Explanation of Stage and Discharge Records

Data Collection and Computation

The data collected by the Bureau of Reclamation at gaging stations along the Lower Colorado River (between Hoover Dam and the Southern International Boundary with Mexico) consist of records of stage, velocity, and/or discharge indicator values, measurements of discharge of streams or canals, and stage of lakes or reservoirs. Records of stage, velocity, and/or discharge are obtained from digital dataloggers that measure electronic sensors at programmed time intervals, and calculate mean hourly values. The recorded values are downloaded at gaging station field locations by Reclamation Hydrologic Technicians with a laptop computer, and transmitted via telemetry to the Lower Colorado River Hydrologic Database in Boulder City, Nevada. Electronic sensor selection is dependent on the parameters required to measure a component of discharge, and may vary by gaging station. Measurements of discharge are made with a mechanical current meter, an acoustic Doppler current meter, or an acoustic Doppler current profiler. Measurement techniques comply with standards established by the United States Geological Survey (USGS) and following guidelines set forth in the Bureau of Reclamation, Blythe Hydrographic Office QA/QC draft plan.

For stream-gaging stations, discharge-rating tables for an appropriate range of stage are prepared from stage-discharge curves. Rating curves are extended to compute discharge values outside of the minimum, and maximum measured values by plotting regressions generated from linear, logarithmic, or power equations. Hourly mean discharge values are computed from hourly mean gage heights applied to rating tables, then daily, monthly, and yearly mean discharges are computed from hourly values. Stage-shifting, and velocity-shifting methods are applied to rating curves when continual or temporary physical changes impact the discharge relationship. Dynamic physical conditions may include changes in control or channel geometry, migrating sandbars on the channel bottom, and seasonal variations in aquatic growth. Shift adjustments may be prorated with time or stage.

At gaging stations where stage-discharge relationships are not accurate due to backwater effect caused by downstream ponding in reservoirs, variations in downstream gate configurations, or other situations where no artificial or natural controls are present, the use of velocity-index or alternative indicator-discharge techniques may be used. With these techniques, an index velocity is used to calculate an average velocity for the flow in the stream or pipe. This average velocity along with a stage-area relationship is used to calculate discharge. Gaging stations that utilize pipe meter devices to measure discharge often require correction through the use of an indicator-discharge relationship.

For some gaging stations, there are periods when no data record is available or data are in error, and cannot be used to compute hourly discharge. This condition occurs when the datalogger or connected sensors malfunction due to failure, drift or fouling. For such periods, discharge is computed from the estimated record. Missing or erroneous data are estimated using various techniques including, but not limited to, interpolation, projecting from surrounding data, or a hydrologic relation developed with another stream gage.

Data Presentation

The records published for each continuous-record discharge station (gaging station) consist of three parts: (1) the station manuscript; (2) a discharge hydrograph; and (3) the data table of daily mean discharge values for the current year with summary data.

Station Manuscript

The station manuscript provides descriptive information such as station location, period of record, historical extremes, and other remarks pertinent to station operation. The following descriptions detail the type of information included in each section.

Location—Information on the location is obtained from Global Positioning System data referencing the World Geodetic System of 1984, and the location of the gage with respect to the physical features in the vicinity. Township, range, section, and meridian descriptions are obtained from USGS topographical maps. In a few locations, the grid system is not available on the Fort Mojave Indian Reservation. In these locations, the grid system has been projected to obtain the required information. Descriptions of distance between a gaging station, and a nearby town are provided as a linear distance, not a driving distance. Distances downstream of dams are provided in river miles between the upstream dam, and the gaging station.

Drainage Area—Drainage areas were cited from Inter-agency Committee River Mile Index, published in January 1976, and measured using Bureau of Reclamation aerial orthophotographs, and USGS topographic quadrangles. Gaging stations with drainage areas listed as “not applicable” indicate a stream or canal that is not impacted by runoff. Drainage areas listed as “undetermined” indicate a drainage area that has not been outlined and/or measured by the Bureau of Reclamation.

Period of Record—The period for which there are published records for the station or for an equivalent station. An equivalent station is one that was in operation at a time when the present station was not in operation, and whose location was such that records from it can reasonably be considered equivalent with records from the present station. Calendar year 2005 was the first year that final record was published by the Blythe Hydrographic Office. In many cases, the gaging stations mentioned in this publication have been in operation for some time prior to 2005. However, the records have not been finalized or published for any gage prior to 2005.

Gage—A description of the gage used during the reporting year including the gage equipment, and the technique used to calculate the discharge record.

Extremes—Extreme discharge values are listed as minimum and maximum hourly, and daily mean values for the record period listed in the period of record section.

Remarks—Periods of estimated hourly discharge record will be identified in this paragraph. The paragraph also is used to present information relative to the accuracy of the records, to special methods of computation, to conditions that affect flow at the station, and possibly other pertinent items.

Discharge Hydrograph, Data Table and Summary Data

The discharge hydrograph displays mean daily discharge in a graphical format. The data table that follows each station manuscript and discharge hydrograph provides mean daily discharge values presented in tabular format. Basic statistical information is provided near the bottom summarizing each month, including total discharge in cubic feet per second, mean, maximum, and minimum values for the month, and total volume expressed in acre-feet. In addition, annual discharge in cubic-feet per second, and acre-feet are provided for the year along with the annual mean, maximum, and minimum daily discharges. Maximum and minimum hourly discharge values located on the bottom of the table indicate the date, time, gage height, and discharge that the hourly extremes occurred during the year.

Colorado River below Big Bend

Location--Latitude 35° 05.303', Longitude 114° 37.458', in the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 10, T. 33S., R. 66E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mile (mi) 264.7, 2.4 mi southwest of Bullhead City, Arizona, 17.2 mi north of Needles, California, and 11.1 river mi downstream of Davis Dam.

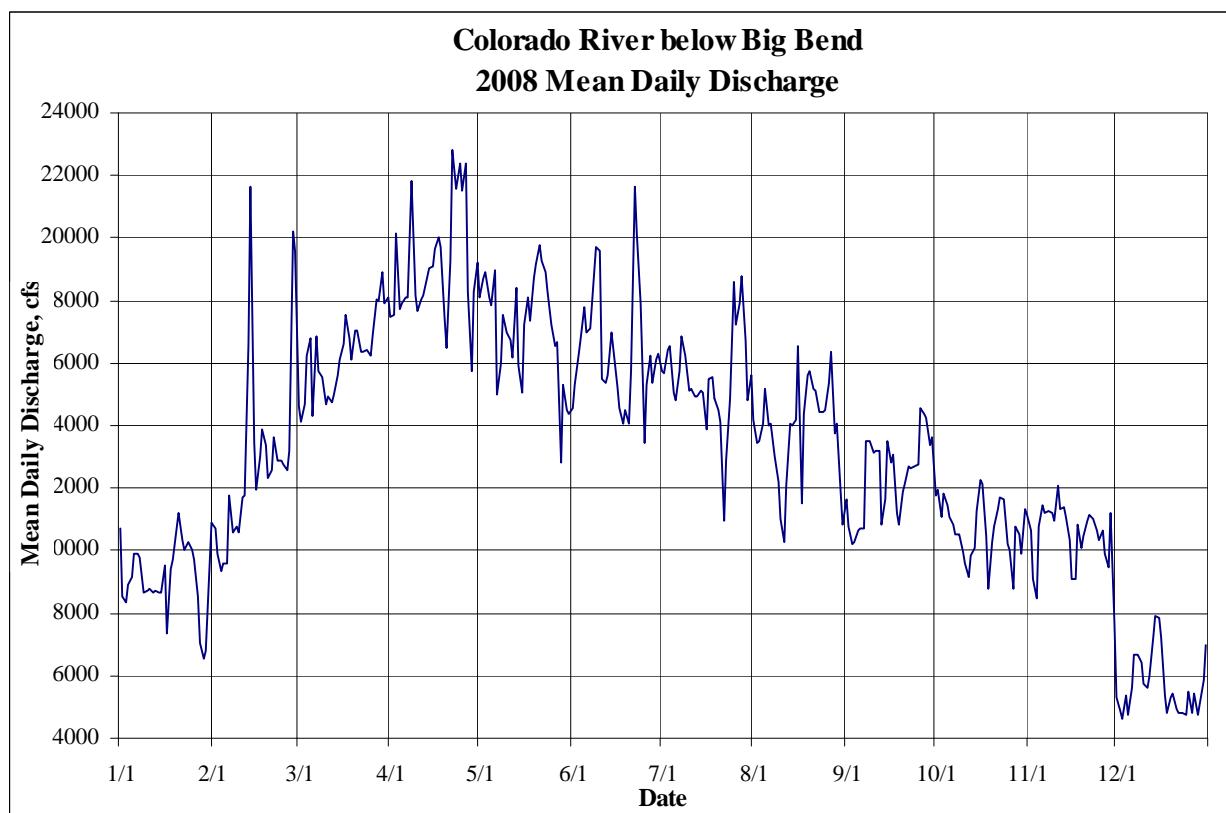

Drainage Area-- Unknown.

Period of Record--Jan. 1, 2005 to current year.

Gage--A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage discharge relationship.

Extremes-- Maximum daily discharge, 22,840 cubic feet per second (cfs), Apr. 22, 2008; minimum daily discharge, 2,180 cfs, Jan. 13, 2005; maximum hourly discharge, 27,620 cfs, Jul. 14, 2005 at 23:00; minimum hourly discharge, 689 cfs, Mar. 08, 2005 at 11:00.

Remarks-- None.

Colorado River below Needles Bridge

Location—Latitude 34° 49.504', longitude 114° 34.870', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 33, T. 9 N., R. 23 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 243.5, 2.0 mi east of Needles, California, 20.1 mi south of Bullhead City, Arizona, and 32.4 river mi downstream from Davis Dam.

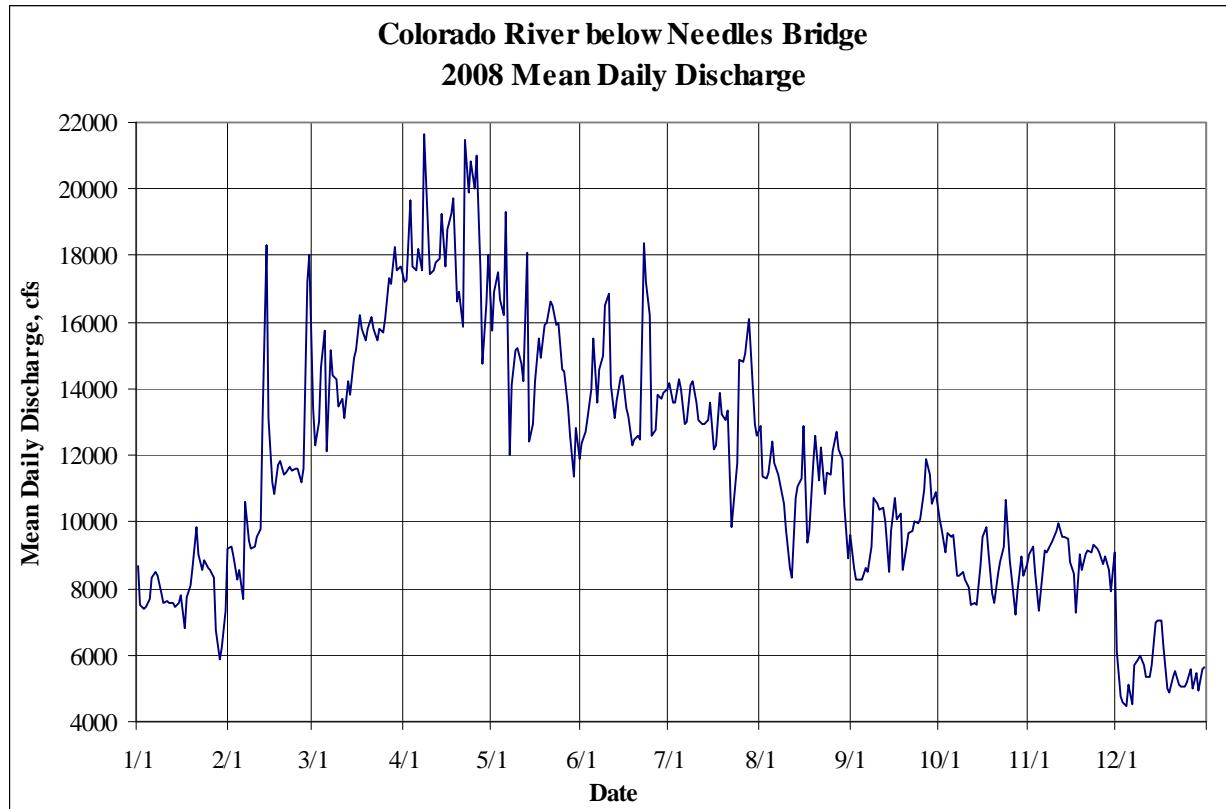

Drainage Area—Undetermined.

Period of Record—Apr. 25, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron Multiple Interface Shaft Encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 21,650 cubic feet per second (cfs), Apr. 8, 2008; minimum daily discharge, 4,470 cfs, Dec. 4, 2008; maximum hourly discharge, 23,300 cfs, Apr. 8, 2008 at 23:00; minimum hourly discharge, 4,120 cfs, Dec. 8, 2007 at 16:00.

Remarks—None.

Colorado River at River Section 41

Location—Latitude 34° 41.255', longitude 114° 27.759', in the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 13, T. 15 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, at river mile (mi) 231.0, 13.5 mi south of Needles, California, 16.2 mi north of Lake Havasu City, Arizona, and 44.9 river mi downstream of Davis Dam.

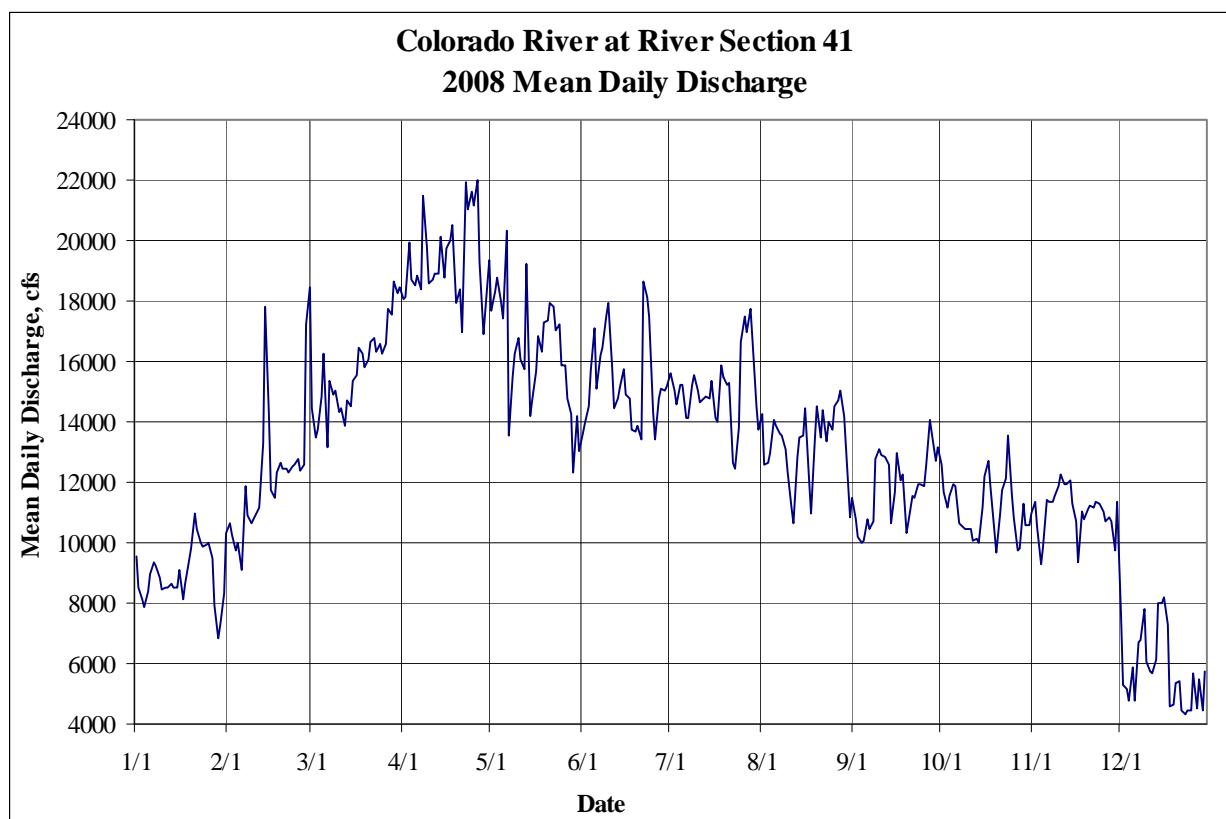

Drainage Area—172,300 square miles.

Period of Record—Jun. 2006 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records stage and velocity measured by a Sontek/YSI Argonaut-SL Current Meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 22,000 cubic feet per second (cfs), Apr. 26, 2008; minimum daily discharge 4,100 cfs, Dec. 08, 2007; maximum hourly discharge, 23,210 cfs, Apr. 24, 2008 at 02:00; minimum hourly discharge, 3,420 cfs, Dec. 08, 2007 at 17:00.

Remarks—None.

Colorado River at Parker Gage

Location—Latitude 34° 08.934', longitude 114° 18.468', in the NW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 2, T. 9 N., R. 20 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mile (mi) 175.0, 1.1 mi west of Parker, Arizona, 40.4 mi north of Blythe, California, and 17 river mi downstream of Parker Dam.

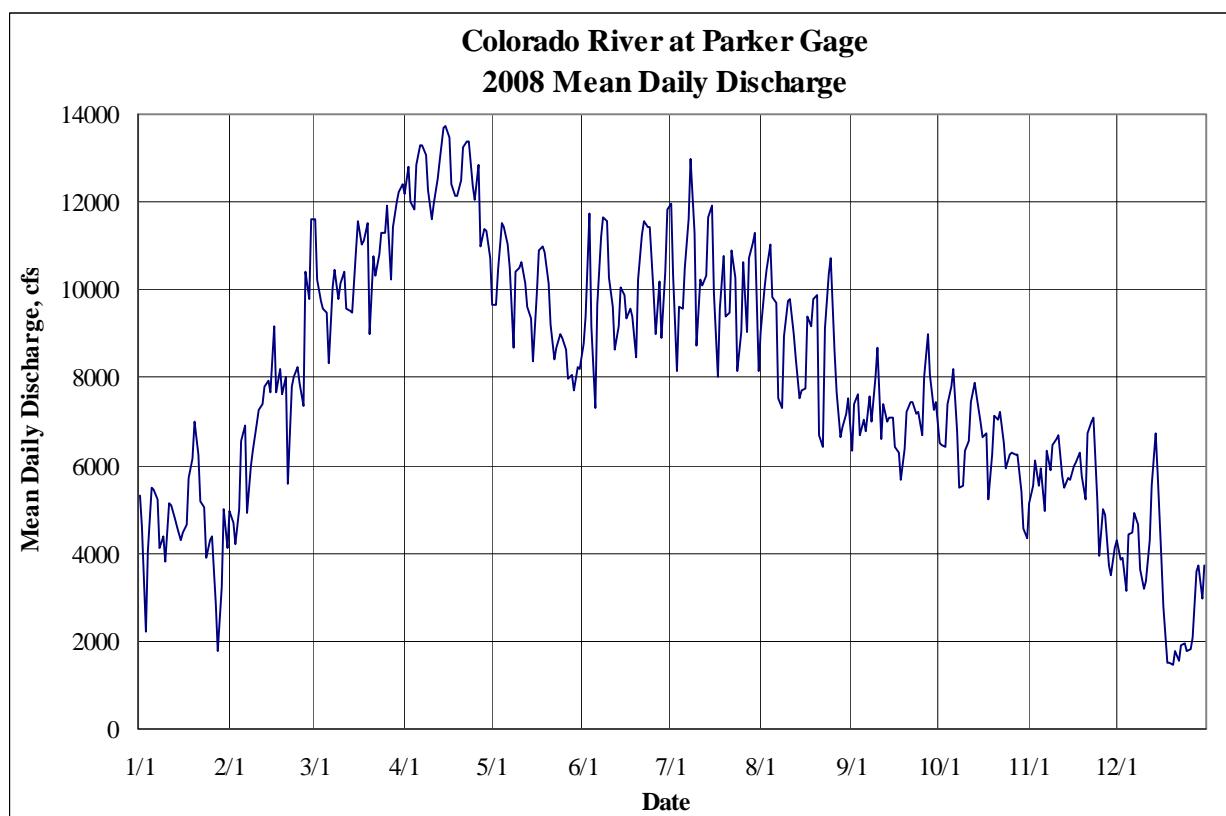

Drainage Area—Undetermined.

Period of Record—Jan. 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron AccuBubble Self-contained Bubbler System (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 13,750 cubic feet per second (cfs), Apr. 15, 2008; minimum daily discharge, 1,450 cfs, Dec. 20, 2008; maximum hourly discharge, 21,490 cfs, Sep. 14, 2005 at 17:00; minimum hourly discharge, 487 cfs, Aug. 18, 2006 at 06:00.

Remarks—None.

Colorado River below Palo Verde Dam

Location—Latitude 33° 43.155', longitude 114° 29.852', in the NE $\frac{1}{4}$ of Section 2, T. 4 N., R .22 W., Gila-Salt River meridian, Riverside County, California, Hydrologic Unit 15030104, river mile (mi) 132.6, 32.1 mi south of Parker, Arizona, 8.9 mi north of Blythe, California, and 1.2 river mi downstream of Palo Verde Diversion Dam.

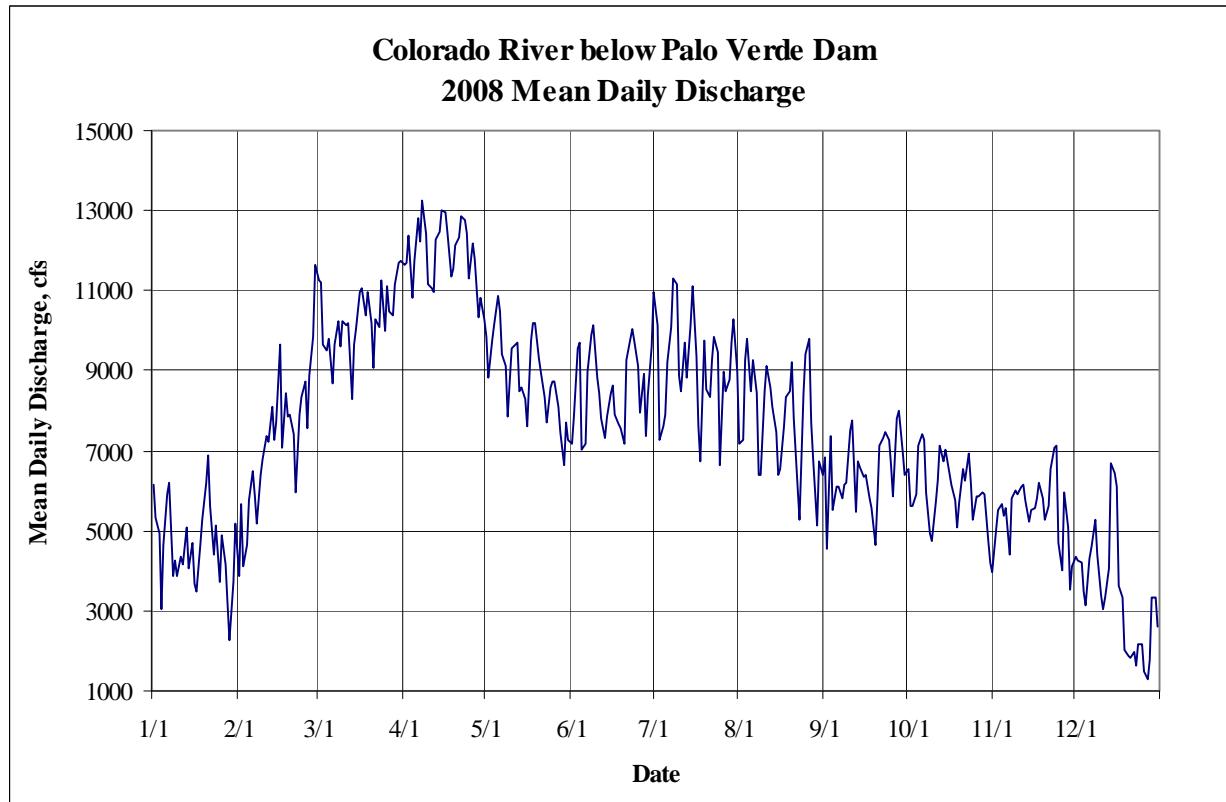

Drainage Area—Undetermined.

Period of Record—Jan. 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron AccuBubble Self-contained Bubbler System (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 13,230 cubic feet per second (cfs), Apr. 08, 2008; minimum daily discharge, 1,270 cfs, Dec. 27, 2008; maximum hourly discharge, 14,670 cfs, Apr. 24, 2006 at 06:00; minimum hourly discharge, 861 cfs, Dec. 26, 2008 at 09:00.

Remarks—None.

Location—Latitude 35° 02.940', longitude 114° 37.360', in the NW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 27, T. 33 S., R. 66 E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mile (mi) 261, 4.8 mi south of Bullhead City, Arizona, 14.5 mi north of Needles, California, and 14.9 river mi downstream of Davis Dam.

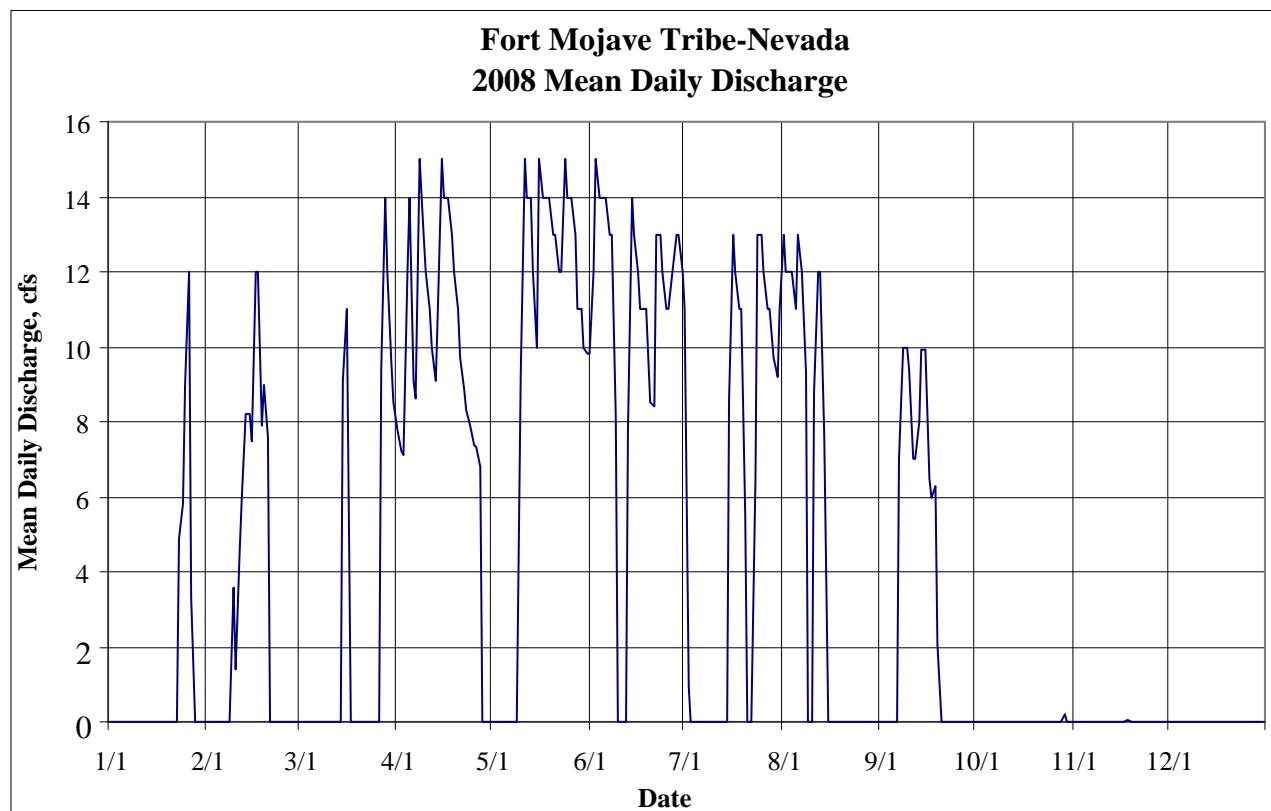

Drainage Area—Not applicable.

Period of Record—Jan. 1, 2006 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics Insertion Magnetic Flow Meter (Model EX-201-S) mounted in the discharge side of the diversion pipe. Discharge is calculated using an indicator-discharge relationship.

Extremes—Maximum daily discharge, 15 cubic-feet per second (cfs), Apr. 08, 2008; minimum daily discharge, no diversion at times; maximum hourly discharge, 16 cfs, Feb. 14, 2008 at 12:00; minimum hourly discharge, no diversion at times.

Remarks—None.

Fort Mojave Tribe-California 2 (West)

Location—Latitude 34° 58.022', longitude 114° 38.173', in the NE $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 13, T. 10 N., R. 22 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 254.9, 10.4 mi south of Bullhead City, Arizona, 8.9 mi north of Needles, California, and 21 river mi downstream of Davis Dam.

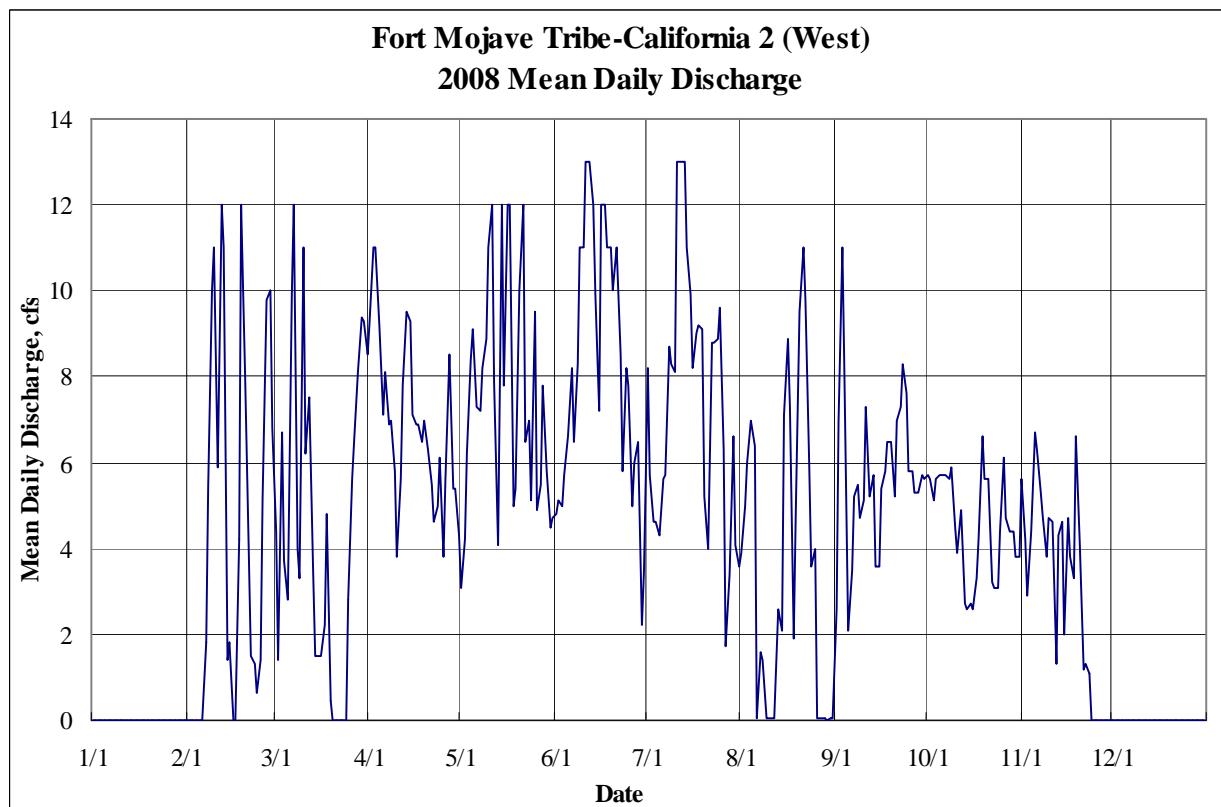

Drainage Area—Not applicable.

Period of Record—Jan. 1, 2006 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics Insertion Magnetic Flow Meter (Model EX-201-S) mounted to the inside of the discharge pipe downstream of the diversion pump. Discharge is calculated using a indicator-discharge relationship.

Extremes—Maximum daily discharge, 13 cubic-feet per second (cfs), numerous occurrences; minimum daily discharge, no diversion at times; maximum hourly discharge, 20 cfs, Sep. 20, 2006 at 12:00; minimum hourly discharge, no diversion at times.

Remarks—None.

Fort Mojave Tribe-Willow

Location—Latitude 34° 54.572', longitude 114° 37.733', in the SW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 28, T. 18 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mile (mi) 250.8, 14.3 mi south of Bullhead City, Arizona, 4.9 mi north of Needles, California, and 25.1 river mi downstream of Davis Dam.

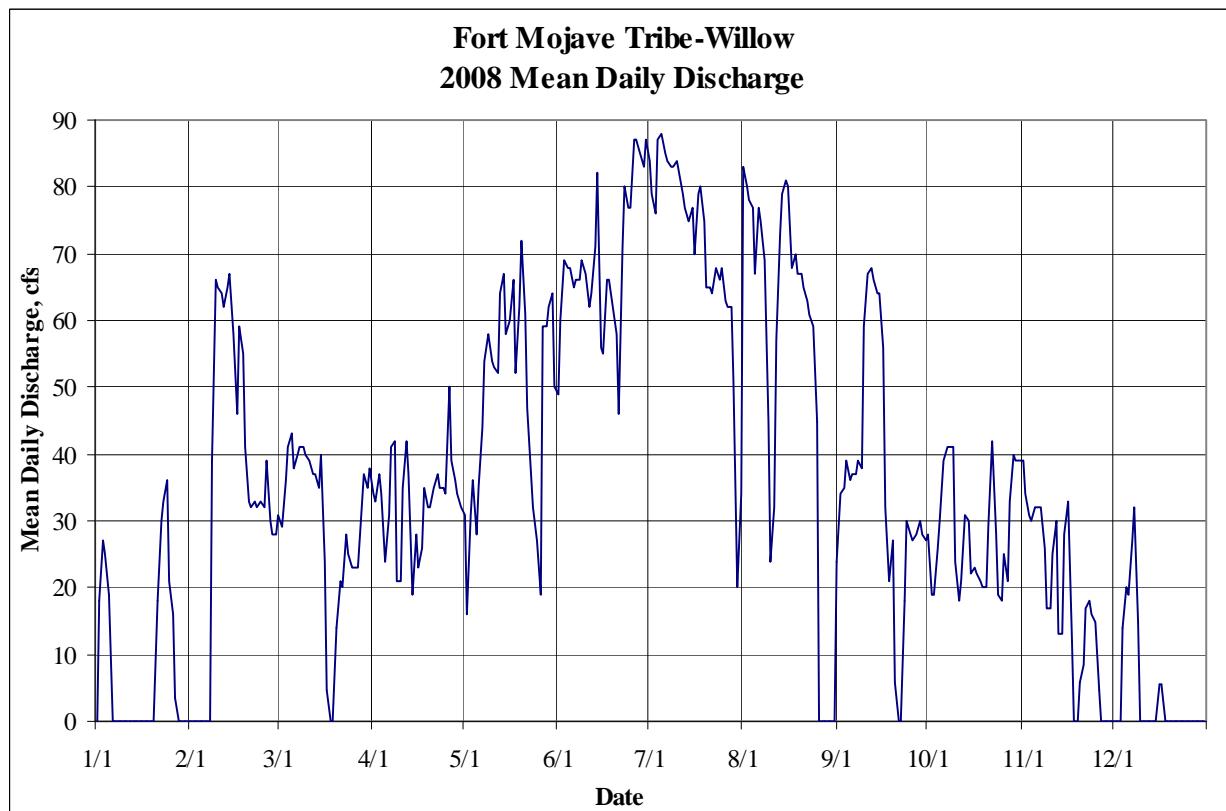

Drainage Area—Not applicable.

Period of Record—Jul. 12, 2006 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records gage height, and water velocity measured by a Sontek/YSI Argonaut-SW Current Meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 96 cubic feet per second (cfs), May 21, 2007; minimum daily discharge, no diversion at times; maximum hourly discharge, 105 cfs, Aug. 10, 2006 at 20:00, 22:00 and 23:00, and Aug. 11, 2006 at 00:00; minimum hourly discharge, no diversion at times.

Remarks—None.

Fort Mojave Tribe-Willow

Fort Mojave Tribe-Barrackman

Location—Latitude 34° 50.931', longitude 114° 35.892', in the NE $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 22, T. 17 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mile (mi) 245.4, 1.0 mi east of Needles, California, 18.4 mi south of Bullhead City, Arizona, and 30.5 river mi downstream of Davis Dam.

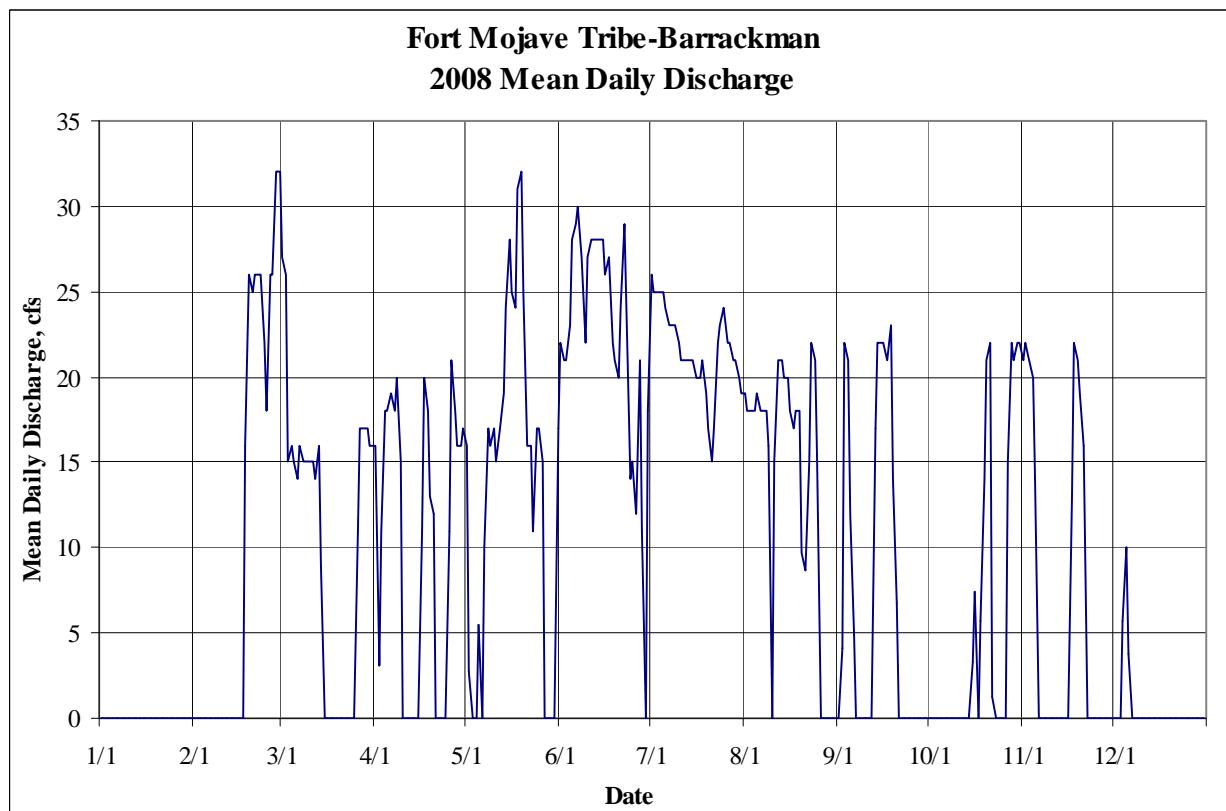

Drainage Area—Not applicable.

Period of Record—Apr. 21, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records gage height measured by a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR) upstream from a fixed abrupt-expansion type, long-throated flume made of smooth steel. Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 38 cubic feet per second (cfs), May 12, 2006 and May 10, 2007; minimum daily discharge, no diversion at times; maximum hourly discharge, 47 cfs, May 9, 2006 at 11:00; minimum hourly discharge, no diversion at times.

Remarks—None.

Fort Mojave Tribe-Refuge (Fort Mojave Tribe)

Location—Latitude 34° 50.286', longitude 114° 34.237', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 24, T. 17 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.2 mi south of Bullhead City, Arizona, and 2.9 mi east of Needles, California.

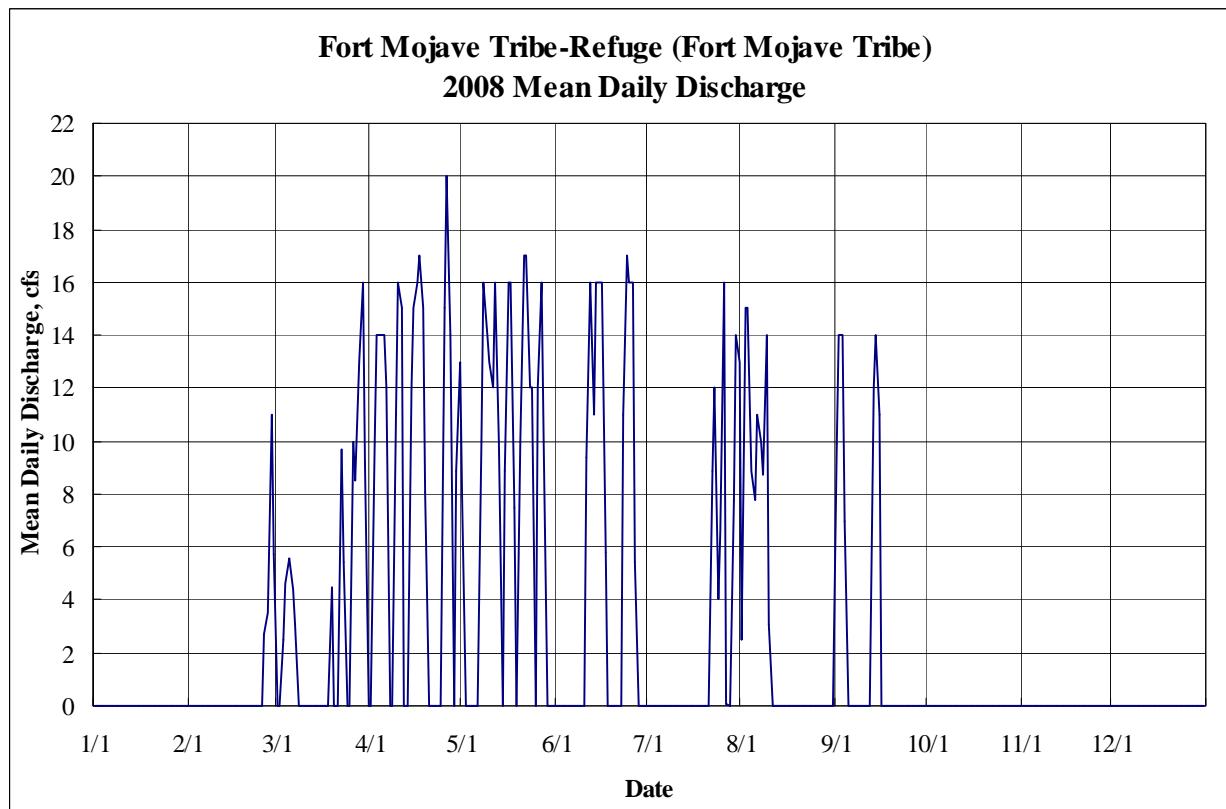

Drainage Area—Not applicable.

Period of Record—Jan. 27, 2006 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics Insertion Magnetic Flow Meter (Model EX-201-S) mounted to the inside of the discharge pipe downstream of the diversion pump. Discharge is calculated using a discharge-indicator relationship.

Extremes—Maximum daily discharge, 20 cubic feet per second (cfs), Apr. 26, 2008; minimum daily discharge, 0 cfs, occurs frequently; maximum hourly discharge, 27 cfs, which first occurred on Jul. 21, 2006 at 13:00; minimum hourly discharge, 0 cfs, occurs frequently.

Remarks—This record includes numerous short duration gage failures that range from one to five hours. The discharge for these periods was assumed to be zero as no other sources of diversion record are available.

United States Fish and Wildlife Service-Inlet Canal

Location—Latitude 34° 50.202', longitude 114° 31.674', in the NE $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 29, T. 17 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.6 mile (mi) south of Bullhead City, Arizona, and 4.8 mi east of Needles, California.

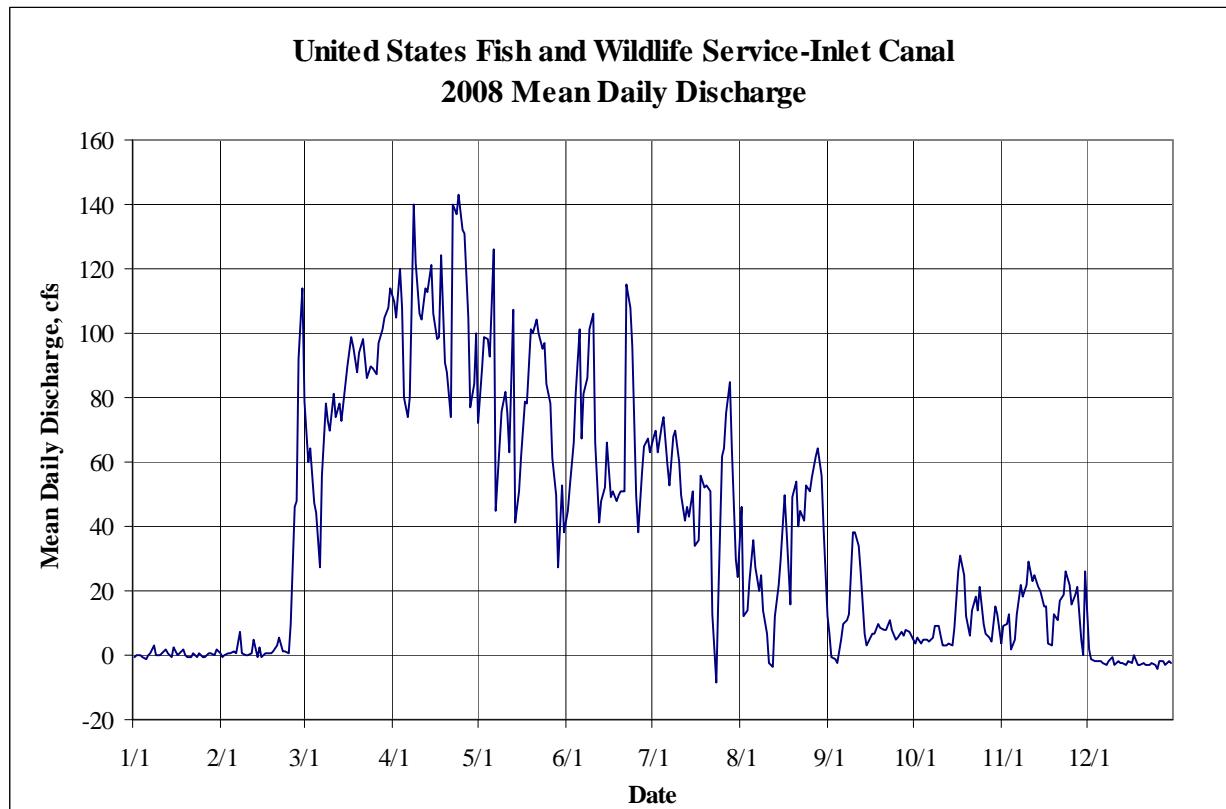

Drainage Area—Not applicable.

Period of Record—Jul. 16, 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records water elevation, and velocity measured by a Sontek/YSI Argonaut-SW Current Meter mounted to a 2-inch galvanized pipe on the channel bottom about 25 feet upstream from the siphon structure. Discharge is computed using a velocity-index relationship.

Extremes—Maximum daily discharge, 150 cubic-foot per second (cfs), Apr. 20, 2007; minimum daily discharge, -12 cfs, Dec. 2, 2006; maximum hourly discharge, 164 cfs, Apr. 19, 2007 at 22:00; minimum hourly discharge, -41 cfs, Aug. 4, 2006 at 03:00.

Remarks—None.

United States Fish and Wildlife Service-South Dike

Location—Latitude 34° 44.214', longitude 114° 29.407', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 27, T. 16 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 26.8 miles (mi) south of Bullhead City, Arizona, and 9.9 mi southeast of Needles, California.

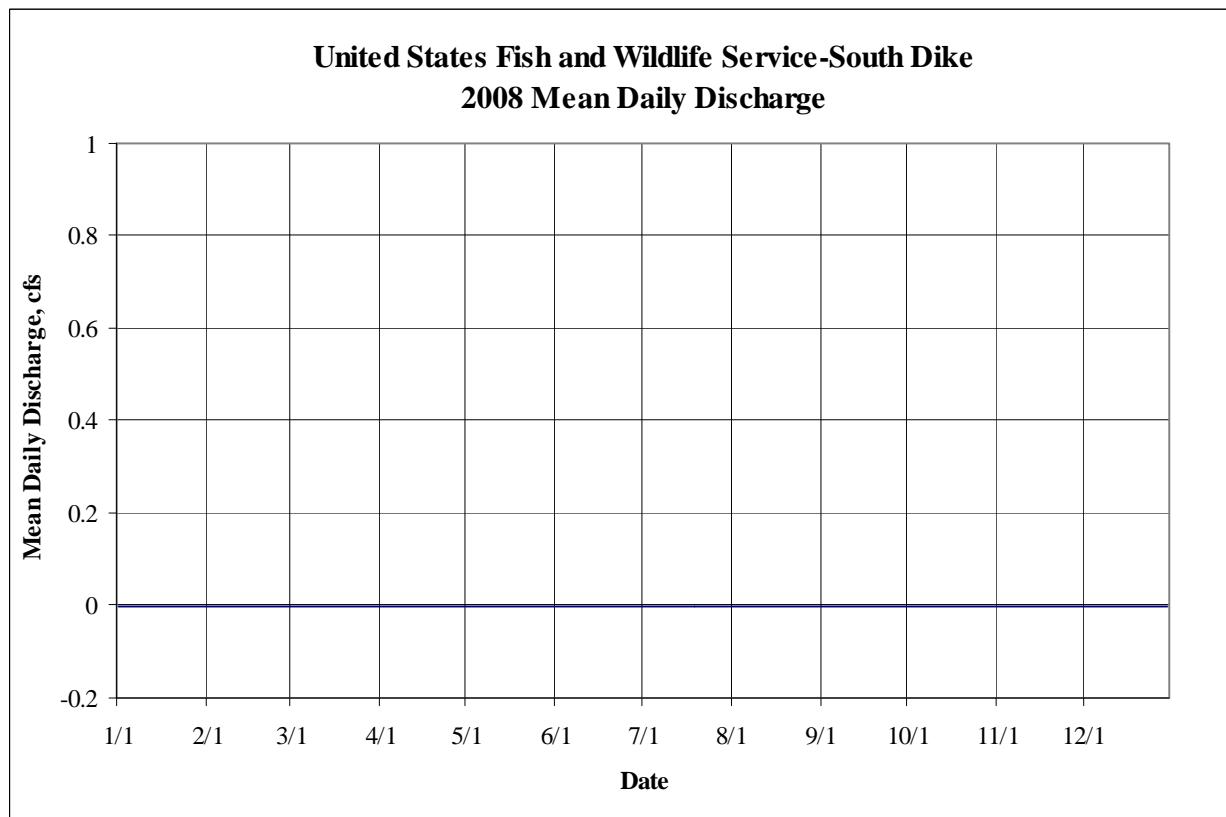

Drainage Area—Undetermined.

Period of Record—Jun. 16, 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records marsh elevation, river elevation, and gate position measured by Sutron Multiple Interface Shaft Encoders (Model 56-0540-400-DTR). Discharge over the bi-fold lateral gate is computed by applying a theoretical weir equation.

Extremes—Maximum daily discharge, 9.1 cubic-feet per second (cfs), Aug. 5, 2005; minimum daily discharge, 0 cfs, occurs frequently; maximum hourly discharge, 36 cfs, Apr. 18, 2007 at 12:00; minimum hourly discharge, 0 cfs, occurs frequently.

Remarks—None.

Metropolitan Water District at Lake Havasu

Location—Latitude 34° 18.967', longitude 114° 09.433', in the NW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 28, T. 3 N., R. 27 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 193.8, 14.9 mi southeast of Lake Havasu City, Arizona, 13.7 mi northeast of Parker, Arizona, and 82.1 river mi downstream of Davis Dam.

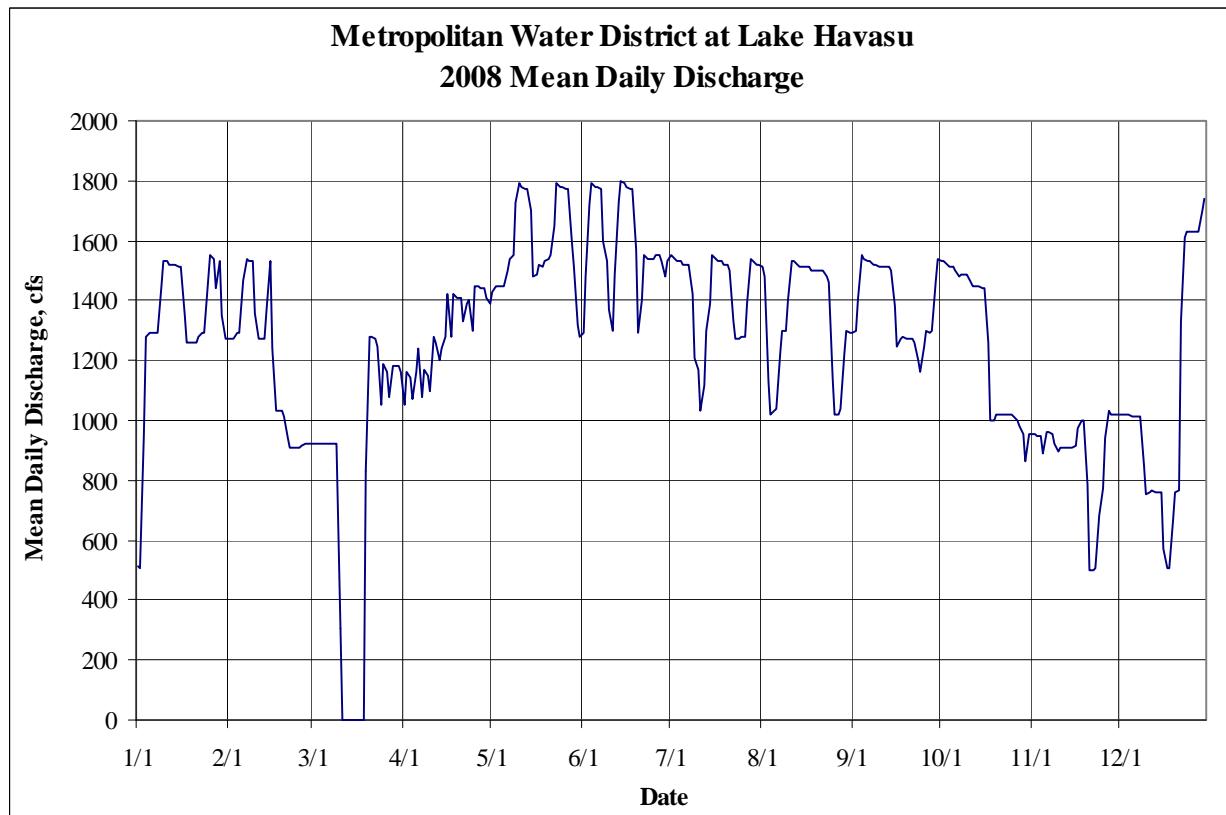

Drainage Area—Not applicable.

Period of Record—Jan. 1, 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records discharge measured by an Accusonic Flow Meter (Model 7500) operated by the Metropolitan Water District of Southern California. The flow meter measures discharge from nine pumps that divert Colorado River water into the Colorado River Aqueduct which conveys the water to metropolitan areas of southwestern California.

Extremes—Maximum daily discharge, 1970 cubic feet per second (cfs), Nov. 11, 2005; minimum daily discharge, no diversion at times; maximum hourly discharge, 1981 cfs, Nov. 10, 2005, at 09:00 and 10:00; minimum hourly discharge, no diversion at times.

Remarks—Maintenance and calibration of measuring equipment are performed by the Metropolitan Water District of Southern California. The Bureau of Reclamation does not perform measurements to verify the accuracy of the data. The Bureau of Reclamation also does not monitor flows that return to the Colorado River below the Gene Wash Reservoir Dam.

Metropolitan Water District at Lake Havasu

Central Arizona Project at Lake Havasu

Location—Latitude 34° 17.340', longitude 114° 06.230', in the NW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 23, T. 11 N., R. 18 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030204, river mile (mi) 192.5, 15.3 mi southeast of Lake Havasu City, Arizona, 14.3 mi northeast of Parker, Arizona, and 83.4 river mi downstream of Davis Dam.

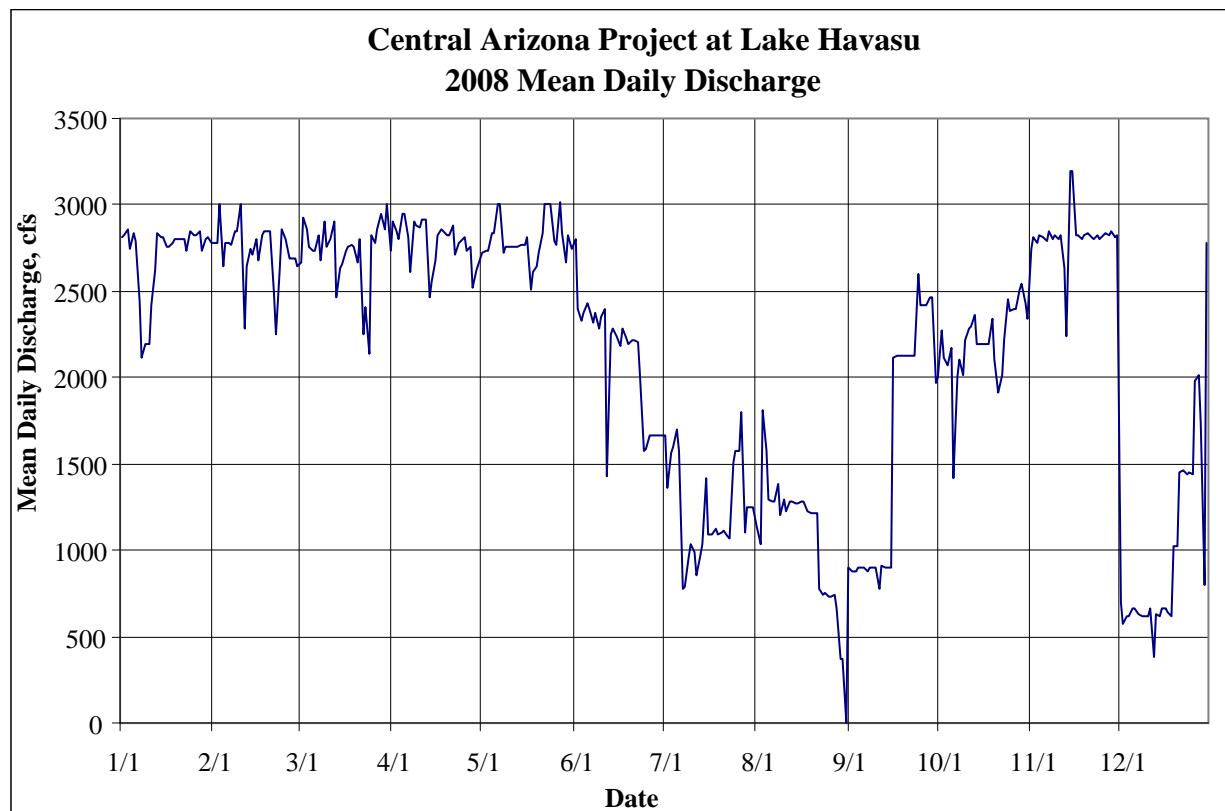

Drainage Area—Not applicable.

Period of Record—Jan. 1, 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records discharge measured by two Accusonic Flow Meters (Model 7500) operated by the Central Arizona Project. The flow meters measure discharge from six pumps that divert Colorado River water into the Hayden-Rhodes Aqueduct which conveys the water to the Phoenix, and Tucson metropolitan areas.

Extremes—Maximum daily discharge, 3,600 cubic-feet per second (cfs), Mar. 24 and 25, 2007; minimum daily discharge, no diversion at times; maximum hourly discharge, 3,670 cfs, Jun. 3, 2005 at 07:00, and Jun. 4, 2005 at 00:00; minimum hourly discharge, no diversion at times.

Remarks—Maintenance, and calibration of measuring equipment are performed by a private contractor hired by the Central Arizona Project. The Bureau of Reclamation does not perform measurements to verify the accuracy of the data.

Palo Verde Irrigation District-Main Canal

Location—Latitude 33° 43.80', longitude 114° 30.717', in the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 19, T. 5 S., R. 24 E., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, river mile (mi) 133.8, 31.7 mi south of Parker, Arizona, 9.2 mi north of Blythe, California, and 58.2 river mi downstream of Parker Dam.

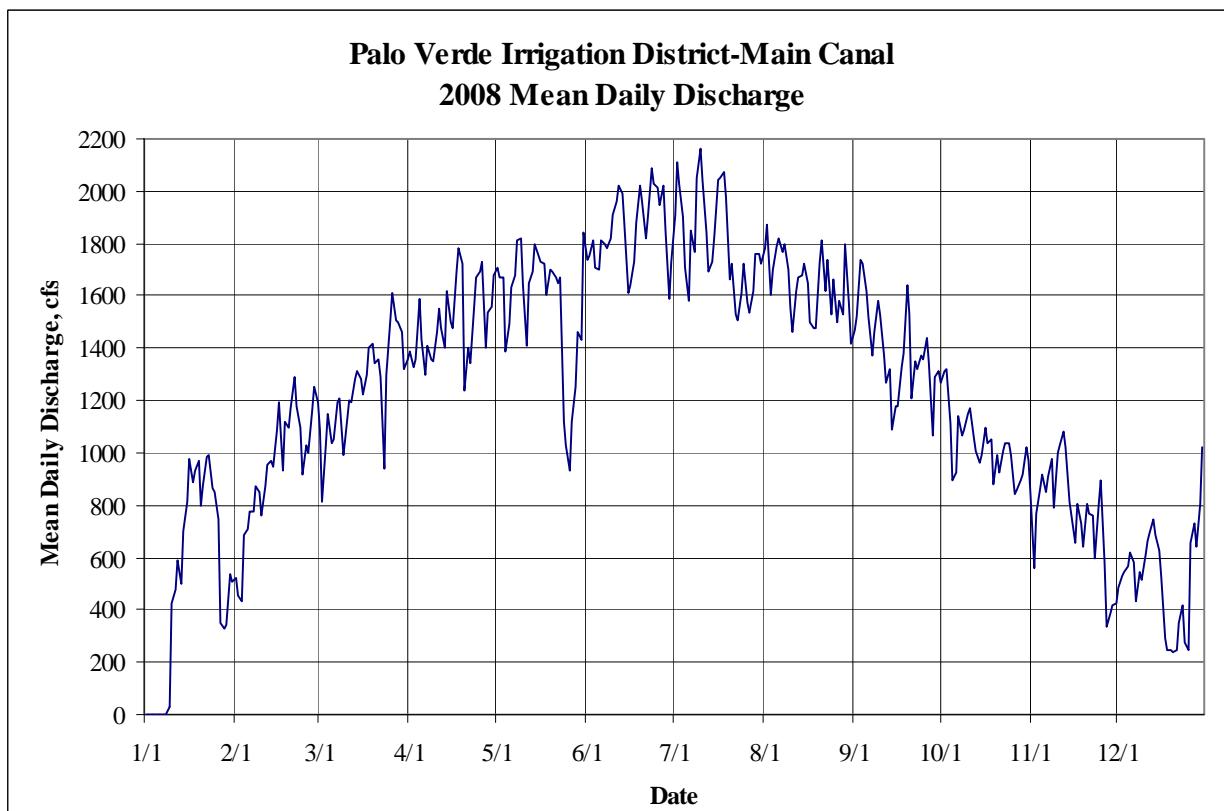

Drainage Area—Not applicable.

Period of Record—Jan. 1, 2005 to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records water elevation, and velocity measured by a Sontek/YSI Argonaut-SL Current Meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 2,190 cubic-feet per second (cfs), Aug. 5, 2006; minimum daily discharge, 0 cfs, no diversion at times; maximum hourly discharge, 2,530 cfs, Jun. 30, 2008 at 14:00; minimum hourly discharge, 0 cfs, no diversion at times.

Remarks—No diversions from Jan. 01, 2008 thru Jan. 08, 2008 during Palo Verde Irrigation District annual outages.

Palo Verde Irrigation District-Outfall Drain

Location—Latitude 33° 20.308', longitude 114° 42.734', in the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 1, T. 10 S., R. 21 E., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, 20.2 miles (mi) south of Blythe, California, and 44.4 mi north of Yuma, Arizona.

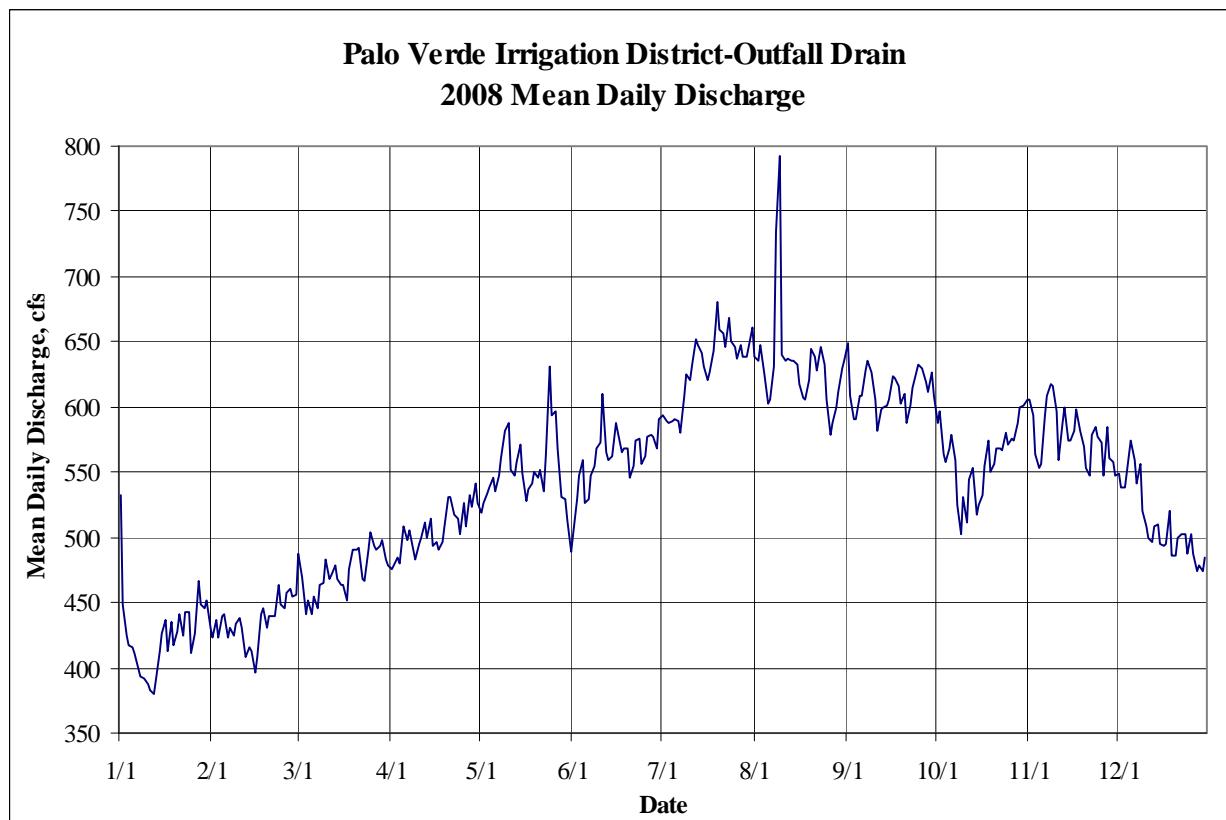

Drainage Area—Undetermined.

Period of Record—Jan. 1, 2005, to current year.

Gage—A Sutron Xlite Datalogger (Model 9210-0000-1A) records water elevation, and velocity measured by a Sontek/YSI Argonaut-SL Current Meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 1,200 cubic-feet per second (cfs), Aug. 10, 2005; minimum daily discharge, 326 cfs, Feb. 26, 2005; maximum hourly discharge, 3,230 cfs (estimated), Aug. 9, 2005 at 22:00, caused by an overbank condition created from significant side wash inflow; minimum hourly discharge, 225 cfs, Nov. 29, 2006 at 14:00.

Remarks—For the time periods of Mar. 20, 2008 at 23:00 to Mar. 21, 2008 at 11:00, numerous short duration periods between Apr. 8, 2008 and Apr. 23, 2008, Aug. 10, 2008 at 16:00 to Aug. 15, 2008 at 10:00, and Sep. 21, 2008 at 17:00 to Sep. 25, 2008 at 00:00, data were estimated due to gage failure.

Glossary

Acre-foot (Ac-ft, acre-ft or af)—The quantity of water required to cover 1 acre to a depth of 1 foot, and is equivalent to 43,560 cubic feet or about 326,000 gallons.

Control—Channel features downstream of a gage that determines the stage-discharge relation at the gage. Controls can be either artificial or natural. Artificial controls consist of man-made structures like weirs and flumes, while natural controls consist of channel constrictions, outcroppings, rock or gravel beds, and uniform stretches of channel.

Cubic Foot per Second (ft³/s or cfs)—The rate of discharge representing a volume of 1 cubic foot passing a given point during 1 second, and is equivalent to approximately 7.48 gallons per second or 448.8 gallons per minute.

Data—Characteristic observations, often represented as numbers, made over specific points in time.

Datalogger—An electronic device that records data in time sequence with related events. Dataloggers take measurements from sensors and/or transducers located at the gage.

Datum—Any numerical quantity that serves as a reference or base for another comparable quantity.

Discharge—The volume of water that passes a given point within a given period of time.

Discharge-Indicator Relationship—The relationship between an indicator discharge, and a volume of water, per unit of time, flowing in a channel.

Drainage Area—The area of the associated drainage basin expressed in square miles.

Elevation—The height of water above mean sea level.

Extremes—The maximum and minimum hourly and daily discharges recorded in the date range listed in the period of record.

Final Data—Provisional data that have been checked for completeness and accuracy, and may have been adjusted and manipulated based on observations.

Gage—An instrument or device used to measure a medium's magnitude or position, such as water elevation or velocity.

Gage-Height (GH)—The height of water at a gage.

Gaging Station—A particular location in a stream, canal, lake, pipe, or reservoir where systematic observations of hydrologic data are obtained.

Global Positioning System (GPS)—A system of orbiting satellites and receiving devices used to compute positions on the earth.

Hydrologic Unit Code (HUC)—A geographic area representing part or all of a surface drainage basin or distinct hydrologic feature, and represented as an eight-digit number.

Latitude—The angular distance north or south of the earth's equator, measured in degrees along a meridian, as on a map or globe.

Longitude—The angular distance on the earth's surface, measured east or west from the prime meridian at Greenwich, England, to the meridian passing through a position, expressed in degrees and minutes or DM.

Location—The location of the gaging station with respect to physical features in the vicinity, and with respect to the reference plane mentioned in the station name.

Meridian—Lines measuring the distance east and west around the earth at right angles to the equator. Meridians are great circles of the earth passing through both poles also known as lines of *Longitude*.

Maximum Discharge—The maximum reported hourly or daily discharge for the calendar year.

Minimum Discharge—The minimum reported hourly or daily discharge for the calendar year.

Negative Discharge—The volume of water that changes direction, and passes a gage for a second time. A negative discharge is subtracted from discharge and acre-feet totals.

Period of Record—A period for which published records exist for a gaging station.

Provisional Data—Data collected in real-time that have received little or no review. Inaccuracies in data may be present because of instrument malfunctions or physical changes at the measurement location. Significant revisions to the data may result upon review and computation of final data record.

Quarter-quarter—A method used to subdivide *sections*; each section is divided into four quarter sections: southeast, southwest, northeast, and northwest. Each subdivided section is then divided again into four quarter sections giving a total of 16 quadrants per section.

Real-Time Data—Provisional data that have been computed, and made available immediately.

River Mile—The curvilinear distance, in miles, measured upstream from the mouth along the path of the stream.

Section—A unit of land area, generally equal to one square mile or 640 acres. The section is part of a description of the location of land using the survey system (Public Land Survey System-PLSS) of the United States Government.

Sensor—Any device that senses a change in a physical or chemical quantity, and provides an electrical output for measurement by a datalogger.

Stage—The height of water above stream bed or arbitrary datum.

Stage-Discharge Relationship—The relationship between gage height, and the volume of water, per unit of time, flowing in a channel.

Township—A territorial subdivision, generally considered six miles long, six miles wide, and containing 36 *sections*. The township designation is part of a description of the location of land using the survey system (Public Land Survey System-PLSS) of the United States Government, and includes the 40-acre subdivision within a *quarter, section, township, and range*. The Public Land Survey System is based on

the concept of a township as a square parcel of land six miles on each side. Its location is established as being so many six-mile units east of a north-south line (called a meridian), and so many six-mile units north or south of an east-west line (called the baseline). The township is described by township and range e.g., T. 4 N., R. 23 E. Each township is further divided into 36 parts called sections, each approximately one mile square in area.

Transducer—Any device that converts energy from one form to another, as from acoustic energy to electric or mechanical energy.

Velocity-Index—Continuous velocity measurements made from an in-situ velocity sensor that measures a sample volume of a stream. Velocity-Index measurements are required when the channel has poor control or experiences backwater conditions.

Velocity-Index Relationship—The relationship between an indicator velocity, and the mean stream velocity, computed from a discharge measurement, flowing in a channel.

World Geodetic System of 1984 (WGS84)—The World Geodetic System of 1984 is the datum that is used by the Global Positioning System (GPS). The datum is defined, and maintained by the United States National Geospatial-Intelligence Agency (NGA).
