### Environmental Assessment and Finding of No Significant Impact Related to Issuance of Technical Specification Amendment for the Humboldt Bay Power Plant Unit 3 License DPR-007, Humboldt, CA

#### SUPPLEMENTARY INFORMATION:

#### I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) staff is considering a

request dated January 19, 2006, by the Pacific Gas and Electric Company (PGE or the Licensee), to approve an amendment to Facility Operating License No. DPR-7 that would revise Technical Specification (TS) 3.1.2 to correct an editorial error, and TS 5.2.2 to allow leaving the Unit 3 control room temporarily unmanned during emergency conditions requiring personnel to evacuate occupied buildings for their safety.

## II. Environmental Assessment

### Background

Humboldt Bay Power Plant (HBPP) was permanently shut down in July 1976, and until recently was in safe storage condition (SAFSTOR). SAFSTOR is defined as a method of decommissioning in which the nuclear facility is placed and maintained in safe condition for an extended period of time to permit radioactive material to decay to levels that ease subsequent decontamination and decommissioning of the facility. A Decommissioning Plan was approved in July 1988. Subsequent to the 1996 decommissioning rule, the licensee converted its decommissioning plan into its Defueled Safety Analysis Report which is updated every two years. A Post Shutdown Decommissioning Activities Report was issued by the licensee in February 1998. The licensee is now engaged in some incremental decommissioning activities. In December 2003, PG&E formally submitted a license application to the NRC for approval of a dry-cask Independent Spent Fuel Storage Installation (ISFSI) at the Humboldt Bay site. A license and safety evaluation report for the Humboldt Bay ISFSI were issued on November 17, 2005. PG&E should begin active decommissioning of the facility in 2007.

On June 14, 2005, a magnitude 7.2 earthquake occurred 97 miles WNW of the Humboldt Bay site and was felt onsite. Subsequently a tsunami warning was issued for an area that included the plant site. In accordance with plant emergency procedures, site personnel evacuated the facility to the high ground evacuation site within the owner controlled area of the site. Since TS 5.2.2.c requires continuous staffing of the Unit 3 control room, or alternatively of the Units 1 and 2 control station, this necessitated that the licensee invoke the provisions of 10 CFR 50.54(x) for noncompliance with the TS. Based on this experience, and that the site will continue to be subject to potential earthquakes and tsunamis, the licensee requested the change to the TS to allow temporarily not manning the Unit 3
