BILLING CODE 4312-51-P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****Petitions for Modification**

AGENCY: Mine Safety and Health
Administration (MSHA), Labor.

ACTION: Notice of petitions for
modification of existing mandatory
safety standards.

SUMMARY: Section 101(c) of the Federal
Mine Safety and Health Act of 1977 and
30 CFR Part 44 govern the application,
processing, and disposition of petitions
for modification. This notice is a
summary of petitions for modification
filed by the parties listed below to
modify the application of existing
mandatory safety standards published in
Title 30 of the Code of Federal
Regulations.

DATES: All comments on the petitions
must be received by the Office of
Standards, Regulations and Variances
on or before April 16, 2010.

ADDRESSES: You may submit your
comments, identified by "docket
number" on the subject line, by any of
the following methods:

1. *Electronic Mail:* Standards-Petitions@dol.gov.
2. *Facsimile:* 1-202-693-9441.
3. *Regular Mail:* MSHA, Office of Standards, Regulations and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209-3939, Attention: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances.
4. *Hand-Delivery or Courier:* MSHA, Office of Standards, Regulations and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209-3939, Attention: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances.

MSHA will consider only comments
postmarked by the U.S. Postal Service or
proof of delivery from another delivery
service such as UPS or Federal Express
on or before the deadline for comments.
Individuals who submit comments by
hand-delivery are required to check in
at the receptionist desk on the 21st
floor.

Individuals may inspect copies of the
petitions and comments during normal
business hours at the address listed
above.

FOR FURTHER INFORMATION CONTACT:

Barbara Barron, Office of Standards,
Regulations and Variances at 202-693-
9447 (Voice), barron.barbara@dol.gov
(E-mail), or 202-693-9441 (Telefax).
[These are not toll-free numbers.]

SUPPLEMENTARY INFORMATION:**I. Background**

Section 101(c) of the Federal Mine
Safety and Health Act of 1977 (Mine
Act) allows the mine operator or
representative of miners to file a
petition to modify the application of any
mandatory safety standard to a coal or
other mine if the Secretary determines
that: (1) An alternative method of
achieving the result of such standard
exists which will at all times guarantee
no less than the same measure of
protection afforded the miners of such
mine by such standard; or (2) that the
application of such standard to such
mine will result in a diminution of
safety to the miners in such mine. In
addition, the regulations at 30 CFR
44.10 and 44.11 establish the
requirements and procedures for filing
petitions for modification.

II. Petitions for Modification

Docket Number: M-2010-005-C.
Petitioner: Manalapan Mining Co.,
Inc., 8174 East Highway 72, Pathfork,
Kentucky 40863.

Mine: RB #12 Mine, MSHA I.D. No.
15-18771, located in Harlan County,
Kentucky.

Regulation Affected: 30 CFR 75.507-
1(a) (Electric equipment other than
power-connection points; outby the last
open crosscut; return air; permissibility
requirements).

Modification Request: The petitioner
requests a modification of the existing
standard to permit an increase in the
maximum length of trailing cables
supplying power to permissible pumps.
The petitioner states that: (1) This
petition will apply only to trailing
cables supplying three-phase, 480-volt
power for permissible pumps; (2) the
maximum length of 480-volt power for
permissible pumps will be 1,800 feet;
(3) the 480-volt power for permissible
pump trailing cables will be no smaller
than #10 American Wire Gauge (AWG);
(4) all circuit breakers used to protect
trailing cables exceeding the pump
approval length or Table 9 of part 18,
will have an instantaneous trip unit
calibrated to trip at 70% of phase to
phase short circuit current. The trip
setting of these circuit breakers will be
sealed or locked, and these circuit
breakers will have permanent, legible
labels. Each label will identify the
circuit breaker as being suitable for
protecting the trailing cables and be

maintained legible. In instances where a 70% instantaneous setpoint will not allow a pump to start, due to motor inrush, a thermal magnetic breaker will be furnished. The thermal rating of the circuit breaker will be no greater than 70% of the available short circuit current and the instantaneous setting will be adjusted to one setting above the motor inrush trip point. This setting will also be sealed or locked; (5) replacement instantaneous trip units, used to protect pump trailing cables exceeding the length of item #4, will be calibrated to trip at 70% of the available phase to phase short circuit current and this setting will be sealed or locked; (6) permanent warning labels will be installed and maintained on the cover(s) of the power center to identify the location of each sealed or locked short-circuit protection device. These labels will warn miners not to change or alter these short circuit settings; (7) all future pump installations with excessive cable lengths will have a short-circuit survey conducted and items 1–6 will be implemented. A copy of each pump's short-circuit survey will be available at the mine site for inspection; (8) the petitioner's alternative method will not be implemented until miners who have been designated to examine the integrity of seals or locks, verify the short-circuit settings, and proper procedures for examining trailing cables for defects and damage have received the elements of training herein; and (9) within sixty (60) days after this petition is granted, proposed revisions for approved 30 CFR Part 48 training plans will be submitted to the District Manager for the area in which the mine is located. The training will include the following elements: (a) Training in mining methods and operating procedures that will protect the trailing cables against damage; (b) training in the proper procedures for examining the trailing cables to ensure the cables are in safe operating condition; (c) training in hazards of setting the instantaneous circuit breakers too high to adequately protect the trailing cables; and (d) training in how to verify the circuit interrupting device(s) protecting the trailing cable(s) are properly set and maintained. The petitioner asserts that the procedures of 30 CFR 48.3 for approval of proposed revisions to already approved training plans will apply, and that the proposed alternative method will at all times guarantee no less than the same measure of protection to all miners at Manalapan Mining Company, Inc., provided by the existing standards.

Docket Number: M–2010–006–C.

Petitioner: Armstrong Coal Company, Inc., 407 Brown Road, Madisonville, Kentucky 42341.

Mine: Parkway Mine, MSHA I. D. No. 15–19358, located in Muhlenberg County, Kentucky.

Regulation Affected: 30 CFR 75.1101–1(b) (Deluge-type water spray systems).

Modification Request: The petitioner requests a modification of the existing standard to eliminate the requirement that deluge-type water spray system nozzles be provided with blow-off dust covers. The petitioner proposes to conduct weekly examinations and weekly functional testing of the deluge-type water spray systems. Specifically, the petitioner proposes that the alternative method consist of the following requirements: (a) Once every seven (7) days, a person trained in the testing procedures specific to the deluge-type water spray systems utilized at each belt drive will: (i) Conduct a visual examination of each of the deluge-type water spray systems; (ii) conduct a functional test of the deluge-type water spray systems by actuating the system and observing its performance; and (iii) record the results of the visual examination and functional test in a book maintained on the surface for that purpose. The record will be made available to the authorized representative of the Secretary of Labor (the "Secretary") and retained at the mine for one year; (b) a clogged nozzle or any other malfunction detected as a result of the weekly visual examination and functional test will be corrected immediately; and (c) the procedure used to perform the functional test will be posted at or near each belt drive that utilizes a deluge-type water spray system. The petitioner states that: (1) The alternative method provides for weekly functional testing of the deluge-type water spray system while 30 CFR 75.1101–11 requires only yearly functional testing; (2) the alternative method greatly increases frequency of testing, which flushes out the entire system and better assures that the nozzles are not plugged with debris; and (3) eliminating the blow-off dust covers ensures that they do not become corroded and resist blowing off when actuated. The petitioner asserts that the proposed alternative method will all times guarantee no less than the same measure of protection afforded by the existing standard.

Docket Number: M–2010–007–C.

Petitioner: Blue Diamond Coal Company, P.O. Box 47, Slemp, Kentucky 41763.

Mine: No. 75 Mine, MSHA I.D. No. 15–17478, located in Perry County, Kentucky.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance).

Modification Request: The petitioner requests a modification of the existing standard to permit an increase in the maximum length of trailing cables supplying power to permissible pumps. The petitioner states that: (1) This petition will apply only to trailing cables supplying three-phase, 480-volt power for permissible pumps; (2) the maximum length of the 480-volt power for permissible pumps will be 4,000 feet; (3) all circuit breakers used to protect trailing cables exceeding the pump approval length or Table 9 of Part 18 will have an instantaneous trip unit calibrated to trip at 75% of phase to phase short-circuit current. The trip setting of these circuit breakers will be sealed or locked, and will have permanent, legible labels. Each label will identify the circuit breaker as being suitable for protecting the trailing cables, and the label will be maintained legible. In instances where 75% instantaneous set point will not allow a pump to start due to motor inrush, a thermal magnetic breaker will be furnished. The thermal rating of the circuit breaker will be no greater than 75% of the available short-circuit current and the instantaneous setting will be adjusted one setting above the motor inrush trip point. This setting will also be sealed or locked; (4) replacement instantaneous trip units used to protect pump trailing cables exceeding the length of item #4 will be calibrated to trip at 75% of the available phase to phase short-circuit current and this setting will be sealed or locked; (5) permanent warning labels will be installed and maintained on the cover(s) of the power center to identify the location of each sealed or locked short-circuit protection device. These labels will warn miners not to change or alter these short-circuit settings; (6) all future pump installation with excessive cable lengths will have a short-circuit survey conducted and items 1–6 will be implemented. A copy of each pumps short-circuit survey will be available at the mine site for inspection; (7) the petitioner's alternative method will not be implemented until miners who have been designated to examine the integrity of seals or locks, verify the short-circuit settings, and proper procedures for examining trailing cables for defects and damage have received the elements of training herein; and (8) within sixty (60) days after this petition is granted, proposed revisions for approved 30 CFR Part 48 training plan will be submitted to the District Manager for the area in

which the mine is located. The training will include the following elements: (a) Training in mining methods and operating procedures that will protect the trailing cables against damage; (b) training in the proper procedures for examining the trailing cables to ensure the cables are in safe operating condition; (c) training in hazards of settings the instantaneous circuit breakers too high to adequately protect the trailing cables; and (d) training in how to verify the circuit interrupting device(s) protecting the trailing cable(s) are properly set and maintained. The petitioner asserts that the procedures of 30 CFR 48.3 for approval of proposed revisions to already approved training plans will apply, and the proposed alternative method will at all times guarantee no less than the same measure of protection to all miners at Blue Diamond Coal Company provided by the existing standard.

Docket Number: M-2010-008-C.

Petitioner: Blue Diamond Coal Company, P.O. Box 47, Slemp, Kentucky 41763.

Mine: No. 77 Mine, MSHA I. D. No. 15-09636, located in Perry County, Kentucky.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance).

Modification Request: The petitioner requests a modification of the existing standard to permit an increase in the maximum length of trailing cables supplying power to permissible pumps. The petitioner states that: (1) This petition will apply only to trailing cables supplying three-phase, 480-volt power for permissible pumps; (2) the maximum length of the 480-volt power for permissible pumps will be 4,000 feet; (3) all circuit breakers used to protect trailing cables exceeding the pump approval length or Table 9 of Part 18 will have an instantaneous trip unit calibrated to trip at 75% of phase to phase short-circuit current. The trip setting of these circuit breakers will be sealed or locked, and will have permanent, legible labels. Each label will identify the circuit breaker as being suitable for protecting the trailing cables, and the label will be maintained legible. In instances where 75% instantaneous set point will not allow a pump to start due to motor inrush, a thermal magnetic breaker will be furnished. The thermal rating of the circuit breaker will be no greater than 75% of the available short-circuit current and the instantaneous setting will be adjusted one setting above the motor inrush trip point. This setting will also be sealed or locked; (4)

replacement instantaneous trip units used to protect pump trailing cables exceeding the length of item #4 will be calibrated to trip at 75% of the available phase to phase short-circuit current and this setting will be sealed or locked; (5) permanent warning labels will be installed and maintained on the cover(s) of the power center to identify the location of each sealed or locked short-circuit protection device. These labels will warn miners not to change or alter these short-circuit settings; (6) all future pump installations with excessive cable lengths will have a short-circuit survey conducted and items 1-6 will be implemented. A copy of each pumps short-circuit survey will be available at the mine site for inspection; (7) the petitioner's alternative method will not be implemented until miners who have been designated to examine the integrity of seals or locks, verify the short-circuit settings, and proper procedures for examining trailing cables for defects and damage have received the elements of training herein; and (8) within sixty (60) days after this petition is granted, proposed revisions for approved 30 CFR Part 48 training plan will be submitted to the District Manager for the area in which the mine is located. The training will include the following elements: (a) Training in mining methods and operating procedures that will protect the trailing cables against damage; (b) training in the proper procedures for examining the trailing cables to ensure the cables are in safe operating condition; (c) training in hazards of settings the instantaneous circuit breakers too high to adequately protect the trailing cables; and (d) training in how to verify the circuit interrupting device(s) protecting the trailing cable(s) are properly set and maintained. The petitioner asserts that the procedures of 30 CFR 48.3 for approval of proposed revisions to already approved training plans will apply, and the proposed alternative method will at all times guarantee no less than the same measure of protection to all miners at Blue Diamond Coal Company provided by the existing standard.

Docket Number: M-2010-009-C.

Petitioner: Blue Diamond Coal Company, P.O. Box 47, Slemp, Kentucky 41763.

Mine: No. 81 Mine, MSHA I. D. No. 15-12753, located in Leslie County, Kentucky.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance).

Modification Request: The petitioner requests a modification of the existing standard to permit an increase in the

maximum length of trailing cables supplying power to permissible pumps. The petitioner states that: (1) This petition will apply only to trailing cables supplying three-phase, 480-volt power for permissible pumps; (2) the maximum length of the 480-volt power for permissible pumps will be 4,000 feet; (3) all circuit breakers used to protect trailing cables exceeding the pump approval length or Table 9 of Part 18 will have an instantaneous trip unit calibrated to trip at 75% of phase to phase short-circuit current. The trip setting of these circuit breakers will be sealed or locked, and will have permanent, legible labels. Each label will identify the circuit breaker as being suitable for protecting the trailing cables, and the label will be maintained legible. In instances where 75% instantaneous set point will not allow a pump to start due to motor inrush, a thermal magnetic breaker will be furnished. The thermal rating of the circuit breaker will be no greater than 75% of the available short-circuit current and the instantaneous setting will be adjusted one setting above the motor inrush trip point. This setting will also be sealed or locked; (4) replacement instantaneous trip units used to protect pump trailing cables exceeding the length of item #4 will be calibrated to trip at 75% of the available phase to phase short-circuit current and this setting will be sealed or locked; (5) permanent warning labels will be installed and maintained on the cover(s) of the power center to identify the location of each sealed or locked short-circuit protection device. These labels will warn miners not to change or alter these short-circuit settings; (6) all future pump installations with excessive cable lengths will have a short-circuit survey conducted and items 1-6 will be implemented. A copy of each pumps short-circuit survey will be available at the mine site for inspection; (7) the petitioner's alternative method will not be implemented until miners who have been designated to examine the integrity of seals or locks, verify the short-circuit settings, and proper procedures for examining trailing cables for defects and damage have received the elements of training herein; and (8) within sixty (60) days after this petition is granted, proposed revisions for approved 30 CFR Part 48 training plan will be submitted to the District Manager for the area in which the mine is located. The training will include the following elements: (a) Training in mining methods and operating procedures that will protect the trailing cables against damage; (b) training in the proper procedures for

examining the trailing cables to ensure the cables are in safe operating condition; (c) training in hazards of settings the instantaneous circuit breakers too high to adequately protect the trailing cables; and (d) training in how to verify the circuit interrupting device(s) protecting the trailing cable(s) are properly set and maintained. The petitioner asserts that the procedures of 30 CFR 48.3 for approval of proposed revisions to already approved training plans will apply, and the proposed alternative method will at all times guarantee no less than the same measure of protection to all miners at Blue Diamond Coal Company provided by the existing standard.

Docket Number: M-2010-010-C.

Petitioner: Leeco Coal Company, P.O. Box 47, Slemp, Kentucky 41763.

Mine: No. 68 Mine, MSHA I. D. No. 15-17497, located in Perry County, Kentucky.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance)

Modification Request: The petitioner requests a modification of the existing standard to permit an increase in the maximum length of trailing cables supplying power to permissible pumps. The petitioner states that: (1) This petition will apply only to trailing cables supplying three-phase, 480-volt power for permissible pumps; (2) the maximum length of the 480-volt power for permissible pumps will be 4,400 feet; (3) all circuit breakers used to protect trailing cables exceeding the pump approval length or Table 9 of Part 18 will have an instantaneous trip unit calibrated to trip at 75% of phase to phase short-circuit current.
