## **Abbreviated Terms and Symbols**

The following abbreviated terms and symbols are found in the text, map, tables, and graphs contained within this report.

ac-ft	acre-feet
cfs	cubic-feet per second
°	degrees
E	east
elev	elevation
ft	feet
gh	gage-height
gps	global positioning system
id	identification
max	maximum
mi	mile (miles)
mi <sup>2</sup>	square mile (miles)
min	minimum
'	minutes
N	north
NE	northeast
NW	northwest
R	range
S	south
SE	southeast
SW	southwest
T	township
W	west

## **Explanation of Records**

The Bureau of Reclamation, Blythe Hydrographic Office is responsible for collecting surface water records along the Lower Colorado River between Hoover Dam and the Southern International Boundary with Mexico. The data provided in this report is not inclusive to the data collection efforts of the Lower Colorado Region but indicative of the record collection responsibilities of the Operations Support Group of the Boulder Canyon Operations Office.

### **Data Collection and Computation**

The data collected consist of records of stage, velocity, and discharge values and empirical measurements of discharge of streams or canals. Records of stage, velocity-index, and/or discharge-index are obtained from digital dataloggers that measure electronic sensors at programmed time intervals, and calculate mean hourly values. The recorded values are transmitted via telemetry to the Lower Colorado River Hydrologic Database in Boulder City, Nevada and are downloaded from gaging station field locations by Reclamation Hydrologic Technicians with a laptop computer. Electronic sensor selection is dependent on the parameters required to measure a component of discharge, and vary by gaging station. Measurements of discharge are made with a mechanical current meter, an acoustic Doppler velocimeter, or an acoustic Doppler current profiler. Measurement techniques comply with standards established by the United States Geological Survey and follow guidelines set forth by the Blythe Hydrographic Office draft quality assurance and quality control plan.

For stream-gaging discharge record stations, discharge rating tables for an appropriate range of stage are prepared from stage-discharge curves. Rating curves are extended to compute discharge values outside of the minimum and maximum measured values by plotting regressions generated from linear, logarithmic, or power equations. Hourly mean discharge values are computed from hourly mean gage-heights applied to rating tables. Monthly and yearly mean discharges are computed from mean daily discharge values. Stage-shifting and velocity-shifting methods are applied to rating curves when continual or temporary physical changes impact the discharge relationship. Dynamic physical conditions may include changes in control or channel geometry caused by migrating sandbars on the channel bottom, seasonal variations in aquatic growth, lack of bank line stability, and side wash ephemeral flows. Shift adjustments may be prorated with time or stage.

At gaging stations where stage-discharge relationships are not accurate due to backwater effect caused by downstream ponding in reservoirs, variations in downstream gate configurations, or other situations where no artificial or natural controls are present, the use of velocity-index or discharge-index techniques may be used. The velocity indexing method consists of using an index velocity to calculate an average velocity for the flow in the stream. This average velocity along with a stage-area relationship is used to calculate discharge. Gaging stations that utilize pipe meter devices to measure discharge often require correction through the use of a discharge-index relationship. The discharge indexing method consists of using an index discharge to calculate stream discharge by direct correlation.

For some gaging stations, there are periods when no data are available or data are in error, and cannot be used to compute hourly discharge. This condition occurs when the datalogger or connected sensors malfunction due to failure, drift, or fouling. For such periods, discharge is computed from an estimated independent variable using various techniques including, but not limited to, interpolation, projecting from surrounding data, or a hydrologic relation developed with another stream gage.

## Data Presentation

Records published for each continuous-record station consist of three parts: (1) station manuscript; (2) hydrograph; and (3) data table of daily mean values for the current year with summary data. Times provided reference Mountain Standard Time.

### Station Manuscript

The station manuscript provides descriptive information such as station location, period of record, historical extremes, and other remarks pertinent to station operation. The following descriptions detail the type of information included in each section.

**Location**—Information on the location is obtained from Global Positioning System data referencing the World Geodetic System of 1984, including reference to physical features in the vicinity. Township, range, section, and meridian descriptions are obtained from USGS topographical maps. In a few locations, the grid system is not available on the Fort Mojave Indian Reservation. In these locations, the grid system has been projected to obtain the required information. Descriptions of distance between a gaging station, and a nearby town are provided as a linear distance, not a driving distance. Distances downstream of dams are provided in river miles between the upstream dam, and the gaging station.

**Drainage Area**—Drainage areas were cited from the Inter-agency Committee River Mile Index published in January 1976 and measured using Reclamation aerial orthophotographs and USGS topographic quadrangles. Gaging stations with drainage areas listed as “not applicable” indicate a stream or canal that is not impacted by runoff. Drainage areas listed as “undetermined” indicate a drainage area that has not been outlined and/or measured by Reclamation.

**Period of Record**—The period for which there are published records for the station or for an equivalent station. An equivalent station is one that was in operation at a time when the present station was not in operation and the location was such that records from it can reasonably be considered equivalent with records from the present station. Calendar year 2005 was the first year that a final record was published by the Blythe Hydrographic Office. In many cases, the gaging stations mentioned in this publication have been in operation for some time prior to 2005. However, the records have not been finalized or published for any gage prior to 2005.

**Gage**—A description of the gage used during the reporting year including the gage equipment and the technique used to compute the record.

**Extremes**—Extreme discharge values are listed as minimum and maximum hourly, and daily mean values for the record period listed in the period of record section.

**Remarks**—Periods of estimated hourly discharge record will be identified in this paragraph if the method used to estimate the record was non-standard. The paragraph is also used to present information relative to the record that may include details regarding special methods of computation, conditions that affect flow at the station, information on system outages, and other pertinent items.

### Hydrograph, Data Table, and Summary Data

The discharge hydrograph displays mean daily discharge in a graphical format. The data table that follows each station manuscript and discharge hydrograph provides mean daily discharge values presented in tabular format. Basic statistical information is provided near the bottom summarizing each month,

including total, mean, maximum, and minimum discharge values in cubic-feet per second for the month and total volume expressed in acre-feet. In addition, annual discharge in cubic-feet per second, and volume in acre-feet are provided for the year along with the annual mean, maximum, and minimum daily discharges. Maximum and minimum hourly discharge values located on the bottom of the table indicate the date, time, stage, and discharge that the hourly extremes occurred during the year.

The stage hydrograph displays mean daily stage values in a graphical format. The data table that follows each manuscript and stage hydrograph provides mean daily stage values presented in tabular format. Basic statistical information is provided near the bottom summarizing each month, including mean, maximum, and minimum values for the month. In addition, annual mean, maximum, and minimum daily values are provided. Maximum and minimum stage values located on the bottom of the table indicate the date, time, and stage that the hourly extremes occurred during the year.

Stage values throughout this report will be referenced as either gage-height or stage, where no vertical datum is used, or as an elevation which references sea level using the National Geodetic Vertical Datum of 1929.

## **Document Layout**

The hydrographs and data tables are grouped by entity and gage type. The report begins with lakes, then Colorado River gaging stations, and concludes with diversions and returns from the Colorado River. Each grouping is presented geographically beginning with the northern most gage.

**Lower Colorado River  
Gaging Stations Operated  
And Reported By The  
Blythe Hydrographic Office**

## **Lake Gaging Stations**

## Lake Mohave at Davis Dam

**Location**—Latitude 35° 11.765', longitude -114° 34.189', in the NW $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 19, T. 21 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mi 275.9, 55.7 mi south of Boulder City, Nevada, 2.0 mi north of Laughlin, Nevada, and 66.3 river mi downstream of Hoover Dam.

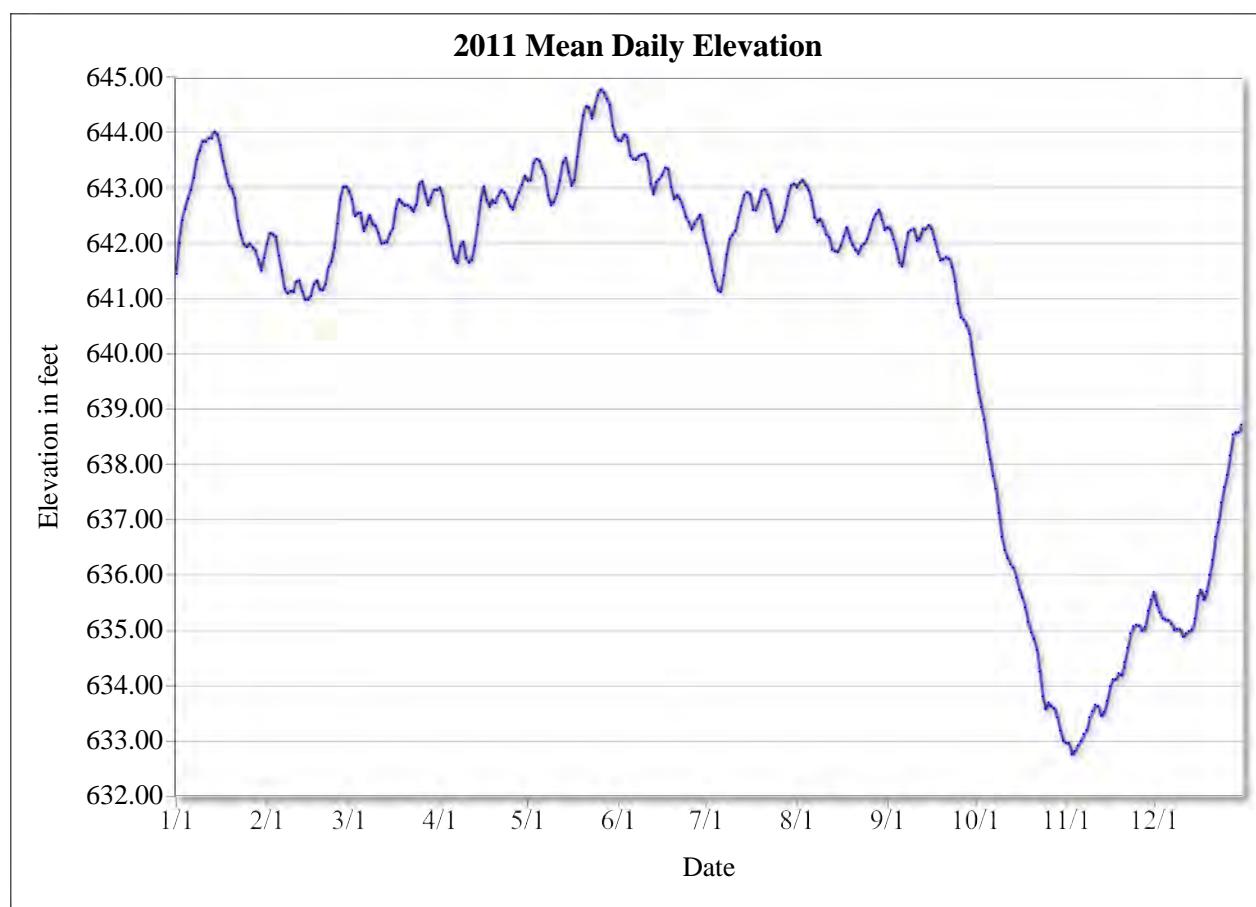

**Drainage Area**—169,300 mi<sup>2</sup>.

**Period of Record**—January 1, 2011 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR).

**Extremes**—Maximum daily elevation, 644.78 ft, May 26, 2011; minimum daily elevation, 632.75 ft, Nov. 3, 2011; maximum hourly elevation, 644.92 ft, May 26, 2011 at 01:00; minimum hourly elevation, 632.63 ft, Nov. 3, 2011 at 16:00.

**Remarks**—None.

## Lake Havasu at Parker Dam

**Location**—Latitude 34° 17.784', longitude -114° 08.311', in the NW $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 3, T. 2 N., R. 27 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mi 192.0, 16.6 mi south of Lake Havasu City, Arizona, 13.3 mi north of Parker, Arizona, and 83.9 river mi downstream of Davis Dam.

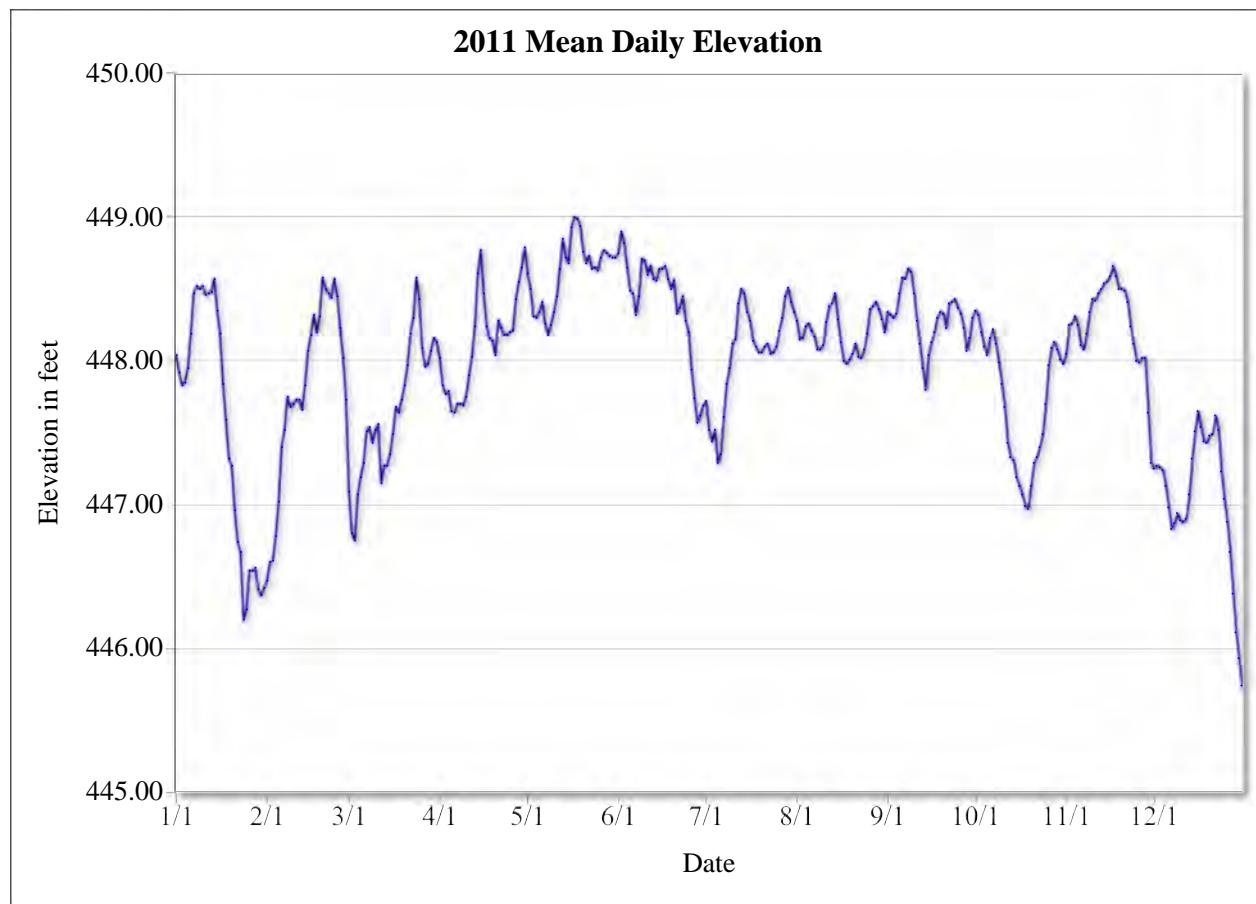

**Drainage Area**—178,800 mi<sup>2</sup>.

**Period of Record**—January 1, 2011 to current year.

**Gage**—A Sutron Xpert datalogger (Model 8080-0000-2A) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR).

**Extremes**—Maximum daily elevation, 449.00 ft, May 17, 2011; minimum daily elevation, 445.74 ft, Dec. 31, 2011; maximum hourly elevation, 449.11 ft, May 18, 2011 at 15:00; minimum hourly elevation, 445.68 ft, Dec. 31, 2011 at 17:00.

**Remarks**—None.

Annual Mean 447.98 Daily Max 449.00 Daily Min 445.74

#### Maximum Elevation

Date	Time	Elev
May 18	15:00	449.11

#### Minimum Elevation

Date	Time	Elev
Dec. 31	17:00	445.68

**Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.**

## **Colorado River Gaging Stations**

## Colorado River Below Big Bend

**Location**—Latitude 35° 05.303', longitude -114° 37.458', in the SW $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 10, T. 33 S., R. 66 E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mi 264.7, 2.4 mi southwest of Bullhead City, Arizona, 17.2 mi north of Needles, California, and 11.1 river mi downstream of Davis Dam.

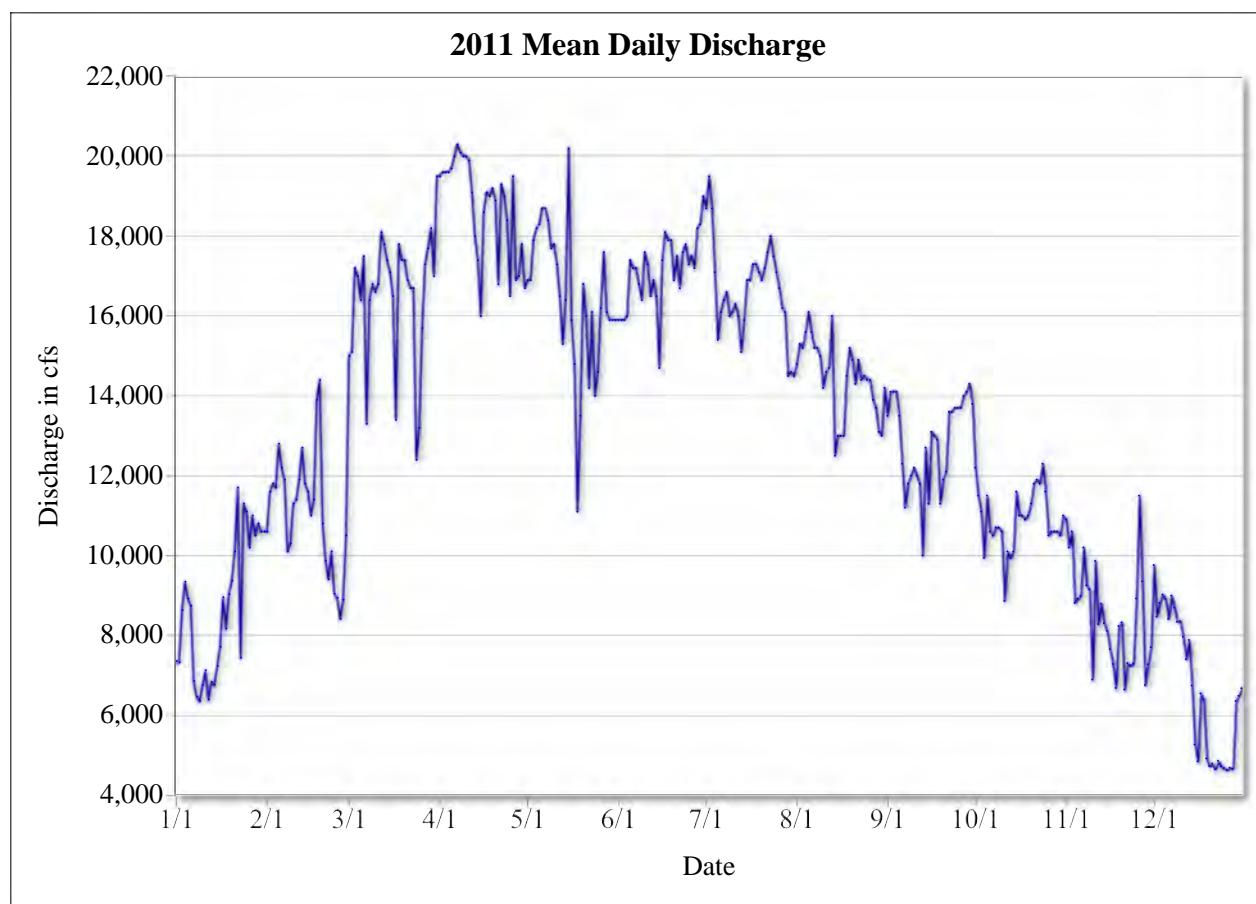

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2008 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 25,500 cfs, Mar. 3, 2009; minimum daily discharge, 4,540 cfs, Feb. 1, 2010; maximum hourly discharge, 27,100 cfs, Apr. 1, 2010 at 22:00; minimum hourly discharge, 2,800 cfs, Dec. 22, 2011 at 14:00.

**Remarks**—None.

## Colorado River at River Section 41

**Location**—Latitude 34° 41.255', longitude -114° 27.759', in the SW $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 13, T. 15 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, at river mi 231.0, 13.5 mi south of Needles, California, 16.2 mi north of Lake Havasu City, Arizona, and 44.9 river mi downstream of Davis Dam.

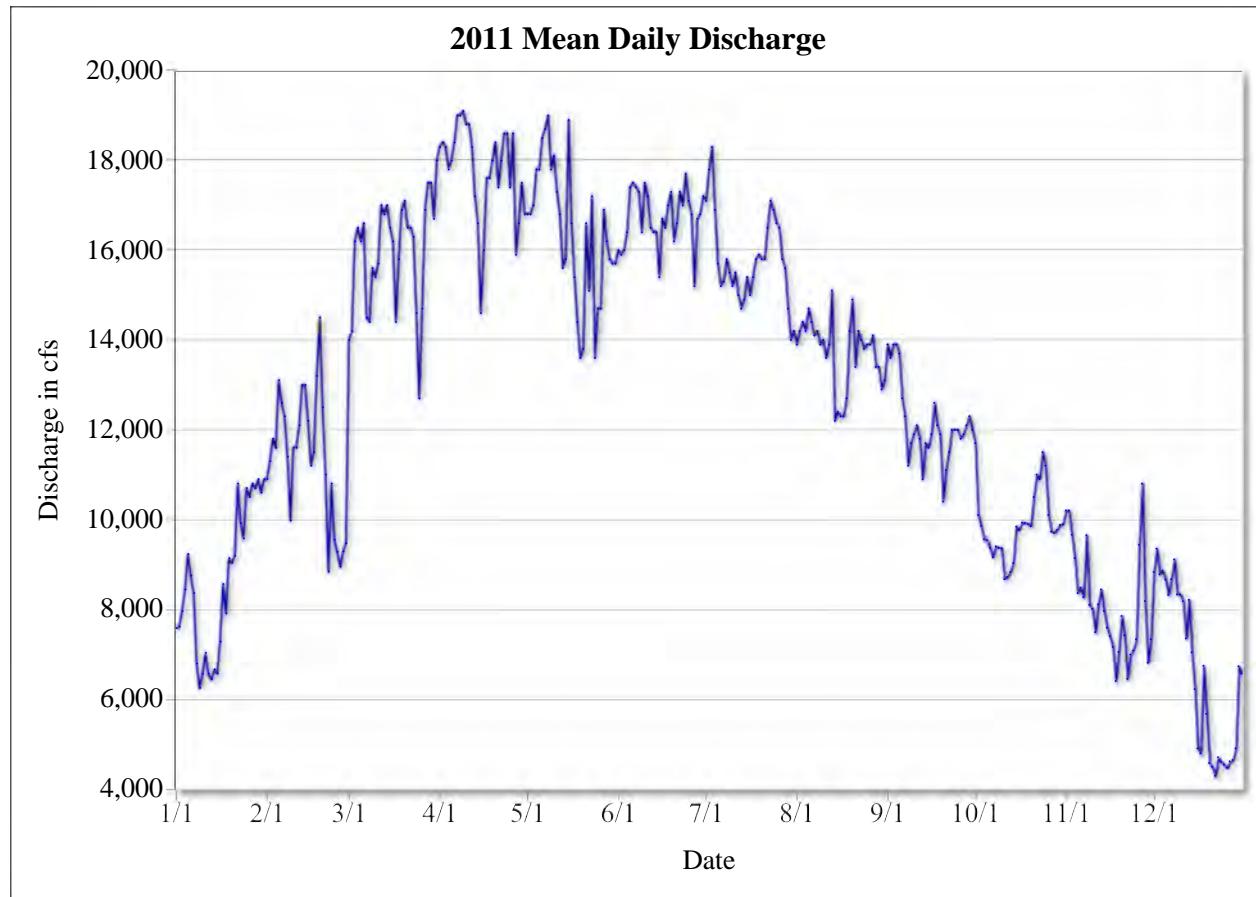

**Drainage Area**—172,300 mi<sup>2</sup>.

**Period of Record**—June 29, 2006 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation and velocity measured with a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

**Extremes**—Maximum daily discharge, 23,300 cfs, Apr. 24, 2009; minimum daily discharge 4,100 cfs, Dec. 8, 2007; maximum hourly discharge, 23,610 cfs, Apr. 24, 2009 at 12:00; minimum hourly discharge, 2,970 cfs, Dec. 22, 2011 at 23:00.

**Remarks**—None.

**Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.**

## Colorado River at Parker Gage

**Location**—Latitude 34° 08.934', longitude -114° 18.468', in the NW $\frac{1}{4}$  SE $\frac{1}{4}$  of Section 2, T. 9 N., R. 20 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mi 175.0, 1.1 mi west of Parker, Arizona, 40.4 mi north of Blythe, California, and 17.0 river mi downstream of Parker Dam.

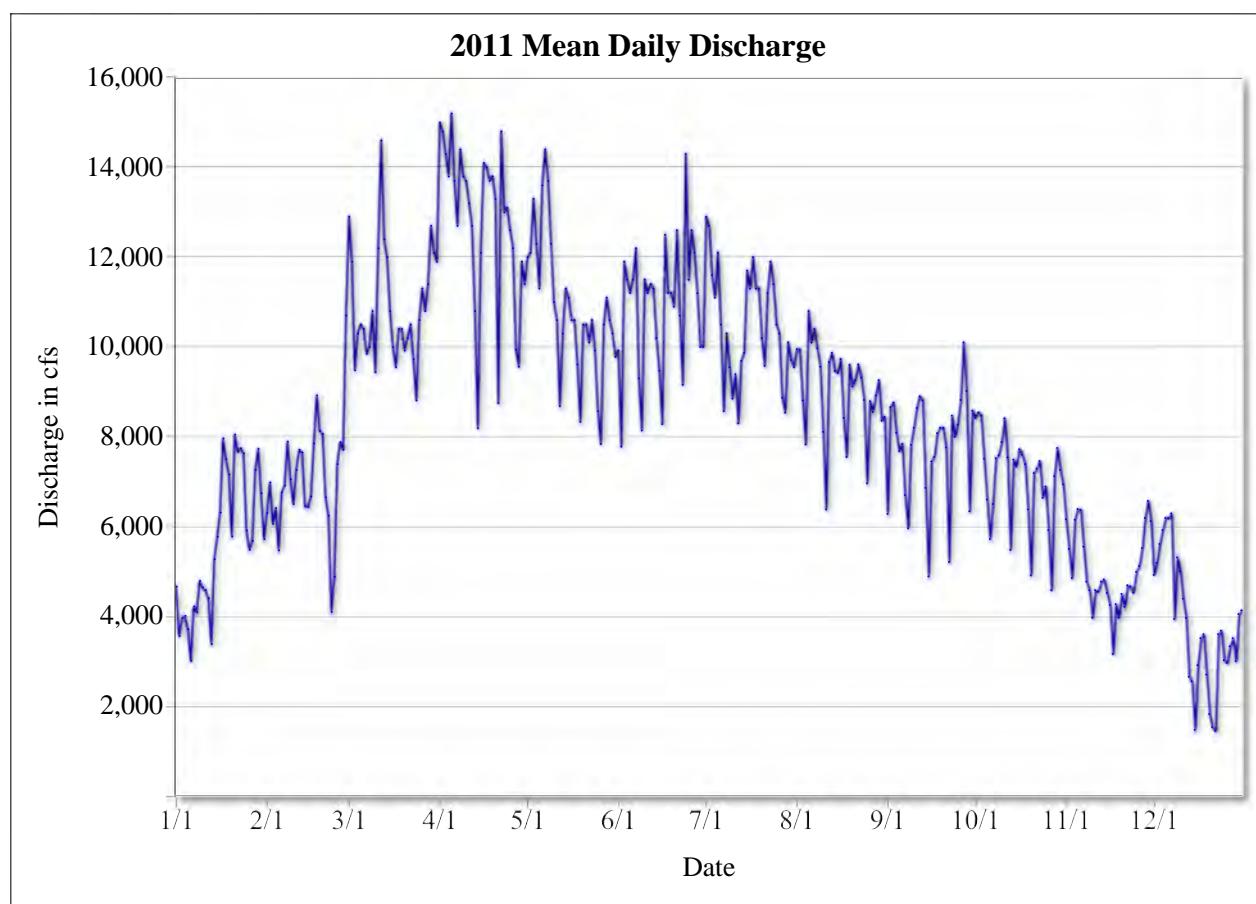

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 17,100 cfs, Apr. 22, 2009; minimum daily discharge, 1,450 cfs, Dec. 20, 2008; maximum hourly discharge, 21,600 cfs, Apr. 16, 2011 at 22:00; minimum hourly discharge, 487 cfs, Aug. 18, 2006 at 07:00.

**Remarks**—None.

## Colorado River at Water Wheel

**Location**—Latitude 33° 55.914', longitude -114° 32.108', in the NW $\frac{1}{4}$  SW $\frac{1}{4}$  of Section 22, T. 7 N., R. 22 W., Gila-Salt meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mi 151.6, 20.7 mi south of Parker, Arizona, 22.3 mi north of Blythe, California, and 40.4 river mi downstream of Parker Dam.

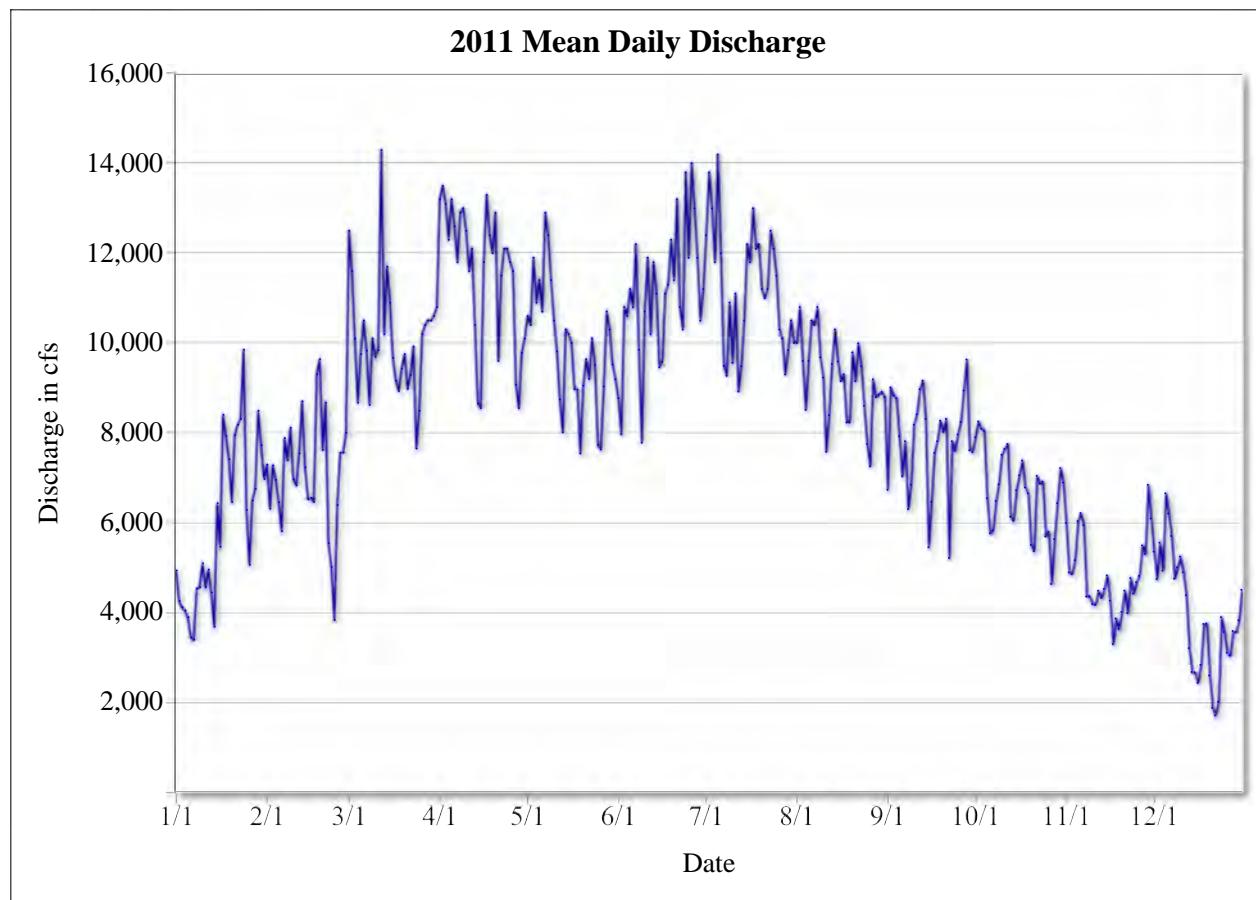

**Drainage Area**—180,700 mi<sup>2</sup>.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 15,700 cfs, Apr. 22, 2009; minimum daily discharge, 1,700 cfs, Dec. 22, 2011; maximum hourly discharge, 18,920 cfs, Apr. 23, 2009 at 02:00; minimum hourly discharge, 1,520 cfs, Dec. 22, 2011 at 19:00.

**Remarks**—None.

## Colorado River Below Palo Verde Dam

**Location**—Latitude 33° 43.155', longitude -114° 29.852', in the SE $\frac{1}{4}$  NE $\frac{1}{4}$  of Section 2, T. 4 N., R. 22 W., Gila-Salt River meridian, Riverside County, California, Hydrologic Unit 15030104, river mi 132.6, 8.9 mi north of Blythe, California, 32.1 mi south of Parker, Arizona, and 59.4 river mi downstream of Parker Dam.

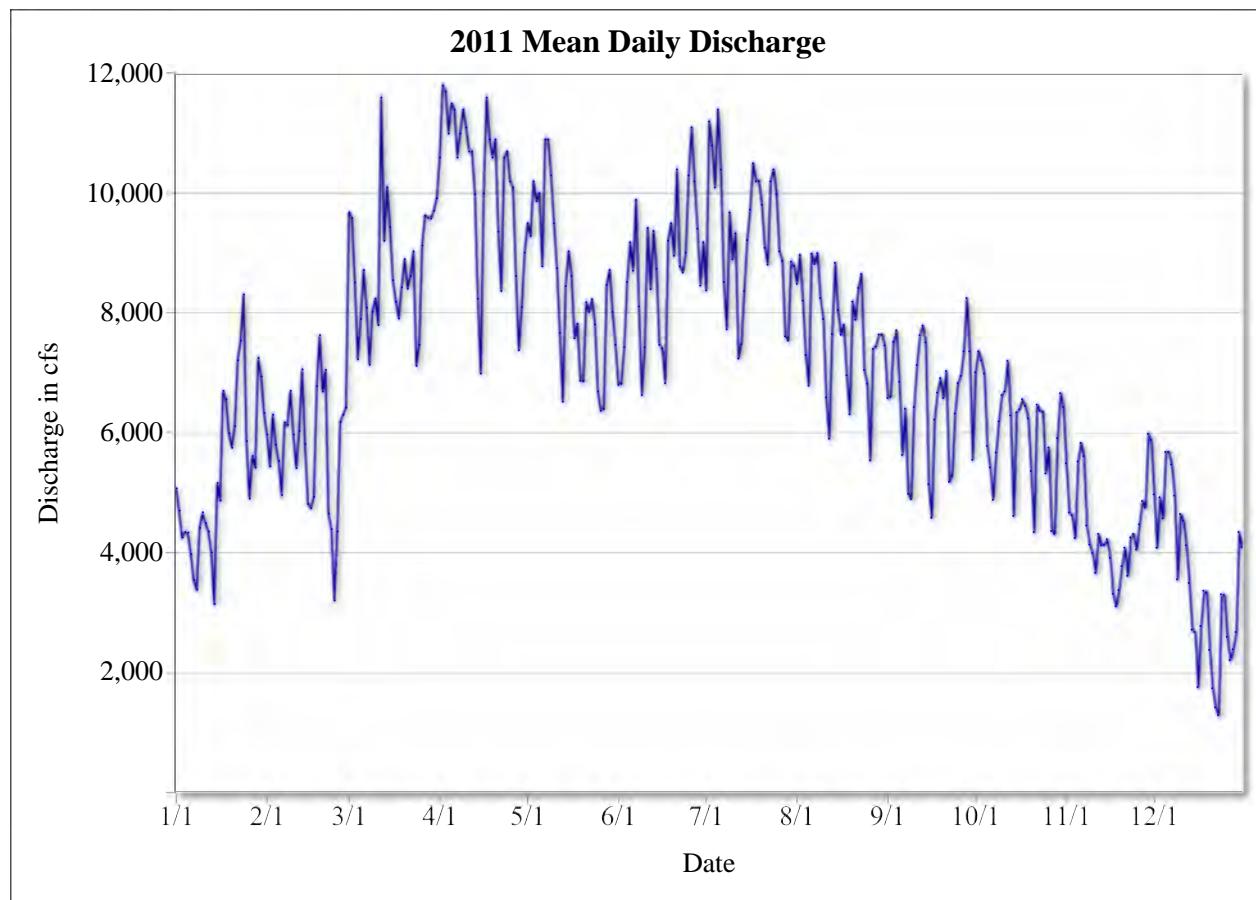

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron AccuBubble self-contained bubbler system (Model 5600-0131-4). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 13,200 cfs, Apr. 8, 2008; minimum daily discharge, 1,270 cfs, Dec. 27, 2008; maximum hourly discharge, 14,710 cfs, Apr. 17, 2007 at 07:00; minimum hourly discharge, 309 cfs, Jan. 10, 2009 at 16:00.

**Remarks**—None.

## Colorado River Below McIntyre Park

**Location**—Latitude 33° 30.659', longitude -114° 34.090', in the SE $\frac{1}{4}$  lot 18 of Section 18, T. 2 N., R. 22 W., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, river mi 113.3, 6.9 mi southeast of Blythe, California, 56.1 mi north of Yuma, Arizona, and 78.7 river mi downstream of Parker Dam.

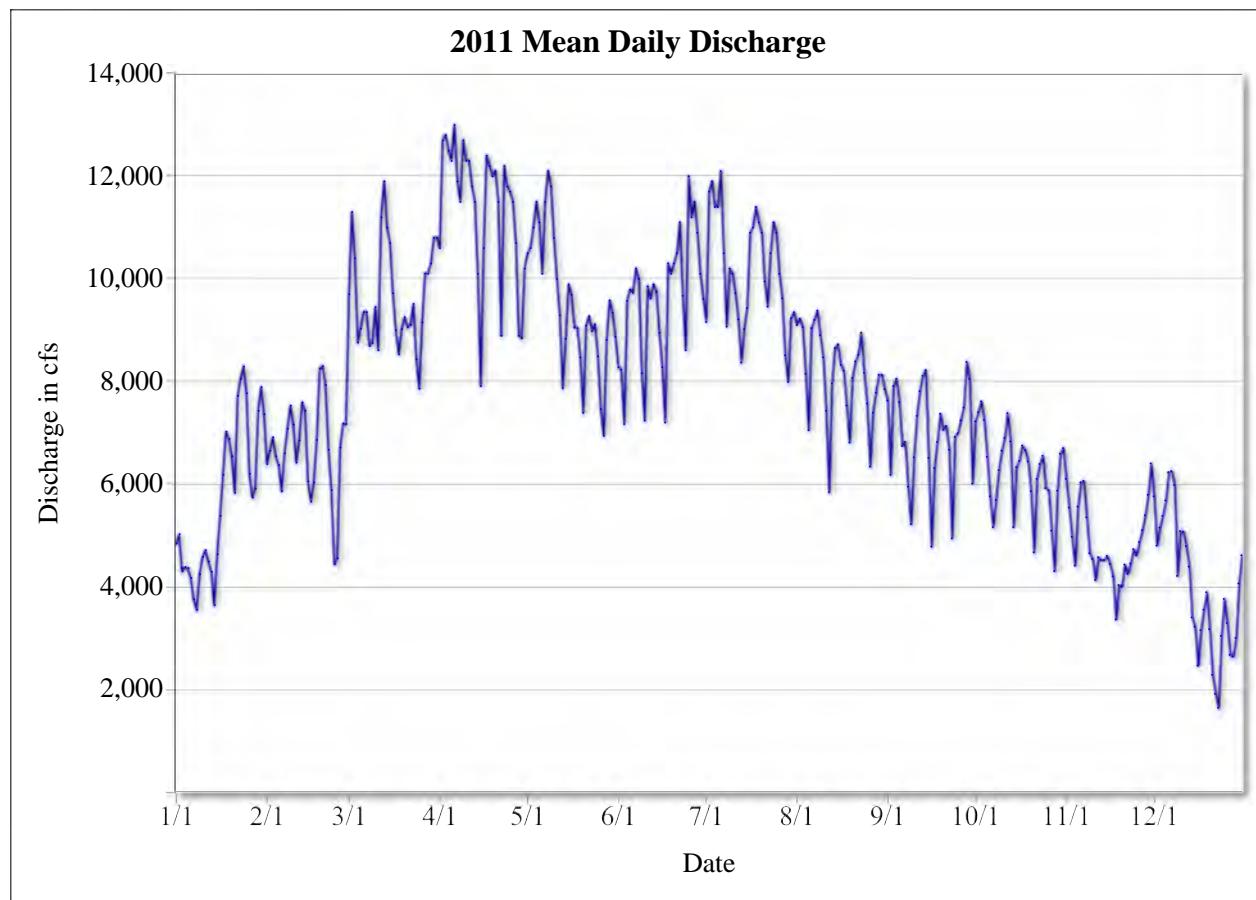

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2011 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron stage discharge recorder shaft encoder (Model SDR-0001). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 13,000 cfs, Apr. 6, 2011; minimum daily discharge, 1,640 cfs, Dec. 23, 2011; maximum hourly discharge, 15,200 cfs, Apr. 6, 2011 at 13:00; minimum hourly discharge, 1,540 cfs, Dec. 24, 2011 at 05:00.

**Remarks**—None.

**Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.**

## Colorado River at Taylor Ferry

**Location**—Latitude 33° 26.063', longitude -114° 37.567', in the SE $\frac{1}{4}$ , lot 4 of Section 10, T. 1 N., R. 23 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mi 106.3, 12.4 mi south of Blythe, California, 50.8 mi north of Yuma, Arizona, and 85.7 river mi downstream of Parker Dam.

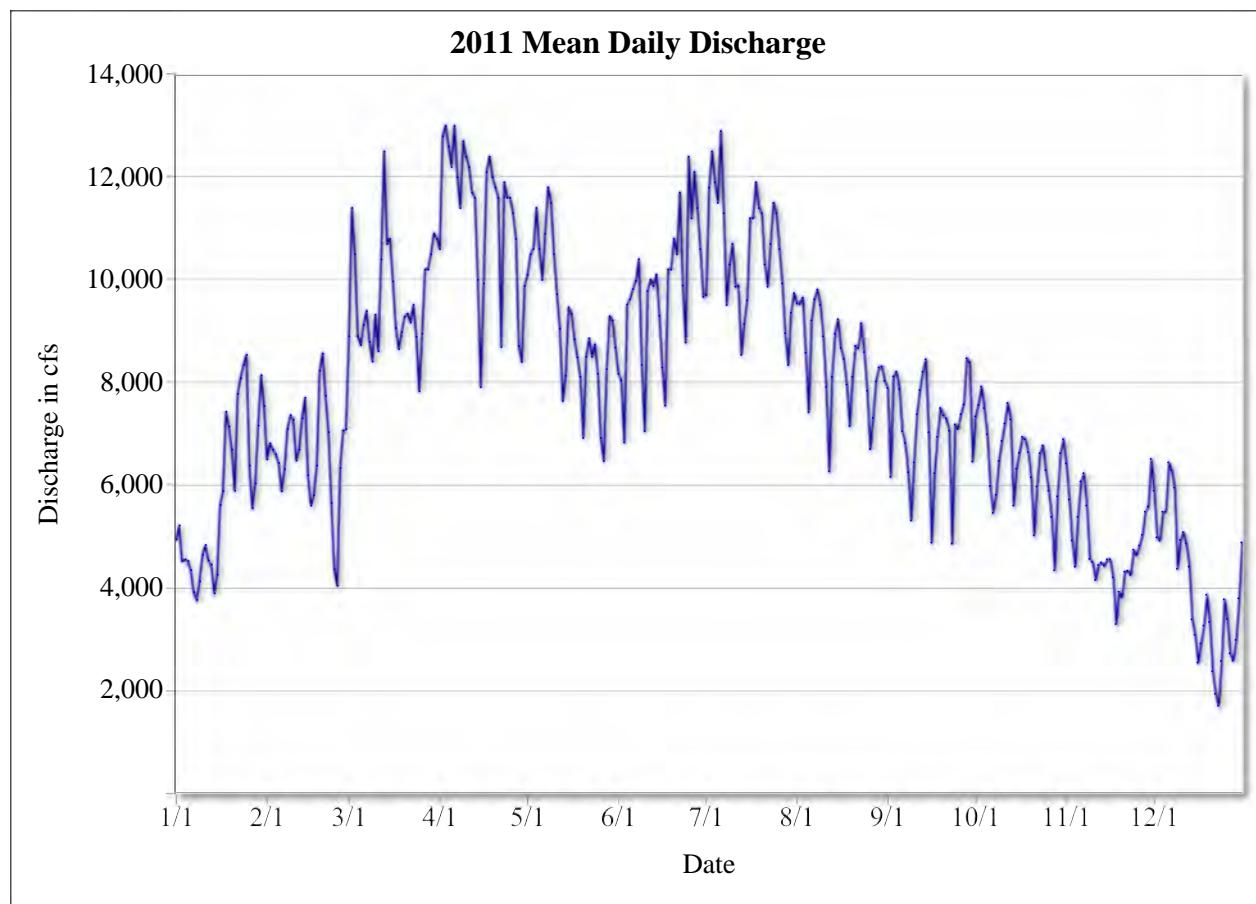

**Drainage Area**—183,700 mi<sup>2</sup>.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 13,200 cfs, Apr. 16, 2008; minimum daily discharge, 1,700 cfs, Dec. 23, 2011; maximum hourly discharge, 15,000 cfs, Apr. 6, 2011 at 16:00; minimum hourly discharge, 1,610 cfs, Dec. 23, 2011 at 08:00.

**Remarks**—None.

## Colorado River Below Oxbow Bridge

**Location**—Latitude 33° 22.060', longitude -114° 42.195', in the NE $\frac{1}{4}$  NE $\frac{1}{4}$  of Section 25, T. 9 S., R. 21 E., San Bernardino meridian, Imperial County, California, Hydrologic Unit 15030104, river mi 98.5, 18.0 mi south of Blythe, California, 46.3 mi north of Yuma, Arizona, and 93.5 river mi downstream of Parker Dam.

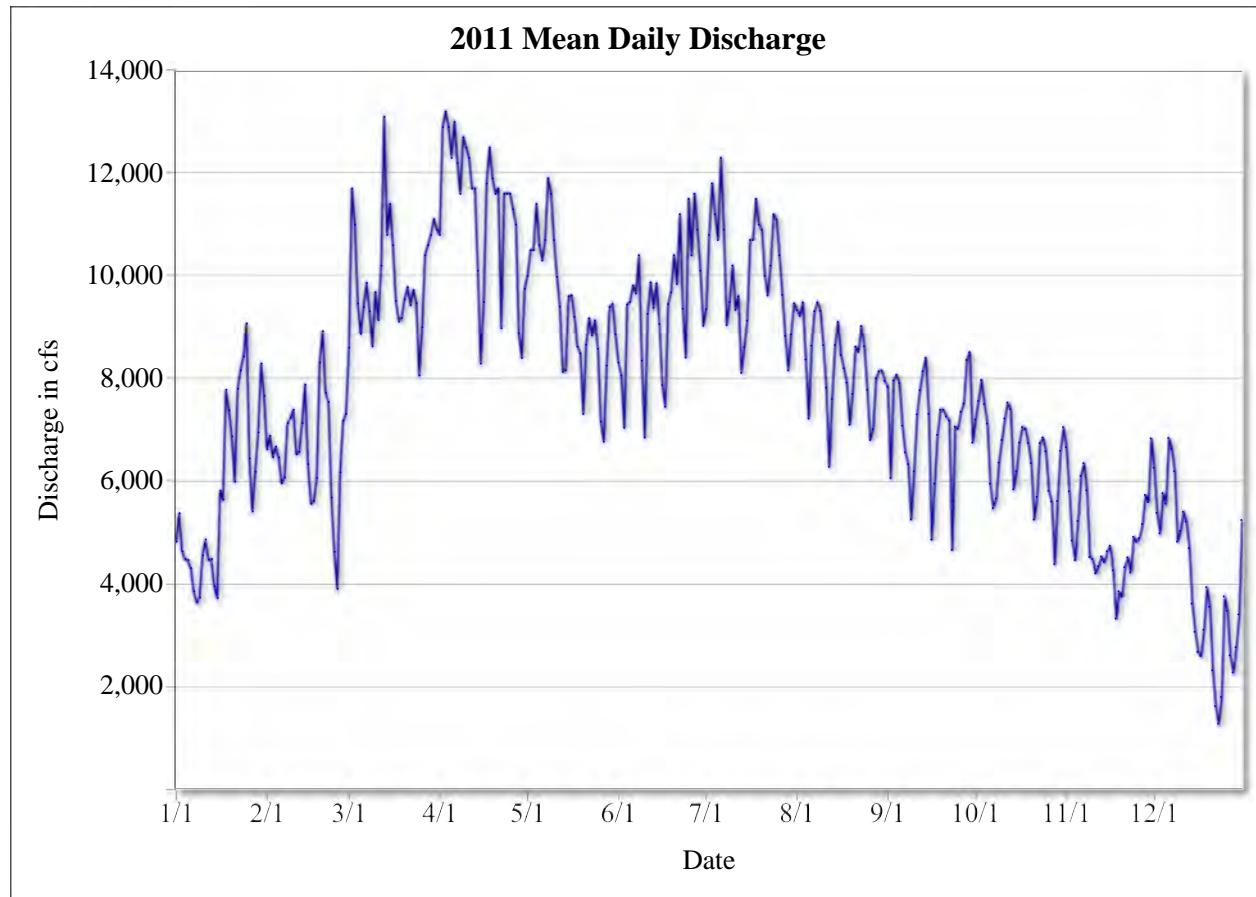

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2011 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron stage discharge recorder shaft encoder (Model SDR-0001). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 13,200 cfs, Apr. 3, 2011; minimum daily discharge, 1,270 cfs, Dec. 23, 2011; maximum hourly discharge, 14,700 cfs, Apr. 6, 2011 at 19:00; minimum hourly discharge, 1,130 cfs, Dec. 23, 2011 at 13:00.

**Remarks**—None.

## Colorado River at Cibola Gage

**Location**—Latitude 33° 13.256', longitude -114° 40.354', in the NE $\frac{1}{4}$  SW $\frac{1}{4}$  of Section 30, T. 2 S., R. 23 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030104, river mi 86.9, 27.4 mi south of Blythe, California, 36.2 mi north of Yuma, Arizona, and 105.1 river mi downstream of Parker Dam.

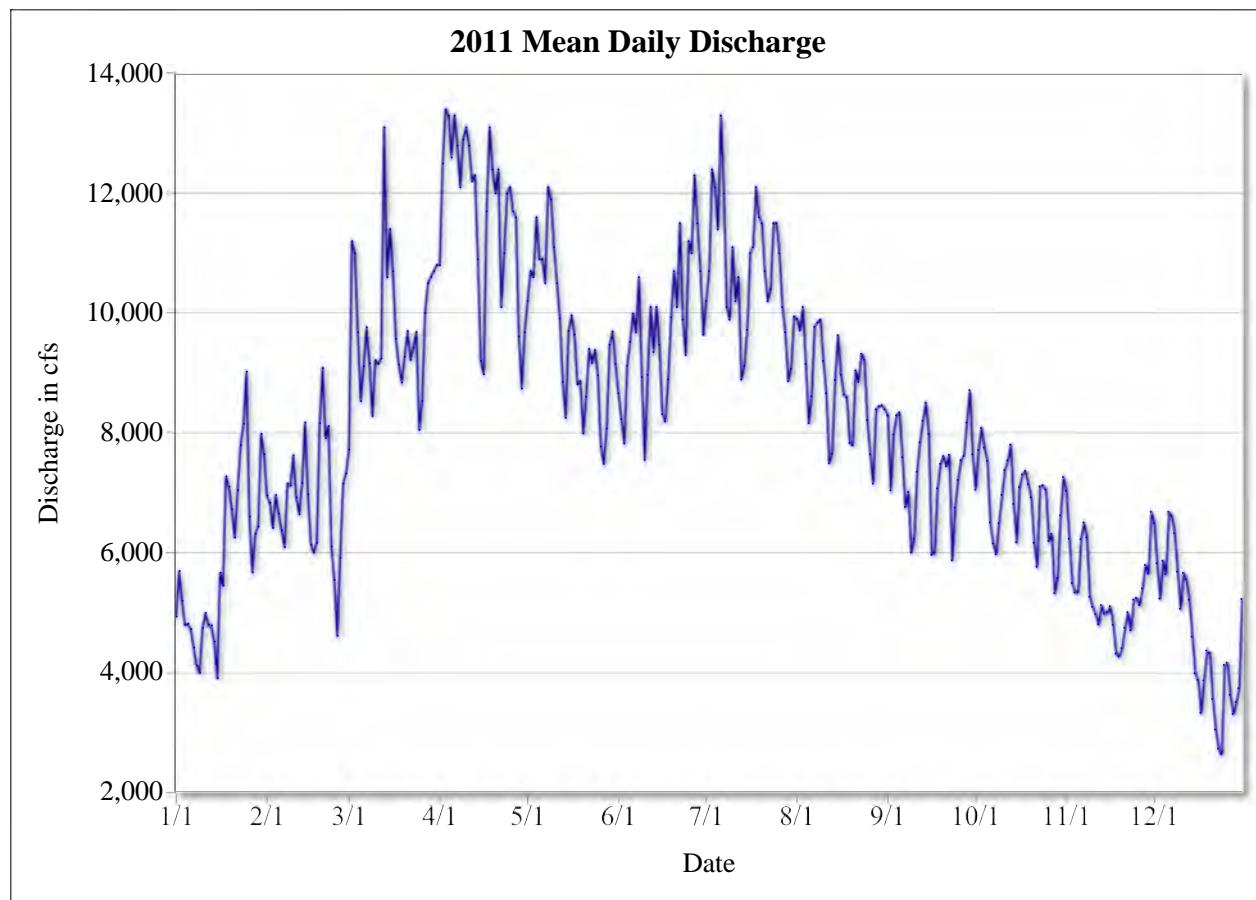

**Drainage Area**—183,800 mi<sup>2</sup>.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation measured with a Sutron multiple interface shaft encoder (Model 56-0540-400-DTR). Discharge is calculated using a stage-discharge relationship.

**Extremes**—Maximum daily discharge, 13,700 cfs, Apr. 16, 2008; minimum daily discharge, 2,570 cfs, Dec. 28, 2008; maximum hourly discharge, 14,900 cfs, Apr. 7, 2011 at 00:00; minimum hourly discharge, 2,210 cfs, Jan. 13, 2005 at 08:00.

**Remarks**—None.

Apr. 7	00:00	209.78	14,900	Dec. 23	19:00	204.86	2,570

A wide-angle photograph of a large concrete dam. Water is cascading down the right side of the dam, creating a white, turbulent waterfall. The dam's surface is dark grey concrete. In the background, there are green trees and hills under a clear blue sky.

## **Diversion and Return Gaging Stations**

## Fort Mojave Tribe-Nevada

**Location**—Latitude 35° 02.940', longitude -114° 37.360', in the NW $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 27, T. 33 S., R. 66 E., Mount Diablo meridian, Clark County, Nevada, Hydrologic Unit 15030101, river mi 261.0, 4.8 mi south of Bullhead City, Arizona, 14.5 mi north of Needles, California, and 14.9 river mi downstream of Davis Dam.

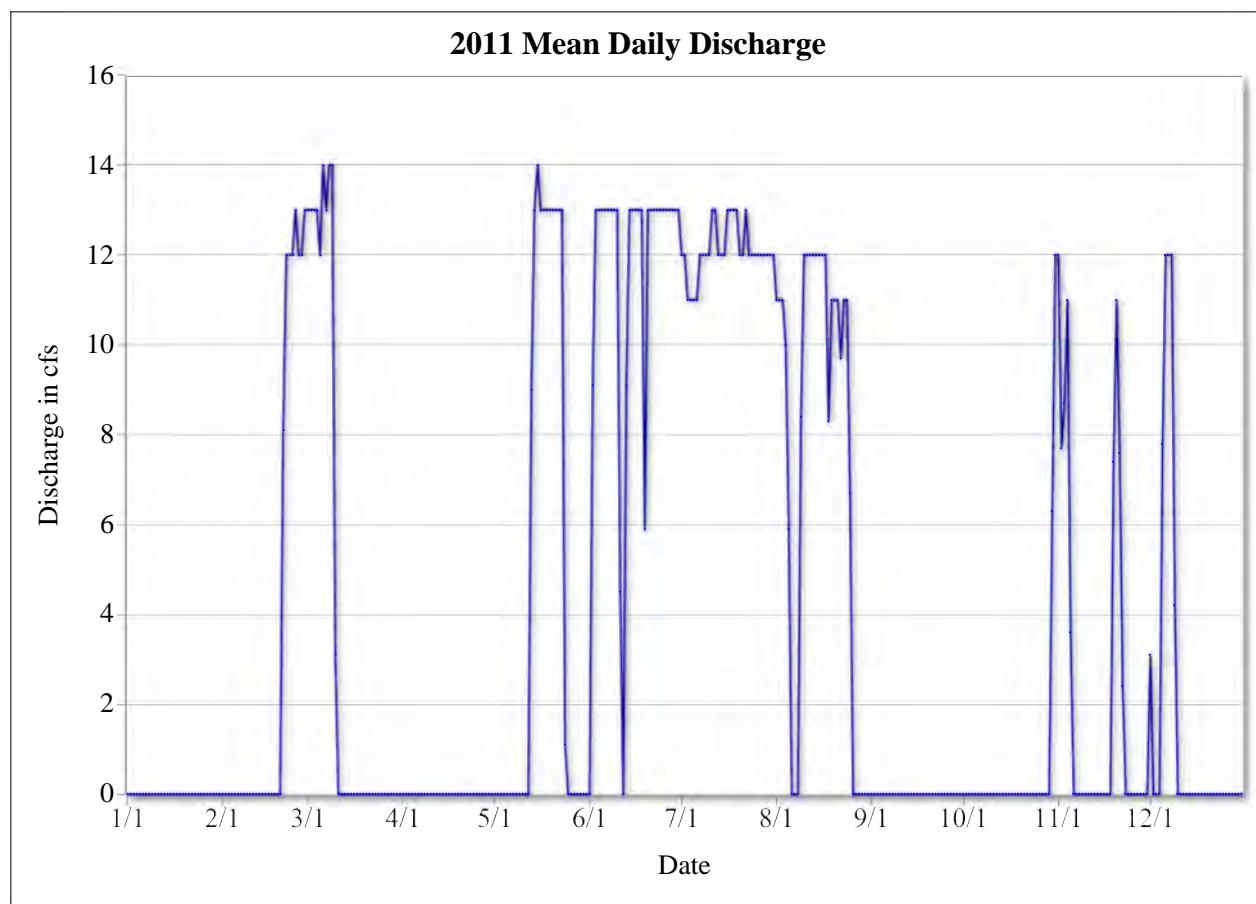

**Drainage Area**—Not applicable.

**Period of Record**—January 1, 2006 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records discharge values measured with a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted in the discharge side of the diversion pipe. Discharge is calculated using a discharge-index relationship.

**Extremes**—Maximum daily discharge, 15 cfs, Apr. 15, 2008; minimum daily discharge, no diversion at times; maximum hourly discharge, 16 cfs, Feb. 14, 2008 at 13:00; minimum hourly discharge, no diversion at times.

**Remarks**—None.

**Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.**

## Fort Mojave Tribe-California 2 (West)

**Location**—Latitude 34° 58.022', longitude -114° 38.173', in the NE $\frac{1}{4}$  NW $\frac{1}{4}$  of Section 13, T. 10 N., R. 22 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mi 254.9, 10.4 mi south of Bullhead City, Arizona, 8.9 mi north of Needles, California, and 21.0 river mi downstream of Davis Dam.

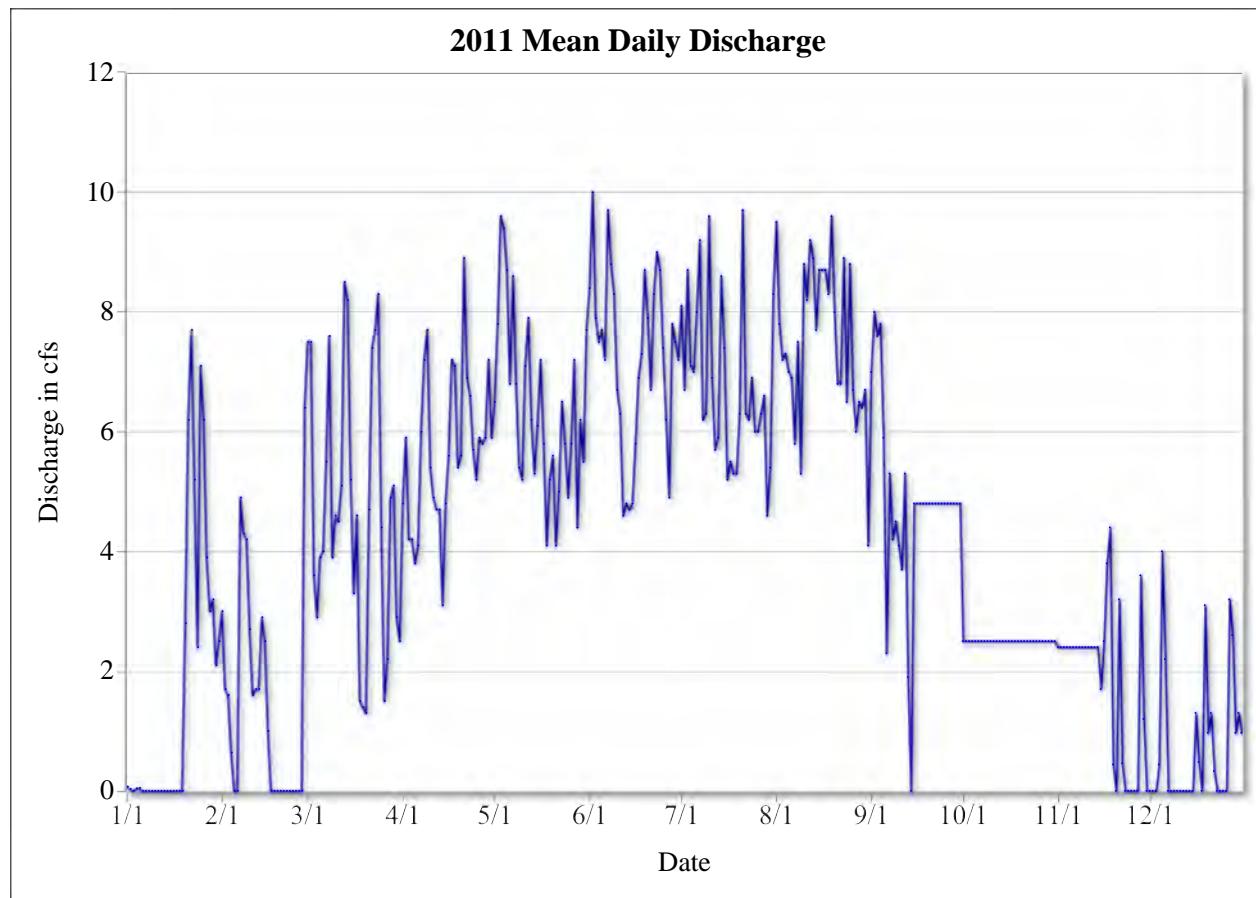

**Drainage Area**—Not applicable.

**Period of Record**—January 1, 2006 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records discharge measured with a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted in the discharge side of the diversion pipe. Discharge is calculated using a discharge-index relationship.

**Extremes**—Maximum daily discharge, 13 cfs, Jul. 12, 2008; minimum daily discharge, no diversion at times; maximum hourly discharge, 20 cfs, Sep. 20, 2006 at 13:00; minimum hourly discharge, no diversion at times.

**Remarks**—Water user provided estimated record for the period of Sep. 13, 2011 to Nov. 15, 2011 due to gage failure.

## Fort Mojave Tribe-Cimmaron

**Location**—Latitude 34° 56.347', longitude -114° 37.699', in the SE $\frac{1}{4}$  SW $\frac{1}{4}$  of Section 16, T. 18 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, river mi 252.9, 12.3 mi south of Bullhead City, Arizona, 6.9 mi north of Needles, California, and 23.0 river mi downstream of Davis Dam.

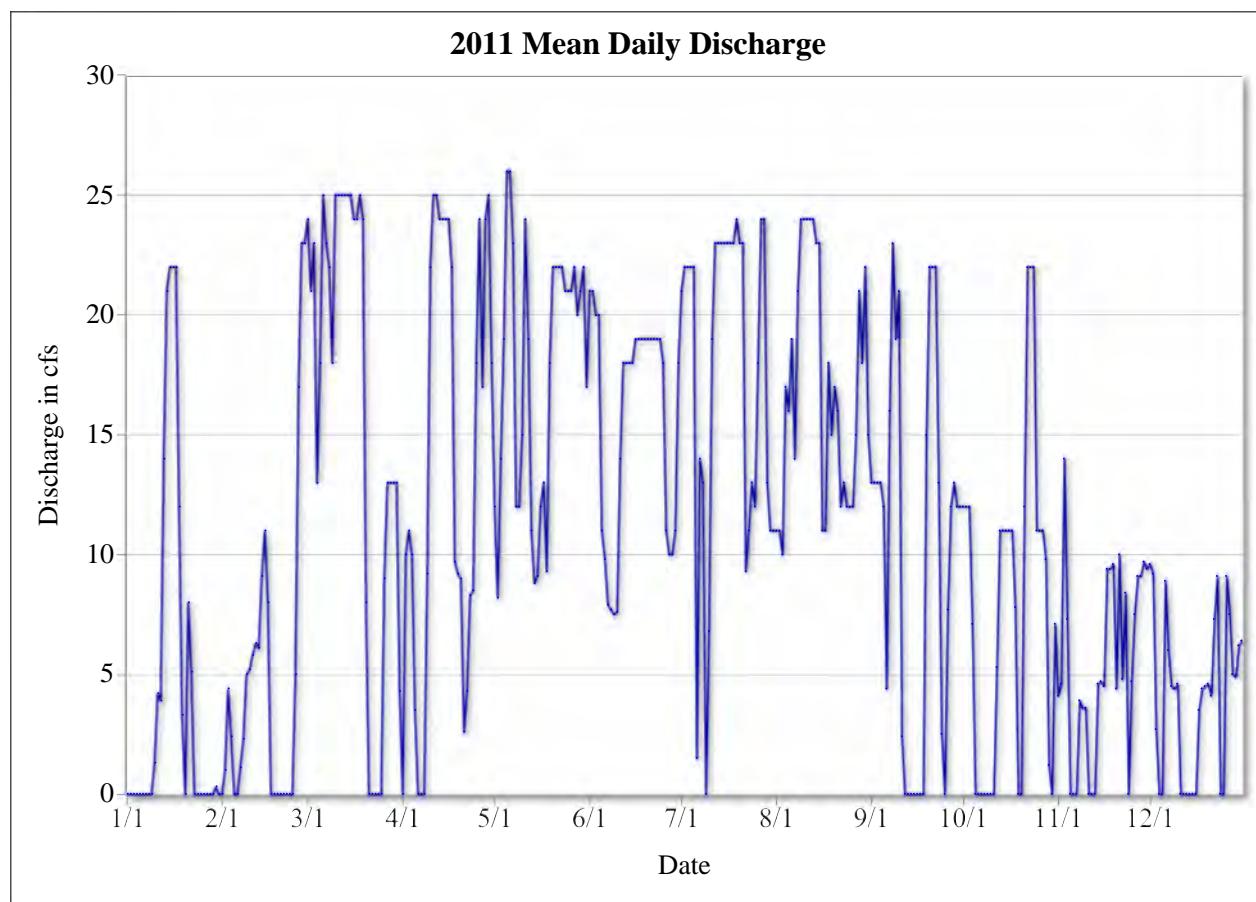

**Drainage Area**—Not applicable.

**Period of Record**—April 10, 2006 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water stage and velocity measured with a SonTek/YSI Argonaut-SW current meter attached to a fixed abrupt-expansion type, long-throated flume. Discharge is calculated using a stage-factor velocity-index relationship.

**Extremes**—Maximum daily discharge, 41 cfs, Jun. 15, 2007; minimum daily discharge, no diversion at times; maximum hourly discharge, 52 cfs, Jun. 12, 2007 at 17:00; minimum hourly discharge, no diversion at times.

**Remarks**—None.

## Fort Mojave Tribe-Refuge (Fort Mojave Tribe)

**Location**—Latitude 34° 50.286', longitude -114° 34.237', in the SW $\frac{1}{4}$  SE $\frac{1}{4}$  of Section 24, T. 17 N., R. 22 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.2 mi south of Bullhead City, Arizona, 2.9 mi east of Needles, California, and 31.5 river mi downstream of Davis Dam.

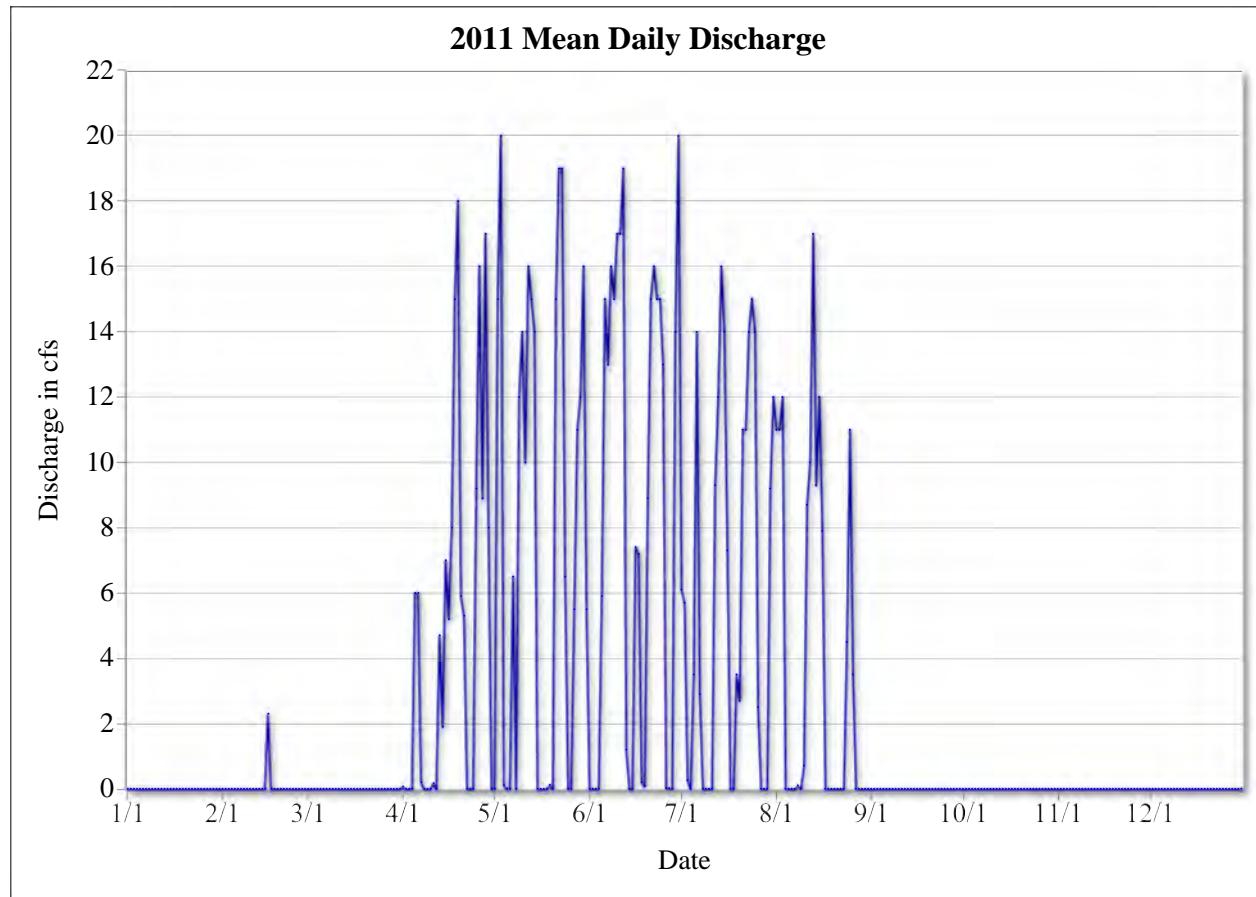

**Drainage Area**—Not applicable.

**Period of Record**—January 27, 2006 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records discharge measured with a SeaMetrics insertion magnetic flow meter (Model EX-201-S) mounted in the discharge side of the diversion pipe. Discharge is calculated using a discharge-index relationship.

**Extremes**—Maximum daily discharge, 20 cfs, Apr. 26, 2008; minimum daily discharge, no diversion at times; maximum hourly discharge, 27 cfs, Jul. 21, 2006 at 14:00; minimum hourly discharge, no diversion at times.

**Remarks**—The gage experienced numerous short duration failures that ranged from 1 to 5 hours. Discharge for these periods were assumed to be zero as no other source of diversion records were available.

## United States Fish and Wildlife Service-Inlet Canal

**Location**—Latitude 34° 50.202', longitude -114° 31.674', in the NE $\frac{1}{4}$  NE $\frac{1}{4}$  of Section 29, T. 17 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 19.6 mi south of Bullhead City, Arizona, and 4.8 mi east of Needles, California.

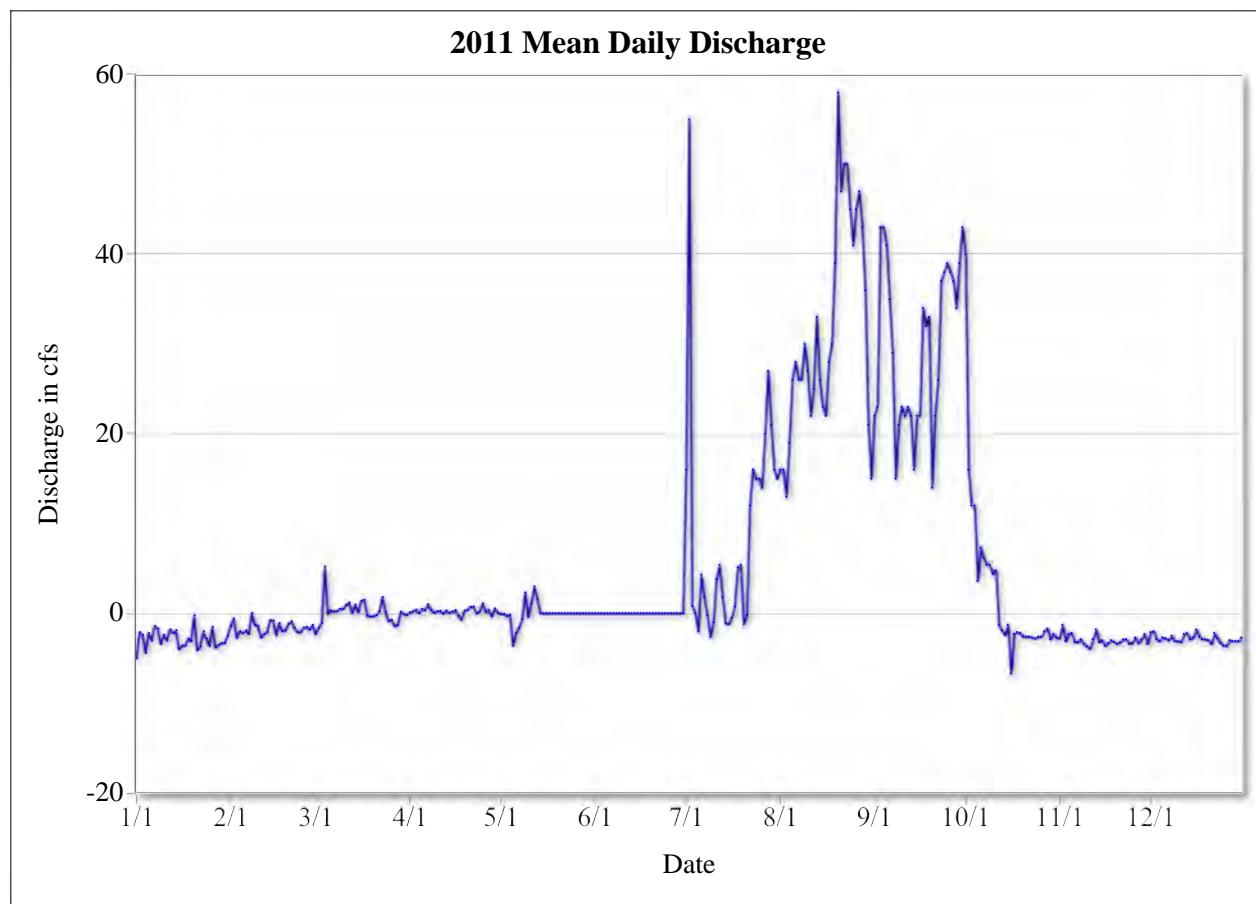

**Drainage Area**—Not applicable.

**Period of Record**—July 16, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation and velocity measured with a SonTek/YSI Argonaut-SW current meter. Discharge is computed using a velocity-index relationship.

**Extremes**—Maximum daily discharge, 150 cfs, Apr. 20, 2007; minimum daily discharge, -15 cfs, Oct. 9, 2009; maximum hourly discharge, 164 cfs, Apr. 19, 2007 at 23:00; minimum hourly discharge, -41 cfs, Aug. 4, 2006 at 04:00.

**Remarks**—None.

### Calendar Year Summary

Annual Total 4,072.66    Annual Mean 11.2    Daily Max 30    Daily Min -0.52    Annual Ac-ft 8,076.4

Maximum Discharge				Minimum Discharge			
Date	Time	GH	Discharge	Date	Time	GH	Discharge
Jul. 17	04:00	N/A	43	Feb. 12	06:00	N/A	-5.2

**Bold values indicate the daily value was derived from hourly data that contained 6 or more consecutive hours of estimated record.**

## United States Fish and Wildlife Service-South Dike

**Location**—Latitude 34° 44.214', longitude -114° 29.407', in the SW $\frac{1}{4}$  SE $\frac{1}{4}$  of Section 27, T. 16 N., R. 21 W., Gila-Salt River meridian, Mohave County, Arizona, Hydrologic Unit 15030101, 26.8 mi south of Bullhead City, Arizona, and 9.9 mi southeast of Needles, California.

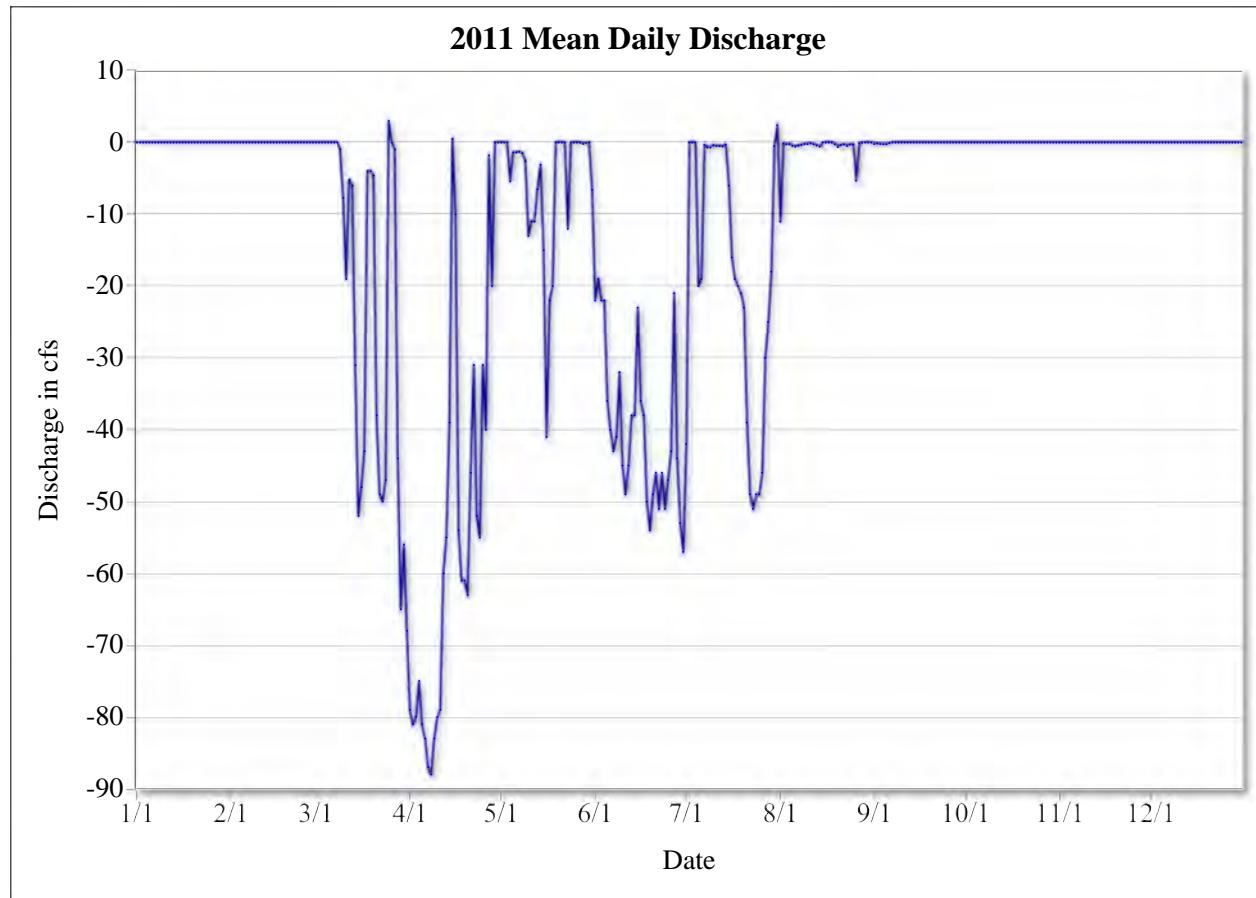

**Drainage Area**—Unknown.

**Period of Record**—June 16, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records marsh, river, and gate elevation measured with Sutron multiple interface shaft encoders (Model 56-0540-400-DTR). Discharge over the bi-fold lateral gate is computed by applying theoretical weir equations.

**Extremes**—Maximum daily discharge, 9.1 cfs on Aug. 5, 2005; minimum daily discharge, -88 cfs on Apr. 8, 2011; maximum hourly discharge, 39 cfs on Apr. 27, 2011 at 18:00; minimum hourly discharge, -92 cfs on Apr. 7, 2011 at 23:00.

**Remarks**—Refuge staff opened the gate during high river flows to allow water to flow into the marsh appearing as negative discharge.

## Metropolitan Water District at Lake Havasu

**Location**—Latitude 34° 18.967', longitude -114° 09.433', in the NW $\frac{1}{4}$  SW $\frac{1}{4}$  of Section 28, T. 3 N., R. 27 E., San Bernardino meridian, San Bernardino County, California, Hydrologic Unit 15030101, river mi 193.8, 14.9 mi southeast of Lake Havasu City, Arizona, 13.7 mi northeast of Parker, Arizona, and 82.1 river mi downstream of Davis Dam.

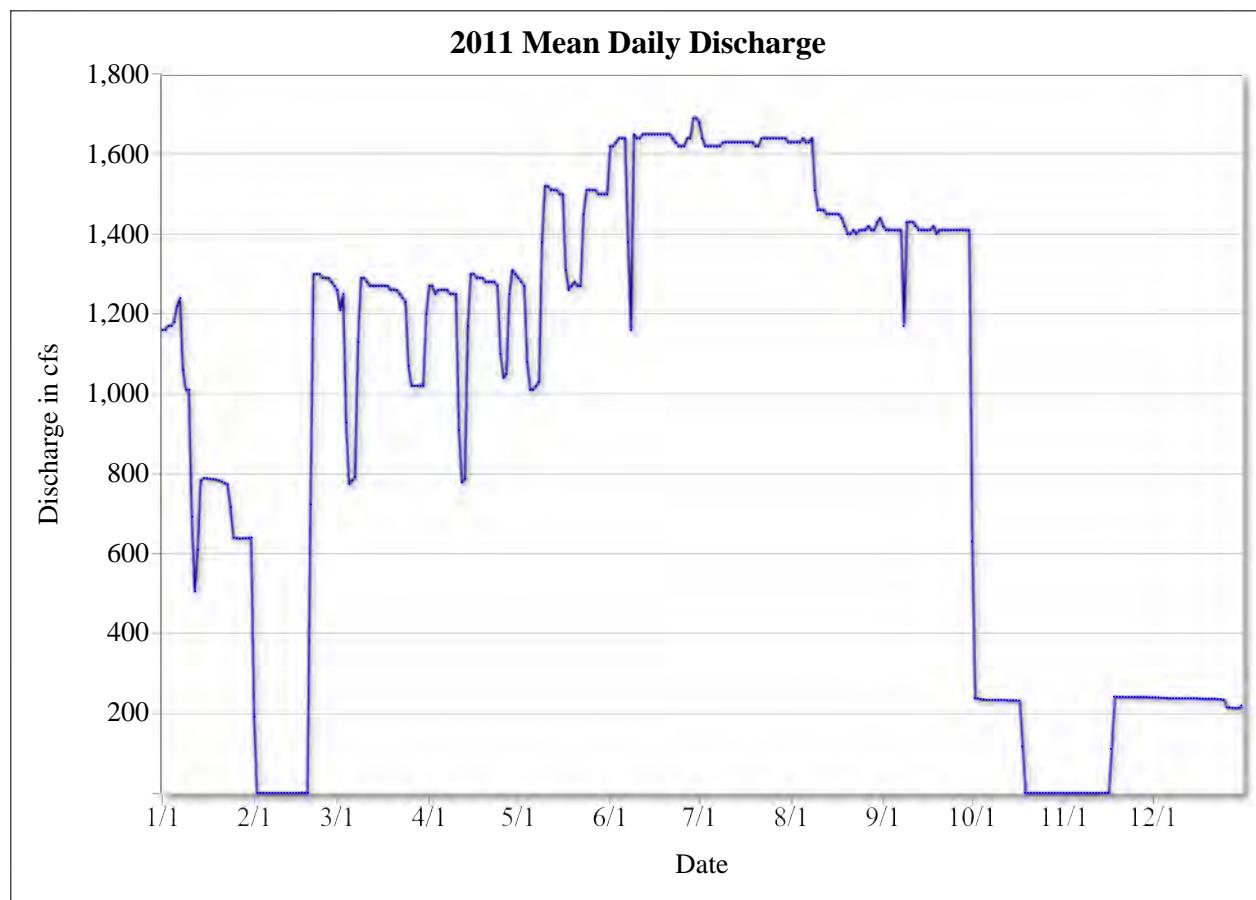

**Drainage Area**—Not applicable.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records discharge measured with an Accusonic flow meter (Model 7500) operated by the Metropolitan Water District of Southern California. The flow meter measures discharge from nine pumps that divert Colorado River water into the Colorado River Aqueduct which conveys the water to metropolitan areas of southwestern California.

**Extremes**—Maximum daily discharge, 1,970 cfs, Nov. 11, 2005; minimum daily discharge, no diversion at times; maximum hourly discharge, 1,981 cfs, Nov. 10, 2005 at 10:00; minimum hourly discharge, no diversion at times.

**Remarks**—Maintenance and calibration of measuring equipment are performed by the Metropolitan Water District of Southern California. Reclamation does not perform measurements to verify the accuracy of the data or monitor flows that return to the Colorado River below the Gene Wash Reservoir Dam.

## Central Arizona Project at Lake Havasu

**Location**—Latitude 34° 17.340', longitude -114° 06.230', in the NW $\frac{1}{4}$  NE $\frac{1}{4}$  of Section 23, T. 11 N., R. 18 W., Gila-Salt River meridian, La Paz County, Arizona, Hydrologic Unit 15030204, river mi 192.5, 15.3 mi southeast of Lake Havasu City, Arizona, 14.3 miles northeast of Parker, Arizona, and 83.4 river mi downstream of Davis Dam.

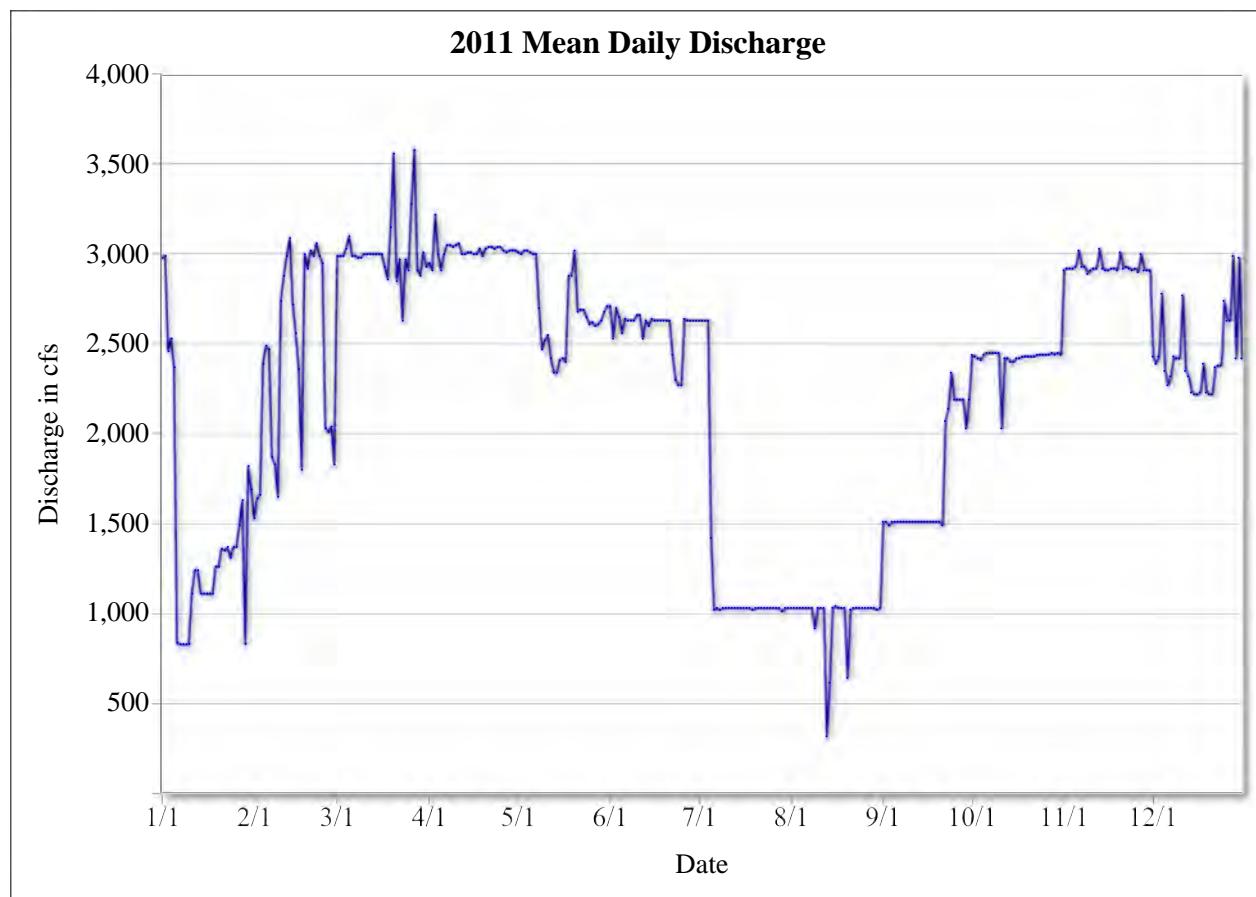

**Drainage Area**—Not applicable.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records discharge values measured with two Accusonic flow meters (Model 7500) operated by the Central Arizona Project. The flow meters measure discharge from six pumps that divert Colorado River water into the Hayden-Rhodes Aqueduct which conveys the water to the Phoenix and Tucson metropolitan areas.

**Extremes**—Maximum daily discharge, 3,600 cfs, Jun. 6, 2010; minimum daily discharge, no diversion at times; maximum hourly discharge, 3,670 cfs, Jun. 3, 2005 at 08:00; minimum hourly discharge, no diversion at times.

**Remarks**—Maintenance and calibration of measuring equipment are performed by a private contractor hired by the Central Arizona Project. Reclamation does not perform measurements to verify the accuracy of the data.

## Palo Verde Irrigation District-Main Canal

**Location**—Latitude 33° 43.801', longitude 114° 30.717', in the SW¼ NE¼ of Section 19, T. 5 S., R. 24 E., San Bernardino meridian, Riverside County, California, Hydrologic Unit 15030104, river mi 133.8, 31.7 mi south of Parker, Arizona, 9.2 mi north of Blythe, California, and 58.2 river mi downstream of Parker Dam.

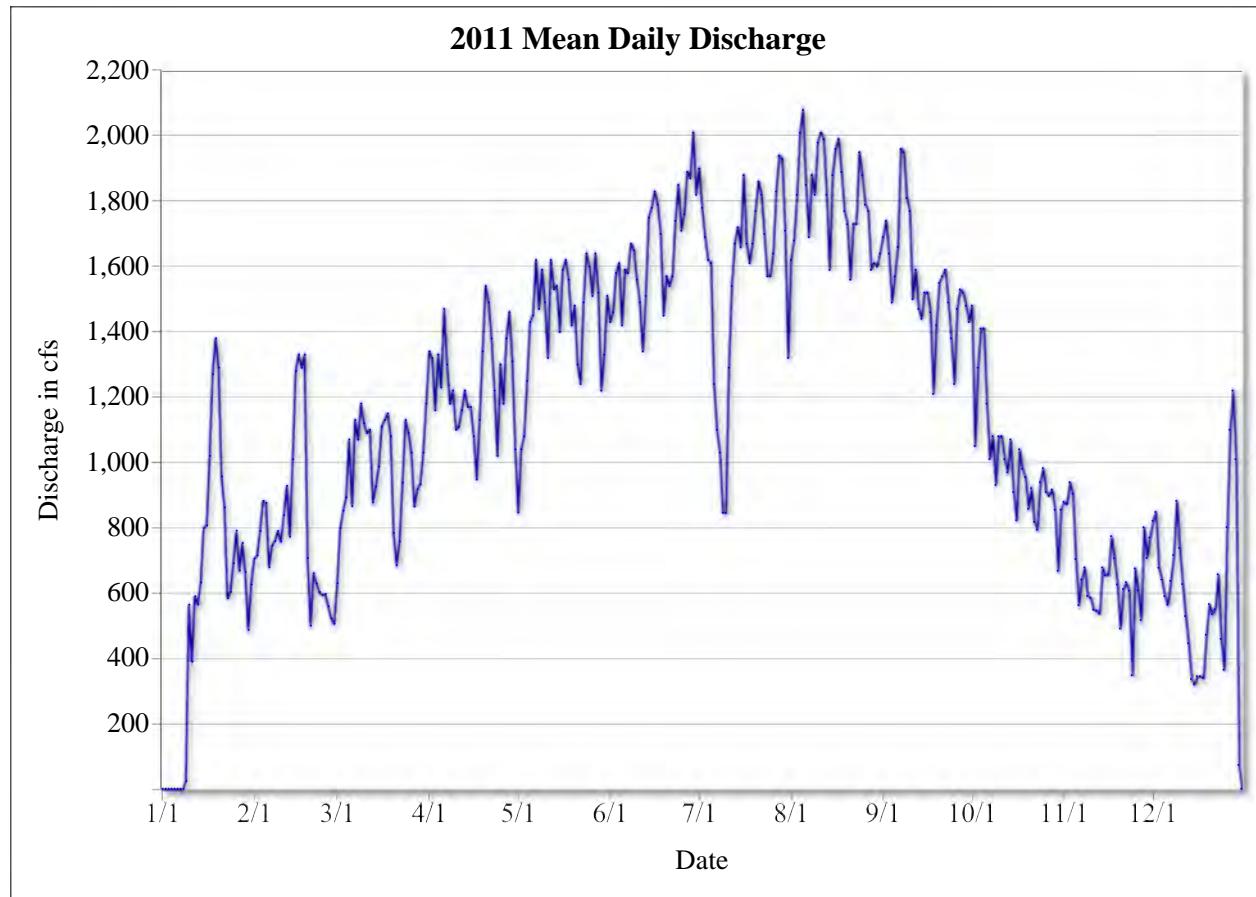

**Drainage Area**—Not applicable.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation and velocity measured with a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

**Extremes**—Maximum daily discharge, 2,190 cfs, Aug. 5, 2006; minimum daily discharge, -0.01 cfs, Jan. 1, 2005; maximum hourly discharge, 2,530 cfs, Jun. 25, 2008 at 15:00; minimum hourly discharge, -174 cfs, Dec. 31, 2005 at 10:00.

**Remarks**—Due to the Palo Verde Irrigation District annual outage there were no diversions from Jan. 1, 2011 at 01:00 to Jan. 9, 2011 at 23:00 and again from Dec. 30, 2011 at 10:00 to Jan. 1, 2012 at 00:00.

## Palo Verde Irrigation District-Outfall Drain

**Location**—Latitude 33° 20.308', longitude -114° 42.734', in the SW $\frac{1}{4}$  NE $\frac{1}{4}$  of Section 1, T. 10 S., R. 21 E., San Bernardino meridian, Imperial County, California, Hydrologic Unit 15030104, 20.2 mi south of Blythe, California, and 44.4 mi north of Yuma, Arizona.

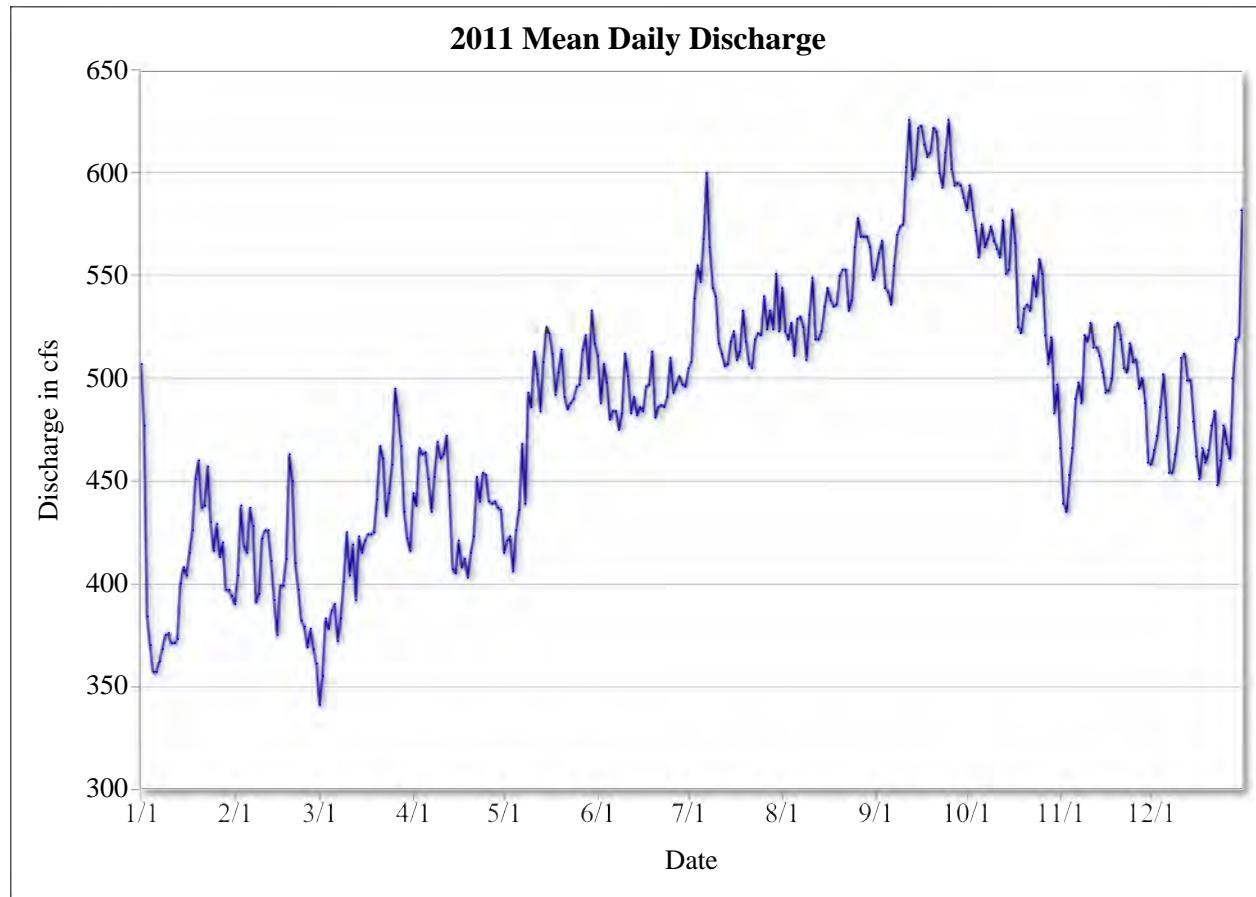

**Drainage Area**—Undetermined.

**Period of Record**—January 1, 2005 to current year.

**Gage**—A Sutron Xlite datalogger (Model 9210-0000-2B) records water elevation and velocity measured with a SonTek/YSI Argonaut-SL current meter. Discharge is calculated using a velocity-index relationship.

**Extremes**—Maximum daily discharge, 1,200 cfs, Aug. 10, 2005; minimum daily discharge, 316 cfs, Jan. 14, 2010; maximum hourly discharge, 3,230 cfs (estimated), Aug. 9, 2005 at 23:00, caused by an overbank condition created from significant side wash inflow; minimum hourly discharge, 225 cfs, Nov. 29, 2006 at 15:00.

**Remarks**—None.

## Glossary

**Acre-foot (ac-ft)**—The quantity of water required to cover one acre to a depth of one foot, the equivalent of 43,560 cubic feet or about 326,000 gallons.

**Control**—Channel features downstream of a gage which determine the stage-discharge relation at the gage. Controls can be either artificial or natural. Artificial controls consist of man-made structures like weirs and flumes, while natural controls consist of channel constrictions, outcroppings, rock or gravel beds, and uniform stretches of channel.

**Cubic Feet per Second (cfs)**—The rate of discharge representing a volume of one cubic foot passing a given point during one second, the equivalent of approximately 7.48 gallons per second or 448.8 gallons per minute.

**Data**—Characteristic observations, often represented as numbers, made over specific points in time.

**Datalogger**—An electronic device that records data in time sequence with related events. Dataloggers take measurements from sensors and/or transducers located at a gaging station.

**Datum**—Any numerical quantity that serves as a reference or base for another comparable quantity.

**Discharge**—The volume of water that passes a given point within a given period of time.

**Discharge-Index Relationship**—The relationship between an indicator discharge and a volume of water, per unit of time, flowing in a channel or pipe.

**Drainage Area**—The area of the associated drainage basin expressed in square miles.

**Elevation**—The height of water at a gage measured in reference to mean sea level.

**Estimated Data or Record**—Data that has been estimated to replace missing or erroneous gage data by a method of prediction that includes averaging, interpolation, or correlation.

**Extremes**—The maximum and minimum hourly and daily discharges recorded in the date range listed in the period of record.

**Final Data**—Provisional data that have been checked for completeness and accuracy and may have been adjusted and corrected based on observations.

**Gage**—An instrument or device used to measure a medium's magnitude or position, such as water elevation or velocity.

**Gage-Height (gh)**—The height of water at a gage with no vertical datum reference applied.

**Gaging Station**—A particular location in a stream, canal, lake, pipe, or reservoir where systematic observations of hydrologic data are obtained.

**Global Positioning System (gps)**—A system of orbiting satellites and receiving devices used to compute positions on the earth.

**Hydrologic Unit Code (huc)**—A geographic area representing part or all of a surface drainage basin or distinct hydrologic feature that is represented as an eight digit number.

**Latitude**—The angular distance north or south of the earth's equator, measured in degrees along a meridian, as on a map or globe.

**Longitude**—The angular distance on the earth's surface, measured east or west from the prime meridian at Greenwich, England, to the meridian passing through a position, measured in degrees.

**Location**—The location of the gaging station with respect to physical features in the vicinity, and with respect to the reference plane mentioned in the station name.

**Meridian**—Lines measuring the distance east and west around the earth at right angles to the equator. Meridians are great circles of the earth passing through both poles also known as lines of *Longitude*.

**Maximum Discharge**—The maximum reported hourly or daily discharge for the calendar year.

**Minimum Discharge**—The minimum reported hourly or daily discharge for the calendar year.

**Negative Discharge**—The volume of water flowing in the opposite direction of normal flow. A negative discharge is subtracted from discharge and acre-feet totals.

**Period of Record**—A period for which published records exist for a gaging station.

**Provisional Data**—Data collected in real-time that have received little or no review. Inaccuracies in data may be present because of instrument malfunctions or physical changes at the measurement location. Significant revisions to the data may result upon review and computation of final data record.

**Quarter-quarter**—A method used to subdivide *sections*; each section is divided into four quarter sections: southeast, southwest, northeast, and northwest. Each subdivided section is then divided again into four quarter sections giving a total of 16 quadrants per section.

**Real-Time Data**—Provisional data that have been computed, and made available immediately.

**River Mile**—The curvilinear distance, in miles, measured upstream from the beginning of the stream along the path of the stream.

**Section**—A unit of land area, generally equal to one square mile or 640 acres. The section is part of a description of the location of land using the Public Land Survey System (PLSS) of the United States Government.

**Sensor**—Any device that senses a change in a physical or chemical quantity, and provides an electrical output for measurement by a datalogger.

**Stage**—The height of water above stream bed or an arbitrary datum.

**Stage-Discharge Relationship**—The relationship between gage height, and the volume of water, per unit of time, flowing in a channel.

**Township**—A territorial subdivision, generally considered six miles long, six miles wide, and containing 36 *sections*. The township designation is part of a description of the location of land using the PLSS, and

includes the 40-acre subdivision within a *quarter*, *section*, township, and range. The PLSS is based on the concept of a township as a square parcel of land six miles on each side. Its location is established as being so many six-mile units east of a north-south line (called a meridian), and so many six-mile units north or south of an east-west line (called the baseline). The township is described by township and range (e.g., T. 4 N., R. 23 E.). Each township is further divided into 36 parts called sections, each approximately one mile square in area.

**Transducer**—Any device that converts energy from one form to another, as from acoustic energy to electric or mechanical energy.

**Velocity-Index**—Continuous velocity measurements made from an in-situ velocity sensor that measures a sample volume of a stream. Velocity-Index measurements are required when the channel has poor control or experiences backwater conditions.

**Velocity-Index Relationship**—The relationship between an index velocity and the mean stream velocity, computed from a discharge measurement, flowing in a channel.

**World Geodetic System of 1984**—The World Geodetic System of 1984 is the datum that is used by the GPS. The datum is defined and maintained by the United States National Geospatial-Intelligence Agency.
