

U.S. EPA NESHAP Subpart W Revisions Update

Reid J. Rosnick

Radiation Protection Division

NRC/NMA Uranium Recovery Workshop

May 26, 2011

Purpose of Presentation

- Provide background and status update on 40 CFR 61, Subpart W (National Emission Standard for Radon Emissions from Operating Mill Tailings under Clean Air Act)

40 CFR 61 Subpart W Summary

- Applies to radon emissions from operating uranium mill tailings
 - Radon emissions flux standard: 20 pCi/m²-sec
- After 12/15/1989, new impoundments were required to meet one of two new work practices
 - ✓ Phased disposal – Impoundment size(2) \leq 40 acres
 - ✓ Continuous disposal – dewatered tailings with no more than 10 acres uncovered
 - ✓ Both must meet design, construction, ground-water monitoring standards at 40 CFR 192.32(a)
- Work practices were designed to achieve at least equivalent risk reductions as obtained by the numerical standard

Review of Subpart W

- Review began after receiving Notice of Intent to Sue (NOI) by two Colorado environmental groups
 - ✓ Based on EPA's alleged failure to review & revise regulation within ten years after enactment of Clean Air Act Amendments of 1990 (11/15/2000)
 - ✓ Plaintiffs filed suit against EPA
 - ✓ Settlement agreement reached November 2009

- EPA is currently revising Subpart W, projected proposal, late this year

Subpart W, continued

- In Situ Leach/Recovery (ISL/ISR) extraction has become more commonplace since original promulgation and does not generate significant tailings, but wastes containing uranium byproduct material are placed in evaporation ponds/impoundments
- ISL/ISR, conventional mill, heap leach operations expected
- Regulatory Reviews
 - ✓ of the current standard
 - ✓ of the original EPA radon risk assessment

Background

Conventional Surface mill

Heap leaching

Subpart W, Scientific Data/Research

- Review and compile a list of existing & proposed U mill tailing facilities & the containment technologies being used, as well as proposed
- Compare & contrast those technologies with the engineering requirements of RCRA Subtitle C land disposal facilities, which are used as the design basis for existing uranium byproduct material impoundments
 - ✓ Review regulatory history of Rad-NESHAPS and Subpart W, Tailings impoundment technologies, and radon measurement method
 - ✓ Comparison of 1989 risk assessment with current risk assessment approaches (adequacy and appropriateness)

Status of 40 CFR Part 61, Subpart W

- Regulation is under formal review
- Work has reached deliberative phase, EPA workgroup is preparing options for regulation revision to Assistant Administrator.
- AA will provide direction on which options to include in preamble of proposal
- Focus has been:
 - ✓ External -- Public information meetings to address settlement agreement requirements
 - ✓ Internal -- Technical review

Communications Plan

- ✓ EPA is committed to maintaining an open and transparent rulemaking process
- ✓ Objectives:
 - Inform stakeholders of potential changes in EPA's Subpart W requirements
 - Give stakeholders an opportunity to provide feedback
- ✓ Audiences:
 - Tribes
 - States
 - Offices/Regions within EPA
 - Other Federal Agencies
 - Mining companies

Outreach

- ✓ Established a dedicated web site to act as an information outlet
- ✓ <http://www.epa.gov/radiation/neshaps/subpartw/rulemaking-activity.html>
- ✓ Site contains current and historical rulemaking documents, presentations, contact information, useful links

Outreach

- ✓ Quarterly conference calls to answer stakeholder questions
- ✓ Next call – July 7, 2011 – 11:00 AM EDT
- ✓ Call in number is 1-866-299-3188. You will be prompted for a conference code, which will be 2023439563. After entering the conference code press the # key and you will then be placed into the conference call
- ✓ Public participation by e-mail:
 - subpartw@epa.gov

Thank You
