

NSTS Updates and Support

NSTS Blog

The NSTS blog is the NRC's primary method of communication with licensees about the NSTS. The blog provides information such as Web site updates, notifications of upcoming events (e.g., NSTS training or industry meetings), and information on using the NSTS online. Stay up-to-date on all NSTS-related activities by subscribing to the NSTS blog.

NSTS Help Desk

The NRC maintains a Help Desk to assist users by answering questions and resolving issues related to credentialing,

login procedures, system use, transaction reporting, and any other problems encountered while using the NSTS. Users may also contact the Help Desk to submit system change requests (to remedy defects or enhance functionality). The NRC logs and tracks each inquiry for future reference.

Help Desk availability is as follows:

Hours: Monday–Thursday 8:00am to 5:00pm (EST)
Friday 8:00am–3:00pm (EST)

Phone: 1-877-671-6787

E-mail: NSTS.Help@nrc.gov

The NRC and the NSTS staff are interested in hearing from you. Submit your suggestions, comments, or questions online when you visit the NSTS Web site.

National Source Tracking System

What is the National Source Tracking System?

The National Source Tracking System (NSTS), a major security initiative of the U.S. Nuclear Regulatory Commission (NRC), is a secure, user-friendly, Web-based database that tracks NRC- and Agreement State-regulated Category 1 and Category 2 radioactive sources. The NSTS tracks these high-risk, radioactive sources from the time of their manufacture or import through the time of their disposal or export, or until they decay enough to no longer be of concern. The NSTS meets the U.S. Government's commitment to implement a national source registry as described in the 2004 International Atomic Energy Agency (IAEA) Code of Conduct on the Safety and Security of Radioactive Sources and later mandated in the Energy Policy Act of 2005.

Approximately 1,400 licensees possessing over 70,000 Category 1 and Category 2 sources began reporting source information in January 2009.

The NSTS is a crucial component of a comprehensive integrated source management system intended to improve the security and control of radioactive material. This integrated system will also include Web-Based Licensing (WBL) and a License Verification System (LVS), currently under development.

Credentialing

The easiest way to report to the NSTS is electronically online. In order to report to the NSTS online, you will need to enroll for a digital certificate, which is loaded onto a hard token or smart card. A digital certificate is an electronic identification which establishes a user's credentials when processing transactions on the Web. Digital certificates allow the NSTS to uniquely identify each user.

The process of obtaining the digital certificate is called credentialing.

The credentialing process takes approximately 30 days from start to finish. There are three steps for the applicant to complete: (1) enrollment, (2) completion of the subscriber agreement, and (3) smart card activation. Licensees possessing Category 1 or Category 2 sources may begin the credentialing process online. Enrollment is easy and should take no more than 10 minutes.

All NSTS users with digital certificates issued prior to July 2009 must renew their digital certificates 1 year from the card-issued date to maintain access to the NSTS. Once an NSTS user renews the certificate, it is valid for the next 2 years.

Please find detailed, step-by-step instructions for the credentialing process and certificate renewal on the NSTS Web site.

Source Reporting

Once an NSTS user completes the credentialing process, all source transactions may be completed by logging into the NSTS.

The NRC prefers and strongly encourages online reporting. Online reporting provides for more timely and accurate tracking. Licensees may also report transactions for inclusion in the NSTS by completing the paper-based NRC Form 748, "National Source Tracking Transaction Report," and submitting it by fax. Users may also make reports by telephone to the NSTS Help Desk with fax or mail followup.

Visit the NSTS Web site to access online reporting training modules and guides. NRC Form 748 and examples of completed transaction reports may also be found online.

Annual Reconciliation

The NRC requires all licensees using the NSTS to review and confirm their inventory annually in the NSTS. Licensees must conduct an inventory reconciliation each January beginning in 2010. Licensees must complete reconciliation by January 31st. A specially formatted inventory report has been created to confirm inventory and ensure that all records in the NSTS are correct.

NSTS users completing their annual inventory reconciliation may do so by logging into the NSTS and following the instructions provided online.
