Semantic Search

DoD Field Activity Since 2004 DoD Field Activity Since 2004 DoD Field Activity Since 2004 DoD Field Activity Since 2004 DoD Field Activity Since 2004 DoD Field Activity Since 2004

Semantic search uses processes based on the meaning of language to disambiguate natural language queries and electronic document content with the goal of generating more relevant search results.

E.g., In traditional word-based searches, the term “tank” will pull documents on fuel tanks, battle tanks, and think tanks. Semantic search capabilities are able to distinguish which “tank” the user means from additional evidence in the query and return results that match that meaning.
