# 2011

## NOVEL NEW DRUGS

JANUARY, 2012

# CDER's 2011 NMEs

## 30 novel new drugs approved in 2011

In Calendar Year 2011, FDA's Center for Drug Evaluation and Research (CDER) approved 30 novel new medicines, known as new molecular entities (NMEs).\* This includes applications for both New Drug Applications (NDAs) and Biologics License Applications (BLAs).

The clear bars in the chart to the right indicate the number of NMEs approved by CDER in each year since 2002. CDER approved 30 NMEs in 2011, representing the second highest total in the past ten years, except 2004, in which the Center approved 36 NMEs. In terms of recent comparison, for the ten-year period from 2002 through 2011, CDER has averaged about 24 NME approvals per year.

## Novel Drug Approvals Remain Steady

The number of NMEs approved over time, however, has not been substantially increasing. This is due primarily to the fact that the number of applications for NMEs has also not been increasing.

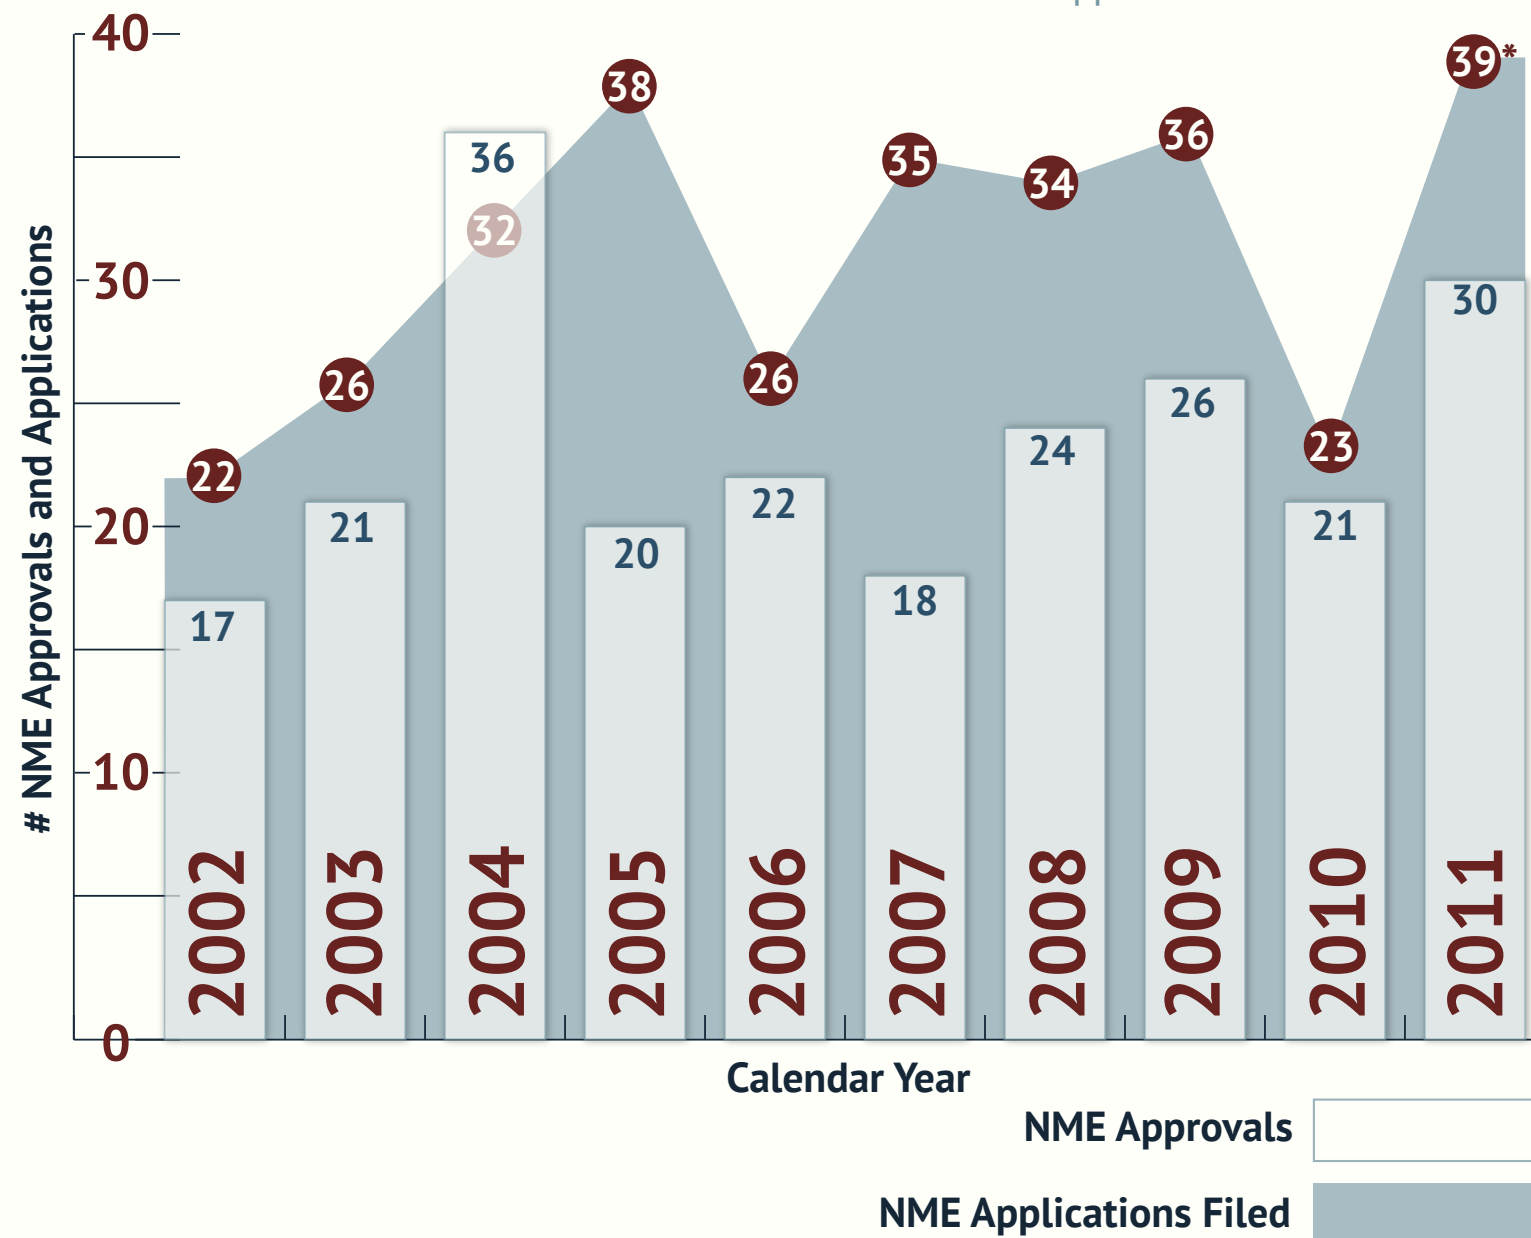

The red dots in the graph to the right indicate the number of new NDA and BLA applications CDER has received over the last ten years for NMEs. From 2002 through 2010 CDER filed an average of about 30 applications for NMEs per year. Although all applications submitted in 2011 were not accepted for filing as of 12/31/11, CDER projects about 39 for 2011, roughly on par with numbers from recent years such as 35 in 2007, 34 in 2008, and 36 in 2009.

In 2011 CDER approved **30 NMEs\***

Since 2002 CDER has averaged **about 24 NME approvals per year.**

The 30 NMEs approved in 2011 is the **highest total** in seven years.

From 2002 through 2010, CDER filed an average of 30 applications for NMEs.

**The NMEs of 2011:** see pages 14 & 15 for what these drugs are used for.

Adcetris	Arcapta	Benlysta	Brilinta	Caprelsa	Daliresp	Datscan	Difucid	Edarbi	Edurant
Eylea	Erwinaze	Ferriprox	Firazyr	Gadavist	Horizant	Incivik	Jakafi	Natroba	Nulojix
Onfi	Potiga	Tradjenta	Victrelis	Viibryd	Xalkori	Xarelto	Yervoy	Zelboraf	Zytiga

\*The final number of NME Applications filed in 2011 is projected, pending final validation of the data and dependent outcome of 12 applications submitted in late 2011.

# IMPACT

## Impact on Public Health

Although the 30 new molecular entities approved by FDA's Center for Drug Evaluation and Research (CDER) in 2011 represent the most since 2004, these NMEs are more notable for their potential positive impact on quality care and public health.

### First-in-Class Drugs

Twelve of the 30 NMEs approved in 2011 (40%) were identified as **First-in-Class**, meaning drugs which, for example, use a new and unique mechanism of action for treating a medical condition.

*Particularly noteworthy first-in-class products include Benlysta, the first new drug approved to treat lupus in over 50 years, Adcetris, the first new drug to treat Hodgkin Lymphoma in over 30 years, and Yervoy, the first drug to clearly demonstrate extending life for patients with late stage melanoma.*

|   | Firazyr  | Yervoy    |
|   | Jakafi   | Zelboraf  |
|   | Nulojix  | Zytiga    |

### Orphan Drugs

Eleven of the 30 NMEs of 2011 (37%) were new drugs approved to treat rare or "**orphan**" diseases that affect 200,000 or fewer Americans. This is significant because patients with rare diseases often have few or no drug treatment options.

*Examples of rare diseases that now have new effective treatment options include myelofibrosis (Jakafi), hereditary angioedema (Firazyr), and Lennox-Gastaut syndrome (Onfi).*

IMPACT

The NMEs for 2011 are most notable for their potential positive impact on quality care and public health.

**An exceptional year for quality**

The 30 NMEs approved in 2011 include Victrelis and Incivik, two new treatments for hepatitis C; Zytiga, a drug to treat late-stage prostate cancer; Adcetris, the first new drug to treat Hodgkin lymphoma in 30 years; and Benlysta, the first new drug for lupus in over 50 years. Additionally, two of the products, Xalkori for lung cancer and Zelboraf for melanoma, represent significant advances in “personalized medicine,” being approved with diagnostic devices that allow the medicine to be targeted specifically to those patients most likely to respond.

Other NMEs approved in 2011 also provide important new therapies such as Eylea for preventing vision loss from macular degeneration, Brilinta for preventing heart attack, and Nulojix to prevent kidney transplant rejection.

# INNOVATION

## Innovative methods for expediting NMEs to market

Many of the 30 NMEs of 2011 approved by CDER are notable for the regulatory methods CDER used to expedite the approval process. Particularly noteworthy examples of drugs approved rapidly are Zytiga (prostate cancer), approved in 4.2 months, Zelboraf (melanoma), approved in 3.6 months, Xalkori (lung cancer), approved in 4.9 months, and Adcetris (two types of lymphoma), approved in 5.7 months.

### Priority Review

Fifteen of the 30 NMEs were designated **Priority Review** (50%), in which CDER determines the drug to potentially provide a significant advance in medical care and sets a target to review the drug within six months instead of the standard 10 months.

Adcetris	Erwinaze	Victrelis
Benlysta	Eylea	Xalkori
Caprelsa	Firazyr	Yervoy
Datscan	Incivek	Zelboraf
Difcid	Jakafi	Zytiga

### Fast Track

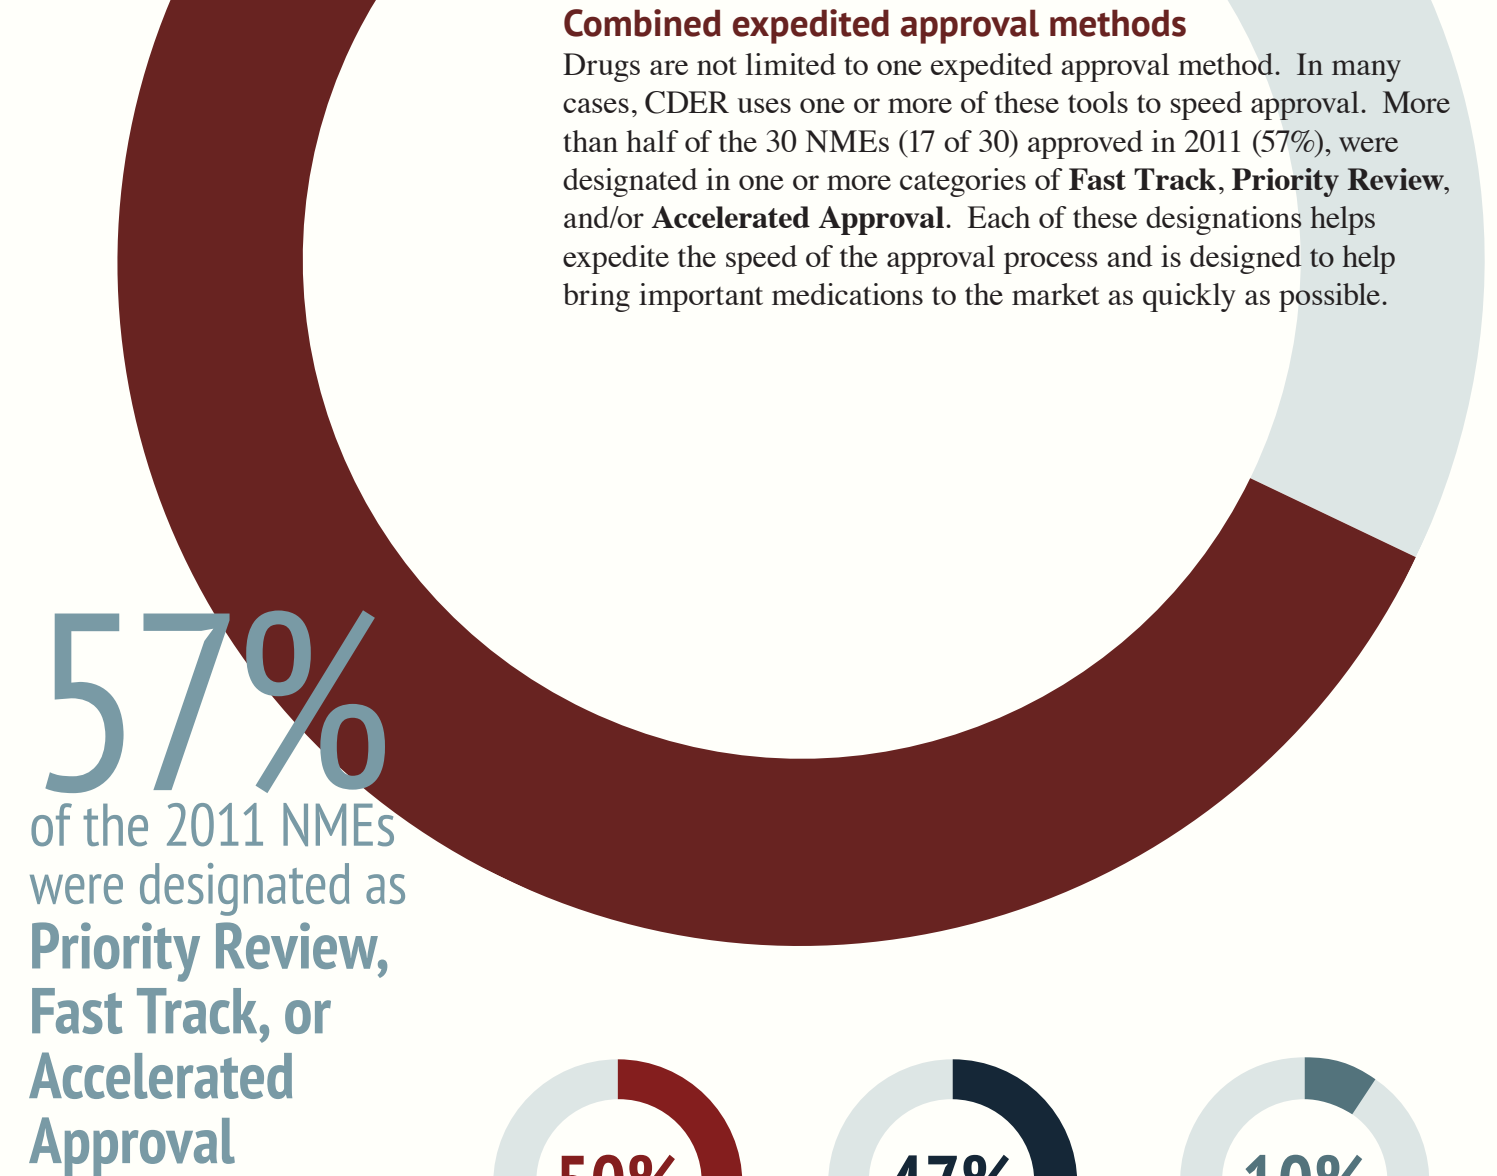

Fourteen of the 30 NMEs approved in 2011 (47%) were designated **Fast Track** approvals, meaning drugs that can treat unmet medical needs; this is the highest number of Fast Track approvals since the program began in 1998. Fast Track speeds new drug reviews; for instance, by increasing the level of communication FDA allocates to developers and by enabling developers to use a “rolling review” process such that CDER can review portions of an application ahead of the submission of the full application.

Adcetris	Erwinaze	Nulojix
Benlysta	Ferriprox	Victrelis
Caprelsa	Firazyr	Xalkori
Difcid	Incivek	Yervoy
	Jakafi	Zelboraf

### Accelerated Approval

Three of the 30 NMEs approved in 2011 (10%) were approved under FDA’s **Accelerated Approval** program, which allows early approval of a drug for serious or life-threatening illness that offers a benefit over current treatments. This approval is based on a “surrogate endpoint” (e.g., a laboratory measure) or other clinical measure that FDA considers reasonably likely to predict clinical benefit. After this approval, the drug must undergo additional testing to confirm that benefit-this speeds the availability of the drug.

Adcetris
Ferriprox
Xalkori

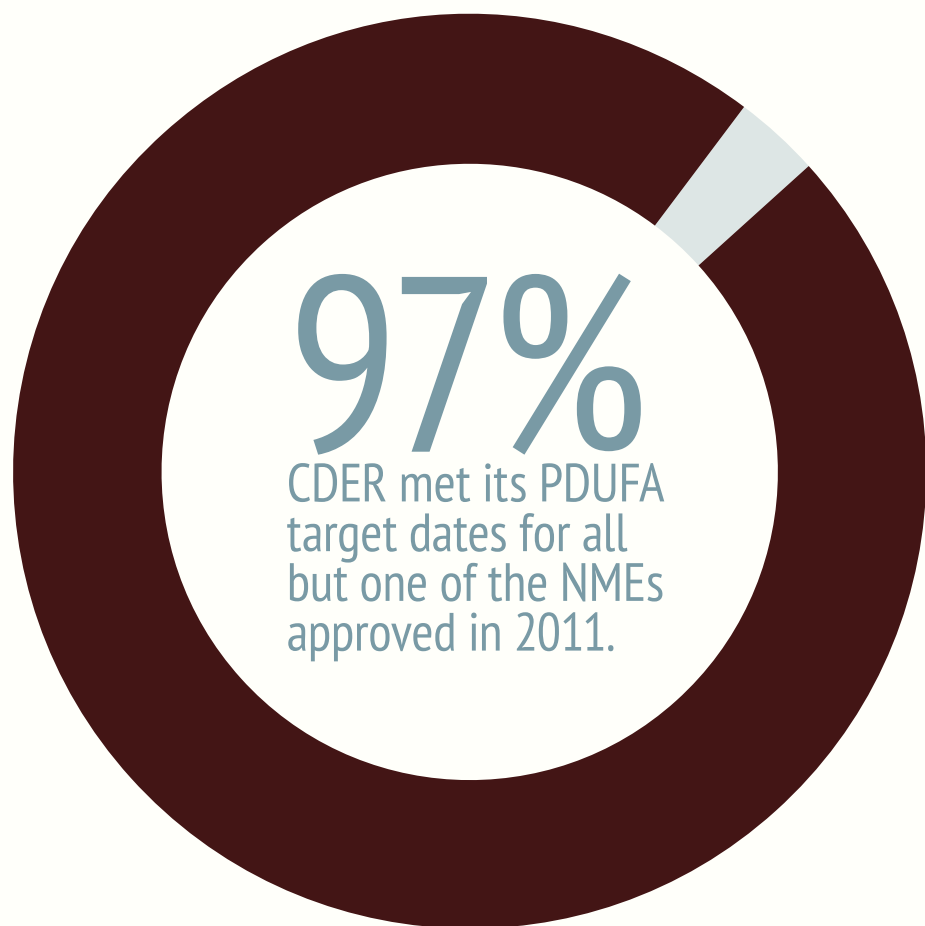

**Combined expedited approval methods**  
Drugs are not limited to one expedited approval method. In many cases, CDER uses one or more of these tools to speed approval. More than half of the 30 NMEs (17 of 30) approved in 2011 (57%), were designated in one or more categories of **Fast Track, Priority Review, and/or Accelerated Approval**. Each of these designations helps expedite the speed of the approval process and is designed to help bring important medications to the market as quickly as possible.

# PREDICTABILITY

## Met PDUFA Target Dates

Under the Prescription Drug User Fee Act (PDUFA), the pharmaceutical industry provides FDA with funding to help ensure the agency conducts reviews for new products within targeted time frames.

Throughout the year, CDER was able to meet or exceed **PDUFA target dates** for application review agreed to with the pharmaceutical industry and approved by Congress. CDER met its PDUFA target dates for all but one (97%) of the NMEs approved in 2011.

- Adcetris
- Arcapta
- Benlysta
- Brilinta
- Caprelsa
- Daliresp
- Datscan
- Difcid
- Edarbi
- Edurant
- Eylea
- Ferriprox
- Firazyr
- Gadavist
- Horizant
- Incivek
- Jakafi
- Natroba
- Nulojix
- Onfi
- Potiga
- Tradjenta
- Victrelis
- Viibryd
- Xalkori
- Xarelto
- Yervoy
- Zelboraf
- Zytiga

# ACCESS

## First Cycle Approval

CDER approved most drugs (19 of 30) on the “**first cycle**” of review (63%), meaning without requests for additional information that would delay approval and lead to another cycle of review.

- |          |           |           |
|----------|-----------|-----------|
| Adcetris | Eylea     | Victrelis |
| Benlysta | Gadavist  | Viibryd   |
| Caprelsa | Incivek   | Xalkori   |
| Difcid   | Jakafi    | Yervoy    |
| Edarbi   | Onfi      | Zelboraf  |
| Edurant  | Tradjenta | Zytiga    |

## First Cycle Approval of Priority Review Drugs

Of the 15 NMEs approved in 2011 designated for Priority Review, 13 (87%) were approved on the first cycle. This is particularly important because Priority Review drugs have the potential to serve as significant medical advances in health care. With faster review and approval results these products become available to patients sooner.

- |          |           |          |
|----------|-----------|----------|
| Adcetris | Eylea     | Xalkori  |
| Benlysta | Incivek   | Zelboraf |
| Caprelsa | Jakafi    | Zytiga   |
| Difcid   | Victrelis |          |
| Erwinaze | Yervoy    |          |

## Approved First in the U.S.

Comparing approval to other countries offers another measure of approval efficiency. Although regulatory processes differ widely between FDA and those of regulatory agencies in other countries, over half (19 of 30) of the NMEs approved in 2011 (63%) were approved first in the U.S. before any other country worldwide.

- |          |           |           |
|----------|-----------|-----------|
| Adcetris | Horizant  | Victrelis |
| Benlysta | Incivek   | Viibryd   |
| Caprelsa | Jakafi    | Xalkori   |
| Difcid   | Natroba   | Yervoy    |
| Edarbi   | Nulojix   | Zelboraf  |
| Edurant  | Tradjenta | Zytiga    |
| Eylea    |           |           |

First Cycle Approval

First Cycle Approval of Priority Review Drugs

Approved first in the U.S.

# OVERVIEW

**This document represents a broad overview of CDER approvals of new molecular entities (NMEs) for calendar year 2011.**

Although the number of NMEs approved in 2011 is higher than those in the past seven years, the quantity of NMEs being approved by CDER over the past decade has not been substantially increasing. A key reason is that the number of applications filed for NMEs has also not been substantially increasing.

More important than the quantity of new drugs approved in 2011, is the quality of the new drugs and the important new roles they are serving to advance medical care.

Also noteworthy is the speed and predictability with which most of these drugs were reviewed and approved. CDER used a variety of “expedited approval” regulatory tools to speed these drugs to market.

In all cases of expedited approval, CDER does not compromise safety in the approval process.

More important than the quantity of new drugs approved in 2011, is the quality of the new drugs and the important new roles they are serving to advance medical care.

# DRUG DESIGNATION SUMMARY

	First in Class	Orphan	Fast Track	Priority Review	Accelerated Approval	Met PDUFA Target Dates	First Cycle	First Approved in U.S.
Adcetris								
Arcapta								
Benlysta								
Brilinta								
Caprelsa								
Daliresp								
Datscan								
Dificid								
Edarbi								
Edurant								
Erwinaze								
Eylea								
Ferriprox								
Firazyr								
Gadavist								
Horizant								
Incivek								
Jakafi								
Natroba								
Nulojix

Potiga								
Tradjenta								
Victrelis								
Viibryd								
Xalkori								
Xarelto								
Yervoy								
Zelboraf								
Zytiga								

## First-in-Class

Drugs with a new and unique mechanism for treating a medical condition

## Orphan Drugs

Drugs approved for small populations of patients with rare diseases

## Fast Track

Drugs that can treat unmet medical needs

## Priority Review

Drugs with a target review of 6 months instead of 10 months

## Accelerated Approval

Early approval based on markers that predict a reasonable benefit, with more testing to confirm clinical benefit after approval

## PDUFA Target Dates

Drugs that met the Prescription Drug User Fee Act target dates for review

## First Cycle

Drugs that were approved without request for additional information that would delay approval and lead to another cycle of review

## First Approved in U.S.

Drugs that were approved first in the U.S. before any other country worldwide

# THE NMEs OF 2011

Drug Name	Active Ingredient	Date	What it's used for
<a href="#">Eylea</a>	abiraterone	11/18	To treat wet (neovascular) age-related macular degeneration (AMD), a leading cause of vision loss and blindness in Americans ages 60 and older.
<a href="#">Erwinaze</a>	asparaginase Erwinia chrysanthemi	11/18	For patients with acute lymphoblastic leukemia (ALL), who have developed an allergy (hypersensitivity) to E. coli derived asparaginase and pegapargase chemotherapy drugs used to treat ALL.
<a href="#">Jakafi</a>	ruxolitinib	11/16	To treat patients with the bone marrow disease myelofibrosis.
<a href="#">Onfi</a>	clobazam	10/24	For use as an adjunctive (add-on) treatment for seizures associated with Lennox-Gastaut syndrome in adults and children 2 years of age and older.
<a href="#">Ferriprox</a>	deferiprone	10/14	Iron overload from blood transfusions in patients with thalassemia (genetic disorder causing anemia), who had an inadequate response to chelation therapy.
<a href="#">Xalkori</a>	crizotinib	08/26	Certain patients with late-stage (locally advanced or metastatic), non-small cell lung cancers who express the abnormal anaplastic lymphoma kinase gene.
<a href="#">Firazyr</a>	icatibant	08/25	For the treatment of acute attacks of a rare condition called hereditary angioedema (HAE) in people ages 18 years and older.
<a href="#">Adcetris</a>	brentuximab vedotin	08/19	Hodgkin lymphoma and ALCL (systemic anaplastic large cell lymphoma).
<a href="#">Zelboraf</a>	vemurafenib	08/17	To treat patients with late-stage (metastatic) or unresectable (cannot be removed by surgery) melanoma, the most dangerous type of skin cancer.
<a href="#">Brilinta</a>	ticagrelor	07/20	To reduce cardiovascular death and heart attack in patients with acute coronary syndromes (ACS).
<a href="#">Xarelto</a>	rivaroxaban	07/01	To reduce the risk of blood clots, deep vein thrombosis (DVT), and pulmonary embolism (PE) following knee or hip replacement surgery.
<a href="#">Arcapta Neohaler</a>	indacaterol inhalation powder	07/01	For the long term, once-daily maintenance bronchodilator treatment of airflow obstruction in people with chronic obstructive pulmonary disease (COPD) including chronic bronchitis and/or emphysema.
<a href="#">Nulojix</a>	belatacept	06/15	To prevent acute rejection in adult patients who have had a kidney transplant.
<a href="#">Potiga</a>	ezogabine	06/10	An add-on medication to treat seizures associated with epilepsy in adults.

Drug Name	Active Ingredient	Date	What it's used for
<a href="#">Difcid</a>	fidaxomicin	05/27	For the treatment of <i>Clostridium difficile</i> -associated diarrhea (CDAD).
<a href="#">Incivek</a>	telaprevir	05/23	To treat certain adults with chronic hepatitis C infection.
<a href="#">Edurant</a>	rilpivirine	05/20	Treatment of HIV-1 infection in adults who have never taken HIV therapy.
<a href="#">Victrelis</a>	boceprevir	05/13	To treat certain adults with chronic hepatitis C.
<a href="#">Tradjenta</a>	linagliptin	05/02	Addition to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.
<a href="#">Zytiga</a>	abiraterone acetate	04/28	In combination with prednisone to treat patients with late-stage (metastatic) castration-resistant prostate cancer who have received docetaxel (chemotherapy).
<a href="#">Caprelsa</a>	vandetanib	04/06	To treat adult patients with late-stage (metastatic) medullary thyroid cancer, ineligible for surgery who have disease that is growing or causing symptoms.
<a href="#">Horizant</a>	gabapentin enacarbil	04/06	A once-daily treatment for moderate-to-severe restless legs syndrome (RLS).
<a href="#">Yervoy</a>	ipilimumab	03/25	Late-stage (metastatic) melanoma, the most dangerous type of skin cancer.
<a href="#">Gadavist</a>	gadobutrol	03/14	Magnetic resonance imaging (MRI) of the central nervous system.
<a href="#">Benlysta</a>	belimumab	03/10	To treat patients with active, autoantibody-positive lupus (systemic lupus erythematosus) who are receiving standard therapy, including corticosteroids, antimalarials, immunosuppressives, and nonsteroidal anti-inflammatory drugs.
<a href="#">Daliresp</a>	roflumilast	02/28	To decrease the frequency of flare-ups (exacerbations) or worsening of symptoms from severe chronic obstructive pulmonary disease (COPD).
<a href="#">Edarbi</a>	azilsartan medoxomil	02/25	To treat high blood pressure (hypertension) in adults.
<a href="#">Viibryd</a>	vilazodone HCl	01/21	To treat major depressive disorder in adults.
<a href="#">Natroba</a>	spinosad	01/18	For the treatment of head lice infestation in patients ages 4 years and older.
<a href="#">Datscan</a>	ioflupane i-123	01/14	An imaging drug used to assist in the evaluation of adult patients with suspected Parkinsonian syndromes (PS).
