(This news release was reissued on June 18, 2007, to correct information about the periods of service listed in the Technical Note. The data in this release were not affected by the corrections.)

EMPLOYMENT SITUATION OF VETERANS: AUGUST 2005

In August 2005, the unemployment rate for veterans of the U.S. Armed Forces was 3.9 percent, the Bureau of Labor Statistics (BLS) of the U.S. Department of Labor reported today. There were 3.4 million Gulf War-era veterans (those who served anytime since August 1990) in the labor force. The jobless rate for these veterans was 5.2 percent. About 11 percent of all veterans had a service-connected disability.

This information on veterans was obtained from a special supplement to the August 2005 Current Population Survey (CPS). The CPS is the monthly sample survey that provides much of the basic data on employment and unemployment for the United States. The CPS is conducted for BLS by the U.S. Census Bureau. While data about veterans are collected monthly in the CPS, the supplement contains additional questions on special topics such as service-connected disability status and year of discharge. The veterans supplement was co-sponsored by the U.S. Department of Veterans Affairs and the U.S. Department of Labor's Veterans Employment and Training Service. Such a supplement has been conducted biennially since 1985. For a detailed description of the survey, including definitions of terms used in this release, see the Technical Note.

Demographic Characteristics of Veterans

In August 2005, 23.4 million men and women in the civilian noninstitutional population had served in the U.S. Armed Forces at some time in the past. About 3.9 million served during the Gulf War era, which began in August 1990 and continues to the present day; more information about these veterans' demographic and labor force characteristics appears in a separate section below. Another 13.5 million, or nearly three-fifths of all veterans, served during World War II, the Korean War, or the Vietnam era. (See table 1. See table 9 for a breakdown of veterans who served in multiple wartime periods.) Six million veterans served on active duty during other service periods, such as the periods between the Korean War and the Vietnam era, and between the Vietnam era and the Gulf War era.

The veterans' population is significantly older than the nonveterans' population. In August 2005, 63 percent of veterans were at least 55 years old, compared with about 26 percent of nonveterans. Only about 1 percent of all veterans were age 18 to 24, compared with 14 percent of nonveterans. (See table 2.)

Whites made up a larger share of the veteran population, 87 percent, than of the nonveteran population, 81 percent. Blacks comprised 10 percent of all veterans and 12 percent of all nonveterans. One percent of

veterans were Asian, while about 5 percent of nonveterans were Asian. About 4 percent of veterans were of Hispanic or Latino ethnicity, while Hispanics comprised 14 percent of nonveterans. (Hispanics can be of any race.) Women made up 7 percent of all veterans, compared with 57 percent of nonveterans. (See table 1.)

Labor Force Characteristics of Veterans

Overall, 55.6 percent of male veterans age 18 and over were in the labor force in August 2005, compared with 81.1 percent of nonveterans of that age. This difference in participation rates reflects the older age profile of male veterans, who are much more likely than nonveterans to be 55 years or over. For men age 18 to 54, the labor force participation rates of both veterans and nonveterans were about 88 percent. Female veterans and nonveterans—whose age profiles were more alike than the men's—each had a participation rate around 60 percent. (See tables 1 and 2.)

The unemployment rate of male veterans (3.7 percent) was little different from the rate of nonveterans (4.4 percent) in August 2005. Among men 18 to 24 years old, however, veterans had a higher jobless rate than nonveterans (17.2 versus 10.4 percent). The unemployment rate of female veterans (5.9 percent) was about the same as that for nonveterans (5.0 percent).

The unemployment rate for black veterans was lower than that for black nonveterans—6.5 percent compared with 9.5 percent in August 2005. Similarly, Hispanic veterans had a lower unemployment rate (2.9 percent) than Hispanic nonveterans (5.4 percent). For whites and Asians, there was little difference in the unemployment rates between veterans and nonveterans.

The occupational distribution of employed male veterans was similar to that of their nonveteran counterparts. About 3 out of 10 male veterans and nonveterans were employed in management, professional, and related occupations, while about 2 out of 10 were employed in each of three categories: natural resources, construction, and maintenance occupations; sales and office occupations; and production, transportation, and material moving occupations. Among women, about 4 out of 10 veterans as well as nonveterans worked in management and professional occupations, while about one-third were employed in sales and office occupations. (See table 3.)

Gulf War-Era Veterans

This release is the first that BLS has issued that separately identifies Gulf War-era veterans. In August 2005, there were 3.3 million male veterans and about 600,000 female veterans who served in the U.S. Armed Forces during the Gulf War era (from August 1990 forward) and were not on active duty at the time of the survey. Whites accounted for 79 percent of Gulf War-era veterans, blacks comprised 16 percent, and Asians were 1 percent. Seven percent were of Hispanic or Latino ethnicity. (See table 1.)

A large majority (87.0 percent) of Gulf War-era veterans were in the labor force in August 2005. Gulf War-era veterans were more likely to be in the labor force than were nonveterans in the same age groups. About 4 in 5 Gulf War-era veterans were employed. Among persons 18 to 24 years old, there was little difference in the proportions of Gulf War-era veterans and nonveterans who were employed. Among older age groups, higher shares of Gulf War-era veterans than nonveterans were employed.

The unemployment rate of Gulf War-era veterans was 5.2 percent. Young Gulf War-era veterans (18 to 24 years old) had a higher unemployment rate (18.7 percent) than young nonveterans (9.9 percent). Older Gulf War-era veterans (25 to 54 years old) had an unemployment rate very similar to their nonveteran peers—about 4 percent.

Of the 3.9 million Gulf War-era veterans in August 2005, 2.8 million had served between August 1990 and August 2001, referred to in this release as Gulf War era I. The other 1.1 million had served since September 2001, referred to as Gulf War era II. Veterans who served in both sub-eras are counted in the most recent one (Gulf War era II). (See table 8.)

Nearly 800,000 veterans reported being discharged from active duty between January 2002 and August 2005. (Not all veterans reported the year of their discharge.) Women accounted for 15 percent of these recently discharged veterans, blacks were 17 percent, and Hispanics were 11 percent. The labor force participation rate for recently discharged veterans was 86.0 percent, and their unemployment rate was 11.9 percent. (See table 6.)

Disabled Veterans

In August 2005, about 2.5 million veterans, or 11 percent of the total, reported having a service-connected disability. (Some veterans did not report whether they had a service-connected disability.) Veterans with a service-connected disability are assigned a disability rating by the Department of Veterans Affairs. Ratings range from 0 to 100 percent, in increments of 10 percentage points, depending on the severity of the condition. Nearly half of disabled veterans reported a disability rating of less than 30 percent, while 22 percent had a rating of 60 percent or higher. (See table 4.)

The incidence of service-connected disabilities was slightly higher for those who served during the Gulf War era than for those who served during earlier designated wartime periods. However, veterans of the earlier wartime periods were more likely than Gulf War-era veterans to have a 60 percent or higher disability rating. Among Gulf War-era veterans, 17 percent reported a disability rating of 60 percent or more, compared with 25 percent of World War II, Korean War, and Vietnam-era veterans.

Of Gulf War-era veterans with a disability, 82.9 percent were in the labor force, compared with 89.0 percent of nondisabled veterans from this period. The unemployment rate of disabled veterans from the Gulf War era was 5.4 percent, essentially the same as the rate for nondisabled veterans (5.2 percent).

Of the nearly 800,000 veterans discharged between January 2002 and August 2005, about 1 in 5, or 167,000, reported a service-connected disability. Of these, 58 percent had a disability rating of 30 percent or higher, compared with 44 percent of veterans discharged between 1991 and 2001. (See table 7.)

About one-third of the disabled veterans of World War II, the Korean War, and the Vietnam era were in the labor force in August 2005. This relatively low rate of labor force participation reflects the age of this group (88 percent of these veterans were 55 years or older) as well as the effects of their disabilities. Among veterans of these periods who did not have a service-connected disability, 44.4 percent were in the labor force. The unemployment rate of disabled veterans of these earlier wartime periods was 3.2 percent; for nondisabled veterans, it was 3.9 percent. (See table 4.)

Disabled veterans who were on active duty during other service periods (times between the designated wartime eras) had a 55.4 percent labor force participation rate, compared with 64.4 percent for nondisabled veterans from these periods. The unemployment rate of disabled veterans from other service periods was 4.4 percent, compared with 3.6 percent for the nondisabled.

About one-third of disabled veterans were employed in federal, state, and local governments, compared with 17 percent of nondisabled veterans and 14 percent of nonveterans. About 18 percent of employed disabled veterans worked for the federal government. This compared with 6 percent of nondisabled veterans and 2 percent of nonveterans. (See table 5.)

Technical Note

The estimates in this release were obtained from a supplement to the August 2005 Current Population Survey (CPS), a monthly survey of about 60,000 households which provides the national data on total employment and unemployment. The CPS is conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS).

The supplement was co-sponsored by the U.S. Department of Veterans Affairs and by the U.S. Department of Labor's Veterans Employment and Training Service. Questions were asked of persons 18 years of age and older regarding their prior service in the U.S. Armed Forces and whether they had a service-connected disability.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates will differ from the "true" population values they represent. The exact difference, or *sampling error*, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by *nonsampling error*. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data. Standard practice in the CPS is for one member of the household to answer questions for all the household members. In the case of the supplementary questions about veterans, however, several attempts were made to collect the information directly from the veterans. This was done because some of the information would be best provided by the veterans themselves.

For a full discussion of the reliability of data from the CPS and information on estimating standard errors, see the "Explanatory Notes and Estimates of Error" section of the BLS monthly periodical, *Employment and Earnings*.

Definitions

The definitions underlying the data in this release are as follows:

Veterans are men and women who previously served on active duty in the U.S. Armed Forces. Members of the Reserves

and National Guard are counted as veterans if they had ever been called to active duty.

Nonveterans are men and women who never served on active duty in the U.S. Armed Forces.

World War II, Korean War, Vietnam-era, and Gulf War-era veterans are men and women who served in the Armed Forces during these periods, regardless of where they served. Veterans who served in more than one wartime period are classified in the most recent one.

Veterans of other service periods are men and women who served in the Armed Forces at any time other than World War II, the Korean War, the Vietnam era, and the Gulf War era. Although U.S. Armed Forces were engaged in several armed conflicts during other service periods, these conflicts were more limited in scope and included a smaller proportion of the Armed Forces than the selected wartime periods. Veterans who served during one of the selected wartime periods and during another period are classified according to the wartime period.

Veteran status is provided from responses to the question, "Did you ever serve on active duty in the U.S. Armed Forces?"

Period of service is provided from answers to the question asked of veterans, "When did you serve?" The following service periods are identified:

- Gulf War era — August 1990 - present
- Vietnam era — August 1964 - April 1975
- Korean War — July 1950 - January 1955
- World War II — December 1941 - December 1946
- Other service periods — All other periods

BLS tabulations are modified occasionally to reflect changes in law, regulation, and program needs of the survey sponsors. In this news release, the World War II era is defined as December 1941 - December 1946, when in prior years' news releases of the Employment Situation of Veterans, World War II had been defined as September 1940 - July 1947. Also, the start of the Korean War era was changed from June 1950 to July 1950.

Another change occurred in the tabulation of data from the Vietnam era. In the news release for the August 2003 veterans' data (USDL 04-1378 issued July 27, 2004), all veterans who served in Southeast Asia between February 28, 1961 and August 4, 1964 were included in the "World War II, Korean War, and Vietnam era" category. In this release of August 2005 data, veterans who served in Southeast Asia during the early 1960s but did not also serve in the World War II or Korean War eras were reclassified into the "Other service periods" group. Had the same periods of service been used in this release as in the July 27, 2004 news release, the total population figure for

“World War II, Korean War, and Vietnam era” category shown in Table 1 would be 13.7 million rather than 13.5 million. This revised definition of the Vietnam era in the August 2005 data now reflects the same period of service definition for the Vietnam period as defined in the monthly and annual average data available from the Current Population Survey.

The *Gulf War era* has been divided into two sub-eras: Gulf War era I, which includes all those who served between August 1990 and August 2001; and Gulf War era II, which includes all those who served from September 2001 to the present. Veterans who served in both sub-eras are classified in the more recent one (era II).

Presence of service-connected disability is provided by answers to the question, “Has the Department of Veterans Affairs (VA) or the Department of Defense determined that you have a service-connected disability; that is, a health condition or impairment caused or made worse by military service?”

Service-connected disability rating is based on answers to the question, “What is your current service-connected

disability rating?” Answers can range from 0 to 100 percent, in increments of 10 percentage points. Ratings are determined from a rating schedule published in the Code of Federal Regulations, Title 38, “Pensions, Bonuses, and Veterans’ Relief,” Part 4—“Schedule for Rating Disabilities.” The rating schedule is “primarily a guide in the evaluation of disability resulting from all types of diseases and injuries encountered as a result of or incident to military service. The percentage ratings represent as far as can practicably be determined the average impairment in earning capacity resulting from such diseases and injuries and their residual conditions in civil occupations.” Part 4 contains a listing of hundreds of possible disorders and assigns ratings of 0 through 100 percent in steps of 10 percent for each, with instructions for rating multiple disorders.

Year of discharge is determined by answers to the question, “In what year were you last separated from active duty in the Armed Forces?”

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

NOTE: Veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, the Gulf War era, and all other service periods. Nonveterans are men and women who never served in the U.S. Armed Forces. Other service periods include the periods between World War II and the Korean War, between

the Korean War and the Vietnam era, and between the Vietnam era and the Gulf War era. More detailed information appears in the Technical Note of this release. Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all race groups. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Dash represents or rounds to zero.

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

² Because of the aging of the population, there are no longer any veterans of these eras under 45 years of age.

NOTE: Veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, the Gulf

War era, and all other service periods. Nonveterans are men and women who never served in the U.S. Armed Forces. Other service periods include the periods between World War II and the Korean War, between the Korean War and the Vietnam era, and between the Vietnam era and the Gulf War era. More detailed information appears in the Technical Note of this release. Dash represents or rounds to zero.

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

NOTE: Veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, the Gulf War era, and all other service periods. Nonveterans are men and women who never served in the U.S. Armed Forces. Other service periods include the periods between

World War II and the Korean War, between the Korean War and the Vietnam era, and between the Vietnam era and the Gulf War era. A service-connected disability is a health condition or impairment caused or made worse by military service. The associated disability rating, which can range from 0 to 100 percent, is determined from a rating schedule published in the U.S. Code of Federal Regulations, "Title 38." More detailed information appears in the Technical Note of this release. Dash represents or rounds to zero.

Year not available	261	194	74.4	192	73.6	2	1.1	67

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

NOTE: Veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, the Gulf War era, and all other service periods. Nonveterans are men and women who never served in the U.S. Armed Forces. Other service periods include the periods between World War II and the Korean War, between the Korean War

and the Vietnam era, and between the Vietnam era and the Gulf War era. More detailed information appears in the Technical Note of this release. Estimates for the above race groups (white and black or African American) do not sum to totals because data are not presented for all race groups. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Asians are not shown separately, as most estimates are too small to meet publication standards. Dash represents or rounds to zero.

Table 7. Employment status of veterans 18 years and over by year of discharge from the Armed Forces, presence of service-connected disability, and reported disability rating, August 2005, not seasonally adjusted

(Numbers in thousands)

Disability rating not reported	36	25	(¹)	25	(¹)	–	–	11
Without service-connected disability	1,905	1,724	90.5	1,658	87.0	67	3.9	181
2002 to 2005								
With service-connected disability	167	143	85.7	122	73.0	21	14.8	24
Less than 30 percent disability rating	58	50	(¹)	43	(¹)	7	(¹)	8
30 to 50 percent disability rating	58	52	(¹)	48	(¹)	3	(¹)	6
60 percent or higher disability rating	39	29	(¹)	28	(¹)	1	(¹)	10
Disability rating not reported	12	12	(¹)	2	(¹)	9	(¹)	1
Without service-connected disability	612	525	85.8	474	77.4	51	9.8	87

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

NOTE: Veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, the Gulf War era, and all other service periods. Nonveterans are men and women who never served in the U.S. Armed Forces. Other service periods include the periods between World War II and the Korean War, between the Korean War and the Vietnam era, and between the Vietnam era and the Gulf War era. Categories do not

add to totals shown on other tables because data are not shown for veterans whose presence of disability was not reported, and because information on the year of discharge was not available for approximately 4.5 million veterans. A service-connected disability is a health condition or impairment caused or made worse by military service. The associated disability rating, which can range from 0 to 100 percent, is determined from a rating schedule published in the U.S. Code of Federal Regulations, "Title 38." More detailed information appears in the Technical Note of this release. Dash represents or rounds to zero.

Gulf War era II	80	57	70.5	57	70.5	-	-	24

¹ Ratios are not shown where the denominator is less than 75,000. Small estimated levels are based on a small number of survey responses and, thus, are subject to relatively large standard errors.

NOTE: Veterans of the Gulf War era are those who served from August 1990 to the present. The era has been divided into two sub-eras: Gulf War era I from August 1990 to August 2001 and Gulf War era II from September 2001 to the present. Veterans who served in

both sub-eras are classified in the more recent one (sub-era II). More detailed information appears in the Technical Note of this release. Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all race groups. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

Table 9. Employment status of veterans with multiple wartime periods of service by selected combinations of periods, August 2005

Periods of service	Civilian noninstitutional population	Civilian labor force						Not in labor force
		Total	Percent of population	Employed		Unemployed		
				Total	Percent of population	Total	Percent of labor force	
Total with multiple wartime periods of service	812	264	32.6	258	31.8	6	2.3	547
Gulf War era and Vietnam era	259	200	77.2	194	75.1	5	2.8	59
Vietnam era and Korean war	206	46	22.1	46	22.1	-	-	161
Korean war and World War II	286	17	5.9	16	5.7	-	-	269

NOTE: Wartime veterans are men and women who served in the U.S. Armed Forces during World War II, the Korean War, the Vietnam era, or the Gulf War era. Categories do not add to totals because not all

combinations are shown. More detailed information appears in the Technical Note of this release. Dash represents or rounds to zero.
