Explanation of Stage and Discharge Records

Data Collection and Computation

The data collected by the Bureau of Reclamation at gaging stations along the Lower Colorado River (between Hoover Dam and the Southern International Boundary with Mexico) consist of records of stage, velocity, and/or discharge indicator values, measurements of discharge of streams or canals, and stage of lakes or reservoirs. Records of stage, velocity, and/or discharge are obtained from digital dataloggers that measure electronic sensors at programmed time intervals, and calculate mean hourly values. The recorded values are transmitted via telemetry to the Lower Colorado River Hydrologic Database in Boulder City, Nevada and are downloaded from gaging station field locations by Reclamation Hydrologic Technicians with a laptop computer. Electronic sensor selection is dependent on the parameters required to measure a component of discharge, and vary by gaging station. Measurements of discharge are made with a mechanical current meter, an acoustic Doppler velocimeter, or an acoustic Doppler current profiler. Measurement techniques comply with standards established by the United States Geological Survey (USGS) and following guidelines set forth by the Bureau of Reclamation, Blythe Hydrographic Office QA/QC draft plan.

For stream-gaging stations, discharge-rating tables for an appropriate range of stage are prepared from stage-discharge curves. Rating curves are extended to compute discharge values outside of the minimum, and maximum measured values by plotting regressions generated from linear, logarithmic, or power equations. Hourly mean discharge values are computed from hourly mean gage heights applied to rating tables, then daily, monthly, and yearly mean discharges are computed from hourly values. Stage-shifting, and velocity-shifting methods are applied to rating curves when continual or temporary physical changes impact the discharge relationship. Dynamic physical conditions may include changes in control or channel geometry, migrating sandbars on the channel bottom, and seasonal variations in aquatic growth. Shift adjustments may be prorated with time or stage.

At gaging stations where stage-discharge relationships are not accurate due to backwater effect caused by downstream ponding in reservoirs, variations in downstream gate configurations, or other situations where no artificial or natural controls are present, the use of velocity-index or alternative indicator-discharge techniques may be used. With these techniques, an index velocity is used to calculate an average velocity for the flow in the stream or pipe. This average velocity along with a stage-area relationship is used to calculate discharge. Gaging stations that utilize pipe meter devices to measure discharge often require correction through the use of an indicator-discharge relationship.

For some gaging stations, there are periods when no data are available or data are in error, and cannot be used to compute hourly discharge. This condition occurs when the datalogger or connected sensors malfunction due to failure, drift, or fouling. For such periods, discharge is computed from the estimated record. Missing or erroneous data are estimated using various techniques including, but not limited to, interpolation, projecting from surrounding data, or a hydrologic relation developed with another stream gage.

Data Presentation

Records published for each continuous-record discharge station (gaging station) consist of three parts: (1) station manuscript; (2) discharge hydrograph; and (3) data table of daily mean discharge values for the current year with summary data.

Station Manuscript

The station manuscript provides descriptive information such as station location, period of record, historical extremes, and other remarks pertinent to station operation. The following descriptions detail the type of information included in each section.

Location—Information on the location is obtained from Global Positioning System data referencing the World Geodetic System of 1984, and the location of the gage with respect to the physical features in the vicinity. Township, range, section, and meridian descriptions are obtained from USGS topographical maps. In a few locations, the grid system is not available on the Fort Mojave Indian Reservation. In these locations, the grid system has been projected to obtain the required information. Descriptions of distance between a gaging station, and a nearby town are provided as a linear distance, not a driving distance. Distances downstream of dams are provided in river miles between the upstream dam, and the gaging station.

Drainage Area—Drainage areas were cited from Inter-agency Committee River Mile Index, published in January 1976, and measured using Bureau of Reclamation aerial orthophotographs, and USGS topographic quadrangles. Gaging stations with drainage areas listed as “not applicable” indicate a stream or canal that is not impacted by runoff. Drainage areas listed as “undetermined” indicate a drainage area that has not been outlined and/or measured by the Bureau of Reclamation.

Period of Record—The period for which there are published records for the station or for an equivalent station. An equivalent station is one that was in operation at a time when the present station was not in operation and the location was such that records from it can reasonably be considered equivalent with records from the present station. Calendar year 2005 was the first year that a final record was published by the Blythe Hydrographic Office. In many cases, the gaging stations mentioned in this publication have been in operation for some time prior to 2005. However, the records have not been finalized or published for any gage prior to 2005.

Gage—A description of the gage used during the reporting year including the gage equipment and the technique used to calculate the discharge record.

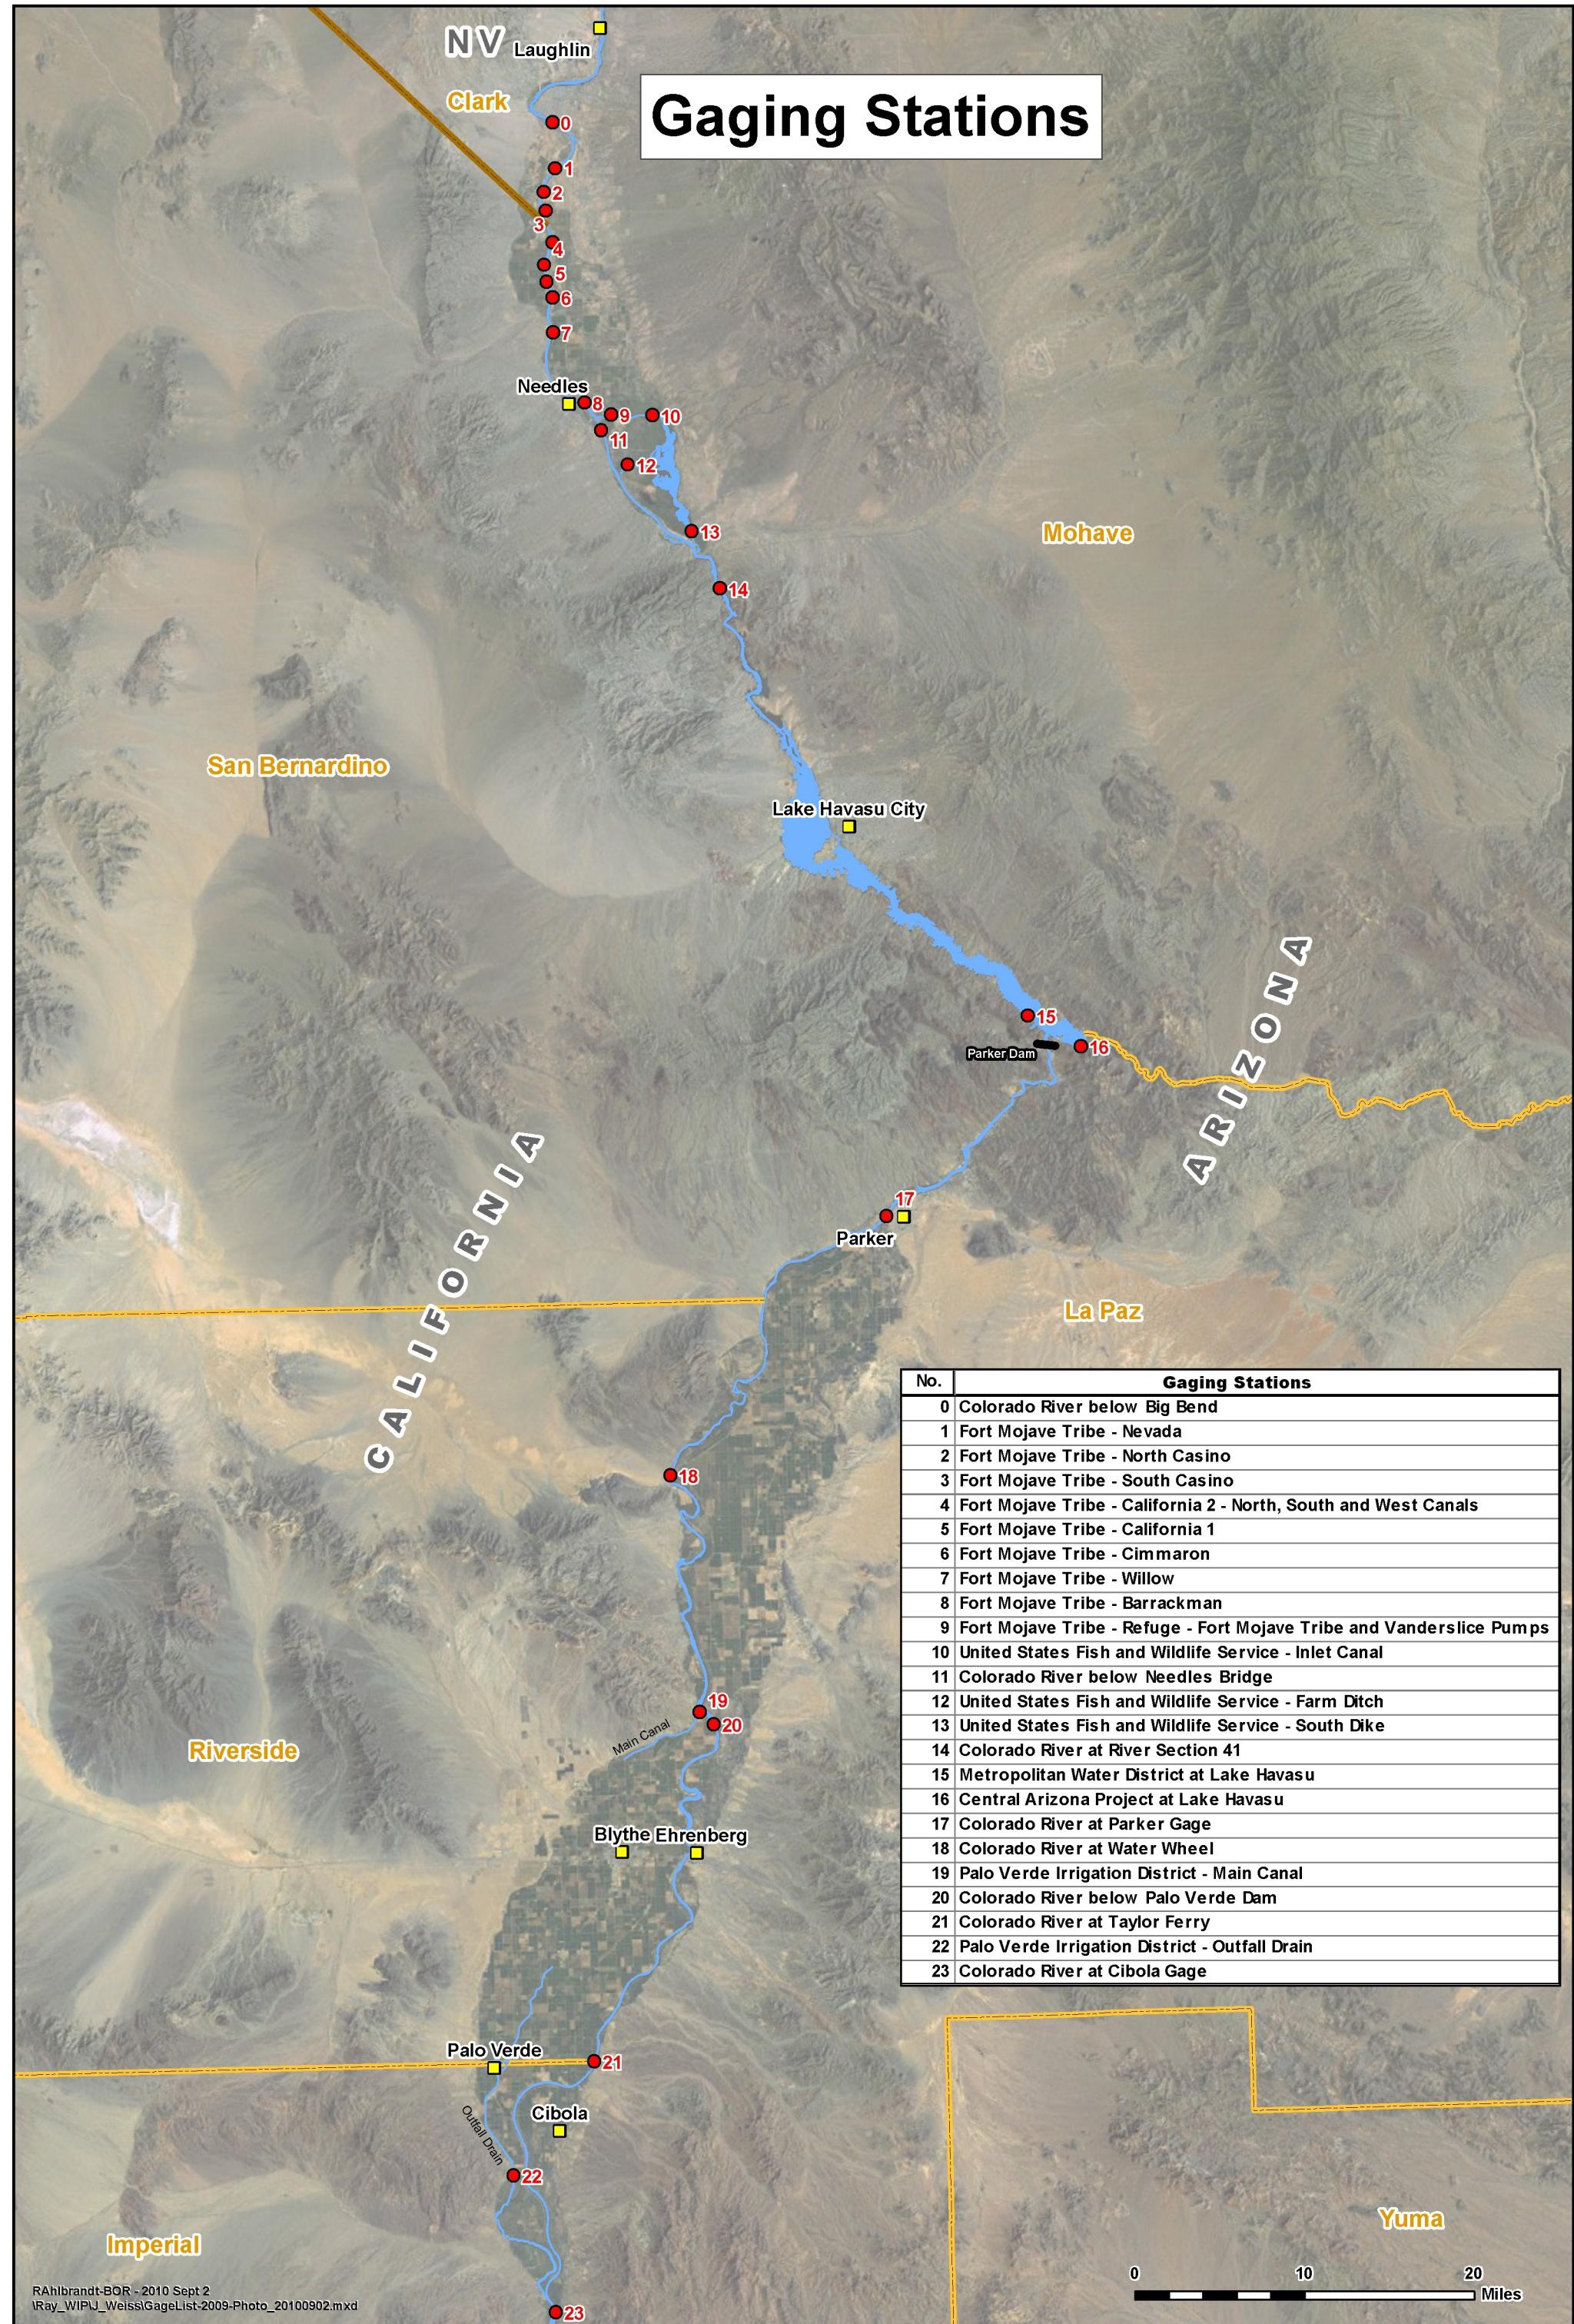

Extremes—Extreme discharge values are listed as minimum and maximum hourly, and daily mean values for the record period listed in the period of record section.

Remarks—Periods of estimated hourly discharge record will be identified in this paragraph. The paragraph is also used to present information relative to the accuracy of the records, special methods of computation, conditions that affect flow at the station, and other pertinent items.

Discharge Hydrograph, Data Table, and Summary Data

The discharge hydrograph displays mean daily discharge in a graphical format. The data table that follows each station manuscript and discharge hydrograph provides mean daily discharge values presented in tabular format. Basic statistical information is provided near the bottom summarizing each month, including total discharge in cubic-feet per second (cfs), mean, maximum, and minimum values for the month, and total volume expressed in acre-feet (ac-ft). In addition, annual discharge in cfs, and volume in ac-ft are provided for the year along with the annual mean, maximum, and minimum daily discharges. Maximum and minimum hourly discharge values located on the bottom of the table indicate the date, time, gage height or elevation, and discharge that the hourly extremes occurred during the year.

Gaging Stations

Colorado River Below Big Bend

Location—Latitude 35° 05.303', longitude 114° 37.458', in the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 10, T. 33 S., R. 66 E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mile (mi) 264.7, 2.4 mi southwest of Bullhead City, Arizona, 17.2 mi north of Needles, California, and 11.1 river mi downstream of Davis Dam.

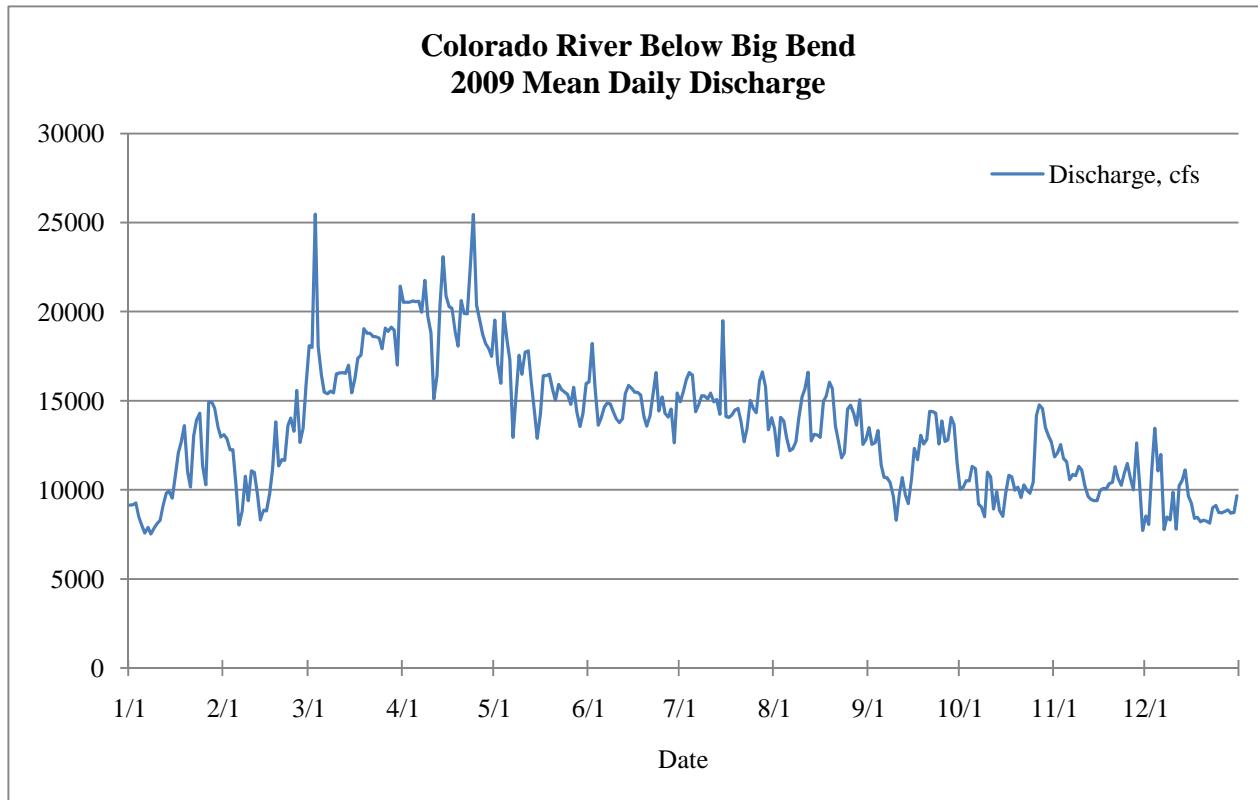

Drainage Area—Unknown.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage discharge relationship.

Extremes—Maximum daily discharge, 25,460 cubic feet per second (cfs), Mar. 3, 2009; minimum daily discharge, 2,180 cfs, Jan. 13, 2005; maximum hourly discharge, 27,620 cfs, Jul. 14, 2005 at 23:00; minimum hourly discharge, 689 cfs, Mar. 8, 2005 at 11:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Colorado River Below Needles Bridge

Location—Latitude 34° 49. 504', longitude 114° 34. 870', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 33, T. 9 N., R. 23 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 243.5, 2.0 mi east of Needles, California, 20.1 mi south of Bullhead City, Arizona, and 32.4 river mi downstream from Davis Dam.

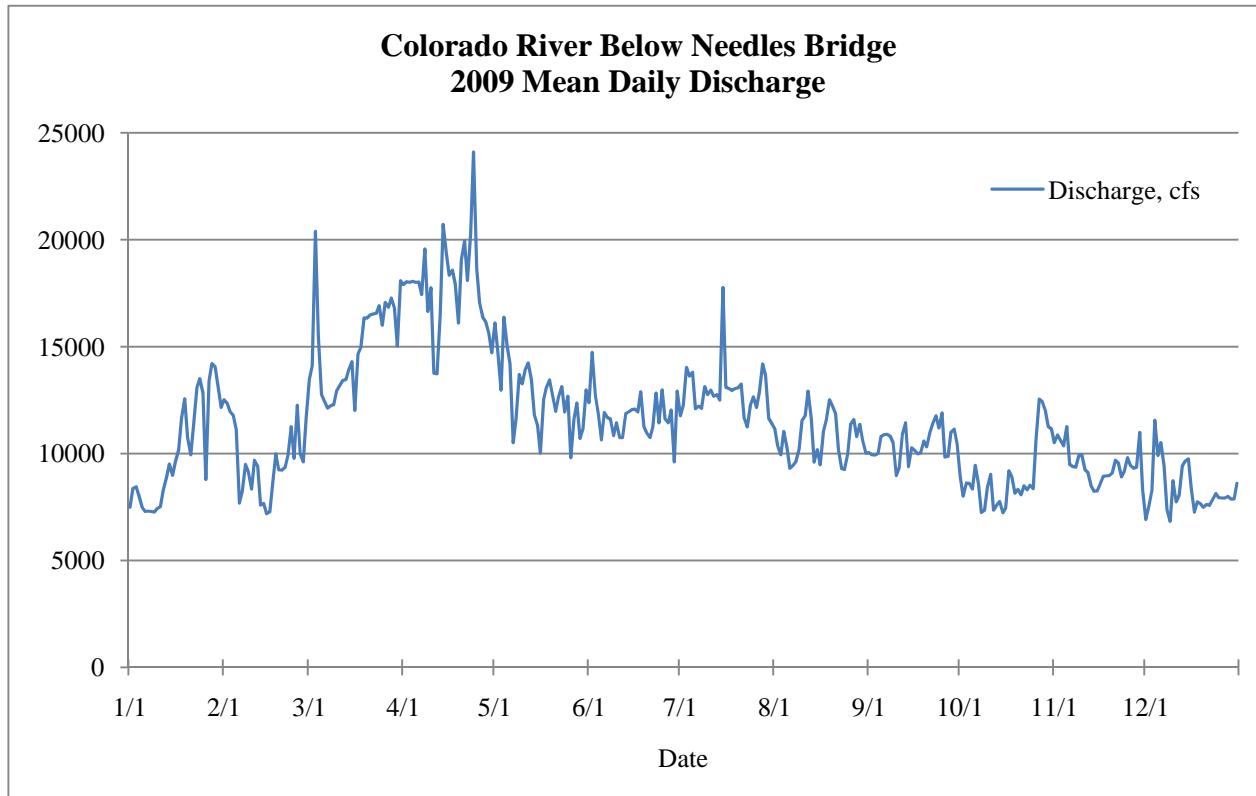

Drainage Area—Undetermined.

Period of Record—April 25, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 24,090 cubic feet per second (cfs), Apr. 24, 2009; minimum daily discharge, 4,470 cfs, Dec. 4, 2008; maximum hourly discharge, 24,290 cfs, Apr. 24, 2009 at 09:00; minimum hourly discharge, 3,830 cfs, Jun. 21, 2009 at 13:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Colorado River at River Section 41

Location—Latitude 34° 41.255', longitude 114° 27.759', in the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 13, T. 15 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, at river mile (mi) 231.0, 13.5 mi south of Needles, California, 16.2 mi north of Lake Havasu City, Arizona, and 44.9 river mi downstream of Davis Dam.

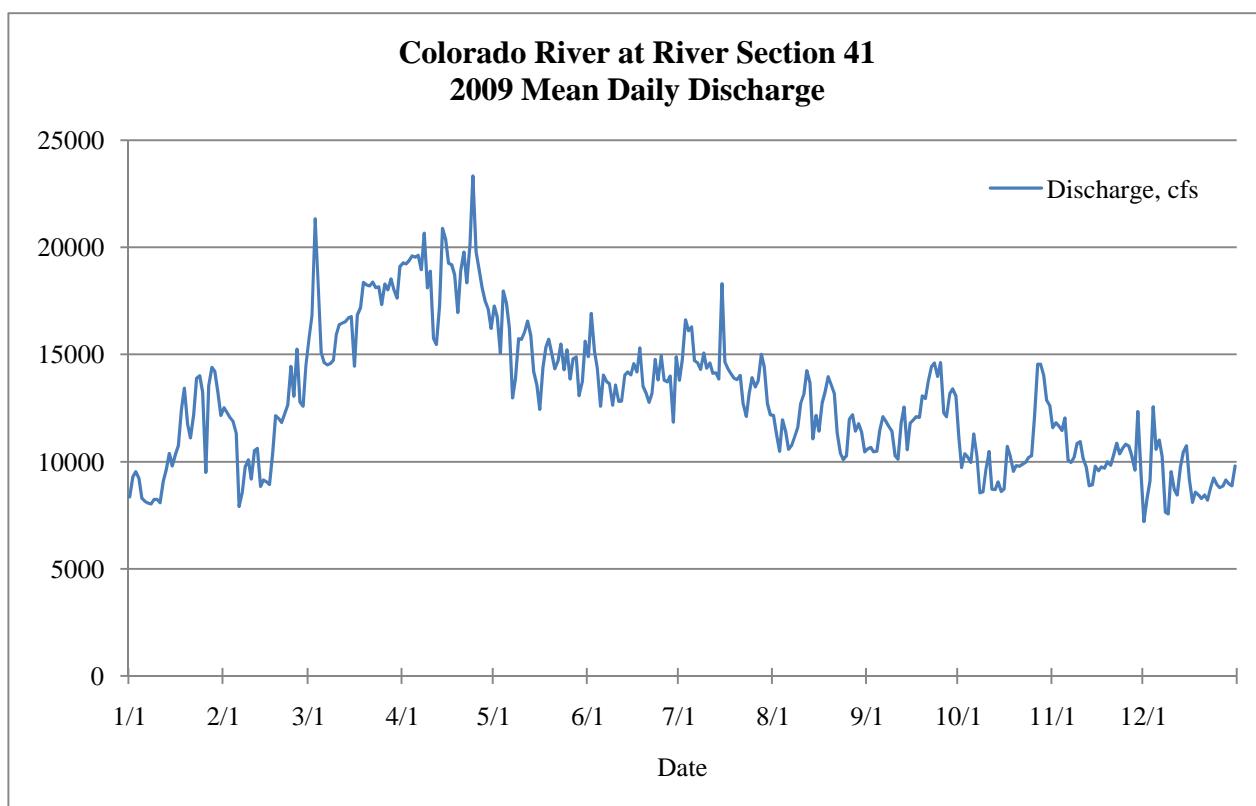

Drainage Area—172,300 square miles.

Period of Record—June 29, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records stage and velocity measured by a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 23,330 cubic feet per second (cfs), Apr. 24, 2009; minimum daily discharge 4,100 cfs, Dec. 8, 2007; maximum hourly discharge, 23,610 cfs, Apr. 24, 2009 at 11:00; minimum hourly discharge, 3,420 cfs, Dec. 8, 2007 at 17:00.

Remarks—None.

Colorado River at Parker Gage

Location—Latitude 34° 08.934', longitude 114° 18.468', in the NW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 2, T. 9 N., R. 20 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mile (mi) 175.0, 1.1 mi west of Parker, Arizona, 40.4 mi north of Blythe, California, and 17.0 river mi downstream of Parker Dam.

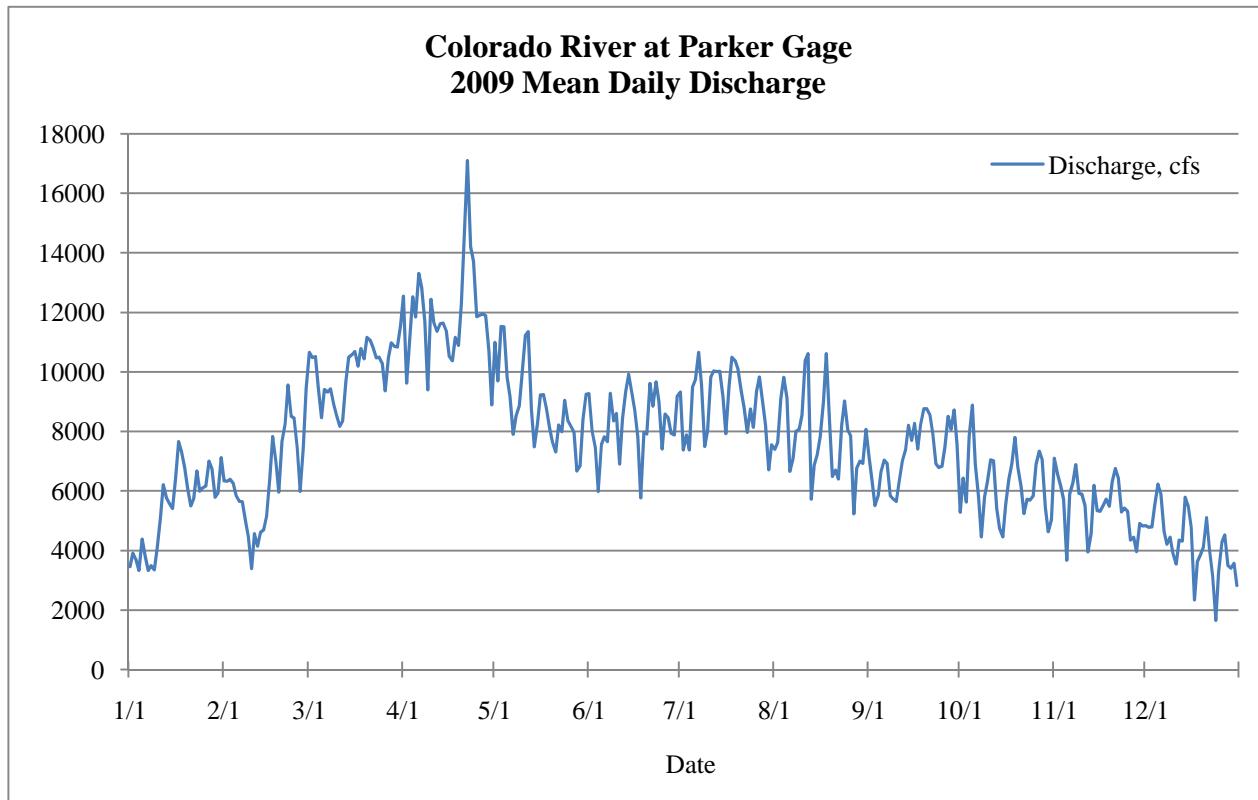

Drainage Area—Undetermined.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 17,090 cubic feet per second (cfs), Apr. 22, 2009; minimum daily discharge, 1,450 cfs, Dec. 20, 2008; maximum hourly discharge, 21,490 cfs, Sep. 14, 2005 at 17:00; minimum hourly discharge, 487 cfs, Aug. 18, 2006 at 06:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Colorado River at Water Wheel

Location—Latitude 33° 55.914', longitude 114° 32.108', in the NW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 22, T. 7 N., R. 22 W., Gila-Salt meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mile (mi) 151.6, 20.7 mi south of Parker, Arizona, 22.3 mi north of Blythe, California, and 40.4 mi downstream of Parker Dam.

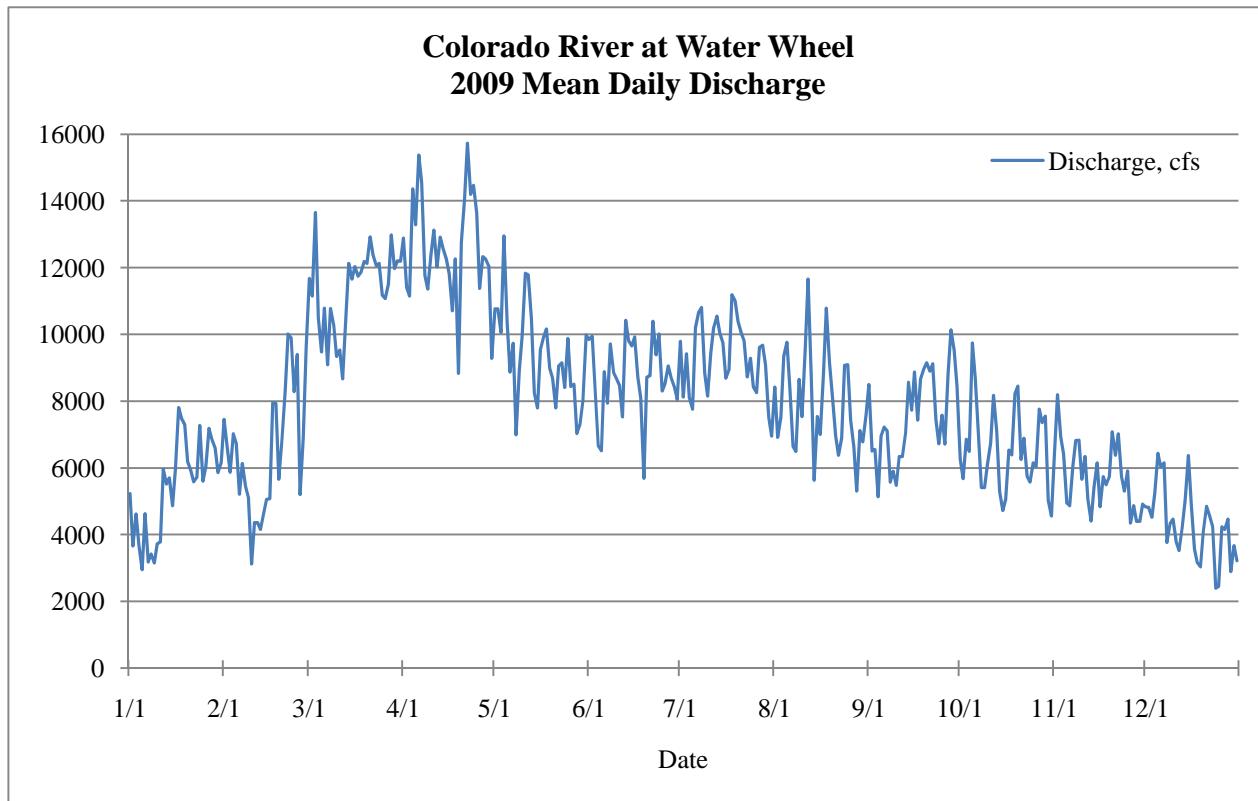

Drainage Area—180,700 square miles.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 15,730 cubic feet per second (cfs), Apr. 22, 2009; minimum daily discharge, 1,990 cfs, Jan. 27, 2005; maximum hourly discharge, 18,920 cfs, Apr. 23, 2009 at 01:00; minimum hourly discharge, 1,610 cfs, Oct. 27, 2005 at 23:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Colorado River at Taylor Ferry

Location—Latitude 33° 26.052', longitude 114° 37.646', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 36, T. 8 S., R. 22 E., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, river mile (mi) 106.3, 12.4 mi south of Blythe, California, 50.8 mi north of Yuma, Arizona, and 85.7 mi downstream of Parker Dam.

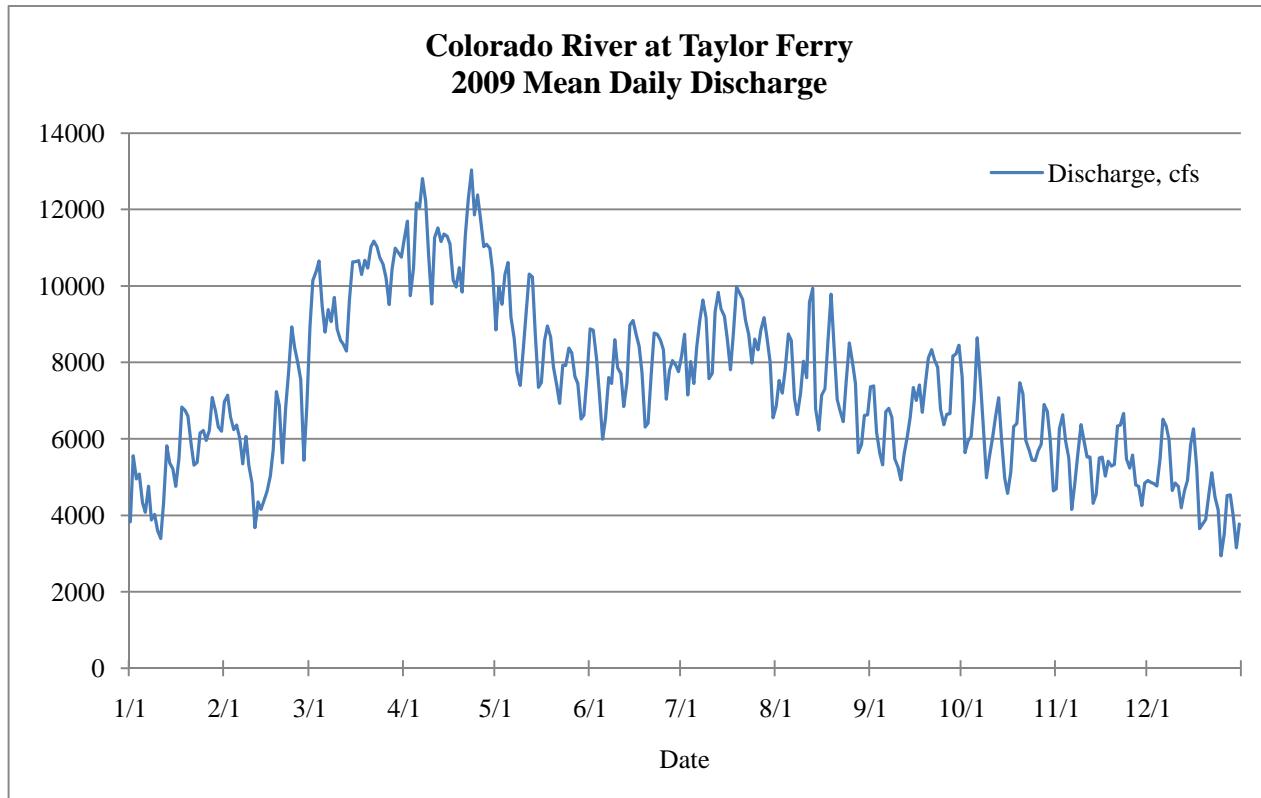

Drainage Area—183,700 square miles.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water level using a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 13,250 cubic feet per second (cfs), Apr. 16, 2008; minimum daily discharge, 2,050 cfs, Dec. 28, 2008; maximum hourly discharge, 14,370 cfs, Apr. 18, 2007 at 15:00; minimum hourly discharge, 1,960 cfs, Dec. 27, 2008 at 17:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Colorado River at Cibola Gage

Location—Latitude 33° 13.256', longitude 114° 40.354', in the NE $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 30, T. 2 S., R. 23 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mile (mi) 86.9, 27.4 mi south of Blythe, California, 36.2 mi north of Yuma, Arizona, and 105.1 mi downstream of Parker Dam.

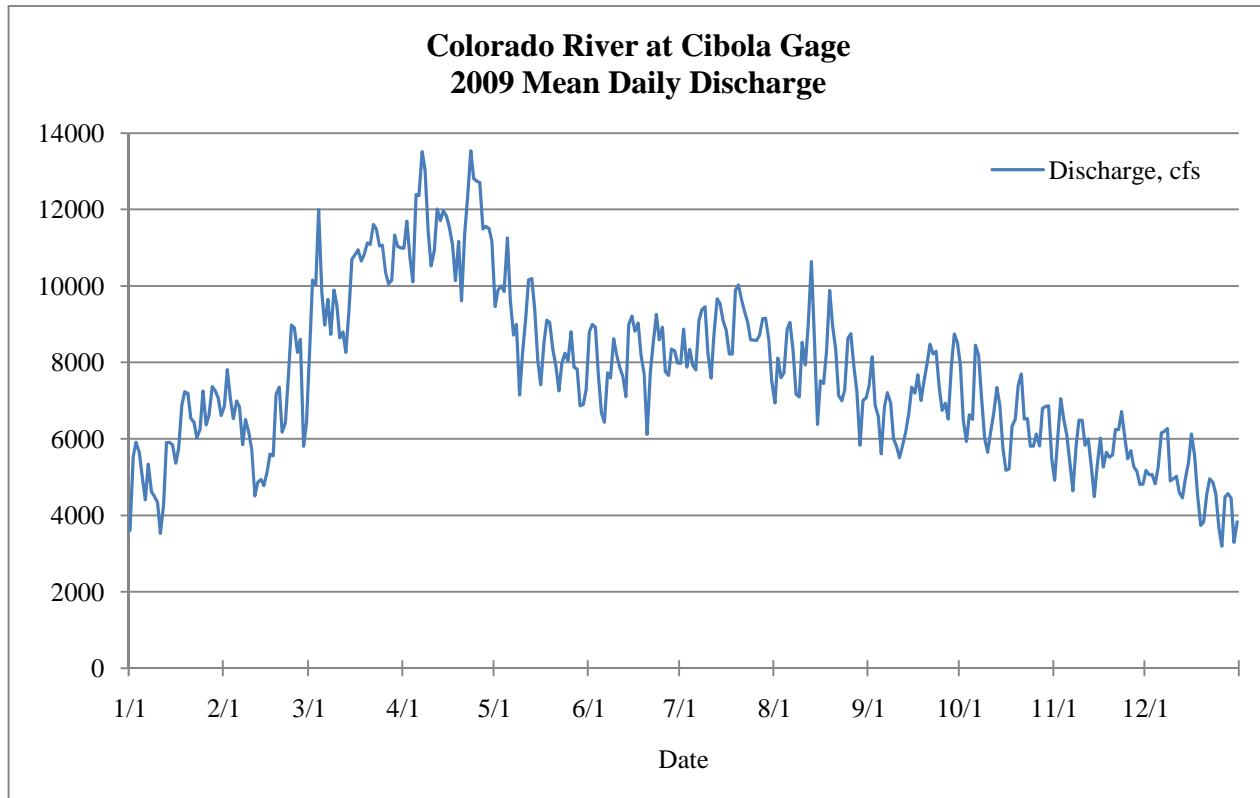

Drainage Area—183,800 square miles.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records water level measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

Extremes—Maximum daily discharge, 13,670 cubic feet per second (cfs), Apr. 09, 2008; minimum daily discharge, 2,570 cfs, Dec. 28, 2008; maximum hourly discharge, 14,530 cfs, Apr. 23, 2009 at 23:00; minimum hourly discharge, 2,560 cfs, Dec. 28, 2008 at 02:00.

Remarks—None.

Location—Latitude 35° 02.940', longitude 114° 37.360', in the NW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 27, T. 33 S., R. 66 E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mile (mi) 261.0, 4.8 mi south of Bullhead City, Arizona, 14.5 mi north of Needles, California, and 14.9 river mi downstream of Davis Dam.

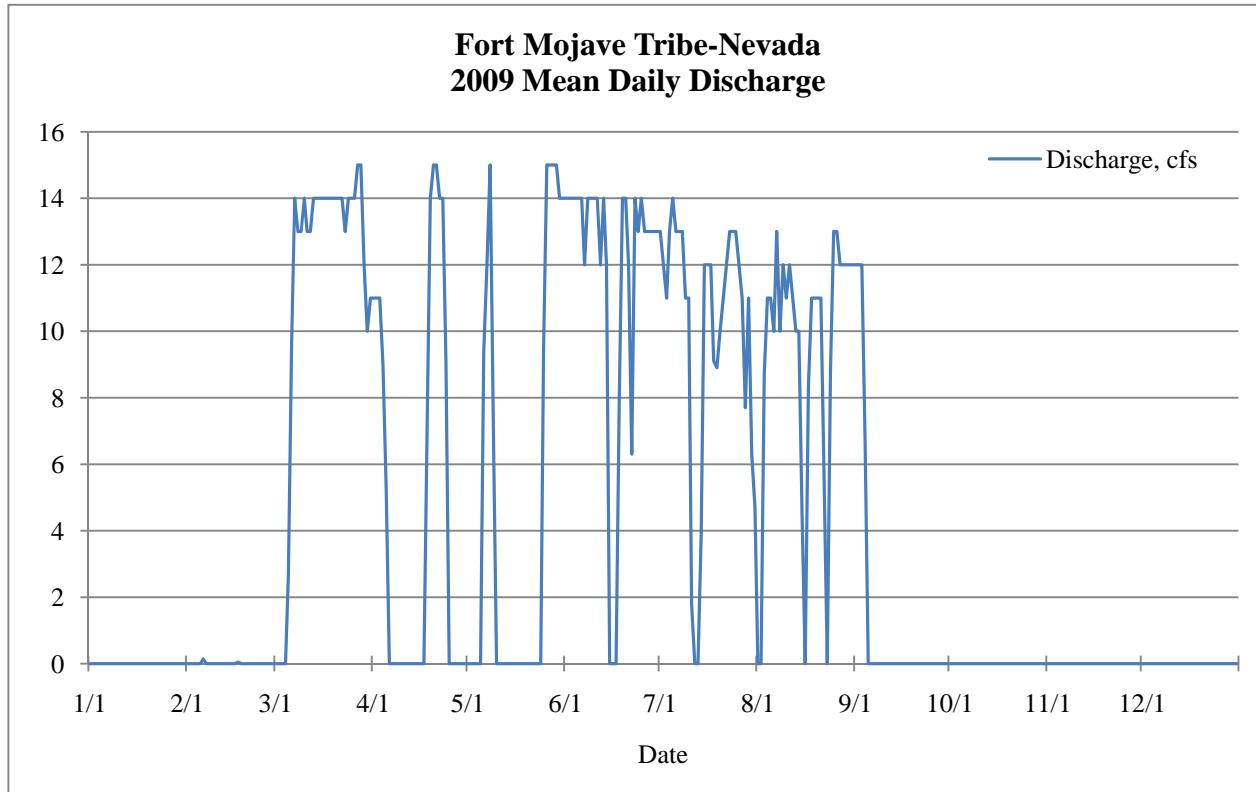

Drainage Area—Not applicable.

Period of Record—January 1, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge values measured by a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted in the discharge side of the diversion pipe. Discharge is calculated using an indicator-discharge relationship.

Extremes—Maximum daily discharge, 15 cubic feet per second (cfs), Apr. 08, 2008; minimum daily discharge, no diversion at times; maximum hourly discharge, 16 cfs, Feb. 14, 2008 at 12:00; minimum hourly discharge, no diversion at times.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Fort Mojave Tribe-North Casino

Location—Latitude 35° 01.749', longitude 114° 38.101', in the SE $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 17, T. 19 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mile (mi) 259.4, 6.3 mi south of Bullhead City, Arizona, 13.1 mi north of Needles, California, and 16.5 river mi downstream of Davis Dam.

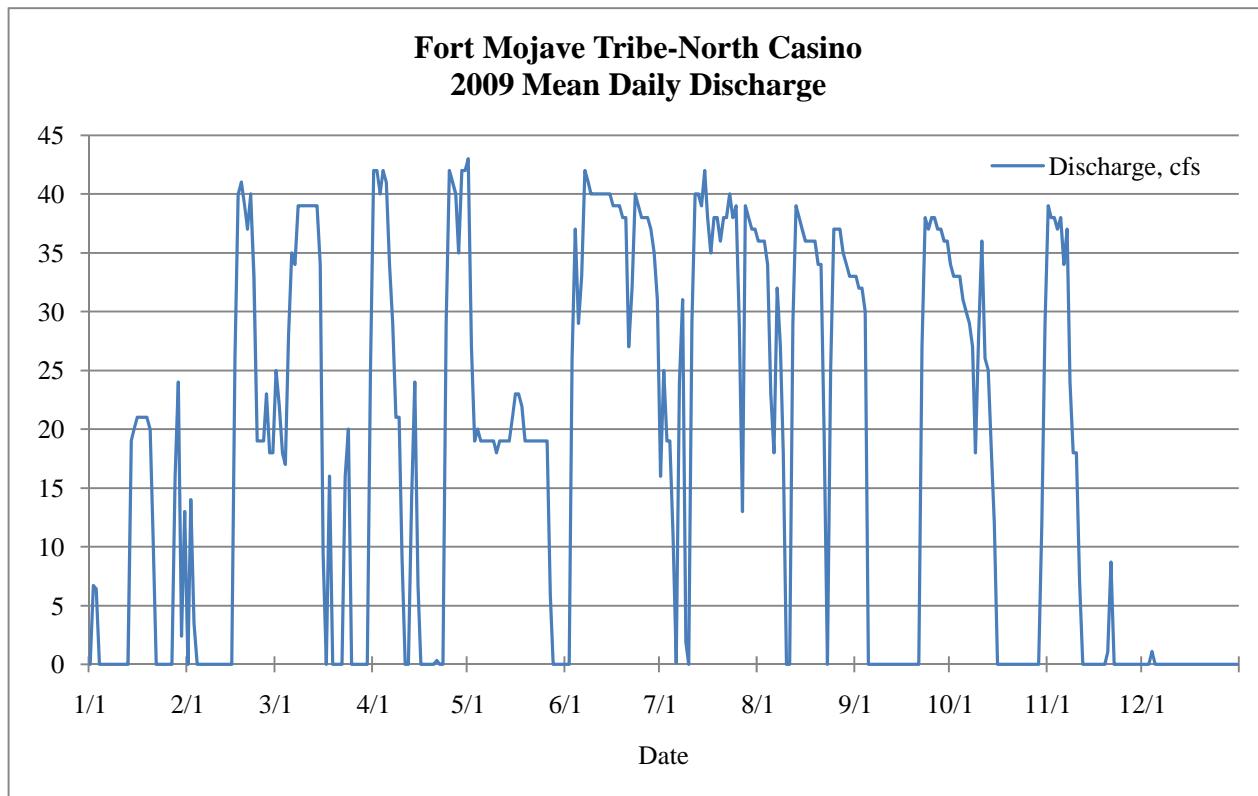

Drainage Area—Not applicable.

Period of Record—February 23, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records stage and water velocity measured by a SonTek/YSI Argonaut-SW current meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 44 cubic feet per second (cfs), which first occurred on May 3, 2006; minimum daily discharge, 0 cfs, which occurred many times; maximum hourly discharge, 46 cfs, May 2, 2006 at 15:00; minimum hourly discharge, 0 cfs, which occurred many times.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Fort Mojave Tribe-California 2 (West)

Location—Latitude 34° 58.022', longitude 114° 38.173', in the NE $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 13, T. 10 N., R. 22 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 254.9, 10.4 mi south of Bullhead City, Arizona, 8.9 mi north of Needles, California, and 21.0 river mi downstream of Davis Dam.

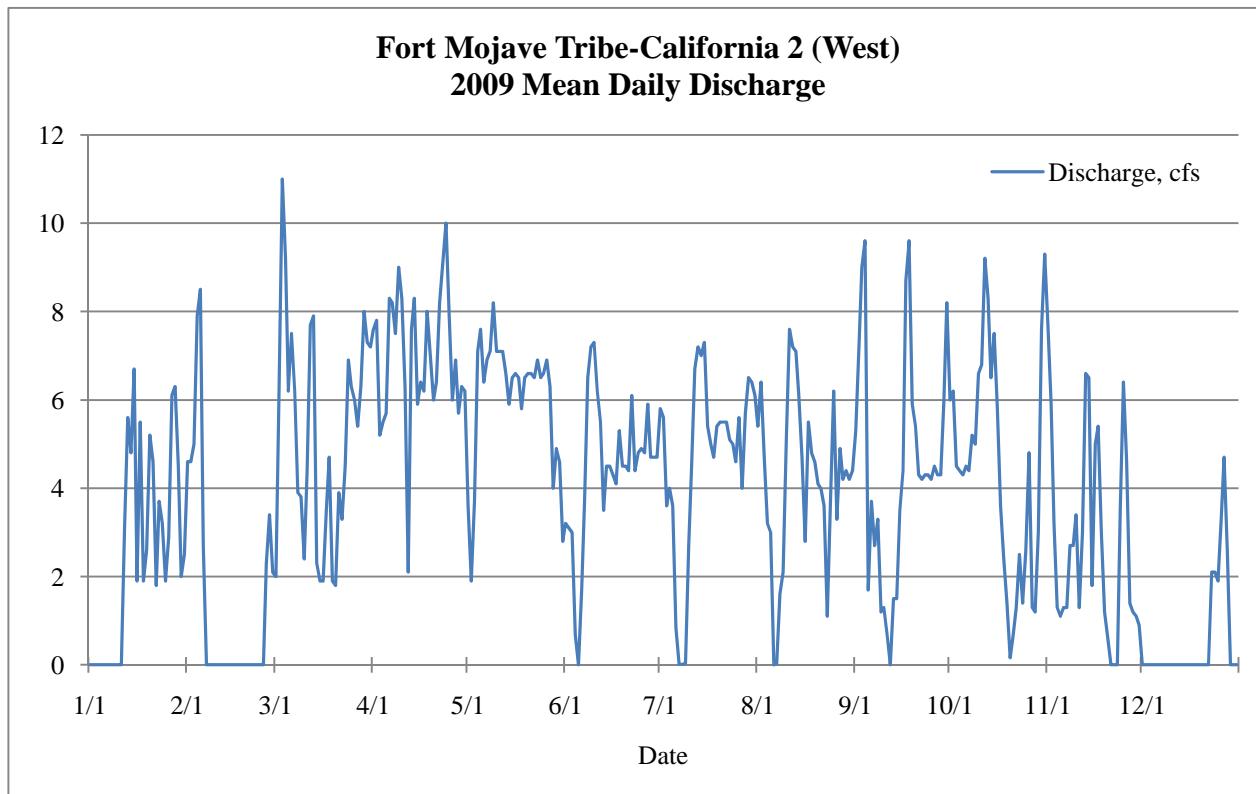

Drainage Area—Not applicable.

Period of Record—January 1, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted inside of the discharge pipe downstream of the diversion pump. Discharge is calculated using an indicator-discharge relationship.

Extremes—Maximum daily discharge, 13 cubic feet per second (cfs), Mar. 6, 2006; minimum daily discharge, 0 cfs, Jan. 1, 2006; maximum hourly discharge, 20 cfs, Sep. 20, 2006 at 12:00; minimum hourly discharge, 0 cfs, Jan. 1, 2006 at 00:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Fort Mojave Tribe-Cimmaron

Location—Latitude 34° 56.347', longitude 114° 37.699', in the SE $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 16, T. 18 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mile (mi) 252.9, 12.3 mi south of Bullhead City, Arizona, 6.9 mi north of Needles, California, and 23.0 river mi downstream of Davis Dam.

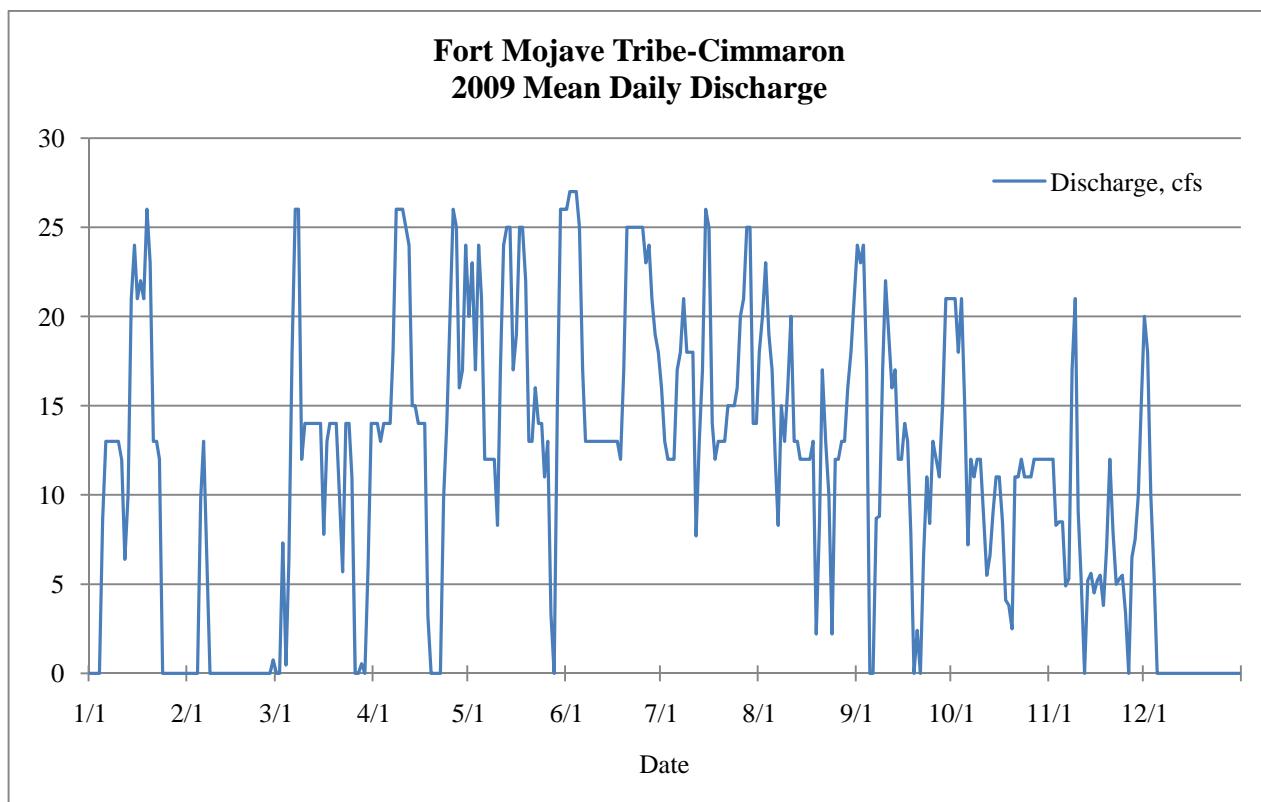

Drainage Area—Not applicable.

Period of Record—April 10, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records gage height and water velocity measured by a SonTek/YSI Argonaut-SW current meter attached to a fixed abrupt-expansion type, long-throated flume made of smooth metal. Discharge is calculated using a stage factor velocity index rating.

Extremes—Maximum daily discharge, 41 cubic feet per second (cfs), Jun. 15, 2007; minimum daily discharge, 0 cfs, which occurred many times; maximum hourly discharge, 52 cfs, Jun. 12, 2007 at 16:00; minimum hourly discharge, 0 cfs, which occurred many times.

Remarks—None.

Fort Mojave Tribe-Refuge (Fort Mojave Tribe Diversion)

Location—Latitude 34° 50.286', longitude 114° 34.237', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 24, T. 17 N., R. 22W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.2 miles (mi) south of Bullhead City, Arizona, 2.9 mi east of Needles, California, and 31.5 mi downstream of Davis Dam.

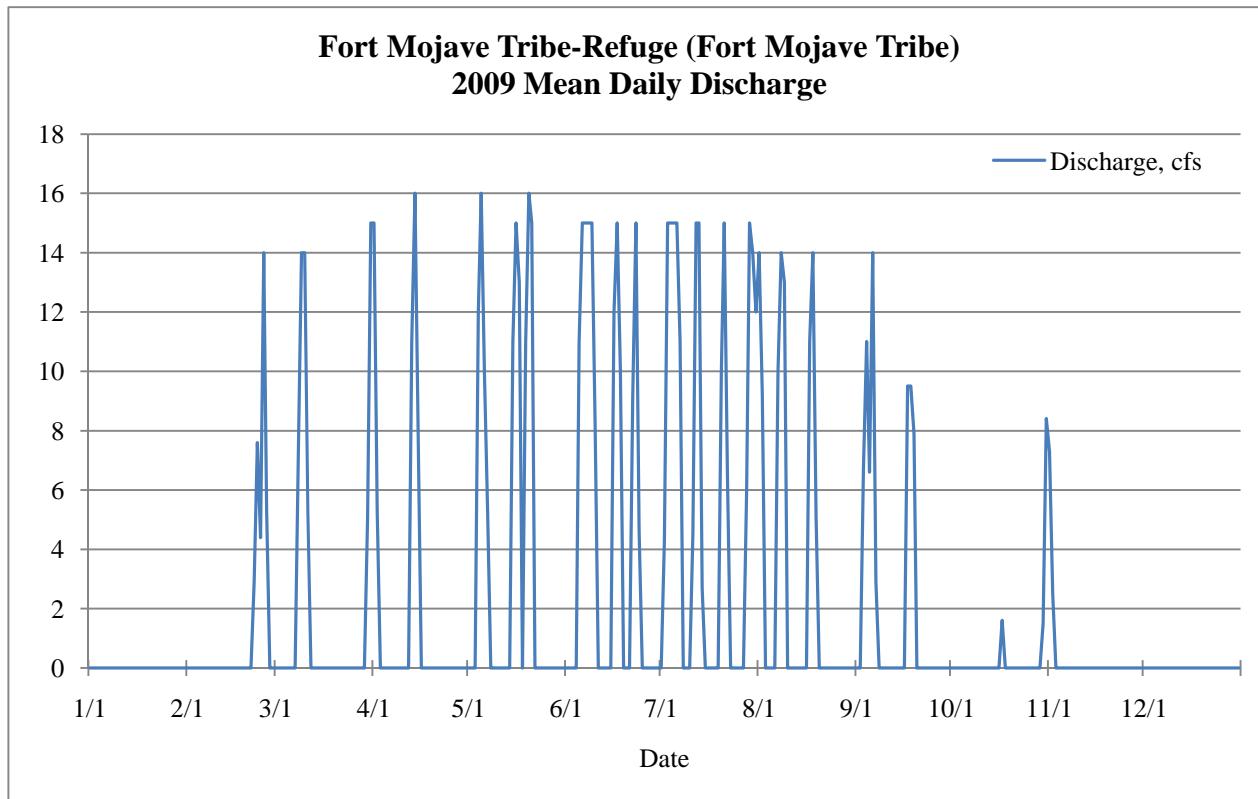

Drainage Area—Not applicable.

Period of Record—January 27, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted to the inside of the discharge pipe downstream of the diversion pump. Discharge is calculated using a discharge-indicator relationship.

Extremes—Maximum daily discharge, 22 cubic feet per second (cfs), which first occurred on Apr. 25, 2008 at 10:00; minimum daily discharge, 0 cfs, occurred many times throughout the year; maximum hourly discharge, 27 cfs, which first occurred on Jul. 21, 2006 at 13:00; minimum hourly discharge, 0 cfs, which occurred many times.

Remarks—The gage experienced numerous short duration failures that ranged from one to five hours. Discharge for these periods were assumed to be zero as no other source of diversion records were available.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Fort Mojave Tribe-Refuge (Vanderslice Farms Diversion)

Location—Latitude 34° 50.286', longitude 114° 34.237', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 24, T. 17 N., R. 22W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.2 miles (mi) south of Bullhead City, Arizona, 2.9 mi east of Needles, California, and 31.5 mi downstream of Davis Dam.

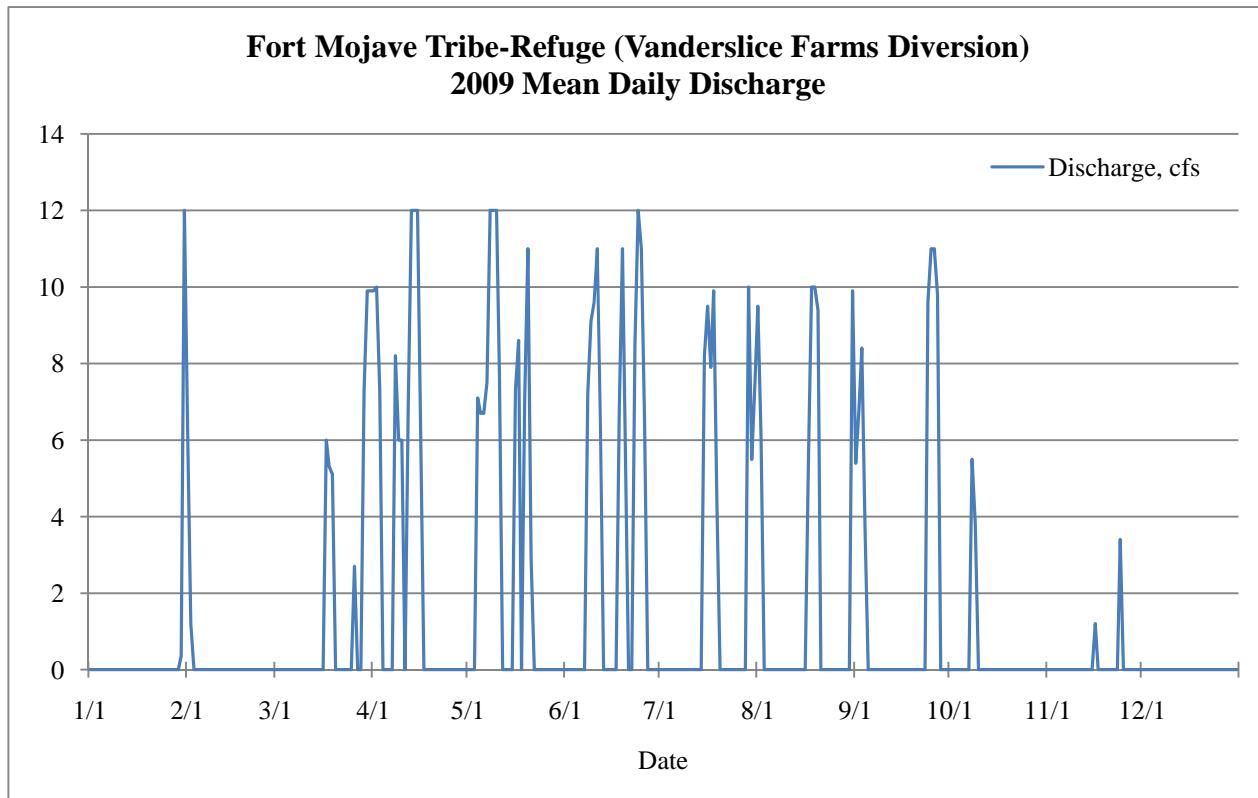

Drainage Area—Not applicable.

Period of Record—Jan. 27, 2006 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge measured by a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted to the inside of the discharge pipe downstream of the diversion pump. Discharge is calculated using a discharge-indicator relationship.

Extremes—Maximum daily discharge, 16 cubic feet per second (cfs), Aug. 16, 2006; minimum daily discharge, 0 cfs, which occurred many times; maximum hourly discharge, 18 cfs, Aug. 02, 2006 at 10:00; minimum hourly discharge, 0 cfs, which occurred many times.

Remarks—None.

United States Fish and Wildlife Service-Inlet Canal

Location—Latitude 34° 50.202', longitude 114° 31.674', in the NE $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 29, T. 17 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.6 mile (mi) south of Bullhead City, Arizona, and 4.8 mi east of Needles, California.

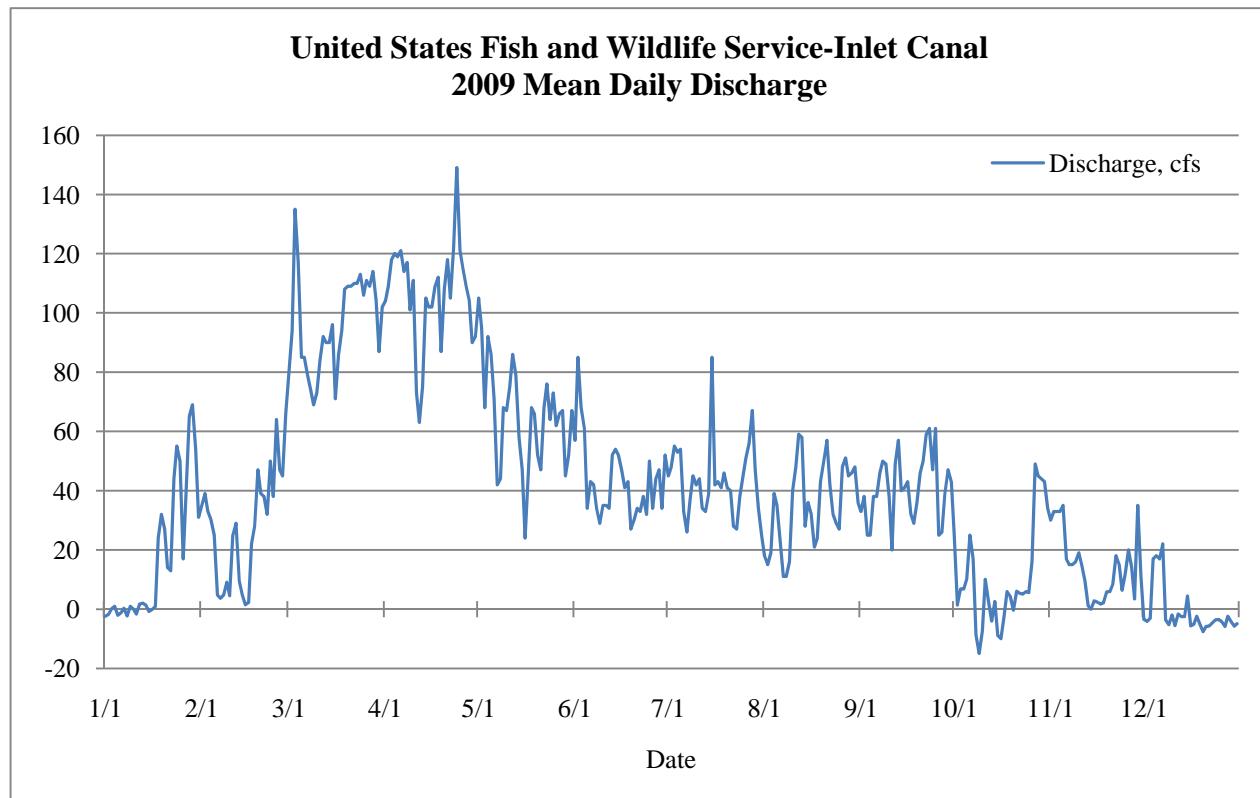

Drainage Area—Not applicable.

Period of Record—July 16, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records water elevation and velocity measured by a SonTek/YSI Argonaut-SW current meter mounted to a two-inch galvanized pipe on the channel bottom about 25 feet upstream from the siphon structure. Discharge is computed using a velocity-index relationship.

Extremes—Maximum daily discharge, 150 cubic feet per second (cfs), Apr. 20, 2007; minimum daily discharge, -12 cfs, Dec. 2, 2006; maximum hourly discharge, 164 cfs, Apr. 19, 2007 at 22:00; minimum hourly discharge, -41 cfs, Aug. 4, 2006 at 03:00.

Remarks—None.

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

United States Fish and Wildlife Service-South Dike

Location—Latitude 34° 44.214', longitude 114° 29.407', in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 27, T. 16 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 26.8 miles (mi) south of Bullhead City, Arizona, and 9.9 mi southeast of Needles, California.

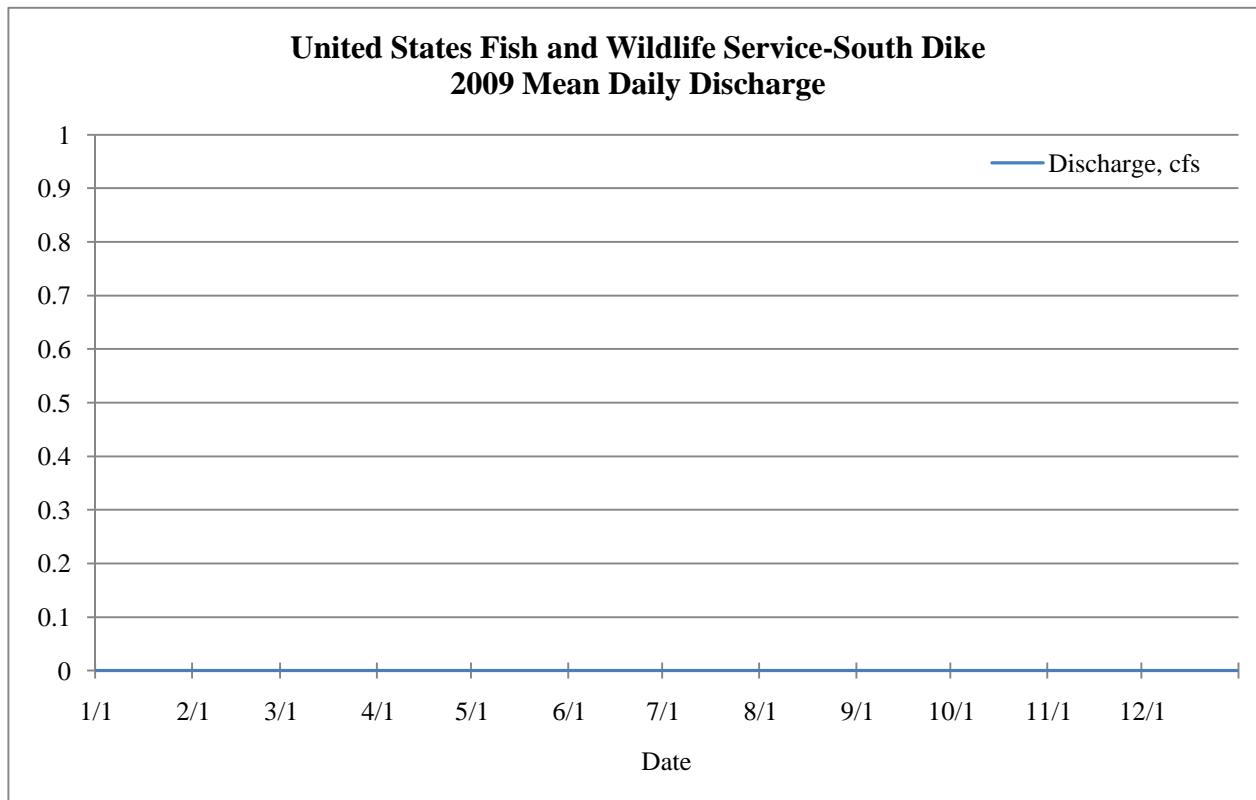

Drainage Area—Unknown.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records marsh elevation, river elevation, and gate position measured by Sutron multiple interface shaft encoders (Model 56-0540-400-DTR). Discharge over the bi-fold lateral gate is computed by applying a theoretical weir equation.

Extremes—Maximum daily discharge, 9.1 cubic feet per second (cfs) on Aug. 5, 2005; minimum daily discharge, 0 cfs, occurs frequently; maximum hourly discharge, 36 cfs on Apr. 18, 2007 at 12:00; minimum hourly discharge, 0 cfs, occurs frequently.

Remarks—The gate was not opened during this record period.

Metropolitan Water District at Lake Havasu

Location—Latitude 34° 18.967', longitude 114° 09.433', in the NW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 28, T. 3 N., R. 27 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mile (mi) 193.8, 14.9 mi southeast of Lake Havasu City, Arizona, 13.7 mi northeast of Parker, Arizona, and 82.1 river mi downstream of Davis Dam.

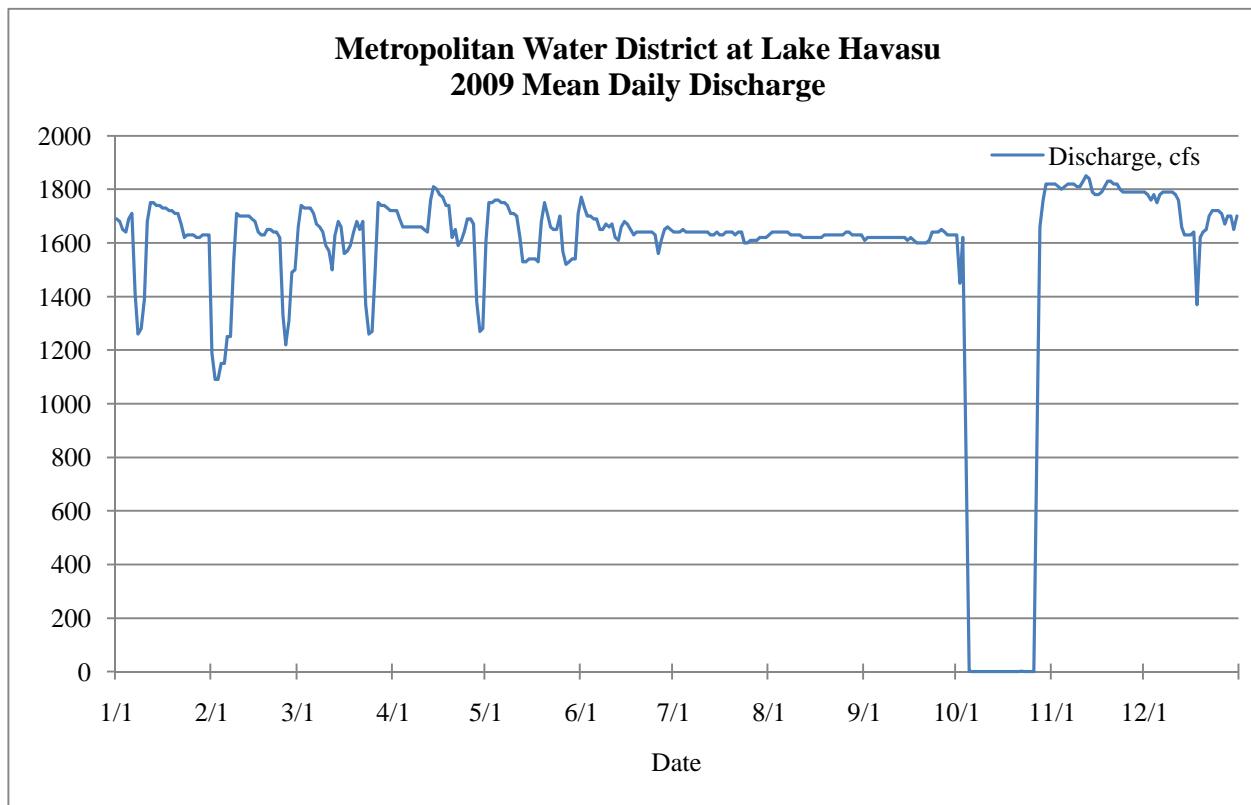

Drainage Area—Not applicable.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge measured by an Accusonic flow meter (Model 7500) operated by the Metropolitan Water District of Southern California. The flow meter measures discharge from nine pumps that divert Colorado River water into the Colorado River Aqueduct which conveys the water to metropolitan areas of southwestern California.

Extremes—Maximum daily discharge, 1970 cubic feet per second (cfs), Nov. 11, 2005; minimum daily discharge, no diversion at times; maximum hourly discharge, 1981 cfs, Nov. 10, 2005, at 09:00 and 10:00; minimum hourly discharge, no diversion at times.

Remarks—Maintenance and calibration of measuring equipment are performed by the Metropolitan Water District of Southern California. The Bureau of Reclamation does not perform measurements to verify the accuracy of the data. The Bureau of Reclamation also does not monitor flows that return to the Colorado River below the Gene Wash Reservoir Dam.

Metropolitan Water District at Lake Havasu

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Central Arizona Project at Lake Havasu

Location—Latitude 34° 17.340', longitude 114° 06.230', in the NW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 23, T. 11 N., R. 18 W., Gila-Salt River meridian, in La Paz County, Arizona, Hydrologic Unit 15030204, river mile (mi) 192.5, 15.3 mi southeast of Lake Havasu City, Arizona, 14.3 miles northeast of Parker, Arizona, and 83.4 river mi downstream of Davis Dam.

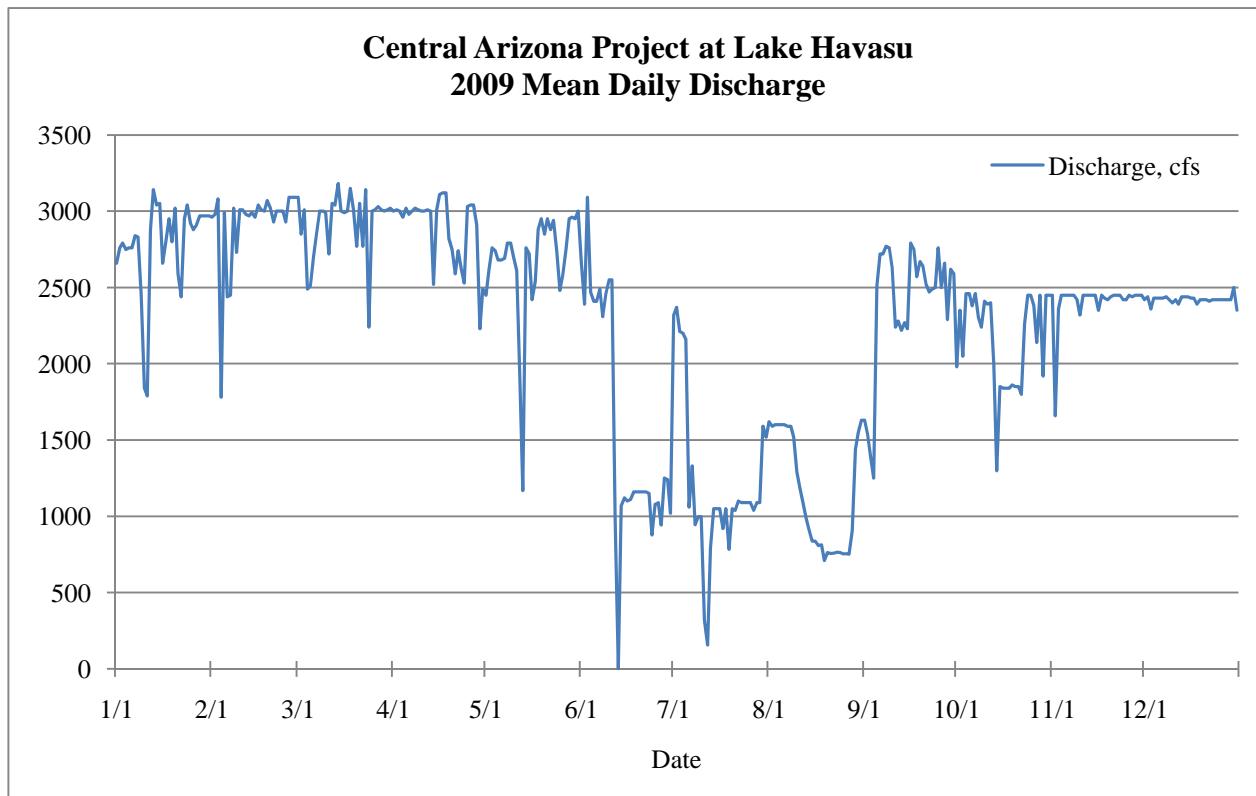

Drainage Area—Not applicable.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1A) records discharge values measured by two Accusonic flow meters (Model 7500) operated by the Central Arizona Project. The flow meters measure discharge from six pumps that divert Colorado River water into the Hayden-Rhodes Aqueduct which conveys the water to the Phoenix and Tucson metropolitan areas.

Extremes—Maximum daily discharge, 3600 cubic feet per second (cfs), Mar. 24 and 25, 2007; minimum daily discharge, no diversion at times; maximum hourly discharge, 3670 cfs, Jun. 3, 2005 at 07:00 and Jun. 4, 2005 at 00:00; minimum hourly discharge, no diversion at times.

Remarks—Maintenance and calibration of measuring equipment are performed by a private contractor hired by the Central Arizona Project. The Bureau of Reclamation does not perform measurements to verify the accuracy of the data.

Palo Verde Irrigation District-Main Canal

Location—Latitude 33° 43.801', longitude 114° 30.717', in the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 19, T. 5 S., R. 24 E., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, river mile (mi) 133.8, 31.7 mi south of Parker, Arizona, 9.2 mi north of Blythe, California, and 58.2 river mi downstream of Parker Dam.

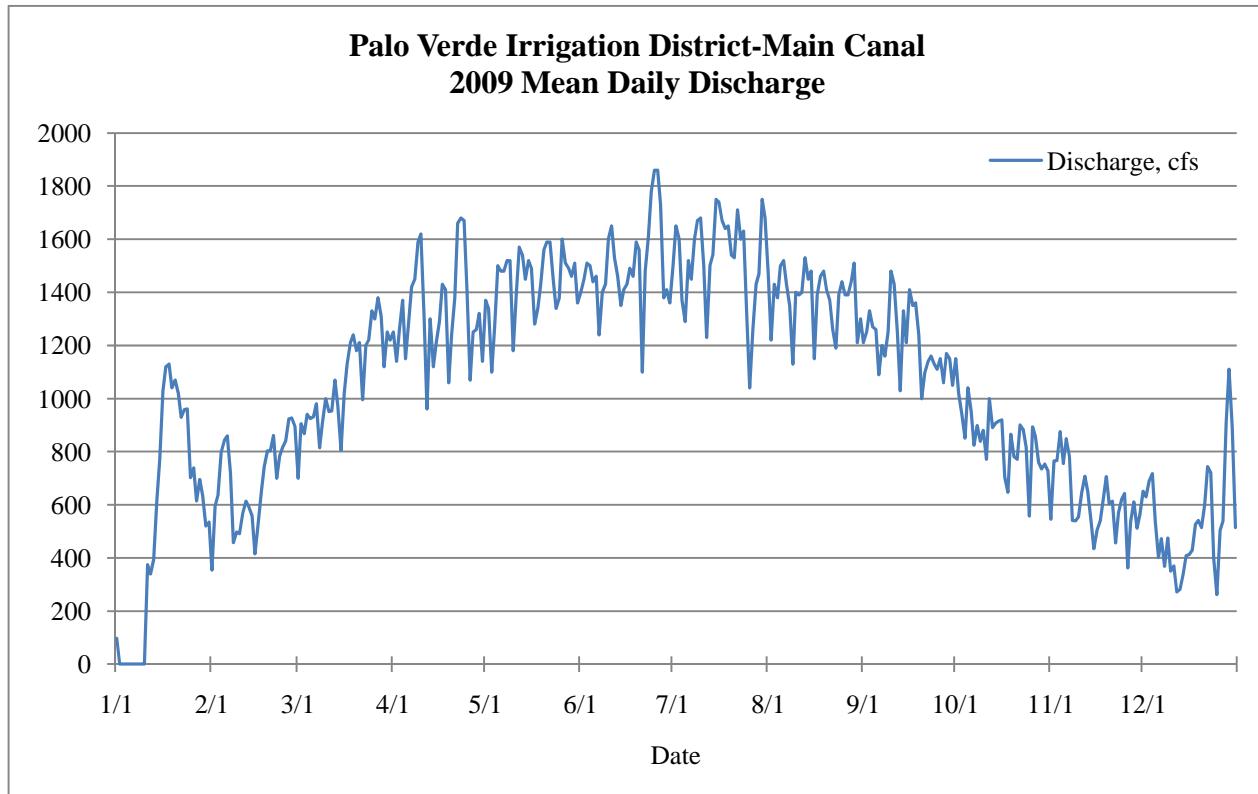

Drainage Area—Not applicable.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records water elevation and velocity measured by a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 2,190 cubic feet per second (cfs), Aug. 5, 2006; minimum daily discharge, 0 cfs, no diversion at times; maximum hourly discharge, 2,530 cfs, Jun. 30, 2008 at 14:00; minimum hourly discharge, 0 cfs, no diversion at times.

Remarks—Due to the Palo Verde Irrigation District annual outage there were no diversions from Jan. 1, 2009 at 13:00 to Jan. 11, 2009 at 03:00.

Palo Verde Irrigation District-Outfall Drain

Location—Latitude 33° 20.308', longitude 114° 42.734', in the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 1, T. 10 S., R. 21 E., San Bernardino meridian, Imperial County, California, Hydrologic Unit 15030104, 20.2 miles (mi) south of Blythe, California, and 44.4 mi north of Yuma, Arizona.

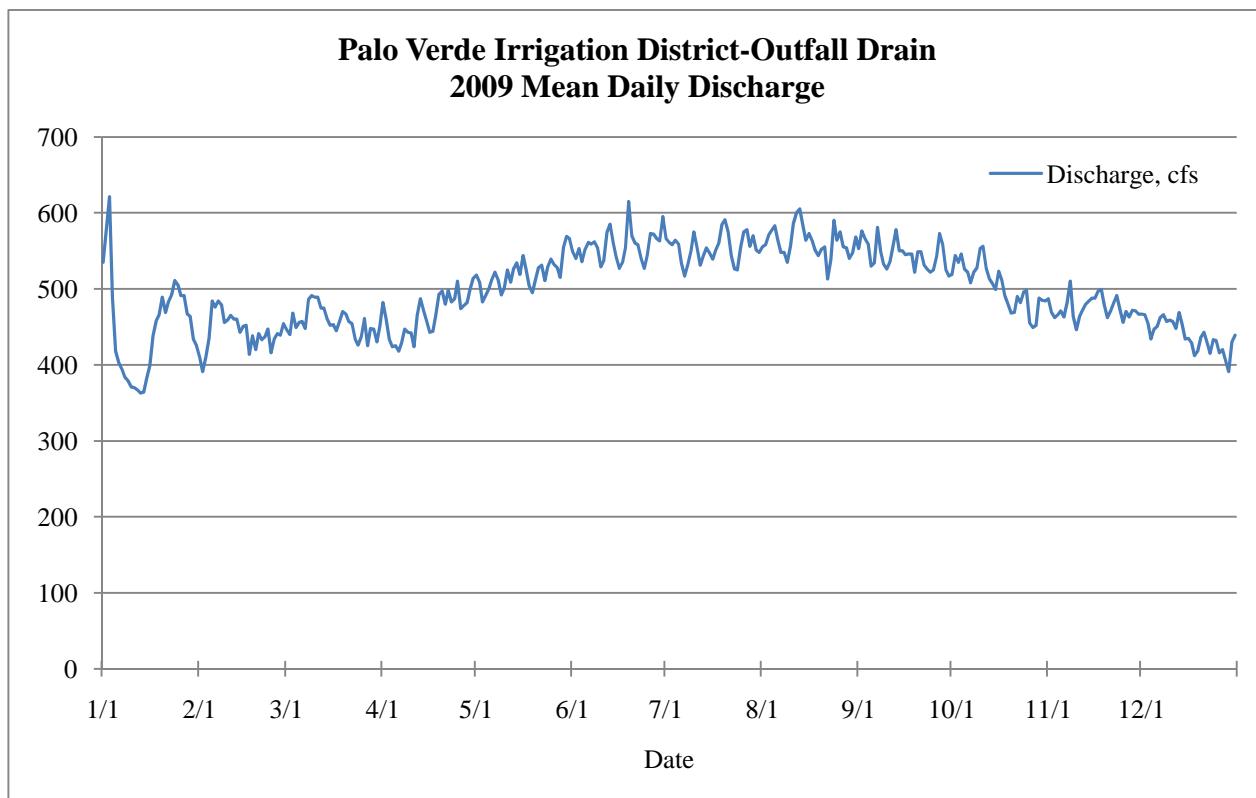

Drainage Area—Undetermined.

Period of Record—January 1, 2005 to current year.

Gage—A Sutron Xlite datalogger (Model 9210-0000-1B) records water elevation and velocity measured by a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

Extremes—Maximum daily discharge, 1,200 cubic feet per second (cfs), Aug. 10, 2005; minimum daily discharge, 326 cfs, Feb. 26, 2005; maximum hourly discharge, 3,230 cfs (estimated), Aug. 9, 2005 at 22:00, caused by an overbank condition created from significant side wash inflow; minimum hourly discharge, 225 cfs, Nov. 29, 2006 at 14:00.

Remarks—None.

Calendar Year 2009 Total 181679 Mean 497 Max 621 Min 363 Ac-ft 360360

Maximum Discharge

Date Time G.H. Discharge
Jan. 3 10:00 215.37 640

Minimum Discharge

Date Time G.H. Discharge
Jan. 14 10:00 213.81 356

Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.

Glossary

Acre-foot (ac-ft)—The quantity of water required to cover one acre to a depth of one foot, the equivalent of 43,560 cubic feet or about 326,000 gallons.

Control—Channel features downstream of a gage which determine the stage-discharge relation at the gage. Controls can be either artificial or natural. Artificial controls consist of man-made structures like weirs and flumes, while natural controls consist of channel constrictions, outcroppings, rock or gravel beds, and uniform stretches of channel.

Cubic Feet per Second (ft³/s or cfs)—The rate of discharge representing a volume of one cubic foot passing a given point during one second, the equivalent of approximately 7.48 gallons per second or 448.8 gallons per minute.

Data—Characteristic observations, often represented as numbers, made over specific points in time.

Datalogger—An electronic device that records data in time sequence with related events. Dataloggers take measurements from sensors and/or transducers located at a gaging station.

Datum—Any numerical quantity that serves as a reference or base for another comparable quantity.

Discharge—The volume of water that passes a given point within a given period of time.

Discharge-Indicator Relationship—The relationship between an indicator discharge and a volume of water, per unit of time, flowing in a channel or pipe.

Drainage Area—The area of the associated drainage basin expressed in square miles.

Elevation—The height of water above mean sea level.

Estimated Data or Record—Data that has been estimated to replace missing or erroneous gage data by a method of prediction that includes averaging, interpolation, or correlation.

Extremes—The maximum and minimum hourly and daily discharges recorded in the date range listed in the period of record.

Final Data—Provisional data that have been checked for completeness and accuracy and may have been adjusted and corrected based on observations.

Gage—An instrument or device used to measure a medium's magnitude or position, such as water elevation or velocity.

Gage-Height (G.H.)—The height of water at a gage.

Gaging Station—A particular location in a stream, canal, lake, pipe, or reservoir where systematic observations of hydrologic data are obtained.

Global Positioning System (GPS)—A system of orbiting satellites and receiving devices used to compute positions on the earth.

Hydrologic Unit Code (HUC)—A geographic area representing part or all of a surface drainage basin or distinct hydrologic feature that is represented as an eight digit number.

Latitude—The angular distance north or south of the earth's equator, measured in degrees along a meridian, as on a map or globe.

Longitude—The angular distance on the earth's surface, measured east or west from the prime meridian at Greenwich, England, to the meridian passing through a position, expressed in degrees and minutes or DM.

Location—The location of the gaging station with respect to physical features in the vicinity, and with respect to the reference plane mentioned in the station name.

Meridian—Lines measuring the distance east and west around the earth at right angles to the equator. Meridians are great circles of the earth passing through both poles also known as lines of *Longitude*.

Maximum Discharge—The maximum reported hourly or daily discharge for the calendar year.

Minimum Discharge—The minimum reported hourly or daily discharge for the calendar year.

Negative Discharge—The volume of water that changes direction, and passes a gage for a second time. A negative discharge is subtracted from discharge and acre-feet totals.

Period of Record—A period for which published records exist for a gaging station.

Provisional Data—Data collected in real-time that have received little or no review. Inaccuracies in data may be present because of instrument malfunctions or physical changes at the measurement location. Significant revisions to the data may result upon review and computation of final data record.

Quarter-quarter—A method used to subdivide *sections*; each section is divided into four quarter sections: southeast, southwest, northeast, and northwest. Each subdivided section is then divided again into four quarter sections giving a total of 16 quadrants per section.

Real-Time Data—Provisional data that have been computed, and made available immediately.

River Mile—The curvilinear distance, in miles, measured upstream from the beginning of the stream along the path of the stream.

Section—A unit of land area, generally equal to one square mile or 640 acres. The section is part of a description of the location of land using the Public Land Survey System (PLSS) of the United States Government.

Sensor—Any device that senses a change in a physical or chemical quantity, and provides an electrical output for measurement by a datalogger.

Stage—The height of water above stream bed or an arbitrary datum.

Stage-Discharge Relationship—The relationship between gage height, and the volume of water, per unit of time, flowing in a channel.

Township—A territorial subdivision, generally considered six miles long, six miles wide, and containing 36 *sections*. The township designation is part of a description of the location of land using the Public Land Survey System (PLSS) of the United States Government, and includes the 40-acre subdivision within a *quarter, section, township, and range*. The PLSS is based on the concept of a township as a square parcel of land six miles on each side. Its location is established as being so many six-mile units east of a north-south line (called a meridian), and so many six-mile units north or south of an east-west line (called the baseline). The township is described by township and range (e.g., T. 4 N., R. 23 E.). Each township is further divided into 36 parts called sections, each approximately one mile square in area.

Transducer—Any device that converts energy from one form to another, as from acoustic energy to electric or mechanical energy.

Velocity-Index—Continuous velocity measurements made from an in-situ velocity sensor that measures a sample volume of a stream. Velocity-Index measurements are required when the channel has poor control or experiences backwater conditions.

Velocity-Index Relationship—The relationship between an indicator velocity, and the mean stream velocity, computed from a discharge measurement, flowing in a channel.

World Geodetic System of 1984 —The World Geodetic System of 1984 (WGS84) is the datum that is used by the Global Positioning System (GPS). The datum is defined and maintained by the United States National Geospatial-Intelligence Agency (NGA).
