

Table 934. Energy Expenditures—End-Use Sector and Selected Source by State: 2008

[In millions of dollars (1,411,922 represents \$1,411,922,000,000). Data are preliminary. End-use sector and electric utilities exclude expenditures on energy sources such as hydroelectric, photovoltaic, solar thermal, wind, and geothermal. Also excludes expenditures for reported amounts of energy consumed by the energy industry for production, transportation, and processing operations. For technical notes and documentation, see source, <http://www.eia.doe.gov/emeu/states/_seds_tech_notes.html>]

– Represents or rounds to zero. ¹ Total expenditures are the sum of purchases for each source (including retail electricity sales) less electric power sector purchases of fuel. ² Includes sources not shown separately, such as electricity imports and exports and coal coke net imports, which are not allocated to the states. ³ Includes fuel ethanol blended into motor gasoline. ⁴ Includes supplemental gaseous fuels.
