

Hanford Occupational Health Services

What is it?

CSC Hanford Occupational Health Services is responsible for administering the Beryllium Medical Surveillance Program in accordance with federal regulations, in our commitment to the health and preventive care of Hanford employees. CSC HOHS provides comprehensive occupational health services supporting Hanford's mission and the health of more than 15,000 Hanford workers.

APRIL - 2012

Who can participate?

Any current Hanford worker whose current Employee Job Task Analysis (EJTA) does NOT designate him/her as a Beryllium worker.

What does the program involve?

Exams every three years including a chest x-ray, pulmonary function (breathing) test and a blood test for possible beryllium sensitization.

Why should I enroll?

- To find out if you have been sensitized to beryllium so that you can be protected from further exposure.
- To become eligible for diagnostic evaluation by beryllium experts.
- To have the information to pass on to your personal healthcare provider.
- To aid in definitive diagnosis if you are experiencing respiratory symptoms.
