the BUSINESS SITUATION

REAL GNP increased at a 3-percent annual rate in the fourth quarter of 1976, as compared with 4 percent in the third quarter. The deceleration was more than accounted for by a reduction in inventory investment. Final sales of GNP increased more in the fourth quarter than in the third—5 percent as compared with 4½ percent (table and chart 1). The improvement in final sales was in personal consumption expenditures (PCE) and residential investment. GNP prices, as measured by the implicit price deflator, accelerated from 4½ percent to 6 percent; about one-third of the acceleration was due to the Federal pay raise.

These fourth-quarter estimates are based on the following major data sources: for PCE, retail sales, and unit auto and truck sales through December; for nonresidential investment, the same information for autos and trucks, manufacturers' shipments of machinery and equipment for October and November, October and November construction put in place, and investment plans for the quarter; for residential investment, October and

November construction put in place, and housing starts through November; for inventories, October and November book values for manufacturing and trade, and unit auto and truck inventories through December; for net exports of goods and services, October and November merchandise trade, and fragmentary information on investment income for the quarter; for government purchases of goods and services, Federal expenditures for October and November, State and local construction put in place for October and November, and State and local employment through December; and for GNP prices, the Consumer Price Index for October and November, the U.S. Department of Agriculture food market basket for December, and the Wholesale Price Index through December. Some of these source data are preliminary and subject to revision. Fourth-quarter information on corporate profits is not yet available; to derive the estimate of corporate profits with inventory valuation and capital consumption adjustments for the year 1976, it was assumed that the fourth-quarter statistical discrepancy was the same as in the third.

In the discussion that follows, other assumptions made to fill major data gaps are noted.

Employment, unemployment, and hours.—The unemployment rate moved up from 7.8 percent in the third quarter to 7.9 percent. As was the case earlier in the recovery, women fared relatively better than men and teenagers (chart 2). The unemployment rate for women declined, and that for men and teenagers increased. Also, the increase in the number of employed women was larger than that for men, and the number of employed teenagers declined.

On the basis of the establishment survey, nonfarm payroll employment was up 364,000, slightly more than in the third quarter. Almost all of the increase was in the service-producing industries, particularly in the services group. Average weekly hours in private nonfarm establishments edged up 0.1 hours to 36.2, after having slipped by that amount in the third quarter. Reflecting stronger employment and hours, the index of aggregate hours increased substantially more than in the third quarter.

Compensation per hour.....	7.8	8.6	7.6	7.5	7.8
Unit labor cost.....	3.5	3.3	3.4	4.8	7.4

Productivity, costs, and prices

Table 2 shows percentage changes in real gross product per hour, compensation per hour, and unit labor cost for the business economy other than farm and housing. These series were described in the October SURVEY. It should be noted again that the gross product estimates for the last quarter are based on the assumption that the constant-dollar equivalent of the statistical discrepancy is the same as in the preceding quarter. New seasonal factors for the hours series recently introduced by the Bureau of Labor Statistics were not used pending further tests of their consistency with the seasonal factors used in adjusting gross product and compensation.

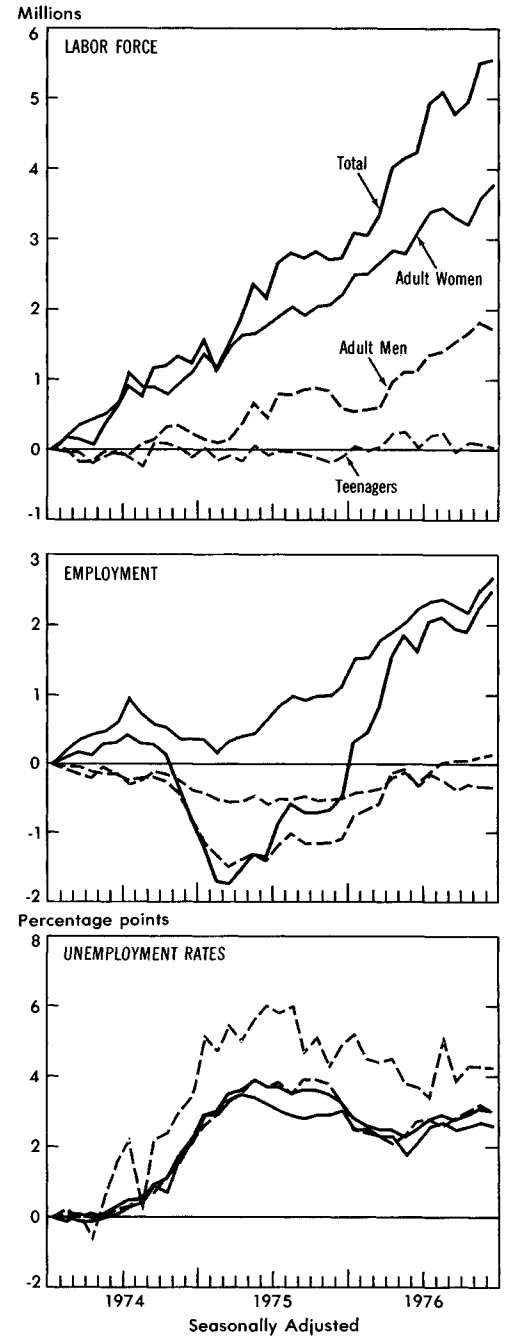

Increases in productivity slowed progressively in 1976; in the fourth quarter, there appears to have been little change according to the preliminary figures. Increases in product slowed more than increases in hours, except in the fourth quarter, when a pickup in hours was the main factor. The increase in compensation per hour remained in the 7½ to 8½ percent (annual rate) range, and unit labor cost increased 7½ percent, substantially more than in earlier quarters.

Prices.—Chart 3 puts the fourth-quarter increase in the GNP implicit price deflator into perspective. As can be seen, the deceleration in the GNP deflator that followed the food and energy price inflation of 1973 and 1974 ceased in the second quarter of 1975. Since then, annual rates of price increase have ranged from 3 to 7 percent, with the fourth quarter of 1976 close to the upper end of the range.

Table 3 shows the deflators for GNP and its components. Prices of final sales to U.S. purchasers, i.e., final sales less exports plus imports, accelerated less than GNP prices, because import prices increased only moderately in the fourth quarter after an erratic spurt in the third.

CHART 2

Labor Force, Employment, and Unemployment Rate: Change From January 1974

U.S. Department of Commerce, Bureau of Economic Analysis 77-1-2 Data: BLS

Prices paid by consumers increased at a 5½-percent annual rate, as they had in the third quarter. The increase in food prices continued to be small, about 1½ percent. The increase in energy prices was large—12 percent—but substantially less than in the third quarter. This deceleration, combined with that in clothing and shoes, was offset by accelerations in the prices of new autos, other durables, and other nondurables.

The other components of final sales listed in the table, except residential investment, showed larger price increases in the fourth quarter than in the third. The Federal pay raise more than accounted for the increase in prices paid by government.

Personal consumption and income

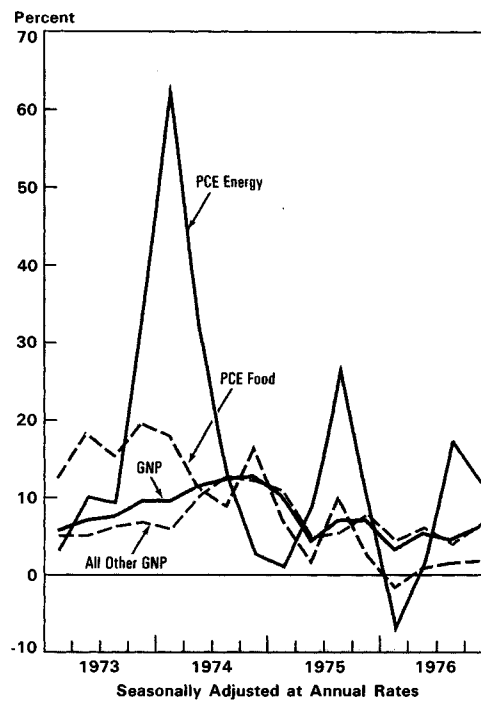

Real PCE increased at an annual rate of 5½ percent in the fourth quarter (table 4). As shown in chart 4, the PCE increase was smaller in the third and second quarters, but larger in the first quarter. The near 9 percent first-quarter increase was due to motor vehicles and parts, food, and energy. The increase in expenditures on all other PCE was small. The fourth-quarter pattern was different. All other PCE was much stronger than in the first quarter, but, mainly because of autos, the increase in the total was less. The strengthening was in goods, with much of the strength in appliances, and clothing and shoes.

The first-quarter increase in motor vehicles was obviously unsustainable. Largely reflecting new autos, the rates of increase tapered in the second and third quarters. In the fourth quarter, there were declines both in new autos and in trucks.

Personal income increased at an annual rate of \$36 billion in the fourth quarter, about \$12 billion more than in the third. The fourth-quarter pickup was accounted for mainly by wage and salary disbursements, farm proprietors' income, and dividends. The increase in wages and salaries was \$23 billion in the fourth quarter, about \$6 billion more than in the third. Wages and salaries had been held down in the third quarter by work stoppages in the mining, rubber, and transportation equipment industries, and lifted in the fourth quarter by the Federal pay raise (about \$2 billion). Farm proprietors' income dropped \$1½ billion in the fourth quarter, \$4½ billion less than in the third, mainly because the drop in livestock prices was much smaller. The \$1½ billion acceleration in dividends largely reflected a special yearend pay out by General Motors.

Personal tax and nontax payments increased about \$3 billion more than in the third quarter, mostly because of larger Federal individual income tax payments, and disposable personal income increased \$9 billion more. With the increase in consumer prices the same

CHART 3
Implicit Price Deflators: Change From Preceding Quarter

U.S. Department of Commerce, Bureau of Economic Analysis

77-13

in both quarters, the acceleration in current-dollar income carried through to real income, which increased at a 3½-percent annual rate in the fourth quarter, as compared with one-half of 1 percent in the third. The percentage increase in personal outlays exceeded that in disposable income, and the saving rate declined from 6.4 to 6.0 percent.

During 1976, the pattern of changes in real PCE was broadly similar to that of changes in real disposable income. Prior to the fourth quarter, income increases had tapered. However, increases in outlays generally exceeded those in income, and the saving rate dropped 1½ percentage points from the fourth quarter of 1975. Setting aside multiplier effects, if the saving rate had not dropped over the past year, the increase in real PCE would have been about \$14 billion, or one-third, less than the increase that actually occurred. At 6 percent in the fourth quarter of 1976, the saving rate was the lowest it had been since mid-1972.

Fixed investment

The increase in real residential investment stepped up in the fourth

CHART 4
Real Personal Consumption Expenditures: Change From Preceding Quarter

* Gasoline and oil, fuel oil and coal, electricity, and gas.

Note.—The area of the bar of each component is approximately proportionate to that component's contribution to the percentage change in total PCE.

quarter, to a 37-percent annual rate (table 5). In the earlier quarters of the year, increases had been considerably smaller. Information on starts, permits, and construction put in place suggests that a disproportionate share of the stepup was in multiunit construction (chart 5).

For single unit construction, it is particularly difficult to explain why a step-up should have occurred at this time. For multiunit construction, it is possible to discern an improvement in market conditions. With some interruptions, the rental vacancy rate has declined over the past year, and the market absorption rate for apartments has increased. Commitments of life insurance companies to finance mortgages on income properties have increased. Also, the availability of commercial bank financing may be improving, as banks adjust to the losses they suffered in financing multiunit structures, particularly via real estate investment trusts. However, the only factor that suggests itself as an explanation of the suddenness of the step-up is increased activity under Section 8 Federal rent subsidy programs. But it is not known to what extent this activity is already reflected in construction put in place.

Permits, starts, and the recent easing of monetary policy are compatible with a further rise in residential construction in the first quarter of 1977. However, on the basis of the information now available, it is unlikely that the increase will be as large as in the fourth quarter.

Nonresidential fixed investment.—Real nonresidential fixed investment was unchanged in the fourth quarter, because it was held down by sharp declines in business expenditures on autos and trucks. Investment in structures continued its gradual improvement, and expenditures on producers' durable equipment other than autos and trucks increased more than earlier in the year.

The outlook for fixed nonresidential investment is best discussed by reference to the plant and equipment survey and information on appropriations, because at this time the horizon of the survey is much longer than that of orders and other series relating to investment commitments. According to

Table 4.—Personal Consumption Expenditures in Current and Constant Dollars, 1976

1. Gasoline and oil, and fuel oil and coal.

2. Electricity and gas.

the plant and equipment survey conducted in late November and December, which is reviewed later in this issue of the SURVEY, business plans to increase plant and equipment spending 11.3 percent in 1977. These plans are stated in current dollars, and it is difficult to translate them into real terms, because little is known about how respondents estimate price changes, or about the adjustments that would be made to plans if price expectations were not realized. As explained in the review article, a 6-percent increase in real spending plans is implied by the current-dollar figures, if prices—as measured by the implicit price deflator for nonresidential fixed investment—increase in 1977 at the same rate as in 1976. According to the plant and equipment survey, business expects an 8-percent increase in 1977 in the prices of capital goods to be purchased. In the 6 years since the inception of the price

inquiry, price expectations have exceeded actual increases reported one year later by as much as 17 percent and fallen short of them by as much as 45 percent. This is not a good record. However, if the 8 percent expected increase is taken at face value, the current-dollar figures imply a 3½-percent real increase in spending plans.

The information from the November-December survey about the year 1977 can be put with the information from the October-November survey about the first half of 1977 to see what is implied for the second half. The second half is derived by deducting first-half planned spending from plans for the year as a whole. The results, in terms of percent changes, are shown at right.

Total plant and equipment spending is seen to decelerate from 7½ percent in the second half of 1976 to 4 percent in the first half of 1977, and to accelerate to 7 percent in the second half. The

[Percent change from preceding half year]

	Second half 1976	First half 1977	Implied second half 1977
Plant and equipment spending, total.....	7.6	4.1	7.1
Manufacturing.....	11.2	3.2	8.0
Durable goods.....	12.8	4.3	3.8
Nondurable goods.....	9.9	2.3	11.6
Nonmanufacturing.....	4.8	4.8	6.4

bulk of the acceleration is in nondurable goods manufacturing. Durable goods manufacturing shows about the same increase in the second half as in the first, and the acceleration in nonmanufacturing is moderate. The changes shown in the underlying industry detail for durable goods manufacturing seem reasonable. The nondurable goods industries show more variation; the second-half acceleration is traceable largely to petroleum. Capital appropriations for petroleum do not confirm this

pickup, but this evidence is not strong, because appropriations and plans for this industry are erratic. In nonmanufacturing, the second-half step-up is the net effect of a sharp drop in electric utility plans, which is consistent with appropriations in this industry, and increases in other groups. The largest increase in the latter is in "other transportation," for which spending plans decrease sharply in the first half of the year and increase in the second. The swing may represent the expectation that the Trans-Alaska pipeline will be completed by midyear.

For several reasons, the sharp V-shaped pattern of spending plans is not likely to be reflected in actual spending. First, spending in the first half may be stronger than suggested by plans, if some fourth-quarter 1976 spending spills over into 1977. This is not unlikely, because fourth-quarter spending plans appear to be high. Second, first-

half plans for the petroleum industry appear to be low, and perhaps some of the increase implied by the calculation for the second half of the year will occur in the first half. Third, spending in "other transportation" may be distributed more evenly over the year than indicated by plans.

Inventory investment

The real change in business inventories (CBI) decelerated \$5½ billion—from \$10 billion in the third quarter to \$4½ billion in the fourth (table 1). In its effect on total GNP, this deceleration more than offset the acceleration of final sales, which—as already noted—was traceable to PCE and residential investment. Given these movements, the constant-dollar ratio of inventory stocks to business final sales slipped a little from earlier in the year.

The major inventory source data now available for the fourth quarter

are listed earlier in this review. To fill in the gaps, it was assumed that the December rate of nonfarm CBI other than of auto dealers would return to almost the October rate. Assumptions about inventory behavior are always risky, and especially so in periods of substantial inventory change. Two further statistical problems should be noted. First, the third-quarter rate of inventory accumulation, particularly in durables manufacturing and durables wholesale trade, was somewhat higher than the published estimates show, mainly because these estimates have not been revised to substitute final for preliminary Census Bureau book value data. The incorporation of these and some other data that affect earlier quarters would raise the nonfarm inventory-business final sales ratio a little, but not nearly enough to affect its interpretation.

Second, in the third and fourth quarters, the two calculations of auto inventories—based on Census Bureau-based book values of automotive dealers and based on physical unit data collected by the Motor Vehicle Manufacturers Association—differed substantially. The former is part of total CBI and GNP; the latter is the inventory component of auto output. Changes in the latter do not affect CBI and GNP, because, in effect, the Census-based estimates are used as the control for total CBI. Differences between the two series are to be expected, because their coverage is not the same. The Census-based series includes, in addition to inventories of new and used autos, inventories of parts and accessories, trucks, recreational vehicles, boats, etc.—in short, of all items that automotive dealers sell in addition to autos. However, in the third and fourth quarters, the differences between the two series were unusually large, implying a swing from accumulation to liquidation of nonauto items of a magnitude that is unlikely to have occurred. Either or both series may be in error.

Setting aside autos, it would appear that the fourth-quarter deceleration of inventory investment centered in retail trade. Inventories held by durable goods manufacturers were higher in

the fourth quarter than in the third. This pattern suggests the possibility that the change in the CBI was not entirely voluntary. The demand for the products of the durable manufacturing industries has been weak, and retail trade has increased unexpectedly in recent months.

Net exports

Real net exports were unchanged in the fourth quarter, as both exports and imports declined. Table 6 has been expanded to show current-dollar breakdowns of merchandise exports into agricultural and nonagricultural, and of merchandise imports into petroleum and nonpetroleum. In the fourth quarter, each of these categories declined. It is reasonable to assume that corresponding constant-dollar figures would also decline.

The government sector

Real government purchases of goods and services were flat in the fourth quarter (table 7). A small increase in Federal purchases was offset by a decline in State and local purchases,

which was due to public construction. Real Federal purchases have shown little change through the period since early 1973. State and local purchases were the same as a year ago. For both Federal and State and local government, the major components of purchases—payrolls and purchases of business products—have also been stationary over these periods.

The shortfall in Federal expenditures.—The slowing of the business recovery during 1976 has been attributed in part to Federal expenditures, in particular to the shortfall of these expenditures from the January 1976 budget estimates. Undoubtedly, the recovery would have been faster if the shortfall had not occurred. However, the frequently cited \$11.4 billion—representing the shortfall of actual unified budget expenditures in the first three quarters from the January estimates—greatly overstates the impact of the shortfall on economic activity. The major reason for the overstatement is that a large part of the shortfall was in transactions that involve exchanges of financial and other assets. These are

included in the unified budget but, at most, have only an indirect impact on economic activity. These transactions are not included in expenditures on a national income and product (NIPA) basis, because the latter register only transactions that directly enter the current receipts of businesses and individuals, and thus have a direct effect on economic activity. Calculated on the NIPA basis, the shortfall was much smaller—not much more than half the unified budget shortfall. It is impossible to be precise about these figures, because for definitional and statistical reasons they cannot be quantified precisely.

There are other reasons why the shortfall is smaller in terms of NIPA expenditures than in the unified budget. A significant factor is the timing adjustment for defense expenditures. This adjustment—the two components of which are adjustments for progress payments and net receivables—converts unified budget expenditures, which are on a checks issued basis, into NIPA expenditures, which are largely on a delivery basis. It is not clear which

Table 7.—Government Purchases of Goods and Services in Current and Constant Dollars, 1976

timing—checks issued or deliveries—is a better indicator of economic impact, in the sense of being closer to production. Progress payments, which are paid on fixed price contracts, are included in the unified budget but not in the NIPA's. With respect to these contracts, the unified budget provides a better measure of economic impact. With respect to cost-type contracts, goods and services produced are not reflected in the unified budget until checks are issued to pay for them. In NIPA expenditures, the net receivables item accounts for the goods and services that have been taken out of inventory and delivered without the Government having paid for them. Accordingly, in the NIPA's, total production is accounted for by the sum of the inventory and Government expenditures entries. Thus, the NIPA's provide a consistent presentation of economic activity. However, this proposition does not point to the conclusion that, in the case of cost-type contracts, NIPA expenditures are a good measure of economic impact, in the sense of being close to production. The situation is similar for "off the shelf" items, which are not produced under contract. These considerations suggest that for defense expenditures, to the extent that the unified budget shortfall differs from the NIPA shortfall because of the timing adjustment, the unified budget shortfall is probably a

better measure of economic impact than the NIPA shortfall.

The extent to which the relevant shortfall in total Federal expenditures will be made up in the period ahead is uncertain. Some of the expenditures in the unified budget may have been overstated, because in estimating them more inflation was assumed than actually occurred. Interest payments were lower than budgeted, because the deficit and interest rates turned out to be lower than assumed. Some other expenditures were overestimated, because of misjudgments in the evaluation of specific programs. These shortfalls will not be made up. Another type of shortfall was due to various kinds of lags—in the making of appropriations, in the obligation of appropriations, and in the payment of obligations. Shortfalls of this type are likely to be made up. They may amount to about one-half of the NIPA shortfall. However, the makeup will probably be gradual, and therefore will not affect economic activity in an identifiable way in any particular period.

Fiscal position.—It is useful to consider the shortfall against the broader background of fiscal policy, which can be summarized in terms of the full employment surplus or deficit, although this measure has many shortcomings. Over the year since the second-quarter 1975 tax rebate, the full employment

budget moved toward balance. Even taking into account that in the absence of the shortfall the full employment budget would have remained further from balance, it seems unlikely that the fiscal policy summarized by it would have been sufficiently expansionary to insure the continuation of a satisfactory rate of business recovery.

The broad outlines of the recently announced 2-year economic program of the incoming administration indicate a substantial increase in the full employment deficit in the period ahead. The major provisions of the program are as follows: For receipts there is, effective in the second quarter (1) a one-time rebate on individual income taxes—perhaps including a lump sum payment to Social Security recipients and others who do not pay income taxes—on the order of magnitude of \$10 billion (\$40 billion annual rate), designed to benefit mainly low to moderate income groups; (2) a permanent cut in individual income taxes, amounting to \$4 billion a year, via an increase in standard deductions, and therefore benefitting primarily the same income groups; and (3) tax reductions for business of \$2 billion a year. This reduction may take the form of a credit against the income tax amounting to 5 percent of the annual payroll tax paid by employers. This mechanism is intended to lower labor costs, and thus stimulate employment and reduce cost pressures. An increase in the investment tax credit is being considered as an alternative. For expenditures, additional grants are proposed for public service jobs, manpower training, countercyclical revenue sharing, and public works. These programs are to get underway in the second quarter, and are estimated to cost over \$2 billion (annual rate) in that quarter and \$8 billion by the end of 1978.

GNP by sector

Additional perspective on the fourth-quarter change in real GNP is provided in table 8. A stripped-down measure of production—GNP less nonbusiness, farm, housing, and auto production, and residential construction—showed only a fractional increase, as compared

^p Preliminary.

1. Equals GNP in constant dollars measured as the sum of final products less GNP in constant dollars measured as the sum of gross product by industry. The quarterly estimates are obtained by interpolating the annual estimates with the statistical discrepancy deflated by the implicit price deflator for gross domestic business product.

2. Held constant at level of previous quarter.

NOTE.—Table 2: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other industries, nondurable.

Table 3: The industry classification within the business sector is on an establishment basis and is based on the 1967 Standard Industrial Classification.

^p Preliminary.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories shown in this table is not the current-dollar change in business inventories (CBI) component of GNP. The former is the difference between two inventory stocks, each valued at end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates.

2. Quarterly totals at annual rates.

3. Equals ratio of nonfarm inventories to final sales of business. These sales include a small amount of final sales by farms.

NOTE.—Table 16: Inventories are classified as durable or nondurable as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other nonfarm industries, nondurable. The industry classification is based on the 1967 Standard Industrial Classification.

Table 17: The industry classification of employees, proprietors' income, and rental income is on an establishment basis; the industry classification of corporate profits and net interest is on company basis. The industry classification of these items is based on the 1967 Standard Industrial Classification.

Residual.....								
Equals: National income	127.1	133.2	127.6	129.9	130.9	132.4	133.8	

1. Consists of final sales and change in business inventories of new autos produced in the United States.

2. Consists of personal consumption expenditures, producers' durable equipment, and government purchases.

NOTE.—Table 21: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other industries, nondurable.

Tables 22 and 24: The industry classification within the business sector is on an establishment basis and is based on the 1967 Standard Industrial Classification

^p Preliminary.

Note.—Table 27: The implicit price deflator for GNP is a weighted average of the detailed price indexes used in the deflation of GNP. In each period, the weights are based on the composition of constant-dollar output in that period. In other words, the price index for each item is weighted by the ratio of the quantity of the item valued in 1972 prices to the total output in 1972 prices. Changes in the implicit price deflator reflect both changes in prices and changes in the composition of output. The chain price index uses as weights the composition of output in the prior period, and, therefore, reflects only the change in prices between the two periods. However, comparisons of percent changes in the chain index also reflect changes in the composition of output. The fixed-weighted price index uses as weights the composition of output in 1972. Accordingly, comparisons over any time span reflect only changes in prices.

State Personal Income, 1975: III-1976: III

STATE personal income increased 9½ percent from the third quarter of 1975 to the third quarter of 1976. Real income was up nearly 5 percent, and prices—as measured by the implicit price deflator for personal consumption expenditures—were up 4¼ percent. In 47 States, the gain in current-dollar income exceeded the national increase in consumer prices. In three farm States—Montana, South Dakota, and North Dakota—and in the District of

NOTE.—Quarterly totals for the State personal income series will not agree with the personal income measure carried in the national income and product accounts.

Columbia, income gains ranged from less than 1 to 4½ percent, and real income was off.

The eight States with the largest income gains, ranging from 13 to 11½ percent, were Alaska, New Hampshire, Utah, Maine, Nevada, Michigan, Wyoming, and South Carolina (table 1). In each, total income gains were industrially widespread, with most major nonfarm income components rising more rapidly than in the Nation. Wage and salary disbursements in service-type industries increased sharply; on average, these wages and salaries increased nearly 15 percent, as compared with 11½ percent nationally. In most of these States, construction and manufacturing wages and salaries also increased more than the national average; manufacturing gains were particularly important in Michigan and South Carolina. In Wyoming, Utah, and Alaska, mining payrolls increased at above-average rates, and in the latter State, so did nearly all other major nonfarm income components as work on the oil pipeline accelerated.

The smallest income gains, ranging from less than 1 to 7¼ percent, occurred in the District of Columbia and in seven States: Montana, South Dakota, North Dakota, Nebraska, Iowa, Arkansas, and Washington. In each of these States, except Washington, a substantial decline in farm income was the major retarding factor. On average, farm income was 15½ percent of total income in these States, as compared with 2¼ percent nationally, and declined 27½ percent, as compared with a national decline of 17½ percent. Each of the farm States, except Arkansas, was hit by a sharp fall in wheat and/or corn prices; Arkansas was affected by a drop in the price of rice. Manufacturing and government payrolls were the major factors holding back income gains in Washington and in the District of Columbia, respectively.

(Continued from page 8)

with the 3-percent annual rate increase of GNP. The components that accounted for the difference were farm and auto production, and residential

construction, each of which registered above average increases. The only other factor that can be isolated as an explanation of the flatness of the stripped-down production measure is

truck production, which is included in the stripped-down measure. It declined sharply in the fourth quarter, after substantial increases earlier in the year, especially in the third quarter.

Plant and Equipment Expenditures: 1977

BUSINESS plans to spend \$135 billion on new plant and equipment in 1977, 11.3 percent more than in 1976 (table 1 and chart 6). This estimate is based on the annual survey conducted by BEA in late November and December. The estimate of 1976 spending, based on the survey conducted a month earlier, is \$121.2 billion, 7.5 percent more than in 1975.¹

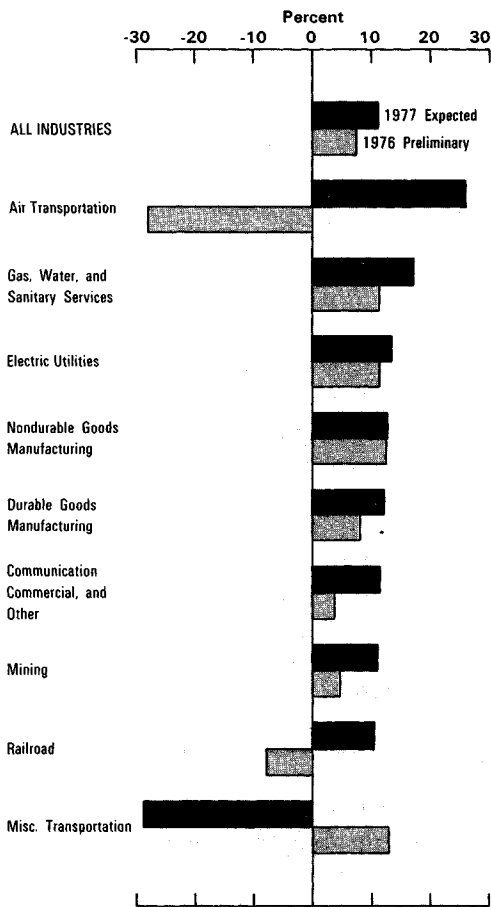

These figures are not adjusted for price change. Survey respondents estimate an 8 percent price increase for capital goods purchased by them in 1976, and expect a similar increase in 1977 (table 2).² Since 1970, when BEA initiated its inquiry into capital goods price changes, the survey-based estimates have indicated larger actual price increases than did the implicit price deflator for the fixed nonresidential investment component of GNP in every year except 1975. The reasons for the differences are not clear. The deflator increased about 5 percent in 1976, suggesting that real spending on plant and equipment in 1976 was up about 3 percent. If capital goods prices increase this year about as much as last year, an increase in real spending of 6 percent for 1977 is suggested.

The 1977 spending plans indicate advances for all major manufacturing and nonmanufacturing industries except "other transportation." The latter reflects a decline in outlays for the Trans-Alaska pipeline.

Manufacturing industries plan to spend \$59.6 billion, 12½ percent more than in 1976. Last year, the increase was 10½ percent and in 1975, 4 percent. All major industry groups plan increases in spending this year. The largest increases are planned by motor vehicles (38 percent), rubber (27 percent), and "other nondurables" (21 percent). Last year's increases in these industries were much smaller. The 16-percent increase planned by paper is about the same as last year. The aircraft, machinery, textile, petroleum, and "other durables" industries plan increases ranging between 11 and 14 percent. In general, the increases do not differ much from the 1976 increases; textiles is the major exception—the 11-percent increase is less than half the 1976 increase. Food-beverage and stone-clay-glass plan small increases this year—6 percent and 5 percent; their 1976 increases were much larger.

Nonmanufacturing industries plan to spend \$75.4 billion, 10½ percent more than in 1976. This increase compares with a 5½-percent increase last year, and a 2½-percent decrease in 1975. Airlines plan a 26-percent increase, following 4 years of declines. Railroads plan a 10½-percent increase; their spending declined 8 percent last year. "Other transportation" plans a 29-percent drop this year, as construction of the Trans-Alaska pipeline nears completion. Gas utilities plan a 17-percent increase and electric utilities a 13½-percent increase; last year, the

CHART 6
Changes in Business Investment

U.S. Department of Commerce, Bureau of Economic Analysis

77-1-6

1. For estimates of prior years, see pages 25-40 of "Revised Estimates of New Plant and Equipment Expenditures, 1947-69: Part I" in the January 1970 SURVEY and the March 1970, 1972, 1974, and 1976 issues.

The estimate of 1976 plans is based on actual expenditures in the first three quarters plus plans for the fourth quarter. The plans are adjusted for systematic biases by procedures described on pages 36-39 of the February 1970 SURVEY.

The 1977 plans were adjusted for systematic biases. Before adjustment, plans were \$60.92 billion for manufacturing and \$74.51 billion for nonmanufacturing; the net effect of the adjustments was to lower manufacturing \$1.34 billion and to raise nonmanufacturing \$0.86 billion. The bias adjustments, which are computed separately for each major industry, were applied only when plans deviated from actual spending in the same direction for 5 of the last 7 years. In these cases, the adjustment used was the median deviation between actual and planned spending in the last 5 years.

2. Respondents were asked:

"What are your best estimates of average price changes from 1975 to 1976 and expected price changes from 1976 to 1977:

"a. Prices paid by your company for new construction, machinery, and equipment.

"b. Prices of goods and/or services sold by your company."

Similar information was obtained in the corresponding annual surveys conducted since 1970. The companies' responses on capital goods and sales price changes were weighted by their reported capital expenditures and sales, respectively.

^p—Preliminary.

1. Excludes expenditures of agricultural business; real estate operators; medical, legal, educational, and cultural services; and nonprofit organizations.

2. Estimates based on plans reported by business in late November and December 1976. Plans were adjusted for systematic biases.

3. Includes estimates not shown separately.

4. Includes guided missiles and space vehicles.

5. Includes fabricated metal, lumber, furniture, instruments, and ordnance and miscellaneous except guided missiles and space vehicles.

6. Includes apparel, tobacco, leather, and printing-publishing.

7. Includes trade, service, construction, finance, and insurance.

spending of each increased 11½ percent. The communications and commercial group plans an 11½-percent increase, largely reflecting communications and trade; last year's spending increase was much less. Mining expects an 11-percent increase, more than double the 1976 increase.

Sales and sales prices

Manufacturers expect their sales to increase 11 percent in 1977 (table 3). The actual increase in 1976 was 14 percent, as compared with an expected increase of 11½ percent. The corresponding figures for trade are 9, 10½, and 9 percent, and for public utilities, 15½, 16, and 15 percent.

Information relating to sales prices is shown in table 4.

Revised Inventory and Sales Estimates, 1958-75

Manufacturing inventories, sales, and inventory-sales ratios, which are regularly shown on page S-5 of the SURVEY OF CURRENT BUSINESS, have been revised.

Manufacturing inventories and sales have been revised back to January 1958 to reflect the adjustment of the monthly estimates to the levels of the 1972 Census of Manufactures and the 1973 Annual Survey of Manufactures. New seasonal adjustment factors have also been introduced. See *Manufacturers' Shipments, Inventories, and Orders: 1958-76 (Revised)* Series M3-1.6, available from the Bureau of the Census.

Table 1 shows sales estimates, table 2 shows inventory estimates, and table 3 shows inventory-sales ratios.

* Revised. † As of July 1.
 ♀ Includes data not shown separately. § Except department stores mail order.
 † See corresponding note on p. S-12.
 ‡ Revisions back to Oct. 1973 appear in "Population Estimates and Projections: Estimates of the Population of the United States and Components of Change—1980-75," P-25, No. 632 (July 1976), Bureau of the Census.

♂ Beginning in the Feb. 1976 SURVEY, data (revised back to Jan. 1971) reflect new seasonal factors and a modification of the procedures previously used to seasonally adjust a few of the series (teenage unemployment and those few other unemployment series of which teenagers are the exclusive or major part). Comparable monthly data back to 1967 appear in EMPLOYMENT AND EARNINGS (Feb. 1976), USDL, BLS.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

† Revised. ‡ Preliminary. § Average for year. ¶ Daily average. ⊙ Adjusted to exclude interbank loans. § For bond yields, see p. S-21. † Beginning Jan. 1959, monthly data have been revised to reflect new seasonal factors and adjustment to bench marks for the latest call date (Dec. 31, 1975). ‡ Revisions are available from the Federal Reserve Board, Washington, D.C. 20551. ¶ Includes data for items not shown separately. † Data have

been revised back to 1970, noninstallment credit will no longer be available on a monthly basis. "Personal loans" and "other consumer goods paper" have been combined to form an "all other" category (not shown separately here). Earlier monthly data are available from the Federal Reserve Board, Washington, D.C. 20551. ¶ Beginning Jan. 1973, data have been revised; revisions for Jan. 1973-April 1975 will be shown later.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

Net income (after taxes) \varnothingdo	1,687	1,111	-----	1,239	-----	-----	175	122	-68	152	-----	114	177	-----	-----	

\varnothing Revised. \varnothing Preliminary. Δ Before extraordinary and prior period items. Δ Annual total; quarterly revisions not available. \varnothing Includes data not shown separately. \varnothing Applies to passengers, baggage, cargo, and mail carried. \varnothing Passenger-miles as a percent of available seat-miles in revenue service reflects proportion of seating capacity actually sold and utilized. \varnothing Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service. * New Series. Source: ICC (no comparable data prior to 1972).

\varnothing Indexes are comparable for the identical quarter of each year (and from year to year). Δ Effective 1976, defined as those with annual revenues of \$10 million or more; restated 1975 data reflect changes. \varnothing Natl. Railroad Pass. Corp. (Amtrak) operations (not included in AAR data above), 1974 and 1975 (mil. \$): Oper. revenues, 257; 253; oper. expenses, 463; 531; net loss, 273; 353 (ICC). \varnothing Domestic trunk operations only (domestic trunks average about 90% of total domestic operations). \varnothing 1st qtr. 1975. \varnothing 2d qtr. 1975. \varnothing 3d qtr. 1975.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

Revised. Preliminary. Annual total; monthly revisions are not available. For six months ending in month shown. For month shown. See note "g". See note "c". Restated 1st qtr. 1975. Data withheld to avoid disclosure of figures from individual companies. Restated 2d. qtr. 1975. Restated 3d. qtr. 1975. See "Δ" note, p. S-24. Average daily rent per occupied room, not scheduled rates. Includes data not shown separately.

Effective 1976, data are compiled by U.S. Dept. of Transportation from INS records and refer to air travel; travel by sea is omitted (for 1973-75, average annual arrivals and departures by sea are as follows—units and order as above: 814; 784; 159; 129). Effective Jan. 1976, data include visits to Voyageurs National Park (no count of visits for earlier periods is available); data for Mar.-July 1976 are restated to delete visits to Platt National Park which was reclassified as a national recreation area. Includes data for Western Union Int. Cable & Wireless. Monthly revisions back to 1971 are available upon request.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

† Revised. ‡ Preliminary. § Annual data; monthly revisions are not available. ¶ Totals include data for types of lumber not shown separately. ¶ Effective Aug. 1976 SURVEY, scrap excludes imports of rerolling rails and pig iron excludes sponge iron imports previously included. ¶ Effective with 1974 annual and Jan. 1975 figures, data reflect expanded sample and exclusion of direct-reduced (prereduced) iron, previously included in scrap series.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

* Revised. † Annual data; monthly revisions are not available. ‡ Less than 50 tons.
 § See "****" note. ¶ For month shown. Ⓞ Corrected
 Ⓢ Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.
 Ⓣ All data (except annual production figures) reflect GSA remelted zinc and zinc purchased for direct shipment. Ⓤ Revised Dec. 31 stocks for 1970-73 (thous. tons): 124.2; 48.6; 30.1; 25.9. Producers' stocks elsewhere, end of Dec. 1976, 28,300 tons.
 *New series effective with data for Jan. 1976. Source: Metals Week. MW Composite monthly price (Straits quality, delivered) is based on average of daily prices at two markets (Penang, Malaysia—settlement, and LME 3-month—High grade), and includes fixed charges plus dealer's and consumer's 70-day financing costs; no comparable earlier prices are available.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976										
	Annual		Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.

^p Revised. ^q Preliminary.¹ Reported annual total; revisions not allocated to the months. ² Less than 50 thousand barrels. ³ Beginning with January 1975, data for soda combined with those for sulphate; not comparable with data for earlier periods.⁴ Beginning March 1975, data for defibrated or exploded, screenings etc., not available; not comparable with those for earlier periods. ⁵ Data exclude small amounts of pulp because reporting would disclose the operations of individual firms. ⁶ Monthly revisions back to 1974 are available upon request.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the edition of 1975 BUSINESS STATISTICS	1974	1975	1975		1976

* Revised. † Preliminary. ‡ Season average. § For 5 weeks, other months, 4 weeks. ¶ Monthly average. †† Effective Sept. 1976 SURVEY, data omit production and stocks of saran and spandex yarn; for 1975, such production totaled 11.7 mil. lbs. ‡‡ Effective 1976, production of blanketing is included in 100% spun yarn fabric; prior to 1976 production of such fabric (totaling 15.5 mil. yd., 4th qtr. 1975) is included in "all other group," not shown separately. §§ Includes data not shown separately. ¶¶ Net-weight (480-lb.) bales. ††† Effective Jan. 1976, specifications for the price formerly designated fine good French

combing and staple have been changed as shown above. Effective with the May 1976 SURVEY the foreign wool price is quoted including duty. * New series. Apparel (BuCensus)—Annual totals derived from firms accounting for 99% of total output of these items; monthly estimates, from smaller sample. Coats exclude all fur, leather, and raincoats. Suits omit garments purchased separately as coordinates. Except for the year 1974, earlier monthly data are available, except for suits. Prices (USDL, BLS)—Data not available prior to 1976.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975		1976

U.S. INDUSTRIAL OUTLOOK

Fundamental facts about business distilled from the research and analyses of more than 100 business conditions experts.

For those who need a feel for what is happening in the industries their business depends upon.

An overview of U.S. business that shows where the action is expected and where the opportunities lie.

Latest data on product and industry shipments, exports, imports, employment, with historical data for perspective and projections to 1985.

(PLEASE DETACH ALONG DOTTED LINE)
