needs of older Americans. Our current activities reflect two major concerns.

The Department's first major concern is insuring that older Americans will have the option of continued employment.

While discrimination against older workers has not been eliminated during the 10 years since enactment of the Age Discrimination in Employment Act, much progress has been made and the Department is doing everything it can in order to be able to more accurately target programs to help older workers.

The Department of Labor has emphasized education activities, enforcement, and the development of a body of legal precedents. The act has helped older workers in terms of increased job opportunities as well as reemployment, on-the-job gains, and back wages. As a result of efforts we have made to strengthen our enforcement effort, a record $10 million in monetary compensation was found due to 1,943 individuals in the 40–65 group during fiscal year 1977.

We are now working to develop policies for the implementation of the 1978 amendments to the ADEA. While enforcement responsibility for the act's prohibitions against age discrimination will be transferred to the Equal Employment Opportunity Commission—EEOC—on July 1, 1978, we will continue to exert full enforcement efforts on this vital program pending the transfer.

Research under the act will continue to be the responsibility of the Department of Labor. We currently have an unsolicited proposal under consideration that would implement the study requriement under section 5 of the act concerning the upper age limit. We are determined to have the study underway as expeditiously as possible.

We also have a continuing responsibility under section 3 of the ADEA to undertake and promote research with a view to reducing barriers to the employment of older persons and to disseminate the findings of studies and other materials to promote the employment of older persons. One area that may prove worthy of future research is the option of flexible work arrangements for older employees. Older workers should have the chance to "ease into" retirement—to continue working at rewarding jobs on a part-time or part-year basis, if they prefer. Employers ideally should provide a full menu of options for the older employee: Continued full-time work, regular part time, temporary callback, and consulting relationship. Community work is yet another area in which the talents of older workers can be readily utilized.

We are also involved more directly in providing employment opportunities to older Americans. For example, we are charged with the administration of title IX of the Older Americans Act—senior community service employment program. Under this program, meaningful part-time employment is provided to low income, older workers. Their work touches on a variety of community activities and functions. In addition, participants receive substantial supportive services. Title IX grants are expected to provide 47,500 job opportunities to older workers during the program year starting July 1, 1978.

In addition, title I, II, and VI of CETA provide valuable public service employment, training, and comprehensive services to older Americans. CETA is estimated to have helped more than 98,000 workers older than age 55 during 1977. Some of the most successful projects have involved senior citizens rendering services to other senior citizens.

Mr. Chairman, I want to assure you that the problems of older Americans are of the utmost concern to the Department of Labor. We are devoting an ever increasing amount of effort to addressing these matters. Enforcement of the age discrimination provisions and programs offering jobs and training to older workers provide substance to this concern.

Second, the Department is concerned with insuring a comfortable retirement for those older persons who have chosen to leave the labor force.

This is partly in connection with our concern for the Old Age Survivor Disability and Health Insurance Trust Fund and their security but also in connection with the private pension plans under the Employee Retirement Income Security Act of 1974. Through aggressively enforcing our mandate under the Employee Retirement Income Security Act, we are doing every thing we can in the Department to assure that when workers who are eligible for these pensions get ready to retire, the funds are likely to be there.

The Department is also involved with enforcing the provisions of the Employee Retirement Income Security Act of 1974—ERISA. The enactment of ERISA was based on the realization that a pension plan is not a "gift" from the employer, but is a part of the total wage package for which the employee bargains. Under ERISA, millions of workers have a vested right to a pension where no such right existed before. Furthermore, all workers covered by private pension plans are protected against careless or unscrupulos administration, and those who participate in defined benefit plans have their vested benefits guaranteed by the Pension Benefit Guaranty Corporation.

As part of its ERISA mandate, the Department is particularly interested in eliminating abuses in the private pension system. Congressional hearings preceding ERISA uncovered many instances where individuals who had expected to retire comfortably with dignity, found they would not receive the benefits they believed they had earned. Among the major reasons of this were inadequate funding and misunderstandings about expected benefits. The Department is focusing its current efforts on eliminating mismanagement and misunderstandings by a combination of enforcement activities and public education efforts. We feel that, due in part to our efforts, plan participants have a better understanding of their rights under their plans and the act. Furthermore, the Department's active enforcement program is working toward insuring that assets in private pension plans are used for the exclusive benefit of all plan participants and beneficiaries.

Another aspect of the Department's work in this area is the variety of public service employment programs providing services to the elderly community, primarily under title VI of the Comprehensive Employment and Training Act. Examples of the many innovative projects supported under this title range from a Wisconsin program aimed at protecting the elderly from unscrupulous insurance sales tactics to a Washington effort helping senior citizens apply for exemptions from utility surcharges.

We also have a number of programs under which CETA workers provide home health care to older workers. We think that these are some of the most effective of the CETA programs that we have.

The Department will continue to work jointly with Congress in the future to protect and expand the rights of older Americans.

We would like to suggest several areas of primary concern:

First: The entire income support system for the elderly should be reviewed. The role of the private pension system and its relation to social security should be studied with the aim of providing more adequate income support to the retired. Special attention must be given to the effects of inflation on private pension benefits. The soundness of the Government financed programs also should be carefully examined. These are some of the issues that will be addressed by the recently announced President's Commission on Pension Policy, which will undertake a comprehensive review of retirement, survivor, and disability programs existing in the United States.

Second: As a major employer, the Federal Government should become a leader in offering flexible work schedules and wider career options for older workers. The Department supports the concept of legislation recently passed by the House and pending before the Senate which authorizes an experiment with flextime work opportunities within the Government. We also endorse wider opportunities for part-time employment in the Federal Government.

Third: Increasing attention should be given to encouraging private employers to provide a wider selection of work arrangements for older workers. This committee may wish to consider further hearings to publicize efforts by private employers already offering such arrangements, thus encouraging others to follow this example.

Mr. Chairman, the Department of Labor appreciates this chance to demonstrate its concern with the problems and opportunities facing our older citizens. We look forward to working closely with Congress on the issues discussed today.

Thank you.

Senator CHURCH. Thank you very much, Mr. Secretary.

I would like to ask Senator Percy to ask whatever questions he has at this time as he has another engagement.

STATEMENT BY SENATOR CHARLES H. PERCY

Senator PERCY. Thank you, Senator Church. Senator Chiles and I have to go to a markup, so I will be very brief.

We appreciate very much indeed your being here Secretary Marshall, and I appreciate your consideration, Mr. Chairman.

The semiretirement phase is one of the toughest problems now facing us, and I think we are less prepared to move into this area than almost any other now being considered by the Congress. The work of your Department is essential in that regard.

I would appreciate your comments on the generally noted fact that people are ill-prepared to retire. Those who are best prepared often have planned and take early retirement. They have thought about it, they have discussed it with their families, they have made a plan for their life, and they are generally pretty well organized people anyway—we almost wish they would not retire so soon. They are ready for it because they have built-up a lifetime of activities outside the structure of work.

Those who really depend on their work—some place to go to, some people to be with, some place to some back from—are the ones least likely to have planned their life as well.

Phased-In Retirement

My own industrial experience shows that when we introduced a program of compulsory retirement at age 68, we did it on a phased in basis. We required beginning at age 65 a paid vacation plan plus an extra month the next year, plus 2 months the next year, plus 3 months the next year, so they phased out with a program of 15 weeks of counseling with the families 5 years prior to retirement, on various phases of adjustment to the retirement.

I have lost track really as to whether those programs our company started in Chicago, and I think 15 to 16 other companies followed us later, has become any kind of move, whether industry looks upon its obligation to help psychologically prepare people for their retirement and whether that phased out program has even been tried in the Department of Labor itself. I wonder if you would advise me either now or subsequently, for the record, as to whether that aspect of retirement is being looked at and being given serious consideration by the Department as well as by industry and labor unions themselves. I think UAW has done an outstanding job in helping people retire.

Secretary Marshall. Well, I think that it is a problem, Senator Percy, and it is correlated with the other one that I mentioned. That is, many of the people who are not prepared for retirement, in terms of having educated themselves, are the same people who have the least financial support when they get ready to retire. The people who plan for retirement seem to be also those people who have more financial security. Lower income workers are less likely to do that.

I think that we ought to first try to do everything we can to provide for steadier income and employment for people and to insure that they will be able to work. I think the prohibition of mandatory retirements will be beneficial in that regard, but we also need to help people prepare psychologically for retirement.

Let me ask Mr. Henle to comment on what we know about the programs that have been undertaken by various people.

Mr. Henle. Well, we do not have an inventory of such programs, but we do have a couple of examples that have come to our attention in your own area. Continental Illinois Bank has a special program which affects about 850 part-timers out of a total work force of 8,500. Half of these part-timers are over 65. The bank has been using part-timers successfully for over a decade.

Another example we have been given information about is Northrop out in California. This is an arrangement for about 300 retirees, including machinists and accountants, during peak work periods. They can be called back to work for up to 60 days. So it is those kinds of arrangements that we would like to promote and see given more publicity to encourage others to follow.

Senator Percy. One last item that we also discussed with Secretary Califano. I would hope that the Department of Labor could address itself to the problem of so many people 65 and over who are disillusioned with medicare and medicaid because they have been led to be-

lieve that these two cover their medical expenses when really they cover less than half of the patients' costs—43 percent is the last figure I saw. This is also true of social security. How much of that is supposed to be anything other than a supplement for their own retirement plans, for their own savings accrued for purposes of retirement?

I think we all need to do a better job of destroying the impression that older people can rely upon social security because we just can't keep raising rates up fast enough. We have to establish a ceiling above which we cannot raise the rates.

Thank you very much indeed, Mr. Chairman.

Senator CHURCH. Senator Chiles.

Senator CHILES. Mr. Chairman, I hate to impinge on your time, but if I could ask a couple questions.

Senator CHURCH. Feel free. Ask whatever you wish.

STATEMENT BY SENATOR LAWTON CHILES

Senator CHILES. Mr. Secretary, I just had an opportunity to see this publication entitled "Senior Aides," which describes the program that is being funded through your Department, with the NCSC. We have six of those projects funded in Florida, and as I have gone around the State, I see very clearly the enthusiasm that an older person has for this work opportunity and the kind of fulfillment and justification that they get from that. I notice the senior aides program, the green thumb and the foster grandparent programs, always seem to have complete enthusiasm from those people that are participating in the program, those that are recipients of the service and the people in the community. I just don't find anybody knocking those particular programs.

I am always hearing people that are criticizing this or that, but I never hear any criticism of these programs, and where I find those programs, I find a tremendous enthusiasm in the community by the people who are participating. I see that we have a lady that was cited for setting up work through that senior aide program at Fort Myers, Edith Obery. She did an outstanding job.

VALUE OF "SENIOR AIDES"

It looks to me that this is one of the most attractive options that we have. We generally, I think, are getting more for our money. We pay these people part-time salaries for their services. They are very satisfied with that, they are looking for part-time income. I don't know of a better return that we are getting for our dollar, and I just certainly hope that the Department would continue the broadening of those programs. I think they have tremendous support in the Congress, too.

Secretary MARSHALL. I agree, Senator Chiles. I have worked in those programs myself, and I think that it is a very good program from all perspectives, and I think that it is the next best thing that can be done for older people. We can assist people to stay employed and thus keep them in the economy.

Senator CHILES. Many of these people don't want that full-time job. What I find is that a lot of these elderly people are women, for example, and they are only looking for part-time work. They will

quickly tell you that with their age or other demands on their time, they are really looking for some fulfilling hours and they are not looking for full-time employment. I find the same thing with many men citing that.

Secretary MARSHALL. I think that is right. We have the same experience. I think we can do a lot more with part-time work in the private sector. Certainly, these programs ought to be available. They are useful from the standpoint of the work that gets done, because the participants do things that the society needs. These jobs are useful to the people that are doing the work because they get a sense of fulfillment, participation, and accomplishment. I have had people tell me they would work in the program even if we didn't pay them.

Senator CHILES. Well, I find that to be true. In fact, I find many of them say, "We work a lot more hours than the hours we are paid for." I also find in those programs where there are a few senior aides or green thumb, there are others in the program that are pure volunteers and will almost tell you: "I don't really have to have the money. I don't need the money, I want the fulfillment of the program." So it also seems to me that it attracts a greater number of participants because you have that program and many of them are not being paid, they just want to participate.

OLDER WORKERS UNDER CETA

I also wanted to bring to your attention the language in section 215 of the Senate committee's CETA bill. That particular language, based on language proposed by Senator Domenici and myself, provides for services for elderly workers under CETA.

Many of us feel that the older workers are currently underserved by CETA and I wanted to call that section to your attention, if it survives in the bill that comes out of the conference. I think, as you said in your statement, that the Department of Labor is giving the utmost attention the needs of our elderly and that this language would give you a statutory mandate to incorporate that as a part of CETA. I certainly hope you people will be able to follow that, if we can have that enacted as part of the reauthorization of CETA.

Secretary MARSHALL. Well, we think that we need the targeted programs like green thumb that you have mentioned, but we also need to encourage CETA to employ older workers. It now provides jobs for about 100,000 older workers in fiscal year 1977, and we think that—as the overall level of unemployment declines—the participation by older workers in the system should and probably will increase.

Senator CHILES. Thank you, Mr. Chairman.

Senator CHURCH. Thank you, Senator.

Now, Mr. Secretary, as I followed you in your testimony, some questions occurred to me, and I would like to go back to your testimony and ask them.

Secretary MARSHALL. All right.

QUESTIONS ON PRIVATE PENSIONS

Senator CHURCH. On page 3, you speak of private pension plans and you say, "By 1975, $14.8 billion were paid to 7 million beneficiaries of the private plans." Then you say, "An estimated 47 percent of

wage and salary workers in the private sector are currently participating in retirement plans." Well, if you divide $14.8 billion by 7 million beneficiaries——

Secretary MARSHALL. I see what you are moving toward, Mr. Chairman. That means that they participate in the sense that they are covered by the private pension plan, but it does not actually mean they are getting retirement benefits.

Senator CHURCH. I see, but that is not what it says. It says by 1975, $14.8 billion were paid to 7 million beneficiaries, so that money is actually paid to beneficiaries who are presently retired.

Secretary MARSHALL. Yes, sir.

Senator CHURCH. Now the other sentence. They are simply covered, but if you take the $14.8 billion and divide it by the 7 million beneficiaries, my computation comes out to about $175 a month average. When you consider that many of those private pension plans allow very generous pensions indeed for executives, that average of $175 a month would suggest that the big majority of beneficiaries under private pension plans may be getting even less, perhaps considerably less.

When you also consider that these plans typically make no provision for cost-of-living increases—that is, for the inflation—it clearly underscores the fact that the social security system is the main reliance of nearly everybody, doesn't it?

Secretary MARSHALL. Yes; and especially lower income workers.

Senator CHURCH. I think that the record should show that 7 out of 10 aged individual beneficiaries in this country, and one out of two elderly couple beneficiaries rely on social security for over half of their income. Do you have enough data to tell this committee whether private insurance programs are going to play an increasingly important role, they are going to be revised in ways that will make them better, or they are going to play a less important role—even less important than they play today looking to the future?

ROLE OF ERISA

Secretary MARSHALL. I think if we look to the future, there are a number of things that are fairly clear. One is that the passage of ERISA has greatly strengthened the funds. It has also caused a number of the funds to go out of existence, because if they are not actuarily sound they could not meet the requirements of ERISA. Many others cited poor economic conditions as the cause for their termination.

We have done everything we can to try to minimize the costs of meeting the requirements of ERISA. I think the pension funds in the future will therefore be sounder than they have been in the past and that when workers get ready to retire, they will have more security. They would tend to know that those funds have been protected as much as possible.

I think there will be greater reliance on private pension funds in the future than now. I think, though, that we have got a lot of work to do, from the public policy perspective, to look at the actuarial soundness of these programs. We are very much concerned about that in the Department of Labor because we are responsible for ERISA.

I am also chairman of the Board of the Pension Benefit Guaranty Corporation, which does assume responsibility for guaranteeing certain benefits. We need to look at the questions of unfunded liabilities of the pension funds, the economic impact of the funds, the relationship between the public and private pension funds. All these things we have under very careful scrutiny.

Senator CHURCH. Mr. Secretary, in that connection yesterday, Secretary Califano testified that the integrity of employer pension plans is open to serious question, and I quote now from his testimony. "In 1976, Federal pension plans had unfunded liabilities between $243 and $425 billion."

Now we are talking about Federal pensions. That would be the military and civil service, among others. Those are the principal ones.

Those are astonishing figures.

For State and local pension plans, the estimate is between $100 and $270 billion. The estimate for private plans is roughly $200 billion. Together, these unfunded liabilities may well exceed the national debt of more than $600 billion. Ten of the largest industrial corporations in America have unfunded pension liabilities equal to a third or more of their net worth; seven of them have unfunded liabilities which exceed the aggregate market value of the common stock.

When you read that statement you wonder if we are not just living in a soap bubble.

Secretary MARSHALL. Let me say I think it is important to make the distinction between the Government programs and private plans. Government programs are, to a significant degree, on a pay-as-you-go basis. They are not fully funded in the sense that they do not accumulate. The assumption is made that the Government will not default on its pension plans. I don't know if that is a valid assumption, but it is one that has been made.

A problem concerning the private pension plans is the degree to which these plans are fully funded. This is a very difficult area. We have just completed a special study of it. Using different actuarial methods, you can reach totally different conclusions about the size of unfunded liabilities.

There is no question that is a serious problem, but I think it requires very careful thought. It is easy to exaggerate it. It is easy to use some actuarial methods that make it look like the funds are not as sound as they really are in terms of their ability to pay off their obligations.

FUNDING RESPONSIBILITIES

We have initiated review of this problem of calculating funding responsibilities. We will be publishing in the Federal Register a proposal for calculating pension fund liability on a uniform and reliable basis. One of the reasons for the disagreement among people these days is because of different ways in making the calculations. So I conclude that, yes, underfunding is a serious problem. We do need to pay particular attention to the soundness of these funds as well as their overall economic impact on the society and the impact on the individual.

Senator CHURCH. Under ERISA, you were charged with the responsibility of reviewing private pension programs and ascertaining whether or not they were sound. What happens in a given case if you determine that a pension plan is unsound, that it is unreliable, and will not, in all likelihood, pay out as promised?

Secretary MARSHALL. Well, what happens depends on the conclusion we reach as to why the fund is, or is not sound. Our primary responsibility under ERISA is to see that the fiduciary responsibilities are not violated by plan administrators, and in that capacity what we do——

Senator CHURCH. You mean that the money is not misappropriated?

Secretary MARSHALL. It is either misappropriated or you have not made wise investments, or you have not otherwise adequately protected the funds. We are responsible primarily for insuring the fiduciary provisions of ERISA. What we try to do once we discover a fiduciary breach is first to remove the funds from the control of the trustees or administrators responsible for the breach, and second, try through civil action, to seek restoration of the fund. Any criminal activity disclosed by our investigation is referred to the Justice Department for action.

Senator CHURCH. All of that has to do with mismanagement. My question relates to a fund that is structurally unsound, where the income is obviously insufficient to meet the obligation. Do you have anything to do with those cases?

Secretary MARSHALL. In those cases, the main responsibility is with IRS, and that the withdrawal of the fund's tax exemption. IRS can also levy an excise tax against an underfunded plan.

Senator CHURCH. Is that the only Government sanction?

Secretary MARSHALL. Those are the main sanctions. Now, of course, a really difficult question for the Government would be to determine whether or not those funds are actuarially sound.

Senator CHURCH. Do you know of any case where the IRS has actually taken that kind of action?

Secretary MARSHALL. I know that they have taken the first steps to withdraw the tax qualification of the Central States Fund, but have withheld pending the results of the current effort by both agencies to require the plan to meet ERISA and tax standards.

Let me see what Mr. Henle knows. Do you know of cases where the IRS has withdrawn tax exempt status because of unsoundness of the fund?

Mr. HENLE. No, they didn't take that action in the Central States case because of the unsoundness of the fund.

Secretary MARSHALL. That was in connection with violations of fiduciary responsibility. We can find the answer to that. I don't know what action IRS might have taken.

Senator CHURCH. You made an interesting statement a few minutes ago, Mr. Secretary. You said even though Government pensions may be insufficiently funded, one assumes that the Government will honor the obligation by appropriating sufficient money to meet the need on a year-to-year basis, and the pension obligation will be honored.

Granting that assumption, certainly Congress has undertaken to safeguard the social security system by the action taken last year. Granted that assumption may be valid where Government needs are concerned. There is, however, no such assumption that can really be made where private companies are concerned.

Secretary MARSHALL. That is right except the safeguards we do have under ERISA.

Senator CHURCH. Are those safeguards related only to management?

Secretary MARSHALL. No, ERISA contains minimum funding requirements. The law also provides safeguards if the fund is termi-

nated. If a single employer defined benefit plan terminates now, then the Pension Benefit Guaranty Corporation has responsibility to pay the beneficiaries, and we have done that. That is not true of the multiemployer funds now because their terminations are not automatically covered. The Pension Benefit Guaranty Corporation can elect to cover multiemployer plans, but coverage will not be automatic until July of 1979.

Mr. Henle would like to add a comment.

Senator CHURCH. Yes.

Mr. HENLE. Mr. Chairman, the process of providing accounting or actuarial evaluation of a private pension plan is not axiomatic.

Senator CHURCH. I know that.

Mr. HENLE. There is less disagreement about evaluating vested benefits. I am sure you understand that vested benefits are the benefits that would be nonforfeitable as of a given moment of time if that firm, say, suddenly went bankrupt. Now the status, as I understand it, with regard to vested benefits, is that the private pension system is really in pretty good shape and most funds have cash assets on hand that equal or exceed 80 to 90 percent of the value of vested benefits.

When you move from valuing vested liabilities or vested benefits into the realm of the unvested, then you are making assumptions about what proportion of your present work force will receive benefits or at least will stay until they become eligible for vested benefit. You have to make assumptions regarding the rate of return you are going to receive for your assets and your investments. You have to consider the turnover among the employees and while you don't really get into the realm of make-believe, you certainly get to the point where some very arbitrary assumptions have to be made. That is why the Department is moving to suggest or require some uniform methods for actuaries to use in this valuation.

MULTIEMPLOYER BENEFIT PLANS

Senator CHURCH. In September 1977, PBGC's report raised major concern over the unfunded liabilities of multiemployer plans. The Congress deferred mandatory coverage until July 1, 1979, and ordered the PBGC to prepare a comprehensive report on the situation. That report, just released, found that about 160 of the 2,000 multiemployer plans were experiencing financial difficulties serious enough to threaten solvency within the next decade. All of these plans had pension benefits totaling $8.3 billion for 1.3 million workers who would be affected. The PBGC made no response to the Congress concerning this situation. What do we do about this?

Secretary MARSHALL. There are a lot of things. What the report attempted to do was to explore the options rather than make the recommendations. We thought it was important to have a debate to look at the present termination requirements to see if they really made sense. Sometimes the present termination requirements make it difficult for the firm to continue to be solvent and to pay the pensions. It might be better to change the 30-percent liability rule and to continue to collect as much income as the firm can pay.

We will obviously have to pay some attention to the premiums if we are going to base this on an insurance principle. There are a lot of things that can be done, both with respect to the premiums paid

for the termination insurance, and to the procedures used for termination.

A variety of alternatives has been explored in the PBGC report, all designed with the idea of doing whatever can be done to assure that the workers get the pensions rather than simply carry out the letter of the law, which might not be as sound a way to proceed as others that are outlined in that report.

Senator CHURCH. Does the insurance system presently cover single employee plans?

Secretary MARSHALL. Yes.

Senator CHURCH. What has been your experience to date? Have you collected premiums for this?

Secretary MARSHALL. Yes.

Senator CHURCH. How long has this insurance been in effect?

Secretary MARSHALL. Since the enactment of ERISA, September 1974.

Senator CHURCH. You have not had sufficient experience then to know whether you are actually administering this program on a sound insurance basis?

Secretary MARSHALL. The impression that I get from studying the issue is that with respect to single employers we have very little problem. The real problem is with the multiemployer plan and the reason is that the assumption that was made initially that in the development of ERISA multiemployer plans were more financially sound than single employer plans. The assumption was made because of the feeling that the large multiemployer plans like those in the coal mining industry and construction would be less of a problem.

Actually, it has turned out to be the reverse. Because declining industries and, to some extent, because of the procedures adopted for the multiemployer plans some employers will desire to withdraw from the plan and others will choose not to join the plan because they would have to assume that liability of other employers which were unable to fund their share of vested benefits. Those are the kinds of things that we think we may have to change in order to deal effectively with the multiemployer plans.

SINGLE EMPLOYER BENEFIT PLANS

Senator CHURCH. Since we cannot solve the multiemployer plan this morning—except to indicate the problems—let's go back to the single employer plans. How many of these single employers come under the program and can you tell me whether or not it is a voluntary matter or whether it is something else.

Secretary MARSHALL. I think we have some statistics somewhere. We will have to find those figures for you.

[Subsequent to the hearing, Secretary Marshall supplied the following information:]

The Employee Retirement Income Security Act of 1974 (ERISA) covers only employees in the private sector who are participants in welfare benefit plans and pension benefit plans. Total private sector employment is about 80 million workers. About 45 million are covered by welfare benefit plans; 39 million are covered by pension benefit plans, the subject of your committee's questions.

ERISA draws a distinction between two categories of pension plans. One is an individual account plan. In an individual account plan, each participant has

an individual account to which employer contributions are allocated. On retirement, a participant's benefit is based solely on the amount contributed to his or her account and any income, expense, gains and losses, and any forfeitures of other participants' accounts that may be allocated to the participant's account. Thus, prior to retirement, no particular level of benefits is promised. The most common type of individual account plan is a deferred profit-sharing arrangement, where a certain percentage of the employer's profits is allocated among participants' accounts. Another type of individual account plan is a money purchase plan in which the employer makes a specified level of contributions to the account of each employee.

The second category of pension plan is a defined benefit plan. Any pension plan which is not an individual account plan—i.e., any pension plan that does not base benefits solely on the balance in the participant's account of retirement—is a defined benefit plan. Thus, any plan which promises a specified level of benefits at retirement is a defined benefit plan.

Under ERISA, all pension plans, whether individual account or defined benefit, are generally subject to reporting and disclosure and fiduciary responsibility provisions and must meet certain participation, vesting and benefit accrual standards. In addition, defined benefit plans and money purchase individual account plans are subject to certain funding standards. Participants' benefits under defined benefit plans must be funded in advance of retirement in accordance with reasonable actuarial assumptions. These provisions are enforced by the Department of Labor and the Internal Revenue Service.

Single employer and multiemployer defined benefit plans must also pay insurance premiums to the Pension Benefit Guaranty Corporation (PBGC), which protects basic vested pension benefits in the event of plan termination. The PBGC currently insures some 80,000 defined benefit plans covering almost 33 million participants.

Because no specific level of benefits is promised by individual account plans, these plans are not covered by PBGC insurance. However, ERISA's sanctions against mismanagement of plan assets by fiduciaries, as well as for violations of the reporting and disclosure participating and vesting requirements do apply to these plans. Participants who believe that the conduct of any plan fiduciary or the operation of any plan provision violates ERISA, may notify the Labor Department for investigation of their complaint, or may bring an enforcement claim in U.S. Federal District Courts.

There are currently about 400,000 individual account plans covering 6 million participants which are subject to ERISA.

Senator CHURCH. Is it a voluntary proposition for companies to come within this insurance program or is it mandatory?

Secretary MARSHALL. It is mandatory if the plan is the defined benefit type, which is the most common.

Senator CHURCH. So, all of them presumably are participating.

Secretary MARSHALL. Multiemployer plans are required to report and to pay premiums, however, benefits are not automatically insured by PBGC.

Senator CHURCH. How many single employer private pension plans have failed since ERISA was enacted?

Secretary MARSHALL. I don't have that information immediately available. We can get it for you from the PBGC. We don't have it. The estimated figure is roughly 3,000, but we can get you the exact figures.

Senator CHURCH. The estimated figure for what?

Secretary MARSHALL For the private pension plans that have failed, single employer plans that have failed.

Senator CHURCH. In the last 3 years?

While you are supplying the committee with that figure I wish you would supply us with the number of employees that were affected.

Secretary MARSHALL. We can do that.

[Subsequent to the hearing, Secretary Marshall supplied the following information:]

Administrators of plans covered by ERISA's termination insurance provisions which intend to terminate must file a notice of termination with the PBGC. Since September 1974, approximately 20,000 insured plans with 450,000 participants have terminated.

PBGC attempts to determine the reasons for plan termination. Of the total number of plans that filed termination notices with PBGC from September 1974 through September 1977, 42 percent cited business-related reasons (adverse business conditions, change of ownership, liquidation, etc.) as the major reason. Another 8 percent claimed that the plan was becoming too costly. About 17 percent mentioned ERISA alone as the reason; 11 percent cited ERISA in combination with other factors. 23 percent cited "other" or no reason. Many plans citing ERISA as the cause for termination probably could not withstand the added costs of implementing ERISA's minimum participation, vesting, and funding standards.

Of the 20,000 plans which have terminated since September 1974, virtually all had sufficient assets to pay the benefits guaranteed by PBGC. Only about 500 did not have enough assets to pay that portion of promised benefits that are guaranteed by the PBGC. The PBGC has placed half of these plans under its trusteeship. About 22,000 workers and retirees are in these trusteed plans. The PBGC is already paying benefits to the retirees, and will pay benefits to the others when they reach retirement age.

Although multiemployer defined benefit plans are now required to pay premiums to PBGC, they will not be fully protected by PBGC insurance until July 1, 1979. The original act set the date of full coverage as January 1, 1978, but the effective date was delayed by Congress because of the financial difficulties being experienced by several large plans. PBGC may elect, at its discretion, to pay insurance benefits on behalf of multiemployed plans terminating before that date. PBGC has elected to cover benefits in four terminated multiemployer plans, in the millinery and milk industries.

When a failed plan comes under PBGC trusteeship, the retiree is not assured the same benefits as promised under the terms of the plan. Only basic pension benefits are guaranteed. Increases in the value of benefits are covered by insurance on a phased-in basis at the rate of 20 percent per year or $20 per month whichever is greater. Analyses by the PBGC show that, overall, about 85 percent to 90 percent of fully vested benefits have been guaranteed under terminated plans.

In addition, benefits under trusteed plans are limited under a formula based on social security benefit calculations. This ceiling on benefits is adjusted periodically and current stands at $1,005.68 per month for an annuity starting at age 65, with actuarial reductions for benefits payable at earlier ages. This limit is far higher than benefits paid under the average plan. Currently the average monthly check issued by PBGC is $110.

Sanctions can be imposed on a plan sponsor who fails to adequately fund a plan according to the requirements of ERISA. Two cases must be distinguished: a terminated plan, and an ongoing plan.

When a pension plan is terminated, the employer is liable to the PBGC for any insufficiency of plan assets as compared to the total value of the benefit guaranteed by PBGC, up to 30 percent of the employer's net worth. As noted above, only about 500 of the 20,000 terminated plans were insufficient, giving rise to liability under this provision. This employer liability serves both as a deterrent to termination of an underfunded plan and as a source of revenue for PBGC's insurance program.

In the case of an ongoing plan to which required contributions are not made, the Internal Revenue Service may invoke a tax of 5 percent of the accumulated funding deficiency for each tax year in which there is such a deficiency. The IRS can also revoke the tax-deductible status of contributions made by the employer to the plan. In appropriate cases the PBGC is empowered to seek a court order terminating an underfunded plan.

There have been reports in the press that the financial security of many firms is threatened by their unfunded pension liabilities. HEW Secretary Califano has claimed that total unfunded liabilities of private pension plans may exceed $200 billion. In the Department of Labor's opinion, these figures are overstated and misused. In addition, the quoted figures are calculated by pension fund actuaries using a variety of actuarial methods and assumptions regarding labor

turnover, future benefit increases, etc. Since these figures are not calculated on a consistent basis, any quoted aggregate amount is not a meaningful figure.

This past January, the Department of Labor initiated a review of the methods used in calculating pension plan liabilities. We have completed that review and will soon issue in the Federal Register a proposal for calculating pension fund liabilities on a reliable, consistent basis.

Senator CHURCH. Have these failures been largely due to bankruptcies?

Secretary MARSHALL. I am not sure what all of the reasons are. I am sure that economic conditions have played a part.

Senator CHURCH. What is the Government's responsibility under the insurance program in the case of a failure?

Secretary MARSHALL. The PBGC takes an accounting of the remaining assets. In most cases, they have been sufficient to pay off vested obligations. If they are not, PBGC insurance pays benefits to those workers who had guaranteed benefits.

Senator CHURCH. For the balance of their lives?

Secretary MARSHALL. To assume largely the same benefits subject to certain limitations and an upward limit they would have had if they had retired under the plan.

Senator CHURCH. Is this program operating in the black right now?

Secretary MARSHALL. Yes; it is in the black right now. We can get you the exact numbers on that, too.

[Subsequent to the hearing, Secretary Marshall supplied the following information:]

ERISA requires PBGC to be self-supporting, and with the new premium enacted by Congress in December 1977, PBGC expects its termination insurance program for single employer plans to be in the black hereafter. PBGC further expects the new $2.60 premium to eliminate within the next 10 years the deficit it incurred earlier under this program. At the end of fiscal year 1977, the deficit amounted to about $95 million.

For multiemployer plans the situation is quite different. Technically, PBGC has neither a surplus nor a deficit at this time in the multiemployer fund. Because of statutory restrictions on PBGC's discretion to pay guaranteed benefits under multiemployer plans that terminate prior to July 1, 1979, PBGC cannot assume liabilities greater than the assets attribuable to this discretionary period will cover. Relying on cash flow considerations, the Corporation has assumed responsibility for four terminated multiemployer plans whose participants' benefits may have to be sharply cut, at some time in the future, unless Congress revises ERISA in this regard.

I might add that PBGC recently sent to Congress a detailed report showing that unless the multiemployer provisions of ERISA are changed, preferably before July 1, 1979, the Corporation could be required to guarantee benefits under 160 multiemployer plans which are viewed as being in serious enough financial difficulty so as to cause their termination over the next 10 years. Were they all to terminate the PBGC liability could exceed $4.8 billion requiring a premium of nearly $80 per participant. The Corporation expects to recommend appropriate legislation on this matter in time to allow for prompt congressional action to avoid the financial crisis that mandatory multiemployer guarantees under the current law might precipitate.

Senator CHURCH. I can see some tremendous problems ahead if we do not look at this carefully. At least, our obligation and premium charge are insufficient to cover the cost. There would be no end to it.

Secretary MARSHALL. That is right. We see serious problems, too, and that is why we thought it was a good idea to defer the mandatory coverage of the multiemployer plans to July of 1979, to give the Congress and us a chance to examine the options, and look at what we know about the problem.

More Openings for Older Workers?

Senator Church. On page 10 of your statement, Mr. Secretary, you said it is a foreseeable situation that "Employers will find themselves competing for the services of older workers, possibly bidding up wages and accommodating their desires for more flexible work schedules." What makes you think so?

Secretary Marshall. A good bit depends, of course, on what happens to the economy. I think we will find a shortage of workers in the future because of demographic changes. There can be a shortage of workers and the consequence of that would be to place a greater premium on retaining older workers and using older workers in the work force. That is the content in which the statement is made. I think that you can almost put it down as a rule that when employers face labor shortages they tend to reverse some procedures that have been used when they have surpluses in labor.

Senator Church. How do you reconcile that assumption with the statements we often hear these days that the unemployment level in this country will not return to the 3 percent that we have known in times of full employment, but may remain somewhere between 4 and 5 percent? Even in relatively prosperous times, if that is so, then it is hard to reconcile an unemployment figure of that magnitude with your projections of a possible labor shortage.

Secretary Marshall. Well, I think that whatever unemployment figure we have, I believe it can be 4 percent or less without a great deal of strain on the economy. I believe we can get to 4-percent unemployment by 1983—I won't say easily because we have to do some things in order to get there—but I believe we can do it.

Now, much depends on what kind of public policy we continue to have to reduce unemployment below that. The so-called frictional level of unemployment, which is about 4 percent, would depend on such things as how long it takes people to move between jobs, and the labor market information system. At that level of unemployment, what you would have is relatively short unemployment. The only people who would be unemployed would be people who are between jobs.

The composition of unemployment as well as employment varies a good bit, even right now. The unemployment rate of people over 55 years of age, right now, is 3.1 percent. For males, it is 3 percent, having declined from 3.3 percent in December 1976; and for females, 3.1 percent, down from 4 percent. Now, as demographic shifts in the work force take place, such shifts are reflected in the unemployment figure of particular groups.

For example, one of the reasons that we have trouble with reducing the unemployment rate of young blacks, which is now 37.1 percent, is because between 1966 and 1976, the rate of increase in the working age population of blacks was about twice the rate for whites. There are other factors inpacting on that, but the demographic aspect of it is important.

So what I believe is likely to happen is that there will be an increasing shortage of workers in the so-called secondary labor market or in relatively low-wage jobs. In fact, I think you can see that there will eventually be a shortage of younger workers because of the declining birthrate, and that means that you have to place much greater reliance on older people.

Senator CHURCH. Somewhere, not in your testimony, but in the facts that have been brought to my attention by the committee staff, I find that in fiscal year 1977, persons 55 years or older accounted for only about 6 percent of all new enrollees in the CETA public service jobs program. Is that 6 percent right?

Secretary MARSHALL. That is approximately right. The CETA system, as you know, is a decentralized system where most decisions are made by local sponsors. They are supposed to make the determination, based on their work force, to put together the array of programs that will meet the labor market needs of their areas.

One of the things that we have found is that as a result of the decentralized decisionmaking in the CETA system, some reported national objectives have not been realized. The participation of young people went down when we went from the MDTA system to CETA, for example, and yet almost one-half the unemloyed are under 24 years of age, so we believe there was a need for special youth programs because the CETA system would not accommodate young people. The CETA system is likely to pay primary attention to giving employment to the most employable people in the work force in order to reduce unemployment. It is not likely to favor young or older people without either supportive programs or special training.

We believe that because of the nature of that decisionmaking process, we need to try to target the CETA program more on structural problems, and many of these structural problems involve older people. That is what we are trying to do with the CETA reauthorization. We also believe that not only do we need to focus the CETA system more on older——

Senator CHURCH. How do you propose focusing both on older workers who are underrepresented and on young workers?

Secretary MARSHALL. Well, you can do it two ways. One is to have national programs which the system resists, like the older Americans program of green thumb. We have discretionary funds with which to establish national programs.

The other ways is to try to encourage the CETA prime sponsors. This can be done through requirements which are difficult because they meet resistance from the sponsors because their flexibility is reduced. In some cases of national objectives, however, we have had to do that and we have had to say that in order to, we want to give priority to these people, and we have tried to encourage the program to do that.

Another way to target a group is by adjusting the eligibility requirements. This could be done by limiting the income eligibility requirements, for example, and limiting the amount that can be paid by the CETA system. You can do more to assure that the low income people will participate in the system. You can also encourage greater use of community based organizations that deal primarily with older Americans, like the Farmers Union, or the age program, which will see to it that that part of the population gets served.

CETA "TARGETING"

Now, as cyclical unemployment declines, it becomes much more important for us to target the whole program toward those whose unemployment is not caused mainly by cyclical factors, and we have at-

tempted to do this in the CETA reauthorization bill which is currently before the Congress. We tried to accomplish this in the stimulus program which we introduced in May 1977, but in the reauthorization we tried to do some more. We believe we have been relatively successful in achieving the objective of bringing down the overall level of unemployment. We believe now that we need to concentrate more on these groups and individuals with special need.

Now, of course, among older workers generally, you don't have much of an unemployment problem, but you have a heavy unemployment problem and employment needs among particular groups of older workers, particularly the low-income older workers, and we think that is what we ought to concentrate our attention on. After all, 3.1 percent is not a relatively serious problem, and it will get lower. But there are older Americans with special problems, and our programs ought to try to reach them.

Senator CHURCH. The administration has had a remarkably good record that needs to be emphasized, I think, in bringing down unemployment in the last 2 years, from 7.8 percent to 5.7 percent.

Is the present 5.7 percent a seasonal phenomenon? I noticed that in the last month the unemployment rate dropped to 5.7 percent. I am wondering if we can hope, or expect, that that figure will not go up again.

Secretary MARSHALL. It might fluctuate. It is hard to say. I don't believe that the trend down, you know, from almost 8 percent to below 6 percent is any kind of statistical aberration. I know it is not, because the expansion of employment and because special groups like older people have been targeted by our programs. If you look at each one of these groups, you can see that in some cases their unemployment rate was moving in the opposite direction from the overall rate until our program went into operation. During the first half of 1977, for example, black unemployment was rising while white unemployment was going down. During the last half, black unemployment declined faster than the overall.

Senator CHURCH. The targeting seems to be working.

Secretary MARSHALL. It does seem to be working. I think there is no doubt that we have reduced the unemployment rate, and that there is a trend. Now it might be a statistical aberration. We might have calculated 5.7 percent when it was really 5.8 percent. That is within a range of error. I do not believe, however, that the trend is an aberration or seasonal. I believe we can, therefore, if we do the right things, continue to reduce that overall rate until we get 4 percent by 1983.

Senator CHURCH. Since we have actually managed to reduce the unemployment rate from 7.8 to 5.7 percent, is there any way to estimate what part of this represents government jobs furnished through CETA and what part of it represents private sector jobs?

Secretary MARSHALL. It is possible to make that estimate.

Senator CHURCH. Could you give us that estimate?

Secretary MARSHALL. Yes, we can supply it.

[Subsequent to the hearings, Secretary Marshall supplied the following information:]

In December 1976, the aggregate unemployment rate stood at 7.8 percent, out of a civilian labor force of 95.9 million workers. By June 1978, the rate had dropped to 5.7 percent out of a civilian labor force of just over 100 million.

During the same period, total employment (seasonally adjusted), as reported in household survey, rose by 6.5 million workers. The rise was concentrated almost entirely in the private sector. On a seasonally adjusted basis, the Federal Government reported only 22,000 more employees in June 1978 than in December 1976; State and local governments reported an increase of 525,000.

While the CETA program has undoubtedly been an important factor in the brightening employment picture, firm estimates of its impact are not yet available. Economists from the Departments of Labor, Commerce, and Treasury are currently participating in a Stimulus Evaluation Task Force which will analyze the effectiveness of the Economic Stimulus Appropriations Act of 1977. Estimates of the impact of Public Service Employment (PSE) jobs, under CETA titles II and VI, will be one aspect of their study. The task force expects to issue a report this fall.

Some preliminary estimates of PSE impact have already been made by Department of Labor researchers. At the time the Economic Stimulus Appropriations Act was enacted, in May 1977, there was 325,000 PSE positions under CETA; by March 1978, the target of 750,000 PSE positions was achieved. The average gross budget cost per year of a PSE position was estimated to be $8,600.

Many participants would have received Government transfers (unemployment compensation, food stamps, or AFDC payments) in the absence of the PSE program; savings or these programs were estimated by the Congressional Budget Office to be approximately $2,200 per participant. The resulting cost per participant is ($8,600—$2,200) or $6,400.

CETA expenditures also had an important expansionary effect through the conventional Government spending multipliers. The researchers estimated that multiplier effects resulted in the creation of one additional private sector job for every five net CETA jobs.

Additional benefits to society and to participants, of course, result when former PSE participants obtain private sector jobs with higher earnings than they would have obtained without their PSE experience, and when they pay income taxes on these higher earnings.

We would like to emphasize that these estimates, while based on sound methodology, remain sketchy and preliminary. This fall's report by the Stimulus Evaluation Task Force will contain more detailed findings on the role of public jobs programs in the economic recovery.

Senator CHURCH. Second, is it possible to give us some estimate of the net saving in tax dollars represented by the reduction of the unemployment rate from 7.8 percent to 5.7 percent?

Secretary MARSHALL. It is.

Senator CHURCH. Taking into account the cost of the program also, the reduction in unemployment compensation and other expenses associated in the unemployment area.

Secretary MARSHALL. It is possible. We have made estimates of those things and we would be glad to supply them.

[Subsequent to the hearing, Secretary Marshall supplied the following information:]

Unemployment reductions result in net tax savings through two mechanisms. First, expenditures are saved on various income maintenance programs (unemployment compensation, food stamps, etc.). Second, the newly employed contribute tax dollars to public treasuries.

If the June unemployment rate had stood at its December 1976 level of 7.8 percent, an additional 2.1 million persons (on a seasonally adjusted basis) would have been unemployed. Using the figure developed by the Congressional Buget Office for CETA jobs, we estimate the income maintenance savings at approximately $4.6 billion per year. Additional Federal tax revenues are estimated to be about $4 billion per year.

Secretary MARSHALL. Now, one distinction that has to be made is that the difference between declining unemployment and expanding employment. Because of the growth in the labor force during 1977, employment had to expand about 4.2 million in order to reduce unemployment by about 1.4 percent during that whole time. The reason for

that is that we generated lot more jobs and more people came to take those jobs, and therefore you had an increase in labor force participation rate as well as the declining unemployment.

Senator CHURCH. And you had the biggest graduating class, didn't, you. this past year?

Secretary MARSHALL. Yes.

Senator CHURCH. Moving into the labor market.

Secretary MARSHALL. Yes. Of course, much of the gain in employment was among young people, but the black teenage unemployment rate is one that continues to be very stubborn. It did decline, after reaching a peak of about 40 percent in the spring and summer of 1977, but still there is 37.1 percent now.

Senator CHURCH. I am told that the traditional unemployment rate during periods of full employment is about 4 percent. Do you share the view that some have expressed, that this traditional rate must be increased because of the added numbers of women who are entering the job market?

STRUCTURAL CHANGES IN WORK FORCE

Secretary MARSHALL. No; I believe that one of the reasons that people argue that the so-called normal full employment rate has increased to 4.8 percent, is because there are structural changes. More women and more young people are in the work force.

It seems to me they would reduce the figure. In other words, use counterstructural programs to offset the structural shifts and therefore lower the unemployment rate that you could have without inflation. I think it is entirely possible to do that.

A lot depends on what we do externally—what we do about immigration, and particularly the illegal immigration into the work force, what we do about international trade and energy problems, and what happens in other countries. We believe that you can get unemployment down to 4.8 percent without even using these structural programs, and to get it down by the remaining 0.8 percent by using the structural programs is not that hard. That is, it is relatively less difficult than what we have already done during the past 15 months. We will have to change the focus of the program, but I think it is entirely possible to do it.

Senator CHURCH. Thank you very much, Mr. Secretary, for your testimony this morning. It has been very helpful and we appreciate your coming.

Secretary MARSHALL. Thank you, Mr. Chairman.

Senator CHURCH. Senator Pete V. Domenici, the ranking minority member of our committee, cannot be with us today, He has, however, submitted a statement, which I will now insert into the record.

[The statement of Senator Domenici follows:]

STATEMENT OF SENATOR PETE V. DOMENICI

Mr. Chairman, yesterday we began what I hope will become a truly comprehensive series of hearings focusing attention on a wide range of issues relating to employment, retirement, and continuing education. Secretary Califano testified at length on the demographic changes which are taking place within our society. and the impact these changes are having on the delivery of services to our citizens.

Dr. Harold Sheppard gave us insight into the attitudes and expectations of working Americans. This is an area that must be explored in depth if these hearings are to have lasting value. If the Congress and the executive branch are to shape meaningful and effective public policies, we must know and understand those forces that motivate working Americans of all ages. Dr. Sheppard noted, in response to a question, the need for developing a consensus around any policy we might develop.

Today, we will receive testimony from Secretary Marshall and Ewan Clague, a former Commissioner of Labor Statistics. I hope that they can and will build upon what was said yesterday.

Mr. Chairman, we need to know much more about the attitudes and expectations of younger workers toward their jobs . . . their employers . . . retirement . . . social security . . . inflation . . . productivity . . . taxes . . . and so forth. The views of younger workers are vital because they must pay the taxes that fund the social services and income transfer programs that enable most older Americans to live in relative comfort and security. In addition, today's youthful workers can look forward to a longer, healthier lifespan—and potentially a longer working life. How long they remain in the work force, when they retire, and how well they prepare for their retirement will have a major impact on the next generation of public and private sector policymakers.

In the short run, we must gain a better understanding of the attitudes of older workers toward retirement. We have just extended the protection of the Age Discrimination in Employment Act of 1967 to include workers between the ages of 65 and 70. But at the same time, American workers have been retiring at an earlier age. We also need to know how middle age and older workers perceive the need for second career training and preretirement counseling.

I hope that Secretary Marshall and Commissioner Clague will address these issues during the course of their testimony and responses to questions from this committee.

Senator CHURCH. Our next witness is Ewan Clague, consultant, and former U.S. Commissioner of the Bureau of Labor Statistics.

We are happy to have you, Mr. Clague. I wonder if you could submit your entire statement for the record and highlight it in your testimony.

STATEMENT OF EWAN CLAGUE, LACONIA, N.H., CONSULTANT, AND FORMER COMMISSIONER, U.S. BUREAU OF LABOR STATISTICS

Mr. CLAGUE. Mr. Chairman, I do welcome this opportunity to testify this morning at your hearing on "Retirement, Work, and Lifelong Learning." My prepared statement is too long to read, so I will summarize it for you.

Senator CHURCH. Please do so. Your full prepared statement will appear in the record.[1]

Mr. CLAGUE. In the introduction, I have pointed out that there are three basic programs which constitute the core of the problem. One is the Consumer Price Index, which is one of our most widely used statistics representing the U.S. economy. The second is productivity, which is the hopeful statistic that enables us to overcome rising costs. The third is old age retirement, which constitutes such a large proportion of our problem in the field of social wellbeing.

CONSUMER PRICE INDEX ROLE

With respect to the Consumer Price Index, it was my experience to guide it through the most rapid rise it ever had—from 1946 to 1948, in the postwar period. Then we did have in the Korean war a second

[1] See. p. 144.

upward movement of about 10 percent. But after that, from 1951 to 1965, the average rise was about 1.5 percent a year, which means about one-tenth of a percent a month. It was not a serious factor in our economy, and since productivity was higher and wages increased at least twice that fast, we had a rising standard of living.

That all changed after 1965. I have a table here which highlights that fact. The increase in the Consumer Price Index was 4.2 percent in 1968, then they went up to 5.9 percent in 1970. We next had the recession of 1970–71 that brought it down to 4.3 percent in 1971, and then President Nixon applied price controls in 1971–72, which brought it down to 3.3 percent. But when controls were taken off in 1973, it jumped about 6 percent by midsummer, then 11 percent in the next year. After that it retreated downward, due to the recession of 1975. The bottom was reached in 1976 and 5.8 percent, followed by 6.5 in 1977, up to 7 percent by May 1978, and the administration's committee has estimated 7.2 percent for the whole year 1978.

One of my interests has been projecting many of these economic series into the future. So I took the rate of increase from 1967, the base period of 100, and carried it through to 1978. I think we shall hit 200 sometime this fall. I hesitate to name the month.

Under that circumstance, I have raised the question: Suppose we continue this rate of inflation for the next 10 years or so, through 1990. The index that is now 200 would be 400, and the index to the year 2001 would be 800. In other words, it would be four times as high as it now is.

I cited a few prices to show the effect of that price rise, because most people notice only month to month, or even year to year, and don't take into account this annual 6 percent increase. It does not seem like much over 1 year. But when it accumulates over the decade, it becomes quite dramatic.

I chose as an example that a half gallon of milk in our home now cost 85 cents. This would be $3.40 in the year 2001. A $100 man's suit would cost $400. The Metro fare—I think I should have said busfare—here in Washington, which is now 50 cents during rush hours, would be $2 or even more, because income is not yet meeting expenses. I want to emphasize that this is not a forecast of where the economy is going, or the future price level. I am just trying to emphasize that this is the trend in which we are now operating.

My next point then was to turn to the problem of the——

Senator CHURCH. Before you move ahead, I notice that every sharp spurt in inflation is associated with war, with the aftermath of the war.

Mr. CLAGUE. Right.

Senator CHURCH. It makes me wonder why we are such a war prone country when we pay such a heavy economic price for it.

The Second World War, Korea, Vietnam—each with a dramatic spurt in inflation afterward.

Mr. CLAGUE. Yes. If I may comment on that, I think that even if we had had price controls during the war in Vietnam itself in 1965, say, to 1969, by holding prices down we might still have had in the early 1970's the same increases that we have had recently.

Senator CHURCH. The same thing.

Mr. CLAGUE. Yes.

Senator CHURCH. That is borne out by the fact that when President Nixon temporarily put on controls in 1972, and then in 1973, following his reelection, abandoned them, you had a very rapid spurt upward.

Mr. CLAGUE. One of the problems is that, when you keep a control like that temporarily, people observe it. The labor people and the employers went along, but when it was taken off, the explosion occurred.

Senator CHURCH. Making up for lost time.

PRODUCTIVITY PROBLEM

Mr. CLAGUE. Right. In the next area of wages and salaries, I am talking about the effect of wages and what they have to do with the rising prices. Of course, the cost of living is a basic wage increase that most all workers want to achieve in any case. Productivity works in favor of reducing prices; it means more output for the same amount of labor, and consequently works in the other direction.

This pattern was set in motion in 1948 by the famous contract in the automobile industry between General Motors—and the other firms—and Walter Reuther, president of the United Automobile Workers. They worked productivity into the contract, but they also worked in the Consumer Price Index, so that every quarter-year the wages would rise in accordance with the quarterly increase in the cost of living.

On the productivity side, I do want to emphasize that their decision was to use productivity on the basis of the national rise in productivity, not the increase in the auto industry. So I have a table here showing that in the auto industry itself, the productivity did exceed the national average, and therefore the employer's return here was not a factor in causing any increase in prices. The productivity of the auto industry is higher than the general average.

On the next page, I have a table showing the 1967 to 1978 rate of change in productivity in the private business sector. This was put out by the Bureau of Labor Statistics, the annual indexes. There are two points about this. One is that productivity is always best in business recovery, because that is the period when the employer who has fixed up his firm and put it in good shape can produce more output at lower cost. This accounts for the fact that in a very good progressive year, like 1968, we can get a 3.3 percent productivity gain, and in 1976, recuperating from the 1975 recession, we got 4.2 percent.

Senator CHURCH. May I ask you a question?

Mr. CLAGUE. Yes.

Senator CHURCH. In your productivity index on page 7, you show that using 1967 as a base year, productivity in the private business sector in this country has increased less than 20 percent—19.9 percent to be exact—between 1967 and 1978.

Mr. CLAGUE. That is right.

Senator CHURCH. That is over an 11-year period.

Mr. CLAGUE. In this next table, it is shown a little better. We did very poorly in the first quarter of 1978—only 0.3 percent. That would mean 1.2 percent for the whole year 1978.

Senator CHURCH. While our productivity has increased by roughly, say, 20 percent in the past 11 years, how much has the cost-of-living index risen in the same period?

Mr. CLAGUE. In the same period it has doubled. The price index is now nearly 200.

Senator CHURCH. So our productivity is increasing at a rate of only one-fifth that of the cost of living.

Mr. CLAGUE. That is right.

Senator CHURCH. Do you have figures that would compare our rate of productivity growth with that of other industralized nations in western Europe?

Mr. CLAGUE. I don't have it right with me, but I can answer in a general way without the actual figures. In Britain, it is much lower than us. Britain is really not doing very well. Germany and Japan are doing much, much better.

Senator CHURCH. Much better than we are?

Mr. CLAGUE. Much better than we are, yes; that is right. They are working hard and being highly productive.

In France, it is about like us. Italy is relatively poor on this point, too much labor and not enough productivity.

There are sets of figures, Mr. Chairman, that would give that whole comparison in recent years. The Bureau of Labor Statistics has them. I just don't remember the exact figures.

Senator CHURCH. Are you able to tell us how the Germans and Japanese have achieved a much higher level of productivity, other than the generalized statement that they are working harder? I mean, are there statistics that would bear out the fact that they put a relatively higher percentage of money into new plant equipment and related activities?

Mr. CLAGUE. Yes, indeed. That is the exact point; plus the point that labor in those countries has suffered from inflation. You will recall that after World War I, the German inflation in the early 1920's brought the German mark down to zero. They had to revalue their money. So in the postwar period of 1946 and thereafter, the German people were prepared—the worst thing they felt that could happen was another inflation. Consequently, the labor movement was very careful in its bargaining about wages. In Japan it was much the same—a dangerous inflation which alerted them to the fact that they must exercise restraint in the wage field, or else it will go up through the roof. So they have been able to keep inflation under control. It is interesting that those two peoples, who suffered defeat in the war, were the ones who appreciated the problem. At the present time, the German inflation is the lowest, I believe, of any country in the world.

Senator CHURCH. Thank you.

Mr. CLAGUE. I have some illustrations here of another factor that is bringing down our productivity in this country; that is, the raising of our health and safety standards. I want to emphasize that that is no argument against raising those standards. But I do want to cite the coal mine industry, in which I have made five studies in the last 6 or 7 years. Productivity in coal mining was spectacular from 1948 to 1968; it increased at 6 percent a year. That accounted for the very high wages of the coal miner.

From 1969 to the present, productivity has gone down by one-third. In other words, in underground mines an output of over 15 tons per man per day in 1969 has fallen to less than 10 tons. That is due in part to safety standards that have been set in motion, as well as the other

health standards, such as the elimination of black lung. This has effect then of reducing the productivity in coal mining. This same problem of safety and health is rising in other industries; in steel, in textiles, and others. These improvements in standards will reduce the productivity down to 2 percent a year, or perhaps less. This is not a criticism of higher standards; but it indicates that we have to be careful about wages rising too rapidly.

Early Retirement Factor

Then I come to early retirement as an inflation factor. I regard this as the marginal factor. I did try to emphasize in my paper that any one of these factors, by themselves—for instance, the rise in the Consumer Price Index—would gradually fade out. The cost-of-living increase that the retirees get does not occur until a year after they have suffered from it. This lag would bring the inflation down, if it was not for some other factors pushing it up.

Now, in connection with the earlier retirement, I have a table here which shows that in 1964, 1967, and 1970, there were just about one-third of the men workers wanting to retire earlier, and a little less than half of the women—46 percent.

Now you will notice how sharply it has jumped in recent years. We have half the men in 1976 retiring at 62 and 56 percent of the women.

In the economics of social security, when we have an inflation rate of 7 percent or higher, it pays to retire at 62 and get the benefits over the 62–64 period rather than waiting until 65 and getting the benefits then, only to find out that they are lower than they would have been with retirement at 62. I think that this is one of the factors that leads to earlier retirement.

I mention one other point concerning retirement; that is in a recent action of the Congress, Mr. Chairman, of dropping the age permitting earnings plus benefits from 72 to 70. It will be interesting to see to what extent that has any bearing upon the work of retirement decision of workers.

I noted also, which is not in my paper, that there is a 3-percent bonus now for each year of work after 65; in other words, for the person who stays int he labor force. When social security was first set up, we had a 1-percent bonus for every year that the worker worked, so that a man or women who put in 40 years would have 40 percent higher benefits on retiring than the simple average earnings. That bonus was lost in the revisions of the early 1950's. But it was a very valid point. If the person has an incentive to stay on working longer, and not draw benefits, that will reduce the benefit payments and bring the system more into better balance.

Senator Church. But is there really any incentive as long as the inducement is lower than the annual rate of inflation?

Mr. Clague. Well, in social security, I have called that the passive factor here. Social security is not really a very strong factor in causing early retirement in itself.

Senator Church. You see what I mean?

Mr. Clague. Yes.

Senator Church. I mean, if you give a person a 3-percent incentive to continue to stay in the work force, and in the meanwhile inflation

is diminishing the value of the dollar at the rate of 7 percent a year, that person would be better off retiring and taking the cost-of-living adjustment on his retirement income.

Mr. CLAGUE. Yes, and it will be quite interesting to see whether this modest incentive has any effect. We will have to wait and see what the result will be.

Senator CHURCH. Yes.

Mr. CLAGUE. In private industry, the situation was that private firms started out establishing retirement systems prior to World War I. I have mentioned some of them that were setting up retirement systems for their own employees. However, that movement came to a disaster in the 1930's. As you recall, the railroad systems which had been started went bankrupt, and the U.S. Government had to take them over—the railroad retirement program.

When social security was being debated in 1936, there was a very strong move to permit private industry firms to set up their own retirement systems instead of social security. But the experience with failures had been so bad that the proposal did not pass. Therefore, a private retirement system did not develop substantially in the 1930's.

However, in the post-war period, it grew up as an addition to social security in the form of supplementary private pension plans. Those have expanded very rapidly in recent years—in the last 20 years—and especially in the last 15 years.

There are two kinds of private plans. One is like the limited mine workers, which is completely independent. The mine workers retire at age 55 with their own private retirement pension independent of social security. On the other hand, the auto workers linked theirs into social security. The employer pays for only retirement, but saves money when social security goes into effect at age 65. Under the General Motors, the Ford, and the Chrysler plans, the workers get company benefits at whatever age is chosen for early retirement; but when the workers reach age 65 and social security becomes effective, then the employer cost declines. Therefore, there is a substantial saving to the private firm in merging their retirement benefits with social security.

Senator CHURCH. In other words, they just piggyback on the social security.

Mr. CLAGUE. That is right. They can provide early retirement, but when social security picks up, the employer pays less.

Senator CHURCH. Yes.

PRIVATE PENSIONS

Mr. CLAGUE. There has been some discussion on the Hill about this problem of private pensions, partly because in the early stages they were pretty much based on the long-service employee who works for most of his life with the firm. There were, sometimes, bad happenings—a man laid off at age 58—he needed to be 60 to get a pension, and he didn't get it. Then there was the other problem, which was mentioned earlier in your hearings, Mr. Chairman, people working in one place and another and another, but never having enough service to get any private pensions at all. The worker earns social security, but nothing else.

So then the law was amended, and Congress made these changes that are set forth here, a worker could qualify in 10 years; or he could qualify with a combination of age and length of service totaling 45; or with 25 percent vested after 5 years, but not getting the full amount until 15 years. Each of these provisions qualifies more pensioners.

But these changes have had another effect; namely, it has resulted in a loss of some plans, because this cost was more than some of the smaller firms could bear. I don't know the statistics on that. This is a case in which we may be improving the private pension system, but we are limiting their numbers to those firms that will be able to finance the program. I would like to read a paragraph here.

These private industry workers can retire at earlier ages on their own funds and then get social security when that becomes available. This may be one factor stimulating retirement at 62 under social security. The conclusion is that there is substantial early retirement in private industry plans, but it does have some limitations. In some firms and industries, there are occasional upward adjustments of benefits to offset the rising cost of living, but these are small. The purchasing power of a private pension falls behind the rising cost of living. Hence, these plans make only a limited contribution to greater inflation.

Federal Retirement Programs

Next, we come to the Federal Government, which has a multitude of retirement systems. The largest is the Federal civil service program, of which I am a beneficiary. It provides for long service, if that turns out the way the employee likes it. A recent change that has been made, as I find out here from the report, is that for about 95 percent of all Federal employees, the mandatory retirement age has now been abolished, so that they can now work into age 70 and beyond.

I have a table which shows what is happening to Federal civil service. In 1966, we had about 561,000 retired employees, and in 1977 we had about 1.1 million. The number has just about doubled. The payments were $1.2 billion in 1966, and now they are $8.1 billion. That is six tmies as much money. The combination is twice as many workers, each of them getting 3 times as much benefit. The reason is, of course——

Senator Church. That is not in constant dollars?

Mr. Clague. Pardon?

Senator Church. That is not in contant dollars?

Mr. Clague. No, that is because of longer service and higher pay. The average has risen from about $2,400 a year to $7,400 a year. In the Federal service, unlike social security, longer service provides higher benefits.

Senator Church. My point being is, your schedule here—on page 13—is in nominal dollars, not in constant dollars.

Mr. Clague. Oh, yes, indeed. That is right.

Senator Church. In that same period the value of the dollar has declined, as you pointed out earlier.

Mr. Clague. Yes. As a matter of fact, I touch on that in the next paragraph because I am one of the beneficiaries of that. Our benefits are raised twice a year by the Consumer Price Index. It runs January to June, and then we get the increase in September. Likewise, from July to December, with the new payment in April. So our benefits are escalated by the Consumer Price Index.

I want to emphasize strongly here that Federal employment is not growing. The approximate total for 1957 was about 2.2 million. Now it is 2.7 million, but in May 1978, it was 2,744,000, and in 1974 it was 2,724,000. So in the last 4 years we have had no increase at all in Federal employment.

Senator CHURCH. However, that does not take into account an article appearing in the morning paper?

Mr. CLAGUE. Yes.

Senator CHURCH. Millions on the Federal payroll.

Mr. CLAGUE. Secondary.

Senator CHURCH. Secondary, which was expanded maximum.

Mr. CLAGUE. I am not sure that they come under our Federal pensions.

Senator CHURCH. No, I don't think they do.

STATE AND LOCAL RETIREMENT

Mr. CLAGUE. No. They may be falling into the next problem which is our toughest problem, what I call the bombshell; namely, State and local government retirement. In that discussion, I made one error, which I hope it is the only one in this paper. That date of December 31, 1964, in New York, should be 1965. I didn't pay enough attention to the fact that Mayor Lindsay was elected in 1965. In New York City, the election comes a year after the Federal. Other than that mistake of date, the figures I present are correct.

The issue of early retirement in New York City came up in connection with the sanitation workers. Policemen and firefighters had taken the lead in early retirement, but it was the sanitation workers who broke through. Upon taking office in January 1966, Mayor Lindsay encountered a 10-day strike of the transport workers.

Three months later, in April, his administration faced the possibility of another strike by the sanitation workers. That was averted by giving them retirement at 50 percent of earnings after 20 years of service at any age. Five years later, the transit workers got retirement at age 50. The effect of that was to insure that those types of workers could retire at age 50 or any time after that, and then be able to enter other industries.

There is one more point about that retirement system. New York provided that the benefits in retirement would be paid at the total earnings in the last year of work so that the——

Senator CHURCH. That is a calamitous provision. I am wondering to what extent it has been a pattern for other retirement programs by those cities.

Mr. CLAGUE. I do not know to what extent. In fact, one of my limitations here is that I have not been able to study other cities. I know New York, because I was in the middle of that discussion. I think it does exist in a varsity of other places, but I am not sure where. The big point is, giving that bonus insures that the retiring worker puts in as much overtime as he can. That is why you have read in the papers about these workers drawing benefits equal to 115 percent of their regular earnings. This is because the benefits are based upon the overtime earnings in the last year of service. I don't know why they adopted the principle that the overtime earnings

should count in retirement benefits. Nor do I know how widespread that system is in other State and local governments.

The second advantage that workers can get from early retirement is that they can then go into private industry and earn a second retirement. That makes it possible for such a worker to earn social security also, provided the city government is not linked to social security. Thus, a worker could end up with three pensions—the city government, a private industry firm, and social security.

Now, one other point about city and other local government retirements, namely, disability. That is a very significant factor when there are from 75 to 90 percent of retired individuals being declared disabled. In that case, they do not pay any taxes on that retirement income, which again is a strong incentive to seek retirement.

Just one point on the economics. State and local government employment is rising rapidly. It has tripled since 1950. Employment in the past year has risen by 500,000. A retirement system which retires workers at an early age does not seem to be in trouble when employment is increasing rapidly. That is a situation in which the real danger is not apparent. There is plenty of money flowing in to take care of retirees at the moment, but the point is that when employment levels off or is cut back, the accumulating costs begin to exceed the income, and the system is in trouble.

Senator CHURCH. Those studies have been ordered, have they not, at least for the Federal programs?

Mr. CLAGUE. Yes; there is a study of the Federal system which is concerned with the whole subject of retirement. I believe there are some other studies in prospect, but I am not very clear about what they are.

Senator CHURCH. And some very tentative action is being taken in the Congress with respect to some of the most serious abuses of the military pension, the double-dipping abuses.

Mr. CLAGUE. Yes; I didn't go into that, partly because it is a big field in itself, and because it is just starting right now to get some of the expansions coming from World War II, with the Korean war following after. I am a veteran of World War I, so I am aware of that general situation, but that is a big study in itself.

COST-OF-LIVING ADJUSTMENT

Senator CHURCH. Yes; one of the difficulties where the elderly are concerned—particularly those on the social security system—is that the periodic annual adjustment for cost of living, which I sponsored some years ago, and succeeded in incorporating in the social security law, is based upon the Consumer Price Index, which is normally used for this purpose. But our studies show that the cost of the elderly's major purchases—for example, food, fuel, medical care, and housing—is increasing more rapidly than other prices.

These necessities pretty much consume the whole retirement income for those struggling on limited budgets. My question is whether the Consumer Price Index is a proper method for determining the actual inflation affecting retired people? What is your opinion?

Mr. CLAGUE. That question arose long before we got into this current inflation. Back in the midsixties, the question was raised, "Why

don't we have separate cost-of-living indexes for elderly couples and elderly singles?" This arose after our revision of the Consumer Price Index in 1964, when we turned in a new index. At that time, I was still Commissioner, and I made a proposal that we should have an elderly person's index prepared, perhaps quarterly would be enough. But at that time, the decision was made not to set up such an index. The authorities decided that it was not worth the cost; consequently, nothing was done.

I would agree with you that in some respects in the current situation, we really need an older person's index—an older couple and an older single. That would enable us to know, quarter by quarter, how things are going, because we might run into a situation in which food might be scarce and high-priced. And food is a large fraction of elderly persons' budgets.

Senator CHURCH. Thank you very much, Mr. Clague, for your very interesting testimony. Your full written statement will be a very important document in these hearings as well as your actual testimony.

Mr. CLAGUE. Thank you.

[The prepared statement of Mr. Clague follows:]

PREPARED STATEMENT OF EWAN CLAGUE

Mr. Chairman and members of the committee, I welcome this opportunity to testify here this morning at your hearing on "Retirement, Work and Lifelong Learning." The title I have selected is "Inflation and Retirement—The Cumulative Costs of Retirement Compounded by Inflation."

Introduction

The Consumer Price Index was initiated in World War I when President Woodrow Wilson instructed the Commissioner of Labor Statistics, Royal Meeker, to construct a cost-of-living index for use in regulating wage increases in war industries. The family expenditure surveys were begun in 1918, but the war ended before they were completed, so the index based on these surveys was not completed and published until 1920. The index, constructed on a 1913 base=100, was 211 in June 1920.

After recovering moderately from the 1921 slump, consumer prices remained quite stable. Industrial workers, who had become accustomed to cost-of-living increases during the war, found that the index of the 1920's wasn't doing them any good. So some unions requested the Commissioner of Labor Statistics to make some studies of worker productivity as a basis for wage increases.

A research statistician was appointed, historical data on production and employment were assembled and the first productivity indexes (on a 1913 base) were published in the Monthly Labor Review in July 1926. Over the next 2 years, about a dozen industries were covered, including automobiles, which had the best record of all—output per manhour three times the 1913 level.

But the outbreak of the depression of the 1930's destroyed all labor interest in productivity. Unemployment became the dominant statistic in the economy, which sank into the deepest and longest depression in its history.

In that situation, President Roosevelt appointed a Committee on Economic Security, which worked for 2 years in developing a comprehensive social security program covering old age insurance, unemployment compensation, plus public assistance for the needy.

At that same time, the Consumer Price Index was given the first comprehensive revision since 1918–19. Family expenditure studies were conducted, new commodities and services were added, and a greatly improved index was introduced in 1940 on a 1935–39 base.

These are the origins of the programs which are playing such sifinificant roles in the U.S. economy of the 1970's—old age retirement, the cost of living, and productivity.

I. The Consumer Price Index

RELATION TO INFLATION

When the Committee on Economic Security worked out the social security programs in 1934–35, they were cautious and conservative. Unemployment compensation was scheduled for only 16 weeks, public assistance scales were modest and old age insurance benefits were designed as a floor on which pesronal savings and family contributions could be added.

World War II disrupted the carefullly drawn programs. Price and wage controls held the line during the war, but they collapsed in the postwar readjustment and the Consumer Price Index jumped from approximatell 130 in the summer of 1946 to a peak of 175 in the autumn of 1948—an increase of nearly 35 percent in two years.

Prices declined slightly in 1949 and early 1950, but the outbreak of the Korean War caused an increase of about 10 percent from the summer of 1950 to the spring of 1951. But in the next 14 years, from the summer of 1951 to the outbreak in Vietnam in the spring of 1965, the CPI increased on the average only about 1.5 percent a year. With wage increases averaging at least twice that much, there was a substantial rise in the standard of living of American workers and their families.

The outbreak of war in Vietnam in 1965 opened up a new era in cost-of-living increases. By 1967, the index had risen 5.8 percent, which was nearly 3 percent a year, double the previous trend. By 1970, there was a further increase of 16.3 percent, which was an average of 5.4 percent a year.

This was too rapid a rate of increase for Congress to legislate from time to time some upward adjustment in benefits to offset the loss of buying power through inflation. So Congress adopted an automatic system of raising benefits once a year by the amount of the rise in the Consumer Price Index.

The following table shows the annual rates of increases measuring from mid-year to mid-year, 1968–78.

TABLE 1.—*Consumer Price Index: Wage Earners and Clerical Workers, Annual Rates of Increase, 1968–78*

(1967=100)

Year:	*Increase (percent)*
1968	4.2
1969	5.4
1970	5.9
1971	4.3
1972	3.3
1973	6.2
1974	11.0
1975	9.1
1976	5.8
1977	6.5
1978	[1] 7.0

[1] May 1977 to May 1978.

There are two significant points in this table. One is that the business recession of 1970–71 produced a 30 percent decline (5.9 down to 4.3), which was followed by a still slower rate (3.3) by the summer of 1972. That was the effect of the controls which President Nixon imposed in August 1971.

Controls were taken off in 1973, and the CPI immediately responded. There was a 6.2 percent increase to mid-year, followed by a full year increase of 11 percent in the summer of 1974. Then came the worst business recession in the United States since the 1930's. However, the index responded slowly, reaching bottom in 1976, with a rate slightly under 6 percent (5.8). Then the upturn was resumed—6.5 percent in 1977 and 7 percent for the most recent index (May). Furthermore, the administration's economists have recently come out with an estimate of 7.2 percent for the calendar year 1978.

At the present rates of increase the index should cross 200 by autumn, which means that the index will have doubled in the 11 years from 1967 to 1978. Because the average citizen is more conscious of month-to-month changes in the index, or perhaps the year-to-year, he or she is not fully aware of the eventual

impact of those rates of increase. A projection into the future will highlight the impact of inflation.

If the 1968–78 cost-of-living increase continues into the future, the Consumer Price Index at the end of 1990 will be about 400 (double the present) and will be nearing 800 by the year 2001 (doubling again). This is *not* a forecast; it is a projection to show where the economy is going unless steps are taken to control inflation, whatever may be the cost.

To illustrate the meaning of these statistics, here are a few homely examples. In our home, a half-gallon of milk now costs 85 cents; in 2001 it would be $3.40. A $100 men's suit would cost $400; the Metro fare in Washington would be $2, or possibly even more, because the fares aren't high enough now to cover expenses.

The problem for the U.S. Government and the American people is, what can be done to slow down this rate of inflation, and, if possible, bring it to a halt? The answer to that question must come from an analysis of the factors that produce the inflation.

II. Wages and Salaries

Wages and salaries are the dominant factor in the national income, averaging in recent years about 77 percent. Adding the income of small proprietors brings the total to about 83 percent. About five-sixths of the national income goes to people who get income from work.

Wages in the U.S. economy are largely determined by collective bargaining. It is true that only about one-fifth of the total labor force is fully organized, but the unorganized generally follow along, usually with some lag in time and occasionally with some shortfall in wages and fringe benefits. At the lower end of the scale, the Federal and State governments step in with minimum wage requirements, which are periodically raised to keep pace with general wage increases.

When questioned one time by a reporter as to what wages labor wanted, AFL President Samuel Gompers answered "more." So the problem becomes, how much more? From the employer's viewpoint, the source of wage increases is profits. But some firms in an industry don't have any profits, so there is the risk of loss of jobs if the wage increase is too high. In that situation, the cost of living usually becomes a floor; wages should not fall through loss of purchasing power. It is also evident that in a competitive society employers will always be trying to improve their efficiency. This factor is measured by indexes of productivity, which are the statistical measurement of output per manhour of work.

The postwar inflation of 1946–48 brought these two concepts together in the famous escalator collective bargaining contract between labor and management in the automobile industry. In first postwar bargaining of 1945–46, there had been a prolonged strike with serious loss of urgently needed auto production.

There was national concern about another strike in 1948. Suddenly in late May, there was a public announcement that Charles Wilson, the president of General Motors, and Walter Reuther, the president of the Automobile Workers union, had signed a new type of contract which combined two very significant factors. The first was an annual increase in wages equal to the average increase in productivity in the national economy as a whole, which was estimated to be a little under 3 percent a year. The other factor was a quarterly increase in wages based upon the changes in the Consumer Price Index.

While General Motors was the first to sign an agreement, Ford, Chrysler, and the other companies accepted the general principles, so there was no automobile strike in 1948, and automobile production expanded rapidly.

In 1950, when the contract came up for renewal, the auto workers had actually suffered a small loss in wages on the cost-of-living factor (the index had come down a few points). But the productivity factor had produced an increase of more than 5 percent in wages. The contract was sufficient popular among the workers and their families that it was renewed for a 5-year term. After that the term was changed to 3 years. When the next renewal of the contract comes up in 1979, it will have been in operation in the auto industry for 31 years.

One reason for the continued success of the automobile contract was that the productivity increases (based on productivity in the national economy) were nearly always lower than productivity in automobiles. The Bureau of Labor Statistics reported the following annual rates in motor vehicles, 1970–76: 2.0, 16.7, 4.0, 2.5, —4.4, 6.8, 9.1. Except for the disastrous year 1974 (—4.4), all the other years are good to excellent for profits. So it is not bargained wage increases which have sent auto prices to such high levels; it is the escalation by the Consumer Price Index.

Furthermore, the high inflation in recent years has created greater interest by both management and labor in contracts of the escalator type, namely, with precise quarterly, semiannual or annual wage increases based directly on the CPI. According to the most recent data of the Bureau of Labor Statistics, the number of workers covered was about 5.7 million under major contracts. What that type of contract does is to tie wages more closely to the cost of living.

But during the 1970's, national productivity has not been maintained at its theoretical 3 percent level for the total private economy. The next table shows the annual increases for the period 1967–78.

TABLE 2.—PRODUCTIVITY IN THE PRIVATE BUSINESS SECTOR, ANNUAL INDEXES

Year	Index	Rate of change (percent)
1967	100.0	
1968	103.3	3.3
1969	103.7	.4
1970	104.5	.7
1971	107.8	3.2
1972	111.0	3.0
1973	113.1	1.9
1974	109.9	−2.8
1975	111.8	1.7
1976	116.5	4.2
1977	119.5	2.6
1978 [1]	119.9	.3

[1] First quarter.

This is a classic case. Productivity reached 3.3 percent in 1968, but fell back to 0.4 percent in the peak year 1969. It improved substantially in 1971–72, but then slackened off in 1973 and had an actual loss (−2.8 percent) in the business downturn beginning in 1974. On the upgrade, some improvement came in 1975, with the highest increase of the decade in 1976 (4.2). Then came the slackening in 1977, with some indication of a further slowdown in 1978, although there may be an improvement in the second quarter.

The record of the decade 1968–77 is not up to the previous productivity gains. The average gain for 1967–77 is just a little under 2 percent a year, which is a substantial decline from the 3 percent which was approximately the rate for the period between the Korean War and the outbreak in Vietnam.

The outlook for higher productivity in the immediate future is not very good. With increasing population and expanding industrial production, the effects upon the environment are becoming greater and Congress is establishing new higher standards of health and safety in American industries.

The most striking example of the new standards is the bituminous coal industry. For a period of 20 years, 1948–68, that industry had one of the highest productivity increases in U.S. industry—an average gain of about 6 percent per year. Employment in the industry declined from 425,000 miners in 1948 to 125,000 in 1968, a cutback of 300,000 miners. Yet because of the productivity, the miners' wages were among the highest in American industry.

In 1969, Congress passed the Coal Mine Health and Safety Act, which established new health and safety standards. Furthermore, Congress provided special pensions for all miners, currently working or previously retired, who were afflicted with black lung and other diseases. Widows and children of such miners were also covered. The costs were not charged to the industry, but paid from Federal funds. The result was about 210,000 ex-miners, with 145,000 widows with and without children, drawing black lung benefits in 1973. The program (for new cases) ended in 1973, but the existing case load is being carried to the 1980's.

Coal mining provides an excellent example of the price which society must pay to create safe and healthy working conditions in American industries. New environmental standards are also being set for the steel industry, chemicals, textiles, and a number of others. In such industries, the improvements in health and safety are essential, both for the affected workers and the general population. But it must be clearly understood by the American people that these changes require more labor and will reduce productivity per man.

The prospect for the economy is that productivity in the private business sector will continue into the 1980's at the 2 percent level, with the possibility of some-

further reduction. Under those assumptions the outlook would be this—with respect to the cost-of-living factor, the system of escalating old age retirement benefits by the Consumer Price Index, as outlined in section I, contributes to further inflation by increasing consumer buying. But it is important to emphasize that this is a passive factor in causing inflation. Consumer prices rise during the year; but during those 12 months, the purchasing power of the monthly benefits declines. At the end of the year, the beneficiary receives an increase in the monthly benefits equivalent to the loss of purchasing power. But then during the next year he loses again, and so on. The point is that this is a fading factor in causing inflation. If it were the only factor, the inflation would eventually be brought to an end.

However, if wage increases for the economy as a whole exceed the 2 percent productivity gain, they begin to offset the savings made possible by lagging escalation through the cost of living. To the extent that average economywide increases exceed productivity, to that extent they constitute an additional factor producing inflation.

III. Early Retirement As An Inflation Factor

This brings up the question as to what other factors in the economy may be generating inflation. One possibility is early retirement. The selection of 65 years as the appropriate age of retriement originated in the old age and mothers' pension systems in the various States before and after World War I. These welfare pensions were usually set at $30 per month.

Social Security

When the social security program was adopted, 65 years was designated as the age for the receipt of old age benefits. But there was one modification, namely, that workers could retire as early as 62, with the proviso that the benefit would be reduced by 6.7 percent for each early year. The idea was that the eventual cost would be about the same, since the early benefit payments would be offset by the savings to the fund by the reduced benefits after 65.

These early retirement schedules were firmly maintained down to within the last few years. But inflation began to stimulate early retirement as shown by the following table.

TABLE 3.—RATIO OF RETIREMENT TO ELIGIBLES, SELECTED YEARS, 1964–76

Year	Men (percent)	Women (percent)
1964	31	46
1967	33	46
1970	34	46
1972	39	49
1974	44	56
1976	49	54

What this table shows, year by year, is the proportion of men and women workers eligible for retirement who actually chose to do so at ages 62–64. Two points are clear. One is that women retire earlier than men. In the longer past, about one-third of men workers and nearly half of the women retired early. The other point is that the inflation rates of the 1970's stimulated that decision. In 1976, just about half of the men eligibles and 56 percent of the women chose early retirement.

At inflation rates of 7 percent or more, the early retiree would get higher benefits after age 65 than the fellow worker who continued working until age 65 and then drew his benefits.

One modification voted by Congress recently was a reduction in the age at which the retiree was entitled to both benefits and earnings. This action was in response to a proposal that all beneficiaries should be entitled to full benefits at 65 without any reduction at all for earnings. The additional cost of this would have been substantial. Congress was willing to make a reduction of 2 years to age 70. It will be of interest to note in the next few years the extent to which this increases the benefit payments.

In summary on social security, it must be emphasized that the system has retained its original basic character. The escalation of benefits by the Consumer Price Index is the major factor in the expension of the benefit payments, and the year's lag in applying the cost-of-living increase would gradually bring the index down to stability, if there were no other inflation factors operating to push prices upward.

PRIVATE INDUSTRY RETIREMENT SYSTEMS

Private industry and a few unions developed retirement systems at about the beginning of the century. The A.T. & T. program was established in 1913. A number of railroad companies created pension systems for long-service employees.

However, the depression of the 1930's bankrupted many of the private systems. The plight of the railroad companies was such that Congress passed an act in 1935 (prior to the Social Security Act) creating a national retirement system for all railroad employees. This has continued, separate from social security, down to the present.

When the Social Security Act was being debated in Congress, a strong drive was made for a provision offering employers an opportunity to set up their own private retirement systems, in which the employers would be excluded from social security. One factor causing the rejection of that idea was the disastrous experience of the early 1930's.

But after World War II, there was a marked growth of individual company and industrywide pension plans, which were supplementary to social security. In some industries, such as bituminous coal mining, the pension plan was completely independent of social security. In other industries, such as automobiles, company plans paid early retirement benefits from their own funds, but cut back their own payments by the amount of social security benefits when these became available. On either of these bases, the growth in private industry retirement plans during the 1950's and 1960's was very impressive.

It is important to note at this point that these industry plans provide substantially earlier retirement than social security. The prevailing retirement age was 60. This was usually expressed in a combination of age and length of service—60 and 30, or 55 and 35. On length of service, there were minimum requirements of 15 years, 20 years, or even total service up to retirement age.

As the systems developed, problems arose. A worker laid off at age 58 would lose his pension due at 60. A worker who never worked as long as 15 years for any one company found himself without any private pensions, despite a lifetime of work. In fact, there are workers who go through an entire working life without serving long enough with any employer to earn a private pension. They would of course get social security benefits upon retirement.

Congress took a long look at this general situation some years ago and came up with new and firm specifications for private industry pension plans. One was a requirement that the worker be entitled to some pension after a definite minimum length of service, for which there are three alternatives. One is a fully vested benefit after 10 years. Another is the rule which provides 50 percent vesting when a combination of age and service equals 45. Still another provides for 25 percent vesting after 5 years, reaching full vesting after 15 years.

Another requirement was for adequate reserves for pension funds. In addition, provision was made for a reinsurance fund administered by the Department of Labor to rescue any failing funds.

The trend in private industry plans has been in the direction of earlier retirement. In a number of major industries, the plans provide for 30 years of service at age 55. There is one incentive toward this early retirement (apart from a need to retire from work), namely, that a worker retired from one firm or industry can work and earn wages without loss of the pension. In the automobile industry, such early pensions are now payable at age 50. But such early retirement in automobiles, steel, and some other industries is subject to a requirement that the retiree is restrained from earning wages or salaries in any other industry.

The more stringent requirements of the recent legislation is resulting in some decline in private pension plans, especially among smaller companies. The higher standards established by the new legislation may restrain to some extent the growth of private pension plans.

On the subject of early retirement, there is little doubt that these plans create a larger financial burden on industry than would be the case if their retirement

ages corresponded to those of social security. As it is, these private industry workers can retire at earlier ages on their own funds and then get social security when that becomes available. This may be one factor stimulating retirement at 62 under social security.

The conclusion is that there is substantial early retirement in private industry plans. But it does have some limitations. In some firms and industries there are occasional upward adjustments of benefits to offset the rising cost of living. But these are small. The purchasing power of a private pension falls behind the rising cost of living. Hence these plans make only a limited contribution to greater inflation.

FEDERAL GOVERNMENT

The Federal Government has a multitude of retirement systems, both civilian and military. For civilians the Civil Service Retirement System is the largest and can be used as a model for the minor ones.

The Federal Government has a wide range of retirement possibilities. At the upper limit retirement was formerly compulsory at age 70, with the proviso that an empuloyee could work beyond 70 in order to achieve 15 years of service. At the lower end of the scale employees with 20 years of service can retire at age 60. Employees with 30 years of service can retire at age 55, and even earlier, if they accept a reduction in benefits.

The following table shows the upward trend in number of civil service retirees and the corresponding payments.

TABLE 4.—FEDERAL CIVIL SERVICE RETIREES AND BENEFITS, SELECTED FISCAL YEARS, 1956–76

[Dollar amounts in millions

Year	Number	Payment
1966	560, 992	$1, 322
1968	604, 873	1, 665
1970	662, 223	2, 129
1973	843, 520	3, 762
1974	938, 654	4, 825
1975	989, 786	6, 052
1976	1, 038, 377	7, 098
1977	1, 096, 561	8, 143

In the 11-year period from 1966 to 1977, the civil service retirees under that system increased from about 561,000 to almost 1,097,000—very nearly double. Over that same period, the benefit payments increased from $1.3 billion in 1966 to $8.1 billion in 1977. The average annual benefits increased from about $2,400 a year to more than $7,400. Beneficiaries double and benefits triple.

The most recent change is that after September 30, 1978, mandatory retirement has been abolished for about 95 percent of all Federal employees.

Retired civil service employees have their benefits escalated by the Consumer Price Index, but with a somewhat different formula from social security. Civil service retirees have catchup payments twice a year. The increases are calculated on the June and December indexes, with benefits payable three months later in each case. Therefore, civil service employees receive benefits more closely following the rise in the cost of living than do social security beneficiaries. In both instances, of course, they are always losing ground except in the month of catchup.

Federal civil service employees have in the past paid substantially more for their retirement benefits than the social security coverage. The Federal contribution rate is now 7 percent of wages and salaries, and it was 6 percent for many years before that. Social security now has a contribution rate of 6.05 percent, but this includes about 1 percent for the hospital insurance program under medicare.

The most recent development is that Congress has ordered a study of the possibility of merging the Federal Government retirement programs with social security.

There is one important point concerning Federal employment which is not fully understood by the public. Federal employment is *not* growing rapidly. In 1957, the figures were about 2,217,000; in May 1978, about 2,744,000. That is an increase of 525,000, or approximately 25,000 a year. But there has been no recent growth at all; the average for 1974 was 2,724,000 and for 1977 almost exactly the same—2,727,000.

MILITARY PENSIONS

This subject requires more attention than could be given for this paper. Veterans of World War II are reaching retirement ages, and they will be closely followed by those from the Korean War. This cost falls on the Federal Government and will constitute a retirement outlay in the future much higher than the funds required for civil service and other civilian employees.

STATE AND LOCAL GOVERNMENTS

Retirement systems were slow in developing in State and local governments, partly because in some places the employees were political appointees subject to occasional turnovers. A retirement program can't operate under such circumstances. In other places, the employees were able to stay on the job as long as they wanted to do so, even into age 70 and beyond.

But the new conditions in the postwar economy brought some fundamental changes in the States, counties, and cities. The lead was taken by workers providing essential services, such as police, firefighters, transportation workers, and sanitation workers.

The situation in New York City is so well known that it can serve as a case study, representative of many other cities throughout the country. The transit workers (subway and bus) had a contract with New York City which expired on December 31, 1964. The newly elected Mayor Lindsay did not take office until January, but the union leaders refused to settle with the outgoing mayor. They then conducted a strike in the first week of Mayor Lindsay's term. After some bitter negotiations a strike settlement was reached.

Then in April, the contract with the city's sanitation workers came up for renewal. It was vital for the new administration not to have another strike. So the city negotiators accepted a provision which permitted sanitation workers to retire at 50 percent of earnings after 20 years of service, at any age.

This was a monumental change in retirement policy. From that day forward early retirement options spread rapidly. The transit workers wanted the same privilege, but the city feared the loss of so many of its skilled workers, especially the machinists repairing the cars. However, in 1971 an agreement was reached for retirement at age 50 after 20 years of service with a benefit of 50 percent of earnings, with additional benefits of 2 percent a year for longer service. A worker entering at age 25 could retire at 50 with 60 percent of earnings.

The stimulus toward early retirement was greatly strengthened by another provision of the contract which raised monthly benefit payments. These were based upon the employees' earnings in the last year of service, including all overtime earnings. The result was that employees planning to retire sought all the overtime they could get. Stories have appeared in the press recently citing examples of retired employees drawing benefits higher than their regular full-time earnings on the job. Of course, that scale of benefits could easily be achieved by long-service employees.

But the other advantage achieved by early retirees was the opportunity to earn a second retirement benefit from another employer. An employee retiring at 50 years of age could earn social security coverage by age 60, and, in addition, possibly a second retirement pension with a private firm.

This overlapping of retirement benefits, coupled with full-time earnings from work, is the duplication of incomes which causes inflation.

New York is not unique; it is quite typical. Throughout the country other local governments (and States) have established retirement systems which permit early retirement. This is one reason that the local governments are in financial trouble.

Police and firemen have long been in the lead of the drive for early retirement. Because of the personal danger in those occupations, early retirement seems natural and logical. However, those systems usually provide for tax-free benefits for disabled retirees. The result has been in many cities and counties that from 75 to 90 percent of the early retirees are classified as disabled, which means that they pay no taxes on the benefits, or only a small amount.

Police and firemen are very special classes of local employees with relatively small numbers. The problem is that other State and local employees attempt to match these retirement benefits, or at least to move toward them. And in the case of these other employees the numbers are startling.

State and local government employment in 1950 numbered about 4 million; in May 1978, the number was nearly 12.9 million—more than triple expansion.

Within the last year (May to May) there has been an increase of 500,000 employees, desipte all efforts which have been made to hold down and even to cut back on city government employment.

Local government employees comprise about three-quarters of the total, with the States about one-quarter. However, State employment is growing somewhat faster. In 1955, local employment was about 3.6 million and State less than 1.2. In April 1978, the preliminary figures are 3.5 million and 9.7. Both constitute the fastest growing employment in the U.S. economy.

Retirement systems for organizations with such high growth rates in employment have a favorable financing factor which conceals some basic problems. New employees start at the bottom of the ladder; retirement comes later. It is when the employment expansion slackens and finally comes to a halt that the reckoning comes. And an actual cutback in employment would produce a crisis in the retirement program.

In this situation, early retirement may be the timebomb that will upset the system. Employees young enough to get other jobs will take the retirement benefits and hunt other work, in which they can have both earnings and benefits. The older employees will be entitled to benefits which cannot be met by the contributions. The alternatives are failure to pay benefits or increases in contributions and taxes.

What is urgently needed is more intensive study of the early retirement problem in order to find out what could be done to bring the situation under control.

Conclusion

It is not any one factor, but rather a combination of factors, which together produce a persistent inflation.

Escalation of wages and salaries by the Consumer Price Index is a strong sustaining factor in a rising cost of living. But it is offset by an increase in productivity, which reduces labor costs to the employer. If consumer prices rise 6 percent in a year, and productivity is only 2 percent, it would require an economy-wide increase of about 9 percent to generate a further rise in prices.

But if these two factors are not sufficient to create inflation, there are some others which can help push the ball over the line. Still another is the escalation of retirement benefits by the Consumer Price Index. Since these benefits are paid largely to nonproducers, they have the effect of increasing consumption without any corresponding increase in production. Any shortage in the contributions available to balance the benefit increase will generate additional inflation.

Finally, there is early retirement, which is not adequately provided for. Early retirement has two inflationary factors. One is the shortened duration of contributions, perhaps 30 years of work to age 50, plus a lengthened duration of benefits, age 50 to age 80.

The other is the combination of full-time earnings and early retirement benefits. Furthermore, the new earnings may produce a second retirement benefit.

Theoretically, all these factors could be brought under control by the appropriate balancing of benefits and contributions. This can be done by restricting the benefits and raising the contributions until the program is in balance.

In practice, this is what is not done. The pressure against higher contributions is forceful. So the problem is postponed.

What is needed is a study of this problem while it is still in its elementary stages, in order that some reasonably satisfactory solution can be devised.

Senator CHURCH. The hearings are now recessed until tomorrow morning at 10 o'clock.

[Whereupon, at 12:05 p.m., the hearing recessed, to reconvene at 10 a.m., Wednesday, July 19, 1978.]

APPENDIX

Correspondence Relating to Hearing

Item 1. Letter and Enclosure From Senator Frank Church, to Hon. F. Ray Marshall, Secretary, Department of Labor, Dated July 31, 1978

Dear Mr. Secretary: Thank you very much for your testimony at our recent hearing on "Retirement, Work, and Lifelong Learning." I was glad that you could participate, and I look forward to a close working relationship with personnel from your Department as our hearings and studies on related issues continue.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

Frank Church,
Chairman.

[Enclosure]

Questions From Senator Frank Church

1. You have indicated that the Bureau of Labor Statistics projects a continuing decline in the labor force participation rates of older persons through the turn of the century—from 48 percent in 1977 for men 55 or older to 35 percent in 2000. To what extent will the enactment of the Age Discrimination in Employment Act Amendments affect this downward trend? In addition, is there a possibility that the trend may be reversed, as pension costs continue to climb because of the higher ratio of older persons to younger workers?

2. One of the committee's witnesses—William Babson, a financial consultant—suggested the establishment of minimum benefits, along the lines of a minimum wage. What is your reaction to this proposal?

3. What was the rationale for transferring responsibility for administering the Age Discrimination in Employment Act from the Department of Labor to the Equal Employment Opportunity Commission—especially since EEOC has a huge backlog of claims?

4. What would be the cost of reducing or eliminating the FICA tax for older workers by extending the current earned-income tax credit to aged persons without children?

5. In fiscal 1977, persons 55 or older accounted for only about 6 percent of all new enrollees in the CETA (Comprehensive Employment and Training Act) public service jobs programs. What has the Department done or plans to do to sensitize prime sponsors about the needs of older workers?

6. You have said in your written statement that more Americans are finding it possible to retire at an earlier age because of "rising standards of living and increased concern with income security." Do you think this trend toward earlier retirement is desirable when the cost of public and private income maintenance programs are mounting rapidly and will increase more rapidly in a few years?

7. You state that the labor force participation rate for men 55 and over is expected to drop from 48 percent now to 35 percent in 2000. For older woman, it is expected to decline from 23 percent to 19 percent during this same period. What assumptions are made in arriving at this rate of decline? What has been the history of accuracy of labor force participation rates for the 55+ group in the past?

8. The 1978 Age Discrimination in Employment Act Amendments direct the Secretary of Labor to conduct a study concerning the effect of raising the upper age limit of the Age Discrimination in Employment Act to 70 as well as the feasibility of eliminating the upper age ceiling entirely. Your letter of July 12, written in response to a committee inquiry, says you will make every effort to issue an interim report by January 1981, and a final report by 1982. When do you expect this study to begin?

9. The Department of Labor's annual report under the Age Discrimination in Employment Act has for 10 years referred to a study in progress under section 5 of the act to examine "the institutional and other arrangements giving rise to involuntary retirement." To date, no satisfactory study has been completed. When do you propose to complete this study? Will this be part of the overall study mandated by section 6 of the 1978 amendments or will it be handled separately? What are your specific plans and timetables to address this issue?

10. The Senate version of the 1978 Older Americans Act Amendments directs the Department of Labor to give special consideration to minority organizations in awarding grants and contracts under the senior community service employment program. Earlier this month, funding for the senior community service employment program increased significantly. What are the Department's plans, if any, to award contracts to minority organizations, such as the National Caucus on the Black Aged and the National Association of Older Persons?

11. What is the Department of Labor doing to promote job performance evaluation and mid-career training?

12. The House of Representatives recently passed the Federal Employes Flexible and Compressed Work Schedules Act (H.R. 7814) and the Federal Employes Part-Time Career Employment Act (H.R. 10126). What is your Department's position concerning these two bills?

Questions From Senator Edward W. Brooke

Senator Brooke asked that the following questions be raised, since he was unable to attend the hearing in which you testified:

1. How many age discrimination cases has DOL received during the past three years?

2. How many age discrimination cases does DOL bring to court?

3. What are the criteria for telling a complainant that he or she should sue an employer on his/her own? In other words, what are the reasons that DOL takes some cases and tells other persons to sue on their own?

4. What would you estimate the average cost to the individual for bringing his/her own age discrimination case to court?

5. Do large employers tend to dismiss individually brought age discrimination complaints as of no consequence because they may believe that few people discriminated against have either the time or the money to sue on their own?

6. Some persons have suggested that the agency administering the Age Discrimination in Employment Act should be given "cease and desist" authority. Would you agree?

Item 2. Letter and Enclosures from Hon. F. Ray Marshall,[1] Secretary, Department of Labor, to Senator Frank Church, Dated September 11, 1978

Dear Senator Church: This is in response to your letter with questions from yourself and Senator Brooke following my appearance before your committee on July 18, 1978. I am also enclosing the inserts for the record which we were to supply.

I hope this information is useful to you, Senator Brooke, and other members of the committee.

Sincerely,

Ray Marshall,
Secretary of Labor.

[Enclosures.]

Response to Questions From Senator Frank Church

Question 1. You have indicated that the Bureau of Labor Statistics projects a continuing decline in the labor force participation rates of older persons through the turn of the century—from 48 percent in 1977 for men 55 or older to

[1] See statement, p. 112.

35 percent in 2000. To what extent will the enactment of the Age Discrimination in Employment Act Amendments affect this downward trend? In addition, is there a possibility that the trend may be reversed, as pension costs continue to climb because of the higher ratio of older persons to younger workers?

Response. The enactment of the 1978 amendments to the Age Discrimination in Employment Act is expected to have a relatively small impact on the number of older persons in the labor force. In testimony before the House Select Committee on Aging on May 19, 1978, Department of Labor spokesmen noted that labor force participation profiles suggest the number leaving the labor force because of mandatory retirement requirements is small. The availability of retirement benefits, and possibly declining health, are probably more important incentives for leaving the labor force.

Using data provided by the Social Security Administration (SSA) and the Current Population Survey (CPS), Department researchers estimated that an additional 125,000 to 172,000 men and women aged 65 to 69 would be in the labor force if mandatory retirement before age 70 were banned. This represents a net addition to the U.S. labor force of less than two-tenths of 1 percent due to the 1978 ADEA amendments. The same study estimated that about 36,000 men aged 65–69 were unemployed or involuntarily working part time as a result of mandatory retirement.

As part of the study mandated by the 1978 ADEA amendments, we will be developing more refined and detailed estimates of the effects of the mandatory retirement changes. Congress has asked the Department to develop such information in order to help examine the feasibility of outlawing mandatory retirement altogether.

In a "pay-as-you-go" system like social security (and many public-employee pension plans), a growing number of retirees places an increasing burden on younger workers whose taxes must finance benefits. The result may be growing pressure to lower benefits or raise the age of eligibility.

Both of these changes, of course, would act to increase the labor force participation rate of older persons. In the case of the social security system, it is hard to conjecture just how strong—and how effective—these pressures from younger workers will be.

In the case of a fully funded private pension plan, these demographic shifts should theoretically have no effect, since by the time the worker retires all contributions on his behalf have already been made. However, benefits under private pension plans may not be entirely funded in advance of retirement because of the extended amortization period for funding benefit increases and unfunded prior service costs. Thus, to a more limited extent, they will be subject to similar pressures to the ones that OASI will face.

Question 2. One of the committee's witnesses—William Babson, a financial consultant—suggested the establishment of minimum benefits, along the lines of a minimum wage. What is your reaction to this proposal?

Response. We are unable to take a position on Mr. Babson's proposal to establish minimum pension benefits without studying his specific proposal in considerably more detail and discussing it within the administration. However, without adopting a position, we can sketch out the potential economic effects of such a law.

As the law currently stands, companies are under no obligation to offer a pension plan to their employees. (Those who choose to do so, though, must meet ERISA standards.) A minimum-benefits law could be expected to cause some plans to go out of existence because sponsors will consider the plan excessively costly.

The necessity to fund the new minimum benefits could have negative employment effects as employers unable to bear the higher labor cost lay off workers or cut back their hiring plans. In the long run, a minimum benefit law could also slow the growth or take-home wages as the company's labor costs are reallocated away from current wages toward deferred wages (pensions).

These economic effects would be selective in their impact, having their strongest impact on employers whose plans do not already provide the mandated minimum.

Question 3. What was the rationale for transferring responsibility for administering the Age Discrimination in Employment Act from the Department of Labor to the Equal Employment Opportunity Commission—especially since EEOC has a huge backlog of claims?

Response. The transfer of responsibility for enforcement of the ADEA (and the Equal Pay Act) from the Department of Labor to the EEOC is scheduled to take effect on July 1, 1979. Attached are copies of testimony presented last March before the Senate Committee on Governmental Affairs, Subcommittee on Legislation and National Security, by Mr. Donald Elisburg,[1] Assistant Secretary of the Employment Standards Administration in the Department of Labor, and Mr. James T. McIntyre, Jr.,[2] of the Office of Management and Budget, concerning the reorganization plan under which this change is being made. These statements explain in full the rationale for the transfer of responsibilities.

Question 4. What would be the cost of reducing or eliminating the FICA tax for older workers by extending the current earned-income tax credit to aged persons without children?

Response. The earned-income tax credit (EITC) currently applies to earnings up to $8,000 for parents with children in the household. The EITC amounts to a 10 percent credit on earnings up to $4,000; the credit begins to be reduced at a 10 percent rate when earnings exceed $4,000, finally disappearing at $8,000.

Through use of earnings data from the March 1977 Current Population Survey, we have made a rough estimate of the revenue loss that would be caused by extending the EITC to workers 65 and over. The estimate was developed under the following assumptions:

—Only the earnings of the over-65 worker would be eligible for the EITC. Thus, if only one partner in a marriage were 65 or older, only he (or she) would be eligible for the credit.

—Persons over 65 living alone or with unrelated individuals would be eligible.

—All workers eligible for the EITC would claim it.

Under these assumptions, we estimate that the annual cost of such a change in EITC provisions would be approximately $272 million. Of this total, $152 million would go to aged persons living with a spouse; $120 million would go to aged persons living alone or with unrelated individuals.

Question 5. In fiscal 1977, persons 55 or older accounted for only about 6 percent of all new enrollees in the CETA (Comprehensive Employment and Training Act) public service jobs programs. What has the Department done or planned to do to sensitize sponsors about the needs of older workers?

Response. As a followup to the national program for selected population segments (NPSPS) operated under title III of CETA, a series of monographs was prepared describing various approaches to the provision of services for specific groups, including older workers. These monographs were distributed through the system and served to assist prime sponsors in developing better programs for older workers.

Additionally, prime sponsors were directed, in developing their grant applications for fiscal year 1978, to identify planned service levels in their CETA programs by race, age, and sex, comparable to the incidence of these categories of workers in the unemployed population. Prime sponsors were expected to plan programs at levels approximately the levels of need. Where variances were found between the level of need and planned levels of services, it was necessary to provide an explanation to the regional office and, where indicated, to make the necessary modifications in the service plan. We regard the linking of the grant application approval process to the planning of levels of services for age, race and sex groups as an important first step in the approach to assessing service levels by age.

Question 6. You have said in your written statement that more Americans are finding it possible to retire at an earlier age because of "rising standards of living and increased concern with income security." Do you think this trend toward earlier retirement is desirable when the cost of public and private income maintenance programs are mounting rapidly and will increase more rapidly in a few years?

Response. The trend toward earlier retirement has been apparent for the past four decades and is linked to the dramatic expansion of social security, among other factors. At the end of World War II, for example, just under half of men 65 and over were still in the labor force; today the figure is one-fifth. A typical male worker today, retiring at about 62, can look forward to over 15 years of

[1] See p. 161.
[2] See p. 163.

retirement. With the income security provided by OASI, furthermore, the prospect of inability to work because of declining health has been rendered less worrisome.

This trend toward early retirement does pose difficulties for retirement income programs financed on a "pay-as-you-go" basis, inculding social security, SSI, and many public-employee pensions, all of which are sensitive to demographic changes. The Department advocates several strategies for dealing with these difficulties.

—Vigorous enforcement of the Age Discrimination in Employment Act, and dissemination of information to employers concerning the abilities of older workers, will ensure that "retirement," when it occurs, is truly voluntary.

—The encouragement of part-time "call-back," and other flexible arrangements for older workers will afford them the option of partial rather than full retirement.

—The expansion of private pensions, which operate on a funded basis, will provide a supplemental source of retirement income which lacks social security's extreme sensitivity to demographic factors. In the Department's opinion, it is posible to expand the scope of the private pension system within the framework of full ERISA protections.

We believe that the combination of early retirement and projected demographic changes merits concern but not alarm. It is possible to deal with these changes without radically cutting back the options afforded to older persons.

Question 7. You state that the labor force participation rate for men 55 and over is expected to drop from 48 percent now to 35 percent in 2000. For older women, it is expected to decline from 23 percent to 19 percent during this same period. What assumptions are made in arriving at his rate of decline? What has been the history of accuracy of labor force projections for the 55+ group in the past?

Response. The BLS labor force projections cited in the prepared statements were developed by applying projected labor force participation rates to Census projections of the number of persons in specific age brackets (55–59, 60–64, etc.). The projections for the over–55 participation rate cited in our testimony are an aggregation of these different age brackets, and thus reflect the shifting age distribution within the older population as well as changing labor force behavior.

The BLS analysts developed separate projections for three different sets of assumptions:

—In series A, the participation rate for each age/race/sex cohort within the over-55 population is assumed to remain constant at its 1977 rate. This is not a realistic assumption, but serves as a "baseline" case to isolate the effect of demographic shifts within the over-55 age group. In series A, the participation rate for over-55 males would drop from 47.5 in 1978 to 44.5 by 2000; for women, it would drop from 22.6 to 21.0.

—In series B, it is assumed that the cohort-specific participation rates will be stable until 1980, due to the recent mandatory retirement changes, but will then continue to fall at one-half the trend rate for 1970–1977. This would result in the participation rate for over-55 men dropping to 34.5 by 2000; the rate for women would drop to 18.6. This projection reflects the intermediate assumptions and was used in our prepared statement.

—In series C, cohort-specific participation rates are assumed to continue dropping at the 1970–1977 trend rate, without interruption. The participation rates for over-55 men and women would decline to 23.4 and 15.9, respectively, by 2000. This is an extreme scenario. It is not expected that participation will decline as rapidly as series C suggests, since the 1970–77 trends on which it is based reflect two recessionary periods.

BLS labor force projections are continually revised as a result of testing the assumptions against actual experience. Past projections have shown some tendency—which we believe has been remedied in this latest series—to underestimate the trend toward early retirement. Also, the labor force behavior of adult women in general has been difficult to model over the past decades. Overall, though, the BLS projections have had a good record for accuracy. The 1965 projections, for example, overestimated the size of the over-55 labor force in 1970 by only 37,000 persons, for an error marging of less than 3 percent. The 1965 figures overstated the 1975 over-55 labor force by 1.7 million; however, the error margin was probably badly inflated by the 1975 recession.

TABLE 1.—PROJECTED TOTAL LABOR FORCE PARTICIPATION RATES OF PERSONS 55 AND OVER, BY AGE AND SEX, ACCORDING TO 3 DIFFERENT ASSUMPTIONS [1]

Series and age group	Males						Females					
	1978	1980	1985	1990	1995	2000	1978	1980	1985	1990	1995	2000

[1] A. High series assumes constant 1977 annual average rates for each age-sex-race subgroup of the population. B. Medium series assumes constant rates to 1980, then a drop at ½ the trend rate for 1970–77. C. Low series assumes continuation of the 1970–77 trend, unabated.

Question 8. The 1978 Age Discrimination in Employment Act Amendments direct the Secretary of Labor to conduct a study concerning the effect of raising the upper age limit of the ADEA to 70 as well as the feasibility of eliminating the upper age ceiling entirely. Your letter of July 12, written in response to a committee inquiry, says you will make every effort to issue an interim report by January 1981, and a final report by 1982. When do you expect this study to begin?

Question 9. The Department of Labor's annual report under the ADEA has for 10 years referred to a study in progress under section 5 of the act to examine "the institutional and other arrangements giving rise to involuntary retirement." To date, no satisfactory study has been completed. When do you propose to complete this study? Will this be part of the overall study mandated by section 6 of the 1978 amendments or will it be handled separately? What are your specific plans and timetables to address this issue?

Response to questions 8 and 9. Under section 5 of the ADEA, the Secretary of Labor is directed to "undertake an appropriate study of institutional and other arrangements giving rise to involuntary retirement and report his findings and any appropriate legislative recommendations to the President and Congress." Section 6 of the 1978 amendments amended section 5 of the ADEA to specify that the study of involuntary retirement shall include: an examination of the effect of raising the upper age limit of the act to age 70 for non-Federal coverage, determinations as to the feasibility of eliminating the age limit or raising it above 70 years of age, and an examination of the effects of two exemptions. One of the exemptions pertains to certain executive policy-making personnel entitled to pensions of at least $27,000 a year; the other pertains to tenured faculty employed in institutions of higher education and is set to expire on July 1, 1982. The amendments specify that the study may be undertaken directly by the Secretary of Labor or by contract or other arrangement, and stipulate that the Secretary is to submit an interim report on the section 5 study by January 1, 1981, and a final report by January 1, 1982.

We have been working to develop an appropriate approach to fulfill the study requirements of section 5 as amended by section 6 of the 1977 amendments, including an adequate staff capacity to oversee contract work. We expect to publish a request for proposals for contract work on the study shortly. Interest in possible contract work on the study has been indicated by several research-oriented organizations. We expect to complete the study within the time requirements of the act.

Question 10. The Senate version of the 1978 Older Americans Act Amendments directs the Department of Labor to give special consideration to minority organi-

zations in awarding grants and contracts under the senior community service employment program. Earlier this month, funding for the senior community service employment program increased significantly. What are the Department's plans, if any, to award contracts to minority organizations, such as the National Caucus on the Black Aged and the National Association of Older Persons?

Response. The fiscal year 1978 appropriation did allow for a considerable expansion of the senior community service employment program. Mindful of the Senate's intention that minority organizations begin to play an active role in the administration of the program, we reserved about $5.4 million for projects with new national-level sponsoring agencies. In awarding these funds we are using a competitive process that has entailed the public solicitation of grant applications, which were reviewed and rated by a panel of knowledgeable Federal employees drawn from the Department of Labor, the Administration on Aging, the Department of Agriculture, and ACTION. The rating criteria used by the panel gave special consideration to applicant organizations that showed an orientation to the employment-related needs of older persons from minority groups.

Of the 10 applications received, the panel recommended that three be approved for funding. These were the applications submitted by the National Urban League, the Association National Pro Spanish Speaking Elderly, and the National Center on the Black Aged, all three being minority oriented organizations.

The responsible officials in the Employment and Training Administration concurred with the panel and, as a result, we are now negotiating the final terms and conditions of funding with these organizations. I am told that the negotiations are proceeding smoothly and that we will probably be executing the grants in the very near future. The full $5.4 million will be awarded to provide for projects that will make employment available to more than 1,200 persons in 21 different States.

Question 11. What is the Department of Labor doing to promote job performance evaluation and mid-career training?

Response. The Department of Labor, through the auspices of its research and development efforts, has sponsored several projects of varying scale to examine various aspects of mid-career training. Most notable among these was a study conducted under the authority of the Manpower Development and Training Act of 1962 to determine what the potential was for a program of job upgrading. The focus of the Department's employment and training efforts in the past few years, however, has been toward finding jobs for unemployed people. It is our hope that, as the economy improves and the employment picture gets better, DOL will be in a better position to mount programs to deal with some of the problems of mid-career training and to examine further the quality of performance of those graduating from our training programs. In this regard, both the Senate passed and House reported versions of CETA contain a provision authorizing prime sponsors to conduct upgrading programs through agreements with public and private employers.

Question 12. The House of Representatives recently passed the Federal Employees Flexible and Compressed Work Schedules Act (H.R. 7814) and the Federal Employees Part-Time Career Employment Act (H.R. 10126). What is your Department's position concerning these two bills?

Response. The administration has expressed strong support for H.R. 7814. The legislation represents a reasonable and balanced approach to the testing and evaluation of flexible and compressed schedules in Federal agencies. Therefore, we favor enactment of this legislation.

As for the provision of part-time employment, this Department strongly supports such efforts. Part-time employment is one method of providing a wider selection of work opportunities, especially for older workers. We encourage private industry to adopt such arrangements and we support as well governmental efforts. In this regard, the administration has taken steps to increase part-time employment in the Federal Government. On September 16, 1977, the President called upon all agencies to establish innovative programs to expand permanent part-time opportunities. As a result of this directive, the number of permanent part-time workers increased by about 20 percent during the last year at a time when the total permanent work force *dropped* by over 6,000 positions.

As for the specifics of the legislation as passed by both the House and the Senate, we are aware that the Office of Management and Budget and the Civil Service Commission have expressed opposition to certain provisions. We would defer to these agencies on these matters.

RESPONSE TO QUESTIONS FROM SENATOR EDWARD W. BROOKE

Question 1. How many age discrimination cases had DOL received during the past 3 years.

Response. During fiscal year 1975 through fiscal year 1977, including the fiscal year 1976 transition quarter, 18,011 age discrimination complaints were filed against 15,997 establishments. This represents an annual average of approximately 5,540 complaints to date. Complaints have been received at about the same rate in fiscal year 1978.

Question 2. How many age discrimination cases does DOL bring to court?

Response. The ADEA permits both private suits and suits by the Department. Departmental suits have emphasized precedential litigation and pattern and practice cases. Legal action by the Department of Labor over the past 10 years has resulted in the establishment of a new body of law in the field of discrimination against older workers. Since the act's effective date on June 12, 1968, the Department has instituted over 450 court actions. In calendar year 1977, the Department filed 86 lawsuits, two petitions for adjudication of civil contempt, and one petition to enforce an investigative subpena. Also, at the appellate level in 1977, the Department filed nine briefs in cases brought by the Secretary and 16 briefs as amicus curiae in cases brought by private individuals.

Question 3. What are the criteria for telling a complainant that he or she should sue an employer on his/her own? In other words, what are the reasons that DOL takes some cases and tells other persons to sue on their own?

Response. Departmental litigation priorities emphasize obtaining favorable court decisions on unsettled issues of law and prosecuting large pattern and practice cases. While this does not preclude legal action by the Department in small cases, it delineates the extent to which the Department can accept such cases for litigation. Complainants are neither encouraged nor discouraged from litigating privately; they are fully advised of the choices available to them and are then left to make their own decisions based on the advice of private counsel. At least 433 private suits (which typically involve only one or a few aggrieved individuals) were filed in calendar year 1977. In past years, over half of all private ADEA suits were dismissed for procedural reasons without a hearing on the merits. Under the 1978 amendments to the act, major procedural impediments to private suits were removed, and it is anticipated that the impact of private litigation under the act will increase.

In the selection of smaller cases which do not involve precedential issues, the Department tends to emphasize suits that meet the following criteria:

(1) Prima facie evidence of discrimination appears to be strong;

(2) The harm to the discriminatees is substantial—e.g., discharge as contrasted to failure to promote; and

(3) The enforcement impact of the suit may be substantial—e.g.. the employer has a significant segment of the local labor force or the practice is one believed to be common in the industry.

Question 4. What would you estimate the average cost to the individual for bringing his/her own age discrimination case to court?

Response. As data on the costs to plaintiffs of private ADEA suits are not reported to us, we do not have such an estimate. We note, however, that the statute permits plaintiffs to seek recovery of wage and related losses (plus an equal amount as liquidated damages in the event of willful violations) and, in addition, reasonable attorneys' fees and court costs.

Question 5. Do large employers tend to dismiss individually brought age discrimination complaints as of no consequence because they may believe that few people discriminated against have the time or the money to sue on their own?

Response. We are not in a position to speculate on employer motivations behind such decisions and objective data is not available. The Department must attempt to conciliate a resolution of ADEA charges before private plaintiffs may sue, and the possibility that the Department may initiate an investigation which would include other individuals is always a factor mitigating against this tendency on the employer's part.

Question 6. Some persons have suggested that the agency administering the ADEA should be given "cease and desist" authority. Would you agree?

Response. To date, the Department has not assessed the need for cease and desist authority. President Carter's Reorganization Plan No. 1 of 1978, effective May 6, 1978, provides for the transfer of ADEA enforcement from the Department of Labor to the Equal Employment Opportunity Commission on July 1, 1979. In

light of this, and the fact that enforcement of Federal equal employment opportunities laws is continually evolving, you may wish to obtain the views of the EEOC on this issue.

STATEMENT OF DONALD ELISBURG, ASSISTANT SECRETARY, DEPARTMENT OF LABOR, BEFORE THE COMMITTEE ON GOVERNMENTAL AFFAIRS, U.S. SENATE, MARCH 6, 1978

Mr. Chairman and members of this committee, I appreciate this opportunity to appear here today to discuss with you Reorganization Plan No. 1 of 1978. As you know, major portions of the Federal equal employment opportunity program are lodged in the Department of Labor and will be affected by the plan. With me today to discuss the plan and its effect on the Department of Labor are Xavier Vela, Administrator of the Wage and Hour Division; and Weldon Rougeau, Director of the Office of Federal Contract Compliance Programs.

Before I begin, I want to state our support for the reorganization of the Federal EEO programs as spelled out in the plan. The Department of Labor worked very closely with the Office of Management and Budget as this proposal evolved. Reorganization Plan No. 1 is a workable solution to the many deficiences in the Federal equal employment opportunity programs. It is most important that the gains and losses in organizational functions by the Department of Labor be viewed in the context of the total plan. The end result will be a major step forward in assuring equal employment opportunities for all Americans.

Briefly, the plan will move the enforcement of the Age Discrimination in Employment Act (ADEA) and the Equal Pay Act (EPA) to the Equal Employment Opportunity Commission (EEOC) effective July 1, 1979. Enforcement of these statutes is currently lodged in the Wage and Hour Division of the Employment Standards Administration. The ADEA promotes the employment of older workers between 40 and 65 years of age based on ability rather than age; prohibits arbitrary age discrimination in employment; and helps employers and employees find ways to meet problems arising from the impact of age on employment. The EPA provides that employers may not pay employees of one sex wages at rates lower than those paid employees of the opposite sex, employed in the same establishment, for equal work on jobs requiring substantially equal skill, effort, and responsibility which are performed under similar working conditions.

Transfer of the ADEA enforcement to the EEOC involves the transfer of 119 positions and $3.5 million; the EPA, 198 positions and $5.3 million. These figures include legal personnel.

We firmly believe in the Department of Labor that the two programs which will be transferred to the EEOC in mid-1979 have made major strides in fulfilling their stated purpose during the past year. This administration has been fully committed to improvements in their enforcement. We have made commitments of additional resources to overcome prior deficiencies; and we will continue this effort during the transition period, giving priority to full enforcement efforts on these programs.

During fiscal year 1977, there were complaints against 5,054 establishments alleging violations of the ADEA, and 5,600 investigations and conciliation actions were taken in 5,006 establishments. Monetary violations amounting to a record $10 million affecting 1,943 individuals were disclosed—$8.9 million affecting 1,707 persons were disclosed as a result of fact-finding investigations, and the remainder resulted from conciliations in which employers, employment agencies, and labor organizations consented to pay while not being formally charged with or admitting to violations of the act. During calendar year 1977, the Department filed 86 lawsuits under the ADEA.

As a result of the Department of Labor enforcement effort during fiscal year 1977, 1,293 individuals who had suffered age discrimination were aided. A total of $2.7 million in lost income was restored to 744 individuals in 383 establishments, and 532 persons who were hired or reinstated are projected to earn $4.1 million a year in wages. Also, employers agreed that they would consider applicants aged 40 to 65 for anticipated job vacancies totaling 14,584 a year.

The Wage and Hour Division's investigations disclosed illegal advertising in 508 establishments, illegal discharges affecting 648 individuals in 232 establishments, and illegal refusals to hire in 166 establishments affecting 1,380 persons.

The enforcement effort under the Equal Pay Act showed similar beneficial results during fiscal year 1977. Almost $16 million was found owing to 19,382 employees for equal pay violations as a result of compliance actions by the

Wage and Hour Division. Almost 13,000 employees benefited from restored income of nearly $7 million during that year. During the fiscal year, complaints were received against 2,742 establishments, over 650 of which involved executive, administrative, and professional employees. Also, during fiscal year 1977, 80 equal pay lawsuits were filed and several significant cases were resolved.

I am confident that the joining together of the equal pay and age discrimination programs with the title VII program will mean major improvements in the total Federal effort to eliminate discrimination from the Nation's work scene. In the case of the ADEA, consolidation will unify compatible standards, since the ADEA was modeled on title VII. In the case of the EPA, consolidation will unify all types of sex-related discrimination protection in one agency. As I indicated previously, the Department of Labor supports the reorganization proposal, and I can assure you of our utmost cooperation to accomplish a smooth transition.

Turning now from the reorganization plan, I would like to discuss the contract compliance program. As President Carter indicated in his message to the Congress, an executive order will consoliate the enforcement of the Federal contract compliance programs into the Department of Labor on October 1, 1978. The Executive order consolidation will mean the transfer of 1,571 positions and $33.1 million.

As you know, the Office of Federal Contract Compliance Programs (OFCCP) now has an oversight role in the enforcement of Executive Order 11246, which prohibits Federal contractors and subcontractors from discriminating in employment because of race, color, religion, sex, or national origin. However, regardless of discrimination, these employers must also take affirmative action to ensure equal opportunity in all areas of employment. In addition to the Executive order program, OFCCP also administers equal employment opportunity programs for handicapped workers and Vietnam era and disabled veterans. Section 503 of the Rehabilitation Act of 1973 prohibits Federal contractors and subcontractors from discriminating in employment because of physical or mental handicap, and requires affirmative action to employ and advance in employment qualified handicapped workers. Section 402 of the Vietnam Era Veterans' Readjustment Assistance Act of 1974 prohibits Federal contractors and subcontractors from discriminating in employment, requires them to take affirmative action to employ and advance in employment qualified Vietnam era veterans during the first 4 years after their discharge, and requires them to take such action for certain qualified disabled veterans throughout their working lives.

These programs establish coverage of employers through a contractual relationship. The Executive order is, of course, based upon the contracting authority of the President while the section 503 and section 402 programs are established by legislation. Employer obligations under these programs are contract performance standards agreed to in return for payment from Federal tax dollars; and thus Federal court decisions on the Executive order program have generally held that its authority to eliminate discrimination is broader than and not limited by any provision in other Federal equal employment opportunity laws such as ADEA, EPA, and title VII.

During the past year we have made major improvements in the Federal contract compliance programs. The enforcement of the Executive order program is now at the highest point since the inception of the program. Prior to 1977, the Department had succeeded in debarring only 13 contractors from Government contract work. Since January 1977, debarment actions have been completed against three companies. Administrative enforcement actions are currently pending against 14 other companies, and 5 other enforcement cases are pending in the courts.

Of course, while we will not hesitate to enforce the Executive order against employers who discriminate or who refuse to take affirmative action, we are in the business of achieving compliance, not debarring contractors. We would rather have a contractor agree to a meaningful counciliation agreement that to lose a Government contract. In that regard, we have been successful in achieving substantial compliance on a voluntary basis. Since 1969, an estimated $200 million has been restored to workers under the Executive order, some of which was obtained jointly under the Executive order and title VII.

The Department also has taken several initiatives to substantially improve its management capabilities. The Department has effected a reduction in the number of compliance agencies enforcing Executive Order 11246. New and revised regulations will soon be issued to revise the format for compliance by construction contractors and subcontractors and to expand protection of women and minorities

in the construction industry. Training of compliance officer staff has been expanded and is continuing. Improved management information systems are being developed. Improved coordination with the EEOC, Department of Justice, and the Civil Service Commission has resulted in the issuance of joint guidelines on employment selection procedures. In addition, within the Labor Department, the OFCCP and the Employment and Training Administration have entered into an agreement under which we expect to increase minority employment and the entrance of women into nontraditional jobs.

In the veterans and handicapped programs, new procedures have been developed for conducting comprehensive compliance reviews, including procedures for evaluating contractor affirmative action programs in an effort to reduce systemic discrimination. Five cases involving violations of the handicapped worker regulations are at the point of administrative hearing. Another 30 cases are in preparation. In the 4 years of the handicapped worker program, there have been 4,400 complaints filed, with nearly 2,500 having been received in the past year. In addition, under the Vietnam era veterans program, 500 individual complaints have been received and most have been concluded. Also, another 2,000 violations have been alleged for failure to meet the mandatory job listing requirement for veterans.

More importantly, we have implemented a new enforcement policy of directed compliance reviews across the country involving violations of the veterans and handicapped requirements. A total of 300 directed reviews are underway. Under this new enforcement policy, the Labor Department will continue to investigate individual complaints but will also conduct compliance reviews of randomly selected contractors and subcontractors.

Nevertheless, our ability to "manage" the efforts of the compliance agencies has been encumbered by fragmentation, and lengthy and cumbersome channels of communication. Our experience has been that such a division of responsibilities simply does not work. Consolidation will achieve the following: promote consistent standards, procedures, and reporting requirements; remove contractors from the jurisdiction of multiple agencies; prevent an agency's equal employment objectives from being outweighed by its procurement and construction objectives; produce more effective law enforcement through unification of planning, training and sanctions and, as concluded by the Paperwork Commission, reduce paperwork and improve management information systems. We are convinced the consolidation of the enforcement of the Executive order into the Department of Labor will contribute greatly to the overall success of the President's plan.

In summary, Mr. Chairman, the comprehensive reorganization of the Federal EEO effort will go far in promoting equal employment opportunities for our citizens. The Department of Labor is totally committed to a smooth transition and to a vigorous effort in the years ahead. My colleagues and I will now be happy to answer any questions you may have.

STATEMENT OF JAMES T. MCINTYRE, JR., ACTING DIRECTOR, OFFICE OF MANAGEMENT AND BUDGET, BEFORE THE SUBCOMMITTEE ON LEGISLATION AND NATIONAL SECURITY, COMMITTEE ON GOVERNMENT OPERATIONS, U.S. HOUSE OF REPRESENTATIVES, MARCH 7, 1978

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before you today. I would like to summarize a statement which I am submitting for the record.

On February 23, 1978, the President announced his plan to reorganize and improve this Nation's equal employment enforcement efforts. This plan makes the Equal Employment Opportunity Commission the principal Federal agency in fair employment enforcement. Together with actions the President will take by Executive order to merge the contract compliance program into the Department of Labor, it consolidates Federal equal employment opportunity activities and lays, for the first time, the foundation of a unified coherent Federal structure to combat job discrimination in all its forms. The President has stated that one of the prime objectives of this administration is improvement in the management and enforcement of the Nation's civil rights laws. This plan represents a step in that direction.

The Government's equal employment programs have had only limited success. They have been beset by problems. My testimony on pages 2–5 provides examples of the burdens which the present enforcement structure has imposed both on

employers and the persons these laws were intended to protect. Let me mention two of the examples:

—In 1977, a district office of the EEOC duplicated an investigation of the Department of Labor's Wage and Hour Division on a sex discrimination charge against a large refrigerator manufacturer. The EEOC investigator was not made aware of the DOL investigation until the EEOC's investigation was nearly complete.

—In a case involving a coal company, the EEOC found no probable cause for an individual charging party but did find cause on issues of denial of employment to blacks as a class. In 1977, while attempting conciliation, it was discovered that the Department of the Interior had already approved the company's affirmative action plan and the goals and timetable it had set for the employment of blacks.

Many studies have verified these problems. For example, in April 1977, the Commission on Federal Paperwork made this observation about Federal equal employment opportunity programs:

"[I]t has been apparent that the welter of confusing laws, regulations, policies and practices of a multitude of Federal agencies has militated against effective enforcement and informed public policy."

Similar findings and conclusions were reached by the Commission on Civil Rights in reports issued in 1975 and 1977 and by the House Subcommittee on Equal Opportunities last year.

The Office of Management and Budget's analysis identified several problems related to organizational deficiencies in the present equal employment enforcement program. These problems, which I recount on pages 6–8 of my testimony include:

—Overlapping jurisdiction.
—Application of inconsistent standards.
—Duplicative investigations.
—Waste of resources.
—Confusion over procedures.
—Inadequate attempts at coordination.
—Poor management.
—Conflict of interest between program and equal employment responsibilities.
—Lack of accountability.

Many of these problems can be attributed to piecemeal development of the Federal equal employment enforcement effort over a period of more than 30 years. The time is ripe for bringing order and effectiveness to our equal employment programs.

The plan proposed by the President takes steps toward consolidating major equal employment functions. Various components of the plan are phased in over a period of time to allow for management improvements and avoid unnecessary disruption.

The plan assigns to the EEOC the role of principal Federal agency in fair employment enforcement. The EEOC was chosen for this responsibility for two reasons. First, it is the only existing agency whose paramount mission is combatting employment discrimination. Second, its size, experience, and scope of activities are consistent with undertaking such a role. Although the agency has suffered from image and management problems, such occurrences are not uncommon in a young agency administering a highly controversial and complex program. More important, the EEOC has initiated a major internal reform program which already has generated substantial progress, and is likely to improve the agency's performance quite sharply in the long run.

The major elements of this reform program are a streamlined field structure consisting of 22 district and 37 area offices, a new training program, a new charge-intake process, a rapid-charge processing system, and the creation of separate backlog units in each of its district offices.

The Office of Management and Budget has been monitoring EEOC's reforms closely and will take steps to ensure that timetables are adhered to and periodic evaluations of new systems and procedures are conducted. (Details on the initial impact of the EEOC reforms appear in appendix B of the report entitled "Reorganization of Equal Employment Opportunity Programs" which I request be included in the record.)

The reorganization plan authorizes the following transfers of program responsibilities:

—On July 1, 1978, abolish the Equal Employment Opportunity Coordinating Council and transfer its duties to the EEOC.

—On October 1, 1978, shift enforcement of equal employment opportunity for Federal employees from the Civil Service Commission to the EEOC.
—On July 1, 1979, shift responsibility for enforcing both the Equal Pay Act and the Age Discrimination in Employment Act from the Labor Department to the EEOC.

These transfers are explained on pages 15–22 of my testimony. Let me summarize:

By abolishing the Equal Employment Opportunity Coordinating Council and transferring its responsibilities to the EEOC, the plan places the Commission at the center of equal employment opportunity enforcement. Armed with this new coordinating responsibility, the EEOC will develop substantive equal employment opportunity standards applicable to the entire Federal Government, standardize Federal data collection procedures, create joint training programs, and develop Government-wide complaint and compliance review priorities and methodologies. This transfer will help to limit duplication and inconsistency among the equal employment programs.

The transfer of the Civil Service Commission's equal employment opportunity responsibilities to the EEOC will insure uniform implementation of title VII. Today, the EEOC defines the equal employment rights of private employees and employees of State and local governments. It is the agency that possesses the greatest expertise and experience in dealing with equal employment problems. For Federal employees, however, the function is performed by the Civil Service Commission.

Close coordination between the EEOC and the CSC on Federal personnel matters will be necessary. In order to insure that the transfer in no way undermines the objectives of the civil service reforms which the administration is submitting to Congress, the EEOC and CSC are developing compatible complaint appeals systems. The plan authorizes the EEOC to delegate to the CSC or its successor agency the opportunity to make preliminary determinations on discrimination matters which are raised in conjunction with appeals of adverse actions. The EEOC retains the right to review this determination.

The plan transfers enforcement of the Equal Pay Act to the EEOC. The Equal Pay Act and title VII are essentially duplicative. Transfer of the enforcement of the act to the EEOC, therefore, would minimize overlap, permit better allocation of resources, and centralize Federal enforcement of the prohibitions against sex discrimination in employment.

The plan also transfers the enforcement of the Age Discrimination in Employment Act to the EEOC. There is now virtually complete overlap in the employers, labor organizations, and employment agencies covered by title VII and by the Age Discrimination in Employment Act. This overlap is burdensome to employers and confusing to victims of discrimination.

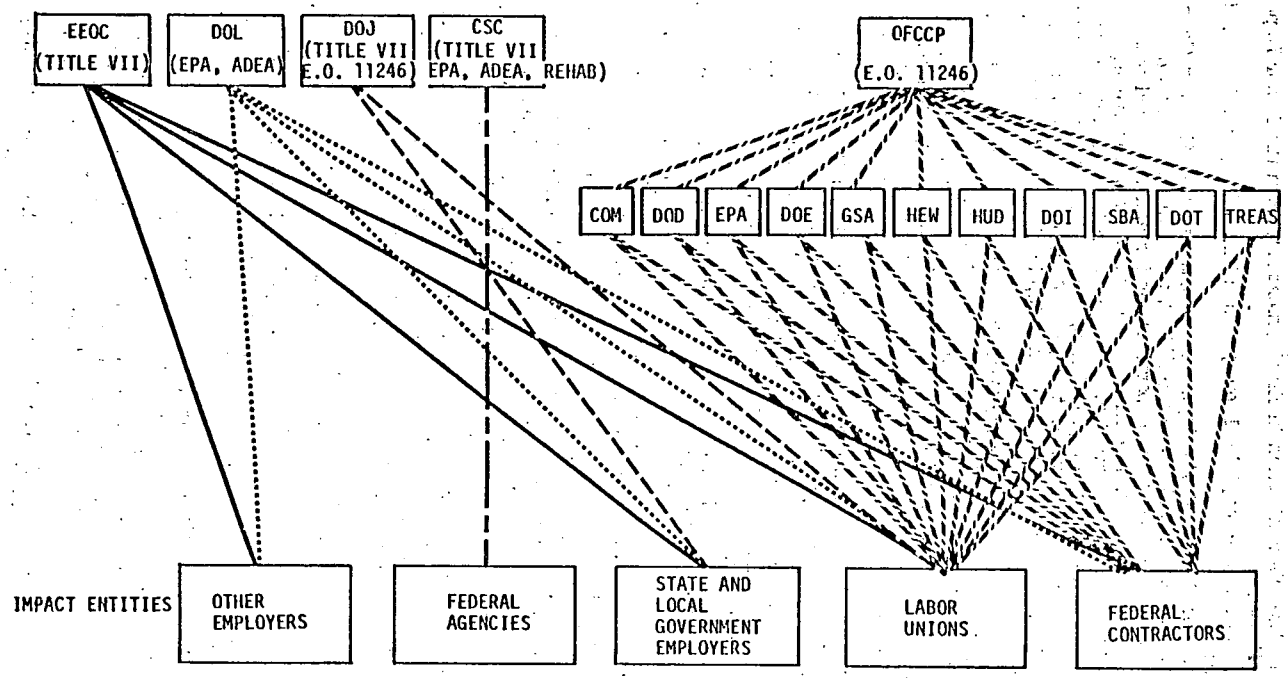
Finally, the plan reinforces the intent of the Congress that the Attorney General may initiate title VII "pattern or practice" cases against State or local governments without the necessity of awaiting the referral of complaints from the EEOC—an issue now disputed in the courts.

In addition to the changes proposed in the plan, the President intends to issue an Executive order, effective October 1, 1978, to consolidate the contract compliance program into the Department of Labor. This consolidation will promote consistent standards, procedures, and reporting requirements, remove contractors from the jurisdiction of multiple agencies; prevent an agency's equal employment objectives from being outweighed by its procurement and construction objectives; and produce more effective law enforcement through unification of planning, training, and sanctions.

While we do not anticipate that the reorganization contained in this plan will result in an overall reduction in expenditures, there will be administrative savings attendant to the creation of a more efficient and manageable enforcement program. Reduction in program overlap, inconsistent data collection systems, and duplicative investigations will mean higher productivity, reduced burdens on employers, and improved services to those seeking relief from discriminatory practices.

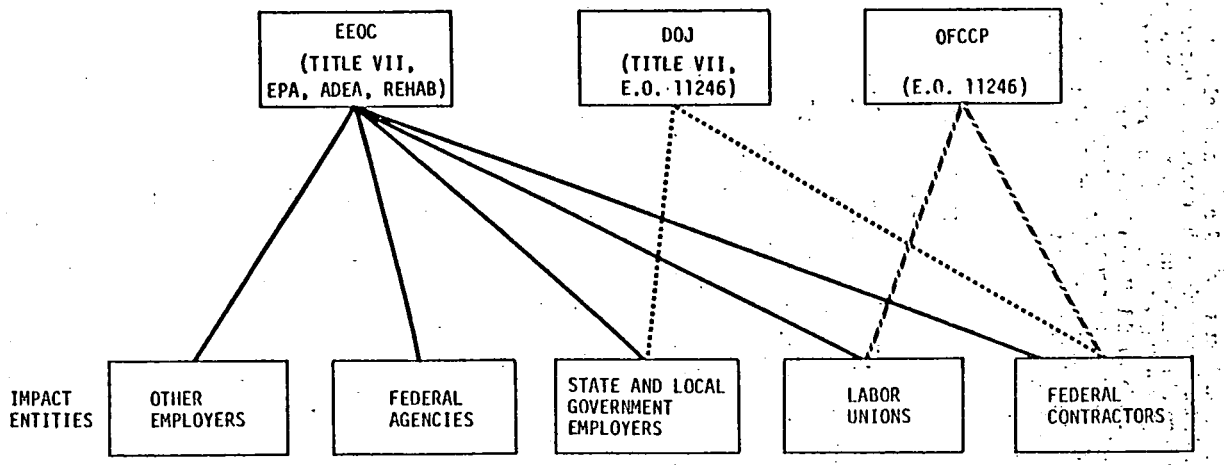
The underlying premise of these changes is that the Federal Government will develop a coherent and unified equal employment program. The inconsistency, duplication, and spinning of wheels which have led to much of the frustration voiced by those the laws are intended to protect and employers and unions attempting to comply with the laws must begin to disappear. We believe that this plan represents a major step in that direction. We hope that you will join the President in moving toward an equal employment opportunity program in which all Americans can place their trust.

PRESENT ENFORCEMENT STRUCTURE FOR MAJOR EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS*



*TITLE VII, EQUAL PAY ACT (EPA), AGE DISCRIMINATION IN EMPLOYMENT ACT (ADEA), SECTION 501 OF REHABILITATION ACT (REHAB), EXECUTIVE ORDER 11246

PROPOSED ENFORCEMENT STRUCTURE
FOR MAJOR EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS*



*TITLE VII, EQUAL PAY ACT (EPA), AGE DISCRIMINATION IN EMPLOYMENT ACT (ADEA), SECTION 501 OF REHABILITATION ACT (REHAB), EXECUTIVE ORDER 11246

ITEM 3. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH, TO EWAN CLAGUE, LACONIA, N.H., CONSULTANT, AND FORMER COMMISSIONER, BUREAU OF LABOR STATISTICS, DATED JULY 31, 1978

DEAR DR. CLAGUE: Thank you very much for the excellent testimony at our hearing last week. You provided a great deal of perspective, along with your very helpful facts. I appreciate the time and effort devoted to your statement. It will receive careful attention and frequent reference as our study continues.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes.

Sincerely,

FRANK CHURCH,
Chairman.

[Enclosure.]

QUESTIONS FROM SENATOR FRANK CHURCH

1. Your statement, "At inflation rates of 7 percent or more, the early retiree would receive higher benefits after age 65 than the fellow worker who continued working until age 65 and then draw his benefits," is of great concern to this committee. Would you care to illustrate this point further?

2. Your reference (p. 16) to early retirement as the potential "time bomb" which would upset current retirement income programs is equally worthy of close attention. Can you give tentative projections as to the timespan for such a calamity, if present trends continue?

3. You request "more intensive study of the early retirement problem in order to find out what could be done to bring the situation under control." What factors should be considered in such a study?

4. This committee has reported that persons on retirement income budgets pay proportionately more of that income for items in which the greatest price increases are occurring: food, shelter, utilities, transportation, and health care. Do you agree with that statement? Would you care to supplement your earlier remarks about the need for a special cost-of-living index for older persons?

5. What suggestions would you make for changes in Department of Labor statistical reporting to better reflect problems of middle-aged and older workers?

6. How much would an elderly person's purchasing power be reduced if he retired today on a $10,000 annual pension at the age of 65 if our annual inflation rate would be 6 percent per year for the next 12 pears? What would be the effect under the same circumstances if the annual inflationary rate would be reduced to 4 percent per year?

7. Would the development of new work patterns—such as part-time employment, phased retirement, and others—have any effect at all in moderating inflation?

8. It is my understanding that much of the information about early retirement in State and local governments is quite often unavailable or incomplete. Would you agree with this statement? And if so, is this another reason that you call State and local early retirement a "time bomb"?

9. Today, inflation seems to be more persistent than it used to be. Why is our Nation not obtaining more results in terms of controlling rising prices?

ITEM 4. LETTER AND ENCLOSURE FROM EWAN CLAGUE,[1] LACONIA, N.H., CONSULTANT, AND FORMER COMMISSIONER, BUREAU OF LABOR STATISTICS, TO SENATOR FRANK CHURCH, DATED SEPTEMBER 5, 1978

DEAR SENATOR CHURCH: The attached memorandum provides the committee with my answers to the questions which you raised in your letter following the July hearings.

I have answered each of these question to the best of my ability within the time available. I hope that the answers may provide a basis from which research analysts could develop more and better information.

Yours,

EWAN CLAGUE.

[Enclosure.]

[1] See statement, p. 135.

RESPONSE TO QUESTIONS FROM SENATOR FRANK CHURCH

Question 1. Your statement, "At inflation rates of 7 percent or more, the early retiree would receive higher benefits after age 65 than the fellow worker who continued working until age 65 and then drew his benefits," is of great concern to this committee. Would you care to illustrate this point further?

Response. The statement, as worded, gives the wrong impression and should be modified. A worker drawing benefits at age 62 would have to take a 20 percent reduction from the full benefits due at age 65. Instead of $300 a month, the early retiree would get $240 the first year; at a 7 percent inflation adjustment he would get $257, $275, and $294 a month at age 65. In the meantime, a fully employed worker receiving wage increases of 5 percent a year would obtain benefits higher than $300 at age 65, substantially ahead of the early retiree. For the fully employed worker it is advantageous to postpone retirement until age 65 with full benefits based on somewhat higher average earnings.

However, there are a number of factors which have the effect of stimulating early retirement. These are set forth in several issues of the Social Security Bulletin.[1] The question posed by Karen Schwab in the August 1974 Bulletin is: "How many individuals are encouraged to leave the labor force because of the availability of early benefits?"

One potent factor is loss of a regular job with little hope of getting another. With the reduced benefits cited above, the early retiree would draw over $9,200 in benefits in years 62–64, and then draw over $3,500 in benefits at age 65. An individual waiting until age 65 to obtain the regular benefits would require at least several years to equal the early benefits obtained by the retiree at age 62.

Anothr factor of greater importance is the growing number of workers retired from private industry at ages 62, 60, 55 and even as early as age 50. Assuming that man such workers have already retired before age 62, they have plenty of incentive to take social security at the earliest available date. There is not much advantage (and some possible disadvantage) in waiting three retired years to get social security at age 65.

Another case would be a husband retired at $300 a month with a wife aged 62 eligible for $200 a month, with a reduction to 80 percent for early retirement. The couple could draw immediately a joint benefit of $460 a month, a loss of only $40 a month, or 8 percent.

Additional examples could be cited, but these should be sufficient to show that for many elderly, men and women both, early retirement at moderately reduced benefits is preferable to a 3-year wait. Another advantage is that the purchasing power of the benefit is protected by the cost-of-living adjustment of the benefits each succeeding year. The statistics of early retirement demonstrate the extent to which the workers are purposely making what to them is a favorable choice.

All the above is now history. An entirely new situation has been created by the 1977 amendments which provide for indexing the workers' earnings in past years by the Consumer Price Index. This results in an entirely new calculation of retirement benefits for individual workers. It is not possible at this time to judge the impact that this new system might have on early retirement.

Question 2. Your reference (p. 16) to early retirement as the potential "time bomb" which would upset current retirement income programs is equally worthy of close attention. Can you give tentative projections as to the timespan for such a calamity, if present trends continue?

Response. The reference to a "time bomb" referred to the delayed impact of a retirement system during the early years when the system is expanding rapidly. When a retirement system is first established there are vast numbers of contributors and no retirees. Contributions come first, pensions later. When social security started in 1936, elderly persons were permitted to qualify with only six quarters of coverage. That basic requirement was increased year by year until the standard 10 years, or 40 quarters, was reached in 1946. Congress also limited the contributions during the war years (1941–45), since the reserve fund expanded rapidly, despite the low contribution rates. Then in 1950, with a growing reserve fund, Congress changed the rules and established only a five-year reserve.

The railroad retirement system in the United States was established on an entirely different basis. When the private railroad company systems were nationalized in 1935, all railroad workers (whether previously insured or not)

[1] November 1972, "Retirement History Study: Introduction"; August 1974, "Early Labor Force Withdrawal of Men"; September 1974, "Labor Force Status of Non-Married Women on the Threshold of Retirement."

were brought into the new program. What a worker needed was proof that he had been employed on the railroads for a long enough period to qualify for benefits. The result was that benefit payments constituted a substantial fraction of the incoming contributions. So the system began as a full-fledged retirement program. This was possible because the railroads had the necessary employment records (for the most part).

But for social security this would have been impossible; there were no such detailed past work records available. So social security had to undergo a long growth period before the system reached maturity; that is, when expanding coverage and benefit payments came into reasonable balance.

The civil service retirement system in the Federal Government began about World War I. It expanded during the 1930's and the war years and then became stabilized in the 1950's. There has been only moderate growth during the last 25 years. Since Federal retirement benefits are escalated twice a year by the Consumer Price Index, the result would be a doubling of the benefit payments for each individual by 1990, with nearly another doubling by the year 2000. Contribution rates of 14 percent (worker and Government 7 percent each) will not provide sufficient funds to pay the benefits. Some additional contributions will be necessary.

State and local government employees totaled about 4 million in 1950, but the number tripled in the next quarter century. That group has constituted the most rapidly growing segment of the U.S. labor force. In the earlier years, a considerable proportion of such workers were moderately or even highly political. A continuity of party control within the State or city insured job security; a political overturn could result in monumental dismissals, accompanied by new hirings. Well-established groups, such as police, firefighters, and teachers, became organized and were able to develop retirement systems for themselves. But the other State and local employees groups were not highly organized. Many of the clerical workers were women, of whom amoderately high proportion became married and dropped out in order to rear a family.

It was in the 1960's that these relatively unorganized workers began joining unions and putting pressure on State and local governments for higher pay and better retirement. This is the most rapidly growing segment of organized labor in the United States.

The Nation's retirement problem in this area is that the rapid expansion of employment conceals the emerging financial problem. Statistics in this whole field are difficult to obtain. For the past, few adequate statistical records are readily available. For the future, new wages and salary scales, as well as new benefits, are being negotiated every year.

Perhaps the District of Columbia (on its way to becoming the 51st State) can serve as an example of this emerging situation. The following table shows annual employment in the D.C. government from the early 1950's to the present.

TABLE 1.—EMPLOYMENT IN THE DISTRICT OF COLUMBIA GOVERNMENT

Year	Employment (thousands)	
	Average	Increase
1951	19.5	
1956	22.1	2.6
1961	26.9	4.8
1962	28.7	.9
1963	29.1	1.3
1964	30.1	1.0
1965	32.1	2.0
1966	35.0	2.9
1967	37.2	2.2
1968	40.4	3.2
1969	43.4	3.0
1970	46.6	3.2
1971	49.0	3.4
1972	48.6	−.4
1973	48.1	−.5
1974	49.9	1.8
1975	[1] 51.4	1.5
1976	[1] 52.3	.9
1977	[1] 50.0	−2.3
1978 (June)	[1] 48.3	−1.7

[1] Including Metro.

D.C. Government employment grew slowly at first—only 2,600 in the 5 years, 1951–56, or about 500 employees per year. In the next 8 years through 1964, the average increase was about 1,000 employees per year. Then the rate multiplied. In the 7 years, 1965–71, D.C. employment increased by almost 19,000 (30.1 to 49.0)—a gain of nearly 63 percent. Then employment stabilized except for the expansion in Metro employment (the new underground transit system).

The important point here is that the retirement systems covering the above government employees are not funded, being paid for out of annual appropriations. Present benefit costs are moderate, based on the relatively small number of retirees from the recruits of the 1950's. But the 1965–71 recruits will become eligible in the 1990's. The combination of expansion and inflation will explode at that future time.

Some reccent congressional hearings have highlighted this retirement problem. In February 1978, the Senate Subcommittee on Governmental Affairs and the District of Columbia (chairman, Senator Thomas F. Eagleton) held hearings on proposed legislation covering the D.C. retirement systems of policemen, firemen, teachers, and judges. Senator Eagleton conducted the hearings on those four D.C. retirement systems.

The general conclusions were that D.C. has the most generous pensions of any State or local government in the United States. The disability provisions are practically unlimited. In 1969, nearly all D.C. policemen (98 percent) and firemen (99 percent) retired on disability. Subsequently, the proportions declined to 77 percent and 71 percent; and recently it was 65 and 67 percent. No city in the United States has as generous disability provisions as D.C.

The great significance of the disability decisions is that disability payments are largely exempt from income taxation. Mayor Walter Washington in his testimony emphasized that those provisions were legislated by the U.S. Congress and not by the D.C. government. Senator Eagleton agreed that these generous provisions were the responsibility of the Congress. He then went on to comment:

"The D.C. system is totally nonfunded, police and fire; marginally or meagerly funded for teachers. The time bomb in the District of Columbia ticks at a faster pace than elsewhere." [1]

It is likely that the disability legislation now under consideration for D.C. will be passed by the Senate and the House, thus introducing some moderation into the system. But this revision is only marginally related to the retirement system for other D.C. government employees who are many times as numerous as police and firemen. These other professional, administrative, and clerical employees do not have the same disability experience as police and firemen, nor do they have such liberal early retirement benefits. But the total cost is much higher. The D.C. government is quite in line with other States and localities on the more generalized retirement and disability provisions for city employees. If D.C. is in prospective financial troubles, so are many others.

If State and local government employment continues to expand as rapidly as it has during the last quarter century, the financial crisis will be postponed for a decade or two. But if the California proposition 13 takes hold in other States and localities, the financial problems of the States and localities will become a national problem of major dimensions.

Question 3. You request "more intensive study of the early retirement problem in order to find out what could be done to bring the situation under conrol." What factors should be considered in such a study?

Response. The most urgent need for the analysis and solution of the problem of early retirement is the collection and publication of statistics which would show the dimensions of the problem in future decades. The first question is, at what ages are government and private industry employees retiring and drawing their pensions?

For the Federal Government, the Civil Service Commission as well as other agencies, issue comprehensive statistics on this subject. In State and local governments such data must be available in state and local records, but it is now largely unpublished and uncollected on a national basis. There is a further question as to whether the governments would make such information available to the general public. Would there be any possibility, even on a sample basis, of developing some statistical trends which would make possible the development of some future projections? In private industry systems such information is no doubt available, but it is not collected and published.

---

[1] Subcommittee hearings, Feb. 23, 1978, p. 13.

A second problem relates to the combination of retirement and employment. The Federal Government has recently issued some statistics showing the extent to which military retirees drawing military benefits are working at full pay in the civilian agencies of the Federal Government. Furthermore, there are some agencies in which a retired Federal civilian employee can work a limited amount (part-time or part-year) with no reduction in his (or her) regular retirement benefits.

However, it is not known to what extent private industry retirees continue to work while drawing retirement benefits. In the case of the United Mine Workers in the coal industry, the miner can draw benefits at age 55. He can't work anymore in the coal industry without losing his coal benefits. But he could work in any other industry and keep whatever earnings he makes. In the case of State and local governments, there are numerous examples of early retirement, at age 50 or earlier, in which the retiree can draw his local government benefits while holding a full-time job in private industry. The key question here (for the future of the retirement system) is the extent to which employees choose early retirement coupled with regular work in another industry. Such information could only be obtained by matching that retirement with social security employment records.

There is another aspect of the work-retirement relationships which requires further study. That could be the effect of the social security permissible work earnings upon private or other government retirement benefits. A retired social security beneficiary can now earn up to $4,000 in annual earnings without any loss of benefits, with $1 reduction in benefits for each $2 of additional earnings. A retiree drawing $3,600 in regular benefits could receive $7,000 from both. If he earned $6,000 on the job, he would get a total of $8,600, losing $1,000 of his pension. At earnings of $11,200 he would lose his pension altogether (as long as he earned that much income from work).

As is evident from the above analysis, there are a number of aspects of early retirement with full benefit payments which should be explored in order to find out what action, if any, should be taken.

Question 4. This committee has reported that persons on retirement income budgets pay proportionately more of that income for items in which the greatest price increases are occurring; food, shelter, utilities, transportation, and health care. Do you agree with that statement? Would you care to supplement your earlier remarks about the need for a special cost-of-living index for older persons?

Response. When basic subsistence costs are high, the elderly retired persons will be paying a larger proportion of their benefits for such necessities. This points to the need for a special index for elderly couples, with possibly an adjustment for singles.

Such an elderly couple's cost-of-living index did receive some attention in 1964–65, when the Consumer Price Index revision had gone into effect in 1964. The study of family expenditures had shown that the pattern of expenditure of the elderly did not match closely the patterns for the standard four-person family represented in the CPI.

However, the needs of the "great society" programs plus the outbreak of the war in Vietnam knocked out the possibility of establishing continuing family expenditure studies, which would have been required to construct the indexes for the elderly.

Now that the CPI has just been revised, this is a most appropriate time to consider the establishment of an elderly couple's index, with perhaps separate single's indexes for men and women.

Question 5. What suggestions would you make for changes in Department of Labor statistical reporting to better reflect problems of middle-aged and older workers?

Response. This question raises the issue of additional information which might be collected by the Bureau of Labor Statistics. That bureau is opening up some areas of research that are germane. There is now in preparation an article in the Monthly Labor Review on the "Employment Characteristics of Older Men," by Philip L. Rones, an economist in the Office of Current Employment Analysis. This will appear in a near-future issue of the Review. The following is a brief quotation from the Introduction:

"This article focuses on those older persons who do continue to work. The discussion includes the major factors which contribute to the older worker's decision to remain on the job and how these factors are reflected in their employment characteristics. Particular emphasis is placed on the reasons behind the industry and occupational employment patterns of older workers."

A preliminary draft of this paper indicates that it will provide significant information on work versus retirement for older workers. One of the significant findings of the report is the growing importance of part-time and part-year work for older workers.

Another aspect, which is not a part of this BLS study, but which requires more research, is the relationship of work and benefits. How many middle-aged or elderly fully employed workers are also drawing retirement benefits? There might be early retirees from local government working in private industry. Or conversely, an early retiree from private industry might find a government job—Federal, State, or local. Or again, a worker retired from one private industry might find employment in another, at least combining wage and retirement income and possibly acquiring a second private pension.

Another angle which might be explored is the extent to which professionals and retirees with administrative skills become self-employed workers while they are drawing full retirement benefits.

There is one aspect of retirement systems which could usefully be explored. That is the benefit experience of workers in industries and occupations in which there is much labor turnover. This might stem either from the worker constantly seeking better jobs or from business failures, especially of small and medium-sized firms. Examples have been cited of workers with a lifetime of work experience but without earning any retirement benefit except social security.

There have been some valuable studies focusing upon the age groups 62–64, 60–64, and 58–62. The age groups which have not been adequately surveyed in these older worker studies are those 50–54 and 55–59. What is urgently needed is some knowledge of the extent to which workers, men and women both, combine work and retirement—at what ages and at what income levels.

Question 6. How much would an elderly person's purchasing power be reduced if he retired today on a $10,000 annual pension at the age of 65 if our annual inflation rate would be 6 percent per year for the next 12 years? What would be the effect under the same circumstances if the annual inflationary rate would be reduced to 4 percent per year?

Response. A retired worker drawing benefits of $10,000 a year would have the purchasing power cut in half with a 6 percent inflation rate over a period of 12 years ($5,057). The following table shows the shrinking purchasing power of that pension. For this calculation the results are rounded to the nearest dollar.

Year:	*Purchasing power*
1	$10,000
2	9,400
3	8,836
4	8,296
5	7,798
6	7,330
7	6,890
8	6,477
9	6,088
10	5,723
11	5,380
12	5,057

At the end of 6 years, the retiree would lose over one-fourth of the value of his pension ($7,330). In 9 years, its purchasing power is almost down to 60 percent of the original benefit.

At an inflation rate of 4 percent the retiree comes out much better.

Year:	*Purchasing power*
1	$10,000
2	9,600
3	9,216
4	8,847
5	8,493
6	8,153
7	7,824
8	7,514
9	7,213
10	6,925
11	6,648
12	6,382

At the end of 6 years, the retiree is down about 19 percent ($8,153), and at 9 years about 28 percent ($7,213). In the 12th year, the loss has been over 36 percent.

However, these mathematical calculations do not show the full extent of the readjustments that such a worker would have to make. Clothing, for example, is seldom a heavy expense to elderly people in their retirement. Housing can be a major problam, both for renters and for many homeowners. But it is the basic necessities of food and utilities which become dominant with a shrinking income.

Furthermore, for early retirees 12 years may be far too low an estimate. With increasing longevity, those retiring at 62 have a reasonable prospect of about 16 years. That would result in the following shrinkage of retirement income in a period of 6 percent annual inflation.

Year:	*Purchasing power*
13	$4,754
14	4,468
15	4,200
16	3,948

The additional years would bring a shrinkage of purchasing power to less than $4,000 in the 16th year. The retiree would by that time be approaching the poverty level.

Question 7. Would the development of new work patterns—such as part-time employment, phased retirement, and others—have any effect at all in moderating inflation?

Response. New work patterns could have some effect in moderating inflation, but they might also have areverse effect. The result will depend upon the impact of the earnings upon the retirement benefits. My original testimony cited the example of the retired woman who worked over the summer from April to October and then drew unemployment insurance during the autumn and winter months, when no work was available in that community. The combination of $3,000 of earnings plus perhaps $2,000 in unemployment insurance would generate more purchasing power than would be covered by the output of goods resutling from her earnings.

Steady part-time work throughout the year could contribute to reduction of inflation. At the new 1978 earnings rate of $4,000 a year, a steady worker earning more than $80 a week could be making a contribution to lower inflation, if his productive output was worth more than $4,000, as it would have to be if his employer kept him regularly on the job. The result here would be the opposite of the above example.

Phased retirement might also reduce costs. Take the example of the worker who gradually retired by vacationing two more months each additional year from age 65 through 69, with full retirement at age 70. Substantial retirement money would be saved for the fund by that method of gradual retirement.

There is a need for more exploration of the combination of work and earnings which would benefit the worker and at the same time help the retirement funds.

Question 8. It is my understanding that much of the information about early retirement in State and local governments is quite often unavailable or incomplete. Would you agree with this statement? And if so, is this another reason that you call State and local early retirement a "time bomb"?

Response. Early retirement statistics for State and local governments are generally unavailable or incomplete. Unavailable means that, while the State or local government may have in their records a substantial volume of information, these data are not regularly published in documents available to the public. Incomplete means that such data as are published may not be analyzed and interpreted for the general public in the way that the Social Security Administration presents its annual reports and predictions for the future.

Perhaps equally important is the fact that many State and local governments are actively engaged in developing and expanding their retirement systems. Some of these are late comers in retirement programs, which means that they are primarily interested in catching up with their neighbors. Such government organizations, State or local, are more likely to be interested in improving the benefits rather than analyzing future costs.

That is the reason for calling such a program for a State or locality a "time bomb." As previously noted, the early stages of an expanding retirement program are always easy and pleasant—receipts far outrun the payments. It is only when the actuaries and analysts project far into the future that the financial

problems become readily apparent and prospectively alarming. The trouble is that State and local legislators are more interested in the next year than in the next decade.

Question 9. Today, inflation seems to be more persistent than it used to be. Why is our Nation not obtaining more results in terms of controlling rising prices?

Response: The problem with inflation is that there is no agreement among businessmen, labor leaders, or government officials on how to control it. Even among some professional economists there is no agreement as to its cause and cure. The only practical approach is to assess each contributing factor to see what its impact is on costs and prices.

In terms of its size and weight, the most dominant factor is wages and salaries, which comprise about 75 percent of the gross national product. Wage and salary increases are usually negotiated (or awarded by nonunion employers) at a level sufficient to cover the persistent rise in the Consumer Price Index. In addition, it has been the custom to give a further wage increase to reward labor for the rise in productivity. With a cost-of-living increase of 6 percent plus a productivity increase of 3 percent, a 9 percent wage increase (average for the economy as a whole) would just balance costs and prices.

Wage (and salary) increases that exceed the cost of living plus productivity (for example, 10 or 12 percent a year) will guarantee further inflation. Of course, highly productive industries with a 5 or 6 percent productivity improvement can pay wage increases of more than 3 percent without raising prices. But the major part of the problem is that industries with negligible or declining productivity find their workers asking for the same wage increase that the more productive industries are obtaining. That situation forces a substantial rise in those prices and stimulates further inflation.

Two additional factors are now operating to increase labor costs and thus to generate price increases. One is the establishment by law of higher health and safety standards within industry. This is already having an economywide effect in that productivity gains are now under 2 percent (national average), not the former 3 percent. It is necessary to emphasize strongly that when improved standards lower productivity and raise labor costs, then wage increases have to be restrained, if further inflation is to be prevented.

The second factor is the legislated minimum wage. That applies to the unskilled, the uneducated, and other handicapped who are at the bottom of the wage pyramid. Congress and the State governments periodically take action to raise this minimum. When no action is taken for several years, which has recently been the case, that minimum still applies to many employed workers. Then when revision legislation is passed, there is a substantial jump in the amount—from $2.35 an hour to $2.65 in 1978, and to $2.90 in 1979. That is an overall increase of over 23 percent in 2 years. The immediate effect will be a major increase in labor costs in those industries with large numbers of unskilled workers, followed by a substantial rise in the prices of their goods and services.

There will be two subsequent results. One will be a rise in unemployment of the unskilled. The papers are already reporting stories of employers economizing on labor. There will be more cafeterias and fewer restaurants. Mechanization will take place wherever it is possible. In the District of Columbia there is a proposal for a minimum wage of $3,25, which would assure some additional unemployment in the District, since both Maryland and Virginia will have lower minimums.

The other result will be a sharp upward movement of wages just above the minimum. Workers who have been making $3 an hour, nearly 30 percent higher than the $2.35 unskilled, will make demands for the establishment of a larger differential above $2.90, one more appropriate to their higher skill. So up through the wage structure there will be some rising wage adjustments to restore, in some degree at least, a significant differential for the higher-skilled workers.

For the future, the present wage program provides for annual adjustments in the minimum. This will produce more gradual increases and avoid the heavy impact of the 1978–79 increases. For the present, however, the outlook is for rising labor costs and higher prices in 1978–79.

BUSINESS PROFITS

After wages and salaries have absorbed 75 percent of gross national product, there remains 25 percent, which consists of perhaps 10 percent for rent, interest, and capital replacement, leaving about 15 percent in profits to the businessmen.

Out of that, with a 25 to 50 percent tax on profits, there is left about 8 to 9 percent available for business investment. That item is what provides for economic growth and expansion.

Some of these profits are distributed to the stockholders, who then have to pay income tax on their dividends. So profits are taxed twice, which limits the funds available for new investment. In many European countries, business profits which are reinvested immediately in the enterprise are not taxed, thus encouraging profitable businesses to expand. In the United States, there have been occasions when Congress has exempted some reinvestment from profits taxation, but the total amount has not been large.

The difficulty with public understanding of profits is that a reported 10 percent increase in business profits seems spectacular, whereas in fact it amounts to only 1.5 percent of GNP. Furthermore, such an increase, if not taxed away, could result in significant increases in capital investment. This is the only way that the economy can expand—a larger volume of capital investment.

There are some economic data which point directly to what people in the United States are doing with their savings, namely, investing in land and homes. The spectacular increases in the price of land and private homes are clear-cut evidence of people putting their savings into something which will insure their protection against inflation.

It is of some interest to note that the two advanced nations which have done well in protecting their economies from inflation are Germany and Japan. The German people have had two disastrous experiences with inflation—World War I and World War II. The Japanese experienced the second. The labor movements in those countries are willing cooperators with the government in checking inflation.

INTERNATIONAL

The U.S. dollar, which since World War II has been the world's basic currency, is falling in value. One major factor in this situation has been the enormous cost of oil imports. Recent figures indicate that these comprise about 50 percent of the U.S. adverse balance of trade. The ominous outlook for the future is that the weakening of the dollar is already giving rise to a proposal for another increase in the world price of oil. That would result in a still larger U.S. deficit in foreign exchange and a further weakening of the dollar.

Meanwhile, domestic oil prices (for oil wells in current production) are being held down to less than half the world price. The United States is the only Western industrial nation which is not economizing on oil consumption. Gasoline prices are less than half of those in Western European countries. If domestic oil production could be increased and imports decreased, the dollar would be strengthened. Furthermore, U.S. self-dependence would be increased at a time when the world economic outlook is becoming more uncertain.

The same point can be made about natural gas. It is the best of all fuels. It should be the highest priced, not the lowest; and the price should be high enough to promote more domestic exploration.

Finally, the continuing decline in the purchasing power of the dollar will stimulate further inflation in the United States. Many imports (materials) are necessary for the growth of the U.S. economy. Such purchases abroad will cost more in dollars and will raise the U.S. prices of the final products.

In summary, the best solution to reduce U.S. inflation is to increase U.S. production and strengthen the dollar as a world currency. There is some risk of a business recession, but this could be mild if action is taken soon. It is imperative to avoid a financial crisis of the 1929 variety.

RETIREMENT, WORK, AND LIFELONG LEARNING

MONDAY, JULY 17, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 10:10 a.m., in room 6226, Dirksen Senate Office Building, Hon. Frank Church, chairman, presiding.

Present: Senators Church, DeConcini, Domenici, and Percy.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Garry V. Wenske, assistant counsel for operations; Letitia Chambers, minority staff director; David A. Rust, minority professional staff member; Alison Case, operations assistant; and Theresa M. Forster, fiscal assistant.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. Today, the Senate Committee on Aging begins an examination of the many issues related to our three general themes: Retirement, work, and lifelong learning.

A subtitle to these hearings might well be: Should the United States be dismayed or even fearful over a process so often described as the "graying" of our population?

My personal answer to that question is "no," as you might expect. It would be a sad day indeed for this Nation if the older persons among us were to be regarded as a drain, rather than a rich reservoir of experience, wisdom, and creative energy. But my answer would also include a caveat—one which has caused these hearings to be called—a warning that we must look deeply into issues which have concerned the Senate Committee on Aging for some time, but which now take on new urgency.

Contributing to the urgency is the debate over social security financing and the deepening concern over the high cost of public and private pensions. Do we know what we are committing for future retirement income, and are we proceeding in the wisest way? It has become common to say that the United States has no retirement policy. Federal, State, and local governments establish pension or annuity plans as if each one existed in a vacuum. Some private plans are loosely related to public sector plans; others are not; and complexity and misunderstanding abound.

What is all this costing us? How much more can we afford? And who really benefits from the current scheme of things?

Is there already a "pension elite" who benefit from several sources of income support while those most in need of a genuine supplement to social security income are the very ones least likely to enjoy it?

And one of the most crucial questions: How is inflation compounding the cost of retirement as it is practiced today?

We have chosen a broad title for these opening hearings and all those which will follow. We want to examine retirement, work, and lifelong learning in some detail, and we want to show that each of these three broad subjects cannot stand alone, especially now.

Retirement Policy

We are concerned about retirement for many reasons, the most immediate of which is new legislation which deals a major blow at traditional mandatory retirement practices.

I am referring, of course, to the raising of the upper age limit in the Age Discrimination in Employment Act from age 65 to 70. This victory won't alter current habits and injustices overnight, but it is historically important because it helps to establish the principle of keeping work options available throughout the lifespan. It also will challenge employers—and employees—to work cooperatively to make the most of the new condition which will generally take effect next January.

Retirement is also on our minds because of a swelling tide of concern about the clear and persistent trend toward earlier retirement. Does this make sense in the face of: increased longevity; inflation's inroads on retirement income; and the growing realization that this Nation now needs, and will need even more in the future, the full use of the talents and knowledge of all those who wish to work for as long as they care to work?

Employment Issues

But what good does it do to delay or even ban retirement if employment opportunities for the older persons are unsatisfactory or even nonexistent? We have put "work" in the title of our hearings because for some years now the Senate Committee on Aging has tried to alert the Nation to the fact that older workers are often called "retired" when in fact they can't get a job to replace one they have lost or one that has been swept aside by technological change. We have issued reports pointing out that so-called recovery for the general economy does not necessarily mean good times for workers in the 50's and 60's who encounter a distinct lag in return to jobs with insidious and far-reaching results: Denied work and often discouraged to the point of not even seeking it, the older worker seizes upon the earliest possible sustained assistance which of course is reduced social security benefits at age 62; the social security trust fund then must pay out instead of receiving payroll taxes from those who want to work, but can no longer find employment.

Our interest in work isn't limited to those past age 50. We also want to know what happens to persons whose job skills become outmoded at any age. And we will take special interest in experimental work arrangements, including flexitime, which could change fundamental thinking about the role and purpose of working the lifespan.

Lifelong Learning

And so we come to the third theme of these hearings, lifelong learning.

The 1971 White House Conference on Aging called education a basic right for all age groups, "continuous and henceforth one of the ways of enabling older people to have a full and meaningful life, and as a means of helping them develop their potential as a resource for the betterment of society."

Now that the end of mandatory retirement is in sight, isn't educational opportunity in later years even more important, not only as a means of adapting to new work demands and making one's self a continuingly valuable employee, but also as a way of adjusting to new interests when work hours decrease or, at an agreed-upon date, end entirely?

Many of the issues which will come before this committee at these and future hearings will be overshadowed by concern about social security financing. My own personal view is that the payroll tax is too high, too regressive, and in need of help from other sources. Important as this issue is, however, I hope that it will not dominate center stage. More important, it seems to me, are our goals for social security in terms of adequacy of benefits the contributions it makes to our society as well as its costs, and its relationship to other programs providing retirement income.

This committee is, of course, also concerned about problems facing the private pension system. Fortunately, the Senate Committee on Human Resources is preparing for hearings next month on amendments to the Employee Retirement Income Security Act of 1974, and we have been in close touch with Chairman Williams on matters of mutual concern.

We are also aware that there are no fewer than six federally authorized studies related to social security, retirement systems, and national retirement policy. We have made contact with representatives of each and will follow their progress closely. The same is true of the Federal Council on Aging, national organizations on aging, and other agencies. Nelson Cruikshank, counselor to President Carter on aging, has promised his personal attention to our hearings, studies, and findings.

In short, we are casting a wide net for information and ideas and perspective. Only in this way can we seek the most helpful answers in our search for what we want retirement, work, and lifelong learning to be in this country. We have been aided considerably by consultation from Harold Sheppard, whose recent book anticipates a growing crisis in this Nation's retirement age policy. Herman Brotman, demographer, and former assistant to the U.S. Commissioner on Aging, has once again contributed significantly to preparations for a hearing by this committee. To them and to others who have helped, and who will help in the future, we want to give our special thanks.

Our first witness, Secretary Califano, is quoted in the latest annual report by this committee as saying in a recent speech:

> We should remind ourselves that support for older Americans is support for all Americans. When medicare pays an older citizen's hospital bill it protects that family's savings to pay for college tuition, or a new house, or their own retirement.
>
> And "the elderly," we must remember, are ourselves—and our children. When we discuss the elderly in 2025, we are discussing the high school seniors of today.

That kind of perspective, Mr. Secretary, will guide us throughout these hearings.

Our ranking Republican member, Senator Domenici, is here this morning. I invite you to make whatever opening remarks you would like to make, Senator.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. Thank you very much, Mr. Chairman.

First, I agree with you, Mr. Chairman, that the whole issue of the changing times and the graying of America and the graying of the world makes the hearings that we are going to start today most important. I have a rather detailed statement which analyzes the three or four major areas that I am sure we are going to cover.

Suffice it to say that the witnesses that we have will address a variety of topics. Today, the Secretary will give us his suggestions on how we might improve the delivery of social services to provide for opportunities to our graying population.

I do believe that the kind of hearings we are undertaking are most important because we do tend to try to package and compartmentalize the problems that are coming down the line, and I believe they cross the entire structure in America. If we can provide some thinking and thought process as to where we are going and how these changes are going to impact upon what we must do and what the private sector must do, what the educational system must do, and what the social delivery system must do, then I think we will have contributed immensely here in these 3 days.

I ask the chairman to make my prepared statement a part of the record. I welcome the distinguished Secretary today.

Senator CHURCH. Thank you very much. Your full statement will appear at this point in the record as though fully read.

[The prepared statement of Senator Domenici follows:]

PREPARED STATEMENT OF SENATOR PETE V. DOMENICI

Mr. Chairman, the enactment of the Age Discrimination in Employment Amendments of 1978 reflects a number of fundamental changes in long-standing social and economic policies. These far-reaching changes necessitate a comprehensive reassessment of our traditional policies in many areas. Longer life and work spans pose a host of interrelated challenges. These challenges encompass income maintenance, adequate housing, proper nutrition, safety in our homes and on our streets, education, social services, and so forth. During the next 3 days, our witnesses will address a variety of topics. Today, we will hear Secretary Califano's suggestions as to how we might improve the delivery of social services to our "graying" population.

Postponed retirement may have a significant impact upon our social security program. Patchwork attempts by the Congress to ensure the continued viability of the program will not be effective in the long run. While the Social Security Financing Amendments of 1977 may help to guarantee the immediate and medium-range soundness of the system, the long-term stability of the social security program is still in doubt. In the months and years ahead, we will assess the merits and drawbacks of several possible solutions to the social security funding dilemma. Universal social security coverage and a rise in the eligibility age for social security recipients have been proposed. We also need to know how we can achieve a better integration of private and Federal pension plans with social security. Proposals to address these issues have, for the most part, generated much debate and controversy. Perhaps Secretary Califano can provide us with a clearer and more definitive analysis of these social security problems and proposals.

Rising medical costs impact on all Americans, but older Americans living on fixed incomes are hardest hit by the inflationary rise in health care costs. If hospital expenses continue to rise, it is estimated that a 1-day hospital stay could cost as much as $450 by 1980. Needless to say, something must be done to bring medical costs back within an affordable range for all Americans. While I realize that the present administration has committed itself to controlling the cost of health care, we are still a long way from a truly cost-effective health care delivery system. As the proportion of senior citizens continues to rise, restraint in the area of medical costs will become increasingly important.

Since the incidence of infirmity tends to increase in later years, more and more elderly individuals will face the possibility of long-term hospitalization or institutionalization in the years ahead. These prospects are not pleasant ones for our elderly to face. When possible, they prefer treatment in familiar surroundings, with friends and family members nearby. Fortunately, the Congress is beginning to look into this matter, and many members now recommend increased home health care services as an alternative to the sterility of institutional care. Legislation I have introduced, along with Senators Brooke and Percy of this committee, the Home Health Care Services Bill (S. 2009), will enable many elderly to obtain the medical services they need in their own homes. I hope that we will see a dramatic expansion of home health care services in the coming years.

Very little change in the distribution of education has occurred in America from 1900 to 1970. Work activity is primarily concentrated in the mid-life period, while education is stressed during the youthful years. We are witnessing a growing emphasis on adult and continuing education programs, but more concentration in this area is needed. The Office of Lifelong Learning, established by the Higher Education Amendments of 1976, is an important attempt to extend educational fulfillment to all generations. I commend the Department of Health, Education, and Welfare for its success in implementing this program, and would like to hear from Secretary Califano about other present or future initiatives in the area of lifelong learning.

I understand that many Federal agencies have implemented some form of preretirement counseling. I am anxious to learn about the extent and effectiveness of these programs within the Department of Health, Education, and Welfare.

Other innovative arrangements have been proposed, such as gradual and trial retirement. I hope Secretary Califano will comment on the desirability and workability of proposals such as these.

Mr. Chairman, another pertinent subject is the prospect of including employment for the elderly within a comprehensive welfare reform proposal. Present proposals exclude seniors from placement in jobs which would be created if welfare reform were implemented. Important questions which need to be addressed are: Can welfare reform open up new job opportunities for the elderly who want to work? Can we have a truly comprehensive welfare reform program without fully including older Americans? I will be interested to hear both Secretary Califano and Dr. Sheppard speak to this issue.

We are also fortunate to have with us today, Dr. Harold Sheppard, who is a distinguished author and scholar and, I might note, a former staff director of this committee. As an industrial gerontologist, Dr. Sheppard can give us a completely different perspective on the forces which are at work in our society. Mr. Chairman, I opened this statement by noting that the enactment of the Age Discrimination in Employment Amendment of 1978 reflects a number of fundamental changes in our social and economic structures. If we are going to come to grips with these forces, and shape realistic policies that will meet the needs of our people in the years to come, we must fully understand the changes that are occurring in the American work place. What are the attitudes of older workers toward retirement? How do middle aged and older workers perceive the need for second career training? What are the expectations and attitudes of younger workers toward their job? Their employer? Retirement? Social security? Inflation? Social services? Productivity? Taxes, and so forth?

I believe Dr. Sheppard is uniquely qualified to address these issues and I look forward to receiving his testimony and hearing his responses to questions posed by the committee members.

In closing, Mr. Chairman, let me state that I believe that our work in the area of "retirement, work, and lifelong learning" can, if carried to fruition, produce valuable data not only for our committee, but for the entire Congress. Our ability to look at the "big picture" regarding employment, retirement, and continuing education should enable us to develop a hearing record that will benefit other

committees, executive agencies, State and local governments, as well as the private sector. America will meet and overcome these challenges, which is the mark of a great civilization. Secretary Califano noted in his "Four Generations" speech: "Our democracy has proven itself both creative and resilient; capable not only of surviving social change, but of dealing with it imaginatively and generously."

We are fortunate indeed to live in a society resourceful enough to meet these demanding responsibilities and challenges.

Senator CHURCH. Senator DeConcini, do you have any opening remarks you would like to make at this time?

Senator DECONCINI. No, sir.

Senator CHURCH. Very well.

Mr. Secretary, welcome to the committee. As our leadoff witness, we are very happy to have you. You may proceed as you wish.

STATEMENT OF HON. JOSEPH A. CALIFANO, SECRETARY, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Secretary CALIFANO. Mr. Chairman, thank you very much for a perceptive opening statement.

Mr. Chairman, members of the Special Committee on Aging, I'm glad to be here and grateful to you for inviting me to take part in these important hearings.

Your inquiry, with its theme "retirement, work, and lifelong learning," takes on increasing urgency when we consider that the number of older citizens in America is growing, that the number of years spent in retirement is growing, and that because of advances in health and nutrition, many older citizens are more vigorous and youthful than their predecessors of a generation ago. Mr. Chairman, we are on the dawn of the first four-generation society in the history of civilization.

Because we are a nation devoted to the fulfillment of the individual, we need to consider the aging of the American population with clear eyes, a realistic grasp of the facts, and a determination to plan, as prudently and thoughtfully as we know how, our programs for enriching the lives of our older citizens.

I think it is appropriate to begin with some facts about aging in America. So today, I want to describe briefly the dramatic aging of the American population and, equally dramatic, its impact on the Federal budget and our national economy. I want also to raise some questions that should be on the minds of all who shape the institutions and programs of America: The Congress and the executive, State and local officials, scholars and social planners, business and opinion leaders, and the American people.

The past four decades have seen a steady growth in the number of older citizens, a demographic change both large and striking. This growth—along with recent trends such as inflation, slow growth, and problems in health care delivery—presents some formidable challenges to programs serving the elderly.

FOUR DRAMATIC TRENDS

Let me describe four dramatic and seemingly inevitable trends about aging in America:

First, life expectancy has increased almost 10 years since 1940. In 1940, the average life expectancy at birth was about 63½ years—

lower than social security's retirement age of 65. Today, life expectancy is 69 for men, 77 for women. Three-quarters of the population now reaches age 65; once there, they live, on the average, for another 16 years, to age 81. As we contemplate the year 2050, we are told that life expectancy will increase only another 3 years for men and 4 for women. And we must remember that biomedical advances have consistently rendered recent projections of life expectancy much too low.

Second, the postwar "baby boom" will reappear early in the 21st century as a "senior boom." In 1940, roughly 7 percent of the total population was 65 or over; today, the proportion is 11 percent, more than 24 million people. After 2010, the elderly percentage will not just increase, it will soar, as the childeren of the "baby boom" become the adults of the "senior boom." By the year 2030, nearly one on five Americans—55 million citizens—will be 65 or older. And the composition of the older population is changing also. In 1940, only 30 percent of older citizens were 75 or older; by the year 2000, they will comprise 45 percent of the elderly—more than 14 million people.

Third, ironically while people are living longer, they are retiring earlier. Thirty years ago, nearly one-half of all men 65 and over remained in the work force. Today, among people 65 and over, only 1 man in 5, and 1 woman in 12, are in the work force. There is no indication that this trend to earlier retirement will cease. This confronts us with some serious questions concerning not only the cost of providing retirement income, but the quality of life for many citizens who may spend 20 years or even longer in retirement.

Fourth, the ratio of active workers to retired citizens will change dramatically over the future: From 6 to 1 today to only 3 to 1 in 2030. This ratio is important because it suggests how many active workers are available to support programs for the elderly. We can estimate this ratio by comparing the number of citizens 65 and over to those 20 to 64. This is rather crude, since some persons over 65 are not retired and many people age 20 to 64 are not workers. But the historical changes in this ratio are extraordinary nonetheless: In 1940, there were 9 citizens age 20 to 64 for every citizen 65 or over; today, it is 6 to 1; by 2030, it will be only 3 to 1.

These four demographic trends have already had significant impact on the Federal budget. Programs for the elderly are claiming an increasing share of our resources.

This year, six major programs for which HEW has responsibility—old age insurance, survivors and disability insurance, medicare, medicaid, supplemental security income, and black lung benefits—will pay out more than $94 billion to persons 65 and over. Another $14 billion will be paid to this group under the civil service, railroad, and military retirement programs. Still another $4 billion will go to the elderly under other programs providing housing subsidies, food stamps, social and employment services.

"Whopping" Budget Increase

This adds up to $112 billion—5 percent of the gross national product and 24 percent of the Federal budget for fiscal year 1978.

This is a whopping increase. Real spending under these programs in 1978 will be four times what it was 18 years ago, in 1960, when we spent only 2.5 percent of GNP on programs for the elderly. And from only 13 percent of the Federal budget in 1960, the percentage has

nearly doubled—largely due to the enactment of such major programs as medicare and medicaid, real benefit increases in social security, and other program expansions.

These expenditures, Mr. Chairman, large as they are, are expected to grow even more. Under the major programs I have mentioned, estimating benefits only for recipients age 65 or older, we expect real spending to more than triple—to $350 billion by the year 2010, just a little over 30 years from now. Between 2010 and 2025, when the "baby boom" becomes the "senior boom," real spending will escalate from more than $350 billion to around $635 billion. It will constitute more than 10 percent of gross national product, more than 40 percent of total Federal outlays.

Beyond the impact on the Federal budget, there are other striking financial implications of the aging of America. Last year, Congress enacted increases in payroll taxes that will insure the fiscal integrity of the social security system into the next century, although, as you on this committee know so well, these changes are hardly free of controversy. But the integrity of employer pension plans is open to serious question.

In 1976, Federal pension plans had unfunded liabilities between $243 and $425 billion.

Senator CHURCH. Do Federal pension plans refer to the civil service and the military pension system?

Secretary CALIFANO. Yes; they are the largest elements of that number. Almost all of it, Mr. Chairman.

MASSIVE UNDERFUNDING?

Senator CHURCH. You are telling us that they are massively underfunded?

Secretary CALIFANO. They are massively underfunded. For State and local pension plans, the estimate is between $100 and $270 billion. The estimate for private plans is roughly $200 billion. Together, these unfunded liabilities may well exceed the national debt of more than $600 billion. Ten of the largest industrial corporations in America have unfunded pension liabilities equal to a third or more of their net worth; seven of them have unfunded liabilities which exceed the aggregate market value of the common stock.

Senator CHURCH. Mr. Secretary, if I may interrupt at this point, I would like to ask whether you are going to tell us in your testimony the reasons that in 1976 Federal pension plans, State and local pension plans, and private pension plans, including those of the largest American corporations, are all in the same condition; namely, being underfunded to this astonishing degree?

Secretary CALIFANO. Mr. Chairman, I do not know the answer why. You note that I used the term in my testimony, unfunded. I use that term because obviously they all represent conscious decisions to rely on current income from whatever sources they are getting. I do think those numbers raise very serious questions about the extent to which this committee should look at the need for legislation in these areas in order to provide the protection. I realize ERISA was passed by the Congress a couple years ago, but I think, and I would urge that among the things this committee looks at, it look at the extent to which the protection may be needed in order to assure that individuals

who are relying on those unfunded pension plans for their retirement years will indeed be placing their reliance with security.

Senator DOMENICI. Would the chairman yield?

Senator CHURCH. Yes, of course.

Senator DOMENICI. Would you tell me, Mr. Secretary, what you mean in the use of the word unfunded?

Secretary CALIFANO. I mean the funds are not there today to pay out for the liabilities that those systems have incurred.

Senator DOMENICI. As of today, or as of some future date?

Secretary CALIFANO. As of today, they incur a certain amount of liability and the funds are not there today to pay for the liability. The people may still be on the work force, but they will all retire 10 or 20 years from now. This is the extent to which that has not been funded. The social security system, by the action of the Congress last year, however controversial, the Congress did take the step of providing that the necessary income will be there over the next 25 years roughly to pay for the social security liabilities that have been and will be incurred over that period of time.

Senator Domenici, you will note that there is a large spread in those numbers.

Senator DOMENICI. Yes.

Secretary CALIFANO. Part of that is because our numbers are so inadequate, and most of those numbers come from studies that were done here in the Congress, and some of them from studies that were done in the Social Security Administration; but also the spread is because we still have a lot to learn about the extent of unfunded liabilities in both the State and local governments, and in our large employers. We don't keep statistics, and the numbers as well, as we should in those areas.

Senator DOMENICI. Thank you, Mr. Chairman.

Senator DECONCINI. Mr. Chairman.

Senator CHURCH. Yes, Senator DeConcini.

Senator DECONCINI. With regard to Senator Domenici's question, are you going to suggest, Mr. Secretary, how you would arrive at a formula that will fund "unfunded" liabilities of private pension plans?

Secretary CALIFANO. No; I do not suggest that, Senator. As you see in my statement, I have gathered all the numbers as best we can gather them from our own sources and studies that have been done here on the Hill, to lay them out before this committee I do not come today with specific recommendations in those areas or in other areas.

Senator DECONCINI. I am concerned, Mr. Secretary, that your testimony may leave the impression among American workers that their pension funds are not funded, and are not going to be available through the balance of their lives. I hope you are in the position to substantiate your information, because that is a very threatening prospect for an autoworker who is planning on his pension from the United Auto Workers Pension Fund, for example.

Secretary CALIFANO. Let me say, Senator, I do not believe that among the pension funds I am mentioning is the United Auto Workers Pension Fund.

Senator DECONCINI. What about some of the others?

Secretary CALIFANO. I will be happy to submit the support, for all those numbers to this committee. There are studies at HEW and studies that have been done by the labor committees here in the Cong-

ress. As I emphasize in the very next paragraph of my prepared statement, I do not cite those numbers to alarm people, for they are subject to all the hazards of estimating, particularly, the State and local numbers and the numbers with respect to private pension plans, because we have not been collecting statistics systematically as we should in those areas.

Senator DECONCINI. I would like to see this background material.

Secretary CALIFANO. I do think, Senator, it is very important that as a nation we focus early on these problems and what is happening to our country, because as a nation, and as a people, we obviously have an obligation to take care of our people in their older years.

Senator DECONCINI. Thank you, Mr. Chairman.

Senator CHURCH. Certainly, Senator.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

Information on unfunded pension liabilities is taken from a paper by Alicia H. Munnell and Ann M. Connolly.[1] The paper is cited in a footnote in a copy of the galley proofs of a chapter from the House Task Force on Pension Plans. The estimates, which Munnell and Connolly warn against interpreting with more precision than they deserve, are in the following table:

Estimates of Civil Service, State-local, and military unfunded pension liabilities (in billions) [2]

Civil service	$164
State-local	270
Military	195
Total	629

The total unfunded pension liability, they claim, is an estimated $629 billion, a total of the Civil Service, State-local, and military pensions. Munnell and Connolly do not state the dates for their figures, but other data in the article lead to the conclusion that they are referring to 1975 figures for their calculations.

Secretary CALIFANO. As I mentioned, these figures, I should emphasize, are subject to the hazards that afflict all estimates. I cite them not to alarm, simply to inform. What I have just described is a shift in the age of our population; the shift in resources that has followed is both inevitable and natural.

Indeed the presence in our society of a growing elderly population is as much a blessing as a cause for concern. It speaks to the success we have had as a Nation in improving the health and well-being of all our citizens, in making the advances of the medical sciences more broadly available, and in being able to respond to the changing needs of citizens of all ages. If we are spending more on behalf of older Americans, that is only as it should be. It is one mark of the respect in which society holds the older generation.

TODAY'S YOUTH: THE FUTURE ELDERLY

Nor is the effort we make on behalf of the elderly unrelated to our own lives. The taxes that younger American workers pay on what they earn today not only assure their own futures, they make possible a better future for all generations. With medicare paying for the medical needs of elderly parents, the earnings of the young can be used for

[1] "Funding Government Pensions: State-Local, Civil Service, and Military" in Funding Government Pensions: Issues and Implications for Financial Markets.

[2] Ibid., pp. 73–74.

education or the down payment on a home. We may, as family members, choose to live with different generations under different roofs, but we remain members of our families wherever we may live; the economic choices made by any one generation affect all generations.

Indeed, as Senator Church noted, "the elderly" are ourselves—and our children. The commitments we make to the elderly of tomorrow are no less than the commitments which we all make to ourselves.

As our population 65 and older grows, the proportion of dependent children will decline. In 1960, 40 percent of our population was under 20. Today, the figure is about 33 percent; by 2025, it will fall to 27 percent. Although public programs for the elderly are expensive, to some extent the reduced burden of caring for younger citizens can offset rising expenses for the elderly.

We are a compassionate society. And a compassionate society faced with such facts must make sure it has the capacity to meet future obligations.

How shall we deal with the fiscal pressure that has been building up—and will continue to build up—within our system caring for of older citizens?

We must first ask some difficult and searching questions: Questions that go beyond immediate problems and quick fixes, for it may be that the old assumptions upon which we have based our programs for the aging are no longer adequate.

Today, let me raise four such questions: Questions that must form part of our national agenda for the remaining years of this century.

The first is this: How adequate are our definitions of "old age" and "retirement"?

What, after all, is old age? In 1900, when only 4 percent of Americans were 65 or over, 65 was clearly old. Today, the advance of health and life expectancies may make 65 a benchmark more arbitrary than reliable.

How to Define "Retirement"?

And how shall we define "retirement"?

At present, we operate with two distinct conceptions of retirement.

The first and more traditional one is support for workers who have reached old age and can no longer work.

The second, more recent conception views retirement as a reward not necessarily related to old age, simply a reward for a certain period of work—typically 20 to 30 years. In the military, for example, a pension is available after only 20 years of service, regardless of age. Workers in the Federal civil service, and in many State and local governments, can retire on full pension at age 55 with 30 years of service. This second conception of retirement is more expensive; it is born of the rich choices that affluence without inflation seemed to offer in past years.

There are reasons to wonder aloud whether the trend toward even earlier retirement is a trend in the right direction. A 1974 poll, for example, indicated that 4 million people 65 and over wanted to work, but were not doing so. With increased life expectancy, improving health, and steady increases in the education level of the elderly, this attitude could doubtless spread.

In 1940, the median educational attainment of persons 60 and over was 8 years; a dozen years from now it will have risen to 12 years.

Although in 1977, only 18 percent of persons in the 65 to 69 year age group had been to college, the proportion will rise to 45 percent by the year 2017.

It makes little sense—social, economic, or commonsense—for the skills and talents of millions of healthy older citizens to be wasted.

Thus, if we rethink our retirement policy, one place to start is with existing incentives for early retirement. Social security is now available, on an actuarially reduced basis, at age 62. Many pension plans provide benefits at that age or earlier with no reduction in benefits. Indeed, in 1978, the Federal Government will pay more than $19 billion dollars in retirement benefits to persons under 65, reduced benefits under social security. Some people almost feel compelled to retire early.

Incentive for Later Retirement

Perhaps we ought to consider different kinds of incentives; for example, like those provided in last year's social security amendments which increase a worker's retirement benefits by 3 percent each year of work past 65.

Or we might explore new kinds of work arrangements that might accommodate greater numbers of older Americans in the work force, such as phased retirement and increased part-time work. One study suggested that as many as four out of five workers would prefer to reduce their years of retirement and redistribute more leisure in the middle years of life, and this highlights the need for more flexible career patterns.

Some have objected that moving toward later retirement will mean fewer jobs for younger workers, an understandable argument in a time of high youth unemployment. But it is an argument that loses some force in a time of steady economic growth, or as the job market tightens. We must remember that when older citizens work, they create new jobs, and that the job market is not a confined space with a precisely limited number of jobs. The jobs that elderly Americans might retain are not necessarily the same jobs that youth would seek.

We should approach the issue with caution. Any shift in retirement age must not come overnight; it cannot come by the sudden act of any one person or institution. But we should focus national debate on whether—and how—to effect a gradual change in our system of incentives and expectations concerning retirement.

Let me suggest a second question for the future: Should we restructure our existing, uncoordinated mechanisms, private and public, for providing income security to older citizens?

The social security system dominates the pension landscape not simply in size but in reliability. Unlike most employer pension plans, it covers almost the entire population. It provides more effective protection against inflation than pension plans or savings. It is, quite simply, probably the grandest and most successful social experiment of our age. Without it, the number of older Americans in 1976 with incomes below the proverty line would have more than tripled—to a total of 10 million people.

One-Quarter Poor or Near-Poor

Even today, however, about one-quarter of the elderly are either poor or "near poor"; that is, their incomes are less than 125 percent of the poverty line. For minority elderly and women living alone, escape from proverty has been the most difficult. So we cannot become complacent about the elderly poor, but neither should we overlook the progress we have made. Twenty years ago, more than one person in three, age 65 or over, was below the poverty line; today, due in large part to social security, the fraction has fallen to one in seven.

Senator Church. Mr. Secretary, may I ask at this point, why have we been unable to eliminate poverty altogether? It is true that we have made progress, but there are still large numbers of retired people living in poverty; particularly, as you point out, among minority groups and women;

Social security has been in existence for more than 40 years. It was intended to provide a retirement income for our citizens sufficient to cover at least the necessities of life. But, as you have testified, about one-quarter of the elderly are either poor or near poor. Now, we have tried in various ways to reach them. The whole effort in the Congress to establish a supplemental security income program was to reach down to those people who are living in poverty and getting so little in the way of retirement income. Yet, we never seem to get the job done. Is there a way?

Secretary Califano. Mr. Chairman, in the context of providing adequate funds or services, yes; there is a way to provide them with those funds and services, but it would cost more money. The supplemental security income program, insofar as the Federal contribution is concerned, provides an amount of money that is not sufficient to raise someone out of poverty. The extent to which people on supplemental security income are receiving that money, on the basis of age, or above the poverty line, becomes a function of the extent to which States match those benefits and function where they live in rural or urban areas.

I mean we can do it. If you just take social security alone, it gives you a sense of how many people we can reach. In 1976, if we had not had the social security system, 60 percent of our senior citizens would have been below the poverty line in terms of their income, so it has had a phenomenal impact, but it is a function of providing additional funds, and it is a function of whether or not we are willing to make the judgment as a country to do that.

Senator Church. But if we were to modify the supplemental security income program in such a way to bring everyone within the social security system to a level of retirement income that at least equaled or exceeded the poverty line as defined by the Federal Government, then we would pretty well eliminate poverty among the elderly in this country, would we not?

Secretary Califano. Yes, Mr. Chairman, we would, providing at the same time we do have medicare and medicaid benefits.

Deterring Welfare Costs

Senator Church. Yes, of course. That bundle of benefits plus a retirement income supplemented to take care of those who otherwise live in poverty could eliminate this problem. You speak of the cost of it, but wouldn't the cost at least in part be mitigated by the elimination of the need to pay these people welfare and other special benefits?

Secretary Califano. Yes; it would. To the extent that we picked up what State and local governments are now doing, yes; that is correct, it would. There might still be that net cost, but you cannot take the gross number. You are absolutely right about that.

Senator Church. I wish that your Department would furnish this committee with an estimate of the cost—that is, the net cost—taking into consideration the savings that might be realized on the welfare side if we were to increase the supplemental payment sufficiently to bring everyone within the social security system above the poverty line. Would you do that?

Secretary Califano. Yes, Mr. Chairman.

Senator Church. Thank you.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

Under the SSI program, States spend approximately $1.5 billion each fiscal year in supplementation costs. Raising the Federal SSI guarantee to the poverty level would reduce State expenditures by about 70 percent.

The 1978 nonfarm poverty line for a head of household age 65 or older is $3,080. Estimates of the minimum cost—the cost for people already receiving SSI—and the maximum cost—the cost for everyone eligible to receive SSI payments—if the Federal SSI guarantee for an individual were raised to the $3,080 amount for the period July 1, 1977, through June 30, 1978, are shown below:

Minimum estimate:	
Program costs (billion)	$8.3
Beneficiaries (million)	4.2
Maximum estimate:	
Program costs (billion)	12.2
Beneficiaries (million)	9.3

Raising the Federal SSI Guarantee to the Poverty Line

Several questions arise in raising the Federal SSI guarantee to the poverty level: (1) What year should be used? and (2) which poverty line should be used?

First, the poverty line is published on a calendar year basis while the SSI guarantee is changed every July 1 and is in effect until the following June 30th. Because changes in the poverty line and the current SSI guarantee do not occur at the same time, if one selects, say, the 1977 poverty line, then from July to December 1977 people would have incomes at the poverty line; for the next 6 months their incomes would be below the poverty line. On the other hand, if one starts with the 1978 poverty line, people's income would always be at the poverty line or above. However, for the 6 months July to December, their income would be above the poverty line.

Second, "the poverty line" can be numerous different levels. The levels differ according to the age of the head of the household, the sex of the head of the household, family size, and nonfarm/farm settings. Therefore, the poverty line selected would affect the objective of eliminating poverty for the SSI population. If a new SSI guarantee were established which would equal the poverty line for an aged head of household, then all disabled people would have incomes below the poverty line; if the guarantee were equal to the poverty line for a nonaged head of household, then aged people would have incomes above their poverty level.

Finally, there is a difference in the relationship between singles and couples. While the Federal SSI guarantee for a couple is one and a half times the guarantee to an individual, the poverty line for a couple is less than 30 percent more than the poverty line for an individual.

For this request, one option has been provided—a Federal guarantee equal to the estimated 1978 poverty line for aged heads of households—$3,080 a year. The nonfarm poverty line was used since no one in a metropolitan area would be at or above poverty using either the farm or the average poverty level. For the same reason, the poverty line for a male-headed household was used. Also, a guarantee that replicates the poverty lines for individuals and couples was used.

One final point should be made. Even with a Federal guarantee equal to the poverty line, not all SSI beneficiaries would appear in subsequent census surveys as having income at or above the poverty line. Due to the payment variations in the program, people living in another's household or in an institution still would be classified as below poverty.

Secretary CALIFANO. The social security program does not, as important as it is, work in isolation. As you know, Mr. Chairman, there is the supplemental security income, and last year it reached 2.3 million aged beneficiaries, about 70 percent of whom also received social security.

There are 68 different retirement plans in the Federal Government, more than 6,000 State and local pension plans, and thousands of private plans. Jointly, they pay out close to $50 billion each year in benefits. Of all new social security retirees, fully half have other pension income.

Senator DOMENICI. How many?

Secretary CALIFANO. Half.

Senator DOMENICI. Of all the new social security retirees?

Secretary CALIFANO. Yes.

Senator DOMENICI. Would you have any information, Mr. Secretary, on the broader question of what percentage of social security recipients have other income?

Secretary CALIFANO. We have some information. I can provide that in detail for the committee. It increases as we get newer retirees; it is fewer in the older retirees.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

As table 2 (submitted to the current Social Security Advisory Council) shows, most beneficiaries have other income; e.g., 57 percent had income from assets, 24 percent with earnings, about 30 percent with a second pension. However, it must also be brought to the committee's attention that for significant proportions of beneficiaries, social security provides more than half their income—over half of the married couples and three-quarters of the non-married. Earnings were the major source of income for only a third of aged units in 1976 and only about 1 in 10 of recipients were majorly dependent on income from assets or private pensions. The survey of newly entitled retired workers (conducted 1968–70) indicated that, at least for the married couples where the man was the sample person, the proportion receiving another pension at age 65 may be increasing.

[1] The 1971 figure is an estimate based on information from the CPS and MER combined.
[2] Unknown.
[3] For 1971, includes private annuities.
[4] Excludes beneficiaries who received their first benefit in February of the survey year or later, transitionally insured, and special age 72 beneficiaries. Beneficiaries may be receiving retired worker benefits, dependents' or survivors' benefits, or disability benefits.
[5] Receipt of retirement pensions is not reported for nonbeneficiaries in 1971 because the inability to separate out railroad retirement benefits from social security has a large effect on this small group.

Source: March 1977 Current Population Survey, and Income of the Population Aged 60, and Older, 1971 (staff paper No. 26). Social Security Administration, table 10.

Senator DECONCINI. Mr. Chairman, may I ask the Secretary a question?

Senator CHURCH. Yes, of course.

GOVERNMENTAL RETIREMENT SYSTEMS

Senator DECONCINI. Mr. Secretary, would you care to express an opinion about the large number of governmental retirement systems? Do you believe there ought to be some consolidation of the 68 different retirement plans in the Federal Government?

Secretary CALIFANO. When the Congress voted the Social Security Act last year, it ordered a series of studies, one of which would go to making the social security system universal. If you did that, you would have to integrate these other retirement plans. The President also, a year of so ago, suggested the creation of a Presidential Commission on Retirement Systems, and I think we should look at that.

Senator DECONCINI. When do you think you will have something on that?

Secretary CALIFANO. We are beginning the study on integration. I have just found someone to take that study on. The Social Security Advisory Committee, which the Congress set up, is already functioning and their report will be finished by the end of next year. Their report will include some attention to the integration of the social security system, but obviously in terms of efficiency, in terms of the realities of the situation, and in terms of making sense, there should be some consolidation of these 68 retirement plans.

Senator DECONCINI. When will your study be finished? Do you have any tentative date?

Secretary CALIFANO. The study will be finished by the end of next year; and we would like the other study to be finished at that time as well so we can have intelligent recommendations before the Congress by that time.

Senator DECONCINI. Thank you.

Secretary CALIFANO. There are some areas, Senator DeConcini, in which I think hearings will be held independently, such as the social security disability program. Both Chairman Long and Chairman Ullman, indicate that they want me to come up with recommendations for changes there.

Senator DECONCINI. Thank you, Mr. Chairman.

Secretary CALIFANO. Another way we help support the elderly is through tax expenditures. Tax breaks accorded to pension plans and social security income, and for elderly taxpayers, will total more than $19 billion in fiscal year 1978.

Finally, there are private savings, which provide an estimated $15 to $20 billion in income to retirees.

These sources of support add up to a substantial sum, but they leave us caught between two conflicting needs: The need to keep future costs under control, and the need to increase benefits for people whose income is inadequate. Resolving this problem depends in part upon the total amount that society is willing to commit for income maintenance, but it depends as well on integrating this patchwork of systems more effectively, and managing the resources we do provide so that they do the most good.

A basic question, then, is what the ratio should be between income earned before retirement and income thereafter. For new retirees aged 65, this ratio today stands at about 47 percent.

But beyond this ratio lie questions of how the overall system treats those at the top—and at the bottom—of the scale.

Today, social security benefits are wholly exempt from taxes. It seems at least open to discussion whether a wealthy lawyer, doctor, or business executive with a $50,000 pension should receive tax-free social security benefits.

Senator DeConcini. Mr. Secretary, since social security is exempt from taxes, what justification is there for not exempting other pension plans when they are not supplemented by social security?

Secretary Califano. Some pension plans are exempted in greater or lesser degree, depending upon the tax laws, which become very complicated and sophisticated in this area, and it is beyond my area of knowledge or expertise.

Senator Church. We do have a tax credit for the elderly that is intended to give comparable tax treatment for Government pensions, with little or no social security benefits.

Senator DeConcini. It does not equal.

Senator Church. No; but that is the intent.

Senator DeConcini. It does not equal the nontaxation of social security.

Senator Church. No; but this is because we have failed to perfect the formula sufficiently to keep it working at that level.

Senator DeConcini. Do you think that the tax-exempt benefits are any incentive to keep people in the social security system?

Secretary Califano. Part of the reason for those being tax exempt is that they are taxable income to individuals who are paying those benefits while they are working. Now, I raise that question in this larger context of our current needs, and those people who have substantial outside pensions from other places. It seems to me all of this is part of the need for this country to look at the whole income maintenance area with respect to our elderly citizens, as one area, and get a much better handle on the relationship between one system and the other.

There are portions of social security now, people who receive social security benefits, who are getting far more proportionately than they paid into it, and in that sense your point about the private pension plan in a comparable situation as a private pension plan has to be taxed.

Senator DeConcini. Thank you.

Higher SSI or Social Security Benefits?

Secretary Califano. At the other end of the scale, we have to consider the plight of those for whom social security benefits are the sole source of income, and whose earning record may not entitle them to the greatest amount. Today, the ratio between contributions and benefits is not fixed: For low-income workers, the ratio is 61 percent, to help make benefits more adequate; for high-income workers, it falls to 35 percent. This is one strategy for helping to reduce poverty among older Americans. But are we doing enough? And should we do more? Is this the best way to bring people out of poverty, or is a system

like supplemental security income—which focuses income only on those at the low end of the income scale—a more efficient method? How do we compare the value of efficiency and the resources it frees for serving unmet needs against the genius of the social security system—that it brings independence to many people who would otherwise be poor, and does so with dignity, with no means test?

Senator CHURCH. In asking the question, Mr. Secretary, can you furnish us with your answer?

Secretary CALIFANO. Mr. Chairman, I am not certain of the answer to this question. I have specifically asked these questions of the Social Security Advisory Committee, because I think one thing that should be looked at is the relationship between the supplemental security income program and the social security program.

Senator CHURCH. Well, I do, too, because if you could increase the ratio of the pension as the income level falls, you have a built-in system of adjustment which does not require the kind of administrative cost and the constant policing that goes on in the supplemental security income program. Every SSI recipient must disclose how much he has in the bank and other assets. It is a cumbersome and costly procedure, requiring a good deal of governmental interference in one's private affairs. If there is a better way of doing it, I think we ought to explore it.

Secretary CALIFANO. It is also more prone to error when all those computations have to be made.

Senator CHURCH. Yes.

Secretary CALIFANO. A critical question that affects persons all along the income scale is the relationship between private and public pensions. Private pensions have spread so that they now cover about 45 percent of the work force, but that growth occurred in a period when inflation was persistent.

If the capacity of private pension plans to assume a major role in providing retirement income is called into question, do we wish to continue to encourage the creation of this layer on top of social security? At present, we do just that by providing substantial tax benefits for contributions to pension plans.

Are we comfortable with a system in which some retirees pile up the maximum social security benefits on top of generous pensions, while other retirees have no pension income and find social security barely enough to get by on? Or would it make more sense to recoup those tax benefits and apply them to more generous and widespread social security coverage?

Senator CHURCH. Are you suggesting here that it might be advisable to scrap the private pension system?

Secretary CALIFANO. No, Mr. Chairman. What I am suggesting is that when we look at the social security system, which has now become such a large part of the landscape of retirement, that we really have to look at all the other retirement systems at the same time. I am simply raising the question as to whether or not what we once perceived to be a very good relationship between the social security system and the private pension system is the right relationship for today and for the future, in the context of the large numbers of people we will have in this country who will be retired.

I don't know the answers to these questions. Again, they are part of what will be done and the studies are being done by the HEW.

Universal Social Security?

A final income security issue that deserves consideration—and one we are examining in a congressionally mandated study—is whether social security coverage should be extended to all employees, including public and nonprofit workers. About 45 percent of civil service annuitants receive social security in addition to their Federal pensions, and many receive a second pension as well. When workers move in and out of covered employment, many obtain a handsome combination of pensions and social security. Some may fail to qualify for substantial benefits either in pension plans or under social security. Income maintenance policy should not be a game with complex rules, winners who get windfalls and losers who get nothing; it should be a rational system for meeting definable human needs. If universal social security coverage is not the answer, we must find another method of filling the gaps and eliminating abuses.

Beyond the questions of retirement and income security, a third question of policy arises: How shall we deliver the services older citizens need—particularly health care—more compassionately and efficiently? This is a matter that has been of concern for the chairman and the committee for some time.

The passage of medicare and medicaid 13 years ago was a major step forward, particularly for older people who are poor or in need of acute care. Yet these programs face some serious problems, notably, inflation in the cost of health care. Between fiscal years 1976 and 1978, for example, costs were up 40 percent in these programs, with little increase in the covered population or in benefits.

Between this year and the year 2025, we estimate that expenses for persons over 65 under the medicare and medicaid programs will increase, in real terms, more than 10 times—twice as fast a pace as the increases in social security. The inflation that these figures reflect is especially harsh on the elderly, given their great needs and their reliance on fixed incomes. Containment of health costs is thus of especially urgent importance to the elderly population.

While we should be concerned about costs, we must be at least equally concerned about the shortcomings of this expensive system. For all the money we spend, major needs remain unmet. As the elderly population increases—especially those 75 and over, who are especially likely to have serious health problems—these needs will increase. Even with medicaid and medicare, many older citizens today must pay large amounts out-of-pocket for health care. In 1976, these out-of-pocket expenses averaged over $400—virtually the same in real terms as they were before medicare and medicaid arrived. We must build a more rational, comprehensive, efficient, and human system for delivering health services.

Out-of-Pocket Health Costs

Senator Church. Now let's stop there for just a minute, Mr. Secretary. I have been aware of a figure that you mentioned. Today, out-of-pocket expenses for the elderly for medical care exceed what was paid out by the elderly for medical care prior to the enactment of the medicare and medicaid programs. But I have never been told, and perhaps you can inform the committee, concerning what these out-of-pocket expenses consist of. Are these out-of-pocket expenses for drugs

that must be purchased, dental care, eyeglasses, or foot care, or medical examinations which are not covered by medicare, and the like——

Senator PERCY. Hearing aids are another item on that list.

Senator CHURCH. Another expense has been mentioned. Or do they come mainly from the doctors' fees that must be paid by the elderly over and above the fee authorized by medicare?

Secretary CALIFANO. Mr. Chairman, in addition, also, of course, a part of it comes from the premium that must be paid under medicare.

Senator CHURCH. Yes.

Secretary CALIFANO. I can't give you the portion of those expenses. I will submit that for the record.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

The following chart shows a breakdown of health care expenditures by age groups for fiscal years 1974–76. As you will note, for the 65-and-over group, medicare covered 40 percent of the amount spent on physician services, and none of the expenditures for dentists' services, eyeglasses and appliances, and drugs. In fiscal year 1976, the per capita expenditures for the elderly for these last three categories were estimated at approximately $32, $19, and $21, respectively.

ESTIMATED AMOUNT AND PERCENTAGE DISTRIBUTION OF PERSONAL HEALTH CARE EXPENDITURES FOR THE AGED, BY TYPE OF EXPENDITURE AND SOURCE OF FUNDS, FISCAL YEARS 1971–76

Type of expenditure	Amount (in millions)						Percentage distribution					
			Public						Public			
	Total	Private	Total	Medicare	Medicaid	Other	Total	Private	Total	Medicare	Medicaid	Other
1976[1]												
Total	$34,853	$11,248	$22,605	$14,953	$5,589	$3,063	100.0	33.2	67.7	42.0	16.0	8.8

[1] Preliminary estimates.

[2] Revised estimates

Secretary CALIFANO. Every expense you have mentioned is part of it. My own experience, when I am traveling outside Washington, and if our mail is any indication, drugs are a significant part of this, as are doctors' fees, above and beyond what we are paying, this whole issue of assignment of doctors' fees. Those are the two items on which we receive a tremendous amount of mail.

Of course, I have had doctors, for example, tell me that they have put elderly patients in the hospital in order to provide them with drugs that we will pay for in the hospital, particularly expensive drugs, like some of the anticancer drugs, because the doctors simply do not want to subject their patients to the burden, and some of their patients could not afford to purchase those drugs if they were being treated on an outpatient basis, even though they should be treated on an outpatient basis.

Senator CHURCH. Well, it is clear that some of the rigidities that exist in the present system greatly and significantly contribute to the increased cost, unnecessary costs.

No "ALTERNATIVES" SYSTEM

Secretary CALIFANO. I agree, Mr. Chairman. Such a system would include: Adequate, supervised residential facilities for those who lack families but want to live in their communities; a range of alternatives between the hospital and the nursing home, including a system of home health care; innovative and compassionate ways of caring for the terminally ill outside the traditional hospital or nursing home.

Such a system is easy to describe, but it is nowhere to be found. We have, instead, a confusing, as you have indicated, and expensive patchwork of financing systems that spawn an even more inadequate delivery system.

The medicaid program, for example, has given great impetus to one industry—the nursing home industry. Between 1965 and 1976, total spending for nursing homes increased more than fourfold. Nearly 40 cents of each medicaid dollar goes to nursing homes, although these homes serve only 6 percent of medicaid beneficiaries. We know that nursing home care is not the most appropriate way to treat all those patients; in some cases it is also not the least expensive. Home health care might be a worthwhile alternative in many cases, yet less than 1 percent of medicaid money is used for this purpose.

And, in part because of medicare's focus on acute care, we have not yet developed an adequate system of community and home health care. In Sweden, for example, there is one home health aide for every 120 people; in this country, one for every 5,000. Providing care in the home setting can itself be therapeutic. We need to expand these services. But in doing so, we must find ways to manage them, so that their costs and quality remain under control. Home health services are delivered by a variety of providers throughout the community, and we will need to insure that services billed are in fact delivered; that services delivered are needed, appropriate, and of high quality. Serious questions are already being raised; we will have to be particularly watchful of this new industry as it develops.

I might add that we are doing surveys for home health care in Florida and in other States now, and finding that it is very difficult to measure what it is, what the services are, that the doctor is ordering

and providing. For instance, what the client thinks he should be receiving. So it will not come overnight to this country.

Senator DOMENICI. Mr. Secretary, on that issue, are you merely surveying the home delivery of home health care, or are you trying to find out whether some of the arbitrary conditions—for instance, is there really any reason that you can only have home health care if you have been in the hospital prior to delivery?

Secretary CALIFANO. No.

Senator DOMENICI. To me that is absolutely ridiculous. That is what you are administering now. I am not saying it is your fault, but that is what the present law says. Are we going to get some suggestions as to whether those kinds of requirements are counterproductive? I don't mean today, but are you doing that kind of thing?

ASSESSING HOME CARE

Secretary CALIFANO. Yes, Senator. Obviously any national health plan would eliminate a lot of those incongruities in the current system, one of the most notable ones of which you mention. The assessment we are doing is looking at what home health care is now being delivered. We are interviewing the doctors, the clients that are receiving it, and those who are providing it. We are asking the doctor, "What do you want to provide for this client in home health care?" We are asking the providers what they think they are providing. We are asking the clients what they think they are receiving, or think they should receive. We are finding out that in many cases they have different views.

The second point is, we have to find a way to administer this in a fair way that will prevent the abuse and fraud on the one hand, and on the other hand, it will not create a monumental papermill. In terms of administration, it is easier if you have an institution, a building with 300 rooms, that you go and visit every day. It is more difficult when you have individuals visiting the homes. Many States are looking at this, too, in the context of their own licensing procedures. That is the survey I was mentioning. In addition to that, yes, particularly in connection with the national health insurance work we are doing, we are looking at the variety of the rational portions of existing law and existing regulations; but as you point out, Senator, much of it is in the statute itself, and there is not as much flexibility in terms of regulation as one would wish.

Senator DOMENICI. I just want to ask—with the chairman's permission—with reference to the arbitrariness of certain of the conditions for home health care, if you would look at Senate bill 2009 and give us your opinion as to whether or not it would eliminate some of the rigidity. Would you try to answer the question that we get from the Finance Committee regarding the additional costs of such an approach? You know, it seems to me we are never going to create flexibility and a broadened delivery short of national health insurance, which I don't think we ought to hold refinements to hostage for, but the answer always is to look at the changes separately and say, "that is going to pose 300 million more."

No one seems to tell us, on the other hand, "you won't go to the hospital as much." Doctors might prescribe home health care, whereas now we must hospitalize people in order for them to qualify for it. We need some of that kind of information in order to help promote the

better delivery of some tools we already know exist. Could you do that for us?

Secretary CALIFANO. Yes, I will, Senator.

Senator DOMENICI. I would appreciate that.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

A major consideration in the recent deliberations surrounding the question of expanding home health benefits has been whether such expanded benefits can serve as a suitable alternative for otherwise required institutional care. While we do not dispute the argument that home health care can, under certain circumstances, provide a cost-effective alternative to institutional care, under other circumstances it is more cost-effective for a patient to enter an institution. Available evidence tends to be contradictory in supporting home health care as a cost-effective alternative to institutionalization. The Department believes that home care programs should be considered in terms of their own merit and not in relation to anticipated savings.

S. 2009 would remove the present 3-day hospitalization requirement for home health benefits under part A of medicare. We do not believe that such a liberalization, by itself, would lead to a decline in hospital admissions. There is no evidence that physicians hospitalize their patients to make them eligible for home health benefits or that they have any reason to do so. Home health benefits are also provided under the supplementary medical insurance program (part B), without the hospitalization requirement, and only 5 percent of the medicare beneficiary population do not have part B coverage.

Senator PERCY. I join Senator Domenici in requesting that information. After receiving your testimony and seeing the ratio of the retention of personnel assigned to home health care, we can better judge the potential for that alternative. We took our committee out into the field, across the country, and investigated the scandalous conditions in the nursing homes, and reported on the terrible conditions found in some of the places visited.

We have not made the kind of progress in nursing home reform I had hoped we would make. I am more and more inclined, as I listen to testimony, to believe that the more we can do for home health care, meals-on-wheels, and other associated programs which keep people in their own neighborhoods, the lesser will be the costs. These programs seem more germane.

The answers must be found. The statistics you presented to us today ought to be one of the highest priority items to which we put our attention.

Thank you.

ACCESSIBILITY: THE CHALLENGE

Secretary CALIFANO. Beyond developing the right kinds of services, there is the problem of making them accessible. At present, an older person faces a bewildering maze that must be negotiated even to learn what services are available, much less to obtain the right kind and mix. How can we end the fragmentation of services for the elderly?

How can we insure that the needs of the elderly are properly identified, that people are not denied the care they need—and not given inappropriate or unduly expensive care? How can we create financial incentives that will discourage overuse of costly facilities?

Unfortunately, for too many of these questions, the only answer that our society can give is "We don't know yet."

It is time for all of us to begin considering the alternatives available for us as we seek to provide better services, more efficiently.

Shall we expand the coverage of existing programs? We could revise medicare and medicaid to create uniform home health benefits, relaxing restrictions that currently permit only skilled nursing services in certain situations. We might permit nonmedical personnal care services for the chronically ill. Or we could develop a financing system that covers an even broader range of health and social services—well beyond those currently covered by medicare and medicaid.

But we need to consider the problems as well as the attractions of such an approach. Extensions of benefits could seriously aggravate health inflation, while leading to the same kind of overuse of chronic care that we often see today for acute care. It could also reduce incentives for families to provide services on their own.

Alternatively, we could seek a major role for new delivery systems, such as special health maintenance organizations for the elderly. Conceivably, such organizations could provide a broader range of services than conventional HMO's; they would have incentives to carefully determine the health needs of participating patients and to find the most economical ways of treating them.

Senator CHURCH. Mr. Secretary, in that connection you have testified earlier that between now and 2025, the cost of medicare and medicaid is projected to increase more than 10 times, or twice as fast as the pace of increases in social security retirement benefits—in other words, twice as fast as the general inflation. At the same time, you are talking about national health insurance extending this kind of program to everybody. For the life of me, I never understood how we could possibly provide national health insurance for everybody when we cannot effectively manage the spiraling costs of present programs that are limited to the people who need them most—the elderly, the indigent, and the dependent.

Unless you can provide me with an answer, I assume there is none. The present medical delivery system in this country is so expensive. Doctors, on the whole, are among our most affluent citizens. For the taxpayer to pay all this and to extend it to everybody seems to me to be utterly unrealistic. So we look for some kind of improvement in the medical delivery system in this country. One of our experiments has been the health maintenance organization.

What has experience shown with this organization? Does it, in fact, reduce the cost of adequate medical treatment for those who participate? What do we know about it? Is it a successful experiment to date, based upon experience, or is it just still a theoretical proposition?

HMO'S AND THE FUTURE

Secretary CALIFANO. Mr. Chairman, we believe that the health maintenance organizations have a substantial role to play in the medical care system. We believe that they have demonstrated that they can substantially reduce costs. The well-run health maintenance organizations have medical costs that are anywhere from 15 to 30 percent below comparable populations on the traditional fee for service basis. Second, they reduce hospitalization and surgery very substantially, by anywhere from 25 to 50 percent or more. So we look upon them not as the only institutions we should have.

One of the things they can provide is some competition in the system. There is no incentive to be efficient in the current system,

because the patient who is getting the service is not paying, in most cases, particularly where hospitalization is concerned. Some third party pays for it, so the customer does not pay. The customer is not ordering the service, in the sense that the doctor is ordering the service that is provided, whether it is surgery, or pills, or drugs, or some course of therapy, and the person ordering the service—namely, the doctor—is not paying. So, it is all the things that make American industry so great in terms of competition, and that makes the relationship between buyer and seller so good in the commercial market that are all absent here. We remember the HMO's as one means of providing some competition and some creative economic tension in a system that desperately needs it.

Senator CHURCH. What percentage of our people today receive their medical treatment through HMO?

Secretary CALIFANO. A very small percentage, Mr. Chairman. We are taking steps to increase it. I would hazard a guess from 2 or 3 percent, but I would like to submit the exact number for the record.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

The percentage of people receiving treatment through HMO's is 3.3 percent or 7 million people.

Secretary CALIFANO. We have sharply increased the number of people being served by qualified HMO's in the last year, largely by qualifying the entire HMO system. Once an HMO is qualified today in their community, then any employer in that community of significance must offer an HMO as an alternative. I have also gone to the large corporations.

We invited the Fortune 500 or 800 in here about 6 months ago, and many of them are interested in HMO's, and in starting them, because they are being so pressed now by this phenomenal increase in health care cost. I think the automobile industry is going to create an HMO in Detroit, and some of the other large corporations in this country are looking at it. They offer tremendous advantages because they have their own employees, because they have the ability to incur the early capital costs that are necessary in these organizations.

Mr. Chairman, I would like to make just one comment on what you said about national health insurance. Given what will happen to medicare and medicaid, if we do nothing in 1983, this country will spend $313 billion or more on health care using the current CEA projections of inflation.

Senator DOMENICI. Private and public?

Secretary CALIFANO. That is everything, private and public. I believe that as part and parcel of the national health plan, we must bring these costs under control, both by providing containment measures and by providing incentives. There is so much inflation in this system now, the objective of any national health plan should be aided and it would substantially reduce the per unit cost of health care in this country than what it would otherwise be without a health plan.

Second, it would reduce——

Senator CHURCH. Mr. Secretary, that has not been our experience in medicare and medicaid. Unless you are going to really depart from that kind of concept and make fundamental changes in the health delivery system, I don't see how you are going to reduce this.

Cost Containment Proposals

Secretary Califano. I think, Mr. Chairman, it has not been our experience under medicare and medicaid. The issue will be the extent to which both we as the administration have the will, and the Congress, as a branch of government, has the will to impose some of the kinds of cost containment measures. One is pending now on the House side, and it has been passed out by the Senate Human Resources Committee here, with respect to hospital cost containment, and also provides the kinds of incentives that are necessary to bring the rate of inflation down in that system, and that is a very real question.

Can we devise proposals that will hold those costs? Sure we can devise proposals that will hold those costs. Will they be acceptable to our society, as represented by the elected officials in the Senate and the House? That is a very serious question. It is part of what we will, as a part of any national health plan—propose measures that will bring this galloping elephant under some control.

Senator Percy. Mr. Secretary, before we try to solve the whole problem this morning, I wonder if I could just come back to your statement on HMO's. I propose that we might examine data on special health maintenance organizations for the elderly.

I always felt HMO's were worth exploring; it was a new approach that was worthy of experimentation. Are you familiar with the studies of the subcommittee on HMO's?

Secretary Califano. I am.

Senator Percy. As I recall, those studies indicated there are many special problems involved with HMO's taking care of the aging. We found the elderly were reticent to complain about costs, for instance. They pointed out their problems to our investigators, but they said they were reluctant to complain about it to the HMO people. We found they are often taken advantage of. They were not receiving the quality care to which they were entitled.

I am deeply concerned about the treatment of the elderly in HMO's and sensitive to the need for a highened awareness of the danger spot, which studies conclude exists.

Secretary Califano. Senator, we are aware of those studies. Indeed we are vigorously supporting legislation that has grown out of the work of that committee in this area.

Senator Percy. We have had full cooperation from your department in that regard. It has been a joint effort and one of grave concern to this committee. Upon first observation, elderly HMO's looked like a very good idea, but there are ways unscrupulous operators have found to abuse this idea.

Secretary Califano. Because of the high risk population they would serve, these HMO's would be more costly than conventional ones. Nonetheless, we believe the idea is worth exploring; we have already proposed legislation to permit medicaid and medicare funds to be used to pay for participation in more conventional HMO's.

Third, there is the alternative of creating a separate financing and delivery system for long-term care, a new Federal program of long-term care. This means separating home health or other long-term care services from our present third-party payment mechanisms for health care, and possibly integrating long-term care with the delivery of other social services. This could make long-term care more controllable as a budget item, and reduce both the fragmentation of

services and the bias toward institutional care. However, we must insure that any system we create has the capacity to provide services for patients who need them.

I might note that we are in the midst, Mr. Chairman, of a long-term study of long-term care in HEW, which I hope we will complete next year. Your staff is familiar with the work on that.

If health care costs threatened to exceed our capacity to pay for them, we may be forced over the long haul to consider a greater use of coinsurance and other means that would enable citizens to choose and pay for their own services; ways of giving citizens both greater choice and great incentives to economize. This could mean offering persons currently covered by medicare and medicaid either greater additional cash payments, or vouchers, like food stamps, that could be used for health services. This approach also poses great risks, however, that the incentive to economize might become an incentive not to obtain needed treatment.

Research and Training

Finally, as we seek to improve the delivery of health services, we must not forget the critical role of research and training. We need to learn more about the diseases that afflict the elderly, and how these diseases can be treated most effectively. I cite the story in the Washing Post [1] this morning on that subject.

These approaches are not mutually exclusive. Each promises certain benefits—and certain dangers. But it is time to begin debating them; to hammer out a genuine national health and service policy for the elderly: A policy that balances our generosity in meeting critical needs with our ability to pay.

Our ability to deal prudently with these urgent concerns of the elderly—income security and health care—will largely determine how well we are able to do at meeting other vital needs of older citizens, especially social services.

Under the Older Americans Act, the Administration on Aging, the State agencies on aging, and 600 area agencies on aging help insure that a wide range of social, nutrition, and health related services are made available to older people: By serving as advocates for the elderly at Federal, State, and local levels to insure that needs are met; by bringing together public and private agencies which do or should service older persons in order to improve the comprehensiveness and coordination of services delivery; by convincing other agencies to commit local resources—over $440,000,000 in 1977—toward meeting the service needs of the elderly; by the development of community based service centers, over 9,000 nutrition sites, and 1,000 multi-purpose senior centers where older citizens can gather for recreation, information and a host of other needed services.

These are only a few of the vital, urgently needed services that older people require and our programs seek to provide. These efforts cannot be seen in isolation. If we are to do an adequate job of providing social services, we must manage our other programs for older people carefully and responsibly.

[1] See p. 40.

The Role of Families

Because of its special importance, I have reserved until last a final question: What role shall families play in caring for their older members?

Many people contend that the American family is disintegrating, or that it no longer cares for its elderly members.

The reality is, I believe, the opposite. Most families go the limit in providing support. Despite the Nation's vast network of services, for example, 70 to 80 percent of home health care for persons 55 and over is still provided by their families.

Families provide a wide range of services, from escorting the elderly on trips and helping with shopping and household chores, to complicated health and rehabilitative care. Yet, it is also true that the extended family living in a single household is no longer so common. Of persons 65 and over with living children, 36 percent lived with their children 20 years ago; by 1975, that percentage had fallen to 18 percent. We must recognize this change—and build upon it.

Yet, too often in the past, we have designed our programs for the elderly with the individual in mind—but not the family unit. We have failed to tap the strength of the family in caring for the elderly. Our programs for financing chronic care, for example, do little to permit and encourage home care administered by family members.

We need to establish programs that help families care for their aged members. We cannot expect doctors, nurses, social workers, or bureaucrats to be as sensitive and effective in meeting the needs of the elderly as a child or grandchild, brother or sister.

Because families themselves are so various, our approaches must also be varied: For those who do live with relatives, for example, day care or respite service might be available, to give the caring relative the freedom to leave home without worrying about the aged person—a service of growing importance as the proportion of women in the work force increases.

For the majority of the elderly who live on their own, either in couples or singly, we need other kinds of services. Supervised residential arrangements will permit them to remain in the community, where the family can more easily support them. And for those who lack families nearby, we must think of developing surrogates—people who volunteer, or are trained, to give the same kind of comfort, and show the same kind of concern, as family members, who can provide the individualized and personal attention for which there is no substitute.

Mr. Chairman, I am aware that I have provided this committee with more questions than answers. I am sorry for that, but it reflects reality. We have, as a society, more problems that solutions, more questions than answers.

That means we cannot be complacent. To accommodate generously the needs of rising numbers of older citizens will require, first and most fundamentally, a healthy and expanding economy.

Taxing Imaginations as Well as Pocketbooks

Beyond generating the economic means to serve our older citizens, we must build new institutions. Doing that will require that we tax not only our pocketbooks, but our imaginations.

Our democracy has proven itself both creative and resilient; capable not only of surviving social change, but of taking up its challenge with vigor and compassion.

I believe we can do so again, Mr. Chairman. How well we do it, in my judgement, will depend upon how well and how soon we answer the questions I have raised.

These hearings are as important as any hearings the committee has ever conducted, and as timely as any hearings it has ever conducted.

Thank you.

Senator CHURCH. Thank you, Mr. Secretary. You have furnished us a great many questions and challenges to consider. The search for answers will certainly affect all of us.

Early in your testimony, you referred to the fact that the retirement income under the social security system, I believe, averaged 47 percent of the working income. How does that compare with the average retirement income in some of the other industrial nations—in Europe, for example?

Secretary CALIFANO. Mr. Chairman, I will have to provide that for the record.

Senator CHURCH. It is our understanding that our average is lower than that of Canada's income, for example.

Secretary CALIFANO. I would not be surprised if that were the case. It would be typical of all services of this kind.

Senator CHURCH. It may well be true of West Germany as well. I don't know about England and France.

I wish you would supply those figures for the record.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

Earnings replacement rates for 1965-75 for selected countries were published in the January 1978 issue of the Social Security Bulletin. There is no overall figure for Europe as a whole, but the following figures are available for 1975 for individual countries:

PENSIONS AS PERCENT OF PRERETIREMENT EARNINGS BASED ON AVERAGE EARNINGS IN MANUFACTURING

	Single worker	Aged couple
Canada	39	57
France	46	65
Federal Republic of Germany	50	50
United Kingdom	26	39

Comparable figures for other countries are given in table 1 below from the January article.

It should be noted that the 47-percent figure mentioned in the testimony refers to the benefit replacement rate for an average earner under social security who retires at age 65 in 1978.

While replacement rates are commonly used to mean the ratio of the benefit to the covered wages earned in the year preceding retirement, it should be noted that: (a) an individual worker's earnings in the year before retirement may not be representative of earnings in the last several years; (b) the earnings covered by the program may be less than the workers total earnings; (c) the social security benefit formula is keyed to replace a portion of the long-term average covered earnings of the worker; i.e., over the period from age 21 to 62, disregarding the 5 years of lowest earning.

TABLE 1.—REPLACEMENT RATE OF SOCIAL SECURITY OLD-AGE PENSIONS FOR MEN WITH AVERAGE EARNINGS IN MANUFACTURING, SELECTED COUNTRIES [1] (RETIREMENT AS OF JAN. 1 OF YEAR INDICATED)

Country	Years worked	Pension as percent of earnings in year before retirement											
		Single worker						Aged couple					
		1965	1969	1972	1973	1974	1975	1965	1969	1972	1973	1974	1975
Austria	40.0	67	65	63	62	61	54	67	65	63	62	61	54
Canada [2]	40.0	21	22	27	30	31	39	42	39	42	46	48	57
Denmark	40.0	35	29	30	30	30	29	51	42	44	44	43	43
France	37.3	49	42	44	47	44	46	65	56	60	62	60	65
Federal Republic of Germany	40.0	48	56	49	49	49	50	48	56	49	49	49	50
Italy	40.0	60	67	65	67	64	67	60	67	65	67	64	67
Netherlands	30.0	35	36	35	38	37	38	50	51	50	53	53	54
Norway	40.0	25	34	37	39	40	41	38	49	51	51	54	55
Sweden	30.0	31	39	45	45	50	59	44	52	58	57	62	76
Switzerland	(3)	28	26	31	39	35	36	45	42	46	58	53	53
United Kingdom [3]	(4)	23	21	22	22	22	26	36	33	34	33	33	39
United States	(5)	29	29	34	38	35	38	44	44	50	57	54	57

[1] Data are for systems at maturity. For Norway and Sweden, data reflect less-than-mature earnings-related pensions: for Denmark, employment-related pension, which is still not payable in full; and for Canada, pension that reached maturity in 1975.

[2] Since 1948.

[3] Based on April rather than January flat-rate benefits in 1973, 1974, and 1975 for Canada and in 1975 for the United Kingdom.

[4] Since 1961.

[5] Since 1951.

Senator CHURCH. Is that average simply based upon the social security formula? In other words, there are a great many people in this country who get social security benefits, but they may also have the benefit of an additional retirement program. I take it they would receive a much higher percentage from the combined income of the two retirement programs.

Secretary CALIFANO. Mr. Chairman, let me clarify, if I may, the 47 percent figure represents the sum of everything.

Senator CHURCH. The sum of everything.

Secretary CALIFANO. The social security numbers follow that portion of the testimony, and it may not have been clearly stated in the testimony, but for new retirees age 65 that ratio today is 47 percent of their income, but that represents all sources of retiring income.

Senator CHURCH. All sources. What would you regard, Mr. Secretary, as adequate for retirement purposes for the country at large?

Secretary CALIFANO. Mr. Chairman, it is very hard to answer that because so much of this is a function of over what years you are going to measure, what the preretirement income was. There will inevitably be an element of need in there. I think, that at the absolute rock bottom, we are wealthy enough and affluent enough in this country to make certain, as you suggested earlier this morning, that no citizen who is older has income below the poverty line, that every older American should have the income that takes them above the poverty line. That is one piece of the poverty puzzle that we could very easily solve, simply with income and healther services. I agree with you on that.

EARLY RETIREMENT ISSUES

Senator CHURCH. I have just a question or two about early retirement and then I will ask Senator Domenici and Senator Percy to take over. Early in your testimony, you said that there is a clear trend toward early retirement in this country, which places a very large additional burden on the retirement systems. As you know, the Congress increased the legal mandatory retirement limit from 65 years of age to 70 and eliminated the mandatory limit entirely in Federal employment

Do you think that this will have any impact at all upon this trend toward earlier retirement in the United States? You said, at one point in your testimony, that there were an estimated 4 million older Americans who would prefer to work but who are retired presumably because of the mandatory retirement age.

Secretary CALIFANO. Mr. Chairman, I hope it will, and I think it should have some impact, but that alone, which is the move that I applaud, will not deal with the problem. Part of the problem relates to the fact that when we have people in this country retire at age 40, age 38, and when we talk about people being retired like the military—someone in the military went in at age 17, served their 20 years and then retired at age 37——

Senator CHURCH. Nearly all of them that I know then go on to a second job and earn a full income plus their military retirement.

Secretary CALIFANO. Exactly, and they are counted as having retired. As long as there are systems which permit that kind of early retirement, and then moving on to get another job, people will retire

early even though the mandatory retirement age is lifted to age 70; and indeed, that will give some individuals an additional 5 years to gain a second pension or a third pension. So that to predict what will happen is difficult, but I would certainly hope so, because as you know so well, there are also larger benefits to our society from those people working, they are producing and they are increasing purchasing power.

Senator CHURCH. Is there any trend at all in industry or in government toward changing the pattern of employment, to furnish part-time jobs for older people who would like to work part time but who no longer feel able or no longer desire to work full time?

Secretary CALIFANO. I would have to say not of any great significance, although I would also have to note that in my work in preparing for these hearings, upon coming to that issue, I have touched off a study in HEW and asked that we develop a program for flexitime work for older citizens. We have a few in our flexitime program, but I have asked that we now develop a plan and mount an effort to do that, because we are going to begin to urge other people to do that. I think you can prove very, very helpful. In government, particularly, there are so many problems which you need to get studied, or thought through, and which people can work a few hours a day or week.

Senator CHURCH. You have your social security system with the retirement test that may work directly against part-time work. I don't know whether private retirement programs also have similar tests which have the same effect.

Secretary CALIFANO. Mr. Chairman, when we look at this whole pension system, at early retirement, you have to look at that issue. That is another very important part of this problem. I think it is less of a phenomenon in the private sector than it is in the social security sector, and it is not a problem at all in the military sector or civilian life.

Senator CHURCH. Thank you.

Senator DOMENICI. Thank you, Mr. Chairman. Mr. Secretary, may I first congratulate you on your testimony. I think you are talking about one of the most complicated social subjects confronting America, and I personally take no affront at the fact that you asked as many questions as you answered. Because I don't see how anyone can know the answer to very many of them today, when we are talking about such drastic changes and such a long period of time.

Let me say this: I assume, based on some of your answers, that you really do get a lot of communication from the public about the issues at hand, and that you personally read some and talk to the American people about these problems. Now, let me just tell you the kind of example that concerns me most about income maintenance for the elderly.

QUESTIONS FROM YOUTH

I am beginning to feel, in my own State, this kind of question, and it comes up more and more often—a working man or woman between the ages of 25 and 30 will come to a meeting and they will already have in their hands a schedule of what they could buy for themselves with the money they are putting in social security. And they will say, "Now, why do we have to do this when we are going to get x dollars if that fund is solvent, but if I go buy this other plan for $40 a month, I

will get more myself than you are going to assure me through the Federal Government?"

I generally can answer that. The fact is that social security is not an insurance policy, it is a social insurance policy, and we have a kind of risk we are spreading around. But that is becoming a very serious problem with the young workers, men and women, in America, who are tremendously concerned. They want to take care of their elders, but they are suggesting that there is not going to be anything there for them, and that to them it is a very poor investment. I am not suggesting that I agree with that, but do you not see that as a growing concern that we ought to be addressing and concerning ourselves with in society?

Secretary CALIFANO. Yes, I do, Senator. I would note that I think wherever this country goes in the future, in terms of solving the retirement income and maintenance problems, that the social security is clearly the dominant piece of the picture, and that one of the imperatives is that we maintain the viability of that system and the financial integrity of that system. As I indicated here, it may be the grandest program that the National Government has ever put into place; it works, it has a very, very low error rate—1 percent perhaps. It is ingenious in its conception. It is almost self-enforcing, because you want to make sure you get the benefits credited to your number so you make sure you report your wages to that number.

How you go about financing it is the problem that you raise, of the extent to which we are now financing it out of the payroll tax. We made some other suggestions, which we thought made more sense than doing that, and we suggested that there be some kind of a countercyclical dip in the general revenues which would have significantly reduced the need for the extent of the payroll tax if unemployment exceeded 6 percent, funds that would have been gained had unemployment been at 6 percent, would have put into the general revenues. There are other ways to do that, but I think this system makes sense for young workers, and I am prepared to try to carry that brief.

Senator DOMENICI. Mr. Secretary, looking down the line to the statistics that you have given us, it appears to me that an income-maintenance program of this magnitude, whether it might be one retiree for three workers compared to 9 to 1, we have got to be talking about what percentage of our productivity can be going to that kind of system at any given point in time. We have to address the issue of the economic growth and inflation, because they are all related, it appears to me. At some point in time we may wish that we could do what you have described here, abolish all poverty at some level for older Americans.

On the other hand, do we have any model of how much of America's productivity can be going to that, as contrasted with other needs to be taken out of productivity? Do you have some economic feeling for that, or anyone looking at that?

INFLATION'S DRASTIC IMPACT

Secretary CALIFANO. No; we have no model for it. We are looking at it. With all the demographic numbers that I provided for the committee which raises those questions, I think that the most serious threat to the achievement of what I mentioned here, and what the

chairman suggested, is inflation. That is what makes it so incredibly expensive, and that is what has changed the pension landscape by taking a big brush or big wide brush of paint and putting it across the paint. That is, inflation is having a dramatic impact on this whole landscape.

Senator DOMENICI. Especially when the growth is so much smaller than inflation, growth in the overall GNP. When you relate the two, the disparity is getting very big. That is what you are referring to.

Secretary CALIFANO. Yes; that is correct. You can just take the health care part of the problem and we have the problem of productivity in our economy. Productivity is rising at an annual rate of about 1 percent, which is much lower than it has been in the past, so even though 6½ million more people are at work, we are not getting that much more productivity out of them.

In the health care area, it is just phenomenal how inept we are at increasing productivity, for example, the American hospital has 3.6, 3.7 people per patient and rising. In Germany, it is one per patient and rising. We have a fine health care system, but those German hospitals are every bit as good as our hospitals are. We have got to deal with that problem in that sector of our economy that is there, and if we can find a way to deal with it effectively, we can take care of a substantial part of the needs of our older citizens who need those acute expensive care facilities more frequently than other citizens.

Senator DOMENICI. I have just three more questions.

On page 8, at the bottom of the page, you cite a list of conditions, including $350 billion by the end of the year 2010, et cetera.

Secretary CALIFANO. Yes.

Senator DOMENICI. Could you supply us for the record with what assumptions were used to arrive at those conditions?

Secretary CALIFANO. Yes; I will.[1]

Senator DOMENICI. I think they would be very relevant to our thinking in terms of cost.

Secretary CALIFANO. I will. You will note, as you go over them, that there is no cost containment built into those numbers. That assumes the current system discontinues to flow.

Senator DOMENICI. One other question. It strikes me that this country's baby boom, which contributed so much to the growth of our educational facilities, is now on the wane, and we are closing schools in many areas. I wonder if you are doing any studies on the additional needs—for those that are long out of the typical grades 1 through 12—in terms of facilities that might be utilized, and what our educational system ought to be doing in regard to retraining and lifelong education?

Secretary CALIFANO. All through the lifelong learning education I think we asked for $5 million this year and before that to do more studies. There is no question that there will be plenty of excess educational plant, particularly at the higher educational level, which we could inure to the benefit of older Americans. We have to recognize in this country as the higher education population declines, as education becomes more expensive to the higher education level, that there are going to be some very serious questions raised about plant.

We have already seen some colleges close in New England, the small colleges. We at HEW are increasing the number of colleges all the time coming in and are concerned about the viability because there are

[1] See "Assumptions Underlying Social Security Long-Range Cost Projections," p. 47.

increased costs. The older Americans may provide an opportunity for some of those institutions that are stronger to enrich and use their plant productively. Now part of that, of course, for many of our older citizens, is going to be a function of who can pay for it, and that is something to which we and the Congress and many States will have to address themselves.

PRIVATE EFFORTS

Senator DOMENICI. One last question. I personally believe that while we want to pursue the social security system to the utmost in terms of its utilization, I don't see how this society of ours can get by without significant private effort, whether it be individual plans or company plans, or whatever they are. Could you supply us, for the record, with your analysis of what we have done in the last 6 years that has most contributed to alternate systems, the tax incentive programs that we have enacted, such as IRA's and what they are accomplishing? Just what incentives have we built into the system, in terms of preparing for one's retirement? I'd like an analysis of which would work best in moving us in the direction of greater private effort in this area.

Secretary CALIFANO. Senator, I will do that to the extent that we have the capability of doing that. I would suggest that you might also want the staff to get in touch with the Internal Revenue Service to get numbers from them as to the extent to which some of these mechanisms are being used and the cost of them. That is where the numbers that I use in this area came from.

I would like to underline the fact that I agree with you wholeheartedly, we must have private pension plans. We will always have a variety of pension plans in this country. My point is that, I think, we have to look better at the question of integrating these plans, both in raising the issue of what is retirement income and also in terms of the relationship between social security. I see nothing replacing that as the cornerstone of retirement for American citizens in all these other plans.

I see 45 percent of the work force has access to private plans, and I think that is important, and I think it is those plans being funded in an appropriate way, and it is important that they survive. I do believe that we have to relate them to what we are doing with social security and everything else, and that when we look at the size of the population, that we have an obligation to take care of it.

Senator DOMENICI. Thank you, Mr. Chairman.

Senator CHURCH. Senator Percy.

Senator PERCY. Mr. Secretary, first, I would like to join Senator Domenici in his praise of this testimony—it is lengthy, and you raise a lot of questions, but in my many years on this committee, it must be cited as one of the most valuable pieces of testimony we have ever had. I appreciate the attention you have paid to the facts and figures involved. It is a herculean task, and I compliment the staff in preparing this very helpful guide for us.

Second, I would like to say that today we will be marking up and reporting out the education bill. With all the abuse HEW takes, and with all the mismanageable bureaucracy, still the testimony about Head Start makes me glad that it is in HEW and not going into a new Department of Education. I have never heard such glowing testimony

about the administration of a program as I have about that one and we voted unanimously, I believe, to keep the Head Start program in HEW.

Secretary CALIFANO. Every time Mary Helen calls me, I cite that testimony.

VALUE OF SENIOR CENTERS

Senator PERCY. I find it very interesting that on page 35 of your statement you point out the fact that 18 to 36 percent of the elderly population live with relatives, and that this puts a substantial amount of pressure on the public sector. You then comment that "day care or respite service might be available." I have recently visited more senior citizen centers, and I am very impressed with what is being done, much of it with Federal money.

Many communities have obtained revenue to build senior citizen centers and now offer programs from 9 in the morning until 5 or 6 in the evening, sometimes 10 o'clock at night. I have visited two outstanding centers in the city of Chicago. Do you feel that senior citizen centers are a possible aid to the increasing number of working mothers or working women, who simply are unable to take care of the father, mother, grandmother, grandfather at home during the day? Do you think this would encourage relatives to keep our senior citizens in the family home rather than sending them away to one of these institutions?

Secretary CALIFANO. Yes; I think there is. I have seen that wonderful place in San Francisco that does that. I think it is very helpful. I think we also have to find a way to provide some situations in which an individual will have to stay at home, in which there are two couples still together, or what have you, and in which one member of the couple should be able to get out once in a while, and the way we have our laws and our tax laws skewed, to have the relative do that, it becomes very difficult. I note that what you have seen is rare. Not many senior citizen centers provide that kind of a day care service, so the more of it that we can get, the better off we will be.

Senator PERCY. But you do feel that the senior citizen day care center idea is well worth exploring?

Secretary CALIFANO. Yes; I do, Senator.

Senator PERCY. Hopefully, it can prove itself a cost effective way to assist in health.

I would like to turn to the nursing home situation again, because it has preoccupied our committee for so many years. We had hoped that we were making progress in making these places fit to live in. I think there have been changes made, but I think it is primarily in the physical appearances. We have removed the urine-stenched hallways; they are now painted, they are now more attractive looking. At least there have been cosmetic changes.

I would like to point out that lead stories on the Better Government Association, under the presidency of Marjorie Benton and Terry Brunner as executive director, appear today, in both the Chicago Tribune and the Chicago Sun Times. They sent their investigators into eight homes where they worked in a variety of positions, for anywhere from a week up to as long as a month, and they also studied

carefully 75 State construction reports. I am quoting the Sun Times article:

The civic watchdog group concluded that despite numerous reform attempts, Chicago area nursing homes are still characterized by neglect, patient abuse, and financial mismanagement.

Nursing Home Abuse

Among the recommendations that they have made is the idea that nursing home abuse could be cured many times if the homes themselves were eliminated or the need for them. They say, "There's obviously no substitute for loving family care at home, and we should be making that easier to do."

They recommend that the statement, analysis, and study of other tax incentives cannot be offered or anything done to reverse this trend of more and more people being farmed out to what are called warehouses for the dying, as they have been characterized in Chicago, rather than the better than one-third 30 years ago that were cared for in the home.

We not only have a big job ahead of us in improving conditions in nursing homes, but also finding alternate methods of care for the aging. Is this the conclusion of HEW at this stage?

Secretary Califano. Yes; I think I agree on both scores. We still have a long way to go to improve conditions in nursing homes, although we are making progress there, and we do have to find ways to provide the resources for more home care for the aging, and more day care of the kinds you are talking about in the senior centers, there is no question about that.

Senator Percy. I ask unanimous consent that the article in the Chicago Sun Times be inserted in the record, and also the front page article in the Washington Post this morning, labeled "Dementia Label Mistakenly Applied, Thousands Doomed by False Senility."

[The newspaper articles referred to follow:]

Need New Tack in Nursing Home "Horrors": BGA

(By Brian J. Kelly)

The horrors of nursing homes are sad stories that have been told many times, but Sunday the Better Government Association, after a 4-month investigation, offered some new solutions.

The civic watchdog group concluded that despite numerous reform attempts, Chicago area nursing homes are still characterized by "neglect, patient abuse, and financial mismanagement."

But J. Terrence Brunner, executive director of the BGA, said he was not interested so much in rehashing the stories of abuses as he was in suggesting more substantial reforms.

"What we began to think when we saw the results of this investigation is that maybe more laws, more inspectors and more money isn't the answer. Maybe there's something basically wrong with the system and we've got to start looking for different kinds of solutions," he said at a press conference at the BGA's office, 230 N. Michigan.

Brunner said he came to this conclusion because he saw so little improvement in the homes despite several earlier investigations—including one in 1971 by the BGA—and a raft of new laws. The BGA's latest investigation was conducted with WLS-TV and will feature film of what Brunner called "horror stories" that will be shown on Channel 7 this week.

Among the BGA's recommendations is the idea that nursing home abuses could be cured if the homes themselves weren't necessary. "There's obviously no substitute for loving family care at home," Brunner said, "and we should be making that easier to do."

The BGA suggested that the State experiment with programs to enable the elderly to receive care in their homes with their own families. Specifically, it recommended tax incentives as a means of accomplishing this.

The BGA also recommended:

That nursing home advisory boards composed of the residents' relatives, neighborhood leaders and nursing home personnel—as well as residents of the home—be established. The boards would have complete access to the home, its books and records, and would advise the operators on all matters of policy.

That the State assist senior citizens groups in providing voluntary care for the elderly.

That the Illinois Department of Public Health evaluate all nursing homes and that its reports be made public.

That existing rules and regulations pertaining to nursing homes be more stringently enforced.

David L. Protess, the BGA's research coordinator, said many of the previous reform efforts have proved to be merely cosmetic, dealing primarily with the physical conditions of the homes. "We found that the new laws have forced the homes to be cleaner and a lot of the gross violations are gone."

But in many cases, he said, this has deceived people wishing to place relatives in homes. "It just makes it harder to tell if the home is any good or not. We found that for the most part, patient care is still marked by an attitude of cruelty and indifference on the part of the staff."

Protess also said that many State inspection reports were found by BGA investigators to be inadequate, often failing to cite numerous violations—particularly as they pertained to patient care.

"I think it's significant to note that not one home has had its license revoked in the last year and our investigators found numerous violations that could have resulted in revocation," Protess said.

Brunner said the BGA expected to reveal evidence of financial irregularities in the near future. "We've concluded that the nursing home business, which gets $225 million a year in medicaid money, is an extraordinarily profitable business."

The BGA and WLS-TV sent investigators into eight homes where they worked in a variety of positions for from 2 weeks to a month. Brunner said his investigators also reviewed 75 State inspection reports.

[From the Washington Post, July 17, 1978]

DEMENTIA LABEL MISTAKENLY APPLIED; THOUSANDS DOOMED BY FALSE SENILITY

(By Victor Cohn, Washington Post Staff Writer)

Ten to 20 percent of the elderly senile do not really suffer from dementia—progressive loss of memory and brain function—but from other conditions and diseases that could be treated if doctors only recognized them, a group of experts on aging agreed last week.

This means, it was agreed, that 300,000 to 600,000 of the estimated 3 million Americans who show symptoms of brain failure are mistakenly labeled as "senile," and, as a result, often go untreated in nursing homes and mental hospitals.

"The prospect of 300,000 doomed people in the United States today who could have been restored to useful life by appropriate evaluation and treatment is staggering and demands action," said Dr. Richard Besdine of Harvard Medical School and the Hebrew Rehabilitation Center for the Aged in Roslindale, Mass.

Besdine was author of a draft report made by a six-member task force for discussion by the 30 specialists who attended a 2-day Conference on Treatable Diseases in the Elderly at the National Institutes of Health in Bethesda.

One of the largest single causes of false senility, it was agreed, is drug intoxication: that is, reactions to medications. The most commonly guilty medications are tranquilizers, and among these the most common is Valium, the Nation's most often used prescription drug.

Among treatable and often unspotted physical diseases that can cause brain dysfunction and mimic truly irreversible senility are heart disease, strokes, infections (including pneumonia), anemia, nerve diseases, brain tumors and blood clots, kidney or liver failure, metabolic diseases such as diabetes or thyroid prob-

lems, nutritional deficiencies (sometimes caused by faulty diet), reactions to chemicals and alcoholism.

The experts' consensus on all these points was reached at the conference, which ended last Wednesday.

The gathering was one of a new series of NIH "consensus meetings" that assemble specialists to make recommendations to the medical world in newly emerging, often puzzling areas.

The idea for the meetings—the creation of Dr. Donald Fredrickson, NIH director—came from a 1977 conference on mammography, or breast X-raying. Because such X-rays may sometimes trigger as well as find cancers, the experts recommended limiting mammography to women with a far greater chance of benefiting than suffering any harm, meaning women over 50, women 35 to 49 who have had one breast cancer already and women 40 to 49 who have had mothers or sisters with breast cancer.

The breast conference was one NIH was virtually forced to hold to reassess the controversial X-ray method that NIH itself was widely funding.

But NIH has also been under the fire of critics, including members of Congress, for not doing enough to translate research findings into everyday care. The consensus conferences are one reply.

The specialists on aging and related fields gathered by NIH's National Institute on Aging included Dr. Ernest Gruenberg, chairman of mental hygiene in the Johns Hopkins School of Hygiene and Public Health; Dr. Robert Katzman, neurology head at Albert Einstein Medical College, New York; and Dr. James Baker, the Veterans Administration's associate chief for mental health treatment.

The discussions will be translated into recommendations in coming months. But there was general agreement to tell practicing doctors that:

There are indeed irreversible causes of "chronic brain syndrome," or dementia, such as repeated blood vessel blockages and various brain and nerve diseases.

They would be well advised, however, to spend more time thoroughly and aggressively examining and testing their confused or disoriented patients to exclude reversible causes.

Deep psychological depression, too, can be classed as a common and often treatable, reversible cause of apparent senility.

It is "amazing," said one doctor attending the conference, how often even a heart attack can occur in silence with no outward physical sign other than mental confusion.

"We're talking about a large group of underlying, unrecognized diseases that are usually improvable, often reversible and sometimes completely cureable," said Besdine.

To say that 10 to 20 percent of the supposed senility cases have potentially reversible causes does not mean other forms of senility shouldn't be treated too, said Dr. Robert Butler, director of the National Institute on Aging.

"In all cases," he said, "the earlier the treatment, the better. The brain doesn't do very well when it is ignored over a long period of time."

Dementia is not a reason "for locking up the patient and throwing away the key," said Dr. Carl Eisdorfer, University of Washington psychiatry head.

The treatment may sometimes be as simple as withdrawing a drug or giving a drug. But often, said conferees, it must mean finding family or other "societal support" for the patient. Doctors and other health workers must themselves get out of their offices into patients' homes before they can understand their problems, the conferees agreed.

"People fear few things more than losing their minds and being 'put away' in a nursing home," said another National Institution on Aging report. Yet too many conditions are "mislabeled as 'senility' " simply because the patient is old, it said.

Senator PERCY. Did you happen to see that article in the Washington Post this morning?

Secretary CALIFANO. Yes, I did, Senator, and I think it kind of capsulizes and dramatizes the need for further research in this area and further investigation in this area and may also indicate the need for better training of the primary care physicians, particularly in terms of the handling of the older population. It may be that we escalate the care of the older population into more expensive levels just the way we are escalating the psychiatrist all the time because he is not adequately trained to recognize and treat some of these things.

Senator PERCY. This staff, under the direction of members of the committee, went to Chicago, New York, and other cities on the nursing home problem. We subpenaed records and found a tremendous percentage of total cost going into medication and one-third of that was spent on tranquilizers. In Illinois, we have a system which I had long trusted, a point system where the nursing home gets paid by points—points accrued if a person is bedridden and has bedsores, on the assumption that this person requires more care, but the incentive these investigators found was to give tranquilizers and sleeping bills to keep them bedridden and help them develop bedsores. Then the patients don't have to go down to dinner, and can be fed just enough food to keep them going.

This article pointed out something I had not taken into account, which is that many of the people I had seen in these nursing homes, just sitting around looking as though they are in a state of stupor or senility, are in fact overmedicated. This article in the Washington Post says that 300,000 to 600,000 of the estimated 3 million Americans who show symptoms of brain failure are mistakenly labeled as senile. One of the largest single causes of false senility is drug intoxication, and they claim the most commonly used medications are tranquilizers. This is the estimate of Dr. Richard Besdine of Harvard Medical School and the Hebrew Rehabilitation Center for the Aged in Roslindale, Mass.

They conclude by saying, "People fear few things more than losing their minds and being 'put away' in a nursing home." This idea was also stated in a National Institute on Aging report.

I would think that this committee, working in cooperation with you, Mr. Secretary, ought to give top priority to the study of this area. We were suspicious years ago about nursing homes and possible abuses occurring there. Again, I say there are some absolutely outstanding nursing homes that I have been in which give fine care, wonderful people running them. I have also seen some unscrupulous operators in this business. They are out solely to make money on the poor, particularly if they are aged poor.

JOB NOT FINISHED

Our job is not finished, according to these reports. We have gone back to one of the cities where we had the greatest difficulty, and cosmetically the problem has been solved, but I think we ought to restudy this business, particularly when we consider 300,000 to 600,000 lost Americans who have useful lives ahead of them if they can only receive some of our attention. It is evident that dreadful things are happening to them. I think we have got to get to the bottom of this.

I want to express appreciation to the Washington Post for reporting so thoroughly on this, and to the medical people who have been conducting these studies.

I commented earlier that I doubt we have ever passed legislation where we knew less about the end result than the bill raising to age 70 the mandatory retirement age. What impact, if any, so far has raising the mandatory age limit to 70 for many workers in the private sector had on the social security system?

Secretary CALIFANO. It is hard to tell. To the extent that it encourages people to continue to work and not draw social security until they

are 70, it will undoubtedly be in that plus for the social security system, although the extent to which it will be a plus is a function of what wage they are working for and how long they have been under the system.

I think much more likely to encourage people to work beyond age 65 and not feel the social security benefits is an incentive the Congress passed last year, which would increase the amount of social security payment to which an individual is entitled by 3 percent for each year that individual continues to work and not draw social security beyond 65 to age 70. It is just very hard to assess what that change in the law will mean, Senator, and I don't think anyone really knows. If you look upon it as something that will stem the trend toward earlier retirement, that is not the only factor in the order of retirement. There are systems in which one can retire after 20 years of work or 30 years of work, and those people retire and draw retirement pay. In fact, they cannot be mandatorily retired at age 65. If you raise the age to 70, it is not going to have much impact.

Senator PERCY. I agree the social security system has been a tremendous help, and I don't know what we would have done without it. On the other hand, in the 3 years that I spent researching the book I put together on aging, I found that many people look upon social security as a program adequate to cover all their retired needs. They assumed the Government was going to take care of them somehow, so they didn't put away enough, and consequently three out of four widows today are living below the poverty line.

How can we spread the word that social security is an assist, a help, a supplement—that it does not remove the responsibility for an individual to somehow provide for their own retirement? Is there any rule of thumb that we can use to delineate for the average person what proportion social security should be able to supply for their financial needs after retirement and what proportion they should be providing on their own through a company, through savings, through whatever other means they possess. Not enough people today are cognizant of the fact that they must provide part of their retirement income. The pressure to continually increase social security benefits comes from people who discover these benefits are simply inadequate for them to maintain themselves after retirement. It is going to pose a terrible load on young working people if we continue this trend.

NEEDED: FACTS ON SOCIAL SECURITY

Secretary CALIFANO. Well, in terms of as variation of mistakes and that is what creates a significant amount of problem to which you allude but there are over 2 million people on social security who are also getting supplemental security income to bring them up to the poverty line. The extent to which we provide adequate information between the social security system is something I will take a look at when I go back, and I will be happy to provide what we do and don't do in response to your question.

Senator PERCY. I appreciate that very much. Part of our job is supplying public information. This mistaken impression about social security is similar to the one about medicare and medicaid; as Senator Church has aptly pointed out, the dollars put out for health care are much as they were before medicare and medicaid, with about 43 per-

cent of costs being covered. Most people assume that medicare is going to cover everything, and they are shocked when they discover there is a huge gap in coverage which they must pay.

I think we have got to find a way to inform the public on which benefits they are going to receive and which they are not. Some rule of thumb needs to be designed for social security so that it is not looked upon as adequate retirement income; otherwise, the unfortunate disillusionment will continue.

[Subsequent to the hearing, Secretary Califano supplied the following information:]

Informational materials produced over 10 years stress that social security benefits are meant to be only a partial replacement of preretirement income. For example, the attached leaflet "Social Security in Your Financial Planning" was first published in the late 1960's. Its primary message is the need to supplement social security benefits.

One of the primary means we have of informing the public is through a monthly package of materials for all media. Included with the materials distributed for use in August 1978 was a draft by-line column (copy attached) on the subject of planning retirement income. The need for supplementing social security benefits is emphasized.

Currently in the early stages of production is a leaflet on the general subject of the value of social security to today's worker. One of the leaflet's primary messages will be the need to provide additional retirement income to maintain one's standard of living.

[From "Your Social Security" column, August 1978, No. 1]

PLANNING RETIREMENT INCOME

(By Social Security District Manager)

People concerned about having sufficient income to maintain their lifestyles through their retirement years should remember that only earnings after retirement, but not other forms of income, may affect receipt of their social security checks.

This means that the wise planner looking ahead should be considering whatever available resources he or she has that can be used to generate nonwork income in the future. Such sources depend on one's current financial situation, but may include savings, investments, insurance, or rental income. Income from renting rooms to college students, for example, would usually not affect a retirement check, while the same amount of money earned by working at a part time job could.

The fact that there is a limit on the amount of earnings a person may have and still draw social security benefits is confusing to many people. And when they discover that the limitation does not include nonearned income, it becomes even less understandable. There are several reasons for the earnings limitation and the manner in which it is applied.

First of all, social security benefits are designed to partially replace earnings lost through retirement, death, or disability. If there has been no such reduction in earnings, then the individual is not considered retired, disabled, or dependent on the earnings of a retired, disabled, or deceased person.

Second, social security was never designed to replace all of a person's earnings, only part of them. The benefits are supposed to provide a base upon which people can build their own level of financial security through their own initiative and enterprise. There would be less incentive to save and invest for the future if by doing so an individual risks losing the floor of protection provided by social security contributions.

If you do plan to work after retirement, you'll find that you can increase your income without losing all of your social security benefits. In 1978 the annual exempt amonut of earnings is $4,000 for individuals 65 and over, and $3,240 for those under 65.

After reaching the earnings limit, social security benefits are reduced $1 for every $2 in excess earnings. At age 72 the earnings limit does not apply.

The annual exempt amount is scheduled to continue to rise in future years. For a 65-year-old it will be $4,500 in 1979, and for those under 65, the rise will parallel increases in average wage levels.

One thing to remember is that the monthly earnings test no longer applies except during the year in which a person starts receiving social security benefits. Before the 1977 Social Security Amendments, a person could receive a full social security check for any month in which he or she did not earn one-twelfth of the annual exempt amount ($334 for a 65-year-old in 1978) no matter how much he or she earned for the year.

Most of the 10 percent of those current beneficiaries whose benefits are reduced because of the retirement test have substantial earnings. They include people who for one reason or another continue to work—the self-employed, professionals, and others whose work is not too physically taxing. The added income provides for the lifestyle they wish to maintain.

But if the prospect of working after retirement does not appeal to you, consider the ways in which you may build nonwork income. Talk to your banker, accountant, or some other person whose financial advice you can trust. It could pay off for you in your retirement years.

Question. I married late and have two children both under 18. I understand that they'll be entitled to benefits, too, when I retire at age 65. Will their earnings affect my social security check?

Answer. No. Their earnings will only affect their social security benefits.

Question. Why doesn't the retirement test apply to people who are 72 and over?

Answer. If there were no age limit, people who work to a very advanced age would not receive any social security benefits even though they had paid into the system all their working years. For that reason the upper age limit is set to provide equity to such workers. In 1982 the age limit is scheduled to drop to age 70 under present law.

Question. How does social security keep track of a beneficiary's earnings?

Answer. A beneficiary who expects to earn more than the annual exempt amount in a year should notify social security in advance so benefit payments may be adjusted. A report of earnings must then be filed by April 15 of the following year. In addition, employer reports of wages are automatically screened against beneficiary records at Social Security headquarters.

Senator PERCY. One final question, Secretary Califano. You did make a comment on page 16 that I would appreciate some expansion on, either now or for the record. You said:

We must remember that when older citizens work they create new jobs and that the job market is not a confined space with a precisely limited number of jobs.

This is a very important concept, worthy of expansion, if you would care to do so.

Secretary CALIFANO. I will expand in some form and provide details for the record, the point simply being, as they work they earn money which, in turn, gives them purchasing power which creates jobs for other people. I think they would like to give you a more elaborate explanation of that point, but I think it is an important point because of this great tendency to grossly oversimplify the issue. There are x number of jobs in the country and if the older Americans take some proportion of them, the younger Americans will not get them. That is just not the case.

Senator PERCY. I think it will help us remove some of the resentment held by those entering the job market, for people who decide to stay on to 70 and be on. They need to know that older workers' purchasing power creates jobs and contributes to a higher standard of living for all Americans. It is a way of stimulating the economy, not depressing it.

[Subsequent to the hearing, Secretary Califano submitted the following information:]

The notion that more jobs for older workers will mean fewer jobs for younger workers is a fallacy. The fallacy is in thinking that the number of jobs in the Nation is fixed in size. In fact, the size of the national output depends upon the input of factories of production: labor, natural resources, and produced capital goods. The larger the input of each of these factors of production, the larger will be the national output.

Whenever there are new entrants into the employed labor force—whether from population growth or increased participation by minorities or women or older workers—the same natural resources and capital stock can produce a larger national output. The increment of output produced by these additional workers provides the source of payment to these workers: each worker earns his keep.

To elaborate, firms hire additional workers as long as the value of output added by these workers covers their wages. The wages of the workers in turn provide income which is spent for goods and services. Thus in the circular flow of goods and income, hiring new workers simultaneously creates more goods and the income to buy the additonal output of the economy.

There are several qualifications which should be noted. First, aggressive monetary and fiscal policies must be pursued to maintain aggregate demand. Second, for any given level of capital (factories, machines, inventory etc.) the absorption of additional workers would tend to lower the real wage. It is therefore essential to vigorously pursue policies to expand capital formation and stimulate technological progress. Finally, there may be problems for particular groups of workers due to specialized skills (or lack thereof), location, industry, etc. These structural problems must be dealt with.

Senator PERCY. Thank you very much indeed, Mr. Secretary.

Thank you, Mr. Chairman.

Senator CHURCH. Senator Percy, I agree with you. We must develop a clearer conception of just what social security is meant to be in our society. I think that there is a continuing argument among us concerning what the role of the social security system should be. Originally, it was intended to cover bare necessities that would enable people to live decently in retirement, but to do more. It was also originally intended to be a retirement program, thus the retirement test. We have seen that change a good deal through the years. At age 70, social security becomes an annuity program, beginning in 1982. And the benefit is available whether or not the person continues to work.

THE RETIREMENT TEST

We have seen the retirement test increased. I myself have favored that. Nevertheless, as it continues to increase, less and less retirement is required in order to qualify for the benefits. So I think we need to define for ourselves what the role of social security should be. If we can come to an agreement among ourselves, perhaps the public conception can be clarified. The confusion stems at least in part from an inability to decide among ourselves just what the role of social security should be in our society.

Mr. Secretary, I want to join, with both, the Republican members of the committee in expressing my appreciation for the testimony you have given us. It seems to me that the testimony will be a rich source book for us. It contains some very important information that I hope will give us guidelines for the balance of our hearings. I am grateful to you for coming here and spending the morning with us. We wish to express appreciation for the entire committee.

Secretary CALIFANO. Mr. Chairman, thank you very much. It has been one of the most thoughtful hearings and questions that I have encountered since I have been the Secretary, and I appreciate the opportunity to come here.

Senator CHURCH. Thank you. You have the least enviable post in the Cabinet, but probably the most important in terms of its impact upon our own people.

Senator DOMENICI. Mr. Chairman, might I ask the Secretary a question? I don't want you to answer this, but I wonder if you might

present the committee with some kind of chart on the issue of inflation as it impacts upon these kinds of income maintenance programs that we are discussing.

I think what I have gathered from this testimony today, is that the best thing that could happen to these programs is for inflation to significantly diminish and be somewhat more controlled. I am not asking that you suggest how we do that, but I think it would be interesting to have some kind of chart showing the impact of various inflationary levels with assumed GNP growth levels on the programs that now exist and the dollar impact in terms of our budget. Do you think you could put that together in some manner for us to see?

Secretary CALIFANO. Yes, I think we can, Senator Domenici. I cannot resist the opportunity to just take hospitals alone and point out that in their costs, if their charges grow by only one and a half times as much as the rest of general inflation in the economy over the next 5 years, we would save $57 billion as a country and $20 billion in Federal expenditures just on that piece of the problem.

Senator DOMENICI. I would very much appreciate such an analysis in an objective chart.

Secretary CALIFANO. We will do that.

Senator DOMENICI. Thank you.

[Subsequent to the hearing, Secretary Califano submitted the following information:]

ASSUMPTIONS UNDERLYING SOCIAL SECURITY LONG-RANGE COST PROJECTIONS

The official cost projections for the social security program (OASDI and Medicare) are based upon assumptions and methodology explained in detail in the 1978 Annual Reports of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund, Disability Insurance Trust Fund, Hospital Insurance Trust Fund, and Supplementary Medical Insurance Trust Fund.

Because the future cannot be predicted with certainty, long-range projections are made on the basis of alternative assumptions in order to determine how the social security programs would operate under future conditions that might reasonably be expected to develop. The alternative II, or "intermediate," set of assumptions from the 1978 Trustees Reports include assumptions that:

Mortality rates will decline overall by about 19 percent from 1977 to 2050;

The fertility rate will increase from its estimated level in 1977 of 1.79 children per woman, gradually reaching 2.1 children per woman by 2005 and remaining level thereafter;

Disability incidence rates will continue increasing, reaching an ultimate level in 1997 that is 25 percent greater than the estimated 1977 level;

Female labor force participation rates will increase to an ultimate level 19 percent greater than the 1977 level;

After 1984, the Consumer Price Index will increase by 4 percent annually (greater increases are assumed between 1978 and 1984);

After 1999, average wages in covered employment will increase by 5¾ percent annually (greater increases are assumed between 1978 and 1999);

The unemployment rate for the total labor force will be 5 percent after 1984;

Hospital costs will increase by 15–17 percent annually for the next 5 years; after 10 years, the annual increase is assumed to be about 10–12 percent.

Assumptions were also made concerning other variables such as the timing pattern of fertility, migration levels, insured status, disability termination rates, marital status, administrative expenses, and interest rates.

EFFECT ON OASDI TRUST FUND OPERATIONS OF VARIOUS RATES OF INFLATION AND ECONOMIC GROWTH[1]

Period	Low inflation, fast growth	Intermediate inflation, intermediate growth	High inflation slow growth
1978–82 (in billions of dollars):			
Total tax income	$614.2	$609.2	$598.6
Total expenditures	597.9	598.9	609.5
Difference	16.3	10.3	−10.9
1978–2052 (as pecentage of taxable payroll):			
Average tax income	12.16	12.16	12.16
Average expenditures	13.23	13.55	13.96
Difference	−1.07	−1.39	−1.80

[1] The economic assumptions underlying the 3 models of economic growth are shown in the attached table 10 from the 1978 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds. "Economic growth" refers here to increases in the real (i.e., inflation adjusted) gross national product in the near future, and gains in real wage levels in the long-range future. Inflation is measured by the Consumer Price Index. The low inflation/fast growth, intermediate inflation/intermediate growth, and high inflation/slow growth patterns correspond to the alternative I, II, and III sets of assumptions in the 1978 trustees reports, respectively.

[Excerpts from the 1978 Annual Reports of the Boards of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds, the Federal Hospital Insurance Trust Fund, and the Federal Supplementary Medical Insurance Trust Fund]

* * * The rate of growth in real GNP is a measure of growth in the real level of economic activity, reflecting changes in employment levels, average earnings, etc., all of which affect total earnings taxable under the OASDI program.

The values assumed for the economic and demographic factors after the early years are intended to represent the average experience for those years and are not intended to be predictions of year-by-year values, which are expected to vary because of possible future economic cycles.

TABLE 10.—VALUES OF SELECTED ECONOMIC AND DEMOGRAPHIC FACTORS ASSUMED IN ALTERNATIVES I, II, AND III, BY CALENDAR YEAR

Calendar year	Percentage increase in average annual— Real GNP[1]	Wages in covered employment	Consumer Price Index (CPI)	Real wage differential[2]	Average annual unemployment rate	Total fertility rate[3]
Alternative I:						
1977	4.9	7.7	6.5	1.2	7.0	1,789.5
1978	4.7	7.2	6.1	1.1	6.3	1,764.6
1979	5.1	8.4	6.0	2.4	5.9	1,793.8
1980	5.5	8.1	5.5	2.6	5.3	1,822.9
1981	5.5	7.6	5.0	2.6	4.9	1,852.1
1982	5.1	7.4	4.5	2.9	4.3	1,881.2
1983	4.0	7.1	4.0	3.1	4.0	1,910.4
1984	2.7	6.0	3.5	2.5	4.2	1,940.0
1985	3.0	5.5	3.0	2.5	4.5	1,970.5
1986	3.3	5.5	3.0	2.5	4.5	2,002.5
1987	3.3	5.5	3.0	2.5	4.5	2,036.0
1988	3.3	5.5	3.0	2.5	4.5	2,070.2
1989	(1)	5.5	3.0	2.5	4.5	2,104.3

2001	(1)	6.25	5.0	1.25	5.5	1,704.1
2002	(1)	6.25	5.0	1.25	5.5	1,702.8
2003	(1)	6.25	5.0	1.25	5.5	1,701.6
2004	(1)	6.25	5.0	1.25	5.5	1,700.5
2005 and later	(1)	6.25	5.0	1.25	5.5	1,700.0

[1] Based on GNP expressed in 1972 dollars (i.e., total output of goods and services adjusted for inflation since 1972). Not projected beyond 1988.
[2] Defined to be the difference between percentage increases in average annual wages and average annual CPI.
[3] Average number of children born per 1,000 women in their lifetime.
[4] As explained in the accompanying text, the economic assumptions for the years 1978–81 are similar to the assumptions underlying the President's 1979 budget.

The real level of economic activity is assumed to grow at differing rates under the three sets of assumptions. The economic recovery from the recession that began in 1974 is assumed to continue at a moderate rate under the intermediate assumptions (alternative II) and at a somewhat faster rate under the optimistic assumptions (alternative I). Under the pessimistic assumptions (alternative III), a pronounced slow-down in economic growth is assumed to begin in 1979 and to continue through 1980, accompanied by increased rates of inflation, with higher rates of economic growth resuming in 1981.

After 1979, under the intermediate assumptions, the assumed annual rate of growth in the real GNP rises to 5.1 percent in 1981 and then declines to about 3 percent by 1985. At the same time, the unemployment rate is assumed to decline to less than 5 percent in 1982 before rising by 1985 to the ultimate assumed rate of 5 percent. It is further assumed that the annual rate of increase in average wages in covered employment will fall to about 6 percent by 1984, remaining at 6 percent through 1991, and declining gradually thereafter until it reaches an ultimate level of 5¾ percent in the year 2000. The rate of increase in the average annual CPI is assumed to decline to 4 percent by 1985, under the intermediate assumptions.

Also under alternative II, the total fertility rate is projected to rise slowly from its assumed 1978 level to its assumed ultimate level of 2.1 children per woman around the year 2005. The effect of future fertility experience on short-range and medium-range projections in based on estimates of workloads and approved budgets for intermediaries and the Health Care Financing Administration. In the long range, administrative cost increases are based on assumed increases in workloads, primarily due to growth and aging of the population, and on assumed unit cost increases of 2 percent less than the increases in average wages shown in table A1.

FINANCING

In order to analyze costs and to evaluate the financing of a program supported by payroll taxes, program costs must be compared on a year-by-year basis with the taxable payroll which provides the source of income for these costs. Since the vast majority of total program costs rclates to insured beneficiaries and since general revenue appropriations and premium payments are available to support the uninsured segments, the remainder of this report will focus on the financing for insured beneficiaries.

Taxable payroll

Taxable payroll increases can be separated into a part due to increases in covered wages and a part due to increases in the number of covered workers. The taxable payroll projection used in this report is based on assumptions used in projecting experience under the OASDI program. Increases in taxable payroll assumed for this report are shown in table A2.

Relationship between program costs and taxable payroll

The single most meaningful measure of program cost increases, with reference to the financing of the system, is the relationship between program cost increases and taxable payroll increases. If the rates of increase in both series are the same, a level tax rate over time will be adequate to support the program. However, to the extent that program costs increase more rapidly than taxable payroll, a schedule of increasing tax rates will be required to finance the system over time. Table A2 shows the resulting increases in program costs relative to taxable payroll over the 25-year projection period. These relative increases fluctuate somewhat during the 1978–80 period, due to the ad hoc increases in the maximum earnings subject to taxes. After 1980, the relative increases reduce gradually to an ultimate level of approximately 3 percent per year.

The result of these increases over the duration of the projection period is a continued increase in the year-by-year ratios of program expenditures to taxable payroll, as shown in table A3.

SENSITIVITY TESTING OF COSTS UNDER ALTERNATIVE ASSUMPTIONS

Over the past 20 years, aggregate inpatient hospital costs for all patients have increased substantially faster than increases in average wages and prices in the general economy. As indicated in table A1, the 10-year period preceding Medicare was characterized by an average 10.4 percent increase in hospital costs, nearly 7½ percent higher than the increase attributable to general wage and price increases. The 1966–71 period experienced substantially higher increases in total hospital costs, averaging 16 percent per year. Of this increase, general economic factors accounted for only 5½ percent; the remaining 10½ percent reflected increases in the volume of services provided and in unit input intensity. Even during the 1972–74 period of economic stabilization program controls, hospital costs increased at an average rate of about 12½ percent, over 5½ percent higher than the amount attributable to increases in average wages and in the CPI. Experience for the fully decontrolled years 1975–76 shows an average annual increase in hospital costs of nearly 17 percent, of which about 9 percent is in excess of increases in general economic factors. Preliminary indications for 1977 show hospital cost increases remaining about 8½ percent higher than wages and prices in the general economy.

The sustained, high rates of hospital cost increases in the past raise serious

questions concerning future cost increases which might be anticipated. Under conventional economic widsom, the hospital industry would not be expected to sustain indefinitely the same rate of growth, relative to the general economy, experienced during the last 20 years. However, the growth pattern has persisted for a long period of time and shows no indication of halting. The most reasonable pattern of cost increase assumptions for the future, then, would fall between the two extremes of (1) an indefinite continuation of the past levels of excess of hospital cost increases over general economic factors and (2) a decline in the near term to hospital cost increase levels approaching those for the economy as a whole.

In view of the uncertainty of future cost trends, projected costs for the hospital insurance program have been prepared under three alternative sets of assumptions. A summary of the assumptions and results is shown in table A3. The set of assumptions labeled "Alternative II" forms the basis for the detailed discussion of hospital cost trends and resulting program costs presented throughout this report. It represents an intermediate set of cost increase assumptions, compared with the lower cost and more optimistic alternative I and the higher cost and less optimistic alternative III. Increases in the economic factors (average wages and CPI) for the three alternatives are consistent with those underlying the OASDI report.

As noted earlier, the single most meaningful measure of hospital insurance program cost increases, reference to the financing of the system, is the relationship between program cost increases and taxable payroll increases. The extent to which program costs increases exceed increases in taxable payroll will determine how steeply tax rates must increase to finance the system over time.

Under alternative II, program costs are projected ultimately to increase approximately 3 percent faster than increases in taxable payroll. Program expenditures, which are currently about 2 percent of taxable payroll, increase to a level in excess of 5 percent by the year 2000 under alternative II assumptions. Hence, if all of the projection assumptions are realized over time, hospital insurance tax rates by the end of the 25-year period will have to be substantially higher than those provided in the present financing schedule (2.9 percent of taxable payroll, for 1986 and later).

Alternatives I and III contain assumptions which result in program costs increasing, relative to taxable payroll increases, approximately 2 percent less and 2 percent more rapidly, respectively, than the results under alternative II. Under alternative I, programed costs ultimately increase 1 percent more rapidly than increases in taxable payroll. By the year 2000, program expendutures under this alternative would be slightly greater than 3½ percent of taxable payroll. Hence, hospital insurance tax rates required by the end of the valuation period would be greater than those currently scheduled, even under the optimistic alternative I assumptions. Under alternative III, program costs ultimately increase nearly 5 percent more rapidly than increases in taxable payroll. The result of this differential is a level of program expenditures in the year 2000 which is slightly over 7 percent of taxable payroll, more than 4 percent higher than the 2.9 percent tax rate currently scheduled.

TABLE A2.—RELATIONSHIP BETWEEN INCREASES IN TOTAL HI PROGRAM COSTS AND INCREASES IN TAXABLE PAYROLL [1]

(In percent)

Calendar year	HI benefit costs				HI administrative costs [3]	Total HI program costs [3]	HI taxable payroll	Ratio of costs to payroll [4]
	inpatient hospital [2]	Skilled nursing facility [2]	Home health agency [2]	Weighted average				
1978	18.2	15.8	30.5	18.4	9.6	18.2	11.0	6.5
1979	17.6	16.0	26.0	17.7	10.3	17.6	16.3	1.1
1980	17.1	15.1	19.4	17.1	9.9	17.0	11.9	4.6
1985	13.6	10.2	10.8	13.5	7.8	13.4	7.2	5.8
1990	11.7	8.9	8.9	11.6	7.2	11.5	6.5	4.7
1995	10.8	8.4	8.4	10.7	6.7	10.7	6.4	4.0
2000	9.8	7.9	7.9	9.8	6.0	9.7	6.5	3.0

[1] Percent increase n year indicated over previous year.

[2] This column differs slightly from the last column of table A1, since table A1 includes all persons eligible for HI protection while this table excludes noninsured persons.

[3] Costs attributable to insured beneficiaries only. Benefits and administrative costs for noninsured persons are financed through general revenue transfers and premium payments rather than through payroll taxes.

[4] Percent increases in the ratio of programs expenditures to taxable payroll. This is equivalent to the differential between the increase in program costs and the increase in taxable payroll.

Note: Taxable payroll is adjusted to take into account the lower contribution rates on self-employment income, on tips, and on multiple-employer "excess wages" as compared with the combined employer-employee rate.

TABLE A3.—SUMMARY OF ALTERNATIVE COST PROJECTIONS FOR THE HOSPITAL INSURANCE PROGRAM

[In percent]

Calendar year	Increases in aggregate inpatient hospital costs [1]				Changes in the relationship between costs and payroll [2]			Expenditures as a percent of taxable payroll
	Average wages	CPI	Volume and Intensity	Total	Program costs [3]	Taxable payroll	Ratio of costs to payroll	
Alternative I:								
1978	7.2	6.1	8.7	15.7	18.2	11.0	6.5	2.06
1979	8.4	6.0	7.3	14.8	17.2	16.8	0.4	2.07
1980	8.1	5.5	6.3	13.8	16.1	12.2	3.5	2.14
1985	5.5	3.0	5.4	9.6	11.3	6.6	4.4	2.62
1990	5.5	3.0	3.9	8.0	9.1	6.1	2.9	3.10
1995	5.4	3.0	3.4	7.4	8.0	5.8	2.1	3.49
2000	5.2	3.0	3.1	7.0	7.2	6.1	1.0	3.69
Alternative II:								
1978	7.2	6.1	6.7	15.7	18.2	11.0	6.5	2.06
1979	7.9	6.1	6.3	15.7	17.6	16.3	1.1	2.09
1980	7.9	5.7	6.2	15.3	17.0	11.9	4.6	2.18
1985	6.0	4.0	6.9	12.0	13.4	7.2	5.8	2.86
1990	6.0	4.0	5.3	10.8	11.5	6.5	4.7	3.65
1995	5.9	4.0	5.3	10.2	10.7	6.4	4.0	4.47
2000	5.8	4.0	4.6	9.4	9.7	6.5	3.0	5.20
Alternative III:								
1978	7.2	6.1	8.7	15.7	18.2	11.0	6.5	2.06
1979	8.2	6.8	8.4	16.3	18.1	16.4	1.4	2.10
1980	7.4	7.1	8.2	15.9	17.6	9.4	7.5	2.26
1985	6.5	5.0	8.4	14.3	15.3	8.6	6.1	3.04
1990	6.5	5.0	7.7	13.5	13.8	7.1	6.3	4.22
1995	6.4	5.0	7.7	13.3	13.1	7.0	5.7	5.58
2000	6.2	5.0	6.9	12.5	12.0	6.9	4.8	7.08

[1] Percent increase in the year indicated over the previous year. Includes hospital costs for all patients.
[2] Percent increase in the year indicated over the previous year.
[3] Includes cost attributable to insured beneficiaries only.

Note: Taxable payroll is adjusted to take into account the lower contribution rates on self-employment income, on tips, and on multiple-employer "excess wages" as compared with the combined employer-employee rate.

MONTHLY ADEQUATE ACTUARIAL RATE FOR DISABLED ENROLLEES

The monthly adequate actuarial rate for disabled enrollees applies to persons eligible to enroll because they have been entitled to disability insurance benefits for not less than 24 consecutive months or because they are suffering from end stage renal disease. Projections for disabled enrollees (other than those suffering from end stage renal disease) are prepared in a fashion exactly parallel to projections for the aged, using the same actuarial assumptions. Costs for the end stage renal disease program are projected using a computer model because of the complex demographic problems involved. The combined results for all disabled enrollees are shown in Table 4.

The projected monthly rate required to pay for one-half of the total of benefits and administrative costs for disabled enrollees for the year ending June 30, 1979, is $24.34. The monthly adequate actuarial rate of $25.00 provides an adjustment for interest earnings and a small margin for contingencies.

TABLE 4.—DERIVATION OF PROMULGATED MONTHLY RATE FOR DISABLED ENROLLEES, YEARS ENDING JUNE 30 OF 1976–79

	1976	1977	1978	1979
Total benefits	$13.85	$16.82	$19.78	$22.60
Administrative expenses	1.57	1.45	1.66	1.74
Incurred expenditures	15.42	18.27	21.44	24.34
Value of interest on fund	−.31	−.41	−.53	−.68
Margin for contingencies and to amortize unfunded liabilities	3.39	1.14	4.09	1.34
Promulgated monthly rate	18.50	19.00	25.00	25.00

SENSITIVITY TESTING

Several factors contribute to uncertainty about future trends in medical care costs. In view of this, it seems appropriate to test the adequacy under alternate assumptions of the rates promulgated here. The most unpredictable factors which contribute significantly to future costs are outpatient hospital costs, physician

utilization (measured indirectly and reflecting the use of more visits per capita, the use of more expensive services, and other factors not explained by simple price per service increases), and increases in physician fees as constrained by the program's reasonable charge screens and economic index. Two alternative sets of assumptions and the results of those assumptions are shown in Table 5. All assumptions not shown in Table 5 are the same as in Table 3.

Table 5 indicates that, under the assumptions used in preparing this report, the promulgated monthly rates will result in an excess of assets over liabilities of $1,212 million by the end of June 1979. This amounts to 12 percent of the estimated total incurred expenditures for the following year. Assumptions which are somewhat more pessimistic produce a deficit of $68 million by the end of June 1979, although the balance in the trust fund remains positive allowing the program to continue paying claims as presented. Under fairly optimistic assumptions, the promulgated monthly rates will result in an excess of assets over liabilities of $2,169 million, which amounts to 25 percent of the estimated total incurred expenditures for the following year.

TABLE 5.—PROJECTION FACTORS AND THE ACTUARIAL STATUS OF THE SMI TRUST FUND UNDER ALTERNATIVE SETS OF ASSUMPTIONS YEARS ENDING JUNE 30 OF 1978–79

	This projection		Low assumption		High assumption	
	1978	1979	1978	1979	1978	1979
Projection factors (in percent):						
Physicians' fees [1]	1.8	7.9	7.3	6.4	10.3	9.4
Utilization of physicians' services [2]	2.0	3.0	.5	1.0	4.0	50.0
Outpatient hospital services per capita	25.0	25.0	15.0	15.0	40.0	40.0
Home health agency services per capita	25.0	25.0	15.0	15.0	40.0	40.0
Actuarial status (in millions):						
Assets	$3,320	$3,939	$3,522	$4,711	$3,059	$2,917
Liabilities	2,314	2,727	2,242	2,542	2,415	2,985
Assets less liabilities	1,006	1,212	1,280	2,169	644	−68
Ratio of assets less liabilities to expenditures (in percent) [3]	11	11	15	23	6	−1

[1] As recognized for payment under the program.
[2] Increase in the number of services received per capita and greater relative use of more expensive services.
[3] Ratio of assets less liabilities at the end of the year to total incurred expenditures during the following year, expressed as a percent.

STANDARD PREMIUM RATE

The law provides that the standard monthly premium rate, promulgated to apply for both aged and disabled enrollees, shall be the lesser of:

(*a*) The adequate actuarial rate for enrollees age 65 and older; or

(*b*) The current standard monthly premium, increased by the same percentage that the level of old-age survivors, and disability insurance (OASDI) benefits has been increased since the May preceding the promulgation (and rounded to the nearer dime).

The standard monthly premium rate for the 12-month period ending with June 30, 1978, is $7.70. The OASDI benefit table was increased 5.9 percent in June 1977. The $7.70 rate increased by 5.9 percent, and rounded to the nearer ten cent multiple, is $8.20. Since this is less than the adequate actuarial rate, the standard premium rate is $8.20 for the twelve months ended with June 1979.

Federal SSI cost estimates for fiscal years 1978–82 using Older Americans Act assumptions on inflation and economic growth: Low inflation, fast growth, $28.2 billion; intermediate inflation, intermediate growth, $28.9 billion; high inflation, slow growth, $29.4 billion.

Senator CHURCH. Thank you, Mr. Secretary.

Secretary CALIFANO. Thank you, Mr. Chairman.

Senator PERCY. Mr. Chairman, I ask that my prepared statement be incorporated in the hearing record.

Senator CHURCH. The prepared statement of Senator Percy will be entered into the record at this time.

[The prepared statement of Senator Percy follows:]

PREPARED STATEMENT OF SENATOR CHARLES H. PERCY

"For the first time in history, the ordinary worker now has a life after work," states Andrey Freedman, a labor economist. But all too often this anxiously awaited time of relaxation is plagued with anxiety stemming from financial worry. After spending many years productively employed, a retired person may become bored and frustrated. In short, many things may prevent the retirement years from being golden.

I read an article in this morning's Washington Post which cited a Harvard Medical School study as finding that 10 to 20 percent of elderly persons which are classified as senile are not senile at all. The study found that "One of the largest single causes of false senility . . . is drug intoxication: that is, reactions to medications." This study points out a crucial aspect of the issue at question in this hearing: What happens to the elderly after retirement? More often than not, they are discarded and forgotten. They are shut off in nursing homes, where often they are kept in a state of constant sedation. We construct a world for them, a world separate from the rest of society, a world in which they fit our concept of what a elderly person should be and how he or she should act. How much of the senility which we perceive in the elderly is either nonexistent or is caused by anxieties, ofars, and lack of a sense of accomplishment brought on by retirement? This is ene of the issues which I hope we address in these hearings.

Sometimes the older worker is in his or her 40's or 50's and, having served 20 or 30 years with one company, becomes eligible for private pension retirement benefits. That worker may want to retire and live on a pension, or may want to switch careers and needs more education, or may want to continue working but only part time. Other older workers, retiring at age 62, 65, or later hope to live on social security, private pension, savings, or some combination of these. But inflation often takes its toll, and retirement funds that provided for plenty 5 or 10 years ago demand strict budgeting today. For these people, returning to work or continuing to work part time becomes necessary.

It may become a national necessity for people to work longer as we approach the turn of the century. At that time the "baby boom" will become the "senior boom," greatly increasing the number of social security beneficiaries while, due to declining birth rates, fewer workers will be available to support them. This will put on enormous strain on the social security system. Private pension funds, which will also suffer from more beneficiaries per worker, will be in tough financial straits. There have been predictions that there will be a need to encourage workers to stay in the labor force and to reverse the current trend of early retirement. Older workers often have the experience and desire to continue working. In most places of employment they have good attendance records. But they may need or desire a more flexible work schedule. Imaginative plans should be developed and implemented which will answer those needs.

We are holding these hearings to get an early start on developing ways of providing choices to the older person that will be beneficial to both him or her and to the economy. We must plan carefully and creatively for the future, rather than wait for the problem to directly confront and overwhelm us. We must consider the many innovative ways to make jobs retirement and education fit people's lifestyles.

Senator CHURCH. Our next witness is Harold L. Sheppard, director, Center on Work and Aging of the American Institutes for Research.

Mr. Sheppard, we are happy to have you back again with us. Mr. Sheppard was a former researcher for this committee and has considerable knowledge about the role of the older worker in our society. We are pleased to welcome you and hear your testimony.

STATEMENT OF HAROLD L. SHEPPARD, PH. D., WASHINGTON, D.C., DIRECTOR, CENTER ON WORK AND AGING, AMERICAN INSTITUTES FOR RESEARCH

Mr. SHEPPARD. I will try to talk over the din of the audience eagerly waiting to hear my comments.

I want to thank the committee and the Senator for this invitation to participate in this type of hearing. It is also an example of why it

was so necessary, in my opinion, to continue this Senate Special Committee on Aging, because it is in the position to deal with broader issues that transcend the jurisdiction of the separate committees.

Most of my remarks today are governed by the tone of the Secretary's testimony here today and his remarks delivered last April to the American Academy of Political Social Science, concerning what seems to be a mounting burden imposed by the increased population of older Americans, especially in the near and long-term future. I want to concentrate on the long-term future and not today's burning issues.

My own view of the issue is, if there is such a burden—and I think we really mean a rising cost level and not necessarily one that we are unwilling to assume—we had better examine the question, what has brought that burden into being, or will potentially bring it into being, and whether those factors need to be inevitable or can be prevented or mitigated or whether they are absolute.

I want to zero in mostly on three of those factors—biomedical, demographic, and economic. That means, therefore, that any new policies designed to resolve that problem has to cut across or transcend otherwise rigid and separate spheres of government and the rest of society. I think many of the things we are talking about today involve programs and policies of not only HEW, but Labor and Commerce.

One of the underlying influences has to do with the policies of government and private institutions concerning the use in the labor force of selected older age groups. I am not going to indulge here in any excruciating detail on the labor force participation trends for people 55 and over.

The New Biomedical Dimension

Another influence is generally labeled as demographic, and we have heard a lot about that today. But it also includes, in my opinion, a new biomedical dimension that I think will be lost sight of if we treat it only within the framework of a conventional demographic point of view. I am referring here, specifically, to the recent sharp drop in mortality rates among older adult Americans. I do not think the implications of this new development have sunken in yet enough in the minds of policymakers and administrators.

The third influence, or factor, is a set of economic variables and developments, some of which are obvious in their relationship to the topic of these hearings, but some factors are not so obvious. The list here includes such matters as inflation, productivity, general employment conditions, and the energy/resource crunch. I am not going to try and elaborate on each one of these separately but I want to try and show how they interrelate with each other, as we try to do in the book that Dr. Sara Rix and I wrote last year, "The Graying of Working America: The Coming Crisis of Retirement Age Policy."

It all comes down to the question: Are we going to have to take another look at the early retirement age trend as the result of the presumed rising costs of supporting a rising very old population? That means it is not enough to use the conventional demographic approach of measuring the so-called dependency ratio in discussing this issue. For one thing, that conventional approach uses an arbitrary and imprecise definition of "working age" population. You will see in a lot of the research literature that it assumes all persons 20 or 21

to 59 years of age, or 16 to 64 are actually working as a support base for the nonworking old and young; second, that they are all working the same amount of hours per year; in other words, no full-time equivalence is taken into consideration when the conventional dependency ratio is used.

To me, the bottom line point is that simply taking a dependency ratio tells us nothing about costs which, after all, is what the fuss is all about. It is quite possible to find, for example, that a dependency ratio goes up over time for nonworking persons per 100 workers, but the costs nevertheless conceivably go down. The dependency ratio might remain the same over the next four or five decades, but the costs could go up. In other words, a simple arithmetic approach tells nothing about costs.

The new biomedical development that I referred to earlier means that we are going to have a far greater number of people, say, 80 and over—greater than we had expected. Since 1969 or 1970, the mortality rates of older age groups have decreased sharply and at a rate far greater than we had previously expected. It is greater, by the way, than for the general mortality decline.

The result is that by the year 2000, even if there is no further progress in the death rates, we can expect 1,725,000 more Americans 80 and older than we had expected for that year as recently as 1971. In other words, we look at the 1971 reports and we find an estimate that is 1,725,000 below what the new report shows, the latest one being 1977. Instead of 6.3 million people 80 and over, we can probablv expect about 8 million.

Unanticipated Elders

The main point is that 1.7 million of the 3 million additional total number of Americans 65 and over, that extra number will consist of Americans 80 and older. Therefore, in any exercise by HEW and other departments that deal with national accounts projections, the differential costs of supporting specific age components of the so-called 65-plus population has to be taken into account. I think it is very misleading, for example, if we take the average cost of supporting each person 65 and over as of 1975.

For example, Secretary Califano refers to medical cost data of $400 on the average per person 65 and over. It would be a mistake, looking towards the future, so simply multiply that figure times the total number of people 65 and over in order to try and estimate support costs for that year 2000, because the age composition of the 65-plus population is changing somewhat radically. I am assuming here that the total support cost for each person 80 and over is going to be much greater than, say, for those people 65 to 69.

Let me shift a little bit now to some other points. We have yet to learn what the total real impact of recent legislation regarding the shift in the allowable mandatory retirement age of 65 to 70 would be, or what the real impact of the increase in the retirement incentive from 1 to 3 percent will be on the upward age side of this policy issue.

I won't have time to present it here, but there is a supplementary submittal on some research findings that we have been carrying out at the American Institutes for Research with an AOA grant in two cities of 1,000 people. We asked them one question: "To what extent

will this new raise in the incentive to stay in the labor force make them consider changing the age at which they retire?" The results were much greater than I expected. About 35 percent said it would make them consider changing their retirement age beyond 65 or were not sure. I don't have time for the details right now, but it is in the total testimony submitted if I may submit that as part of the testimony.

Senator CHURCH. Yes; it will be entered into the record.[1]

Mr. SHEPPARD. I think the most important issue in all this is the early retirement issue. When I say important, I refer partly to the relationship of early retirement to the issue of supporting a disproportionately growing population of the very old, the truly dependent part of the population—disproportionately growing because of demographic and biomedical factors. The role of biomedical influences in that growth rate of the very old is a very specific example of the results of our Nation's progress in promoting the health conditions of Americans long before they reach a very old age. If we continue to pursue the goal of improving the health conditions of preelderly Americans—and no one, I hope, can challenge that goal—we must be prepared to cope with the full consequence of successful outcomes, and one of those outcomes is an increase in life expectancy.

That might mean greater support costs for each of the very old people who survived. If that is the case, then we have to consider now and in the short-term future, not to mention the long run, the necessity and the desirability of at least stabilizing or at best raising the age at which people retire in order to sustain or increase the total working population needed to support the costs of the truly aged population.

Again, I want to mention that in the supplementary testimony, referring to our current research, we asked a question that relates to the alternative suggestion for solving some of the social security fund problems, reducing the rate of increase in the number of people retiring.

What I am dealing with is an issue for the Congress and the executive branch, and I find one of the best ways of setting forth that issue is to quote from a 1976 report by the United Kingdom Department of Health and Social Security. They deal with the issue of early retirement, especially as one way of "solving" the unemployment problem in England. They say the following:

> The question facing those who advocate a lower pension age is what priority the government, representing the working population as well as the retired, should give to this cost [of providing an adequate income for men between 60 and 65].
>
> COSTS OF EARLY RETIREMENT
>
> In other words, early retirement costs the general economy something, and the benefits, such as the alleged increase in job opportunities for the younger population, might not exceed those costs. Indeed, the real resource costs involved must be reckoned with, including the reduction of an economy's potential output due to early retirement patterns. It is even possible that the standard of living of the remaining working population would have to be lower. After all, the increased cost of early retirement has to be paid from a smaller national product.

[1] See p. 60.

To be sure, we would be able to support a larger population of nonworking persons of all ages if we were to experience some miracle in productivity increases, but so far there is little prospect for that. Furthermore, the increased costs due to the required adjustments to a growing energy/resource squeeze only aggravate the productivity issue.

An upward change in average retirement age might be in the offing—or at least a slowdown in the early retirement rate might be emerging—as a result of the high and continuing inflation rate. We have already heard about this in the Secretary's testimony. I don't think we have any clear-cut empirical evidence on this, but I think it is plausible to expect that workers reaching 60 or so today might reason that they themselves would benefit from remaining in the paid labor force longer than previously planned.

This also gets reinforced to the degree that such individuals learn about the increase in life expectancy. It means the earlier they retire, the more years they are going to have to face in retirement, and will their income take care of it all. It may also be reinforced because of the apparent health status level of future generations of the young old—a level better than that of current and past generations the same size.

We already know that within the context of options for early retirement pensions, health status of workers is a powerful predictor of actual early retirement. We know that through the Department of Labor's longitudinal studies. We might expect, therefore, that as health status improves, and given the many other factors that I have mentioned, the early retirement trend might be attenuated.

I have not dealt here with the argument that rising costs for supporting older Americans with no change in retirement age can be offset by such developments as the rising labor force participation rate of women, or by the notion that since we are having a smaller youth population, the reduced cost in supporting the young will offset the cost of the older population. Suffice it to say, just in connection with the young-offset argument that the fertility rate would have to decline far more radically than appears likely in order to constitute a fully 1-to-1 offset to the rising older population; and second, even if that were to take place, we still have a question of how much difference that would mean as far as costs, not a body count, are concerned.

I do want to comment at greater length, though, on one of the major themes expressed by the Secretary in his statement on the importance of the family. But I want to make my comments within the framework of demographic and biomedical developments that I have discussed so far. The fact that the very old are becoming an increasingly greater proportion of the general older population is very relevant in this context. I, along with the Secretary, would reject the notion that the family is disintegrating in America, or that families no longer care for their elderly members.

Pressures on Families

But this may not necessarily mean that, over the next two decades, the adult children of especially the very old can be expected to provide direct services to their elderly relatives or to pay directly for those services. I want to present some figures which can only serve as quantitative clues as to the human side of the emerging problems. They

also point up, perhaps, the need to retain high proportions of the 60- to 64-year-old children of these very old persons in the labor force.

Back in 1960 when I was still with this committee, I started to become interested for the first time in how large a percentage of Americans 60 to 64 had parents still alive, as one indication of the responsibilities of those on the verge of retirement or already in their early retirement years. The most convenient way of estimating that percentage is to take the total population 80 and over and divide that by the size of the population 60 to 64 years of age, as a rough approximation of the number of very old parents and relatives that the young old have.

In 1960, according to such an approach, there were 34 very old persons for every 100 persons 60 to 64. Ten years later, this ratio had increased to 46. By 1980, it will probably be 52. By the end of the next decade, by 1990, we can expect to find 63 very old persons for every 100 aged 60 to 64, and by the end of the century—assuming no further "progress" in biomedical activities—the proportion will rise to 79.

Keep in mind that in 1970 the proportion was only 46. Compare that to the estimate for the year 2000, 79.

These kinds of statistics ought to provoke a lot of questions, and especially some policy dilemmas. For example, can we really expect an increasing proportion of Americans in their early sixties to take care of their elderly relatives, especially if they themselves are retired? They might have more time to provide such care, but what about the expenses involved, particularly in relation to retirement income? If we do witness an increase or stabilization of the labor force participation rate of persons 60 to 64, will they, because of the time factor, be able directly to provide those services?

Finally, assuming that much of the support costs for this population of persons 80 and older—nearly 8 million by the year 2000—will be borne by the total working population, might this not constitute a motive on the part of the under-60 working population to keep older workers in the labor force longer than is currently the case, as one way of distributing over a wide population and sharing the collective expenditures?

My concern over the past several years is that as a nation we can assure our very old fellow citizens—those about 80 or older—of a quality of retirement life that will not put them or the Nation to shame. But that goal requires a strong economic base, which implies a large enough working population. I am suggesting here that we need now to consider the need to include in that working population substantial proportions of those age groups that are now defined as retirable.

Finally, if all the things I have been talking about here do lead to a serious reevaluation of current retirement age policy—especially of early retirement trends—we will need, furthermore, to do more in the way of providing effective opportunities for middle-aged and older workers to learn new skills and to be updated in their current ones. So I am hoping, as a result, that both the Department of HEW and the Department of Labor, along with Congress and the private sector, which we have not talked about much here today, that all of these take the appropriate measures to develop programs for medicare development.

I think I better stop here, Mr. Chairman. I apologize for being so long.

[The supplemental statement of Mr. Sheppard follows:]

SUPPLEMENTAL STATEMENT OF HAROLD L. SHEPPARD

I want to submit to the committee some preliminary findings from the March 1978 phase of an ongoing longitudinal study of older workers by the Center on Work and Aging of AIR, for the Administration on Aging. The study consists of periodic interviews with nearly 1,000 workers or recent workers 40 to 69 years old, in San Diego and Denver.

Some of the questions asked pertain to the major topics for these hearings—especially on retirement age, and the future of the social security system, as well as on the willingness of the public to accept the repsonsibility of supporting an elderly population.

We do not claim that the two samples combined are strictly representative of all workers in this age group, let alone representative of all Americans. But we nevertheless think that the findings are worthy of attention.

First, after informing the respondents that people who retire after 65 can soon increase their yearly social security benefits by 3 percent for each year they continue to work after 65, we asked them if that percentage would be enough for them to consider postponing their own retirement after 65. About one-fourth replied that it would be enough. Another 12 percent could not make up their minds.

Second, nearly two-thirds approved of changing the mandatory retirement age from 65 to 70. I should emphasize that the vast majority of the persons in the sample were under the age of 55.

Third, there appears to be some misunderstanding of how retired worker benefits are financed. For example, more than 40 percent have the mistaken notion that the "social security taxes a worker now pays go into a fund to pay his own benefits when he retires."

Fourth, more than three-fourths of the sample believe that the social security system is in trouble.

Finally, we asked additional questions of this large group of men and women who believe the system is in trouble, questions soliciting their approval or disapproval of four different suggested solutions to "the social security problem."

Nearly three-fifths approved of the idea of using the income tax as an additional source of money for social security benefits.

Two-fifths approved of gradually raising the retirement age "to keep the number of retired people from rising so fast," a proportion higher than we expected.

Two-fifths also approved of raising the social security tax that workers now pay "to keep the fund from going broke."

Only one-fourth approved of keeping social security benefits for people already retired from rising so fast.

More than one-half approved of two or more of these possible solutions. This group was then asked which solution they approved of most of all. The two most favored solutions turned out to be the use of income taxes or general revenues (33 percent); and the gradual raising of the retirement age (28 percent).

There are some very tentative conclusions one might be tempted to draw from these findings. One conclusion might be that there is a general rejection of the notion that workers already retired should be penalized, as far as benefits are concerned, in any effort to solve the problem of financing social security.

At least in the age group covered in our survey, this suggests little in the way of an alleged inter-generational conflict.

The notion of gradually raising retirement age to keep down the rate of increase in the retired population—while rejected by 56 percent—nevertheless had a sizeable minority—41 percent—in favor of this alternative. The further fact that nearly two-thirds of the total sample approve of raising the mandatory retirement age to 70 may be a confirmation of a range of support for this suggestion greater than many would have otherwise expected.

I stress these last few points primarily because I believe we are moving more and more into an open public policy discussion about (1) the degree to which the so-called younger working population—especially those under 60—should be expected to support a growing population of older persons no longer in the work force and who, at the same time, are experiencing an unanticipated increase in life expectancy; and about (2) the degree to which our economy and the government can actually afford the costs of our current early reitrement trend; and also about (3) the degree to which older persons themselves—especially those 60 to

69—may find it financially necessary and desirable to remain in the labor force because of such factors as the high inflation rate, and an increased life expectancy.

Senator CHURCH. Thank you very much, Dr. Sheppard, for your testimony.

The fact that there has been this trend toward earlier retirement is or may be due to the kind of society in which we live—a society in which work itself has so little appeal for many people. In earlier times, many craftsmen took great pride in the work that they did. There was an incentive to continue to work since it was an integral and important part of the life of that person. Today, so much of the work has become simply routine and uninteresting. Maybe that is part of the reason why people look forward to retirement today and would like to stop working as soon as it is feasible for them to do so.

I don't see that changing very much. Do you, in the years ahead, given the nature of our society and the increasing use of the machine, its replacement of the individual worker, the fast production techniques, the large corporation, and the feeling among so many people that they are simply a wheel within a wheel within a wheel?

Mr. SHEPPARD. I certainly have to agree with you that there is a high correlation between the nature of the work a person performs and his or her desire to get the devil out of the work force and retire earlier. I have done some empirical research on that myself, for example, and only found that among male blue-collar workers the lower the quality of their work task—and we had ways of measuring that—even among those under the age of 40, half of them said they would, if they had enough money, retire immediately. I am talking about people under the age of 40, so you are absolutely right in that regard. But I don't know that the directions that we are going to be going in redesigning work and putting some quality into that worklife—I don't want to be too farfetched, but to the degree that all the talk about improving the quality of worklife results in actual change, I would say this would be some offset to the trend we are talking about. I have been dealing primarily in my paper to recognize the economic factors that might bring about change, despite the psychological desire to get out.

THE BABY BOOM'S PROGRESS

Senator CHURCH. I think Secretary Califano spoke of the baby boom that followed the Second World War. In these projections, has that phenomenon been taken into proper account? It seems to me that most of the projections extend into the early part of the next century, where we have this phenomenal enlargement of the elderly population in proportion to the work force, but the projections don't extend beyond that period. I suppose it is accurate in regard to the baby boom of the postwar years as kind of a pig in a poke. As the pig moves through the pipeline, it diminishes very little. But there comes a time when it leaves. I mean it disappears. Aren't these proportions going to change again in favor of the work force to some degree?

I suppose what I am asking is: Are we taking into account in these projection figures the fact that there will be an unusually large proportion of our population in the elderly category for a period of about 20 years, after which the proportions will began to decline again?

Mr. SHEPPARD. Are we talking about 65 years after roughly 1945, which brings us into 2010, when you are going to see, on the demographic side, this big bulge, these babies of all ages, as they go through the process of getting to 65. They are not dying at the rate, say, corresponding cohorts years ago would have died.

Senator CHURCH. True.

Mr. SHEPPARD. At the same time, we don't see yet any rise in the fertility rate, which becomes important in answering your question. Right now, I think we are below what we call the replacement rate.

Senator CHURCH. But when that group reaches that big bulge—at 65—it is going to remain a big bulge for only about 20 or 25 years.

Mr. SHEPPARD. Then it evens itself out.

Senator CHURCH. Because the baby boom has not lasted.

Mr. SHEPPARD. No.

Senator CHURCH. The present birth rate is down rather drastically compared to what it was then.

Mr. SHEPPARD. Then the ratio might even itself out again, assuming no other changes in these other phenomena, including early retirement rates, and so on.

Senator CHURCH. Yes.

Mr. SHEPPARD. I don't want to worry now about the year 2050 or 2070. A lot of my concern has been about the next 20 or 30 years, which brings us into the 21st century.

Senator CHURCH. Yes; I simply wanted to point out that the most extreme figures we have seen may relate to a temporary condition, not a permanent one.

Mr. SHEPPARD. Right.

Senator CHURCH. Secretary Califano's staff person has informed the committee staff that Secretary Califano's statement, on page 19, in which he refers to new retirees age 65 have retirement income at about 47 percent of the retirement income is in error. This 47-percent figure refers only to social security benefits and not other retirement income.

Senator Domenici.

Senator DOMENICI. First, I want to express my appreciation for your testimony. I know we have had a long morning, and maybe we have not done it justice, but I think we are all aware, Dr. Sheppard, of your tremendous endeavor and work in terms of employment policies for the elderly. As part and parcel of analyzing the issues that are before us, we are talking about the social programs and the responsibility of government per se, and that there are no answers without addressing the issue that you are so expert in.

Do you find any attitude change in the expectation of the younger worker regarding retirement, inflation, social security, productivity, those things which might have a real bearing upon a solution to the problems or to compounding them?

Mr. SHEPPARD. Well, there are some studies on the national basis that are going on, for example, about confidence in the social security system. It might be a lot of propaganda, direct or indirect, but there has been a rising level of concern about the future of the social security system, and especially among the young adult population.

Concern About Social Security

Certain segments of the younger population don't want to be paying now for the older people because they don't think they are going to get anything when they retire, which I think is an ominous trend. By the way, we might blame the Social Security Administration—I am going to get in trouble for saying this—for carrying out a very ineffective public education and information program as to the nature of social security, what its benefits are, and so on. They should carry out studies, first of all, to identify what I call the pockets or levels of knowledge or ignorance and the levels of support for, and levels of faith in, the system in order to pinpoint their marketing program, if I can use those terms, and they have not been doing it.

When I made this comment once at a meeting, with some social security people present, they said: "What are you talking about? We publish 35 million pamphlets a year." I am very much concerned about that especially. We can say that social security is involved. I still believe that law is based on consensus, and to the degree that you have that consensus eroded we are in trouble.

Senator Domenici. Yes.

Mr. Sheppard. It is a social contract and it has to be once more built up.

Senator Church. Would you allow a comment there, please, Senator?

Senator Domenici. Yes.

Senator Church. The concern that I find among younger workers who have been reading this criticism of the social security program is quite different from the concern I find among the elderly. The elderly wonder about, indeed, the criticism, and they worry whether or not they will receive their next benefit check or whether the system has gone bankrupt or will soon go bankrupt. I would hope that the action of the Congress last year would tend to mitigate that feeling. But among the younger people, I find the increasing belief that the social security system is some kind of rip-off—a system in which they will not receive anywhere near what they put into it. Many are concerned because they are forced to contribute to a system that they would prefer not to be part of. They would prefer to take their money and buy some kind of an annuity or some other retirement benefit.

I think social security has failed—perhaps all of us have failed—to point out the many hidden benefits within the system that these young people don't take into account—such as the wife and the young children are doing to be cared for if the worker is suddenly killed on the job, and the medicare benefits that are associated with social security. I certainly agree with Senator Domenici that the whole thing must be better explained to younger people because they are increasingly skeptical.

Mr. Sheppard. I think in a survey that was published in the Journal of Risk Insurance a year or so ago showed a fantastically low percentage of the sample who were not even aware of survivors' benefits. I am convinced, without any proof now, that the greater the awareness of the benefits, the greater the level of support there will be for social security, and I would like to see somebody check that out.

Senator Domenici. Right at the end of your statement, you indicated that there was a role for the private sector in terms of expanding the effective opportunities for middle age and older Americans.

That has not been discussed very much today. Would you just elaborate on that, please?

"LET'S TRY SOMETHING NEW"

Mr. SHEPPARD. This is one way of elaborating. There are some sophisticated companies in the United States that have taken a look at the aging of their work force, and have expressed a concern about the possibilities of the so-called obsolescence or the plateauing of their middle-aged employees, including the professional and technical people, especially. Instead of using the traditional approach of saying, let's retire them early to solve that problem, recognizing all the things that we have been discussing here today, they are saying let's try out something new.

We will give an employee 6 months to a year to go off and get his skills updated. If he wants to change his career line we will also pay for that. Some of them have even talked about, in some of the advanced technology industry, being willing to set up an employee in a business on a trial run and if it does not work out, bring him back again. All of these are ways to keep that person utilized effectively. Sometimes he will have the more popular option of having a "lateral" transfer to a less difficult position.

I am trying to give you something innovative. I also think that Congress might explore the results of, say, what France has been doing for the last several years which consists, I think, and I have not kept up with it, of a tax on all employers for such programs, who then get a rebate to the degree that they have employees in such programs for retraining, and so on. I am talking about midcareer age people. I don't think with all the talk about inflation incentives from the Government to employers could be advocated. I may be wrong because that would be one more thing knocked down on the ground of inflation, but what about the idea of a refundable tax if a company provides such a program under certain conditions?

I am giving an off-the-top-of-my-head answer to your very important question, Senator. I wish I could give a more detailed answer.

Senator DOMENICI. Let me just ask you two more questions.

I would suspect that the very recent phenomenon of very high inflation—which many Americans are beginning to think is never going to return to the so-called good old days—my hunch would be that that would be an incentive to remain on the job. Anyone studying pension potential, whether it be social security or private, must figure they are going to be better off working. Am I correct that this may be an incentive to remain on the job beyond the previous retirement time?

Mr. SHEPPARD. You are correct to the degree that I am willing to guess that will happen. As I said in my testimony, it is only plausible to assume that. To the degree that people are inflation conscious, and I don't know who is not these days, and if they are in good health and they are in a somewhat satisfying job, they are weighing all these variables that affect the early retirement decision.

Senator DOMENICI. Do you agree, basically, with the theme of Secretary Califano's method, that we need the mix of the private and public interest income maintenance programs for those who are no longer supporting themselves, that one of the major problems is

that they don't have any inspiration, that there is just a proliferation of different plans?

Cracks Among the Patchwork

Mr. Sheppard. I no longer can pretend to be an expert on it any more because of the multiplicity of quilt work or patchwork is separate, somewhat overlapping, et cetera, et cetera, programs. I have given up. You are absolutely right. Many people, at the same time, fall between the cracks because there is not a total coordinated approach.

Senator Domenici. Your notion of involving the private sector in some way to better utilize older people and keep them on longer, would that have an ameliorating effect on the so-called underfunding of private pension plans? Could it?

Mr. Sheppard. We dealt to some extent on that in our book, "The Graying of Working America," and in certain types ot plans that is definitely the case. We have had some pension fund managers concerned about the rising costs of early retirement policies or trends sometimes encouraged by the payroll management. So you can get in a company a tension between two types of managers, a pension fund manager saying to the payroll manager, "Don't you try to solve your problems by dumping them on my back." That is an analogy to what is happening at the national level or public policy level.

Senator Domenici. Thank you, Mr. Chairman.

Senator Church. Certainly, Senator Domenici.

I don't know whether you can answer this question or not but I am rather curious to know whether private insurance programs typically include a cost-of-living adjustment in the retirement benefit.

Mr. Sheppard. It is vary rare, and as you know, that would add again more to the cost of certain retirement age patterns. The Bankers Trust, every 5 years, does a study of how many corporate plans or a percentage of them have those features still relatively low.

Senator Church. What about private insurance annuity policies? Are there many of those, or any of those to your knowledge, that contain a cost-of-living adjustment?

Mr. Sheppard. I am not aware of any. That is another example of why that so-called approach of having the young people put their money in a private annuity just does not make sense.

Senator Church. I know.

Mr. Sheppard. I would do it my self if I could, but it does not make sense.

Senator Church. This is something that is never taken into account by these critical articles that condemn the social security system, which point out the kinds of private annuities available and what kinds of annuity they pay at retirement age, and so on.

Bill Oriol suggested it might be interesting if we brought many young people who are critical of the social security program into a hearing of this committee, either here or in the field, and let them prepare questions for the social security experts to answer. This is an educational effort, and we could make a record of it here. It certainly needs to be made.

Mr. Sheppard. Doing the work of the Social Security Administration.

Senator CHURCH. They are not getting the message.

Mr. SHEPPARD. I know.

Senator CHURCH. And it needs to be done.

Thank you very much.

Senator DOMENICI. I have five or six more questions that I will submit, that you can answer at your leisure.

The growing population of over 80's, which you have been discussing, from this Senator's standpoint, is a rather new dimension. Is there any suggestion that we ought to have some program in terms of caring for them, other than what we have for the so-called early retirees?

Mr. SHEPPARD. Well, I would not say they need anything special except to keep in mind the service needs of the people now 80 and over. If I am not mistaken, the nursing home population is made up of the very old and that means that in the future, increasingly, some kind of service that we associate with nursing homes will have to be expanded, it is that type of program.

I am glad you picked up the point I was trying to make, that it has been a neglected aspect of these changes. We cannot continually use that sloppy category, 65 and over, any more. I would like to see the Census Bureau and the Labor Department, or whatever, start having finer distinctions. The numbers are getting bigger and the probelms of the 65-year-old population are nothing those like of the 80- or 85-year-old.

FAMILY TIES PERSIST

Senator DOMENICI. This question may not be in an area that you are expert in, but both you and the Secretary mentioned the family—its responsibility and whether it has undergone some generic change. I am most impressed with experts from all over the world who say it really has not. Demographics and distance may be gradually changing, but the willingness to care and love has remained rather consistent. As one of our witnesses said at our international hearing last fall, "What you are really noticing is that older people always love younger people more than younger people love older people." That seems to be something very natural, but that was also true in the "good old days." If we're discussing sacrifice, an older person usually has a bigger heart, but the willingness to help is also there among the young.

Do you have any suggestions as to what we might, as a matter of policy, be doing to encourage families; I might say, to make it easier for them in the present economic system? It is not all our job, but do you have any ideas?

Mr. SHEPPARD. I am glad you posed it in terms of among those who are willing, can't we make it easier for them?

Senator DOMENICI. That is correct.

Mr. SHEPPARD. There are two types of cost they pay, time cost and material cost. Sometimes time costs are greater and we have never done much about developing part-time home health aides for the 80 and over. They need some kind of day care program. They don't all have to be in nursing homes, but I want to say in this context that I got a funny feeling that most of the thrust of our attention these days is how do we get rid of nursing homes.

I think we better start talking about how do we reduce the rate of increase in these nursing homes between now and some future year. We are not going to get rid of something that performs the function today of a nursing home. The demographic reasons I gave earlier, when I talked about the increasing proportion of people in their sixties with very old parents, can be turned the other way. Decreasingly, the very old will not have many children. That is the demographic framework, the thing which you have to think about in considering the role of the family.

Senator DOMENICI. I don't know the answer to this; I should. Assume a couple wants to bring a practical nurse into a household to help take care of either momma or grandma or grandpa. What is the tax situation on that, do you know? We can find out.

Mr. SHEPPARD. I am ignorant about that. I don't know what the tax rate is that they are getting. The only thing I am aware of is if you support an elderly parent at least 50 percent, a child would get some exemption, but I am not certain about such items.

Senator CHURCH. You have to pay more than half of the total support.

Senator DOMENICI. I wonder if it might not be appropriate at this point, Mr. Chairman, to ask our own staff to give us, for the record, the next time we meet, a summary of the tax issues as they involve care and maintenance of this family? I think this might be a good thing.

Senator CHURCH. I think it is a very good idea.

I would also like to point out that Sara Rix worked as a coauthor with Dr. Sheppard on the book, "The Graying of Working America," from which we have taken a portion of the title for our hearings. I believe she is in the room.

Sara, would you please stand up. I want to acknowledge your presence. I compliment you on the excellence of this work.

Dr. Sheppard, thank you very much.

The hearings will continue tomorrow at 10 a.m. in this room.

[Whereupon, at 1:16 p.m., the committee recessed, to reconvene at 10 a.m. Tuesday, July 18, 1978.]

APPENDIX

CORRESPONDENCE RELATED TO HEARING

ITEM 1. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH, CHAIRMAN, SENATE COMMITTEE ON AGING, TO HON. JOSEPH CALIFANO,[1] SECRETARY, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, DATED JULY 31, 1978

DEAR MR. SECRETARY: Your excellent statement was exactly the right beginning for our continuing hearings on "Retirement, Work, and Lifelong Learning." I would like to thank you, once again, for giving us such a substantial and challenging overview presentation.

I have compiled a list of questions and requests either made at the hearing or added since. We would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give a final statement on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

FRANK CHURCH,
Chairman.

Enclosure.

QUESTIONS FOR SECRETARY JOSEPH CALIFANO

(1) The committee shares your concern about the trend toward earlier retirement. What positive and effective steps should be taken to counter this trend? What should the Government's role be? In addition, what about members of minority groups, so many of whom do not live long enough to reach present social security eligibility ages?

(2) You pointed out, as this committee has on numerous occasions, that home health care receives less than 1 percent of medicaid money. Medicare has a similarly low percentage. You call for an expansion of in-home services but warn that costs and quality must remain under control. What is HEW doing to expedite these services while harnessing costs and invitations to abuse?

(3) You placed appropriate emphasis on the role of health costs at our recent hearings. If too large a part of retirement income goes for health costs, even with medicare and medicaid, our older population will live in uncertainty and even fear, as will the younger members of their families. I am concerned about your listing, as one of the options for our thinking about a national health program for all age groups, the alternative of creating a separate financing and delivery system for long-term care. Do we run the risk, if we place that system outside of everything else in a health care system, of having a "separate but equal" type of situation?

(4) What should be the role of education as the baby-boom children become the adults of the "senior boom"? What should the role of the Office of Education be in providing learning opportunities throughout life? What are your plans for the Office of Lifelong Learning?

(5) Would you submit a detailed, written account of the totals used in your statements and projections about the amount of budget funds allotted to older Americans, including a breakdown on what is provided through trust funds, and what is discretionary and what is not?

(6) Consumer prices increased 4.8 percent in 1976, 6.8 percent in 1977, and so far this year they are rising at a rate of 9.8 percent. In its analyses of future commitments for retirement income in this Nation, is HEW taking such inflationary pressures adequately into account?

[1] See statement, p. 6.

(7) What impact, if any, will raising the mandatory retirement age to 70 for many workers in the private sector have on the social security system?

(8) Do you see any trends in our society now—such as the enactment of the 1978 Age Discrimination in Employment Act Amendments or the increase in the delayed retirement credit form 1 percent to 3 percent per year for persons who not receive social security benefits because they work after age 65—to counter the drift toward earlier retirement?

(9) You will announce around the first of October what the 1979 inpatient hospital deductible charge will be for medicare patients. What is the projection at this time? What, if anything, can be done to hold down or put a ceiling on this rapidly increasing charge, which is posing more of an onerous burden for millions of older Americans.

(10) On page 7 of your testimony, you describe programs which pay out benefits to the elderly, including survivors and disability insurance. How much of total expenditures from these two programs goes to people over 65, when compared to total expenditures? Also, please give the totals paid for the other four programs.

(11) You have mentioned that the proportion of dependent children is likely to decline as our population "ages." You have projections for increased spending for the elderly. Do you have projections for spending for youth?

(12) In your testimony earlier this year on extending the Older Americans Act, you endorsed a White House Conference on Aging in 1981. In view of the very challenging statement you have made, do you think we should make special efforts to gather data and take other actions steps to make this conference more than just a discussion about developing policy? Would it be wise to have working models in place of concepts to apply on a larger scale if the conferees and the Administration and the Congress thought them worthwhile? For example, in advance of the conference, could we not put in place, on a scale not yet achieved, a pilot of the long-term care system you so vividly described?

(13) If our Nation decides to abolish poverty for older Americans, what would be the most effective way to approach this goal? For example, should the emphasis be on supplemental security income, social security, a combination of these two programs, or some other approach?

ITEM 2. RESPONSE OF SECRETARY JOSEPH CALIFANO TO QUESTIONS SUBMITTED BY SENATOR FRANK CHURCH

Question. The committee shares your concern about the trend toward earlier retirement. What positive and effective steps should be taken to counter this trend? In addition, what about members of minority groups, so many of whom do not live long enough to reach present social security eligibility age?

Response. The very existence of the social security program of course has had an influence on when people retire. Since reduced benefits were made available as early as age 62, more and more workers have been retiring early. However, to provide some incentive for continuing employment, the social security law contains provisions that increase benefits of people who remain in the work force past age 65 or who return to work after their initial retirement. There are three mechanisms for increasing social security benefits because of additional work: (1) for workers who have high relative earnings after age 65, benefits may be recomputed to take account of these earnings, (2) a delayed retirement credit is provided for workers who work past age 65 and who, though eligible for benefits, do not receive them, and (3) individuals who retire before age 65 and return to work for periods before attaining age 65, earning sufficient amounts to reduce their monthly benefit for one or more months will have their benefit permanently increased to reflect a later retirement date.

We are considering the broad issues of how to increase incentives for continued employment past age 65. Unemployment benefits and social security disability benefits are already available to people who are unable to find jobs or are too disabled to work until age 65. After the turn of the century, a sharp change in the ratio of workers to beneficiaries is projected. This would result in substantially higher costs to the system. With improvements in rates of mortality and morbidity among the older population and the shrinkage in the relative size of the working age population, there may well be additional opportunities for, and interest in, continued employment among the aged. As a result, recent trends toward early retirement might be reversed as these demographic shifts occur.

It is true that black men and women have lower life expectancies than do white men and women. The average life expectancy at birth for males of black and other minority races in 1975 was 63.6 years compared to 69.4 years for white males—an average difference of 5.8 years. For females the average at birth was 72.3 years for members of minority races compared to 77.2 years for white females—an average difference of 4.9 years.

For persons who survive until middle-adulthood, the difference in life expectancy narrows considerably. Of persons aged 45, the life expectancy was 77.0 years for members of black and other minority races and 79.8 for whites—a difference of 2.8 years. For all four groups, the average total life expectancies at age 45 are well beyond the eligibility ages for retirement benefits under the social security program. Thus, for adults who have had time to build up significant credits toward retirement benefits, members of all four groups have reasonably good probabilities of surviving until retirement age.

While the life expectancy of minority groups is shorter than that for others, they get a better buy for their contribution dollar because of the greater tendency for minorities to receive survivorship and disability benefits. In 1976, for example, members of black and other minority races made up the following proportions of persons receiving old-age, disability, and young survivor benefits:

Old-age: 9.1 percent of retired workers and their dependents; 7.2 percent of aged widows and widowers. Disability: 18.1 percent of disabled workers and their dependents. Young survivors: 23.2 percent of the children of deceased workers; 22.5 percent of widowed mothers and fathers.

The entire range of issues relating to the social security retirement age and at what age social security benefits should first be payable is being extensively studied by the current Advisory Council on Social Security. The final report of the Council is due by October 1, 1979.

Question. You pointed out, as this committee has on numerous occasions, that home health care receives less than 1 percent of medicaid money. Medicare has a similarly low percentage. You call for an expansion of in-home services but warn that costs and quality must remain under control. What is HEW doing to expedite these services while harnessing costs and invitations to abuse?

Response. We are quite concerned that aspects of the benefits and eligibility structure of both medicare and medicaid have meant relatively low utilization of home health benefits. HEW is completing a study of in-home care offered under titles XVIII, XIX, and XX of the Social Security Act. We have welcomed this opportunity to look critically at the current system of home health delivery. Our report will encompass a full analysis of the issues you raise and will contain recommendations related to benefits, eligibility, program management, regulation, and quality standards, etc. When the report is forwarded to Congress, which will be very soon, we will provide a copy to the committee.

Question. You placed appropriate emphasis on the role of health costs at our recent hearings. If too large a part of retirement income goes for health costs, even with Medicare and Medicaid, our older population will live in uncertainty and even fear, as will the younger members of their families. I am concerned about your listing, as one of the options for our thinking about a national health program for all age groups, the alternative of creating a separate financing and delivery system for long-term care. Do we run the risk, if we place that system outside of everything else in a health care system, of having a "separate but equal" type of situation?

Response. Last fall when the National Health Insurance Advisory Committee discussed the options for benefits to be covered by a comprehensive health plan, they agreed that long-term care should not be included. While decisions about the benefit package for a national health plan have not yet been made, we would like to point out the following:

First, long-term care is not an "insurable" benefit in the classic sense. Most who require it need care on a continuing and regular basis, thus making the financing of long-term care inappropriate in an insurance mode, which is based on statistical probability of needing a particular service.

Second, the long-term care system is in need of reform, and by merely transferring the costs currently provided through public programs to another payment source, this much needed reform could be overlooked.

Finally, the chronic nature of long-term care disabilities means that it is a costly service to provide, with high per-person costs. Some feel that including it as an NHI benefit may result in inadequate funding and restricted use of the benefit in order to accommodate services which benefit the entire population,

rather than the portion who require continuing chronic care. Again, it should be emphasized that final decisions have not been made concerning the benefits to be covered under NHI. We will take into consideration the comments of the Advisory Committee and others who have communicated their views to us over the past year.

Question. What should be the role of education as the baby-boom children become the adults of the "senior boom"?

Response. That is a problem which we are continuing to study, especially with the new authorizations in the Education Amendments of 1978 and through our lifelong learning study.

As you may already know, the Federal government already provides several programs of support for the education of adults and older Americans through programs authorized by the Adult Education Act of 1966 (AEA), as amended, and the Higher Education Act of 1965 (HEA), as amended.

The AEA was originally enacted in 1966 to expand educational opportunity and encourage the establishment of programs of adult public education that would enable all adults to continue their education to at least the level of completion of secondary school and make available the means to secure training that would enable them to become more employable, productive, and responsible citizens. It has been amended in 1974, 1976, and again in 1978 in an effort to refine its purposes and attempt to ensure that its purposes are met. With the Education Amendments of 1978, the following changes were made in the Adult Education Act:

The statement of purposes was revised to include the purpose of enabling adults to acquire basic functional skills;

Eligible entities were broadened to include public and private nonprofit agencies, organizations, and institutions;

The State plan requirements were modified to require improved needs assessment, provide for an expansion of delivery services for adult education requiring greater consultation with outside groups in planning for programs, and require efforts by the State to remove barriers to the participation in adult education programs;

The research, development, and evaluation authority was broadened, and a clearinghouse authorized to improve the dissemination of information on adult education;

Appropriations were authorized at $210 million for fiscal year 1979, increasing to $290 million for fiscal year 1983.

The program to enhance educational opportunities for Indians was extended through fiscal year 1983; and

A new program was created to provide adult education for immigrants.

When the HEA was originally enacted in 1965, title I of the act (Community Service and Continuing Education) authorized a program designed to assist the people of the United States in solving community problems such as housing, poverty, government, recreation, employment, youth opportunities, transportation, health, and land use through a program of grants to states. Included in this program was the use of extension and continuing education programs which provided educational opportunities to adults. In 1976, the act was amended to specifically authorize a program of continuing education designed to provide postsecondary educational opportunities to meet the educational needs and interests of adults, including the expansion of available learning opportunities for adults who were not adequately served by current educational offerings in their communities. In addition, the 1976 amendments created a new program of lifelong learning which included adult basic education, continuing education, independent study, agricultural education, business education and labor education, occupational education and job training programs, parent education, postsecondary education, preretirement and education for older and retired people, remedial education, special educational programs for groups or for individuals with special needs, and also educational activities designed to upgrade occupational and professional skills, to assist business, public agencies, and other organizations in the use of innovation and research results, and to serve family needs and personal development. Among the activities authorized by the new program was a clearinghouse function designed to identify, collect, and disseminate to educators and the public existing and new information regarding lifelong learning and report on such findings. The attached report on lifelong learning is the result of that review.

The report discusses some other approaches to learning for older adults as follows:

Independent home-based learning is a logical direction to explore for the older age groups since many of the elderly watch television and prefer to stay at home in the evening. Mass media, correspondence courses, community outreach, educational brokering and counseling can be effective in increasing learning opportunities for older persons.

With more older workers remaining in the workforce and/or changing jobs, employees and employers have much to gain if more job training opportunities are extended to older persons.

The learning needs of those who choose to retire from paid employment should not be neglected either. ACTION's Foster Grandparent Program is a good example of older persons using their experience and talent in community service. Investments in preretirement training and in programs in which older persons can use their experience and talent in community service benefits society as well as the individual.

Fields of knowledge such as history, fine arts, and literature can also be invaluable in helping older persons deal with the traumas of later years. Elderhostel 1977, a summer "live-in-and-learn-in" program, enabled 4,500 older persons to move into dormitories in colleges throughout the country and to study such subjects as theater arts, philosophy, and autobiography. Such pursuits help older persons enhance their self-esteem, develop creativity and increase their sense of control over the events of life.

Education for older people is sometimes challenged as a "frill" which cannot be justified at a time when such pressing needs as health care, income maintenance and crime prevention require attention. However, continuing education may be one of the best ways to meet these needs and help solve major social problems. For example, government expenditures for health care services are higher for this age group than for any other. In order to limit these expenses, it would be logical to pursue preventive health care and self-help measures. Through health education programs that teach older persons to ward off illness through proper nutrition and physical exercise and that teach heart patients, for example, to utilize self-care techniques, the government may recognize cost savings. Many such programs could become components of existing public health services. Further, the older person is the target of robberies, muggings, and other crimes. A small percentage of funding for law enforcement could be allotted to teach older people how to avoid victimization, defend themselves successfully, and set up citizen ombudsmen groups against crime.

Question. What should the role be of the Office of Education in providing learning opportunities throughout life?

Response. With the increasing numbers and improved health of the older population, an Office of Education lifelong learning strategy that takes their problems and potential into account should be directed toward the following goals:

Improved coordination of Federal efforts for older adults.

Coordination of education and aging networks at the State levels including the State offices on aging, the cooperative extension service, public welfare offices which administer Social Security, and membership organizations such as the American Association of Retired Persons, the National Council of Senior Citizens, and the Gray Panthers;

Research on the learning needs and patterns of older adults including the study of how they learn best, what they want to learn, what motivates them to learn, and how they can use their special abilities to contribute to society as well as help themselves; and

Research on the learning needs and patterns of all minority group older adults—Blacks, Hispanics, native Americans, and Asians. As a result of the unique cultural attributes of these minority groups, research on their diverse learning abilities and needs merits additional study.

Question. What are your plans for the Office of Lifelong Learning?

Response. We have no plans for the Office of Lifelong Learning.

The 95th Congress did not appropriate the $5 million President Carter requested for Lifelong Learning in his 1979 budget.

Further, the Office of the Assistant Secretary for Education is currently exploring ways to coordinate the Lifelong Learning program funded by the various Federal agencies.

Question. Would you submit a detailed, written account of the totals used in your statements and projections about the amount of budget funds allotted to older Americans, including a breakdown on what is provided through trust funds, and what is discretionary and what is not?

Response. The figures used for the projections are contained in the attached tables 1 through 6. The $350 billion figure quoted on page 69 of the transcript is derived from the report and projections as cited in the footnotes of table 2. The exact estimate from table 2 is $356.4 billion for the year 2010. Table 1 is a listing of some major Federal programs that provide benfits and services to the elderly.

TABLE 1.—FEDERAL PROGRAMS PROVIDING BENEFITS TO THE ELDERLY

Program	Agency	1978 budget outlays (millions)	Number of elderly served
Public Housing, sec. 8	HUD	776.0	2,201,000
Elderly food stamps	Agriculture	561.0	1,100,000
Administration on Aging	HEW	508.8	[1] NA
Unemployment insurance	Labor	[2] 496.3	[2] 34,800
Housing for the elderly and the handicapped	HUD	[3] 335.0	NA
Title XX, Administration for Public Service	HEW	300.0	NA
Coast Guard retirement	DOT	[4] 155.4	NA
Rental housing assistance, sec. 236	HUD	150.0	343,000
Title IX, Older Americans Act	Labor	[7] 140.7	NA
Rent supplement	HUD	113.0	104,000
Employment services	Labor	[5] 91.8	[5] 1,767
CETA II and VI	do	54.5	11,600
Block grants	HUD	39.0	NA
Foster grandparents	ACTION	34.9	[6] 16,250
Elderly feeding	Agriculture	30.0	395,000
Foreign Service retirement	State	27.3	1,472
Capital assistance	DOT	25.0	NA
Employee retirement income security	Labor	24.0	NA
CETA I	do	20.8	13,130

[1] HEW has data on the number of service units, but not the number of elderly served.
[2] Includes railroad.
[3] Includes elderly and handicapped.
[4] Retirees can retire after 20 yr active service regardless of age.
[5] Recipients are 45 and older.
[6] Number of volunteers.
[7] Recipients are 55 and older.

[1] Under Older Americans Act program.

Question. Consumer prices increased 4.8 percent in 1976, 6.8 percent in 1977, and so far this year they are rising at a rate of 9.8 percent. In its analyses of future commitments for retirement income in this Nation, is HEW taking such inflationary pressures adequately into account?

Response. It is true that in recent years the rate of increase in the Consumer Price Index (CPI) has been well above the average annual rate of 4 percent per year that is assumed for purposes of long-range cost estimates for the social security program. While it is difficult to know what the future holds with respect to economic factors, we can make assumptions about the future course of the CPI based on current understanding of economic behavior.

The average annual rate of price increases of 4 percent per year that is used over the long range in the intermediate set of assumptions in the 1978 Trustees' Report is slightly higher than the actual average annual rate of increase over the last 30 years of 3.4 percent. It is assumed that the current high rate of increase in the CPI will gradually decline and will average out to about 4 percent after 1985. The 4-percent level was selected because the trend over the last 65 years indicates a tendency for the rate of increase in the CPI to increase slowly with time. The current outlook does not support a cessation or reversal of this tendency. At the same time, the high rates of increase in the CPI that we have experienced in recent years are not expected to continue over the long range.

The ultimate percentage increases in the average annual CPI of 3 percent under the more optimistic assumptions in the Trustee's Report (Alternative I) and 5 percent under the more pessimistic assumptions (Alternative III) were chosen to be 1 percentage point lower and higher, respectively, than the 4 percent used in Alternative II. It should be noted, though, that along with a 5-percent increase in the CPI, Alternative III also assumes that there would be a corresponding increase in covered wages of 6¼ percent per year, which would increase the income to the program.

As a result of the 1977 Social Security Amendments, the assumptions as to future increases in average wages and in the CPI have considerably less influence on the actuarial balance of the trust funds—and, therefore on long-range financial commitments—than was previously the case. This is mainly because of the new method of benefit calculation which removes the double indexing of future benefits to both average wages and the CPI. Under the prior law, future benefit levels reflected increases in both prices and wages, and, as a result, program expenditures were highly sensitive to changes in either of these factors.

Question. What impact, if any, will raising the mandatory retirement age to 70 for many workers in the private sector have on the social security system?

Response. It is expected that some workers who were forced to retire because their employers had a mandatory retirement age below 70 (usually age 65) will continue to work. The 1978 Report of the Trustees of the Social Security Trust Funds assumes that increasing the mandatory retirement age to 70 will result in a long-range saving of 0.08 percent of taxable payroll.

Eventually the additional number of persons who will be working past age 65 would reach 150,000 to 200,000 because of the change in mandatory retirement age.

Question. Do you see any trends in our society now—such as the enactment of the 1978 Age Discrimination in Employment Act Amendments or the increase in the delayed retirement credits from 1 percent to 3 percent per year for persons who do not receive social security benefits because they work after age 65—to counter the drift toward earlier retirement?

Response. Possibly, although the evidence is not in yet. However, as mentioned in the response to question 7, because of the enactment of the 1978 Age Discrimination in Employment Act, in the future some workers will apply for social security benefits later than they otherwise would have, which is expected to result in a small long-range saving to the program.

Regarding the current situation, the sharp increase in the retirement rate of older men has occurred at a time when the size of the adult workforce has been expanding rapidly. Both the movement of women into the paid workforce and the sharp increase in the number of young workers born during the post-war baby boom have brought dramatic increases in the size of the active workforce in spite of the declining employment of older men.

With the supply of younger workers increasing rapidly, both workers and employers have seen their interests served by pension options that permit or encourage early retirement of older workers. In recent decades both private and public retirement policies have been altered so as to permit or even encourage the early retirement of older workers. Private pension plan initiatives in this area are significant. Mandatory retirement policies, which typically called for retirement at 65, have received a great deal of attention. Perhaps even more important in the private pension sector has been the liberalization of early pension options. Research has shown that early retirees under social security were far more likely to leave their jobs willingly when they had early pensions to combine with their reduced social security benefits.

Today practically all workers covered by pension plans have some type of early retirement provision in their plan. The qualifying conditions for early pensions have also been relaxed. In the past employer consent was usually required, but is rare today. The length of service and age requirements for early pensions have also

been lowered, and the amounts by which early pensions are reduced (if at all) are typically less than the actuarial equivalent to take account of the longer period over which they are payable.

As the demographic picture changes and the supply of younger workers increases more slowly, both workers and employers may see their interests better served by employment policies that help to prolong the work life. Thus, in future years we may see a shift from the expansion of early pension options toward employment policies that help to prevent skill obsolescence and to make work settings more attractive to older workers. Such a shift could be an important factor in countering the continued trend toward earlier retirement.

Question. You will announce around the first of October what the 1979 inpatient hospital deductible charge will be for Medicare patients. What is the projection at this time? What, if anything, can be done to hold down or put a ceiling on this rapidly increasing charge, which is posing more of an onerous burden for millions of older Americans?

Response. As you know, the Secretary of HEW is required by law to review the hospital cost experience of Medicare beneficiaries each year and to adjust the inpatient hospital deductible amount according to a specific formula in the Social Security Act. Under the formula the inpatient hospital deductible amount for 1979 will be based on the rate of increase in hospital costs over the period from the start of the Medicare program through 1977. The inpatient hospital deductible will be increased to $160 for 1979, an increase of more than 11 percent over the $144 deductible amount now in effect.

Because the formula used to determine the deductible fully reflects the rate of increase in hospital costs (a rate which has increased much faster than the cost of living generally) the financial burden of the deductible on aged and disabled medicare beneficiaries who need hospital care has increased much faster than improvements in beneficiary incomes. I am convinced that the best way to reduce this burden on our medicaid population is through the enactment of legislation which will effectively deal with the spiraling costs of hospital care. In my view, implementation of a hospital cost containment program similar to the plan submitted to the Congress by President Carter 18 months ago is the only responsible way to reduce excessive annual increases in hospital costs and thereby to reduce the inpatient hospital deductible amount which medicare patients must pay.

Question. On page 7 of your testimony, you describe programs which pay out benefits to the elderly, including survivors and disability insurance. How much of total expenditures from these two programs goes to people over 65, when compared to total expenditures? Also, please give the totals paid for the other four programs.

Response. Based on fiscal year 1978 data, the following table presents the amount and proportion of benefits for persons 65 years and older under the various programs:

Program	Benefits for persons 65 years and older (in billions)	As a percent of total benefit dollars under program (in percent)
OASDI	$62.7	69.1
Old-age insurance [1]	49.1	49.1
Survivors insurance	[2] 13.5	58.7
Disability insurance	([3])	.3
SSI	1.7	35.3
Medicare	21.5	87.3
Medicaid	3.6	36.4
Black lung	.7	72.2

[1] Total benefit payments to retired workers and dependents include payments to retired workers aged 62-64 receiving reduced benefits and to dependents under age 65. Dependents under age 65 include spouses aged 62-64 receiving reduced benefits, children, and their mothers under age 62.

[2] Benefit payments to survivors aged 65 and over consist of payments to aged widows and aged dependent parents.

[3] Less than $50,000,000. The only persons aged 65 and over receiving benefit payments are spouses of workers under age 65.

Question. You have mentioned that the proportion of dependent children is likely to decline as our population "ages." You have projections for increased spending for the elderly. Do you have projections for spending for youth?

Response. Future spending for the young under the social security program is estimated to be an average 0.66 percent of taxable payroll. Future AFDC expenditures are projected only for 5 years thus precluding any meaningful comparison with the long-range projections supplied for spending on the aged.

Additional data related to the question of future spending for the young is included in a paper by Professors Robert Clark (North Carolina State University) and Joseph Spengler (Duke University) entitled: "Changing Demography and Dependency Costs: The Implications of New Dependency Ratios and Their Composition." Clark and Spengler provide data on Federal expenditures for health, education, and income maintenance programs, and State and local education expenses, and categorize them according to age group of dependent. Based on these data and assuming replacement level fertility and annual average immigration of 400,000, public dependency costs as a percent of the gross national product are expected to drop slightly for youths over the next 75 years (from 5.2 percent to 3.8 percent), while those for the elderly are expected to rise (from 4.7 percent to 7.3 percent).

The three attached tables provide projections for spending for the young and the elderly, and data on future OASDI child beneficiaries. Table 1, which is based on the Clark and Spengler data mentioned above, shows government expenditures for young dependents up to age 18 and for aged dependents age 65 and over for 1974 and future years. It should be noted that the largest part of dependency costs for children is met through private, rather than public means. Private expenditures are not taken into account in any of the data above or in Table 1.

Tables 2 and 3 show the projected increases in child OASI and DI beneficiaries, respectively, over the next 75 years under the three alternative sets of economic assumptions in the 1978 Annual Report of the Board of Trustees of the Federal OASDI Trust Funds.

TABLE 1.—DEPENDENCY COSTS FOR 1974 AND FUTURE YEARS[1]

[Dollars in billions]

	1974	1990	2000	2025	2050
Gross national product (GNP)[2]	$1,413.2	$2,279.7	$2,976.8	$5,576.6	$9,719.3
Expenditures on youths	$72.9	$95.6	$127.1	$216.7	$373.3
Percent GNP used to finance benefits to children (percent)	5.2	4.2	4.3	3.9	3.8
Expenditures on elderly	$67.0	$121.9	$157.1	$405.2	$708.3
Percent GNP used to finance benefits to elderly (percent)	4.7	5.3	5.3	7.3	7.3
Total dependency costs as percent of GNP (percent)	9.9	9.5	9.6	11.2	11.1

[1] This table is derived from Robert Clark and Joseph Spengler, "Changing Demography and Dependency Costs: The Implications of New Dependency Ratios and Their Composition," in "Income and Aging: Programs and Prospects for the Elderly," edited by Barbara Herzog, Human Science Press, New York, 1978, p. 76. Dependency costs are expressed as a percentage of GNP rather than of disposable personal income.

[2] Estimate of GNP based on Clark and Spengler's projections of disposable personal income (DPI) and assumption that DPI comprises 0.685 of full-employment GNP (in accordance with postwar experience).

Note: Alternatives I, II, and III are the 3 sets of economic and demographic assumptions used in the 1978 OASDI Trustees Report. Alternatives I and III may be respectively characterized as more "optimistic" and "pessimistic" than alternative II.

Question. In your testimony earlier this year on extending the Older Americans Act, you endorsed a White House Conference on Aging in 1981. In view of the very challenging statement you have made, do you think we should make special efforts to gather data and take other action steps to make this conference more than just a discussion about developing policy? Would it be wise to have working models in place of concepts to apply on a larger scale if the conferees and the Administration and the Congress thought them worthwhile? For example, in advance of the conference, could we not put in place, on a scale not yet achieved, a pilot of the long-term care system you so vividly described?

Response. Because the elderly are increasing both in absolute numbers, and as a proportion of the Nation's population, steps are being taken now to meet the wide range of needs which older persons in varying circumstances will confront in the future.

The Administration on Aging has launched a new initiative which, when fully implemented, will enable AoA to more adequately address the needs of the increasing numbers of older persons. The development of focal points in the community for the coordinated delivery of necessary services to the elderly is a major initiative within AoA. These services are designed to enable the elderly to remain in their own homes for as long as possible through the development of a comprehensive long-term services system at the community level.

This initiative is reflected in the fiscal year 1978 guidelines for research and demonstration projects funded by AoA. These projects will promote the development of comprehensive and coordinated community-based services with particular emphasis on services to sustain older persons in greatest economic or social need

in their own homes or in the least restrictive setting. The issues to be addressed by researchers include: the factors which affect the selection of long-term alternatives of care for older persons; the effects of reimbursement methods on the supply and quality of community-based services for older persons; and the cost-benefits of alternative service modalities for older persons. Model projects will demonstrate ways to improve community care systems for older persons and to foster the mutual reinforcement of community and family supports in living and service arrangements for older persons. Increased emphasis will be placed on supporting special projects designed to meet the special needs of, and improve the delivery of service to, low income, minority, rural, and disabled older persons.

The problems of the chronically disabled aged are a major concern to the Department. Consequently, there will be a complete staff review, and a series of initiatives proposed over the next several months to better meet their needs utilizing existing available financial resources. The White House Conference to be held in 1981 will assess where we stand in this country on meeting the needs of Older Americans and to develop recommendations to improve the delivery of needed services and other opportunities.

The Health Care Financing Administration will be carrying on a series of demonstrations designed to assess the cost and effectiveness of alternative ways of meeting the long-term care needs of the aged.

Question. If our Nation decides to abolish poverty for older Americans, what would be the most effective way to approach this goal? For example, should the emphasis be on the supplemental security income, social security, a combination of these two programs, or some other approach?

Response. There are two conflicting needs that we face in any effort to abolish poverty—that of keeping future costs under control and of increasing benefits for people whose income is inadequate.

The earnings related social security programs should remain the Nation's primary means of providing economic security for older Americans. The system lends itself well to supplementation by private pensions, savings, and other individual and group efforts to provide economic security. We recognize that social insurance cannot provide an adequate income for those who have had little or no earnings during their working years. Thus, an effective means tested program to provide basic income for people with low income is a necessary third ingredient to meet any need for cash income that social security and private resources cannot provide.

The Advisory Council on Social Security that was appointed in February 1978 is currently studying all aspects of the social security program. The Council will be focusing on selected issues dealing with the role of social security in the future, including the issues raised by your questions. In addition, as you know, the Social Security Amendments of 1977 established a National Commission on Social Security, which will be jointly appointed by the President and the Congress, to make a broad-scale comprehensive study of the social security program. Along with the financial status of the social security program, coverage, and benefit adequacy, this Commission may study possible alternatives to current program, including integration of the current program with private retirement systems.

Further study of this sort will be carried out by the Presidential Commission on Pension Policy. Established under an Executive Order, the Commission will examine pension systems around the country in an effort to develop national policies for retirement, survivor, and disability programs that can serve as a guide for public and private programs. The Commission on Pension Policy will coordinate its work of the Advisory Council and the National Commission.

ITEM 3. LETTER AND ENCLOSURE FROM SENATOR FRANK CHURCH TO HAROLD L. SHEPPARD,[1] PH. D., DIRECTOR, CENTER ON WORK AND AGING, AMERICAN INSTITUTES FOR RESEARCH, WASHINGTON, D.C., DATED JULY 31, 1978

DEAR HAL: Once again, the Senate Committee on Aging owes you an expression of appreciation, not only for excellent testimony, but for your willingness to share your expertise and insights. Your statement last week gave us the exact focus we needed on several issues of major consequence.

[1] See statement, p. 54.

I have enclosed several other questions on which you may wish to comment. I would like to have this additional material by September 5 for inclusion in our hearing record. If it is not possible to give final statements on any individual matter, I would be glad to have an interim response indicating when the additional information will become available.

With best wishes,

Sincerely,

FRANK CHURCH,
Chairman.

Enclosures.

QUESTIONS FOR DR. HAROLD SHEPPARD

(1) You caution against the "body count" method of arriving at a dependency ratio. Your book gives examples of factors, apparently modest, which could alter such ratios dramatically in varying combinations. Would you care to discuss some of them?

(2) Do you agree with those who say that increased costs for supporting an increasingly older population may be offset significantly by reductions in public expenditures for a decreasing proportion of younger persons?

(3) You did not have time in your testimony to discuss the growing number of women in the work force. Secretary Califano has spoken of the important role of the family in providing services to their elderly kin. But since women are probably the major deliverers of services to elderly family members, do you see a growing conflict of role here?

(4) The new employment and training report of the President, issued annually in response to a mandate of the 1973 CETA legislation, has a chapter this year on older workers. I personally am glad to see that this group of workers is receiving more attention from the Department of Labor and from HEW. At one point (p. 98) the report says that the senior community service employment program, funded through the Older Americans Act, offered part-time community service jobs to 37,400 economically disadvantaged persons aged 55 and over. New authorizations and appropriations are likely to raise that number significantly in the near future, but are you satisfied with the rate of increase in these excellent programs? In addition, middle-aged and older workers still have a disporportionately low representation in CETA. Where should the focus be: bigger and better title IX programs? A more receptive CETA? Or both, and more?

(5) You close your excellent statement by expressing the hope that HEW and the Department of Labor, along with the Congress and the private sector, take appropriate measures to develop expanded programs for mid-career development. What should be the division of labor between HEW and DOL? What should be the Congressional focus, and how can the private sector be made more aware of the growing need to retain and retrain the older worker?

(6) May we have your permission to make, as part of our hearing record, pp. III–X (Summary), pp. 105–120 (Part-Time Work, New Work-Time Arrangements, and Work Restructuring), pp. 121–140 (The Older Worker Woman), pp. 141–156 (Older Minority Group Workers), and pp. 157–160 (Older Workers in Rural Areas) from your report, "Research and Development Strategy on Employment-Related Problems of Older Workers"? These pages provide very useful and pertinent material which would effectively supplement your testimony.

ITEM 4. LETTER AND ENCLOSURE FROM DR. HAROLD L. SHEPPARD TO WILLIAM E. ORIOL, SENATE COMMITTEE ON AGING, DATED AUGUST 7, 1978

DEAR BILL: Enclosed are my answers to the questions Senator Church asked me to comment on in his letter of July 31. Also, further information on the "biomedical dimension" requested by Senator Domenici.

Sincerely,

HAROLD L. SHEPPARD.

Enclosure.

RESPONSE TO QUESTION 1

The "body count" approach of measuring the dependency ratio consist simply of dividing the number of persons outside of the "working age" population, arbitrarily defined (e.g., under 16 and over 64) by the number of persons in that "working age" population (16–64 years of age). But this statistical approach fails

to consider factors that influence a more sensitive measurement of dependency. Some of these factors are:

(1) The number of persons actually working, and whether full-time, year-round, or part-time, regardless of age.

(2) The detailed composition of the nonworking population, especially the age composition of the older dependent segment.

(3) Trends, if any, in rates of early retirement.

(4) The costs of the working population of supporting the nonworking portion.

The major purpose of any dependency ratio is to determine the support burden on the working population. But the "body count" can be misleading. For example, it is possible to have a relatively unchanging ratio but for costs to decrease, or increase. The conventional ratio provides no indication of the cost factor. An unchanging ratio, over time, can also obscure the possibility of an "aging" of the older population which itself implies a heavier support cost. And this is what we are experiencing now—a growing proportion of the increasing 65-plus population consisting of persons 80 and older.

Finally, a dependency ratio ostensibly could increase, but the costs remain the same if, for example, the country's economic base (including sharply increased productivity) were to improve sufficiently to compensate for an increase dependency ratio.

RESPONSE TO QUESTION 2

There is no doubt that if high fertility rates prevailed over the next few decades, the total support costs would be much greater than they might be under current and expected conditions of low fertility. But this does not mean that the low fertility rates will be sufficient to offset, on a one-to-one basis, the growing costs of supporting the increasing retired older population. Furthermore, a smaller nonworking infant and youth population does not necessarily result in an arithmetically lower public expenditure per child. In addition to relatively fixed capital costs, such as for schools, it is possible that decisions would be made to spend more per child for other purposes than in the past. The total aggregate costs per child might be less, but not enough to offset, on a one-to-one basis, the rising costs of supporting the aged population.

RESPONSE TO QUESTION 3

This question applies more generally to the need to develop programs and policies in response to the rapidly growing proportion of persons in late adulthood (say, 60–64) with parents and older relatives still alive (e.g., 80 and older). As I pointed out in my testimony, this proportion is increasing by leaps and bounds—from 46 percent in 1970, 63 percent by 1990, and 79 percent by 2000, based on current data on population projections.

Even today, we run across women in their young sixties concerned about what role to play in relationship to the needs of their parents and older relatives. Should they continue to work for their own reasons, and for helping to pay for some of the support of their older relatives? Can they afford to stop working in order to provide some or all services to those relatives?

These comments and questions are primarily speculative on may part, but the main point is that I have not seen any overt recognition of the trends I've described above. It is plausible to believe that the rising labor force participation rate of women will put a strain on their capacity and resources (including time resources) for providing direct care for their older family members. It might possibly reduce the supply of nonworking women available for such services to those members. In that event, the need for a system of paid services, of wage and salary workers to provide those services—outside of the informal family network—may be greater over the next several years than is now the case.

Finally, we must also recognize that a very large proportion of the "very old"—much greater than as of now—will have no or few children as potential service providers on an unpaid, informal basis. And, if an increasing proportion of women in their late 50's and early 60's are in the future labor force, this means fewer of them available to provide direct services for their older relatives. Assuming that women become much more attached to the labor force (for economic and psychological reasons) than they are now, we may witness a growing "role conflict" among them. I also assume, in describing such a scenario, that women, much more than men, will be expected to be the providers of the bulk of services required by the elderly. But this, too, might undergo change.

RESPONSE TO QUESTION 4

I certainly agree that an increase in the number of Title IX participants is important. At the same time, I am concerned that more equitable opportunities for participation in the larger programs of CETA be opened to persons 55 and older. As long as there is an apparent "differential treatment" of older jobseekers in our communities and economy, we will continue to need earmarked programs such as the Title IX program. But this does not preclude some Congressional mandate to provide more opportunities in the other titles of CETA, including public service programs. More liberal eligibility standards might also be applied, such as allowing the poverty criterion to be extended to 125 percent of the formal poverty income cut-off point.

A more critical question, as far as the long-term future is concerned, is: Will we continue to sustain a pattern wherein older workers seem to be "flaked off" during times of economic downturn, or are retired early, only to be forced out of economic necessity to join a quasi-marginal workforce? Once in this position, government then finds it necessary to create such programs as those made possible by Title IX, and other temporary public service job programs. We don't know too much about the previous employment experiences of participants in such programs, but I feel sure that a large portion of them had been victims of a lack of mid-career training and job redesign programs, during economic downturns This, in turn, brings me to your next question.

RESPONSE TO QUESTION 5

Mid-career development obviously cuts across departmental boundaries, and perhaps it should even include the participation of the Department of Commerce because of its relationships with private employers. Our educational institutions, still within the scope of HEW, and the employment and training activities of the Department of Labor, should develop, for example, aome consortia dedicated to the stimulation and expansion of mid-career development activities among employers—first of all, for their current middle-age workers. Much of this thrust would require greater outreach programs, instead of merely using a passive approach in recruitment of participants. Congress might consider a range of incentives to employers to expand or create such programs, perhaps with a higher emphasis on selective industries, depending on the age profile of their current work forces.

RESPONSE TO QUESTION 6

There is no need to obtain my permission to reprint parts of my report [1] for the Department of Labor. It is public property, and I am very pleased that the Committee believes the material in the report can be useful.

Senator Domenici also requested further information on the "biomedical dimension."

The new developments in the biomedical sphere are perhaps the new and as yet unrecognized factor adding to the "senior boom" in this country. Until recently, it would be safer to say that the increased size of the aged population was the result of higher fertility rates in the past, rather than of any increased longevity (relatively speaking). But certainly since 1970 and through 1975—the latest year for which data are available from the National Center for Health Statistics—life expectancy for older Americans has increased at a rate far greater than for the previous 10 years. This change is a reflection of lower mortality rates for older Americans. For example, among men 65–69, death rates per 100,000 from 1960 to 1965, and from 1965 to 1970, were virtually the same. But from 1970 to 1975, the death rate for this same age group declined by more than 11 percent.

What this means, therefore, is that men 65–69 in recent years have a far greater chance of surviving to be 70 or more than previous cohorts of the same age. The increased numbers of men 70 and older, or 80 and older, are therefore a result of improved biomedical conditions, as well as a result of higher fertility rates around the turn of the 20th century.

The accompanying table shows the rate of change in age-adjusted death rates for the 65-plus population over these three 5-year periods, for males and females.

[1] See item 5, p. 87.

RATES OF CHANGE IN AGE-ADJUSTED DEATH RATES FOR THE 65-PLUS POPULATION, 1960-65, 1965-70, AND 1970-75

[In percent]

	1960-65	1965-70	1970-75
Males	+0.5	−3.4	−7.2
Females	−5.2	−8.1	−11.1

Based on data from National Center for Health Statistics.

In brief, this tables shows that for men, there was little, if any progress in reducing mortality rates in the 1960–70 decade, but that over the next 5 years, a rather sharp decline. The same is true for men 55–64 not shown in the table. For women, there has been a steady and increasing rate of decline in death rates for each of the separate age groups in the 65-plus population, to such an extent that the 1970–75 period witnessed a decline rate more than twice that for the 1960–65 period.

These developments, to repeat, mean a greater life expectancy for the aged population, and thus an increase in that population greater than had been previously expected by most experts.

One major explanation of the decline has to do with the progress being made in the fight against diseases of the heart. From 1970 to 1975, death rates for this cause declined from 1,558 to 1,324 (per 100,000) for men and women 65–74 years old. From 1965 to 1970, the death rate for the same cause declined only slightly—from 1,698 to 1,558.

As Dr. Rix and I have pointed out in our book on "The Graying of Working America," much of the decline in this and other death-causing diseases are no doubt due to greater health-consciousness in the population, better nutrition, exercise, and new medical technology. It is our view that even greater strides will be taken against "premature" death when the research results of physiologists and chemists come to be applied to much of the general population. This, too, will mean an increase in the number of adults living to be 75 or 80 and older, thus adding to the "senior boom" now underway.

ITEM 5. EXCERPTS OF REPORT ENTITLED "RESEARCH AND DEVELOPMENT STRATEGY ON EMPLOYMENT-RELATED PROBLEMS OF OLDER WORKERS," BY DR. HAROLD SHEPPARD [1]

VI. PART-TIME WORK, NEW WORK-TIME ARRANGEMENTS, AND WORK RESTRUCTURING

Each of these concepts has general applicability to the total working or working-age population. Older workers are no exception, and in the opinion of a variety of experts and organizations, may constitute a special target group for the concrete types of work suggested by those concepts.

In this connection, it cannot be stressed too much that survey research on the retirement decisions and intentions of middle-aged and older workers rarely poses a choice of options to the survey respondents. They are asked, instead, questions of an either-or character regarding employment: full-time work *or* full-time non-work—nothing in-between. The failure to use an alternative approach results in little useful knowledge regarding (1) the potential labor supply for voluntary part-time work; (2) for occasional, on-and-off employment; or (3) the "market" for a policy of tapered, or gradual retirement. (The latter is a variant of part-time work; it might just as well be conceptualized as part-time *retirement*).

In one study designed to overcome this limitation, Jacobsohn (1970) found that British factory workers nearing retirement age gave *different* responses, depending on the kind of question asked. When asked the either-or type, 55 percent preferred complete retirement. But when offered *choice*, only 21 percent chose such complete withdrawal from work.

The proportion citing a preference for continued *full*-time work fell from 44 percent (when asked the either-or question) to only 15 percent when the question was re-phrased to include part-time, or occasional work. More than three-fifths of them, it turned out, preferred part-time or occasional employment. Altogether, then, only 21 percent—not 55 percent—preferred total withdrawal from the work force.

[1] See statement, p. 54.

Research using a similar approach among American workers—by type of occupation and industry, age, sex, race, and other characteristics—is lacking, and information on the empirical dimensions of the issues involved should be valuable to employers and government, not to mention the individual pre-retiree who may be otherwise forced to think in either-or terms regarding employment in the later years.

On the other hand, the advantages of part-time employment—on a voluntary basis—may be more obvious to the middle-aged and older worker than they are for the organization or employer. There is little in the way of research-findings consensus on the latter. Indeed, little, if any, of the research on the topic of part-time employment focuses on age differences *vis a vis* advantages to the employee or employer. One study (which makes no reference to age) did find—through personal interviews and mail questionnaires among users and non-users of permanent part-time employees—that: (1) little net positive effect on the economic side (from the standpoint of managerial measures of performance); (2) few types of technologies affected these ratings; (3) the vast majority of such jobs consisted of those with discrete (and primarily repetitive) job tasks, and with cyclical demands for output; and (4) part-time jobs apparently are more acceptable to non-traditional, change-oriented managers, and in organizations with more informal "organizational climate."

More in-depth, organizational *case studies* might be necessary to gain further practical insights into how these and related dimensions of the employers of different age groups voluntary part-time workers on a permanent basis might differ between and amongst each other.

As part of the need to assess the market for *voluntary* part-time employment, a first step should consist of sophisticated analysis of the distribution of voluntary part-time employment by industry and occupation, with special attention on the former as a starting point. In 1976, for example, voluntary part-time employment was disproportionately over-represented in wholesale and retail trade (growing since 1966); and finance and other services. Unfortunately, Department of Labor statistics report no information by age in each industry (see Erenburg, 1970).

From 1966 to 1976, the *total* number of persons working part-time on a voluntary part-time basis increased by 41 percent. But the rate of increase in the case of the 45-plus group was much lower, only 25 percent. This fact, plus the additional one—that total numbers employed on a *full-time* basis increased very little (in the case of the 45–64 group) and actually *decreased* in the 65-plus in the same ten-year period—raises the question of whether efforts must be increased to expand opportunities for voluntary part-time employment for older persons, if it is an agreed-upon policy that such employment is one of the positive solutions to certain problems of older workers.

The facts indicate that "opportunities" for such employment increased at a greater rate than opportunities for full-time employment, even omitting the 65-plus. From 1966 to 1976, full-time jobs for the 45–64 group expanded by only 2.6 percent, compared to a 26 percent expansion of voluntary part-time jobs in the same age group.

This type of discussion should also bear in mind that between 1966 and 1976, the number of persons 45–64 who usually worked full-time, but were working part-time because of economic reasons (because of slack work, and inability to find full-time jobs), increased by 39 percent. That rate of increase should be compared with the mere 2.6 percent increase in full-time employment during the same period.

These statistics (taken from the 1977 Employment and Training Report) tell us nothing as to the reasons for lower rates of increase in voluntary part-time employment for the older age groups (compared to younger ages); and for the greater increases in such part-time employment than in full-time employment for the 45–64 group. Nor do they give us any clues as to whether the latter phenomenon is a socially desirable goal or policy to pursue (despite the label of "voluntary").

How many of the so-called voluntarily part-time employed older persons would accept a full-time if offered one? Under what conditions, etc.?

All of these questions require pin-pointed research inquiries and policy discussions which, to our knowledge, are missing in the current scene.

Other specific research questions stimulated by these data, and which should have program and policy implications, include the following:

In which industries, and areas, have there been the least and most increase in part-time employment—and by category (voluntary and involuntary)?

What are the trends (keeping the above in consideration) for males vs. females; whites vs. minority groups?

How do the differences in rates of change in opportunities for full-time vs. less than full-time (especially on an involuntary basis) affect the "discouragement" process?

Any research and program focus on part-time work should, however, conceptualize such work as only one type of pattern, or option, available to older workers (in this case, say, 50 and older)—ranging from:

(1) Continued full-time employment in same occupation with same employer.

(2) Continued full-time employment but with same or different employer, but in different occupation.

(3) Part-time employment with same employer, same occupation.

(4) Part-time, with same or different employer, but in different occupation.

(5) Voluntarily intermittent employment.

"Part-time" itself as a term can be misleading, since it encompasses a broad spectrum of number of hours and/or days per week. Furthermore, at a certain point in the worklife cycle, individual workers may choose, or be encouraged to choose (depending on a number of conditions), a *gradual* tapering down of total working hours, or days per week—or even weeks per year.

Research in this area would require an identification of factors and conditions that are associated with different patterns of work-time distribution on the part of older workers (with due recognition of the heterogeneous composition of that population), by occupational groupings, family situation, etc.

Equally important, of course, is the extent to which employing organizations—both public and private—can actually function with such work-time patterns, the conditions under which such organizations can be induced to initiate such personnel practices; the role of unions in facilitating or hindering the introduction of such patterns, etc.

Also, it is not clear how much of the desire for part-time work on the part of older workers is unmet because of their lack of job market information regarding the availability of such employment in different organizations. This topic should not be separated from an additional one, namely, the degree to which various forms of part-time employment, as an alternative to full withdrawal from the labor force, are known to older workers—or to *employers* whose "cake of custom" blinds them to the use of part-time employees even when this might be of advantage to them (e.g., in times of high demand for labor).

Apart from the obvious research efforts that can be carried out on these topics, it may be more fruitful to conduct experimental and demonstration programs designed, for example, to improve the match between older workers seeking various forms of part-time employment and employers seeking such persons—or who could be persuaded to hire them.

Finally, there is, at the present time, no comprehensive picture, based on empirical research, of:

(1) The distribution of and trends in work-time patterns by age, industry, and occupation;

(2) Worker and employer evaluations of these patterns;

(3) Projections of employee and employer demand for such types of work-time distribution; and

(4) Cost-benefit analyses of these types.

Juanita Kreps (1971), in commenting on needed research on the general topic of work-time options for older workers, stresses the point that:

"[It] would be useful to business organizations, public employers, and union officials in determining whether their employees and constituents would prefer a second career or early retirement, should such options be available. *In the absence of such evidence on desired work-leisure patterns, the free time generated by economic growth will be used in ways not necessarily compatible with preferences. It is also difficult to predict the degree to which firms could accommodate to worker preference without some evaluation of the institutional constraints operating against career flexibility.*" (emphasis added)

In addition to the position that holds that older workers should be treated the same as any other age group when it comes to the right to engage in all types of occupational employment and on a fulltime basis, we need also to recognize that many older workers—especially those in the upper age groups (say, 65–74)—seek only part-time or intermittent full-time work.

The research need here is to determine (1) the size of such a population; (2) the types of work they are already capable of performing (without any extensive or intensive training); and (3) the "market" for such voluntarily less-than-full-time paid activity (the demand side).

None of this implies that there is or should be such a thing as part-time types of employment for "older workers only," although many programs or program proposals may tend to adhere to such a doctrine.

Furthermore, on the experimental and demonstration side, pilot efforts might be designed and carried out to *expand* on the types of jobs that could be performed on a part-time basis, for (1) a *variety* of jobseekers (again on a voluntary basis)—including older workers—and (2) for older workers *only*. This would first require a survey of employers in given local areas to determine the possibility, or feasibility of creating such positions (or locating them, if already existing but not filled), and the numbers and types involved; second, an active job development effort coupled with an orientation and recruitment activity.

Some of these jobs might be traditionally viewed as full-time jobs, but could be the source of *work-sharing* design. Needless to say, such an E&D suggestion would also entail an examination of the legal and institutional barriers to its effective implementation; and how, if at all, other, previous similar efforts overcame such barriers.

In addition to, and perhaps as a prelude to this type of E&D project, research might be needed on previous and current programs to provide part-time and intermittent jobs to older workers, with a focus on:

Types of jobs; and industries.

Types of older workers.

Degree to which nature of the local community and the local labor market affects the prospects for part-time employment activity.

Previous experience with regard to barriers; recruitment of interest among employers and older workers themselves.

Costs to the employer.

Degree to which such employment facilitates the "adjustment" to full-time retirement.

Research on the topic of part-time employment should also concentrate on some specific issues including the following:

(1) What proportion is truly voluntary?

(2) What is the "universe of need" for such voluntary part-time employment—by specific subgroups of older persons (type of area; previous occupation; current total income; race-sex differences, etc.)?

(3) What is the current and potential structure of opportunities for such employment, according to industry?

(4) What are the obstacles and facilitators affect that opportunity structure (e.g., government, company, and union rules and customs)?

(5) What are the trade-offs involved, as far as effects on other groups' employment status is concerned?

(6) What effect does such employment have on such programs as transfer payment systems? On community services?

(7) To what extent would the already-retired (and who among them) take advantage of such opportunities for part-time work?

On each of these items, and related ones, experimental and demonstration projects might be expanded or developed, in order to obtain answers to the questions, and to determine what other effects are found, of an unexpected nature; and how obstacles were overcome, or facilitators were improved.

If voluntary part-time employment is to be accepted as a positive public policy, it would then seem appropriate for the federal government at least to serve as a model.

A report by the General Accounting Office (1976) on part-time employment in federal agencies spelled out the advantages and disadvantages cited by federal agency managers on the use of part-time employees. It refers to the age distribution of the total numbers involved in 21 agencies, but nothing on the constraints, advantages and disadvantages according to age. Nearly 28 percent of the overall numbers (105,000) were 41 and older; 40 percent, under 25.

For government agencies at the Federal, state, and local levels—as well as for private industries employing persons in similar occupations (typically white-collar)—it may be valuable to ascertain whether the following examples of advantages and disadvantages also apply to older groups:

Advantages

Greater access to a "pool of talent" not needed or available on a full-time basis.

Greater agency flexibility in meeting temporary demand during seasonal workload peaks.

Greater productivity (reported only from some agencies) than by full-time employees.

A new and valuable source for eventually full-time personnel.

Disadvantages

Excess training and administrative costs.
Problems of work-time accommodation.
Lack of job continuity and completion.
High turnover.
Poor morale among part-timers because of fewer, or no, fringe benefits.

In addition to research into the applicability of these and other advantages and disadvantages regarding the use of older persons as part-time employees, similar efforts should be directed—of a research *and* demonstration nature—toward other levels of government, and in the private sector.

But is part-time employment worth pursuing as a national goal or policy? Furthermore,

(1) Does such employment patterns suggest that it is a sign that the mainstream of the labor force is moving towards a general pattern of reduced working hours?

(2) If the country were to adopt an opposite policy, namely, a *restriction* on the number of part-time jobs, would that policy increase *full*-time opportunities—and for which groups in the population, if at all?

(3) Do employers—and in which industries—respond to major changes in age in such a way as to influence the demand for persons available for less than full-time employment? That is, does the "supply" of such persons increase the demand for part-time employment?

(4) To what extent, can part-time employment serve (and under what conditions) as a *transition* for various adult and older groups to *full*-time retirement?

This discussion so far, and the research and policy questions raised, have dealt primarily with the topic of part-time employment from the standpoints of the individual and the employer. What about the "total economy" side? We can only answer this important question with questions.

For example, do such employment patterns affect opportunities, and to what extent, for full-time employment (and with fringe benefits, etc., not typically associated with part-time employment)? In which particular sectors of the economy?

Without such employment, would there be a deterioration in the numbers and kinds of *services* desired and required by the community and consumers?

These and similar questions have been treated at length recently by Owen (1976), but the study does not include attention to the age factor.

Work sharing, flexi-time (on less than a full-week basis), and similar concepts should be considered as variants of the basic part-time employment topic, and the issues, research and demonstration prospects—as far as older workers are concerned—should not be too different, if at all. (State of Wisconsin, 1977; Glickman and Brown, 1974; Evans, 1973; Baum and Young; 1974, Kimzey and Prince, 1974). However, few, if any, of the many reports and research studies include considerations of the age factor.

Tapered, or "part-time" retirement, also is another variant (the other side of the coin), but because of its special character, warrants more attention in this report. It is discussed in other sections of this report.

These separate topics can be conceptualized as specific examples and facets of a more general, perhaps more basic, approach concentrating on the *lifelong allocation of time*—or the lifetime distribution of work, leisure, and education. That approach highlights the issue of how society and economies "decide" on who shall (and when they shall) learn, work, and not work over the total lifespan, and the value of redistributing, intermittently, each of these activities over that lifespan (Sheppard, 1977; Best and Stern, 1976; Chalendar, 1976; Wirtz, 1975; Kreps, 1971).

It may be too soon for the Department of Labor to devote its research and demonstration resources to this intriguing subject which is issue-laden. For the immediate future, however, the sub-topic of *mid-career change and development* cannot be ignored now. That dimension of the lifespan approach is treated in a separate section of this report.

Work and work environment restructuring. Separate and distinct from the topic and issue of time-allocation of work, is another category of alternative work patterns, generally found in research and policy discussions about job satisfaction, job redesign, job enrichment and "quality of work," etc. In recent years, this topic has reached a stage virtually of a movement in various circles, in many countries.

One of the ways in which it bears upon the job-related problems of middle-aged and older workers is with respect to the retirement phenomenon. Jacobsohn (1972) found that workers' acceptance of their companies' retirement age was

clearly related to the level of job strain, and of worker autonomy in job performance (e.g., machine-paced vs. bench work). Sheppard, in his simple cross-classification analysis of NLS data (1976), found that level of 1966 job satisfaction predicted for early retirement rates, but only among *unhealthy whites*, with no analysis by age. The fact that no relationship prevailed in the case of unhealthy blacks raises the issue as to whether these men are in any economic position—despite their poor health—to leave the labor market if dissatisfied with their jobs.

However, Andrisani (1976) found, through a more sophisticated analysis of the same data, that for both whites and blacks (regardless of health status) early retirement was a function of job dissatisfaction.

What may be one of the most interesting research and policy changes is the fact that while the economic rewards of the NLS sample of middle-age and older men increased, on the average, over the 1966–71 period, *job satisfaction* actually declined in this same period. While the latter has been found to be generally associated positively with income level—in *cross-sectional* research—this does not automatically mean that the components and roots of job satisfaction are exclusively economic in nature (Sheppard, 1976). Because of this, improvements over time in economic status (as measured by real income changes) are not necessarily accompanied by improvements in satisfaction with other dimensions of a person's work life and its environment.

The analysis of quality of task levels among white male blue collar workers—i.e., degree of variety, autonomy, and responsibility—by Sheppard (1972) found that the lower the task-quality level, holding age constant, the greater the proposition of such workers indicating that if assured of adequate income, they would retire immediately. More important, UAW data for 1972–73 indicate that among workers eligible for "30-and-out" retirement, actual retirement rates varied according to skill-level: the higher the skill, the lower the rate.

The analysis of the Survey of Working Conditions survey by Quinn showed that *low autonomy* was associated with early retirement—for *men* but not women. Why should this be? Does it mean that work itself—at least in the past and contemporary scenes—is of a greater central life focus for men, that men are so much identified with their jobs that negative features are more salient to them? Will this *change*, as women become more regularly attached to the labor force over a greater portion of their lives?

Andrisani's multi-variate analysis (1976) of the NLS data (for all age-sex-race sub-samples) found that:

(1) Regardless of the state of the economy, dissatisfied middle-aged males were more likely than the satisfied ones to change jobs voluntarily.

(2) Black middle-aged males—but not whites—who were dissatisfied with their jobs *and* who changed voluntarily made higher advances (in terms of job status and earnings) in subsequent years.

(3) With the exception of blacks, job satisfaction among the middle-aged *declined*, from 1966 to 1972.

The *reasons* for these relationships and trends should provide some basic policy guidelines for approaching the qualitative dimension of job-related problems of middle-aged and older workers.

The decline in job satisfaction among the *non*-changers in the NLS sample is a case in point. Policy thinking regarding labor turnover and mobility—which are partly a function of level of job satisfaction—is characterized by contradictory values. On the one hand, there is a concern about turnover as a cost item—especially at the organizational level. On the other hand, there is also a great emphasis on the virtues of mobility for the sake of a highly rational and fruitful functioning of the economy. If job satisfaction among job-*stayers* does decline—even among middle-aged and older workers who conventionally are deemed as having become "satisfied" over time—this might lead to various kinds of diseconomies and costs to the firm, and thus indirectly to the total economy.

Finally, there is a more intriguing dimension of the various efforts for improving the quality of work life. If it is correct that job attitudes, and early retirement (coupled with quality of job performance itself), are in part a function of such criteria as degree of task autonomy, what is happening in the many organizations—in both the private and public sectors—now experimenting with, or institutionalizing, such notions as job redesign, job enrichment, autonomous work groups, etc?

For example, to the degree that such notions have been put into actual practice—on a pilot or regularized basis—is there a change in early retirement intentions? In actual retirement rates? How do these measures in such situations compare with

findings in workplaces producing the same product or service but which have *not* introduced similar practices?

The time is ripe for research on these questions which may be of import to workers, organizations, and the economy.

Job redesign has, over the years, been recommended as one of the solutions to selected problems of older workers, usually in response to presumed physical and mental changes associated with advancing age, as a way of coping with their inability to maintain performance in their *regular* jobs. Such a notion consists of changing those regular jobs in such a way as to make the jobs match the working capacity of workers growing older—as opposed to *transferring* them to "easier" jobs (frequently resulting in lower pay and loss of status). (OECD, 1966). This particular meaning of job redesign, however, is *not* the same as that intended by other researchers and consultants using the same term (e.g., Davis and Taylor, 1973).

According to a Department of Labor report (1967), few of the 1,000 largest American industrial corporations have specifically redesigned jobs for older workers for purposes of matching the job to the presumed decline in older worker performance. There is no compelling reason to think that much has changed in this regard in recent years (although the "quality of work life" projects may coincidentally include older persons). Corporations generally have tended to exercise two options—*transfer* older workers to less physically demanding jobs under the presumption older workers could not continue in their present jobs, or persuade older workers to retire early.

Instead of resorting to either of these courses of action, corporations could benefit from job redesign based on task analysis by creating new jobs that tap the skills and experience of older workers, and *reduce* the odds for increased job dissatisfaction. Such efforts might be encouraged by Departmental experimental and demonstration programs.

Whether or not an older worker will like a job is no more important than whether or not he or she can do a job. An experimental program may involve the creation of new jobs by new combinations of tasks in a given industry.

Does combining so many demanding tasks together make a job "undoable" or stressful?

Does combining *many* low level tasks together make for a high error rate due to boredom?

Does the "right" combination of tasks ("right" from the standpoint of job enrichment proponents) make a positive difference for *all* age groups?

It is recommended that tasks that make up several jobs be considered in the experimental effort to allow latitude for innovative new job-quality creation. Results from such a study could be considered in relationship to other experimental job redesigns such as re-clustering of tasks from a single existing job into "higher" and "lower" task-quality groupings.

No easy predictions—and no comforting prescriptions—should be made on the potential outcomes of improving the quality of worklife (as defined from the standpoint of experts on the subject) on the job behavior and retirement decisions among older workers. In the first place, there is no such animal as *the* "older worker," as we have tried to make clear throughout this report (and despite our own frequent violations of that percept): there are *varieties*. The response to changing the nature of job tasks will be influenced by the nature of the individual older worker—and of younger ones whose retirement desires also may be affected by the nature of the job.

Experts on the topic of work values and personality types *vis a vis* quality of work (Yankelovich, 1972, for example) suggest that the *young* workers of today—the older workers of tomorrow—will tolerate less the low task quality of many job assignments; that many, if not most of them—but to a greater extent than in the case of today's older workers—will require job tasks of a higher quality to keep them productive, in the future.

Furthermore, the *way* in which such changes are introduced play a role in worker reaction. Pollman and Johnson (1974), for example, found that retirement decisions among auto workers were partly affected by job changes *not* initiated by the workers themselves. It is not clear from their study, however, which of the jobs the workers were transferred to were, if at all, of a more positive task-level quality.

The critical questions stemming from that research and from the general theory (and expectation) concerning the virtues of job redesign, job enrichment, and other forms of work-quality improvement involve the extent to which changes in those directions are made with the participation of the workers themselves, and not merely initiated by management. As workers grow older in jobs already

"enriched," are their job performance and retirement behavior any different (and in what way) from their age peers not in such jobs? These and related questions should be part of a research agenda in this arena of job-related problems of middle-aged and older workers.

VII. THE OLDER WORKING WOMAN

As women have become a more significant segment of the labor force, and with their participation rates increasing, the topic of older working women and the issues and problems associated with these phenomena gather in importance. Chief among these problems are the following (not necessarily in order of importance):

(1) Once unemployed, average duration of joblessness for women is higher than for men of the same, older ages.

(2) The older the discouraged woman worker, the greater the length of time between last job and the "decision" to drop out of the labor force (Moser, 1974).

(3) Compared to discouraged older males, the length of time is also greater.

(4) The chances of adequate retirement income are more severe for women than for men, and while the future may see improvements over the present, these chances will remain lower than for men (Bernstein, 1974).

(5) The uncertainty regarding the shift toward "male" occupations which typically have higher status, and which affects employment and retirement status in the later years may characterize the employment world of adult women.

(6) Even with improvements in vesting provisions, due to ERISA, women face more serious problems than men, given their shorter tenure in any given job, and their high representation among the part-time employed (who typically do not enjoy fringe benefits such as pension coverage). However, taking women of all ages, the proportion of the total population of women working on a year-round, full-time basis has risen over the past decades; and in the *middle*-age groups, at least, this proportion is greater than in the younger groups of women.

(7) Given the general pattern of no survivors' benefits in private pension plans, the higher *survivorship* of wives beyond their husband's time of death means serious problems for them, unless they themselves have gained adequate work experience with private pension coverage as well. Frequently, this element plays a role in the work-nonwork decisions of married women.

(8) This point also may prompt decisions to re-enter the labor force, or enter for the first time, at a late stage in life, with many attendant problems.

(9) Among these problems are the need for training or re-training as well as for "occupational socialization" in the world of work after many years of nonwork.

(10) But such investments in training can be stymied to the degree that both "sexism" and "ageism" together persist as barriers to the employment status of older women.

(11) Mature women seeking employment in part-time professional jobs and those with high levels of responsibility encounter obstacles in that search.

(12) *Retired* older women have lower morale than those employed (with the exception of the higher income groups). Those who never worked have the lowest morale (Jaslow, 1976).

(13) Lack of training in the early years produces a "retrogression" in economic status between the first and current jobs (Parnes, et al., 1975).

(14) *Nonmarried* older women (58–63) tend to have the lowest proportions covered by private pensions prior to retirement.

(15) Because they are typically in lower-paying jobs, with less continuous attachment to the labor force, and with wages *below* the taxable wage ceiling for Social Security purposes, women are affected more than men by the "regressivity" of the system's payroll tax.

(16) If old enough, they are more likely to "opt" for early retirement (with severely reduced benefits) than men, in times of unemployment (Sommers, 1975).

(17) On the other hand, if under the age of 62, they run the risk of being "too old to work, and too young"—i.e., little work experience—for adequate unemployment insurance (Sommers, 1975).

(18) Because of many of the above problems, and others, mandatory retirement age requirements—and not-completely voluntary *early* retirement—can mean even greater problems in the later years for women than for men.

Labor force participation. The topic of, and problems related to, labor force participation among older women (and the longitudinal dimensions of such participation) is important for a number of reasons, including (1) those stemming from the cultural shift among women themselves regarding their roles in the society; (2) the relevance of such participation—at what scale, i.e., part-or full-time—to

the broader issue regarding the need to find "offsets" to the allegedly growing problem of the "dependency burden" of supporting larger numbers and proportions of older nonworking persons; and (3) the possibility that work itself is becoming a more salient dimension of women's lives than in the past.

In this connection, we find it of more than passing interest that preliminary findings from a current AIR study of a national sample of 1,000 men and women 48 to 52 years old, indicate that out of 15 factors associated with the quality of life, work among women was the most important influence. Among men, however, it was only the third most important. This is a study (by Flanagan and Russ-Eft, sponsored by the Administration on Aging) which has not yet been fully explored, of the jobs and work experiences of this middle-aged group which explain the high influence-rank of work for women in this age group, and the reasons why it is higher in rank for women than for men. Other studies (e.g., Lowenthal, 1975), however, indicate that work as a source of stress is greater in the lives of middle-aged men than for women.

In any event, work as a major element in the lives of women, especially as reflected in the experiences of those with continuing attachment to the labor force, seems to be on the upswing. This development may even influence such spheres as the retirement decision, early retirement rates, and degree of acceptance of mandatory age-at-retirement practices.

Attention to this possibility is rare in the research literature and in policy documents. In a study of British semi-skilled factory workers, Jacobsohn (1970) found that among the women 50–59 years old, there was a greater reluctance to retire than among men of the same age; they were *less* positive about the prospects of retiring than the men.

Is this type of contrast a matterr of cultural differences, i.e., not to be found among American women in similar circumstances?

Is it—regardless of culture—a portent of any *divergent* tendencies among women as opposed to men regarding the trade-off between work continuity and nonwork, or "leisure" (retirement)?

Is it a specific manifestation of the general socio-cultural shift in the life and work ethos of women (in its most dramatic form, a result of the "women's liberation" movement)? That is, are today's women becoming attracted more to the world of work as a more desirable alternative to the unpaid work-role of homemaker, which is what "retirement" more typically means for women than for men—at least, so far?

These and many other questions can be translated into hypotheses for new research efforts supported by the Department of Labor. The empirical facets of such research may have policy and program implications regarding, for example, demands of working women for improved status in the labor force as they grow older, including rights to training and promotion opportunities; tailor-made provisions regarding retirement options, instead of universal policies.

The rising participation rates of women accompanied by an opposite trend for men—especially in the middle- and older age groups—is a phenomenon that has both fascinating research and policy-problem nuances. In what ways, if at all, are these two opposite trends related to each other? Or are they, to some extent, unrelated—or fortuitous? The relationship has only been asserted, and descriptively reported with statistics showing each of the two separate trends. But, to our knowledge, there has been little research as to any presumed causal relationship.

Are women actually taking the place of older men—on a job-by-job, occupation-by-occupation, industry-by-industry basis?

Does the current EEO emphasis on the employment rights of women—regardless of age—result in the reduction of opportunities for older men?

Or is the process essentially due to the growth of occupations "traditionally" held by women, and the simultaneous decline of those traditionally filled by men? As Oppenheimer (1973) has pointed out, men and women have been "used" interchangeably in *some* occupations over recent decades, but "most demand for labor has usually been sex specific," that is, the growing participation rate of women is to a considerable extent a function, so far, of the pattern of economic development which has characteristically moved the demand for labor toward those service occupations and industries historically associated with "women's work." The usual explanations, such as reduced fertility, higher education, urbanization, etc., (which increase supply) all may be relevant, but the economic development factor must also be reckoned with.

On the policy side, how feasible would it be to break up the *general* pattern of "male" versus "female" types of occupations, in order to maintain or to increase the participation opportunities of older men?

Is the current effort to change the "sex identity" of certain occupations primarily one-sided, i.e., directed toward placing women in traditionally male positions, and not directed *without* regard to sex? On this latter point, internal labor market situations might be the best sites in which to study the question.

Each year has witnessed a rising proportion of the 45+ group in the labor force. At the end of World War II, 33 percent of women 45–54 were in the work force. A little more than a quarter of a century later, the percent for women of the same ages was 55 percent. The corresponding figures for the 55–64 age group are 21 percent (1947) and 41 percent (1974)—nearly a 100 percent rate of increase. During the same period, the rates for men in both age groups *declined.*

The 65+ group's participation rate has by and large remained the same, about 8 percent, with slightly higher percentages from about 1955 to 1965. Even among just the 65–69 year olds, the rate has remained basically unchanged.

In 1947, women made up only 23 percent of the 45+ work force, but by 1976, this proportion had increased substantially, to nearly 39 percent.

The greatest rate of increase in labor force participation has been taking place among married women. Commitment or attachment to work among married women may be becoming increasingly like that of their husbands, a possibility which deserves greater research attention.

From 1959 to 1974, the percentage of women in the age groups of 45–54; 55–59; and 60–64 who worked on a year-around, full-time basis (YRFT) has also increased sharply—with the greatest rate of increase occurring in the 55–59 age group.

Contrary to what has been happening to *men* in the 62–64 age group, there has been little decline in the percent of women of the same ages with some kind of work experience, and/or working on a year-round, full-time basis—this despite eligibility for retired worker benefits at age 62.

If opportunities for year-round, full-time employment are viewed as a desirable goal (since, for example, it means a higher income), then it is important to see how such factors as *education* affect those opportunities for older women workers. The proportions of each age group working YRFT in 1974 show a clear relationship to amount of schooling.

PERCENT OF WOMEN WORKING YEAR ROUND, FULL TIME, BY AGE AND EDUCATION, 1974

	25–34	35–44	45–54	55–64	65-plus
Total	42	44	48	37	3
Less than 9 years schooling	21	30	33	27	2
9 to 11 years	25	40	42	34	3
High school (12 years)	42	45	52	42	5
1–3 years college	47	46	49	43	6
4-plus years college	54	52	60	56	5

Source: Census Bureau, Current Population Reports, p. 60, No. 101, "Money Income in 1974 of Families and Persons in the United States," 1976. Table 58.

While the proportion working YRFT in each level of schooling peaks in the 45-54 age group, the important point is that within each age group, including the key 45-64 group of women, the higher the educational level, the greater the proportion of women working on a year-round, full-time basis.

It is equally important that in each of the levels of schooling, the *median income* of the older women, especially those 45-64, is equal to or greater than the income of younger women.

Finally, although the proportion of older women working year-round, full-time is generally lower than the proportion for men of the same age group, that proportion rises depending on level of schooling, The greater the schooling, the greater the proportion working YRFT.

The importance of marital status of older women regarding labor force participation rates can partly be seen in the 1969 Retirement History Study of the Social Security Administration. Despite the eligibility for retired worker benefits at age 62, one-half of the *non*married women were still in the labor force. If they were *widows*, the proportion was only 42 percent—in contrast to 62 percent of those *never* married. Unfortunately, the Study did not include married wives with previous or current attachment to the labor force. In any event, trends in participation (or retirement) rates warrant monitoring on a systematic basis over the short- and long-run, including the rates of married women in this age group.

More sophisticated research should also include consideration of educational and occupational levels—simultaneously with marital status—as factors associated with trends in labor force participation rates of this older female age group (for example, similar to the 1900-1960 analysis by Darian, 1972).

As stated already, the participation rate of women has been increasing over the past several decades. The greatest rate of increase has occurred in the case of *married* women—almost by definition, since the rates of participation among women of other marital statuses are already high. Using an approximation to a truly longitudinal method, analysis of the data indicate that from 1966 to 1976, the rate of increase (based on the "Stouffer Method" [1]) in participation of married women 25-34 years old in 1966 had increased—by the time this cohort was 35-44 in 1976—by over 32 percent. This was greater than for other women of the same age in 1966; greater for those 35-44 in 1966 and 45-54 in 1976, and for those 45-54 in 1966 and 55-64 in 1976—*regardless* of marital status.

Nevertheless, unmarried older women do have the highest participation rates. One major research and policy-related question here is, to what degree do unmarried women in the labor force remain in it, and thereby—as they grow older—enjoy greater prospects for upward mobility than married women who typically enter (or re-enter) the labor force at a later age? This possibility thereby places the older married female re-entrant (or new entrant) in what may come to be a disadvantageous position.

Furthermore, we have little information on the "job adjustment problems," if any, of the middle-aged housewife who, for a variety of reasons, enters the labor force and finds employment. For those previously employed, does this experience, facilitate the establishment and acquisition of new substantive and adaptive skills, as compared to those without previous job experience, and to those women of the same age but with long years of uninterrupted employment?

The higher the educational level, the smaller the gap between labor force participation rates of older married and other women. How far this development will go is still not clear, and requires regular research monitoring. This "gap-narrowing" qualifies the general view that there is less economic *need* for upper socio-economic groups (one proxy for which is years of schooling) of older married women to seek employment.

Is part of the explanation due to the differences in opportunity structures according to education?

Is it because higher education is associated with having fewer children, thus making such women more available for employment?

Are there other socio-cultural values involved—such as careerism—that distinguish the upper socio-economic groups of married women?

In what ways do all of these, and other factors interact to produce the higher participation rate of married women with greater education which, in turn, narrows the gap cited above?

Finally, what are the average retirement ages of such married women relative to all others—and to men as well? We cannot accept, without empirical research, the assumption that parity between the sexes—especially holding education constant—will produce parallel retirement plans and decision-making.

Comparisons between 1964 and 1974 data reveal that among married women 55–64 years old, participation rates in each ascending level of schooling achieved had risen, with the *exception* of those with four or more years of college completed.[2] For this latter group, the drop was quite marked (from 59 down to 50 percent, while the rate for other women remained relatively unchanged—thus increasing the gap).

Finally, it may be critical to explore the reasons for, and the implications of the general *increase* in participation rates for *married* middle-aged women (45–64), accompanied by a general decrease in rates among widowed, divorced, and separated women, over the past dozen years, even in the higher-educated groups.

Because the greatest rate of change in female labor force participation has been occurring among married women, it is important to determine the *extent* of their

[1] A measure developed by Samuel Stouffer, in his volumes on The American Soldier, that accounts for the fact that an increase from one level of percentage to some maximum percentage (such as 100 percent) will be affected by the size of the base percentage. It is a more sensitive measure, and more relevant than the one that takes a percentage at one time and uses the absolute percentage points between that one and the succeeding one as a proportion of the original percentage, i.e., Difference in percentage points from time A to Time B divided by Difference between 100 percent and Time A.

[2] Special Labor Reports on Educational Attainment of Workers, for 1964 and 1974. By 1976, the participation rate for this group rose, slightly, to 53 percent.

work experience, e.g., the percentage working part-time, or less than year-round full-time. From 1971 to 1975, according to work experience tables of the Department of Labor, the prop tirons of married women, by age, with *any* work experience who were employed *less* than 27 weeks, were as follows:

	1971	1975
All women, 16-plus	23.7	20.7
Married, spouse present	22.8	19.5
25–44	24.3	21.5
45–54	15.0	12.9
55–64	15.0	12.1
65-plus	30.9	25.8

Source: Special Labor Force Reports for 1971 and 1975, Department of Labor, Bureau of Labor Statistics.

Since these percentages are based only on those with work experience, it is not clear whether the downward changes are a function of an increase in full-time job opportunities, or of a decrease in opportunities in general due to cyclical changes, etc. This clearly is an untapped research topic.

Also, to our knowledge, little, if anything, is known about the relationship between (1) changes in the labor force participation rates of different age groups of married women (and/or proportions working or seeking full-time employment, etc.), and (2) the employment status of their *husbands.* While it is generally accepted that the rise in such rates must be associated with such factors as a rising educational level of women, decline in size of family, etc., we do not know the extent to which *husband's* employment status is also influential in this changing phenomenon. We should add, too, the influence of rates of change in *inflation,* insofar as efforts to maintain a given family standard of living requires the wife to seek employment or—if already employed part-time—to seek full-time work. The current longitudinal project by Sheppard and Rix (with support from the Administration on Aging)—focusing on persons 40–69 in two large labor areas with widely contrasting rates of unemployment—is partly designed to test the hypothesis that the husband's employment status may influence the labor force status of other family members.

In any type of research on older women in the workforce, it may not be sufficient merely to refer to statistics on "labor force participants," since such figures do not actually tell us how many women actually worked in any given year, i.e., work experience. This is especially true of middle-aged and older women. For example, in 1975, the female "labor force" figure was reported as roughly 37 million (all 16 and older), but work experience tables for the same year indicate that nearly 49 million worked for some period of time, a difference of nearly 16 percent.

More important, the older the woman (starting at age 60), the *greater* the discrepancy between the labor force size and the size of the female population with any work experience. The same is true in the case of men, incidentally, but the discrepancy is of a smaller magnitude, reflecting the sex difference in proportions working year-round and/or on a full-time basis. Furthermore, comparisons between 1970 and 1975 data suggest a *declining* discrepancy in the case of women, which may reflect the growing proportion of women working on more than a part-time, or part-year basis.

To repeat, labor force *participation rates* of women, by age, marital status and race, are one phenomenon: They should not be confused with data on *work experience.* More important, from the standpoint of eventual retirement income, are *years* of full- and/or part-time employment. But there is little systematic or periodic information on this topic.

The National Longitudinal Study of women—*if* supported long enough and with little attrition—could become one major source of such information. The type of research required, however, must ideally include women currently not in the labor force, or currently not employed, and must also be designed to reckon with the possibility of intermittent participation and employment (full- and part-time) in future years, prior to full and permanent retirement.

There are other aspects of the older woman worker topic which need research and policy attention, and which may contain the roots of potential problems. The major conceptual point regarding one of those aspects is that the relationship between marital status and labor force status among women as they become older may not be uni-directional. We cannot ignore the possible impact of employment

among women upon their marital status, and their eventual socio-economic status in later life. Many single women obtain satisfying employment and partly because of this, remain single for a *longer* number of years than otherwise, or may even remain single throughout their lives—again, partly because of the nature of their work experience.

Equally important, if not more so, many *married* women may obtain and keep a satisfying type of employment, and this fact *itself* might increase the odds for separation or divorce—thus making them "unmarried" for the rest of their lives. To the degree that family dissolutions are a critical problem for individuals and for society, the topic acquires a policy-implication significance.

There is, however, little in the way of research designed explicitly to test the hypothesis that labor force status is itself an "independent" variable in marital patterns and trends, including the phenomenon of divorce and separation. One research model might consist of longitudinal analyses of cohorts of young adults and middle-aged *employed vs. not employed* wives, concentrating on relative changes in marital status over an extended number of years. Data of a cross-sectional nature already exist on the labor force status of divorced and separated women, but they do not contain information regarding the relative *time* position of entry into the labor force and of change in marital status.

Finally, with regard to labor force participation, no attempt to carry out *projections* of participation rates of middle-aged and older women should ignore those factors that may function, over time, as possible deterrents (or conversely, facilitators) to their continued participation in the workforce, with special regard to socio-economic differences among such women. In discussions of this nature, the observations of Taeuber (1976) on projection efforts in general should be heeded:

"To the chagrin of forecasters and other seers and to the delight of the human spirit, the future cannot be foretold. . . . No single manpower projection, no matter how careful and sophisticated, can lay claim to much confidence that it portrays *the* future path. Policies need to be adjusted to changing circumstances, and so do projections. The activity of projection should be continuous and it should be focused on the delineation of multiple alternatives. The alternatives should represent varying perspectives on what is likely to happen and on what may happen as a result of various deliberate policy interventions."

To be sure, labor force projectors cannot be expected to know about all the various developments and problems that other social sciences may include in scenarios of alternative futures, but they should make use of some of those resources to identify the important, more plausible sets of alternative possibilities, and to work out the major *indirect* effects.

For example, in professional and technical classes, a middle-aged or older husband-wife family may have to make a trade-off between dual employment and higher taxes required by the higher joint income of the two. In such cases, where the couple decides the marginal return is not sufficient to warrant a second person working (both of them on a year-round, full-time basis), who shall stay in the labor force? Who shall drop out? Or might we not also see a new pattern emerging, one in which the two take turns participating in the labor force, as another variation of the notion of alternative work schedules?

As another example, among the older married working women in the future, will it be as safe at that time, as it apparently was nearly ten years ago, to assert that retirement for them will be defined in terms of their *husbands'* withdrawal from the labor force? This was a major reason given by the Social Security Administration for excluding married women from their Retirement History Study, begun in 1968.

As of 1966, in the NLS sample of middle-aged males, nearly one-half of the whites and nearly three-fifths of the blacks reported working wives. This survey, because of its longitudinal nature, should be a valuable source of findings on (1) relatively recent patterns regarding such an assertion, and for (2) suggesting new avenues and hypotheses for research on future cohorts of middle-aged husband-wife labor force members.

Older female heads of families. Marital status—whether married, divorced, separated, widowed, or never married—is an important factor in the labor force participation of women, but among the non-married, there are female *family heads.* Middle-aged and older women in this classification may have been experiencing different patterns of labor force participation—and special problems associated with those patterns—compared to others. From 1970 to 1975, the labor force participation rates of 45–64 year-old female heads of families *declined*—in contrast to those of married and all other women (McEaddy, 1976; Employment and Training Report, 1977).

Equally important, among family heads only, this decline occurred only in 45 and older age groups.

There are no definitive explanations for these contrasting trends and patterns, nor anything that tells us much about the problems, if any, accompanying the trends and patterns. What is there about such middle-aged and older female family heads and their circumstances that explains their declining participation rates, relative to younger female heads, and to other women of the same ages? Is the decline indicative of special difficulties faced by them and their families? Once such information is obtained through careful research efforts, special programs and policies could then be developed to meet those difficulties, if indeed they exist.

Unemployment duration and discouragement. Once unemployed, middle-aged and older women remain unemployed longer than their younger peers, just as in the case of men. From 1973 to 1976, the proportion of older women unemployed for 15 or more weeks increased at a greater rate than for other age groups—but still slightly less than for older men. But by 1976, for both older women and men, the long-term employed were at least 42 percent of all older unemployed—in contract to approximately 30 percent for all others.

Because of their generally lower number of UI eligibility weeks, older women are also disproportionately among the UI exhaustees, and thus perhaps more likely to become "discouraged workers," i.e., labor force "drop-outs."

In the older studies of workers subjected to plant shutdowns and mass layoffs, it was generally found that older women were much more likely than older men to cease job-seeking activities altogether, or to persist at a lower level than in the case of men. There have been few studies of such situations in the past five years or so, but one hypothesis would be that the extent of continued job seeking persistence among older women in similar situations would be greater than in the past. This hypothesis is based on the assumption that today's female labor force—including the older segment—has a greater attachment, for economic and social-psychological reasons, to the labor force than in the past.

The late entrant. We have already stressed the importance of continued, and well-paying, employment in general for the ultimate retirement status level of Americans. The principle applies more directly in the case of women (and for disadvantaged minority groups, too). Even with the improved mortality rates of older men, women can still "count on" outliving their spouses, and thus exposed to higher risks of low status in their retirement years. The longer a person lives, in other words, the greater the unmet needs. We should add to this factor the implications of an apparent trend toward never-married and divorced women, a phenomenon which portends new job-related problems for women.

Apart from the general issue of sex-bias in the occupational structure of the labor force which exacerbates the current and future job-related problems of middle-aged and older women, another source of these problems lies in the large number of women who, in middle-age, enter the labor force for the first time, or after many years of only "home-making" experience.

The extent to which women enter the labor force at relatively young ages, and *remain* employed, should, of course, tend to reduce this problem. It is incumbent, therefore, that research on trends in proportions who are long-term employed, by different age groups, be a regular component of the Department's activities. This does not rule out, however, the strong possibility that for many women over the long-term future, first-time entry (or entry after an extended period of non-attachment to the labor force) will continue to warrant strong research and program attention. The fact that the general educational level of women has been improving, and will continue to improve, constitutes (1) an ameliorative facter in improving the job chances of such new entrants; and (2) a challenge, in that such higher-educated women may face problems of *under*-employment—i.e., employment in types of jobs not commensurate with their levels of education and the expectations that such education usually create.

But for some time to come, we will still be faced with the "displaced homemaker" problem, and that of all middle-aged and older women re-entering or entering for the first time, the labor force. They may frequently need special training because of their limited work experience.

On the research side, there may be a need to identify the types of "deficiencies" for which such special training would be designed—including training in more than the substantive skills.

Congress has, in recent years, been considering legislation (similar to that already existing in some states) which would provide special assistance to what has been called the "displaced homemaker" population, i.e., women who—because

of widowhood at an early age, or divorce and separation—desire and need employment. This assistance would consist of, among other things, special counseling, training, and job development.

Without waiting for such national legislation to be passed, the Department could, at the present time, support projects designed to evaluate such few ongoing programs as do exist, for example, in California, and Maryland, in order to learn critical lessons from such experiences as a means of being better prepared to design more effective nationally legislated programs, once passed.

Social Security. Another job-related problem of women is that they are treated "equally" with men as far as "years of forgiveness" for interrupted work experience or low earnings years are concerned, in calculating retirement benefits. Women's rights advocates point out that the maximum of five years lowest earnings may have been reasonable in the case of men, but that the special labor force status of women is such as to result in many more years of such earnings levels.

As women enter the labor force on more than an intermittent level, this problem will become somewhat attenuated, but will *proportions* of women with such regular labor force attachment and employment reach—at least in the intermediate future—those for men?

Here too, is a topic for research attention. While the problems facing the Social Security system are not directly those of the Department of Labor, some types of cooperative policy research analyses (with an aim at alternative solutions) might be carried out.

Middle-aged and older women in—or seeking to enter—the labor force not only face the obstacles encountered by their age peers among men, such as stereotypes regarding work performance. In addition to the "ageism" hindering their chances in the labor market, they face also the "sexism" encountered by women in general. Other complaints registered by advocates for the job rights of women include the apparent penalty paid by married women as far as entitlement to retired *worker* benefits are concerned, under Social Security—a reflection of the "cultural lag" surviving from the time of the passage of the Social Security Act when it was taken for granted that few married women would work for extended numbers of years, and that the only protection they needed was as *widows* or wives of retired males. Thus, today, according to these critics, they do not accrue, upon retirement, their full benefits as retired *workers.*

On the other hand, even with an intermittent work career, her benefits as a wife can be larger than if she had never worked at all, even though her earnings were subject to deductions for Social Security contributions.

Much of the problem is rooted in the original and basically still prevalent principle (and financing) of Social Security—namely, that it is a form of "insurance," defined as a payment (a *transfer* payment, and not an annuity) to a previously employed person after a certain age (now 62) in the *event*—the contingency—of no employment.

Defenders of the current Social Security system point out that "it is not correct to argue for . . . changes on the ground that women workers as a group get less for their contributions than do men workers as a group." [1] This does not address the issue of whether some women—especially working wives—have a legitimate complaint. As a research topic, this issue is important if only to delve into the degree to which such inequities, if they exist, function as disincentives among women to enter the labor force in any meaningful way.

This topic is thus related also to the adequacy or accuracy of projections (and the assumptions used in such projections) concerning labor force participation rates among women, especially married middle-aged and older ones. The Social Security Board of Trustees report of 1975 projects that "ultimately" (no date specified) the female participation rate will be about 73 percent of the male rate. Such projections call for regular assessment and re-examination, as already suggested.

Older minority women. Currently, the occupational structure of middle-aged and older female blacks shows a much lower socio-economic profile than the structure of comparable white women. The critical research topic here is to determine, over the ensuing decades, the degree and direction of changes absolutely and relatively, as the current "new generation" of female blacks (and some other minority women)—with their improved educational achievements, reduced fertility rates, etc.—move into their older years.

---

[1] U.S. Senate Special Committee on Aging, Women and Social Security: Adapting to a New Era, October, 1975.

We do know, for example, that much smaller proportions of young female blacks, compared to their older ranks, are in such low status jobs as domestic servants, and that their educatioual achievements are far superior to those of older black women—all of which suggests the *possibility* of an improved status in the future. But there is a need to distinguish between improvements over a previous generation of women of the same race, and improvements relative to women of other races.

VIII. OLDER MINORITY GROUP WORKERS

In the past, little attention was paid to the special and unique job-related problems of older blacks and other minority groups—partly because it was asserted that they were preponderantly in rural and farm areas where unemployment was little studied (apart from problems of low income from rural-farm pursuits); partly because the civil rights movement had not yet succeeded to the point of raising the consciousness (and conscience) of the majority society. Another extended viewpoint was that since so few blacks survived into the upper ages, there was no problem worth considering!

Current facts and projections for the future no longer justify such neglect. For example, in 1975, there were nearly 2.6 million nonwhites 62 and older; more than 1 million 55 to 59; and nearly 4 million, 40–54 (2.3 million; over 900,000, and 3.5 million blacks respectively).

By 1990, slightly more than one decade from now, these figures will rise to about:

[In millions]

	All nonwhites	Blacks only
62-plus	3.7	3.2
55–59	1.3	1.1
40–54	5.5	4.5

The rate of increase in such numbers is actually projected to be higher than for whites or similar ages. These figures assume no marked improvement in mortality rates, an assumption which can no longer be accepted with as much sanguinity as in the past. The median age of the black population in 1975 was only 23.4 (compared to 29.6 for whites), but the projected median age for 1990 is 28.5 for blacks (compared to 33.6 for whites)—reflecting declines in fertility rates, but with no account taken of possible improvements in mortality rates for middle-aged and older persons.

Just the increase of roughly 1 million additional blacks 40–54 between 1975 and 1990 will present a special challenge to the country's general problems of employment of its middle-aged workers. At the very least, it suggests the importance of special research, policy and program attention directed *now* to those blacks and other minority group members who are in their 30's and 40's—the future 40–54 year olds of a decade from now.

Preventive measures, unfortunately, receive a lower priority than those measures designed to cure and alleviate the job-related problems of today's older persons, regardless of ethnicity. But for such minority groups, the generalization is especially pertinent. The current emphasis on the "welfare population" can be interpreted partly as a cost of past failures to cope with the job-related problems of such persons at earlier ages. The magnitude of the future welfare population problem will depend in part on what is done with and for *current* critical segments of the "young middle-aged" in minority groups.

It is difficult to accept the explanation that *voluntary* retirement, for instance, is the critical factor involved in the far greater decline in labor force participation rates among nonwhite males—compared to whites—from the time they were 35–44 in 1956 to the time they were 55–64 twenty years later, in 1976.

This is apart from the greater mortality rate among nonwhite males over these two decades—itself partly due to job-related problems. The latter phenomenon is also a critical research, program, and policy matter.[1]

[1] By 1976, the total 55–64 nonwhite male population was only 77.5 percent of the corresponding 1956 35–44 population, as contrasted to 86.1 percent of the whites, an indication of the lower survivorship rate of the nonwhites.

A report by the National Center on Black Aged (1976) highlights the special labor force problems of older blacks, including the following:

—Higher labor force drop-out rates.
—Greater involuntary part-time employment.
—Few, if any, local black sponsors of such limited programs as Title IX programs.

Much of that document is devoted specifically to the issue of participation by older blacks in job programs, a topic of a separate section in this report.

"Double jeopardy" is the term frequently applied to the situation of older black workers. As one example, while white workers 55–64 experienced an increase in labor force participation in the 1975–76 "recovery," the opposite—a decrease—occurred among blacks and others (the BLS tables in the Employment and Training Report do not separate other racial groups from blacks, but the latter constitute the vast majority of that category).

Actually, the decrease took place among black *males*, not females. The 55–64 year old nonwhite male participation rate fell by three full percentage points from 1975 to 1976—in contrast to a mere 0.4 decline point for black *females* of the same age group; a decline of 1.1 point for white males; and only 0.1 point for white females.

The reasons for such differentials still need exploration and warrant continued research.

Rates of unemployment also are critical, and as the accompanying table reveals, only the nonwhites in the 55–64 age group—in contrast to their white peers—experienced an increase in unemployment from 1975 to 1976, otherwise a period of job "recovery."

Persons 65 and older are excluded from this table because of the age-heterogeneity of that category—a point which needs correction in future statistical reporting series, since it should be useful to ascertain rates for such age groups as 65–69, and 70–74, but especially the 65–69 group. Furthermore, since men and women can retire as early as age 62 under Social Security, even the 55–64 classification should be broken down into 55–59; 60 and 61; and 62–64—just as the Department's work experience tables have done for some years. (By 1990, there will be at least a 36 percent increase over 1975 in the number of nonwhites 60–69 years old.)

ADULT UNEMPLOYMENT RATES BY RACE, SEX, AND AGE, 1970–76

	1970	1971	1972	1973	1974	1975	1976
Al l16-plus							
White males	4.0	4.9	4.5	3.7	4.3	7.2	6.4
White females	5.4	6.3	5.9	5.3	6.1	8.6	7.9
Black and other males	7.3	9.1	8.9	7.6	9.1	13.7	12.7
Black and other females	9.3	10.8	11.3	10.5	10.7	14.0	13.6
25–34:							
White males	3.1	4.0	3.4	3.0	3.5	6.3	5.6
White females	5.3	6.3	5.5	5.1	5.7	8.5	7.6
Black and other males	6.1	7.4	6.8	5.8	7.2	11.9	11.0
Black and other females	7.9	10.7	10.2	9.7	8.6	12.9	13.0
35–44:							
White males	2.3	2.9	2.5	1.8	2.4	4.5	3.7
White females	4.3	4.9	4.5	3.7	4.3	6.6	5.8
Black and other males	3.9	4.9	4.8	4.0	4.1	8.3	7.1
Black and other females	4.8	6.9	7.2	5.3	6.7	8.6	8.1
45–54:							
White males	2.3	2.8	2.5	2.0	2.2	4.4	3.7
White females	3.4	3.9	3.5	3.1	3.6	5.8	5.0
Black and other males	3.3	4.5	3.8	3.2	4.0	9.0	7.2
Black and other females	4.0	4.2	4.7	3.7	4.3	6.7	6.1
55–64:							
White males	2.7	3.2	3.0	2.4	2.5	4.1	4.0
White females	2.6	3.3	3.3	2.8	3.3	5.1	4.8
Black and other males	3.4	4.7	4.6	3.1	3.6	6.1	6.2
Black and other females	3.2	3.5	4.0	3.2	3.3	5.3	5.5

Source: "Employment and Training Report of the President, 1977," table A-20.

More important in this context, however, is the fact that from 1973 to 1975 (the start and end of the recent "recession"), black males in each of the age groups in the 25–64 range experienced a *doubling* of their unemployment rates which were already high as of 1973; for the 55–64 group the 1976 rate (which *in general* declined) was even higher than in 1975. The same was true, too, of black females. Age and race thus combine to produce the double jeopardy.

Such job-related problems of older minority groups may be further aggravated by the possibility of their having more dependents than whites. Among the 53–57 year old black males in the NLS sample, for example, nearly 12 percent still had three or more children under 18 in 1966, still living with them, in marked contrast to only 4.3 percent in the case of white males of the same ages. Among Spanish-speaking and other minorities, the proportion may be even higher.

To be sure, white males 25–54 also experienced a doubling of unemployment rates from 1973 to 1975, but the rates were lower to begin with, and more important, *declined* from 1975 to 1976. Furthermore, the rate for white males 55–64 did not double, unlike the case of black males, from 1973–75, and they experienced a slight decline in unemployment after 1975.

One of the crucial dimensions of the double jeopardy status of older minority workers can be seen in the fact that even for the NLS sample of "healthy" middle-aged blacks (45–57 in 1966), unemployment in that year had a greater statistical relationship to nonparticipation (i.e., withdrawal from the labor force) *seven* years later than in the corresponding group of whites. In both cases, for both whites and males, the relationship held, but more so for the blacks.

In both cases, the finding points to the need to consider "exogenous" influences on the "decision to retire" and also the need to cope, when conducting research on the impact of unemployment, with the "lag" factor which suggests that a process is involved which cannot be captured through cross-sectional kinds of research. It should be noted that labor force withdrawal in this particular analysis (Sheppard, 1976) refers to withdrawal *before* the age of 65 (EWR). The older the unemployed individual, furthermore, the higher the early withdrawal rate—even for those only 45–47 years old in 1966. Again, the relationship was greater in the case of black males.

Health and employment status as of 1966, when added to the race variable, clearly shows the disadvantaged position of black males, as demonstrated by the following tables showing early withdrawal rates (including death before the age of 65).

1966 employment, race, and health status

Rank:	*EWR by 1973*
1. Employed healthy whites	19. 1
2. Employed healthy blacks	22. 5
3. Unemployed healthy whites	29. 5
4. Employed unhealthy whites	33. 9
5. Unemployed healthy blacks	37. 5
6. Employed unhealthy blacks	39. 2
7. Unemployed unhealthy whites	40. 0
8. Unemployed unhealthy blacks	63. 2

Presenting the findings in another way, (1) among the workers employed when interviewed in 1966, and (2) among those unemployed that year, the 1973 EWRs were as follows:

Race and health status	Employed in 1966, EWR	Unemployed in 1966, EWR
Healthy whites	19. 1	29. 5
Healthy blacks	22. 5	37. 5
Unhealthy whites	29. 5	40. 0
Unhealthy blacks	39. 2	63. 2

The higher rates of unemployment and of poor health status (as measured by elf reported estimates of work-limiting capabilities) among black middle-aged s nd older males are reflected in this table, and call for special research analyses and appropriate program responses to cope with the special problems of that group—including measures designed to intervene before such men reach their 40's and 50's. The fact that the early withdrawal rate of employed healthy blacks is not much below that of comparable whites reinforces the importance of both health and employment status.

Relatively good health status, among older blacks, however, does not necessarily mean that their labor force participation rates will be similar to that of whites. Their poor health status may be offset by a greater economic need to remain in the labor force.

The NLS data file contains a rich source of information concerning some aspects of the factors processes involved, that is, the experience and attitudinal changes

in the intervening years, and research should be encouraged on the work-capacity and employment aspects of the labor force experience of blacks and other minorities as contrasted to that of whites.

Future Years. Given the reported sharp improvement in the occupational gains of young blacks in recent years, it is important to carry out longitudinal studies to determine whether such gains are not only sustained, but to ascertain the extent to which such phenomena as changes in early withdrawal rates occur—and in which direction—among minority groups, relative to whites, and by sex. The NLS samples of women, if continued to be surveyed, would be a major contribution to this effort.

Furthermore, a new sample survey of men 45–59, beginning no later than 1979 or 1980, would provide information of an important nature and quality concerning "generational" differences, if any, in the labor force and life status of blacks relative to white middle-aged and older workers. In other words, in what respects are the 45-59 cohorts of, say, 1980, different from those of 1966?

Part-Time vs. Full-Time. The work experience data available through the Department of Labor (BLS) have not, to our knowledge, been as fully exploited for research and policy purposes as they might be, a point made in other parts of this report. In the case of minority groups, for example, in 1975, nearly 16 percent of nonwhite males 45-64 years old worked either in full-time jobs for less than 27 weeks or at part-time jobs, compared to 10 percent of white males. Corresponding figures for females were 39 percent in the case of nonwhites, versus 36 percent for whites. For both male and female nonwhites, the proportion working only part-time was greater then among whites. Compared to the 25–44 age groups, the part-time proportion was greater for the older persons, especially among non-white females.

Unfortunately, these age groupings are too broad for any usefulpolicy-reseiarch purposes, and furthermore, information is lacking regarding the degree to whch such work experience on less than a year-round, full-time basis is voluntary vs. involuntary.

Furthermore, the percentages reported here are based on only those with any work experience at all. Perhaps a more sensitive measure would be derived from using as the basis the *total* population in each race and age group (with and without work experience). This failure to use a total population base may serve to obscure the discouraged worker phenomenon in such age groups, especially when trend analysis included cyclical changes in the general level of employment opportunities.

Underemployment. Anecdotal literature is replete with case studies of black males who achieved higher education degrees in the 1940's and '50's, but remained victims of race discrimination in the world of employment; they thereby became "underemployed." No study of a systematic nature has been carried out to find out if the recent progress in equal employment opportunities has produced any marked effect on their current employment status levels.

Has their older age become the new barrier for any upward mobility?

Have they become "locked in" (because of pension rights and other equities built up over time), and thus reluctant to seek upwardly mobile opportunities?

Has the long-term experience with such underemployment produced an "adaptation" on their part, of a form of resignation?

To what extent does the same phenomenon occur even *today*, and with what different implications for the future?

Each of these questions needs to be examined within specific industries, occupations, and regions. The NLS occupational mobility items would be one general source, in both the 30–44 female sample, and the 45–59 male sample, for exploratory findings.

The NLS sample should be analyzed to seek answers to these and related questions. The 1974 report (Parnes, et al., 1974) on the 1966–71 data does not shed any direct light on the issue, but the material on voluntary job-changing during those five years (with no White-Black comparisons) may provide some suggestions for further research on the questions, for example:

(1) Education was positively associated with voluntary job-changing; pension-coverage, *negatively* associated.

(2) Job satisfaction with new job among Black voluntary job-changers increased over satisfaction with previous jobs, much more than among White changers.

Policy dimensions of life expectancy differences. One of the issues among researcher and advocates concerning problems of the minority aged emanates from the lower life expectancy at birth of racial groups such as blacks. Accordingly, such persons argue that special provision should be made in the Social Security system

to rectify this disadvantage—either in the form of even *lower* retirement ages for such groups, and/or *higher* benefits for those persons retiring at the same age as the White majority.

Apart from the administrative and cost problems entailed in such proposals, there remains the issue of whether or not, among the *older* black workers (i.e., those who survive into the upper ages), such differences in life expectancy—say, at 60 or 65—are as great as implied. According to the National Center for Health Statistics, life expectancy at 50 and 65—as of 1973—for white and nonwhite males and females was as follows:

	Whites	Blacks and others
Male:		
Age 50	24.3	22.4
Age 65	13.7	13.4
Female:		
Age 50	30.3	27.9
Age 65	18.1	17.5

Source: National Center for Health Statistics, Vital Statistics Report, vol. 28, No. 11 supplement, February 1977, table 2.

This table suggests that by age 65, white-nonwhite "gap" among males is nonexistent, although among women, the life expectancy for whites is greater. But none of this pinpoints the specifics of life expectancy among *workers*—or those retiring from the labor force—by race, sex, and age. As long as the industry-occupation mix is not "equal," factors such as mortality and health (as affected by the nature of the job, for example), and "retirement resources" (as affected by pension eligibility, number of dependents, etc.), may also continue to be unevenly distributed. Regardless of the legal and financing dimensions of the issue of differential benefits and retirement ages under social security, Black "caucuses" of/and for the aged can be expected to keep the issue alive.

All of these and related facets raise the question of the degree to which EEO laws, regulations, and enforcement will move minority groups into industries and occupations which (1) improve their pension-coverage status; (2) raise their total life work experience and wage levels; (3) impact on their health status as a function of the nature of the job—and thus their life expectancy, etc. Current research should make this one of its major focuses, and simulation models might be constructed to project future conditions regarding these phenomena.

As an example of the "inequality" dimension, in 1966 (according to the NLS data), among men 48–52 years old, (1) only 15.7 percent of the blacks were craftsmen and foremen, compared to 26.3 percent of whites. (2) Their "health" rate was lower than for whites. (3) On the other hand, their death rate by 1973 was no different—perhaps even better—compared to whites. (4) Among those still alive in 1973 (55–59 years old), their "unable to work" proportion was about the same as for whites.

But, to repeat, a much smaller proportion of black males was in this occupation. As a result, for all blacks 48–52 in 1966, compared to their white age peers, their early withdrawal rate (including deaths) by 1973 was much higher than for whites. And among those still alive in 1973, their "unable to work" proportion was higher than for whites. In general, such data imply the difference it makes to have an equal white-nonwhite occupational distribution. It should also be noted that as of 1966, few blacks—if any—in the 48–52 age group were in managerial, official, or proprietor, sales and clerical occupations.

Another inequality dimension can be seen in (1) the relation *pension* coverage of whites and blacks in the NLS data on 45–59 year old males; in 1971, 72 percent of the white, but only 59 percent of the blacks, were employed in establishments with pension programs. (2) In 1973, 70 percent of whites 62–64 were retired with a pension, compared to only 52 percent of blacks of the same age.

Many of the research and program recommendations of a general nature discussed throughout this report should be applied, naturally, to the special subgroups in the population. For example:

(1) Trends in proportions affected by mandatory retirement age policies.

(2) Similarly, measures regarding other forms of involuntary retirement, *before* any mandatory retirement age.

(3) Extent of voluntary vs. involuntary part-time employment—and the "universe of need" for voluntary part-time employment.

Other elements of the minority older worker topic which contain research, policy, and policy suggestions include:

The impact of union vs. nonunion membership. One study (Parnes, et al 1975) indicates that middle-aged black operatives who are not union members earn at least 25 percent less than comparable whites while the differential between black and white union member operatives is much less (about 10 percent). But this latter differential itself warrants special attention.

The importance of labor market information. For example, most jobseeking studies indicate the importance of job-openings through friends and relatives or other informal mechanisms. Typically, whites are more familiar about such knowledge, and the challenge here relates to how such information can be improved among minority middle-aged and older jobseekers.

Effects of workplace "outmigration" from central cities. To the degree that restrictions on access to housing in suburbs and in urban areas to which industries might relocate continue to be greater for minority groups, the drift in the direction of greater and greater concentrations of older persons in the central cities constitutes not only a serious problem for older minority jobseekers, but even for the central city governments as well. New trends, if any, in the migration patterns and opportunities, require special research attention.

Changes in the industry-occupation composition of middle-aged and older minority workers. Independently of the characteristics of such persons, the dynamics of change in the Nation's industry-occupation mix will serve both to improve and to damage the job-related problems of minority groups, especially the middle-aged. The effects of such changes in this regard should be a major focus of empirical and projection studies.

Greater union contract coverage. The NLS data indicate that, contrary to some expectations, a higher proportion of middle-aged and older blacks are covered by collective bargaining contracts. If this is so, and these contracts provide for some form and degree of seniority rights, such contract coverage becomes a valuable beachhead for these workers, not available to whites in general. The facts do not contradict, however, that among only whites and blacks covered by contracts, the former may have higher seniority (including senority restricted to more desirable jobs and departments).

How will blacks fare, in the future, relative to other *non-unionized* blacks, in the same occupation, and in other occupations? What will be the trends *vis a vis* unionization and its presumed benefits among *today's younger* blacks (and other minorities, too), as they themselves become middle-aged or older?

Effects of Rulings on Seniority Coverage. In recent years, in the steel industry for example, restrictions of seniority rights within only departments (e.g., in foundries) have been abolished by court action. What have been the effects of greater *company*-wide seniority rights in the internal labor market experiences of minority workers? How widespread is the pattern of company-wide seniority rights, an in what ways are minority group middle-aged and older workers benefitting from such a pattern?

Relationship of type of job to health status. While work environment attributes contribute to the health status of all workers, in what ways is that status among minority middle-aged workers any better or worse, given their current lower positions, in general, with regard to their location in types of industries and workplaces characterized by greater risks regarding safety and health? Are OSHA's activities having any effect on this phenomenon?

Other minority groups. The fact that this report devotes little space to minority other than blacks should not be interpreted as a reflection of any intent to place a lower priority on their job-rated problems. Blacks, however, are the dominant minority group in this country, and have been the most politically effective in expressing their unmet needs in the employment area. But even for this groups, attention to the middle-aged and older segments' job-related problems has been only recent. Detailed, systematic statistical reporting for blacks only (as contrasted to "nonwhites" as a statistical category) is only beginning to improve.

Departmental research should be systematic in disaggregating such data, even if this requires over-weighting of their representation in samples (such as in the case of the National Longitudinal Survey). In special local areas, where it is known that *other* minority groups are concentrated more than in other areas (such as Filipinos, American Indians, and Spanish-speaking persons), the same principle should be applied.

Unfortunately, national data of a detailed nature, by age, are lacking regarding such items as participation rates of other minority groups (e.g., those of Spanish origin), according to age and education, for example. As a case in point, the 1975 BLS report on *Educational Attainment of Workers, 1974*, provides a participation rate table, on persons of Spanish origin using the broad age span of 25–54, by sex and education, which thereby obscures age differences, if any, within that span. This makes it impossible to make meaningful comparisons between specific age-sex-education-ethnic groups *vis a vis* whites and blacks. Furthermore, the samples for the upper age groups (55–64, and 65-plus) are too small for any reporting purposes—part of which, of course, is a reflection of the very low educational achievements of those age groups.

IX. OLDER WORKERS IN RURAL AREAS

Typically, rural areas are characterized by work forces older than those in the larger urban areas—attributable partly to the greater likelihood of young persons to emigrate from them because of restricted job opportunities. The range of severity of rural older worker problems is affected by the latter, too, but also by type of rural area (e.g., the midwest wheat belt vs. Appalachia, and the rural South). Generalizations on this topic are not too secure.

Nevertheless, it may be safe to say that in most instances, the traditional structure and dynamics of job opportuniteis in rural areas are such as to increase the odds for middle-aged and older workers in those areas to move into a poverty status by the time they reach 65 or more. This may be especially true in the case of rural *nonfarm* population.

Departmental and other governmental concern with the rural older worker should probably concentrate more on programs, and demonstration projects, than research—except to the degree the latter is required as part of programs and demonstration projects, including evaluation.

Given the limited opportunities in many, if not most, rural areas for employment in the private sector for persons of all ages, emphasis should be placed on greater involvement of the local rural public sector agencies, especially with regard to the older worker. Limited experience with Title IX programs in such areas suggests that public sector opportunities might be expanded.

In one effort, carried out in several counties (by the American Association of Retired Persons), jobs were developed for persons 55 and older as school matrons, teacher aides, hospital and library aides; assistant school bus drivers—and even maintenance mechanics. Other examples include welfare agency case worker assistants and commodity distributors.

The benefits for the individual persons employed, the agencies employing them, and the families of such persons should be obvious. But there is also a community benefits side that requires consideration and perhaps evaluation. For example, as a result of employing elderly persons as pickup truck drivers to bring children to county health clinics, the number of children and of clinic visits increased—presumably with positive effects on the health status of the children. Even the Food and Drug Administration improved its rural consumer education program by enlisting the older persons as part-time employees.

On a more general policy level, serious consideration should be given to relatively *permanent* rural community service employment programs for older men and women. For middle-aged rural workers, public *works* programs might also be given greater emphasis. Without any additional public works programs in such areas (when truly needed, of course), there may be a tendency to disregard that age group in favor of younger persons still remaining in the rural areas.

In any event, all of these kinds of programs should be studied, with a focus on income effects; migration rates and patterns of program participants *and* their younger family members.

Census reports suggest that starting in the early 1970's, the rate of growth in metropolitan areas declined and that *non*metropolitan areas continued to gain populations from the former (Bureau of Census, January, 1977). "Many 'rural' counties, particularly those with a large State university or an especially recreation area," show a new *in*migration from other parts of the country.

To our knowledge no special focus has been directed to the impact of this phenomenon on the socio-economic status of the older age groups in the native, nonmigrant population of those rural areas. Ostensibly, such areas should be experiencing a growth—at least a stabilization—of employment opportunities, to the benefit of middle-aged and older persons, as well as to that of younger ones.

But no attempt has yet been made to verify this hypothesis. At the very least, such information should help in the fine-tuning of policies and programs designed to assist rural-area middle-aged and older persons in their job-related problems.

Contrary to stereotypes, older persons do nevertheless migrate—especially if unemployed. Therefore, in addition to the phenomenon of older rural nonmigrants and their related job problems, there remains the equally significant phenomenon of older rural migrants to urban labor markets, and the differences over time (as persons "age") between migrants and nonmigrants in places of destination. It should be obvious that an integral part of a systematic effort to ease the problems of rural persons in general is the facilitation of adjustment to the urban labor market among those who do not stay in rural areas, but rather migrate to the former. (Peterson *et al*, 1977).

In this connection, little research attention has been given to the characteristics of the place of *destination* of migrants from rural areas. Sheppard (1971) has reported on the labor force status and experience of young and older rural migrant *females* (white and black), according to size of SMSA, using the 1967 Survey of Economic Opportunity data sources. He found, for example, that among white females, the larger the SMSA the greater the opportunities for year-round full-time work for those 45-plus. The same was true for blacks of the same age group. At the same time, the proportions of older black rural migrants working no weeks at all increased, according to SMSA size. This was *not* true in the case of *white* rural migrants 45 and older.

Equally, if not more important, the occupational structure in 1966 among older black rural migrants reveals greater opportunities in the largest SMSAs (over 750,000). This is dramatically illustrated by the fact that the proportion of older black women employed as domestic servants was much less in the largest SMSA's, compared to those with populations under 250,000 and 250–750,000. Furthermore, while the proportion of older rural migrants employed in this low-status occupation was higher than for older "native urbanites" (those born in the SMSA where interviewed) in the smaller SMSA's, this difference disappears in the largest SMSA's.

Finally, as a single index of family socio-economic status, the "poverty rate" among *white* older rural migrants, the poverty rate was higher than for white native migrants, regardless of sex of SMSA (although the rate is lowest for both migrants and native urbanites in the largest SMSA's).

But for black females, the pattern is the exact opposite: older rural migrants, especially to SMSA's over 250,000, had *lower* poverty rates than their counterparts who had always lived in the urban area where interviewed.

The reasons for this latter finding still need to be explored. Education may be a factor, given, given the finding by Sheppard that both black and white rural migrants reported more years of schooling than native urbanites.

In addition, this type of research focus requires updating, given the fact that these findings are at least ten years old, and economic changes, as well as changes in the composition of the populations, have taken place, and will continue to do so.

MEDI-GAP: PRIVATE HEALTH INSURANCE SUPPLEMENTS TO MEDICARE

THURSDAY, JUNE 29, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to call, at 9:40 a.m., in room 457, Russell Senate Office Building, Hon. Lawton Chiles presiding.

Present: Senators Chiles and Domenici.

Also present: William E. Oriol, staff director; Kathleen M. Deignan, professional staff; Garry V. Wenske, assistant counsel for operations; Letitia Chambers, minority staff director; David A. Rust, minority professional staff; Theresa M. Forster, fiscal assistant; Madonna S. Pettit, research assistant; and Pam Klepec, clerical assistant.

OPENING STATEMENT BY SENATOR LAWTON CHILES, PRESIDING

Senator CHILES. We will convene our hearing.

A few weeks ago, when this committee opened hearings on the sale of private insurance policies to the elderly, I was distressed to hear from consumers and State insurance commissioners that many older Americans were clearly being taken advantage of by unscrupulous insurance agents eager to make high commissions.

We were also distressed to hear that in some cases insurance company policies encourage oversale and misrepresentation of health insurance policies to the elderly—while the insurance company at the same time does not take the responsibility for its own agents.

RESPONSE TO FIRST HEARING

As one result of that hearing, additional refunds have been made to some consumers, and inquiries are being made about agents who figured in earlier high-pressure sales.

We also received much mail—from consumers, from insurance commissioners, and from insurance salesmen. Their letters show that these problems are not limited to the situations described in the earlier testimony.

We have heard of insurance salesmen offering door prizes at senior centers and other programs for older Americans to obtain membership lists—lists which are then routinely used to sell insurance policies.

Sales agents have described company directives requiring them to sell new policies on every service visit, to write new policies rather

than to renew current ones, and to delete medical histories on new policy forms.

We have also had reports of companies routinely denying claims when they first come in—taking the better-than-average chance that the elderly policyholder will not challenge their judgment and resubmit a claim.

Relatives have written who were outraged when they discovered an elderly parent with many insurance policies and large accumulations of canceled checks to insurance companies. One from Marathon, Fla., said:

> Last spring, I learned that my 88-year-old aunt * * * whose income is less than $5,000 per year * * * had been sold more than $10,400 of health insurance in approximately a 1-year period.

Several expressed great frustration at knowing how to find good supplemental health coverage for their parents. Some related long stories of visits and letters to State insurance commission offices and to State consumer protection offices—only to be told that there was nothing that could be done about getting refunds on policies they felt had been sold under false pretenses.

Another of these letters came from Mr. Wiley Cheatham, a district attorney in Cuero, Tex., who told us that he had seen, and prosecuted, many cases much more aggravated than those the committee heard at our earlier hearing. We will be hearing from Mr. Cheatham this morning, as well as Mr. C. L. Woodard, a U.S. Postal Inspector from Houston, Tex., who assisted Mr. Cheatham in prosecution of agents preying on the elderly in Texas.

I would like also to welcome Elizabeth Hanford Dole, Commissioner, Federal Trade Commission. Commissioner Dole has taken a special interest in consumer problems of older Americans ever since her appointment, and she has been instrumental in turning the Federal Trade Commission's attention to the difficulties elderly consumers have in purchasing medicare supplemental insurance.

We are also pleased to take testimony from Mr. Joseph Mike, commissioner of insurance in the State of Connecticut, representing the National Association of Insurance Commissioners. We look forward to the National Commission's recommendations and to working further with all State insurance regulatory commissions to find solutions to these problems. Commissioner Garcia, from New Mexico, is also here, and I am sure we will have many good suggestions from him.

Senator Domenici, we are delighted to have you here and we would be delighted to have an opening statement.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. Thank you very much, Mr. Chairman.

I would like my written statement to be made part of the record, with your concurrence, and just make a couple of remarks and an explanation to the witnesses and to you about my schedule.

Mr. Chairman, I don't think there is an easy answer to this problem. Obviously, we are here to find out what we can do as the National Government. One suggestion is that we broaden the base of counseling that is available to senior citizens so that they can be

better informed. However, any such effort will not solve the entire problem.

Minimum Standards

While I do not want to usurp the State's role, I am looking forward to hearing from the experts here as to what our Federal Government's role ought to be. Perhaps some national minimal standard should be in place if the States do not adopt some kind of disclosure or minimum compliance standards. Basically, we have got to get a handle on the sale of insurance, the type we have recently heard about. I hope that the experts we hear from today will address the issue forthrightly and give us some ideas as to what we might do.

I am most appreciative that Mr. Garcia is with us today. I am fully aware that his agency in New Mexico is taking very constructive steps, and I think we will learn from his experience and his suggestions today along with the other experts whom you have welcomed to the hearing.

Thank you very much, Mr. Chairman.

[The prepared statement of Senator Domenici follows:]

Prepared Statement of Senator Pete V. Domenici

In an age of rapidly rising health care costs, all of our citizens are afraid that the insurance they carry will not be sufficient to meet their health care needs. Our elderly, who are so much more vulnerable to long-term illness than the rest of the population, are especially aware of the deficiencies in many health insurance policies. Also, as we all well know, medicare has its limitations, and coverage is frequently inadequate. We are now learning that medi-gap policies, sold to "fill the gap" in medicare benefits, also have some serious drawbacks.

To protect what assets they may have, many elderly persons seek additional insurance coverage. Medicare now covers only about 38 percent of total health care costs for those age 65 and over. In addition, there is often confusion over what is covered by medicare. For 1976, out-of-pocket costs for health care of medicare members was $562 million.

"Shocking Testimony"

During the hearing held on this subject on May 16, this committee received some very shocking testimony. A case in point was that of Mrs. Lucille W. Lowry. By June of 1977, Mrs. Lowry's contractual obligations for premium payments to one insurance company amounted to $9,158.61 per year, or approximately 68 percent of her annual income. At that hearing we were led to believe that abuses of this type are not so uncommon as we might like to think.

It is easy to see why our elderly fall prey to unscrupulous insurance agents. Seniors are often unsophisticated and unknowledgeable about the terms and conditions of insurance policies, many of which are quite complex. Further, as age progresses, they realize that their health is more likely to fail, and they do not want to burden themselves or their families with exorbitant medical bills. Catastrophic

illness can wipe out anyone's income, and our elderly are especially prone to catastrophic or, at least, long term illness.

Reforms are needed to protect the elderly from overlapping and inadequate medi-gap coverage. Many reforms will have to be made at the State level and insurance companies will have to institute safeguards of their own. In addition, I have proposed—and I hope that the committee will take an in-depth look at my suggestion—a program of insurance counseling for the elderly. If we can devise and implement a comprehensive and easily understandable insurance counseling program, our elderly will be better informed and can then purchase medi-gap coverage wisely at premiums they can afford.

I hope that some very important questions will be answered by the witnesses testifying today. In particular, I would like to know what you feel the role of the Federal Government should be in the area of medi-gap abuse. Naturally, I do not want to see the authority of the States usurped in any manner, but it is very possible that limited Federal involvement is necessary. Perhaps it should be the responsibility of the Federal Government to develop a set of minimum standards. In any event, I hope that Commissioner Dole and the other witnesses we hear today will be able to provide their thoughts on the responsibility of the Federal Government in this area.

I am very pleased that Manny Garcia, superintendent of insurance, State of New Mexico, is here to testify today. Manny and his predecessor, Mr. Kenneth Moore, have involved themselves extensively in this problem, and have taken affirmative action to uncover and eliminate medi-gap abuse in my State of New Mexico. Both Mr. Garcia and Mr. Moore deserve praise and commendation for their fine efforts to eradicate medi-gap abuse. I look forward to hearing from Mr. Garcia about the details of New Mexico's reform program.

Mr. Chairman, thank you for your time. I look forward to working with those testifying today and with the committee members toward a solution to a very perplexing and serious problem which faces our senior citizens.

Senator CHILES. Thank you.

Senator DOMENICI. I would want to say to the witnesses that at 10 o'clock I have to appear with a nominee for the Federal pension in the State of New Mexico. Mr. Chairman, I will go there and reappear as quickly as possible if you wish.

Senator CHILES. Our first witnesses will be Mr. Cheatham and Mr. Woodard. We will ask you if you will come up, please.

Mr. Woodard, you may proceed in any way you desire.

STATEMENT OF CURTIS L. WOODARD, U.S. POSTAL INSPECTOR, HOUSTON, TEX.

Mr. WOODARD. Mr. Chairman and members of the committee, my name is Curtis L. Woodard. I am a postal inspector stationed at Houston, Tex.

This is Wiley Cheatham, district attorney from the 24th Judicial District of Texas.

I appreciate the opportunity to appear before you today to discuss investigations the inspection service has made regarding the defrauding of elderly citizens of Texas and Oklahoma by unscrupulous insurance agents and exinsurance agents.

I have been assigned the investigation of mail fraud cases at Austin and Houston, Tex., for approximately the last 7 years. The type of fraud investigated and prosecuted under the mail fraud statute, title 18 United States Code, section 1341, is very broad and includes any type of business which is operated fraudulently and uses the U.S. mails to further its scheme. It need not be a mail order business.

TEXAS INVESTIGATIONS

The postal inspection service investigates alleged violations of the mail fraud statute among its many responsibilities. Normally, the results of a mail fraud investigation are presented to the U.S. attorney for consideration of filing charges in the U.S. district courts. However, in these investigations, the U.S. attorney's office in Fort Worth, Tex., determined that it would be advantageous to cooperate with Mr. Wiley Cheatham, the district attorney in the 24th Judicial District of Texas. This decision was based partially on the fact that State investigations were underway and some indictments had been returned in State court. The fact that all of the victim witnesses were aged and some were in poor health was also considered.

Beginning in January 1974, the inspection service was asked to investigate a series of offenses involving the defrauding of elderly people in Texas by unscrupulous insurance agents and exinsurance agents, usually working in pairs. Mr. Wiley L. Cheatham, district attorney, 24th Judicial District of Cuero, Tex., who had noticed some of these crimes occurring in his district, which consists of four counties in south Texas, was also investigating violations of State statutes. Indictments were ultimately returned in six other State judicial districts and overlapping convictions were obtained in three of those districts. The State board of insurance assisted and assigned Investigator Howard L. McRae who also worked with us on these investigations.

Senator DOMENICI. May I ask a question, Mr. Chairman?

Senator CHILES. Yes.

Senator DOMENICI. What is the crime? Would you state it for us again?

Mr. CHEATHAM. Yes. It would actually be theft by false pretext or theft by fraud, as someone indicated in their prestatement. It is theft, but theft by misleading and defrauding of people as to what they are getting. Legally we call it theft by fraud.

Does that clarify it for you?

Senator CHILES. Yes, sir.

Senator DOMENICI. Yes, sir.

Mr. WOODARD. A mail fraud case would be a combination of many such thefts drawn into one indictment.

The series of investigations involved aged victims, usually women, age 65–92 years, living alone. Also elderly couples were fraudulently solicited, but usually one of them was senile or incapacitated, and the fraudulent pitch would be directed toward the one who handled the checkbook and financial affairs. Elderly people tend to be concerned with their health and their need for extra hospitalization which is generally motivated by a desire to remain independent and to be able to financially survive an expensive illness.

The elderly citizen is frequently lonely, and a well dressed, youthful, and confident salesman has an easy time gaining entry to the victim's home and gaining his or her confidence. We noticed that the elderly people usually do not understand the fast talking, double talking sales pitches that these agents use. These factors make the elderly an easy mark for unscrupulous insurance salesmen.

"Goose Lists"

The first investigation in which I participated involved two men. One was a licensed insurance agent and one had lost his Texas insurance agent's license. They sold accident and health policies by "hard-sell" tactics to elderly women commonly called "gooses" by these agents.

Senator Chiles. Tell me, what does that term mean? That was a term of art that the agents used?

Mr. Woodard. Mr. Cheatham.

Mr. Cheatham. This is the slang word that they use for these elderly people who are easy prey.

Senator Chiles. Easy marks.

Mr. Cheatham. Easy marks, yes.

In fact, when we got down the line we were able to capture one of the goose lists [1] and we will give you a couple of examples of what it pretty well portrays, the feeling that these agents have for these old people in their description of them, how easy they are to sell. We will cover that if you like.

Senator Chiles. Thank you.

Mr. Woodard. These insurance sales were intermingled with the selling of worthless, desolate west Texas land or lots at grossly inflated prices. The term "gooses" relates to aged people who can be sold hospitalization, insurance, or almost anything else on an insurance pitch, whether or not it is needed. Most of the west Texas lots were sold on a "paid-up" hospitalization pitch, when in fact no such paid-up insurance was available, nor was any insurance furnished. The salesmen perpetrated their fraudulent scheme by substituting deeds for virtually worthless lots; however, these deeds were generally not furnished to the victims unless a complaint arose or an enforcement agency became involved. Some insurance policies were put in force but were sold by the same tactics that we found—misleading. Some lots were deeded to more than one victim. The scheme involved the mailing of checks for collection between banks and the mailing of the deeds of the worthless and unwanted lots. Approximately $200,000 was obtained from elderly people in Texas on this flim-flam.

Overloading Accident and Health Insurance

The two principal operators received 7- and 8-year prison sentences from the DeWitt County Texas District Court. That is Mr. Cheatham's district. The investigation further disclosed numerous instances of overloading and defrauding elderly citizens of Texas and Oklahoma in accident and health insurance solicitations.

---

[1] See p. 227.

Several separate but similar investigations were made in 1974 and 1975 involving a loose-knit group of insurance agents and exagents primarily operating out of Fort Worth, Tex. Generally, one agent who held an insurance license was recruited to "front" or sign the papers and receive a percentage of the commission for very little effort on his part. Unlicensed salesmen fraudulently solicited business from the aged and sometimes senile citizens susceptible to high pressure tactics. These schemes usually worked for relatively short periods of time because the Texas insurance companies, and in a few instances Oklahoma or other out-of-State insurance companies, were eager to obtain the new business which had virtually no claim liability during the first 1 or 2 years. Underwriting safeguards were not adequate to detect and reject the fraudulently solicited business.

The high pressure and fraudulent sale of accident and health policies to the aged almost always resulted in the "twisting" or replacing, or the dropping of existing policies which had outlived some or all of their waiting periods.

Senator CHILES. That term "twisting," is that another term of art?

Mr. WOODARD. Yes, sir.

Mr. CHEATHAM. Yes, sir, that is correct. The way they work it—you touched on it slightly a while ago—an agent presents a policy and collects the annual premium. Usually nearly all the policies have waiting periods from 1 to 2 years before the purchaser is covered as far as hospitalization. As that policy comes near to the time it will expire, the agent will come in and usually tell the victim that there are a number of ways to renew which we can touch on later if you like.

Senator CHILES. Yes.

Mr. CHEATHAM. The agents will tell people, for example, "It is time to renew your policy; we need your annual premium." The agents will say, "We didn't have time to get it out of the computer so you will be getting a bill on this, but just disregard the bill and you can go ahead and pay us now." They collect the money and of course the insured will follow the instructions of the agent and will disregard the notice and not make the payment, so their policy that is in force will lapse and they will lose what time coverage they had. They will be sent a new policy which will have a new waiting period and actually many of those old people were never insured although they would pay premiums each year supposedly for renewal and it would actually be for a new policy which would begin anew.

Senator CHILES. Regardless of their claim, they would always be in the waiting period.

Mr. CHEATHAM. Always be in the waiting period. The company will say: "I am sorry but you have not had the policy long enough. We regret very much not being able to pay your hospital claim."

Mr. WOODARD. We will cite you an example in just a moment, Mr. Chairman.

This replacing or twisting of policies of course resulted in a high rate of denials of claims. Some instances of twisting within the same company were noted. In one such instance, an agent was convicted in the 24th Judicial District of Texas in a case prosecuted by Mr. Cheatham. In that case the aged victim's claim was denied after the

agent had fraudulently replaced a good policy that had been in force with a new policy. The more common type of twisting noted during these investigations involved the transferring of aged customers between two or three companies. This usually resulted in the expiration of policies which were in force, in favor of newly acquired policies with new waiting periods.

Tactics Used

Some examples of fraudulent and deceptive tactics used by salesmen in obtaining money from the aged citizens are as follows:

One: The seeking out of elderly people who are known to be susceptible to repeated insurance sales.

Two: The use of "goose lists" in identifying and locating aged victims, and in disseminating information from one agent or ex-agent to another on the pitch or technique to be used.

We have an actual goose list [1] that we would like to show you and we have made copies. The names we would like to protect for the reason of not embarrassing those people.

Senator Chiles. Thank you.

Mr. Woodard. Some of the comments are very interesting in that they show the salesman's attitude toward the old people.

Three: Salesmen claiming to be there to collect on accident and health premiums due on existing policies while actually soliciting new business.

Four: Salesmen claiming to represent the victim's accident and health companies.

Five: Salesman claiming to be combining their insurance and sometimes getting money back.

Six: Unlicensed agents soliciting insurance sales to be "fronted" by licensed agents.

Seven: Licensed and unlicensed agents claiming to represent companies that were familiar to the aged victims, such as American Insurance Co.—anything with "American" in it is good to use on an old person—and tricking them into signing new applications for insurance with other companies.

Eight: Salesmen representing that "Our company has bought out your company" and that "The company has sent us out here to collect for your insurance and get these new papers signed," while actually soliciting new hospitalization business.

Nine: Salesmen's representations such as "No waiting periods," "This policy will pay everything" or "Everything that medicare does not pay," "This is a paid-up hospitalization policy," and "You will start getting so many dollars per month back on this paid-up policy."

Incidentally, I don't know of any paid-up policies. We didn't run across any in our investigations.

Ten: Salesmen represented that they would reinstate expired accident and health policies which in some cases had been expired for 2 or 3 years and had been issued by companies they did not represent.

Eleven: Some solicitations were as simple as "Get your checkbook; your insurance is due."

---

[1] See p. 227.

Twelve: Salesmen claiming that they were there to help the aged victims with their social security while actually soliciting accident and health business.

Thirteen: The use of familiar sounding and appealing agency trade styles such as the American Agency, Senior Citizens Agency, and First Continental Agency—these names were actually used in Texas—to induce aged people to listen to the sales pitches.

Fourteen: Falsification of applications for new accident and health policies by clean sheeting—omitting unfavorable information such as age, health conditions, and additional policies in force; forging signatures of applicants; and fence-post policies—completing applications in the name of relatives or others, unknown to the victims. This is done to bypass underwriting rules when it is known the victims already have the maximum coverage in effect with a company.

Sixteen Individuals Convicted

The results of prosecutions—Mr. Cheatham's prosecutions. As a result of the investigations, 16 individuals were indicted and convicted on insurance-related offenses which were prosecuted by Mr. Cheatham in the 24th Judicial District of Texas. Some individuals were convicted of more than one offense. One was convicted of perjury in connection with a grand jury investigation and another on bail jumping when he failed to commence his sentence, and that was an additional offense. Prison sentences ranged up to 9 years in addition to probated sentences and an additional 5-year prison sentence was assessed to the bail jumper after a 9-year sentence on swindling old people. All defendants indicted in Mr. Cheatham's district were ultimately convicted.

I don't think that is intended to mean that everyone that did something bad to old people was indicted. Some of the cases could not be made, but he did convict all of the ones he indicted.

Mr. Chairman, I have prepared five specific examples which demonstrate the hardship these insurance frauds have worked upon the elderly. With your permission, I offer them for the record.

Senator Chiles. Without objection, they will be made a part of the record.

[The material follows:]

Examples of Fraudulent Accident and Health Insurance Solicitations

An 84-year-old woman at Helotes, Tex., paid at least $15,303 on approximately 23 accident and health solicitations from November 1972 to April 1974. She paid $3,200 on a paid-up insurance pitch, but later was delivered a deed to near worthless and unwanted lots in west Texas (she owned a 10,000-acre ranch in Texas plus three farms in New Mexico). She was solicited three times during March and April 1974 and issued checks totaling $6,720.50, payable to Senior Citizens Agency, VWC Agency on Nursing Care, and accident and health pitches. The money was diverted to purchase worthless vehicle warranty contracts. Among the policies issued to her, nine were issued on forged or unsigned applications and seven were issued on "fence post" or unauthorized names.

One victim at Dallas, Tex., age 92, was solicited for insurance 13 times between April 1972 and July 1974. She paid $3,440 in checks plus $1,000 cash, and received nothing. On April 16, 1974, she paid $975 on an insurance pitch that would allegedly combine and pay up her accident and health policies. She alledgedly was to begin receiving $100 per month from the paid-up insurance. However, the money went to purchase worthless vehicle warranty. She owned no automobile.

An aged couple at Victoria, Tex., was solicited for 16 checks, totaling $3,220, for accident and health-type insurance between October 1973 and May 1974. The husband was unable to handle financial affairs and the wife, age 74 and confined to a wheelchair, looked after these matters. Of the money paid for hospitalization, $633 was diverted to a vehicle warranty contract. Salesmen claimed they were collecting premiums on insurance that was due.

Two sisters living together at Victoria, Tex., ages 85 and 91, were solicited six times between January and May 1974 for a total of $3,071 on accident and health pitches. The 91-year-old sister unwittingly paid $1,656 in two installments for a vehicle warranty contract. She had no automobile, but her sister did have a 20-year-old car.

An 83-year-old victim at Lockhart, Tex., gave an agent a check for about $7,200 to pay up her insurance, but overheard the agents conversing as they left her home and thus learned that they did not intend to do as they had agreed. Later testimony by one of the agents disclosed that the money had been solicited for insurance, but was to be converted to worthless west Texas lots. She was again solicited in March and April 1974 for $1,975 and $1,860. The first solicitation was to reinstate a lapsed policy and to pay up two life policies, plus one annual hospitalization policy. She received no insurance coverage for this money. The $1,860 was paid on an accident and health pitch, but included a $50,000 life policy. She received no insurance, but did receive a worthless vehicle warranty contract in the mail for her $3,835 paid to Senior Citizens Agency.

Mr. WOODARD. This concludes my statement. I will be glad to answer any questions you may have.

Senator CHILES. Thank you, sir.

Mr. Cheatham, we will put you on next and then we will question both of you.

STATEMENT OF WILEY L. CHEATHAM, DISTRICT ATTORNEY, 24TH JUDICIAL DISTRICT, CUERO, TEX.

Mr. CHEATHAM. Thank you, sir.

I believe what I might do is to cover this in a little more depth.

Senator CHILES. Fine. If you want to relate to any of these examples, fine. I want to ask you some questions about this.

Mr. CHEATHAM. Any time that you like, feel free to interrupt me.

Senator CHILES. Why don't you list them?

Mr. CHEATHAM. We photocopied part of the list and I will be glad to leave a copy with you. We have the original in case you would like to see it.

RICH AND POOR VICTIMS

I would like to mention that in this regard both the rich and poor alike are victims of these schemes. We had an ex-Governor's close relative who was victimized regularly, not in my district, however, but it came to my attention. In our investigation in our district we have a district judge's elderly mother and aunt who were regularly taken each year for considerable sums of money, unbeknown to the judge. This is one area that the younger relatives might want to take note, because these elderly people like to feel that they are handling their business; that they are getting insurance and won't have to fall back on their children; so very often they don't tell their closest relatives of the business transactions they have had.

We were able to recover quite a bit of the judge's mother's and aunt's money that they had expended on these fraudulent sales and policies. We had several wealthy widows, one of them who has a ranch in excess of 10,000 acres in Texas, and much more land in New Mexico. She was one of the regular customers. They would

more or less vie for who would go in there and write her a big policy.

We have another elderly lady in one of the adjoining counties where one set of salesmen would go in and write in excess of 10,000 dollars' worth of policies at one time, come back the next year and write her again. Since it was not in my district, we could not follow up on it, but one of these agents who we convicted, as part of his sentence, made full disclosure of his knowledge of the violations that had gone on in Texas, New Mexico, and Oklahoma. He indicated that in a period of 14 months this one wealthy lady, through about four companies and a larger number of agents, spent between $45,000 and $50,000.

Then, of course, you have many of the poorer senior citizens living in low-cost housing units. We have found quite often that the agents would have to time their visits so that they would get there after the social security checks came in so they could take advantage of the social security checks.

"Clean Sheeting"

With reference to their tactics, they have a language all of their own, and this I guess makes it a little difficult to understand the jargon, but Mr. Woodard touched on the "clean sheeting." When the agents go into a house and write the victim, they will write it up as if there were no prior illnesses, thus indicating to the company that if they get sick, anything would be covered. This is sort of a two-edged sword, if you will, because when the person gets sick and goes to the hospital, the doctor makes the report. When the company gets it they write back and say, "Well, you defrauded us, you didn't tell us about all your prior illnesses, so therefore we have to deny your claim." We had a number of the companies that were doing that.

I guess one of the best examples that we have had is an old couple that lived right behind the jail in Cuero, Tex. The husband had had a stroke and had been in a wheelchair since 1967. His wife was the sole breadwinner and she worked at a little hamburger stand making hamburgers and selling soft drinks. We recovered something over $3,000 for them, a lot of others we didn't, but the point being that the husband had been in a wheelchair since 1967 and when the agent went in to sell, the husband was sitting there in the wheelchair. Yet, the agent wrote up the policy indicating that he had had no prior illnesses.

Some of the companies had had insurance policies on these people before and had claims before and, of course, knew what sort of shape the old man was in, yet they would accept these new policies each time. She thought she was renewing and she was getting a new policy every time so that very seldom did the waiting period run out. If it did run out—the waiting period—then the company still would refuse to pay because they said the people had not related to them that they had had the prior illnesses in their application for the insuring policy.

They would hit the old people with the "Pay it all proposition"; in other words, you are paying up all of your insurance. Also, for example, they went in on one couple, indicating that the company would pay up to $25,000 no matter what the bills were. Well, of

course, the policy itself did not read that way. The agents used an outlaw pitch sheet, a printed form which they would show the people and, of course, the people felt that they were legitimate agents.

Senator CHILES. Were, in fact, some of the agents legitimate and working with companies?

Mr. CHEATHAM. Yes, very definitely so. Some of them were agents with the companies, and I will touch on this just momentarily. Many of them were prior agents who had lost their license and then kept on selling these old people through another licensed agent. I might add—and I think this is important—that when these agents go in these old people's homes they come up in a $500 suit and a Lincoln Continental or a Cadillac. They come in there and they know everything about that old couple or the old person. They will know what policies they have, when their policy will be coming due. They will know the name of their cat or their dog, whether or not the sister lives with them. When they go in on those old people like that it is very disarming; in other words, they feel that they are bound to be legitimate agents and a legitimate company, otherwise they would not have all the information.

Many times these people hardly ever have company; they don't see people very often. When you have an agent coming in and being that aware of everything about their prior life and visiting with them, they are very easy prey.

"LOADING UP"

Mr. Woodard touched on this matter of "loading up," or collecting for many policies. Very often we found where the agents would go in and find out how much the victims had in the bank and leave the victims $50 or $100 to live on for the next month and write out a check for whatever amount the older person had, and then left the victim just short of going on starvation wages. They would sign these forms up in blank and then go back in the company offices and select various policies that would fit the amount of money that they had collected. Very often these policies would be of very little value or no benefit to the person. They would probably sell them two or three hospital policies and maybe a cancer policy on the side to try to fit the amount of money they had collected. Very often, the cost of the policies furnished did not match the exact amount of money collected from the victim.

One of these agents, incidentally, indicated that his net take for his part per year was approximately $85,000. The other agents of course got like amounts.

NONLICENSED AGENTS

Mr. Woodard touched on this matter of "fronting." This is where you have one or more licensed agents and maybe a half dozen nonlicensed agents or agents that have lost their license. The nonlicensed agents go in and make the pitch to the old lady. They meet at the end of the day or the end of the week and have the licensed agent sign the application forms before submitting them to the company.

In Texas, this form requires that the agent be present with the

old lady when the application was taken, so he signs the form indicating that he was present in Cuero, Tex., or Victoria, Tex., when the victim signed the application. This also has some problems as far as the prosecution of these men, because when we get a description from a little old lady that said, "There was a nice tall dark headed man who came in and sold me this policy," and we think it is "so and so" insurance company, we check with that company and get a copy of the application and it will have an agent's signature on there. They will get a picture of the agent and it will turn out to be a short blond. So we have a little old lady that they say, "Well, she is just completely confused." It does not even fit the same description of the signing agent. It also helps the agents to have a defense when you catch up with them, unless you are able, as Mr. Woodard helped us, to find and check the other nonlicensed agents that were working with the licensed agent.

But in one of these little rural districts when you have one little old lady and she gives a description of a man that does not fit the description of the man who wrote the insurance, you can realize the difficulty in trying to make a case to catch the man who defrauded her because she does not even have the right description. She describes the person who was there, but the person who was there is not the one who signed the policy.

Mr. WOODARD. You convicted the signing agent.

Mr. CHEATHAM. Yes. I might add that under Texas law a person is guilty as a principal if he does anything to aid another person in committing the offense, and in several instances we were able to indict not only the person who went in the house after we found out who he was, but also the signing agent acting as a principal, although he didn't actually, physically, go in the house where the little old lady was. But he took part in the scheme by signing the application in which he was confirming he was there at the time.

"PAID-UP POLICY PITCH"

Touching on this "paid-up policy pitch" that they have, they go in and tell them, "We want to finalize your policies." They will get some little old lady that has a suitcase full of policies who has been paying $300 or $400 to the companies for the last 3 or 4 years on each of many policies. She may have a big paper sack or suitcase full of policies that are duplicated and they come in and tell her, "These other companies are not treating you right: you are paying too much money. We want to fix it up so we will finalize or combine all of your policies. You pay us another $700 or $800 and we will put them all together and they will be completely paid up and then you will start drawing"—usually they will tell them $100 to $200 a month. Of course that sounds like Christmas, you know, a good thing, so the little old lady pays that up and of course she never gets the several hundred dollars a month and she also does not keep the policies alive that she already has.

Mr. Woodard touched briefly on what they call "fence posting" in the business. This is where they sell so many policies that the company can't legally insure them on any more policies and they have more money that they collected from the little old lady. This $45,000 one, and several of the others—they would start writing up

policies on her relatives or even her friends. They would ask, "Who is your beneficiary?" and they would write up several policies on her. We convicted several of these.

One of the little old ladies, when she got the policy back, was still alert enough to realize that they were sending her a hospitalization policy back on her sister and brother who lived some 300 miles away in Forth Worth. She wrote them. Fortunately for us, she wrote a little letter to the company and indicated she did not do that, and of course the company just avoided it, and did not answer the letter at that time as I recall, so she had her lawyer write a letter.

When you get instruments like this, it helps you very much with the little old ladies, because if they have become senile in the meantime it is very difficult to make a case on their testimony, but where you have evidence in black and white and written complaints that come from the victim or principal to show what their understanding of what they were being sold at the time, it helps very much in prosecuting these people. Because, you can realize the problem of having a one-witness case with a little old lady that can't remember the color of the agent's hair or remembers the man as being a brunette and he turns out to be a blond. Here comes a smooth talker who could sell an Eskimo a refrigerator, if you pardon the expression, and he comes into court and is a smooth operator. When you are successful in getting these other instruments, it does help tremendously in convicting these people.

I would like to touch a little more on this matter of "twisting" policies. This is, as Mr. Woodard explained, where the victims have a policy and the agents come in and cause a lapse of that policy. The policy coverage is lost and the agent sells a new policy to the victim. There are several facets of that. We ran into a situation where one man owned three companies. The agent would run in and sell the woman a policy and all the companies had similar names—usually all of them had similar names—and one of the names would be the same, and then they would vary it a little. They would come in and sell the little old lady one policy for whatever they could get, $300 or $400 or more.

Company Switches

Thirty days before that policy ran out, they would come in and say, "I am here to collect your insurance," and instead of renewing the old policy, they would write it on the second company, all owned by the same man, and then they would come in later and sell them this third policy on the same company owned by the same man. The old person would actually never have insurance that would cover them because the waiting period had not run out.

Then you have a situation—it is not always the companies and the agents working together in each situation—we learned about where one company had sold out to a new purchaser. Then the exowner got the agents to go out in the field to twist off all the policies that they had sold to the new company. They put the policies back into another company that the person owned that had sold out the first company. So the new company wound up with a shortage of customers and the little old lady has suffered because she was not covered by the insurance because of the waiting period. So it was a fight

with the companies; in effect, but the little old ladies are the ones who really suffered.

I think he touched pretty well on the similar name pitch, where they come in and say, "Well, we are from American" or "We are from Southwest" and so forth, and that convinced most of the elderly policyholders. That meant some prominent well-recognized company to the victims. We are not saying that all of the companies are that way. Companywise, there are a small minority of these companies that I think, as far as I can see, were doing this, but these unlawful practices do hurt a lot of the companies that are legitimate.

Senator CHILES. Did you find companies that were trying to police their agents?

Mr. CHEATHAM. In some areas and in some of these new companies; in some of the companies, if once we caught them, yes, they would come in and they would come down and testify for us. We would issue a subpena and they would produce the records, but without exception each one of these people, as we convict them and before they were sent to the penitentiary—we talked to them; they always told us: "We could not have done what we did had the company not known. In other words, the company had to approve it. The company officials had to be approving it or we could not have accomplished this, other than maybe on a very short term basis." If the company checks their records properly, it does not take them long to recognize these repeaters.

Another one of the schemes we ran into was where one agent would come in and sell the hospitalization policy to the little old lady. We had one who had to have an eye operation that was not paid for because of this. She bought the policy and she kept it long enough to where she was covered, fortunately. The second agent came in and told her that, "No, I am terribly sorry, but one of our agents sold you a policy on the wrong form and you are really not covered like you should be and we are going to sell you this new policy. The waiting periods will be waived and you will be covered." She bought the new policy and the old policy lapsed.

Incidentally, she was telling the agent all the time: "I have to have this eye operation. I have a cataract operation coming up and I want to be sure I am covered." He assured her that she was covered, and, of course, when it reached the company they complained and he came back and said, "I am sorry, you have not had this policy long enough to be covered." So she lost her coverage for her cataract operation.

We have touched on the "no waiting period" and this, to me, is one of the real problem areas with these senior citizens. I am not an insurance man and there may be problems there, but if there were any way that these elderly people, buying policies—if the company were required to not insure them until they could get by this waiting period or, once they accepted the business, that they would not have the waiting period, not all of it but a lot of this type of fraud would probably be eliminated.

We had another pitch that sold a lot of policies. The agent would take a husband or a daughter or a close friend and, in trying to sell the policy, they would tell them, "Well, you know, my husband here or my daughter had an illness last year and the company paid more than the whole hospital, and doctor bill too—we have actually made

money on it," and of course the husband and daughter didn't even have insurance with the company. You would be surprised how that causes people to buy insurance. They want to be sure that they are completely covered and, of course, they are not.

We had some agents who would sign up a group of elderly people. If they were not able to place it with one company, they would then forge the signatures on new applications. We had old people who wound up with insurance with companies that they had never even heard of before. We had a number of instances of that.

Basically, that is all.

Senator CHILES. Tell me something, on the goose list. How did that work and where did you get that?

"GOOSE LIST" EXCERPTS

Mr. CHEATHAM. This was recovered from a group of these people who we caught. The man who made this particular list up had lost his license in Texas and his presence in Texas was not very—in other words, they were looking for him and he left to go to Oklahoma, as I recall. Before he left, he prepared the list and gave them this list to use in Texas. If you would like, I can show you this.

Senator CHILES. Yes, sir, if you would.

Mr. CHEATHAM. This will show you how "benevolently" some of these agents feel toward some of these old people.

Without using the name, he says: "This one is a good deal, but she likes Reserve Life, so handle with ease. Sell on idea of lowering rates that she now pays."

Here is another one. "This lady is as goosey as two young skunks. Cinch sale—$200, $250."

Here is another one. "There are two sisters here and another one that lives somewhere else. They pay for her, too. Good for $2,000, $3.000. Cinch."

Here is another one. "This woman is easy. Go in and sell her for her sister that don't live with her. She likes to hear a pitch. Also likes insurance that covers cancer and preexisting conditions."

Here is another one. "Everybody knows this one so don't take a check for more than $200, $300." In other words, otherwise you might get a hot check for your premium, because some of them have gone in there and got money from her already.

"This is just a plain old goose. Check bank balance."

Here is another. "This lady has a sister that lives with her. They are goosey, but they like Reserve Life. Real good, so you need to put a story on them. They are not stupid, so handle with care."

Here is another one. "This lady is goosey, but she is a younger one. Also, she has about five to six policies with Reserve Life."

Here is another one. "This one is a younger woman and goosey as hell. Has a husband, but she takes care of all insurance. Sell preexisting policy. She's sick. Not a big deal, but a cash sale. Don't 100 percent."

Now I guess I better touch on that slightly. Most of these agents on a new policy will receive anywhere from 60 percent to 90 percent, and we found a few, I don't think any more, that would even get 100 percent of the first year's annual premium. If they go in and sell a policy and don't turn it in at all and keep all of the money, then they are more likely to get caught. But if they go ahead and

put the policy in with the company, even though it does not pay, then if somebody complains they can claim that the little old lady misunderstood them in what they told her because there is the policy that they sold. But they are cautioning them on this one, "Don't 100 percent her"; don't keep all the money, or otherwise you might get caught.

Then we have them, for example, where we had one little old lady in one of the other towns in my district who had been sold so much that she had a great big suitcase full of policies. Every time some of these agents go in and sell her some more, they would ask to look at her policies and then they would carry an armful of those policies out and throw them out down the road, so if relatives came and found the suitcase they would not find all this mass of duplicate policies.

Back to the goose list.

Here is another. "This lady has always bought good. She wants a policy that pays for rest home; she won't have anything else. Go to back door."

Here is one. "This is the goosiest thing you ever saw. Run check through regular channels, no more than $500 at a time. This one is pretty well known by all the high rollers."

A lot of these agents refer to themselves as "high rollers."

So again—well, it is self-explanatory, I think.

This one says: "This one is a cinch. Make like you are lowering her premium."

In other words, she is paying too much for a premium so we are going to sell you a policy that won't cost you as much.

There are a lot of other examples in here, some of which are not fit to read in mixed public. The committee is welcome to have a copy and read them if you like.

[The list follows:]

"GOOSE LIST" SUBMITTED BY MESSRS. CHEATHAM AND WOODARD

[ADDRESSES AND TELEPHONE NUMBERS DELETED]

MAGGIE. This is a *cinch* sale, easy to talk to.

MYRTLE. This one is a good deal but she likes Reserve Life, so handle with ease—sell on idea of lowering rates she now pays.

JEWELL. This is a man and wife. They like Reserve Life, but I think they can be sold on anything because they are paying a lot for this insurance; however, the rate's about $50 less than they are paying.

HARRIET. This woman is a good deal but you have to sell—so set in tough so you can close.

WILMA. This one is tough but has always been sold heavy, but you have to stroke it on her ———.

EULA. This lady is as goosy as two young skunks. Clinch sales. $200—$250.

EFFIE. Don't know this one but she is a buyer. I never could get her at home.

LUCILLE. This is a sale. not too big, but a cinch.

NOVA. This is a cinch sale good for $150–$200—silly as ———.

GLADYS. This one is a cinch for all she has—check bank account. I sold $350. Check good.

AUDIE. This is a woman (Audie) good deal.

EVA. This is a jam-up good one for anyone.

LOTTIE. E. J. has sold this deal four or five times. He can't write nothing but goosies. Try her.

BESS. You ought to know this one, but don't fail to call on—she is a dandy.

WILLYNE. These are two sisters here and another one that lives somewhere else; they buy for her too—good for $2,000 or $3,000. Cinch.

LONNIE. This is a good deal.

ADDIE. This is a small deal, but is a sale.

ZELA. This lady is a goose. Talk to her about her quilts that she makes. Buy one from her—pay her half and stroke it on her ———.

OLGA. This woman is easy. Go in and sell her for her sister—that don't live with her—she likes to hear a pitch; also likes insurance that covers cancer and preexisting conditions.

RUTH. This one is a younger woman and goosy as hell—has a husband, but she takes care of all insurance. Sell preexisting policy. She is sick; not a big deal but a cash sale. Don't 100 percent.

PAULINE. This is a goose, but watch out for her daughter. This is not a hot one, but her daughter is a smart ———.

MARY. Everybody knows this one, so don't take a check for more than $200–$300.

IRENE. This is a good deal, but sure likes Reserve Life, so handle with care.

BESSIE. This is just a plain old goose—check bank balance.

ADDIE. This is a good deal but not too big—$150 or so.

CORA. This lady has a sister that lives with her—they are goosy, but they like Reserve Life real good, so you need to put a story on them—they are not stupid, so handle with care.

VERA. This one has bought a lot of insurance but I don't remember anything about her. I am kinda slack this morning.

INEZ. This is one of E. J.'s old deals.

EUNICE. I don't know about this one for sure, but she pays quite a bit for insurance.

MABEL. This lady is goosy, but she is a younger one. Also, she has about five or six policies with Reserve Life.

IRMA. This one is just a plain old goose; not too big, but sale inevitable.

RUTH. This is a good one; handle easy, nice to talk to.

LEONA. This is a good deal; pays cash, but she has a sister that lives in FTW who also has Reserve Life. But be sure, don't call on her; she is a great letter writer.

ZULA. This one will buy, but not a big deal. Everything counts in love and war.

EDITH. This one is a cinch sale; goosy as ———.

ZORA. This one is goosy for a policy that pays everything for home and office calls.

DELSIE. I sold this lady a couple of times. She is good, but not too big.

RUBY. This one is a good deal, but not too big.

ULYSSIS. This is an old man and is a good deal. Go in and talk about playing guitar; he likes that kind of ———. Has daughter, but she don't mess with his business.

LAURIA. This is a sale, but don't have very much money (sorry about that).

FLORENCE. This is a lady that pays a lot for insurance with E. J., so put a story on this one.

FLANNIE. This is an old time buyer, goosy as ———. Be sure and call her before going in because of the law up there—they will strap it on your ———.

ROY. This man has been missed, but he wasn't handled right. You can't rush him; he likes to hear preexisting condition.

ISA. This is a good one.

MOLLIE. This lady has always bought good. She wants a policy that pays for rest home. She won't have anything else. Go to back door.

MONDRE. This is a good deal. Her nephew works in bank; go through channels; have no trouble with check.

JANIE. This is a goose (get it on).

MINNIE. This one is a good deal. No address; lives west on MWC Highway. Sweet deal.

ALICE. This one looks like a good deal. I didn't find her at home. Has been very big for years.

MARGARET. Good deal; not too big—cinch.

INEZ. Small deal, but go sell.

MARTHA. This is a good deal. She talks about getting struck by lightning out by the clothesline. You have to put it on her ———, but never no trouble with business.

AL. This is a man with money and will buy. I know another one that you would like to know about up here.

RUBY. This one is hot as a three dollar bill, so send someone on this.

DORA. This is the goosiest thing you ever saw. Run check through regular channel, no more than $500 at a time. This one is pretty well known by all the high rollers, so don't go ape ———.

FRANCES This one has always bought from me, but is sure not a cinch for everybody. You have to stroke it on her ———. See how tough you are.
THELMA. This one might not be very good, but I had a big bunch of ——— over it, but I ——— her around pretty bad; sorry about that.
EILA. This one I sold, but no comments. Can't think.
MYRTLE. This one is a cinch. Make like you are lowering her principle.
VERA. Goose.
MAGGIE. Can sure be sold (I did).
VELMA. Not too big, but sold.

Mr. CHEATHAM. That is about as much as I can cover in a brief list. I am sure you might have questions and we would be glad to answer any of them.

Senator CHILES. Thank you, Mr. Cheatham.

I understand you convicted everybody you indicted out there.

Mr. CHEATHAM. Yes, sir. I will say we had to take a second run on several of them because of the technical problems.

Senator CHILES. But you took another run at it.

Mr. CHEATHAM. We took another run.

We had one we got the maximum conviction from the jury on, only to find that one of our jurors had been an exconvict. I messed up there, I will be frank. If I had known he was an exconvict, I would not have taken him, but apparently he didn't like little old ladies being defrauded either. In Texas one of the qualifications to sit on a jury is that you not be an exconvict. The defense found out that he had been placed on probation for an offense in one of the other counties, and that county had not sent the conviction in, so it was not on the NCIC or TCIC records, so we were not aware of it. They found it out and, of course, the judge had to give him a new trial because of that. There were several instances like that, but we backed up and started over.

Senator CHILES. Mr. Cheatham, based on your experience and what you found out in this case, do you think this kind of action is taking place just in Texas?

Mr. CHEATHAM. No, sir.

Senator CHILES. Does it lap over into New Mexico?

Mr. CHEATHAM. Well, let me explain it this way. I can only speak for the counties that I cover, but our evidence indicates that it is taking place over in New Mexico and in many other States.

Senator CHILES. Yes, sir.

Mr. CHEATHAM. But as we convict these people, usually part of my plea bargaining with them was that they make full disclosure of theirs and other activities all over Texas and anywhere else. We had some rather startling information from people going into New Mexico and Oklahoma. One agent had a bad record in both Texas, Oklahoma, and Arkansas, as I recall.

THICK COMPLAINT FILES

Incidentally, the State board has the files on these agents from the time that they have first filed an application to be appointed as an agent. They get complaint letters from little old ladies, and very few of them know to write in—only a small percentage—but it would shock you to see the thickness of some of these agents' files which were full of complaint letters from little old ladies.

We had one we convicted and, unfortunately, the judge saw fit to

give him probation rather than the penitentiary. By contacting Oklahoma and Arkansas authorities, we got massive amounts of complaint letters from each one of those States that the little old ladies or the elderly citizens had written in to the various State boards of insurance complaining of this person. I can only speak for Texas, and to a limited extent there, because I don't run the State board of insurance, but they don't have the authority themselves to prosecute a case criminally. They can take a license and that sort of thing, but we have found just a massive number of these complaint letters from the little old ladies. As I say, for each little lady who is able to write in, there are many hundreds who either would not know where to write or, because of their aging conditions, could not write; so it is pretty indicative.

Senator CHILES. Did anything happen to the companies?

Mr. CHEATHAM. I will have to speak to that with mixed emotions, I suppose, and of course I realize I am touching on a little gray area. The State board of insurance set up a task force when this was brought out in the newspapers. They did some investigation. I understand they intend to take some corrective action.

This man, Mr. McRae, who worked with us, I might add, has done an outstanding job. Unfortunately—and I could not say why—he has not been promoted up in the way that he should. In years past, he has been bringing these cases to me, but we didn't have anyone like Mr. Woodard who could take it over a statewide basis. We had to handle them all on a single-case basis. He did an outstanding job on it.

Senator CHILES. Who did he work for?

Mr. CHEATHAM. The State Board of Insurance of Texas.

I understand there were a number of companies examined by the State board and Mr. McRae indicates to me that he feels that they have made good strides toward correcting some of the problems. I think you get into the question of what type of correction you want. Is it sufficient just to take licenses and that sort of thing, or is it necessary to send people to the penitentiary?

I guess I kind of lean to the side that if you send them down to the penitentiary for a while they have less likelihood to repeat, but maybe I am too tough, I don't know. Some of them have indicated I am. There are others inclined to feel that if they correct it or take their licenses, that will be sufficient. I have my own feelings on it, but I realize that there are other feelings, and those who feel otherwise have their points. Every question has two sides.

Senator DOMENICI. Mr. Cheatham, has the State of Texas, in your opinion, made substantial changes in the way of insurance commission?

Mr. CHEATHAM. I think they have made some changes for the good. I could not say that they have gone as far as I personally feel they could, and I don't mean this as criticism. I think they have taken steps and made strides toward correcting this problem.

Senator DOMENICI. You lead me to conclude that we ought to take a look at the national criminal statutes to see if we cannot make the job a bit easier in terms of prosecuting. It seems like we have got to strain some statutes here to get prosecution.

Mr. CHEATHAM. You hit the point perfectly, Senator.

Senator DOMENICI. Well, do you have any suggestions in that regard, either of you?

Mr. CHEATHAM. That covers a lot of territory.

Senator CHILES. Well, you certainly raised points that we are going to look at as to whether there should be.

FAMILIARITY WITH COMPANIES HELPS

Mr. CHEATHAM. Let me say, and I don't want to take too much of your time, but before Mr. Woodard came in and helped us or was able to, Mr. McRae—I cannot commend him highly enough for his work. Frankly I would rather have him than 50 others on the State board of insurance. He has a knack about him. He is a handwriting expert, for example; he knows these companies; through the years he has become familiar with them. He knows what companies are borderline; he knows what companies are fudging on some of their policies.

He can take a bunch of these applications and pull them out and say, "This one and this one and this one I don't believe are going to be good ones," and I have not seen him miss yet, he is that good. What I am saying is that in the past years he would call me up and say, "Wiley, I believe I have a couple of cases down in your district," and he and I would work together and we got convictions on all of those, but they were single-shot deals; they were one little old lady.

Very often when we convicted that agent, he would tell us of others whom he had defrauded. We would try to get their money back, and this is another problem. If I might bring it in, there are many of these little old ladies who don't want their relatives or friends to know they have been duped. We have several who said, "Well, I would rather lose the money than have to go up and testify and have my friends find out that I got talked into this thing."

Back to the main point, we were able to convict these people on a single-shot basis, but we didn't have the needed area coverage. We could not bring in, for example, the help when you have one little old lady competing in her testimony with a smooth insurance agent. It is very difficult if you don't have the supportive documentary evidence to get a conviction. But when you have help from someone like Mr. Woodard, as he is able to do, he could go out and get the other 20 who were sold, say in the same week out of my district, and we can bring as many of those little old ladies as we can. Some of them are too sick to travel, that is the problem, but if we can bring in extraneous offenses, we can bring those 20 little old ladies in and say they were told the same thing. As a result, the jury knows that little old lady they are trying the case for is telling the truth and, in that respect, it has aided us immensely to have the assistance of Mr. Woodard who has a broader scope of coverage than they have.

Senator CHILES. If some of these cases could have been prosecuted in the Federal courts when you were talking about Oklahoma, Texas, and New Mexico, could you have brought those all together in a major conspiracy case?

Mr. CHEATHAM. I would like to bite into one like that, but my State office is not——

Senator CHILES. I am just asking, would that have helped resolve the kind of problem when they were getting beyond your jurisdiction?

Mr. CHEATHAM. Very definitely. One of the problems he has touched on here—if you have an 85- or 90-year-old woman, it is a little difficult to bring her 150 or 200 or 300 miles to Fort Worth, for example, to testify. It creates a problem, and this is one of the reasons I think that they elected to have us prosecute them at a local level where it was a shorter distance for little old ladies to travel.

Senator DOMENICI. Let me ask you one other question. You mentioned that on a number of occasions, after you started prosecution, you found a number of complaints on file with the insurance commission in your State. You indicated those complaints would come from only a small percentage because a lot of people won't complain. Did you find that the insurance commission followed up on the complaints?

Mr. CHEATHAM. They would send an investigator out and take a statement from the little old lady, almost without exception, and then, depending on what they found, they would contact the insurance company and probably ask them to send them copies of their records, and that sort of thing. They have provision for hearings for the taking of agents' licenses. They have that; they do that.

Senator CHILES. What kind of crime is it in Texas for selling insurance after your license has been taken?

Mr. CHEATHAM. There is a statute, but my recollection is, and I could be wrong, but I think it is a misdemeanor. When you get into that area, if these fellows are netting $85,000 a year, as one man admitted to me, it does not hurt him to pay a $500 fine or something like that.

Senator CHILES. I agree if it is simply a misdemeanor.

MAIL FRAUD STATUTE APPLIES

Senator DOMENICI. Mr. Woodard, you have adequacy on the Federal statutes to address this issue?

Mr. WOODARD. Well, the mail fraud law covers any scheme, and the fact that an insurance policy is sold on a fraudulent pitch would satisfy that part of the statute. The other element is, of course, the use of the mails. Fortunately, all these schemes or agencies or insurance companies use the mail, so these cases could have been prosecuted at Fort Worth. The problem is the gathering together of those 70-, 80-, 90-year-old women, who are generally unwilling to go a long distance to participate in a week-long trial or even a 3- or 4-day trial. They can come in to their county seat, and that, I think, is the main reason that the U.S. attorney in Fort Worth felt that the local prosecutions were the best resolution. I think the law covers this type of scheme. This is commonly used, especially in the younger victims' situations.

Senator CHILES. The goose list—this is not the only list of this kind?

Mr. CHEATHAM. Oh, no. They collect what we call lapse cards from the companies. I have another man that, when he finally got convicted and capitulated, he turned over his entire files to us. I have one, for example, that is a steel filing cabinet with four drawers about so long and a fifth steel cabinet, and they are com-

pletely full of index cards like this. They will index them alphabetically by name and by area so that they know when they go to Livingston, Tex., they will have a list of all the little people there and their addresses. When their policies expire, what type of insurance they have, the name of their sister, of a dog or whatever it might be, they have there.

If I could touch on answering part of the question that you asked him, and I don't mean this as criticism or anything like that, but in both Federal and State courts now we all have such full dockets; we have so many cases that they have to eliminate some by whether they are stronger or weaker cases. We have to do this to a certain extent. I think, in addition, these type of cases are not like a simple burglary, or they are not the easiest cases to try; they tax your wits and your efforts and it takes a lot of preparation to try these cases. We are all human beings with human frailties and I think there is a tendency not to take this type of case because, for one reason, many elderly people are sick and senile. They don't always make good witnesses, so you may have to interview 50 victims before you find one that is still alert enough to be able to withstand the rigid cross examination of a defense lawyer. So this is part of the problem.

Senator DOMENICI. Let me ask both of you one last question from my end. In this area that you work, would you be able to assess for the committee whether or not this is a major problem in terms of scope, of selling this kind of policy to the elderly?

Mr. CHEATHAM. I would consider it so, and also for the whole State of Texas; it is amazing. I mean, when you talk to these people and then go back and get the rest of their scheme on one particular deal, it will run—well, we have one here from 50-some-odd victims. What we did in that case, we found out that there was no insurance company to refund these victims. We have sent each one of them to the penitentiary in one case; given them a probation in another, so that when they get out they have to be supervised and make restitution.

We have on their probation—I have one of them here if the staff or you would like to see it as an example. We have all the elderly people's names and their towns and the amount of money they paid in and didn't get anything for. It runs from south Texas where we live all the way up through Texas and into Oklahoma. As I recall, we have four to six victims in Oklahoma. They may have been all old and passed away by the time they get the money paid back, but the probation office is due to collect money to pay back to them if they live long enough, and of course when these people get out, it takes them a long time to make the payments. We are requiring, where we can, duplicate convictions; we sent them to the penitentiary, which helps to keep them from doing it again, and we can probably give them probation in another case and require restitution. This requires some doing, but it works.

STANDARDIZATION WOULD HELP

Senator CHILES. Do you think it would help if we had standardized policies so that it would be clear to these older people what is in a policy, what kinds of benefits are available to be paid?

Mr. CHEATHAM. Yes, this would help. The prior Commissioner had a program to try to simplify the policy, but I would point out again that many of these people are not capable, at their age and degree of health, to comprehend. I am not a senior citizen yet but there are a lot of these problems I have extreme difficulty understanding. In fact, when we get ready to try a case I will get a man from the State board of insurance to come down and testify just what that policy will or will not do, in comparison with what the agent advised it would do. It is a difficult area.

Senator CHILES. I want to thank you both again for your testimony and for the job that you did here. I think you made the old adage "What is sauce for the goose is sauce for the gander," and I think you could compile a little book on the 16 ganders that you all worked on.

Mr. CHEATHAM. It is very heartbreaking, Senator, to go in and talk to these elderly people and see what little they have left, and to realize that they are being bilked out of that.

Senator CHILES. I think the information that is on this goose list gives you an idea of the type of people who are preying on the elderly, and their total and complete lack of any kind of feeling whatsoever. I can't think of anything much more heinous than people who would run this kind of scheme.

Mr. CHEATHAM. They better not do my mother and father that way, that is all I can say.

Let me say this. We do have a lot of other files that might or might not be helpful to your staff. I have indicated to your staff that if they need them, I can make them available.

Senator CHILES. We will be in touch with you.

Mr. CHEATHAM. Thank you, sir. I enjoyed coming before you. I hope I have been helpful.

Senator CHILES. Our next witness will be the Honorable Elizabeth Hanford Dole, Commissioner, Federal Trade Commission.

Mrs. Dole, I again thank you very much for the work that you have been doing in trying to protect the elderly in consumer affairs.

STATEMENT OF HON. ELIZABETH HANFORD DOLE, COMMISSIONER, FEDERAL TRADE COMMISSION; ACCOMPANIED BY JEFFREY EDELSTEIN, ATTORNEY-ADVISER; ANNE DENOVO AND GAIL SHEARER, OFFICE OF POLICY PLANNING; AND MARK ROSENBERG, OFFICE OF GENERAL COUNSEL

Mrs. DOLE. Thank you, sir.

I am pleased to be with you today and I would like to introduce several people who are with me.

Anne Denovo, on my left, is the author of the staff report [1] which I will be discussing a little later in my presentation.

Jeffrey Edelstein is an attorney-adviser to me at the Commission.

Gail Shearer is right behind me and is with our Office of Policy Planning.

Mark Rosenberg is here as well, from the FTC, from our General Counsel's Office.

---

[1] See appendix 1, p. 275.

I want to thank you for inviting me to testify here today on behalf of the Federal Trade Commission. I welcome this opportunity, for I share with you a deep personal concern about the problems of the elderly. I am pleased that, thanks to your efforts, the issue of medicare supplement, or medi-gap, insurance is beginning to receive the attention it so urgently needs.

More than half the people in this country aged 65 and over have private health insurance in addition to medicare. They purchase it because they worry about meeting the medical expenses which medicare does not cover, and with good reason. On the average, elderly individuals spend $1,360 per year on health care—three times as much as the rest of the adult population. In 1976, medicare paid only 38 percent of their health care costs.

At this committee's hearing on May 16, both State officials and consumers told of the abuses associated with the marketing of medicare supplement insurance and, of course, we have heard more about it this morning. There was testimony that some dishonest agents take advantage of the isolation or physical disability of many older people. Some agents engage in "stacking" or selling several policies with overlapping coverages to the same person.

Another common marketing abuse as we have heard this morning is "twisting" or persuading people to cancel their policies and buy new ones which subject them to new exclusions and waiting periods. Some agents also misrepresent that they are from medicare or Social Security or that the policies they sell have been approved or sponsored by the Federal Government. The Federal Trade Commission commends those State insurance commissioners who have increased their enforcement efforts in order to put an end to misconduct by agents.

"Impossible To Make Rational Purchase Decisions"

It is also important to recognize that there is such a dearth of consumer information in the medicare supplement market that it is almost impossible for consumers to make rational purchase decisions; agent misconduct is thus facilitated. A great variety of differing policies effectively precludes buyers from comparing benefits or premiums, resulting in lack of price competition and the sale of duplicate coverage to hundreds of thousands of people who are under the impression that they are filling all the gaps in medicare. Other areas of widespread misunderstanding are the limited nature of medicare supplement coverage, the relatively high cost of coverage for the initial deductibles compared to insurance against catastrophic medical expenses, and exclusions for preexisting medical conditions.

This morning, Mr. Chairman, I would like to describe some of the common informational problems in the medicare supplement area, and then review briefly the public policy alternatives and some recent State initiatives. These subjects are discussed at length in a staff report[1] which is nearing completion and which we hope to release to you next month. Finally, I would like to discuss the possibility of an impact evaluation of various state approaches—con-

[1] See appendix 1, p. 275.

ducted, perhaps, as a cooperative Federal-State effort—to determine the most effective method of making medi-gap supplement insurance policies comprehensible to everyone.

Reasons for Federal Attention

Why should the Federal Government become involved in this area?

First, the medicare supplement market is a by-product of the Federal medicare program. Supplemental insurance is confusing because medicare's benefit structure is complicated. Commissioner Harold Wilde of Wisconsin has observed that the Federal Government has a moral responsibility to cope with the problems medicare has caused.

Second, there are arguments for a uniform approach to medicare supplement regulation, which Federal study could facilitate. Continuing variation in State standardization regulations carries the spectre of insurers having to market different medi-gap policies in every State, with obvious increasing costs. In addition, it would appear that uniformity would benefit consumers by insuring that the categories for medi-gap insurance will be the same should they move to another State. These and other issues should be assessed in the impact evaluation to determine if there are particular reasons why uniformity is desirable in this segment of the insurance market.

Third, most States would not be able to enforce their medicare supplement regulations against mail order insurers not licensed in their States. Many supplement and indemnity plans are sold by mail.

As you know, the McCarran-Ferguson Act generally immunizes the "business of insurance" from the Sherman-Clayton and FTC Acts to the extent that such business is regulated by State law. However, Federal agencies can make valuable contributions to the deliberations in this important area by undertaking studies such as the impact evaluation that I have mentioned and making recommendations to Congress and to the States.

Let me discuss just for a moment the complexity of the market.

Three types of health insurance policies are commonly sold to the elderly. Medi-gap or medicare supplement policies pay service benefits to fill some of the gaps in medicare; generally, they pay some or all of medicare's initial and daily deductibles and coinsurance.

The second and third types—hospital indemnity and dread disease policies—may be sold to adults of any age, but many companies emphasize sales to the elderly. Unlike medi-gap policies, indemnity policies pay a certain dollar amount per day of hospitalization, typically $20 to $50, to offset daily hospital costs which usually run up to $150 or more. Finally, dread disease contracts cover only some of the expenses incurred for care of a particular illness, such as cancer.

No Standardization

Even in the medi-gap category alone there is virtually no standardization. Let me give you just a few examples. Some medi-gap policies cover only the part A initial and daily hospital deductibles; some place low dollar limits on coverage for the 20 percent coinsurance under part B; some cover virtually the full 20 percent part B coinsurance, but others only for those medical services rendered in a

hospital setting and not for the same procedures performed outside a hospital. Some sell several policies with piecemeal, but overlapping, coverages. Some mix service and indemnity benefits.

It is difficult enough for anyone to have a thorough understanding of medicare's complex benefit structure and its gaps. Now add to that the bewildering variety of ways each different insurer fills some of those gaps. Then, when hospital and nursing home indemnity plans and dread disease contracts complicate the picture, comprehension and comparison become almost impossible for consumers.

Confusion caused by the multiplicity of policies often leads consumers to buy two or more policies in an effort to obtain complete coverage. It has been estimated that 23 percent of the people over 65 who have private insurance have two or more policies covering hospital costs, resulting in some degree of overlapping coverage. Medigap policies generally include coordination of benefits clauses. This means that in the areas of overlap, only one policy will pay for each gap. For instance, a person who buys three policies which cover the $144 part A deductible will not receive $432 in the event of hospitalization. Only the first policy will pay $144 in benefits. The buyer has wasted the portion of the second and third premiums which paid for the duplicate coverage of the initial deductible. Those elderly persons who live on fixed incomes can ill afford to spend their money on such worthless duplication.

Both indemnity and dread disease plans will pay benefits in addition to medicare and any other private insurance, giving "extra cash." However, these policies often produce few benefits in relation to the amount of money invested; they typically have very low loss ratios.

Even the elderly person with only one medi-gap policy may have a low value product. Since comparison shopping is foreclosed, many medicare supplement insurers are not obliged to price or operate competitively. Recently the outgoing chairman of the board of the Health Insurance Association of America criticized those companies whose loss ratios are "far too low," saying they "give a bad name to the whole industry."

Incomplete Benefits

Many people purchase supplemental coverage in the belief that their private insurance will take care of all of the medical expenses medicare will not pay. Often agents tell their prospects: "This policy will cover everything that medicare doesn't cover." In reality, many medi-gap policies exclude from coverage the very same areas which medicare will never cover: Out-of-hospital prescription drugs, most nursing home care, routine physical examinations, eyeglasses, hearing aids, and dental care. Medicare will not pay for the portion of physicians' fees which exceed a "reasonable charge," as determined by the medicare carrier. We are not aware, either, of any medicare supplement insurer who will pay those excess charges.

Of course, medicare's determination of reasonable charges is a measure designed to control costs. We are not suggesting that medigap insurers should provide reimbursement for excess physicians' charges. Nor do we mean to say that supplemental policies should fill every gap in medicare. The problem is the common misperception that medicare supplemental coverage is comprehensive. Actually its

role is limited; private health insurance accounts for only 5 percent of the health care expenses of the elderly. How many people would buy medi-gap policies if they knew how incomplete their coverage might prove to be?

Consumers may not realize that some kinds of medicare supplement coverage are more expensive than others. For example, they pay more for coverage for the initial deductibles than for insurance covering those catastropic medical expenses which could mean financial disaster. The California Department of Insurance estimates that it costs, on the average, $30 per year to buy insurance for the $60 annual part B deductible.

It is important that consumers know how much first-dollar insurance coverage really costs them, as well as which medi-gap policies provide it and which do not. Some people, however, want first-dollar coverage for health care expenses because it gives them a sense of security, and they may not realize that not all medi-gap policies cover the initial deductibles. Once again, the problem is lack of information. And if consumers knew the true cost of first-dollar coverage, perhaps they would not choose it.

Many medi-gap policies exclude coverage or require waiting periods before they will cover preexisting conditions as you have already heard this morning. Under "pre-X" clauses, an insurance company can deny coverage for conditions which existed before the policy went into effect. Since many elderly people have multiple health problems, a policy may lose much of its value if the insurer interprets a pre-X clause strictly to deny claims for any illness which developed out of preexisting conditions. Some companies insure all applicants regardless of medical history, then deny their claims citing preexisting conditions. Because pre-X clauses are not uniform, it may be extremely difficult for the consumer to anticipate what his premium dollar is buying.

In attempting to solve the consumer information problems in the medicare supplement area, the States have developed three possible approaches. The first of these is the establishment of minimum standards. California has set a benchmark minimum loss ratio of 55 percent for medicare supplement policies. An Illinois statute requires that all such policies delivered in that State must fill certain gaps, including the initial part A deductible, part A copayments, and part B coinsurance.

New Rule Sets Up Four Benefit Levels

A second approach is to bring about standardization by establishing categories for policies and requiring that each policy carry an appropriate label. Wisconsin's new rule sets up four benefit levels for medi-gap policies, which must now bear the corresponding number. Categories 1 to 3 range from most to least comprehensive. Policies in category 4A supplement only part A of medicare; those in category 4B supplement only part B. California has also established, in a different way, three categories for medicare supplement policies, labeling them "in-hospital only," "in-and-out-of-hospital," and "catastrophic."

The third type of public policy initiative involves efforts to provide information to consumers in order to permit the market to

function more effectively. The most common method is a disclosure requirement. Wisconsin requires agents to give out an 18-page booklet and California mandates the use of general one-page disclosure forms.

Senator CHILES. I am going to have to interrupt you right here to answer the rollcall.

Is your time requirement all right now?

Mrs. DOLE. Yes. Thank you.

[Whereupon, at 11:07 a.m., the committee recessed until 11:25 a.m.]

Senator CHILES. Please go on.

Mrs. DOLE. OK. I believe I was just discussing the third type of public policy initiative which involves efforts to provide information to consumers in order to permit the market to function more effectively. In Oregon, insurers or agents must fill in the blanks on a disclosure chart showing medicare benefits, gaps, and policy benefits. New Mexico requires a slightly different disclosure chart. In my opinion, a chart would be particularly useful if it could show not only medicare's coverage and gaps and the policy's benefits and costs, but also the expenses the consumer would still have to pay out-of-pocket.

I should emphasize that these State approaches—minimum standards, standardization combined with labeling, and disclosure requirements—are not mutually exclusive. It may well be that a combination of these regulatory measures would be most effective.

At present when an agent or an advertisement exaggerates the worth of a medi-gap policy, the prospective buyer typically has nowhere else to turn for impartial information to correct the misunderstanding. Other methods have been suggested besides mandatory written disclosures to assure that buyers get the information they need, such as individualized insurance counseling and consumer education measures to furnish facts which insurers do not generally provide: For example, medicare coverage and gaps; eligibility for medicaid; health risk information—for example, average length of hospital stay for the over 65 age group—and rating of companies' records in handling claims. In addition, nontraditional avenues for increasing consumer awareness, such as the use of television spots, should be explored.

EVALUATION OF STATE APPROACHES NEEDED

What is needed to ferret out the problems and evaluate the public policy implications of alternative solutions? We believe the answer is an impact evaluation of existing State regulations of medicare supplement insurance with central focus on the effectiveness of different regulatory systems in facilitating the purchase of medicare supplement insurance which meets consumers' needs and expectations.

Considerable groundwork would be necessary to narrow the focus of such a study. Basic facts about the medicare supplement industry, such as total premium volume, are presently unavailable. It is evident that duplicate coverage is a serious problem but no one knows its precise nature or extent. It would be important to learn from

consumers what information they feel is essential to make wise purchasing decisions.

A full scale impact evaluation would help to answer the complex and important policy questions which abound in the medicare supplement area: Is it possible to provide complete yet comprehensible explanations of medicare and the multitude of ways private insurers fill some of its gaps? Is standardization necessary to make the market's offerings understandable? Should public policy try to influence the consumer's choice between costly first-dollar coverage and what economists might call more rational insurance for catastrophic medical expenses? What are the arguments for and against the sale of dread disease or indemnity policies?

An impact evaluation would be timely because several States' regulations have become effective within the past year. As I have already indicated, Wisconsin and California have established totally different systems of standardization and labeling. Oregon and New Mexico have different disclosure requirements, but no regulations involving standards. Illinois sets minimum standards but does not prescribe any particular disclosures. An evaluation should point up the strengths and weaknesses of each State's system and should assess the desirability of a model regulation.

An impact evaluation could also provide information about the effectiveness of various disclosures and recommend followup consumer education and counseling measures. And if current debates lead to the establishment of some form of national health insurance, it appears that the results of such a study would be valuable to policymakers, since a similar supplemental market might well develop under any system providing a less than comprehensive benefit package. The results of the impact evaluation would be available, of course, for the use of State regulators and legislators, Congress, and the public.

Cooperative Federal/State Approach

How should this impact evaluation be performed? Perhaps a cooperative Federal/State approach would be best, with participation by the National Association of Insurance Commissioners, the Federal Trade Commission, and the Department of Health, Education, and Welfare. A joint HEW–FTC–NAIC project would bring together different types of expertise, each of which would contribute greatly to such a study. The NAIC and State insurance departments have firsthand experience with insurance regulation and access to data. In fact, on June 12 the accident and health subcommittee of the National Association of Insurance Commissioners voted to create a task force to investigate regulation of health insurance sold to the elderly and identification of other health insurance products "which do not fulfill the public's interest." HEW would contribute knowledge about the medicare program and the FTC's expertise in the areas of consumer protection, information disclosure, and competition would be pertinent. We would welcome the opportunity to work with the NAIC and HEW in such an undertaking.

In conclusion, Mr. Chairman, I am convinced that inappropriate medicare supplement insurance purchased at this point can impose severe hardships on the elderly. We must begin now to determine

the best approaches for resolving these problems, and I hope that my testimony this morning will make some contribution to that endeavor.

Senator CHILES. We thank you very much for your comprehensive statement, and I think you have certainly contributed to what we are trying to do here. We would like to have you make the staff report[1] you mention a part of our hearing record. Would that be made available to us as soon as possible?

Mrs. DOLE. Yes.

Senator CHILES. When do you expect to have that?

Mrs. DOLE. During the month of July that will be available.

Senator CHILES. We will leave the record open until that time because I think it would be valuable to have.

Mrs. DOLE. We will certainly send it down as soon as it is ready.

Senator CHILES. You say what is needed is an impact evaluation of existing State regulations of medicare supplement insurance. Will the Federal Trade Commission undertake this study?

Mrs. DOLE. The Commission has expressed an interest in such an impact evaluation, Mr. Chairman. At this point the Commission has not actually set aside the funds for this study or assigned personnel to it, but we will be engaging in budget determinations fairly soon now. Our staff is looking into this and, I am sure, will have some recommendations for the Commission to focus upon as far as personnel and funding.

Senator DOMENICI. Will the Senator yield?

Is there anyone else to your knowledge, Commissioner, that is undertaking the study—any other institution?

Mrs. DOLE. No, sir, I don't believe so. This study might analyze all of the State regulations. The breadth of the study would be one of the considerations. Should each State regulation be evaluated or should just certain ones be chosen and a more selective approach taken? As far as I know there has been no across-the-board approach of this sort.

Senator CHILES. Senator Domenici and I both think that the information to be derived from such a study would be most helpful, not only to the States themselves but to all of the parties concerned. I like very much your approach of having that be a cooperative study with the State commissioners and others that you pointed out in your study. I think so many times they tend to feel that anything the Federal Trade Commission is doing is perhaps to step on their turf.

"A NATIONAL PROBLEM"

I think it has been pointed out that regulation of insurance is a State problem, but what we are dealing with here is very much a national problem stemming from the gaps in medicare coverage. Having the State insurance commissioners participating as we look at standards and possible model legislation will be very important so that improvements in regulations can eventually result.

What would the evaluation cover and how long do you think it would take?

---

[1] See appendix 1, p. 275.

Mrs. DOLE. The best estimate at this point would be 15 to 17 months. This would involve a period of establishing a design for the impact evaluation with perhaps a pilot study during that phase; we estimate the first phase would take about 9 months. An impact evaluation is a very complex matter. It is not an easy undertaking.

Senator CHILES. I am sure is isn't. I want to ask you about a few parts which the study could include.

Mrs. DOLE. All right.

Senator CHILES. We have taken testimony suggesting that perhaps the commission structure set by the insurance companies could encourage policy sales by the setting of high commissions on first-year policies. Would a study like this be able to examine this area?

Mrs. DOLE. I think that such a study would focus on what information is in the market—is there a dearth of information, what misinformation exists at this point. Certainly to the extent that the commission structure is causing misinformation in the market and to the extent that a dearth of information is making it possible for abusive practices to take place, that would be encompassed in the study. I don't know if you want me to elaborate further. I didn't complete my answer on what the impact evaluation would entail.

Senator CHILES. Excuse me.

Mrs. DOLE. Just to give a little more information on that point, the impact evaluation would involve, during the first phase when the design is being established, deciding how to approach the matter; whether it should focus on all of the States or certain selected States; matching the States so that those with regulations are compared with similar States which have no regulations. Where a State already has a regulation in effect, there may be base line data which was accumulated before the regulation took effect. If not, I think by comparing similar States with and without regulations, we can get the equivalent of base line data. Decisions would have to be made in that area, and we would try to obtain from insurance companies and from the State commissioners data that would be useful.

Surveys of consumers would take place in phase 2—finding out when they purchased their medi-gap policies, what sort of information they relied on, what the source of that information was. Did the policy actually meet their expectations? How much overlapping coverage was there? We know there is certainly a problem of overlapping coverage, but we don't know the extent. To summarize, there would be a number of various issues which would be focused upon in the design phase and then, in phase 2, there would be actual surveys of consumers. Phase 2 would also involve analyzing the data and writing the report. Ultimately, perhaps, we might work with the States to develop some sort of uniform regulatory model.

Senator CHILES. Do you favor the use of minimum loss ratios as a way to solve the problem?

Mrs. DOLE. The loss ratio would certainly be a focus of the study because some of the States which have recently adopted regulations do have loss ratios. For example, California has a loss ratio of 55 percent; I believe Michigan has a 65 percent loss ratio. This regulatory approach would certainly be a part of the study.

INFORMATION LIMITED

At this point data is limited because, for example, the premium volume and the sales volume is not available for medi-gap or medicare supplement insurance. The reason is that the companies report data to the State insurance commissioners under the heading of health insurance, but they don't break it out into medicare supplement insurance. Data is not broken out now except in several States where there is a minimum loss ratio.

Senator CHILES. The States would have to get that information.

Mrs. DOLE. It would be important in any sort of undertaking to understand the volume of sales and the volume of premiums. This type of information would certainly be needed.

Senator CHILES. Do we have information now on how many dread disease policies are sold?

Mrs. DOLE. No, we don't. It is the same problem. It is in aggregate form under the heading of health insurance. That is the way it is reported generally to the State commissioners. It is not broken out according to dread disease or indemnity policies or medicare supplement policies.

Senator CHILES. Do you envision that our senior citizens could help in that survey effort that you are talking about?

Mrs. DOLE. I certainly would anticipate that.

Senator CHILES. That is to say their national organizations.

Mrs. DOLE. I certainly think so. Consumer surveys would be a very important part of an evaluation.

Senator DOMENICI. Commissioner, let me ask you this. As the chairman has indicated, I certainly join with him in an effort to do what we can to expedite the kind of evaluation you are speaking of. Would there, in your opinion, be any congressional action necessary to expedite this kind of evaluation?

Mrs. DOLE. I don't foresee any particular action at this moment. I can't think of anything specific at this point to suggest. I certainly think that we should follow closely what you do in the committee. You may decide to have additional hearings and to collect and disseminate additional information. I would encourage you to continue to do that. This would certainly be helpful as the impact evaluation gets underway.

Senator DOMENICI. What if we were to communicate as a special committee to the Commission, indicating that we are holding these hearings, that we are already convinced that it is a major problem, that we don't have enough information to address the problem properly and that we encourage the Federal Trade Commission system to assist in getting information. Would that be helpful?

Mrs. DOLE. At this point, we must determine what information is needed. The impact evaluation will pinpoint exactly where we should go, and at this point I don't think we could say just what is going to be necessary. Then, of course, there will hopefully be the opportunity to get a lot of the data from other sources, perhaps the State insurance commissioners. There will hopefully be voluntary cooperation on the part of the companies and ultimately, if we have to use a compulsory process, it is my view that the Commission has authority to obtain the necessary data. I don't

think that we really know now just what specifically would be needed until we pinpoint the areas that will be focused on.

Senator DOMENICI. Let me ask you one other question. I am fully aware of your genuine interest in this area and I commend you for it. It has got to be one of the most difficult to address, yet obviously one that is peculiar and different in terms of insurance in this country—in fact, so different in my opinion that it would ultimately require a significant departure, regulatorywise, from other insurance selling. It is obvious that we have a victim sphere here that is very vulnerable and very different because of the nature of being old and alone.

Mrs. DOLE. Yes, I agree.

"INSURANCE COMPANIES MUST BE MORE CONCERNED"

Senator DOMENICI. What I am most impressed with after two hearings, participating as much as I can, is that somehow or another we are able to get the so-called fly-by-night agents, be they criminals or operating without a license, or the like. However, it seems that ultimately the companies that insure have to do the policing. If they end up writing a policy, they are the ones that are going to have to have more stringent rules and more stringent evaluation before they issue the policies and the like to catch their own malfeasance in the field. We cannot get at the company. When called in before a Commission, the companies state that a refund has been made, et cetera. When companies such as New York Life Insurance and General Life Insurance—unscrupulous agents like these would have been caught. They just don't go around defrauding people like this, selling them 15 policies, and the like, or 20.

It does appear to me that some way or another we have got to get every insurance company that sells this kind of insurance and issues the basic policy more concerned about policing what is going on in the field.

Mrs. DOLE. I think that what you are doing by holding these hearings should assist a great deal in that effort. I would say that in addition to the agent abuses we certainly have to keep in mind the great dearth of information in this area and, of course, that is one of the reasons that agent abuses can take place. By means of the impact evaluation, we can take a good hard look at whether it is going to be possible to remedy the problems here through provision of information or whether perhaps we will have to move to some form of standardization. We do not know at this time what the answer is going to be, because the problem is so extremely complex.

As a prospective medicare supplement purchaser, you have to understand the medicare system. You have to understand what medicare does and does not cover. You have to be able to compare between the many combinations of policies that are offered. You have to understand the difference in dread disease and indemnity policies as well as medicare supplement policies.

On top of that, there is a body of general information which is important to understand. For example, when an elderly person is considering whether a medicare supplement policy is needed, it is helpful to know what the average length of stay in the hospital is for a person over 65, and it is very important to know that if you

are eligible for medicaid, you probably should not be purchasing additional policies.

Various Remedies Possible

There are many different pieces of information which are most important to an intelligent decision, and we will have to explore whether or not it is possible to remedy problems through disclosures and through information as some of the States are trying to do, or whether standardization is the right approach, or perhaps even a cost index. There are various options, and at this point I think we need to know more about the industry to understand how these various remedies would impact on the market.

Senator Domenici. There might even be some prohibitions. We might end up where certain kinds of policies are useless and cannot be written, is that not correct?

Mrs. Dole. That would be one focus, I would think, as you explore all of the various options.

Senator Domenici. Thank you, Mr. Chairman.

Senator Chiles. On page 3 you speak about a dearth of consumer information in the market. Since these policies are, as you say, a product of Federal action, should the Social Security Administration make greater efforts to supply such information?

Mrs. Dole. Mr. Chairman, that has occurred to me as one possible means of providing information; through that channel to the persons who are in need of the additional insurance data could be pinpointed directly. I would think that if HEW is interested in being a part of this impact evaluation—and I hope that they are because of their expertise in medicare—this idea could be explored.

Senator Chiles. Again, we want to thank you very much for your statement and the efforts that you have made in this area. We look forward to working with you.

Mrs. Dole. Thank you. I appreciate the opportunity to appear this morning.

Senator Chiles. Our next witness will be Mr. Joseph C. Mike, insurance commissioner of the State of Connecticut, and chairman of the National Association of Insurance Commissioners Accident and Health Subcommittee.

Mr. Mike, we appreciate your appearance here today and note that you have a lengthy statement on this subject. We would like to put that in the record[1] in full and, if you could summarize that for us in some way, we can have a chance to ask you some questions.

STATEMENT OF JOSEPH C. MIKE, INSURANCE COMMISSIONER, STATE OF CONNECTICUT, AND CHAIRMAN, NAIC ACCIDENT AND HEALTH INSURANCE SUBCOMMITTEE; ACCOMPANIED BY RICHARD HEMINGS, NAIC COUNSEL

Mr. Mike. Thank you very much, Senator.

My name is Joseph C. Mike and I am the insurance commissioner of the State of Connecticut and the chairman of the Accident and Health Insurance Subcommittee of the National Association of Insurance Commissioners.

[1] See p. 252.

Accompanying me this morning is Richard Hemings, the NAIC counsel.

The NAIC is a voluntary association of the chief insurance regulatory officials of the 50 States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands. It is a pleasure to be with you this morning to relate the concerns and activities of the NAIC with respect to sales of so-called medicare supplement health insurance coverages.

We share your concern over confusion accompanying the medicare program and marketing practices, and the inappropriate and duplicate private health insurance coverages being purchased by medicare eligible persons. We trust that constructive and cooperative efforts of the Federal Government and the States will minimize the problems and confusion of the medicare population. Several States have already acted individually to set medicare supplement standards, and the NAIC will now prepare recommendations for all States. In addition, all States do act on consumer complaints regarding misrepresentation, false advertising, and other unfair marketing practices that may accompany sales of medicare supplemental coverages.

Medi-Gap Task Force

At its June 12, 1978, meeting, the NAIC's Accident and Health Insurance Subcommittee resolved to examine the need for, and draft in accordance with perceived needs, rules governing the sale of medicare supplement health insurance, and we established a task force that has been charged with that responsibility. It is my expectation as chairman of the subcommittee that within 6 or probably 12 months that task force will have prepared for our subcommittee a recommendation. We would be most receptive to input and advice from your committee. You and your staff are invited to participate in our proceedings and, in the meanwhile, we do recommend or suggest or urge that any complaints that you have that you feel warrant further individual investigation be referred to the regulatory agencies in the State from which the complaint came and give us a chance to do something with it.

Senator Chiles. We will certainly do that. I appreciate very much that you have asked our committee and our staff to participate and I can tell you that we will look forward to taking you up on that. If you let us know when your first meeting is going to be held, we would like to have somebody there covering that.

Mr. Mike. We will be very glad to do that.

Let me turn now to our current understanding of the problems and our respective roles in resolving outstanding problems. The problems that we see are divisible into two categories: First is the question of whether and how to fill medicare gaps and limitations and, second, is how to control the unfair trade practices of medicare supplement insurers and agents.

Medicare supplement insurance is, as suggested by the term, designed to fill residual gaps and limitations not covered by medicare. One obvious option open to the Federal Government is to broaden the scope and extent of medicare benefits to lessen the apparent need for supplemental private insurance.

Senator CHILES. If you note, we are dealing with a $51 billion deficit in the Federal Government.

Mr. MIKE. Yes.

Senator CHILES. I don't think that you are going to find, as much as a lot of us would like to see it, all those gaps covered. So you are right, that would be a very nice way to cover the problem, just not to have any gaps, but each one of those gaps, of course, involves millions of dollars and our biggest problem right now is the cost of medical bills. We are now seeking the development of reasonable costs and guidelines.

We have not found any device that puts any downward pressure on rising health costs. So to say that we are going to cover those gaps right now is impossible. In other words, our biggest problem is to stay level to where we are and not create some more gaps. I foresee that that is going to be the problem with the current state of the economy. Proposition 13 has some effect here as well as it does in California. So I think that we have got to talk about the alternative No. 2, because I don't see that there would be any possibility in dealing with alternative No. 1.

Mr. MIKE. Absolutely.

The next statement I had was a deferral to the Senate. Obviously there are additional problems involved with attempting to address the gaps of medicare.

Senator CHILES. Yes.

Mr. MIKE. Two initial questions that appear though are: (1) Do those over age 65 need a private insurance supplement; and (2) should the Federal Government broaden the medicare benefits?

As far as the marketplace is concerned, the answer to the first question is yes, absolutely. As far as the people who purchase medicare supplements are concerned, there is no doubt in their minds that they need private supplements.

Most medicare eligible Americans have private health insurance. There are, nevertheless, some serious doubts in our minds that the public fully understands the workings of the health care system, the functions of medicare, and the value or the benefits of the private health insurance they have. I will explain those concerns in a moment in answer to the second question.

Senator CHILES. They need the coverage, but do they need the coverage that they are now getting if they knew what it, in fact, was and what they were paying for?

"NOT AN OPEN AND FREE MARKET"

Mr. MIKE. The ideal solution is for most of the beneficiaries to understand what they are now getting and what they are now purchasing. We would not have a fraction of the problems we have now if the market functioned the way theoretically an open and free market does function. I am sure it does not in this case.

People are moved by emotion, by fear, and by a great lack of understanding of the product that they are buying to protect them from all those fears. We defer to you and your ability to balance the need of the elderly with the national capacity to underwrite such coverage.

In general, medicare cost sharing serves the dual purpose of cost

containment of health services and limiting the program's financial strain on the Federal Government. Although the health care cost containment objective is, in our view, socially desirable, both for the medicare population and the general public, the public has become accustomed to first dollar coverages.

One of the major benefit provisions of most supplement policies is coverage of the deductible and coinsurance amounts. We do not intend to prohibit insurance for medicare cost sharing amounts. However, the value of such insurance is open to question.

If first dollar coverage is economically inappropriate, then the insurance industry, State and Federal Governments, unions, and employers are to blame for allowing or encouraging its prevalence. The NAIC is on record in encouraging the use of consumer cost sharing as a device to assure use of the restraining influence of household budgets to minimize the inflationary propensity of the health care system.

I would like to stress that point just a little bit because within my role as insurance commissioner in Connecticut I am also a member of the Connecticut Commission on Hospitals and Health Care, and one of the problems we constantly run into is the fact that the public is insulated very heavily from the cost of the health care he is provided. It is very difficult for them to see the flow-through between the health care system which needs to be controlled very badly and the insurance coverage.

We get a great many complaints every year over the increases in Blue Cross/Blue Shield coverage and most of the people who complain to our department are unable to make the transition to the budget of their own hospital or the questions of duplication in the health care system itself.

We think it is essential that we avoid, in all cases, 100 percent comprehensive coverage. There has to be a responsible feeling on the decision to purchase the health care that his insurance is helping to pay for. If we can return to a more basic principle of insurance that protects you from a severe economic loss—not any economic payment—then I think the system is going to be much better off. Unfortunately, that is not a very popular idea. The theoretical ideas of cost sharing are not accepted by the market.

I think perhaps some education as to the relative cost of first dollar coverage might be very illuminating to the public. That is something we think ought to be attempted.

The population that is being treated with medicare supplemental coverage is extremely vulnerable. Many of them remember quite readily a time prior to medicare when a senior citizen could not obtain medicare to protect him from any loss, and many of them are very much afraid of being a drain on the family and loved ones and afraid of catastrophic health losses. They also become a population that will respond readily to any kind of marketing attempt to provide health insurance, and they are a fertile ground for any kind of slippery operation that may be in place.

We in Connecticut have prohibited specified disease policies. This is not necessarily a unanimous position. There are some people who feel that as long as the public is desirous of making a certain purchase, it should be available. I would note, in 1969 and 1972, Connecticut also prohibited senior citizens supplemental medical indem-

nity-type policies, but the pressure from the population to drop that prohibition was enormous.

Senator CHILES. But you don't have the dread disease policies now.

Mr. MIKE. No, we do not. I think myself that the best thing we can do is attempt to prohibit them countrywide. I really believe the best answer to the concerns addressed by the person to purchase dread disease is to purchase full comprehensive coverage. It is marketed by emotional appeal and scare tactics.

SUBSTANDARD POLICIES

Senator CHILES. Does the association have any position on that?

Mr. MIKE. It has been to identify dread disease as nonstandard, substandard insurance policies. The task force I referred to has been given a twofold charge. The first is to take on the question of medicare supplemental coverages. The second question that will dovetail and follow the first one is to take on the broader question of those insurance policies that are not in the public interest. They are going to examine questions, I hope, like indemnity contracts, specified or dread disease policies, minimal benefit policies, the $10 a day hospital policy—that kind of coverage.

There is a great question now whether the public does benefit by it, regardless of how strong the desire to purchase it is. In keeping with my positions on the cost of the health care system, I see a real problem with indemnity policies. Indemnity policies, unfortunately in many cases, are often an incentive to consume a greater portion of the health care system and it is the kind of coverage that someone could very easily develop into a profitable operation. Somebody could make money by being in the hospital an extra day or two. That kind of economic situation lies in the face of any attempt at cost containment. That is a very difficult question.

In order for the consumer to intelligently decide whether to buy insurance coverage of the medicare cost sharing amounts, the consumer must understand what medicare provides. We agree with the chairman of this committee who, in 1974, acknowledged that "One of the most compelling points for the Congress to consider is the great need for more intensive educational efforts upon the part of the Federal Government to inform older persons about medicare itself."

A peculiar aspect of the medicare program is that the basic benefits payable have changed almost annually, due to rising deductibles and coinsurance, since the inception of medicare. This results in a great problem. We not only have an element of the population that every year must learn about medicare as they reach the age where they qualify for it, and that previously were probably not as well aware as they should be of what medicare provides, but we also have a problem where the instruction may change from year to year. There is a constant need to inform.

I am an individual who believes that too much emphasis is placed only on the simplification of insurance. The unfortunate fact is insurance is, by and large, not a simple proposition. It is very easy to say we are going to simplify the language of this policy and leave it at that. More is needed. Simplification is desirable and necessary,

but I think, especially in the situation of the senior citizen, an ongoing counseling service is going to have to be provided. I don't see any way around it.

Our department has been discussing the situation with the Commission on Aging in Connecticut and we feel that that kind of educational function is valid and it must be encountered. Once that happens, we are also going to find greater exposure of the practices of agents and companies in the market. I will get to that in 1 minute because we have an enforcement difficulty that I don't think will go away at any level.

The other thing that bothers me a great deal is the ability of the physician to take or leave assignments and the reimbursement formula that leaves gaps between the allowable charges and actual fees. It seems to me that the system is aggravated when you allow the physician to accept a charge for one particular service and not for another. It becomes difficult for the patient to be able to determine whether medicare will pay his full bill or whether he is going to be hit with an additional charge that even an additional supplemental carrier won't provide. I hope that is a question that is taken up further. I think a physician ought to make a determination whether he will participate in the program or not, not on a case-by-case basis, whether he feels it is advantageous for this individual or this procedure, to take the assignment.

The consumer does not adequately understand the impact of nonassignment on the part of the physician. He does not understand the ability of the physician to charge him extra; the inability of most supplemental insurance to cover that.

Some possibilities for State regulators' consideration are mandatory disclosure of premiums allocable to the cost sharing amounts under any private supplement and controls on policy replacement procedures. These are some of the topics that we expect the task force is going to be undertaking.

In addition to medicare "gaps" attributable to purposeful cost sharing requirements, there are other gaps and limitations such as the maximum 90 inpatient days per episode of illness covered by part A; or the gaps caused by "reasonable and necessary care" payment limitations; or the numerous health care services not covered and not intended to be covered by medicare such as drugs, dental services, and full nursing home services.

"Market Can Be Influenced by Public Demand"

Given the existing set of medicare benefits, we believe the proper role of the States to be that of assisting the consumer in determining what gaps are suitable for private insurance coverage. So long as the public understands the benefits and limitations of the medicare program, the nature of private health insurance, and need to contain health care costs, the market for sensible and appropriate medicare supplements can be positively influenced by public demand. Public understanding should be a primary objective of both the Federal and State Governments with respect to medicare and sales of private insurance supplements.

When it comes to enforcement, there is an additional problem. Now we have the authority to enforce not only the insurance stat-

utes, but to seek enforcement of the criminal statutes over the marketing practices specifically of the agent force.

I should note that in Connecticut the Blue Cross program writes the vast majority—I would say almost 90 percent—of the supplemental coverage. They don't have a waiting period and they are not encountering any of the problems with not having preexisting conditions and with open enrollment. Because of that, a great many of the insureds are with the Blue Cross program. Their rates are reviewed annually. They are costly and our marketing problems are less than many.

That is not to say they don't exist. They exist primarily with special operations. We find that a particular company may become active in some approach that we don't care for or believe to be illegal or some particular agency may undertake an approach that we find it necessary to enforce our laws against.

We have a significant investigation going on right now that involves the State's attorney's office and the State police. It is a problem much like all of the other episodes that have been outlined here and in the previous testimony. We feel the situation is obviously illegal, but it is an enforcement difficulty, it is a crime, and I don't see any good way to avoid the commission of a crime. The best we can do is to attempt to enforce the statutes as fully as possible and detect problems as quickly as possible.

I would be a fool to sit here and maintain that we could prevent the situation from ever occurring again. What we feel is necessary is for the population to understand what their rights are and what their rights should be; to understand what kinds of coverages they should be obtaining and what they should not be expected to do. To the extent that we can make the population, if nothing else, very cynical and provide for them counseling services, we can expose the marketing practices to our scrutiny and be even more effective in enforcement.

"Not Aware of Victimization"

Many senior citizens are not aware of the fact that they are being victimized, pure and simple. A lot of the situations where the individual had all those insurance policies stashed away in a trunk were the same as people we found in our cases. We had to go in and explain to the persons, once we found the operation and started to track down its victims, why they were being victimized and show them exactly what was wrong with what they had and where the problem was. In many cases the persons became so embarrassed about it that they would be reluctant at best to participate in the investigation further.

So there has been a special problem. We cannot look at the figures and say it is a small problem. Most of the figures don't come to light. Most of the problems are difficult to detect and we have to ferret them out. That is why I think to the extent the public is more well educated everyone will benefit.

At least six States have promulgated regulations specifically dealing with the matter of medicare supplement insurance and, in my lengthier testimony, I have submitted outlines of what those States have done and also submitted examples in an addendum of the kinds of regulations that are already in force, are already adapted by the

NAIC, and enforced by most of the States affecting the behavior of agencies and companies.

It is premature to suggest which, if any, of these specific State regulatory approaches may be followed by the NAIC. A fair conclusion is that each attempts to summarize what medicare provides and to enhance the consumer's ability to determine what is appropriate to supplement medicare. This general objective will undoubtedly be shared by any model regulation proposed by the NAIC.

Thank you.

[The prepared statement of Joseph C. Mike follows:]

PREPARED STATEMENT OF JOSEPH C. MIKE

Mr. Chairman and members of the committee, my name is Joseph C. Mike, Connecticut Insurance Commissioner, and chairman of the Accident and Health Insurance Subcommittee of the National Association of Insurance Commissioners (NAIC). The NAIC is a voluntary association of the chief insurance regulatory officials of the 50 States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands. It is a pleasure to be with you this morning to relate the concerns and activities of the NAIC with respect to sales of so-called medicare supplement health insurance coverages.

We share your concern over confusion accompanying the medicare program and the inappropriate and duplicate private health insurance coverages being purchased by medicare eligible persons. We trust that constructive and cooperative efforts of the Federal Government and the States will minimize the problems and confusion of the medicare population. The marketing abuses and purchaser confusion accompanying medicare supplement health insurance sales appear to have ripened into problems appropriate for State regulatory action. Several states have already acted individually to set medicare supplement standards and the NAIC will now prepare recommendations for all states. All states actively regulate trade practices to deal with unfair marketing methods, unfair advertising, unfair claims settlement practices, and improper agent conduct.

As you may already know, the NAIC conducted its 1978 annual meeting in Washington during the second week of June. At its June 12, 1978, meeting, the NAIC's Accident and Health Insurance Subcommittee resolved to examine the need for, and draft in accordance with perceived needs, rules governing the sale of medicare supplement health insurance. It is my expectation that within 6 to 12 months the NAIC will be in a position to recommend a model regulation to individual States. During the public hearings to be held on this subject in future months, we would be most receptive to the recommendations and advice of the Senate Special Committee on Aging. We cordially invite members of the committee or your staff to participate in NAIC proceedings on formulating State regulatory initiatives in response to problems associated with medicare supplement sales. In the meantime, the NAIC recommends and respectfully requests that you refer individual medicare supplement complaints that come to your attention to the States for appropriate consumer assistance.

The States currently have in effect broad and detailed authority to regulate advertising, unfair trade practices, and other aspects of insurance company marketing. To the extent that fraud, abuse, and other unfair marketing practices are at the heart of problems with medicare supplement sales, individual states already have regulatory tools in place that are adequate to the task of addressing marketing abuses. When consumer complaints are filed with the State insurance departments, or when unfair market conduct is otherwise brought to our attention, we can and do deal effectively with individual instances of company or agent marketing abuse. However, on the basis of our regulatory experience, it has become clear that one of the best means to accomplish consumer protection is to arm the consumer with adequate knowledge of insurance products and educate him to appropriately identify his needs. Medicare is a complex Government health insurance program. It has become apparent that beneficiaries do not adequately understand what benefits they have much less what they need in the way of private supplements. Confusion in the minds of medicare supplement purchasers, inability to determine one's insurance needs, and inappropriate selection of health care may be aspects of

the problem that the Congress and the States can constructively address, but perhaps not entirely solve. However, we see the need for educational and consumer assistance programs as a major element of the medicare supplement problem. We will develop recommendations for State action. Let me turn now to our current understanding of the problems and the appropriate roles of the State and Federal Governments in resolving the significant problems.

The problems that we see are divisible into two categories—whether and how to fill medicare gaps and limitations; and controlling unfair trade practices of medicare supplement insurers. I have attached to this statement a brief review highlighting state regulatory measures applicable to the marketing of health insurance in general. The focus of my statement to you today will be what additional positive steps may now be taken on medicare supplement problems.

Medicare Gaps and Limitations

Medicare supplement insurance is, as suggested by the term, designed to fill residual gaps and limitations not covered by medicare. If complete, comprehensive coverage were provided to the elderly under medicare, there would be no market for private medicare supplement coverages. Therefore, one obvious option open to the Congress is to broaden the scope and extent of medicare benefits.

It may be interesting as a historical footnote to relate the insurance industry's expectations expressed in 1965 on the role of private health insurance under medicare. In commenting on the NAIC on the then-proposed medicare program offering both hospital and optional medical coverages, the industry suggested that "there will be little, if any, room left for private health insurance for those over 65 and coverage now in force would be eliminated." [1] Credit either the ingenuity of the suppliers of private health insurance or the demands of the elderly for first dollar comprehensive health insurance, or both, there is clearly a market for medicare supplement policies despite the bleak predictions of health insurers in 1965. According to the Health Insurance Institute, at the end of 1975 some 12.6 million older people, six-tenths of the over-age-65 population, had private health insurance to supplement medicare.[2]

Two initial questions that are woven through all of the issues now before you are: (1) Is there a real need for private medicare supplement insurance; and (2) should the Federal Government broaden medicare benefit structures? As far as the marketplace is concerned, the answer to the first question apparently is a resounding yes. Most medicare eligible Americans have private health insurance. There are, nevertheless, some serious doubts in our minds that the public fully appreciates the workings of the health care system, medicare, and private health insurance. I will explain our concerns in a moment. The second question, the appropriateness of broadening medicare coverage, is a matter for congressional discretion. For reasons that are undoubtedly well known by you, we cannot in general recommend expansion of the medicare system. We defer to the ability of Congress to balance the needs of the elderly with the capacity of the government to fulfill those needs.

The intent of the medicare legislation was to provide a broad program of hospital insurance protecting the over-65 population against the costs of inpatient hospital services, posthospital extended care, posthospital home health services and outpatient hospital diagnostic services. The hospital insurance plan was to be supplemented by a voluntary medical service plan to protect against the costs of physician services, home health services, and numerous other medical and health services. According to the 1965 House report on medicare legislation:

"The combined coverage of the two insurance plans would result in protection for the elderly of a quality that only a few older people can now afford. Most elderly people could be expected to have the protection of both of these insurance programs. The provision of insurance against the covered costs could encourage participating institutions, agencies and individuals to make the best of modern medicine more readily available to the aged." [3]

In spite of the fact that medicare was intended to be relatively complete and adequate, a high proportion of medicare eligibles supplement the program with private insurance.

COST SHARING GAPS

In general, medicare cost sharing serves the dual purpose of cost containment of health services and limiting the financial strain on the Federal Government in providing medicare benefits. We believe the health care cost containment objective is socially desirable both for the medicare population and the general public. However, the public has become accustomed to first dollar coverages.

As noted by one of the foremost authorities on social insurance, Robert J. Meyers, in his 1970 book entitled "Medicare":

"The high rate of continuance of supplementary private health insurance of all types is a vivid testimonial to the belief of a large segment of the population that relatively full insurance coverage is desirable if it can be afforded. This support is also noteworthy in view of the facts that much of the supplementary coverage represents first-dollar costs that are readily budgetable and that the ratio of the value of the benefit protection to the premium paid is now relatively low as compared with what it was under some full-coverage policies and plans in existence prior to medicare." [4]

This committee has been made fully aware of the fact that one of the major benefit provisions, if not the major benefit, of most supplement policies is coverage of the deductible and coinsurance amounts.[5]

If first dollar coverage is economically inappropriate, the insurance industry, State and Federal Governments, unions, and employers are to blame for allowing or encouraging its prevalence. The NAIC is on record in encouraging the use of consumer cost sharing as a device to assure use of the restraining influence of household budgets to minimize the inflationary propensity of health insurance.[6] If the Congress can be entirely convinced of the need for medicare deductibles and coinsurance, private insurance coverage of such cost sharing measures could be prohibited.

However, whatever the theoretical virtues of mandatory cost sharing, the public is not likely to accept prohibition of first dollar coverages absent a convincing and prolonged public education program accompanied by repeal of the tax subsidies of employer and individually purchased health insurance. The problem is further complicated by the fixed income of retired persons coupled to rising cost sharing requirements of medicare. Therefore, we conclude that a sizable market will continue to exist for first dollar medicare supplements whether they are appropriate or not. Nevertheless, a public campaign to persuade and educate the medicare population on the economics of health insurance we believe is in the public interest.

In order for medicare eligibles to be able to evaluate their needs for medicare supplements, perhaps the most pressing deficiency of the medicare program is public misunderstanding. The chairman of this committee, Senator Frank Church, in 1974 acknowledged in unmistakable terms that—

"One of the most compelling points for the Congress to consider is the great need for more intensive educational efforts upon the part of the Federal Government to inform older persons *about medicare itself* (original emphasis)." [7]

A peculiar aspect of the medicare program, one that distinguishes medicare from other forms of hospital, medical, and surgical policies, is that the basic benefits payable have changed almost annually due to rising deductibles and coinsurance since the inception of medicare. Given changing benefits, the ability of physicians to take or leave assignments for medicare patients, and the reimbursement formula that leaves gaps between the allowable charges under medicare and actual health care provider fees, one can easily understand the confusion in the minds of medicare eligible patients. Moderating the increases in cost sharing amounts under medicare, and setting easily understood deductible and coinsurance requirements would go far in our opinion to ameliorate present misunderstanding and to improve the ability of the medicare population to select desired supplements. We recommend congressional review of the cost sharing provisions of medicare.

Disclosure of what medicare pays and what private supplements pay is a major objective of virtually all of the State medicare supplement regulations now in place in six States. These State plans will be discussed in greater detail later in my statement.

GAPS AND LIMITATIONS OTHER THAN COST SHARING

In addition to medicare "gaps" attributable to purposeful cost sharing requirements, there are other gaps and limitations such as the maximum 90 inpatient days per episode of illness covered by part A; or the gaps caused by "reasonable and necessary care" payment limitations; or the numerous health care services not covered and not intended to be covered by medicare such as drugs, dental services, and full nursing home services. Are these additional gaps suitable for private insurance supplements? Should there be broader medicare coverage of both existing and additional benefits? The answers to these questions, as you well know, are not easy.

On the issue of broadening medicare coverages, we are aware of the remarkable rate at which costs of existing medicare and medicaid programs are increasing. Combined medicare and medicaid expenditures by the Federal Government have risen from $9.9 billion in 1970 to an estimated $32.2 billion in 1977.[8] Within only a few short years after the enactment of medicare legislation, future cost projections were being revised markedly upwards because of soaring costs attributable to provide cost increases and greater than anticipated utilization.[9] The problems created by health care cost increases are directly related to public and private, third-party reimbursement. Obviously, congressional interest in increasing medicare benefits must take account not only of the needs of the elderly but also the ability of the Government to support broadened coverages and contain health care costs.

If private insurance is feasible for services not already covered by medicare, the individual need for services must necessarily be of an insurable nature. Insurance deals with pooling similar risks of loss. The individual risk is the occurrence of a fortuitous event. If individual needs for dental services, drugs, or custodial care are either predictable or within the control of the patient, such services are by definition not insurable. While there are developing in the private market insurance programs for dental and drug services, the existence of such programs is largely attributable to the tax subsidies available in employer-paid benefit programs rather than a natural market for insurable services. Since many of most medicare patients are no longer employed, private insurance to supplement medicare with dental, drug, or custodial care services may simply be uneconomical. Premiums for such insurance may tend to match or exceed the individuals direct payment costs for such services.

In a similar vein are hospital and medical costs determined under medicare to be unreasonable and/or unnecessary. It is questionable both as a matter of public policy and economics to encourage private insurance for care, sought not for medical necessity but for convenience of the patient. In short, which total health care expenses of our medicare population may substantially exceed the amounts paid by medicare, it does not necessarily follow that the remaining expenses not paid by medicare can or should be privately or publicly insured.

However, there are gaps within medicare that are suitable for private insurance coverage. For example, the occurrence of a catastrophic illness or accident may lead to hospitalization beyond the period of coverage provided by medicare part A. This kind of risk is perfectly insurable, and private supplements to cover this kind of risk are undoubtedly beneficial. So long as the public understands the benefits and limitations of the medicare program, the nature of private health insurance, and need to contain health care costs, the market for sensible and appropriate medicare supplements will be shaped by public demand. Public understanding should be a primary objective of both the Federal and State Governments with respect to medicare and sales of private insurance supplements.

REGULATORY ACTION TO ASSURE A PROPER PRIVATE INSURANCE MARKET FOR FILLING THE GAPS AND LIMITATIONS OF MEDICARE

At least six States have promulgated regulations specifically dealing with the matter of medicare supplement insurance: California, Colorado, New Mexico, Oregon, Washington, and Wisconsin. As noted at the outset, it is the intention of the NAIC to consider the need for a similar model medicare supplement regulation.

Let me briefly summarize the existing State regulations:

(a) *California.* The California regulation basically sets benefit standards and calls for disclosure. The standards for "medicare supplement" coverages in California require:

(i) Application of a 55 percent loss ratio requirement for policy approval; and

(ii) Coverage of the coinsurance amounts applicable to both parts A and B which are automatically adjusted to medicare changes.

The standards prohibit:

(i) Coverage of the part B deductible if the insured is not hospital confined in the year;

(ii) Preexisting condition exclusions less favorable to the insured than a definition limited to conditions apparent 6 months before coverage and then excludable only for 6 months;

(iii) Exceptions, limitations, or reductions in coverage in a manner inconsistent with medicare;

(iv) Coverage of accidents on a different basis than sickness.

The disclosure requirements of the California regulation call for three categories of coverage: (i) in-hospital; (ii) in and out-of-hospital; and (iii) catastrophic coverage. Insurers in California are not required to make the catastrophic coverage available. A basic purpose of the California regulation is to require both parts of medicare be supplemented by any policy permitted to be sold as a "medicare supplement," subject to the proviso that coverage can be limited to expenses incurred as an inpatient. The catastrophic category is to provide blanket coverage after a "corridor deductible." In each category, prescribed statements clearly identify what is and what is not covered by the supplement.

(b) *Colorado.* The approach taken in Colorado is to require delivery of a prescribed notice form to medicare eligible applicants for any accident or health insurance that may replace or be added to existing insurance. The selling insurer is required to determine when a replacement or supplement may occur and then provide the notice form. The form cautions the applicant on benefits that may be lost on replacement and calls for a disclosure by the insurer of "any duplication or overlapping of coverages and deductions by reason of coordination of benefits."

(c) *New Mexico.* New Mexico has taken a straightforward disclosure approach in its medicare supplement regulation. In order to sell "medicare supplement" insurance, the insurer must provide a summary of Federal medicare benefits and applied-for policy benefits.

(d) *Oregon.* Oregon similarly requires delivery of a prescribed disclosure form that details medicare benefits, supplement policy benefits, and provides general purchase advice.

(e) *Washington.* In a manner similar to New Mexico and Oregon, Washington requires delivery of a prescribed disclosure form providing general consumer information and disclosure of medicare benefits with a continguous supplement policy benefit disclosure.

(f) *Wisconsin.* Wisconsin has set standards for medicare supplement rules that divide policies into four classes. The defined categories of coverage are designed to enhance consumer understanding and promote comparison. The first and most complete category of coverage under the Wisconsin regulation is medicare supplement 1. The category 1 coverage must provide a policy limit of at least $22,500 of supplemental coverage for specified medicare parts A and B eligible expenses. In addition, coverage of 75 percent of prescription drug expenses and 50 percent of psychiatric treatment expenses (up to $1,000) is required. Policies qualifying under the designation medicare supplement 2, medicare supplement 3, and medicare supplement 4 must provide specified but less complete benefits than the first category. Medicare supplement 4 may be issued in an A or B variety providing part A supplemental benefits or part B benefits. Wisconsin further defines permissible exclusions and limitations, requires de-

livery of outlines of coverage and consumer booklets, and prohibits sale of hospital confinement indemnity policies under the designation medicare supplements.

It is premature to suggest which, if any, of these specific State regulatory approaches may be followed by the NAIC. A fair conclusion is that each attempts to summarize what medicare provides and to enhance the consumer's ability to determine what is needed to supplement medicare. This general objective will undoubtedly be shared by any model regulation proposed by the NAIC.

SUMMARY

The perceived inadequacy of medicare benefits by our Nation's senior citizens is evident in the numbers of medicare supplement policies sold by the private insurance industry. A major question facing the Congress is whether to broaden medicare benefits to more completely provide the health insurance security sought by the elderly. Inextricably linked to the question of how comprehensive public benefits should be is the issue of how to assure that medicare beneficiaries are able to determine their medicare supplement needs and to select the appropriate private insurance supplement.

The apparent problems giving rise to these hearings on medicare supplement insurance are, in our view, attributable to confusion over what medicare provides, a lack of understanding of the economics of health care delivery, and difficulties with the private insurance mechanism. The members of the NAIC stand ready to assist you and the Nation's elderly in resolving each of these problems. In particular, State regulatory attention is being given to the need for medicare supplement standards and more adequate disclosure. To facilitate this effort, it is obviously desirable that the Congress clarify to the extent practicable what gaps and limitations are intended to exist under medicare and why. Broad regulatory authority is already in place in the States to control fraudulent, abusive, or misrepresentative marketing practices of insurance companies and their agents. We are hopeful that our collective efforts will substantially eradicate the conditions that have given rise to problems of our elder citizens in purchasing appropriate supplements to medicare.

Attachment.

SUPPLEMENTAL STATEMENT OF THE NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

A. HIGHLIGHTS OF MARKET CONDUCT REGULATORY AUTHORITY OF STATE INSURANCE DEPARTMENTS, RELATED HEALTH INSURANCE SALES

Where unfair trade practices by agents or insurers occur in the marketing of medicare supplement insurance and are brought to the regulator's attention, the States have ample regulatory authority already in place to address the problems. Even though only six States have acted to implement medicare supplement regulations, the remaining States can and do act under existing regulatory authority to revoke licenses, to impose fines and penalties, to issue cease and desist orders, and take other appropriate remedial action. In order to convey the nature and scope of State regulatory authority, there follows a brief description of several State insurance regulatory developments related to health insurance marketing.

(1) Unfair trade practices

Every State has enacted an Unfair Trade Practices Act in some form applicable to the business of insurance. Typically, these acts are patterned after the NAIC Model Unfair Trade Practices Act adopted in 1947.[1] In recent years, it was determined that the model law needed updating so as to more specifically address current problems of the insurance consuming public. After an extensive review in 1972, the NAIC substantially revised the model law. As currently recommended to the States, the model act speaks specifically to the fair treatment of policyholders and defines unfair claim settlement practices in considerable detail. The unfair trade practices act is clearly a consumer oriented legislative act. Regulatory procedures are authorized to determine the existence of unfair or deceptive practices in the business of insurance along with strong enforcement procedures. Cease and desist orders, license revocation, and sub-

[1] Reprinted in "Proceedings of the NAIC II," 509–15 (1960).

stantial fines and penalties are authorized by the model act. The unfair methods of competition, or unfair or deceptive acts and practices specifically defined in the act fall in these eleven general areas:

(a) Misrepresentation and false advertising of insurance policies;
(b) False information and advertising generally;
(c) Defamation;
(d) Boycott, coercion, and intimidation;
(e) False statement and entries;
(f) Stock operations and advisory board contracts;
(g) Unfair discrimination;
(h) Rebates;
(i) Unfair claim settlement practices;
(j) Failure to maintain complaint handling procedures; and
(k) Misrepresentation in insurance applications.

In addition, the NAIC model act authorizes the insurance commissioner to examine and investigate other practices which may be determined to be unfair or deceptive whether or not they are specifically defined as such in the act. This comprehensive authority to regulate insurance trade practices is second to none in terms of its broad scope and enforcement authority. In short, we have substantial authority to deal with unfair or deceptive insurance sales practices involving medicare supplement sales or any other line of insurance. If particular complaints are brought to your attention, the appropriate member of the NAIC will certainly provide its regulatory assistance on request.

(2) Health insurance advertising

In recent years the bulk of the problems associated with health insurance advertising have related to mass marketing activity through the mails, newspapers, radio, and television. Until fairly recently when an insurer entered a State through these techniques, as distinguished from personal solicitation by agents within the jurisdictional boundaries of the State, there had been serious questions as to the State's constitutional authority to reach such insurers. However, two court decisions in the middle 1960's have been favorable to the State regulatory position and have eliminated most of the questions related to the States' regulatory authority over mail order insurers.[2]

Health insurance advertising became increasingly important in the years after the NAIC 1956 rules governing advertisement of accident and sickness insurance were adopted. The expanding availability of group coverage, the advent of governmental programs, and the growth in sales of individual policies not only offer the public the diversity of choice, but also serves to complicate the consumer's decisional process. The consequent need for better information led to the disclosure requirements established by the 1972 NAIC advertising rules. As the volume of health insurance marketed through direct response techniques mushroomed, such advertising evolved from a sales aid for the agent to a major marketing effort. This led to the amending of the NAIC model rules governing advertisements of accident and sickness insurance (with interpretive guidelines) in 1974 to reflect specific requirements for direct response advertisements.[3]

The rules seek "to assure truthful and adequate disclosure" through the establishment of minimum standards and guidelines in the conduct of advertising. Certain information is required to be disclosed in a nonmisleading manner, and certain words, phrases, and illustrations are prohibited. Specific practices are also governed by the rules. For example, each insurer is required to maintain a file containing its various advertisements, and each file is subject to insurance department examination. An authorized officer is required to certify the insurer's compliance with the advertising rules. Furthermore, the rules contain an optional provision which would enable the commissioner to require that direct response advertising material must be filed for review 30 days prior to use.[4]

Rptr. 599, appeal dismissed for want of Federal question, 389 U.S. 330 (1967). For a detailed discussion of the constitutional issues, see Hanson and Obenberger, "Mail Order Insurers: A Case Study in the Ability of the States to Regulate the Insurance Business," 50 Marq. L. Rev. 178, 215 *et seq.* (1966).

[3] 2. "Proceedings of the NAIC" 420 *et seq.* (1974).

[4] *Id.*

Thus, with the removal of the constitutional doubt as to the State insurance regulatory authority, the NAIC and the individual States have moved quite aggressively to improve health insurance advertising. The adoption of the NAIC rules in 1972, as amended in 1974, marked the culmination of an extensive and successful effort by the NAIC to improve the quality of the existing insurance market. Most States have promulgated advertising regulations, typically patterned on the NAIC model rules, which have contributed to a more informed buyer and have deterred sellers' advertising abuses.

(3) Complaints

Closely related to the Unfair Trade Practice Act and the advertising rules and regulations is the assumption of responsibility by State insurance departments for establishment of a mechanism for handling policyholders' complaints. State complaint services in recent years have been expanded and emphasized. Among other things, State insurance departments have implemented toll free telephone lines and more efficient complaint handling procedures in order to make their policyholder service units more accessible to citizens. Processing complaints not only serves to assist individuals with their particular problems but also provides a means to monitor an insurer's conduct in a more efficient fashion.

Two NAIC developments in this area are noteworthy. First, under the authority of the revised Unfair Trade Practices Act, a model regulation has been developed and adopted which requires an insurer to maintain records of policyholder complaints made to the insurer.[5] Such records are subject to insurance department review. Second, the NAIC has developed a uniform complaint handling system that is in widespread use throughout the States. Complaints which are received by an insurance department are in many States compiled in a uniform format[6] by company, type, line, reason, disposition, etc., so that data can be reviewed for regulatory purposes.[7]

B. GENERAL BACKGROUND ON HEALTH INSURANCE POLICY APPROVAL STANDARDS AND NAIC ACTIVITIES

(1) Premium rate controls

As a general matter, States do not regulate rates of life, health, and accident insurance in a manner similar to that of property and liability insurance. In most States, property and liability insurers must file insurance rates for prior approval by the insurance department, although there is a trend toward open competition rating in those lines. Blue Cross and Blue Shield rates are directly regulated in many States, in contrast to commercial health insurance, because of their tax exempt status, the service benefit nature of coverage, and their leverage over providers of health care.

Although health insurance rates are not regulated directly by the States as a general matter, most States require rates to be filed with the insurance department. As part of the policy form approval procedure, many States provide that forms will be disapproved if the benefits provided are unreasonable in relation to the premiums charged. All States require the filing of actual loss experience on policies. The requirements of a reasonable relation between premiums and benefits in many States has led to the development by the NAIC of loss ratio benchmarks that, as advisory guidelines, are recommended to the states for consideration in reviewing health insurance policy filings.

The NAIC currently has a technical task force that is reviewing the NAIC loss ratio guidelines in effect since 1953. New guidelines for premium increases on individual health insurance forms are being prepared which would, if adopted, require submission of an actuarial memorandum specifying the anticipated loss ratios, an actuarial certification that policy filings comply with State law and provide benefits that are reasonable in relation to premiums. Furthermore, the new guidelines would provide specific loss ratio benchmarks ranging from 50 to 65 percent depending upon the type of coverage and renewability features.

---

[5] The model regulation as amended is reprinted in 1 "Proceedings of the NAIC" 282–310 (1974).

[6] 1 "Proceedings of the NAIC" 287 (1974).

[7] Such a program can focus attention upon particular patterns of complaints and can identify policyholder problems that may be rectified by contract modification or marketing technique changes. It is also possible to note those insurers that are creating more policyholder complaints than their volume of business would anticipate and react as need be. *Hearings*—NAIC, *supra* note 67, at 2653.

(2) Minimum standards requirements

Another area of recent State insurance regulatory activity, focusing specifically on health insurance, relates to development of minimum standards for health insurance policies. In this regard, during its December 1973 meetings, the NAIC adopted the Model Individual Accident and Sickness Minimum Standards Act.[8] The essence of the Minimum Standards Act is found in section 4 which requires the commissioner to establish minimum standards in relation to benefits for seven specified categories of coverage: (1) Basic hospital expense coverage; (2) basic medical, surgical expense coverage; (3) hospital confinement indemnity coverage; (4) major medical expense coverage; (5) disability income protection coverage; (6) accident only coverage; and (7) specified disease or accident coverage.

No policy or contract can be issued or delivered in the State which fails to meet the minimum standards for the categories of coverage into which it falls.[9] Other pertinent sections of the Minimum Standards Act include section 3, which directs the commissioner to promulgate regulations to establish standards that "set forth the manner, content, and required disclosure for the sale of individual policies" and Blue Cross and Blue Shield contracts,[10] and section 5, which provides that no policy or contract shall be issued or delivered in the State unless an outline of coverage is provided to the applicant.[11] Following the adoption of the model act, the NAIC immediately began work on a model regulation to implement the Minimum Standards Act. After a series of public hearings, a minimum standards regulation was adopted during the December 1974 meeting of the NAIC.[12]

In essence, the model act and the implementing model regulation establish the framework to: (1) enable the standardization of the definition of policy terms, (2) compel policies to meet minimum standards for the category into which they fall, and (3) compel disclosure to the consumer to better enable him to know what he is purchasing.

The minimum standards act and regulation does apply to individual medicare supplement policies despite the fact that a separate category for medicare supplements is not provided. In accordance with the current recommended draft of the minimum standards regulation, medicare supplements generally would be required to be sold as "limited benefit health insurance" coverages with and outline of coverage disclosing principal policy benefits and limitations.

In the event the NAIC resolves to provide specific rules for medicare supplements, the existing minimum standards act and regulation could be amended to include the new rules. The NAIC will give deliberate consideration to this option. The minimum standards regulation already includes provisions governing use of preexisting condition limitations, waiting periods, cancellation and renewal provisions, and other policy terms and conditions relevant to medicare supplement issues.

(3) Policy readability

A final regulatory development that is notable is the adoption earlier this month by the NAIC of a model Life and Health Insurance Policy Language Simplification Act. In response to the difficulties of policyholders in reading and comprehending life and health insurance policies, the NAIC has adopted a model law that sets new standards for policy drafting. The standards include, for example, a requirement that policies achieve a minimum Flesch test readability score, and the act sets standards for type face, inclusion of tables of contents, and avoidance of undue prominance given to policy text or riders. The purpose of the new act is to improve policy language in order to facilitate the insured's understanding of the coverages provided. It is our hope that regulatory developments such as the readability model will enrich the ability of all insurance policyholders, including medicare supplement purchasers, to choose the correct coverage for their needs and better understand their insurance benefits.

[8] The model act is reprinted in 1 "Proceedings of the NAIC" 414 (1974).

[9] *Id.* at 416–17.

[10] This authority extends to, but is not limited by, several enumerated provisions and terms found in health insurance policies. Through this provision the commissioner can standardize definitions for particular terms, and specifically prohibit policy provisions which are "unjust, unfair, or unfairly discriminatory to the policyholder, any person insured under the policy, or beneficiary." *Id.* at 415–16.

[11] The commissioner shall prescribe the format and content of the outline of coverage including the category of the policy, a description of the principal benefits and coverage, a statement of exceptions and limitations, etc.

[12] The model regulation is reprinted in 1 "Proceedings of the NAIC" 54–77 (1977).

Senator CHILES. Thank you very much for your statement.

We have another rollcall in process so we are going to have to leave in just a few minutes.

Senator Domenici will leave now and maybe by the time he gets back I can go over.

How long do you anticipate the study of your task force to be?

Mr. MIKE. We had hoped 6 to 12 months would be sufficient time for the task force to bring its recommendations back. The NAIC meets twice a year and the task force is bringing their results to the subcommittee meetings. We had frankly hoped that by next summer we would have the recommendations and the subcommittee could begin action.

Senator CHILES. I just want to point out to you I tried at the last meeting that we had, and before you had your meeting—and I think I speak for Senator Domenici, too; I am sure I do—we strongly feel that the regulation of insurance has been and should continue to be a State question. I am the product of the State legislature myself, having spent 12 years there before I got sent up here, and I think the States are best able to do that.

NATIONAL PROBLEM

When you get a problem like this and we see the extent of the problem, it is clear that it is a national problem that we are dealing with. I think that those of us who want to see the States continue to regulate insurance have to be for action that you are talking about like your task force where we can see model laws develop and see the States move in unison to taking care of the problem like this. It has always been in an area like this where States often fail in their responsibility, that someone decides, well, that is something that the Federal Government has got to get into.

When I was in the State I used to talk about intrusion, but the longer I looked at it the more I saw it was, in many instances, where the States failed that the Federal Government moved into a vacuum, and moving into that vacuum we had more power come up here. I think we have got more now than we can say grace over. I would like the States to do more, but I think this would be one of those areas that, if the problems continue, it could well bring the regulation of insurance into the Federal Government arena.

I think that would be very important, so I want to tell you I am delighted to see that you have appointed a task force. I think your statement here today is certainly strong in the efforts you want to see that task force take. I just hope that that message will go to all of the insurance commissioners in all of the States.

This is a problem that you do have to work on. We do have to come up with solutions to it. We are talking about sooner or later having some kind of a national health insurance. We must get our house in order before the national health insurance comes down the pike.

I think it is awfully important that we do get some good work out of your task force. As I said, we do look forward to trying to work with you in any way that we can.

You were here and had an opportunity to hear Commissioner Dole and her testimony this morning. I would like to know just what

your feeling is in regard to what she was talking about in having a joint study in which the FTC would seek participation from the States and from the insurance commissioners of the State in trying to do an impact study.

Mr. MIKE. Obviously, I cannot speak officially for the organization.

Senator CHILES. I understand.

Mr. MIKE. We welcome anything that is going to provide further information to this task force to enable it to do its job better. We are recognizing that if we take the narrow view of attempting to jealously guard the States' rights to guard insurance to the exclusion of all other considerations, we are going to be overlooking a great many problems here and we are not fearful with involvement with the Federal Government. We think the public can benefit greatly by it and we would honestly welcome anything.

Senator CHILES. I think that is a very healthy attitude and I hope that you would circulate to the other States this kind of offer that she is talking about, because it seems to me that there are certain resources that are available to the Federal Trade Commission and certain resources that are available to us through certain powers that we have. By the same token, the States have much of the information. The basis of the information and by putting all of those parties together, I think we can come up with a much better and rational plan. Again, it would be up to the States to implement that plan.

Mr. MIKE. I intend to invite Commissioner Dole to submit to the NAIC a proposal with some detailed information for the organization to consider—that is, the executive staff. I am not an officer of the organization, but merely a subcommittee chairman. We can begin to discuss and implement something as quickly as possible.

Senator CHILES. I think that would be very, very helpful.

I want to thank you very much for your appearance and for your testimony. We will certainly look forward to working with you.

Mr. MIKE. Thank you very much.

Senator CHILES. I am going to go and vote. Senator Domenici will be coming back shortly.

Mr. Garcia, we will be taking your testimony.

[Whereupon, the committee took a short recess.]

Senator DOMENICI [presiding]. Senator Chiles will vote and, if he can, he will return. We are going to proceed with our last witness for the day.

As our last witness for the day, it is our privilege to have Manuel A. Garcia, Jr., superintendent of insurance, New Mexico.

If you are ready, Mr. Garcia, you may proceed.

STATEMENT OF MANUEL A. GARCIA, JR., SANTA FE, N. MEX., SUPERINTENDENT, DEPARTMENT OF INSURANCE, STATE OF NEW MEXICO

Mr. GARCIA. Mr. Acting Chairman, it is a real privilege for me to be here and to present to this committee some of the problems that we have in New Mexico and also to present to this committee some of the solutions we have had with some of these problems.

Sometime during the latter part of 1976 and during 1977, the problems and abuses began to come to our attention in the form of complaints from some of the elderly citizens of New Mexico. The complaints that we received involved two areas of abuse: First, policies were being sold which did not fill the gaps left open by the Social Security Act, and these provided a vast area for misrepresentation by sales persons. Second, the overselling of insurance policies to the elderly.

I would like to proceed to present to this honorable committee the case histories, and you have already heard case histories from other witnesses involving the elderly. I would like to summarize the three cases we just picked at random. We had others, of course, but we thought these were significant.

The first case we had in the complaint, I might add, was received in our department by an officer of a life underwriting association in that part of the State. Our investigation proceeded and we found that this elderly person had purchased, in a period of 2 years, over 30 policies of various types. The total premium involved was $3,843.18.

After the department took over the investigation, we determined the information we needed to proceed. We summoned the representatives of various insurance companies to come to our department and discuss the matter. I might add that this not only involved one company, it involved nine separate companies. After presenting these companies with the problems and what our desires were, we were able to get a refund of $3,369.16 for that person. There was a balance of the premium that was not returned because these were some of the policies that the party decided to keep.

The second case we were involved in was an elderly gentleman in the northern part of the State of New Mexico. The complaint in this instance came from the Department of Health, Education, and Welfare of the Dallas, Tex., office, and the complaint recited that there was an agent identifying himself as a social security representative collecting medicare premiums.

"Soliciting Funds To Support Medicare Program"

We undertook an investigation immediately and discovered that there were 157 individuals who had purchased this medicare supplement plan from this particular agent. The information and copies of the applications were solicited and received from the insurance company represented by this particular agent. Of course, part of his deception was to indicate to these people that the medicare program was on the verge of bankruptcy and that he was soliciting funds to maintain the medicare program until the Congress could appropriate more funds.

Our representative out of the department worked with the different county welfare offices and counsel. We suggested that the letter be sent to all the people involved who purchased these plans; however, on the advice of their legal counsel, it was decided that instead of a written letter, we would issue a radio and newspaper release[1] that would be circulated through the northern counties and

[1] See p. 267.

throughout the State, warning people to take precautions against purchasing these plans from individuals passing themselves as social security representatives.

After discussions with the insurance companies, the company was willing to make refunds to all these purchasers, but we only had 22 formal requests for refunds. Those refunds were made. The agent's license was suspended. We offered him a hearing. We had no response from him at all as to his cancellation or as to his interest in a hearing. This agent is no longer doing business in the State of New Mexico so far as we are concerned.

The third case involved, again, an elderly lady in the southern part of the State who, over a 2-year period, had purchased 16 various policies, for a total of $7,431. We again conducted a full investigation, discussed the problems with the companies involved, and were able to secure a $7,171 refund; $260 was not recovered due to a company insolvency.

Senator DOMENICI. Commissioner, are those 16 policies all from the same company?

Mr. GARCIA. There were various companies involved. I don't have a breakdown as to how many.

Senator DOMENICI. How did you find out about that one?

Mr. GARCIA. We got a call from a friend of the lady involved.

These three examples as well as many of the others that you have heard this morning are from other sources. These examples are the ones that were encountered in New Mexico in the area of supplemental plans and the resolutions that were completed by the Department of Insurance for the State of New Mexico. These cases don't represent all of the problems. We have many other cases where we have been successful in terms of returning refunds on premiums.

We have done other things to proceed to try to eliminate some of these problems in the medicare gap and medicare supplemental plans. First, we published in the news media cautions and warnings of the pitfalls of purchasing medicare supplements. Although we felt that this type of release is not the most effective, we did feel it would reach certain segments of the public that would be involved in this and would bring to light some of the problems they may encounter by overzealous sales persons for this type of plan.

Second, we oriented all of the personnel who worked in the government service offices or service centers on how to identify the problems and how to aid in getting this information to the department of insurance as soon as possible. Three members of our department were sent to many population centers to explain problems to assembled groups and to make this information available to radio and the press.

FULL-TIME INVESTIGATOR

During these meetings it was encouraged that citizens bring their complaints and questions to the department of insurance as soon as possible, and I can report that these efforts have been successful in the use of these facilities. We added to our staff in the department a fulltime investigator who is now readily available to us so he can go out and investigate these problems. Prior to this we had to rely on telephone contacts et cetera.

We have also published, along with our regulation we promulgated to the different companies and agents, that any time we find an agent or a company who is guilty of this behavior, we will proceed immediately to either suspend or cancel their license to do business in the State. There is a suspension revocation. We have means through the National Association of Insurance Commissioners by which we can pass that information on to other people, especially neighboring States.

Information also received by this department would indicate that a company also involved in pursuing this type of practice would immediately be investigated and a hearing brought forth.

I mentioned previously that the department had promulgated the regulation in November 1977. We have attached this to my statement. The purpose of this regulation is to let the buyer of medicare supplements in the exhibit attached physically see this graphic form the benefits of such medicare supplemental plans and in addition how it compares to what coverage is provided for under medicare.

We feel in New Mexico that medicare supplements, when they are properly sold and controlled, are very essential to the health and welfare of the elderly citizens of the State. We do intend to continue our efforts in other areas to control and oversee these programs to the benefit of a very important segment of our society in New Mexico.

I would like to field any questions that you might have Senator.

[The prepared statement and attachments of Manuel A. Garcia, Jr., follow:]

PREPARED STATEMENT OF MANUEL A. GARCIA, JR.

Mr. Chairman and members of the Senate Special Committee on Aging, I welcome this opportunity to come before you and present some testimony involving medicare and medicare supplement plans and the problems that some of the elderly in New Mexico have encountered in this area. We will testify on the actions which the State of New Mexico, through its insurance department, has taken to protect the elderly medicare policyholders in New Mexico.

Sometime during the latter part of 1976 and during 1977, the problems and abuses began to come to our attention in the form of complaints from some of the elderly citizens of New Mexico. The complaints that we received involved two areas of abuse; first, policies were being sold which did not fill the gaps left open by the Social Security Act, and these provided a vast area for misrepresentation by sales persons. Second, the overselling of insurance policies to the elderly.

I will proceed to present to this honorable committee the case histories, the problems encountered, the abuses that were involved, the action that the State Department of Insurance for the State of New Mexico took, the resolution to these problems, and how we proceeded to take care of regulating this area of the private health insurance business. In addition to that, we will proceed to show you the regulation adopted by the State of New Mexico and the control that we have with the insurance industry in the area of medicare supplemental coverages.

The first case that we will refer to was C. P. of Carlsbad, N. Mex. Mrs. P. was involved in a very severe case of overselling in the area of medicare supplements. A formal complaint was received by the department from the vice president of the Life Underwriters Association in Roswell, N. Mex., a city north of Carlsbad, N. Mex., where Mrs. C. P. lived. There was no question after reviewing the grievance that Mrs. P. in a period of over 2 years, had over 30 policies of various types. The total involved premium was $3,843.18. A complete investigation was undertaken by the department investigator and, after determining the factual information necessary, several home office representatives were summoned to the department of insurance for dis-

cussion of this matter. Every insurance company involved was informed of the obvious abuses of agency practices regarding the duplication of coverage to Mrs. P. and a full refund of premiums to Mrs. P. was requested. We were successful in having $3,369.16 recovered for the insured from the various companies. The balance of the premium was in policies retained by the insured, and we closed our case.

The second case involved an elderly gentleman in the northern part of the State. The formal complaint was received from the Department of Health, Education, and Welfare, Dallas, Tex., office.

The complaint recited the following: The agent was identifying himself as a Social Security representative collecting medicare premiums. An investigation was undertaken by our department investigator and it was discovered that a total of 157 individuals had purchased this medicare supplement plan from this agent. This information and copies of the applications were solicited and received from the insurance company represented by this particular agent. A part of his deception was to indicate to these people that the medicare program was on the verge of bankruptcy and that he was soliciting funds to maintain the medicare program until the Congress could appropriate more funds. Our representative worked with the different county welfare offices and the State welfare office and their legal counsel. It was suggested by our department that a letter be sent out to all of the purchasers of these plans. Instead of a written letter, however, it was then decided that, for legal reasons, a general news release via radio and newspaper would be circulated in those northern counties warning people to take precautions against purchasing medicare supplement coverages from individuals passing themselves off as Social Security representatives. Although the insurance company was willing to make refunds to all purchasers, only 22 made formal requests for refunds. All of these refunds were made. The agent's license was canceled and an offer of a hearing was afforded the agent, although there was no response from him as to his cancellation or to his hearing. This agent is no longer doing business in the State of New Mexico.

The third case involved, again, an elderly lady in the southern part of the State who, in a 2-year period, had purchased 16 various policies. The total premium paid out was $7,431. After a full investigation by our department and contact with the proper company representatives, a refund was recovered for that insured totaling $7,171. The $260 not recovered was due to a company insolvency. The case was closed on April 19, 1978.

These are but three examples of the problems encountered by New Mexico elderly citizens in the area of medicare supplemental plans and the investigation and resolution as attempted and completed by the Department of Insurance for the State of New Mexico. These cases, of course, do not represent our only efforts; we have many cases which are as successful as the ones aforementioned and a few cases that will be resolved in the very near future. The efforts made by this department did not really stop there; we did several other things:

(1) We published in the news media cautions and warnings[1] of the pitfalls of over purchasing medicare supplements. We feel that this type of release is not the most effective; however, it will reach a particular segment of the insuring public and we are in hopes that it will at least bring to light some of the problems that they may encounter by over-zealous salesmen of these type of plans.

(2) We have oriented all of the personnel who work in the Governor's service centers how to identify the problems at hand and how to aid in getting this information to the department of insurance as soon as possible.

(3) Members of our department have been sent to many population centers to explain the problem to assembled groups and to make this information available to radio and the press. During these meetings, we have encouraged citizens to bring their complaints and questions to the department of insurance and I can report that this effort has been successful and that use of these facilities will be utilized further in the future.

(4) With a staff investigator readily available to this department, we can now accumulate detailed factual information necessary to curb these types of abuses on any of the insuring public of the State of New Mexico.

---

[1] See p. 267.

(5) At any time that we find an agent or agents guilty of behavior of this fashion we will immediately suspend or cancel their licenses to do business in the State. The suspension or revocation of the license is then passed to all States involved through the facilities of the National Association of Insurance Commissioners.

(6) Information received by this department that would indicate that a company is involved in such practices, will immediately be investigated and brought to task.

Additionally, the department of insurance promulgated the attached regulation.[1] You will note that this regulation became effective on November 28, 1977. The purpose of this regulation is to let the buyer of medicare supplements physically see, in a graphic form, the possible benefits of such medicare supplements.

We feel that medicare supplements which are properly sold and controlled are essential to the health and welfare of the elderly citizens of the State of New Mexico.

We intend to continue our efforts in controlling and overseeing these programs to the benefit of a very important segment of our society in New Mexico.

Attachment.

STATE OF NEW MEXICO,
DEPARTMENT OF INSURANCE,
Santa Fe, N. Mex., November 18, 1977.

NEWS RELEASE

Within recent days the department of insurance has received a large number of reports that persons over age 65, and others have purchased or reported to have purchased health insurance and have not received policies of insurance.

These or reported agents have:

(1) Not properly identified themselves.

(2) Secured personal checks drawn to themselves. These checks have been cashed, and no policies delivered.

(3) Persons posing as agents in a number of cases have no license, nor can they be located, and the department of insurance has no record of them.

(4) Other purported agents are operating with material either stolen from a licensed company, or the material has been reproduced from copies of forms secured.

(5) Other purported agents are signing and forging the names of licensed agents.

(6) Other purported agents are offering policies of insurance in companies not licensed to do business in New Mexico.

(7) Other agents or purported agents are representing themselves as being from the Social Security Administration. No agent may do this.

The department of insurance recommends that if any client is unsure of the person presenting themselves as agents that they should:

(1) Ask for positive identification, and retain evidence of identification.

(2) Call the company being represented to affirm that the agent is as represented.

(3) If a policy is purchased, *always* make the check payable to the insurance company and put on the check what is being purchased.

(4) Secure in writing or in printing the benefits being offered.

(5) If there are any doubts concerning either the agent or the company, call or write to: Superintendent of Insurance, P.O. Box 1269, Santa Fe, N. Mex. 87501. Telephone No. (505) 827-2451; or the Governors Service Center nearest your home.

The department of insurance is earnestly attempting to stamp out abuses and fraud, and to protect the interests of the buying public.

The department of insurance is equally interested in protecting the licensed and legitimate agents and companies who are offering the necessary insurance coverages.

KENNETH C. MOORE,
Superintendent of Insurance.

---

[1] See p. 268.

ARTICLE 11, CHAPTER 58, RULE 4

DEPARTMENT OF INSURANCE REGULATIONS GOVERNING ACCIDENT AND HEALTH INSURANCE MEDICARE SUPPLEMENTS.

11-4-1. Authority.—This rule is promulgated pursuant to section 58-2-13, NMSA, 1953.

11-4-2. Scope.—This rule applies to any insurer which delivers or issues for delivery in this State an individual policy of sickness and accident insurance which is a medicare supplement. It also applies to any nonprofit health care plan which delivers or issues for delivery in this State an individual subscriber contract which is a medicare supplement.

11-4-3. Definition.—"Medicare supplement" means a policy or subscriber contract which relates its coverage to eligibility for medicare or medicare benefits, substantially or in part, to fill the gaps in the coverage supplied by medicare, part A and/or part B.

11-4-4. Disclosure requirements.—

(A) After 150 days following the effective date of this rule, no insurer and no nonprofit health care plan shall deliver or issue for delivery in this State an individual policy of sickness and accident insurance, or an individual subscriber contract, which is specifically designed as a medicare supplement unless a summary of Federal medicare benefits and policy (or subscriber contract) benefits is furnished to the applicant or subscriber at the time the application is made, or to the policyholder or contract-holder at the time the policy or subscriber contract is delivered.

(B) Such summary shall contain in substance the information shown or called for in attachment A, which is attached hereto and made a part hereof. The summary may include other information which the insurer desires to include, but such other information may not be presented in such a way as to obscure the comparison of medicare benefits and policy benefits.

(C) Federal medicare benefits are not stable and do fluctuate in accordance with congressional action. It is, therefore, necessary that any company or plan writing medicare supplements revise the form from time to time so that it does not furnish a form which is out of date.

(D) The policyholder of a medicare supplement which is subject to this rule shall be permitted to return the policy or subscriber contract within ten (10) days after its delivery if such person is not satisfied with it for any reason. If it is so returned to any office or agent specified by the insurer or plan (such as the insurer's or plan's home office or branch office or the soliciting agent) with written request for surrender, it shall be void from the beginning and any premium paid for it shall be refunded. A notice of such right to return the policy or subscriber contract and receive a refund of any premium paid shall be included in or printed on or attached to the policy or subscriber contract or included in the summary.

(E) The details on the disclosure form as outlined in attachment "A" shall be of a size of not less than ten (10) point type.

11-4-5. Effective date.—This rule shall take effect on November 28, 1977.

I, Kenneth C. Moore, superintendent of insurance of the State of New Mexico, pursuant to the authority granted me under section 58-2-13, NMSA, 1953, do hereby promulgate the following rule (article 11, chapter 58, rule 4) of the official compilation of rules and regulations, to take effect on November 28, 1977, after filing with the record center as provided by the provisions of State Rules Act (71-6-23, 71-6-24, 71-7-1 to 71-7-10, NMSA, 1953).

I, Kenneth C. Moore, superintendent of insurance of the State of New Mexico, do hereby certify that the foregoing initial rule has been issued and entered in the office of the Superintendent of Insurance in an indexed, permanent book which is a public record.

In Witness Whereof, I have hereunto set my hand and caused my official seal to be affixed at the city of Santa Fe, N. Mex., this 26th day of October, A.D. 1977.

KENNETH C. MOORE,
Superintendent of Insurance.

Certificate of Filing: I, Kenneth C. Moore, superintendent of insurance, State of New Mexico, do hereby certify that the foregoing initial rule (11-4-1 to 11-4-5) has been filed on October 26, 1977, with the records center.

KENNETH C. MOORE,
Superintendent of Insurance.

ATTACHMENT A.—SUMMARY OF MEDICARE BENEFITS AND POLICY BENEFITS

(1) *Inpatient hospital benefits (Part A of Medicare)*. Benefits are paid for covered hospital charges for hospital room and board and miscellaneous services during each "benefit period" as follows:

Day of confinement	Medicare now pays	Policy pays
Days 1-60 each benefit period	Covered charges, but not the first $144	
Days 61-90 each benefit period	Covered charges except $36 a day	
Days 91-150 while lifetime reserve remains	Covered charges except $72 a day	

(2) *Skilled nursing facility confinement benefits (part A of medicare)*. Benefits are paid for covered skilled nursing facility charges, if the patient is an inpatient in an approved skilled nursing facility and confinement begins within 14 days of a hospital stay of at least 3 days for the same injury or sickness, as follows:

Day of confinement	Medicare now pays	Policy pays
Days 1-20 each benefit period	All covered charges	
Days 21-100 each benefit period	Covered charges except $18 a day	

(3) *Medical benefits (part B of medicare)*. Benefits are provided for "reasonable charges" for covered physician's services, medical supplies, and other covered services, each calendar year.

Medicare now pays 80 percent of the "reasonable charges" but not the first $60 each year.

The summary shall also contain:

(a) A description of any other benefits provided by the policy or subscriber contract.

(b) A description of the exceptions, reductions and limitations contained in the policy or subscriber contract.

(c) A statement that the summary is only a brief summary of certain policy or subscriber contract provisions, and is not a part of the contract of insurance. The policy (or subscriber contract) itself sets forth the rights and obligations of the insured (or subscriber) and the insurer (or plan).

(d) A statement that medicare benefits change from time to time, according to Federal law and with rules and regulations of the Social Security Administration.

(e) The name of the insurer or health care plan and address must appear on the summary of benefits.

Senator DOMENICI. Let me just ask now on the disclosure part of your new rule, does the company that desires to sell and is making the disclosure submit the disclosure statement to the insurance commissioner's office or the superintendent's office for his approval?

Mr. GARCIA. Every one of these companies that is now selling these plans must provide us with a disclosure statement that is very similar, but that would cover specifically these items required in this disclosure.

Senator DOMENICI. You cited three cases that were rather severe and told us about the disposition of them. You have heard the testimony here today about how rampant this kind of misconduct is, downright criminal behavior in the State of Texas. Would you have an opinion as to whether or not abuse is still widespread in the State of New Mexico or not?

CANNOT MONITOR WITHOUT FORMAL COMPLAINT

Mr. GARCIA. Well, we don't have any way to monitor it in our department unless we get a formal complaint. I would answer the

question this way, and that is that the number of complaints has diminished since this regulation was promulgated. I am not going to be naive enough to think that there are not additional problems; I am sure there are. We don't think that there are many of this magnitude. I think there may be isolated problems, perhaps one agent has taken or perhaps two agents have oversold. We have no way of knowing until we get a complaint in the department.

Senator DOMENICI. You have been present and heard testimony regarding the difficulty of trying to police this kind of activity. Do you have any opinions as to whether or not some kind of standardization would be in the public interest and, if so, should it be national and, if not, how do we get it out there?

Mr. GARCIA. As I see our position in the State of New Mexico and with the regulation in the disclosure statement we have, we appear to be treating the symptoms rather than the disease. I really think that the standardization, perhaps on a Federal level or through the NAIC—the type of plans that are being sold throughout the country—is probably related. My feeling, however, is that the vast area of problems is not that one company is involved in all of this; there are several companies involved. I think we have to proceed to educate the consumers further and I think this should be a joint effort between the Federal Government and the State government to publish, in laymen's terms, the kinds of coverages they have under medicare, and also under the different plans. Yes, I would think that the standardization of some type to be very desirable.

Senator DOMENICI. Do you have any suggestions as to ways that this cooperative effort on educating or advising the people might be implemented? Do you have any examples of what might be done that is not being done?

Mr. GARCIA. One of the things I believe has made our approach to these problems successful is that traditionally in New Mexico—the people of the State have always been able to go very directly to the department of insurance with their complaints. The Governor's service centers have also certainly been in that position. If we had a joint effort to provide an easy avenue to report these problems to the proper authorities or to the proper departments, I think it would be worthwhile. I think this is the solution.

Senator DOMENICI. With reference to the authority that you have as superintendent, is your jurisdiction limited to taking action against the agents or companies in terms of their permission to sell, or are there some criminal statutes that you enforce?

Mr. GARCIA. No. Basically our jurisdiction and our authority would be to either suspend or revoke licenses and impose fines and ask that they be continued. However, I might add that in many cases the suspension of the license should not be taken lightly because, after all, these people are making a living in this and if they suspend the license, they are out of business until they have a hearing.

Senator DOMENICI. You indicated that in three examples you were able to get the cooperation of the companies and in two instances refunds were made—rather significant refunds. Now the companies that actually insured as contrasted with the agents out in the field, did the companies indicate that they were totally un-

aware of the kind of conduct that their agents were pursuing, or did they take part of the blame for their own procedures, or lack of them?

NEED MORE AGENT CONTROLS

Mr. GARCIA. Well, we were very quick to point out that the actions of their agents were the actions of the company. They were not aware in many cases that this was going on. You see, when you spread the problem out among, say, nine companies as I indicated in the first example, you don't have repeaters of the same company. There may have been one or two cases where maybe two different agents of the same company were involved that was not isolated to one company, which makes the regulation or the control of this problem difficult because you have several companies. Even when you standardize, you still would have agents representing different companies over-selling. I really think that more stringent regulations with reference to the agent himself may be the solution so that he is aware that he can't go out and repeat this type of thing.

Another solution might be to some way formulate some kind of an information pooling system between companies so as to cross-index—perhaps the same person would come up with the same type of coverages. If that would be so, then the companies would index it and if there is repetition they can do something with it.

Senator DOMENICI. Do you have authority to do that under your present laws?

Mr. GARCIA. I think we could extend our authority on that point. It is a little complex and we are doing some studies on it now. I don't know how it will come out.

Senator CHILES. I was just interested in what Senator Domenici was asking you. Part of the problem seems to be that there is no real down-hill risk for the companies themselves. They say, "Well, the agent did that, we didn't know, and as soon as we found out we took some kind of action against him." Yet you heard from the testimony—especially our district attorney from Texas today said when he started questioning these agents they said: "There was no way we could do this. If they were paying any attention at all, they would know what we were doing."

Mr. GARCIA. I might answer that this way, if a company in our State were to continue with this type of practice, we do have available to us the authority to convene a hearing to explain why they are continuing these types of practices. The Insurance Unfair Practices Act, which is our statute law—we do have that authority.

Senator CHILES. I think something like that is very necessary to require that the companies exercise some policing power themselves because obviously they really could do it better because they know these fellows.

Mr. GARCIA. The only problem with that, it takes a little time because you have to develop a pattern of practices with the company.

Senator CHILES. Right.

Mr. GARCIA. So far we have not been successful in establishing that kind of a pattern with any one particular company. Several companies have been involved.

Senator DOMENICI. Can you pull the insurance company's license instead of the agent's license?

Mr. GARCIA. Obviously we have to provide them with due process and provide them with a hearing, but that is within our authority.

Senator DOMENICI. You have not had to do this to this point?

Mr. GARCIA. No. I think the meetings that we have had with the companies and the agents have been really informal conferences to discuss the problems and to set forth our desires. In these cases it has been to get refunds from people. I might add that in one or two cases the companies discharged their agents because of these practices and no longer wanted them on the payroll.

Senator DOMENICI. I have one last question with reference to information available to help us arrive at some conclusion as to the dimension of the problem. Do you have, within the recordkeeping capacity of the insurance commission or insurance superintendent's office, knowledge as to how many policies in the area of medi-gap coverage, and what type coverage for cancer and the like are issued in the State of New Mexico?

Mr. GARCIA. That information is available. We would probably have to program the State computer systems or the data processing people to get some help on it. I believe we could get most of that information.

How Rampant Are Abuses?

Senator DOMENICI. I think what we know at this point would indicate that the malfeasance and abuse is going to be directly related to the number of senior citizens who are buying this kind of insurance. It just strikes me that the problem is so difficult that if we could know how many people are buying a typical kind of senior citizen health coverage it would aid us in determining how rampant the abuses are apt to be. Do you think you might request that of the computer system and see if you could get it to us?

Mr. GARCIA. I will sure give it a try.

Senator DOMENICI. I personally would like to have it because I think it would be almost directly related to the kinds of abuses that are out there.

Let me ask you one other question. Do you have any way of assessing how effective your disclosure procedure is? Are you monitoring it in some way? It sounds great and I compliment you for it, as I have publicly in the State, but do you know whether it is having a real impact?

Mr. GARCIA. Well, the only way we know that it is having some impact is in the reduction of the number of complaints. We have no way of really monitoring the results. We do know for a fact that companies that are writing these plans in New Mexico are providing each person who they sell this plan to with this disclosure form. If you will note, the disclosure form is very simple and we wanted to keep it that way so it would be easily understood. We don't purport that it covers all of the problems and answers all the questions, but at least a person has some idea of what they are buying but no way of monitoring the results.

Senator DOMENICI. One last question. Do you prohibit, at this point, any kinds of coverage? You have previously heard the insurance commissioner say that in Connecticut they prohibit several

kinds because they conclude, as a matter of public policy, they are useless, I assume.

Mr. GARCIA. No, we don't prohibit any of them. However, that is under study in the department now and we would like to consider that further.

Senator CHILES. We thank you very much for your appearance here and for the work that you have done in New Mexico. We look forward to continuing to work with you on this problem.

Mr. GARCIA. Thank you very much.

Senator DOMENICI. Thank you very much.

Mr. GARCIA. I might add that being last has some advantages. I have the committee almost to my self, it looks like. And some disadvantages. Everybody has already talked about some of the things I was going to talk about.

I thank you very much.

Senator DOMENICI. Yes, sir.

Senator CHILES. This will conclude our hearings in this area, but we will keep the record open for approximately 30 days.

Senator DOMENICI. Thank you, Mr. Chairman.

[Whereupon, at 12:45 p.m., the committee adjourned.]

APPENDIXES

Appendix 1

POLICY PLANNING ISSUES PAPER: PRIVATE HEALTH INSURANCE TO SUPPLEMENT MEDICARE, PREPARED BY THE FEDERAL TRADE COMMISSION

(By Anne DeNovo and Gail Shearer, July 1978)

This issues paper expressed only the views of the authors, staff members of the Office of Policy Planning. It does not represent the position of the Federal Trade Commission or any Commissioner. The authors would like to thank Joanne Riley, Dhylia Hughes, and Sharon Lawson for their invaluable assistance in completing this project.

Executive Summary

I. *Description of problems in the market for health insurance for the elderly.*—Health care costs are a major expense item and source of concern for the elderly. Medicare covers only 38 percent of their health care costs. People over 65 must pay for medicare's deductibles and coinsurance and for many kinds of care which medicare will never cover, including drugs, dental care, eyeglasses, hearing aids, routine examinations and most nursing home care. Even after medicare and private insurance, the average per capita health care expenditure for the over-65 age group was $403—much more than they paid out-of-pocket before medicare.

Because of the gaps in medicare, the Nation's elderly have turned to private health insurance; more than 50 percent have at least one policy. The annual premium volume of this medicare supplement or "medi-gap" business is unknown, but it has been estimated at $1 billion. In addition, large numbers of policies are sold to the elderly which are not true medicare supplements, such as hospital indemnity plans and dread disease policies.

The lack of consumer information in the medicare supplement market is so great that it is almost impossible to make rational purchase decisions. Very few people understand the complexities of medicare and its gaps. There is no standardization of private insurance policies, so buyers cannot comparison shop. As a result, supplemental policies often do not compete on price and offer only a low rate of return.

In an effort to get complete protection, many people over 65 buy two or more policies which overlap. An estimated 23 percent of those who do buy private health insurance have some unnecessary duplication in coverage. Unscrupulous agents selling door-to-door or mail order advertisements often mislead or frighten them into "loading up" on two or more policies or replacing policies each year, a practice known as "twisting." When they file claims, many of them find that the coverage they thought would fill all the gaps in medicare falls far short of their expectations. Most supplemental policies will not pay for pre-existing conditions or the major gaps in medicare, such as nursing home care, excess provider charges and prescription drugs.

II. *State regulatory initiatives.*—In response to complaints, several States have tried very different regulatory solutions to the medicare supplement problem. A recent Wisconsin rule requires that all policies marketed as supplements to medicare meet the standards for one of four benefit levels and bear a number one through four (from most to least comprehensive coverage). At the time of their initial contact with a prospect, insurers and agents must distribute an 18-page booklet prepared by the insurance commissioner's office,

which gives advice about medicare, its gaps, the four categories and insurance buying in general.

California has established three descriptive categories for supplemental policies: in-hospital only, in- and out-of-hospital and catastrophic. The California Insurance Department has also set a benchmark minimum loss ratio of 55 percent. Insurers must deliver a one-page form with very general disclosures along with their policies.

In Illinois, a statute prescribes minimum standards for supplemental policies but does not provide for any special disclosures. Oregon, New Mexico, and Washington require delivery of a two-page disclosure form with medicare supplement policies. Each agent or insurer is supposed to fill in the blanks on a chart to show which medicare gaps the policy will fill. Unlike Wisconsin and California, they do not have any regulation which sets minimum standards or tends to standardize coverages.

In Colorado, agents and insurers must furnish a warning notice when the sale would involve an addition or a replacement.

III. *Policy questions surrounding regulation of health insurance for the elderly.*—It may be appropriate for the Federal Government to play a major role in this area because its own medicare program created the problem and because a uniform system of standardization is necessary to reduce buyers' confusion. The medicare supplement market also furnishes an opportunity to study and plan for the supplemental market which will develop under national health insurance.

Governmental initiatives could address medi-gap or true medicare supplement policies only, all health insurance policies sold to the elderly or all individual health insurance. The second approach would be most likely to eliminate the purchase of "unnecessary" duplicate coverage by the elderly.

Policymakers must also decide whether they should seek to provide a great deal of information for the sake of accuracy or simple disclosures, whether they should attempt to standardize coverages or permit unlimited variety and whether they should distinguish between "good" Medigap filling, such as catastrophic coverage, and "bad" coverage such as reimbursement of the initial deductibles.

IV. *Policy objectives and criteria for assessing options.*—In order to promote competition, any initiative with respect to supplemental insurance should provide complete information in a usable form, ensure access to that information, standardize coverage and eliminate duplication. To correct market failures, an action should also assure a reasonable return, minimize the opportunity for marketing abuses, ensure prompt and fair claims handling and minimize undesirable side effects. Alternatives should also be politically feasible, easy to enforce, inexpensive to administer and complementary with national health insurance.

V. *Public policy alternatives.*—Governmental action with respect to health insurance for the elderly could take three principal forms: minimum standards; a system of standardization combined with disclosures or labels; or provision of information to consumers.

In the minimum standards category, minimum loss ratios could eliminate low-value policies from the market. Uniform language in clauses which include pre-existing conditions could reduce buyers' confusion and companies' unjustified denials of claims. Other options are a requirement that policies supplement both parts A and B of medicare, minimum dollar limits and mandated benefits.

Options for standardization combined with disclosures include prohibiting references to indemnity and limited polices as medicare supplements, establishing descriptive categories (the California model), setting up benefit levels (the Wisconsin model), or using a system of unit pricing. Another method, a cost index, could provide a more accurate measure of a policy's value than the first three options, but it would be an extremely complex task to devise one.

In the third category, many forms of mandatory written disclosures are possible, but they may be ineffective because health insurance to supplement medicare is such a complex subject. Alternative consumer education measures are a buyer's guide, providing information which is not now available, use of non-traditional media such as television and individualized insurance counseling.

Other options which do not fit in any one of the three categories include regulation of advertising, requiring direct contact between the insurance company and its customer, and imposing a fiduciary duty on agents and claims

handling requirements on insurers. The last possibility, Federal Government sponsorship of optional medicare supplement insurance, would permit the Government to realize certain cost advantages, although the extent of coverage and the subsidy element required would be subjects of debate.

VI. *Policy recommendations.*—The writers of this issues paper recommend that an impact evaluation be conducted to determine the effectiveness of existing State regulations of insurance sold to supplement medicare. Such an impact evaluation would yield information about whether and how standardization might bring about competition in this market, and might also lead to recommendations for other consumer protection measures. If possible, the study should be a joint project with the participation of HEW, the NAIC, and the FTC; each has special expertise to contribute in this area.

I. DESCRIPTION OF PROBLEMS IN THE MARKET FOR HEALTH INSURANCE FOR THE ELDERLY

Because medicare does not provide complete coverage for their health care expenses, more than 50 percent of people over 65 purchase private insurance in an effort to fill medicare's gaps. At the end of 1975, 12.6 million held at least one supplemental policy.[1] Estimates of the premium volume of this medicare supplement business run from $0.5 to $1.0 billion per year.[2] Total expenditures for health insurance by the elderly may be considerably more than $1 billion, since this estimate probably does not include hospital indemnity or dread disease coverage, and is based on figures from 1974. No official information exists about total premium volume because insurance companies are not required to separate medicare supplement figures when they file individual accident and health data with State insurance commissioners.

A Background: Health Care Expenses of the Elderly and Sources of Funds

1. Health Care Expenditures

The elderly have to spend much more on health care than the rest of the population, due to their more frequent illnesses and the greater expenses of their care, which often involves hospitalization. In fiscal 1976, the average per capita expenditure for health care by people over 65 was $1,521—almost three times as much as adults aged 19–64 ($547) and nearly six times as much as young people under 19 ($249).[3]

Medicare, medical assistance, and other government programs paid 67.6 percent of those expenses. Private health insurance, the subject of this paper, covered only 5.4 percent. Elderly patients and their families were left to pay

---

[1] The Health Insurance Institute of America states that in 1975 12.6 million people aged 65 and over had some hospital expense coverage to supplement medicare benefits. HIAA data also shows that 10.4 million had some surgical expense coverage, 9.7 million had some regular medical expense coverage, and 2 million had some major medical expense coverage. HIAA's tables eliminate duplication occurring where more than one insurer or more than one policy affords the same kind of coverage. Health Insurance Institute of America, *Source Book of Health Insurance, 1976–77* 10, 21–31. The 1974 national health survey of 40,000 households reported that an estimated 53.8 percent of those 65 and older had private hospital insurance coverage in addition to medicare. See 52 *Hospitals* (Journal of the American Hospital Association) 20 (May 16, 1978).

[2] The author of a working paper prepared in 1974 for the use of the Senate Special Committee on Aging estimated the annual premium volume at $0.5 billion by assuming that all elderly paid the same rates for non-Blue Cross policies as they did for Blue Cross coverage and that they all chose low cost options. Therefore her estimate was almost certainly low. See G. Ellenbogen, *Private Health Insurance Supplementary to Medicare* (a working paper prepared for the Senate Special Committee on Aging) 1, n.2 (1974) [hereinafter Senate Committee print]. Consumer Reports repeated the $0.5 billion figure in 1976. See Health Insurance for Older People: Filling the gaps in Medicare, *Consumer Reports* 27 (January 1976) [hereinafter *Consumer Reports*]. Insurance Commissioner Harold Wilde of Wisconsin estimates that senior citizens spend somewhere between $0.5 billion and $1 billion each year on private insurance to supplement medicare. H. Wilde, "Medicare and Medi-scare: The Responsibility of Government and the Insurance Industry," speech to the Milwaukee Association of Life Underwriters (December 15, 1977) [hereinafter "Mediscare"]. In September 1977, slightly more than 50 percent of the companies then writing medicare supplement policies in Wisconsin responded to a survey conducted by Commissioner Wilde's office. They reported premiums totalling $22 million.

[3] Gibson, Mueller and Fisher, Age Differences in Health Care Spending; Fiscal Year 1976, 40 *Social Security Bulletin* 1, 5 (August 1977) [hereinafter Age Differences]. Elderly Americans, who make up slightly more than 10 percent of the population, accounted for 28.9 percent of all personal health expenditures.

26.5 percent of the bills themselves. Their out-of-pocket expenditures averaged $403 per person—much more than they paid before medicare.[4]

2. Medicare Gaps

Medicare, the Federal Government's health insurance program for the elderly,[5] paid only 38 percent of health care expenses in 1976.[6] Although the medicare program was enacted to assure that senior citizens would have access to basic health care, especially in hospitals, it was never intended to cover all their expenses. At hearings held in 1965 on a proposal for medicare, the Secretary of HEW stated:

"The proposed program will serve as a foundation on which people can build greater protection through private health insurance and employer retirement plans, just as the present social security cash benefit system is serving as a base on which people build additional protection through private means." [7]

Medicare has never covered certain types of care. Furthermore, the medicare deductibles which patients must pay have been constantly increasing, and in general, medicare patients have borne a large portion of the inflation of medical costs. One commentator has characterized the result as "a cutback implemented without legislative or administrative action." [8]

Some explanation of Medicare is helpful in understanding exactly what it does not cover. The program has two parts. The first, part A hospital insurance (HI) helps to pay for in-patient hospital care, care in a medicare-approved skilled nursing facility or SNF, and some home health care.[9] Most people over 65 also enroll in the second part of the program, part B supplementary medical insurance (SMI), which covers physicians' services, outpatient and other non-hospital care.[10]

A chart showing medicare benefits and gaps appears as appendix A to this report.

(a) PART A GAPS

Hospital care accounted for 45 percent of the health care expenditures of the elderly in 1976. Medicare paid for 71 percent of their hospitalization expenses,[11] but medicare patients must pay the following expenses themselves:

(1) An initial deductible set to correspond to one day's hospital stay—$144 in 1978. Medicare then pays all charges until the 60th day of the hospital stay.

(2) From the 61st through 90th days, the patient must pay a daily deductible of $36 in 1978.

(3) After the 90th day the patient has 60 "lifetime reserve days" which can be used only once in her life. For each reserve day she pays a $72 deductible in 1978.

(4) After a patient has used up her 60 lifetime reserve days, medicare part A coverage ends. But only 0.03 percent of hospitalized medicare beneficiaries

---

[4] *Id.* at 9. Philanthropy and industry paid 9.4 percent of the elderly's health care expenses. The $403.53 average out-of-pocket per capita expenditure does not include medicare part B premiums or private health insurance premiums. In 1966, before the institution of medicare coverage, the average per capita out-of-pocket expenditures for the over-65 age group was $236.72. This article includes figures for 1974, 1975, and 1976. For similar compilations for the fiscal years 1966-1974, see U.S. Department of Health, Education, and Welfare, *Compendium of National Health Expenditures Data* at 110-111 (1976).

[5] Title XVIII of the Social Security Act, 42 U.S.C. Sec. 1395. Medicare also covers people under 65 who have been disabled (as defined by the Social Security Administration) for at least 24 months and those with chronic renal disease. SSA estimates that in fiscal 1978 23.6 million aged, 2.4 million disabled and 24,000 renal disease patients will be enrolled in part A of the medicare program. Congressional Budget Office, Congress of the U.S., *Catastrophic Health Insurance* 25 (January 1977) [hereinafter *Catastrophic Health Insurance*].

[6] Age Differences at 10. Medicare's share would be 43 percent but for the part B premiums paid by beneficiaries.

[7] *Medicare Gaps and Limitations*: Hearing before the Subcommittee on Health and Long-Term Care of the House Select Comm. on Aging, 95th Cong., 1st Sess. 36 (1977) (appendix I: "The Aged and their Health Expenditures").

[8] Schneider, Medicare: Beneficiaries, Cutbacks and Supplements, 9 *Clearinghouse Rev.* 552, 553 (December 1975).

[9] See generally Department of Health, Education, and Welfare, Social Security Administration, *Your Medicare Handbook* 10–19 (January 1977) [hereinafter *Your Medicare Handbook*]. Part A is financed largely through social security employer and employee taxes. People over 65 who were in the social security or railroad retirement programs are automatically enrolled in part A. Others may purchase part A hospital insurance for a monthly premium—$54 until July 1, 1978.

[10] In 1975 97.4 percent of the elderly people covered under part A were also enrolled in part B.

[11] Age Differences at 11, 13.

ever reach that point.[12] Many of the hospitalization expenses not covered by medicare are due to the following gaps in part A coverage.

(5) Nursing home care. While 23 percent of the health expenditures of people over 65 goes for nursing home care, medicare only pays for a small percentage of those expenses—3.6 percent in 1976.[13] The medicare program places the following limitations on nursing home coverage:

(i) The patient must be in a skilled nursing facility (SNF) approved by the medicare program. State licensure of a nursing home is not sufficient for medicare reimbursement. Care in SNF's or intermediate care facilities (ICF's) which are certified by medicaid but not medicare is not covered. Availability of medicare-approved SNF care varies widely from State to State; in some regions it is almost impossible to obtain.[14]

(ii) Five conditions must be met, including physician's certification of need for skilled services.[15] If a utilization review committee or PSRO decides that skilled care is no longer necessary, medicare will not provide any further coverage.

(iii) Assuming that the patient is in a medicare-certified SNF and has met medicare's five requirements, medicare will pay for the first 20 days of her stay. (However, medicare will not pay for custodial care even if all the other conditions are satisfied. See 8 below.) From the 21st through 100th days, she must pay an $18 daily deductible. Part A coverage for "extended care" ends after the 100th day.

(6) Medicare places a 190 day limit on part A coverage for in-patient treatment in a psychiatric hospital.

(7) Part A will cover up to 100 home health care visits for skilled nursing care, physical therapy or speech therapy visits if six conditions are met (including prior hospitalization, physician certification, and participation in the medicare program by the home health agency).[16]

(8) Neither part A nor part B of medicare will ever provide any coverage for "custodial care," whether it is rendered at home, in a hospital, in a SNF or in some other facility. Custodial care has been interpreted to mean personal care which does not require the attention of skilled or specially trained medical personnel, such as help with walking, bathing, eating, and dressing.[17]

(b) PART B GAPS

Part B covers physicians' services both in and out of hospitals, as well as some diagnostic services by independent medicare-certified laboratories and some medical supplies, equipment and devices.[18] In 1976 medicare paid for only 55 percent of physicians' services, which account for 17 percent of the health care expenses of the elderly.[19] Medicare part B enrollees must pay:

(1) An initial deductible of $60 per calendar year.

(2) 20 percent of all charges (after meeting the initial deductible).

---

[12] *Catastrophic Health Insurance* at 25 (estimated figure for 1966–71 period).

[13] Age Differences at 10, 11. It is common for institutionalized patients to spend their own resources for their care until they become eligible for medical assistance, which paid 48.4 percent of nursing home costs in 1976. Sometimes their families also pay many of the bills.

[14] As of July 1975, the number of certified SNF beds per 1,000 medicare enrollees varied from 1.4 in Oklahoma, 2.2 in Arkansas and 2.6 in Louisiana to 22.9 in New York, 37.9 in Connecticut and 40.8 in California. In Arizona (the State with the fastest-growing elderly population), there were only 19 medicare-certified SNF's. Staff of the Subcommittee on Health, House Committee on Ways and Means. *National Health Insurance Resource Book* 105 (1976) [hereinafter *National Health Insurance Resource Book*].

[15] The five conditions for part A SNF coverage are: (1) The patient must have been in a hospital for at least 3 consecutive days before her transfer to a SNF. (2) The patient must have been transferred because she needed care for a condition which was treated in the hospital. (3) The patient must be admitted to the SNF within 14 days of leaving the hospital (with certain limited exceptions). (4) A physician must certify that the patient needs and actually receives skilled nursing or rehabilitation services on a daily basis. (5) The SNF's UR committee or PSRO must not disapprove the patient's stay. See *Your Medicare Handbook* at 17–19.

[16] See *Your Medicare Handbook* at 36.

[17] See *Your Medicare Handbook* at 8–9. Since there is no general definition of the term "custodial care" in the statute or regulations, its meaning has been the subject of much litigation. Seen generally CCH *Medicare and Medicaid Guide* paras. 4105, 4110 and 4115 (1976).

[18] See generally *Your Medicare Handbook* at 20–33. Part B also covers some home health care services under specified conditions which are different from the requirements for part A coverage of home health care. *Id.* at 37.

[19] Age Differences at 11, 13.

(3) Any "excess charges" over the level the medicare carrier determines to be reasonable. (Blue Shield plans or other private health insurers, called intermediaries under part A and carriers under part B, administer the program under contract with HEW.) The Social Security Act provides that no payment shall be made under either part A or part B for services or items which are not reasonable and necessary for the diagnosis or treatment of illness or injury.[20] If the part B carrier determines that a physician's charge exceeds the reasonable level, medicare will not pay the excess. In general, the carrier will pay only the lowest of: (i) The physician's actual charge; (ii) the customary charge (usually the median of her past charges); or (iii) the prevailing charge, which is defined as the 75th percentile of the customary charges made in the area for the same service.[21]

Whether the patient bears the cost of any charges which medicare determines to be excessive depends on whether the provider exercised an option to accept assignment of medicare benefits. Under such an assignment, the patient transfers her right to medicare reimbursement to her physician; the physician agrees to accept the reasonable charge determined by the carrier as full payment for her services. When the physician accepts assignment, she cannot bill the patient for any amount the Medicare carrier determines to be excessive.[22]

The number of physicians who will accept assignment has been declining steadily to its present level of 50.5 percent.[23] At the same time, the excess physician charges on unassigned claims have been on the rise. In 1976, they accounted for 9.6 percent of expenditures for physicians' services to the elderly, up from 4.5 percent in 1970.[24] During the second quarter of 1977, carriers reduced the total dollar amount of unassigned part B claims filed with them by 20.7 percent.[25] This means that medicare patients can expect to pay on the average 36 percent of their physicians' bills themselves (20 percent coinsurance plus an average of 20 percent of the remaining 80 percent).

(c) ITEMS AND SERVICES NEVER COVERED BY MEDICARE

Neither part A nor part B ever reimburses for:

—Drugs which can be self-administered (drugs and drug sundries account for 8 percent of the health care expenditures of people 65 and over);

—Dental care (except jaw surgery) (dentists' services account for 2 percent);

—Eye or hearing examinations;

—Eyeglasses, hearing aids, dentures, and many other medical appliances (eyeglasses and appliances account for 1 percent of the elderly's health care expenses);

—Routine physical examinations and routine diagnostic tests performed in connection with such examinations;

—Immunizations;

---

[20] Of course the statutory provision is longer than this paraphrase. See 42 U.S.C. Sec. 1862(a). Reasonable charge reductions occur under part A as well as part B, but usually the provider of services cannot bill the patient for excess charges. The "waiver of beneficiary liability" provision states that the patient cannot be held liable for payment for services she did not know or could not be reasonably expected to know were not covered by medicare. 42 U.S.C. Sec. 1395 pp. This waiver provision applies whenever medicare denies or reduces payment for a claim on the grounds that the care was custodial or that it was not reasonable and necessary. What happens when a hospital or nursing home patient gets "PSRO'd out" is beyond the scope of this paper, but generally she and any advocates she may have get at least a few days to make some other arrangements before medicare coverage ends.

[21] This is a gross oversimplification. See CCH *Medicare and Medicaid Guide* Secs. 3190 *et seq.* (1977).

[22] To be more exact, the waiver of beneficiary liability provision operates in the case of assigned part B claims.

[23] In 1969, more than 60 percent of medicare claims were assigned. *Washington Post*, February 11, 1978, at 1. Assignment rates show great variation between regions, from lows of 24.6 percent in Wyoming and 27.2 percent in Oklahoma to levels above 70 percent in the industrial northeastern States. Department of Health, Education, and Welfare, Health Care Financing Administration, *Part B Carrier Workload Report* (October 1977). In general physicians are unwilling to accept assignment if they believe they can collect excess fees from their patients. In addition to possible reductions of their charges, they face delays of up to 9 months in obtaining reimbursement if they accept assignment.

[24] Age Differences at 13–14.

[25] Department of Health, Education, and Welfare, Health Care Financing Administration, *Quarterly Report on SMI* Carrier Reasonable Charge and Denial Activity (April–June 1977). Part B carriers made some reduction of 79.9 percent of the unassigned claims filed, for an average reduction of $18.31 per claim. They reduced 76.4 percent of all assigned claims files by an average of $16.51. Excess charges are expected to reach $0.8 billion in fiscal 1978. *Catastrophic Health Insurance* at 25.

—Most chiropractors' services;
—Full-time nursing care at home;
—Homemakers' services or meals at home.[26]

B. Health Insurance to Supplement Medicare—Areas of Market Failure

1. Description of Private Health Insurance Available to Supplement Medicare

Health insurance policies marketed to the elderly are not standardized at all. They fall into three general categories: (a) Medicare supplement or medigap, (b) indemnity, and (c) limited policies.

(a) MEDIGAP OR MEDICARE SUPPLEMENT POLICIES

These terms usually refer to policies whose coverage is designed to fill the gaps in the benefit structure of the medicare program and which pay service rather than indemnity benefits. Sometimes the health insurance industry refers to this gap-filling as "wraparound" coverage.

(1) *No Standardization of coverage.*—Within this category the variations in benefits are almost infinite. Some retiring workers can convert their group coverage to a plan with reduced benefits calculated to supplement medicare. (Usually they have to pay the entire premium themselves on retirement.) In addition, most Blue Cross-Blue Shield plans offer medicare supplement policies, both on an individual basis and as conversion contracts offering continued coverage (at a higher premium) to retirees who had Blues coverage with their employment group. Each of the 77 Blues plans has a different medicare supplement for its State or region, and some have low and high cost options.[27] In 1974, 50.9 percent of the people over 65 with hospitalization insurance had individual or group Blue Cross or Blue Shield policies. An additional 13.9 percent had some other form of group coverage and the remaining 35.3 percent had other individual hospital expense policies.[28]

Many health insurers besides the Blues have marketed medicare supplement policies, and no two are alike. Some policies are available in all States; some only in certain regions or only to members of certain groups. Some mix service and indemnity benefits. Some cover only the part A deductibles without any benefits to supplement part B; some place low dollar ceilings on coverage of the 20 percent coinsurance under part B. At least one company offers catastrophic coverage only, but *Consumer Reports* could only find one company which would write new major medical coverage for people over 65.[29] *Consumer Reports*' charts and the brochure published by the Wisconsin Governor's Council on Consumer Affairs, reproduced as appendixes B and C, show a sampling of the bewildering variety of coverages on the market.[30]

(2) *Inadequate coverage.*—Although the definition of "inadequate" coverage is open to debate,[31] it is indisputable that medicare supplement policies often fail to cover the most important gaps in medicare. None covers physician's charges above the level medicare determines to be reasonable. None covers the items and services medicare will never pay for, such as routine physicals, eyeglasses, and medical appliances. Like the rest of the population, few older people have insurance coverage for prescription drugs or dental care—two important gaps in Medicare. As of January 1, 1975, only 16.9 percent of the population 65 and over had any coverage for out-of-hospital prescription drugs and only 1.9 percent had any coverage for dental care. 15.8 percent had some nursing home coverage,[32] but medi-gap policies usually cover at most the medicare

[26] See generally 42 U.S.C. Sec. 1862(a), 42 C.F.R. Sec. 405.310 and *Your Medicare Handbook* at 42–43. The percentages of total health care spending for the over-64 age group are from Age Differences at 11.

[27] See Senate Committee print at 1, n.1 and *Consumer Reports* at 28.

[28] Percentages derived from table 4, National Health Insurance Resource Book at 235, which also includes data on the number of people over 65 enrolled in different types of plans covering various kinds of physicians' services and other care.

[29] *Consumer Reports* at 27. Illinois Mutual Life & Casualty offers major medical. Guardian Life sells a "catastrophic" Medi-gap policy which does not cover the initial deductibles.

[30] The Wisconsin brochure attempts to compare only 11 of the policies most commonly sold in the State *by agents* in 1977; it does not include policies sold by mail. Forty companies sold medicare supplement policies there last year.

[31] It is possible to argue that any third party reimbursement of providers' charges above a reasonable level is undesirable because it would diminish their incentives to keep costs down. In any event, medi-gap coverages are incomplete in that they do not fill all the gaps. Therefore they are "inadequate" in the sense that they often do not live up to consumers' expectations that their supplemental insurance will pay for all expenses medicare does not cover. See section I.B. 4(d)—coverage not in conformity with expectations.

[32] *National Health Insurance Resource Book* at 232.

deductibles for SNF care. A few offer some non-SNF nursing home benefits (usually indemnity) by rider. None covers custodial care.

Appendix A summarizes in chart form medicare's benefits and its gaps and the medi-gaps which supplemental policies usually will not fill.

(b) INDEMNITY POLICIES

Indemnity policies pay a certain number of dollars per day of hospitalization, regardless of actual charges, whether or not medicare and/or some other insurance actually pays the hospital bills. Often the amounts are so low that they would pay only a small fraction of a day's hospitalization cost. Benefits of $20 to $50 per day are typical, while the average hospital cost per patient per day is now over $150.[33] Although owners of indemnity policies could use the dollars they receive to pay medicare deductibles and copayments, the rate of return on these policies is so low that they would do better to place their money in another form of investment. (See sec. 4(b) below.)

Adults of any age can purchase hospital indemnity policies. However, the companies selling indemnity policies make a special appeal to older people—especially elderly women with low incomes.[34] In the profile of its policyholders prepared for internal use, one company stated:

"* * * future ad copy should emphasize the necessity of coverage, especially when not immediately supported by a spouse * * *. Upper age bracket policyowners are more heavily female than male * * * females at this age may feel more insecure than males concerning health costs and hence purchase the coverage * * *. Ad copy should accentuate that coverage is excellent supplemental coverage to Medicare to the older female who has a lower income." [35]

In their pitch to the medicare eligible, indemnity insurers also point out that their policies have no complicated limitations, exclusions and exceptions, unlike medicare supplement policies, which are geared to medicare and sometimes repeat the statutory exclusions from medicare verbatim. Their advertisements emphasize the fact that medicare was never intended to afford comprehensive coverage and that medicare deductibles go up each year.

They repeat that their policies will pay benefits in addition to Medicare. They even attempt to present duplicate coverage as an advantage. One company included the following in its mail-order solicitation:

"Q. Then, with Magna-Medicare I can be sure I'm completely protected?

"A. Yes. It is the only plan in the Nation that after the first deductible, pays all medicare-covered in-hospital expenses whenever medicare does not * * *. So to be completely protected you must have Magna-Medicare even if you have other plans.

"Q. But then won't I have duplicate insurance?

"A. Magna-Medicare does not duplicate government medicare and pays you in addition to any other insurance you may have now or ever get in the future. If part of your expenses are paid by another plan, you can spend the extra money any way you want * * *." [36]

(c) LIMITED POLICIES

The most commonly sold kind of limited policy is the dread disease policy. It pays benefits, often indemnity, only in the event the insured contracts a certain named disease—most commonly cancer. People of any age may buy dread disease policies, but like indemnity insurers, sellers of cancer policies market them to older people, particularly women.[37] Their advertising plays on the fear, common among the elderly, of burdening family members with astronomical medical bills because of a long illness. Dread disease coverage also overlaps with medicare and any other supplemental coverage a policyholder may have.

---

[33] In 1975 the average total expense per patient day was $151.42. U.S. Department of Health, Education, and Welfare, Public Health Service, *Health, United States*, 1976–1977 381 (1977).

[34] *Commercial Health and Accident Industry*, Hearings before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, 92nd Cong., 2d Sess. 591, 829 (1972) [hereinafter 1972 Hearings].

[35] *Id.* at 829. (National Liberty Group.)

[36] *Id.* at 382 (Bankers Life & Casualty Co. of Chicago). This advertisement might well violate many if not all State regulations applicable to all insurance advertising, since it is clearly deceptive to state that the policy pays all in-hospital expenses whenever medicare does not and probably also misleading to say that no duplicate coverage is involved.

[37] *Id.* at 1150. (American Family Life Assurance Co. of Columbus, Ga.)

Consumers Union recommends against purchasing any cancer insurance policies, warning that the ones it had analyzed "offer only fragmentary protection against the cost of treatment." CU also cautioned that "they offer no coverage at all for numerous other diseases that can also be expensive to treat."[38]

2. *Marketing*

Most medicare supplement insurance is sold by mail or by agents. Both marketing methods are the subject of widespread abuse.

(a) AGENT PRACTICES

State insurance departments receive many reports about door-to-door sales of insurance to the elderly. The most frequent complaints are:

Taking advantage of the physical or mental impairments of the elderly. Some agents circulate lists of the names and addresses of old people who are physically ill or mentally confused, who will buy any policies offered to them.[39] At a hearing held on June 29 by the Senate Special Committee on Aging, District Attorney Wiley L. Cheatham of the 24th Judicial District of Texas, read from such a "goose" list where agents described the approaches they had used to defraud each victim. Some companies list policy exclusions in very fine print or pale gray lettering, both especially difficult for anyone with limited eyesight to read.

Agents like to visit old people who live alone and have no family or friends nearby. It is easier for agents to make people who live in isolation believe that the agents have their best interests at heart when they advise the purchase of several insurance policies.[40]

Twisting or roll over. Often an agent can persuade older people that they need to cancel the insurance they now have and replace it with whatever the agent is selling. Agents have every incentive to do this because medicare supplement policies typically have high first year commissions—65 percent is routine, 100 percent is not unheard of.[41] Some agents try to "roll over" their entire clientele each year.

This practice is particularly unfair because the new policies usually exclude pre-existing conditions from coverage for the first 6 months, sometimes longer.[42] Insurance Commissioner Harold Wilde of Wisconsin has expressed the fear that agents will use Wisconsin's new medicare supplement regulation as a pretext to persuade people to replace their policies, by telling them the old ones are "no good" now that the new rule is in effect.[43]

Loading up. Agents tell people that their present coverage is inadequate and sell an extra policy or two to fill the gaps, which usually results in wasteful duplication.[44] This pitch is especially effective in selling nursing home policies and riders, especially in States where people over 65 are acutely aware that there are few medicare-certified SNF beds.[45]

"Clean-Sheeting." Agents sometimes submit an application for insurance, after obtaining the elderly applicants' signature, which does not mention that the applicant has any pre-existing health problems, although she may have tried to tell the agent about them. The company accepts the risk, then delves

---

[38] Cashing In On Fear: The Selling of Cancer Insurance, *Consumer Reports* 336, 338 (June 1978).

[39] "Mediscare" at 8.

[40] Wyden, Oregon Elderly Win Insurance Fight, *Aging* 13, 15 (Nov.–Dec. 1977).

[41] "Mediscare" at 4. Agents commonly tell policyholders that their insurance company is in financial trouble or has already gone out of business.

[42] See *Consumer Reports* at 29 and Senate committee print at 17.

[43] "Mediscare" at 10.

[44] If an agent talks an individual who already has a Medi-gap policy into buying an additional indemnity contract, the second policy will pay indemnity benefits in addition to the other insurance. Indemnity insurers would argue that people could use the "extra cash" they receive to pay medical bills not covered by medicare or other medi-gap insurance. However, the indemnity plans are structured to pay a certain amount per day of hospitalization, not to pay the types of expenses both medicare and supplemental insurance leave uncovered: drugs, nursing home care, many kinds of preventive care. Since people are more likely to incur such expenses when they are not hospitalized, indemnity-type insurance does not meet the need people may perceive to supplement medi-gap insurance they already have.

[45] Medicare and "regular" medicare supplement insurance policies cover only care in a certified SNF, not in any intermediate care facilities or nursing home licensed by the State. Sometimes the nursing home policies which unscrupulous agents sell limit their coverage to medicare-approved SNF's, in which case the purchaser is often paying for unnecessary duplicate coverage.

into the policyholder's past to find the pre-existing condition and deny coverage on the basis of a general exclusion in the policy. This unfair practice is a variation of, and facilitates, post-claims underwriting, discussed in section I.B.4.(d)(i) below.

Other fraudulent practices. Some agents have elderly buyers pay cash or make checks out to the agent instead of the company, then abscond with the money. Sometimes the same agents simply switch companies and repeat the same tactic.

Often agents do not identify themselves as insurance agents; sometimes they try to make people believe that they are "from medicare" or some other service agency or organization. Sometimes they make fraudulent representations that the policy is approved, sponsored or recommended by the medicare program, that the premiums will never go up, or that the policy will cover everything medicare doesn't. They fail to explain or even mention waiting periods and exclusions for pre-existing conditions, leading purchasers to think that their policies will provide 100 percent coverage immediately.[46]

Unscrupulous agents can revise their sales pitches to get around almost any regulation requiring certain disclosures or prohibiting certain representations. They can dilute, discount or disparage mandatory written disclosures in an oral presentation. Often they can turn a newly enacted standard-setting regulation to their advantage by telling people they must buy new policies which conform to the new law's requirements. Thus monitoring agents' conduct is a continuing necessity for effective enforcement of any regulation in the medicare supplement area.

(b) MAIL ORDER INSURERS

Most advertisements and personal solicitations for medicare supplement insurance play to some extent on fear. Mail order companies' advertisements are notorious for their use of scare tactics. Herbert Denenberg, former insurance commissioner of Pennsylvania, has testified:

"Everyone, of course, is terrified at the prospect of major illness, but none more than the elderly. They have finished their work years and have to depend on pensions and social security. A sudden sickness requiring prolonged hospital care will break many budgets.

The mail-order companies prey on the fear of these old people. They suggest to them, in the biggest headlines, that they must have health insurance or they will die in the paupers ward. Or the company reminds them that they certainly don't want to be a burden to their children or relatives. * * * Another effective scare tactic is to push the idea that present coverage is not enough, whatever it is. Hospital costs are skyrocketing, therefore your coverage must be insufficient. * * * This is an effective technique in promoting policies to supplement medicare. * * * Some companies use frightening photographs. Continental Casualty Company likes to illustrate its ads with a picture of a hospital bed. United Fire Insurance Company is fond of wheelchairs. * * *" [47]

A technique commonly used in mail order advertisements is the warning that enrollment will only be possible for a limited time, whereas in fact the company may offer the same coverage in another mass mailing shortly thereafter.

Many of the policies sold by mail are not true medicare supplements tailored to fill the gaps in medicare's coverage; often they pay only indemnity benefits which are unrelated to the gaps in medicare.

The largest mail-order company, Colonial Penn, sells its insurance through the American Association of Retired Persons (AARP) and the National Retired Teachers Association (NRTA). Through AARP, Colonial Penn markets several hospital indemnity policies with limited benefits, encouraging overlapping coverage.[48] The U.S. Postal Service has begun an investigation of AARP's non-profit status, which entitles it to special mailing rates.

---

[46] See generally "Mediscare" and Fact Sheet on Medicare and Medicare Supplements (November 1977) (available from the Office of the Wisconsin Commissioner of Insurance).

[47] 1972 hearings at 447. See also Senate committee print at 19–23.

[48] Some of AARP's policies do not cover any of the gaps in medicare part B coverage. Some do not begin to pay benefits until the insured has been hospitalized for 8 days. Any Colonial Penn policy sold through AARP is virtually certain to duplicate some of the coverage of any other health policy a person over 65 may have. Anyone who holds more than one of Colonial Penn's hospitalization plans for AARP members has at least some duplicate coverage. See *Consumer Reports* at 32–34 and Colonial Penn Alleges Errors in CU Report, *Consumer Reports* (April 1976).

In a private lawsuit, a former executive director of AARP has also challenged its relationship with Colonial Penn, alleging a "scheme to persuade and delude the public that the associations (AARP and NRTA) are not insurance marketing devices * * * but rather are democratically organized and independently operated organizations." The complaint also charges that the defendants, including founder Leonard Davis and his close associates, caused AARP and NRTA to "recommend the purchase of insurance policies so as to benefit CPG (the Colonial Penn Group) regardless of the welfare, interests and needs of the associations' members," principally through advertisements in AARP publications and newsletters which appeared to be articles by AARP or NRTA staff members endorsing Colonial Penn's insurance.[49]

3. Inadequate Information

It is very difficult for senior citizens to make rational decisions about their health insurance needs and purchases because they lack the requisite information.

(a) IGNORANCE ABOUT MEDICARE

Most older people know little or nothing about the medicare program. Although they may be aware that medicare does not cover everything, they do not know enough about its gaps to evaluate their supplemental insurance needs. In 1974 the Senate Special Committee on Aging noted "the great need for more intensive educational efforts upon the part of the Federal Government to inform older persons about medicare itself."[50] There is no indication that these efforts have taken place; indeed, some older people may not even file claims for medicare benefits they do not realize they are entitled to.

(b) IGNORANCE ABOUT RISKS

Like the rest of the population, older people generally do not know the extent to which they are at risk for various types of health care expenditures. They lack easy access to information about average hospital cost per day, average hospital length of stay, average annual per capita expenditures for physician charges, or likelihood and length of a nursing home stay for their particular age group. Thus they have no basis for deciding whether they want insurance coverage for each kind of expense. Some low-income elderly may not know that they are eligible for medicaid, which would eliminate or generally reduce their need for private health insurance. In many States, medicaid programs cover all or almost all the health care expenses of eligible individuals. Even in States which require medicaid recipients to pay some of their medical bills, there may not be any coverage available to fill those gaps, because medicaid programs usually cut back on the same services that neither medicare nor supplemental insurance covers (dental care and dentures, hearing aids, eyeglasses, small copayments for prescription drugs).[51]

(c) NON-STANDARDIZED COVERAGES

Since medicare supplements and other insurance policies commonly sold to the elderly are not standardized, it is often impossible to compare coverages.

---

[49] *Miller* v. *Davis et al.*, complaint filed May 2, 1978 in the Superior Court of the District of Columbia, paras. 12 and 47. See also Two Non-Profit Organizations Accused as a 'Cover', *Washington Post*, May 3, 1978 at A2, col. 1.

[50] Senate committee print at iv; see also 24.

[51] The kind of care covered by medicaid or medical assistance programs varies from State to State. Federal law mandates that all State programs pay for certain types of services, but States may elect to offer a higher level of benefits. For an illustrative list of State medicaid cutbacks instituted during the period from January 1 through October 1, 1975, see *Medicare Gaps and Limitations*: hearing before the Subcommitte on Health and Long-Term Care of the House Select Comm. on Aging, 95th Cong., 1st Sess. 45–50 (1977) (appendix I: "The Aged and their Health Care Expenditures," sec. II. D: "Experience of the aged with Medicaid."). Some cutbacks involve services which would be covered by medicare anyway for elderly individuals, such as in-patient hospital care; they would not affect the need for supplemental insurance. In States where medicaid pays all health care expenses, an eligible person obviously needs no health insurance. Even where a State medicaid program is limited to the statutorily required benefits, supplemental medi-gap coverage necessarily involves a high degree of overlap, which is particularly unjustifiable for people living on very low incomes. Indemnity policies will, of course, pay benefits even to medicaid recipients who have not had to make any out-of-pocket expenditure for their health care. But State medicaid programs may consider indemnity benefits as income to the recipients, possibly endangering their eligibility status or subjecting them to penalties for fraud if they neglect to report the indemnity payments as income.

Even where two of the available policies have roughly comparable benefit structures, they may be so complex that comparing them may not be cost-justified.

(d) SPECIAL LIMITATIONS OF THE ELDERLY

Some older people may have vision or hearing limitations which make it more difficult to get information. Some may have reduced attention spans or impaired memories. Many do not even realize that they have been victimized until the time comes to make a claim. Even then many are reluctant to complain and some of those who do make poor witnesses.[52]

(e) NO SOURCES OF INFORMATION

Very few people outside the insurance industry are at all knowledgeable about insurance matters. In addition, the elderly, especially in rural areas, often lack advisers and advocates. As a result, the insurance agent or mass mailing may be the only source of information about supplemental insurance available to an older person. Although family members offer assistance when they can, their knowledge about insurance and medicare is usually far from complete. And some old people have no family to turn to.

4. Consequences of Inadequate Information

Because they do not have sufficient information about insurance to supplement medicare, senior citizens end up wasting a large portion of the $0.5 to more than $1 billion they spend on it each year. The following characteristics of the market indicate its failures.

(a) NO PRICE COMPETITION

The lack of standardization and the complexity of the coverages available make comparison-shopping almost impossible. Therefore supplemental insurers do not compete on price. In Wisconsin in 1977, for example, Blue Cross' relatively comprehensive medicare extended policy sold for $95.40/year. The premium for Reliable's much more restricted elder care series III plan was $200/year for people under 75, $236/year for those 75 and over.[53]

(b) LOW RETURN

Medicare supplement insurance policies pay back in benefits only a relatively low percentage of dollars paid in premiums. Loss ratios for hospital indemnity, nursing home and low-value medicare supplement policies run around 40 percent. Expense factors of 50–60 percent are not uncommon. The highest loss ratios for individual medicare supplement policies are between 70 and 80 percent. In contrast, Blue Cross-Blue Shield group health insurance plans usually have loss ratios of 85–90 percent.[54]

Not only do medicare supplement premiums return relatively little value; they also take a large share of the fixed incomes of the elderly, typically between 5 and 10 percent for those people who choose to buy them.[55]

(c) DUPLICATE COVERAGE

Lack of standardization, consumer ignorance about medicare and insurance and agent incentives combine to produce unnecessary overlaps in coverage. The extent of this duplication is unknown. However, the Social Security Administration has estimated that in 1972, 2.6 million of the 11.2 million people who had some hospitalization coverage to supplement medicare held more

[52] "Mediscare" at 7.

[53] In some cases differences in underwriting criteria might explain price differences. The two insurers cited in the example do not refuse coverage to poor health risks, although they may exclude coverage for certain existing conditions or some applicants. See appendix C to compare benefits available under the two policies.

[54] "Mediscare" at 4–6.

[55] This estimate was calculated as follows: The national median income for unrelated individuals over 65 was $3,495 in 1976. In 1977, 1 year later, the annual premium for the most comprehensive medi-gap policy in Wisconsin (WPS medicare plus $22,500) was $342. Most other annual premiums were in the $200–300 range while the cheapest widely sold medicare supplement (nonindemnity) policy was Blue Cross' medicare extended at $95.40/year. Since many people had duplicative coverage, an estimate of 5–10 percent is not unreasonable. In addition they must pay a medicare part B premium of $92.40/year.

than one policy covering hospital costs, so that at least 23 percent had duplicate coverage.[56]

Confusion may lead consumers to buy two or more policies in an effort to obtain complete coverage. But medi-gap policies generally include coordination of benefits clauses. This means that in the areas of overlap, only one policy will pay for each gap. For instance, a person who buys three policies which cover the $144 part A deductible will not receive a windfall of $432 in the event of hospitalization. Only one of the policies will pay $144. The buyer has wasted the portion of the other two premiums which paid for the duplicate coverage of the initial deductible. Those elderly persons who live on fixed incomes can ill afford to spend their money on such worthless duplication.[57] Indemnity policies will, of course, pay benefits without regard to any other insurance a policyholder may have.

Cases have been reported where a single individual held six or more policies and paid over $1,000 annually in premiums.[58] At a hearing held May 16 by the Senate Special Committee on Aging, a witness testified that agents from a single company sold his 67-year-old mother 17 insurance policies in a 2-year period, so that she was paying 68 percent of her income in premiums when he discovered her predicament.[59]

(d) COVERAGE NOT IN CONFORMITY WITH EXPECTATIONS

Contrary to policyholders' expectations, even the better medicare supplement policies leave some major gaps uncovered (See sec. I.B.1(a)(ii)—Inadequate Coverage). As a consequence of the way medicare supplement insurance is marketed, many older people think they have much more extensive coverage than they actually do. Advertisements and agents tell them a policy will cover everything medicare doesn't.[60] They believe it because no other mechanism exists to provide them with usable information about what benefits it really will pay. Common areas of misunderstanding are:

(1) *Preexisting conditions.*—A clause excluding coverage for pre-existing conditions gives the insurer the right to refuse to pay any expenses for conditions or illnesses which began before the effective date of the policy. A strict interpretation of these clauses can lead to denials of claims for any illnesses developing out of conditions (such as hypertension) which existed before the policy went into effect. Since many elderly people have multiple health problems, "pre-X" clauses can make coverage so limited as to be meaningless for some of them. Insurance companies often use "pre-existing conditions" as a pretext for rejecting claims in a totally arbitrary manner.[61] Since people cannot know in advance to what lengths a company will go to deny claims because of pre-existing conditions, they can never be certain of what their coverage is worth.

---

[56] Senate committee print at 7–8. Apparently the Social Security Administration stopped estimating duplication after 1972. See National Health Insurance Resource Book at 239. In 1974 the National Health Survey of 40,000 households yielded an estimate that 53.8 percent of those 65 and older had private health insurance in addition to medicare and that 12.1 percent of them had two or more plans. See 52 *Hospitals* (Journal of the American Hospital Association) 20 (May 16, 1978).

[57] Senate committee print at 16–17.

[58] See "Mediscare" at 6 and Wyden, Public Regulation of Private Supplements to Medicare and Medicaid in Oregon, 9 Conn. L. Rev. 450, 452, 456 (1977) [hereinafter Wyden].

[59] Statement of Robert E. Lowry from Raleigh, N.C., before the U.S. Senate Special Committee on Aging at a hearing on Medi-Gap: Private Health Insurance Supplements to Medicare, May 16, 1978. Senator Lawton Chiles, who presided at the hearing, also read a letter from an 87-year-old woman who had been sold 19 health insurance policies in 1 year's time, by six different agents.

[60] See, e.g. *International Security Life Ins. Co.* v. *Finck,* 475 S.W. 3d 363 (Tex. Civ. App. 1971). The court held that a representation that the policy in question would cover everything not covered by medicare was not mere "touting," "in making a sales pitch to an elderly person who does not have and needs hospitalization insurance," but rather an assertion of material fact which the plaintiff relied upon and which entitled him to damages when it proved to be false. 475 S.W. 2d at 369. However, the Texas Supreme Court reversed on the ground that the agent's representations were beyond his authority to make; therefore the plaintiff could not recover actual or exemplary (punitive) damages from the insurance company. He was limited to recovery of benefits due under the insurance policy, plus interest and a 12 percent statutory penalty—$378.19, instead of the $6,596.07 the jury awarded him. *International Security Life Ins. Co.* v. *Finck,* 496 S.W. 2d 544 (Tex. 1973).

[61] See 1972 hearings at 597 and 644–758 for some examples of arbitrary denials. In the *Finck* case, *supra* note 60, the defendant insurance company apparently denied every claim filed, citing a prior existing condition or some other technicality, so that policyholders had to enlist an attorney's assistance in order to collect.

Diversity among pre-X clauses reduces still further the older insurance buyer's chance of comparing policies. Many medicare supplement policies will not cover pre-existing conditions for a waiting period of 6 months or 1 year after the policy has been in force. Some companies exclude coverage for certain conditions by means of riders; the policy will not cover those named conditions even after any waiting period is over. Mail order insurers often accept all applicants without any medical underwriting, then shock policyholders by citing pre-existing conditions as a ground for denial of claims.[62] The language of their pre-X clauses is particularly impenetrable.[63] The practice of denying large numbers of claims from policyholders with pre-existing health problems is known as "post-claims underwriting." Some companies add complications which are almost impossible to ascertain in advance. One Wisconsin policy will never afford any coverage for a pre-existing condition if it was treated during the first 6 months after issuance of the policy.[64]

(2) *Nursing some coverage.*—Purchasers usually assume that nursing home coverage applies to care in any nursing home facility, not just in medicare certified SNF's. One Salem, Ore., social worker has stated, "I spend about 50 percent of my day trying to explain it * * * [T]heir policies do not cover what medicare does not cover—intermediate care." [65]

(3) *Excess over reasonable charges.*—People who purchase a policy to supplement medicare expect that when medicare refuses reimbursement for part of a physician's charges, the supplemental insurance will take care of it. When the private insurer denies payment as well, they are surprised and confused.

(e) CLAIMS HANDLING

Elderly policyholders often complain, to state insurance departments and others, that their supplemental health insurance claims were unfairly denied. One cause of this problem is widespread misunderstanding about policy coverage. For example, in one 26-month period, one hospital indemnity insurer paid nothing at all on 30,291 or 38.5 percent of the 78,577 claims received. 12,213 or 15.5 percent were rejected because of a pre-existing condition and 5,660 or 7.2 percent because there was no hospital confinement or surgery as required by the terms of the policy.[66] Where such a large number of claims clearly not within policy coverage were filed, it is evident that many policyholders were completely misinformed (or totally uninformed) about the extent of their insurance coverage.

Claims denials are often simply the events which make older people aware that the insurance they purchased does not meet their needs. But some denials (especially for pre-existing conditions) are surely questionable. Incomprehensible policy provisions and lack of the most basic knowledge about supplemental insurance make it very difficult for older policyholders to challenge arbitrary treatment.

Another source of frequent complaints is delay in settling claims. For unassigned part B claims insureds must file a claim with the medicare part B carrier, wait as long as 6 months for payment or denial, then file a claim

---

[62] Senate committee print at 14–15.

[63] In 1972, National Home Life Insurance Company used the following pre-X clause in one of its indemnity policies: "After 2 years from the date of this policy becomes effective for a covered member, hospital confinement commencing thereafter while the policy is in force for such covered member, and as a result of any such condition for which such covered member was medically treated, or advised prior to the effective date, shall be covered hereunder." The president of National Liberty Group explained its effect as follows: "* * * if you had been treated for a heart condition, and you take out one of our policies, for the first 2 years you will not be covered for any heart condition if you go in the hospital." 1972 hearings at 592 (testimony of Robert E. Slater).

[64] WPS' medicare plus $22,500, sold by Wisconsin Physicians Service, a Blue Shield plan. In 1977, this policy offered the most complete medicare supplement coverage available; its big selling point was its coverage of out-of-hospital prescription drugs. Many health insurance policies issued to people under 65 require that policyholders go without treatment for a pre-existing condition during the first 6 months the policy is in force in order for that pre-existing condition to be covered. However, WPS considers taking medication for a pre-existing condition during the first 6 months a policy is in force to be "treatment" which would bar any coverage for that condition. For elderly policyholders with conditions which require regular medication (such as hypertension), WPS' coverage diminishes in value when they discover such limitations. (People who enroll in WPS' plan within 3 months of their 65th birthday are not subject to this particularly restrictive pre-X exclusion. Their pre-existing conditions are covered after 1 year even if they are treated during the first 6 months.)

[65] Wyden at 459–460.

[66] 1972 hearings at 598. (National Liberty) More than half the claims paid were less than $100.

with the supplemental insurance company and wait again.[67] Since medicare supplement insurers have little incentive to be responsive to their policyholders,[68] they can and often do pay claims very slowly.

II. STATE REGULATORY INITIATIVES

This section presents an overview of selected State approaches to the regulation of medicare supplement insurance.

A. Types of State Regulation

1. Traditional Approaches

Most States have statutes and regulations of general applicability which could be used in the medicare supplement area. All States have adopted some form of statute governing unfair methods of competition and unfair or deceptive practices in the business of insurance, naming misrepresentation, false advertising, boycott, coercion or intimidation, and unfair discrimination, among others.[69] Most States have more detailed regulations applicable to all advertising of health insurance, and some even specifically prohibit certain kinds of claims in advertising of medicare supplements.[70] However, most courts which have considered the question have declined to imply from such statutes a private right of action for unfair trade practices.[71] At least one court has noted such a state statute's expression of the public policy against misleading or deceptive advertising, in order to support the plaintiff's claim for misrepresentation in an insurer's advertisements for its indemnity plan. However, in such an action the plaintiff is limited to recovery of the benefits due under the policy.[72]

State insurance commissioners have the power the revoke licenses of agents who engage in fraudulent practices.[73] They are also empowered to license insurers to do business in their States and to deny or revoke licenses for failure to comply with requirements for minimum capitalization or reserves or for the reporting or other data.[74]

In addition, some States have the authority to disapprove policy forms which are inequitable, unfairly discriminatory, or misleading—because the benefits are too restricted to achieve the purposes for which the policy is sold, because the language is unnecessarily complex or for other reasons.[75] Some State statutes empower the commissioner to withdraw authorization of policies on a finding that permiums charged are unreasonable in relation to the benefits provided.[76] Some States interpret their statutes as requiring time-consuming individual evaluation of each policy and issuance of a written statement of reasons for disapproval.[77] For that reason this approach has not yet been widely used to ban low-value medi-gap policies.

---

[67] When a provider accepts assignment, the claimant has to wait until the carrier issues an "Explanation of Medicare Benefits" form in order to send it along with an insurance claim. Even where the part B carrier and the supplemental insurer are one and the same, federal regulations require separate processing of medicare and private insurance claims.

[68] Elderly people are sometimes reluctant to cancel even when they learn that the policy is not what they thought they were buying or when they are dissatisfied with claims service. They are afraid that they will not be able to obtain any other health insurance because of advanced age or existing health problems.

[69] These statutes are similar or identical to the Model Unfair Trade Practices Act drafted by the National Association of Insurance Commissioners. See 2 *Proceedings of the NAIC* 509 (1960). The model act also provides a means for defining unfair practices in addition to those specifically listed.

[70] See, e.g. Calif. Admin. Code, Title 10, Ch. 5 (Rules and Regulations of the Insurance Commissioner), Secs. 2535 *et seq.*, especially Secs. 2536.2(a) 1 and guidelines 38–40, 2536.2(b)(2) and 2536.9.

[71] See the cases cited in *Crawford* v. *American Title Ins. Co.*, 518 F.2d 217, 229, fn. 32 (5th Cir. 1975) (Godbold, J., dissenting). Judge Godbold noted that in the cases where courts had implied a private right of action, the practice complained of was specifically enumerated in the state's unfair practices act. (He apparently views the *Craver* case, note 72 *infra*, as one supporting the implication of a private right of action only by analogy.)

[72] *Craver* v. *Union Fidelity Life Ins. Co.*, 307 N.E. 2d 265 (Ohio App. 1973).

[74] See Lamel, State Regulation of the Insurance Industry (paper prepared for the U.S. Commission on Civil Rights) 12–13 (April 14, 1978).

[75] See, e.g. Wis. Stat. Sec. 631.20 (1975).

[76] See, e.g. Deering's Calif. Ins. Code Ann. Sec. 10293(a), (1969) (individual hospital, medical or surgical policies).

[77] Conversations with personnel of the Office of the Wisconsin Commissioner of Insurance concerning the requirements of Wis. Stat. Secs. 631.20(a) and (4), where the policy form has already been approved and is on file with the commissioner's office.

2. Standard-Setting: Minimum Loss Ratios

Some States require that individual accident and health insurance policies in general and/or individual medi-gap policies in particular return a certain percentage of dollars paid in premiums to policyholders in benefits. In Michigan the anticipated loss ratio for policies issued to individuals 65 and over must be at least 65 percent.[78] California is raising its "benchmark minimum loss ratio" for policies designed to supplement medicare to 55 percent effective January 1, 1979. Policies with lower loss ratios are deemed not to provide reasonable benefits relative to the premiums charged.[79] Recently, New Jersey Insurance Commissioner Sheeran banned the sale of 133 kinds of individual health and accident policies with loss ratios of less than 50 percent.[80] Many were limited policies which covered only specific dread diseases or certain accidents, a type of insurance marketed especially to elderly buyers. Reportedly, Florida and Nevada also have regulations or guidelines requiring that individual policies have loss ratios of more than 50 percent.[81]

3. Regulations Specifically Applicable to Medicare Supplement Insurance

In response to the volume of complaints from individuals and senior citizen's groups, some insurance commissioners (and State legislatures) have recently begun to devise new solutions specifically for the medicare supplement market. They have taken very different approaches. In general, State regulations which target medicare supplement insurance use one or a combination of three methods: (i) Setting standards or minimum benefit levels; (ii) promoting standardization through labeling; or (iii) requiring disclosures or provision of information by other means.[82]

B. Wisconsin: Four Grades Plus Extensive Disclosure

Wisconsin's new medicare supplement rule, Ins. 3.39, combines a labeling system with a requirement of extensive disclosure. The insurance commissioner's office hoped that it would result in "greater standardization of policies, improved consumer information and elimination of many of the worst policies from the market."[83]

Other States such as Michigan and New Jersey are considering adoption of the Wisconsin model.[84]

1. Standardization: Four Categories

Ins. 3.39 sets up four distinct categories of medicare supplement coverage. As of January 1, 1978, any policy "designed or structured to supplement medicare" must meet the standards for one of four classes of coverage in order to be approved for sale in Wisconsin. Approved policies must then bear a label (called a "designation") such as "medicare supplement 1."[85] Representatives of the insurance industry criticized Ins. 3.39 on the ground that it establishes minimum benefit levels and curtails individual choice. However, the rule does not impose a ban; it provides that no non-conforming policy "shall relate its coverage to medicare or be structured, advertised or marketed as a supplement to Medicare. . . ."[86] Technically, insurers could continue to sell policies which did not meet the prescribed standards as long as they did not present them as supplements to medicare.

[86] Appendix D, Ins. 3.39(4).

(a) BENEFIT STRUCTURE

All four categories of medicare supplement policies are required to cover only "medicare-eligible" expenses. "Medicare eligible" means the same kind of expense that medicare would cover.[87] In other words, insurers need not provide for custodial long-term care, nursing home care outside a medicare-certified SNF, physicians' charges above the amount medicare determines to be reasonable, or any of the less obvious but more sizeable gaps left by medicare.

Policies do not have to include coverage for either part A or part B initial deductibles under any of the four categories. The Wisconsin regulators felt that high premium costs imposed by a first-dollar coverage requirement would outweigh any potential increases in clarification for prospective buyers.[88] Companies may cover the initial deductibles if they choose.

No medicare supplement policy may exclude coverage for pre-existing conditions for a period longer than 12 months after its effective date, unless the condition is specifically described.[89]

A medicare supplement 1, the most comprehensive policy, must cover "medicare-eligible" expenses under both parts A and B, including at least 75 percent of prescription drug expenditures, up to either (i) $22,500 for both parts A and B or (ii) $15,000 for part A and $7,500 for part B.[90] A medicare supplement 2 is similar, except that the minimum dollar ceilings are lower and the policy need not afford any coverage for prescription drugs, psychiatric care, or certain other benefits of limited significance.[91] The standards for a "medicare supplement 3" set still lower dollar limits and remove the requirements for coverage of part B-type home health care, some diagnostic tests and a few other benefits.[92]

The first three categories do not differ markedly except in their dollar limits. It remains to be seen whether companies and consumers will find them sufficiently distinguishable to bring about price competition within each category.

The fourth category is divided into two parts. A "medicare supplement 4A" provides coverage for hospitalization and other part A expenses only, up to a maximum of $15,000. A "medicare supplement 4B" offers coverage for part B-type medical expenses only, up to at least $7,500 per year. A medicare supplement 4B policy may provide catastrophic coverage by including a "corridor deductible" of up to $500, which means that a policyholder would have to pay $500 out-of-pocket before the policy would provide any coverage.[93]

The rule's drafters were persuaded by the industry's argument that a product with high deductibles could supplement part A only or part B only at a low price. They believed that the concept of catastrophic coverage only should be encouraged. They also thought that permitting a policy to supplement part A but not part B and vice versa would not necessarily result in consumer confusion. In an effort to prevent further fragmentation of coverage and reduce the possibility of duplication, a medicare supplement 4A may not include any coverage to supplement part B. Nor may 4B policies supplement part A in any way.

Because of a prior statutory requirement, medicare supplement policies (except 4B) must offer coverage for 30 days of skilled nursing care. This mandated benefit has been the subject of great controversy, because the insurance commissioner has interpreted it to mean that all medicare supplement policies must cover 30 days of skilled nursing care, whether it is rendered in a medicare SNF or any other nursing home.[94]

---

[87] Appendix D, Ins. 3.39(3)(c).

[88] One of the authors of this paper, Anne DeNovo, became familiar with the viewpoints of the office of the Wisconsin Commissioner of Insurance during her participation in the hearing and meetings during the drafting process of Ins. 3.39 (as a law student intern with the Center for Public Representation, Madison, Wis.).

[89] Appendix D, Ins. 3.39(4)(a)(2).

[90] Appendix D, Ins. 3.39(5)(a).

[91] Appendix D, Ins. 3.39(5)(b).

[92] Appendix D, Ins. 3.39(5)(c).

[93] Appendix D, Ins. 3.39(5)(d). For a medicare beneficiary to be personally liable for $500 in medical expenses, she would have incurred $2,500 in total bills, because medicare would have paid 80 percent of the total.

[94] See, Warns on Insurance (letter from Harold R. Wilde, commissioner of insurance), *Wisconsin State Journal*, Madison, Wis., Feb. 25, 1978, Sec. 1 at 8, Col. 3; Wilde: Beware cut-rate insurance, *Capital Times*, Madison, Wis., Feb. 27, 1978, and Bruno's Rebuttal to Wilde, *Capital Times*, Mar. 3, 1978. Of the 45,500 skilled nursing home beds in Wisconsin, only 3,400, or 7.7 percent, are medicare-certified. Thus this interpretation of the mandated benefit for 30 days of skilled nursing care, Wis. Stat. Sec. 207.04, represents a very great increase in coverage.

(b) IMPACT

At the end of January 1978, only four of the 40 companies which had sold medicare supplement policies in Wisconsin in 1977 had medicare supplement policies approved for sale in the State in 1978. All five approved policies were in categories 2 or 3 (one company had both a 2 and 3); there were no 1's or 4's. Some insurers had expressed their intention to stay out of the Wisconsin market for a year to see what the effect of the new regulation would be, but by June, five more companies had had their policies approved, including one in category 4A. Eight more had filed policy forms and were awaiting approval.

Price dispersion is evident from the table of policies approved for sale in Wisconsin as of June 12, 1978 which appears as appendex E. Rural Security Life, Blue Cross of Wisconsin, and WPS (Wisconsin Physicians Service, the Madison area Blue Shield plan) sell the cheapest medicare supplement "2" policies, for $185.83, $210 and $211.20 per year respectively. The premium for the only other "2," sold by Reliable Life & Casualty, is $446.00 for ages 65–72, $502 for ages 73–79, and $646 for ages 80 and up. The least expensive policy in category 3 cost $230.28 for all age groups, whereas the two most expensive 3's cost $396 for ages 65–72, $438 or $442 for ages 73–79 and $586 or $594 for ages 80 and over. In general, anticipated loss ratios show a rough inverse relationship to price. In contrast, annual premium amounts increase with first-year agents' commissions.

Reportedly Blue Cross withdrew the medicare supplement 2 policy it had filed for approval upon learning that WPS' "2" policy would be selling for much less than Blue Cross had planned to charge, and came back with a premium about equal to WPS'. In 1977, WPS had sold a medi-gap policy whose coverage almost qualified it for a "1" rating, but in 1978 the company reduced its premium and eliminated some benefits to enter at the "2" level. Some companies doubled their 1977 premiums, blaming the price increase on the new medicare supplement regulation and the mandated benefit for skilled nursing care. The industry maintains that the mandated benefit raises premium costs by $55 per year on the average.[95]

2. Disclosure

Ins. 3.39 also requires the provision of a great deal of useful information about its four categories and medicare supplement insurance in general. Agents must give all prospective purchasers a copy of an 18-page booklet called "Health Insurance Advice for Senior Citizens" at the time they provide them with applications. This booklet is reproduced as appendix F.

The pamphlet, prepared by the office of the commissioner of insurance, explains the four new categories for medicare supplement policies. It includes general information about medicare gaps and insurance to fill them, emphasizing the fact that policies will exclude the same type of expenses that medicare excludes. The pamphlet also warns its readers about common frauds. It also cautions readers not to purchase any private insurance if they are eligible for medicaid and not to replace old policies simply because of the new medicare supplement rule. Commissioner Wilde has made the point that unscrupulous agents can and do use the new policies as a "reason" to persuade people to cancel the ones they have in force—perhaps subjecting themselves to new waiting periods for coverage for conditions they already have or even losing it entirely.[96] The back cover of the booklet is a policy checklist.

In addition to the pamphlet, agents must leave an outline of coverage with people who purchase a policy. The outline of coverage for medicare supplement policies must contain a clearly organized chart summarizing medicare benefits, the benefits the policy provides and the expenses which remain uncovered.[97]

All policies and outlines of coverage are supposed to include a "medicare supplement" label and a short, general caption. The caption should tell consumers to consult the pamphlet and say: "Do not buy this policy if you did not get this pamphlet and were not given a chance to review the outline of

[95] See "Warns on Insurance," note 94 *supra*.
[96] Testimony by Wisconsin Insurance Commissioner Harold R. Wilde, U.S. Senate Special Committee on Aging, hearing on "medi-gap" insurance 10 (May 16, 1978).
[97] Appendix D, Ins. 3.39(4)(b).

coverage provided you." However, the rule does not require that the outline of coverage be signed and returned. Nor does it accord individual consumers any remedy for failure to comply with the disclosure provisions.

3. Limited Scope in Ins. 3.39

The regulation applies only to individual medicare supplement policies, not group coverage or conversion contracts. The commissioner's office feels that it could not apply the rule to group mail order insurers not authorized to do business in Wisconsin without holding a hearing and making certain statutorily required findings of fact.[98]

The standardization provisions of the rule do not apply to hospital indemnity, dread disease or nursing home policies. Each of those policies must make certain written disclosures, including the fact that it is not a medicare supplement,[99] but their sale remains unaffected.

C. California: Minimum Standards, Three Descriptive Categories and Simple Disclosure Forms

Since 1974, California has prescribed minimum coverage standards and the use of one-page disclosure forms for each different type of individual health insurance. The regulations established separate categories for specified disease, hospital indemnity and medicare supplement expense policies. These minimum standards for medicare supplement, dread disease and hospital indemnity policies appear as appendix G, and the original text of the regulations requiring disclosures for those types of policies is in appendix H. California regulations also set a benchmark loss ratio of 50 percent for medicare supplement insurance. The department could presume that policies with lower loss ratios did not afford reasonable benefits in relation to premiums charged and withdraw its authorization for those policies.[100]

In late 1976, the department became aware that some individual supplemental policies were showing loss ratios of less than 50 percent, which was the "benchmark" minimum loss ratio at that time.[101] The department held investigative hearings on medicare supplement insurance in January 1977 and proposed revisions in its regulations in September. The notice of the proposed regulations and additions, dated September 29, 1977, is included as appendix I. The department held further hearings on the proposals in November, and issued final amendments on March 21, 1978, to become effective on January 1, 1979. The text of the revised regulations and the decision of the California Insurance Commissioner which accompanied them may be found in appendix J.

Public witnesses at the hearings were less concerned about the price of policies than their design and solicitation. Many testified that they found their policies incomprehensible and that they had purchased what they thought was complete supplemental coverage, only to discover when they filed claims that it filled only a few medicare gaps.[102]

1. Minimum Standards

(a) MEDICARE SUPPLEMENT POLICIES

The 1972 standards for supplemental policies paying benefits on an expense incurred basis set forth general requirements such as prohibitions of any de-

[98] Appendix D, Ins. 3.39(2). Also, Wis. Stat. 600.91(1)(6) makes the Wisconsin insurance code inapplicable to group or blanket insurance covering risks in the State if: (a) The policyholder exists primarily for purposes other than to procure insurance; (b) the policyholder is not a Wisconsin corporation or other resident and does not have its principal office in Wisconsin; (c) no more than 25 percent of the certificate holders of insureds are resident in this State; (d) on request of the commissioner, the insurer files with the commissioner a copy of the policy and a copy of each form of certificate; and (e) the insurer agrees to pay taxes on the Wisconsin portion of the business on the same basis it would do if authorized to do business in this State. . . . Under Wis. Stat. Sec. 600.01(2), the commissioner may subject such group insurance to the State insurance code, upon making a finding that the foregoing conditions are not satisfied or that circumstances require that the transactions be subject to the code in order to provide adequate protection to Wisconsin insureds and the public.

[99] Appendix D, Ins. 3.39(7), (8) and (9).

[100] See appendix J, State of California Department of Insurance, Decision In the Matter of the Proposed Amendments and Additions to the Regulations of the Insurance Commissioner Relating to Individual Disability Policies Designed to Supplement Medicare at 1–2, 7–8, (March 21, 1978).

[101] See appendix D at 1–2.

[102] Appendix J at 2.

ductibles (other than the initial medicare part A and part B deductibles, which did not need to be covered) and any exceptions inconsistent with medicare's exceptions.[103] Any coverage of medicare deductibles and part B coinsurance had to increase automatically whenever medicare raised those amounts.[104] The only permissible exclusions of coverage of pre-existing conditions were for: (i) conditions treated 12 months before the policy's effective date; or (ii) conditions treated 6 months before or 6 months after the effective date.[105] The regulations did allow policies to supplement part A only or part B only.[106]

The 1978 amendments require all medicare supplement policies to fill some of the gaps in both part A and part B of medicare. Insurers need not cover the initial part A deductible, but they must cover the initial part B deductible for any year in which the insured is hospitalized. All medi-gap policies must pay the part A copayments for the 60th through 90th day and the 60 lifetime reserve days of hospitalization.[107] They need not include benefits for skilled nursing care or home health visits, but the amended disclosure forms provide a space for showing those optional benefits.[108] Policies must reimburse part B coinsurance expenditures up to at least $1,000. Although some part B gap-filling is required, coverage of out-of-hospital medical expenses is not mandatory. Nor are companies required to cover physicians' charges in excess of the amount medicare determines to be reasonable, though they may offer a "catastrophic medicare supplement." (See sec. II.C.2(b) below.)

Some insurance company representatives testified that supplements for part A expenses only were their best sellers and that requiring all policies to supplement both parts A and B would make their policies prohibitively expensive. However, the California regulators noted that medicare covers a lesser percentage of medical expenses than hospital expenses and concluded that there is a greater need for supplementation of part B than part A. The final version of the minimum standards reflects their view that some mandatory part B coverage would not necessarily result in excessively high premiums, because insurers may omit expensive coverage of the initial hospital deductible if they choose.[109]

Public witnesses called for a ban on pre-existing conditions clauses on the ground that Medicare does not exclude such conditions from coverage, while industry representatives voiced concerns about adverse selection which would drive up premiums.[110] The department noted that many policies had 6-month pre-X clauses and adopted an amendment permitting only a 6-month waiting period before covering conditions treated 6 months before the policy's effective date.[111]

The department also raised its minimum "benchmark" loss ratio for medicare supplement policies to 55 percent, based on a finding that people over 65 properly constitute a separate class for the purpose of considering reasonable loss ratios, because many of them live on low fixed incomes. The department rejected the proposal that insurers be required to furnish loss experience data for California only, since some policies with small premium volumes in the state might have widely varying loss ratios from year to year.[112]

The amended regulations also require separate identification of medicare supplement policies in reporting loss experience.[113]

(b) HOSPITAL INDEMNITY POLICIES

The 1972 standards set general standards for hospital indemnity policies issued to people eligible for medicare, relating to pre-X clauses and waiting periods.[114] The 1978 amendments increased the minimum daily benefit from $10 to $15.[115]

(c) DREAD DISEASE POLICIES

California's regulations set special minimum standards for dread disease insurance, although there are no requirements specially applicable to dread disease policies sold to the medicare-eligible. They establish a minimum benefit ceiling of $10,000 or alternative piecemeal minimum benefit ceilings for cancer only policies.[116]

2. Standardization through Labeling: Three Descriptive Categories

(a) THREE UNGRADED CLASSES

Although there was considerable public testimony at the hearings in favor of a grading system for supplemental policies, the California department explicitly rejected the Wisconsin model for two reasons. First, they felt that "there is such a vast range of possible supplemental benefits to medicare that it would be difficult to consider them all properly in a comprehensive grading system." [117] Furthermore, they believed that a provision of the California insurance code prohibiting the commissioner from prescribing policy forms presented a legal barrier to the creation of a grading system for different levels of coverage.[118]

The final 1978 rules set up three kinds of medicare supplement policies, each with its own special mandatory disclosure form. (See sec. II.C.3 below.) They are: (i) in-hospital expenses only; (ii) in-and-out-of-hospital expenses; and (iii) catastrophic medicare supplement coverage.[119] Apparently the department did not consider the possibility that permitting insurers to limit their coverage to treatment in a hospital (as they may do in category (i)) might not be desirable where the same treatment could be provided at a lower cost on an outpatient basis. There is no mention of this subject in the opinion accompanying the new regulations.

(b) CATASTROPHIC MEDICARE SUPPLEMENT COVERAGE

The department noted the great demand for a supplemental policy which would provide complete coverage, but rejected the idea as unworkable because premiums would be too high.[120] The department believed that in California, medicare beneficiaries bear a greater share of physicians' charges than elderly people in the rest of the country, because fees are higher and part B carriers' reasonable charge reductions are greater.[121] To address this problem, the 1978 regulations include guidelines for a new type of catastrophic medicare supplement coverage, to be administered like a major medical plan. Upon receiving a claim, the insurance company would reach its own reasonable charge determination using its own "UCR" data, just as it would for claims under any major medical plan. Then it would subtract any amounts paid to the insured by medicare and the amount of the "corridor" deductible, which could be up to $1,000. The minimum lifetime benefit ceiling would have to be at least $25,000.[122]

A catastrophic medicare supplement would only be required to cover those reasonable expenses incurred "in the treatment of conditions covered in whole or in part by medicare." [123] Such a policy would not have to pay any benefits for the kind of health care expenses medicare would never cover, such as out-of-hospital prescription drugs, eyeglasses or routine physicals.

As the department admits, it has no authority to require any insurer to offer catastrophic medicare supplement coverage. Nothing in the earlier version of the regulations would have prevented an insurer from offering such a policy if it had wished to do so. The department has expressed the hope that some companies will now begin to offer catastrophic medi-gap policies on an indi-

[116] Appendix G, sec. 2220.24. The recent revisions did not modify the minimum standards for dread disease policies.

[123] *Id.*

vidual basis, since apparently some group medicare supplement coverage is now written in a similar manner.[124]

At present policies which supplement medicare part B will pay the coinsurance percentage of the amount medicare determines to be reasonable. The fact that medicare (through its part B carriers) performs part of the claims adjustment process by making the determination of reasonableness first reduces claims adjustment expenses. Requiring duplication of part of the claims adjustment function by the catastrophic medicare supplement insurer might be inefficient.

A representative of the department has also recognized that even if insurers do offer catastrophic medicare supplements, it would be extremely difficult to enforce their obligation to make their own reasonableness determination instead of using medicare's reasonable charge determination.[125] Even if insurers did make an independent decision using their own UCR data, there is no guarantee that the result would differ from the present system or that policyholders would have to pay a small share of provider charges. Medicare part B carriers usually deny charges above the 75th percentile of the customary charge (of all physicians' charges in the area); private insurers generally allow claims up to the 90th percentile.[126] However, for procedures which are not commonly performed, insurers have little data about usual or customary charges and tend to reimburse the same amount that medicare would.

3. Disclosure

(a) PROTOTYPE STANDARD SUPPLEMENTAL DISCLOSURE FORMS

California's Health Insurance Disclosure Act of 1974 established mandatory one- or two-page diclosure forms for different types of disability insurance, included in appendix H. The state legislature declared that "[t]he availability of certain minimum information relative to the benefits, limitations and costs of health insurance coverages in a standard, readily comparable form would assist consumers in making the best choices among such insurance coverages commensurate with their respective incomes." [127]

The regulations promulgated established mandatory "prototype standard supplemental disclosure forms" for use with each kind of health or disability insurance policy.[128] Each disclosure form briefly describes the policy type, the specific benefits available, exceptions and limitations, conditions of renewability and premium.

The original 1974 regulations included disclosure forms for hospital indemnity policies and specified disease policies.[129] Amendments which became effective in February 1976 added mandatory disclosure forms for use with medicare supplement policies.[130] These forms had only been in use for less than a year when the first hearings on medicare supplement insurance were held. At the hearings several witnesses did state that the forms appeared to be working well.[131] The regulations were amended to provide separate disclosure forms for the three classes of medicare supplement coverage: in-hospital, in-and-out-of-hospital and catastrophic.[132] Each form must include the prescribed sentence about each medicare gap, whether or not the policy fills it. The 1978 versions include a section for disclosure of any skilled nursing facility copayment benefit, but it may be omitted entirely if the policy does not cover any SNF care at all.

(b) NEED FOR DIRECT COMMUNICATION BETWEEN INSURER AND INSUREDS

Last September, the California Insurance Department proposed requiring insurance companies to send their policyholders a "followup form" along with new policies. The followup questionnaire was intended to permit insurance

[132] Appendix J. exhibit, item 8, amended sec. 2540.5(k).

companies to set up a direct line of communication with their policyholders and to monitor the selling activities of agents. Insurers would have been required to summarize the coverage provisions, to ask about replacement and the agent who sold the policy, and to extend an offer of rescission to dissatisfied buyers.[133]

The department eliminated the followup inquiry from the final 1978 amendments because of unfavorable testimony at the hearings. Industry representatives objected that the response rate of policyholders to written communications is always low (usually below 50 percent), that the followup form would overlap with their required disclosure form and confuse insureds, and that insurers were not given any guidance about what to do with the information they would collect.[134] The department therefore rejected the idea of a mandatory followup form, but recognized that purchasers of medicare supplement policies need to be able to bypass agents and contact their insurance companies directly. To that end the 1978 amendments require that the standard disclosure forms give the name, address and telephone number of the insurer's representative or general agent (other than the agent who sold the policy). The insurer must specify a toll-free 800 number unless its representative is located in California.

In addition, the new regulations impose the duty on insurers to set up affirmative procedures to ensure that the required disclosure forms are delivered. Acceptable procedures include attaching them to policies issued in the field, requiring return of copies signed by prospective purchasers or requiring return of separate signed acknowledgments of receipt in cases where the prospect sends the application directly to the insurer. Insurers are free to develop other reasonable procedures.[135]

(c) READABILITY

The department's general objective was to make the required disclosure forms complete yet short and readable. Complaints about complex and incomprehensible medi-gap policies were also a matter of concern. The opinion accompanying the 1978 regulations concluded: "Complicated design will always be a problem with medicare supplement policies because of the complexity of medicare, but it is obvious that insurers have made little effort to simplify the text of such policies." [136] Although the California commissioner lacks statutory authority to set readability standards for policies by rule, he does require that Flesch Readability Test scores accompany all new submissions of individual health policies and riders, in the hope that this requirement will at least call insurers' attention to the problem. One company has submitted for approval an easy-to-read in-and-out-of-hospital medicare supplement policy. According to Flesch test scoring, it would be understood by the 90 percent of the U.S. population who have attained a sixth grade reading level.

4. Scope

Unlike Wisconsin's Ins. 3.39, the California regulations apply to all individual health insurance policies issued to the elderly.[137] In addition to policies issued to individuals over 65, they govern conversion contracts by which some employees may convert their employment group coverage to individual policies when they retire. (Although the premiums are often much higher, conversion permits people to keep the same level of benefits and avoid exclusions or waiting periods for pre-existing conditions.)[138] However, the California department's disclosure requirements and minimum standards do not seem to apply to out-of-State mail order group health insurance policies. The department does not believe that it could make those regulations applicable to group mail order or other group insurers where the master policy is issued in another jurisdic-

[137] Calif. Admin. Code, title 10, ch. 5, secs. 2219 and 2220.1. The requirement that Standard Supplemental Disclosure Forms be used applies to both individual and group policies, see appendix M, secs. 2540.1 and 2540.2(a), but not group policies not issued in the State of California. See note 139 *infra* and accompanying text.

[138] For the medicare-eligible, there is no duplication between a conversion contract and medicare. By the operation of coordination-of-benefits clauses, the conversion contract would function as a medi-gap policy, paying only those covered expenses which medicare did not cover.

tion. It views this legal constraint as a serious problem because of the inadequacy of some of the products sold by mail to California residents.[139]

A proposed amendment would have warned consumers on the disclosure forms that out-of-state group insurance plans might not be subject to California laws.[140] The department dropped this requirement after witnesses pointed out that it might lead Californians to report complaints about mail order policies to the insurance commissioner of the State where the master policy was delivered.[141] The California regulators apparently decided that their interest in receiving all complaints about insurers doing business in their State outweighed whatever beneficial effect the warning might have had in discouraging the purchase of policies by mail.

Different regulations apply to medi-gap, hospital indemnity and dread disease policies. Under the 1978 regulations, hospital indemnity policies may not be labelled or described as medicare supplements, "it being accepted that this type of policy is not a true medicare supplement coverage." [142] As in Wisconsin, the sale of indemnity and dread disease policies to the elderly may continue, though insurers must deliver the disclosure forms with those kinds of policies.

D. Illinois: Minimum Standards Only

The Illinois legislature has enacted a statute which briefly sets forth minimum standards for health insurance policies which "purport to supplement medicare," effective October 1, 1977.[143] The text of the statute is included as appendix K. All medicare supplement policies delivered in Illinois must cover: The initial part A deductible; the part A copayment for the 60th through 90th days of hospitalization; the part A copayment for 60 lifetime reserve days of hospitalization; the part A copayment for the 21st through 100th days of SNF care; 20 percent of the amount of physicians' charges medicare determines to be reasonable if the insured is a bed patient in a hospital (with a maximum deductible of $200 and a minimum benefit limit of $1,000).

The medicare supplement benefit structure mandated by the Illinois law leaves a great deal to be desired. Apparently the State legislature either failed to consider or rejected the view that it is undesirable to require expensive coverage of the initial part A deductible. In addition, requiring coverage of the 20 percent coinsurance under part B only for in-hospital care might be inappropriate. Third party reimbursement for inpatient services removes incentives to provide cheaper outpatient care for medicare beneficiaries. By its terms, the Illinois statute applies only to policies issued in that State,[144] so it would not cover the sale of policies to Illinois residents by mail order insurers not licensed to do business there. The statute has a loophole for *new* medicare supplement products. The insurance department may approve a policy for sale as a medicare supplement upon a determination that its benefits "when viewed as a whole, actuarially exceed the standards for this section." [145] Actuarial equivalence, of course, will not eliminate and may increase the confusion of older people faced with varying policy provisions. The Illinois department is currently reviewing each medicare supplement policy it already has on file in order to determine whether it conforms to the provisions of the new law.[146]

Illinois did not attempt to address the information problem by statute or regulation by requiring any special written disclosures in connection with the sale of medicare supplement insurance. Other statutory provisions prohibit

certain representations by advertisements or agents in the sale of medicare supplements and "any other health insurance policy sold to individuals eligible for medicare because of age," which would presumably include indemnity and dread disease policies. For instance, they must make it clear that they are not connected with the medicare program and that they are soliciting the purchase of insurance.[147] However, the statute does not prescribe use of any specific language.

Apparently the Illinois department is now in the process of preparing a pamphlet describing the provisions of the new legislation, targeted for distribution to Illinois senior citizens some time during 1978.[148]

E. Oregon: Disclosure Requirement Only

Oregon has a disclosure rule applicable to the "sale of health insurance providing benefits that supplement Federal medicare insurance benefits," but does not prescribe any minimum standards or standardized categories for medicare supplement policies. The disclosure rule and prescribed disclosure forms are reproduced in appendix L. As of March 1, 1977 every agent or insurer must deliver a two-page disclosure form to the insured not later than delivery of a medi-gap policy, fill in the blanks and sign the form.[149]

(1) Two-Page Disclosure Forms

The first page of the form consists of a chart with three columns. The first column lists medicare benefits and the second tells what portion of each medicare will pay. In the third column, headed "Insurance Policy Pays," the insurer or agent is supposed to fill in blanks describing the policy's benefits.

The second page supplies general information about insurance to supplement medicare, including conditions of renewability. Among other things the second page warns prospects that they will still be obligated for the amounts of physicians' charges and other charges for medical services which exceed the level approved by medicare. It also states that if the policy application contains medical questions, it will cover pre-existing conditions from the date of issue, "generally speaking."

Apparently this sentence refers to the situation where the insurer does apply medical underwriting standards to applicants and may deny an application or issue a policy with specific exclusions (sometimes by rider) if it finds that the applicant has pre-existing health problems. This paragraph may be misleading since it creates the impression that an insurance company which asks medical questions will always consent to cover pre-existing conditions when it accepts an application. More often, such companies will have exclusions or waiting periods for pre-existing conditions in their medicare supplement coverage. This paragraph might lead consumers to neglect to question an agent or check the policy on receipt.

On the second page of disclosures, the Oregon Insurance Commissioner also recommends that buyers check with their social security office about benefits not described in the chart and that they buy only one health insurance policy instead of several limited ones. The second page also says that supplemental insurance is "not recommended" for the medicaid-eligible; many would think the wording of this warning should be much stronger.[150]

The form urges consumers to check to make sure that they have the coverage they thought they bought and if not, to return the policy directly to the company (not the agent) within 10 days for a full refund. This last warning is extremely important, though perhaps insufficient. Agents may, but are not required, to furnish the disclosure forms at the time of their initial contact with prospective buyers. It would be quite possible for an agent to induce a person to apply and pay for insurance by means of misrepresentation or fraud.

The disclosure forms would only arrive in the mail later with the insurance policy itself. In order for the buyer to take advantage of the "10-day free look" privilege, she would have to notice the warning buried at the end of two pages of disclosures, read the policy and discover that she had been the victim of a deceptive or misleading sales presentation.

---

[150] See note 51 *supra* and accompanying text.

(2) *Shortcomings*

Oregon's disclosure requirement could serve only (at best) "to adequately inform the prospective insured regarding the insurance transaction," [151] not to standardize or upgrade medicare supplement offerings. It may not even be effective in forcing the provision of sufficient information to prevent Oregon's senior citizens from wasting the money they spend in supplemental insurance premiums.

In May 1976, a coalition of senior citizens' groups and community organizers petitioned Oregon's Insurance Commissioner for rule-making in the medicare supplement area. At first the insurance department refused to hold a rule-making hearing, but changed its mind after the activists' coalition launched a successful drive for statewide publicity of their cause.[152] At the hearing held in September 1976, one insurance industry representative actually admitted that it seemed "inappropriate to attack any proposal which seeks to better inform prospective insureds about their coverage * * *." [153] However, several did attack the rule, and the final version failed to respond to several of the Oregon senior citizens' concerns.

(1) The rule as proposed in their original petition would have required agents selling or attempting to sell supplemental insurance to inquire whether the prospect was eligible for medicaid. If so, the agent would have had to give her a second form describing the benefits available under the medicaid program.[154] The department dropped this requirement. One insurer commented that the Social Security Administration, not insurance agents, should bear the responsibility for informing the elderly about the benefits available from medicare and medicaid.[155]

(2) The disclosure form does not provide any figures about the average length of stay in Oregon hospitals for people over 65. The petitioners had argued that this information was necessary for old people with low incomes to balance a policy's cost against the likelihood of any payoff.[156]

(3) The regulation does not require that the forms be printed in large type, as many witnesses had asked at the hearing.[157]

(4) The section of the chart on the first page which lists the gaps in medicare coverage of care in a skilled nursing facility is misleading. It tells readers to check whether a nursing home "qualifies for medicare," but does not inform them that medicare will never cover a stay in an intermediate care facility.[158]

(5) The insurance department rejected the petitioners' proposed enforcement provision, which would have granted insureds the remedy of rescission for failure to provide the required disclosure statement. The buyer could have opted for rescission of the policy at any time. Within 15 days of the notice of rescission, the company would have had to return all the premiums paid, whether or not it had paid out any benefits.[159]

(6) Enforcement of the disclosure requirement is all the more problematic because of the Oregon Insurance Department's attitude. The coalition has complained that the department has never published any buyers' guides, either before or after the disclosure rule, or publicized it in any way.[160]

(7) Apparently the rule applies both to group and to individual insurance, but it does not clearly state whether it governs the sale of policies by mail to Oregon residents.[161] Nor does it require the provision of any information along with indemnity, nursing home and dread disease policies sold to the elderly.

[159] *Id.* at 459.
[160] *Id.* at 452, 460.
[161] *Id.* at 457. The Nationwide Mutual Insurance Company of Columbus, Ohio, assumed in its comments to the Oregon Insurance Commissioner that the disclosure regulation would apply to both individual and group, including conversion, policies. However, it appears that the rule might only govern only policies insured in Oregon, since the agent or insurer is not required to supply the prescribed forms at any time before the delivery of the policy. See appendix L, OAR 836-52-110. Hence it probably would not cover mail order sales to Oregon residents by insurers not licensed in Oregon.

F. New Mexico: Disclosure Requirement Only

New Mexico also requires delivery of a two-page disclosure form with medicare supplement policies. As Superintendent of Insurance Manuel A. Garcia has described, in late 1976 and in 1977, the New Mexico department began to receive a large number of complaints about over-selling and inadequate supplemental products.[102] On November 28, 1977, the department sent out the text of its regulation, which became effective on that date, and the prescribed disclosure form, to all insurance companies writing health and accident insurance in the State of New Mexico. In an accompanying letter, Kenneth P. Moore, then superintendent, warned that both companies and agents who engaged in selling over an individual's needs would be subjected to a hearing. This letter, the regulation and disclosure form appear in appendix M. In his statement Superintendent Garcia described other measures the Department was taking to curb abuses in the sale of medicare supplement insurance, such as warnings in the news media and settlement of individuals' complaints.[103]

The New Mexico disclosure forms are similar to those required in Oregon. The first page consists of a chart with either two or three columns. For inpatient hospital and skilled nursing facility benefits under part A of medicare, the first two columns are headed "Day of Confinement" and "Medicare Now Pays." For part B medical benefits, there is a single column headed "Medicare Now Pays." For both parts A and B the third column is headed "Policy Pays." It consists of blanks which the agent or insurer is supposed to complete.

The summary disclosure form must also contain a description of other benefits, exceptions, reductions and limitations contained in the policy, statements that the policy (not the summary) controls and that medicare benefits are subject to change, and the name and address of the insurer. The regulation does not specifically state that these disclosures are to appear on a second page, but there probably would not be room on the first page with the chart.

Like Oregon, New Mexico does not require any mention of the kinds of health care expenses medicare never covers or the expenses a person would still have to pay even if she bought the policy. Unlike Oregon's, the New Mexico form does not contain any warnings about the purchase of supplemental insurance by people eligible for medicaid or about pre-X clauses.

As in Oregon, agents and insurers are permitted to furnish the mandated disclosures at the time of delivery of the policy.[104] If a purchaser discovers that the policy mailed to her does not conform to the oral promises an agent made when he visited her, she has the burden of returning the policy within the ten day period permitted by law to obtain a refund.

The disclosure regulation applies only to individual medicare supplements, not group policies.[105] It does not affect in any way the sale of hospital indemnity or dread disease policies to people who are eligible for medicare. Since the rule provides that it is applicable only to policies delivered in the State of New Mexico,[106] it does not cover mail order sales to New Mexico residents by unlicensed out-of-State insurers. New Mexico does not have any standard-setting or standardization regulation for medicare supplement insurance.

G. Washington: Disclosure Requirement Only

Like Oregon and New Mexico, Washington requires the provision of certain disclosures to purchasers of medicare supplement policies, without making any attempt to set minimum standards or standardize policy offerings. The text of its medicare supplement disclosure regulation and the three-page disclosure form are included as appendix N. The regulation will go into effect on August 1, 1978, though the insurance commissioner encouraged all those subject to its terms to begin using it when he issued it on April 20, 1978.[107] The disclosure form has a chart with two columns like those in use in the other two

[107] See Appendix N.

States. The first column shows what medicare pays and the second leaves blanks to show what the policy will pay. But Washington's approach has some significant new aspects. First, the insurance commissioner's suggestions precede the chart. He cautions people about renewability, waiting periods and exclusions for pre-existing conditions, in simple language; he states that "one policy that meets your needs is usually less expensive than several limited policies"; and he advises people not to buy medicare supplement insurance if they are eligible for medicaid. The disclosure form also suggests that people use the information on the form to compare a policy's benefits with any policies they already have. The list of suggestions ends with a reminder about the State's "10-day free look" law, which may be helpful, since Washington (like Oregon and New Mexico) does not require that a prospect see the disclosure form before delivery of the policy.[168]

Second, the chart has several innovations. The section on the medicare part A skilled nursing facility benefit makes it clear that medicare provides no benefits beyond the 100th day of a patient's stay and no benefits for custodial care. Custodial care is defined in simple language as "care which is primarily for the purpose of meeting personal needs which could be provided by a non-professional person."[169] Perhaps these additions will make the common inadequacies in private health insurance coverage more apparent to elderly people concerned about the possibility of having to go into a nursing home, although the disclosure regulation apparently would not apply to nursing home indemnity policies.[170] The disclosure chart also includes a section for "miscellaneous services or benefits," which lists some areas medicare never covers: private duty nursing, outpatient prescription drugs, routine eye and hearing examinations, the first three pints of blood per year. There is an additional question about whether a policy's coverage of deductibles and coinsurance will increase automatically as medicare changes its copayment requirements. Surprisingly, Washington's form is the only one which requires disclosure of the premium amount and whether it rises when the insured reaches a certain age.

The regulation does not impose any requirements on sellers of dread disease and hospital indemnity plans. Although the disclosure form does state that a single policy, presumably a true medicare supplement, may be cheaper than several limited policies, older consumers will not have any opportunity to see how limited indemnity-type coverage is through the use of uniform disclosure forms. Washington's disclosure requirement applies only to individual health insurance policies, not group plans. Thus group mail order insurers would not be governed by it.[171] However, in Washington health maintenance organizations and health care service contractors must supply the disclosure form to prospects who are eligible for medicare, with appropriate modifications in language.[172]

H. Colorado: Disclosure Requirement Only for Replacement or Addition

Colorado's disclosure regulation for medicare supplements has a different objective than those of the other three States with disclosure requirements only. It does not attempt to give consumers a graphic means of comparison of medicare benefits and what a policy will pay. Rather it seeks to warn elderly people on the verge of purchasing a new medicare supplement policy about the dangers of cancelling the coverage they have in force and to inform them about areas of overlapping coverage if they have more than one policy.

Colorado's regulation 76-6 became effective on July 1, 1977; its text appears as appendix O. It differs from other States' disclosure requirements in that it applies to the sale of hospital indemnity insurance to the medicare-eligible as well as policies specifically designed to supplement medicare.[173] It is silent about dread disease policies, however. It applies only to individual policies, not to group plans.[174] Unlike the disclosure requirements in Oregon, New Mexico and Washington, it is specifically applicable to mail order or "direct response" insurers.[175]

---

[168] Appendix N, WAC 284-50-455(1).
[169] Appendix N, Disclosure Form, Item 9.
[170] Appendix N, WAC-284-50-450; see also the following paragraph in the text.
[171] Appendix N, WAC 284-50-455(1). It is not clear from the regulation itself whether it is applicable to insurers not licensed to do business in Washington who sell individual medi-gap policies to Washington residents by mail—if such a situation exists.
[172] Appendix N, WAC 284-50-450 and WAC 284-50-455(3).
[173] Appendix O, Colorado rules and regulations, regulation 76-6, sec. III.
[174] *Id.*
[175] Appendix O, sec. IV(c).

An insurer or agent must make the required disclosures upon becoming aware that the sale of a policy would involve replacement or addition; in other words, upon learning that a prospect already has one or more medi-gap or hospital indemnity policies.[176] Application forms must include a question designed to ascertain whether the policy to be issued would be a replacement or an addition.[177] If an agent is making the sale, he must furnish the disclosure notice to the applicant at the time he takes the application. A company soliciting direct response insurance must provide the required disclosures by mail *before* the policy is issued. In either case, a copy must be signed by the insured and the insurer must retain it for 2 years.[178]

These provisions are evidently intended to assure that a person has time to consider the message in the disclosures and to contact her present insurer if she wishes, before a new policy is issued. The requirement that a copy of the notice be signed by the insured and returned to the company is meant to ensure compliance by giving companies a means for monitoring agents' conduct and by creating a written record for enforcement purposes. However, in the case of sales by agents, it is difficult to enforce the requirement that the disclosures be given before the policy is issued. It would be fairly easy for an unscrupulous agent to obtain a prospect's signature on the disclosure notice, without giving her a chance to consider it carefully, at the time he took the application, either by minimizing its importance or presenting it as "just another paper to sign."

The prescribed disclosure notice warns applicants about possible exclusions or waiting periods for pre-existing conditions, less favorable conditions of renewability and the possibility that the cost of a new policy will be higher because of older age at the time of issue. One paragraph cautions applicants that if they do not answer all the questions in the application truthfully and completely, the policy may be void. Perhaps this provision is intended to help buyers assert themselves to prevent agents from "clean-sheeting" them. The form also suggests that it may be advantageous for people considering replacement or addition to contact their present insurer or agent. The last paragraph simply instructs the agent or insurer to compare the applicants' existing medicare and private insurance benefits with those which the new policy would afford and to show any duplication, overlap or deduction because of coordination of benefits.[179] Of course, enforcement of this last requirement would be very difficult. If an insurer or agent failed to give an accurate picture of the extent of duplicate coverage which would result from an additive sale, the insured might not discover it until she filed a claim.

III. POLICY QUESTIONS SURROUNDING REGULATION OF HEALTH INSURANCE FOR THE ELDERLY

A. Need for Federal Involvement

Tradition, and since 1945 the McCarran-Ferguson Act, have left regulation of the business of insurance largely to the States. Yet there are several reasons why it may be appropriate for the Federal Government to take on a major role in the formulation and even the implementation of public policy with respect to insurance to supplement medicare.

1. Problem Created by Federal Program

The Federal medicare program created the medicare supplement market. At least one State insurance commissioner and members of the public have expressed the view that the Federal Government should step in and regulate the medicare supplement market.[180]

2. Need for Uniformity

Consumers and insurance companies would benefit from a uniform nationwide approach to regulation of supplemental insurance. If each State used a different system for standardizing medicare supplement policies, buyers' confu-

---

[176] For the definitions of the terms "replacement" and "addition", see appendix O, secs. IV(a) and (b).
[177] Appendix O, sec. V.
[178] Appendix O, sec. VI.
[179] Appendix O, sec. VII.
[180] See Testimony by Wisconsin Insurance Commissioner Harold R. Wilde. U.S. Senate Special Committee on Aging, Hearing on "Medi-Gap" Insurance at 11-12 (May 16, 1978).

sion would continue. Many people move from one State to another at the time they retire, or afterwards. A uniform approach to standardization would reduce opportunities for "twisting" and "stacking" by ensuring that these people would not have to confront a different way of categorizing medi-gap policies.

Some insurers now subject to conflicting State regulations might not object to uniform requirements. At present a company could not simultaneously comply with the disclosure regulations of Wisconsin, California, Oregon, New Mexico, Washington, and Colorado by using a single form. In some instances a company could not sell the same policy as a supplement to medicare in Wisconsin, California, and Illinois. Continuing variation in State standardization regulations would carry the danger that insurers might have to market different supplemental policies in every State, at obvious increased cost.

3. Prototype for National Health Insurance (NHI)

The medicare supplement market provides an opportunity to study and plan for the supplemental market which will develop under national health insurance. It now seems likely that any national health insurance plan to be adopted in the near future will involve some form of cost-sharing by patients. The private sector would then develop policies to fill various NHI gaps. Problems in that market would affect the entire population, not just people over 65.

The benefit structure of national health insurance could be planned to minimize the potential for the kinds of confusion and misinformation which have grown up in the medi-gap market. In addition, any regulatory initiatives which proved successful in solving the competition and consumer protection problems in the medicare supplement market could be adapted for use in the NHI supplement area.

4. Mail Order Group Supplemental Policies: A Possible Gap in State Regulation

A substantial number of medicare supplement and indemnity plans are sold to the elderly by mail. It is common for a direct response or mail order insurance company to be licensed in only one State and send its advertisements and solicitations to residents of other States. When an applicant responds, the company issues a policy in the State where it is licensed and sends it to the insured.

It now appears that State insurance departments are experiencing some difficulties in regulating the sale of group policies to supplement medicare by an unlicensed out-of-State mail order insurer.[181] Some medicare supplement

---

[181] Whether or not the States could subject unauthorized mail order insurers to regulations specifically governing medicare supplement insurance is a complicated legal question beyond the scope of this report. The answer might well be different for each State, for each insurance company and for each situation. The point is that some companies do appear to be going unregulated because the States with medicare supplement regulations do not apply them to unlicensed group mail order insurers. At present, it seems that a State can generally enforce its unfair trade practices act, including the prohibition of false or misleading advertising, against an insurance company not licensed to do business there which advertises to its residents. See generally Hanson and Obenberger, Mail Order Insurers: A Case Study in the ability of the States to Regulate the Insurance Business, 50 *Marquette L. Rev.* 175 (1966). In *FTC* v. *Travelers Health Asso.*, 362 U.S. 293 (1960), an insurance company licensed only in Nebraska sent out allegedly deceptive advertisements to the residents of States where it had neither offices nor agents. The Supreme Court held that the FTC had jurisdiction over such false advertising practices, despite the McCarran Act, because Nebraska could not regulate the insurer's extraterritorial activities. In order for regulation to displace the FTC act, it must be "regulation by the State in which the deception is practiced and has its impact." 362 U.S. at 721. On remand, the Eighth Circuit found that the States whose residents received the advertising could not regulate the unfair practices effectively, because they could not constitutionally enforce a judgment against the mail order insurer which had no property within their boundaries. *Travelers Health Asso.* v. *FTC* 298 F. 2d 820 (8th Cir. 1962). After the *Travelers Health* decision, all States adopted the NAIC's model Unauthorized Insurers Process Act, which permits State commissioners to proceed against unauthorized mail order insurers for false advertising in violation of the State's unfair trade practices act. However, the FTC would still have jurisdiction, where the same constitutional infirmity of State regulation existed as in the *Travelers Health* case, or, logically, if the State where the advertising had its impact could not regulate effectively for some other reason. See Hanson and Obenberger, 50 *Marq. L. Rev.* at 200-211. Also, group insurance may be exempt from State jurisdiction where the master policy is lawfully issued and delivered in a State in which the insurer is authorized to do business. See, e.g. Md. Code Art. 48A, Sec. 203(b)(6). The above discussion of advertising says nothing about a State's ability to regulate an unauthorized mail order insurer's activity which does not violate the State's unfair practices act.

regulations govern only individual policies.[182] Some, by their terms, apply only to policies issued in the State, and thus exempt many individual as well as group policies sold by mail.[183] None of the States' standardization measures applies to unlicensed group mail order insurers. Policies can be a source of confusion for the elderly if they are not subject to their States' regulation.[184] Federal involvement could ensure that all policies sold to supplement medicare are subject to regulation.

B. Scope of Governmental Action

Should regulatory initiatives address true medicare supplement or medi-gap policies only, all health insurance policies sold to the elderly, or all individual health insurance policies?

On the basis of the following analysis, it seems best to consider all health insurance problems of the elderly as an integral unit, in order to attempt to eliminate the purchase of unnecessary duplicate coverage by people in that age group. It is important to note, though, that any remedy applicable only to medicare supplement insurance or even to all health insurance policies sold to the elderly would not address the fundamental problems experienced by older people in obtaining and paying for health care. Specifically, no such regulation would affect the situation of the near-poor and middle-income elderly who are ineligible for medicaid but cannot afford private insurance.

1. Alternative 1: Medigap Policies Only

It would be easier to devise a standardization/disclosure system for policies which supplement only the more obvious gaps in medicare (deductibles, coinsurance and perhaps some catastrophic expenses) than for all health insurance policies sold to the elderly. Some form of regulation could be implemented quickly and evaluation of its effectiveness would provide guidance in expanding it to other health insurance policies.

However, any initiative limited to medi-gap policies would exempt the dread disease, hospital indemnity, nursing home and other piecemeal policies commonly sold to people over 65. Agents could easily continue to sell overlapping coverage. Furthermore, such a limited approach would not address the problem of health care expenses, such as nursing home expenses, which neither medicare nor medicare supplement policies cover. It might even increase the potential for duplication in coverage, since dishonest agents could point to the narrow scope of regulated medi-gap policies as a reason for buying additional supplemental coverage.

2. Alternative 2: All health insurance sold to people over 65

Considering all health insurance policies sold to the elderly as a discrete problem area would permit regulators to address in a meaningful way the problems of duplicate coverage and lack of consumer information.

On the other hand, dread disease and hospital indemnity policies are sold to people of all ages. Their benefit structure is not designed around the medicare program. Minimum standards might have to be made applicable to all such policies in order to be sure of reaching all insurance sold to the elderly. In contrast, the applicability of disclosure regulations could be made to depend on a mandatory inquiry about the prospect's eligibility for medicare. For instance, agents might have to ask people about medicare eligibility, and companies might have to ascertain the ages of addressees of direct mail appeals.

---

[182] Washington's medicare supplement disclosure regulation applies only to individual policies. See note 171 *supra* and accompanying text. Colorado's rule covers replacements of and additions to individual mail order policies, but not group. See note 175 and accompanying text. Wisconsin's standardization regulation, Ins. 3.39, applies only to coverage on an individual basis. See note 98 *supra* and accompanying text.

[183] The Illinois statute and the New Mexico disclosure regulation apply only to policies issued or delivered in those States. See notes 144 and 166 *supra* and accompanying text. In Oregon it is not clear whether the disclosure rule would apply to an unlicensed mail order medi-gap insurer. See note 161 and accompanying text. In California, the department of insurance cannot apply its standards, standardization or disclosure regulations of medicare supplement policies to unlicensed group insurers where the master policy is issued in another jurisdiction.

[184] Commissioner Wilde testified that confusion is already occurring in Wisconsin because AARP's group policies have not been subject to the medicare supplement rule. See testimony, note 180 *supra*, at 12.

3. Alternative 3: All individual health insurance policies

A uniform set of minimum standards and/or disclosure requirements for policies sold to people of all ages would be useful to all insurance purchasers. A system which would carry over after retirement would aid in pre-retirement planning.

However, it would take much longer to devise a regulatory scheme for all health insurance. Complications introduced by the medicare program might even make a uniform approach impossible. The accepted categories of health coverage such as basic hospital expenses, major medical, etc., lose their meaning when medicare's benefit structure is superimposed on them.

C. Important Policy Questions

1. Adequacy v. Simplicity of Information

The need to provide complete information about medicare and supplemental coverage may conflict with the need for simplicity and brevity in order to make sure that information is assimilated. At the point where it becomes inefficient (or even impossible) to give older people comprehensive information about coverage alternatives, efforts should be redirected to standardization to make the market's offerings understandable. It is important to evaluate the options in this area in terms of their effectiveness in getting information across to consumers.

2. Standardization v. Availability of Coverages

Insurance industry representatives insist that they should be left free to offer an unlimited variety of coverages to respond to different personal needs and income levels. But it may be undesirable to permit endless proliferation of products. Standardization or limitation of medicare supplement coverages may be necessary in order to further price competition between comparable policies.

3. "Good" v. "Bad" Medicare Supplement Coverage

Should regulation attempt to distinguish between the two?

(a) "dollar trading"

It is questionable whether medicare supplement policies should be required—or even permitted—to cover the initial deductibles. Consumers pay much more for coverage for the initial deductibles than for insurance covering catastrophic medical expenses which could mean financial disasters. The currently prevalent type of "shallow" health insurance which covers initial expenses but not very large medical bills has been criticized as affording only inadequate coverage while inducing substantial cost inflation.[185]

Since medicare beneficiaries have a very high chance of incurring the modest part A and part B initial deductibles, they may not be appropriate expenses for insurance coverage. Processing a high volume of small claims results in high claims expense ratios. The California Department of Insurance, among others, calls such coverage "dollar-trading," "since it amounts to the insured and the insurer merely exchanging dollars with one another to cover a type of loss which most insureds will incur with considerable regularity." The department estimates that in California annual premiums average about one third of the $144 part A deductible and one-half the $60 part B deductible.[186] On the other hand, first-dollar coverage seems to impart a sense of psychological security to which many people attribute great value. Some people may continue to use first-dollar coverage as a kind of prepayment mechanism for health care, as long as the premium does not exceed the deductible they would have to pay.[187] Informational issues are involved as well. People may not realize that not all medi-gap policies cover the initial deductibles. They may not understand the advantages of self-insurance for relatively small sums and for risks which are almost certain to occur.

---

[185] See, e.g. Feldstein, A New Approach to National Health Insurance, 23 *The Public Interest* 93 (1971).

[186] Appendix J at 4-5.

[187] Deductibles may prevent some people from obtaining needed care; see note 190 *infra* and accompanying text.

(b) IMPACT ON HEALTH CARE COSTS

Is it appropriate to take action to promote or require medicare supplement coverage which may remove incentives to keep costs down? In general, requiring copayment clearly reduces utilization of physicians' services,[188] although the effects of deductibles and coinsurance differ.[189] This consideration alone might seem to argue against third-party reimbursement of initial health expenditures, but several factors may complicate the picture. It is possible that decreased utilization simply represents unmet demand for medical care by people with low (but not low enough to qualify for medicaid) incomes.[190] It is also possible that providers make the decisions about whether to provide care, especially the relatively low-cost services represented by the medicare deductibles, and that they deliver some services whether or not an individual patient can afford them.[191] People over 65 may also have less control over initial provider contact than other age groups if a higher percentage of their visits to physicians are due to serious illnesses.

Conversely, promoting competition on benefits among medicare supplement insurers could serve to decrease aggregate health care costs. At present there is often no third-party payment available for less costly health care alternatives.[192] Some policies which supplement part B cover only in-hospital medical services, not less costly outpatient charges, whereas it is possible that complete, first-dollar coverage for people over 65 could result in a shift from inpatient to outpatient care.

The trend is for supplemental insurance to cover hospitalization, perhaps some skilled nursing care, but not home health care. Neither medicare nor medicare supplements cover many routine diagnostic services which could reduce the catastrophic costs of serious but preventable conditions. Encouraging insurers to compete by offering to cover cheaper alternatives might result in beneficial alterations in the health care delivery system.

(c) LONG-TERM CARE

The problems of financing long-term care are far beyond the scope of this paper. The consequences of requiring policies to cover nursing home costs should be briefly noted, though. Mandating those benefits would transfer to insurers (and their policyholders) the long-term care expenses of those elderly who could afford the premiums and incurred nursing home expenses. Since the costs of long-term care are the most rapidly rising component of health care costs and since the phenomenon of adverse selection might well operate, those premiums could quickly become prohibitive.

IV. POLICY OBJECTIVES AND CRITERIA FOR ASSESSING OPTIONS

A. OBJECTIVE: PROMOTE COMPETITION IN THE MARKET FOR HEALTH INSURANCE FOR THE ELDERLY

There is a well-established relationship between availability of information about products and services and the competitiveness of an industry. Therefore any governmental initiative should:

1. Provide Complete Information

Any option should provide people over 65 with sufficient information to make a rational choice about purchasing health insurance in addition to medicare. Prospective purchasers should understand what medicare covers, what kinds of

---

[188] Scitovsky and McCall, Coinsurance and the Demand for Physician Services: Four Years Later, *Social Security Bulletin* 19 (May 1977).

[189] See Phelps, Insurance Benefits and their Impact on Health Care Costs, Rand Corporation Paper P-5844 at 6-7 (April 1977). Phelps characterizes a uniform coinsurance rate such as medicare part B's 20 percent coinsurance as "neutral." In contrast, a fixed dollar deductible to be paid by the patient for each visit to a physician might discourage inappropriate recourse to physicians for nonserious conditions, but there would be no incentive not to choose the most expensive doctor, because once the patient has paid the initial deductible "luxurious" care costs her no more.

[190] See generally Hopkins, Roemer, et al., Cost-Sharing and Prior Authorization Effects on Medicaid Services in California, Part I. The Beneficiaries' Reactions, 13 *Medical Care* 582 (July 1975).

[191] *Catastrophic Health Insurance*, note 5 *supra*, at 34 (January 1977).

[192] Cf. Feldstein, note 185 *supra*, at 95. The same problem exists with medicare supplement coverages, as in Illinois, where coverage for in-hospital medical services is required by statute but coverage for the same services entered on an outpatient basis is not.

expenses medicare does not cover, the types of supplemental private insurance available and their cost. Each individual should be aware of factors affecting his or her insurance needs such as possible eligibility for medical assistance. Ideally people should also know about alternatives to the purchase of private insurance to supplement medicare, such as self-insurance and health maintenance organizations.

2. Provide Information in a Usable Form

It is difficult for people of any age to understand the complexities of medicare and supplemental insurance. Explanations must be simple enough so that they do not exceed consumers' capabilities for processing highly technical information. In addition, the information must be presented in a form adapted to the special needs of the elderly, who may have hearing or reading problems or live in isolation.

3. Ensure Access to Information

Because of medicare's complexity and the lack of standardization of supplemental policies, traditional methods, such as printed disclosure forms, may be ineffective in conveying the information necessary to a decision about appropriate coverage to supplement medicare. Search costs involved in obtaining information may be so great that senior citizens simply give up. Any governmental initiative should provide easy access to impartial and complete explanations.

4. Standardize Coverage

Standardization of available coverages may be necessary to make price competition possible, so that consumers can compare similar products. At the same time a regulatory system should permit a sufficient variety of coverages to meet differing individual needs.

5. Eliminate Duplicate Coverage

Any restructuring of the market should aim to reduce the potential for confusion which leads to the purchase of overlapping coverage. No one over 65 should have to pay more than once to supplement the same gap in medicare in an effort to obtain comprehensive coverage.

B. Objective: Correct Failures of the Market for Health Insurance for the Elderly

To improve market function in the areas where competition has broken down, an option should:

1. Assure Reasonable Return

Because consumers cannot obtain the information they need about supplemental insurance, competitive forces will not reward those insurers who provide their policyholders with the best return. All health insurance policies sold to the elderly should pay back a reasonable amount in benefits in relation to premium dollars. One way to assure better value may be to promote coverage only for appropriate insurable events, by discouraging or banning first dollar coverage, "dollar trading," and coverage for "risks" which are almost certain to occur.

2. Minimize Opportunity for Marketing Abuses

State insurance departments have primary responsibility for monitoring the conduct of individual agents. However, any program undertaken should be carefully designed to cut down opportunities for agent misrepresentation. Policy standardization and simplification could make it much more difficult to convince people that they need more or different policies. At the same time consumer education measures could give them the means to question agents more assertively and completely. Regulation should also facilitate, and perhaps require, insurance companies' policing of their agents' conduct.

3. Ensure Prompt and Fair Claims Handling

Policyholders who submit claims should not have to suffer long delays and arbitrary treatment. Decisions about claims should be reached in accordance with ascertainable standards and procedures. Better information will help here

too. If consumers understand what a policy does and does not cover at the time they purchase it, there will be less disputes about coverage at the time they submit claims. A larger problem is that insurance consumers cannot obtain reliable information about a company's claims handling practices before purchasing insurance.

4. Minimize Undesirable Side Effects

Regulation to remedy market failures should avoid undesirable distributional consequences and features which would contribute to the inflation of aggregate health care costs.

C. Objective: Implement Regulation Effectively and Efficiently

Priority should be accorded to alternatives which will be:

1. Politically Feasible

An option should raise relatively few questions about the proper role of government intervention.

2. Easily Enforceable and Inexpensive to Administer

3. Complementary With NHI

A regulatory initiative should be designed for easy adaptation while national health insurance is being phased in and afterwards.

V. PUBLIC POLICY ALTERNATIVES

Governmental action with respect to health insurance for the elderly could take three principal forms: (A) minimum standards, (B) a system of standardization combined with disclosures or labels, or (C) provision of information to consumers. In addition, several novel approaches are possible. The numbers in parenthesis refer to the criteria described in part IV.

A. Minimum Standards

1. Minimum Loss Ratios

Would require that at least a certain percentage of premium dollars be returned in benefits.

Advantages:

Would eliminate low-value policies from the market. (B.1)

Could help to improve quality coverage. (B.1, A.4)

Could induce companies to operate more efficiently. In particular, minimum loss ratios might bring about reform of commission structure and hence reduce agents' incentive to "roll over" their clientele. (B.2)

Relatively easy to implement. The studies and analysis which would be required to determine the appropriate level for an initial minimum loss ratio would not be as time-consuming as evaluating and implementing standardization measures. (C.1)

Disadvantages:

Would necessarily involve prohibiting the sale of some policies and thus some curtailment of choice. (C.1)

Could be expensive to police. Evaluation of anticipated loss ratios reported by companies could be expensive and time-consuming, since such figures may be subject to manipulation. (C.2)

2. Restriction on Exclusions of Preexisting (Pre-X) Conditions

Pre-X clauses could be banned or their provisions could be limited. For example, insurers could be permitted to exclude (i) only conditions which were treated or diagnosed 6 months or a year before the policy's effective date; and/or (ii) only for 6 months or a year after the policy's effective date. Insurers could be required to use a uniform definition of "pre-existing conditions" in policies and in handling claims.

Advantages:

Uniform pre-X clauses would:

Reduce buyers' confusion about coverage at the time of purchase. (A.2)

Help to prevent unjustified denials of coverage, especially by companies which accept all applicants regardless of their medical history ("post-claims underwriting"). (B.1, B.3)

Standardize one aspect of available policies. (A.4)

Provide guidance in planning for the NHI supplement market which is likely to develop with a less than comprehensive NHI system. Pre-X would continue to be a problem under NHI which, like medicare, would cover all previous conditions, whereas supplemental insurers would not wish to do so. (C.3)

Disadvantages:

Requiring coverage of pre-existing conditions could lead to adverse selection. People with health problems would purchase insurance, driving the premiums up. (B.4)

Policies with only very limited pre-X coverage may be the only protection available to high-risk elderly. Any restriction on availability raises political concerns. (C.1)

Detection and case-by-case adjudication of arbitrary denials of claims would be costly. (C.2)

3. Requirement That Medigap Policies Supplement Both Parts A and B

Advantages:

Would reduce confusion by increasing standardization. (A.2, A.4)

Would reduce potential for duplicate coverage and "loading up." Agents would not be able to persuade people they needed one policy to fill part A gaps, one for part B gaps, etc. (A.5, B.2)

Disadvantages:

If all medi-gap policies were required to cover both part A and part B initial deductibles, then increased dollar-trading might make coverage more expensive.[103]

Coverage of both deductibles might result in unnecessary health expenditures. (B.4)

4. Minimum Dollar Limits

Medi-gap policies would have to pay benefits to supplement medicare up to at least a certain amount. Wisconsin's rule is structured this way, e.g., a medicare supplement must pay at least $7,500 to supplement part B, or $22,500 to supplement both.

Hospital indemnity policies could be required to pay a minimum daily benefit which would represent a certain percentage of average daily hospital costs.

Advantages:

Setting high minimum limits for medi-gap policies increases coverage of catastrophic losses, which should result in only a small increase in premiums. (A.1)

Minimum benefits for hospital indemnity insurance would result in higher premiums and discourage its purchase by the medicare-eligible, who do not need it in order to meet medical expenses as they arise. (A.5)

Disadvantages:

Emphasis on limits does not give consumers any information about the need for catastrophic coverage or likelihood of incurring expenses above the dollar ceiling. (A.1)

A system for rating policies which relies on minimum dollar limits may not differentiate categories sufficiently to bring about standardization, since only a small percentage of claims involve high dollar amounts. (A.4)

The concept of a minimum maximum is inherently confusing. (A.2)

Hospital indemnity insurers would object that their policies are not meant to provide basic hospital coverage, but to supplement it. (C.1)

---

[103] The requirement could be structured to eliminate mandatory coverage of the deductibles. However, many people would expect governmental intervention to assure "full" (i.e., first dollar) coverage.

5. Mandated Benefits

Any policy which covered a certain kind of care would also have to cover the same care rendered in a less expensive manner. For example, a policy which supplemented part B might have to reimburse outpatient as well as inpatient expenditures. Insurers could also be required to pay for the services of home health aides, nurse practitioners, etc.

Advantages:

Could help to reduce aggregate health care costs and reform health care delivery systems, to the extent that less costly services are substitutable for more expensive care. (B.4)

Might reduce consumer confusion about policies which "cover everything medicare doesn't." (A.1)

Disadvantages:

Open to criticism as unjustifiable interference with insurance industry decisions about risk and reimbursement and an attempt to accomplish aims which should be the object of a comprehensive government health policy. (C.1)

B. STANDARDIZATION/DISCLOSURE

1. Prohibition of references to indemnity, nursing home, dread disease and other limited policies as Medicare supplements

Advantages:

Would eliminate opportunities for misleading consumers in advertising and sales presentations. (A.1, B.2)

Noncontroversial; the idea that limited policies are not medicare supplements is widely accepted. (C.1)

Disadvantages:

Difficulty of policing oral representation by agents, whose presence can weaken the force of written statements or printed disclosures. (A.3, B.2)

Possibility that agents could use requirement to sell duplicate coverage. They could emphasize the difference between medi-gap and other kinds of policies to persuade individuals that they need more than one. (A.5)

2. Descriptive Categories (California Model)

Labels or captions on policies would reflect the nature or scope of the supplemental coverage without rating or comparing them. California provides for three categories: in-hospital only, in- and out-of hospital and catastrophic. Other possibilities are part A only and part B only.

Advantages:

Descriptive labels do not imply a governmental judgment that one policy is better than another. (C.1)

It would be easy to modify California's system to make clear the difference between true medicare supplement policies on one hand and indemnity or limited policies on the other, using additional capsule descriptions. (A.1, A.5)

Disadvantages:

Descriptive labels do not give specific information about which gaps in medicare are covered; they may be so vague as to be useless. (A.1)

They allow too much variation within each category, so prospective buyers cannot make meaningful price comparisons. (A.4)

They permit the sale of duplicate coverage to continue, unless the categories are carefully structured so that no one may include any element of another. (A.5)

Permitting in-hospital coverage only may cause distortion and increase health care costs. (B.4)

3. Benefit Levels (Wisconsin Model)

Wisconsin has established four benefit levels for medicare supplement policies, with mandated benefits and minimum dollar limits for each. Policies bear the numbers 1 through 4.

Advantages:

The labels "1" through "4" are easy to understand and use; they facilitate price comparisons within each category. (A.2)

The lowest level sets a floor for medi-gap coverage; policies which do not even meet the standards for the lowest category cannot represent themselves as medicare supplements. (The system could be modified to ban the sale of non-conforming policies if insurers proved able to circumvent such a provision.) Thus policies with very limited benefits can be eliminated from the market. (B.1)

Since the benefit levels are cumulative, they should reduce purchases of duplicate medicare coverage (A.5)

Disadvantages:

This model does not address the problem of indemnity and limited policies. (A.1) Even with knowledge of a policy's rating, a consumer could still purchase one of those policies which would overlap completely or partially with her medi-gap coverage. (A.5)

Different minimum limits may not differentiate categories enough to distinguish their value to the buyer. If not, then benefit levels are misleading. (A.4)

4. Unit Pricing

Supplemental insurers could be required to disclose, in a uniform format, the premium cost of filling each gap in medicare. Unit pricing could be combined with any other system of standardization or categorization.

Advantages:

Consumers would be able to see the high cost of insurance for the initial deductibles and the relatively low price of catastrophic coverage. (A.1)

By choosing more economical coverage packages, buyers could reduce their supplemental insurance expenditures. (B.1)

Fragmenting benefits could highlight possible areas of overlap and might reduce the likelihood that agents could "load up" buyers with policies. (A.5, B.2)

Disadvantages:

A unit pricing system could not take into account indemnity and dread disease policies, because it would be impossible to compare service and indemnity benefits in a uniform format. The problem of duplicate coverage would continue (A.5). Indemnity plans with lower premiums but limited benefits might appear to be better buys. (B.1)

Unit medi-gap pricing might well be too complicated for anyone to use. (A.2)

There would be no yardstick to allow consumers to compare the costs of different policies (unless unit pricing were combined with standardization regulation). (A.1)

5. New Method: Cost Index

It may be that neither the California nor the Wisconsin model is effective in bringing about sufficient standardization for price competition to take place. The States' experiences could be analyzed in order to pinpoint each regulations' shortcomings and to devise a new method to permit price comparison: a cost index.

Advantages:

The cost index would provide a more accurate measure of a policy's value than loss ratios, so that consumers could avoid policies with a low rate of return. (B.1)

The index could be comprehensive; it should reflect all factors which determine a policy's value to its holders. (A.1) At present little or no reliable information is available to consumers about:

An insurance company's claims service, especially time required for payment (B.3).

A company's record in handling complaints and denying claims without justification (B.3).

A company's underwriting standards and practices.

The policy's coverage of health care expenses the over-65 age group is most likely to incur.

Purchasers and persons planning for their insurance needs after retirement could use the cost index themselves, without interference from an agent or the need to seek advice from experts. (A.3)

The cost index system could be extended, with appropriate modifications, to insurance to supplement national health insurance. (C.3)

Disadvantages:

The cost index would be helpful only to a buyer who had the opportunity to compare policies. When alone with an individual prospect, an agent could still misrepresent a low index figure as "good" since it would be meaningless in absolute terms. (B.2)

Devising a complete cost index would be an extremely difficult and complex task. Companies have different standards for underwriting risks and settling claims. It might prove impossible to obtain information about some variables. For example, determining the number of unreasonable denials of claims presupposes an adjudication mechanism which does not now exist. (C.2)

It is now impossible to compare medi-gap policies which pay service benefits with indemnity and limited policies. Like term and whole life insurance, they have totally different purposes. If they are widely perceived as meeting different needs, then the opportunity to sell duplicate coverage still exists. (A.5, B.2)

Even among medicare supplement coverages, it might be impossible to estimate and compare the values of different combinations of health benefits, especially given individuals' varying needs. (A.1)

C. Provision of Information

1. Mandatory Written Disclosures

Insurers or agents could be required to present such disclosures as part of a sales talk, with a direct mail solicitation, or with delivery of the policy. Several variations are possible:

(a) Disclosure of loss ratios for medi-gap policies. A prerequisite would be separate reporting of loss experience for medicare supplement policies, which most States do not now require.

(b) Disclosure of loss ratios for all individual health insurance policies sold to the elderly including dread disease and indemnity contracts. They could be combined with a strongly worded warning that purchasing such insurance is like gambling.

(c) A one-page disclosure sheet with general information about benefits, renewability, etc. (California, Oregon's second page, New Mexico's second page, Washington's list of suggestions.)

(d) A one-page disclosure sheet in the form of a chart with columns for medicare benefits, medicare gaps and policy coverage (Oregon's first page, New Mexico's first page, Washington). The prospective purchaser could fill in the blanks in the last column herself, or with the assistance of an agent or an advocate.

(e) A cost index. (See B.4 above)

Advantages:

It is relatively easy to establish and enforce disclosure requirements. (C.2)

Disclosure and a strong cautionary statement are more politically acceptable than a ban on the sale of dread disease and similar policies. (C.1)

Disadvantages:

Written disclosures or warnings are not as forceful as an agent's oral statements. Face to face, an agent can gain a prospects's confidence and discount printed disclosures or persuade her to ignore them. (A.2, B.2)

Even on their own, people may not believe that disclosure statements have any importance for them; they seem to be especially indifferent to loss ratio figures. (A.2)

Brief disclosure messages are necessarily incomplete. They do not include some of the facts which would be necessary for a truly rational decision, such as risk information or disclosures about the "unfillable" gaps in both medicare and supplemental coverage. (A.1)

Loss ratios tell nothing about the particular benefits afforded by each policy and very little about a company's claims performance or underwriting practices. (See V.C. 2(b) below.)

If insurers are permitted to make mandatory disclosures at the time of delivery of the policy, the purchaser will have the burden of returning a policy for a refund within a short time (usually 10 days) if she discovers it does not cover what she thought it did. Perhaps some such errors could be prevented by requiring disclosures at an earlier point in time. (A.2, B.2)

2. Consumer Education Measures

Possible initiatives include:

(a) A buyer's guide with complete information about medicare and medicaid, supplemental coverage and the standardization/labeling system in use. Wisconsin's booklet *Health Insurance Advice for Senior Citizens* is an example.

(b) Providing, or requiring insurers to provide, information which is not now furnished. People cannot judge their need for an insurance product unless they have some perception of the risk involved. Some kinds of helpful information are:

Company ratings on the basis of complaints per premium dollar, percentage of claims denied, time for paying claims and complaint resolution record.

Risk information: hospital costs per day, length of stay, frequency of physician visits, etc., for the over 65 age group.

More education about medicare, especially expenses neither medicare nor private insurance will cover: physicians' excess charges, most stays in nursing homes which are not medicare-certified, custodial care.

Medical assistance benefits and eligibility requirements.

Provider information: whether a physician ever accepts assignment, physicians' average and median charges for certain procedures. (Medicare collects and must disclose customary charge data by provider name).

(c) Exploration of non-traditional avenues for increasing consumer awareness, such as the use of television and radio spots and videotapes for use in nutrition and other sites which receive government funds.

(d) One-in-one insurance counseling, integrated with pre-retirement financial counseling.

Each consumer education option has fairly obvious advantages and drawbacks. The first step in this area should be determining what information consumers use or would like to have before making a medicare supplement purchase decision. The next would be evaluation of each option's effectiveness in getting that information across to the people who need it and in narrowing the gap between the coverage they expect and the coverage they actually get. For example, individuals can study buyer's guides on their own, but their length may make them useless in the face of high-pressure sales tactics. Their success might depend on wide dissemination for reading before contacts with agents or advertising. Some initiatives would be very expensive. Placing on insurers the costs of collecting and communicating information about everything except policy coverage raises additional political questions.

Counseling in particular deserves more attention, although it would evidently require a sizeable commitment of resources to training, establishing and maintaining a network of counselors. Counseling may be the best way to assure that the information provided is actually used. It may be the only way to counter agents' oral presentations and provide an alternative to industry expertise.

D. Other Initiatives

There are a number of other approaches, some untried, to solving part or all of the medicare supplement insurance problem. This paper will list several of them but analyze only the last one, federally sponsored medicare supplement insurance.

1. Regulation of Advertising

State or Federal regulators could commence proceedings and increase enforcement of existing advertising standards. Advertising by mail order insurers would seem to warrant special scrutiny because it employs scare tactics and other misleading techniques and because, for the most part, it escapes regulation by State insurance departments.

2. Company-Customer Contact

Various suggestions have been made to establish direct contact between the insurance company and the insured, in order to permit the company to police the behavior of the agents who sell its policies. These include: A requirement that each company's promotional materials, advertisements and outlines of coverage give a toll-free number the customer can call for more information; a followup questionnaire about agent practices; a reaffirmation requirement which would effectively prevent sale of a policy on the first contact and give the buyer time to reflect. In order for a policy to become effective, the buyer

would have to reaffirm her wish to purchase it after a certain amount of time has elapsed.

3. Company Responsibility for Agent Conduct

State commissioners and others believe that insurance companies must take on a more active role in monitoring the activities of their agents to prevent abuses. Companies could set up procedures to detect overselling and twisting. They could also set up a reporting network among themselves, so that it would not be easy for an agent to find employment with another company after he had been terminated by one for misconduct.

4. Agents' Fiduciary Duty

Statute or common law could establish the principle that an agent has a fiduciary duty to sell only the insurance suited to each individual's needs. As a fiduciary an agent could not sell duplicate coverage or coverage inappropriate for the buyer's income level—which would necessitate some inquiries about a buyer's particular situation. Imposition of a fiduciary duty could be combined with a self-enforcing mechanism such as voidability at the buyer's option or a private right of action, perhaps coupled with provisions to facilitate access to legal services and promote its use, such as attorney's fees and treble or punitive damages.

5. Claims Handling Requirements

Insurance companies could be required to pay claims within a certain time limit or give a written statement of reasons for denials. Provisions for attorneys' fees and generous damages awards could be added to facilitate private enforcement and challenges to arbitrary refusals to pay claims. An alternative dispute resolution mechanism might be helpful.

6. Federal Government Sponsorship of Optional Medicare Supplement Insurance

Many elderly people now believe that medicare supplement insurance is approved or sold by the Federal Government, perhaps because of widespread fraudulent marketing practices. In any event, the proposal merits thorough evaluation of feasibility and costs for various design options.

One way to fill medi-gaps would be to extend medicare coverage, analysis of which is beyond the scope of this paper. The Federal Government's medicare supplement insurance would differ from mere expansion of the existing medicare program in that there would be less subsidization. Of course, it could be optional, like part B. The degree to which the government's medi-gap policy could be priced to risk would have to be the subject of intensive study. The extent to which it should be would of course be controversial. The underlying policy question is simply whether all of society should bear the costs of health care associated with aging.

Some possible advantages of a federal government medicare supplement insurance program are:

Ability to provide coverage only for the kinds of risks appropriate for insurance, such as the costs of major illnesses. There is no reason why private insurers could not offer such supplemental coverage, but few now do.

Ability to fill the gaps which neither medicare nor supplemental insurance now covers, such as prescription drugs, medical appliances and even excess provider charges, perhaps through partial subsidies. Such a policy would meet more of older people's expectations for complete coverage, but the objective obviously conflicts to some extent with the preceding one.

Cost advantages. Some medicare supplement insurers do not deny coverage to poor health risks. Although some have open enrollment periods and some do not do any medical underwriting at all, many of these companies have better loss ratios, perhaps because they usually have more policyholders. Similarly, the Federal Government could spread the risk over a very large group. Other economies are available to the government: use of the existing social security network of offices and employees with knowledge about medicare for sale of policies and handling claims, partial integration of claims processing with medicare, etc.

Better consumer information. Explanations of medicare and supplemental

insurance could be combined and given at the time or before a person becomes eligible for medicare, perhaps through retirement counseling.

Sale by social security employees would eliminate incentives for deceptive marketing and reduce opportunities for fraud by agents selling private insurance.

Opportunity to obtain valuable information for use in planning benefit structure and setting up the administration of national health insurance.

Possible disadvantages are:

Criticism by insurance industry and others who would object that the Federal Government has no business acting as an insurer.

Even if the program were voluntary, any move to curtail first dollar coverage or increase copayments would meet great resistance from the medicare-eligible and perhaps discourage many from participating in the program.

High cost, both in premiums and in inflation of health care costs, if the government's policy were to attempt to fill some of the gaps which are currently unfillable—especially long-term care. As noted above, this paper cannot attempt to answer the difficult policy questions involved in financing long stays in nursing homes.

VI. POLICY RECOMMENDATIONS

The recommendations which follow are of a general policy nature, based on the foregoing analysis of the market for private health insurance to supplement medicare. They represent only the opinions of the writers of this paper, not those of the Federal Trade Commission.

A. Impact Evaluation

An impact evaluation should be conducted to determine the effectiveness of existing State regulations of insurance sold to supplement medicare.

1. Purpose

The purpose of the impact evaluation would be to provide the information needed to prepare a recommendation for a uniform approach to the regulation of this supplemental market. Its end products would be a report for Congress, State regulators, and other policymakers, and the public.

2. Scope

The study should consider all health insurance policies sold to the elderly as a unit. In accordance with the analysis in section III., any initiatives should attempt to address problems arising from all the types of policies sold to the over-65 age groups, not only those which fill specific gaps in medicaid. Unnecessary duplication of coverage is often due to overlapping policies which are not true medicare supplements.

3. Objectives

The central inquiry of the impact evaluation should be to determine how elderly consumers can get the best coverage possible for each dollar they spend to supplement medicare—coverage which meets their needs and their expectations.

(a) initial groundwork

Considerable groundwork would be necessary in order to narrow the focus of the project. First, basic facts about the supplemental insurance industry, even total premium volume, are presently unavailable. More data should be gathered about this industry: a survey of the number and kinds of coverages available, premium and sales volume, benefits paid and loss experience. The project could also look into companies' complaint records and ascertain whether they make efforts to control or check on agents' activities to prevent overselling and other abuses.

Another initial stage could be a pilot consumer survey of elderly people who had recently purchased insurance to supplement medicare. Individual interviews could be conducted to determine the extent and nature of duplicate and overlapping coverage, whether the coverage they purchased met their expectations and whether those policies or others actually did serve to fill the gaps in medicare. Questions could also be asked about policyholders' experience with delay in settling claims, denial of claims which they felt were unjustified and

denials on the grounds of pre-existing conditions. Interviews could also include questions about how buyers obtained and used information before buying insurance and about marketing techniques they encountered.

Analysis of the results of two such preliminary projects would help to design a full-scale evaluation of the effectiveness of each State's regulatory approach. Careful design would be essential, in order for such a complex undertaking to be manageable.

(b) SUBJECTS OF INVESTIGATION

The impact evaluation should yield data about the ability of a standardization approach to bring down price competition among medicare supplement insurers. The impact evaluation should devote particular attention to determining the effectiveness of:

Minimum loss ratios (V.A.1.);

Uniform exclusions of pre-existing conditions (V.A.2.);

Various means of differentiating categories of coverage for consumers, such as minimum dollar limits (V.A.4. and V.B.3.);

The effectiveness of labels, numerical ratings or disclosure sheets in helping older people to compare policies (V.B.2., V.B.3 and V.C.1.).

The report resulting from the study should make recommendations about traditional forms of disclosure such as buyer's guides and mandatory disclosure sheets only if the impact evaluation shows that:

Consumers need kinds of information they cannot readily obtain now. (V.C.2(b)) If there are widespread misunderstandings about certain aspects of medicare, such a physicians' charges, the report could make recommendations as to how the Social Security Administration could help to correct them.

Consumers may not be able to use written information about this extraordinarily complex subject. If it is not possible to reach people with the printed word, then the report could consider alternatives, such as televised consumer education (V.C.2)

The final report could also include recommendations about consumer protection measures which seemed appropriate in light of the results of the study. These topics might include:

Arguments for banning or limiting the sale of dread disease and other indemnity policies;

Methods of curbing agent misconduct in selling policies;

The need for and costs of individualized health insurance counseling for the elderly; and

Possible imposition of claims handling requirements.

Demand for a possible optional medicare supplement insurance program sponsored by the federal government.

B. JOINT HEW/NAIC/FTC PROJECT

If possible, the impact evaluation should involve joint participation by HEW, the NAIC, and the FTC. On June 29, FTC Commissioner Dole testified to the Senate Special Committee on Aging that the FTC would welcome the opportunity to work with the NAIC and HEW in such an undertaking.

1. HEW

HEW staff could make a valuable contribution to the project because of their knowledge about medicare and its provisions. They could pinpoint areas of consumer misunderstanding and ignorance about Medicare, and therefore about supplemental coverage as well. The Department is taking an interest in supplemental insurance issues. Recently the Health Care Financing Administration published a request for proposals to study the purchase of supplemental insurance by medicaid recipients.[194]

[194] See 43 *Fed. Reg.* 15594 (April 13, 1978). One of the priority areas for health financing research and demonstration grants was "analysis of the extent of private health insurance coverage for medicaid eligibles." As a cost control measure, State agencies administering the medicaid program are required by law to try to recover payments from any third-party insurance held by medicaid recipients. Medicaid is supposed to be the payor of last resort, so medicaid agencies are directed to recover any third-party payments for medical expenses which a recipient receives or has the right to receive. These payments could be workers' compensation or family group coverage on another family member. Or they could be medicare supplement, indemnity and other policies sold to the elderly poor and disabled. State agencies would therefore collect information about policies held by medicaid recipients or applicants who are also eligible for medicare, but not about policies held by those elderly who are neither poor nor disabled.

Medicare supplement insurance also raises important policy questions about the supplemental insurance market which would be developed under any system of national health insurance with less than comprehensive coverage. HEW might wish to participate in and use the results of the medicare supplement impact evaluation to plan for NHI. Consumer confusion and the other market malfunctions observed in the medicare supplement area could affect a larger segment of the population under NHI, particularly if the benefit structure of any NHI system adopted is as complicated as medicare's. Moreover, the sale of insurance to cover deductibles and coinsurance might undermine the cost control purpose of copayment provisions (though it might allow beneficiaries to obtain needed care). Since cost-sharing is under serious consideration, planners might want to draw all the lessons they can from study of the medicare supplement experience.

2. The NAIC

On June 12, 1978, the Accident and Health Subcommittee of the NAIC voted to create a task force to investigate regulation of health insurance sold to the elderly and identification of other health insurance products "which do not fulfill the public's interest."[105] The NAIC would bring to the study State insurance commissioners' first-hand experience with insurance regulation and their access to relevant data. Barring new legal developments, the State commissioners will be primarily responsible for the regulation of medicare supplement insurance for some time to come. The NAIC's participation in a joint impact evaluation could provide a model for Federal-State cooperation and technical assistance to State regulators in the insurance area.

3. FTC

The need for a uniform approach to medicare supplement insurance and the widespread feeling that the Federal Government should cope with the problems the medicare program has caused point to an increased Federal role. FTC has an important contribution to make. The staff of the Bureaus of Economics and the Bureau of Consumer Protection have experience in evaluating the impact of proposed and present regulations, devising disclosure and standardization measures and determining the effectiveness of various means of conveying information to consumers. These are the skills necessary to address the complex issues raised by medicare supplement insurance.

---

[105] Statement of the National Association of Insurance Commissioners, submitted to the Senate Special Committee on Aging at a hearing on Private Health Insurance Supplements to Medicare, by Joseph C. Mike, insurance commissioner of the State of Connecticut and chairman of the NAIC Accident and Health Insurance Subcommittee 1-2 (June 29, 1978).

Appendix 2

STATEMENT OF MILT SMEDSRUD, PRESIDENT, COMMUNICATING FOR AGRICULTURE, FERGUS FALLS, MINN.

Mr. chairman and members of the committee, on behalf of the members of Communicating for Agriculture, I thank you for the privilege and opportunity of presenting this written testimony before you. CA is a relatively young organization that was incorporated in 1972 under the Non-Profit Corporation Act in Minnesota. The organization, now active in 44 Midwestern, Southeastern, and Rocky Mountain States, consists of members roughly 40 percent of whom are farmers and 60 percent of whom are small town agri-business people, such as bankers, lawyers, independent implement dealers, grocers, etc.

Our purpose is to promote the health, well-being and advancement of people in agriculture and agri-business. This purpose has generated involvement in legislation to protect the family farm, overcome inequities in social security and reform estate tax laws. We also provide scholarships for young people who are interested in pursuing careers in agriculture and agri-business.

In the area of health care delivery, CA supports initiatives to encourage physicians to practice in rural areas and promotes better utilization of rural hospital bedspace. In order to assure that people get the quality health insurance they seek, CA has become involved in promoting comprehensive health insurance laws in Minnesota, Wisconsin, Georgia, South Dakota, Iowa, and Missouri. While I am presently devoting all of my time to responsibilities with CA, I have a background in health insurance that spans more than 20 years.

During the last 20 years, we have seen the cost of medical care increase dramatically, far outpacing the rate of inflation. In 1956, Americans were spending about 15 million dollars annually to cover their health care needs. At present, we are spending eight times that amount.[1] In the last decade, the average annual medical expense per family has risen from $830 per family to $2,200.[2] On the average, it is estimated an elderly person spends $1,360 per year or three times as much as the rest of the adult population.[3]

To help cover the increasing costs of vital health care services, Americans have by-in-large turned to private health insurance. It is estimated that 90 percent of the American people have health insurance of some kind. Insurance companies have attempted to meet a vital need, and by-in-large they have succeeded. Their success is most evident in the quality group insurance plans offered to employees of large corporations, public institutions, and Federal and State governments.

The farmer, people in small business, and the self-employed cannot be assured that the health insurance policies they hold are similarly comprehensive or of low cost. In short, that is why an agricultural organization has become involved in the issue of comprehensive health insurance. CA has advocated a systematic expansion of health insurance opportunities for people in need.

CA believes that a most prominent need rests in the inability of people with preexisting health conditions to obtain comprehensive coverage in the private sector. CA lobbied to help establish a "pool" in Minnesota, where people who had been previously uninsurable would have an opportunity to gain coverage. The pool, operated and funded by an association of insurers and self-insurers, experienced a minimal deficit during its first year of operation. A total of $261 for every $1 million of health insurance premiums was assessed associa-

[1] Expenditures in 1975 totaled $118.5 billion. Data is from the Office of Research and Statistics of the Social Security Administration.

[2] "Current History," July-August 1977, p. 17. K. Leffler, "National Health Insurance: A Social Placebo?"

[3] "Medi-gap: Private Health Insurance Supplements to Medicare," Federal Trade Commissioner Elizabeth Hanford Dole. June, 1978, p. 1.

tion members (Minnesota had $500 million of health insurance premium). An effective, yet relatively inexpensive means to provide health care coverage for people with preexisting medical conditions appears to have been accomplished without massive government intervention.

Soaring health care costs have also created a great deal of anxiety for senior citizens, especially those who live on fixed incomes. It is estimated that medicare pays for an average of 38 percent of the medical expenses of senior citizens. But $418 of an annual medical bill of $1,360 is not adequate for most. Large numbers of senior citizens have turned to private insurance companies to fill the gap. The result has been that 63 percent of senior citizens have purchased coverage for physician services.[4]

Some of the policies are very good and provide an effective supplement to medicare. The record of the insurance industry, however, has been tarnished by some companies which take an exorbitantly large portion of premium payments for commissions, and fail to instill in their agents an honest commitment to client service.

In some cases 60 to 75 percent of first-year premiums have been allocated for commissions. A mere 25 to 40 cents per dollar has been retained for client benefits.

In one case, 100 percent of the first-year premium was allocated for commission. How can it be done that a company can allocate so much of its premium income and leave so little for client benefits? Inordinate commissions have been made possible by the sale of policies which do not pay benefits in relationship to their high cost. At present, an individual has no way of knowing how much the company keeps to pay salesman, administrative costs, and profits. CA believes that the people should know so that the loss ratio on all insurance claims can be limited to at least 65 to 70 percent.

Differing medicare supplement policies have been designed to provide different ways to fill the gaps in medicare coverage. The advent of indemnity and dreaded disease plans, many of dubious quality, has added further confusion to the already unnecessarily complicated medicare benefit structure. The result has been that senior citizens are not able to evaluate the nature and completeness of the policies which they purchase.

When these elements of confusion are coupled with a salesman who is not committed to honest client service, the results are tragic. This committee has been provided testimony regarding a Wisconsin woman who was sold over 17 policies amounting to over $4,000 of annual premium payments, and of a California senior citizen who purchased health and life insurance policies with contractual obligations of $9,158.61, or roughly 68 percent of the individual's annual income.

These examples indicate the extreme to which abuse of medicare supplement insurance can be taken. The message is clear, we must provide help for senior citizens so they can understand the kinds of services which medicare covers and can be assured of the quality and completeness of medicare supplements. In order to provide this committee with first-person testimony from people with whom CA is involved, a hearing of senior citizens was conducted at a meeting in Elbow Lake, Minn.

CA was invited to attend a seven-county organizational meeting of the Minnesota Federation of Seniors. Approximately 90 senior citizens attended the meeting. In order to gain needed consumer input, CA asked a number of questions regarding individuals involvement with and understanding of medicare and medicare supplement insurance.

In total, 53 percent of the people surveyed indicated that they did not have a very clear understanding of the health care costs for which medicare will pay, while 35 percent indicated that they were somewhat clear. Only 12 percent of the people surveyed suggested that they had a clear understanding of the health care costs for which medicare will pay.

The lack of understanding about the benefits of medicare was reflected in the answers of people when asked "what percentage of your medical costs will medicare reimburse?" Over 70 percent of those responding estimated that medicare would pay between 62 percent and 75 percent of their health care costs. The remainder of the people surveyed did not know or did not answer.

While CA's survey results cannot be viewed as precise statistical indicators, these prominent trends are important in understanding the difficulties senior citizens have with medicare and supplement insurance.

---

[4] "Medi-gap—Private Health Insurance Supplement to Medicare," Senator Lawton Chiles, May 1978.

Confusion and misunderstanding about the benefits of medicare is an important factor in the susceptibility of senior citizens to the purchase of medicare supplements of poor quality. Clarification of medicare benefits and education for senior citizens regarding those benefits is necessary. It is interesting to note the comment of one man who suggested that seeking information about medicare from the social security office was intimidating because of "aloof bureaucrats who act as if you are interrupting them from something more important."

When questioned about their understanding of the coverage provided under medicare supplement insurance policies, confusion and lack of understanding was equally evident. Consistent with national estimates, the survey indicated that slightly more than 63 percent of these senior citizens held private insurance policies to supplement medicare. Roughly 20 percent had purchased more than one policy, and they attributed it to dissatisfaction with the insurance company with which they had previously held policies.

There were no reports of insurance agents misrepresenting the policies which they offered by suggesting they were government sponsored or recommended by the insurance commissioner. Several individuals did indicate that insurance agents had told them a statement of one's medical history was not necessary when applying for medicare supplement insurance.

Despite the lack of apparent widespread fraud, people expressed a great deal of anxiety about medicare and supplement insurance. Roughly one-third of the people surveyed questioned why medicare could not pay more and if medicare could be simplified.

Considerable dissatisfaction with the supplement policies which individuals held at present was expressed. Complaints included: (1) The frequency of restrictive riders for preexisting medical conditions, (2) limitations on coverage after 160 days of hospitalization, (3) nursing home coverage limited to just a few approved nursing homes, (4) the high cost of supplement insurance.

A senior citizen from a small west central Minnesota community also complained about the refusal of medicare to pay for treatment of an ear problem which she was having. The doctor in her community did not believe he had the needed expertise, and referred her to a specialist about 60 miles away. Medicare, suggesting that a specialist was not required for treatment, refused to reimburse the expenses.

The rural doctor recognized his limitations and sought proper care. A more highly trained urban doctor may not have needed to make the referral. Because of this, an individual in need was penalized. The example illustrates an instance where guidelines and health planning did not recognize the legitimate differences between the practice of medicine in a rural setting and that of an urban area.

In general, the high cost of medical care was frequently cited by people with whom we spoke. Bruno Aijala, State president of the federation, suggested that young doctors have demonstrated a greater tendency to comply with medicare guidelines for "reasonable and necessary charges." With medical costs inflating and the price of supplements growing out of reach, a more general compliance with medicare cost guidelines needs to be encouraged.

In January 1977, the Minnesota Comprehensive Health Insurance Act was enacted (the plan will be discussed in some detail later). The law prescribes a qualified medicare supplement which must be outlined to all prospective clients by insurance agents. From the testimony of people with whom we spoke, it did not appear that the nature and implications of the law are being clearly explained by all agents.

One man, very well versed in insurance costs and coverage, indicated that an agent had not told him about the qualified medicare supplement saying, "Perhaps he thought I already knew about it." Clearly, a more aggressive advocacy in behalf of clients by the divisions of insurance in our State governments is needed. The client orientation which CA advocated is best represented by Wisconsin's insurance commissioner, Harold Wilde, who fined an agent who had not provided required informational material to a client. With aggressiveness of this kind, laws designed to protect people will not go unheeded.

The problems associated with medicare are not restricted to people over 65 years of age. A 55-year-old Georgia man recently contacted CA seeking advice. His persistent heart tremor had necessitated release from work. The termination of his employment also resulted in the cancellation of the group health insurance policy which had been offered by his employer. The conversion policy offered by the insurance company provided extremely limited coverage.

Medicare would be available after the 2-year waiting period. As the situation now stands, this man will not have an opportunity for health insurance coverage of any kind during the next 2 years. The example illustrates a medigap for which no supplement is available. Even after gaining medicare coverage, preexisting medical conditions are likely to prevent obtaining needed supplemental coverage.

An even greater difficulty confronts a disabled homemaker who has not paid into social security. If one's spouse, who was several years older than the homemaker, retired, a group health insurance policy which covered both would be terminated. While the spouse would be eligible for medicare, the more youthful homemaker would have to seek coverage in the private sector. Again, preexisting medical conditions and poor conversion policies would prevent obtaining the needed coverage.

The plight of a disabled homemaker could be longstanding. Because one had not paid into social security, eligibility for medicare would not be possible. Both of the examples illustrate a need for legislation which makes it necessary for insurers to provide conversion policies of comparable coverage to individuals who have been under group health care plans of that insurance company.

With the passage of the Comprehensive Health Insurance Act in Minnesota, a requirement of comparable conversion policies was made into law. CA believes that the tenets of the Minnesota Comprehensive Health Insurance Act provide the substance for change so that senior citizens and all Americans can be assured of quality health care coverage. The law requires that all companies selling health insurance or medicare supplement in Minnesota offer a qualified plan to residents.

To be qualified, a plan must provide $250,000 of major medical coverage, with a choice of three deductibles and a maximum loss of $3,000. Qualified medicare supplements must provide $100,000 of major medical coverage, 50 percent coinsurance on the original deductibles, and a maximum loss of $1,000. A qualified plan would include coverage for all doctor and hospital fees, outpatient drugs, nursing home care, routine physical examinations, durable medical equipment, and dental care.

People may elect to purchase a level of coverage which is less than the benefits of a qualified plan. That fact may make it necessary to outline minimum standards for policies on a number of levels, so that people are best able to purchase the amount of coverage they need and can afford. A plan similar to Wisconsin's supplement guidelines can help to assure people that the policies they purchase are worth the money, though the policy may not include first dollar coverage on all medi-gaps.

Other prominent features of the law include a requirement that insurance companies state the percentage of the premiums which will be paid out in claims and offer conversion policies of comparable coverage. As mentioned, an insurance pool where people with preexisting medical conditions can obtain coverage has been created. Qualified health insurance plans and medicare supplements are outlined. And, the law requires that hospital care cost reports be filed with the State for review by the health department and the commissioner of insurance.

CA believes that with steps of this kind and a stronger client orientation by the insurance divisions of our State governments, insurance companies will be forced to provide adequate coverage. The act is strong enough to protect the public from companies who issue extremely limited policies or use excessive portions of premium payments to cover administrative costs, yet fair enough that legitimate insurers will have no trouble operating within the confines of the law. I am enclosing a copy of the law for your review.

When seeking solutions for the problems of medicare and medicare supplement insurance, CA believes that it is important to bear in mind the original intent of the law. Allow me to quote the testimony which Federal Trade Commissioner Elizabeth Hanford Dole has cited. "The medicare program was never designed to provide complete coverage. Instead, it was meant to serve as a base on which people could build by means of private health insurance plans." [5]

CA believes that legislation enacted on the State level, similar to the Comprehensive Health Insurance Act of Minnesota, can serve to provide the as-

[5] Loc. cit., p. 1, footnote.

surances that senior citizens need when purchasing supplement insurance, without a massive government intervention. In developing our position on health insurance issues CA has been guided by a philosophy aptly stated by a Sioux Falls, S. Dak., retired elementary school principal whose wife could not qualify for insurance. "I do not believe that we should have socialized medicine, but I do believe that the government should legislate so every person is eligible for a private plan * * * any help you could give would be appreciated. I am not asking for free insurance for my wife, I am just asking for an opportunity to carry insurance on her."

CA advocates an expansion of health insurance opportunities, and laws which assure people that the insurance they purchase is sound. We believe that the emphasis of these initiatives should rest in state governments and the private sector.

By serving to gather and refine available information, and by providing technical expertise to State governments, the Federal Government can act as a valuable facilitator of needed change. If CA can be of continued assistance, please contact us. Thank you very much.

MEDI-GAP: PRIVATE HEALTH INSURANCE SUPPLEMENTS TO MEDICARE

TUESDAY, MAY 16, 1978

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 9:35 a.m., in room 357, Russell Senate Office Building, Hon. Lawton Chiles, presiding.

Present: Senators Chiles, Glenn, and Domenici.

Also present: William E. Oriol, staff director; Kathleen M. Deignan, professional staff member; Garry V. Wenske, assistant counsel for operations; Letitia Chambers, minority staff director; Margaret S. Fayé, minority professional staff member; Alison Case, operations assistant; and Madonna S. Pettit, research assistant.

OPENING STATEMENT BY SENATOR LAWTON CHILES, PRESIDING

Senator CHILES. This hearing of the Senate Special Committee on Aging is a preliminary inquiry into the extent and patterns of purchase of private health insurance supplements to medicare by older Americans.

A number of questions have been raised about such insurance, including suggestions that many older Americans purchase policies of questionable value, multiple policies well in excess of probable need, and policies offering benefits inappropriate to need.

The committee wants to know how pervasive these problems are and what factors may contribute to unnecessary expenditures of precious retirement income.

There is very little information available now. The committee issued a report in 1974 [1] which estimated that older Americans spent over half a billion dollars annually on private health insurance to supplement medicare. We now believe this is a very conservative estimate.

The Social Security Administration reports that almost 63 percent of all Americans over age 65 had some private health insurance coverage for hospital care alone in 1975. Up to 55 percent of all older Americans had some form of private insurance coverage for physician's services. This is a lot of insurance, but only 5 percent of the health care bill for older Americans is paid for by private health coverage.

[1] "Private Health Insurance Supplementary to Medicare," a working paper prepared in December 1974 for the Senate Special Committee on Aging by Gladys Ellenbogen, Ph. D., consultant to the committee.

"Taking Advantage of Fear"

Clearly, older Americans fear health care costs well beyond what medicare will cover. Why else would there be such a large market for supplemental health insurance? And no wonder. When medicare cost-sharing amounts are deducted, medicare pays for only 38 percent of the total health care bill for older Americans.

One need only look at the advertising used in these two examples [1] here to see that this fear is taken advantage of in insurance policy sales to older Americans—whether by mail, through newspaper ads, or door to door by agents who sometimes sell policies from a number of different companies at the same time. These examples, by the way, are the first pages of advertising brochures stuffed in Florida Sunday newspapers.

There also appears to be a lot of confusion about what medicare will and will not pay for. We have heard allegations about individual insurance agents who take advantage of this confusion. Some have even represented themselves as Federal employees of medicare and suggest medicare will cover a lot less than is actually the case. At the same time, false claims may be made about benefits provided by the health insurance they have to sell—all in the interest of a large commission—without due regard for appropriate insurance protection for the elderly consumer.

Largest Gaps Left Uncovered

Ironically, most of the insurance sold to medicare beneficiaries does not cover the real gaps in medicare protection, such as prescription drugs, dental care, or custodial nursing home care. According to the Social Security Administration, only 22 percent of older Americans have private insurance coverage for out-of-hospital prescription drugs; less than 3 percent have any form of dental coverage; and less than 20 percent have any form of coverage for nursing home care. The insurance is sold more often simply to fill in the deductibles and coinsurance charges required in medicare hospitalization and outpatient service plans.

The situation the committee is concerned about is best illustrated, I think, by the following letter received by the Wisconsin Commissioner of Insurance, one of our witnesses this morning. Since an investigation is now in process, the names of the individuals and companies involved have been changed, but I would like to read that letter.

Dear Sir: My name is Jane Doe. I was born April 20, 1891. I seem to buy an awful lot of insurance lately. Since January 8, 1976, I purchased from Company, A, Agent No. 1, four policies for $320. Then on January 6, 1977, Agent No. 1 sold me replacement nursing home insurance with Company B for $330. I don't have the policy for that yet.

On March 17, 1976, Company C sold me nursing home insurance for $342. Then on July 17, 1976, Agent No. 2 sold me a hospital indemnity policy for $600 in Company D. Then Agent No. 2 came back and sold me, in October 1976, two Company B policies for $287.40, indemnity and cancer insurance. I found a receipt signed by Agent No. 2, dated July 26, 1976, for $390.25 from Company B, and I don't even know what that is for.

Then on October 7, 1976, Agent No. 3 was here and wrote me a life policy dated October 19, 1976, from Company E. That is for $1,500 of insurance and it cost me $538.76 a year, and I really don't care to have it.

---

[1] See pages 21–26.

Then on December 9, 1976, Agent No. 4 wrote me a nursing home policy with Company B, again for $140 a year. Then on January 5, 1977, Agent No. 5 wrote me two policies for hospital and nursing home that cost $192 with Company F.

Then on February 9, 1977, Agent No. 6 wrote me hospital and nursing home insurance with Company G for $364. Then the same fellow came back again on February 18, 1977, and wrote me two more policies for cancer and hospital for $222, and I don't have these policies.

I also have Company H and Company I cancer insurance.

There may be some other policies here, but I think I am afraid to look.

I have spent for insurance, since January 1976, about $3,675 (actually, $3,726.41), and I am appealing to you to help me recover as much of this as humanly possible. I really want all my money back and I want to be left alone by these insurance agents.

Most of them don't even tell me what they're selling me and half the time I don't get receipts and they keep coming back every so ofter for more money.

It is your duty to help a poor widow, as the help I'm receiving from other people does not have your authority.

JANE DOE.

P.S. I had someone write this as I have a little arthritis which impairs my handwriting.

In case you didn't catch that, this 87-year-old woman had been sold 19 separate policies from 9 different companies by 6 agents in just over 1 year. She was committed to payments of almost $4,000 a year in premiums for insurance, which, even from the sketchy information provided in this letter, has to be largely worthless to her because of the duplication and overlap in coverage. I also wonder how she became so well known to so many agents in such a short time.

A number of our witnesses today will, I believe, recount similar situations. We hope they will also offer suggestions for ways to prevent this from happening so often.

The committee is not alone in its concern. I would like to insert into the hearing record excerpts from a speech delivered to the Health Insurance Association of America, representing insurers who write 85 percent of the private health insurance in the country, by Mr. Robert A. Beck, chairman of the association and president of the Prudential Insurance Co. of America.

INDUSTRY SHORTCOMINGS

Mr. Beck said that "the few companies" selling medicare supplement policies to the elderly give a bad name to the whole industry. He suggested many medicare supplements have a ratio of benefits to premiums far too low to ever be expected to provide a reasonable return, and he charged the association to recognize certain industry shortcomings and face up to its responsibilities in correcting them.

[The speech referred to follows:]

EXCERPTS FROM A SPEECH BY ROBERT A. BECK, CHICAGO, ILL., MAY 1, 1978[1]

Good morning:

This past year has been a busy and productive one for the association and very rewarding to me personally.

But the pleasure I feel at addressing this 22nd annual group insurance forum is mixed. For today marks the end of my tenure as chairman of the board of the HIAA. It is traditional for the outgoing chairman to review the association's accomplishments over the past year. Let's do that—briefly.

[1] Full text retained in committee files.

At the State level, our actions have helped hold the line on State health insurance plans. At the beginning of 1977, there were four State plans in effect. Although more than a dozen State legislatures introduced bills proposing such plans last year, none was enacted. In another problem area—mandated coverage of maternity benefits—the private insurance industry is seeking to affirm an important decision in New York. Our position—that the legislature may not force amendments of those in-force contracts which cannot be terminated or nonrenewed by the insurer—was upheld on first appeal. We trust that the New York Court of Appeals will affirm this. The court of appeals has heard the arguments and we expect a decision soon. That's the good news. The bad news is that the diversity of mandated state benefits continues to plague us. Each new legislative session brings renewed efforts to impose additional State requirements.

More important, however, than the absence of new State health insurance plans, are the positive accomplishments that have been achieved. At the top of the list is the fact that people now realize that the private health insurance industry has viable and constructive alternatives to State health insurance plans. There is a portfolio of State activities and legislation we support. State prospective hospital budget review is one example—it's effective in five States already and being considered in several more. Peer review programs are another. Effective health planning at the local level is a third. Some 250 insurance industry people are now involved in the health planning agencies, the HSA's and the SHCC's.

In a similar vein, the model group health insurance continuation and conversion bill should be supported.

These measures promote cost containment, quality assurance, and adequacy of coverage, without setting up a State health insurance plan.

On the Federal level, relatively few adverse actions have been taken. The private health insurance industry is a key participant in both the cost containment and the national health insurance debates. Federal legislators and Federal agencies know that we have positive programs to meet society's needs—that we are not just against everything. Our support of a public-private partnership for NHI is embodied in our continuing advocacy of the Burleson-McIntyre National Health Care Act. In the present debate over what form national health insurance should take, we have made our views known in meetings with congressional, HEW and White House staff officials.

But this retrospective look at our recent successes: support of positive programs, effective advocacy of the insurance viewpoint, and increased public awareness of the problems of our business—must not blind us to the concerns we face.

The problems of the HIAA—or challenges, as I prefer to call them—are the results of the times we live in; challenges we experience by our very nature as a large association with diverse membership. They are crucial. If we are to overcome them, we must recognize certain industry shortcomings and face up to our responsibilities in correcting them.

"Some Plans Do Not Provide Good Value"

One of these problems is the sale of plans which do not provide good value—policies whose benefits are unreasonably small in relation to premium. Recently in New Jersey, the commissioner charged 71 companies with the sale of such policies. Unhappily, I have to tell you that Prudential was one of them.

We were cited because the loss ratio on one of the plans we currently sell was below the commissioner's 50 percent loss ratio standard. The plan is a daily hospital indemnity plan which we began selling in 1970. It represents only a very small fraction of our business. We have about 19,000 of these plans in force nationwide and last year the premiums were less than 1 percent of our total individual health care insurance business.

In our response to the commissioner, we explained that our loss ratio on this plan has been steadily increasing as the policies aged and this year we expect the cumulative loss ratio to exceed 59 percent. In retrospect, it is a pity that we did not give a more detailed explanation when we first replied to the commissioner's request for information. I think we could have avoided some criticism which I think was really unwarranted.

I believe that some of the other 71 companies which were criticized can give similar justification for their situations. There are some companies, however—particularly some selling medicare supplement policies to the elderly—where

the ratio of benefits to premiums is really far too low and can never be expected to reach a reasonable figure. These companies can be fairly criticized. Those few companies give a bad name to the whole industry, and I urge them to change their practices.

"INDUSTRY HAS BEEN LAX"

I submit that we have been lax, as an industry, in policing our fellow companies. We can't just sit back and do nothing for fear of antagonizing some of our members. When companies sell plans which are clearly inappropriate or overly expensive, we should criticize them—rather than wait for the public, the press, regulators or legislators to point out our deficiencies.

HIAA has more than 300 members. In an association like ours, we need companies of every size and every type: large and small, Eastern and Western, mutual and stock, because every company has essential talents to offer. The 20 largest companies represent over half of the HIAA dues assessments. On the other hand, the many smaller companies are located in every area of the country. They know local conditions and can keep on top of local situations. It's they who generate our grassroots political clout. We depend on them to tell the private sector story—to be our advocates before State and local governments.

The diversity of our membership sometimes makes it hard for us to unite. It should not. Our diversity—our mix of different companies—gives us strength, flexibility, and the ability to work simultaneously on many levels.

So far I've mentioned two main policy concerns: unfavorable industry publicity resulting from questionable marketing practices, and the association's need for active member companies of all sizes and types.

HIAA policy on State versus Federal regulation of our business is a third area where we need to constantly examine our position. Our stand on this difficult question is somewhat inconsistent. On the one hand, when we approach the question of State or Federal regulation in the abstract, we opt for State regulation. We fear the increasing encroachment of the Federal Government. State officials, we say, are better able to appraise and control affairs according to the uniquely varying local conditions that affect the citizens of their State.

Then too, it's often easier for a company to communicate with its State legislators, regulators, and insurance department officials than with far-off Washington leaders.

But the nonuniformity of the State-by-State approach can cause us serious problems and make us think pleasant thoughts of the virtues of a uniform Federal standard. We recognize that we're going to have Federal and State regulation. Our objective should be to reduce the duplication and make sure that regulation is in the best interest of the consumer.

Senator CHILES. Reporter Herb Jaffee, investigating medi-gap policy sales in New Jersey, has written a series of articles detailing many of the problems faced by the elderly as they purchase health insurance policies. He charges that some policies are designed to deceive and exploit unwary policyholders and that others are relatively useless. And elderly consumers have paid annual premiums ranging into several hundreds of dollars for these policies.

I would like to also enter these articles into the record.

[The articles referred to follow:]

[From the Newark, N.J., Star-Ledger, Feb. 26, 1978]

LAX REGULATION FAILS TO PROTECT BUYERS

(By Herb Jaffe)

More than half a billion dollars a year are paid by Jerseyans for health insurance policies that are neither regulated, carefully scrutinized by the State nor formally approved by the insurance commissioner.

In some cases these policies with their "fine print" and vague disclosures of benefits, sold by agents of commercial insurance companies, are designed to deceive and exploit unwary policyholders.

Instances of relatively useless health insurance policies, for which consumers have paid annual premiums ranging into several hundreds of dollars, have been discovered by the Star-Ledger.

"Realistically, some of these contracts could be covert misrepresentations and distortions of what policyholders were actually promised by their agents," a Federal Trade Commission official stated, concerned by the rise in complaints nationally from victimized consumers.

By deceiving the consumer into buying a more expensive health policy that is less suited to his needs, an unscrupulous agent is better able to enlarge his earnings through sales commissions.

In some cases, the company which employs the agent also is a victim of misrepresentation, having issued the policy on the agent's recommendation.

Information on the extent of such health insuance practices, while still generally scant in New Jersey and elsewhere across the Nation, is starting to reach Congress and the State insurance departments which have been entrusted by Congress with the regulation of insurance.

Studies have found that most insurers "appear to be operating in a reputable manner." However, the lack of State laws that would impose strict regulation by most insurance departments make it impossible to determine how wide the health insurance irregularities extend. With the exception of the nonprofit Blue Cross and Blue Shield plans, which in New Jersey are regulated even more stringently than the property and casualty insurers who sell auto and home-owners coverages, health insurers are almost free to operate at will.

"Health insurance is like the illegitimate child," State insurance department actuary William White commented. "The regulation of health insurance today is about where the regulation of property and casualty insurance was 20 years ago."

Twenty years ago the magnitude of the auto insurance problem was just beginning to become known, and closer State supervison of the regulatory system was unfolding.

But the newly emerging concerns over questionable health insurance practices cannot be attributed to the watchdog responsibilities of the Nation's State insurance departments. Rather, it is due to a growing number of complaints to State and Federal agencies which protect the interests of senior citizens.

"The elderly as a class are the greatest victims of health insurance ripoffs, which occasionally transcend the line into such criminal practices as fraud, forgery and embezzlement," explained Dr. Gladys Ellenbogen, former professor and chairman of the economics department at Montclair State College.

In 1974, Dr. Ellenbogen researched and wrote the most comprehensive report known on the victimization of the elderly in the sale of supplementary medicare insurance. She was commissioned by the U.S. Senate Special Committee on Aging, and in her report she supports a statement attributed to the Florida insurance commissioner:

"Senior citizens are probably the most duped of all the public as far as the accident and health insurance field."

With the establishment by the Federal Government of medicare in 1966 came an accompanying need for supplementary medicare insurance, also known as "medigap," which supplements the medicare deductibles and other areas of health care which medicare does not cover.

As a result, an entirely new element in the health insurance industry emerged, to prey on the fears of the elderly.

A number of smaller insurance companies in particular "have been engaging in some of the most unconscionable abuses imaginable," Wisconsin Insurance Commissioner Harold Wilde stated.

Wisconsin is one of only two States which have enacted strict regulations and harsh penalties aimed at curbing deceptive and fraudulent practices in the sale of medigap coverages.

"Before we began to crack down about 3 years ago, we found that some of these companies and their agents were at best misleading—and at worst criminal," Wilde said.

In New Mexico, where similar regulation will become effective next June 1 to protect the elderly from unscrupulous health insurance practices, Commissioner Kenneth Moore explained:

"People who qualify for medicare have a minimum resistance to a smooth sales talk. We had some bad cases show up of senior citizens who bought medicare supplemental policies on top of medicare supplemental policies—far above what they needed."

Symptomatic of the problem surrounding the lack of regulation in health insurance is the number of complaints registered by insurance departments.

In her report to the U.S. Senate Committee on Aging, Dr. Ellenbogen wrote:

"The major source of complaints from people of all ages, received by the departments of insurance in many of our States, concern health insurance policies.

"Of 17,697 complaints, for example, disposed of by the California Department of Insurance, as reported in its annual report for 1971, there were 8,305, or 47 percent, concerning health insurance policies.

"Some complaints, of course, are justified and some are not. A high proportion of the complaints come from the elderly."

Dr. Ellenbogen told The Star-Ledger she was unable to obtain any information on complaint from the New Jersey Insurance Department.

One reason for the State's inability to maintain accurate annual statistics on the number of complaints is the insurance department's lack of personnel, and particularly the need for a larger investigative staff.

Mrs. Helen Thompson, actuarial assistant to William White in the New Jersey department, explained that she is one of only two investigators for all health and life insurance complaints that are referred to the department.

"For about 6 months of the year we have a third investigator, and we do the best we can under the circumstances," Mrs. Thompson commented.

"We try to follow through with each complaint, but we just don't have the manpower to always do the job that has to be done," Mrs. Thompson added.

A far more serious problem is the fact that most consumers do not know they can lodge complaints with the State insurance department.

A Pennsylvania woman whose hospital and medical bills totaled almost $2,200 didn't realize that the insurance department might have been able to help her after the company refused to pay the claim in 1976.

"We still owe $710 on bills that they wouldn't pay," her husband said. "They said there was a pre-existing condition—but the pre-existing condition was mine, not my wife's," he added.

A pre-existing condition is an illness which the policyholder had before the policy was written. Such a clause in a health insurance policy means that the company has the right to refuse payment of any claim with a deductible time period for any illness arising from the pre-existing condition.

Dr. Ellenbogen explained that "a major source of complaints reported to insurance departments by the elderly is the refusal of their insurance company to pay a claim on the grounds it involves a pre-existing condition."

In her report to the Senate committee she gave a typical example of problems arising from pre-existing condition clauses in health insurance policies:

"Mr. X suffers from arthritis in his knee and has been suffering from arthritis for some time. After the effective date of his insurance policy, an intense arthritic pain in his knee causes him to lose his balance. He falls and breaks his leg.

"With an ironclad pre-existing condition clause, Mr. X's insurance policy would not pay for any hospital or medical costs incurred for his broken leg.

"Because persons 65 and over may have multiple health problems, a pre-existing condition clause, in the extreme form presented in the case of Mr. X, could provide no coverage at all to many aged persons.

"Therefore, the pre-existing condition clause has become a very critical issue in health policies for the elderly."

In the case of the Pennsylvania family, the husband said the company informed him it would not be responsible for her illness because of a pre-existing condition. "But the pre-existing condition pertained to me and not her. Furthermore, my pre-existing condition wasn't even the same as the illness that put her in the hospital.

"That agent of theirs did a hell of a sell job on me. He made me knock out a good policy which I had before," he added.

The man said the company refunded his premium for the policy of $792. "I guess that was a lot cheaper for them than paying the claim."

The practice of agents urging senior citizens to cancel good policies, on the pretext that they have better replacement policies, is one of the most serious abuses. The practice is intended primarily to foster the larger first-year sales commissions for agents, and insurance departments in other States have revoked the licenses of agents for such actions.

Dr. Ellenbogen said in her Senate report:

"Cancellation and sale of a new policy is an unfortunate tactic which has resulted in revocations of agents' licenses. For example, a policy is sold and some months later the insured elderly person is advised by the agent to cancel the policy and purchase a new one. The major advantage for the agent is the commission he receives on selling each policy."

Data filed with the State on the percentage of sales commissions paid out of each premium dollar indicates wide disparities between Intercontinental Life Insurance Co., which is the State's 13th leading health insurer, and the three leading private insurance companies.

According to the 1976 annual statements, which companies must file, Intercontinental collected $9.4 million in total health premiums in the 26 States where the company is licensed. It paid out 45.4 percent of this amount in claims, while 42 cents out of every premium dollar was used to pay sales commissions to agents. Statements for 1977 have not yet been submitted.

Correspondingly, of $1,696 million in premiums on health insurance written by Prudential across the country, 85 percent was used to pay claims and 3.6 percent paid agent commissions. Prudential is the State's largest private health insurer.

The claims percentages are still higher and the sales commissions lower for Travelers Insurance Co. and Aetna Life, the second and third largest private health insurers in New Jersey.

The percentage of claims paid is called the "loss ratio," and Dr. Ellenbogen's report explains:

"A very low loss ratio may indicate a company is disallowing many claims."

Ephraim Weiniger, chief executive officer of Intercontinental, explained the differentials:

"We're basically a young company. We put on new business without much renewal, and we pay a heavy cost to acquire this new business. Our incurred claims are inordinately lower. This relates to our volume of new business."

He attributed the disparities against the top three in commissions and claims percentages to the large volume of group insurance sold by the other companies. Group policies reduce sales commissions drastically, and Intercontinental writes almost no group insurance.

But according to the annual statements filed by all companies with the insurance department, Intercontinental sold $8.6 million in premiums in 1976 for individual health policies. It paid 45.8 percent of this total in claims and 38.9 percent for agent commissions.

By comparison, Prudential, with $232.5 million in individual health policies for 1976, paid 66.5 percent in claims and 12.8 percent in agent commissions. The gap between claims paid and commissions for Travelers and Aetna on individual health policies was even greater than that of Prudential to Intercontinental.

A detailed "Discussion Paper on Administration of National Health Insurance," issued last month by the U.S. Department of Health, Education, and Welfare, explains:

"Commissions for sale of new health insurance policies average about 1 percent of premiums for group business and 25 percent for individual policies."

Reports of agents' commissions found to actually exceed the amount of a policyholder's entire annual premium have come from insurance departments where there is strict regulation.

In Wisconsin, for example, Commissioner Harold Wilde said he found "one company paying commissions of 103 percent on a certain health policy.

"One of our regulations mandates comparisons of premiums to policy benefits. For example, we found Blue Cross was selling a policy for $211 a year. A private insurer was selling a policy that was less comprehensive than the Blue Cross policy for $400 a year.

"The big difference, of course, was the high sales commission the private insurer paid," Wilde explained.

William White, the New Jersey department's health insurance actuary, acknowledged, "Health insurance regulation in New Jersey has been something less than a priority. In fact, until now the chief concern in health premium rates has been Blue Cross and Blue Shield."

Commenting on private health insurance rates and regulations, he added, "The factor after that (concern over Blue Cross and Blue Shield) has been to let the health rates find their own way."

STATE RETAINS BARRIERS AGAINST CANCER POLICIES

(By Herb Jaffe)

New Jersey, which has one of the highest cancer mortality rates in the Nation, is one of only three States which prohibits the sale of insurance against cancer.

Since the late 1940's the State has not permitted the sale of "dread disease" insurance policies, although it will permit such coverage as a rider to basic health policies, State Insurance Department actuary William White explained.

Despite a declaration 2 years ago by the National Health Institute that New Jersey ranks highest in the Nation in bladder, colon and rectal cancers, and is one of the leading States in cancer mortality, the insurance department's position is that "cancer insurance is a scare tactic."

White said the insurance department has been "concerned with the total field of dread diseases insurance since the days when polio was a major dread disease, and our policy against licensing such insurance was formulated sometime in the late 1940's."

Only New York and Connecticut, aside from New Jersey, prohibit cancer insurance as a separate form of health insurance.

"Our department's present position, established in the late 1950's, is that dread disease coverages can be bought as a rider to a conventional health insurance policy," White added.

He explained that the reasoning for permitting the purchase of cancer insurance only as a rider, or an amendment, to a separate health policy "is to avoid the scare tactics."

White equated cancer insurance to a form of "gimmickery," and said "it's like a person with a life insurance policy who buys insurance at the airport every time he flies."

A survey of cancer insurance claimants conducted by Opinion Research Corp. of Princeton last year found that most were favorable to the concept.

AGENTS TAKE BIG BITE IN COMPANY WHICH BYRNE HELPED FOUND

(By Herb Jaffe)

An insurance company that Gov. Brendan Byrne helped establish and in which he has long held a financial interest is deeply involved in the sale of health insurance. Some of the company's agents have been accused of deceiving policyholders and of misrepresentation in order to increase sales commissions.

The company, Intercontinental Life Insurance Co. of Newark, which State Sen. Martin L. Greenberg (D-Essex) also helped establish and in which he remains an active officer, pays sales commissions to its agents that are almost equal to the amount it pays to all health insurance claimants.

Intercontinental concentrates most of its volume on two types of health insurance markets—senior citizens and "groups."

In the company's dealings with senior citizens, files obtained by The Star-Ledger reveal allegations of signatures forged by agents of Intercontinental on health insurance applications.

Other documents show that company agents dwell heavily on the sale of "group" insurance policies.

But statements filed by the company with the New Jersey Insurance Department show Intercontinental has almost no income from the sale of actual "group" health insurance policies. The "group" policies which the company sells are basically the same policy any individual can buy, for the same price.

Much of the reason for unethnical practices by agents of the company is attributed to the lack of regulatory enforcement over all health insurers, coupled with the inability of the legislature to enact strict laws to administer this segment of the insurance industry.

Due to laxities in New Jersey's regulations of health insurance, Intercontinental has been successful in eliminating types of health insurance policies that might benefit policyholders for long periods.

It has also been permitted to remove health policies if they do not provide the degree of high profits the company requires in order to continue to pay sales commissions that in 1976 averaged 42 cents out of every premium dollar collected.

In the same year, the most recent for which annual statements are filed with the State insurance department, Intercontinental paid health claimants just over 45 cents out of every premium dollar collected.

Ephraim Weiniger, chairman and president of the company, explained in a shareholders report that was contained in the most recent annual report for Intercontinental:

"Intercontinental Life Insurance Co. has improved its profit potential by moving rapidly to reduce its exposure on long-term disability policies; terminating specific marginal policy forms; obtaining premium rate increases on other forms, and placing greater emphasis on the marketing and sale of health insurance policies having a limited exposure and a greater profit potential."

Weiniger does not believe any further restrictions on health insurance practices are needed. "We are quite heavily regulated. New Jersey is one of the toughest States," he said, even though there is no regulatory standard for profits in health insurance.

In the regulation of auto and homeowners insurance, New Jersey is in fact "one of the toughest States." But in health and life insurance, companies for all practical purposes need only file their policies and rates with the State insurance department, then sell their products.

Intercontinental was founded in 1964 by four individuals, including Byrne, who was then a practicing lawyer, and his two law partners at that time.

Byrne told The Star-Ledger that at the time he became Governor he owned "about 100,000 shares of Intercontinental," but that he remembers there was a stock consolidation some years ago.

"The stock is in a blind trust, and I really don't know how much Intercontinental stock I own. I'm not supposed to know. That's the purpose of a blind trust," Byrne said. The blind trust is administered by Byrne's personal attorney, who has the right to deal with these assets while Byrne is Governor.

Intercontinental stock is presently being marketed at $2.37 a share. In 1974, when Byrne became Governor, 100,000 shares represented almost 9 percent of Intercontinental's outstanding stock.

Byrne served as chairman of the board of Intercontinental from 1966 to 1970, during which medicare was established and the company became heavily involved in the sale of supplementary medicare health coverages to senior citizens.

Greenberg, a former law partner of Byrne and chairman of the Senate Judiciary Committee, is presently secretary of the company. Greenberg also is a substantial stockholder and a member of the company's four-member executive committee.

Harold R. Teltser, Byrne's other former law partner, also is a large stockholder and a member of the company's board of directors. He, too, is a cofounder. Lawrence E. Stern, onetime State insurance commissioner and the first president of Intercontinental, is the fourth co-founder.

One illustration of the company's practices involves a woman who insists that a policy she bought from Intercontinental was not the one delivered by her agent.

"I never signed that application. My name was forged," the woman asserted.

The woman explained she bought the health policy for her husband, who died since the incident. "We bought the policy with a 10-day right to return it if it was not what we expected it to be. The agent kept delaying an appointment to explain the policy.

"When he finally came, we told him we didn't want it because it had a $500 deductible, and we were led to believe we were buying a $100 deductible.

"By then our 3-month premium had expired, and he told us not to worry about it, that he would make the correction and apply our first 3-month premium to the second 3 months, since it was his mistake," the woman explained, adding:

"During the second 3 months I went to the hospital for a matter that was to have been covered by the policy. But the company informed me that there was no policy, that I had let it lapse because I didn't pay the premium."

The woman said she could not reach the agent so she contacted the State insurance department. "All they did was give me a run-around."

She explained that she eventually got her money back for the 3-months premiums with the assistance of another agent from another company.

"He told me what to do to get my money back," she said. The woman said of the policy, "I know the agent forged my name. Otherwise Intercontinental would never have issued the policy, and he would have lost his commission after spending so much time with me doing a selling job."

Another elderly couple did in fact have a premium of more than $400 refunded by Intercontinental after the matter was investigated by the insurance department.

In a letter to the insurance department, the woman explained how she bought the health policy. "He also said it would be advisable to drop my husband's policy and he would write my husband a policy which would take over after Blue Cross, Blue Shield and medicare." The letter continues:

"When I wanted to go upstairs and get my husband's signature, he (the agent) said it was unnecessary and I could sign for him, which I did.

"About 3 weeks later I received my husband's policy and noticed they paid only $5 per day for the first 60 days. I decided to wait till I got my policy before calling him about this.

"About a week after receiving my husband's policy I received mine, but also received an additional policy he had written for me that we had not even discussed and never thought of. It was to pay $75 per week while hospitalized.

"The address on my policy was incorrect, and I called him to tell him about that and ask why he had written a policy I had not even discussed with him. He said I needed it and could cancel after the first year if I didn't want it.

"About my husband's policy, he said not to concern myself because if the difference of a hospital stay between Blue Cross, Blue Shield and medicare was more than $5 a day, his company would absorb it even if it was $15 or $20 a day.

"After our telephone conversation I read my husband's policy as well as I could and found nothing to indicate they would pay any more other than $5 per day plus the extra allowance for nurses and first-day extras."

The woman explained she returned the policies and demanded her money back from the company. Following her demand for a refund, based on misrepresentations and other irregularities, the woman received a form letter from Intercontinental which said in part:

"We have received your request for cancellation of your policy with Intercontinental Life. As your policy does not contain a refund provision, the policy will lapse 31 days after the next due date, as there is a 31-day grace period in your contract."

In effect, the company was refusing to refund the $410 in premiums. The insurance department investigated the matter, then wrote to the company:

"Please provide the sworn statement of (agent) as to his solicitation, presentation and representations to (the woman). Since there appears to have been several irregularities in this transaction, including the possibility that some signatures were forged, we request that you rescind the enclosed policies and refund the premiums to (the woman)."

The premiums were refunded in full.

As for the sale of "group" health policies, agents of the company have used letters of endorsement from companies and associations to sell members of those organizations policies that are supposed to be less expensive "group" plans.

AGENTS USE "SCARE TACTICS" WITH ELDERLY

INSURERS EXPLOIT DEFICIENCIES IN MEDICARE

(By Herb Jaffe)

Concern has been growing in Congress, Federal agencies and the private sector that medicare may be responsible for the "scare tactics" health insurance companies are using to "hard-sell" expensive but inadequate policies to senior citizens.

"Medicare is paying for a steadily decreasing share of the health costs," Dr. Gladys Ellenbogen, former chairman of the economics department at Montclair State College, reported to the U.S. Senate Special Committee on Aging.

"A large number of the elderly are living on low incomes. Some have assets in the form of savings accounts or savings bonds or other securities," Dr. Ellenbogen wrote in the report commissioned by the Senate committee, adding:

"Aware of the high cost of medical care and fearful of the risk of great depletion in their liquid resources, they purchase private health insurance protection."

Her report explains that medicare is paying for less each year, largely as a result of inflation and rising costs in hospital, medical and nursing home care.

The result is that more senior citizens are being forced to buy additional private health insurance. In fact, the Social Security Administration last August reported that medicare's responsibilities have shrunk to an average of less than 43 percent of all health costs for the elderly.

Commenting on the experiences of senior citizens in buying private health insurance, Dr. Ellenbogen said:

"As reported to us by consumer service bureaus of State insurance departments and by State and local offices on aging, many of the elderly are puzzled by the complexities of private health policies."

Her report adds that many senior citizens who never bought health insurance before, because of employer group coverages prior to their retirement years, are now experiencing "the hardsell, scare tactics of some of the insurance companies, particularly those companies offering them policies by 'mail order.'"

An example of the "scare tactics" is a mail order card that is being sent to senior citizens in New Jersey. The card advises the recipient of "Senior Care 3" which provides coverage for "hospitalization, surgery, doctors' fees, anesthesia, private nurse, transfusions and ambulance."

However, the card is an official-looking document, with the senior citizen's name and address typed in. Among other things, it says:

"Advance information for New Jersey senior citizens. Announcing Senior Care 3—the new health care plan designed to fill the gaps left by medicare."

Nowhere on the information side of the card is there any mention of an insurance company, agent or anything else to represent that the card came from the private health insurance sector.

On the mail side of the card, it is addressed only to I.L.I.C. information center, with a post office box number in Bridgewater.

Most senior citizens might not be expected to know that I.L.I.C. is Intercontinental Life Insurance Co., a private health insurer with its home office in Newark.

"The card looked a little suspicious to me, but it was in the shape of the social security card I get in the mail, so I sent it in anyway just to see what would happen," an 80-year-old man, who is a retired RCA engineer, explained.

"A couple of weeks later this young man came and made like he had something special for me. But when I began to ask him some questions, I couldn't get any sense out of him. Sure enough, he was trying to sell me insurance," the senior citizen explained.

"He wouldn't tell me how they got my name, all he kept saying was that I needed extra coverage. Well, I got Blue Shield, Blue Cross, Prudential, Colonial Penn and medicare. But he kept saying that wasn't enough," the man continued.

He said he was angered by what he considered "a colossal deception to sell me insurance."

Practices of this type of health insurance companies are of special concern to David Fox, an attorney for the Federal Trade Commission (FTC).

"The elderly are very ripe for abuses by health insurers, and this is an area in which I have a strong personal interest," Fox said. "The elderly are tremendously afraid of going to the hospital and not having enough insurance, so they often use their limited income to buy four or five policies that duplicate each other."

Fox said that while the FTC does not have jurisdiction, since insurance is regulated by the States, "we can at least keep an eye on the situation and alert States to what's happening in their midst."

Congress also is keeping an eye on how the elderly are being treated by insurers. While Senate hearings have been held almost annually since the early 1970's on the difficulties senior citizens face with health care, with the thrust of the Senate's concern on medicare, some senators have pointed to the inadequacies of private health insurance.

During one hearing before the Special Committee on Aging, Vice President Walter Mondale, then a senator from Minnesota, commented:

"I had a mother that went to a hospital with cancer, and they canceled her insurance. So I am not convinced that private insurance companies are the same as the United Fund."

During another hearing before the same committee, Dr. Joseph Ingber, a New York chiropractor, testified.

"Maybe you will be investigating 5 years from now what is being done in the private sector with the major medical insurance companies—what kind of fraud is going on in major medical insurance."

An American Bar Association (ABA) committee has been studying the problem for some time. San Francisco attorney Luther Avery, vice chairman of the

legal problems of the aging committee of the ABA's Family Law Section, said the committee is "analyzing cases of senior citizens who have been gypped and swindled by health insurance companies."

Avery said the committee's concern has been enhanced by evidence from the National Council of Senior Citizens in Washington and the National Senior Citizens Law Center in Los Angeles.

"We see this as a serious problem, and we may either report our findings to the ABA's house of delegates, or in the form of recommendations to some Federal agency, or even as a report that will be made available to senior citizens," Avery said.

One of the most common complaints by senior citizens centers around decisions by insurers that the policyholder is not eligible for benefits under his policy because of pre-existing conditions.

In a letter from Intercontinental to an 84-year-old man, the company said it would not honor his claim, explaining:

"We have reviewed the claim recently submitted, and medical information in our possession indicates the condition for which claim has been presented began prior to the effective date of your policy. Consequently, we are unable to be of service to you on this claim."

The language of the letter is "form" language, appearing on many others obtained by The Star-Ledger.

"Pre-existing condition my foot," the man said. "I paid them too soon. My premium for the year was around $500. I was operated for an aneurysm, and I never had any problem before. Their information is hooey.

"I succumbed to high pressure salesmanship," he said. The man added that medicare and his Blue Cross and Blue Shield coverage paid most of the cost.

"Do you know that company had the gall to try to sell me another policy about a year after they gave me all that trouble. This young agent came around and told me that the other agent was fired because of the way he was selling," the man stated.

Another senior citizen explained that he "dropped the policy because their agent misrepresented what he was selling me." The man contended that the Intercontinental agent sold the policy with a premium of about $180 on the basis that the policy would entitle him to coverage for visits to a doctor's office.

During the course of the year he held the policy, both he and his wife were denied claims by the company for doctor visits. In one letter a company examiner wrote:

"We sincerely regret we are unable to provide benefits in connection with this claim because the policy provides benefits for office visits, provided that these expenses are incurred following a hospital confinement. Since there was no indication of hospitalization, the charges submitted for office visits are not eligible for benefits."

"That's not the way the agent sold it to me," the man said. "He told me we could use it for any doctor visits."

Asked if he read the policy, the man said: "Who could understand that insurance language? I trusted the salesman."

Ephraim Weiniger, chief executive officer of Intercontinental, acknowledged that his company sells a large volume of health insurance to senior citizens.

Weiniger added that while many complaints come from senior citizens, "we can't pay a claim if it involves a condition that an elderly person didn't tell us about when we sold the policy.

In a "confidential memo" to his agents 3 years ago, Weiniger referred to "something to be desired in our marketing methods." He also emphasized "selling honestly" and mentioned "the administrative expense which comes with refunds and some other practices which will tend to hurt our company and put the man's insurance license in jeopardy."

The memo refers to another problem which concerned Weiniger. The problem dealt with agents so eager to earn a commission that they had little regard for the medical history of the persons they solicited and tended to ignore an applicant's true medical problems. Moreover, they had little concern for whether the policyholder had the financial means to keep up their premium payments. According to the memo:

"Men are selling us claims. For a $40-$50 commission we are buying a $1,000-$2,000 claim. The agen't concern is getting the first premium only and as much as he can get with little concern about whether or not the person can afford the renewal."

[From the Newark, N.J., Star-Ledger, Mar. 1, 1978]

HEALTH INSURANCE: STATE FAILS TO REVOKE LICENSES OF FLAGRANT AGENTS

(By Herb Jaffe)

The State insurance commissioner is empowered to lift the license of any agent who has committed insurance irregularities, but no one can remember the last time an agent selling health insurance in New Jersey lost his license.

By comparison, in Wisconsin, where special regulations were recently invoked to protect senior citizens in particular from being swindled in the sale of health insurance, Commissioner Harold Wilde says he won't hesitate to revoke or suspend the licenses of agents who commit indiscretions.

"When I came here 3 years ago, we were revoking two or three licenses a year. Now we're acting against 10 to 12 agents a month. Among them we're lifting a lot of licenses, and many of them were health agents. We're trying to guarantee as much as possible that no consumer will get swindled," Wilde said.

"We even suspended a health insurance company recently for a year and a half," he added.

Sidney K. Decker, chairman of the ethics committee of the New Jersey State Association of Life Underwriters, has been involved with the selling and upgrading of health and life insurance practices in New Jersey for more than 20 years.

"I don't recall any agent selling life or health insurance ever being revoked or suspended in this State, at least since I've been around," Decker said.

"As I understand it, one of the problems is that the insurance department does not have the funds for an investigative staff. The department is certainly empowered to lift licenses, but they have been very lenient.

"Some practices have been brought before our ethics committees where not only should the agent's license have been revoked, but there should have been criminal action taken," Decker said.

Asked why the insurance department refuses to lift licenses, especially in blatant cases of irregularity, Decker said, "I don't know. But I do know that some very serious ones have been recommended to them by our ethics committees.

"But then the department asks us, 'do you realize what it takes to lift an agent's license?' Our position is, what good is a license if there are no ethical standards to support it.

"There has to be sanctions. If not, then the agent who steals and only gets a slap on the wrist will do it again," Decker said.

He explained that in New York and other States there is a public record of agent license revocations. "There have been a few casualty agent licenses lifted in New Jersey over the years, but I don't recall ever hearing of a life or health agent losing a license," he added.

Decker explained that the Association of Life Underwriters—a nationally recognized professional body—maintains a code of ethics, adopted by its Washington-based national association. "We have 15 local associations with working ethics committees in New Jersey and a membership that includes about half the agents in the State who write health and life insurance," he said.

One of the association's most important functions, he said, is to maintain its peer review ethics committees which gather evidence and evaluate charges of unethical practices by agents.

"If we can't resolve a charge through the committee, or the agent's company, we will recommend it to the insurance department, in behalf of the insured making the charge. But that's as far as we're permitted to go. We have no subpena power," he explained.

Decker said that five or six agents a year are referred to the insurance department. "There are some good people in the insurance department, but they have no investigations staff," he commented.

Recommended legislation for model regulatory standards in the agent ethics area has been devised by the National Association of Insurance Commissioners (NAIC), and while New Jersey does not enforce a strict watch on health agent activities, many other states do.

In the NAIC's January 1977, reaffirmation of its model regulations on duties of insurers and agents, the text focuses on such problems in New Jersey as agents who misrepresent the contents of health policies to their applicants

According to this proposed regulation by the NAIC, which has been promulgated in other States:

"The insurer's agent has an obligation to be sure that all pertinent information revealed to him by the applicant is adequately set forth in the application.

"Failure to do so is a disservice to himself, his company and the applicant, because it may prevent accurate evaluation of the risk and may lead to cancellation or to defense of a claim based upon failure to disclose material information."

A Star-Ledger survey has found that failure to disclose material information on health insurance applications is a frequent occurrence with some agents, resulting in claims controversies between the policyholder and the company.

The most common indiscretion by some agents is the failure to disclose the applicant's complete medical history, especially where senior citizens are the applicants.

Medical examinations are not required in the purchase of such policies, and to avoid a denial of the application by their home office—resulting in lost sales commissions—agents in some instances will ignore pertinent details in the applicant's medical history.

In this respect, the NAIC's model guideline for regulation continues:

"An insurer will normally take disciplinary action, which may include discharge, against an agent who submits an application which is materially inaccurate or incomplete.

"In the event an insurer discharges such an agent, an insurance commissioner, charged with protection of the public interest, may terminate the agent's license, and the insurer should disclose appropriate information to the commissioner when it can do so without exposing itself to legal action.

"An agent who is unwilling to abide by the high standards required in the business of health insurance should make his living in another business which does not rest so strongly on a necessary assumption of good faith."

Federal Trade Commission attorney David Fix, concerned with potential violations of the unfair trade practices act, said that disclosure regulations by State insurance departments could help minimize the victimization of health insurance consumers by unscrupulous agents.

"For example, disclosure regulations should force companies to detail exactly what a policy does include in the simplest terms. Many of these policies are incomprehensible even for lawyers. So how can they expect the average layman to understand what is included?" Fix asked.

"I'm also concerned with the health policies that overlap. Too often high-pressured sales approaches will sell a consumer a coverage that he already has either through medicare or another supplementary medicare policy," he added.

New Mexico Insurance Commissioner Kenneth Moore said regulations that will protect senior citizens from high-pressure health insurance agents will become effective in June. "Our regulations are intended to stop agents from taking advantage of the elderly."

"Senior citizens are often lonely and anxious to talk to people. Some agents know that, and too often the senior citizen ends up getting fleeced into some policy that he or she doesn't really need," Moore stated.

The New Mexico regulations will be similar to those in Wisconsin, the first State to adopt such strict standards for agents in the sale of health insurance.

Wisconsin Commissioner Wilde called senior citizens the "most vulnerable market" for fraudulent selling practices. "I saw volumes of complaints in this area, largely because this class of victims has fewer defenses," Wilde added.

He said among the regulations is one that makes it an unfair trade practice to use the word "medicare" on any commercial health insurance literature, thus avoiding certain deceptive sales approaches.

"But we found that when you chop off one head, three new ones grow back," Wilde commented. "There are many elements involved in the sale of health insurance, and we're taking them on one by one."

He said that in addition to revoking agent licenses for unscrupulous practices, "we're also working with our State Association of Life Underwriters and chambers of commerce to set up senior citizen counseling services. This is intended to prevent such common abuses as finding people with 15 health policies—sold through scare tactics."

Wilde has invoked special regulations which mandate clearly explained minimum levels of benefits in easy-to-read policies, standardized health policies for all companies, and a withdrawal of all former policy forms.

"We also have prepared a booklet for senior citizens that tells all the do's and don'ts, and we mandated a rule that this book must be presented by agents with every solicitation.

"We have made it clear to every company that if they want to sell Medicare supplements they must abide by the regulations," he added.

Wilde said that all policies used in the State must be approved by him before they can be sold. New Jersey is a "prior approval" State in auto and homeowner insurance, but in health and life coverage the companies simply file their policies with the insurance department and use them.

"Our next stage will be to compare price differentials that exist. No one really knows what the profits are in health insurance. We attempt to judge this on the basis of loss ratios," he said. Loss ratios are the percentages of the premium dollar used to pay claims.

Wilde said one of his greatest concerns has been to crack down on agents who urge policyholders to cash-in an existing policy so they can sell the consumer a new one and earn a new first-year sales commission.

"First-year commissions are enormous. I think it's a disgrace to switch off a senior citizen, especially, from a perfectly good policy just so an agent can earn more commission. Meanwhile, the consumer is stuck with a new set of deductibles, which can often present a hardship," Wilde said.

[From the Newark, N.J., Star-Ledger, Mar. 2, 1978]

HEALTH INSURANCE: JERSEY SUBSTITUTES A "BOOKLET" FOR REGULATION

(By Herb Jaffe)

New Jersey's inadequate regulation of private health insurance is attributed by some to the effectiveness of the insurance lobby—plus considerable apathy in both the legislature and the State insurance department.

Typically, one insurance department official commented, "With the exception of Blue Cross and Blue Shield, health insurance regulation in New Jersey has never really been much of a priority."

The fact that the insurance department gathered 3,600 health insurance complaints from consumers in 1976 may have prompted the preparation by the department of a handbook for senior citizens. As a class, the elderly are the most common victims of abusive practices by private health insurance companies.

The newly prepared booklet alerts senior citizens to the potential pitfalls when buying health insurance. It offers "helpful hints" on how to shop for health insurance wisely.

The booklet, which includes a friendly opening letter from Gov. Brendan Byrne, was financed by a federal grant in an effort to better educate the elderly against "gimmickry."

According to one piece of advice in the booklet:

"Health insurance policies are very complicated. Reading and understanding policies as well as making price comparisons is not easy. Health insurance for senior citizens is one field in which the insurance industry has generally done a very poor job."

The booklet is similar to one distributed in Pennsylvania, Wisconsin and other States—where tighter regulations exist to protect senior citizens more than just advise them of "complicated" insurance policies with incomprehensible language.

As a regulatory agency, the insurance department is aware of the dangers in the merchandising of some private health insurance policies. But while New Jersey concentrates more on alerting senior citizens to potential dangers that the legislature can easily empower the insurance department to eliminate, other State insurance departments are acting in a more direct manner to remove such threats.

For example, legislation in 1973 empowered the New York Insurance Department to standardize basic health policies and eliminate many of the kinds of deceptive practices that exist in New Jersey.

"It took us 2 years before we could enact that legislation. Obviously, the insurance companies didn't like the idea because it put an end to policies and practices that many companies had become accustomed to," New York Deputy Superintendent of Health Insurance James Clyne said.

"New York was the first State to adopt such regulations. It resulted in a cleansing of the health insurance field. We eliminated a lot of policies from being sold in New York," Clyne explained, adding:

"Companies were required to examine their own portfolios, and that had the greatest effect on what could be sold in New York State. We were able to eliminate many of the dead-wood policies, as well as the questionable ones.

"I think this was a very worthwhile effort, because in the process we were able to review every policy being sold so that we could compare and determine what was needed to best protect the consumer. The legislature since then has adopted a series of additional laws mandating that certain health coverages be made available."

Clyne said that in his judgment, and from his experience, "health insurance really has to be watched closely and differently from other lines of insurance," referring to the ease with which sophisticated forms of abuse can be incorporated into policies by insurers.

"There was much objection to our standards from the carriers. It was an invasion into areas insurance companies did not want invaded," Clyne added. "Regulations of our type are very controversial, which is why they haven't spread into too many other States."

For one thing. Clyne emphasized that insurance companies in New York must now have the prior approval of the insurance department before they can market a policy, rescind existing policies or alter rates. The Department also has invoked strict disclosure requirements to avoid deceptive practices as much as possible.

"Many of the features and provisions in the NAIC's (National Association of Insurance Commissioners) model health insurance bill are patterned after our system," Clyne added.

Many health insurers in New Jersey include provisions in their policies that prohibit cancellation and imply automatic renewal. However, the provisions do not prohibit an insurer from deciding not to renew everyone insured under a certain policy—in effect, terminating the entire policy if the company decides it is not earning sufficient profits from the policy.

"That kind of thing is a problem. When a company decides to terminate a class of business, we become very conscious of it in terms of approving any replacement policy," Clyne explained.

"We want to include a provision in all health contracts that termination of the entire policy must be with the approval of the superintendent of the New York Insurance Department, and that the company must provide an adequate alternative policy for the same policyholders," he said.

Clyne also explained that his department maintains well-staffed consumer services bureaus in New York City and Albany. "We have investigators and examiners who check out all complaints."

He said there is also much concern in behalf of senior citizens "who tend to overbuy health insurance. I don't know if it's victimization or just some inherent fear elderly persons might have which makes them prone to purchase such policies as those that will pay them a lump sum a day if they're hospitalized.

"They tend to feel insecure, and they'll buy the lump-sum policies even though they have medicare and good medicare supplemental coverages. There are companies who deal heavily in hospital indemnity policies. The question is whether there is a real need for such policies, or whether those companies are using fear tactics on the elderly," Clyne commented.

The New York regulations were established only after a 2-year legislative battle. Sponsors of legislation that would impose stronger regulations over health insurers in New Jersey have never even reached the battle stage.

Many legislators have been repeatedly unsuccessful in getting their health insurance bills out of committee. There was a flurry of bills in the last legislature that would have begun to impose minimum regulatory standards, but they all died in committee when the Legislature expired last month.

A bill sponsored by Sen. Joseph J. Merlino (D-Mercer) would have established minimum standards that would have included "full and fair disclosure for the form, content and sale of health insurance."

While Merlino said the measure was particularly aimed at Blue Cross and Blue Shield—which already are heavily regulated—it would, nevertheless, have affected all private insurers. But the bill was stuck in a committee for 8 months.

However, Merlino said he intends to reintroduce the bill in the present legislature. The bill would include:

"Reasonable standardization and simplification of language and coverages to facilitate understanding and comparisons."

"Elimination of provisions which may be misleading or unreasonably confusing in connection with either the purchase of such insurance or the settlement of claims."

"Elimination of deceptive practices in connection with the sale of such insurance."

"Elimination of provisions which may be contrary to the health care needs of the public."

"Elimination of coverages which are so limited in scope as to be of no substantial economic value to the holders thereof."

"Elimination of unfair renewal practices which are contrary to the health care needs and economic wellbeing of the public."

Another bill, introduced by Sen. Garrett Hagedorn (R-Bergen) and co-sponsored by 11 other Republican and Democratic senators, was lodged in committee since it was submitted in September, 1976. The bill was specifically concerned with health insurance policies that are misleading.

It would have given the insurance commissioner powers to disapprove a policy if it "contains provisions which are unjust, unfair, inequitable, misleading or contrary to law or to the public policy of this State, or if it is sold in such a manner as to mislead the public."

Hagedorn already has resubmitted the bill in the new legislature. "Something has to be done to equalize regulation in this area and make what is good for Blue Cross good for every other health insurer in this State," Hagedorn said.

"Two other bills that would impose health insurance regulations were filed 2 years ago by retired Sen. Anne Martindell. Both remained in committee until the legislature expired.

The summary statement attached to one of the bills said:

"An insurance company may stipulate in a health insurance policy, other than group or blanket, that the policy can be canceled at any time by the company by written notice to the insured.

"When this option is taken by an insurance company, it can, and often does act to the severe detriment of policyholders, especially those who have paid premiums for years, then find their policies canceled after a difficult illness.

"This bill amends the relevant provisions of the law by repealing the option presently afforded insurance companies."

The statement attached to Martindell's other bill said:

"This bill provides that an insured would have an automatic option to renew a health insurance policy, other than group or blanket, without prejudicing the terms and conditions of the policy to be renewed.

"The insurer would be obligated to offer renewal of the policy between 30 and 60 days prior to the expiration thereof, and the insured would opt to renew by payment of the premiums during the grace period."

There were other bills in the last legislature which touched on health insurance regulation, in an effort to protect consumers from misrepresentations, distortions, and fraudulent selling practices. They all died in committees.

[From the Newark, N.J., Star-Ledger, Mar. 3, 1978]

NATIONAL INSURANCE: U.S. DISTURBED BY HEALTH COVERAGE "GAPS"

(By Herb Jaffe)

Insurers are fearful that revelations of inadequacies in the cost, benefits and State regulation of health insurance could trigger a new movement for national health insurance (NHI) that might have serious consequences for the private insurance industry.

An analysis prepared last month by the U.S. Department of Health, Education, and Welfare (HEW) delves into the regulation and administration of NHI even before the proposal of an actual national health plan.

The report analyzes two basic questions in any proposed administration of NHI:

"What should be the role of the Federal Government, of the States and localities, of the private insurance industry?"

"How should these sectors interact in an overall NHI organizational arrangement?"

In analyzing any role for the private industry, if in fact the private sector should be permitted to underwrite NHI, the HEW report says:

"Supporters of a private sector underwriting role in NHI argue that competition gives private insurers incentives to perform functions more cheaply in order to increase profit margins or to gain a larger share of the market.

"Critics contend that industry underwriting practices conflict with some goals of NHI and that competition leads to higher profits and marketing costs which could be better used to pay the provision of health insurance."

But then the report goes on to say:

"At present it is very difficult to determine how many people have adequate coverage for medical expenses. Private insurance policies range from comprehensive major medical coverage to plans providing a fixed per diem payment for hospitalization.

"Many persons purchase several policies as supplements to basic coverage but are still uncovered for major expenses. The Congressional Budget Office estimates that between 19 and 38 million people with insurance have less than adequate protection against catastrophic expenses."

Still another indicator of the Federal Government's growing concern over the nation's private health insurance system is a statement last June in the Social Security Administration's monthly bulletin:

"That the insured person cannot expect to receive truly comprehensive health care services in return for his premium payments is just one of the deficiencies in the private health insurance system."

The bulletin said that in 1975 consumers under age 65 paid $33.6 billion in private health premiums, but that this "resulted in the return of only $28.9 billion in benefits."

Pointing to the inadequacy of the insurance system, the social security report adds that this represented only 44 percent of the total personal health care expenditures of Americans under 65.

Other reports are equally critical of the private health insurance sector, its manner of operation and what many consider to be inadequate regulation that has resulted in confusion, complexity and needless expense for consumers.

An illustration of the confusion thrust on policyholders by private insurers, from inadequate regulation, is the following letter a claimant received from her health insurance company:

"We sincerely regret we are unable to provide benefits in connection with this claim because expenses incurred for normal childbirth, a caesarian section or a miscarriage are not covered. In cases of pregnancy, the policy provides only for expenses incurred as a result of complications thereof."

"What is that supposed to mean?" the woman asked, "funeral costs?"

Private health insurance is being marketed in such a blatant manner in some instances, stemming from the lack of regulation, that even "unlicensed insurance brokerages" can operate in New Jersey.

State Sen. James H. Wallwork (R-Essex) told of an agent who knocked on his door last month to sell a health policy.

"He had no business card, no promotional literature, nor anything else that could identify he was an insurance agent. But he did have a good sales pitch and an application form for me to sign, at a premium of $164.85 a year," Wallwork said.

Upon checking with the State insurance department's licensing division, Wallwork was first told that the man was a licensed agent, but that the insurance brokerage employing him was unlicensed, which is a serious offense.

However, several weeks later Wallwork received a letter from Arthur M. Keefe, chief investigator of the insurance department, after the senator formally filed a complaint with the department. Following a more thorough review, Keefe said records show the insurance brokerage is licensed.

"The incident covering the solicitation at your residence does leave something to be desired," Keefe wrote, advising Wallwork that if he wished the department would pursue the matter further.

In similar cases, the insurance department, which earns almost $40 million a year for the State in the form of insurance taxes and licenses fees, says it does not have sufficient investigative and examining personnel to protect the public adequately from unscrupulous practices by health insurance companies, agents or brokers.

The HEW report of last month referred to its concern over the true effectiveness of the private health insurance industry if it ever became properly regulated in order to serve a major role in NHI:

"It should be noted that extensive regulaiton and alteration of current industry practices might lead to fundamental change in the character and nature of the industry itself."

The report also expresses concern that lax regulation has made it almost impossible to understand the health insurance industry's true profit picture, which would be a major factor if a national health insurance program were forced to rely on administration from the private sector. According to the report:

"The true extent of insurance industry profits and marketing costs is difficult to determine from existing data."

It explains the underwriting and accounting principles vary among the different companies. As a result, "marketing costs are difficult to measure and categorize appropriately."

The report adds that "inclusion of commercial insurers as underwriters of NHI virtually implies an allowance for profit. Profits could be regulated, along the line of a public utility, if that were desired."

But based on the complexities of profit regulation by the States in other lines of insurance, the report says:

"The necessary regulation could become so extensive and complex that it might make more sense for the Federal Government to operate the program directly."

Extensive hearings in the last several years before the U.S. Senate Special Committee on Aging have raised questions concerning the effectiveness of the private industry just in its role as intermediary in the administration of federal medicare funds.

There is also testimony before the committee that has raised concern over practices by the private sector in providing supplemental medicare coverages.

The Special Committee on Aging is a fact-finding body, and Sen. Harrison A. Williams (D-N.J.) served as its chairman for 6 years, until 1970. Williams remained a ranking member of the committee until last year when he became chairman of the Senate Human Resources Committee—the committee that could sponsor legislation to correct any abuses found by the Special Committee on Aging.

"I know that in my years as chairman of the Senate Aging Committee we found that senior citizens indeed were often special targets for fraud in the area of health care," Williams stated.

"Certainly there are now serious questions being raised about certain aspects of the supplemental insurance fiield, and these are a matter of very grave concern to the Aging Committee," he added.

"I would expect that this will be a subject of special and particular interest to the committee, and I would hope that we could formulate a plan of action so that senior citizens can obtain the coverage they need without falling prey to any abusive or fradulent practices," Williams said.

Dr. Gladys Ellenbogen, former head of the economics department at Montclair State College and the Committee on Aging's nationally recognized authority on private health insurance, said that most consumers know very little about how to buy health insurance.

"Generally, people are totally inexperienced in buying health insurance because during most of their lifetime it is their employer's problem," Dr. Ellenbogen explained.

"At the age of 65 you're on your own. If you take an early retirement you are not yet eligible for medicare and you have to pray that you don't get sick. With homeowners and auto insurance the average person is experienced, because you're confronted with it all your life," she said, adding:

"When you buy car insurance there's unit pricing. You know what you're paying for collision, liability and comprehensive.

"But when you buy health insurance you can't pick and choose. It's very tough for the consumer to be selective in health insurance, partly because they have no experience in buying and partly because there is no unit pricing."

"The average person knows nothing about how to buy nursing home coverage. or a policy that would cover prescription drugs, or private duty nursing—even if there were policies just limited to those areas. But they give you a whole package, and there is no comparison shopping from company to company, which makes it so difficult, especially for the elderly.

"On top of everything else, State insurance departments have limited power over premium charges because most States have no legislation or very limited legislation concerning health cost containment."

On January 1, 1978, Medicare Deductibles - The Part You Pay Out of Your Own Pocket - Jumped 16%! YOU are Paying these Higher Bills!

THE UNION FIDELITY

MEDICARE SUPPLEMENT PLAN

PAYS ALL THE PART A IN-HOSPITAL DEDUCTIBLES YOU HAVE TO PAY YOURSELF!

NO OBLIGATION

PAYS a maximum of $50,000 in cash benefits.

PAYS the $144.00 Initial Medicare Deductible.

PAYS the expenses for your first 3 pints of blood.

PAYS the $36.00-a-day Deductible from the 60th to 90th day totalling $1,080.00.

PAYS the $72.00-a-day Deductible from the 91st to 150th day . . . totalling $4,320.00.

PAYS 100% of your total eligible Hospital bill up to $144.00 per day when Medicare stops paying.

PAYS cash benefits direct to you, or anyone you choose.

ALL CASH benefits are paid in addition to any other plan you have.

GUARANTEED ACCEPTANCE, regardless of your age or health history, if you haven't been confined in a hospital or nursing home in the last 60 days.

NO OBLIGATION

YOURS FREE if you apply before MAY 31, 1978 The Exclusive MEDICARE REFERENCE CARD

SENIOR CITIZENS, PLEASE NOTE:

Government Has Increased Your Medicare Deductibles Again For 1978

You have until February 8, 1978, to add this In-Hospital Medicare Part A Supplement Insurance Protection

APPLICATION FORM ENCLOSED

SENIOR CITIZENS DEPARTMENT

Bankers Multiple Line Insurance Company
4810 No. Kenneth Avenue • Chicago, Illinois 60630

NOW...PAYMENT FOR ALL YOUR NECESSARY IN-HOSPITAL COSTS THAT MEDICARE PART A DOESN'T PAY— STARTING WITH YOUR FIRST DAY IN THE HOSPITAL

- Pays you before Medicare starts (the first $144)
- Pays you when Medicare reduces ($36 a day)
- Pays you when Medicare reduces again ($72 a day)
- Pays you when Medicare stops completely
- Pays you up to $50,000 maximum in lifetime benefits

Dear Friend:

Government Medicare is a fine thing for Americans 65 and over. It means that every senior citizen can get the medical attention he or she needs. However, even from the start, Medicare was never intended to cover all of your hospital expenses. The Government has had to establish limits on the benefits you receive as a patient in a regular, general hospital.

This means that you must pay part of your hospital bill yourself. And the amounts you must pay have increased for each of the last 10 years. They had to. Skyrocketing costs have forced the Government to pay out more and more, and to increase the share you must pay, too.

(over, please)

Senator CHILES. The committee has more examples of exploitation of older Americans and concern on the part of State insurance regulators.

Subsequent to this hearing, we will make a thorough evaluation of the testimony presented and determine further steps to be taken by the committee.

Senator Domenici, we are delighted to have you here to participate in this hearing. Do you have an opening statement?

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. Yes, Mr. Chairman. I commend you for your opening statement; I think it clearly defines the parameters of a very serious problem.

Adequate health insurance is a protection everyone needs, particularly in these days of ever-increasing hospital costs. The elderly, however, are most concerned about insurance coverage as they fear the prospect of a catastrophic illness or prolonged ill health, either of which may deplete their life savings. As a result, the elderly have become a new and expanding market, as well as an easy mark, so to speak, for insurance salesmen who sell expensive policies to the elderly, assuring them that the insurance will pay for what medicare does not cover. Unfortunately, this is not always the case. The insurance itself may not be faulty but the fine print regarding exclusions for coverage, such as "pre-existing conditions" can often make the insurance useless to the elderly who may have multiple health problems. For this reason, although an individual may hold various insurance policies, medical expenses may not be covered.

MEDICARE PAYS LESS AND LESS

The fact that medicare pays less and less proportionately of the total medical bill has led to the rise of the development of what are called medi-gap policies. Insurance agents sell insurance to fill the gap but often sell more than the individual needs or can afford. It has been documented that the elderly often have overlapping policies but sometimes are not able to receive the coverage expected from any one of them.

State insurance commissions are beginning to take note of this problem as you noted, Mr. Chairman. Wisconsin has adopted strict standards which we will hear more about today. I am pleased to note that my own State of New Mexico has adopted similar standards to be effective in June. The commissioner of insurance in our State, Kenneth Moore, said in a recent interview:

> Our regulations are intended to stop agents from taking advantage of the elderly. Senior citizens are often lonely and anxious to talk to people. Some agents know that, and too often the senior citizen ends up getting fleeced into some policy that he or she doesn't really need.

Most insurance salesmen are in the business to help people of all ages. Some, however, are overzealous, shall we say. The elderly are uninformed about the intricacies of the wording of insurance policies.

It would seem that there is a need for insurance counseling as a part of the legal services we are offering the elderly. It could also be designed in much the same way as we now offer assistance to the elderly in the preparation of income taxes.

I look forward to the testimony of the witnesses and hope that this issue may become widely recognized, that the elderly will be helped to become knowledgeable consumers, and that the insurance industry and State insurance commissions will set standards to avoid the problems associated with medi-gap insurance policies.

Thank you, Mr. Chairman.

Senator CHILES. Thank you, Senator Domenici, for your comprehensive statement.

Senator Glenn is also here today. Senator Glenn first brought to the attention of our committee the Lowry case. Mr. Lowry, son of Mrs. Lowry, is going to be a witness here today.

Senator Glenn, we are glad for your endeavor in bringing that case to our attention. That is certainly one of the prime reasons that we are focusing on this subject today and we would be delighted to hear from you.

STATEMENT BY SENATOR JOHN GLENN

Senator GLENN. Thank you vey much, Senator Chiles.

I think rather than thanking me we ought to thank Mr. Lowry who is with us here today and who will bring out some of the things we passed on to the committee. Mr. Lowry was instrumental in having these hearings held as early as they are being held after he contacted us. The committee staff was looking into some of these general problems that he brought to our attention.

I won't try and pre-empt Mr. Lowry's statement, which he will make here in a little while, by going into all of the details. I am sure he will put it forth eloquently, as he has in the past, to us and to the committee. It is a story that I think is all too typical of what is happening too many times these days.

I might add one other letter we received in mid-February of this year from a gentleman who is 79 years old. He is a farmer. He says, "My good wife is 77." He goes on talking about an operation he had and about paying for it. This is in Alvada, Ohio, and I won't use his name, but let me read the last couple paragraphs from his letter.

> Recently a young fellow, a fast talker, and an agent from this insurance company came, so he said, to help us process our papers. When he got his foot in the door he proceeded to tell us we did not have enough health insurance. In his fast talk he told us that medicare was in bad shape and that it would run out or be defunct in 1979. Well, I wrote him a check for $787.80, which I am going to try to recover.
>
> Now how about it, is medicare sound? I hope so. If it is, we had plenty of insurance before we took out more, and I will tell this young fellow to return our old policies and reimburse us for what we paid him.
>
> Yours truly.

[The full text of the letter follows:]

ALVADA, OHIO, *February 14, 1978.*

DEAR SENATOR GLENN: I am a farmer, 79 years old; my good wife is 77, and we are Democrats. We think you are doing a fine job as Senator and we don't think you will have any trouble being reelected.

Now, my reason for writing to you. Recently I had major surgery resulting from an aortic aneurysm. As you may know, the hospital and surgical bills were enormous. Medicare paid most of the hospital bill and all but 20 percent of the surgical bills, for which we were very grateful and fully satisfied.

We have hospital, surgical, and accident policies from a well-known insurance company. We have had these for 20 years, which helped pay the incidentals and the 20 percent surgical which medicare did not pay.

Recently, a young fellow—a fast talker—and an agent from this insurance company came, so he said, to help us process our papers. When he got his foot in the door, he proceeded to tell us we did not have enough health insurance. In his fast talk, he told us that medicare was in bad shape and that it would run out or be defunct in 1979. Well, I wrote him a check for $787.80, which I am going to try to recover.

Now, how about it—is medicare sound? I hope so. If it is, we had plenty of insurance before we took out more, and I will tell this young fellow to return our old policies and reimburse us for what we paid him.

Yours truly,

[Name withheld.]

Senator GLENN. I think that is all too typical of some of the things going on these days. Therefore, we obviously wish to explore here what the relationship is between the agent who is out doing this fast talking with his foot in the door and the companies that should be controlling those agents to a better extent than they do.

"A FLIM-FLAM SITUATION"

I think, as Mr. Lowry will point out, the volume of policies sold to his mother, and the other examples that we will have brought forth here today, are the result of scare tactics. Too often, there is no control exercised by the companies involved. How can we correct this? How can we get these people recompensed for their expenses and the excess policies they have already bought? More importantly, how can we control this better in the future, through whatever Government action, if that is required, or through action by the insurance companies and State insurance commissions controlling what has gotten to be a real flimflam, a real fraud situation?

Those are the things that we want to get into day. I, in particular, wish to compliment Mr. Lowry in his coming forth with the information he gave us and being willing to come up here and spend his own time in bringing this to the attention of the committee so we can hopefully get cooperative action out of the companies and agents and, if not, do something about it with Federal legislation.

Thank you, Mr. Chairman.

Senator CHILES. Thank you, Senator Glenn.

I think many times people ask, does it do any good to write a letter? I think sometimes it does do some good to write a letter, and today is an example of that in our hearing.

Our first panel of witnesses will be consumer representatives consisting of Robert Lowry of Raleigh, N.C., and Jules L. Klowden, counselor of the Senior Service Center, San Diego, Calif. If you will come to the witness table.

Mr. Lowry, we will allow you to lead off. We do appreciate your appearance here today and your effort.

STATEMENT OF ROBERT E. LOWRY, RALEIGH, N.C.

Mr. LOWRY. Thank you, Senator Chiles; thank you, Senator Glenn and Senator Domenici, for your comments.

I should like to express my appreciation for the invitation to appear before this committee and to congratulate the committee and its fine staff for the demonstrated determination to probe into the complexities, pitfalls, and problem areas encountered by the elderly as they seek adequate insurance protection. I think it is a tragic state of affairs, Senator Chiles, if the case history I am about to present can equal or top the story you told regarding the elderly Wisconsin woman. I suspect there are many similar, but untold stories of insurance exploitation throughout this country.

My name is Robert E. Lowry and I am a resident of Raleigh, N.C. My present involvement in this subject matter is accidental, but it has stimulated the creation of a personal commitment to assist in the exposure, correction, and prevention of unfair or abusive practices in the sale of insurance to the elderly. From the outset, I should make it clearly understood that I am not trained nor highly knowledgeable in matters of insurance. I am not an attorney, but have often wished I were, in view of the present circumstances. At the time of my initial involvement last August, I was in the terminal stages of a program of graduate work at North Carolina State University. Prior to that. I was with the U.S. Department of Justice here in Washington.

Today I represent, by proxy, my 76-year-old mother, Mrs. Lucille W. Lowry, a resident of the United Methodist-sponsored retirement community of Otterbein Home in Lebanon, Ohio. She wishes you well in your efforts and sincerely hopes that whatever mistakes, suffering, expenditures, and problems she has experienced in her serious over-involvement with insurance may serve a positive purpose in alerting others to the need for caution and access to sound, impartial advice. Both of us also hope to encourage the creation or improvement of effective and easily accessible avenues for correction or adjustment once a problem situation is discovered.

With the Senator's permission, I shall attempt to briefly describe the development of my mother's insurance problem, and equally important, the difficulties we encountered in attempting to resolve the situation. In July 1973, Mrs. Lowry moved from her home in California to a small apartment within the "independent living" complex at Otterbein Home. My mother is a very proud, independent, and private person, having adequately managed her business affairs and much of the family finances in the past. I respected these qualities and did not attempt to meddle in her affairs, although I had assured myself that her income from various sources was sufficient to meet the expenses of her new life at Otterbein Home. I might also mention that she had, in my estimation, a more than adequate insurance program at the time of her arrival in Ohio, both in life and in health coverages.

During the spring of 1977, I was puzzled by my mother mentioning, in several telephone conversations, that she was feeling financially strapped and was finding it necessary to defer certain planned expenses. I knew that her income averaged slightly over $1,000 per

month and that Otterbein Home expenses would not normally exceed half that amount.

In August, I drove my family to Ohio for a planned 1-week visit with my mother, but we remained for nearly a month when it was discovered that she was experiencing a major financial problem. I reviewed her record of expenditures and was startled to find a recent and extremely large outlay of funds to one insurance company. From her bank deposit box I obtained a variety of insurance policies and attempted to match these to the canceled checks which reflected her rapidly increasing involvement with additional insurance purchases since 1975.

Found a Number of Policies

Four health policies and three expensive life insurance policies issued by Bankers Life & Casualty Co. of Chicago were identified as representing Mrs. Lowry's major insurance expenses over the previous 2 years. However, I also encountered several canceled checks made out to the same company which, in the memo portion, made reference to policies or forms which were not in her possession. Two of these had my brother's and my initials. Automatic bank draft payments were also being made on policies which could not be located.

My mother was unable to recall what these policies represented and I then contacted one of the seven Bankers agents who had recently sold my mother insurance and requested an explanation of her entire program. He said that the two local Dayton, Ohio, offices did not attempt to maintain such information on its customers, but that he would contact the home office in Chicago. On August 25, the agent telephoned to inform me that several policies had been purchased in April 1977, among these an annuity policy on my life and one on the life of my brother, Kenneth. He further indicated that these policies had apparently never been "placed" or delivered to my mother and then, rather surprisingly, offered to have them canceled and refunded. Neither my brother nor I had previously known of the existence of these policies and I was aware that most States prohibit the creation of life insurance on a mature person without his knowledge, consent and signature. It was for these reasons that I postponed acceptance of the offer to cancel. I wished very much to see these highly questionable policies.

Over $13,000 Paid to One Company

With the concurrence of my mother, her attorney, and the administrator of Otterbein Home, a power of attorney was created in order that I might act in her behalf due to the precarious state of her finances and a condition of failing health and capacities. Alarmed that over $13,000 had been paid out in premiums to Bankers Life & Casualty during the previous 2 years for an extensive, and largely unnecessary, insurance program, and outraged at the discovery of a new and unwanted policy on my life, I contacted the Ohio attorney general's consumer protection section for guidance.

An investigator was immediately sent to Lebanon for a review of the materials I had accumulated, and interviews with my mother and

myself. Despite the attorney general staff's demonstrated concern and interest in the matter, it was later determined that the Ohio Consumer Fraud Act specifically prohibited their intervention in problems of insurance. The attorney general's office did provide me, however, with some information which was of considerable help and which enabled me to understand that my mother's over-involvement with insurance was neither a unique nor isolated situation.

I should like to submit these copies of press releases from the Pennsylvania Department of Insurance for the committee's review. These press releases relate to the years 1974 and 1975, but I found them of considerable relevance. Some striking similarities exist in the abuses cited in Pennsylvania and my mother's insurance problem.

I would like to read brief sections from several of the releases:

[PENNSYLVANIA] INSURANCE DEPARTMENT ANNOUNCES "CRACKDOWN" ON COMPANIES, AGENTS EXPLOITING ELDERLY

Those (agents) found to be engaged in fraud or forgery have been turned over to local authorities for criminal prosecution. As a result of these investigations, around 50 agents have lost their jobs and 10 have been indicted.

There are various methods employed by agents to exploit the elderly. Among these are:

—Recontacting longtime elderly insureds of the companies, getting them to lapse their policies and buy new ones.
—Passing the names of elderly, sometimes senile consumers from agent to agent and thus causing multiple sales of insurance policies.
—Forging signatures of applicants on the applications.
—Writing policies on sons, daughters, nephews, and nieces of elderly persons.

WHAT THE PUBLIC CAN DO

Elderly citizens throughout the State must be extremely careful they do not fall prey to these smooth talking charlatans. Younger people with parents of advanced age should check into their financial affairs to be quite sure victimization is not taking place. Here are some "warning signals" which may suggest you or a loved one is becoming a victim:

—An agent suggesting you replace an older health insurance policy with a new one.
—Several agents from the same insurance company calling on a regular basis to make new sales.
—An agent trying to get you to purchase insurance on a fully grown child, nephew or niece.
—A "helpful" agent who wants to complete all questions on the application for you.

Senators, in the course of my investigation of Mrs. Lowry's insurance problem, I became convinced that most of the tactics described had been utilized in the company's contacts with her. I also learned that Bankers Life & Casualty was one of the companies involved in the problem situation in Pennsylvania.

Senator CHILES. Without objection, those press releases will be made a part of the record.

Mr. LOWRY. Thank you, Senator.

[The press releases referred to follow:]

PRESS RELEASES FROM THE PENNSYLVANIA INSURANCE DEPARTMENT

SEPTEMBER 25, 1974.—Insurance Commissioner William J. Sheppard today announced an intense "crackdown" on insurance companies and their agents who have been engaged in a disgraceful exploitation of the senior citizens of our commonwealth through the sale of health insurance.

During the past several months, the department's bureau of policyholder services and enforcement has been investigating the activities of a number of health insurance companies and their agents, most of whom have been operating in Western Pennsylvania. Communities that have been major targets of these unscrupulous people include Pittsburgh, Greensburg. New Castle, Mount Lebanon, Erie, Altoona, Meadville, Sharon, Oil City, and Franklin. As a result of the department's efforts, nine agents have been arrested and seven of those indicted.

CHARACTERISTICS OF THE EXPLOITATION

The characteristics of this type of selling include:

Recontacting longtime elderly insureds of the companies, getting them to lapse their policies and buy new ones.

Passing the names of elderly, sometimes senile consumers from agent to agent and thus causing multiple sales of insurance policies

Taking premiums for annual policies and having them issued on a quarterly basis to get a larger commission.

Writing many policies under a variety of names to avoid detection of the multiple sales ("Mary Smith," "Mary A. Smith," "M. Ann Smith," etc.).

Forging signatures of applicants on the applications.

Writing policies on sons, daughters, nephews, and nieces of elderly persons.

Before delivery of policies, tearing out riders which exclude payment for various health conditions the insured may possess.

The worst case to come to our attention is that of an 80-year-old woman from Meadville who spent $50,574 in a recent 3-year period on 31 policies, all of which lapsed. We requested the presidents of the nine insurance companies involved to refund her money. So far, six have done so.

In still another case, an 87-year-old Greensburg woman bought 22 policies in 28 months from six different agents. Three policies were issued on nieces and a nephew.

Another lady in her seventies was spending $100 of her monthly $109 social security benefit on various insurance policies. She told our investigator she sold baked goods and dipped into her savings to make ends meet.

The Pennsylvania Insurance Department is presently contacting, via personal interview and questionnaire, several hundred elderly Westmoreland County and Blair County residents suspected of having been victimized.

CAUSES

There are several causes of the problem. First, the companies involved have been very lax in screening the type of agent they hire. We find many of these problem agents go from one such company to another, lapsing and rewriting their client's health insurance as they go. These companies only seem to care about placing new business on their books. Second, life-health insurance companies pay very little commission on renewals. Thus there is an incentive for the unscrupulous agent to rewrite policies. Additionally, some of these companies pay a higher commission for the shorter term policy. One insurance company recently informed us their commission scale (percentage of initial premium paid to the agent) was: Annual premiums, 50 percent; semiannual premiums, 65 percent; and quarterly premiums, 85 percent. Third, many of these insurance companies have chaotic records systems and do not notice multiple sales.

Finally, the companies in question do not send out investigators to randomly review sales their agents are making.

WHAT THE INSURANCE DEPARTMENT IS DOING

First, we are arranging for formal departmental legal action against those agents found breaking our laws. Those found to have engaged in fraud or forgery are being turned over to local authorities for prosecution. The Post Office Department is also looking into our findings for possible prosecution for mail fraud.

Second, thorough investigations of companies whose agents are engaged in such practices will be conducted. We are going to require refunds of premium, payment of denied claims and will take formal action under the Unfair Insurance Practices Act, which was signed into law by Governor Shapp on July 22, 1974.

Third, we are considering the requiring of all health insurance agents, when they replace a policy, to give the consumer a comparison of both the new and the old coverages.

Fourth, new guidelines covering the conduct of insurance agents have been completed and will be published shortly. These will go a long way toward removing such agents from the marketplace.

WHAT THE PUBLIC CAN DO

Elderly citizens throughout the State may be extremely careful they do not fall prey to these smooth talking charlatans. Younger people with parents of advanced age should check into their financial affairs to be quite sure victimization is not taking place.

Here are some "warning signals" which may suggest you or a loved one is becoming a victim:

An agent suggesting you replace an older health insurance policy with a new one;

Several agents calling from the same insurance company on a regular basis to make new sales;

Failure by the agent to give you a receipt for your premium on the new policy which indicates the name of the insurance company and the type of coverage;

An agent trying to get you to purchase insurance on a fully grown child, nephew, or niece;

Evidence that a new health insurance policy or life insurance policy delivered by your agent has been torn apart;

A statement by the agent that your policy is being billed on a quarterly or semi-annual basis when you thought the premium was for an entire year;

A "helpful" agent who wants to complete all questions on the application for you;

Failure of the insurance company to pay a claim due to a "pre-existing health condition" when you are under the impression you have carried coverage with them for many years.

If any resident believes he or she has been a victim of one of these ripoff artists, they should immediately contact the Pennsylvania Insurance Department at one of its four regional offices located in Pittsburgh, Harrisburg, Philadelphia, and Erie. We will immediately investigate the matter.

APRIL 8, 1975.—In September of 1974, the insurance department launched a crackdown on insurance companies and agents who specialize in ripping off the elderly. This was precipitated by our regional offices in Pittsburgh and Erie reporting cases of exploitation with regards to insuring senior citizens.

The worst case to come to our attention involved an 80-year-old woman from Meadville who spent over $50,000 on 31 policies over a 3-year period, all of which lapsed. The insurance department contacted the presidents of the nine companies and ordered them to refund her money. To date, she has received around $30,000.

To remedy this growing problem, Commissioner Sheppard has sent complaint teams into the smaller communities outside urban areas, because it is these smaller towns that have reported the most cases of elderly abuse. These complaint investigators listen to the problems and then initiate investigations into the agent and company involved.

The department has also filed formal departmental legal action against agents found violating the law. Those found to be engaged in fraud or forgery have been turned over to local authorities for criminal prosecution. As a result of these investigations, around 50 agents have lost their jobs and 10 have been indicted.

There are various methods employed by agents to exploit the elderly. Among these are:

Recontacting longtime elderly insureds of the companies, getting them to lapse their policies and buy new ones.

Passing the names of elderly, sometimes senile consumers from agent to agent and thus causing multiple sales of insurance policies.

Taking premiums for annual policies and having them issued on a quarterly basis to get a larger commission.

Writing many policies under a variety of names to avoid detection of the multiple sales ("Mary Smith," "Mary A. Smith," "M. Ann Smith," etc.)

Forging signatures of applicants on the applications.

Writing policies on sons, daughters, nephews, and nieces of elderly persons.

Before delivery of policies, tearing out riders which exclude payment for various health conditions the insured may possess.

There are several reasons the problem exists. First, the companies involved have been very lax in screening the type of agent they employ. Often, problem agents float from company to company, lapsing and rewriting their clients' health insurance as they go. Second, life-health insurance companies pay little commission on renewals. Because of this, there is a very great incentive for an unscrupulous agent to rewrite policies. Third, many insurance companies have chaotic records systems and do not notice multiple sales. Finally, many companies do not send out investigators to randomly review the sales their agents are making.

The insurance department has four branch offices, in Philadelphia, Harrisburg, Pittsburgh, and Erie, but it's the latter two which receive the most complaints concerning elderly insurance ripoffs.

In Pittsburgh, the number of cases involving alleged ripoffs has been dwindling, but one very recent case is noteworthy. It involved a very old woman who had paid premiums of about $42,000 on various policies. The agent who sold her the policies allegedly pocketed some of her premium checks and as a result, she was paying for coverage that she did not have. One of the Pittsburgh office's investigators, Ralph Hartford, learned of the case and began investigating. After many phone conversations with the insurance company president, the department was able to get back every penny of the woman's original outlay of $42,000. Meanwhile, the agent who allegedly forged her signature, cashed her checks, signed her up for policies she could never qualify for, and broke her savings, is now up before the insurance department for possible disciplinary action.

In Erie, our regional office serves a 14-county area and has a caseload of around 200, which keeps our two investigators, Jim Crawford and Bill Christ, quite busy, to say the least. The two of them are well known in the area for resolving complaints and consequently, many consumers experiencing problems with their insurance companies contact them for help. To date, the Erie office has gotten back over $60,000 for consumers who were taken advantage of by agents and companies. When those agents were reported, the Erie office informs us that so far nine have been arrested and charged in Western Pennsylvania. As shown by these figures, the Erie office has led the way in investigations and the removal of agents from the marketplace.

In addition to these programs designed to provide help for the elderly after the misdeed has been committed, the department has taken other steps to educate senior citizens so these abuses don't happen in the first place.

The department has maintained a systematic distribution to the elderly of the latest consumer guides, advising them on different lines of insurance and how they can avoid deception. Also, we are cooperating with Penn Dot in a new program which ensures that all Pennsylvania drivers over 65 will receive along with their drivers license renewal, computer cards stating where elderly insureds can go to resolve their insurance problems. One million cards are now being printed and they will be sent out starting in May.

Also, special circuit offices where investigators spend a day answering questions and complaints have been established all across the state.

In the past 6 months, the Pennsylvania Insurance Department has made great strides in eliminating the abuses inflicted on the elderly by unscrupulous agents and companies. Through the cooperation and dedication of our investigators throughout the State, the department has ferreted out these abuses, investigated them, pressured company executives for refunds to consumers, and hand delivered the refund checks to the senior citizens involved. These investigations take time and perseverence but the satisfaction involved in helping those who can't help themselves is well worth the time and effort spent.

Mr. LOWRY. I was referred to the insurance warden, the Ohio Department of Insurance. I filed a complaint and request for clarification of this matter. He, in turn, requested the company to provide copies

of missing documents and an accounting of all premium moneys received. A meeting with representatives of the company was scheduled for October 13. Shortly prior to this meeting I learned of the existence of four additional policies—one accident policy on Mrs. Lowry and three life policies on her grandchildren—bringing the total of policies in force with this company to 13. I also learned that a total of 17 sales had been accomplished but 4 policies were canceled and refunded, at least 3 of which were apparently duplications of coverage. With the exception of the original health coverage sold in November 1973, all sales took place within a 2-year time frame.

13 Sales by 5 Agents in 5 Months

Please refer to the sheet containing a list of policies sold to Mrs. Lowry. The list is submitted as an integral part of this presentation. You will note from the column of issue dates, or date sold, the rapidly increasing frequency of sale, similar to a snowball rolling ever more rapidly down hill and increasing its mass in premium dollars. In 1975, 1 major life policy; in 1976, 1 major life policy, 1 small life policy—refunded—and 2 health policies; and in 1977, 11 sales: 6 small life policies and 5 health policies—three refunded as duplicates—for a total of 16 sales. Within the 5-month period of December 1976 and April 1977, some 13 separate sales were accomplished by 5 agents. That averages out to approximately one sale every 11 or 12 days. I cannot avoid wondering how far the company representatives would have pursued this situation or just how large the "snowball" might have become had no one interceded. By June 1977, Mrs. Lowry's contractual obligations for premium payments amounted to $9,158.61 per year or approximately 68 percent of her annual income.

BANKERS LIFE & CASUALTY INSURANCE POLICIES

	Policy No.	Date sold	Coverage	Agent	Actual annual cost	Paid
1.	730-576-561	Nov. 9, 1973	Health, medical surgical, extended care	Carson	$109.64	Annual.
2.	5-248-470	June 3, 1975	Life, $17,145	Keller	3,090.00	$257.50 per month.
3.	760-175-115	April 19, 1976	Health, intensive care	Walsh	73.09	Annual.
4.	4-854-476	June 14, 1976	Life, $17,358	Keller	3,364.64	$841.16 quarterly.
5.	5-393-843	Dec. 15, 1976	Life, increasing to $2,480	Walsh	(272.73)	Refunded.
6.	760-392-452	Dec. 16, 1976	Health, hospital medicare supplement	do	76.91	Annual.
7.	R-831-018	Jan. 9, 1977	Health, intensive care (duplicate)	Walsh (?)	(109.64)	Refunded.
8.	770-052-917	do	Health, hospital indemnity	Walsh	284.72	Annual.
9.	5-413-376	Mar. 2, 1977	Life, increasing to $3,200	Grooms/Rainey	446.51	Do.
10.	770-150-792	April 2, 1977	Health, intensive care (duplicate)	Montgomery +A4544	(129.82)	Refunded.
11.	770-149-043	April 22, 1977	Health, accident, $10,000 to $50,000	LaBovick-Montgomery	27.82	Annual.
12.	5-432-306	do	Life annuity, $2,000 each	Montgomery	842.64	$70.22 per month.
13.	5-432-307		R. Lowry and K. Lowry		842.64	$140.44.
14.	R-844685	April 25, 1977	(?)	(?)	(109.64)	Refunded.
15.						
16.			3 life policies on grandchildren			$1,000.
17.						
	Total		5 life policies in force, annual premiums			$8,586.43.
			5 health policies in force, annual premiums			$572.18.

How did this happen? It is, perhaps, unnecessary to observe that my mother was a prime target for relatively easy sales. Her pride in, and love for, her two sons and their families is quickly apparent in any conversation, as is her continuing need to feel she can still do something nice for them. Certainly, in this, she is no different from millions of other senior citizen parents. She was, therefore, susceptible to sales arguments utilizing such terms as "estate expansion," "free of probate,' and "tax-free income for your loved ones."

"Trying to Cover the Medicare Gap"

Again, like millions of others, Mrs. Lowry was terribly concerned about the possibility of a long-term or chronic illness and the catastrophic effects that this could have on her savings and her small income producing investment program. Unfortunately, neither medicare nor private insurance carriers attempt to offer much protection against the long-term illness and she was persuaded to attempt to cover the medicare gap with a multitude of small specialized health policies.

She was also very trusting of the "professional guidance" so generously offered by the various insurance sales representatives and felt a genuine friendship and affection for some. When finally faced with the realities of what had grown to be an extremely heavy financial commitment to premium payments, the personal anguish she experienced was made doubly painful with the realization that none of her "friends" had bothered to warn her she was getting in too deeply.

During the course of my own efforts to unravel and understand this problem, I learned that seven or more separate agents, including branch managers, from Bankers Life & Casualty had dealt with and sold insurance to Mrs. Lowry. Six of these agents worked with her during the 2-year period of June 1975–May 1977. Both my mother and several of her neighbors at Otterbein Home recall that a large number of the agent's visits were in groups of two and sometimes three. This type of group visit was particularly distressing to me for I know how difficult it would be for my mother to reject their combined "guidance."

The October 13 meeting in the offices of the Ohio Department of Insurance was relatively unproductive and unpleasant. Present were Robert Katz, Ohio insurance warden; William Grubbs, director of government relations, and Mr. William Tobin, regional manager, representing Bankers Life & Casualty; Miss Warner, business manager, and Eugene Strawn, resident, both of Otterbein Home, and myself.

From the outset, the atmosphere was that of adversaries. Mr. Grubbs demanded to know why Miss Warner and Mr. Strawn were present and what interests they represented. He questioned the validity of my power of attorney and my personal motivations for involvement in my mother's business affairs, stating that the company's "first obligation" was to Mrs. Lowry. When issue was made about the frequency of sales visits to my mother by groups of agents, this was denied by Mr. Grubbs as impractical; it would not happen. Subsequent correspondence from Mr. Grubbs has made much of this denial with assertions that such group visits would occur only in the training program

and then only on rare occasions. I sincerely resent the fact that my mother's doorstep was apparently used as a training ground for new agents and the occasions were not rare.

Questionable Signatures

The two missing policies on my life and that of my brother were delivered, but were stamped "duplicate," an identification which I protested. The contract signatures were not in our handwriting and I indicated they might have been signed by my mother. However, the signatures had been witnessed or authenticated by the selling agent, Ronald Montgomery. Mr. Grubbs commented that the policies were not properly written. My mother's apparent participation in the creation of these questionable contracts was represented as a serious inconvenience to the company, but Mr. Grubbs said we would be permitted to choose whether to continue the policies in force or rescind them for a full refund of premiums.

During this meeting, it soon became apparent that the only "adjustment" the company was willing to make to Mrs. Lowry's 13-policy insurance program was in reference to the forged policies. Their recommendation was to lapse any other policy which we found burdensome. "No free rides" was the comment I recall hearing. In good conscience, and in my mother's best interest, I could not accept this as the only alternative.

A brief explanation was provided of the various life and health coverages and the meeting terminated with an agreement that the family would have a month in which to discuss and decide upon those policies which would be maintained and those for which a refund would be requested. Mr. Grubbs' parting comments referred to the meeting as a needless waste of time and included an estimate that the actions brought about by my "unfounded" complaint had cost the company nearly $4,000 thus far.

On November 3, a formal letter indicating the family's decisions was sent to both Mr. Grubbs and the Ohio insurance warden. Referring to the "unreasonable financial burden" which this recent and largely unnecessary 13-policy insurance program represented, the letter specifically requested rescission and refunds for the three expensive life policies on Mrs. Lowry and also for the recently "upgraded" hospital indemnity policy. These cancellations would have had the net effect of reducing her annual premium expenditures from $9,158.61 to $1,972.74, or approximately 15 percent of her annual income. It was clearly stated that the premiums would be paid on other health policies as they became due. The company was also duly informed that no decision had been reached as to the course of action we would take with regard to the highly questionable policies on my brother and myself.

My mother wrote her own letter to Mr. Grubbs to confirm the unity of the family decision and I would like to read just a portion of her letter. I feel it rather eloquently portrays the frustration and anguish she was experiencing. After requesting cancellation of the four policies, she says: "I trusted your salesmen to help me set up an insurance program. * * *" "Sincerely, L. Lowry." Both of these letters are submitted as part of this presentation.

Senator CHILES. Those letters will be admitted as part of the record. [The letters referred to follows:]

RALEIGH, N.C., *November 3, 1977.*

Re: Lucille W. Lowry.

Mr. WILLIAM GRUBBS,
General Counsel, Bankers Life and Casualty Co.,
Chicago, Ill.

GENTLEMEN: This letter will acknowledge receipt of the three missing policies purchased by Mrs. Lucille W. Lowry from Bankers Life and Casualty Co. on the lives of her three grandchildren. These three policies, as well as the life and annuity policies on Kenneth F. Lowry, Jr. and Robert E. Lowry, delivered on October 13, 1977, were erroneously stamped and identified as "duplicate policies." It is our contention that, in fact, these policies had never been previously delivered to Lucille Lowry.

The information derived from our meeting at the Ohio Department of Insurance on October 13 has been communicated to both my mother, Lucille W. Lowry, and my brother, Kenneth F. Lowry, Jr. Both of them have empowered me, in notarized documents, to act in their behalf. As was expressed at the meeting on October 13, our concern centers on the extensive variety of insurance policies sold to my mother between June 1975 and May 1977 (sixteen policies sold, of which four were cancelled and refunded as duplicate coverage). This insurance program represents considerable unnecessary coverage in view of her pre-existing insurance and now constitutes an unreasonable financial burden in monthly or annual premium payments amounting to approximately 68 percent of her present income. A proper financial analysis of Mrs. Lowry's needs and present situation as a resident of Otterbein Home would have revealed her permanent financial obligations to the home as well as other commitments. We therefore request the following:

(1) Rescission and refunds on the whole life policies No. 5,248,470, issued June 3, 1975; No. 4,854,476, issued June 14, 1976; and No. 5,413,376, issued March 2, 1977. These policies represent the heaviest financial drain on Lucille Lowry's resources and were unnecessary in view of the coverage which already existed in other life policies.

(2) Rescission and refund on the hospital indemnity policy No. 770,052,917.

(3) Compensation for the expenses incurred in attempting to investigate and resolve this matter. In their negotiations with Lucille W. Lowry, the actions and sales practices of the various agents representing Bankers Life and Casualty Co. raise serious questions regarding the lack of fiduciary responsibility, the resultant effect on her well-being, and her right to be compensated beyond the expenses mentioned above.

The premium will be paid on GR717 medical surgical policy No. 730,576,561, and on other health policies as they become due. At the present, no decision has been taken as to the course of action which will be followed in reference to the life and annuity policy No. 5,432,306 on Kenneth F. Lowry, Jr., and No. 5,432,307 on Robert E. Lowry. All refunds may be made payable to Mr. Lucille W. Lowry.

Sincerely,

ROBERT E. LOWRY.

LEBANON, OHIO, *November 10, 1977.*

Mr. WILLIAM GRUBBS,
General Counsel, Bankers Life and Casualty Co., Chicago, Ill.

Dear Mr. GRUBBS: Due to my physical condition, I was unable to attend the meeting my son, Robert, had with you at the offices of the department of insurance, State of Ohio, Columbus, Ohio, last month. Robert was acting in my behalf under my authorization. He explained to me the details of the meeting. He promised that I would make a decision as to my requirements on or before November 14, 1977. Therefore, my decision is as follows:

I wish to cancel the following listed policies and request refund of all premiums paid on these policies from the issued dates:

Life policies: 5248470, issued January 3, 1975; 4854476, issued June 14, 1976; 5413376, issued March 2, 1977. Health policy: 770052917.

I trusted your salesmen to help me set up an insurance program that would benefit my children. I did not realize that I would not be able to pay all these premiums until I found myself financially strapped and unable to meet my current obligations out of my monthly income. So instead of helping my children, I find that sooner or later I will lose all the money I have paid in and I am on a dead-end street, so to speak. An audit of my financial affairs indicates that 68 percent of my income is owed to Bankers Life and Casualty Co., and I will not be able to help my children as represented by your salesmen. My son, Kenneth, has been here from Michigan and agrees with all of the above decisions.

I sincerely hope you will make the above adjustment in order to rectify my predicament.

Sincerely yours,

LUCILLE W. LOWRY.

"AVENUES OF ASSISTANCE EXHAUSTED"

Mr. LOWRY. In the days following the meeting I did not know where else to turn for assistance in resolving this problem. The company's attitude in refusing to recognize that insurance oversale had apparently taken place and their minimal concessions gave little hope that our decisions and requests would provoke a positive response. I was also aware that the Ohio Department of Insurance appeared to feel that their immediate responsibility had been satisfied simply by bringing about the meeting. Due to the structure of Ohio laws it seemed that I had exhausted both the avenues and the remedies available to the complaining consumer in Ohio.

The problems of insurance exploitation and the offensive sales tactics described in the Pennsylvania press releases were so similar to my mother's situation that I began to wonder if the problem practices had crossed the State line and were now flourishing in Ohio and elsewhere. The probability that my mother's problem was not unique or isolated suggested the necessity of alerting the appropriate authorities and assisting in the exposure of the condemned sales practices.

The attorney general's staff was again helpful in referring me to a former staff member of your committee who is presently directing an Ohio agency program concerned with problems of the elderly.

She strongly suggested that I contact the Washington office of Senator Glenn and the Committee on Aging in order to call the problem to their attention. I did so. Senator Glenn and his staff became immediately involved. Letters were written to the Federal Trade Commission, the Ohio Department of Insurance, and the Ohio attorney general's office expressing a great concern for my mother's specific problem and requesting some review of the possibility that insurance exploitation of the elderly might be taking place in Ohio and elsewhere. Senator Metzenbaum also directed letters urging investigation of the problem to those same Ohio agencies. I contacted Senator Stevenson's office which reported the problem to the Illinois Department of Insurance and they, in turn, made inquiry of Bankers Life & Casualty. We are most sincerely grateful for the interest and support received from these concerned Senators.

I finally received a letter from Bankers Life & Casualty on December 10, and a copy of their reply to Senator Stevenson's inquiry. The letter contained a justification of the company's position, the propriety of the insurance program written on my mother and two refund

checks. To my complete surprise, the refund was a blanket cancellation of all 13 policies. Referring again to the letters my mother and I sent to the company, we specifically requested only four policies be rescinded and refunded, that is, the three life policies which constituted, by far, the major share—$6,901.15—of her annual insurance premiums and one health policy.

The company's action in this total program cancellation was inexplicable. There had been no intention on our part to leave my mother without some insurance protection. Three of the health policies were to be maintained, at least for the time being. The accident policy and the grandchildren's policies were relatively inexpensive and we had decided to retain them—despite our conviction that they represented basically unnecessary purchases in an already oversold program. The company's treatment, in this unrequested blanket refund and cancellation, was interpreted by us as a vindictive act. One further offense had been committed against this elderly client and we were unable to understand the reasons.

The Pennsylvania press releases make a strong recommendation, a plea, for family members to dare to involve themselves in their aging parents' affairs in order to help assure that overinsurance or exploitation does not occur. As I indicated earlier, my own involvement was accidental and very tardy. Once a problem of insurance oversale does exist and is discovered, the avenues available for pursuit of its correction or remedy are, I feel, unnecessarily difficult and time consuming. Responsible public agencies at the local or State level are not always responsive or tend to view their roles as referees who stand back and say, "Let you and him fight." Washington, D.C., is a long distance for most people to travel and it should not be necessary to come here in order to obtain an insurance program correction.

I sincerely hope that this difficulty of corrective actions might become one of the concerns of this committee. Also, there should be an awareness that there is considerable apprehension and reluctance to come forward, to admit publicly what my mother has mentioned to me. "I have loved too much, lived too long, or trusted too much."

Single Agent Selling Duplicate Policies

Senator Chiles. Thank you.

Mr. Lowry, looking at the listing here of the policies that she bought it appears that in one instance one agent was responsible for some of the sales of duplicate policies which were later refunded by the company on that basis. Is this your understanding?

Mr. Lowry. Yes. From the information I was able to gather, Mr. Walsh had sold the original health intensive care policy in April 1976 and 8 months later, he again sold her the same type of coverage which was subsequently refunded by the company as duplicative. This particular type of policy was very popular because other Bankers agents apparently sold it to her two more times in April 1977. I fail to understand this, but I do have the refund stubs. My mother is unable to recall the details of these transactions.

Senator Chiles. Do you know how these agents first contacted your mother? How did they become aware of her?

Mr. LOWRY. I do not know, Senator. If I might dare to conjecture, it may have been through a Sunday supplement coupon or a mailed out brochure which could have piqued her curiosity. She does have certain anxieties and concerns and I think it very likely that she would have responded to these advertisements.

Senator CHILES. Do you know if these same agents sold insurance to anyone else in the Otterbein Home?

Mr. LOWRY. I do.

Senator CHILES. They did?

Mr. LOWRY. Yes, sir. I know of at least one other Otterbein Home resident who purchased two life policies from the same agent who had sold my mother her two largest policies. She has apparently contacted some trusted person who has advised her against the program she purchased. She would like to obtain a refund and yet, when I look at the figures on her insurance, the cash surrender values are minimal—approximately one-third—in comparison to the amount of premiums paid in over 2 or 3 years time.

The company had made quite a point of saying to us that there would be no refund because the policies had been well sold, that there was a true "need" which existed for my mother. Therefore, nothing out of place had occurred. Yet, I believe, with the spotlight focused on them and receiving expressions of interest from various Senators here as to their actions, they did decide that a refund should be made. This was a full refund.

I would like to believe that the company would not consider my mother a very special exception. She did receive a full refund, and I would hope that perhaps other dissatisfied senior citizens might be able to obtain their program corrections.

Senator CHILES. Senator Glenn.

Senator GLENN. Thank you, Mr. Chairman.

This struck a particular chord with me because of a family experience we had, I guess. My dad worked as a plumber all his life, had a small plumbing shop, saved a very modest amount for retirement. My mother and dad owned their own home. About 2 years after my dad retired, he got cancer and was on about a 6-year downhill slide and all the savings went.

After my dad died, my mother then had a number of calls in the next few months regarding her own health insurance. I suppose they assumed that all the money had gone to pay for my dad's medical bills and she would be especially concerned about her own health problems. Fortunately, she called me and I was able to advise her in these matters. However, where there is not someone immediately available like that, and with the fright that the elderly have with regard to their health, it becomes an increasing problem.

"A FRIGHTENING, FRIGHTENING PROSPECT"

As people reach their senior years, health becomes the most important thing to them. When they have that concern, and when we know that medicare pays only about 38 percent of the medical costs of those over 65, you begin to see the extreme concern that people have of getting left stranded as paupers with nothing to take care of their

health needs. It is a frightening, frightening, prospect, and it places people like your mother, and others, in a situation where they are so very vulnerable to the pressures that can be exerted on them. That is something we absolutely have to take care of, either through the companies voluntarily or through law.

Let me add one other thing. I think those who have pushed for national health insurance with a comprehensive overall national health insurance have done a disservice in some respects. They have insisted on the whole national health package or nothing, and as a result we have got nothing. I think, a long time ago, we should have gone to the major area of concern—as I see it—that of covering the catastrophic illness. That is the one that just wipes people out overnight, wipes out family finances. It seems to me that we should get something in place that covers that most dangerous area, that of catastrophic illness, but we have not been able to split that off from comprehensive national health insurance. The proponents of national health insurance will not see anything except the full blown package, and as a result we have had nothing. I think we should be covering some of these areas of special concern.

Let me ask you specifically, in this area of false signatures, what was done on that? Now that is criminal. Was there any followup made on that?

Mr. LOWRY. The company had offered to refund those or honor the policies as we were to decide.

Senator GLENN. But I mean it is criminal for anything, not just with insurance. It is criminal to sign somebody else's name or falsify a signature. Did the attorney general or anyone follow up on that as to——

FALSE SIGNATURE NOT FOLLOWED UP

Mr. LOWRY. No, Senator. I appreciate your having raised this issue. I have been extremely disappointed at the lack of reaction in Ohio, to the maintenance of laws that I understood would exist for the protection of the citizens. Neither the attorney general's office found an avenue for acting in this area, nor the department of insurance. A local attorney I spoke to was unsure.

I had not requested, had not accepted the company's offer to refund these particular policies, because we were and still are considering possible legal action there in Ohio. This is an area about which I have felt a great deal of concern.

I might mention one other violation. In the blanket cancellation which the company accomplished of all of my mother's coverages, attached to every one of the health policies is a small rider called the Ohio statutory rider. I won't read the whole thing. It says, "Cancellation by the insured, noncancellation by the company." One of the sentences specifically says, "The company may not cancel this policy." Yet, the company did.

Now I plan to file a formal protest regarding this in Ohio. Even though the Lowry family feels that it wishes no further insurance involvement with Bankers Life & Casualty, we were willing to maintain these policies because we did not wish to leave my mother totally unprotected, but I protest the action of the company in violating yet one more Ohio statute.

Senator GLENN. Was one of the frauds that was also perpetrated—I guess it would be official fraud—that of using different names or using an applicant's initials one time, the first name another time, the first initial and middle name another time, so that perhaps they wouldn't show up on the computer runs that the company might make to follow up on individual agents? I don't think we are here today to castigate the whole insurance industry. That is far from my purpose here today because I think a lot of this comes from individual agents out there that need to be policed better by the companies. I don't fault everybody in all the companies, and I want to make that clear, but sometimes individual agents out there will use different names or sets of initials for the same person. Was that done in your mother's case? Was the name always the same?

Mr. LOWRY. This is one of the warning signals included in the Pennsylvania press releases, but I have not found that to be the case. Her name was spelled and misspelled with a passion, but this did not seem to result in a duplication.

Senator GLENN. Maybe this just was not a very bright agent in this case.

Mr. LOWRY. The company has made a great point in much of its correspondence to the North Carolina Department of Insurance in citing a number of rules which exist for the behavior of their agents. I found these extremely interesting due to the fact that they consistently managed to violate their own rules, so the recitation of such behavioral codes means very little to me. It may well be that these rules are a very recent creation and brought about through protests such as this.

Senator GLENN. Did you ever talk personally to the agents involved that sold these to your mother—Mr. Walsh, for instance—that sold five different policies in a reasonably short period of time, about 1½, 1¾ years?

Mr. LOWRY. No, Senator, I did not. I met with only one agent, Mr. Grooms, who came out to respond to some initial questions. He was also interested in insuring me during the visit. The subsequent contacts were all with Mr. Grubbs.

Senator GLENN. I know we do have other witnesses and our time is getting away, and we are going to have to move along, so I will curtail my questions. We might wish to send you questions that could be answered later on so the committee records will be complete. I would note though and want to make this comment to you, we are going to follow up on the record of today's hearings and your testimony. I have already asked my staff, Diane Lifsey on my personal staff, and I would ask the committee staff to go through this and make a copy of the day's hearings so that we can send it along with any comments on this from the staff here to the Ohio attorney general's office to see if there is any area of criminal prosecution that should be followed up.

The attorney general, Bill Brown, is a very good friend of mine. I know personally of his interest in following up where there has been fraud or where criminal activity would be involved against a particularly vulnerable group of people like this. I don't know at this point whether there is anything that can be done or not, but I know he would be interested in following through on it. We will make the

record available to him, along with staff analysis of where they think there might be particular areas that warrant criminal prosecution.

Mr. LOWRY. I sincerely feel that the Ohio attorney general's office did wish to become involved, but they found themselves blocked from such involvement by existing legislation and reluctantly referred me to the insurance department. I would hope that necessary changes could be made in the Ohio law and the Ohio Consumer Fraud Act.

Senator CHILES. Thank you. You have done a service not only for your mother but for a lot of elderly people, too.

Mr. LOWRY. Thank you.

Senator CHILES. Mr. Klowden, you are next. Your statement in full will be placed in the record and if you could summarize that for us a little bit it might help us because we have a number of other witnesses.

STATEMENT OF JULES L. KLOWDEN, VOLUNTEER INSURANCE COUNSELOR, SENIOR CITIZENS SERVICE CENTER, SAN DIEGO, CALIF.

Mr. KLOWDEN. I will try to be as brief as possible.

Senator CHILES. Thank you. We want to have time to ask you a few questions.

Mr. KLOWDEN. I am overwhelmed to be able to address these distinguished people.

My name is Jules Klowden, I am a volunteer insurance counselor with the city of San Diego Senior Citizens Service Center. My office is in the city administration building. A month after coming to live in the area, my services were enlisted as I came in to register to vote. The story given to me was that the seniors were being "ripped off" by insurance companies and since I was retired and formerly in the insurance field, would I help? Mrs. Evelyn Herrmann, chief of the senior citizen services, is in charge, and it was she who recruited me.

We analyze approximately 15 to 20 policies per week, or for that many people, I should say, and we have many telephone interviews as well. The city attorney has provided, in writing, permission for me to be able to recommend a number of insurance companies and our service is free of any charges to the public.

We find that people are inclined to buy more than one health policy for two reasons: (1) That medicare does not pay the entire bill and adheres to its famous phrase, "Reasonable fees and charges"; and (2) supplemental plans to medicare follow the same principle and offer to pay their share of what medicare allows as reasonable.

GAPS REMAIN

This leaves a big gap in medical costs for the patients to pay, despite the fact that they have medicare supplemental plans.

There is a great fear in the elderly, especially women, who worry about whether they have enough coverage should they wind up in a hospital or nursing home. This fear impels them to buy from glib-tongued salesmen and from well-flowered ads they see in newspapers.

An interesting case that I am concerned with is for a retired Navy chaplain who felt that he and his wife needed a benefit for a nursing home facility. The salesman, working for an insurance agency, came to the chaplain's home and after telling him about this great plan that he had, indicated that it could only be sold to members of his senior citizens association. The fee for that is $12 per year. The policy was purchased for $120 per year for each of them, plus a $10 policy "fee," a one-time payment, plus of course the $12 per year.

A statement in the policy says the company will pay according to plan selected, for a period not to exceed 180 days, after excluding the first 100 days of covered nursing home confinement. The benefit it provides is $10 per day. At no time does it offer to pay at least part of the medicare deductible since it does not pay anything until the medicare benefit ends. Is this value?

One month later, upon delivery of the policy, the salesman told of a great investment plan that he had for the chaplain. This was with a savings and loan association from Los Angeles which was planning to build an establishment in San Diego within 6 months.

The chaplain fell for the idea and his investment was to be $1,176 per year. After the second payment was made and no building was put up by the investment company, he tried to reach the salesman by phone and then with repeated visits to the office. The man was never in, always out to see his doctor, but never returned the calls.

Our chaplain now came to me for help and we found that the great investment for this 77-year-old man—now 79—was a life insurance policy. We filed charges of fraud with the district attorney as he was working on other cases against this sales agency. He, in turn, contacted the department of insurance. We are still waiting for the investigation to be completed.

The owner of this insurance agency has been arrested on another case since then with the trial coming up soon. Two other men from this agency are now in jail. Several others are being investigated for shenanigans in the field, one for continuing to sell insurance after his license was canceled by the department of insurance, and working a funeral cost racket with seniors for this same agency.

Another case with that group was of a lady who had made purchase of a medicare supplement policy but had not yet received it. Reading the newspaper story about the owner of the agency, she became frightened and wanted out. I advised her against it as the problem was not with the insurance company. She was insistent. We showed her how to do it.

A few days later, two men came in with a tape recorder and "held an inquisition," as she described it. She was hysterical. Her money was refunded.

Bombarded By Advertising

Another problem we have is selling medicare supplements with brochures that indicate benefits that are not provided by the policy.

We again have the problem of companies that advertise in the newspapers. Some of them have fair plans that could have some meaning to the elderly; however, they start a bombardment of mailings to add

riders or to sell additional coverages that bring them millions and empty the purses of the seniors. The extra plans they sell come under my description of "junk policies." Here is a case of a company who advertises in one of our local papers with a fairly good plan.

They supply this for only $1 for the first month. Not bad? Whether you continue with the plan or drop it, you are on the mailing list and ripe for their cancer policy. This was purchased by one of my ladies. The annual premium was $53.32 and was dated April 22, 1977. A rider was added for $23.44, dated October 22, 1977; then again another rider for $77, dated November 22, 1977. This makes a total of $153.76 per year.

Not too long ago, a cancer policy sold for $10 per year to cover an entire family and included many other dread diseases with it. These benefits are poor and the cost too high. It allows $60 per day for the first 12 days and $40 per day thereafter for a total of 90 days of coverage. It pays from $30 to $500 on a listed surgical benefit. This is for cancer. They allow up to $50 per day for intensive care, limited to 30 days. They allow up to $6 per day for drugs or medicines for the first 12 days and up to $4 per day thereafter until a total of $250 is paid.

We in San Diego are living in one of the highest medical cost areas in the world. People must not have such junk offered to them. The hospital nearest to my home charges $151 per day for general care—at least it was that last week. Our big problem is the bill presented by the doctors and most of the "junk policies" offer no benefits, just piddly ones that can bankrupt a family.

Reluctance To Pay Benefits

We have case after case of insurance companies who do not like to pay even the benefits that they provide in their policies.

One lady came to me with medical bills of over $8,000 and begged for help. A girl in the doctor's office filed the claim for her. Upon my inquiry, they said no claim had been made. This was about 10 or 8 months later. Upon filing the claim we got $1,400 for her.

The same company, on another claim that I made for a man, resulted in a payoff. He tried for 10 months to get help to make them pay. However, they shorted him $40. It took several months more and filing with the department of insurance to do it before they paid. It is a nationally known group and very well known.

We have the problem of an 80-year-old widow with seven policies who came to me last week to see if she had proper coverage to help with medicare benefits. She left the policies with me as I could not evaluate all of them immediately. The next day she wrote a letter which I brought with me. I would like this entered into the record, if possible.

Senator Chiles. Without objection, it will be entered into the record.

[The letter referred to follows:]

San Diego, Calif., *May 6, 1978.*

Dear Mr. Klowden: As you probably recall I left some insurance policies with you Friday, May 5, for you to please look over and give your opinion of which ones are the better and/or if they are practical for me to keep.

I know I have too many, perhaps covering the same thing—and if so could I collect from both?

When I took them out, I knew that medicare does not call "reasonable" nearly the amount the hospital, doctors, and convalescent or skilled nursing homes cost and some of the policies maybe say they only pay $15 or $20 a day in hospital—or for $18 to $10 per shift for home nursing, but I thought that amount would help pay for the "unreasonable" part that medicare doesn't cover? But on the other hand—would it be cheaper or more advisable for me to put my money in the savings and loan to draw interest? I'd have to pay or file income tax then if my income was high enough. I don't like the idea of paying interest on interest, neither throwing money away.

I've heard a number of people say one only needs one good supplement to medicare, but what ones are good?

Also different ones speak of having Blue Cross-Blue Shield, whatever they are, but said BC-BS was quite expensive. Does or can one have medicare and Blue Cross and Blue Shield at the same time? And what do they pay that medicare doesn't?

I've been thinking the past few months of dropping one or two or three of these anyway, and if I could get some one policy if there is such a one, that would cover and pay for what the ones I now have do. I would not want to let them go where I wouldn't be covered, until the waiting period of a new policy has elapsed, I mean if I have to wait 6 months before I can collect on a policy. I should want to keep one I have until I have had a new one that long.

At the present I have too many to keep track of when premiums are due.

I think I read something a while back in "Senior World" about AARP and Colonial Penn, but I don't remember what. Isn't Colonial Penn a reliable company, one that pays and pays promptly, or are their premiums too high?

I was thinking a while back before I thought of coming to (you) for help of maybe dropping Bankers "Over 65 Skilled Care" since it has raised to $133.82 a year now and maybe keeping AARP recommended Colonial Penn Skilled Nursing and Home Nursing Policy No. 1152372, but also was about of the opinion that medicare or Bankers or Colonial Penn would not cover the costs or even 50 percent of costs for the majority of people that go to these places, for stays here require 24 hours a day skilled service, have to have registered nurse and doctor 24 hours per day. So maybe would not be able to get anything from medicare or any insurance company.

What do you think? I had thought the individual accident part of 1152372 might be good if the company will pay what the policy says, but they have never raised the price since I took it out, but maybe they aren't reliable and wouldn't even pay what they said. (It is $4.75 per month.)

My sister had Bankers' in-hospital like mine and it paid off as policy stated while she was in the hospital. But nothing while she was in Hillcrest Rehabilitation and Convalescent Hospital. Medicare didn't either except the H.R.C. had her charged for 20 percent of therapy. Said that medicare had paid them but she didn't get any reduction on any of colostomy supplies, medication for or drugs for bladder trouble, heart or lungs, but charged her almost twice as much for some of same kind of medicine, etc., that she took when she was home. Therapy, even 20 percent, was plenty high, I don't know of any only rubbed her back and helped her walk a few times.

Thanks for giving your time in looking at my policies and trying to read this. I appreciate it very much.

Sincerely,

(SIGNED.)

P.S. Sunday—

Someone gave me a folder to look at today called Coronet Senior from Blue Shield. I looked it over some but am not sure I understand it all or not, but I think if one takes out the Coronet Senior they have to pay $100 a year hospital care, and prescription drugs and private duty registered nurse, these things while in a hospital. Is that correct? And any medical and outpatient hospital services are provided by Blue Shield without a deductible. (What is outpatient hospital services?)

Under "payments" of this folder, what does this line, "Benefits of this plan may not be assigned without the written consent of Blue Shield," mean? Under part B—"Medical and Outpatient Hospital Services," what does outpatient hospital services mean? Does that mean that if one has this policy, even if they haven't been in the hospital, but if a doctor or even the holder of the policy thought they needed an X-ray, or had a chest pain, or some ailment and they

wanted to find out what was the cause, and got relief, they could go to the hospital and ask for such help without first contacting a doctor even if I had been doctoring with one? And if one's doctor had sent patient to have X-rays and tests, that medicare pays 80 percent of what they call reasonable, and Blue Shield pays the other 20 percent of what medicare calls reasonable? (And then the patient still pays about 40 percent of the bill that isn't reasonable.)

Do you think I would be better off and as adequately covered if I took Coronet Senior if I could get it with Blue Shield at $67.50 a quarter or $270 a year, and drop two or three of the ones I have? Which ones? Which do you advise? I have felt I had too many for hospital, but not ones that cover doctors and medicines, etc., but I guess none of them pay for nonprescription medicines or for chiropractor treatments, or adjustments, and heat when one has a wrenched or strained back, do they?

If you can read this and give me your honest opinion I will appreciate it.

I am 80 plus, have social security and a little savings but not much, but enough so far to not need welfare, but have not enough that would last long in a hospital or convalescent or rest home, or even if I had to have help. So far, have lived in studio apartment for quite a number of years so get rent cheaper than would if I hadn't been here so many years. If have to pay rent like most, then my savings wouldn't last and I have been making a little working a few hours at housework, so cut down on expenses too. I have no one to help me or to depend on if I get so I can't care for myself. So far, I only have to take one prescription regularly.

I don't understand "reimbursement of benefits for injury" paragraph.

Sincerely,

(SIGNED.)

Mr. KLOWDEN. It tells the story of one poor soul of many millions with the same problem. One of the policies indicated it was for persons over 65 and they had the audacity to put a maternity benefit in it.

CALIFORNIA ACTIONS

California has become aware of the medi-gap problems and the department of insurance has taken a few more steps to help our seniors. We have established a loss ratio for medicare supplement policies at 55 percent. The commissioner will study the annual reports from insurance companies closely and see that they adhere to this regulation.

In order to be called a "medicare supplement policy" part A and part B will have to be included. However, the coverage could be limited to expenses incurred while hospital confined and may not need to include skilled nursing care services.

Preexisting conditions are now to contain a maximum of 6 months waiting period instead of 12 months for coverage of conditions treated during the 6 months prior to the effective date of a policy.

Policies designed to supplement medicare shall be indentified as such.

Readability is being stressed. All medicare policies are to be withdrawn as of December 31, 1978, and be replaced if they were issued prior to May 1, 1978. They are to be written in understandable English. Disclosure forms must be provided with each new policy delivered after January 1, describing the benefits and returned to the insurer to indicate understanding of the policy.

A catastrophic medicare supplement coverage will be permitted to be written starting in January. This could be designed to pay the difference between what medicare pays and the usual, customary, and reasonable expenses.

I am afraid, however, that if no control is placed on medical costs when this type of policy is issued, may God help us.

My most heartfelt thanks for listening.

Senator CHILES. Thank you, Mr. Klowden, for your comprehensive statement. You mention on page 2 of your statement that the insurance agency was selling insurance only to members of a senior citizens association and that they paid a $12 fee to belong to that association.

Mr. KLOWDEN. That is right.

Senator CHILES. Is that a local group?

Mr. KLOWDEN. Yes, sir, it is a local group. They did not actually seek out members and then sell them insurance. What they do is seek out most people to whom they sell their insurance and then tell them they must be members in order to get the insurance. In this way, they sell the membership also.

Senator CHILES. I see. The design was not just to sell insurance. You would be able to buy insurance if you were in that group but they were going to provide other services.

Mr. KLOWDEN. Yes.

Senator CHILES. What other services were there besides the prescription service?

Mr. KLOWDEN. They had meetings once a month. They had guest speakers. They did have some kind of travel setup to offer to the people but this——

Senator CHILES. This was looking like a nonprofit association designed to benefit the members by helping them with problems.

Mr. KLOWDEN. I would not say that it was nonprofit—$12 a year—I think they made themselves a good piece of change, because they didn't give anything for it—very little I would say.

Senator CHILES. Did they give counseling and advice to the seniors as well as help them with their prescriptions?

Mr. KLOWDEN. It is possible. It is possible.

Senator CHILES. How many members did they have, do you know?

Mr. KLOWDEN. I have no idea, sir. I never did check on that. I am sure that the district attorney has that information available to him.

Senator CHILES. Some of these people have been put in jail?

Mr. KLOWDEN. Yes, sir, that is right, and there are more going.

Senator CHILES. You indicate that the brochures advertising supplemental policies to be misleading. How much of that do you see in your position as counselor? Do people get a lot of these brochures through the mail?

Mr. KLOWDEN. Yes, sir, they do. In fact, I did bring a policy and a brochure that was used in which to sell it, although I have it downstairs in an office. It is in my briefcase.

Senator CHILES. We will keep the record open. We would like to see that.

LIMITATIONS NOT EXPLAINED IN ADVERTISING

Mr. KLOWDEN. We find that many companies offer in their brochures various benefits. Just to give you an example, say they claim that they will pay X-ray charges, they will pay laboratory fees, and it is assumed by the individual who then buys it that the full amount is going to be paid. However, when the policy is received and you read these various benefits, they indicate the same benefits but then a few words after that "up to $10." In other words, they have a tight limitation on it, but it is not indicated as such in the brochure.

Senator CHILES. The step that California has taken in providing that they must pay out 55 percent of their premiums, do you think that is a good step?

Mr. KLOWDEN. I believe so, only there is one problem that we might be involved in in the future in that. If the company has to pay that much out in benefits, it is going to cut down on the cost of commissions to their salesmen, and if that happens we may have more problems with vultures.

Senator CHILES. Senator Glenn.

Senator GLENN. Yes, a couple brief questions.

Mr. Klowden, you indicated in your statement you were formerly in the insurance field. In what capacity was that?

Mr. KLOWDEN. As an insurance salesman, and I was an assistant manager with my agency for a while.

Senator GLENN. Did you in your experience with the companies follow up to see or make a real substantial effort to see that these kinds of practices did not occur when you were active yourself?

Mr. KLOWDEN. We had very, very few problems of that kind at the time that I was in the business. I got out of the insurance business in 1961 and it has been a while. We had a few companies that were rather rough on people, some of the cases that have been brought up to date, but there were very few like that. Most of the companies were quite dependable.

Senator GLENN. When you were active this was before medicare and before some of the fast rising costs that we have had.

Mr. KLOWDEN. Yes, sir.

Senator GLENN. Do you think State insurance laws in general are adequate now in this area?

Mr. KLOWDEN. I am not familiar with any outside of my State, or that of which I operated before, but I think they should be tightened up even more, to be more watchful.

Senator GLENN. What kind of cooperation have you had since you have become an advisor in this area in San Diego? What kind of cooperation have you had from the companies when you point out the problems?

Mr. KLOWDEN. Oh, some of them were very reluctant. I have attempted to get specimen policies, for example, from many companies and usually they will send brochures trying to advertise rather than to send specimens, because I know that the payoff on any claim is based on the policy itself, and for this reason I refuse to evaluate information on a company other than on the policy itself.

Senator GLENN. One obvious improvement that could be made immediately, of course, is that people do take the time to know what they are doing, and in that case a lot of people who do not have the expertise that you can provide for them, it is difficult for them to analyze what is best in their situation unless they have someone like you.

Mr. KLOWDEN. True.

EXPERT ADVICE OFFERED

Senator GLENN. Has this been an expanding program in California and could you comment very briefly on the advice or role you have had

and whether you think it should be expanded? I personally think this is a great idea, having someone of your caliber and someone of your background who knows of the problems so they know somebody they can call so they have not a bipartisan but——

Mr. KLOWDEN. Unbiased.

Senator GLENN. An unbiased view of the people's real needs. Usually people don't have anyone to turn to, and so I think that your situation would be one we should try to foster in all States and arrange for people who do not have someone else to advise them.

Mr. KLOWDEN. Senator Glenn, I highly recommend it because as far as I know there is no one else in this country doing it as a volunteer. I don't get paid for it. It costs me money to do this but I am happy to do it. If any State or city in this country is willing to learn something about it, I will be very happy to train a staff for them, so long as they send them out to me for this help.

Senator GLENN. Well, you are to be commended for your activities and for taking this on and helping your colleagues out there who may not have your expertise. I commend you for it.

Thank you, Mr. Chairman.

Senator CHILES. Thank you, sir.

Thank you very much for your testimony, Mr. Klowden.

Mr. KLOWDEN. Thank you.

Senator CHILES. Our next witness will be William E. Grubbs, director of government relations, Bankers Life & Casualty Co., Chicago, Ill.

Mr. Grubbs, I understand you have a couple of people with you. You can bring them to the table with you if you like.

STATEMENT OF WILLIAM E. GRUBBS, ASSOCIATE LEGAL COUNSEL AND DIRECTOR OF GOVERNMENT RELATIONS, BANKERS LIFE & CASUALTY CO., CHICAGO, ILL.; ACCOMPANIED BY DUANE CHAPMAN, ADMINISTRATIVE VICE PRESIDENT; RUSSELL VAN KAMPEN, MARKETING VICE PRESIDENT; AND MICHAEL DRESSENDORFER, ASSOCIATE

Mr. GRUBBS. Mr. Chairman, I have with me Duane Chapman, an administrative vice president; Russell Van Kampen, a marketing vice president; and Michael Dressendorfer, an associate in my division.

We are pleased to be here and we appreciate the courtesy of this committee in inviting us. We have been asked to comment in two general areas. First, the range and extent of purchase of private insurance policies by medicare beneficiaries. This includes comments upon the underwriting limits and practices involved in the offering and issuance of life insurance and accident and health insurance to persons over 65 years of age. Second, the issuance of life and accident and health policies to insure Mrs. Lucille Lowry, three of her grandchildren, and her two sons.

We have presented the committee and staff our prepared statement covering in some detail our view of the range and extent of the private insurance held by medicare beneficiaries.

Senator CHILES. Mr. Grubbs, that statement,[1] in full, will be included in the record and if you can summarize that for us it will be helpful.

Mr. GRUBBS. Yes, sir. That is exactly what we intend to do, Mr. Chairman. We were asked by staff to try to restrict our comments to 10 minutes. I went through this once and I made it in 10 minutes and I hope to do it again.

Senator CHILES. We will give you a little leeway there but we would appreciate it.

Mr. GRUBBS. Thank you.

$120 MILLION IN HEALTH PREMIUMS FROM ELDERLY

Our insurance marketing is not limited to persons over 65. I will just take a moment here to issue for your information a little profile of our company business as of 1977 so that these matters can be put in the proper perspective.

In 1977, we had total premium income of $476 million roughly. We had individual and accident health insurance in force of $298,500,000. We had group accident and health insurance in force of $74 million. We had approximately $120 million or about 45 percent of our total accident and health in force on persons over 65.

Senator CHILES. I missed that figure.

Mr. GRUBBS. That is approximately $120 million out of the $476 million. The total premium income being $476 million, the income coming in from persons over 65 is $120 million.

Senator CHILES. Can you tell me the premium that you are collecting from people over 65?

Mr. GRUBBS. The $120 million is premium or 45 percent of the total accident and health roughly. That is between 40 and 45 percent somewhere.

Mr. Chairman, do you have those figures? We have individual life coverage in force of $62 million, annuity in force of $13,500,000, group life of $7,300,000, and group annuity of $800,000. I think that will perhaps help you keep this matter in its proper perspective.

In addition, our written report provides detail concerning the issuance of life and accident and health policies to insure Mr. Lowry, three of her grandchildren, and her two sons. I would like to comment at this time about the Lucille Lowry matter since it became the responsibility of my department to handle this matter after a complaint had been lodged with the Ohio Insurance Department on or about September 28, 1977, and subsequently with the Illinois, Virginia, and North Carolina Insurance Departments, to whom we were required to explain this matter.

I would like to add one additional factor here, and that is our company does not consider one over 65 to be prima facie an incompetent person. Our assumption is that a person over 65 is competent and able. As a matter of fact, in our hiring practices, from the very beginning, we have never had a mandatory retirement age for this reason. One of my leading secretaries happens to be 74 and is most competent and able. Consequently, just because an individual is over 65, we don't treat him any differently than we would a younger individual.

[1] See page 56.

My original review of the policyholder files indicated to me the health insurance in force upon Mrs. Lowry fell within reasonable parameters and also within our company rules limiting the maximum of premium to $50 a month. We have been informed——

"DON'T OVERSELL"

Senator CHILES. Excuse me just a minute but I am going back to your full statement where you talk about medicare coverage.

With few exceptions, everyone over age 65 has the benefit of medicare, both parts A and B. If for some reason they didn't apply for part B, advise them to do so. This in itself is excellent protection.

Then you go to a "Don't oversell, don't place a burden on the policyholder that he or she cannot afford."

Mr. GRUBBS. That is correct.

Senator CHILES. Then going on, I notice on page 5 that you say, "By putting the above actions into every presentation to people in the over-65 age market, you will not only help them but in the long run the company and yourself."

You were referring there to in-force coverage. "Regardless of how substantial the benefits of our policies are, very seldom is there an advantage to the policyholder to lapse one individual policy in favor of another. Usually, it is an injustice with a resultant misunderstanding on claims." So it looks like you have in your manual recognized the over-65 and you have put in certain kinds of conditions in regard to sales to that over-65.

Mr. GRUBBS. That is absolutely correct.

Senator CHILES. Why don't you recognize them as being incompetent? Under your own manual it seems that you are trying to instruct your agents as to something in sales restraint.

Mr. GRUBBS. That is correct.

Senator CHILES. Excuse me for interrupting.

Mr. GRUBBS. We have been informed. Mr. Lowry questioned whether his mother had received sufficient life or accident and health coverage to account for the amount of premium she had paid. It was my understanding Mr. Lowry felt his mother had more life insurance than she could pay for, as related to her income, and Mr. Lowry indicated neither he nor his brother had signed the applications for two life policies insuring their lives for which his mother was paying.

On October 13, 1977, Mr. Lowry and two persons to assist him, two representatives of the Ohio Insurance Department, the company's regional manager and I, met for an informal hearing in the Ohio Department. Since Mr. Lowry had indicated to us neither he nor his brother had signed the life applications, I requested a check be drawn from the company to Mrs. Lowry refunding the entire premium of these two policies in the event Mr. Lowry indicated his mother wished to have the policies rescinded.

At the hearing, the following occurred: First, I felt a satisfactory accounting of the crediting of premium paid to the company by Mrs. Lowry was provided. The accounting was later presented to Mr. Lowry in a written form by the company.

Second, we offered to either rescind or keep in force the two life policies with the challenged signatures upon the applications at the

discretion of Mr. Lowry and his brother. Mr. Lowry asked for an additional 30 days to think it over and we agreed to this request. We did previously give him an additional 30 days before this occurred from the time we were notified of the question by the Ohio department.

Third, at that time I felt that the two life policies on Mrs. Lowry's life had been in force for more than a year and since we had been on the risk for over $30,000 face coverage during that period it was my view at that time we could only return the nonforfeiture values, if any, which may have accrued. Although I had some concern about the amount of premium which Mrs. Lowry was paying, it was my misimpression at that time that Mrs. Lowry had a greater regular income and considerable estate for which life insurance would be an appropriate vehicle to provide liquidity in her estate upon her death. At the Ohio hearing, Mr. Lowry did not apparently know, or at least didn't mention, the existence of an approximately $60,000 face amount of life insurance Mrs. Lowry apparently had with New York Life Insurance Co. We had no knowledge of that either.

Fourth, it was my impression when the meeting adjourned in the Ohio department, their understanding concerning this case was the same as mine. Approximately 2 weeks after the hearing in the Ohio department, I received a copy of a letter written by Robert Lowry, which for the first time disclosed to me the existence of the New York Life policies. Since in my mind this placed the matter of the amount of premium being paid and the amount of coverage Mrs. Lowry possessed in a different light, consequently I asked that a complete refund of all premiums received from Mrs. Lowry be made and the company made the refund to Mrs. Lowry on December 13, 1977.

Apology Offered

As to our company's position in the matter, we wish we had caught the excessive premium in its relationship to income at the time the applications came to us. Further, we would hope that our agents would have uncovered accurate information so that they would not have taken these life applications in the first place. The submission of forged applications is intolerable to us. We are embarrassed and we apologize to Mr. Lowry and his mother.

We will be happy to try to answer any questions you care to ask us. Since we were first notified about this hearing approximately 1 week ago, it is possible we might not have been anticipating some of your questions or be able to prepare some of the information you want. We will, of course, be happy to accumulate and submit to you any material which you want which we have not brought with us.

[The prepared statement of Mr. Grubbs follows:]

Prepared Statement of William E. Grubbs

Mr. Chairman and members of the committee, I am William E. Grubbs, associate legal counsel and director of government relations of Bankers Life & Casualty Co. With me is Duane Chapman and Russell Van Kampen, both of whom are vice presidents of the company. Mr. Chapman is an administrative vice president, Mr. Van Kampen is a marketing vice president.

We are pleased to be here and we appreciate the courtesy of this committee in inviting us. We have been asked to comment in two general areas. First, the range and extent of purchase of private insurance policies by medicare bene-

ficiaries. This includes comments upon the underwriting limits and practices involved in the offering and issuance of life insurance and accident and health insurance to persons over 65 years of age. Second, the issuance of life and accident and health policies to insure Mrs. Lucille Lowry, three of her grandchildren, and her two sons.

The insurance products marketed by Bankers Life & Casualty Co. to persons over 65, who have medicare coverage fall into four general areas:

A. Medicare part A wraparound products.—These are insurance policies which are designed to pay the entire deductible and coinsurance features not covered by part A of medicare and to provide catastrophic hospital benefits when medicare stops paying.

B. Policies which pay medical-surgical and out-of-hospital expenses.—These are intended to provide reimbursement for doctor calls, surgery, miscellaneous expenses such as X-ray, laboratory and anesthetist fees.

C. Hospital confinement indemnity.—These policies pay at a fixed-guaranteed rate for each day of hospitalization, thus providing financial help to cover hospital, doctor or personal expenses.

D. Extended care facility policies.—These policies pay the coinsurance amounts of medicare in the first 100 days. In addition, they pay benefits for the next 300 days.

The committee may be interested in the underwriting rules which pertain to the sale of these products. The following is a section taken from our agents manual providing instructions pertaining to the offering of our products to the elderly:

C. COUNSELING OVER-AGE RISKS

When selling health insurance to prospects in the over 65 age market, the company and its agents incur legal, social, and moral responsibilities to help these people in identifying their proper insurance needs, and preventing situations that would constitute overinsurance or undue financial hardships.

Because of their age, their normal anxiety relating to the increased possibility of illness, and ever-increasing hospital and medical costs, this market is quite susceptible to being taken advantage of by some agents. This must be prevented if you as an agent and the company are to remain reputable. To assist you in counseling and delivering a proper sales presentation, keep the following points in mind:

1. Finances.—Generally speaking, most over-age prospects are no longer employed full-time. As a result, their income is derived from such things as pension and retirement benefits, social security benefits, and perhaps some investment income. It is unwise to judge an applicant's ability to pay by how much he has in the bank. Their ability to pay should be judged upon the actual income they have.

2. Medicare coverage.—With few exceptions, everyone over age 65 has the benefit of medicare, both parts A and B. If for some reason they didn't apply for part B, advise them to do so. This in itself is excellent protection. Maybe the premium for part B is all they can afford. Don't over-sell. Don't place a burden on the policyholder he or she cannot afford.

3. Wraparound or supplemental coverage.—The prime need for coverage supplementing medicare is a wraparound policy providing supplemental benefits for hospital expenses not covered by the Federal medicare program. No individual should be sold more than one of each type of policy, either hospital or medical, because the result is overinsurance, duplication of coverage and unnecessary and excessive costs to the policyholder.

4. Hospital confinement indemnity.—Hospital confinement indemnity provides excellent coverage but should be sold only where the policyholder can afford the premium, desires a private room and other special services, or realizes that he will incur additional extra expenses due to an extended hospital confinement.

5. In-force coverage.—Regardless of how substantial the benefits of our policies are, very seldom is there an advantage to the policyholder to lapse one individual policy in favor of another. Usually it's an injustice with resultant misunderstandings on claims and a real disservice to the policyholder. If someone has good coverage in force with another reputable company, suggest that he keep the coverage, ask for referrals, and all concerned will benefit in the long run. But putting the above actions into every presentation to people in the over-65 age market, you will not only help them, but in the long run, the company, and yourself.

In order to reinforce some of the rules regarding applications on persons age 65 and over, we are calling your attention to the rules listed below which must be followed:

1. Only one of the policy forms in each group listed below can be sold to an individual (this applies to policies in all companies, including the MacArthur Insurance Companies, except as noted):

(*a*) Medicare wraparound coverage such as the GR–730B, GR–764A, 1696 Rider, etc.

(*b*) Medical surgical policies such as the GR–716, GR–717, and GR–75J.

(*c*) Extended care facility policies such as the GR–747, GR–748, and GR–74B.

(*d*) Hospital confinement indemnity policies such as the GR–700, GR–780, and GR–74J.

Only $30 per day hospital confinement indemnity coverage is allowed per individual.

It is essentially important in dealing with senior citizens to assure that the policy sold does not duplicate other coverage and that the amount of premium is affordable based on the senior citizen's current income.

In addition to these instructions, we practice the following underwriting rules:

1. For individuals 65 or over, the maximum allowable premium including substandard charges for all accident and health policies for all companies insuring the individual is $50 monthly. To enforce this rule, we have established systems involving a computer alphabetized check of all accident and health in-force business when a new application is received.

2. A policy which has been lapsed less than 12 months must be reinstated, upgraded, or exchanged in order to inhibit "rolling" of a policyholder from one policy to another. An upgrade or exchange is limited to one in a 12-month period.

3. We will not allow any improper switching of an over-65 policy to another policy.

We have also been asked to comment on the range and extent of purchase of private insurance policies by medicare beneficiaries. We have obtained some information from the research division of the Health Insurance Association of America whom we would recommend as being a good source for further statistical data about the industry practices and the extent of coverage in this market.

We have attached their information as Appendix "A".[1]

You will note that there are about 23 million senior citizens. Of this group, Bankers Life & Casualty Co. provides coverage for about 750,000 people or about 3.5 percent of this population.

We would like to address the case brought to this committee by Mr. Robert Lowry. Mrs. Lucille Lowry applied for and was issued the following coverage:

(a) Life insurance coverage on her own life with annualized premiums of $6,651. These policies were issued between 6–3–75 and 3–12–77 and in the aggregate provided ultimate death benefits of $37,700.

(b) Accident and health insurance issued to Lucille Lowry amounted to annualized premium of $565.

(c) Life insurance policies covering Lucille Lowry's grandchildren were issued for an annual premium of $65 each (for a total of $195 to provide coverage for each of them to age 23 and with guaranteed insurability options.

(d) Life insurance policies with a rider to provide annuity benefits for each of her two sons costing a total annual premium of $1,636.

For details of the above policies, see Appendix "B".[2]

As to the life insurance policies with annuity riders which Mrs. Lowry took out for the benefits of her sons, Robert and Kenneth, with the understanding that the signatures had been forged and they did not complete the applications, we rescinded these policies and refunded all premium. The agent involved left the company prior to our discovering the facts about this situation. His records with the company and with the Ohio Insurance Department have been marked to show he was "terminated for cause". There was no way for the company to know about these forgeries until Mr. Robert Lowry uncovered it and told us about it.

The life insurance policies issued to cover Mrs. Lowry's three grandchildren are not unusual purchases for grandparents. These are policies requiring a one-time premium payment of $65 to provide $1,000 of insurance to age 23. At age

[1] See page 60.
[2] See page 61.

23, the amount of insurance is $5,000 and premiums commence. In addition, they have guaranteed insurability options which allow the child upon reaching 23 and until age 31 to purchase insurance in $5,000 increments up to a total of $30,000 of life insurance without evidence of insurability. These premiums were refunded.

The health insurance policies (not life) written to cover Mrs. Lowry are within the limits of the annual premium allowed by the company. These were refunded as we understood Mr. Lowry wished them refunded because of the total premium being paid by his mother was excessive for her income. We also understand from subsequent correspondence on which we received copies, that Mr. Lowry objected to our refunding these premiums. If Mr. Lowry would like to continue any of the policies uninterrupted, we will be pleased to do so. It was not our intention to vindictively rescind and refund these policies as he suggested.

Subsequent to the hearing in the Ohio Insurance Department, we learned from copies of Mr. Lowry's correspondence to others on which we received copies that Mrs. Lowry had in excess of $50,000 of life insurance in force with the New York Life Insurance Co. This information is not reflected in any of our files or underwriting investigations. It apparently wasn't known by Mr. Lowry at the time of the hearing in the Ohio Insurance Department as it was not discussed at that time. Had we known of this insurance, the life policies which had been issued to Mrs. Lowry would not have been issued. In view of this fact and Mr. Lowry's request, the policies were rescinded and all premium was returned to Mrs. Lowry.

In view of the foregoing, you are no doubt interested in our position on the Lowry case. Frankly, we are embarrassed—we apologize to Mr. Robert Lowry and his mother, Mrs. Lucille Lowry. We wish we had caught the excessive premium and its relationship to her income at the time the applications came to us. Further, we would hope that our agents would have uncovered accurate information so that they would not have taken these life applications. Also, the agent's submission of the two forged applications on Mrs. Lowry's sons is intolerable. We wish we hadn't made an underwriting error in issuing the second Life policy (4,854,476) in June 1976.

We wish our impression of Mrs. Lowry's financial position had been more accurate at the time we visited with Mr. Lowry in the Ohio Insurance Department. The premium Mrs. Lowry was paying in relation to her income admittedly exceeded our own underwriting standards.

The medicare wraparound market came upon us rather rapidly in 1966. No one of us in the individual accident and health insurance business knew what the market would be—we barely knew what medicare was and we certainly didn't know what the insuring needs of the over-65 age group were or what they wanted, if anything. We did our best to provide riders to our existing policyholders to fill the gaps in medicare as we perceived them and to offer new policies to the insuring public over age 65. As we became more informed of their needs and desires, we developed updated coverages which were more comprehensive. It was in the process of providing broader and additional coverages that we created the products which were used by relatively few agents to take advantage of older individuals through twisting and rolling of previously issued policies. It should be noted that these agents were at the same time taking advantage not only of the insuring public but of the companies which contracted with them.

Each time abuses have been noted, they have led to new rules and new controls, both by our company and regulatory agencies. There have been areas where the abuses have been deemed serious by the company which resulted in stringent remedial action.

Mr. Lowry in several of his letters has referred to the situation which was investigated during the last part of 1974 in Pennsylvania by the Pennsylvania Insurance Department. We invite this committee to have its staff obtain the facts of the situation and the action taken from the deputy in charge of the investigation. Please contact Mr. Kimber A. Wald, deputy commissioner of the Pennsylvania Insurance Department, Harrisburg, Pa. We feel the situation has been remedied. The effectiveness of the remedial efforts of the company have been successful. See copies of letters from Mr. Wald—Appendix "C".[3]

Incidentally, market conduct surveillance examinations conducted by the State insurance departments cover all areas of an insurance company's operations;

[3] See page 62.

sales, advertising, underwriting, policy issue, claims, correspondence servicing, and complaint handling. The examiners either cover total activities in each area examined or when large volumes of work are analyzed they select significant samples based on statistically valid techniques.

To say there is no problem or there are not problems worthy of our attention is not correct. The principal area that continues to cause problems for our company and for the insurance industry lies in the area of how to identify the individual who is no longer capable of carrying on his or her own business transactions.

It is possible that even one policy consisting of a $10 or $20 monthly premium could be an excessive burden on an individual. From a company viewpoint, there is no absolute or practical way to know this. Also, for any of us who have dealt with older individuals, there are situations where the individual's incapacity is not immediately apparent to an outsider.

These individuals are not easily recognizable. They are prey to any one of the unscrupulous or unprincipled individuals in our society whether they are selling insurance or any other product. It could be noted here that there are people under 65 who because of their lack of sophistication are also susceptible to being taken advantage of.

Remedies for excess insurance and excess premium in relation to income are hard to find. It is difficult to obtain a statement of income and insurance from this group. However, the very people we're trying to protect will normally be easily led into giving an incorrect statement.

Is it possible that this market should not be sold any individual life or accident and health policies? It is inequitable to deprive the large majority of this population the same privileges when they are fully capable of handling their own business affairs.

We think the protection of those individuals is properly a concern of all. We have provided training, rules and controls to prevent and to uncover problems. but, while reduced, they continue to occur. We continue to look for new ways but we think this committee will find out it is very difficult to completely protect the incapacitated individuals in this group without removing some of the freedoms from the capable members of this group.

To what degree can we as a business, or we as a Nation, through our various governmental agencies, prevent abuse of these individuals? It is our observation that we cannot prevent all wrongful actions from taking place. We can provide inspections and controls and systems to uncover them. We also can provide remedial action to reverse improper transactions and identify those individuals involved in such activity and either help remove their licenses to transact business, fine them or prosecute them.

If we can provide any other information or answer any questions for the committee, it will be our privilege to do so.

APPENDIX "A"

The Health Insurance Association of America, as of its last published survey covering reporting year 1976, indicates the following facts about senior citizens who are covered by private insurance:

(A) The U.S. Bureau of Census reported age 65+ population as of July 1, 1976, to be 22,934,000.

(B) The number of senior citizens covered by private insurance for hospital expenses was 12,554,000 (55 percent). Hospital expense insurance would be generally defined as one form or another of a "wraparound" or medicare supplement insurance. Primarily, it would be covering the deductible and coinsurance amounts of the in-hospital portion of medicare part A.

(C) The number of senior citizens covered by private insurance for surgical expenses by including Blue Cross/Blue Shield was 10,580,000 (46 percent). Surgical expense coverage would refer to the physician expenses involved with a surgical procedure.

(D) The number of senior citizens covered by private insurance for regular medical expense was 10,227,000 (45 percent). The regular medical expense insurance would include all other physician care, such as office visits, etc.

(E) The number of senior citizens covered by private insurance for catastrophic or major medical expenses was 1,913,000 (8.5 percent). The major medical and catastrophic insurance would include the providing for high limit coverage (in excess of $10,000) for hospital expense when medicare benefits are exhausted.

APPENDIX "B"

Life Insurance Policies Issued Insuring Lucille Lowry

Policy Number	Date of Issue	Annual Premium	Form
5,248,470	6-3-75	$ 3,000	L-129
4,854,476	6-14-76	$ 3,204	L-129

Dear Duane:

I am attaching the MacArthur Group complaint printout for 1976. You will note a further decline to 161. Previous years are:

1975	204
1974	261
1973	263

It should be noted this was in the face of a 51.3 percent increase in our work load. A statistical analysis of our work is also enclosed.

Obviously, the reforms you sparked in 1974 are paying off in better consumer service.

Very truly yours,

Kimber A. Wald
Deputy Commissioner

Duane Chapman, Vice President
Bankers Life and Casualty Insurance Company
4444 Lawrence Avenue
Chicago, Ill. 60630

Dear Duane:

I am attaching a copy of the 1977 MacArthur Group complaint printout. Once again you have had a sharp decline in the face of a rising complaints volume here. I continue to maintain this is due to the reforms you instituted in 1974, when your total was nearly double the 1977 figure.

I am also enclosing a comparison of all complaints by coverage and problem which may be of interest.

Very truly yours,

Kimber A. Wald
Deputy Commissioner

Senator CHILES. I note and I appreciate very much your digest of the statement for me. That is very helpful to us.

I note that you do say in your full statement on page 8:

> The health insurance policies (not life) written to cover Mrs. Lowry are within the limits of the annual premium allowed by the company. These were refunded as we understood Mr. Lowry wished them refunded because of the total premium being paid by his mother was excessive for her income. We also understand from subsequent correspondence on which we received copies that Mr. Lowry objected to our refunding these premiums. If Mr. Lowry would like to continue any of the policies uninterrupted, we will be pleased to do so. It was not our intention to vindictively rescind and refund these policies as he suggested.

Mr. GRUBBS. That is correct, Mr. Chairman.

Senator CHILES. I just wanted to make sure Mr. Lowry understood that because he had said from his statement today that he would like to have some of those policies or he felt that it might be helpful to his mother to have some of those policies in force. So it would be the company's position if he wanted to continue some of these policies noninterrupted you would do so.

Mr. GRUBBS. That is correct, Mr. Chairman.

COMPANY POLICIES TO DETECT DUPLICATE SALES

Senator CHILES. Now, I am interested in reading your full statement to see that the company does have a policy. Part of these policies that were returned, as I understand they were returned because your computer picked them up as being duplicate, is that correct?

Mr. GRUBBS. That is correct, Mr. Chairman.

Senator CHILES. So this is a check that the company tries to have to send back a duplicate policy.

Mr. GRUBBS. Yes, sir.

Senator CHILES. When you do that, when you send that policy back or in this instance, can you tell me, do you contact the agent? Do you try to find out why a duplicate policy was written? We have at least one agent writing several duplicate policies.

Mr. GRUBBS. Perhaps Mr. Chapman can explain the operation of the computer as it relates——

Senator CHILES. We are trying to get at this here and other instances. I am delighted to see what you have in your policy handbook that you give your agents, but if it is just a policy and a handbook and it never gets translated out into the field other than being there, then it is nice for the company to say, "We have got this policy." But we see that your agents didn't exactly follow that policy in the Lowry case. They certainly sold her insurance beyond what she could pay for and that is against your policy. They gave her duplicate policies and that is against your policy. There are two or three other instances that they covered that are against the policy. I want to know, how does the policy get interpreted into the field?

Mr. GRUBBS. Mr. Chapman can answer that.

Mr. CHAPMAN. I will answer the part about the home office, Senator. The policy rules, as we have outlined them here, deal with the accident and health portion of our controls, and I think they are outlined there. The computer checks are people checks, too. You know, the computer is no smarter than the people who run it and input it and read the alphabets.

The total premium problem came about, as I reconstructed it when I first looked at it last week, was due to the excess life insurance. If you will notice the total premium that Mrs. Lowry was paying—better than $6,000 of that premium was for two life insurance policies. The first one was issued for approximately $3,000. At that time our underwriters passed that case because of the total amount of investments and income that they understood and our subsequent checks revealed that Mrs. Lowry had. Our files show that the statement made by Mrs. Lowry indicated an estate of somewhere over $100,000. The underwriter thought the policy should be issued.

The second policy which was issued 1 year later added up to $3,200 additional premium. So when we talk about 68 percent of her premium, some $6,200——

Senator CHILES. You mean 68 percent of her income?

Mr. CHAPMAN. Yes. Some $6,200 was represented in two life insurance policies. The second life insurance policy was taken—I cannot justify its being taken. When it came into the home office, it would not go through our A. & H. control because we have a different——

Senator CHILES. A. & H. is accident and health?

Mr. CHAPMAN. Yes. I am sorry, sir. Accident and health. I am used to using these terms.

The life insurance has not been recognized by us as needing to come under this premium control and the reason it has not is that these are reviewed by underwriters who should be reviewing the total income and the necessity for this insurance because there is a company problem here, too, and that is being overexposed on a risk just as a matter of self-interest, if you will. We don't want to be on a risk for more than we should be. How much insurance should you sell without any need for insurance to someone in this age group 75, 76 years old?

Senator CHILES. That is the prime link your underwriter is looking at.

Mr. CHAPMAN. Oh, absolutely. I am merely pointing out that we did not have a control on life insurance to protect Mrs. Lowry or someone like Mrs. Lowry. In our own self-interest we should be protecting ourselves and incidentally not collecting the additional premium. There was a mistake made. The basic underwriter approved it and it went through the system without a second supervisory underwriter's signature. It should not have been issued.

I would like to back up just a moment and make a few comments. I have heard what has been said here this morning.

ENFORCEMENT OF POLICY

Senator CHILES. Just a minute now. I will be glad to give you that time. No one has told me yet how this transfer translates down to the agents. Specifically, in this case, when you sent back three policies as being duplicates, at least two of which were done by the same agent, it looks like maybe three were done by the same agent, does anybody ever say to that agent:

You are not following the policy of this company because it is no good to have a policy and to come up and say we have a policy to protect people in this regard if no one is going to follow up on that.

Mr. CHAPMAN. We have a procedure which obviously in this case did not work and this is one of the problems. Frankly, we are embarrassed by this particular case, and there have been a few others. The procedure is that the underwriter recognizing the duplicate policies have been written does have a procedure to write out a complaint form against those agents. The complaint form is sent to the manager of the agent and asks him to answer the complaint, to interview the agent and file the answer. This goes back to our agency secretary and it is reviewed for completeness, for adequacy, and it becomes a part of his agent's file.

Senator CHILES. Can you tell me whether this was done in this case?

Mr. CHAPMAN. Yes, it was done in this case.

Senator CHILES. When? Do you know when?

Mr. CHAPMAN. I don't have the file with me, sir. I know the case of agent Montgomery's name was brought up this morning. I know that agent Montgomery terminated from the company prior to this case coming to our attention. I know that subsequent to our uncovering this and making refunds, that agent Montgomery's records were marked "terminate for cause" and the Ohio Department was notified of this.

Senator GLENN. Would the chairman yield?

Senator CHILES. Yes.

Senator GLENN. Is he still in the insurance business?

Mr. CHAPMAN. I do not have any personal knowledge. I would defer to Mr. Van Kampen, perhaps he knows. I would have no way to check that, Senator.

Mr. VAN KAMPEN. Senator, I am not sure whether he is in the insurance business. He will never be allowed to return to our company.

Senator GLENN. One of the problems is floating agents from company to company to company sometimes who may be violating every rule.

Mr. VAN KAMPEN. Senator, if I might add, when that happens where an agent is terminated for cause, as Mr. Chapman said, we do notify the insurance department that it is a termination for cause, giving all those facts, and hopefully that will prevent this agent from going on to work with other companies.

Senator CHILES. I interrupted you. You had some other thought.

COMPANY CANNOT ALWAYS CATCH UNSCRUPULOUS AGENTS

Mr. CHAPMAN. I had just a general comment, having heard what we have heard this morning. Certainly there are people, and I don't want anyone to misunderstand me, in the older age group who cannot take care of their own affairs. They are victimized by agents. The company cannot always catch them.

Mr. Lowry referred in his testimony this morning to the news releases from Pennsylvania. He referred to the fact that we were one of the companies that was involved in sales to people over 65. Yes, that is true. Yes, there were a lot of the rules that you see in our testimony that were installed since that time. A number of people in the over-65 market need insurance, they want insurance. There is a proper market there. There is definitely a problem in trying to control the unscrupulous agent and there is a need on the part of home office

administration, I think, to get a little smarter and a little more sophisticated in doing so.

Senator CHILES. Can you tell me what percentage of the premium income, $120 million that your premium covers over 65—what part of that are you paying out in claims?

Mr. GRUBBS. Well, that gets into a loss ratio, Mr. Chairman, and what we are currently paying out overall. The company's overall loss ratio for both individual and group accident and health for 1977 was sixty-six sixty-sevenths percent as indicated on our annual statements.

Senator CHILES. Maybe I am asking you some questions that you don't have an answer for today.

Mr. GRUBBS. That is right.

Senator CHILES. Would you speak to that computer of yours and ask it if it can tell me what you would be paying out of that $120 million in the way of claims?

Mr. GRUBBS. We will be glad to do that and provide you with the information.[1]

Senator CHILES. Give me that for a couple of years if you will—1975, 1976, 1977.

Mr. GRUBBS. All right.

If I could add this, Mr. Chairman.

Senator CHILES. Yes, sir.

Mr. GRUBBS. Loss ratio figures should not be promiscuously used in that they are products of actuarial science.

Senator CHILES. I don't intend to be promiscuous about those figures, I cannot speak for Senator Glenn.

Senator GLENN. I will follow my chairman's leadership.

Mr. GRUBBS. I will be happy to provide you with those figures.

Senator CHILES. All right, sir. If you want to show me some other breakdowns in addition to the questions I will ask you, that will be satisfactory, too.

Mr. GRUBBS. What are the other——

Senator CHILES. I said if you have some other way you want to show it, in addition to the question I have asked, that will be satisfactory, too.

Mr. GRUBBS. Thank you.

LIFE INSURANCE PREMIUMS EXCEED UNDERWRITING STANDARDS?

Senator CHILES. You said that the premium Mrs. Lowry was paying for life insurance in relation to her income exceeded your underwriting standards. Can you tell me what that standard would be? I note she was paying life premiums of $8,586 with an income of $13,508.

Mr. GRUBBS. Mr. Chapman would be most knowledgeable about the underwriting area I believe.

Senator CHILES. Yes, sir.

Mr. CHAPMAN. The total amount of insurance that could have been written according to our rules on Mrs. Lowry would have been in the neighborhood of that first policy, $17,000 to $18,000 face amount.

Senator CHILES. What kind of commission does your company pay its agents on the sale of full life policies such as those purchased

[1] See page 70.

by Mrs. Lowry? Is that one and a half or what would be your commission?

Mr. GRUBBS. Mr. Van Kampen should be qualified to answer that.

Senator CHILES. I might note while he is looking for that, I used to have something to do with starting a little debit company at one time in the life insurance business and we had a great ratio. We paid out about 125 percent. [Laughter.] We don't have that company any longer.

AGENT'S COMMISSION: 25 TO 65 PERCENT OF 1-YEAR PREMIUM

Mr. VAN KAMPEN. Senator, each policy would vary in commission, but on our life policies we go all the way from approximately 25 to 65 percent of the first year's premium which would be the commission to our agent.

Senator CHILES. On the whole life policy, like what we are talking about here?

Mr. VAN KAMPEN. On the son's policies—in the neighborhood of 55 percent to 65 percent.

Senator CHILES. That is on your first-year premium.

Mr. VAN KAMPEN. Yes.

Senator CHILES. Then your retention is what after that?

Mr. VAN KAMPEN. Well, it would be based on the premium that stays in force with the second year, approximately 25 percent renewal on the Lowry boys' policies and then graded from the third to the tenth year at 20 percent. We will be glad to submit for the committee each of the policy forms [1] and the actual commission rates.

Senator CHILES. I think that might be helpful to us.

What kind of commission do you pay the agents who sell the health insurance policies?

Mr. VAN KAMPEN. That is more of a front commission and there again it would depend on the type of policy but generally speaking it is a premium or commission equal to possibly 300 percent of 1 month's premium over the first 6 months of the first year's premium.

Senator CHILES. Three hundred percent of one month for the first 6 months.

Mr. VAN KAMPEN. It would be spread over that period.

Senator CHILES. Oh, spread over that period.

Mr. VAN KAMPEN. Yes. If the policy was written and didn't renew and persisted for the entire year and it was a $10 monthly premium—we would collect 12 months at $10 premium per month, equalling $120. Our agent would receive 100 percent of the first month and then 40 percent of the next 5 months—which totals $30 that our agent would receive, which is 25 percent of the annual premium of $120. Now that again is a general basis and we would be glad to furnish you with the commission schedule for all of our health policies.

Senator CHILES. Would you also when you speak to the computer give us the loss ratios for each of the four medicare supplements that you listed on page 2 of your statement?

Mr. GRUBBS. Yes, sir, we will.

Senator CHILES. And then for all four combined.

Mr. GRUBBS. We will.

[1] Retained in committee files.

[Subsequent to the hearing, Mr. Grubbs supplied the following information:]

POLICY LOSS RATIOS

To illustrate the proportion of health insurance premiums paid in claims, State insurance departments require insurance companies to publish in their annual statements loss ratios for the calendar year preceding the date of the statement. Loss ratios are calculated by dividing incurred claims by premiums earned. For the year 1977, the loss ratio for Bankers Life & Casualty Co. policies sold to policyholders above age 65 was 55 percent. Loss ratios for senior citizens policies for 1976 and 1975 were 55 percent and 51 percent, respectively.

The better measure of fair return of premium in claim payments is the ultimate loss ratio, rather than the loss ratio for a particular calendar year. For various reasons, loss ratios tend to increase as a block of business ages. Thus, the appropriateness of using calendar year loss ratios to determine whether policyholders have received a fair return is highly dependent on the average age of the business for which the loss ratios are determined. The loss ratio for a very young block of business will be much lower than the average over the lifetime of that group of policies. The loss ratio for a very old block of business is generally somewhat higher than the average over its lifetime.

Loss ratios for calendar years 1975, 1976, and 1977 which were requested for each of the four categories of senior citizens business referred to on page 2 of our statement to the committee are for in-hospital benefits supplementing medicare part A which constitute 30 percent of our total senior citizens business, 66 percent, 75 percent, 69 percent respectively; for medical-surgical benefits, which constitute 22 percent of our total senior citizen business, 60 percent, 61 percent, 65 percent respectively; for daily hospital confinement indemnity benefits, which constitute 31 percent of our total senior citizens business, 41 percent 43 percent, 48 percent respectively; for extended care (skilled nursing) facility benefits, which constitute 14 percent of our total senior citizens business, 40 percent, 45 percent, 30 percent respectively. Policies for in-hospital benefits supplementing medicare part A and medical-surgical benefits were introduced when medicare became effective. Policies with daily hospital confinement benefits designed for senior citizens were first sold in 1967. Policies with extended care facility benefits were not sold until 1972.

We believe that the loss ratios stated above understate the ultimate percentage of premiums returned to policyholders in benefits. This ultimate percentage for all categories combined should be close to 60 percent. The premiums we developed for our current generation of senior citizens health products for the categories listed above are all calculated on anticipated loss ratios in excess of 60 percent.

"NAME SWITCHING"

Senator GLENN. You mention a computer alphabetized check when a new application is received. We have had letters and other suggestions that salesmen sometimes get around this by writing the policies in different forms of the name, using the initials on one policy and a full name on another policy, to avoid computer detection. Is that something that you all are aware of is happening, and what kinds of checks do you have on that?

Mr. CHAPMAN. Yes, Senator. That has been in the past a very common practice by an agent who wants to defeat an internal process. You will also find where there is a husband and wife, some policies are in the wife's name and some in the husband's name. We have installed an address check and hope to overcome this and we have found that it results in a considerable improvement over what we were able to uncover in the past.

Senator CHILES. I note that in the two life policies on Mr. Lowry's life and his brother's life that they were improperly executed. When were the forgeries discovered by the company?

Mr. GRUBBS. Our first information that they were not signed by Mr. Lowry came from Mr. Lowry in our October 13 meeting in 1977, at which time he said his brother did not sign his application either, so it was at that time we got firsthand knowledge. Earlier the general counsel for the Ohio Department of Insurance had called me on the phone and told me that Mr. Lowry had said that. Consequently, I was prepared, when I arrived there, to either give the money back, rescind the policies, or allow them to remain in force although it has been contrary to our interest, of course, to do so, because we had no representations as to their condition of health or anything else.

Senator CHILES. These were the policies that were written by the agent that was terminated for fraud?

Mr. GRUBBS. That is correct.

Senator CHILES. Senator Glenn.

Senator GLENN. I would like to followup on this signature thing for just a moment, Mr. Chairman.

This type of policy, is it not the law that you have to have the permission of the person being insured?

Mr. GRUBBS. There is such a thing as a signature not by the person being insured under some instances. It is our usual company rule that the signature of the insured must appear upon the policy application.

Senator GLENN. If this is illegal and if the signing was illegal, have steps been taken to internally prosecute those who did this?

Mr. GRUBBS. Senator, I think if you will examine the signature, we did not report Mrs. Lowry for signing her sons' names. I would not think that her sons would wish us to do this. Certainly we did not report that she had signed her sons' names.

Senator GLENN. Let me make a comment on your statement, pages 2 through 5. That is an excellent statement of your policies and what you expect your agents to live up to, and that is fine. I am sure that every insurance company in the business has a similar statement of policy that is excellent and sets the standard that you hope your agents try to adhere to. However, I would take some exception with your comment on page 11 that

> The principal area that continues to cause problems for our company and for the insurance industry lies in the area of how to identify the individual who is no longer capable of carrying on his or her own business transactions.

It seems to me that that is almost an impossible task. We cannot set a certain age deadline, nor would we try to, where people are beyond the use of their normal faculties. Some people are absolutely brilliant at age 100 and others phase out at my age—and maybe I already did, I don't know. Anyway you cannot set an age limit, so I don't think you can identify the individual who is no longer capable. I think that sets an impossible goal.

"WEED OUT THE BAD APPLES"

I think there is a possible goal here, though, and that is sensitizing your own agents in this area and following up on what kind of policies they are writing and weeding these bad apples out. It may be a matter of business for the company, but where an individual is involved on the recipient end of this, it is absolutely a personal tragedy. I don't know what kind of followup you can do.

I am very much concerned about what you are doing to weed out the unscrupulous agent who is not including all of this information and is not doing the right job of analyzing and is just business as usual, take advantage of the elderly, write every policy you can, pass the name on to another agent who is a buddy in a different company who then comes back, and economically, at least, rapes this individual all over again. We wind up with a whole pattern here. There has to be some way of following this up in the industry or we will have stringent legislation on the industry.

I hope that you gentlemen in your expertise can come up with some method of self-policing here. I am not trying to lecture you, but I think you ought to come up with some method of self-policing so that we won't find Federal legislation necessary to, in turn, force State insurance commissions to in turn force you into methods of self-policing when you could have done this voluntarily to begin with. I would welcome a comment on this from any of you.

Mr. GRUBBS. Senator, to begin with, if the policyholder is taken advantage of because he is oversold insurance and if he is, to use your words, economically raped, so is the company at that time, may I remind you, sir.

Senator GLENN. I agree, and I am not trying to castigate any of the insurance companies here necessarily. You provide a vital function and it is great and I am glad you do the job you do, but we are trying to prevent abuses. You gentlemen are in the middle of it, you give us the advice.

Mr. GRUBBS. Well, we are, of course, entering new endeavors all the time in order to protect, frankly, our own economic interest, because when the policyholder is not treated properly it is a direct damage to the company when they are oversold. The policies lapse and that is expensive to the company when they are oversold life insurance and there is no insurable interest. The casebooks are filled with tragic things which occur.

Senator GLENN. Let me get to a specific here. On page 10, in the middle of the testimony, it says:

> It was in the process of providing broader and additional coverages that we created the products which were used by relatively few agents to take advantage of older individuals through twisting and rolling of previously issued policies. It should be noted that these agents were at the same time taking advantage not only of the insuring public but of the companies which contracted with them.
>
> Each time abuses have been noted, they have led to new rules and new controls, both by our company and regulatory agencies. There have been areas where the abuses have been deemed serious by the company which resulted in stringent remedial action.

Could you list some of those remedial actions you have taken on past abuses?

22 AGENTS TERMINATED IN PENNSYLVANIA

Mr. CHAPMAN. A previous case, Senator, that has come up here is the Pennsylvania situation. I believe that we terminated 1 regional manager, 2 or 3 district managers, and about 22 agents in that area. In addition, we put in some of the controls we have referred to previously. What can we do? I think we have got to do more of what we have started to do. Certainly the matter of policing agents on sales to

people over 65 has got to have more attention and more money put into it. When we think that we are going along with improvements, seeing the complaint ratios improving, we believe we are doing a pretty good job until we see a Lowry case. Frankly, that kind of case is shocking, it tells us that we have got to do something with the life insurance premium and look at the total premium by individual.

Senator GLENN. Do you require adequate financial status information on each individual to properly analyze it, as in the Lowry case?

Mr. CHAPMAN. We do on life insurance, Senator, because that is part of our underwriting. We have to know what the need for that insurance is. When we get over certain amounts, our self-interest and that of the individual. So we do ask for financial information. I don't think the Lowry case is typical. We missed the impact of that financial information and we did not have anything that totaled up all those policies until Mr. Lowry started looking into his mother's affairs.

Senator GLENN. With health insurance you can't require any general financial statement.

Mr. CHAPMAN. No, sir, we do not.

Senator GLENN. Do you think that is an area that should be included so you have a picture of whether they are getting overextended or not?

Mr. CHAPMAN. That is a possibility that we have considered. I personally have trouble with it because if you have an agent leading someone, they can lead them to sign this financial disclosure statement.

"SELF-POLICING HAS GOT TO BE THE ANSWER"

Senator GLENN. I have trouble with the whole field because I don't want to determine the rights of people to determine their own lives, No. 1, and I don't want to limit people because of age, No. 2, and I don't want to limit the insurance, No. 3. I think you must put on a level of supervision that is far more stringent and far more definitive, as you have said. I make this as an industrywide statement, not just to your particular company. I think self-policing has got to be the answer. You gentlemen in the industry will know that something will be done when abuses are increasing and as people become more concerned about their health problems and their old age.

This is what we are faced with now, so it seems that your unscrupulous agents are going to have more of an opportunity to take advantage of people who perhaps are not as able to take care of their own affairs. So it means there is going to have to be more self-policing in this industry or we are going to have some kind of legislation to take care of it. I think it is that important.

If you need a new level of subdistrict manager, one for every five agents or whatever, there has to be some sort of policing mechanism that prevents cases like that. I am sure the committee and the staff would be most happy to work on this, and my office will certainly be happy to work with you in any way on ideas that you may have. I hope we don't have to come through with some big package of legislation and try to run the insurance business in this area, like we run too many things from Washington. If there is a need here and people are being taken and nothing is being done by the industry, then that is certainly what is going to happen. I am just stating the facts.

Concern About Lists Being Passed Around

Senator Chiles. How do you think it did happen that you have all these different agents from Bankers Life & Casualty calling on Mrs. Lowry? How does that practice happen? We are concerned about lists being passed around and sometimes an agent leaves one company and carries his list with him. How would that many people get to see her to do the check?

Mr. Van Kampen. Senator, I am not sure how this one happened, but the way it could happen, and I am sure this was part of this situation, first of all you have the manager who is assigned to a certain number of agents in his office. Occasionally, when a manager will be training a new agent, the two people would call—both the manager and the agent in training.

From time to time, our agents are promoted to management in another area of the country and those in-force policyholders, the listings are then turned over to the office or to a new agent who goes out to either service or sell additional coverage, if the need warrants it, and this would mean that now a different agent would come by. Very possibly the manager has been promoted and the manager and the new agent in training would be out servicing a policyholder and would find out that there was some coverage that was missing or a policy that we had come out with filled still another gap. It would be offered if it did not exceed the maximum amount of $50 per month premium to be paid by any one insured who is 65 or over. In this way several agents could have called on her.

Hopefully, our agents are not passing on the names of these overage people to other people in the industry. We would react to that for both reasons, certainly the overager being taken advantage of and handing over our contracts to the competitor. So we would have a dual interest there.

Senator Chiles. Well, then it is part of your policy as such for your managers to try and get the agents to call routinely, or to make calls, on people that your company has already sold policies to.

Mr. Van Kampen. Yes, for several reasons. One would be service, another would be a copy of every claim that is paid by the company is sent to our local office and it is the responsibility of our local office to call on each one of these to make sure that the claim is properly handled, that all benefits were received, that all bills were submitted to make sure that they have received the full claim payment.

Less Control Over Independent Contractors

Mr. Grubbs. Senator, if I may, I should point out that our agents happen to be independent contractors. This is not true with all companies in the industry, but ours are independent contractors. Consequently, although we can provide rules and terminate their contract and notify the insurance department, we don't have the extent of control over them that perhaps if they were employees we would.

Senator Chiles. These independent contractors, will they be writing with other companies?

Mr. Grubbs. In most cases not with this company. In most cases not, but they are still allowed to be.

Mr. VAN KAMPEN. Hopefully not, sir.

Senator GLENN. Do you have a termination of pages 2 through 6 here, or 2 through 5? If any of those things are violated, do you have——

Mr. GRUBBS. Yes. If they violate company rules, we can terminate them. Yes.

Mr. VAN KAMPEN. We terminate their contract because they are an independent contractor.

Senator CHILES. We thank you for your testimony and look forward to the submissions that you are going to provide us.

Mr. GRUBBS. Thank you, Senator.

Mr. VAN KAMPEN. On that, Senator, before we finish, you seemed a bit surprised when I mentioned the commission schedule and I mentioned 300 percent of 1 month. Maybe we better explain this. Because of the 6 months, I saw a quizzical look on your face. If the policy was written and did renew and persisted for the entire year and it was a $10 monthly premium—we would collect 12 months at $10 premium per month equaling $120. Our agent would receive 100 percent of the first month and then 40 percent of the next 5 months—which totals $30 that our agent would receive, which is 25 percent of the annual premium of $120.

Senator CHILES. I understand that.

Mr. VAN KAMPEN. All right.

Senator CHILES. Our next panel will be Harold R. Wilde, the commissioner of insurance for the State of Wisconsin; and W. W. Cooper, the administrator for health insurance, Florida State Insurance Department.

Mr. Wilde, we are going to call on you first to give us your statement. I understand you are going to talk about medicare and that you have done considerable work in this area. We are delighted to have your appearance here today.

Your statement in full will be included in the record and if you care to summarize in any way, that will be helpful.

STATEMENT OF HAROLD R. WILDE, MADISON, WIS., COMMISSIONER OF INSURANCE, STATE OF WISCONSIN

Mr. WILDE. Thank you, Senator. As I was sitting here this morning I have been gradually cutting that statement shorter and shorter.

Senator CHILES. As the hour gets shorter.

Mr. WILDE. I hope that you will ask me some questions concerning some of the testimony you have heard earlier; for example, phrases like "independent contractors" and "terminated for cause." You may want to have some clarification on those.

Senator CHILES. Good.

MEDI-GAP SALES NO. 1 CONCERN

Mr. WILDE. I would like to thank you for the opportunity to speak here today about an issue which I think has been my No. 1 concern since I became commissioner of insurance in the State of Wisconsin.

Senator CHILES. When was that?

Mr. WILDE. Three years ago. There are about one-quarter million senior citizens in the State of Wisconsin who we believe supplement medicare with some form of private health insurance, and it is our belief that those senior citizens are probably wasting well into the millions of dollars.

Senator CHILES. There are still one-quarter of a million there that have not come to Florida?

Mr. WILDE. Oh, there are well over one-half million senior citizens. In fact, we are known as the star of the snowbelt. There are elderly people who move to northern Wisconsin because they like the winters. Different strokes for different folks.

The most basic waste in medicare relates to the product itself. Medicare returns 95 cents on the dollar as a benefit. Some private group insurance normally returns 85 to 95 cents in benefits on every dollar. Good private individual medicare supplement contracts return 70 to 75 cents on the dollar. What is the return in actual benefits on the high commission/low value medicare supplement, nursing home and indemnity contracts which are marketed most aggressively to the elderly? A good guess would be 40 percent, if that.

"INEFFICIENCY AND EXTRAVAGANCE IN MARKETING"

The inefficiencies and extravagances built into the marketing of these health insurance products to the elderly are obscured by the complexity of the products themselves and the marketing techniques utilized.

There is no insurance policy sold in our State—and I doubt that there is any policy sold in any State—which fills all of the gaps of medicare. None. But there are thousands of insurance policies purchased every week which are thought to fill all the gaps in medicare. Then another policy is purchased, and then another.

As we have heard this morning, it is not uncommon for us to find senior citizens in Wisconsin who are spending well over $1,000 a year on health insurance policies, each of which is duplicative of the other, and only one of which will pay off in the event of a loss.

How can this happen? Part of the answer lies in the nature of the "crime." The victims of one fast talking medi-scare peddler may, all together, have wasted $100,000 in a year on inadequate or duplicative coverage. But each victim lost only $200 or $300, so the size of the crime and the pattern of victimization is rarely recognized.

Many old people don't even realize they are victims; some are enfeebled or infirm and incapable of complaining. They make poor witnesses in court and in administrative proceedings. It is no surprise, therefore, that local prosecutors are wary of attemptng to pursue such white-collar crime. It is costly and difficult.

Nor should it be surprising that the ripoff artist himself frequently points to the approval of a policy form by the State commissioner of insurance as evidence of its acceptability.

"REGULATORS ACQUIESCE TO MORALLY INDEFENSIBLE PRACTICES"

Government has been and continues to be part of the problem. State regulators have too long acquiesced in practices which are morally

indefensible. I think it is time to call a halt to such acquiescence by both Government and the private insurance industry. A Government that creates a medicare program for its senior citizens ought to act to assure that the gaps and holes in that program are addressed responsibly.

In Wisconsin we have experienced success, failure, and much frustration over the past 3 years as we have attempted to cope with this problem in its many dimensions. We have greatly strengthened our enforcement efforts. We have increased the number of agent license revocations, suspensions, and forfeitures from a handful in 1974 to nearly 100 last year. We have fined one company $25,000 and suspended it from the market for over 1 year. We have conducted examinations of a number of the insurers with the worst records—and major disciplinary actions may now result. We have distributed directly or indirectly over 100,000 copies of a booklet we prepared for senior citizens outlining their health insurance needs and rights and I have submitted that booklet for the record.

Senator CHILES. A copy of that will be made part of our record.[1]

Mr. WILDE. But, at least until recently, the problem has not shown signs of lessening.

Here are just some of the examples of what we have come across in the past 3 years, and these are the kinds of things you heard this morning. We could go on all day with examples.

LISTS CIRCULATED

Agents tell us about lists of "mooches," or "cripples," or "marks," that have been circulated among the medi-scare peddlers—lists of infirm or senile old people who will take anything offered to them—who will "buy the whole load." We have a list like that in our office of 150 people, and I think that the example you gave this morning was an example taken off that list. I can't think of anything more disgusting in my experience as commissioner than that kind of practice.

We are aware of teams of agents switching from one company to another company and in the process thousands of people getting caught in a war as policies are switched from one company to another company.

We go into a company's files and we find dozens of medical applications from particular agents which have been "clean sheeted." There is a whole vocabulary. "Clean sheeting" means that you take an application from a person over age 65 and where you are supposed to indicate medical history, there is no medical history. Therefore, the person gets underwritten because he does not show up as having medical history. Of course, how many people over age 65 don't have a medical history? So when they have a claim, if it is a serious claim, the company goes back and searches out the medical history. If they find that the person had a medical history, they retract the claim and refund the premium. It is a horrible practice, "post-claim underwriting"; but the clean sheeting is only one part of the process. It is a process quite frequently engaged in unannounced to the purchaser.

[1] See appendix 2, item 1, page 110.

The agent walks away, gets the purchaser's signature on the bottom line, has a whole history and holds it up to the window. That is the classic example. He forges the signature on a new application and hands this in clean sheeted. What kind of company gets applications of people age 65 with no prior health history and does not see something wrong?

"COMPANIES OUGHT TO CATCH ON"

We go into another company's files and find stacks of complaints on a particular agent 6 or 8 inches high—and that company I think was represented here today. Yet the agent had not been dismissed or was not dismissed. Stacks of complaints 6 or 8 inches high. How many complaints does it take before a company decides it is time to boot the guy out? The answer is, of course, that a guy who can generate that many complaints can also generate a hell of a lot of business. He is a good producer, he makes money for the company.

In the course of various investigations we come across evidence of systematic forgery and routine postdating of applications. This is an agent practice, but again, the companies ought to be catching on.

If there is some cause for optimism in Wisconsin, I guess it arises from our experience of the past few months. In January of this year, a new rule went into effect which required all new policies sold as "medicare supplements" to senior citizens in Wisconsin to provide minimum benefit levels and which mandated that whenever an elderly person in Wisconsin is solicited for health insurance he or she must receive a copy of the consumer booklet to which I referred earlier which is produced by our office.

One important byproduct of this rule has been that many of the inadequate policies previously on the market have been withdrawn. Another important result has been the creation of the possibility for elderly consumers to make meaningful pricing comparisons among health insurance policies such as they have always been able to make in buying auto and homeowners insurance. For the first time the senior citizen can see the difference in costs, because the benefits have been standardized in the various policies approved under our rule. The end result is that the policies with ridiculously high expense ratios cannot meet the minimum benefit requirements of the rule and still be offered at a competitive price.

Senator CHILES. What is your minimum benefit?

Mr. WILDE. Well, we have a minimum, not in terms of loss ratio, but in terms of various policies—medicare supplement 1, 2, 3, 4A, and 4B. Each one must have a certain amount of benefits which are specified quite explicitly in the rule. The end result is that we have a medicare supplement 2, for example, where at this point two or three of them have been filed at around $200 and we have a number of others which have been filed at around $400 to $450. Same policy.

Now how can that be? The answer is simple. The companies that are filing them at $200 are viewing them as basically public service policies, low commission, policies that they write because it is kind of their obligation in that marketplace in Wisconsin. Low expense, low administrative cost.

The companies at $400, $450, these are the "drummers," the guys who are out there who have the 50 percent, 60 percent commissions, et cetera, and as a result they have got products that are too expensive, and they come in and weep copious tears and we feel very sad.

Senator CHILES. You don't prevent them writing that policy, you just try to set forth the procedure wherein the person over 65——

Mr. WILDE. All policies have been filed on expense ratios of 55 percent or greater, but the expense ratio is a prospective filing. Somebody here earlier referred to actuarial science. Well, actuarial science is not always what it is cracked up to be. I mean one company comes in and estimates its experience one way and another company comes in and——

Senator CHILES. Do you have an underwriter who works for you?

Mr. WILDE. We have an actuary who reviews these things, but our actuary is often hesitant to second guess their judgments. As I say, one company comes in and says, "We need a $400 premium at an expense ratio of 55 percent." Another company comes in and says, "We need a $200 premium at an expense ratio of 70 percent." Our actuary accepts them both. Now what we then do is look to the actual experience.

Senator CHILES. You are trying to go back and postaudit then?

Mr. WILDE. Yes, but then you are talking about 5 years down the road, and that is a terrible problem with looking to loss ratios. We are now postauditing policies that were filed 5 years ago, and there are some with 10-percent loss ratios. There are some with 75-percent loss ratios, and they come from all over the place. Actuarial science is not a science.

STANDARDIZED POLICIES

What we like to see is not the department making the judgment on price, but the marketplace making the judgment on price by having standardized policies that the consumers can compare. We now have a circumstance where the consumer can see it is the same policy—it is $200 with this company and $400 with this company. That is in fact what is happening. The agents who are selling the $400 policies are going back to their own company and saying: "We cannot sell this. Either lower the price or we will get out of this." So, again, that is the marketplace making the judgment, and we have been publicizing the price differentials for just that reason.

Senator CHILES. Do you think you are really getting that message across to the people who are out there buying it?

Mr. WILDE. Yes, I do. I do. We have purchased public service advertisements and various things like that to get it across. Yet even this rule which provides a mechanism for greater standardization of policies, improved consumer information, elimination of many of the worst policies from the market, can easily be misused and our past experience gives us good reason for caution.

One fear, for example, has been that the medicare peddlers would use the new policies as a justification for people to replace perfectly good current policies and subject themselves to new waiting periods and exclusions, and we have seen examples of this taking place. Another problem has been the group policies, such as those offered by the

AARP—American Association of Retired Persons—policies which have not been subject to the rule and in fact have not been subject to State insurance regulation in most States, including Wisconsin.

Despite the problems at this point, we are guardedly optimistic that the medicare supplement marketplace in Wisconsin may be improving. We are seeing parallel initiatives in California.

Even if the States do finally do their job, even if they are generally effective in meeting that responsibility, I don't think that gets either the Federal Government or the insurance industry off the hook.

FEDERAL GOVERNMENT OBLIGED TO COPE WITH MEDICARE PROBLEMS

The Federal Government, which created the medicare program and its gaps, has an obligation to cope with the problems left in its wake. At a minimum that coping should include:

Extensive information and counseling efforts through the Social Security Administration and its local offices.

Some sort of Federal initiative to target law enforcement funds to State attorneys general, local district attorneys, and State insurance commissioners, to encourage them to pursue and prosecute this type of insurance fraud, and it is a difficult kind of prosecution to make.

Senator CHILES. It is a difficult kind of targeting to make when the Governor says, "Don't tie things on your LEAA funds."

Mr. WILDE. What we have tried to do in Wisconsin is show some local district attorneys that it may be a political page 1 issue. That is the only way, sometimes, you can get them to pay attention. It is a painful issue because if you are going after this kind of fraud, if the guy is a very hard peddler, he is worth a lot and he can raise a very tough defense. It is a sophisticated kind of prosecution to make and most local district attorneys are not equipped to do it.

Finally, I think that the Federal Government could encourage the private insurance industry to offer a small number of standardized, comprehensive medicare supplement alternatives on an open enrollment basis countrywide. I think you can encourage that in a lot of ways: First of all, by setting up some proposed standards which might apply countrywide; and second, by using the market power of the Federal employees who are distributed throughout this country and who can—in effect—dictate terms at least to some of the major carriers; and finally, by using the media power of the Federal Government.

As a State insurance commissioner, while I must be wary of Federal regulatory incursion into areas of State jurisdiction, I believe that States have many effective options to pursue in combating the abuses I have identified. I nevertheless welcome your interest and involvement on this issue because I think there is a Federal moral responsibility involved, and also because I believe your involvement insures that the insurance industry and the insurance commissioners will take the issue seriously. In particular, I should say that it pleases me after having spent a number of years listening to tales such as Mr. Lowry's and seeing the victims and feeling quite often the frustration, it pleases me to see some attention at the Federal level to this issue.

Senator CHILES. Thank you, sir. Your prepared statement will be entered into the record at this time.

[The prepared statement of Mr. Wilde follows:]

PREPARED STATEMENT OF HAROLD R. WILDE

Eleven and one-half years ago, the Government of the United States put into effect a program designed to assure adequate health insurance for every elderly person in America. That program was medicare.

Today, elderly Americans pay far more out-of-pocket for medical attention, hospitals and drugs, than they did before medicare. In fact, of the $1,218 average yearly medical bill in 1975 for a person over age 65—medicare paid only $463, or 38 percent. And this percentage has decreased progressively since 1966, when medicare started.

It is not my purpose today to critique the Federal medicare program. Its deficiencies speak for themselves:

A program designed to assist the elderly pay hospital and doctor costs, end up setting off an unprecedented inflationary spiral in those costs, which hurts everyone (except providers), but most of all, senior citizens on fixed incomes.

Cost control mechanisms built into the program are "too little, too late" and end up penalizing patients in their pocketbooks, instead of restraining the bills of doctors and hospitals.

Medicare's deficiencies have been well documented. So too have been its successes, most notably, a broadening of health care availability to America's senior citizens and a consistent ability to deliver health insurance benefits at an administrative cost of 5 cents on the dollar, or less.

What hasn't been adequately documented, or graphically enough demonstrated, is the nature of the problems for the senior citizens left in medicare's wake in the private insurance system—problems which might be called the "medi-scare insurance racket."

Countrywide, these problems—which are the result of what amounts to an unholy alliance between the public and the private sectors to confuse and exasperate the elderly of America—add up to a multimillion dollar ripoff of our senior citizens. They are nothing less than a national disgrace.

I am convinced that the failure of the private sector to adequately and responsibly address this gouging of America's senior citizens by some insurers and their agents in the name of "medicare supplement," represents the Achilles' heel of the private insurance industry in the debate on national health insurance. In few areas is the record of private insurers less credible.

Paradoxically, because of Government's role in creating this problem, the conclusions Federal policymakers should draw from this sorry situation may be equally painful.

What exactly is the "mediscare insurance racket"?

It starts with the high cost of health care, and the (generally quite rational) fears of senior citizens about their future health needs and the gaps in medicare.

There are the obvious gaps:

The initial deductibles.

The 20 percent copayment for physicians services.

No money for out-of-hospital prescription drugs, eyeglasses, hearing aids. dentures.

No hospital days after the lifetime reserve is exhausted.

Then there are the less obvious holes:

The patient's responsibility to pick up the difference between what medicare calls "reasonable and necessary" (as a cost control measure) and what the physician wants to charge.

Nursing home care in a nonmedicare certified nursing home.

Custodial nursing home care.

When a person anticipates real risks which may drain his or her future resources, it is natural to turn to insurance, as a way of transferring those risks.

It is estimated that at least one-half of America's senior citizens, or over 11 million people, do just this—and that they may spend into the billions of dollars this year on private health insurance, to supplement medicare.

For the smart ones, or the lucky ones, who purchase one comprehensive medicare supplement policy from a reputable carrier (frequently one of the "Blue" plans) and no other health insurance—this insurance can be a relatively good deal. And they may feel reasonably secure.

But when you're dealing with a subject which causes you and your peers continuous and daily worry, when the terms of medicare and health insurance coverage in general are extremely confusing and nonstandardized, and when you've been identified as a target group by a class of hard-selling predator-agents and companies, it is difficult to be either smart or lucky. Millions make a good choice. Millions of others do not.

Think of yourself as a 65-year-old widow or widower.

Which of us would not succumb to the charms of an earnest young man at our door who tells us that the policy we currently have will not fill all the gaps in medicare, but his will?

What would we know about 100 percent first year commissions—yes, unbelievably, there is one policy which offers such a commission—or the more "routine" 65 percent commissions?

What would we know about the economics of an industry where 50 percent or 60 percent expense factors are routine for some companies—leaving 40 cents or less on the dollar for benefits? Would we understand the all-too-frequent need of the earnest young man to turn over, churn, or "twist" business, in order to hang onto the high first year commissions which he depends upon to make a decent living?

And then we're hit by the next appeal.

It may be for a cancer policy, in the newspaper. Or an "inexpensive" hospital indemnity policy, at "low group rates," from a national organization.

Or it may be from another door-to-door agent, telling us that we need a nursing home policy—after all, medicare doesn't pay for custodial nursing home care, and isn't that our number one fear.

Trouble is, she doesn't tell us that there is no insurance policy sold in our State that truly covers custodial nursing home care, and that her policy only pays off for nursing home stays after hospitalization and after medicare benefits are exhausted—which means, the policy is virtually useless.

But how are we to know this?

There are approximately one-quarter million senior ciitzens in Wisconsin who supplement medicare with some form of private health insurance (the figure may be significantly understated). We have no way of estimating the amount of money these citizens waste every year in seeking health insurance to fill the gaps in medicare—but we can guess it is well into the millions of dollars.

The most basic waste relates to the product itself. Medicare returns 95 cents of every dollar spent as a benefit. "Blue" plan group insurance (and some private group insurance) normally return 85 cents to 95 cents in benefits on every dollar. The highest value individually marketed medicare supplement insurance policies return 70 cents to 75 cents on the dollar in the form of benefits.

And what is the return in actual benefits on the high-commission, low-value medicare supplement, nursing home, and hospital indemnity contracts which are most aggressively sold to the elderly? A good guess would be 40 percent, if that.

A glance at the 1977 Wisconsin Insurance Commissioner's report and the loss ratios on Wisconsin business of some of the companies heavily into this market will confirm this dreary conclusion; and Wisconsin's experience is not in any way unique.

Ask yourself: How many senior citizens would spend $200 on a nursing home policy or a medicare supplement policy, if they knew that on the average the highest return they could expect back on that policy was $80?

The inefficiencies and extravagances built into the marketing of these health insurance products to the elderly are obscured by the complexity of the products themselves, and the marketing techniques utilized.

There is no insurance policy sold in our State—and I doubt that there is any policy sold in any State—which fills all of the gaps of medicare. None.

But there are thousands of insurance policies purchased every week which are thought to fill all the gaps—at least, until the next medi-scare salesman knocks on the door.

And then another policy is purchased. And another.

It is not uncommon for us to find senior citizens in Wisconsin who are spending well over $1,000 a year on health insurance policies, each of which is duplicative of the other, and only one of which will pay off in the event of a loss.

How can we allow such waste? How can we excuse it? Why is it allowed to go on?

Part of the answer lies in the nature of the victims: Older people, vulnerable, afraid for their health and their estates, more likely to blame themselves when their insurance proves inadequate than the company or its agent.

Part of the answer lies in the nature of the "crime." The victims of one fast-talking medi-scare peddler may, all together, have wasted $100,000 in a year on inadequate or duplicative coverage. But each victim lost only $200 or $300—so the size of the crime and the pattern of victimization is rarely recognized.

Many old people don't even realize they are victims; some are enfeebled or infirm, and incapable of complaining. They make poor witnesses, and they are reluctant to come forward—because they think it may expose their own ignorance and make them look foolish.

It is no surprise that local prosecutors are wary of attempting to pursue such white collar crime. It is costly and difficult.

Nor should it be surprising that the ripoff artist himself frequently points to the approval of a policy form by the State commissioner of insurance as evidence of its acceptability.

Government has been and continues to be part of the problem. State regulators have too long acquiesced in practices which are morally indefensible.

It is time to call a halt to such acquiescence, by both government and private insurance industry.

A government that creates a medicare program for its senior citizens ought to act to assure that the gaps and holes in that program are addressed responsibly.

For too many years, the attitude has been, "out-of-sight, out-of-mind"—which for the senior citizens usually means "out-of-pocket." Such an attitude cannot be accepted in a government which, out of a commitment to "compassion" and "competence," seeks our support for broader government health initiatives.

Nor can the arguments of the private sector against national health insurance be given much credence, when the performance of some of the insurers in the medicare supplement market is reviewed. If this is the best the private sector can do in working with a public program, then it is a powerful argument for a fully socialized health insurance system—at least for the elderly.

In Wisconsin, we have experienced success, failure, and much frustration over the past 3 years, as we have attempted to cope with this problem.

We have greatly strengthened our enforcement efforts. We have increased the number of agent license revocations, suspensions and forfeitures from a handful in 1974 to nearly 100 last year. We have fined one company $25,000 and suspended it from the market for over a year. We have conducted examinations of a number of the insurers with the worst record—and major disciplinary actions may now result.

We have distributed (directly or indirectly) over 100,000 copies of a booklet we prepared for senior citizens outlining their health insurance needs and rights. But, at least until recently, the problem has not shown signs of lessening.

Here are just some of the examples of what we have come across in the past 3 years:

Agents tell us about lists of "mooches," or "cripples," or "marks," that have been circulated among the medi-scare peddlers—lists of infirm or senile old people who will take anything offered to them—who will "buy the whole load"—and we have seen such lists.

Teams of hundreds of agents switch from one company to another, and thousands of people get caught in the ensuing "war."

We go into a company's files, and find dozens of medical applications from particular agents which have been "clean-sheeted." How many people over age 65 do you know with no prior health problems?

We go into another company's files, and find stacks of complaints 6 or 8 inches high on particular agents—yet these agents are still with the company. The unspoken reason: They're too heavy producers to be dismissed.

In the course of various investigations, we come across evidence of systematic forgery and routine post-dating of applications.

Agents tell us about the message they received from their company supervisor in training: "Don't worry about the replacement regulations, don't worry about the 'outline of coverage,' don't worry about the commissioner. The name of the game is to make a sale."

If there is cause for some optimism in Wisconsin, it arises from our experience of the past few months.

On January 1, 1978, a new rule went into effect, which required all new policies sold as "medicare supplements" to senior citizens in Wisconsin to provide minimum benefit levels; and which mandated that whenever an elderly person in Wisconsin is solicited for health insurance, he or she must receive a copy of the consumer booklet produced by this office concerning the health insurance needs of senior citizens.

One important by-product of this rule has been that many of the inadequate policies previously on the market have been withdrawn. Another important result has been the creation of the possibility for elderly consumers to make meaningful pricing comparisons among health insurance policies, such as they have always been able to make in buying auto and homeowner insurance. For the first time, the senior citizen can see the difference in costs (because the benefits have been held constant). Policies with ridiculously high expense ratios cannot meet the minimum benefit requirements of the rule and still be offered at a competitive price. Indeed, among the first policies approved under the rule were some at over $400, offering identical benefits to others priced at less than half that figure.

Yet, even this rule, which provides a mechanism for greater standardization of policies, improved consumer information, and elimination of many of the worst policies from the market, can easily be misused—and our past experience gives us good reason for caution.

One fear, for example, has been that medi-scare peddlers will use the new policies as a justification for people to replace perfectly good current policies—and subject themselves to new waiting periods and exclusions—and we have already seen examples of this taking place.

Another problem area has been the "group" policies, such as those offered by the American Association of Retired Persons, which have not been subject to the rule—and have therefore become a source of some confusion to the elderly.

But at this point, we are guardedly optimistic that the medicare supplement market place in Wisconsin may be improving. We are receiving strong support in our efforts from elderly groups, and from elements of the insurance industry itself (most notably, the State life insurance underwriters organization, which has set up a counseling program).

Even if our effort, and parallel initiatives by California's insurance department and other States, do show signs of working, I do not feel, however, that that gets either the Federal Government or the insurance industry "off the hook."

The Federal Government which created the medicare program—and its gaps—has an obligation to cope with the problems left in its wake. At a minimum, that "coping" should include:

Extensive information and counseling efforts through the Social Security Administration and its local offices.

The "targeting" of law enforcement funds to State attorney generals, local district attorneys and State insurance commissioners to "encourage" them to pursue and prosecute this type of insurance fraud.

"Encouragement" of the private insurance industry to offer a small number of standardized, comprehensive medicare supplement alternatives on an open enrollment basis country wide (e.g., through use of the market power of Federal employees and the media power of the Federal Government).

As a state insurance commissioner, I must be wary of Federal regulatory "incursion" into areas of State jurisdiction. And I believe that States have many effective options to pursue in combating the abuses I have identified.

Nevertheless, I welcome Federal interest and involvement on this issue—because I think there is a Federal moral responsibility involved; but also, for practical political reasons.

The insurance industry and State insurance regulators frequently do not seem to take an issue completely seriously until the Federal Government starts to rattle its "nuclear saber." In recent weeks, there have been signs, within the National Association of Insurance Commissioners and the Health Insurance Association of America—that this issue is finally being given the attention it deserves.

For that—and I am sure for the recommendations with which this committee comes up—you will deserve the gratitude of this nation's senior citizens.

Thank you.

Senator CHILES. Mr. Cooper, I am going to take your testimony and then I will question you both together.

STATEMENT OF W. W. COOPER, TALLAHASSEE, FLA., ADMINISTRATOR, HEALTH INSURANCE SECTION, OFFICE OF FLORIDA INSURANCE COMMISSIONER

Mr. COOPER. Thank you, Senator.

Senator CHILES. We are pleased to have you here from our State. Your full statement will be made a part of the record [1] and you may summarize.

Mr. COOPER. We have problems in this area. We feel the Florida Insurance Department is setting the pace and controlling the situation in our State, protecting the hundreds of thousands of senior citizens that could be taken advantage of. I entered into the record a letter [2] that is a tragic situation. I think the Senator will note this was in 1976. We have not been confronted with such a flagrant situation of someone being taken advantage of, but we do have problems with it with some companies concerning advertising.

21 SERVICE OFFICES

We have one control center that we feel is a big tool in our area in the State of Florida. That is our 21 service offices. The commissioner for the State of Florida has instructed his staff that each Monday morning, after these big spreads have come out in the newspapers, to check into those and see if there is any violation of our rules and regulations in the State of Florida in controlling advertising. This we monitor constantly. We still have some violations.

Our biggest problem is one of general agents. Another thing that we have in Florida is that we check companies. We have a regulation in the State of Florida that companies have to file their training programs, as has been mentioned here today. A lot of training in the past has been poor, and poor training manuals put out by companies, but in the State of Florida they have to file annually their training programs. We have found that if we review these each year and find a situation as has been brought out here today, we see that this is corrected.

We verify loss ratios in the State of Florida. As the commissioner of Wisconsin says, he has a rule and regulation that I think has just been put in force. We do not have such a rule and regulation but we have Florida statutes that require that the premium be reasonable in relationship to benefits provided.

Since Bill Gunter has taken office he has instructed the staff to check and verify loss ratios. We have started this procedure since he has taken office and we go back 4 years. You mentioned this a moment ago. We feel like that is a credible experience and we check each year for the credibility of this contract to be sure that this loss ratio provides benefits above 50 cents on the dollar.

We have had several companies that we have found that their premium was not reasonable in relation to the benefit provided. We have had several of them to revise their complete portfolio to either reduce the premium or increase the benefits and give refunds to these people in the State of Florida.

---

[1] See page 86.
[2] See page 87.

We think in Florida that we are doing an excellent job. We know that Washington has its control and we hope that the other States will follow in behind Florida and will help control their situations such as Bill Gunter is doing in the State of Florida. We have revoked numerous agent's licenses. The word has gotten around in Florida that you cannot become a fat cat by fleecing the senior citizens or the younger age group.

So we feel, Senator, that we are doing a pretty good job, but we still have complaints brought to our attention. We have regional investigators that Bill Gunter has assigned for central Florida, north, south, southwest Florida, et cetera. We don't sit back on our duff and wait until somebody has really been ripped off, we get on top of it immediately.

Senator CHILES. I will enter into the record at this time the prepared statement of Mr. Cooper.

[The prepared statement of Mr. Cooper follows:]

PREPARED STATEMENT OF W. W. COOPER

SENIOR CITIZENS INSURANCE MARKET

(1) The biggest problem Florida has in the area of senior citizens coverage with respect to medicare supplement contracts, also known as medi-gap, is in the replacement of these type contracts during the first 12 months of coverage. Replacement during this initial period of coverage prohibits the insured from being able to receive benefits for pre-existing conditions. This is because the policy must be in force usually, from 1 to 2 years, before he is able to collect benefits for pre-existing conditions. This type of waiting period is common in most contracts, to prevent antiselection against the company, because of people purchasing insurance specifically to pay for expenses on a pre-existing condition. When a policy is replaced before a person satisfies this waiting period, he must pay for all the expenses incurred for a pre-existing condition which causes a further financial hardship on the senior citizens, which is not necessary. The reason agents replace this business, knowing the potential detriment to the insured, is that he will receive first year commission. A first year commission will average between 35 to 65 percent of the annual premium. When an agent makes a practice of replacing medicare supplement coverage, it is common to find that an unscrupulous agent will return to his own client at the time of renewal of a policy, and will sell the client a new policy instead of renewing the current policy.

Renewal commissions are approximately 5 to 10 percent of the annual premium. Therefore, it is more profitable for those agents who are dishonest to sell a new policy instead of collecting the renewal premium on the current policy. It is not uncommon for a dishonest agent to represent more than one company, and replace one of his client's policies with another policy issued by a different company.

(2) Another related problem is a dishonest agent using pressure tactics to sell the insured more coverage than he has a need for. This is called stacking of business. [See attachment, page 87.] This is a common occurrence in the medicare supplement insurance market. There are numerous companies that offer medicare supplement policies that provide sufficient benefits under one policy, to supplement their medicare parts A and B coverage. Therefore, in most cases, there is no need for coverage under several policies that can be provided under one policy.

(3) The third most common practice creating problems in the medicare supplement insurance market is the manner in which these policies are sold. Some dishonest agents, in order to replace a policy or to sell additional and unneeded coverage, will misrepresent a policy and use pressure sales pitches. This results in insureds being confused about what insurance benefits they need and what they are actually purchasing. We have received complaints from in-

sureds stating that they were scared into purchasing coverage and not knowing what they were actually buying.

(4) The Florida Insurance Department regulates advertising used in Florida through the use of guidelines under rule 4–6, which outline the manner in which advertising may be written. The rule requires that all insurance companies provide an annual certification that all of their advertising complies with rule 4–6. However, the problem that most often occurs is with a general agent. The agent will draft his own advertising without prior authorization from the insurance carrier. In the medicare supplement insurance market, the most common violation has been the use of advertising material which is written or designed so as to mislead the reader into thinking that the material is being distributed by the agent of the Federal medicare program. Rule 4–6.13(2), states "no advertisement shall use any combination of words, symbols or physical materials which by their content, phraseology, shape, color, or other characteristic are so similar to combination of words, symbols, or physical materials, used by agencies of the Federal Government or of this State, or otherwise appear to be of such a nature that it tends to confuse or mislead prospective insureds into believing that the solicitation is in some manner connected with an agency of the municipal, State, or Federal Government".

The Florida Insurance Department has 21 service offices throughout the State that try to keep a close watch on advertising material being used in their area.

SOLUTIONS

(1) The department is reviewing the annual statements submitted by companies on their experience as to premiums earned and claims paid on each type policy sold. This review is made to find policy forms that reflect a premium which is not reasonable in relation to benefits provided. This indicates a policy that may be designed actuarily so as to provide too small a benefit to the insured, and too high a profit to the company. The recent investigation by the department of one such company resulted in the company, at the department's instructions, having to update and revise their entire policy portfolio in order to provide benefits that are reasonable in relation to the premiums charged. The department is also reviewing request for rate increases to be sure that the company's actual experience justifies the need for a premium increase. In the majority of such requests for rate increases, we have found that the actual experience for Florida policyholders, did not justify the amount of premium increase being requested.

(2) Bill Gunter, as a result of continual problems in the replacement of health insurance, has proposed a rule which would require that agents give full disclosure and comparison of contracts involved in a replacement. This should be a big help in stopping replacement of insurance which is sold for the sole purpose of profit to the agent.

(3) The Florida Insurance Department, in order to provide the citizens of Florida with a better understanding of health insurance, including what a person should be aware of in a policy, is in the process of publishing a booklet to be given to the public. This booklet will explain terms, provisions, definitions, exclusions, and benefits of insurance policies. The booklet will identify what the senior citizens should look for in a medicare supplement policy.

(4) Market conduct surveillance examinations.

In Reply please refer to: Our file No. 14–76–663 (Oliver) or various policies. Mrs. ———, ———, complainant.

DEAR MR. GREEN: Several recent complaints or inquiries have been brought to the attention of the Insurance Commissioner's Office of insurances where agents of your company have grossly and flagrantly oversold and exploited risks in this area and other areas of Florida.

The most recent is the case of Mr. and Mrs. ———. Mrs. ———, the daughter of this couple is visiting her parents and found that their cooking range. refrigerator, and television were not operating. She asked her parents why they had not had the appliances repaired and was told they could not afford the expense. When she inquired further her parents told her their insurance was such an expense they did not have money for other necessities. Copies of checks drawn on the ——— checking account payable to Insurance Company are attached

and indicate premium payments on December 5, 1975, $1,747.00, January 9, 1976, $354.00, January 1, 1976, $143.40, October 13, 1975, $380,00, January 3, 1974, $134.00, December 26, 1974, $124.00.

In a period of slightly more than a year, these people have paid to your company $2,882.00 for nineteen policies, which are identified on the attached pages.

Mr. ——— is 82 and Mrs. ——— is 78. In speaking to Mr. ——— on the telephone, his speech is halting and barely audible, which is the result of three strokes.

Senator CHILES. You mentioned in your written statement a number of practices that unscrupulous agents use. I suppose those practices, some of those still won't go?

Mr. COOPER. Senator, we still have some of those. They are not running as hard and as fast as they were in the past. We checked in general. We have the right to go in and check a general agent's record even if he is not licensed. Maybe he just sets up an agency and he has men under him. Any time he is transacting insurance in the State of Florida we check those records, and this is how we find stacking of policies.

Senator CHILES. I am delighted to hear that Florida is doing so well and I trust then I am not going to get any letters when the press writes about this hearing, that says there are not any problems in Florida.

Mr. COOPER. Senator, you will get letters. We get letters every day. When these ads hit the paper Sunday, Monday, Tuesday, Wednesday, and Thursday, we receive the letters that we check into, but it is not as rampant as it was in the past, sir.

INDEPENDENT CONTRACTORS

Senator CHILES. Mr. Wilde, you were talking about independent contractors. You were going to comment on that and also on someone being fired "for cause."

Mr. WILDE. Yes. First of all, the phrase "independent contractor," for example, in Wisconsin, would not be an acceptable kind of approach. In Wisconsin, we have only one status of insurance salesman at the moment, which is an agent, and the company is legally responsible for the acts of the agent. Now some companies like to say that their agents are "independent contractors." I suspect in a similar fashion to the way that the guy who sells "numbers" somehow is an independent contractor when you try to trace up the whole chain to the top. I think that the phrase is misleading. Legally, the company is liable for the actions of those agents. They are the company's agents and the company is responsible for their deeds, pure and simple, and so the company has a responsibility to train them.

Senator CHILES. When you are talking about numbers, you are not talking about phone numbers?

Mr. WILDE. No, I am talking about an analogous structure to some elements of the so-called organized crime.

Senator CHILES. We call that bolita.

Mr. WILDE. Second, the "terminated for cause" comment. I am not going to comment on any particular company, but we have discovered, and I suspect most insurance departments would discover, that almost

no agent is ever "terminated for cause." When agents are terminated, they are terminated for "nonproduction."

Senator CHILES. When one gets in a U.S. Senate hearing he might be terminated for cause.

Mr. WILDE. That is not to say they are not terminated for cause, but I am saying from a departmental standpoint, one of the important controls we have is when a company has a bum agent and they know he is a bum agent, they want to get rid of him. I accept that fact. Good companies, bad companies, nobody wants a bum agent—he might steal from them. Generally, when they get rid of him they are afraid to say that they terminated him for cause, they are afraid he will sue them or whatever, so they indicate in their notice to the department that they terminated him for nonproduction.

Under our rules, if they do that, it is a violation by the company; and we are now finding dozens and dozens of these kinds of violations as we go into company records. When we examine their records we discover agent X has been dismissed for all kinds of horrible activities and complaints, yet in our records it shows he was dismissed for nonproduction.

Senator CHILES. Then you require, as part of your regulations, that they notify you?

Mr. WILDE. Absolutely.

Senator CHILES. And what the reasons are?

Mr. WILDE. Absolutely. As I say, that is a requirement that has been in place for years.

Senator CHILES. Do you license these agents?

Mr. WILDE. Yes. That is why it is so crucial that we get that kind of evidence, because, as Senator Glenn was referring earlier to the fact that these guys jump around from company to company; this is very, very true.

Senator CHILES. What kind of results have you had where you failed to license an agent? Have you been tested? Has anybody taken you to court for failure to grant a license?

Mr. WILDE No. We have refused licenses to a number of agents in recent years and we so far have gotten away with it.

Senator CHILES. Nothing has been overturned?

Mr. WILDE. That is right.

Senator CHILES. So it can be an effective means of getting these people out of writing insurance where you have this information?

Mr. WILDE. Yes. In fact, I would say that one of the most striking things is that just one general agent, with a team of a few hundred subagents, can generate hundreds of thousands of dollars of business and hundreds of complaints. If you go after that general agent, it is very hard to get him. They are insulated and protected. But if you go after them, if you can stop them, you see a literal drop-off in the number of complaints in the hundreds, just from the prosecution of a few key agents.

AN AGENT GRAPEVINE

Senator CHILES. Word gets around fast.

Mr. WILDE. Yes.

Senator CHILES. There is a great grapevine out there among those agents, is there not?

Mr. WILDE. Yes, there certainly is.

Senator CHILES. You mention certain things you think the Federal Government can do, and you also mention that you see some more activity on the part of the National Association of Insurance Commissioners. Do you think that is really moving? Is there a possibility for some kind of model law and model regulations, or is the Federal Government going to have to get into this field, as we have gotten into so many areas when the job wasn't being done?

Mr. WILDE. I think that there are some National Association of Insurance Commissioners models of minimum standard things in place now, but in the medicare supplement area it is not very helpful. There may well be at this point in time some interest in the National Association of Insurance Commissioners in going to a much more detailed approach, such as California and Wisconsin have gone to, and it should be said California and Wisconsin have gone in somewhat different directions and that suggests the need for some form of uniformity.

I think that there are agencies of the Federal Government, perhaps the Federal Trade Commission, and others, who have some interest in this issue. I don't think at this point there is a need for a Federal law to establish minimum standards, but as I suggested in my testimony, it would be very appropriate for an agency of the Federal Government and the Congress to develop some guidelines as to what you think would be good and then take the Health Insurance Association of America at their word and walk back to them and say, "OK, you say there is a small number of sharks; what about the good guys?" What are you good guys going to do?

Are you going to offer, countrywide, a few good policies, on an open enrollment basis, so that anyone can get them—and that are offered on an accommodation basis—which means they are not high expense, high commission products? Maybe you can get the private health insurance industry to recognize what I think is its clear responsibility and if it does not recognize it then I think we may have to come back to the Federal Government and say what is the Federal Government's responsibility given the fact that a large part of the problem is created by medicare and the gaps in medicare.

Senator CHILES. Mr. Cooper, what kind of requirement does Florida have in regard to standardization of policies?

Mr. COOPER. In the accident and health field?

Senator CHILES. Yes.

Mr. COOPER. We have what was put into effect a couple years ago, Senator, minimum standards which the commissioner from Wisconsin mentioned, and they are pretty stringent. We have certain guidelines that companies have to comply with when they file policy forms, and if these do not comply with these guidelines then they are not permitted to sell them in our State. Every company had to revise their contracts to bring them into compliance within the State of Florida.

Senator CHILES. Do you have provisions that would require the contract to show what percentage, what is the cost of the accident and health for each coverage A and B and supplemental coverage?

Mr. COOPER. In all areas, Senator, we require in the State of Florida when a company submits a new policy that they have to give us a 10 year breakdown on their anticipated loss ratio and we have received

a little bit of flack from industry in this area because several of the companies did not want to reflect what they anticipated down the road. They might have a 10-percent loss ratio on the contract that is in force in Florida and if we knew it we would withdraw the form which we have statutory authority to do and we have done so. We feel that by requesting this anticipated loss ratio that it is going to correct some of the situations that have been brought out here today.

Mr. WILDE. Senator, if I could comment, I thought I heard your question differently. I thought you were asking what was required in terms of information on the policy.

Senator CHILES. That is what I am trying to find out. What do you require of the purchaser of the policy so that he will see on the face of that policy what the expense is for A coverage or B coverage, medicare A, medicare B?

Mr. COOPER. As far as specifics, Senator, we don't have anything of that nature. We have an outline that is required to be filed with medicare supplements and it tells what they get but it does not go into the cost of the contract.

Senator CHILES. Well, it sounds like to me from what Wisconsin is doing and California—is California doing that, too, what you are talking about?

Mr. WILDE. Well, I am not sure exactly what California requires. What we require is that on any of these medicare supplement contracts they must provide a chart in a very simple, readable form of medicare, what medicare covers, what the policy covers, and what neither covers, side by side, so that it is very simple for the policyholder to figure out what is not covered and what is covered. I don't know if California does that or not.

Mr. COOPER. That is included in our outline.

Senator CHILES. That is included?

Mr. COOPER. Yes, we include what you get and what you don't get on the medicare supplement. I didn't quite understand your question.

Senator CHILES. I am also trying to reach the provision that you are talking about where some companies would show their expense ratio was $400 and another would show that it was $200. That would be in your——

Mr. WILDE. That would be just the basic price of the policy, that would not be the expense ratio. That comparison, of course, every State would have. In States that did not have a standardized approach, company A and company B could both be offering a policy which they call medicare supplement. Company A could have huge exclusions in it and have a very high expense ratio and company B could have no exclusions and be a very comprehensive policy yet they could have the same price.

Senator CHILES. Standardized policy?

Mr. COOPER. Right, sir. Our actuary has told us that any contract written in the accident and health field, that when the company structured its rates and did not have a 55-percent loss ratio that it could cause a large increase in premiums down the road within a couple of years, and this we have found true in Florida after we began to check exhibits of loss ratios where companies would apply for a 200-percent premium increase, as the commissioner has mentioned.

Senator CHILES. How prevalent would either of you judge instances of insurance oversale to the elderly to be?

Mr. COOPER. There is quite a bit of it, Senator.

Senator CHILES. Can you give me a ballpark figure of what you would say it is in Florida?

Mr. COOPER. Most of these people that we have found, that have been brought out today, are very insurance minded. They realize what could happen to their life savings and a lot of them will buy unnecessary contracts such as these policies. So there are quite a few. As far as the numbers, it would be hard to say, Senator.

Senator CHILES. Mr. Wilde.

Mr. WILDE. One way of measuring that question would be to look at the number of people on the medicaid program, which is, after all, only available to people of moderate or low incomes, the number of people on the medicaid program who are insured improperly—since the medicaid program in Wisconsin, and I assume the rest of the country, has to get reimbursement from private insurance where a person in medicaid also has private insurance.

20 PERCENT OF MEDICAID RECIPIENTS WITH PRIVATE INSURANCE

Now the State of Wisconsin Department of Health and Social Services has done some survey work, and at this point I think it is something like 20 percent of the people on medicaid have been shown to have some form of private health insurance. Now there is very little rhyme or reason to people having that health insurance, since by law they really have to turn all the money they receive from insurance over to the State anyway, since they are taking the medicaid benefits and that is one of the prices of those medicaid benefits.

Some people have told us they think they are about to go off medicaid and that's why they want to hang on to insurance. But a lot of those people, particularly people with cancer policies and limited policies of various types, are holding insurance that they should not be holding, and this is an indication of how the marketing tactics have gotten through to the people who clearly can't afford it.

I would like to turn your question around a little bit and also say that the problem in this market is not just one of people being oversold too much insurance, it is also a problem of people being oversold a lot of inadequate insurance so that, for example, they get a stack of policies, such as you have heard today, rather than getting one comprehensive policy, let's say, to supplement medicare. They get four or five limited policies which end up costing $100 or $200 more, and when the crunch comes they find out that those policies are not worth very much.

Mr. COOPER. This is the reason, Senator, that we have withdrawn numerous contracts in the State of Florida because of companies that did not wish to comply with our request.

Senator CHILES. Some people have suggested to the committee that some companies, no matter what the training manual of the company policy says, unofficially encourage agents to disregard the rules as long as the high volume of sales will continue. Do you have any actual knowledge of this, either of you?

Mr. COOPER. Senator, as far as actual knowledge, we don't, but we have been told this and you are going to have some, but most of them

police their own self in this area because we come down on the company. As someone stated, we see that it is corrected. As the commissioner of Wisconsin said, contract or no contract.

Mr. WILDE. I think the answer to that question is that that is the case in this marketplace and has been the case. We have had agents tell us point blank that vice presidents or whatnot of the company have said to them, "Ignore the rules, ignore the commissioner, that is not what you are out there for." As I indicated before, we have come into company records where we could see a stack of complaints 6 inches high on the agent and the agent was still there. That tells us something; it tells us that the company values that agent's production more than their own credibility. We know that we have taken action against agents in Wisconsin and the companies have come in and said: "We agree with you completely. That guy is a bum; we don't want anything to do with him." Then they have licensed him in Illinois.

Senator CHILES. Both of you talked about agents. Do you know anything when you take this action? Do you send that to other States, neighboring States?

Mr. WILDE. Yes, we do and we distribute it. The National Association of Insurance Commissioners distributes a monthly or bimonthly list of agents whose licenses have been revoked or terminated, but it is a very inadequate procedure, because a lot of disciplinary actions don't necessarily result in revocations. They may result in forfeitures, they may result in voluntary withdrawals by the agent, and so on and so forth. I have no doubt that when a State really cracks down, that it may be exporting its problems to other States.

POSING AS MEDICARE REPRESENTATIVES

Senator CHILES. Both of you have talked about agents misrepresenting themselves as agents of the Federal medicare program. I noticed in some of the material provided to the committee, for example, cards mailed to people asking them to return the cards if they want information or changes in medicare. Can you describe how this type of contract works?

Mr. WILDE. When we first started going after this problem 3 years ago, Senator, we used to see literally packets of 10,000 and 50,000 of these cards being mailed out of three or four different agencies. I don't know where they got the lists from, probably from some source that uses motor vehicle records, or some other records that are typed by date.

They would send out a card saying: "Medicare changes information. If you want to know about what is going on in medicare, write to us." Then they would systematically follow up on this. Now we have set up rules which don't allow that kind of misrepresentation and I think we have largely cut it out, but it seems to go on in various ways no matter what we do.

For example, when our new rule went into effect January 1, one of the first things that happened was that some kind of boilerroom agent operation was set up north where someone was calling up lists of senior citizens and saying: "Under the commissioner's new rule, all medicare supplement policies have been abolished; you have to buy

our new medicare supplement policy." The ingenuity of the people in this market is infinite.

Senator CHILES. Mr. Wilde, what has been the reaction of the insurance companies to your new rules and clarification system for medicare supplemental policies?

Mr. WILDE. I think I would say, generally, it has been a healthy reaction. A number of the companies have withdrawn from the market, which is probably healthy. Some companies have gone into the market and made what I would call a public service commitment. They have said that, "We are going to write these policies, not to make a lot of money, but because we think it is the need."

As I indicated in my prepared testimony, they have already distributed 100,000 copies of our booklet to elderly people in Wisconsin, so somebody is out there selling. We have seen the distribution of prices that I referred to, which is, some companies have come in at low prices, some at high, and I think that is important for the consumer.

We have had some problems and one of them, as I indicated in my prepared testimony, was with the American Association of Retired Persons group policy which does not come under the rule. There are something like 40,000 people in Wisconsin who have these policies and many of them are very confused about how they relate to the rule and what their needs are and how their policies relate. I would say we have not been too successful, up to now, in trying to get that situation resolved, but I trust that after "60 Minutes" went to work, maybe we can resolve it much quicker.

Senator CHILES. Mr. Cooper.

Mr. COOPER. Referring to the premium, Senator, some of these companies in the past, we have found some would come out with a gimmick contract and we would disapprove it due to the fact that the premium was not justifiable, it would be too low. We could see that it would create insolvency. We turned those down, we didn't try to have the premium too low for benefits provided. This would cause a problem. We watched both ends of it, whether it was too high or too low.

Senator CHILES. We thank you both very much for your testimony. You have been very helpful to the committee and we appreciate it.

This concludes our hearing.

The committee will be looking at this question further and we will probably be seeking additional information trying to determine what is the extent of the problem and how many States are adequately trying to police the problem.

[Whereupon, at 12:28 p.m., the hearing adjourned.]

APPENDIXES

Appendix 1

ADDITIONAL MATERIAL SUBMITTED BY ROBERT E. LOWRY [1]

ITEM 1. FURTHER COMMENTS OF ROBERT E. LOWRY

Several concerns exist on a highly personal and, I believe, relatively unselfish level. These are "awarenesses" which developed as I groped my way toward the original goal. The light manner in which the problem and complaint was handled in Ohio and the official indifference or unwillingness to initiate action (either in criminal charges for the inducement to forgery, or disciplinary for the company and agents) for behavior which the same officials found "reprehensible" in private conversations. Add to this the concerns which developed during the contacts and communications with company representatives; their insensitive reaction to the factor of financial hardship caused by overinsurance, their insults and insinuations.

I don't give up a fight easily, but I confess that these layers of resistance, to an appropriate resolution of the problem, were almost overwhelmingly discouraging. After 2 months of effort and having apparently exhausted the remedies available in Ohio, my only accomplishments were the company's grudging admission that two policies were refundable, having been "improperly written," and a suggestion that we lapse any other policies found financially burdensome. I tried to imagine my mother or some other "typical" gentle-mannered elderly person attempting to fight their own battles in pursuit of a correction to their grievance on problem along the same path I had traveled. The willingness to admit one has been deceived, the energy to knock on many doors and write innumerable letters, or the ability to endure bureaucractic delays and indifference may be lacking. It is not my intention to demean the spirit or capabilities which many senior citizens retain, but my observations suggest that these types of frustrations and confrontations are neither desired nor needed at this stage of their lives. In short, I became convinced that neither the systems designed to prevent insurance exploitation and abuse nor the systems designed to correct such abuses, after they occur, are adequate in meeting the needs of elderly consumers. This concern and its exposition became as important as resolution of the specific family problem.

I've still got a little fight left in me, but these factors were almost overwhelmingly discouraging. I tried to imagine my mother or some other "typical," gentle-mannered elderly person attempting to pursue a correction of their grievance or problem along the same path I had traveled. The system is neither fair nor adequate to meet their needs when a problem arises. I also learned a few facts of life about the insurance industry, how powerful it is, both economically and politically, and how aggressive they appear to be in their relationships with the various state agencies which regulate their activities. The relevance of these factors seemed to merit equal emphasis within any presentation of our insurance problem to the committee.

There is a direct correlation between our exposure of my mother's insurance problem and the company's willingness to take corrective actions in refunds and, 6 months later, to guardedly admit that insurance oversale did occur and tender an apology. The admissions that something had gone wrong within the company's sales and fiduciary relationship with my mother finally occurred under the bright lights of the committee hearing room with the close attention of

[1] See statement, page 30.

Senators and the media. I feel very strongly that the committee needs to be aware of the very different attitude which this company manifested and the formal stand it took, in reference to our specific problem and complaint, during the 8 months prior to the hearing date. This earlier attitude is relevant to the committee's interests since it represents exactly what we would have had to content ourselves with if the committee had not interceded with a closer examination. As recently as April 5, Mr. Grubbs wrote to the North Carolina Department of Insurance and reaffirmed the statements made in an earlier (January 13) letter concerning my complaint of mistreatment and insurance oversale. The change of heart and attitude occurred between April 5 and May 16. The committee's concern is, I am sure, directed toward the many elderly consumers whose legitimate complaints are not so publicly exposed or favored by Senatorial intervention and who, consequently, may not benefit from a changed attitude by this or other insurance companies.

For this reason, I would like to request that all correspondence between the company and the North Carolina Department of Insurance be included as information supplemental to my testimony. In these and other letters you will note that the company never recognized nor admitted the possibility of overinsurance, nor did it ever mention the New York Life policies as the factor which had motivated their refund in December, although this was the reason given to the committee. Neither the facts of the originating problem nor the information available to the company, from which their attitude and decisions were presumably derived, have altered since last fall. The investigation initiated by the North Carolina Department of Insurance is a positive and energetic response to the complaint I filed as a resident of that State. The correspondence stimulated by this continuing investigation provides both public record and documentary proof that statements made by Mr. Grubbs and other company representatives to a responsible State regulatory agency vary considerably from the company's testimony before the committee (in certain key areas including the issue of overinsurance). The point being made is now obvious. If insurance companies feel free to deal with the consumer in a callous, indifferent manner, and with State regulatory agencies in misleading, possibly deceptive statements, to whom do they respond with the truth? The committee cannot serve as a consumer's "court of last resort."

ITEM. 2. EXCHANGE OF CORRESPONDENCE BETWEEN ROBERT LOWRY, THE NORTH CAROLINA COMMISSIONER OF INSURANCE, AND BANKERS LIFE & CASUALTY CO., CHICAGO, ILL.

RALEIGH, N.C., *November 30, 1977.*

Attn.: W. Kenneth Brown, deputy commissioner.

Hon. JOHN R. INGRAM,
Commissioner of Insurance, Department of Insurance, State of North Carolina, Raleigh, N.C.

DEAR COMMISSIONER INGRAM: As a resident of North Carolina since 1974, I have noted, with considerable satisfaction, your personal concern and the aggressive efforts of the department of insurance in the provision of guidance and protection for the consuming public against unfair insurance industry practices. Unfortunately, not all States enjoy such independent and effective regulatory controls against abusive sales tactics. I feel it is now my responsibility to inform you of a problem situation facing my family and myself which involves a company licensed to do business in North Carolina, Bankers Life & Casualty Co. of Chicago.

In August 1977, I visited my ailing mother, Lucille W. Lowry, age 75, at the Otterbein (retirement) Home in Lebanon, Ohio. Her financial affairs were in a state of chaos due to recent, extremely heavy (nearly $13,500) investments in unnecessary insurance coverage with the above company, as described in the enclosed documents. In examining her papers, I discovered a number of cancelled checks and bank drafts for premium payments on policies she did not have in her possession. Upon inquiry, a Banker's Life agent confirmed the existence of two identical whole life policies with a principal sum of $2,000, one on my life (No. 5,432.307) and another on my brother's life (No. 5.432.306), for which monthly premiums of $140.44 were being collected by bank drafts. During the phone conversation, the agent twice suggested that I might wish to cancel the policies and obtain a full refund. He also stated that the policies had apparently never been "placed" or delivered to my mother. The company's reluc-

tance to deliver the policies emphasized the need to know how life policies could be created on two adult sons without their knowledge, approval and signatures.

Together with other missing policies, the two subject policies were finally delivered on October 13 during a meeting with the Bankers Life chief counsel, Wm. Grubbs, in the offices of the Ohio insurance warden, Mr. R. Katz. The two subject policies had an issue date of April 22, 1977 and all missing policies were stamped "duplicate," an identification which I protested. The contract signatures were not in my brother's or my handwriting and may have been written by my mother, but they were witnessed or authenticated by the selling agent, R. M. Mr. Grubbs commented that these particular policies were "bad" and were not properly written, but that R. M. was no longer with the company. My mother's apparent participation in the creation of these questionable contracts was represented as a serious inconvenience to the company, but Mr. Grubbs said they would overlook her offense and we would be permitted to choose whether to continue the policies in force or rescind them for a full refund of premiums.

Subsequent to the meeting on October 13, the company supplied three other missing policies which my mother had purchased in March 1977 on the lives of her three grandchildren, two of whom are my children with residence in Raleigh. The policies have an issue date of April 6, 1977 and they had apparently never been delivered to my mother, but were stamped "duplicate" when received. I had requested that the company provide me with an accounting for all monies paid in as premiums on life policies. The accounting was sent along with the children's policies, but the dollar amounts do not correspond with the cancelled checks and bank drafts in my possession relating to items #2 and 4 of the enclosed list, the two major life policies.

Mr. Grubss had agreed to maintain all policies in force until November 14 so as to provide time for the family to study the recently supplied policies and determine which policies, of the entire insurance program with this company, should be maintained. Following consultations with my mother, my brother and other advisors, I wrote to the company on November 3 with the details of our decision (copy enclosed). The relatively small health, accident and childrens policies were not of major concern, although they certainly form a part of what is considered the oversale of insurance programs to an elderly woman. My letter requested rescission and refunds on three major life policies and one health policy representing exorbitantly expensive and totally unnecessary coverage in view of her pre-existing insurance program.

As indicated, the company has offered to rescind and refund the two highly questionable policies written on my brother's and my lives. While we regard them as undesirable and are offended by their manner of creation and existence, no decision has, as yet, been reached in reference to accepting the offer pending further legal consultations and your investigation of the matter. I do protest, most strongly, that a contract concerning my life or death, however well-meaning, was accomplished in another State without my knowledge and a financial commitment was created which I would have to assume upon my mother's death. I respectfully request your investigation of this situation and the general business practices of Bankers Life & Casualty Co. of Chicago as they may relate to the citizens of North Carolina.

Sincerely,

ROBERT E. LOWRY.

STATE OF NORTH CAROLINA,
DEPARTMENT OF INSURANCE,
December 19, 1977.

Re: Various Policies, Mrs. Lucille W. Lowry, Lebanon, Ohio.

DONALD CLARKE,
Manager, Claim Review Department,
Bankers Life & Casualty Co.,
Chicago, Ill.

DEAR MR. CLARKE: Your attention is directed to the attached letter, with enclosures, of November 30, 1977 from Robert E. Lowry.

After carefully reviewing the letter and enclosures and discussing this matter with Mr. Lowry, it is our observation that since a citizen of North Carolina has been involved in the manner alleged that we have an obligation to become concerned with his interests and with the sales practices which caused his involvement.

Because of this we request that you furnish this office with a complete report surrounding this matter and responding specifically in detail to each and every charge of Mr. Lowry.

If it is found that all or any of these charges are correct we also request that you inform this department what measures you have taken to determine that such practices will not occur in this State involving our citizens.

We are concerned with the welfare of all citizens with respect to sales practices and tactics but must necessarily be especially interested in any improper application of such practices with respect to our elderly population.

Your prompt reply is expected.

Very truly yours,

FRED L. SEAMAN,
Assistant Deputy Commissioner,
Consumer Insurance Information Division.

BANKERS LIFE & CASUALTY CO.,
Chicago, Ill., January 13, 1978.

Attn.: Mr. Fred L. Seaman, Assistant Deputy Commissioner, Consumer Insurance Information Division.

Re: Your December 19, 1977 letter concerning Lucille W. Lowry—my January 3, 1978 letter.

JOHN RANDOLPH INGRAM,
Commissioner of Insurance,
State of North Carolina,
North Carolina Insurance Department, Raleigh, N.C.

DEAR MR. SEAMAN: This is a followup to my January 3 letter concerning Mr. Robert E. Lowry—your letter of December 19, 1977.

I have reviewed the entire file and have completed a policyowner review of all coverages applied for by Mrs. Lowry.

1. Here's a review of the coverages that were issued for Mr. Lowry. On November 9, 1973, we issued a No. 717 Medical-Surgical Policy, No. 747 Extended Care Facility Policy and No. 780 Hospital Indemnity Policy, all of which were under Policy No. 730,576.561. We don't feel the sale of these policies would have been detrimental to Mrs. Lowry.

2. The Hospital Indemnity Policy, No. 780, was converted and replaced to a 74J Hospital Indemnity Policy, the current form essentially replacing the No. 780 form, under policy No. 730,576,561.

3. On April 19, 1976, the Company issued a No. 774 Intensive Care Policy to Mrs. Lowry under policy No. 760,175,115. This is supplemental insurance which provides a benefit of $50 per week for hospital confinement plus additional benefits of $100 a day for intensive care in the hospital.

4. On December 16, 1976, there was issued a No. 764 Hospital Medicare Supplement Policy to Mrs. Lowry, policy No. 760,392,452 which was a guaranteed issue. In retrospect, this Medicare Supplement probably should not have been issued because of the existence of other coverages. Apparently, since this particular product was a guaranteed issue, it did not become personally reviewed by an underwriter.

5. On April 22, 1977, a Traffic and Travel Accident Policy was issued to Mrs. Lowry.

6. On April 2, 1977, an Intensive Care Policy No. 770,150,792 was issued, but was voided as Mrs. Lowry already had a plan of this kind in force.

7. On April 22, 1977, the Company issued policies 5,432,306 and 5,432,307 which were life insurance policies for Kenneth and Robert Lowry. I am attaching photocopies of the applications which show the signatures of Mr. Kenneth Lowry and Mr. Robert Lowry. We have since learned that Mr. Robert Lowry and Mr. Kenneth Lowry may not sign the applications, but were signed by Mrs. Lowry. We refunded the entire amount of $842. This action was taken immediately when we did discover these were not properly signed.

8. On April 6, 1977, we issued three Juvenile Estate Life Policies on Mrs. Lowry's grandchildren; policies 5,423,861, 5,423,862 and 5,423,863.

9. Mrs. Lowry was also owner of four policies on her life: policy 5,393,843, issued December 15, 1976. That policy was voided as of the issue date. Policy 4,854,476 was issued June 14, 1976: policy 5,248,470 was issued on June 3, 1975: policy 5,413,376 was issued on March 2, 1977.

10. It did appear from our review, of the underwriting file for Mrs. Lowry, that the life policies could have had a definite need. The files would reflect that at the time of issue, Mrs. Lowry was in a strong financial position.

11. We are concerned with the abuse of the senior citizen in the sale of insurance. We have taken action to attempt to curb such abuse when we have it.

12. As a means of assuring fair treatment of senior citizens, Bankers Life and Casualty Company has established several rules concerning abuse in the sale of Accident & Health insurance to senior citizens.

13. The most important of the current rules are: (1) For individuals 65 or over, the maximum allowable premium, including substandard, for all Accident & Health policies for all companies, is $50 monthly. We have established extensive computer systems involving a computer check of all in-force business when a new application is received. Our agents are required to carefully review a prospective insured's current coverage and note such coverages on the application. (2) A policy for an age 65+ policyholder, which has been lapsed less than 12 months must be reinstated, upgraded or exchanged. Such a policy lapsing over a 12 month period can be rewritten, but such rewrites are limited to one in a 12-month period. (3) The Company will not allow any switching of an over-65 policy to another policy in Bankers or any affiliated Company regardless of any explanation given by the agency associate.

14. These rules have been adhered to by the Company. For example, to monitor the success of our rules, I reviewed the computer records on rejection of applications for the reason that a person over 65 has $50 per month in accident and health premiums.

Month	Number of rejections	Percent of all A. & H. premiums
November 1977	130	6.6
October 1977	98	4.1
September 1977	83	3.4
August 1977	70	2.7
July 1977	64	3.0

15. We carefully train our agency associates to use common sense underwriting in the saie of insurance to the senior citizen. We tell our agents when selling health insurance to people in the over age 65 market, that we, the Company, and the agent incur legal, social and moral responsibilities to help these people identify their proper insurance needs and prevent situations that would constitute overinsurance or undue financial hardship. Our agents are made aware that because of the prospect's age, the normal anxiety relating to the increased possibility of illness, and ever increasing hospital and medical costs, that such a person is quite susceptible to being taken advantage of. We teach our agents to review the finances of a senior citizen prospect. We tell our agents to judge an applicant's ability to pay not by how much he has in the bank, but on the actual income they have from their pension or other retirement as well as social security.

16. The Life policies written by ex-agent R.M. on the lives of Robert and Kenneth Lowry appeared to have been signed by Mrs. Lowry rather than her two sons. The Company issued these policies on the assumption the applications were signed by Robert and Kenneth Lowry. When the purported applicants contended otherwise, we made refund and rescission as requested. Our attorney for Agents Licensing matters is also investigating the matter to determine if ex-agent R.M. should have his file in the Insurance Department and the Company indicate "termination for cause".

17. We issued the duplicate policies mentioned in Mr. Lowry's November 30, 1977 letter, since it was apparent Mrs. Lowry could not locate the original policies.

18. The Company has granted a full refund of all premiums we received for all applications of Mrs. Lowry. All policies issued were rescinded. This action was explained to Mr. Robert Lowry on December 5th.

19. On October 13th, Mr. William Grubbs of our Company met with Regional Sales Manager, William Tobin, Mr. Robert Katz and Mr. William White of the Ohio Insurance Department, along with Mr. Lowry. Our Company explained Mrs. Lowry's coverage to the Department and Mr. Lowry at that time, along with an accounting of all premiums for all of the policies she purchased.

20. It was agreed at that time, that Mr. Lowry would notify Mr. Grubbs before November 14th as to whether or not be wished rescission of the two policies issued for Kenneth and Robert Lowry. We did not hear from Mr. Lowry as to his decision.

21. The decision to grant the refund was not based on the Company's conclusion that Mrs. Lowry was overinsured or was mistreated in the sale of these policies. We made the refund as an accommodation for Mrs. Lowry, considering her apparent present circumstances.

If you have further questions, please feel free to write or call. Thank you for the time and attention you have given this matter.

Sincerely,

MICHAEL J. DRESSENDORFER,
Government Relations Department.

STATE OF NORTH CAROLINA,
DEPARTMENT OF INSURANCE,
Raleigh, N.C., March 29, 1978.

Re: Lucille W. Lowry and Robert Lowry.

MICHAEL J. DRESSENDORFER,
Government Relations Department,
Bankers Life & Casualty Co., Chicago, Ill.

DEAR MR. DRESSENDORFER: Your file will reveal that you furnished this office a report on January 13, 1978 with a supplemental letter on January 18, 1978 enclosing material omitted from the first letter.

In keeping with our normal practice we have supplied the complainant, Robert Lowry, with a copy of your report and we now have the attached response from him addressing the contents of your letter which he has numbered by paragraph for convenient reply.

We are aware that the refunds for all policies sold Mrs. Lowry have been made and that the agent reportedly making the sale of this life insurance on Mr. Lowry is under investigation. We also realize that all of these transactions occurred in another State, however, the nature of the charges brought against your company which is licensed in North Carolina are of sufficient scope to make it necessary that we interest this Department further in this matter on the premise that we monitor the conduct of all companies when charges of this nature arise regardless of where they occur.

We consider this a fundamental obligation to our citizens which we are required to protect by law.

In reviewing Mr. Lowry's comments we find interest in and request explanation of the following numbered items on the basis that if he is correct, we are entitled to further explanation.

These items are No. 7, No. 8, No. 10, No. 11, No. 12, No. 13, No. 14, No. 15, No. 16, No. 17, No. 18, No. 21.

We trust that you will furnish a complete response to the questions and observations of Mr. Lowry as promptly as possible.

Very truly yours,

FRED L. SEAMAN,
Assistant Deputy Commissioner,
Consumer Insurance Information Division.

Attn.: Mr. Fred L. Seaman, Assistant Deputy Commissioner, Consumer Insurance Information Division.

Re Analysis/Response to Bankers Life & Casualty Co. letter of January 13, 1978 to the North Carolina Department of Insurance.

Hon. JOHN R. INGRAM,
Commissioner of Insurance, Department of Insurance, State of North Carolina, Raleigh, N.C.

DEAR MR. SEAMAN: In order to facilitate an understandable discussion of the various issues touched on, I have numbered the paragraphs on the accompanying copy of the Company's letter. Please read each numbered paragraph in the Company letter and then refer to the corresponding item number in the analysis/response. Certain issues or subject areas not mentioned in the Company letter, but considered relevant to the overall problem, are discussed in my analysis. For convenience, Mr. Dressendorfer is referred to as Mr. "D".

1. This original, three-part Health policy No. 730,576,561 may have been the most reasonable policy of the entire program. (The annual premium was $220.91.) However, the later "conversion" of the Hospital Indemnity portion considerably increased the cost.

2. With the removal of the Hospital Indemnity portion, the premium on the old policy was reduced to $109.64. The Hospital Indemnity coverage paying benefits of $14.28 per day (per Mr. Grubbs and Mr. Tobin) had apparently cost $111.27 per year. The new, "converted" Hospital Indemnity policy No. 770,052,917 had an annual premium of $284.72 which resulted in a cost increase of $173.45 (256%), yet benefits only increased to $30.00 per day. The very high cost of this converted policy is felt to be disproportionate to the small increase in benefits and, for this reason, I requested rescission and refund on this policy in my November 3 letter to the Company. I suggest that possibly the real reason for the salesman's suggestion to convert was: a.) to accomplish a new policy sale or, b.) to remove Mrs. Lowry from a policy coverage not "cost efficient" to the Company (the rates for which could only be raised by class and throughout the state). Within some circles this sales tactic is considered a form of "twisting".

3. This Intensive Care coverage was certainly the favorite of the various Bankers agents in that at least two (and possibly three) duplicate policies were apparently sold to Mrs. Lowry and subsequently refunded. I had planned to maintain this coverage for the time being.

4. Mr. D. recognizes this policy as inappropriate in view of existing coverage. The selling agent who suggested it was quite familiar with the existing coverage. Thus far, this is the only admission of possible oversale or inappropriate coverage by the Company . . . out of the entire 16 sales accomplished within a period of two years.

5. This was a relatively inexpensive coverage and we had decided to maintain the policy. The policy was delivered seven months after its issue date.

6. As previously mentioned in Item No. 3, this was the *third* (and second duplicate) sale of this same Intensive Care coverage. The second sale was in December, 1976 by Agent Walsh. This is puzzling because Walsh was the same Agent who had sold the original coverage only nine months earlier, in April, 1976. The subsequent repeat sales were each increasingly expensive: No. 1 $73.09, No. 2 $109.64, No. 3 $129.82.

The excuse provided by the Company for such duplicate sales was an absence of records or client's file maintenance at the local offices. The fact that Agents from two separate Bankers offices in Dayton, Ohio were working (with) Mrs. Lowry was also tendered as a possible reason for confusion and duplicate sales. Mrs. Lowry had entrusted the planning of her insurance program to the Bankers "professionals" and obediently followed their guidance. She was, in fact, confused as to what coverage she had as were, apparently, the Agents who were intent on selling her still more policies. Her handwritten notes reveal that she was receiving conflicting guidance from the various Bankers Agents, including conflicting advice as to which of her health policies with other companies should be kept or dropped.

7. The Company is quite sensitive regarding the manner of creation of these policies and their subsequent handling of the resultant problem. A number of misleading statements which attempt to portray an openness and promptness of corrective action are contained in Company correspondence to myself and to investigating officials. In light of this, the key question becomes, "On or about what date did the Company *discover* that the policy applications were improperly or fraudulently completed?"

In mid August, I discovered the existence of two mysterious policies, which apparently concerned my brother and I, through the canceled premium checks in my mother's possession. Bankers Agent Paul Grooms was contacted and asked to provide information as to the nature of the policies since they were not in Mrs. Lowry's possession. On August 25, Mr. Grooms telephoned to inform me that the policies were on me and my brother's lives, that they had been issued on April 22, 1977, but had never been delivered to Mrs. Lowry. Twice during the conversation, Mr. Grooms suggested that the policies might not fit our needs and that he would be willing to order their cancellation and provide a full refund of all premium payments. The Company seemed curiously reluctant to make delivery of these policies. (At this time, I was still unaware that the Company had similarly failed to deliver four other policies issued in April.)

My suspicions aroused by the number of selling Agents involved, the appearance of oversell and the extremely high premium outlay to this one Company, I refused to sign a Company statement of "Lost Policy" and requested both the missing

policies and an accounting of all policies through Mr. R. Katz, Warden for the Ohio Department of Insurance. The two subject policies were finally delivered during the October 13 meeting with Mr. Grubbs and Mr. Tobin in Mr. Katz' office. At that time, I stated that the signatures on the application forms were not mine or my brothers and that both were possibly signed by Lucille Lowry. "Our" signatures were, however, witnessed or authenticated by selling Agent Ronald Montgomery. *If* the Company did not know that the applications were improperly signed by the time Mr. Grooms suggested cancellation in August, they were informed of such on October 13.

A check for $842.24 identified as an "Issue Date Refund" (copy enclosed), for the two subject policies, was subsequently received from the Company on December 12, 1977. Interestingly enough, this Company check No. 495917 was stamped with a date of issuance of October 7, 1977. While no request for a refund on these policies had been made, Mr. Katz had asked for copies of the original application forms in his letter of September 28 to the Company. It is reasonable to assume that the Company had some motive for issuing the check at that time, possibly in preparation for the scheduled meeting on October 13. Further, the check was probably in Mr. Grubbs' possession during the meeting, but no request for refund was made and the check was never shown nor offered. In view of the above described events which strongly suggest that the Company had prior knowledge of the improper creation of these policies, how can Mr. D. now claim that the refund "action was taken immediately when we did discover these were not properly signed."?

A number of reasonable questions arise which are relevant to any examination of this Company's business practices, controls against abusive sales tactics, promptness and adequate in taking necessary corrective action, and candor in dealing with investigating officials or regulatory agencies.

(a) When did the Company discover the policies were not properly created?

(b) Why were the policies withheld and not delivered until nearly six months after date of issue?

(c) Why were the policies stamped "Duplicate" when finally delivered: was this not a rather obvious method of covering up for the long delay in delivery?

(d) Why did Agent Grooms suggest that I might wish to cancel the undelivered policies on August 25 with the offer of a full refund?

(e) Was Mr. Grooms' suggestion not prompted by his or the Company's discovery of an improper, if not illegal, act by one of their agents?

(f) When was selling Agent Montgomery dismissed and on what grounds?

(g) If representatives of the Company had prior knowledge of the improper creation of these policies, why was there no one with the honesty, integrity and courage to bring this to the attention of the client and stop the collection of monthly premium payments?

8. These grandchildren policies were acceptable and no cancellation was requested. As with the policies described above, these were not delivered until six months after issue date and were incorrectly stamped "Duplicate".

9. This is correct.

10. The issues and subject matter touched on in this paragraph are worthy of a much more detailed statement of justification, particularly in view of my frequently expressed complaint regarding oversale. It would be most appropriate and interesting to learn what "definite needs" the life policies were intended to meet. Mrs. Lowry had the following life insurance coverage in force at the time of purchasing the various Bankers policies:

LIFE INSURANCE, LUCILLE W. LOWRY

Company	Status	Year of issue	Death benefits
Midland Mutual	Paid up	1924	$1,000
Union Central	do	1960	2,000
New York Life	do	1932	5,000
Do	do	1954	5,000
Do	Annual premium	1968	25,000
Do	do	1968	25,000
Total life insurance coverage in force plus accumulated dividends			63,000

Mrs. Lowry has no one dependent upon her for support. Her two married sons, ages 43 and 46, are and have been independently self-supporting for many years. Who was dependent upon future death benefits from these policies? As one of the two designated beneficiaries to the policies listed above and to the more recently purchased Bankers Life policies, I am not unaware of the comforts which can be derived from receipt of "windfall income", but neither my brother nor I are dependent upon these future benefits. What constitutes the "definite need" described in the statement by Mr. D? I suggest the possibility that the "financial needs" of the selling agent were a much stronger factor in the creation of these life policies than any concern for Lowry heirs or sound estate planning, particularly in view of existing coverage.

"The files" referred to by Mr. D. appear to contain the key information which serves as the basis for the Company's interpretation of "definite need" and their determination that, "at the time of issue, Mrs. Lowry was in a strong financial position". During the October 13 meeting, I was denied access to these files by Mr. Grubbs. His position was that the Company's first obligation was to protect the "best interests" and privacy of their client, Lucille Lowry, and that revelation of the confidential, privileged information contained in these files would not be in keeping with this obligation.

Mr. D.'s reference to Mrs. Lowry's "strong financial position" at the time of issue and his much more pointed statement in paragraph No. 21 regarding "her apparent present circumstances" attempt to suggest an altered or deteriorated financial situation due to causes beyond the Company's knowledge. It has been my contention that the deteriorated "present circumstances" were *directly* attributable to the rapidly growing financial involvement with the Company which represented an unbearable drain on her income and resources for the payment of insurance premiums. The facts are that one of Mrs. Lowry's important income producing assets, her savings accounts, were being gradually reduced due to large withdrawals for the payment of annual and quarterly premiums. Fortunately, both her income as beneficiary of the trust account and her Federal benefits have increased somewhat.

In both Mr. Grubbs' letter of December 5 and in the present letter from Mr. D., the Company has conveniently portrayed itself as "accommodating" an unfortunate person who has fallen on hard times. They have consistenly avoided a direct and detailed response to the charges contained in my letter of November 3 to the Company:

(a) That an appropriate evaluation was *not* accomplished of Lucille Lowry's existing insurance coveage, her present residential circumstances and financial obligations, and, most importantly, her real need and ability to pay for so much additional insurance. The Company's vague references to a "review of the (secret) underwriting file" does not constitute an adequate justification of their actions nor an explanation of "definite need".

(b) That the accomplishment of *sixteen* separate sales of insurance policies (less four cancellations and refunds) *within a two year period* was an obvious abuse by Company representatives which clearly demonstrates an irresponsibility within the fiduciary relationship of advisor and client.

(c) That the resulting financial committment to annual premium payments amounting to *$9,158.61* represented approximately *68%* of Mrs. Lowry's annual income and thus constituted not only an unreasonable financial burden, but an indefensible abuse of her confidence and an unconscionable, possibly malicious, attack on her resources.

The circumstances and facts detailed above certainly betray the ineffectiveness of the Company's training program or code of behavior which is so eloquently described by Mr. D. in paragraph No. 15 of his letter.

11. It would be reasonable to ask how long the Company has seriously evidenced a concern for protecting senior citizens from abuse in the sale of insurance. I was informed, by a senior official of the Pennsylvania Department of Insurance, that Bankers Life and Casualty had been seriously involved in abusive practices of sales of unnecessary insurance to Pennsylvania senior citizens during 1973 and 1974. It would be relevant to know to what extent they were involved there and what corrective actions were required by the authorities.

If, for a moment, one could assume that an improper sales practice was called to the Company's attention in 1974, what excuse or justification now exists for agents of the same company to practice similar abusive sales tactics in the neighboring state of Ohio or elsewhere in 1975, 1976 or 1977? Can either agents or Company home office officials dare to claim they were unaware that such prac-

tices, as described in the enclosed Pennsylvania press release, were no longer to be tolerated? You will note that a majority of the condemned sales practices described in the press release checklist *were accomplished* in the Company's dealings with Mrs. Lowry. With the present evidence of the Company's behavior so readily apparent, can this company properly claim to be effectively self-regulating?

12. Mr. D. has now narrowed the scope of his explanation to the field of Accident and Health insurance. Some of the Health policies sold to Mrs. Lowry were considered excessive and of doubtful value, but the major strain on her financial resources was caused by the various expensive life policies. With reference to sales of life coverage, would not similar rules be equally appropriate "as a means of assuring fair treatment of senior citizens"?

13. Mr. D. has stressed the importance of the described rules designed to prevent abuse of senior citizens. Unfortunately, Mrs. Lowry was not a beneficiary of this "protection". The premiums for her Banker's Health and Accident policies averaged $47.68 per month *in addition* to her Blue Cross, Blue Shield and other previously existing Health coverages. (This amount is, of course, apart from the premiums Mrs. Lowry was paying the Company for her life insurance policies . . . averaging $715.53 *per month!*)

The establishment of "extensive computer systems and checks of all in-force business", as described by Mr. D., are worthless if the applications do not detail such other coverages. He states, "Our agents are required to carefully review a prospective insured's current coverage and note such coverages on the application." Why was this *not done* in the case of Mrs. Lowry? On most of the attached application forms there is simply the scrawled notation, "Medicare and BL&C". Only on the original application for Health policy #730,576,561, issued in November, 1973, was the Blue Cross mentioned, but no other coverages were described. No indications of monthly or annual premium amounts for existing coverages were included on the application forms despite a specific block which requests such information.

There seems to be little point to a recitation of "Company Rules", the "careful training programs" and good intents of the Company if its representatives ignore them. The existence of rules, mottos and codes of behavior may serve a practical purpose, however, in advertising and public relations. They can be referred to with pride or conveniently trotted out to stifle some complaint or defuse an investigation by a regulatory official. The defense strategy is all too obvious, "That (incident) could not have happened because the Company rules don't allow it." or, "If it did happen, that certainly was not the way those agents were trained or told to behave."

During the October 13 meeting, Mr. Grubbs mentioned that the Company had experienced a turnover of approximately 2,000 agents during the past year. His meaning, I assume, was to suggest that hard working, honest and faithful representatives were hard to find. With such a turnover, I would also assume that training programs are less effective than might be desired. This is a Company problem and I sincerely resent the fact that Mrs. Lowry was used as a training ground and that their problem has become our problem. The point is clear: rules may exist, but their usefulness to the consumer is minimal *if they are not enforced* and if agents are not checked by supervisors as to compliance. After having carefully "reviewed the entire file", Mr. D. decided to include a description of certain Company rules and training guidance. I am surprised, but pleased that he included these for *they have been ignored* in nearly every instance in the specific case of Mrs. Lowry. Are we expected to believe that she is a unique exception and that other senior citizen clients in North Carolina, Ohio, Pennsylvania and elsewhere will benefit from the protection afforded by these rules? The Company's past track record suggests otherwise.

14. Mr. D. says, "These rules have been adhered to by the Company." At the risk of appearing overly repetitious, I must again point out that this is *not* a truthful or accurate statement (see above). As I have mentioned previously, the Company's handling of our complaint has been deceptive rather than frank and their correspondence concerning the situation is riddled with statements which are intentionally misleading. Their decision to deal with me, the perceived antagonist, in this manner was not unexpected, but I am very much surprised that the responsible Company officials would risk jeopardizing their considerable business interest in this state by utilizing the same deceptive tactics in their official response to the inquiry made by the North Carolina Department of Insurance.

It is interesting to note the steady increase in both percentage and number of rejections from July through November, 1977 in the computer data provided. But, why is there no data prior to July? I suggest the strong possibility that this Company rule is a new one (i.e. as of May or June, 1977) and that compliance by agents is increasing as news of the rule spreads.

In recognition of the pride with which Mr. D. presents the Company rules established for the protection of senior citizens, perhaps if will be considered nitpicking if I point out what appears to be an area of serious omission in rule No. 1 if the rule is intended to avoid overloading or strain on the client's budget and resources. Average, necessary expenditures for housing, food, medications, transportation and, in some cases, life insurance premiums are factors whose relevance cannot be denied and which must figure in any equation designed to evaluate a client's capability to assume additional financial committments. Rather than setting some arbitrary dollar amount as a maximum allowable premium obligation, I suggest that a safer, more equitable premium maximum could be established as a percentage of average monthly income. For thousands of clients, the $50.00 maximum could represent 25% or more of average monthly income and would be excessive. When were these rules created and what circumstances prompted their creation? They may form a part of some corrective actions which were required by another state's regulatory agency.

15. The validity or truth of the first sentence in this paragraph is clearly disproved by a review of the correspondence and case history detailing Lucille Lowry's financial overinvolvement with the Company. The following, rather laudable, Company interpretation of appropriate business ethics and practices again appears to deal exclusively with the subject of Health insurance sales. Is this a safer ground for the Company's posturing of virtue and moral concern for the client's welfare? There is a definite avoidance of any mention of the ethics involved in life insurance planning and sales throughout the Company's correspondence. This ommission is puzzling and perhaps deliberately misleading within the context of a discussion or investigation concerning policies requiring an annual premium expenditure of $9,158.61, of which 94% is life insurance premiums. The Company's ploy seems rather transparent with their "Let's talk about what I want to talk about" attitude. Are we to assume, and be fairly warned, that the Company and the agents do not similarly "incur legal, social and moral responsibilities to help these people identify their proper insurance needs and prevent situations that would constitute overinsurance or undue financial hardship" in the sale of life insurance?

The paragraph's last sentence is particularly commendable, "We tell our agents to judge an applicant's ability to pay not by how much he has in the bank, but on the actual income they have from their pension or other retirement as well as social security". While this statement probably refers to premium outlay for Health coverage, it seems equally appropriate, with few exceptions, to the planning for a life insurance program. The Company obviously does not see the correlation or rejects the applicability of this judgemental factor to the sales of life insurance coverage. The "guidance" received by Mrs. Lowry resulted in the creation of a Bankers insurance program with an average monthly premium obligation of $763.21 representing 68% of her average monthly income. Of this amount, $715.53, or 63.5% of monthly income, applied to payment of premiums on expensive, unnecessary life insurance policies. The Company's assessment of this situation, as expressed by Mr. D. in paragraph No. 21, is that Mrs. Lowry was neither mistreated nor overinsured in the sale of these policies. We may conclude, therefore, that the history of sixteen policy sales within a two year time frame and the resulting financial committment to premium expenditures reaching 68% of a client's income is, in the Company's view, acceptable and perhaps even standard business practice. We have also established the apparent existence of a double standard within the Company rules and sales guidelines (Health vs. Life coverages) which were ostensibly designed to protect the elderly client from abusive practices.

16. Once again, either Mr. D. has not reviewed the files of correspondence carefully or the Company has experienced yet another communications "misunderstanding". He says, "we made refund and rescission as requested". As previously indicated, I clearly stated, at the Oct. 13 meeting in Columbus, Ohio and again in my letter of November 30 to Commissioner Ingram, that the signatures on the applications were not mine nor my brother's. *No* request for refund or rescission on these two highly improper policies was even made pending possible civil or

criminal prosecution. The decision to refund was made by the Company alone and was undoubtedly in recognition that a wrongful act had been committed, and to avoid possible legal action.

Under the circumstances, I feel it is appropriate to inquire the date on which Mr. Montgomery became "ex-agent Montgomery" and the reasons for his termination. Was there a connection between his sale of these policies to Mrs. Lowry and his termination? Is the act of encouraging and authenticating the improper signing of applications considered a "cause" for termination? Was his supervisor, Agent LaBovick, who generally accompanied him on the sales visits to Mrs. Lowry and co-brokered one sale with Montgomery, also held partly responsible for what transpired? In a company which claims to be so concerned about propriety of conduct with senior citizen clients, why would nearly six months have to elapse before an investigation is initiated to determine whether or not Montgomery's termination should be identified as "for cause"? To which Insurance Department would Mr. Montgomery's file be referred, Illinois or Ohio?

17. This paragraph is partially true, but the Company persists with the insinuation that Mrs. Lowry lost the original policies despite Agent Grooms' statement to me that the policies had never been delivered. The sentence is yet another example of the skillfully crafted phraseology which avoids an outright falsehood, but attempts to deceive through misleading the reader. In effect, it is true that "Mrs. Lowry could not locate the original policies", but this is because she never had them in her possession. I suggest it is now high time that the Company provide proof of an earlier, original policy delivery. At the same time, proof of earlier, timely delivery could be provided for Accident policy #770,149,043 issued April 22, 1977 and the three Juvenile policies #5,423,861; #5,423,862; and #5,423,863 issued on April 6, 1977. All of the above policies were finally delivered during or shortly following the October 13 meeting and were erroneously stamped "Duplicate".

The Company's "lost policy" insinuation is particularly hard to accept when all other Company policies were located in Mrs. Lowry's safe deposit box at the Lebanon bank. Rather neatly filed in her apartment was nearly every other document relating to her contacts with the Company; cancelled checks, refund check vouchers, sales brochures, envelopes and booklets with notes of decisions reached during meetings with agents from Bankers. It is unknown whether the non-delivery of these six policies was an act of oversight, negligence or embarrasment at the discovery of oversale and improper acts.

18. The Company has apparently "granted" a full refund of all premiums paid in by Lucille Lowry. This rescission and refund of all policies was *not* requested in my November 3 formal letter to the Company. The Company's decision to rescind all policies was very definitely not explained, nor was it even mentioned in Mr. Grubbs' letter of December 5. The heading of Mr. Grubbs' letter listed only the Life policies #4,834,476, #5,248,470, #5,413,376 for which rescission and refund had been requested, plus the policies #5,432,306 and #5,432,307 on Robert and Kenneth Lowry, for which rescission and refund was *not* requested. No other policies or coverages are described or referred to in the letter.

Mr. Grubbs' letter closes with, "we herewith enclose a full refund of the premium we have received. The policies issued herein are, as of this date, rescinded and are under no force and effect". No mention nor explanation was provided concerning the rescission of the eight other Health, Accident and Juvenile policies, only one of which, Health policy No. 770,052,917, it was our intention to rescind. The Company's actions in this regard came as a complete surprise. Were we to interpret this blanket cancellation as a petty act of revenge for having requested undelivered policies, adjustments and corrections in Mrs. Lowry's insurance program? Or, in view of our questioning the sales tactics, the frequency of visits and sales, and the number (two and three) of salesmen arriving together, was this a "closing of the books" on an elderly and troublesome client? While we were not enormously pleased with the Company's past handling of her insurance program, due to her advanced age, we had decided to maintain some of the Health and Accident coverage for the time being. Indeed, Mr. Katz' letter of December 14 (copy enclosed) indicates his interpretation of the Company's December 5 communication as encompassing refunds on Life policies only and he urges that we consider continuation of appropriate Health coverages.

Thus, we now have a situation wherein the original series of abuses involving improper documents and the oversale of insurance have been unnecessarily

complicated by intentionally misleading statements from Company officials and, finally, by the undesired cancellation of all coverage for this elderly woman. This behavior can scarcely be regarded as the corrective actions of a respectable business firm which proclaims a concern for protecting the interests of senior citizens and recognizes the Company's "legal, social and moral responsibilities to help these people". It seems appropriate that a company's image and reputation should be based on the realities of what it does rather than upon its artfully prepared statements of intentions.

During the meeting on October 13, Mr. Grubbs cited "clerical error" as the culprit in certain questionable practices involving altered signature blocks and unsigned application form copies within policies. The same excuse will probably be offered when the Company is reminded that each Health and Accident policy sold to Mrs. Lowry contains the clearly labeled statement, "The Company may *not* cancel this policy". Is this not simply one more "rule" or policy statement, designed to protect the best interests of the client and the public image of the Company, which is conveniently forgotten or set aside when necessary?

In the event of a serious complaint regarding the blanket cancellation of all policies, the Company's defense posture is already prepared. A break down of communications or a "misunderstanding" of Mr. Grubbs' instructions will have occurred in the office that issued the check. Certainly Mr. Grubbs' letter of December 5 makes no mention of cancellation of Health policies and very clearly spells out the policy numbers of the Life policies which were being cancelled. Aware that the unrequested cancellation of all Health policies would leave this elderly client without insurance protection and, aware also that such an action would be viewed negatively by others, the deed was accomplished unobtrusively simply by failing to mention the Health policies within the letter. Mr. Grubbs was mindful of the need to avoid stimulating a negative reaction among the distinguished and lengthy list of individuals who were scheduled to receive copies of his December 5 letter. I strongly suggest that it was the intent of that letter to confound and placate the readership while appearing to bring the entire matter to "an amicable conclusion". Again the question may reasonably be asked; can the above described handling of this problem situation be considered standard, proper or acceptable business practice?

19. Mr. Grubbs and Mr. Tobin did interpret much of Mrs. Lowry's insurance program during the October 13 meeting. The premium accounting explanation became overly complicated and time consuming so I requested a written accounting for all Life insurance premiums paid in. This accounting was received subsequently, but, as indicated previously, their figures do not tally with the cancelled checks in my possession.

20. This is essentially true. My formal response to the Company on November 3 did mention the two subject policies, but indicated that no decision had, as yet, been reached as to their disposition. This position was taken on the advice of legal counsel.

21. This paragraph is particularly significant in that it appears to represent the Company's overall assessment or evaluation of the quality of service provided to Mrs. Lucille Lowry within an extensive business relationship. The statement may reasonably be interpreted as Company conclusion that Mrs. Lowry was not mistreated and was not overinsured in the sale of these policies. In his letter of December 5 to Senator Adlai Stevenson, Mr. Grubbs stated, "We feel we have acted in good faith in regard to Mrs. Lowry's purchases". With these statements providing a frame of reference, we may deduce that the Company maintains an unusually liberal approach toward its definition of what constitutes acceptable or standard business practice.

The Company has concluded that no mistreatment took place in the sale of twelve separate, largely unnecessary, insurance policies within a two year period and the resultant creation of a financial burden in annual premiums amounting to $9,158.61 or approximately 68% of the elderly client's income. No mistreatment occurred in the preparation of applications and sale of two undesired policies on the lives of adult sons, nor in the non-delivery of these and other policies. The presence of two or three aggressive young Agents during a sales visit would not, from the Company's viewpoint, constitute inappropriate pressure tactics. Overinsurance with new Bankers policies did not occur, according to the Company, despite the existence of a variety of Health coverages and more than adequate Life coverage with other companies. Finally, within the same context, the Company possibly intended no mistreatment in its action of an abrupt, unrequested

cancellation of all Health insurance coverages for this client. It is fortunate, indeed, that most business firms have a much more conservative attitude in regard to acceptable business practices and factors which would represent mistreatment, particularly with respect to dealings with senior citizens.

Despite the Company's apparent conviction that no mistreatment occurred within its business relationship with Mrs. Lowry, a decision was reached to cancel and refund all thirteen policies then in force although cancellation had been requested only on four of the most expensive coverages. Mr. D. says, "We made the refund as an accommodation for Mrs. Lowry, considering her apparent present circumstances." For the record, Mrs. Lowry's "present circumstances," as of December 5, were no worse than they had been in September when the complaint alleging oversale was first filed with Ohio authorities and the Company was notified. This relatively minor point is mentioned only to show the time frame within which the Company apparently experienced a change of heart; a period wherein the Company became aware of the interest and concern, on the part of Federal officials and consumer oriented groups, for a satisfactory resolution of Mrs. Lowry's problem and complaint. The fact is that the only "accommodation" offered by the Company, during the October 13 meeting, involved the cancellation and refund of the two fraudulently created policies, a thirty day grace period for the family to consult and render a decision as to which policies of the program would be maintained, and a suggested "adjustment" to the program by lapsing the life policies.

While the two extremely expensive Life policies represented 70% ($6,455.00) of Mrs. Lowry's annual premium payments to the Company, the suggestion to lapse these was rejected. Though considered undesirable and unnecessary, it is common knowledge that Life policies which are lapsed within two or three years of their issue date provide a negligible return of the dollars invested due to their minimal cash value. Convinced that these policies represented the grossest example of overinsurance and exploitation, I requested rescission and full refund on these as a more appropriate and logical alternative or solution. In his December 5 letter, Mr. Grubbs chose to avoid mention of my alternative request and insinuated that my letter of November 3, containing the request, was never received. Surprisingly, he commented on my failure to "advise us if your mother wished to allow the two life policies on herself to lapse. We have not heard from you in this regard." After referring to the policies as fulfilling a "definite need", he said that, "a refund wouldn't be due under any rule or law". Yet, despite the various Company statements of righteous and correct behavior, of conviction that neither overinsurance nor mistreatment had occurred, a blanket cancellation and full refund for all policies was made, "as an accommodation for Mrs. Lowry, considering her apparent present circumstances".

This statement's suggestion of Company compassion and generosity is highly suspect in view of the earlier rigidity of their position. The "present circumstances" referred to were a direct result of Mrs. Lowry's deepening involvement with the Company and are a subject of discussion in paragraph #10. I submit that the Company's ultimate decision to "accommodate" and refund was motivated primarily by the desire to remove both itself and the problem issue from the focused attention of increasing numbers of concerned officials and observers. Certainly the Company was aware of the issue's appearance of: impropriety in the type and frequency of sales contacts with Mrs. Lowry; insurance oversale, in view of all prior existing coverage; and exploitation of a senior citizen's concerns and resources through the creation of a contractual burden equalling 68% of her annual income.

The "accommodation" made by the Company was offensive and petty in its seemingly vengeful cancellation of all coverage. It is imperfect in that the Company refuses to admit or recognize the occurrence of excesses in its sales contacts and contracts with Mrs. Lowry, to apologize to her for these excesses, and to provide assurances that the questionable practices will not be repeated with other elderly clients. The "accommodation" is incomplete due to its failure to address the issue of compensation for the anguish and actual expenses suffered by Mrs. Lowry in the effort to correct this problem situation, as detailed in Item #3 of my November 3 letter to the Coompany. Was this letter not received by the Company?

To prevent future abuses of the elderly in the sale of insurance programs, adequate safeguards must exist within the companies themselves and, in the
