

Cedar Bluff Dam River Outlet Works Stilling Basin Repair

The River Outlet Works at Cedar Bluff Dam, near Hays, Kansas is scheduled to receive concrete maintenance repairs in the summer and fall of 2009.

The River Outlet Works at Cedar Bluff Dam is a concrete structure used to release water from the reservoir into the Smoky Hill River. The concrete floor of the spillway has experienced deterioration from periodic water releases, and is in need of routine maintenance. The repair work will consist of removing deteriorated concrete by ultra-high pressure water jetting and placing new concrete to the old lines and grades.
