Comments:

Department of Defense (DoD) prime contracting supports DoD's mission to provide the military forces needed to deter war and to protect the security of our country. The complex and expensive systems needed to aid in this mission are considered "small business eligible," even though there are no small businesses, or group of small businesses, that have the capacity or infrastructure to perform any of these contracts while staying within the existing size standards. In FY 11, there were 11 product service codes (PSCs) for items such as aircraft, destroyers, space vehicles, guided missiles, aircraft carriers and combat ships that had less than 0.5% awarded to small businesses, but account for more than \$34.6 billion of DoD's base. If these contracts did not count against DoD's small business achievements, DoD would have achieved 23.16% to small business. Furthermore, these PSCs do not constitute maximum practicable opportunities for small businesses. Despite these challenges, DoD is excited about several initiatives begun in FY 11 that will have a positive effect on small business performance in FY 12 and beyond. Among these is the inclusion of small business goal achievement in SES performance appraisals for all functions related to acquisitions. DoD has also expanded the functionality of the MaxPrac tool to better assist with market research, not just identify likely areas of small business improvement. Efforts to develop and deploy essential small business training to the entire DoD acquisition workforce are also underway. Another huge advancement for DoD small business programs is the inclusion of small business initiatives in the Defense Planning Guidance, which is used for the development and implementation of Defense programs.
