the BUSINESS SITUATION

THE latest BEA survey of business capital spending plans points to a 13-percent increase this year compared with 9 percent in 1972 (see pages 8-11 for details). Manufacturers reported plans for a sharp increase following some years of near stability, with outlays to rise 18½ percent this year compared with only 4½ percent in 1972 (chart 1). Pressure on capacity is evidently significant in a number of manufacturing industries. Aggregate spending by nonmanufacturing industries has been increasing quite steadily year after year despite cyclical fluctuations in overall economic activity, and a further broad-based advance is expected in 1973. The essentially steady growth of aggregate nonmanufacturing spending has been largely a reflection of the growth in outlays by the communications industry—mainly telecommunications firms—and the electric utilities, both of which have faced persistent capacity shortages.

A larger increase in capital spending this year than last was generally expected at the start of the year. Economic forecasts at that time typically included a 1973 capital spending increase on the order of 13 to 15 percent. The BEA February survey pointed to a rise of almost 14 percent and the latest expectation, 13 percent, is not significantly different. On balance, the indicated path of capital investment in 1973 is consistent with the general shape of economic forecasts made early in the year. The rate of inventory investment, on the other hand, has been running well below the range of \$10 to \$15 billion incorporated in 1973 forecasts, while the weakening of home-building thus far in 1973 seems to have been a bit milder than most early forecasts implied. The one really sharp

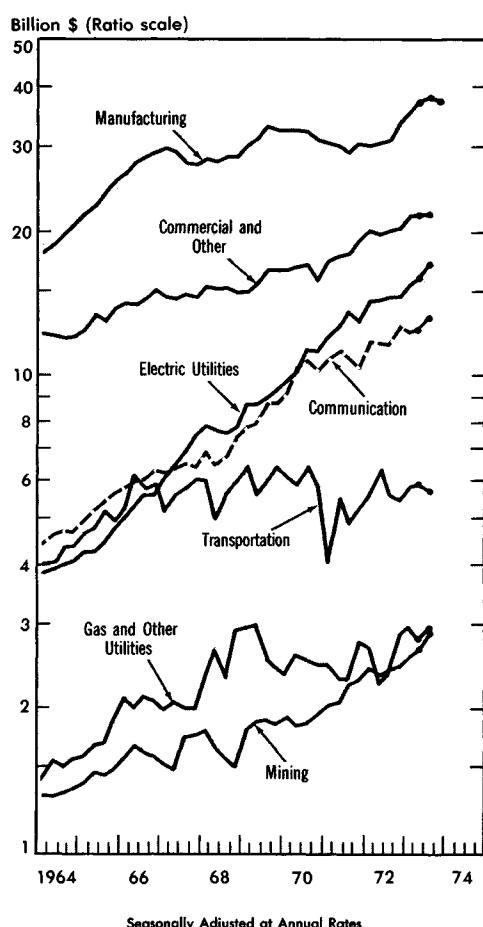

divergence from the typical 1973 forecast was the first quarter acceleration in the growth of consumer demand; and this surge has been a major cause of revision in forecasts of total 1973 output.

Various analysts now forecast a wide range of paths for economic activity in 1974, but there is a broad consensus that real output growth for the remain-

der of 1973 will be appreciably slower than the extraordinary 8 percent (annual rate) in the fourth quarter of 1972 and the first quarter of 1973. For instance, the median forecast of 1973 real output in the American Statistical Association's quarterly poll of forecasters was higher in May than in February, but this increase reflected the unexpectedly large first quarter advance; the forecast for the rest of the year was for a real growth rate averaging just over 4 percent (annual rate), somewhat less than forecast in February (and decelerating during the year). The revised Administration forecast for 1973 released around the first of May showed an upward revision for the year as a whole but implied a real growth rate after the first quarter in the range of 5½ to 6 percent, which is similar to the implication of the Administration's January forecast. (The revised official forecast put 1973 GNP at \$1283 billion, with real output up 7 percent and the deflator up about 4 percent; the January forecast figures were \$1267 billion, 6¾ percent, and 3 percent, respectively.)

A new element affecting the economy's course is the President's mid-June decision to take further economic stabilization action. The President's specific concern was with rising prices, especially rising food prices. On June 13, he imposed a freeze to hold prices at levels no higher than those charged during the first 8 days of June. The only general exceptions are prices of unprocessed agricultural commodities at the farm level, and rents. Wages, interest, and dividends continue to be subject to existing control systems during the freeze. The freeze is to last for a maximum of 60 days, to allow time for development of a new system of con-

73-6-1

trols—Phase IV—"designed to contain the forces that have sent prices so rapidly upward in the past few months."

The consumer price data for May have just become available as this issue of the SURVEY goes to press. The overall consumer index rose 0.6 percent (seasonally adjusted), with food up 1.1 percent and all items except food up 0.5 percent. The seasonally adjusted wholesale index increased 2.0 percent in May, with industrial commodities up more than 1 percent for the third consecutive month and the nonindustrial index up 4.1 percent. In the preceding 3 months—February, March, and April—the rise in the consumer index averaged 0.7 percent per month while the wholesale index rose an average 1.6 percent per month.

Housing starts

At the beginning of the year, the expectation was that the very high rate of housing starts maintained in 1972 was not sustainable for long, and that total private starts in 1973 would be roughly 10 percent below the 1972 total of 2.36 million units. The seasonally adjusted annual rate of starts had been essentially flat throughout 1972, at about 2.4 million units. It peaked in January of this year at 2.5 million, fell in the next 3 months, but then rebounded in May. The rate averaged 2.40 million in the first quarter, the same as in the fourth, and 2.27 million in April and May. For the year's first 5 months the average was 2.35 million units, equal to the 1972 total and a higher figure, probably, than analysts had looked for.

The course of housing starts for the rest of the year will be heavily influenced by the availability and cost of credit. A tightening of credit has been evident since early in the year, reflecting Federal Reserve policy as well as very strong credit demands. The tightening intensified in the spring and the rise in short-term interest rates accelerated as midyear approached. The steep rise in market rates this year has rendered the rates paid by thrift institutions relatively unattractive and the net inflow of deposits to these institutions has slowed appreciably. Consequently, the institutions have

been cutting back sharply on new mortgage commitments, so that mortgage credit has become harder to obtain and mortgage interest rates have risen. However, if the growth of business credit demand slows with a slowing of the economy's growth, credit tightness is unlikely to have a severe impact on housing activity this year.

Consumer demand

Following unusually strong expansion in the first 3 months of the year, retail sales dropped sharply in April (though some of the drop may have reflected the difficulty of making an accurate seasonal adjustment to take account of the date of Easter). Sales recovered only part of the decline in May, according to the advance estimate, and the average in April and May was just equal to the average for the first quarter, in contrast to very large gains during the past year and especially in the first quarter—when retail sales rose 5½ percent.

The virtual stability of sales in April–May versus the first quarter average was broadly based among the major durable and nondurable goods groups. One clear exception was apparel sales, which are estimated to have dropped sharply after very large gains in the fourth and first quarters. Sales at food stores rose 1 percent, but the bulk of that increase appears to reflect rising prices.

Sales by retailers in the auto group shared the general pattern of stability in April and May relative to the first quarter. This is consistent with the behavior of new car sales in unit terms. Unit sales, including both domestic models and imports, averaged 12.2 million (seasonally adjusted annual rate) in April and May, only a little below the record rate of 12.5 million in the first quarter. Sales of import models averaged 1.9 million in April and May and sales of domestic models 10.3 million; the comparable rates in the first quarter were 2.0 million and 10.6 million.

Despite strenuous efforts to expand production, the very high sales rate for domestic models has cut heavily into dealer inventory accumulation, and

stocks have declined to the lowest level since the model change-over period last July. The ratio of inventory to sales was 1.68 months at the end of May; with the exception of March, when the ratio fell to 1.60, this is the lowest since last July and is down considerably from the recent high of 1.90 at the end of 1972.

Consumer income

The recent slowdown in consumer demand came at a time when personal income growth was also slowing—although the income gains were still quite substantial—and saving was evidently rising appreciably. A significant factor in the deceleration of income growth in April and May was a decline in agricultural income, following months of substantial increases. The increase in personal income averaged \$7.6 billion (annual rate) in February and March and slowed to \$6.1 billion in April and \$4.8 billion in May. The increase in January was only \$3.1 billion, but would have been about \$6½ billion had it not been for a \$5.2 billion rise in social security taxes (a deduction from personal income) that more than offset a Federal pay increase of about \$2 billion. Income gains averaged \$12 billion (annual rate) per month in the fourth quarter of last year, an exceptionally large figure that reflected big increases in social security benefits.

A factor having an important influence on disposable personal income this spring is net final settlements on 1972 tax liabilities. Taxpayers generally did not adjust to the new withholding schedules introduced in January 1972 and were consequently overwithheld by some \$9 billion in 1972—making disposable income last year that much lower than it otherwise would have been. In the first half of this year, ongoing overwithholding is being more than offset by larger-than-usual net final settlements (bigger tax refunds or smaller final payments to the Treasury than otherwise) that mainly reflect repayment of the 1972 overwithholding. It is estimated that the overwithholding phenomenon's net impact on disposable income was neutral in the first quarter as enlarged final settlements about

offset continued overwithholding. However, the bulk of the refunds has been concentrated in the second quarter, with the extra-large net final settlements estimated to exceed ongoing overwithholding by some \$3 to \$4 billion (annual rate), which would boost disposable income in the quarter by that much.

Installment credit

The growth of outstanding consumer installment credit in April, the latest month for which data are available, amounted to \$16.8 billion at a seasonally adjusted annual rate, a large gain but nevertheless the smallest since last September. Credit growth was at a record annual rate of \$24 billion in the first 3 months of this year, \$19½ billion in fourth quarter of 1972, and \$14¾ billion in the first 9 months of 1972. The steep acceleration in the 6 months preceding April carried the ratio of credit growth to the flow of disposable income to a record 2.8 percent in the first quarter, up from 1.7 percent in the first quarter of 1972 and only 0.8 percent in the first quarter of 1971, when the current expansion in installment credit began.

The stabilization of new car sales this year—albeit at a very high rate—has slowed the growth of auto credit. In April, there was also a sharp slowdown in personal loan growth, following 3 months of sizable increases; this may be related to the fact that income tax refunds were exceptionally heavy in April, due to the overwithholding phenomenon as well as to some lateness this year in processing tax returns.

It is unwise to infer much from a 1-month slowdown in credit expansion, but the April figures do seem consistent with other data suggesting the likelihood of a slowdown in credit use relative to the hectic pace of the past two quarters. For instance, the percentage of disposable personal income currently committed to installment debt repayment is very high. There is no established limit to that percentage which, once reached, will cause a slowdown in consumer credit growth; however, the ratio rose sharply in the first quarter to a record 16.3 percent, compared to 15.8

percent 1 year earlier and 15.2 percent in the first quarter of 1971. Also, tightening in credit markets has led to higher interest rates and a reduced availability of funds, and this will probably cut into installment credit use. Finally, the outlook for further slowdown in credit

growth is consistent with the most recent University of Michigan survey of consumer sentiment, taken in March, which showed a sharp drop in consumer optimism that suggests a reduction in the willingness to borrow and to spend in the months ahead.

Revised Estimates of Federal Budget

Revised estimates of Federal unified budget receipts and outlays were released in early June by the Office of Management and Budget (OMB). The new estimates are tentative, largely because congressional action had not been completed on any of the fiscal 1974 appropriation bills or on other proposed legislation affecting the budget.

For fiscal 1974, a \$2.7 billion deficit is now estimated, compared to a \$12.7 deficit projected in January. The change is due entirely to higher receipts estimates: individual income taxes and corporate income taxes are both revised up about \$4½ billion and other taxes are up \$1 billion. These estimates are based on a projected calendar 1973 GNP of \$1,283 billion, \$16 billion above

the January projection. In addition, tax collection experience this year suggests that receipts at a given level of GNP are higher than previously estimated.

The outlays projection for fiscal 1974 continues at the level of \$268.7 billion published in January, but there is some shift among the components. Upward revisions for interest on the debt and disaster assistance are offset by lower unemployment benefits and larger receipts (negative outlays) from sales of stockpiles and offshore oil leases.

Fiscal 1973 deficit reduced

The revised figures show a deficit of \$17.8 billion for the fiscal year ending this month, compared to \$24.8

Billions of 1958 dollars

Dollars

1. Excludes gross product originating in the rest of the world.

2. This is equal to the deflator for gross product of nonfinancial corporations, with the decimal point shifted two places to the left.

3. Personal saving as a percentage of disposable personal income.

1973 Plant and Equipment Expenditure Programs

BUSINESSMEN expect to spend \$100 billion on new plant and equipment during 1973, according to the survey conducted in late April and May by the Bureau of Economic Analysis. This would be a 13.2-percent increase over last year, compared with increases of 8.9 percent in 1972 and 1.9 percent in 1971 (table 1).¹

The 1973 advance—if realized—will be the largest since 1966, when outlays rose 16.7 percent. As in 1966, the advance reflects stronger expansion in manufacturing (18½ percent) than in nonmanufacturing (10½ percent). This contrasts with the period 1966–72, when manufacturers' outlays rose at an annual rate of only 1.8 percent while nonmanufacturing investment increased at a rate of 8.3 percent.

Outlays increased 4.6 percent from the fourth quarter of 1972 to the first quarter of 1973, to a seasonally adjusted annual rate of \$96.2 billion. This was the second successive strong quarterly gain; the fourth quarter increase was 4.9 percent. Slower expansion is projected for the rest of 1973, with outlays rising 2.5 percent in the second quarter, 3.3 percent in the third, and 1.6 percent in the fourth (table 2).

Projected spending for the full year 1973 is down slightly—about \$500 million or 0.5 percent—from the \$100.6 billion projected in February. First quarter spending was 0.6 percent below the earlier projection and the second

quarter projection has been cut 1.6 percent. Plans for the second half of the year are virtually unchanged from those reported in February.

Nonmanufacturing industries have lowered projections for the year about 1 percent from the February survey; electric utilities, airlines, and communications and commercial firms reduced their projections, while railroads, gas utilities, and mining companies raised theirs. Manufacturers have slightly raised their projections. Projected expenditures were raised by the electrical machinery, iron and steel, rubber,

“other durable goods” and “other nondurable goods” industries, and reduced by the petroleum, motor vehicle, and nonferrous metal industries.

The survey findings indicate that capital spending will rise throughout 1973—although not at the exceptionally high rates of the past fall and winter. These findings are supported by most factors influencing business investment, which are on balance favorable to continued high expansion. Funds generated internally—retained earnings and capital consumption allowances—have risen steeply in the past 2 years; in addition to rising profits and an expanded capital base, these funds have been bolstered by the liberalized depreciation rules adopted in mid-1971 and the investment tax credit enacted late that year. Although short-term interest rates have risen in response to tighter monetary policy and increasing credit demand, long-term rates have remained relatively stable. Capacity utilization in manufacturing has been rising rapidly; the Federal Reserve utilization rate rose 6 percentage points from December 1971 to March 1973, and this BEA survey shows a sharp further rise in the reported need for more capacity (table 4) and in the carry-over of investment projects underway (table 3).

The 13-percent spending increase in 1973 indicated by the survey is more moderate than the 19-percent rise indicated by the spring survey conducted by the McGraw-Hill Publications Company, although little different from the 14-percent figure obtained by Lionel D. Edie and Company. Differences between private surveys and the BEA survey result largely from the size and

1. Includes industries not shown separately.
Source: U.S. Department of Commerce, Bureau of Economic Analysis.

1. The expectations figures have been adjusted for systematic biases (footnote 2, table 6). Before adjustment, 1973 expenditures were expected to be \$99.98 billion for all industries, \$38.26 billion for manufacturing and \$61.72 billion for nonmanufacturing. The adjustments were applied separately to each major industry; their net effect was to lower the manufacturing total by \$1.10 billion and raise nonmanufacturing by \$1.24 billion.

composition of the samples used and from differences in processing techniques. The private survey samples have considerably fewer reporters than the BEA sample, and consist primarily of the larger firms. It may be noted that large manufacturing firms in the BEA sample—those with assets of \$50 million or over—expect to spend 27½ percent more this year than last, not very different from the 29-percent increase for manufacturing shown by the McGraw-Hill survey. The full BEA sample of manufacturers, including smaller firms, reports an expected increase of 22 percent, but the figure after adjustment for the systematic upward bias in manufacturers' expectations is 18½ percent. This adjustment for systematic bias, which is not made in the McGraw-Hill survey, is described in the February 1970 issue of the SURVEY, pages 20–21, 36–39. For nonmanufacturing industries, the bias correction raises the BEA projection of the 1973 increase by 2 percentage points, but the McGraw-Hill projection is still larger by 4 points; here, the entire difference is attributable to differences in the composition of the reporting panels.

Manufacturing programs

Manufacturers' outlays rose 5.6 percent in the first quarter to a seasonally adjusted annual rate of \$35.5 billion, following an increase of 8.6 percent in the fourth quarter. These two large gains are in marked contrast to the small advances over the preceding 3 years. Table 5 provides a measure of the pervasiveness of the recent expansion. Outlays reported by each manufacturing company in the survey sample in each quarter of 1972 and the first quarter of 1973 were matched with the

outlays reported in the year-earlier quarter: In the first quarter of 1973, 57 percent of the companies reported over-the-year increases in outlays, about the same percentage as in the fourth quarter; the figure in the first quarter of 1972 was 49 percent.

The expected increase in manufacturers' investment for the full year 1973

is 18½ percent, with durable goods producers expecting a 22-percent increase and nondurable goods producers a 15-percent increase. All major industry groups except textiles expect increases, with the largest increases expected by the rubber, nonferrous metal, paper, and "other durable goods" industries.

The 1973 increase is scheduled to take place primarily in the first half of the year, and all manufacturing industry groups except petroleum expect to spend more in the first half than in the second half of 1972. Outlays are expected to rise 4½ percent in the second quarter, 2½ percent in the third, and to decline 0.6 percent in the fourth quarter. The indicated increase from the second half of 1972 to the first half of 1973 is 12 percent; a 4-percent increase is expected for the second half.

1. Starts are estimated by adding changes in carryover to expenditures during the given period.

2. Carryover refers to expenditures yet to be incurred on plant and equipment projects already underway at end of period.

3. Includes data not shown separately.

4. Includes guided missiles and space vehicles.

5. Seasonally adjusted data for starts and carryover have been revised for all periods since the beginning of the series in the fourth quarter of 1962.

NOTE.—Details may not add to totals because of rounding.

Manufacturers' starts and carryover of investment projects and evaluation of capacity

The value of new projects started by manufacturers rose 12 percent (seasonally adjusted) from the fourth quarter to the first (table 3); starts have increased in each of the past seven quarters but the latest rise is the largest in that period.² Starts by nondurable goods producers advanced 17 percent—centered in the chemical, petroleum, and textile industries—and starts by durables producers increased 7 percent.

Starts exceeded capital expenditures in the first quarter, resulting in an increase in carryover—the amounts still to be spent on projects already underway. Seasonally adjusted carryover totaled \$24.0 billion at the end of March, up \$2 billion or 9 percent from end-December. The March carryover was 2.71 times the amount of spending in the first quarter, compared with a ratio of 2.62 at the end of December and 2.44 at the end of March 1972.

Manufacturers reported a further tightening in the adequacy of their facilities during the first quarter (table 4). Companies owning 44 percent of fixed assets in manufacturing reported that their facilities as of March 31 were inadequate, taking account of prospective sales over the next 12 months, compared with 40 percent as of December 31 and 31 percent in March 1972. The "more needed" percentage rose for most of the durable goods industries; in nondurables, the petroleum industry accounted for the increase.

The "about adequate" percentage declined to 53 percent as of March 31 from 55 percent at December 31. Companies reporting facilities in excess of needs accounted for 3 percent

2. Seasonally adjusted figures on starts and carryover have been revised for all periods since the beginning of the series in the fourth quarter of 1962. Data for 1971 and earlier years will be published in a future issue of the SURVEY. The revised data have been calculated by seasonally adjusting the carryover data and deriving seasonally adjusted starts by adding seasonally adjusted expenditures to the change in seasonally adjusted carryover. Formerly, starts were seasonally adjusted directly, and seasonally adjusted changes in carryover were derived by subtracting seasonally adjusted expenditures from seasonally adjusted starts. The estimates for total manufacturing were not significantly changed by this revision, but the estimates for several industries were.

of fixed assets at March 31, down from 5 percent at December 31.

Nonmanufacturing programs

Nonmanufacturing industries reported spending at a seasonally adjusted annual rate of \$60.7 billion in the first quarter, 4 percent above the fourth quarter. The projected gains for the rest of the year are 1.4 percent in the second quarter, 3.7 percent in the third, and 2.9 percent in the fourth.

For the full year 1973, nonmanufacturing industries project a 10½-percent gain, compared with 11½ percent in

1972. Public utilities project strong growth; the demand for new electric generating facilities has resulted in a steady growth in spending over the past several years, and projected 1973 spending is almost double the spending in 1968. Starts of new projects by utilities in the first quarter of 1973 totaled \$7.9 billion, exceeded only by the record \$8.9 billion reported for the fourth quarter of 1972. Carryover increased \$3.3 billion in the quarter to \$47.0 billion at the end of March.

Railroads have boosted their planned 1973 outlays and now expect an increase

of about 12 percent, compared with 7½ percent last year. Airlines expect to reduce outlays 10 percent in 1973 following a huge rise to a record volume last year.

The communications and mining industries expect spending increases this year—10½ percent and 13 percent, respectively—about the same as the increases last year.

The “commercial and other” group—trade, service, construction, finance and insurance—expects an increase of 8 percent, compared with 11 percent last year.

1. Excludes agricultural business; real estate operators; medical, legal, educational, and cultural service; and nonprofit organizations.

2. Estimates are based on expected capital expenditures reported by business in late April and May 1973. The estimates for the second quarter, and third quarter of 1973 have been corrected for systematic biases. The adjustment procedures are described in the February 1970 issue of the SURVEY OF CURRENT BUSINESS. Before such adjustments, 1973 expenditures were expected to be \$99.98 billion for all industries, \$38.26 billion for manufacturing, and \$61.72 billion for nonmanufacturing.

3. Includes data not shown separately.

4. Includes guided missiles and space vehicles.

5. Includes fabricated metal, lumber, furniture, instrument, ordnance, and miscellaneous except guided missiles and space vehicles.

6. Includes apparel, tobacco, leather, and printing-publishing.

7. Includes trade, service, construction, finance and insurance.

International Travel, Passenger Fares, and Other Transportation in the U.S. Balance of Payments: 1972

CHART 2

U.S. Payments and Receipts for Travel and Transocean Passenger Fares

THE net U.S. deficit on international travel and transportation transactions last year was \$2.9 billion, \$0.6 billion or 24 percent more than in 1971 (table 1). U.S. payments for these services increased 14 percent to nearly \$9.9 billion, while U.S. receipts increased 10 percent to \$7.0 billion. Net U.S. payments for international travel and passenger fares were \$3.0 billion, up from \$2.5 billion in 1971; other transportation transactions recorded a surplus of \$0.2 billion, about the same as in 1971. Stimulated by strong domestic eco-

nomic growth, U.S. residents traveled overseas in record numbers in 1972 despite substantially higher prices for U.S. travelers than in 1971, reflecting rapid inflation abroad and the effect of the December 1971 dollar devaluation. U.S. travelers' total expenditure in foreign countries increased 14 percent. The average dollar expenditure per U.S. traveler to oversea areas increased only 2½ percent, as the average trip lengthened slightly. Evidently, the higher prices for travel were largely offset by a reduction in real expenditure.

Source: U.S. Department of Commerce, Bureau of Economic Analysis.

U.S. travel receipts rose 10 percent, despite a decline in Canadian travel outlays here. The dollar devaluation may have had some expansionary influence on foreign travel spending in the United States, for there was vigorous growth both in numbers of and expenditures by visitors from oversea areas where currencies were revalued.

This article reviews 1972 developments in the travel, passenger fare, and other transportation accounts in the U.S. balance of international payments.

NOTE.—Excludes travel by military personnel and other Government employees stationed abroad and by their dependents and U.S. citizens residing abroad; includes shore expenditures of cruise travelers, but not their transportation fares or other passenger fares.

Source: U.S. Department of Commerce, Bureau of Economic Analysis.

Transocean passenger fares are discussed as part of the review of total spending by U.S. residents traveling abroad and of spending by foreign visitors in the United States. (The article includes data on passenger fares paid by U.S. travelers to U.S. transocean carriers, which do not enter into the balance of payments but do represent an important part of total spending by U.S. travelers; see table 1, memorandum items.) U.S. carriers' receipts of passenger fares from foreigners for travel between foreign countries, which do enter into the balance of payments, are reported in this article. Also reviewed are freight payments to U.S. and foreign air and sea carriers and the carriers' port expenditures.

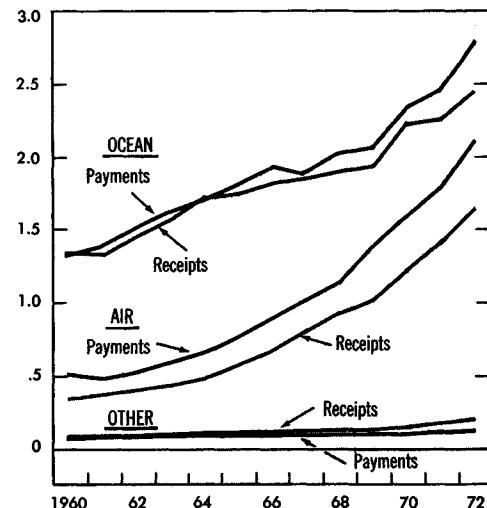

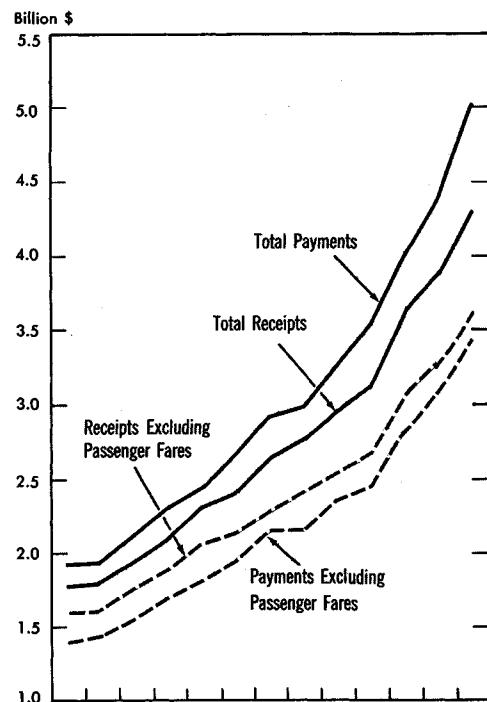

In contrast to the pattern overseas and in Mexico, travel outlays in Canada declined 7 percent in 1972, to \$1,036 million, compared with a 6-percent rise in 1971. Much of the estimated decline,

have been stimulated by the fact that the peso-dollar exchange rate remained unchanged, while a number of other currencies appreciated against the dollar.

In contrast to the pattern overseas and in Mexico, travel outlays in Canada declined 7 percent in 1972, to \$1,036 million, compared with a 6-percent rise in 1971. Much of the estimated decline,

CHART 3

U.S. Payments and Receipts for Passenger Fares and Other Transportation

NOTE.—Totals consist of passenger fares, freight transportation charges, charter hire, and carriers' port expenditures.

however, probably reflected a change in the statistical system for reporting border entries and departures, which reduced the reported volume of travel on which the expenditure estimates are based. However, part of the decline may have been due to bad weather conditions last summer.

Nearly 99 percent of the 6.8 million U.S. oversea travelers in 1972 traveled by air (table 4). The number traveling by ship dropped to less than 75,000, from 95,000 in 1971 and 120,000 in 1970. Sea cruises, however, continued to grow in popularity, and 657,000 U.S. residents took cruises in 1972, up 4 percent from 1971.

Travel to Europe and the Mediterranean

The number of U.S. travelers to Europe and the Mediterranean area, their total passenger fare expenses, and their travel outlays abroad, each increased about 20 percent from 1971 to 1972. The average trip expense—counting both transatlantic fare and travel outlay abroad—was about \$850 in 1972, about the same as in 1971. Despite the 7-percent increase in trans-

atlantic air fares beginning in April 1972, average passenger fare payments were \$368, slightly below the 1971 level. This virtual stability may have been related to the unusually large proportion of travelers who made their trips in the off-season periods, when lower fares are offered.

The average travel outlay within the European-Mediterranean area was \$482, also essentially unchanged from 1971 (table 3). The average duration of stay was extended by 1 day to 27 days, and the daily outlay averaged about \$18.00, down from \$18.50 in 1971. The average tourist visited 2.6 countries, also about the same as in 1971 but below the 3.0 countries visited in 1970 and earlier years.

Not all countries in the European-Mediterranean area shared equally in the 1972 increase in travelers' spending. As shown in table 3, the increase can be broken into two components for each country: the change in the number of travelers and the change in their average spending. Change in average spending, in turn, reflects change in the length of stay in the country and change in spending per day (details on this break-

down are not now available). All of these factors are influenced by the changing tastes of tourists; changes in local political atmosphere; tourism promotion programs of various countries; and changing costs for travel, including the impact of inflation and of changes in exchange rates.

In 1972, three countries showed a significant loss in their share of total spending: the United Kingdom, Ire-

land, and Israel. The United Kingdom's share of the total fell from 21.0 percent in 1971 to 18.5 percent in 1972; the number of travelers there rose only 9.9 percent, compared with the 20.0-percent rise in the total for the European-Mediterranean area, and average expenditure per traveler fell 4.2 percent from \$239 to \$229. These developments may have been partly related to the fluctuations of the pound sterling against the dollar. In the early part of 1972, when travel plans for the summer were being formulated, sterling had appreciated against the dollar and this probably held down the number of visitors. But sterling depreciated sharply against the dollar at midyear; thus, when travelers arrived their sterling expenses measured in dollars were lower than they otherwise would have been, and this probably contributed to the drop in average spending. The political problems in Northern Ireland probably contributed to the reduction in the number of travelers to the Republic of Ireland, and the drop in their average spending may have reflected shorter stays. In the case of Israel, the increase in the number of travelers (6.3 percent) was significantly below the average.

Countries which showed substantial increases in their share of total spending can be divided into two groups: (1) relatively high-cost countries such as Germany, Sweden, Norway, Netherlands, and Belgium, whose currencies appreciated against the dollar (increasing dollar costs of travel) but which nevertheless experienced average or above average increases in the number of U.S. visitors; (2) relatively low-cost countries such as Spain (whose currency also

appreciated against the dollar) and Greece (whose currency was stable against the dollar), both of which experienced especially large increases in the number of U.S. visitors.

In other major tourist countries—France, Italy, and Switzerland—the number of visitors increased somewhat less than the average but average spending increased enough to keep each country's share of total spending roughly unchanged.

Western Hemisphere and Pacific

The West Indies and Central America received over \$500 million from U.S. travelers in 1972. This was a gain of nearly \$100 million or 24 percent, after 2 years of minor advances. The number of travelers increased sharply, from about 1.7 million in 1971 to 2.0 million, and average outlay per traveler also rose. The Bahamas earned \$144 million, up 20 percent from 1971 after 2 years of decline. Spending in Jamaica increased 17 percent to \$105 million, and in Bermuda it rose 11 percent to \$69 million; both countries had registered a decline in 1971. Spending in other West Indies and Caribbean areas continued the

rapid growth of recent years, rising 37 percent in 1972. In South America both the number of American visitors (340,000) and their total spending (\$113 million) increased substantially, following virtual stability in 1971.

Marked increases were recorded in 1972 in U.S. travel to "other areas," primarily the Pacific and Far East. The number of travelers grew 30 percent to over 600,000, average expenditure per traveler rose, and total travel payments increased 36 percent to \$400 million, compared with a gain of 6 percent in 1971. Much of the growth in both travel volume and spending occurred in Japan and Hong Kong, two of the Pacific area's major tourist attractions. In Japan, Americans spent \$120 million, nearly 38 percent more than in 1971, and outlays in Hong Kong were up 40 percent to \$70 million. Both countries had experienced a decline in 1971. On the other hand, spending in Australia and New Zealand increased only about 7 percent in 1972, to \$50 million, following a 40-percent increase in 1971.

Foreign Visitors to the United States

U.S. receipts from foreign visitors increased 11 percent in 1972 to a record \$3.2 billion. The total includes \$2.7 billion spent in the United States and \$0.5 billion in fares paid to U.S. transocean carriers for passage to and from the United States.

Canadian spending for travel here declined \$12 million, or about 1 percent, to \$922 million. Receipts from Mexico, on the other hand, increased 9 percent to \$615 million. In 1971, receipts from both Canada and Mexico had increased about 4 percent. The change in data-recording procedures which was cited as affecting the estimate of U.S. travel spending in Canada is also believed to account for much of the estimated slump in Canadian travel to the United States last year. However, poor weather and floods in the United States may also have had an impact.

Oversea visitors spent \$1.2 billion in the United States last year, a 21-percent increase over 1971. U.S. car-

73-64

riars' earnings from these foreign visitors increased 16 percent. There were nearly 2.9 million visitors from oversea areas in 1972. Three-fourths came on pleasure trips, the remainder on business, in transit to other destinations, or as students.

Japan led all oversea countries in travel to the United States, both in number and in total travel expenses here. More than 400,000 Japanese visited in 1972, an increase of 34 percent. Their travel outlays in the United States rose 53 percent to \$205 million. Expansion of Japanese travel to the United States speeded up in months following the August 1971 exchange rate changes—which resulted in an especially large appreciation of the yen against the dollar.

European visitors to the United States numbered 1.3 million last year, up 17 percent from 1971, and they spent about \$450 million here, up 23 percent. About 30 percent of the Europeans were residents of the United Kingdom. The number of British visitors increased 19 percent to 389,000, their average expenditure in this country rose, and their total outlay increased more than 40 percent to \$96 million. The number of German

visitors increased 17 percent to 237,000 and their spending rose 18 percent to \$93 million. The number of French visitors increased 17 percent to 157,000 and their spending rose over 30 percent to \$63 million.

The number of visitors from the West Indies, Central and South America increased only about 3 percent in 1972, following a decline in 1971, and remained below the record set in 1970. Total receipts from the area rose less than 6 percent to \$343 million. This relatively slow expansion was probably related to the fact that Western Hemisphere currencies either maintained their parity with the dollar or were devalued against the dollar.

International Passenger Fares and Other Transportation Transactions

The international transportation account of the U.S. balance of payments comprise payments and receipts for ocean and air movement of goods and travelers (passenger fares) between the United States and foreign countries; U.S. receipts also include foreigners' payments to U.S. carriers for transporting goods and travelers between foreign points. Also included are port expenditures of foreign car-

ries in the United States (receipts) and of U.S. carriers in foreign countries (payments); international receipts and payments for ship charters; transactions with Canada and Mexico for rail and pipeline operations; and Great Lakes international shipping activities.

U.S. residents paid \$5.0 billion in 1972 to foreigners for international transportation activities, 15 percent more than in 1971 (table 1, lines 3 and 4, and table 8). Transocean passenger fares, which increased 22 percent, accounted for \$1.6 billion of the total. U.S. receipts from transportation transactions were \$4.3 billion, up 11 percent from 1971 (table 1, lines 10 and 11, and table 8). Port expenses of foreign air, ocean, Great Lakes, and railroad operators in the United States which increased 10 percent, accounted for \$2.3 billion of the total. Passenger fare receipts (almost wholly for air travel) increased 13 percent to \$0.7 billion, while receipts from carrying ocean freight were up 8 percent to \$0.8 billion. Receipts from ocean freight and from foreign ocean carriers' port expense here were favorably affected by carryovers resulting from the late-1971 work stoppage at U.S. ports.

U.S. Balance of Payments Developments: First Quarter 1973

CONTRASTING shifts among the major accounts characterized U.S. balance of payments developments in the first quarter of 1973. Reported private capital outflows—mostly short-term—as well as net payments through unrecorded transactions (errors and omissions) showed a very large rise, which led to sharp increases in the net liquidity deficit and the official reserve transactions deficit. On the other hand, there was a decline in the deficit on current account transactions, largely reflecting a narrowing of the merchandise trade deficit. The deficit on current account and long-term capital also declined slightly, to its lowest level in 2 years, as an increase in direct investment outflows was more than offset by the combined improvement in merchandise trade, Government capital flows, and other net long-term private capital flows.

The large rise in capital outflows in the first quarter was mostly associated with two periods of exchange market uncertainties. The first followed the creation of a two-tier system for the Italian lira and the subsequent floating of the Swiss franc near the end of January, and culminated with the 10-percent devaluation of the dollar on February 12 and the floating of the Japanese yen. The second developed at the end of February and led to a suspension of official intervention in exchange markets in a number of major countries in early March. Subsequently, the German mark was revalued an additional 3 percent and six of the nine Common Market countries decided to maintain narrow exchange rate margins among themselves while ceasing to

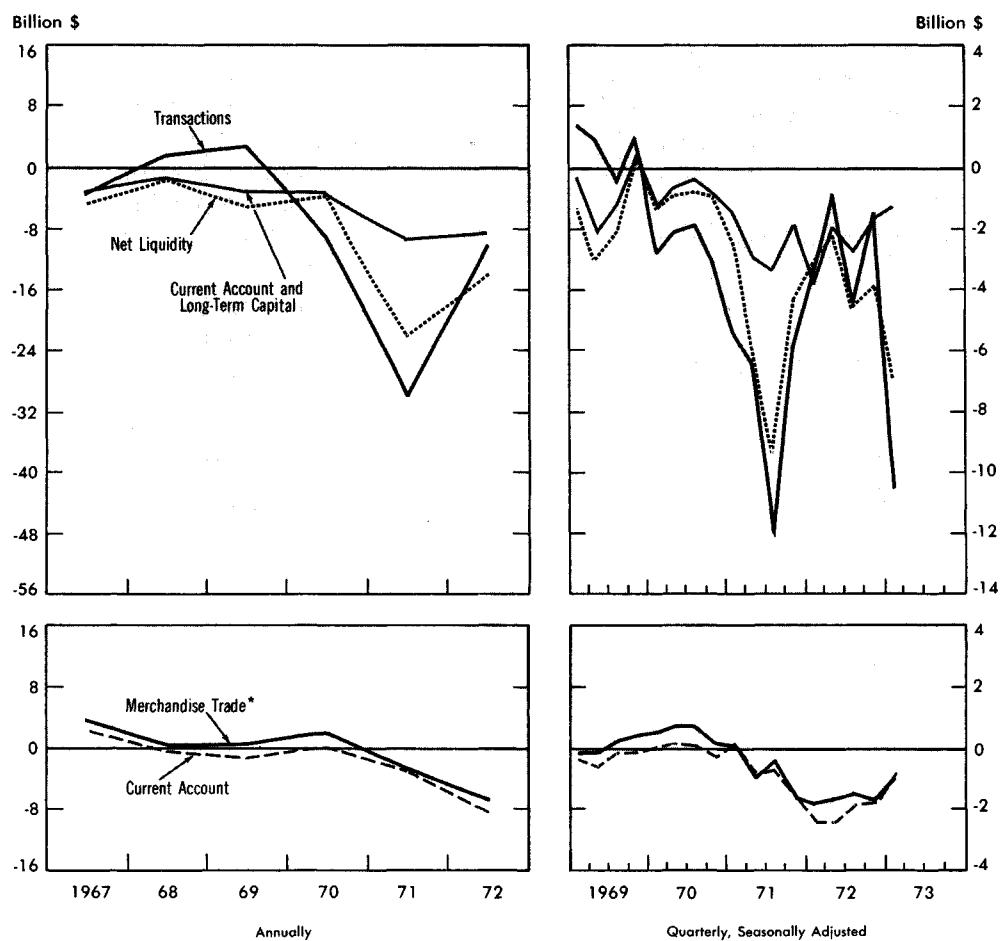

intervene in support of fixed margins vis-a-vis the dollar and other currencies. At the same time, many European countries intensified their controls on incoming capital.

A good part of the increased capital outflow in the quarter was accounted for by short-term capital channeled through banks, as foreigners made heavy drawings on their assets and credit lines with banks in the United

States. Direct investment outflows were also large, rising to a record quarterly level. Although direct investment is classified in the long-term capital accounts, the outflow in the first quarter was probably strongly affected by more immediate factors, including expectations of exchange rate changes. Such expectations and the related widening of short-term interest rate differentials between the United States

CHART 5

Balances on Major U.S. International Transactions

*Excludes exports under military grants and U.S. military agency sales contracts and imports of U.S. military agencies.

and leading international money centers, especially the London Eurodollar market, probably were the major factors contributing to the large errors and omissions outflow, as well as the bank-reported outflows. Consequently, outflows of both nonliquid and liquid funds, reported and non-reported, in the first quarter were probably mostly concentrated in the periods of exchange market uncertainties noted above.

Current account transactions

The merchandise trade deficit declined almost \$0.8 billion in the first quarter to less than \$1 billion, as exports rose considerably more than imports (see Highlights and Perspectives—Merchandise Trade). Agricultural shipments accounted for a large part of the export increase, followed by industrial supplies and materials and capital equipment. On the import side, industrial supplies and materials, especially petroleum and related products, led the advance. Most of the improvement in the trade balance was with Western Europe and Japan. There was a small improvement in the balance on military transactions (excluding transfers under military grants) as deliveries under military sales contracts increased.

Net investment income showed vir-

tually no change but there were significant developments on both the receipts and payments sides. Income on U.S. direct investments abroad, including fees and royalties, rose more than \$0.1 billion and reached \$3.1 billion, surpassing the record set in the previous quarter and representing, at an annual rate, a flow about 20 percent above the 1972 total. Income receipts of U.S. petroleum companies accounted for a rising share of the total, and there were also substantial inflows through the United Kingdom. Income on other private assets also increased nearly \$0.1 billion, as the worldwide escalation of interest rates continued. Payments on foreign investment in the United States rose more than \$0.2 billion. The rise was centered in payments on U.S. Government liabilities, largely reflecting the accumulation of these liabilities by foreign official agencies and higher short-term interest rates.

The net result of all the above transactions and those associated with other services, which showed virtually no change, was a \$0.9 billion improvement in the balance on goods and services, which eliminated the deficit in that balance. There was little change in remittances, pensions, and other transfers but there was a \$0.1 billion reduction in U.S. Government grants

(excluding military), mainly due to a repayment to the United States associated with the earlier termination of the European Monetary Agreement. Thus, the current account deficit declined \$1.0 billion to less than \$0.8 billion.

Long-term capital flows

Net long-term capital flows, including Government and private, moved unfavorably by nearly \$0.7 billion in the first quarter to an outflow of nearly \$0.5 billion. The Government accounts shifted favorably by more than \$0.2 billion, mainly because of sales of Export-Import Bank loans to the Japanese monetary authorities and prepayments by several countries for military equipment to be delivered later. Among net private long-term capital flows, the dominant element was direct investment outflows, which increased almost \$1.4 billion from the fourth quarter to reach \$2.1 billion. Exchange market-related intercompany transfers, and increases in plant and equipment spending by U.S.-owned affiliates abroad, were among the leading factors in this outflow (see Highlights and Perspectives: Corporate Capital Flows). The major share of the outflow was to petroleum affiliates in Western Europe and the Middle East. Foreign direct investment

CHART 6

Changes in Selected Foreign Exchange Rates¹

Percent change from parity with U.S. dollar on March 31, 1970

1. Spot rates at end of quarter.

2. U.S. trade-weighted average of Canada, Japan, United Kingdom, West Germany, France, Italy, Netherlands, Belgium, Switzerland, Denmark, Sweden and Norway.

3. Represents the percent change between parity on March 31, 1970 and the central rates established in the Smithsonian agreement on December 18, 1971.

in the United States was up nearly \$0.1 billion. A good part of the net inflow was accounted for by two European takeovers of U.S. firms. In contrast to previous periods of exchange market upheaval, there was an absence of large-scale transfers from the United States to Japan by Japanese trading companies here.

Net U.S. purchases of foreign securities shifted favorably by almost \$0.1 billion, as a decline in new Canadian bond issues in the United States more than offset a shift to small net U.S. purchases of European stocks. Foreigners' net transactions in U.S. securities (other than Treasury issues) were virtually unchanged from the fourth quarter. Their net purchases of U.S. stocks rose to a record \$1.3 billion (see chart 8), a favorable shift of \$0.2 billion from the already high level of the fourth quarter, but there was an offsetting decline in new issues sold abroad by U.S. corporations, as these bonds lost favor in February and March. About 40 percent of the new issues sold were convertible.

Net long-term capital outflows reported by U.S. banks were less than \$0.2 billion, a favorable shift of \$0.3 billion; long-term claims on foreigners increased somewhat less than in the fourth quarter and there was a \$0.2 billion shift, to an increase, in long-term liabilities to international organizations, mostly associated with an increase in time deposits held by the World Bank.

The adverse shift of nearly \$0.7 billion in long-term capital flows, netted against the \$1.0 billion improvement in the current account, resulted in a reduction of more than \$0.3 billion in the deficit on current account and long-term capital. That deficit amounted to \$1.2 billion in the first quarter.

Short-term capital flows

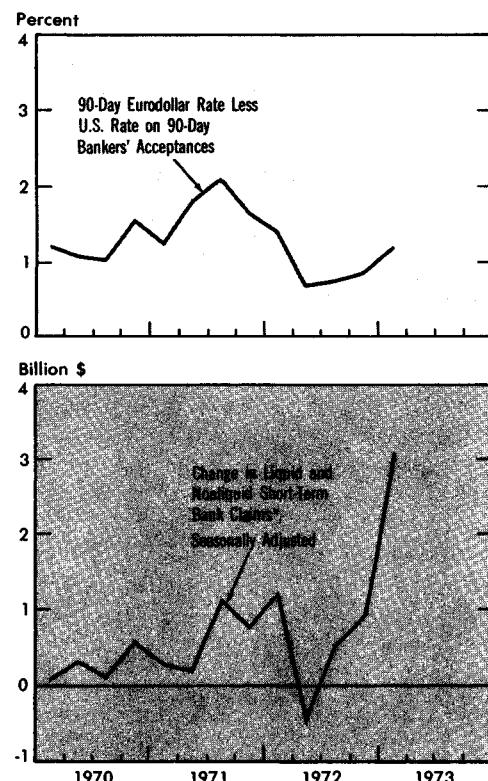

Net short-term nonliquid private capital outflows showed a marked increase for the third successive quarter, rising \$0.4 billion to a record of more than \$1.4 billion. The outflow on bank-reported nonliquid claims was \$1.8 billion, an increase of \$0.9 billion. The major part of the outflow was to Japan, mainly in the form of loans and items in the process of collection; it occurred in

February and was probably associated with the hectic foreign exchange market activity. At that time, foreigners drew heavily on their assets and credit lines with U.S. banks and with U.S. agencies and branches of foreign banks. Additional but smaller outflows occurred in March as the interest rate spread between the United States and the Eurodollar market favored borrowing here and lending in Europe (see chart 7). Based upon preliminary and incomplete data, nonliquid short-term claims reported by nonbanks are estimated to have shifted favorably by almost \$0.5 billion in the first quarter; however, this account has been subject to considerable revision in recent quarters as more complete data become available.

Outflows associated with transactions not covered by the reporting system (errors and omissions) shifted adversely by \$2.7 billion to more than \$4.2 billion in the first quarter, an outflow

CHART 7

U.S.-Foreign Short-Term Interest Rate Differential and Change in U.S. Short-Term Bank Reported Claims

*Increase +, decrease - (reverse of balance of payments signs).

exceeded only in the third quarter of 1971. Much of the outflow was probably related to the exchange market uncertainties before the mid-February devaluation and at the beginning of March, before the suspension of official intervention in exchange markets and the subsequent introduction of floating rates.

There is no new SDR allocation in 1973, in contrast to the previous 3 years, and this resulted in an unfavorable shift of almost \$0.2 billion from the fourth quarter of 1972 to the first quarter. This shift, plus the \$0.4 billion increase in recorded short-term non-liquid private capital outflows and the \$2.7 billion rise in unrecorded outflows resulted in a total adverse shift of \$3.4 billion; with the \$0.3 billion improvement in the balance on current account and long-term capital serving as only a marginal offset, the net liquidity deficit thus deteriorated by about \$3.0 billion, to \$6.9 billion.

There was a very large adverse shift of about \$6.0 billion in net liquid private capital flows, to an outflow of \$3.6 billion. A decline in liquid liabilities and an increase in liquid claims each accounted for about half of the \$3.6 billion outflow, but liquid liabilities accounted for a much larger share of the \$6.0 billion adverse shift than did

liquid claims. The shift in liabilities—especially to foreign branches of U.S. banks and to the head offices of U.S. agencies and branches of foreign banks—was \$4.4 billion, while the shift in liquid claims, mostly bank-reported, was \$1.6 billion. There was an increase in demand for Eurodollars by foreign banks seeking to meet the demand for dollar loans by borrowers who wanted to switch out of dollars into currencies that were candidates for appreciation against the dollar. This tended to push Eurodollar rates substantially higher and to widen the spread between them and U.S.-money market rates of comparable maturities. This created an incentive for U.S.-based banks to repay Eurodollar borrowings. The same factors—expectations of exchange rate changes and the interest rate differential—probably contributed to unrecorded outflows from the United States. The constellation of interest rates also favored borrowing by foreigners in the United States and their lending abroad (see chart 7).

Adding the \$6.0 billion unfavorable shift in liquid private capital flows to the \$3.0 billion increase in the net liquidity deficit results in a \$9.0 billion increase in the official reserve transactions deficit, to \$10.5 billion. The first quarter deficit exceeded the deficit for the entire year 1972.

Financing the official reserve transactions balance

U.S. liquid liabilities to foreign official reserve agencies rose \$9.1 billion in the first quarter, financing about seven-eighths of the official reserve transactions deficit. There was also an unusual \$1.2 billion rise in other readily marketable liabilities to foreign official agencies (see footnote 6, tables 1, 2, and 8 and Technical Notes in the September and December 1972 SURVEY articles). This category includes nonliquid liabilities to foreign official agencies reported by U.S. banks, previously shown separately, and reported net purchases by foreign official agencies of debt securities of U.S. Government corporations and agencies, private corporations, and State and local governments. These instruments may be regarded as a part of foreign official reserves, whether or not

the country involved includes them as part of its published official reserve holdings. (Foreign official agencies' transactions through intermediaries present problems of identification and/or confidentiality.) There was a \$0.2 billion decline in U.S. official reserve assets, mainly convertible currencies utilized in exchange market operations supporting the dollar before the mid-February devaluation.

Highlights and Perspectives

Merchandise trade

The merchandise trade balance improved \$0.8 billion in the first quarter as the deficit declined to under \$1 billion (seasonally adjusted) from more than \$1.7 billion in the fourth quarter. The improvement was strongly influenced by favorable developments in the month of March. (The improvement continued in April, when the trade balance moved into a small surplus, the first since September 1971.)

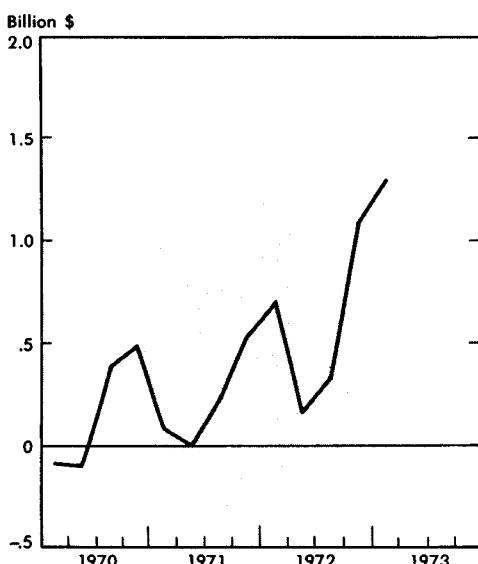

Exports rose \$2.1 billion in the first quarter to \$15.3 billion, while imports rose \$1.3 billion to \$16.3 billion. There were sharp export gains in January and March, while a strong rise in imports in January was followed by virtually no further expansion in the next 2 months. (In April, imports actually declined and exports rose further.) At a seasonally adjusted annual rate, the first quarter trade deficit was \$3.8 billion compared to the 1972 full-year deficit of \$6.9 billion. Exports were at an annual rate of \$61.3 billion, more than 25 percent above the 1972 total of \$48.8 billion; imports, at an annual rate of \$65.1 billion, were 17 percent above the 1972 total of \$55.7 billion. (All figures are revised, and are on the usual balance of payments basis excluding "military," as shown in tables 1, 2, 3, and B-2. Trade totals including "military" can be found in tables 4 and B-1.)

Exports

A very large share of the export expansion in the first quarter was in agricultural shipments, reflecting strong foreign demand, tight world supplies, and sharply higher prices. These shipments normally comprise less than one-

CHART 8

Net Foreign Purchases of U.S. Stocks

fifth of total exports, but they accounted for over one-half of the total export rise. Aided by a 10-percent increase in average prices, agricultural exports rose \$1.1 billion, or more than 40 percent, to a new high of \$3.8

billion (seasonally adjusted); the previous high had been set in the fourth quarter (see table B-1). Deliveries to the Soviet Union rose 50 percent but that accounted for only \$100 million of the agricultural export rise. Con-

sidering the exceptionally high level of agricultural exports in the first quarter—a seasonally adjusted annual rate of \$15.3 billion compared to the record annual total of \$9.5 billion in 1972—and in view of developing do-

BALANCE (EXPORT SURPLUS +)														
33	Balance on merchandise trade, adjusted to balance of payments basis, including "military" (16)	3,106	-1,692	-6,221	363	-611	-153	-1,291	-1,635	-1,602	-1,417	-1,567	-806	761
34	Balance on merchandise trade, adjusted to balance of payments basis, excluding "military" (17)	2,176	-2,698	-6,912	129	-917	-385	-1,525	-1,820	-1,774	-1,573	-1,745	-960	785

¹ Preliminary.

² "Adjusted" items reflect balance of payments corrections to Census trade figures for coverage, valuation, and timing. For example: Line 6 is adjusted for changes in stocks of U.S. grain stored in Canada; lines 8 and 23 include exports and imports of nonmonetary gold, electric power, and petroleum trade of the Virgin Islands with foreign countries; line 18 excludes reexports and line 23 excludes imports of natural gas in transit through the United States from western to eastern Canada; lines 28 and 29 reflect adjustments for the overvaluation in Census import data of autos and trucks from Canada.

1. Includes goods physically exported from the United States under U.S. military agency sales contracts and recorded in Census trade statistics; includes goods physically imported into the United States directly by U.S. military agencies (and by the Atomic Energy Commission and the Coast Guard) and recorded in Census trade statistics.

2. The statistical identification of automotive products exports to Canada (line 15) is not as complete and comprehensive as the identification of automotive products imports from Canada, which are more definitively classified for duty-free status under the U.S.-Canada Automotive Products Trade Act. The less comprehensive identification in U.S. trade statistics of automotive parts exports to Canada results in an undercounting of such exports (line 15) which—estimated from examination of Canada's import statistics—amounted to about \$450 million annually in the 3 years 1970-72.

NOTE.—Seasonally adjusted quarterly details may not add to unadjusted annual totals.

mestic supply shortages, particularly in soybeans, these shipments may have peaked. (In April, agricultural exports declined slightly from their March high.)

Exports of nonagricultural goods rose nearly 10 percent or about \$1 billion, to \$11.5 billion, following a rise of less than 6 percent in the fourth quarter. The increase in the first quarter probably reflected both the quickened pace of economic activity in our leading foreign markets and higher prices, especially for primary materials. Exports may also be showing beneficial effects of the December 1971 dollar devaluation and other currency realignments. Shipments of industrial supplies and materials—led by logs

and lumber, chemicals, steel scrap and steel—increased \$340 million in the first quarter. Exports of capital equipment rose \$300 million despite a flattening in civilian aircraft deliveries. These two categories accounted for two-thirds of the total increase in nonagricultural exports. In addition, automotive exports rose \$145 million (\$115 million to Canada), and exports of nonfood consumer goods (other than automotive) rose nearly \$100 million.

Imports

Leading the \$1.3 billion rise in total imports in the first quarter was an increase of 11 percent, or nearly \$650 million, in imports of industrial supplies and materials. Among these,

imports of petroleum and products jumped 21 percent or \$260 million, and imports of nonferrous and precious metals (platinum and palladium) rose 19 percent, or \$130 million; gains of nearly \$100 million each were registered for imports of building materials (mainly lumber), and of paper and paper-base stocks. Steel imports declined slightly but remained high. Automotive imports from Canada rose \$115 million, about the same as the rise in automotive exports to that country; automotive imports from overseas increased only \$25 million following a gain of nearly \$100 million in the fourth quarter of 1972.

As noted above, the import rise was concentrated in January, with a level-

lines 2 and 16; seasonally adjusted quarterly data shown in this table are computed from corresponding unadjusted quarterly data represented in table 9, lines 2 and 16.

ing in the next 2 months despite rising oil imports. In volume terms, a slight import decline was evident in March when import prices (unit values) rose nearly 2 percent against an increase in the value of imports of less than one-half of 1 percent. This moderation of imports, in the face of the rapid growth in the U.S. economy, suggests that the exchange rate changes of late 1971 may be starting to have their desired effect, and that the initial perverse effects of that first devaluation may have run their course. In fact, the delayed positive impact of the 1971 devaluation may now be offsetting the initial perverse effect on imports of the February 1973 devaluation, but it will be some months before it can be confirmed whether this is actually the case.

Area developments

The \$0.8 billion improvement in the trade balance in the first quarter was primarily with Western Europe and Japan. The surplus with Western Europe increased \$0.4 billion, and the deficit with Japan declined by a like amount (see table B-2). Large favorable balances in agricultural goods and capital equipment were contributing factors. However, increased U.S.

demand for and rising prices of food-stuffs (coffee, sugar, fish, meat) and producers' supplies (woodpulp, paper, lumber, metals, and oil) contributed to a worsening of the U.S.-trade balance with Western Hemisphere countries. The trade deficits with Canada and with the Caribbean countries increased moderately, and the traditional trade surplus with the Latin American Republics—which was about \$0.2 billion in the last quarter of 1972—disappeared. Partly offsetting were improvements in the U.S. trade balance with Eastern Europe and with Australia, New Zealand, and South Africa.

U.S. corporate capital

Net corporate capital outflows totaled \$1.7 billion in the first quarter, an increase of \$1.4 billion over the fourth quarter (see table C). The deterioration was essentially the result of a large increase in outflows for direct investment; flows reflecting changes in other corporate claims and liabilities showed little net change.

Direct investment outflows increased \$1.4 billion to \$2.1 billion. Almost one-half of the first quarter outflow was to petroleum affiliates, particularly to those in Western Europe; substantial

outflows also went to petroleum affiliates in the Middle East and to affiliates engaged in international tanker operations. Outflows to manufacturing affiliates accounted for about 25 percent of the total, largely to Western Europe.

The unsettled state of the foreign exchange markets was of particular importance among the factors leading to the increase in direct investment outflows in the first quarter. Although direct investment outflows are classified among the long-term capital accounts, specific transactions may actually be short-term. Such is the case with short-term intercompany account transactions between U.S. parent companies and their foreign affiliates. In order to avoid losses or effect gains in periods of exchange market uncertainties, such short-term direct investment accounts may be used as a conduit for transfers of funds from the United States for acquiring assets or reducing liabilities in currencies expected to appreciate against the dollar. Preliminary and incomplete data for the first quarter indicate that an unusually high proportion of direct investment outflows was of a short-term nature.

Another factor which may have con-

¹ Revised. ² Preliminary. ³ Portion of line.

⁴ Excludes claims and liabilities of U.S. banking and brokerage institutions.

⁵ Includes proceeds from new issues of stocks as well as bonds sold abroad by U.S. corporations. Excludes funds obtained abroad by U.S. corporations through bank loans and other credits and also excludes securities issued by subsidiaries incorporated abroad. However, securities issued by finance subsidiaries incorporated in the Netherlands Antilles are treated as if they had been issued by U.S. corporations to the extent that the proceeds of such issues are transferred to U.S. parent companies.

³ Excludes brokerage transactions.

⁴ Corporate foreign borrowing and changes in "other corporate claims" may include funds to finance trade or other activities not entirely related to direct investment. The amounts cannot be disaggregated.

⁵ A (-) reflects a decline in foreign deposits and money market paper held in the United States.

⁶ Excludes an increase in U.S. corporate long-term claims of \$286 million that was associated with increased foreign direct investment in the United States.

^a Preliminary. *Less than \$500,000 (\pm). n.a. Not available.

1. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports of U.S. military agencies.

2. Includes fees and royalties from U.S. direct investments abroad or from foreign direct investments in the United States.

3. Equal to net exports of goods and services in national income and product accounts of the United States.

4. The sum of lines 15 and 31 is equal to "net foreign investment" in the national income and product accounts of the United States.

5. Includes some short-term U.S. Government assets.

Not Seasonally Adjusted

6. Coverage of liquid banking claims for 1960-1963 and of liquid nonbanking claims for 1960-1962 is limited to foreign currency deposits only; other liquid items are not available separately and are included with nonliquid claims.

7. Includes changes in nonliquid liabilities reported by U.S. banks and in investments by foreign official agencies in debt securities of U.S. Government corporations and agencies,

private corporations, and State and local governments.

NOTE.—Details may not add to totals because of rounding.

^a Preliminary. ^b Less than \$500,000 (±).

1. Credits, +: Exports of goods and services; unilateral transfers to U.S.; capital inflows (increase in U.S. liabilities or decrease in U.S. assets); decrease in U.S. official reserve assets.

Debits, -: Imports of goods and services; unilateral transfers to foreigners; capital outflows (decrease in U.S. liabilities or increase in U.S. assets); increase in U.S. official reserve assets.

2. Excludes transfers of goods and services under U.S. military grant programs.

3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, and imports of goods included under direct defense expenditures identified in Census import documents, and reflects various other balance-of-payments adjustments (for valuation, coverage, and timing) to Census statistics; see table 4.

* Preliminary. * Less than \$500,000.

1. The figures shown for exports and imports are the trade totals published by the Census Bureau, with the following exceptions:

Exports and Imports: Beginning with 1968 data, exports and imports as published by the Census Bureau include trade in silver ore and bullion. To achieve comparability over time, all pre-1968 data shown in this table have been adjusted to include silver transactions.

Imports Only: (a) 1962 imports as shown do not include an upward revision of \$10 million which is in the revised 1962 import total published by the Census Bureau, because supporting commodity detail was not available. This amount is included instead in the balance of payments adjustment shown in line 12, and is in total merchandise imports, balance of payments basis, lines 13 and 15. (b) 1965 imports as shown here are \$92 million higher than imports as recorded in Census Bureau published statistics. The adjustment, which corrects for large irregularities and some omissions in the monthly receipt of documents by Census during the last 6 months of 1965, has been distributed in the accompanying commodity detail, lines 61-101.

2. Mainly net additions to or liquidations of U.S.-owned grains in storage in Canada, and exports of electrical energy.

3. Mainly exports of exposed motion picture film for rental rather than sale, and exports to Panama Canal Zone. Prior to 1966, also includes transfers of goods procured offshore under nonmilitary aid programs.

4. Irregular and occasional adjustments; valuation adjustments for goods considered to be underpriced or overpriced in Census data; timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.

5. Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unadjusted recorded annual totals.

6. Exports of military equipment under U.S. military agency sales contracts with foreign governments to the extent such exports are identifiable from Census export documents. These exports are included in table 2: line 3: "Transfers under U.S. military agency sales contracts."

Trade—Continued

¹ Preliminary. *Less than \$500,000 (\pm).

1. The identification of transactions involving direct dollar outflow from the United States is made in reports by each operating agency. However, such data for fourth quarter 1972 and first quarter 1973 are only extrapolated estimates by BEA, because of incomplete reports from one operating agency, and are to be revised in future issues of the SURVEY.

2. Line A.28 includes foreign currency collected as interest and line A.30 includes foreign currency collected as principal, as recorded in lines A.6 and A.7.

3. Lines A.29 and A.31 include some short-term U.S. Government claims, collections of which are recorded in line A.34. Collections of those short-term claims recorded in lines A.29 and B.14 are included in line B.15.

4. Consists of transfers of military goods and services financed by U.S. Government credits and of advance payments to the Defense Department (on military sales contracts) financed by credits extended to foreigners by U.S. Government agencies.

5. Includes securities payable in U.S. dollars and in convertible foreign currencies.

6. Transactions under military sales contracts are those in which the Defense Department sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. The entries for the several categories of transactions related to military sales contracts in this and the other tables are partially estimated from incomplete data.

7. Consists of transfers of military goods and services financed by U.S. Government credits (included in line B.16) and of increases in Defense Department liabilities (on military sales contracts) which arise from advance payments to the Defense Department financed by credits to foreigners by U.S. Government.

8. Excludes liabilities associated with military sales contracts financed by U.S. Government credits and included in line B.11.

Note.—Details may not add to totals because of rounding.

¹ Preliminary. *Less than \$500,000 (\pm). n.a. Not available.

1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.

2. Sales and liquidations of capital stock and other equity holdings, total, and partial.

3. Includes security issues placed with outside interests in the United States, the amortization of these security issues, and verified transactions of nonreporters not classified by type of transaction.

4. Mining and smelting includes the exploration and development of mining properties, the extraction of raw ores and the processing necessary for basic refined metals. Petroleum includes the exploration, development and production of crude oil and gas, and the transportation, refining and marketing of petroleum products exclusive of petrochemicals. Manufacturing excludes petroleum refining and the smelting operations of mining companies. "Other" industries includes all industries except those previously listed, the major ones being agriculture, public utilities, transportation, trade, insurance, finance and services.

5. As published in Treasury Bulletin. Treasury data are based on transactions by foreigners reported by banks and brokers in the United States; net purchases by foreigners (+) correspond to net U.S. sales (-).

6. Redemptions measure scheduled retirements and identifiable premature retirements of U.S. held foreign debt securities. Unidentifiable nonscheduled retirements appear in line 45.

7. Includes proceeds from new issues of stock sold abroad by U.S. corporations.

8. Securities newly issued by finance subsidiaries incorporated in the Netherlands Antilles are included to the extent that the proceeds are transferred to U.S. parent companies.

9. Mainly reflects exclusion of investments by foreign official reserve agencies in debt securities of U.S. Government corporations and agencies, private corporations, and State and local governments. These investments are included in table 2, line 56.

Note.—Details may not add to totals because of rounding.

^a Preliminary. *Less than \$500,000 (\pm).

1. Position figures reflect increase of \$15 million in U.S. Treasury bills and certificates (line 27), \$128 million in U.S. Treasury bonds and notes (line 31), \$19 million in nonmarketable, nonliquid U.S. Treasury obligations (line 39) and a negligible amount in convertible currencies (line 47), as a result of revaluations in foreign currencies due to the dollar devaluation in the first quarter, 1973.

2. During 1971, data included special Export-Import Bank and Treasury securities held as custody items by U.S. reporting banks on behalf of their foreign branches.

3. With maturity of 1 year or less; negotiable certificates of deposit with a maturity of 1 year or less are included in "other obligations."

4. Includes debt securities of U.S. Government corporations and agencies with a maturity of 1 year or less.

5. Includes liabilities of U.S. monetary authorities for gold deposited by and held for the IMF and includes U.S. Treasury obligations obtained from proceeds of gold sales by the IMF to the United States to acquire income-earning assets. Investment was terminated in February 1972 and gold was reacquired by the IMF.

6. Includes nonliquid liabilities reported by U.S. banks and investment in debt securities of U.S. Government corporations and agencies, private corporations, and State and local governments.

NOTE.—Details may not add to totals because of rounding.

6. The "European Economic Community (9)" includes the "European Economic Community (6)", the United Kingdom, Denmark, and Ireland.

7. The "European Economic Community (6)" includes Belgium, France, Germany, Italy, Luxembourg, and the Netherlands.

8. "Other Western Europe" excludes the United Kingdom and the "E.E.C. (6)" through the fourth quarter of 1972. Beginning in the first quarter of 1973 "other Western Europe" excludes the "E.E.C. (9)".

9. Transactions with the Ryukyu Islands that were under U.S. military administration

from the end of World War II until May 15, 1972, are included with Japan beginning in the first quarter 1972; in previous periods they are included with "other countries in Asia and Africa."

10. Includes transactions with shipping companies operating under the flags of Honduras, Liberia and Panama.

NOTE.—Details may not add to total because of rounding.

Netherlands and partially excludes such receipts from Italy because these data are not available by country.

Note.—Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transaction. For instance: U.S. export statistics reflect country of reported destination; in many cases the exports may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of security transactions reflects country with which

transaction occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

Data for individual countries within EEC (6) may not add to the published totals for EEC (6) since in several instances the transactions are regional and in other instances estimates for the group are not available for each country. In addition, country data may not add to EEC (6) totals because of rounding.

^a Preliminary.

1. Balance of payments by area on the net liquidity basis and the official reserve transactions basis lack validity because liquid dollar holdings of private and official foreigners may be affected not only by their transactions with the United States but also by transactions among themselves. The balances shown by area here have some shortcomings due to statistical discrepancies including errors, omissions, and incorrect area attributions.

Balances are derived from lines in table 2 (all areas) and table 9 (individual areas) as follows:

- Merchandise trade..... 2, 16
- Goods and services..... 1, 15
- Goods, services and remittances..... 1, 15, 31, 32
- Current account..... 1, 15, 29
- Current account and long-term capital..... 1, 15, 29, 33, 39-41, 44, 48, 49-51, 53 (by area only part of line 53 is included)

The balance on current account and long-term capital with "all areas" includes changes in long-term liabilities to all private foreigners reported by U.S. banks; with "international organizations" includes only liabilities to IBRD and affiliated organizations; and with other areas includes only liabilities to regional organizations. Increases in the long-term liabilities to other private foreigners included in the total, but not in the areas, amounted to (millions

of dollars): 1969 year, 48; 1970 year, 123; 1971 year, 95; 1972 year, 33; 1972-I, 17; 1972-II, 19; 1972-III, 7; 1972-IV, -10; 1973-I, 21.

2. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports under direct defense expenditures.

3. Includes some short-term U.S. Government assets; area data exclude long-term liabilities reported by U.S. banks other than to international organizations (see footnote 1).

4. The "European Economic Community (9)" includes the "European Economic Community (6)," the United Kingdom, Denmark, and Ireland.

5. The "European Economic Community (6)" includes Belgium, France, Germany, Italy, Luxembourg, and the Netherlands.

6. "Other Western Europe" excludes the United Kingdom and the "EEC (6)" through the fourth quarter of 1972. Beginning in the first quarter of 1973 "Other Western Europe" excludes the "EEC (9)."

7. Transactions with the Ryukyu Islands that were under U.S. military administration from the end of World War II until May 15, 1972 are included with Japan beginning in the first quarter of 1972; in previous periods they are included with "other countries in Asia and Africa."

NOTE.—Details may not add to totals because of rounding.

(Continued from page 23)

tributed to the unfavorable shift in direct investment outflows in the first quarter was anticipation of the proliferating controls on incoming capital that were instituted by European countries by the end of the quarter. U.S. parent companies may have made investments early in the first quarter which otherwise might not have been made until later in the year.

In recent years, direct investment outflows have generally been high in the first quarter compared to other quarters, even after seasonal adjustment. This may have reflected the reversal of yearend positioning necessary for compliance with the OFDI program. One might have expected, however, that such an influence would have been milder this year by virtue of the easing of regulations in December 1971 which permitted companies to shift the positioning date from the end of the year

into the first quarter. On the other hand, there was some easing of the program announced early in 1973 which may have had some offsetting influence.

The increase in direct investment outflows in the first quarter may also have reflected the fact that, according to the results of BEA's most recent survey (published in the March issue of the *Survey*), U.S.-owned foreign affiliates expect to increase their plant and equipment spending abroad by 9 percent this year. Although this is a rather modest increase, it is substantially larger than the 2-percent increase in 1972. It may imply the need for additional U.S. parent company funds to finance the expansion, particularly in light of high borrowing costs abroad.

The net flow on U.S. corporate liabilities and claims other than direct investments was virtually unchanged in the first quarter. Total corporate borrowing was the same, at \$0.8 billion, as in the fourth quarter. Among

the components, new issues of securities sold abroad by U.S. corporations declined \$0.2 billion to \$0.4 billion, as these bonds lost favor in the latter part of the quarter, but other long- and short-term borrowing rose by an equal amount.

U.S. corporate claims other than direct investment increased \$0.4 billion in the first quarter, about the same as in the previous quarter. Short-term liquid claims rose \$0.4 billion compared with virtually no increase in the fourth quarter. Most of the first quarter increase was related to transactions with Canada and the United Kingdom; in the latter case, the increase may have reflected the widening short-term interest rate differential in favor of European deposits. Based on preliminary and incomplete data, short-term nonliquid claims fell \$0.2 billion in the first quarter, a favorable shift of \$0.4 billion, offsetting the adverse swing in short-term liquid claims. However, it should be noted that this figure, as in previous quarters, may be subject to substantial revision.

Technical Notes

Revisions

As is customary each June, the balance of payments tables published in this issue of the *SURVEY* have been revised to correct data previously published and to incorporate new information. Using the revised data, seasonal adjustments for most accounts were recalculated by extending through 1972 the period used for deriving adjustment factors. Data and seasonal adjustments for 1971 and 1972 were subject to the most revision.

Merchandise trade data were adjusted to include transfers (exports or imports) of ships that are not recorded in Bureau of the Census foreign trade statistics, and to exclude natural gas in transit through the United States from western to eastern Canada, which had been included in Bureau of the Census trade data through 1972.

Geographic detail

In addition to the usual data on U.S. international transactions with geographic areas (tables 9 and 10), data on transactions with Belgium-Luxembourg, France, Germany, Italy, Netherlands, and Mexico for the years 1969-72 are shown in tables 9A and 10A. Data for the years 1968-71 were published for the first time in the June 1972 *SURVEY* article.

U.S.-Canadian current account reconciliation

Reconciliation of the 1970 bilateral current account in the balance of payments statistics of the United States and Canada was completed in the spring of 1973. On the basis of the conceptual framework established for the study, the results indicate a 1970 current account deficit for the United States of \$0.1 billion in contrast to the U.S. deficit of \$0.6 billion published by the United States and the Canadian deficit of \$0.2 billion published by Canada. If work now underway for later years confirms the patterns of 1970, revisions based on the reconciliation may be incorporated in the regularly published balance of payments series of the United States.

n.a. Not available. n.s.s. Not shown separately.

1. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports of U.S. military agencies.

2. Includes fees and royalties from U.S. direct investments abroad or from foreign direct investments in the United States.

3. Equal to net exports of goods and services in national income and product accounts of the United States.

4. The sum of lines 15 and 31 is equal to "net foreign investment" in the national income and product accounts of the United States.

5. Includes some short-term U.S. Government assets.

6. Includes direct defense expenditures only.

7. Coverage of liquid banking and nonbanking claims is limited to foreign currency deposits only; other liquid items are not available separately and are included with nonliquid claims.

NOTE.—Details may not add to totals because of rounding.

(Continued from page 3)

billion estimated in January. The reduction, like that for fiscal 1974, is entirely due to a higher receipts estimate. Individual income taxes, mainly withholdings, are revised up about \$3½ billion, corporate taxes are up \$2½ billion, and all other receipts are up about \$1 billion. None of the revision of individual income taxes is in refunds, as refunds are running very close to the extremely high levels projected in January.

The outlays projection for fiscal 1973, like that for fiscal 1974, is unchanged from the January estimate (\$249.8 billion), but there are some changes in components. Veterans benefits and disaster loans are revised up, while unemployment benefits and outlays by the Department of Health,

Education, and Welfare are revised down.

Full-employment surplus

On a full-employment basis, the 1974 unified budget is now expected to show a surplus of \$5.3 billion, compared to \$0.3 billion estimated in January. This change is due entirely to an upward revision in full-employment receipts—expressed in 1974 prices—largely because estimated full-employment GNP was increased because of higher-than-anticipated inflation. The revision also incorporates higher effective tax rates based on recent experience. Full-employment outlays have not been revised, which means that in real terms there has been an effective downward revision in projected full-employment outlays. For fiscal 1973, the full-employment deficit is now estimated

at \$1.8 billion, down from the January estimate of \$2.3 billion.

NIA Federal sector

No official OMB estimates of the Federal sector of the national income accounts (NIA) were released. However, calculations by BEA, consistent with the new OMB estimates of unified budget outlays and with the new economic assumptions, show NIA deficits in fiscal 1973 and 1974 that are much smaller than the January estimates (table 1). On the NIA basis, 1973 receipts are \$6.4 billion higher than estimated in January, expenditures are \$1.4 billion lower, and the deficit is \$7.8 billion lower. For fiscal 1974, NIA receipts are \$10.3 billion higher than the January estimate, expenditures are \$0.8 billion higher, and the deficit is \$9.5 billion lower.

(Continued from page 16)

The net U.S. payment for all international transportation transactions was \$703 million in 1972, compared with \$474 million in 1971 (table 8), a rise of 50 percent. The net deficit on passenger fares increased 31 percent, from \$675 million to \$886 million; the net surplus on other transportation transactions dropped from \$201 million to \$183 million.

Payments

Of the \$1.6 billion in passenger fares paid to foreign sea and air carriers by Americans in 1972, about \$1.3 billion was for air travel and the remainder largely for cruise trips. Regular transocean passenger service continued to shrink, with further concentration of shipping services on the cruise trade.

Total freight payments to foreign sea and air operators moving U.S. imports increased 14 percent to \$2.0 billion in 1972. Higher rates and a small increase in the volume of higher valued cargo shipped on foreign carriers, as well as a decline in import cargo

movements by U.S. carriers, accounted for the rise.

American ocean carriers' port expenses abroad rose 8 percent to \$313 million. A drop in the volume of export and import tonnages carried by U.S. operators was more than offset by sharply rising costs in most areas. U.S. air carriers' port expenses abroad, primarily associated with transportation of passengers, rose 7 percent to \$621 million.

Receipts

U.S. receipts from ocean transportation last year were \$2.5 billion, 8 percent above 1971. The increase was largely due to increased freight rates and to the effects of the late-1971 dock strikes. The total includes \$0.8 billion from carrying U.S. exports and some freight between foreign countries, \$1.6 billion in foreign carriers' port expenses here, and about \$40 million from other sources. While the amount of American-operated ocean tonnage has changed little in recent years, average freight rates, especially on liner services, have

continued to rise. Higher handling charges continued to boost foreign carrier's port expenditures here.

U.S. receipts from air transportation and related services totaled \$1.7 billion in 1972, up 16 percent from 1971. Earnings from airline passenger fares, including \$0.2 billion from carrying foreigners between foreign destinations, were \$0.7 billion, up 11 percent. Foreign airlines' port expenses in the United States, mostly connected with passenger traffic, rose 18 percent to \$0.7 billion. This increase reflected both an increase in the number of air travelers and higher operating costs for services, advertising, and aircraft maintenance. Air freight on U.S. exports and on shipments between foreign points earned \$235 million for U.S. airlines in 1972, a 16-percent gain that continued the steady uptrend in this service.

Other transportation earnings, largely receipts from Canada and Mexico for rail and pipeline transportation and Great Lakes shipping, totaled \$219 million, an increase of 11 percent.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1971 edition of **BUSINESS STATISTICS**, biennial statistical supplement to the **SURVEY OF CURRENT BUSINESS**. That volume (available from the Superintendent of Documents for \$3.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1967 through 1970 (1960-70 for major quarterly series), annually, 1947-70; for selected series, monthly or quarterly, 1947-70 (where available). Series added or significantly revised after the 1971 **BUSINESS STATISTICS** went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1970 issued too late for inclusion in the 1971 volume appear in the monthly **SURVEY** beginning with the September 1971 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1971 edition of **BUSINESS STATISTICS**; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 189-90. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1970 and descriptive notes are as shown in the 1971 edition of BUSINESS STATISTICS	1970	1971	1972	1970				1971				1972				1973

^r Revised. ^p Preliminary. ¹ Annual data; monthly revisions are not available.

² Average for 11 months. ³ Less than 50 tons. ⁴ For quarter ending in month shown.

* New series. † Corrected.

△Effective Dec. 1971, nationwide delivered price substituted for N. Y.-basis price.
Includes copper and copper-tin lead stocks in refinery shapes and in copper-base sc

^cIncludes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.
^dProducers' stocks elsewhere, end of May 1973, 11,700 short tons.

④ Producers' stocks elsewhere, end of May 1973, 11,200 short tons.

¹ Revised. ² Annual total includes revisions not distributed by months. ³ Estimate of production, not factory sales. ⁴ Omits data for three States. ⁵ Omits data for two States. ⁶ Omits data for 4 States. ⁷ Effective Feb. 1972, imports include trucks valued less than \$1,000 each. ⁸ Revisions appear in Census report, Men's and Women's Selected Monthly Apparel Cuttings, 1970-72, Revised (MA-23A Supplement), Feb. 1973. Beginning 1973, a new panel of items is planned for men's apparel; data are not presently available.

⁹ Total includes backlog for nonrelated products and services and basic research. ¹⁰ Domestics include U.S.-type cars produced in the United States and Canada; imports cover foreign-type cars and captive imports, and exclude domestics produced in Canada.

¹¹ Courtesy of R. L. Polk & Co.; republication prohibited.

¹² Excludes railroad-owned private refrigerator cars and private line cars.
