Welcome to Environmental Reporting System (ERS)

The ERS data base is updated from DRMS' Base Operations Support System (BOSS) hazardous disposal tracking subsystem. You are welcome to use any of the reports listed in ERS. Additional instructions are available at the link to the right of the link used to access this system (ERS User´s Guide). The RCRA report only includes waste with RCRA specific EPA waste codes. Universal waste, service requirements, etc are not included.   Please notice that these reports may be exported into a number of spreadsheet applications for your convenience. To access the reports use the following instructions:

1. Select the link labeled "ERS Reports (BOSS)" located just above the link to these instructions.

2. Scroll down through the available reports ("workbooks") and click on either "PUB RCRA Report w/ Designated TSDF" or "PUB RCRA Report w/ Designated TSDF & Full HIN" as desired.

3. When the screen changes to that report, edit the parameters for your request. Enter the date range required for your report. Enter your generator EPA ID number following the "Generator Exact" option. Click on the "Apply" button to initiate the report. Response time varies depending on the quantity of data in the report and other users in the system.

4. When the report is returned to the screen, you may select "Printable Page" or "Export" to use the information. "Export" provides a number of options to save the data electronically in a file on your computer.

5. Please ensure that you click on the "Exit" button to properly exit the ERS system. Then you may exit from your web browser.

Thank you for using DRMS for your hazardous property disposal!
