

Federal Aviation Administration

National Part 139 CertAlert

****Advisory**Cautionary**Non-Directive**Advisory**Cautionary**Non-Directive**Advisory**Cautionary**Non-Directive****

Date: 2/24/2012 **No. 12-01**
To: Airport Operators, FAA Airport Certification Safety Inspectors
Subj: FAA approved Fuel Safety Training Courses (Update)

Point of Contact: Kevin Hehir AAS-300 202-267-8224, Email: Kevin.Hehir@FAA.gov

1. Purpose. This CertAlert provides additions to the list of acceptable trainers. **This is the last CertAlert update of this list.** In the future, we will post an updated list of acceptable trainers quarterly on the FAA website as an addendum to Advisory Circular 150/5230-4, Aircraft Fuel Storage, Handling, and Dispensing on Airports. We expect to release the updated AC in fiscal year 2012. Once released, you will be able to access it from our Aircraft Rescue and Fire Fighting page at http://www.faa.gov/airports/airport_safety/aircraft_rescue_fire_fighting/.

2. Background. 14 CFR section 139.321 (e) (1) requires airport operators to train fueling personnel in fire safety in accordance with the requirements of section 139.321 (b) (6). To accomplish this, “at least one supervisor, with each fueling agent must have completed an aviation fuel training course in fire safety that is authorized by the Administrator.” Part 139.321 (e) (2) requires “all other employees who fuel aircraft, accept fuel shipments, or otherwise handle fuel must receive at least initial on-the-job training and recurrent instruction every 24 consecutive calendar months in fire safety from the supervisor trained in accordance with paragraph (e) (1) of this section.” This recurrent training in fire safety is required.

Any person or company submitting aviation fuel training course in fire safety for FAA review to become an acceptable training must follow FAA guidelines, in Advisory Circular 150/5230-4, Aircraft Fuel Storage, Handling, and Dispensing on Airports have guidance to develop a fire safety training course.

The fuel Safety Training courses listed below contain:

- Courses that address the seven items listed in Part 139.321 (b).
- Comprehensive courses that include subject areas beyond those listed in Part 139.321 (e.g., fueling procedures for various types of aircraft, use of current or advanced fuel technologies and equipment, other airside products such as oils, de-icing and hydraulic fluids’, and various lubricants).

All courses listed in the CertAlert are acceptable to the FAA Administrator. However, fueling supervisors who plan to attend a **recurrent** Fire Safety Training course should select one of the **asterisked** companies. These companies have comprehensive programs that prepare supervisors not only in the technical areas but also in techniques to deliver the safety-first message to their employees. These courses are also more challenging for supervisors whose fueling facilities serve a large variety of air carrier aircraft.

3. Cancellation. This CertAlert replaces CertAlert 11-01 issued 14 January 2011.
